ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 19, Paton Street, Piccadilly, Manchester.*

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: The Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

Modern Movements Among Moslems. By SAMUEL GRAHAM WILSON, D.D. **6s. 6d.** net.
An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

"Self-Taught" Series. Paper **2s.**, Cloth **2s. 6d.**
These books contain classified Vocabularies and useful Phrases and Conversations, with the English Phonetic Pronunciation of every word, so arranged that they may be Learned at a Glance, and a simplified Grammar which will prepare the way for more advanced study.
Arabic (Syrian); **Egyptian** (Arabic), with Naval and Military Terms; **Greek** (Modern), with Photographic and Archæological Terms; **Persian; Turkish**, with Dictionary.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.) 1, Devonshire Sq., London, E.C.2.

NOTES OF THE WEEK.

On the eve of the Parliamentary debate on the Mesopotamia Report it is announced that a judicial inquiry is to be held into the conduct of all those persons who are prejudicially affected by the report. The personnel of the Court is undecided, and while the step is sure to be welcomed as a promise of determined action by the Government, certain difficulties seem likely to arise. The evidence of the witnesses before the Royal Commission was protected; moreover, the Royal Commission was not a judicial body, and was, therefore, not bound by the strict rules regarding evidence which prevail in the Courts—presumably, therefore, the judges will have to hear the evidence again before they can decide on any steps. Moreover, as Mr. Bonar Law pointed out in announcing the inquiry, many of the witnesses before the Court will have to be brought considerable distances, much time will thereby be consumed, and before the summary of evidence could be completed the Statute of Limitations, which in cases of this kind prescribes three years, would come into force.

It is perhaps unfortunate that the judicial inquiry will have no power to deal with the faults in the system, but must to all appearance confine itself to an examination into the conduct of the individuals concerned. While there is no public desire whatever to prejudge the case as a whole, or that of any person connected with it, it must be admitted that the appointment of a judicial body which has indeed the power to pass sentence but is impotent to enforce it would be strongly resented. Further, the soldiers who were implicated in the case are now unemployed, and they have, therefore, been punished; the civilians concerned in the case are still in the employment of the State. It remains an open question whether the judicial inquiry will be effective as regards the latter. It will have no power to punish, but it will have the power to advise the Army Council on the matter, which can take action if necessary by court-martial. But civilians are not amenable to the Army Council, and they cannot be tried by court-martial; and if the judicial body has no power of itself to punish soldiers, it can hardly have power to punish civilians. Should that be the case—and we hope it will not prove so—it would be an unsatisfactory expedient.

It may be said that no penalties were inflicted in the similar case of the Dardanelles. But the soldiers inculpated in that disaster have not been further employed; Mr. Winston Churchill, the politician who was most concerned in the affair, retired, and has perhaps been sufficiently punished by the universal distrust of his considerable but dangerous abilities which his countrymen have manifested ever since; Mr. Asquith, who as head of the Cabinet was also responsible for the venture, had also resigned his post before the Dardanelles Report was issued. Now, it is not the case that most of the politicians who have been named in the Mesopotamia report have retired.

Apropos the Mesopotamia question, Sir O'Moore Creagh has pointed out, in an article in the *Weekly Dispatch*, that, when in 1911 he was asked to make reductions in the Indian Army, he furnished a complete report to the Government of India of the reasons which made these proposals unwise. He called attention to the fact that we had to apprehend war with Turkey, or Turkey aided by Germany, "which, indeed, was quite obvious." He catalogued the deficiencies in the army, but his recommendations were ignored. Possibly something more will be heard of this.

Matters are moving in Athens. M. Venizelos is firmly in the saddle, and King Alexander has received the remaining Ministers in audience. The union of the two armies of Royalists and Venizelists is proceeding, and we are told that it proceeds without difficulty; the Constituent Assembly is to undertake the revision of the Constitution on a democratic basis, and it is said that it will officially proclaim the deposition of King Constantine and the Crown Prince. Should that step be taken, it would be significant, for deposition is by no means the same thing as abdication. It will be remembered that some confusion was caused over the precise use of the term when Mr. Bonar Law announced the *fait accompli*.

M. Jonnart has left Athens for the time being, and while in Western Europe he will look into the question of Greek finances, which have suffered somewhat heavily these last two years. Britain and France will probably come to the rescue, and with Greece herself restored to unity her industry will make good progress, and with a world-shortage of all goods she will have no difficulty in getting good prices for her produce, should it be possible to export. Large tracts of fertile land are to be

Digitized by Google

put under cultivation in Macedonia and Old Greece, which it is hoped will almost suffice to feed the army and the rest of the population. The restoration of railway service between Athens and Salonika, which is announced this week, will help considerably towards the commercial resuscitation of the country.

Something is also being done in regard to foreign policy. M. Venizelos cannot, indeed, undo in a day the harm wrought by King Constantine in two years; he cannot get back territory ceded to Bulgaria. But apart from his assurance of support to Serbia, negotiations have been undertaken with Italy regarding Epirus. Conversations have already begun, and the Athens newspapers have announced that the Italian troops are to leave Janina, and be replaced by Greeks; while an Italian journal states that this will only be a portion of a general evacuation of Greek territory by the Allies as soon as M. Venizelos feels himself strong enough to cope with the situation. As to the military situation and its possible developments it would be useless to speculate here, but a great deal will be gained, if Greece and Italy can at last accommodate their ambitions. For Italy, of course, the question is more complicated and probably more vital than for Greece, owing to the fact that she is directly interested in the whole Adriatic problem, which can never be more than a secondary question for Greece, as well as in the Levant, but the Greater Greece which M. Venizelos stands for need not necessarily conflict at many angles with legitimate Italian ambitions.

It is said that when the Greek Chargé d'Affaires at Berlin called for his passports, the Foreign Secretary, Herr Zimmermann, lost his temper and declared, "This doesn't matter to Germany, but it will matter much to Greece. Your Venizelos will smart for this." It seems to be fast becoming a German tradition to be as rude to foreign gentlemen as to their own women.

It is understood that a strict inquiry is to be held into the disturbances of last December at Athens, and the authors, or perhaps it would be more correct to say the accomplices, of that outrage are to be severely punished. Already the bodies of two hundred Venizelists who were assassinated during the riots have been recovered—nearly all of them Cretans, mostly stabbed to death. Several of the bodies are those of children—a sufficient proof that the Royalist faction did not discriminate in their slaughter.

A satisfactory announcement has been made as to the health of the British troops at Salonika. Our forces, which suffered heavily from malaria on the Struma, which they had to evacuate some weeks ago, have now been provided with efficient medical care, which was somewhat difficult to seek a year ago. Statistics as to malaria and dysentery issued by the War Office are highly satisfactory, and we have the word of Lord Granard, who returned from Salonika recently, that the sick are now as well tended there as on any other front. In view of a certain amount of disquietude on the point recently, this assurance is highly satisfactory.

A curious report comes from Copenhagen to the effect that Turkey is intending to raise a loan in Scandinavia. That Turkey would raise a loan anywhere may be readily believed, and that Scandinavia, which knows something of war profits, has money to lend is also possible. But Turkey is not precisely a country to which everybody wishes to lend at this moment, and Denmark has not such great interests in Asia Minor that she is likely to go out of her way to oblige a poor customer. Turkey has already had large sums from Berlin to finance her share in the war, and in return for those loans she has been compelled to grant Germany the right to full commercial exploitation of her territories for a period of years. An undertaking of that kind would scarcely seem to be an inducement to neutrals to lend money to the Ottoman Empire.

The Jewish problem in Rumania is in a fair way to solution. M. Take Jonescu, in a late sitting of the Chamber at Jassy, has made it clear that the reform was decided upon in August, 1914, and he added that equality before the law, when the new law is passed, was not enough, but that efforts should be made to promote fraternity between the Jews and Christians. On that it must be said that the efforts will fail unless they are seconded by both sides, for problems which are settled politically may still exist in a social aspect.

A piteous statement was made by a Slovene deputy in the Reichsrath as to the systematic extermination of the Serb population. "Go to the Balkans," said Dr. Otokar Ribar, "and you shall see how former flourishing towns and villages are now mouldering ruins. Not military necessity, but the deliberate will of authorities has devastated our lands. Our unhappy people have been scattered to the winds; from whole districts women and old men and children have been carried off. From the vicinity of Nish alone the Bulgarians have carried away 30,000 people to the deserts of Asia Minor. It is a war of extermination. The Allies talk of a restoration of Serbia and the unification of the Serbian race. Serbia they may save, but not the Serbs or the Southern Slavs, for there will be none left to rejoice in the blessings of peace." Unhappily, there is too much truth in this dark picture.

The Russian offensive progresses, a large number of prisoners have been taken on the Eastern Galicia front, and Halicz, the ancient capital of Galicia, has been captured. The Germans have admitted the check, which has caused some despondency in Berlin, as an indication of the failure of Germany to obtain a separate peace and so reduce the number of her enemies. The enemy Press is so carefully controlled that it is difficult to know what the feelings of the people are with regard to the war, but from the depression caused by the failure to detach Russia it may be assumed that very high hopes were entertained of the possibility of that enterprise. It is now definitely seen that it has been an intrigue for nothing.

One consequence of the failure, reinforced, it is true, by anger at the reprehensible slowness of England in admitting defeat by the submarine war, is the Ministerial crisis in Berlin, and a discussion whether peace can be concluded after all without indemnities or annexations. We shall do well to take this whole business with a grain of salt; it is not a month ago since the Majority Socialists insisted on annexations, and many Germans are demanding indemnities as an alternative to national bankruptcy. The Minority Socialists, however, have got a little further. The latest revised programme issued by that party—is it the fifth or sixth?—admits that the creation of a Great Serbia by the reunion of the Serb race would be the best means of producing stable political conditions in the Balkans; it also admits the right of Prussian and Austrian Poland to independence. Since this programme would involve the liberation of West Prussia as well as Posen, and the retrocession of Danzig to the Poles, it will be resisted to the last by the German Government. It is true that a straw shows which way the wind blows, but when, as in this case, the Minority Socialists have no more weight than a straw, it does not carry things much further.

The Russian evacuation of Mesopotamia is announced. It is three months since General Baratoff's force effected a junction with the British, but the communications have never been secure. It would appear that the Russian force was not large, and it has now retreated across the mountains to the Russian frontier. The incident is unfortunate, since it will add to the weight of the British task in the Middle East, but it is useless to exaggerate its significance. From the British force comes the news of a further attack on the enemy by a mobile column of aeroplanes and armoured cars, which punished the Turks heavily.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 24.

H.H. The Sultan.

H.H. the Sultan went down to Alexandria for a few days, during which he gave numerous audiences at Ras el Tin Palace. He returned to his estate at Gabaris on Tuesday. Before he left Alexandria his Highness sent the Governor a sum of one thousand pounds, to be distributed amongst the poor of the city on the occasion of the fast of Ramadan. He also made a contribution of five hundred pounds towards the expenses of the three students whom the Egyptian University is sending to Europe to complete their studies. His Highness has, in addition, given two hundred pounds to the fund which is being raised in aid of the French Red Cross, and when he heard that the poor, to whom his Ramadan gift was to be distributed, would include some Russian refugees, his Highness, with characteristic generosity, ordered an additional sum to be sent to the Governor for special distribution to those refugees.

The Fast of Ramadan.

The fast of Ramadan started on Wednesday, the 20th. This year the new moon was first seen at Qena, in Upper Egypt, and the fact was announced by telegram from the Prime Minister to the Mahkama Sharia in Cairo. The usual ceremony of attesting the appearance of the new moon, which inaugurates the commencement of the 30 days' fast, did not, therefore, take place here. This year Moslems will not suffer as much as they usually do when the fast falls in the summer months, for we are having abnormally cool weather. Indeed, it is so cool that the cotton is likely to suffer very much, and the ravages of the cotton-worm threaten, as a result, to become serious.

With regard to the manner in which the commencement of the Ramadan fast is determined *i.e.*, attestation before the religious Court that the new moon has been seen with the naked eye, several Moslems have written to the Press pointing out that this practice is liable to lead to errors, and that by far the best plan would be to accept the evidence as available from data supplied by the Egyptian Observatory. There is no doubt that these critics are quite right. It has happened on more than one occasion in the past, that Egypt and the Sudan have commenced the fast on different days, because the new moon was visible in one part before the other, and unless some more scientific method is generally adopted the confusion is certain to recur in the future. It is not for a non-Moslem to interfere in such a matter, of course, but it may be pointed out that the Jews, whose religious fixtures are mostly based on the movements of the moon, rely entirely on astronomical observations, and that it is merely custom handed down through centuries, and not Islamic law, that has dictated that the new moon must have been seen with the naked eye. It is, however, a distinct sign of the times that Moslems should suggest that the antiquated method of fixing the beginning of the fast, and consequently of other religious festivals, should be abandoned, and that recourse should be had to the generally recognised method for computing dates which modern science has put at the disposal of the world. It is, indeed, only a few years since evidence by telegram, even from their own representative, such as was accepted this year, was rejected as inadmissible by the Moslem religious authorities of Egypt.

The Mecca Pilgrimage.

The Pilgrimage to Mecca is to take place as usual this year, and the Sultan has reappointed Lewa Fatin Pasha as Emir-el-Hag. It is understood that arrangements similar to those in force last year will be made, and that the same high fees will be charged. There is every likelihood that the applications for permission to go to Mecca will be greater than a year ago. The people are very much better off, and can easily afford the high fees, whilst the facility with which the last pilgrimage was carried out will encourage the more timorous to venture this year. The great difficulty confronting the Egyptian Government will, of course, be the transport by sea to Jedda, and it may quite possibly be necessary to introduce special measures to restrict the caravan to proportions for which accommodation will be available.

The Press of Egypt.

Apropos of the regulations made by the military authorities with a view to reducing the local consumption of paper, it is interesting to note that no fewer than one hundred and eleven newspapers and periodicals are published in Egypt; of these sixty-nine are issued in Cairo and thirty-three in Alexandria. A year ago the total was ninety-two. The present number is divided up as to sixty-two newspapers, of which twenty-three are in Arabic and thirty-three in a European language, and forty-nine reviews, of which thirty-eight are in Arabic and eight in a European language. According to Silva White, in 1899 the total number of journals and periodicals published in this country was a little over thirty, of which half were issued in the vernacular. Even allowing for the extension of education, one cannot help feeling that Egypt is over-supplied with newspapers. When the statistics are published for the 1917 Census it will be interesting to see in this connection what the proportion of literates is, and how it compares with the number of papers in circulation.

The Philippides Case.

The Philippides case, to which much space is daily devoted by the local press, is still before the Cairo Assizes. So far, only the witnesses for the prosecution and one or two for the defence have been heard. It is expected that the case will last another week at least.

MAILS LOST AT SEA.

The Postmaster-General announces that the following mails have been lost at sea through enemy action :—

(1) A parcel mail for the Salonika force, containing parcels for that force which reached the Army Post Office, London, for despatch between 6 p.m. on June 12 and noon on June 17.

(2) Mails for the Egyptian expeditionary force, containing letters, packets, and newspapers (but not parcels), which reached the Army Post Office, London, for despatch between 3.30 p.m. on May 31 and 2.30 a.m. on June 4, and letters only which were received for despatch between 3.30 p.m. on June 7 and 2.30 a.m. on June 9.

(3) Mails for Egypt, Seychelles, Mauritius, Madagascar, and Reunion, containing correspondence which reached the General Post Office, London, for despatch as follows :—

Destinations.	Dates on which lost correspondence was received at General Post Office.	
	Letters.	Printed matter.
Egypt and Seychelles	June 1, 2, and 8	May 31 to June 2 and June 7 and 8
Mauritius	May 30 to June 8	May 30 to June 8
Madagascar, Reunion, etc.....	May 20 to June 8	May 20 to June 8

(4) Letter and parcel mails from Australia, Ceylon, Aden, and Egypt, which left Adelaide on May 22, Fremantle on May 27, Colombo on June 13, Aden on June 22, and Port Said on June 30.

EGYPT'S PAPER SHORTAGE.

The Egyptian Press Bureau announces that for the present it has been decided not to enforce Regulation No. 5, limiting half piastre newspapers on four days in the week to two pages. It is evident, therefore, that the shortage of paper is not so great in Egypt as had been feared.

CYPRUS NOTES.

(From a Correspondent.)

The Hot Season and Olympus.

Early in June, as a rule, the High Commissioner moves to Mount Troödos. Government House, or "Cottage," as it calls itself, is situate in a pleasant site, on a mountain slope well surrounded by pines, some way below the military camp. The offices of the Chief Secretary and Staff are across a deep ravine, through which runs the Kreos Potamos, or "cold river," a little mountain torrent which carries a good flow of water all through the year. It is pumped up by steam power to the camp and other points. The office of the Chief Secretary, and a few other privileged officials, migrate annually to the cool and invigorating heights. The judges of the Courts, who in the matter of pensions enjoy great advantages over their civilian confrères, can also obtain a good holiday every year out of a six weeks' mid-summer vacation. All other officials, including the District Commissioners and heads of departments, who enjoy no such vacation, must swelter in the plains throughout the long and trying summer. The day will, no doubt, come when the health of other hard-working officials will be considered as well as those of the one department which regularly enjoys this change every year. Justice will see to it that others, too, will get some chance of a periodical recuperation on Troödos, or some of the other heights. Troödos may be regarded as a miniature Simla, and criticism of the Indian system, as regards some aspects of the far-famed resort, may be extended in due course to other places, not excluding Cyprus.

Debates in the Legislative Council.

Discussions on a variety of proposed measures have been continued. There is no lack of ability in the group of elected representatives. Several of the new members have contributed largely to the interest of the debates. Among them are Dr. Zannetos, of Larnaca, M. Sevéris, of Kyrenia, M. Locs Loïsou, and M. Nicolaïdes, of Papho, all vigorous champions of their electoral divisions. Of the old members, M. Theodotou, of Nicosia, M. N. Lanitis and M. Evgenios Zeno—the two latter of Limassol—all good speakers, have maintained the decidedly high level of debating energy. M. Theodotou is one of the ablest of the Greek members, and has often used his influence and oratorical power in a good cause outside the Council. He has spoken and written vigorously—e.g., in support of a strict policy of forest preservation and development, and of the Goats Law, fully explaining to the people how island interests, including those of agriculture, stand in need of these measures. He is also a strong promoter of ecclesiastical reforms. Of the three Turkish members, Irfan Bey, of Nicosia, is the most prominent. He keeps a watchful eye on Greek movements, and has contributed much to the interest, the direction, and, it may be added, to the liveliness of the proceedings.

Ban on Cyprus News.

Government has prohibited the despatch of any Cyprus newspapers out of the island for some reason not yet revealed. Why island intelligence should be thus suppressed it is difficult to see. A vigorous censorship is exercised, and any articles or paragraphs to which objection is taken are not passed for publication. Accordingly, sometimes papers appear with blank columns, or spaces, indicating that such objection has been encountered. As it is, the papers contain a very bare record of island events, with comments generally of a mild enough description. There is little enough to talk or write about at the best of times in this quiet, sea-girt corner of the Levant; and wonder is often expressed how so many Greek papers can manage to exist in so small a community. Why this scanty information should not be allowed to be communicated outside the island is quite unintelligible. It could hardly be of use to "the enemy." For three years of war papers have been sent abroad freely, but now, for some unaccountable reason, they seem to be regarded as dangerous, and can only circulate in Cyprus. Editors cannot add to their very limited number of subscribers. They are obliged to notify those abroad that they must conform to the new rule. Cypriots are widely scattered in almost every part of the world, and a considerable number are, no doubt, glad to keep in touch with island affairs. They are now cut off from this source of information by what seems a very uncalled-for and arbitrary act. No distinction is made between papers that are moderate in tone and others which are generally more outspoken in their criticism of Government.

One thousand members of a mass meeting of Greek Liberals in New York signed a pledge to fight against the common enemy of the world—Germany. A resolution was adopted conveying to President Wilson "our soldiers' determination to redeem our national pledges and to stand true to our treaties by supporting M. Venizelos in his ennobling task of arraying the forces of Greece against the common foe."

ARCHÆOLOGICAL NOTES.

BY JOSEPH OFFORD.

Early in this year Sir William Willcocks delivered a long and important lecture at the Institut Egyptien, in Cairo, upon the "Hebrew Story of the Plagues in Egypt and of the Exodus." In this lecture he utilised his great knowledge of the water supply of the country in both ancient and modern times, and of its natural history, to illustrate the Old Testament narrative; and upon the publication of his address in full we hope to summarise its more important elucidations.

He has returned to the rather speculative theory of the elder Brugsch Pasha, that the Israelites went out, not by way of the Red Sea, but along the Mediterranean littoral by Pelusium; and that the pursuing Egyptians perished in the Sebonic lake. This gave rise to some discussion, and H.H. Prince Ahmed Fouad requested M. G. Daressy, secretary of the Service of Antiquities, who has frequently published notes upon old Egyptian material throwing light upon the Exodus, to place his views before the Société Sultanienne de Geographie. M. Daressy is resolutely opposed to this idea of a northern route of the Exodus march, not because it is directly contradictory of the Exodus narrative, wherein we are expressly told Moses was forbidden to lead away the people by the road of the country of the Philistines; although he properly quotes this interdiction, but from his knowledge of the geography of the Delta in ancient times, as revealed by old Egyptian records. He showed that the natural features of the north-east corner of Egypt were now quite different from what they must have been under the Pharaohs. Lake Menzaleh was first formed—probably by a fall in the land level—in the sixth century A.D., and that part of Egypt had in early times to be, and was, irrigated, producing excellent crops. Therefore, in that direction there was no "Lake of the Reeds" or Yam-souph, so particularly mentioned as being passed by the Israelites.

M. Daressy quoted four passages, showing that the Yam-souph was close to the northern projection of the Red Sea, above Suez. He said, "The only reasonable explanation of the Exodus story is that the people came out by way of the Wadi Tumilat, and so by way of the lagoons then existing about the site of Lake Tirusah and the Bitter Lakes, which latter were then naturally (not by canal) connected with the Gulf of Suez. They then escaped after the crossing into the Sinai desert, where the Egyptians deemed it useless to follow them. He terms the theory that the Yam-souph was identical with the modern Menzaleh Marshes, *une invention du pédantisme allemand*, which we should not accept. No one is better qualified than M. Daressy to know all the points concerning the question the Egyptian monuments and papyri disclose, and he is in entire agreement with Sir Hanbury Browne, who, like Sir W. Willcocks, is an eminent Egyptian irrigation engineer.

AUSTRIA IN THE NEAR EAST.

A valued correspondent writes:—As a specimen of perfect Italian literary composition it would be difficult to surpass the "Commemorazione del Socio Straniero Gaston Maspero," delivered by Professor Dr. Evaristo Breccia at the Accademia dei Lincei last April. As curator of the Alexandria Museum, Dr. Breccia was for several years in constant official intercourse and amicable correspondence with Sir Gaston Maspero. The latter's family was of Lombardian origin, and therefore it was appropriate that a memorial of him should be contained in the records of the senior Italian Academy.

Particularly interesting is the following paragraph from one of Maspero's last letters, sent on the occasion of the birth of a son to Dr. Breccia, which gives Maspero's views upon the rôle of Austria in the Near East in the past. Speaking of the boy, he wrote: "Il grandira je l'espère dans des temps moins troublés que les nôtres, et il sera citoyen d'une Italie prospère, délivrée enfin complètement de ce cauchemar des Tedeschi. Je me demande vraiment quel service a jamais rendu à l'humanité cette dévote Autriche tant cherie du Pape. Elle n'a rien inventé, rien produit qui fût utile ou glorieux? Elle à toujours opprimé et proscrit ce qui était libre ou généreux; elle n'a été qu'un rapace cousant sans cesse l'un à l'autre des bouts de province dont elle ne savait pas s'attacher les populations. C'est la survivance dans l'Europe actuelle d'un état des choses antérieur, qui ne trouve quelque analogue que dans l'autre rapace d'Allemagne. Tout cela devrait disparaître; mais Allemands du Nord ou du Sud, Autrichiens, Hongrois, ont ils un esprit capable de se perfectionner selon les idées du jour. J'en doute beaucoup; ils pourront être battus, reduits à l'impuissance, jamais amendés. Barbares ils sont né; barbares ils resteront jusqu'à la fin des temps, et ils persisteront à s'enorgueillir de leur barbarie, quelques progrès matériels qu' ils puissent encore réaliser par la suite."

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Medical Arrangements at Salonika. July 10.

The Earl of Dunraven asked the Secretary for War whether he could make any announcement as to any change—made or in contemplation—in the disposition of the sick and wounded of our Salonika force? There were rumours that the hospital base at Malta was going to be discontinued, and that the personnel of the staff were going to be transferred to Salonika. Some unrest had been caused by these rumours. Malta might be described as almost unique for hospital purposes; the accommodation and the arrangements were as perfect, humanly speaking, as they could well be. Salonika was, to use a very mild term, unhealthy. The hospitals were very far removed from the town or fort, and he was afraid he must say that the wounded there must be accommodated in huts or under canvas, which were insufficient to protect against the sun in summer or blizzards in winter. Also, he should like to know what provision was being made for convalescents in the neighbourhood of Salonika, and if a change in the arrangements was to be made, had it the approval of the responsible medical and military authorities at home? He did not suggest that any repetition of Mesopotamia conditions was going to happen in Salonika, but at the same time he wanted to know whether everything possible had been done to ensure that there should be no unnecessary suffering.

The Earl of Granard said that he had been in Salonika from the first, and only left there a short time ago. The question of hospitals had been considered by the Commander-in-Chief. There were certain hills at the back of Salonika in the vicinity of which the Commander-in-Chief had placed six or seven camps, which were amply supplied with water, and they were approved by the medical authorities, and there was every reason to believe that the soldiers who had contracted malaria in the low-lying districts would benefit by their stay there, and would return to the front line absolutely cured. There was now every reason to hope that the condition of the sick and wounded at Salonika compared favourably with that obtaining in any other expeditionary force. In company with the Commander-in-Chief he had visited every hospital in Salonika on very many occasions, and it was perfectly true to say that every precaution had been taken, and that the sick and wounded in the Salonika command were looked after as well as, if not better than, anywhere else.

The Earl of Derby (Secretary for War) said that, owing to the brutal submarine policy of the Germans in sinking hospital ships, the whole hospital system had to be changed, and, instead of sending the sick and wounded to Malta and Egypt and shipping as many as possible home, it became necessary to shift the majority of the hospitals from Malta to Salonika. In addition, something like seven general hospitals had been sent out from this country since the policy of torpedoing hospital ships was instituted. We had also a convalescent camp at Corfu, and there were other arrangements which it was obviously better that he should not mention. He was assured by the medical officers that everything possible was being done for the comfort and convenience of the sick and wounded, and when the history of the campaign came to be written, it would be found that the medical department of the War Office had endeavoured to do everything that could be done.

HOUSE OF COMMONS.

The Mesopotamia Report. July 5.

Mr. Joynson Hicks: Will the Government give the House any indication as to what steps they propose to take in consequence of the report of the Mesopotamia Commission?

Mr. Bonar Law: I am sure the House will realise that the Government cannot take action without very careful thought in this matter, for it involves everything which people regard as of value in the case of the individuals concerned. We are considering it, and I do not know whether it would be possible to give any indication before the debate, but we shall do so then.

Mr. Joynson-Hicks: Would it not be better that the debate should be adjourned until we have definite information from the Government as to the steps they are going to take? Otherwise the debate will wander over large sections of opinion without any definite result.

Mr. Bonar Law: I do not think there is any danger of that happening, because some member of the Government will speak very early in the debate and give an indication of what will be done.

July 6.

Sir J. D. Rees asked whether, in view of the comprehensive character of the Mesopotamia Report, of the number of constitutional and other questions of public interest involved, and of the many individuals whose reputations were at stake, two days would be given for the debate on the Mesopotamia Report.

The Chancellor of the Exchequer said he had already stated that the amount of time to be given to the debate must rest with the House.

July 10.

Mr. King (L, Somerset, North) asked the Leader of the House whether any disciplinary notice had been taken of those officials and persons who had been censured in the Mesopotamia Report, and, if not, whether the decision to do so would be announced before Thursday, or whether it was the policy of the Government to wait and see what the debate in this House might produce.

Mr. Bonar Law: I propose to make a statement after questions to-morrow as to the intentions of the Government in this matter.

[Mr. Bonar Law's statement was made on July 11, and the substance of it is reproduced in the "Notes of the Week."]

Mesopotamia and the Dardanelles. July 9.

Mr. Bonar Law replied in the negative to a question by Mr. Lynch, whether as the result of the Mesopotamia Report, the Prime Minister would announce the resignation from office of all members of the Government implicated and of all officials whose administration had been censured.

Replying to Mr. G. Faber, Mr. Bonar Law stated that the Committee of the Cabinet, which during October, 1915, was known as the Dardanelles Committee, was attended by Mr. Asquith, Mr. Lloyd George, Mr. Balfour, Sir Edward Grey, Earl Kitchener, Earl Curzon, the Marquess of Crewe, the Marquess of Lansdowne, Mr. Churchill, the Earl of Selborne, and himself. At the beginning of November, 1915, the Dardanelles Committee was superseded by the War Committee, which was composed of Mr. Asquith, Mr. McKenna, Mr. Lloyd George, Lord Kitchener, Mr. Balfour, and himself.

Sir J. Jardine asked what advice was tendered by Lord Kitchener as to the advantage or otherwise of an advance from Kut-el-Amara to Baghdad.

Mr. Bonar Law: The proceedings of the Cabinet have always been secret, and I regret that I cannot give the information asked for.

The Indian Army. July 10.

Major H. Terrell asked whether the statement of the deficiency in the personnel and equipment of the Indian Army submitted by General Sir O'Moore Creagh on January 30, 1914, and the report submitted by him in 1911 of the reasons which, in his opinion, made the reduction in the Indian Army he was ordered to make unwise would be laid on the Table before the debate on the Mesopotamia report.

Mr. Austen Chamberlain (Secretary for India): The statement to which the hon. member refers, is, I presume, a memorandum by Sir O'Moore Creagh on the reports of the Army in India Committee. I am not sure what statements are referred to as "the report submitted by him in 1911." The reports of the Army in India Committee itself have never been published and cannot be published now. It is impossible that I should publish comments upon them.

Major H. Terrell also asked for the production of the confirmatory report of Surgeon-General Babtie mentioned in telegram H 5620 of June 16, 1915, set out in page 74, par. 53, of the Mesopotamia Report.

Mr. A. Chamberlain: The report itself was not sent home. The gist of it, according to the Commission, is contained in the Viceroy's telegram of June 16, 1915.

Questions to Commissioners. July 5.

Commander Bellairs asked for the Speaker's ruling as to the rights of private members to put questions concerning the actions of Royal Commissions, Commissioners, or Committees. On Monday he had asked at the Table to whom he could address a question arising out of the Mesopotamia Commission, as to why Sir William Meyer did not give evidence before the Commission. He was told that he could not address any question on the subject to any Minister or to any member of the Commission.

The Speaker said that in olden days there was not so much rigidity about questions, and questions were permitted to members of Royal Commissions and of Committees. During the last five or six Parliaments no such questions had been allowed. The reason was obvious. Royal Commissions were appointed by the King, and it would be very improper if their members gave information to the House before they reported to his Majesty. It was, moreover, quite a fortuitous thing to have a member of the House on a Commission. He thought that it would be very undesirable to amend the practice. It was better to follow the rule which obtained in regard to Select Committees—namely, that when a matter had been referred to a Select Committee, no questions were permitted until it had reported. When the matter came up for debate, hon. members could put questions to any members of the Commission who might happen to be present. But to allow to appear on the paper questions addressed to members of Royal Commissions would be an innovation which was quite contrary to the practice of the last forty-five years.

America and the War. July 10.

Mr. King asked whether the United States were now at war with Austria-Hungary, Bulgaria, and Turkey respectively; and, if not, whether, in order to complete the unity of the Allies, representations had been made to the United States on this matter.

Lord R. Cecil: The answer to both parts of the question is in the negative.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

TANGIER TO TEHERAN.

I find myself in theory heartily in sympathy with a correspondent of the *Busreh Times* who enters a plea for the much-abused town which has played such a prominent part in the life of the Indian Expeditionary Force "D." He points out that probably Mandalay and the Irrawaddy came in for a similar amount of grousing in their time, but the veterans of the Burmese War, in a retrospective mood, would be far more likely to remember "when the mist was on the rice fields and the sun was setting low" than the numerous abominations that loomed so large at the time of their sojourn. So, too, the correspondent thinks, will it be with Busreh, and pending the moment when Mr. Rudyard Kipling or somebody else tackles the subject, he enumerates some of the town's "points." After all, he says, there are beautiful aspects here. "A broad river flowing like oil, a crimson grey sheen on the waters, the smoke of the shipping hanging low, the rattle of the winches stopped while the evening meal is prepared, the pleasant smell of cooking mingling with the all-pervading stench of the incinerators, and even the rascally bellamchi looking quite picturesque as he pulls his way home across the river."

***

The idea is all right, but different men will fit in the details in different ways. Undoubtedly the river dominates the picture. For me, a waterway must entirely belie its name, if it is to be devoid of all charm, and in the category I am prepared to include everything from the Pet and Pem in Cambridge, to the Mersey, the Bistritza, or Singapore harbour. True, Busreh's creeks have to do duty as laundries and drains, as well as waterways, but there is plenty that is picturesque in the place. The narrow, tortuous streets, the natives—but I am exposing myself to the taunt that my point of view is that of a very temporary visitor and that I know nothing of Busreh in the light of a year or more of active service. It is so. But the correspondent of the *Busreh Times* is right.

***

To the most inveterate grouser in the Mesopotamian Force *olim meminisse juvabit*. I can only recall one place which I resolutely refuse to credit with a single redeeming feature. It would never do to name it in case some kind reader wished to challenge my obsession. But I remember that I thought all the more of the few fellow-countrymen on board the foreign ship I boarded when they subsequently explained that the reason why they could not bring themselves to speak to me for a couple of days was that they felt certain that no respectable Englishman could ever be found in such a place. It is fair to add, perhaps, that the nearest approach to a redeeming feature was the discovery of a foreign banker who refused to have any "truck" with an absolutely unchallengeable Letter of Credit that held good the world over, but cheerfully cashed a £20 cheque on a London bank without even the shadowiest guarantee of the bona fides of myself, the cheque, or the bank.

***

It is hard to refrain from moralising upon the Mesopotamia Report. In all that concerns the Government of India, or any Government for that matter, the system and the personal factor crop up at every turn. Throughout the Civil Service efficiency is much less sought out or required than the capacity to please one's superior, and as practically everyone in the higher grades is "out for a quiet life," and for the avoidance of anything likely to disturb the even tenour of his progress to the Honours List and Retirement, the subordinate inevitably drops into the same groove. The higher you go and the nearer you get to the double goal the more natural is it that you should make a particular point of falling in with your superior's wishes. By the time, say, the Viceroy's Council is reached there is little likelihood of "a plain Mr." sticking up for the rights of his position. Suicide would be hardly more suicidal. In peace times these things, like sugar and the bread supply, pass unnoticed. Then comes the severe test of war, and is it to be wondered at that there is not a man amongst the lot to rise to the occasion?

LETTERS TO THE EDITOR.

ITALY AND THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

SIR,—Permit me, as a Jugoslav from Dalmatia, to briefly comment upon the article, "Italy and the Balkans," by Mr. F. Bonavia.

The writer of the article in question alleges that Dalmatia has for twenty centuries been, first Roman and then Venetian, and in any case during all that time a Latin country. It is truly strange that he can make this allegation when it is contradicted by history.

Does your contributor realise that the Croatian kings ruled and were crowned in Dalmatia, and so on? Does he realise that Dalmatia always opposed armed resistance to any unrequested domination, whether Venetian, Turkish, or Magyar. Venice never possessed the whole of Dalmatia. The coast towns which were subject to the republic were eternally at war with the Venetians. That the Dalmatian towns, and above all Zadar (Zara), were not in favour of the Venetian domination is proved by the fact that they were continuously at war with the republic, and by the other fact that when Venice took part in the Crusades she engaged the Crusaders' forces in the first place to subjugate the Jugoslav Catholics in the Dalmatian towns.

When the Republic of Venice desired the people of Dalmatia to understand her laws and enactments she found herself obliged to have the latter translated into Serbo-Croatian.

It is not true to say that Dalmatia lamented the fall of the Republic of Venice; on the contrary, her people breathed more freely after shaking off the bonds of the Venetian Signoria, who used to employ the natives of Dalmatia as galley slaves. Even as Dalmatia recalls with bitterness the days of Venice, she gratefully cherishes the memory of that era when she was under the French administration. Several times in the sittings of the Dalmatian Sabor (Diet), when the Jugoslav deputies reproached the Austrians with their bad government, they have held up the French era as an example, but never the Venetian.

The few Italians who live in Dalmatia—2 per cent. of the population—are not only in no way ill-used by the Austrian Government, but rather favoured at the expense of the Jugoslavs. The only municipality in Dalmatia in Italian hands is Zadar (Zara), where the local officials, who have Italian sympathies, artificially keep the municipality in Italian hands. As proof that the Government is not hostile to the Italians, the fact may serve that the Jugoslav municipalities of Sibenik (Sebenico), Spljet (Spalato), Dubrovnik (Ragusa), etc., were dissolved and their representatives imprisoned, while the Italian municipality of Zadar (Zara) has remained scatheless under its Italian mayor.

A further proof of the Jugoslav character of Dalmatia is the fact that of the eleven representatives which Dalmatia sends to the Vienna Parliament, and which are elected on the principle of universal secret suffrage, the whole eleven are Jugoslavs. The Italian candidate for the district of Zadar (Zara), Dr. Bozitch (the very name proves him to be a Jugoslav renegade), had to speak in the Serbo-Croatian language when canvassing the electors in the immediate neighbourhood of Zadar.

The solution of the Dalmatian question and of the question of the whole Eastern shore of the Adriatic, if Italy does not want to acknowledge their Jugoslav character, can be accomplished fairly and justly, if the population itself is permitted to decide its future.

Italy, who owes her freedom and unity to the principle of nationality, should not dare to trample upon her own past. Instead of opposing the liberation and unification of the Jugoslavs and demanding Jugoslav territory; instead of copying Austria's example of *divide et impera*, she ought rather to help the Jugoslavs to achieve their liberation and unification, and to unite with them in friendship against their common enemies—the Germans. Thus she will walk in the way pointed out to her by her father, the great Mazzini.

I am, Sir, yours faithfully,
DR. MICHAEL MICIC,
Town Councillor of Dubrovnik (Ragusa) and Member of the Jugoslav Committee.
45, Stanhope Gardens, London, S.W.7.

NEAR EAST BOOKSHELF.

WAR PICTURES.*

Among the myriad books inspired by the War, this glowing volume calls for special notice. A gallery of picturesque sketches, of brilliant not garish colour, illustrative of many and various phases of world-shattering strife, more vividly perhaps than a recital of events in ordered sequence it creates an impression of reality. The mean is judiciously preserved. While details of horrors are not too grossly accumulated, there is no suggestion that war is other than awful, soul-rending beyond the power of words. So grave, so austere, so mighty is the theme, that a style, elsewhere luxuriant, florid, flamboyant, is here appropriately vigorous and efficient. The writer has risen to the height of the great argument, and has achieved an artistic work of marked distinction.

Whether by luck or, more probably, by good management, Mr. Scott O'Connor saw an amazingly large part of the battle area on hill and plain. Wherever he went Statesmen, Generals, Subalterns did their best to make his path, if not smooth, at least practicable as well as exciting and instructive. With few exceptions, of which our Fleet and the armies of Russia are most to be regretted, our author saw the Scene of War on every front.

A very pleasant prelude gives a glimpse of classic seas and of Athens under war conditions, with a more extended view of Salonika. There Mr. Scott O'Connor saw and spoke with M. Venizelos; rode to visit outposts with General Mahon; and in an aeroplane hovered over the trenches of the Allies. We cross to Italy, and are charmed by interludes at Rome, Venice, and many a smaller town. Vicenza shall be named, if only for its salutary law imposing a fine of fifty francs on anyone found in the street during an air raid. "This fine has been more potent than the fear of death." And now we come to matter of enthralling interest, sketches of actual conflict drawn with admirable verve and vigour. In the Trentino and in the Dolomites our traveller was in the forefront of the battle, and learned to estimate at the highest value the almost superhuman efforts of the Italian Army. We quote a characteristic passage:—

"He [a young Italian officer] left upon me a vivid impression of the splendid spirit of the Italian soldiery. He claimed that no troops in the world could have done better, and that few have had to face such extraordinary difficulties and hardships as the Italian Alpini. Guns have been hauled up sheer precipices, 'far more difficult than those which you see there,' pointing to the almost vertical Dolomitic crags about Pasubio; wounded men have been sent down from almost inaccessible peaks, suspended from the telephone wire and fired at by the Austrian riflemen, as men fire at game. . . . There have been times when detachments of the Alpini have been left in the snow, in mid-winter, under a storm of Austrian shells, with only their marching kit, for three days and nights, unable to stir, while the Austrians have literally swept the snow from about them with their searching fire. They have been frost-bitten in June, and cut off from their base by violent storms in the mountains; and they have been gay and cheery and resourceful and tireless through it all, the men from Sicily and the South entering into this unique life with as much zeal and dash as the most hardened Piedmontese."

On the Western Front, kindly welcomed and sped on his hazardous course by Sir Douglas Haig himself, Mr. Scott O'Connor saw the Tanks in the first flush of their glad youth and many thrilling spisodes of battle. Let him again speak his own words:—

"We can see the white seamy lines of the trenches, the black smoke-fountains of the falling shells, the sudden flame of the guns in the brilliant sunlight, and then from time to time the receding harvest of battle, the captives and the wounded. . . .

Such was the Battle of the Somme as I saw it in the course of one eventful day. Its ultimate impression that survives is of some vast material force at work, some mighty organization—of a war of munitions, transport, apparatus; but side by side with these mechanic things, inspiring the Frankenstein monster with human passion and life, were a gallantry and valour unsurpassed—if they have ever been equalled—in the history of the world; cold and unmoved here in the second line; fierce and pitiless there in the couloirs and avenues of Death; genial and tolerant once the point of victory has been reached, the enemy beaten."

Somewhat later, but still on the Somme, occurred an incident illustrative of the risks of even the civilian observer:—

"As I stood here, absorbed in its detail, I saw approaching me, racing across the grey waste, like some footballer dashing for his goal, a small black creature, clearly visible, swaying from side to side, yet furiously intent upon its course. I dropped into the trench to the sound of a smashing explosion; a shower of mud, and a heavy fall as de G——, who had been following us, rolled over at my feet."

Perhaps the finest sections of the book are those devoted to France at war by sea and land, a noble appreciation of her splendour and resolve. The spirit of the nation, her anguish, the death-despising valour of her sons and daughters are painted with restraint but with throbbing human feeling.

A meeting with Marshal Joffre, of whom there is a life-like sketch; a visit to Toulon, with its fortifications and munition works; a voyage to Malta in a French cruiser through waters stiff with submarines, are incidents sufficiently inspiring but pale in comparison with the lurid glow of the battle front. The culmination of tragic intensity is the picture of havoc and desolation at Rheims, at Arras, at Senlis. For one sombre sketch of the Cathedral at Rheims, still in these later days the object of barbarian fury, we must find space:—

"Its rich and splendid portals are hidden behind sandbags that time and weather have turned to mildewed black; its great rose-windows, that were once the pride of the world, gape in their empty sockets like the eyes of the blind; the statues and columns on its front are shattered and twisted as if in a convulsion of pain; the knees of its Christ over the northern portal are broken. His face is torn away; its saints, apostles, and kings; its soaring towers, its vaulted roof; its centuries of toil, the willing labour of men to whom their work was like a prayer—all these, and more than these, are involved in the tragedy of destruction. A nail has been driven here into the very heart of France."

Egypt was twice visited: once early in 1916, when the writer had as fellow-passenger the great-hearted warrior Sir Pertab Singh, of whom there are delightful reminiscences, and when there still lingered relics of the forlorn attack on the Canal; a second time, a year later, when he was privileged to plunge into the desert on the way to Palestine. From El Mazar he rode to an encampment of our cavalry from beyond the seas, and was bidden to accompany their Brigadier to inspect outlying pickets:—

"We did so, and for my own part I was rather surprised that I ever got there, for this General of sixty rides with the fiery speed of a Rupert, and looks, when he is in the saddle, more like a centaur than a British officer. He carried me over those sand-hills that follow each other in long waves, mountainous upon one side, like the blade of a sword or the inside of a wave upon the other, at the rate of a whirlwind. It was an uncomfortable journey, but I found some consolation in the sight of his superb unbending figure and in the group of officers, some twenty in number, who rode beside him—colonels and aides-de-camp—their emu plumes fluttering in the breeze, the very pattern of Chivalry. Every one of these men rode with the grace of a cavalier—the southern warmth of Australia lending to the heavier British stock, from which they have sprung, the lightness and flexibility that are their special characteristic. There is, I should think, no cavalry in the world the natural equal of these splendid horsemen."

Perhaps it is ungracious to say that the section devoted to Mesopotamia, which our author saw only vicariously, might with advantage have been omitted. Though interesting in itself, it is not in keeping with the rest, and mars the composition.

We have reviewed this book at length because it seems to us to be a work of permanent interest, which may be read not once and twice with pleasure and profit. Written with unimpeachable good taste, it should realise the author's hope that it may help, if help be needed, to preserve the admirable fellowship between ourselves and our Allies, between all the peoples of the British Empire. To us it sounds a special appeal as the work of one holding a worthy place in the ranks of men at once of action and of letters who have served the State in the East.

* "The Scene of War." By V. C. Scott O'Connor (Odysseus). (Edinburgh and London: Wm. Blackwood and Sons. 5s. net.)

BOOK NOTES.

At a recent meeting at Khartoum, presided over by General Stack, the Acting Governor-General of the Sudan, it was decided "that a scientific journal be started dealing with Sudan anthropology, languages, geography, natural history, and other sciences." The journal, to be known as *Sudan Notes and Records*, will be edited by Mr. J. W. Crowfoot, Director of Education, and will be published quarterly. Correspondence or subscriptions (10s. 6d. per annum) should be addressed to Mr. R. Wedd, Lands Department, Khartoum.

Mr. E. S. Thomas has now published his fourth edition of his short guide to the chief exhibits of the Cairo Museum of Antiquities. One of the idiosyncrasies of the Cairo Museum is that the situation of the exhibits is frequently changed, thus soon causing any existing guide-book to become obsolete. The fact that Mr. Thomas has been obliged to bring out four editions is an eloquent proof of the activities of the curators in this connection.

BOOKS RECEIVED.

The Immortal Gamble: and the Part Played in it by H.M.S. "Cornwallis." By A. T. Stewart, Acting Commander, R.N., and the Rev. C. J. E. Peshall, B.A., Chaplain, R.N. (London: A. and C. Black, Ltd. 6s. net.)

Russian Poets and Poems. Vol I. "*Classics.*" By Mme. N. Jarintzov. (Oxford: Blackwell. 10s. 6d. net.)

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. July.	1917. June.		1335. Ramadan	5677. Tamuz
13	30	Friday	23	23
14	July 1	Saturday.....	24	24
15	2	Sunday	25	25
16	3	Monday	26	26
17	4	Tuesday	27	27
18	5	Wednesday	28	28
19	6	Thursday	29	29

The Earl of Bessborough has left London for Birmingham.

A total eclipse of the moon was plainly visible at Cairo on Wednesday evening of last week.

It is announced from Athens that 134 generals, colonels, and lieutenant-colonels have been relieved of their duties.

The Serbian Minister was among the diplomatic visitors to Mr. Balfour at the Foreign Office on Tuesday afternoon.

A telegram from Sofia states that the Dutch Minister there has been charged with the protection of Greek interests in Bulgaria.

Prince Nicholas and his family and Prince Christopher have left Greece for Italy on board the Greek Royal yacht Amphitrite.

An Athens message received through Reuter's Agency states that Captain Criezis, Naval Attaché at the Greek Legation in London, has been recalled.

According to a telegram from Amsterdam, the *Deutsche Tageszeitung* says that Prince George of Greece has arrived in Berlin and is staying at the Hotel Continental.

Earl Grey, who returned to South Street, Park Lane, on Tuesday morning from Buckhurst, Sussex, is making but slow progress towards recovery from his long illness.

La Bourse Egyptienne has ceased its Sunday issue, announcing at the time that this was the prelude to more drastic measures of economy. It has now raised its price to P.T.1, and continues to appear in its ordinary size.

Lord Basil Blackwood, Grenadier Guards, is officially reported as missing since July 3. He is the second surviving son of the first Marquess of Dufferin and Ava and of the Dowager Marchioness of Dufferin and Ava.

A mission composed of Mussulmans from Tripoli, Cyrenaica, Erythrea, and Italian Somaliland has arrived at Jeddah to study the question of the pilgrimages to the Holy Places undertaken by Mussulman subjects in the Italian colonies.

General Sarrail arrived in Athens on July 4, and was met at the station by M. Venizelos and M. Jonnart. It is understood that his visit is connected with the future co-operation of the Greek Army with the Allied troops based on Salonika.

According to the *Morning Post's* Stockholm correspondent, it is understood that the Swedish Government has received a request from the authorities at Washington to obtain particulars of the cruelties committed by the Turkish troops in Armenia and Mesopotamia.

A Greco-Entente entertainment took place at Athens on Tuesday night for the purpose of promoting the fraternization of Greek and French officers. M. Venizelos and the other members of the Cabinet, Admiral de Gueydon, and the Diplomatic body attended.

The funeral of Dr. John Stuart Campbell, who died at Jassy of a disease contracted in the practice of his profession, took place there on Friday last. It was attended by many distinguished Roumanians, and M. Duca, the Minister of Education, delivered a warm tribute to his devoted self-sacrifice.

M. Jonnart, the Allies' High Commissioner at Athens, arrived in Rome on Monday from Greece. He reached Paris on Wednesday and will take part in the forthcoming conference on Balkan affairs. During his abence from Athens M. Clausse, Counsellor of Embassy, will represent M. Jonnart and receive his instructions.

The value of the estate of Major Arthur Austen Macgregor Layard, R.E., of Victoria Road, Kensington, who took part in the actions of Hasheen and Tamai and with the Sudan Expedition in 1885, and died as the result of injuries received in a motor accident on June 5, has been returned at £20,433.

An address on "Mesopotamia and the Baghdad Railway" will be delivered to the members of the London Chamber of Commerce by Mr. F. Faithfull Begg in the Council Room of the Chamber on Monday, July 16, at 2.30 p.m. The Right Hon. Lord Desborough, K.C.V.O., President of the Chamber, will preside.

Mr. George Stokes, who recently died at Lichfield, in his seventy-fourth year, joined the Staffordshire Militia as a drummer-boy when only ten years of age, and a year afterwards was sent to Corfu and Cephalonia and served during the Crimean War. At the age of fifty-eight he went out to South Africa, and, when he returned in 1907, he had a record of over fifty-three years' continuous service

The War Organisation of the British Red Cross Society and the Order of St. John has added to its laurels by its latest achievement in Egypt. In the summary of the work done in that country it is announced that "Red Cross stores and comforts are now being delivered by aerial service. An aeroplane leaves a certain point in the Canal zone daily and carries such Red Cross comforts as fans, fly whisks, chocolate, gramophones, etc., to outlying medical units in the desert."

According to *The Times'* Athens correspondent, the journal *Hestia* states that the Government intends to undertake immediately extensive agricultural work in Macedonia. It is said that the grain and vegetable crops are expected to equal the yield in Thessaly. The Allies will probably be asked to lend prisoners of war for this purpose, as 8,000 additional labourers may be needed. As many as 900,000 acres are to be placed under cultivation. The result of this effort will naturally be of great value to the Macedonian Army.

The total subscriptions received by the Lord Mayor for the Lord Kitchener National Memorial Fund up to June 30 amounted to £445,000. The cost of the collection and administrative expenses are returned at 1¼ per cent. Applications are being received from disabled officers and men of the Navy and Army for the provision of hand-propelled chairs and surgical appliances. A scheme for the endowment of Kitchener scholarships is under consideration by the Council. Communications regarding the fund should be addressed to Sir Hedley Le Bas, joint hon. secretary, 34-35, Norfolk Street, London, W.C.2.

M. Joannes Gennadius has now received official confirmation from Athens of his appointment as Greek Minister under the Venizelist Government to the Court of Saint James. In December last M. Gennadius, who has represented Greece in London for many years, resigned his position on finding himself not in sympathy with the policy of ex-King Constantine's Government. Shortly afterwards the British Government decided to recognize diplomatic representatives of the National Government established at Salonika by M. Venizelos, and M. Gennadius was officially informed by the Foreign Office of his recognition as accredited representative of that Government.

The opening of a new Y.M.C.A. hut at Mürren by Lady Rumbold, wife of the British Minister at Berne, was a gala occasion for the interned British prisoners of war.

Lieutenant-Colonel H. Picot, who is in charge of all the British prisoners interned in Switzerland, took the opportunity, we learn from the *Morning Post*, to give the men the latest information regarding the repatriation proposals. He said:—"A small number of men have been selected by the Swiss doctors for immediate repatriation, and they will proceed to England very shortly. This is under the old system of repatriation, which has already been replaced by a much wider scheme affecting only France and Germany at present. . . . The agreement arrived at between France and Germany applies to the following classes of interned men, the general principle followed being that the sick and wounded whose re-establishment to health is not likely to take place within one year, and whose validity has diminished by about 50 per cent., will be repatriated:—

"(1) All those who have lost one member, at least a hand or a foot; (2) all suffering from a grave infirmity which is not likely to disappear within one year, with or without operative treatment—for instance, complete or partial ankylosis or paralysis, diminishing by about three-quarters the use of a shoulder, elbow, wrist, leg, knee, or foot; (3) mutilation of the face, mouth wounds, head wounds causing epilepsy; (4) cases of wounds in the vertebral column, throat, abdomen, etc.; (5) tuberculosis where a cure in Switzerland is not likely to be useful; (6) diseases affecting respiration, the heart, digestion, and grave neurasthenia; (7) blindness; (8) deafness of certain degree; (9) mental cases; (10) malaria cases, serious; (11) kidney troubles; (12) tuberculosis (cured).

"This scheme, which is already in operation for France and Germany, has been sent, at the request of the Swiss Government, to the Home Government. The Swiss Government has asked whether his Majesty's Government will agree to the scheme, and it is probable that an answer will be received in about a fortnight. If the assent of his Majesty's Government be given, it is calculated that 15 per cent. of those now interned in this country will be repatriated. . . . Six hundred and fifty French tuberculosis cured cases have already left Switzerland for France."

APPOINTMENTS, PROMOTIONS, ETC.

Lewa C. E. G. Blunt Pasha, D.S.O., Reserve of Officers, has been granted the temporary rank of colonel whilst employed as Director of Supplies, Egyptian Army.

The Minister of Public Works has approved the promotion of Mr. Hindmarsh, Director of Works, 2nd Circle of Irrigation, to the post of Inspector of Irrigation. He will be transferred to the Sudan.

According to *Al-Mokattam*, it has been decided to appoint Mr. Bury (Inspector of Irrigation in the Sudan) Inspector of the 2nd Circle of Irrigation, in place of Mr. Bulkeley, who has been transferred to the Projects Department.

Kaimakam E. G. Rainsford-Hannay Bey, Acting Director of Military Works, has been granted leave of absence expiring on August 25, and Kaimakam T. A. Nicholas Bey, Sudan Veterinary Department, and C. R. K. Bacon Bey, Officer Commanding 15th Sudanese, have been granted leave of absence expiring on August 23.

The following Consular appointments have been made :—

Harold Eustace Satow, Esq., to be his Majesty's Consul for the Province of Thessaly, to reside at Larissa.

Clifford Edward Heathcote-Smith, Esq., to be his Majesty's Consul at Salonika.

Lieutenant Terence Vincent Brenan to be his Majesty's Vice-Consul at Birjand (Persia).

William Richard Howson, Esq., to be his Majesty's Consul for the District of Bunder Abbas up to the Khamir Boundary, the Districts of Shamilat and Minab, and the Islands of Hormuz, Larak, Kishm and Henjam, to reside at Bunder Abbas.

OBITUARY.

The death of Viscount Frankfort de Montmorency took place suddenly on the 5th inst. at Woodend, Studland, Dorset. He had succeeded his father as the fourth viscount in 1902. Formerly a captain in the Duke of Cornwall's Light Infantry, Willoughby de Montmorency served in Burma, 1891-2 (medal with clasp), the Tirah Expedition, 1897-8 (medal with two clasps), and the Nile Expedition, 1899 (medal with clasp). In 1916 he married Mabel Augusta, Mrs. Pearson, daughter of the late C. L. Throckmorton.

The death took place at Cairo on Wednesday evening of El Lewa W. B. Drury Pasha, R.N.R., Director of Steamers, Sudan Government. Drury Pasha has been connected with the Egyptian Army since 1902, when he served in the Sudd Cutting Expedition in the Bahr El Ghazal. He was subsequently appointed Controller of Harbours and Lights, Sudan Government, at Port Sudan, which post he filled until 1913, when he was appointed to succeed Lewa E. E. Bond Pasha, C.M.G., as Director of Sudan Government Steamers.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

HENLEZ.—On Wednesday, July 4, at Haddon-Kodaikanal, South India, the wife of Commander C. B. Henlez, A.D.C., R.I.M., Port Officer, Aden, of a son.

SMITH.—On July 7, at Chinthurst Hill, Guildford, Lady Elisabeth Smith, wife of Sir Henry Babington Smith, of a daughter.

VERNON-JARVIS.—On the 13th inst., at Cairo, Itala, wife of Bimbashi Vernon-Jarvis, of a son—Eric Horace Anthony.

FORTHCOMING MARRIAGE.

The marriage between Major H. A. Wernher and Countess Zia de Torby will take place quietly, owing to the war, on Friday, the 20th inst., at half-past two o'clock, at the Chapel Royal, St. James's Palace. The limited accommodation of the chapel only allows of near relatives and a few friends being present.

MARRIAGES.

HOLMES—DUNSFORD.—On July 4, at the British Consulate and the R.C. Church, Citadel, Cairo, Egypt, Major Maurice Gerald Holmes, A.S.C. (tempy.), son of Mr. Edmond Holmes, late Chief Inspector of Schools, and Mrs. Holmes, to Ivy, only child of Brigadier-General F. P. S. Dunsford and Mrs. Dunsford, Continental Hotel, Cairo.

NOLL—WALKER.—On June 14, at the Cathedral, Gibraltar, by the Very Reverend the Dean, Lieutenant Maurice G. Noll, R.N.V.R., only son of Eng. Captain G. W. Noll, R.N., and Mrs. Noll, of West Southbourne, to Gwendolen Edith, younger daughter of Admiral and Mrs. T. P. Walker, of 69, Prince Edward's Road, Gibraltar, and Homeleigh, Woking.

DEATH.

HADDEN.—On July 4, in Cairo, from typhoid, Eleanor Fanny (Nellie), second daughter of the late C. S. Hadden, of Rossway, Herts, aged sixty.

DIED OF WOUNDS.

SYKES.—On June 29, at a casualty clearing station, of injuries received flying June 23, Lieut. Harold Keith Sykes, Royal Fusiliers, Royal Flying Corps, dearly-loved eldest son of the late Mr. J. D. Sykes, of Woking, and Mrs. Sykes, 109, Ebury Street, S.W., and grandson of the late Patrick Keith, Esq., of London and Algiers, aged twenty-five.

SERBIAN TREASON TRIAL.

A semi-official *communiqué*, issued at Corfu on July 6, Reuter's correspondent announces, gives a number of details regarding the high treason trial for which two Serbian officers and an Austrian subject were shot on June 26 outside Salonika. The prisoners were members of a secret society called "Union or Death." It was shown that one of the objects of the society was the establishment of a purely military *régime*, and that a propaganda was carried on in the army against the policy pursued by the Crown Prince and the Serbian Government, though all the society's efforts to bring about disorders and risings failed owing to the patriotism of the army and the people. The society's programme included the removal by force of the Crown Prince and M. Pashitch, the Premier, who were described as "blindly attached to the Entente Powers."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.

PERSIA'S PROBLEM.

All eyes in Persia at the present moment are directed towards Petrograd. Not even in Russia itself, it is safe to assume, has the revolution aroused greater hopes than it has among the inhabitants of Northern Persia. As far as they are concerned, there is no need to wait until the end of the war for putting into practice the policy of "no annexations." Russia's hold on Azerbaijan during the old régime was hardly distinguishable from annexation, and if the Provisional Government is sincere in its protestations, it will lose no time in restoring this Persian province to its rightful owners. Such, indeed, is the line of argument current throughout the north of Persia. That it should be so will evoke no surprise. In its practical application to the settlement of Europe and Asia Minor after the war the theory of "no annexations" may be susceptible of modifications that have not yet occurred to the minds of the "Maximalists" of Petrograd; but these modifications will not be applicable to Persian territory, where the principle of nationality provides only one possible solution. Some such thoughts would seem to have occurred to the Russians on the spot in Azerbaijan; for we hear of the establishment of most cordial relations between Persians and Russians, of even the fraternisation of the inhabitants with the army of occupation. Where a few years ago the Russian military authorities prohibited the holding of elections, meetings have taken place with full Russian approval to demand the restoration of the Persian Parliament, and elections may even now be in full swing. It is impossible to withhold sympathy from the Persians in the aspirations which events in Russia have naturally kindled amongst them. The hand of autocratic Russia lay heavily upon them, and often it made itself felt through the local bureaucrats more harshly than the Central Government may have intended. Any hopes founded on the association with Russia of a more liberal-minded Britain had long since been dissipated, when it was realised that the effect of the 1907 Agreement was to make Russia not only the predominant partner, but the sole dictator of any policy that might be applied in the joint name of the protecting Powers. The revolution has swept the former Russian régime away, and left in its place wonderfully vocal exponents of the principles of liberty, equality, and fraternity.

The new orientation of the Allies' war views which is understood to have been called for by Russia will, we may hope, enable the British and Russian Governments to revise their Persian policy. The lines that we should like to see that policy follow have frequently been set forth in the pages of THE NEAR EAST. They may not conform entirely with the views that are now prevalent in Persia, where probably the sudden swing of the pendulum has disturbed the popular balance almost as violently as it has done in Russia. Public attention will at once be centred on the Mejliss, and it will seem as if only the reintroduction of a full democratic Constitution was required to bring the millennium to Persia. The real friends of the country will feel compelled to utter a warning against this optimistic view. By all means let the Persians enjoy free institutions and be allowed to work out their own salvation; but they will reach more quickly the goal at which they are aiming, if they make up their minds to hasten slowly. Democracy, as General Smuts has reminded the Russians, means work. In Persia's case, in particular, there is a considerable amount of hard work in store before the country can win through—so much work, indeed, that it may even be doubtful whether the more enlightened Persians, who will be required to put their shoulders to the wheel, will have any time for talk in the Mejliss. Successful government, under whatever name it passes, rests upon two indispensable foundations—order and finance. At the present moment the Persians are quite unable of themselves to supply either of these essentials; consequently, if the State edifice is to be constructed entirely by Persian hands, it will either be without foundations, or it will rest insecurely on a base with which it has no real connection. For this reason we should prefer to see Persia still looking, of her own accord and more trustfully than hitherto, to the protecting Powers for guidance and material help in the work before her. She will do no good by refusing to face facts. These, in so far as she is concerned, are that, for one reason or another, the country has for a long time been given over to disorder and lawlessness; the exchequer is empty, and past experience does not afford her any confidence that she has ready to hand a supply of officials capable, without supervision, of administering the country on sound and honest lines.

In common with the Persian Liberals we hope that the Russian revolution will effect a great change in Persia's fortunes. Certainly the time has come for Great Britain to free herself from the strange subservience which for so many years prompted her to acquiesce in the application to the Persians of a policy distasteful to her and contrary to her traditions. In winning Russian approval now for a more liberal attitude towards Persian affairs the British Government will be pushing at an open door; but it must have ready a cut-and-dried policy, and be prepared to commend it with conviction to the approval of the Russian Government. The Persians will naturally be a party to any new arrangement. Complete unanimity between the three countries ought not to be difficult to attain, if the Persian Government bears in mind that it is dependent on Great Britain and Russia both for the maintenance of law and order in the land, and for the replenishing of the exchequer. How far Persia has yet to travel before she can stand alone is proved by General Sir Percy Sykes's experience in the formation of the new gendarmerie. It was not merely the extension of the European war to Persia that was responsible for the condition of things which he was called upon to remedy. German intrigue had enveloped the land, and hostility to Russia supplied a fruitful field for the machinations of German agents; but at the root of all the trouble lay the age-long absence of any real control over the country by the Teheran Government. Before the latter can hope to exercise its functions adequately it must allow a disposition towards law and order to be inculcated by the agency of a gendarmerie and militia under foreign organisation, and it must pass through a long course of instruction in the science of financial administration. Until Persia is opened up by means of more adequate communications the efforts of the Teheran Government will be largely stultified. Foreign enterprise will be needed to achieve this end, and it will need a fairly free hand. Persian patriots, therefore,, while urging their country's claims for generous and sympathetic treatment, will do well to remember the limitations under which they start on the laborious task of building up an independent State. What is most required is real hard work, and anyone who will contribute this, be he Persian, British, or Russian, is likely to do the country more good than those who only contribute words to the solving of Persia's national problem.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.2.

ITALY AND THE BALKANS.*

THE PROBLEM OF DALMATIA.—II.

The latest Austrian statistics give an overwhelming majority of Slavs in Dalmatia. The Slavs themselves are not satisfied with this majority, and maintain that the statistics favour the Italians. The electoral returns seem to show that, far from being favoured, the Italians in Dalmatia have been under-estimated by two-thirds. But if the policy of persecution, of intimidation, and violence pursued by Austria during the last fifty years is not to be allowed to obtain its object, if the great democracies of the world are not to let crime go unpunished, it will be necessary to consider not the statistics of to-day alone, but the statistics of the last fifty years, and to inquire very carefully into the astonishing changes which have taken place. Even in 1880 all the municipalities of the largest Dalmatian cities were Italian. To-day the capital alone—Zara—has an Italian corporation. Even Ragusa had until the turn of the century a municipality which consisted half of Italian and half of Serbian representatives. Now Ragusa, like Spalato since 1883, like Sebenico and Trau, is entirely in the hands of the Croats. In the Dalmatian Diet of 1861 the Italian party had thirty members against thirteen more recently. When the Venetian Republic fell the Dalmatian cities showed in unmistakable manner their attachment to the State which had carried on the traditions of Rome extending over a period of twenty centuries. What has happened in the last fifty years to change the national character of the province? Simply this: the Austrians, to justify their possession in the face of Europe, which demanded a national base for the State, decided upon a crusade to denationalise the whole of the Italian provinces, a crusade which sometimes was childish and futile, as when the Austrian authorities cut a Venetian lion from one of the city walls of Monfalcone, but more often was bloody and violent.

The notion originated with Radetzky. But it was not adopted at once, for Austria had still hopes of recovering Venice and possibly the Milanese, in which case there would have been one more nationality to steady the political balance of the empire. When the statesmen of Vienna realised that Italy was more likely to claim what belonged to her by right than to lose a part of what she held, they embarked on their new policy, which is the exact counterpart of the policy carried on by Germany in Alsace-Lorraine and attempted in a necessarily modified form in Belgium since the occupation. Europe demanded that the people should choose their government. Austria and Germany—autocracies—undertook to provide the kind of people that would be faithful to them. The experiment has not been altogether successful in Dalmatia, for part of the Slavs now demand separation. But the Croatian Slav is still one of the mainstays of the monarchy, and in the meantime the Italians were sacrificed.

How Austria respected the wishes and aspirations of her people is shown by the manner in which the elections for the Diet were carried on in Dalmatia. The preparation consisted in a series of acts of brutal violence to intimidate the Italian electors. Flourishing vineyards were destroyed, trees cut down, fields ready for the harvesters trampled upon, electors shot at and stoned. The electoral commission worked protected by the soldiers' bayonets. One of the Austrian officials, unaware that a Croatian victory had been ordered from Vienna, reprimanded the authors of some gross fraud. He was immediately suspended, and the campaign was carried on with greater violence, with contemptuous disregard of all equity and justice. When it became apparent that the victory would go to the Italians unless new subterfuges were resorted to, the Slav electors were recalled and made to impersonate voters long dead. The Italians discovered the fraud, and obtained and produced death certificates; the commission refused to listen to them. But victory still hung in the balance. The special Viennese envoy had to resort to open violence. He began by teaching the Slav from the country to make the road dangerous for the Italian electors. He ended by ordering or countenancing a charge of two battalions of Tyrolese chasseurs to disperse a few hundred Italians who were waiting their turn to enter the polling booth. Is it surprising if the result gave a Diet in which the number of the Italian representatives fell from thirty to thirteen? Nor was the method adopted to win over the municipal government essentially different. When Spalato passed over to the Croatians in 1883 a couple of warships kept their guns trained on the town, while patrols of soldiers and sailors prevented Italian electors from reaching the voting stations. Italian votes were cancelled, clocks were tampered with to hasten or suspend the closing hour as the election seemed to go in favour of or against the Croatian party. The Austrian "prefect" ordered all the Government employees to vote for the Croatians, and the Slav bishop issued a similar command to his dependents. Thus gradually all the civic government fell into the hands of the protégés of the Austrians. A few years ago the islands of Brazza, Lissa, Werbosca, in Lesina, still held out. To-day the capital —Zara—stands alone.

To capture the municipal government was essential to the success of the Austrian plan. The municipality alone is sufficiently powerful to protect the city and the surrounding district from the attacks of the government party. To drive away or convert forcibly the Italians, it was necessary to control schools and churches. This could not be done as long as the town authorities had the means to open new schools and the power to protest against a political campaign carried on from the pulpit. When the control of the city government was secured church and schools were used with unparalleled unscrupulousness to sow hatred and distrust of all Italians. There are cases on record where the Croatian priests (the bishops of Trieste and Veglia are Slavs) have refused to administer baptism and the last sacraments of the Church to Italians because they were Italians. A funeral procession was refused admittance to church, and denied permission to enter the cemetery for the same reason. A few years ago the Bishop of Veglia, Monsignor Mahnic, issued an order that religion was to be taught in all the Quarnero Croatian islands irrespective of the nationality of the students and of their inability to understand the language. But the schools' council had still some power over which the Government's hand did not stretch, and it exercised it by substituting for the priests lay teachers able and willing to teach religion in the only tongue the pupils spoke and understood. At the close of the scholastic year the bishop retorted by excommunicating both teachers and council, a procedure which the Crotian clerical paper, *Pucki Prigateli*, described as an excellent manœuvre. Another teacher was arrested and tried because he happened to use Latin instead of Croatian when singing the "Tantum ergo." When a religious body from Slav Zagabria asked permission to open a school at Pola, the authorisation was granted immediately, but the friars of Pirano, when they made a similar request, received a sharp denial, because they were of Italian nationality. Such examples could be multiplied indefinitely, but enough has been said, perhaps, to prove at least that the power which inspired this policy of extermination against the Italians of the Irredenta is hardly likely to have "cooked" the statistics in order to favour the Italians at the expense of the Slavs. The Italians of Dalmatia, says Gayda, contributed 30 per cent. of the provincial taxes in 1911, yet the Budget did not give them a single school in which their children could receive their education in the language of their fathers. The Austrian Minister of Education, after many petitions, acknowledged in 1886 that "the conditions required by the law for the institution of an Italian school at Spalato exist without doubt," and the Imperial tribunal confirmed the Government's statement, and yet the school was not established.

F. BONAVIA.

THE MESOPOTAMIA CAMPAIGN.

DESPATCH FROM SIR STANLEY MAUDE.

A Supplement to the *London Gazette* issued on July 10 contains a despatch from Lieut.-General Sir Stanley Maude, Commander-in-Chief, Mesopotamian Expeditionary Force, describing the operations carried out by him in the period extending from August 28, 1916, when he assumed command, until March 31 last, three weeks after the fall of Baghdad.

The enemy's plan appeared to be to contain our main forces on the Tigris whilst a vigorous campaign, which would directly threaten India, was being developed in Persia. There were indications, too, of an impending move down the Euphrates, towards Nasariyeh. To disseminate our troops in order to safeguard the various conflicting interests involved would have relegated us to a passive defensive everywhere, and it seemed clear from the outset that the true solution of the problem was a resolute offensive, with concentrated forces on the Tigris, thus effectively threatening Baghdad, the centre from which the enemy's columns were operating. Such a stroke pursued with energy and success would, it was felt, automatically relieve the pressure in Persia and on the Euphrates, and preserve quiet in all districts with the security of which we were charged.

That was the principle which guided the subsequent operations, which are grouped into eight phases :—

(1) Preliminary preparations, from August 28 to December 12.

(2) The consolidation of our position on the Hai, from December 13 to January 4.

(3) The operations in the Khadairi Bend, from January 5 to 19.

(4) The operations against the Hai salient, from January 20 to February 5.

(5) The operations in the Dahra Bend, from February 6 to 16.

(6) The capture of Sanna-i-yat and passage of the Tigris, from February 17 to 24.

(7) The advance on Baghdad, from February 25 to March 11.

(8) The operations subsequent to the fall of Baghdad, from March 12 to 31.

Before active operations could be undertaken, however, with reasonable prospect of success, a vast amount of preliminary preparations had to be carried through. By the end of November these preliminary preparations were well advanced. A steady stream of reinforcements had been moving up the Tigris for some weeks, and drafts were joining their units, making good the wastage of the summer. The troops had shaken off the ill-effects of the hot weather, and their war training had improved. Stores, ammunition, and supplies were accumulating rapidly at the front, communications were assured, and it seemed clear that it was only a matter of days before offensive operations could be justifiably undertaken. Training camps which had been formed at Amarah were broken up, and the general concentration upstream of Sheikh Sa'ad was completed.

It was decided, first, to secure possession of Hai ; secondly, to clear the Turkish trench systems still remaining on the right bank of the Tigris ; thirdly, to sap the enemy's strength by constant attacks, and give him no rest ; fourthly, to compel him to give up the Sanna-i-yat position, or in default of that to extend his attenuated forces more and more to counter our strokes against his communications ; and, lastly, to cross the Tigris at the weakest part of his line as far west as possible, and so sever his communications. In carrying out this programme our extended line offered good opportunities for making successful feints to cover our real intention.

Resumption of Operations.

The despatch details the operations for the consolidation of our position on the Hai, by which we (a) secured a position whence we could control that waterway and directly threaten the enemy's communications west of Shumran ; (b) rendered Nasariyeh safe against a hostile movement from the Tigris down the Hai ; (c) increased the possibility of obtaining supplies from the prosperous districts on the middle Hai, and rendered it correspondingly difficult for the enemy to supply himself from there ; (d) interposed between the Turks and their adherents at Shattra.

The next operation was to clear the Khadairi bend, which was a menace to our communications with the Hai. This was accomplished by Lieut.-General Cobbe by January 19.

Lieut.-General Marshall then took a hand in the reduction of the Hai salient, the extensive trench system which the Turks held astride the Hai River, near its junction with the Tigris. The operations lasted from January 20 to February 5, and were successfully concluded. During this period the splendid fighting qualities of the infantry were well seconded by the bold support rendered by the artillery, and by the ceaseless work carried out by the Royal Flying Corps.

The clearing of the Dahra bend followed, from February 6 to 16. It was brilliantly carried out, after severe fighting, and thousands of prisoners were captured. The enemy (General Maude continues) had now, after two months of strenuous fighting, been driven entirely from the right bank of the Tigris in the neighbourhood of Kut. He still held, however, a very strong position defensively, in that it was protected from Sanna-i-yat to Shumran by the Tigris, which also afforded security to his communications running along the left bank of that river. The successive lines at Sanna-i-yat, which had been consistently strengthened for nearly a year, barred the way on a narrow front to an advance on our part along the left bank, whilst north of Sanna-i-yat the Suwaikieh Marsh and the Marsh of Jessan rendered the Turks immune from attack from the north. On the other hand, we had, by the application of constant pressure to the vicinity of Shumran, where the enemy's battle line and communications met, compelled him so to weaken and expand his front that his attenuated forces were found to present vulnerable points, if these could be ascertained. The moment then seemed ripe to cross the river and commence conclusions with the enemy on the left bank. To effect this it was important that his attention should be engaged about Sanna-i-yat and along the river line between Sanna-i-yat and Kut, whilst the main stroke was being prepared and delivered as far west as possible.

The capture of Sanna-i-yat position, which the Turks believed to be impregnable, is fully described in the despatch. It was accomplished after a fierce struggle, in which our infantry, closely supported by our artillery, displayed great gallantry and endurance against a brave and determined enemy.

The Advance on Baghdad.

Then began, on February 25, the pursuit of the Turks which resulted in the occupation of Baghdad on March 11. Early in the morning of February 25, the cavalry and Lieutenant-General Marshall's force moved north-west in pursuit of the enemy, whose rearguards had retired in the night. The gunboats also proceeded up-stream. Our troops came in contact with the enemy about eight miles from Shumran, and drove him back, in spite of stubborn resistance, to his main position two miles further west, where the Turks, strong in artillery, were disposed in trenches and nalas. After a severe fight, our infantry gained a footing in the enemy's position and took about 400 prisoners. The cavalry on the northern flank had been checked by entrenched infantry, and were unable to envelop the Turkish rearguard. The Royal Navy on our left flank co-operated with excellent effect in the bombardment of the enemy's position during the day. On the 26th one column, following the bend of the river, advanced to force any position which the enemy might be holding on the left bank of the Tigris, whilst another column of all arms marched direct to the Sumar bend in order to intercept him. His retreat proved, however, to be too rapid. Stripping themselves of guns and other encumbrances, the Turks just evaded our troops, who had made a forced march across some eighteen miles of arid plain. Our cavalry came up with the enemy's rear parties and shelled his rearguard, entrenched near Nahr Kellak.

The pursuit was taken up by the gunboat flotilla, which, proceeding upstream full speed ahead, came under very heavy fire at the closest range from guns, machine-guns, and rifles. In spite of casualties and damage to the vessels the flotilla held on its course past the rearguard position, and did considerable execution among the enemy's retreating columns. Further upstream many of the enemy's craft were struggling to get away, and the Royal Navy pressed forward in pursuit, capturing in turn the armed tug "Sumana," the Turkish steamer "Basra," full of troops and wounded, H.M.S. "Firefly," which had been taken from us during the retreat from Ctesiphon in 1915, and the "Pioneer." Our gunboats were in touch with and shelled the retreating enemy during most of the 27th, and his retirement was harassed by the cavalry until after dark, when his troops were streaming through Aziziyeh in great confusion.

The pursuit was broken off at Aziziyeh (fifty miles from Kut and half-way to Baghdad), where the gunboats, cavalry, and Lieutenant-General Marshall's infantry were concentrated during the pause necessary to reorganise our extended line of communication preparatory to a further advance. Lieutenant-General Cobbe's force closed to the front, clearing the battlefields and protecting the line of march. Immense quantities of equipment, ammunition, rifles, vehicles, and stores of all kinds lay scattered through-

Digitized by Google

out the eighty miles over which the enemy had retreated under pressure, and marauders on looting intent did not hesitate to attack small parties who stood in their way.

On March 5 the supply situation having been rapidly readjusted, Lieut.-General Marshall marched to Zeur (eighteen miles), preceded by the cavalry, which moved seven miles further to Lajj. Here the Turkish rearguard was found in an entrenched position, very difficult to locate by reason of a dense dust storm that was blowing and of a network of nalas, with which the country is intersected. The cavalry was hotly engaged with the enemy in this locality throughout the day, and took some prisoners. The enemy retreated during the night. The dust storm continued on the 6th, when the cavalry, carrying out some useful reconnaissances, got within three miles of the Dialah river, and picked up some prisoners. The Ctesiphon position, strongly entrenched, was found unoccupied. Lieut.-General Marshall followed the cavalry to Bustan (seventeen miles), and the head of Lieut.-General Cobbe's column reached Zeur. On the 7th our advanced guard came in contact with the enemy on the line of the Dialah river, which joins the Tigris on its left bank, about eight miles below Baghdad. As the ground was absolutely flat and devoid of cover it was decided to make no further advance till after sunset. Our gunboats and artillery, however, came into action against the hostile guns.

General Maude then tells the story of the Dialah fight and the crossing of the Tigris, with which will ever be associated the heroic stand of a company of the Loyal North Lancashires on the right bank of the Dialah.

On the 8th a bridge was constructed across the Tigris, half a mile below Bawi, and the cavalry, followed by a portion of Lieut.-General Cobbe's force, crossed to the right bank in order to drive the enemy from positions which our aeroplanes reported that he had occupied about Shawa Khan, and north-west of that place, covering Baghdad from the south and south-west. During the forenoon of the 9th Shawa Khan was occupied without much opposition, and aeroplanes reported another position one and a-half miles to the north-west, and some six miles south of Baghdad, as strongly held.

On the morning of the 10th our troops were again engaged with the Turkish rearguard within three miles of Baghdad, and our cavalry patrols reached a point two miles west of Baghdad railway station, where they were checked by the enemy's fire. A gale and blinding dust storm limited vision to a few yards, and under these conditions reconnaissance and co-ordination of movements became difficult. The dry wind and dust and the absence of water away from the river added greatly to the discomfort of the troops and animals. About midnight patrols reported the enemy to be retiring. The dust storm was still raging, but following the Decauville railway as a guide our troops occupied Baghdad railway station at 5.55 a.m., and it was ascertained that the enemy on the right bank had retired upstream of Baghdad. Troops detailed in advance occupied the city, and the cavalry moved on Kadhimain, some four miles north-west of Baghdad, where they secured some prisoners.

On the left bank of the Tigris Lieut.-General Marshall had, during the 9th, elaborated preparations for forcing the passage of the Dialah. At 4 a.m., on the 10th, the crossing began at two points a mile apart, and met with considerable opposition, but by 7 a.m. the East Lancashires and Wiltshires were across and had linked up with the detachment of the Loyal North Lancashires, which had so heroically held its ground there. Motor lighters carrying infantry to attack the enemy's right flank above the mouth of the Dialah grounded lower down the river, and took no part in the operation. The bridge across the Dialah was completed by noon, and our troops, pushing steadily on, drove the enemy from the riverside villages of Saidah, Dibaiyi, and Qararah —the latter strongly defended with machine-guns—and finally placed the enemy's last position covering Baghdad along the Tel Muhammad Ridge. During the night of the 10th-11th close touch with the enemy was maintained by patrols, and at 1.30 a.m. on the 11th it was reported that the Turks were retiring. The Tel Muhammad position was at once occupied, and patrols pushed beyond it, but contact with the enemy was lost in the dust storm.

Early on the 11th Lieut.-General Marshall advanced rapidly on Baghdad and entered the city amid manifestations of satisfaction on the part of the inhabitants. A state of anarchy had existed for some hours, Kurds and Arabs looting the bazaars and setting fire indiscriminately at various points. Infantry guards provided for in advance were, however, soon on the spot, order was restored without difficulty, and the British flag hoisted over the city. In the afternoon the gunboat flotilla, proceeding upstream in line ahead formation, anchored off the British Residency, and the two forces under Lieut.-Generals Marshall and Cobbe provided for the security of the approaches to the city, being disposed one on either bank of the river.

The nature of the operations, General Maude adds, has been as varied as it has been complex, and the training of the troops has been tested, first in the fierce hand-to-hand fighting in trench warfare round Kut and Sanna-i-yat, and later in the more open battles which characterized the operations in the Dahra bend, the passage of the Tigris, the advance on Baghdad, and the subsequent actions. From this ordeal they have emerged with a proud record, and have dealt the enemy a series of stinging blows, the full significance of which will not be easily effaced. British and Indian troops, working side by side, have vied with each other in their efforts to close with the enemy, and all ranks have been imbued throughout with that offensive spirit which is the soldier's finest jewel. The operations have involved long hours and strenuous work, as well as great responsibilities, for commanders and their staffs, but by sheer hard work and a determination to succeed they have risen superior to every obstacle and compelled success.

The despatch closes with the following tributes to the services of Sir Stanley Maude's chief assistants :—

Lieut.-General W. R. Marshall has commanded his troops with determination and judgment. His quiet, imperturbable manner, his coolness and decision, inspire confidence among his subordinates, whilst his bold methods and intelligent appreciation and rapid execution of orders have been of the greatest value.

Lieut.-General A. S. Cobbe has commanded with marked ability. Always methodical and thorough in his plans, he brings to bear upon their execution a complete knowledge of the details of his profession. These qualities, added to a thorough grasp of the possibilities and limitations of the various arms, have enabled him to make the most of his opportunities wherever severe fighting has been involved.

Major-General A. W. Money, Chief of the General Staff, has carried out his responsible duties most competently. He has not spared himself in giving me every assistance, and his knowledge of Indian, and, indeed, Eastern, conditions has frequently been of great value to me.

Of Major-General G. F. MacMunn, Inspector-General of Communications, it is not too much to say that his responsibilities have been immense. The repeated calls made on him by me during these protracted operations have never once failed to elicit a satisfactory response, and the thoroughness and elasticity of his organization was never better exemplified than in the efficiency maintained on the lines of communication during the rapid advance on Baghdad, and subsequent to our arrival at that city. Optimistic by nature, he readily brushes aside obstacles, whether imaginary or real.

This despatch would not be complete without a reference to the valuable services rendered to the Army by Lieut.-Colonel Sir Percy Cox and the political officers working under his direction. His advice has been invaluable to me on many occasions, and the tranquil state of the country from Baghdad to Basra at the present time is in itself an additional testimony to his already well-established reputation.

THE ANGLO-HELLENIC LEAGUE.

A meeting of the Anglo-Hellenic League was held on July 5 at King's College, London, Dr. Pember Reeves presiding. In the course of his remarks the chairman said that he did not think a league founded to promote good feeling between Greece and England could have found itself in a more awkward plight than the Anglo-Hellenic League did between May, 1916, and May, 1917. But the sky had now cleared. Now that there was no sinister influence between the Greek people and Venizelos, they would trust him and give him the support he wanted. The statesmen of the Entente should have the same trust and confidence. They should not only trust Venizelos to act wisely when acting on his own responsibility, but they should condescend to ask his advice on matters relating to the Balkans, and even go so far as sometimes to take it. As to Epirus, while the situation was not free from anxiety, he (Dr. Reeves) was personally hopeful.

Mr. R. J. McNeill, M.P., moved a resolution expressing satisfaction at the present turn of events, and congratulating M. Venizelos on his services to Greece. Speaking of the part being played by Italy in current affairs, he said that he hoped that country's statesmen would remember the pronouncement made more than half a century ago by Mazzini: "The map of Europe is to redraw. New nationalities prepare everywhere to form. Poland will revive. Greece will outstrip her existing boundaries to incorporate those countries kindred in language and belief. Italy and the Southern Slavs will cause the Empire of Austria to vanish." (Applause.) When the time came for the assembling of the congress which must be held before peace could be re-established, Venizelos would of right have a seat at the council table, where his penetration, judgment, patriotism, and wisdom would be of infinite assistance.

Mr. Hugh Law, M.P., seconded the resolution.

Dr. Burrows said it was delightful to see Monsieur and Madame Jovanovitch present. (Applause.) They would know from the cheers that there was nothing that gave more delight to Greeks and friends of Greeks than the revival of the alliance with Serbia. (Renewed applause.)

The resolution was carried.

THE PRESS ON THE NEAR EAST.

M. Venizelos in Athens.

It is a dramatic situation, says Mr. Ronald M. Burrows in *The New Europe*, that Venizelos should be addressing mass meetings where only six months ago the Anathema Service judged him traitor. Mr. Burrows, who has unrivalled sources of information, suggests that Venizelos did not advise his own immediate recall, but that the actual crisis in Greece was brought about by the Allies without consulting him. He continues:—

Fortunately, it can be stated with authority that, once King Alexander was placed on the Throne, the Protecting Powers decided henceforward to ask Venizelos's advice, and to take it. Lesser men would have waited. The danger of open opposition and secret plot, the fact that the moderate element in the Royalist Party has not yet declared its attitude to the new *régime*—all such pleas would have been valid. But he has brushed them aside as irrelevant, in comparison with the one dominant necessity of showing his trust in the Greek people.

Mesopotamia.

The Report of the Mesopotamia Commission, scathing enough itself, has let loose a flood of yet more scathing language in the Press as a whole. Feeling is running almost as high as it does in the East End of London after an air raid. It may be that the idea is that unless strictures are more outspoken than usual, nothing will be done to give effect to the Commission's recommendations. This is how the *Morning Post* returns to the charge:—

It seems to us that our Royal Commissions nowadays are like school laboratories: they make stinks, but lead to no practical result. We have never heard that any action has been taken upon the report of the Dardanelles Commission, although its terms of condemnation were definite and strong. Then there is the report of the Mesopotamia Commission. Like the other, it was prepared by men of whose fairness and competence there is no question. They were duly appointed, duly heard evidence, and duly reported, and their report is the severest possible condemnation of certain people in authority. Will anything be done? Mr. Rudyard Kipling, who has the divine gift of expressing what the manhood of the Empire feels, writes with bitter scorn of the survival and advancement of those whose incompetence sent brave men to their death. His nausea reminds us of an even greater poet's cry for "restful death" as a refuge from "gilded honour shamefully misplaced," and "strength by limping sway disabled." It is indeed a thought which almost induces physical sickness, that while our soldiers, who brave death in its most dreadful forms and all the hardships, privations, and sufferings of war, should be broken for a single mistake, the politicians and officials whose blunders and follies—we might almost say crimes—are responsible for the death of thousands, are "trimmed in jollity" and loaded with honours.

The same day, however, Mr. Bonar Law announced in the House of Commons that the Report had been considered by Government legal officers, and a judicial inquiry into the conduct of those impugned was held to be necessary in the interests of justice and of the persons themselves.

In the poem to which the *Morning Post* refers, appearing in its pages the same day, Mr. Rudyard Kipling writes:—

Our dead shall not return to us while day and night divide—
Never while the bars of sunset hold.
But the idle-minded overlings who quibbled while they died,
Shall they thrust for high employments as of old?

Shall we only threaten and be angry for an hour?
When the storm is ended shall we find
How softly, but how swiftly, they have sidled back to power
By the favour and contrivance of their kind?

Swiss Doctors in Roumania.

The German authorities in the occupied territories of Roumania have put difficulties in the way of the Swiss returning to Switzerland.

We know (says *Le Journal de Génève*) that certain Swiss who asked to be able to leave Roumania during the early days of the German occupation still await this authorisation. Dr. Alfred Matthey, who left Switzerland to give medical aid to the Roumanian armies, and who desired to await the German troops at Bucharest in order to continue his work at the hospital of which he had the direction, is still detained by the Germans. He has made repeated demands to leave the country in order to give his services, according to his engagement, to the Roumanian forces in Moldavia, to which place he would travel *viâ* Switzerland and Russia. This was strictly his right, according to the terms of the Geneva Convention. Other compatriots of ours have obtained passports only at the end of several months, whilst others, in fairly large numbers, are still kept in Roumania, in spite of their pressing representations, to which the German officials do not even deign to reply. This is a violation of all international usages and an unqualified abuse. We know that our Government is occupied with this matter, and we hope that it will be with the energy desired. It is inadmissible that pacific Swiss subjects should be thus treated by German officials, and sometimes even with less regard than enemy belligerents. Since the departure of the Roumanian Government, our compatriots at Bucharest find themselves without any protection, and left to the arbitrariness of the army of invasion.

Articles to Note.

"Roumania's Choice," by Madame Take Jonescu, in the *New Europe*.

"Djemal Pasha," by Mr. I. Ben Zevie, in the *American Jewish Chronicle*, quoted by *Palestine*.

SALIF FORT.

The recent capture of the Fort of Salif recalls to the writer a visit paid to that locality a few years ago, and a little description of the place may be of interest to readers of THE NEAR EAST.

The fort itself, a not very imposing structure of mud and bricks, stands on an elevation at the back of the village and salt works at Salif, about half a mile from the sea, and commands the narrow neck of land which joins the promontory of Salif to the mainland of the Tahama. The fort was built to protect Salif and the salt works from raids by hostile Arabs, and the garrison, nominally 100 rank and file, was placed there at the request of the Administration of the Ottoman Public Debt.

On the occasion of my stay at Salif during the Turco-Italian war, I paid a visit to the fort and photographed such of the garrison as happened to be awake—three privates, who, with childlike simplicity, wanted to see the finished photograph the moment after the button had been pressed. The life of the troops stationed there was monotonous and uninteresting in the extreme, and doubtless the now captured garrison is enjoying the change of scene and surroundings.

The fort had been attacked by an Italian gunboat a few weeks before my arrival, but on this occasion the attacker had been satisfied with firing a dozen or so rounds, few of which took effect, and nobody was hurt.

Bristol, July, 1917. F.R.G.S.

MOSLEM INTEREST IN PALESTINE.

Speaking at a meeting of the Central Islamic Society, held at Caxton Hall, Westminster, last Saturday, Mr. M. Pickthall said that Palestine was a holy land alike for Christians, Jews and Moslems. Followers of all these religions visited it in pilgrimage and formed part of its permanent population. This would not have been the case had it been ruled for the past 1,300 years by Christians or Jews. When conquered by Moslems its population was entirely Christian; a large Christian population remained after the conquest and continued until to-day. The native Jews now found in the country were the descendants of those who at various times in the past had fled for a refuge to the Moslem empire for protection from the cruel persecutions they had endured in Christian Europe. When the Crusaders conquered Palestine and ruled it for a time, they were far from showing the same tolerance as had been shown by the Moslems. He had known Palestine and the adjacent country fairly intimately for 23 years, and would regard it as a world disaster, if the country were taken from Moslem government. Must even the Holy Land be exploited by the profiteer? Must picture palaces and cafés chantants be established in Jerusalem? The Moslems had preserved Jerusalem as a holy city and Palestine as a holy country with proper reverence.

Of the Zionist immigrants, Mr. Pickthall said they were marked by an extreme and narrow fanaticism, a fact which was hardly realised by their enlightened co-religionists in Europe. They hated Christians and they hated Moslems. Their supremacy would mean oppression for the other elements of the population. Most of the Jews of Europe had abandoned their narrow racial and religious standpoint and had adopted that of a wider humanity, but not so those of the Zionist colonies in Palestine; and if Jews wished to be shamed in the sight of the world, let them have an independent Jewish state in Palestine at this stage of their development. The Moslems did not hate Jews or Christians as such, and had always tolerated those religions in their country. The Zionist immigrants would have realised their welcome in the Moslem empire, and could have realised the scheme in all essentials, if the wirepullers of that scheme would have allowed them to become Ottoman subjects. But the Turkish Government had naturally objected to the importation of hundreds of thousands of Russian, German, Austrian, and other subjects as an evident pretext for interference with the internal affairs of the province, and with the avowed object of eventually detaching the province from the Moslem empire. People always said that the Moslem empire was very badly governed, and of late years there might be something in the criticism; but on the other hand, he knew of no religion in the world where so much progress had been made in the last quarter of a century. A friend of his, a man of sixty, had told him that when a little boy, he lived in a house on the wall of Jerusalem; and that he and a neighbour's boy, for fun, used to let themselves down outside the wall in their nightshirts and see how far they could run without meeting a robber. They seldom had to run more than 500 yards. To-day such a state of things seemed nearly as remote to the inhabitants of Jerusalem as did that of highwaymen to the modern resident on Hounslow Heath.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The attempts which M. Jonnart, the High Commissioner of the Protecting Powers in Greece, is to make in London and Paris to strengthen the financial position of Greece will be followed with interest so far as they may be laid open to public view. M. Jonnart, however, will probably do most of his work in this direction with the appropriate Government departments, and the results of his endeavours will be seen in improved conditions in the country he is to befriend rather than in the newspapers. Even so, the commercial world will be benefited by any relief which may thus be afforded, and all will wish this energetic and capable Frenchman success in his mission.

***

M. Jonnart's endeavour is to embrace a wide scope, judging from what he told the Athens correspondent of *The Times* in an interview before he left Athens. "I am returning to France," he said, "where I shall take part in a forthcoming conference to discuss various questions of loans and other matters concerning Greece. She has suffered so much from the blockade and from the fictitious finance of the old régime that she is in pressing need of generous monetary aid. Nor is it merely a question of money, which I trust England and France will provide, but of capable organisers and business men to take a personal hand in the re-establishment of her position and the development of her largely untapped resources."

***

I should like to invite the attention of British firms to the series of special articles appearing in THE NEAR EAST, written by our correspondent in Cairo. It will be seen that Britons have failed to realise all the opportunities which have been presented by the elimination of enemy firms in Egypt, and that there is a danger that a considerable volume of business will pass into non-British hands. This danger has been emphasised in these Notes before, and it seems a pity that all the efforts made by the officials out yonder should go for nought. The cotton industry is the most important question involved, of course; but there are other lines of activity which call for enterprising men.

***

Notes published in recent issues of the "Daily Consular and Trade Reports," circulated by the Bureau of Foreign and Domestic Commerce at Washington, indicate a revival of industry in some Balkan countries. For example, we are told that "a firm in Roumania wishes to be placed in communication with American manufacturers and exporters of precision instruments for physical appliances, optical instruments, general supplies for railroads, especially rolling stock, general supplies for the petroleum industry and viticulture, construction materials, and equipment for hospitals." In Greece, too, there would seem to be openings. "A commission merchant," it is reported, "is in the market for brass and galvanised wire, Paris gauge from No. 1 to 20, and annealed iron wire (burnt), Paris gauge from No. 12 and 13." Quotations, it is observed, should be made f.o.b. New York, and payment will be made by cash against documents. Correspondence should be in French. Does this not suggest that it is time for our own people to become busy?

***

Another branch of trade which United States Consuls in Greece are introducing to their manufacturers is footwear. The Consul at Athens wrote recently that "there is an exceedingly good market in Salonika at the present time for boots and shoes and rubber overshoes. Stocks now are greatly depleted, owing to the difficulties in the way of importation. The greatest demand in shoes for men and women is in black, coloured, and varnished box calf. It is essential that they be of light weight, as import duties under the Greek Customs tariff of 1914 are assessed according to weight." Valuable information regarding duty, prices and terms follow. And altogether, it is to be observed, that the interests of the "trade" are being pretty well cared for.

***

The management of the Bank of British West Africa is to be congratulated on the super-excellent results achieved in 1916. In the twelve months ended on March 31 last the gross profit amounted to £217,000, an increase of nearly £47,000 on the previous year. Shareholders will again receive 8 per cent., notwithstanding some heavy appropriations, including £10,000 for reserve account and £18,200 carried forward. In addition to the appropriation from profits the reserve receives the premium on 40,000 new £4 shares issued at £5 10s. per share, the total of the fund being thus increased from £150,000 to £220,000. The balance-sheet shows current and deposit accounts totalling £3,083,600, against £2,523,000, and cash £1,142,800, against £1,020,700.

***

Reference to this bank reminds me that the British Merchants' (Morocco) Association is rapidly developing its propaganda, and has succeeded in making a very strong appeal to manufacturers and merchants who have interests in Morocco. As I remarked a week or two ago, the list of the Council of the Association includes some noteworthy names, and it is hoped next week to publish in THE NEAR EAST an article dealing not only with the work of the Association, but with trade prospects and openings in the country generally. In the meantime, firms interested should apply to the secretary, Mr. P. B. Robinson, 17, Leadenhall Street, London, E.C.2, who, I know, is always prepared to give any information he has available—and it is considerable.

***

The capture by a British Naval force of the little Turkish settlement of Salif, on the Arabian shore of the Red Sea, about a hundred miles north of Perim, did not attract much attention in this country; and small wonder, because nobody knew very much about the place. From a certain local point of view, however, Salif is of some importance. It is the "seaport" for the salt mines in the interior, possesses a jetty of sorts, and was regarded sufficiently to be defended by a garrison. Seagoing steamers used, before the war, to visit Salif in some numbers; but it is a depressing hole, and when I was unlucky enough to find myself there a few years ago I came to the conclusion that it was no place for a self-respecting white man. From what I remember of the condition of the people they will be glad enough to have seen the last of the Turk!

There will be a full and sympathetic understanding of the position in which the directors of the Bank of Roumania found themselves at the annual general meeting on Wednesday. Owing to enemy occupation of parts of the country no accounts are available, and the proceedings were, therefore, formal in the extreme. "No useful purpose would be served at this juncture by indulging in any prophecies as to the future trend of events," said Lord Bessborough, the chairman, in his brief speech to the shareholders; and his caution will be commended. Nevertheless, the future is not so dark as it once was. Things have been happening in Greece, in Russia, and Galicia which will not fail to influence the general situation.

***

It seems a pity that in the general rush for heads to place on the Mesopotamian charger people will persist in the indiscriminate flinging of mud. I referred recently to the explanation of Sir John Biles regarding the river craft employed on the rivers, and hoped his letter to the Press would be accepted as relieving him of responsibility. Not so, however. Questions were asked in the House of Commons on Wednesday, and it was necessary for the Secretary of State for India to go rather more deeply into the matter than seems to me to have been necessary. It has been established that the craft condemned have actually been working satisfactorily ever since they were placed in commission.

***

The present financial position of Turkey is grotesque. Her representatives are chasing each other around the little piece of Europe which remains neutral in the hunt for money! Sweden and Denmark, so it is said, are being exploited in turn, "though with probably poor results." But why not Germany and Austria? Or have the money springs in these countries dried up? In view of past relations between Britain and the Ottomans, it is almost possible to be sorry for the unfortunate people who have been betrayed by Enver Pasha and his satellites; for in the general débâcle which is now in course of development they must suffer with the guilty betrayers of their country.

EGYPTIAN PROSPERITY.

Improvement in the Balance of Trade.

(From Our Own Correspondent.)

Cairo, June 24.

The Customs returns for May show a continuation of the decline in imports recorded during the preceding months, but the improvement in exports continues. Imports during May amounted to £E2,065,008 and exports to £E2,550,295, as compared with £E2,970,052 and £E2,079,511 during the corresponding month last year, *i.e.*, there was a decrease of £E905,044, or 30 per cent. in imports, and an increase of £E470,784, or 20 per cent. in exports.

The balance of trade in favour of Egypt is, therefore, steadily on the increase; imports, so far, are £E502,108 below what they stood at the end of the first five months of 1916, and exports are £E3.263,342 above the figure for the corresponding period last year, whilst the balance is £E6,851,019, as against £E3,085,569, in favour of this country.

Imports.

Under imports the principal items were:—Meat, £E88,775; potatoes, £E30.538; flour, £E59,950; dried fruits, £E34,066; coffee, £E48,002; petroleum, £E72,693; coal, £E199,783; natural indigo, £E11,077; textiles, £E742,285 (of which cotton tissues £E444,644, sacks £E63,329, and cotton threads £E53,403); worked iron and steel, £E65,124; and tobacco, £E204,673. No raw sugar or benzine were imported during the month. The decrease in value was mainly borne by beer, £E75,176; petroleum, £E111.787; coal, £E273,401 (the quantity was 37,939 tons less), and textiles £E275,002; on the other hand the most important increases were in meat, £E74,921; potatoes, £E22,846; sacks, £E34.058, and tobacco, £E124,801.

Principal Exports.

The principal exports during the month were:—Eggs, £E15,583; skins and tanned goods, £E56,903; cotton seed and cake, £E153,416; onions, £E61.584; sesame, £E26,086; maize, £E20,112; rice, £E25,718; sugar, £E48,011; gum, £E55,219; cotton seed oil, £E21,737; caustic soda, £E12,042; cotton, £E1,944,479, and cigarettes, £E33,461. The increase in value was represented by rice, £E11,177; sesame, £E23,049; cotton seed cake, £E11,462; gum, £E52.713; cotton seed oil, £E18,266; caustic soda, £E11.743; cotton, £E763,448 (the quantity was 49,957 cantars less), and cigarettes, £E15,614; on the other hand, the following were the chief decreases:—Maize, £E221,048; beans, £E10,300; cotton seed, £E59,178 (the quantity was 78,435 ardebs less); sugar, £E62,258; alcohol, £E39,373; wool, £E21,284, and gold and silver bar, £E29,848.

Empire Trade.

Great Britain's share of the import trade fell somewhat; it was 40 per cent., as against 55 per cent. the previous May. She sent all the coal, 65 per cent. of the textiles, and 60 per cent. of the metals. Both India and Australia improved their share considerably; the former doubled her shipments (sending all the sacks, sesame and indigo, and 50 per cent. of the cotton threads), whilst Australia increased from practically nothing to £E106,006, meat and flour.

The United States, Italy and Brazil all reduced their shipments very much, and France hers somewhat; Greece was the only country which increased at all noticeably, and that mainly by reason of her tobacco exports to this country.

On the export side Great Britain also showed a decrease, although the total had increased. As usual, she took all the eggs, cotton seed and cake, wool and gold bar, as well as 75 per cent. of the onions and one-third of the cotton exports. India, the United States, Greece, Italy, Japan and Switzerland all increased their purchases; Greece took 60 per cent. of the tanned goods and 20 per cent. of the sugar; the United States took 40 per cent. of the cotton—more than went to Great Britain; France took 90 per cent. of the gum and nearly all the cotton seed oil, whilst 70 per cent. of the sugar went to India.

The Sudan.

Trade with the Sudan continued to be good. Imports into Egypt during the month rose by £E104.335 to £E205.931; whilst exports to the Sudan dropped slightly to £E131,528. The chief imports into Egypt were: — Livestock, £E18,845; maize, £E33,164; sesame, £E16,728; gum, £E27,041, and cotton, £E65,925. The principal exports from Egypt were:—Refined sugar, £E39,771, and cotton tissues, £E33,502. The total imports into Egypt this year have more than doubled, whilst the exports into the Sudan have increased by about 15 per cent., the figures being respectively £E961,710 and £E547,173. It is to be noted that, so far this year, the Sudan sent to Egypt 60,620 head of cattle and sheep (24,228), 36.500 tons of maize (5,600), 1,994 tons of ground nuts (760), 1,104 tons of gum (266), and 1,090 tons of cotton (879). The figures in brackets are those for the corresponding period of last year.

Proceedings are in progress in the prize court at Malta in respect of certain goods *ex* the vessel "Barrowmore." Appearance by those interested must be entered at once.

In Greece—Ionian Bank, Ltd., Salonica; Banque Populaire, Athens, Piræus.

THE CAUCASUS.

British Consuls' Hints to Merchants and Manufacturers.

British Consuls in the Caucasus have submitted some interesting trade reports recently in which openings for British merchants and manufacturers are briefly but clearly outlined.

Mr. P. Stevens writes from Batoum that German firms were able to secure the great majority of orders for goods by means of their well-defined system of pushing trade. Agencies were established in most of the principal towns in the Batoum district, where large stocks of goods were kept on show, and also, for the purpose of meeting immediate demands, periodical visits were made by commercial travellers who spoke Russian, and, in this way, aided by widespread advertising in Russian, backed by catalogues and price lists (prices in most instances being quoted inclusive of customs duties, manipulation expenses, freight rates, etc.), German firms developed a large business in all kinds of their varied manufactured products.

Secret of Success.

It cannot be too frequently repeated that the high state of commercial efficiency which was attained by German firms was largely due to the diligent and unceasing activities of the agents referred to, who, whilst in the exercise of the duties entrusted to them, had the full support of their employers, and, with a view to securing all the trade they possibly could, were given a free hand to introduce methods which they saw most fitted the needs and established customs of the Caucasian markets.

Under these conditions German firms had a great advantage over their competitors, seeing that at any time when difficulties in negotiations arose, their agents and travellers were always in a position, by consultation between themselves, to decide questions on the spot, such questions as in ordinary circumstances their competitors would have to refer to their principals, who probably lost business owing to this loss of time.

The discretionary powers extended by German firms to their agents and travellers frequently comprised, amongst others, the very important one of allowing credit to dealers in Russia. Mr. Stevens emphasises this because, he says, British firms seem to regard a system of credit as so reprehensible that, apparently, they would prefer to abandon the markets in the Caucasus rather than run the risk of a bad debt occasionally, although, in comparison with the volume of business transacted, and the profits made thereon, the amounts involved in such bad debts would prove insignificant.

British firms during the war have unfortunately been unable to show signs of energetic enterprise in the Caucasus, while American and Japanese and other foreign traders have made and are making great efforts to secure trade in this field. A good deal of hosiery and haberdashery is being imported into the Caucasus from Japan, and Japanese competition is steadily becoming a serious factor.

Begin at Home.

Preliminary organisation is very necessary, and United Kingdom firms should make preparations as soon as possible. In order to obtain trade in the Caucasus it is essential that full support should be given by the manufacturer or shipper in the United Kingdom to his representative's actions—which should be restricted by power of attorney to a certain class of activity—in his transactions with dealers and tradesmen. To push sales numerous reliable agents must be appointed; they should be men who know Russian, and are generally familiar with business conditions, legislation affecting trade, and customs obtaining in the Caucasus.

Commercial travellers with these qualifications should also be appointed to visit the traders of the nearest towns and those of the surrounding country at given intervals. These travellers should be attached to each agency. It is useless, however, having an agency at Odessa or Moscow for the Northern Caucasus, or at Rostov-on-Don for the Trans-Caucasus. An agent should reside at Rostov for business in the Don, Kuban, Stravropol and Ter Cossack territories, and another agent for the Trans-Caucasus should reside at Batoum, Tiflis or Baku.

SUBMARINE WAR.

Fewer Merchant Vessels Sunk and Attacked.

The Secretary of the Admiralty on Wednesday issued the following weekly return of arrivals, sailings, war losses, and unsuccessful attacks :—

Week Ending 3 p.m., July 8, 1917.

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft) :

(a) Arrivals	2,898
(b) Sailings	2,798

British merchant vessels sunk by mine or submarine :

(a) 1,600 tons (gross) or over	13
(b) Under 1,600 tons (gross)	3
British merchant vessels unsuccessfully attacked by submarines	13
British fishing vessels sunk	6

CROP OUTLOOK.

The crops have, in Western Europe and on the shores of the Mediterranean, been very much favoured during May by the increasing temperature with the intermittent rainfall. Vegetation in France and Italy, previously so backward, has (according to a report to the Board of Agriculture from the International Agricultural Institute) been able to make up the greater part of the time lost owing to the rigour of the earlier months of the year. In Northern and Central Europe, especially in Luxemburg and the Netherlands, the drawbacks resulting from the length and severity of the winter are still seriously felt. Spring sowings have taken place in Luxemburg in normal surroundings; their condition in the Netherlands is only moderate. In Switzerland, in spite of the recent warmer weather, the outlook for the winter crops is under average, but that for the spring sowings may be considered as normal.

In the greater part of European and Asiatic Russia temperature below the normal has hitherto prevailed. But despite these unseasonable chills, the situation appears to be favourable as a whole, and an area under spring crops equal to last year was expected. Drought and wind had hindered the development of the spring crops in some districts of Siberia.

In Canada spring sowings are practically finished, and the area under wheat compares favourably with that of 1916. Although in the United States the winter crops suffered injury, from the severity of the season and the violent winds, to such an extent as to cause the abandonment of nearly one-third of the area sown with wheat, the weather of the last few weeks has been so favourable that the wheat crop as a whole promises a larger yield than that of last year. In British India the outlook is very good, while that of Japan is an average one. In Egypt the results of the crop are considered as satisfactory.

MOROCCO RAILWAY SCHEMES.

As a result of the convention recently announced between the Morocco Protectorate and the Cie Paris, Lyons, and Mediterranean, the Orleans Railway Company, the Cie Generale du Maroc, and the Cie Marocaine, to consider the establishment of a railway system which will permit the rapid economic development of Morocco, a Bill has been deposited in the French Chamber of Deputies which, it is expected, says a Paris contemporary, will hasten the examination and the vote.

The Bill provides that the agreement concluded on January 13, 1917, in the name of H.M. the Sultan of Morocco and of the Government of the French Republic with the companies mentioned has been approved by the Public Administration for the following railway concessions, viz :—

Fron Petit Jean Station on the Tangiers-Fez line to Kenitra; from Kenitra to Casablanca, viâ Rabat; from Kenitra to a point on the Tangiers-Fez line situated between Souk-el-Arba and Arbdona; from Casablanca to Marrakech; from Fez to the Algerian frontier.

LANCASHIRE COTTON.

Conference with the Board of Trade.

(From Our Own Correspondent.)

Manchester, Thursday.

There has not been any increased activity in the market during the past week, and buyers and sellers have waited on events. The members of the Control Board have been busy dealing with numerous matters, and it is understood that consideration has been given to the statistics relating to stocks of raw cotton in spinners' hands and at the warehouses in Lancashire.

Arrangements have been made for a special meeting of the Board to be held on Friday, when it is expected Sir Albert Stanley, the President of the Board of Trade will be present. There seems to be every probability of a definite scheme being announced to enable the supplies of raw cotton conserved.

Some surprise has been expressed at the decision of the card-room operatives to demand an increase in wages of 25 per cent., but the application is quite in order, as it was part of the arbitration award of last February that a further change in wages might take place in August.

An abnormal situation continues to prevail with regard to Egyptian cotton, and prices have continued to advance, and there is increased nervousness as to future supplies. Bolton yarns have been put up in quotation, but in certain counts and qualities the figures now required are quite prohibitive. Some spinning machinery in Lancashire is now being stopped, partly owing to the difficulty in obtaining raw material, and partly as a result of the scarcity of labour.

Buying in piece-goods for Egypt has not been quite so pronounced as a few weeks ago, and buyers and sellers are now exercising more caution in placing orders with manufacturers. Certain goods, however, have been purchased and very high figures have been paid, especially for quick delivery.

The inquiry in piece-goods for India remains disappointing, and a few offers which have come through have been a long way out. In some quarters, however, it is believed that dealers in Calcutta, Bombay, and Madras will be forced to purchase more freely before very long.

Operations for China have been very limited, and there is little prospect of increased activity until political affairs in the Far East are more settled.

Makers of cloth suitable for the Government continue busy and are deeply engaged for many months ahead.

American yarns have moved off slowly at irregular rates. Stocks in wefts, especially in medium numbers, are still very harassing. There has been no life whatever in export yarns, and the bids mentioned have been a long way out.

THE ADVISORY COMMITTEE.

Sir Albert Stanley (President of the Board of Trade) stated in the House of Commons on Wednesday that the terms of reference to the Committee on the Growth of Cotton in the Empire will be as follows :—

To investigate the best means of developing the growing of cotton within the Empire and to advise the Government as to the necessary measures to be taken for this purpose.

The chairman will be Sir Henry Birchenough, who has recently acted as chairman of the Board of Trade Committee on the position of the textile trades after the war. Sir Henry Birchenough will also represent the Board of Trade on the Committee.

Enver Pasha and Djavid Pasha visited Switzerland recently to meet representatives of Scandinavian bankers, with a view to negotiate a loan.

TRADE NOTES.

Gibraltar.

The Acting Colonial Secretary at Gibraltar reports that a general commission agent at that port wishes to get into touch with United Kingdom manufacturers with a view to obtaining their agencies for Gibraltar. The inquirer particularly desires to negotiate with United Kingdom manufacturers of cheap ready-made clothing.

Algeria.

The British Vice-Consul at Oran (Mr. R. Barber) reports that an agent in that town desires to obtain agencies for United Kingdom manufacturers and exporters of the following goods, for which the inquirer states there is a large demand in Oran :—Cotton piece-goods, ironmongery, Rio and Santos raw coffees, and green teas from China. In the case of such of the goods as British firms may not be able to deliver at present, it is suggested by the Board of Trade *Journal* that negotiations might be entered into now with a view to trade when circumstances permit.

Morocco.

The British Vice-Consul at Saffi reports that he has recently received two inquiries for the names of United Kingdom manufacturers of bicycles. The first inquiry was made by a local firm which has been established at Saffi for four years. This firm is particularly interested in importing bicycles in parts, as it has a workshop at which machines are assembled, and by importing in this way there would be a saving in freight rates and Customs dues. A bicycle that would cost the firm c.i.f. Saffi about £4 10s. would, it is said, suit the local market very well. The firm is also interested in bicycle parts and accessories.

The second inquiry was made by an engineer and mechanic who wishes to represent United Kingdom manufacturers of cheap bicycles.

The Vice-Consul adds (writes the Board of Trade *Journal*) that there are no bicycles to be had in Saffi at present, and he thinks that there is a small opening for cheap British bicycles. Beginnings must necessarily be small, but Saffi should be a good market for bicycles in the future, because there is a considerable mileage of good roads in the vicinity of the town, and roads connecting Saffi with neighbouring towns, notably Marrakesh, are under construction and will shortly be completed; the residential quarter of Saffi is at some distance from the business part of the town, and, with the completion of the port and the road to Marrakesh, many Europeans will, it is anticipated, come to Saffi to stay.

Egypt.

Sealed tenders, on the proper forms, will be received by the director of the Technical School, Bulac, Cairo, for the supply of 305 sets of blue linen overalls (jackets and trousers), required for the school during the year 1917-18. No date for the receipt of tenders is specified. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him.

Copies of the cahier des charges and form of tender may be obtained from the Model Workshops, Bulac, Cairo, where also samples of the overalls may be inspected. The copy of the cahier des charges, together with particulars of the overalls required, may be consulted by British firms at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2.

With reference to the call for tenders by the Egyptian Ministry of the Interior for the supply of Ghafir clothing (including blue drill belts, drawers and quamis), required by the Stores Department during 1917, it is notified that the time for receipt of tenders has been extended, and that sealed tenders, on the proper forms, will now be received up to noon on August 15 by the Director, Personnel and Equipment Department, Ministry of the Interior, Cairo.

MESOPOTAMIA RIVER CRAFT.

Mr. King has asked the Secretary of State for India whether it was with his knowledge and sanction that in the autumn of 1915 Sir John Biles went direct to the builders of the "Medjidieh," belonging to Messrs. Lynch Brothers, and obtained a copy of the plans of the steamer; whether the India Office was aware that the barges and steamers supplied did not comply with the requirements of the military authorities in Mesopotamia; what was the total cost incurred in building and sending those steamers and barges; and whether Sir John Biles was still employed, and on a commercial basis, by the India Office as their naval architect.

Mr. Chamberlain stated in reply: I understand that Sir John Biles expected to obtain the design of the "Medjidieh" from the builders, and I was not and am not aware that there was anything unusual or unprofessional in this. The design was the property of the builders, was thirty-three years old, and, save as to general outline, was of little practical value for the construction of a modern vessel. The steamers supplied complied, so far as was practicable, with the specifications received from Mesopotamia, and are to-day running satisfactorily on the Tigris. Others of the same type have since been built for the expedition by the War Office. The barges were reported not to be suitable for the purpose for which they were ordered, but are now in constant use on the upper reaches of the river. The cost of the six steamers as delivered in this country was about £294,000. The cost of transporting them to Mesopotamia was about £11,500. The cost of the forty-three barges was about £250,000. They were mostly shipped as part cargo in enemy vessels controlled by the India Office, and the cost involved in carrying them is not at present available. The answer to the last part of the question is in the affirmative, and Sir John Biles is now employed by the War Office in constructing river craft for use in Mesopotamia.

FRANCE AND ITALY.

A Franco-Italian combination has been constituted in Rome, under the name of the "Unioné Industriale Italo-Francese," to promote more intimate and effective economic relationships between the two countries. The capital is, for the present, limited to £400,000, with power to increase it to £800,000.

A further proclamation has been issued under date June 15, by the General Officer Commanding-in-Chief of the forces in Egypt, dealing with trading with the enemy firms. The lists of persons with whom trading is prohibited and those removed from prohibition appear in the *Official Journal* supplement of June 18.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to April 30, 1917 (New Style: January 14 to May 13, 1917):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, April, 1917		1,987,403	850,000
Do. do. do. 1916		2,517,882	2,064,000
Estimated Receipts for 4 months (Law of Control)		9,633,333	3,566,666
Actual do. do., 1917		9,150,316	4,452,000
Do. do. do., 1916		11,817.723	9,550,000
Difference between estimated and actual receipts for 4 months	1917	— 483,016	+ 885,333
	1916	+ 2,184,389	+ 5,983,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

ENGINEERING NOTES.

German Waterways.

While British traders are content with occasional trade-warcries, and confine themselves to talk and plans of paper campaigns for the capture of enemy trade when peace has been concluded, the Germans are acting and preparing for offensive as well as defensive trade-war. Their engineers have been busy in the preparation of great plans, while the Central Commercial Union, prominent manufacturing firms, and interested towns, all aided by Government support, are raising funds for carrying them out forthwith.. The great German aim, *Drang nach Osten* (Towards the East), the famous axiom which incited, more than anything else, the present war, and which also implies a German solution of what used to be called "The Eastern Question," is still the pass-word of Pan-Germanism; while the words of Rauscher uttered more than half a century ago are still sounding in German ears. "There in Asia Minor," he said, "by a peaceful conquest we can create a new Germany which could raise her in grandeur, population and riches, in the face of old Germany, and which would form the safest road against Russia and Panslavism."

More than a Dream.

Great and chimerical as this dream may appear at the present moment it shows that Germany for a long time pursued with zeal and perseverance the conquest of the markets in the Near and Middle East. Fortunately the war has changed the aspect, and now, in view of the depletion of her mercantile shipping and the inevitable scarcity of tonnage for many years after the war, which means high freights for sea traffic, Germany has begun to plan schemes which, if carried out, will undoubtedly make the forthcoming trade war as stiff as the present clash of arms.

A "Practical" Ambition.

The opening up of land and water communications from Germany to the East has been a practical object of German ambitions, which have been supported by the popular instincts. Goethe, in 1827 said he would like to live to see the opening of a Panama Canal, and also a communication between the Danube and the Rhine, although he doubted the possibility of the latter "in view of the extent of German resources." The resources have much improved since Goethe's time, and the effect of the British blockade has caused Germans to demand, more than ever, the opening of a waterway through Central Europe to the East. In previous notes (May 26, 1916) referring to the projected union of the Rhine with the Danube the writer mentioned that there were two schemes under consideration: the Danube-Oder Canal, and the great project of the Rhine-Nain—Danube Canal. The first, as being advantageous to Prussian interests, was favoured by Prussia, while the second is the pot-scheme of Bavaria. In the later scheme the canal runs almost diagonally through that country, and offers special facilities to link up by a system of canals, not only the Rhine with the Danube and the Elbe, but many other important German waterways.

Royal Support.

Its most powerful advocate was the King of Bavaria, and the adoption of this scheme, and the new Danube—Main Canal Bill which the Bavarian Diet has recently passed is considered a great personal triumph for the Monarch. According to reliable information the route will practically be that of the river Main from Aschaffenburg to Bamberg, and that of the Danube from Steppberg to Passan. Considerable new works are required on both rivers. The great feature, however, of the scheme is the new canal from the Main at Bamberg to the Danube at Steppberg. According to the latest plans the new canal is intended for 1,200 ton ships. The canalisation of the Main to Aschaffenburg is already almost colmpeted and that part provides for 1,500 ton ships. The whole waterway will be about 460 miles in length, and it is estimated that the cost of construction will be £32,500,000, and that the whole expenditure can be covered by revenue if there is an annual traffic of 10,000,000 tons.

To Take Large Ships.

The Bavarian Bill was accompanied by a statement which contained the following remarks—"Our experience in the present war, and consideration for the future economic relations between Germany, Austria-Hungary, and Austria-Hungary's eastern neighbours, suggest at once that we should contemplate the construction at an early date of a connection between the Main and the Danube for big ships. An efficient Rhine-Danube waterway in addition to the existing railway communications, has proved necessary for economic and strategic reasons for traffic between the German Empire and Austria-Hungary and the Balkan States. It will strengthen permanently the Central European group and its economic and military defences, and it will promote a closer economic union of the States belonging to this group."

The meaning of this is quite clear; we need not repeat here what, a year ago, in alluding to the possibilities of this waterway through Central Europe, we said with regard to its effect on British trade in the Near and Middle East. The passing of the Bill at such a time, and so urgently, is proof that the Germans are actually preparing for the forthcoming great war of trade.

How to Paint Iron.

It is a great mistake to assume that a second coat of paint on iron or steel necessarily increases the protection of the metal. In all probability the reverse is the case, because it is proved that the second coat softens and partially dissolves the first, making it more porous, and thus deteriorating the protection just where it is most needed. A single, fairly heavy coat of paint, applied without too much brushing, gives better results. The heavier particles sink to the bottom, the solvent flows over them, and oxidation completes a dense coating. In a thin coat, such as is given when a second coat is contemplated, there are open spaces between the heavier particles, and the second coat makes matters worse.

Potash from Seaweed.

The experiments conducted by the United States Department of Agriculture for the production of potash from seaweed, on a commercial scale, will interest the residents in many districts on the Mediterranean coast, where seaweed is found in great quantities. The machinery used is of recent invention, and consists of drying kilns, distilling chambers, vats, handling machinery, etc. It is capable of dealing with about 200 tons of wet seaweed a day, and from this quantity about five tons of muriate of potash can be produced. The experiments at present are to determine the most economical process of producing the potash from and to discover methods for the recovery and utilisation of by-products. Numerous methods will be employed experimentally, but for the most part the Department of Agriculture will rely on distillation. The area of the seaweed beds along the United States Pacific coast is nearly 400 square miles. From this it is estimated the annual cuttings (including two cuttings a year off the coast of South-Western California) would yield 59,000,000 tons of wet weed, from which 2,300,000 tons of potassium chloride could be obtained. In view of the enormous quantities of weed to be obtained along the Mediterranean a most valuable industry could be created in the Near East.

The Egyptian Government has approved of raising the price of tombac, a monopoly owned by Khalil Pasha Khayat, by P.T. 15 per oke—that is, from P.T. 48 to P.T. 63. Of this increase P.T. 10.5 will go to the Treasury and the balance to the monopolist. A big shipment of tombac arrived recently at Alexandria from Persia, and will be sold at the new rates. It is interesting to note that the price of tombac has been raised twice before since the beginning of the war. Before the war it was P.T. 28 an oke. The "shisha," which used to be smoked for P.T. 1, is now worth P.T. 2 and P.T. 2.5.

RUBBER PRODUCTS IN GREECE.

Large Demand for Hose and Packing.

Manufacturers of rubber products will be interested in the following report, submitted to Washington, by the United States Vice-Consul (Mr. George P. Waller, Junr.) at Athens. Mr. Waller writes:—

There is very little demand in Greece for transmission and conveyor belting. Leather belting and balata and camel's-hair belting in widths of three to thirty centimeters, and in rolls 120 to 130 meters long, are much used. In normal times the imports of such articles into Greece are thought to amount to £5,000 per annum. Small quantities of pressure packing of asbestos fabric and other compounds are imported in normal times.

Hose.

For rubber hose there is a large demand. The following kinds of hose are popular: (*a*) Water-pure black rubber hose, 2 and 3 ply, ranging from ¾ inch to an inch and a-half interior diameter, for light duty. (*b*) The same dimensions, but for heavy duty in foundries, marine and railway service. (*c*) Rubber hose with wire covering in fifteen to twenty-five millimeters interior diameter. (*d*) Cotton rubber-lined hose in sizes of ½, 1 and ¾ inch. (*e*) Unlined linen hose of forty to 140 millimeters diameter. (*f*) Suction hose with plain surface and also with spiral wire inside, in 12, 15, 18, 20, 23, 25 and 30 millimeters diameter.

Of the types of hose that are enumerated, it is estimated that a quantity valued at £7,720 is imported each year in normal times. For spraying the vineyards in the wine-growing districts with a solution of copper sulphate a special rubber discharge hose with a disk was formerly supplied by European factories. These are now out of the market.

Packing.

The qualities of sheet-rubber packing principally used here are the cheaper grades, one to five millimeters thick, 2 and 3 ply, in rolls of ten to fifteen square meters. Pure rubber sheets or valve rubber in thicknesses up to and including one-fourth inch and in sheets of 100 square centimeters are sold. It is thought that perhaps £3,000 worth of the last two mentioned products are imported yearly. Three-fourths of all these articles before the war were supplied by Germany and Austria, and the remainder came from France and England. Dimensions are given largely in metric units without their equivalents in inches, because they are standard sizes.

Emphasis should be placed upon the importance of having a commission agent here, fully trusted and familiar with all the local needs and customs, and, most important of all, familiar with the language. It is exceedingly difficult to build up a permanent market by mail, and an agent fully accredited with exclusive territory is almost indispensable.

No duty on mechanical rubber goods is prescribed by the Greek tariff. The duty on automobile tyres and inner tubes is about 4½d. per pound.

MANCHESTER ENGINEERS' CLUB.

According to recent reports, the Manchester Engineers' Club continues to be successful. Although it was started only three years ago, the club has now over 700 members, and notwithstanding the difficulties caused by the war, the past year was the most successful since its formation.

It would be a great advantage to the engineering industry in the forthcoming trade-war if similar bodies were formed in other leading engineering districts of the Kingdom.

COMPANY MEETING.

THE BANK OF ROUMANIA.

Lord Bessborough presided on Wednesday at the formal annual general meeting of the British Bank of Roumania held at Winchester House, E.C. No balance-sheet and report for 1916 were laid before the meeting, and the directors did not recommend the payment of a dividend, as it was not possible to obtain the audited accounts of the Bucharest branch owing to the circumstances now existing in Roumania. Lord Bessborough, remarking that Roumania had joined on the side of the Allies and that Bucharest was now occupied by enemy forces, said that when the figures were available they would be submitted to the shareholders, but no useful purpose would be served at this juncture by indulging in any prophecies as to the future trend of events.

COMPANY REPORTS.

New Egyptian.

The report of the New Egyptian Company for 1916 shows a profit of £15,021. Deducting £5,413 for the service of the debentures, there remains a balance of £9,608. Adding £7,023 brought forward from last year, the balance at the credit of the account amounts to £16,630, which the directors recommend should be carried forward. The net income derived from the estates shows an increase of over £8,000 as compared with the previous year, notwithstanding the increased cost of coal, oil, and other material, and the reduction of the rental area consequent on the sales of land. The average price obtained by sales of land during the last seven years has been £94 15s. 9d. per feddan. The capital expenditure during the year was £366, as compared with £1,498 in 1915. During the year the company's indebtedness has been reduced by £18,000.

Malta and Mediterranean Gas Co.

The report for the year ended March 31 last states that the balance of the general revenue account is £5,406. The directors recommend the payment of the usual dividends on the First and Second Preference capital, and a dividend of 4 per cent. free of income-tax, on the ordinary capital, making with the interim dividend paid in December last 6 per cent. for the year, leaving a balance of £678 to be carried forward.

Bibi Eibat Oil Co.

The report for the year ended March 31 last states that the net income, consisting of interest accrued on loans to La Société de Naphte de Bibi Eibat, amounted to £6,976. Against this balance there has to be set the sum of £7,000 for interest and redemption of debentures and £519 for loss on realisation of investments, leaving a deficit of £543, which, deducted from the sum brought in from the previous year, leaves a balance of £18,964 to be carried forward. Investments and cash now stand at £31,093. The inability of the Russian company to declare a dividend has again adversely affected the accounts of the English company, and the directors are consequently unable to recommend the payment of a dividend.

COMPANY NOTES.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 19 tons (against 20); Hurghada, 902 (against 926).

Dividends, Payments, etc.

Piræus, Athens and Peloponnesus Railway Co 4 per cent. Bonds.—Coupon No. 11, due July 14, 1917, will be paid at the offices of the Bank of Athens, 22, Fenchurch Street, E.C.3, on and after that date.

The Aboukir Company.

The following advice, dated June 23, has been received :—"The supply of water is everywhere plentiful, and the cotton crop, although backward, looks well."

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.,
Thursday.

We have again this week had a favourable market for Egyptian shares, and there has been a very fair amount of activity. Local buying on this side has been rather a feature, but Egypt also has been taking a hand in several directions, and the prospects all round are looking very favourable.

The high prices of all produce and the great commercial activity prevailing in Egypt are all causing a large amount of prosperity, which is gradually spreading to the share market. Egyptian Government stocks have continued firm, and some transactions have taken place in the 3½ per cents. at 73, and even higher. City of Alexandria bonds have also been in demand, and the price has recovered the full dividend recently deducted.

Agricultural Banks have found persistent buyers, and the price is 1-16 up at 5⅜, with a good business doing. Anglo-Egyptians have improved ¼ to 12¾. National Banks have been a firm spot round 15.

Delta Light Railways have jumped ¼ to 6¼, but the scarcity of sellers has stood in the way of business.

In land shares, Behéras have been again in demand, and a fair number of transactions have taken place from 9 15-16 to 10¼, at which price they close, showing a rise of 7-16. Gharbieh Lands have been wanted, but sellers are very scarce. In New Egyptians a large business has been done round 11s., not only for local but also for Egyptian account. Union Foncières have further improved 2s. 6d. to 30s. bid, but business so far has not resulted, as sellers are holding off. Among miscellaneous shares, Alexandria Waters have been done in a small way at 11⅞, at which price they are in demand for Egypt, but sellers here are now asking 12⅛. Salts and Sodas are a good market at the slightly firmer price of 24s. 10½d., but Khedivial Mails, in which there has been a good many transactions, close somewhat lower at 37s. 3d.

In Greek securities the market has continued a very firm one, and there have been a fair number of transactions in Monopolies at the improved price of about 53½, and in Larissas at 55. The 4 per Cent. 1902 Loan has been done at the rather lower level of 61 for a fair amount of stock. The 1881 and 1884 Loans are still wanted round 57½.

Oil Shares.

Anglo-Egyptian "B's" were unchanged at 13s. 6d., Anglo-Persian Prefs. at 24s., and Roumanian Consols at 13s.

Paris Bourse.

Dealings on the Coulisse were on a moderate scale on Tuesday. Greek securities were steadily held.

THE MONEY MARKET.

London, July 12.

Towards the close of the week money has been more usable, and the demand for accommodation was strong enough to bring about an advance. Day-to-day business was done on the basis of 4 per cent. down to 3½ per cent., and weekly 4¼ per cent.

Exchange on Alexandria varied between 97¼ to 97¾ piastres to the pound sterling.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned :—

	1916. Francs.	1917. Francs.
July 3	330,000	170,000
July 4	180,000	190,000
July 5, 6, 7, 8	930,000	690,000
July 9	120,000	130,000

TERRIBLE REPORTS from Syria—

2.—From a Missionary in the Interior.

"I write these few lines that you may know I am still alive, but I cannot walk a step that I do not see someone lying dead in dirt and filth, and I thank God that He has permitted me to remain and serve this awful need. This letter goes to you by the kindness of Brother B———, who will post it in Europe.

"Two hours ago I was in the Bab Tuma quarter, distributing what had been sent me from Beirut, and there I saw thirteen bodies in the street, one of them having been murdered, and all surrounded by their loved ones. One day's harvest of death.

"One cannot walk anywhere in Damascus and not see hundreds of such sights. In an interview with the Mayor of the city as to the best method of distribution of relief, I learned that the number of inhabitants was supposed to be about 400,000, but that 120,000 had died during the past two years."

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the UTMOST URGENCY.

(Reproduced by permission of "The Times."

£300,000 WANTED
of which £50,000 is needed at once.

A strong administrative committee is at work. CONSIGNMENTS OF FOOD, MEDICINE & CLOTHING ARE NOW ENTERING PALESTINE, and goods stored in Egypt will continue to be poured into the country as further access is obtained. Relief will be given to all—Christian, Jew and Arab alike—according to their need.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110 Victoria Street, Westminster, S.W.1.

BOOKS on the NEAR EAST

A History of Serbia. By Captain H. W. V. TEMPERLEY, M.A., F.R.H.S, **10s. 6d.** net.
This book is the fruit of some years of travel and study in the Near East. The author has been fortunate enough to approach his subject without prejudices; he envisages the Balkans as a whole, and his sympathies, springing from personal acquaintance with the land, are wide enough to embrace the entire Peninsula without being tinged by the miasma of racial antipathies. In this volume Captain Temperley gives a complete and scholarly record of the Serbian nation.

Greek Ideals. By C. DELISLE BURNS. **5s.** net.
A study of Greek life and thought as an inheritance belonging to every man of intelligence. The leading idea is that the Greeks value *sociability* most highly. This stands out among the Greek conceptions of an admirable life and an ideal character.

Soldier Men. By "YEO." **3s. 6d.** net.
Campaigning in Egypt is the chief theme of this volume of sketches.

The Future of Constantinople. By LEONARD S. WOOLF. **2s. 6d.** net.
This work deals with one of the most vital problems of British foreign policy—the settlement of the Ottoman Empire after the war. It proposes and discusses a settlement of Constantinople based upon the political, economic, and strategic interests of all nations.

The Immortal Gamble: and the Part Played in it by H.M.S. "Cornwallis." By A. T. STEWART and C. J. E. PESHALL, Chaplain. **6s.** net.
It was from the fore-turret of H.M.S. "Cornwallis" that the first shot was fired in the Dardanelles bombardment, and the book is written by the Acting Commander and the Chaplain of the ship.

Roumania and Great Britain. By A. HERSCOVICI HURST. **1s.** net.
A short concise statement of the history, characteristics, and resources of Roumania and her people, and of relation to international politics and the war, by a Roumanian who is a naturalised British subject.

The Rise of Nationality in the Balkans. By R. W. SETON-WATSON. With Maps. **10s. 6d.**

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.), 1, Devonshire Sq., London, E.C.2.

NOTES OF THE WEEK.

It can hardly be pretended that the two days' debate last week in the House of Commons and the subsequent discussion on Wednesday this week on the Mesopotamia Report tended to edification. The Attorney-General's laboured plea for a legal court was no better received by members than it had been by the Press; Mr. Asquith denounced the newspapers, which after all were not responsible for the decision to advance on Baghdad; Mr. Balfour had certainly not read the report when he spoke, and Mr. Lloyd George had apparently barely glanced at it. Mr. Austen Chamberlain emerged with credit from a difficult situation by resigning the Secretaryship for India; Lord Hardinge offered his resignation, but Mr. Balfour refused to accept it, somewhat to the surprise of the public; Sir William Meyer sits tight at Simla. Mr. Chamberlain's successor is Mr. E. S. Montagu, whose choice has aroused almost as much criticism as the return of Mr. Churchill, six months after the publication of the Dardanelles Report had seemed to put an end to his legitimate gambles for the period of the war.

It is recognised on all hands that, quite apart from the personal question of the reputation of this or that politician in the Mesopotamia business which absorbs Westminster and Fleet Street, there is the deeper question of a reform in the whole system under which the affairs of the India Office and India itself are conducted. The distribution of responsibility and the methods of communication between Whitehall and Delhi—or Simla—were clearly unsatisfactory; the practical ignoring of the Council of India, which may be either the consequence or the cause, or both combined, of its weakness of personnel; the aloofness of Indian officials in high places towards the war, almost as though India were in another planet instead of merely in another continent—these things require attention, and a strong man who is capable of reform. Mr. Montagu has yet to prove himself. Unfortunately his speech in the Mesopotamian debate showed no signs of real insight into the whole matter.

Incidentally the debate on the report has given rise to an interesting revelation. Lord George Hamilton, the Chairman of the Commission, apparently vexed by the partisan criticisms of the Report—criticisms which were made for a purpose, and which failed, for the Report substantially holds its ground—wrote to *The Times* to defend one or two points on which he had been attacked. In his letter he stated that he and Lord Cromer only assumed the ungrateful task of presiding over the Commissions because it was represented to them that, unless these Commissions were appointed, "Mr. Asquith's Government would be beaten in the House of Commons and a political crisis created." It will be remembered that the Government opposed the desire of the House for these Commissions until the very morning of the debate on the subject, when it suddenly changed its mind and consented. The reason for the sudden change is now clear—Mr. Asquith secured another four months of office by the manœuvre.

An answer to a question concerning British diplomacy in the Middle and Near East which Mr. Balfour made in the House of Commons is of peculiar interest. It has always been understood that as the outcome of the abortive negotiations on disarmament which followed Lord Haldane's visit to Berlin in 1912 further discussions were held between the British and German Governments regarding the rearrangement of frontiers in Africa and the rival spheres of interest of the two Powers in the Middle East and Asia Minor. The revision of the map of Africa does not concern us here, but it was believed that the negotiations both as regards Asia and Africa reached a successful conclusion. A London Liberal newspaper remarked with every appearance of knowledge in August, 1914, that agreement was actually reached as to the Baghdad Railway question, that the document was received in the British Foreign Office at the end of July, 1914, and that, if the war had not broken out in the meantime, it would have been signed almost on the exact date of the British ultimatum. Mr. Balfour now states that there is no truth in the report of these negotiations.

The curious thing is that Germans as well as Englishmen held the same belief that these negotiations had occurred. Since the war began references to the supposed conversations, the alleged agreement, and the apocryphal document have also appeared in the German Press, and at more length than in the English papers. Since there was no truth in the whole thing, no purpose would be served by reproducing here the precise terms of the supposititious concordat which were printed in the German Press, but it may be recalled that even in the heat of war the German writer who discussed the matter admitted that Britain had been unexpectedly liberal in her attitude, and conveyed the impression that Sir Edward Grey had met German demands more than half-way. These statements, which

Digitized by Google

did not seem inherently improbable to those acquainted either with the British record on the Baghdad Railway or with the policy of the then Foreign Secretary, caused a vague feeling of uneasiness in England.

Some disquietude has been expressed as to the attitude of King Alexander, who is said, despite his telegram to M. Poincaré, to be privately thwarting the policy of M. Venizelos, who has urged his Sovereign to break completely with the policy of King Constantine. Should it be true that the King has refused to sign the decree convoking the Chamber, it would be extremely difficult to deny that these allegations are wholly devoid of truth. To hold a general election at the moment is clearly impossible, in view of the present condition of Greece. To convoke the Parliament in which the Venizelists are in a minority would be absurd. But to refuse to convoke the Chamber at all would be still more dangerous, since it would imply that the King intended to break his oath as constitutional Sovereign and to carry on the personal policy of divine right which King Constantine initiated. The world has seen whither that policy led, and it would undoubtedly lead to the same end again, albeit by a more speedy path. There is no doubt that M. Venizelos has the majority of the country behind him, and that in the circumstances the right course is to convoke the Chamber of 1915, which is still fairly representative of the true position. Otherwise serious trouble will not be long delayed.

Meanwhile, the negotiations between the Italian and Greek Governments regarding Epirus are understood to be progressing satisfactorily. Only one point remains open for discussion, as to the destiny of a triangular portion of land which projects from the boundary drawn at the Florence Conference, but it is believed that a solution of this matter may be found on the lines that Italian troops should continue the occupation in order to maintain the security of the Santi Quaranta-Koritza road, while the Greek civil authorities will be reinstated. A compromise of this kind must from its nature be a temporary expedient, since friction between the divided civil and military authorities must inevitably arise in any permanent conjoint administration, even if worked with the utmost goodwill. For the moment, however, it may prove to be the best that can be done.

The transference of the Serb Government from Corfu to Salonika will probably take place shortly. The move will be advantageous, since there must be difficulties in conducting the administration from an island, and Salonika is nearer to the Serbian Army and the reconquered Monastir. It is understood that the Greek Government is friendly to the proposal, which may be taken as the first fruits of M. Venizelos' renewed pledge to Serbia a few days back.

A piteous protest has been made by the Greek population of Aivali against their expulsion by the Turks. The town is purely Greek, and the inhabitants declare that their "recent expulsion follows the savage persecution of the last three years." They are now in the unhappy position of refugees. There is no doubt that the British and French Governments will receive this memorial with sympathy, but in the nature of things no remedy save victory in the war can be effectual.

Bulgaria appears to be thoroughly alarmed at the hints of peace without annexations. (It seems that the Bulgars take the political propaganda of their Allies seriously.) Articles have been published in the newspapers of Sofia, and a leading politician has threatened to write a book proving that, whoever else goes short of booty, it must not be Bulgaria. The Central Powers are accused of having promised King Ferdinand Macedonia and the Dobruja as the reward of the successful belligerent, and they are warned that they must stick to their bargain. One imagines that Berlin will care less than nothing for these exhortations—the promises were but scraps of paper after all, and if necessary they will be produced for a burnt-offering on the altar of peace. Besides, the Bulgarian protestants have omitted one item in their catalogue. Whether or no they were promised certain territory, it is a fact that they received a loan from Berlin in February, 1915—the Allies have not forgotten the elaborate excuses of pre-war pledges that were put forward to cloak the true nature of that transaction. From what is known of the finances of Bulgaria, it is unlikely that that loan now stands alone, or that money has been advanced by Germany entirely without conditions. Now it is not always wise of debtors to remind their creditors of the precise terms of the bond.

The Russian offensive in Galicia has received a slight check, which is not intended to be permanent. In any event, our Allies have secured a whole army corps of prisoners; they appear to have forced a movement of enemy troops from the western to the eastern front—which is no small relief to our side of the war; and they have precipitated a domestic crisis in Germany. Herr von Bethmann-Hollweg, the "scrap of paper" Chancellor, has resigned, and his place has been taken by a Chancellor who is known only as a Prussian of the Prussians, a friend of the Junkers, and a supporter of the Conservative or annexation school. His choice would appear to indicate that Germany has no present intention of seriously setting her house in democratic order, as the ardent idealists here and elsewhere had assumed; and also that she will pursue a strong foreign policy, particularly on the eastern front, which is the peculiar care of the Junker party, from the position of East Prussia as the Conservative stronghold.

In any event, a Chancellor of this type in Berlin will be suspect in Petrograd, where the hope of peace seems gradually diminishing, despite the fixing of a definite date for the meeting of the now somewhat discredited Stockholm Conference. The internal situation in Russia, which reacts so directly on the whole Balkan position, continues difficult. Finland has been on the point of asserting complete independence—an event which, if it unfortunately occurred, would fundamentally alter the Baltic problem and the Scandinavian balance of power, and possibly create an awkward position for Sweden; while four members of the Russian Government have resigned over the proposed solution of the Ukraine question. The Kief Conference of Ukraine deputies, which a fortnight ago appointed a Minister for Foreign Affairs, and was apparently as near to a declaration of independence as Finland, appears to have reconsidered its attitude, and to desire, not independence but State membership of a Federal Republic. In any solution on those lines the essence of the question is clearly the seat of the sovereign power, and the Ukraine deputies, of whose deliberations few details have reached this country, may have demanded such large powers for the State vis-à-vis the Republic that Russia's access to the Black Sea and the Balkans would be practically cut off. That is, and must remain, a vital question for any Government that sits at Petrograd. The fact that resignations have occurred appears to show that the proposed concordat was unsatisfactory.

Further news on this matter will be awaited with interest. If Russia were to lose her southern provinces, and consequently her weight in the Near East, the future of Serbia would become difficult indeed, faced by a hungry and resentful Austria and deprived of any support on that side of Europe. For Roumania the position would be less serious, her relations with Russia in the past not having always been effusive; but it would appear that Roumania stands on the whole to lose rather than gain by the diminution of Russian influence in the Balkans, and Roumania has her own special relation to the Ruthenian problem to affect her attitude towards an independent Ukraine. As to Asia Minor, the exclusion of Russia from the Black Sea and the substitution therefor of a second-class state like the Ukraine would considerably alter the relative position of the Ottoman Empire both across the Bosphorus and in the capital.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—I.

Special interest attaches to the report on the work of the Ministry of Justice during 1915-16, just published, by reason of the fact that the author, Sir William Brunyate, who succeeded Sir Malcolm McIlwraith as Judicial Adviser to the Egyptian Government in October last, and who now returns to administrative duties after an absence of several years, gives his impressions of the present state of affairs as compared with what he knew it to be in 1906, and puts on record the conclusions at which he arrives from that comparison.

Criminal Statistics.

Crime generally showed a reduction during 1915-16. Reported offences fell from 255,647 to 240,959, of which 185,622 turned out to be real offences as compared with 194,572 in 1914-15. The number of complaints classified as unfounded or as calling for no public action compares favourably with that of ten years ago, when, of course, the total number of complaints was smaller. Allowing for certain categories which did not appear in the 1906 statistics, the 1915-16 figures for complaints show a well-marked drop compared with those for 1914-15, following upon a steady tendency to rise throughout the ten-year period. Basing himself on the available statistics for the annual increase in population since 1882, the Adviser makes it perfectly clear that the criminality of the population is far from being on the increase. Nevertheless, as he says, the question presents itself whether throughout the period the facilities for setting in motion the machinery of criminal justice in wholly petty cases have not been unduly great. He draws attention to the change that has taken place in regard to petty assaults. Between 1900 and 1905 the figures rose very considerably, and as on examination it appeared that the population was appealing to the police whenever it had the least disagreement with its neighbours, it was decided to leave aggrieved persons to institute proceedings themselves in all really petty cases in which no public interest was involved. The effect of this decision was that assaults, which stood at 28,221 in 1905, fell to 18,282 in 1907, and numbered only 22,852 in 1915-16, whilst minor assaults and insults, which had stood at 23,553 in 1905, fell to 1,265 in 1906, and amounted to only 650 in 1915-16. No other figures have brought home to him so strikingly the change from the conditions with which he was once familiar and from the fact that of the 13,847 complainants whose complaints were entered last year in the police station books without further inquiry, only 838 considered it worth their while to initiate criminal proceedings themselves, and that of this number 491 failed in their actions, Sir William concludes that the public now understands that complaints to the police of minor assaults or insults serve no useful purpose.

In other respects he finds that aggrieved persons still continue to regard the police as proper to be appealed to. With the possible exception of petty thefts he can, however, find no figures in the provincial returns to enable him to express a definite opinion that the system of public prosecution is being abused, but in Cairo he regards the evidence of such abuse as conclusive. During the decade figures for practically every offence in which the public authorities initiate prosecution have fallen, but cases of assault have more than doubled, and those of delictual theft have quintupled, whilst of the 240,959 complaints for the whole of Egypt, 63,979 originated in the capital. It would be ridiculous to contend that Cairo is less orderly than it was ten years ago, and the conclusion he comes to is that petty thefts are being needlessly reported to the police just as petty assaults were twelve years ago. The advantages of a judicious combination of public and private prosecutions appear to him worthy of examination whenever the existing criminal procedure comes up for revision.

The Adviser gives some very interesting comparative figures regarding crimes recorded during the last eleven years. There has been a more or less steady increase in criminal homicides, which, as far as he can judge, has not tended quite to keep pace with the increase in population, and the details of which would "tend to show the cheapness of life rather than the existence of deliberate crime." Attempted homicide has been proportionately somewhat greater; thefts classified as crimes by reason of the accompanying circumstances have, unlike delictual thefts, diminished, while thefts classified as crimes by reason of the antecedents of the thief have increased in number, "thanks probably to the efficiency of the anthropometric system of identification." Arson has practically doubled during the decade. This he, in part, explains by increased readiness to complain to the police, but it is interesting to note that he is informed "that since the disappearance of certain enemy offices, whose local agents were not above suspicion, arson, as it is understood in England, has substantially diminished in Cairo." Criminal destruction of crops has fallen, whilst the small number of cases of bribery brought to the notice of the authorities, he fears, cannot be conclusive of the infrequency of the offence. The same remark, he says, is largely true of criminal forgeries, though it is satisfactory to note that prosecutions are on the increase. With regard to the distribution of crime by locality, offences have increased during the past year in Cairo and the Canal zone, a result "not wholly unconnected with the presence of large bodies of troops, more especially as a large proportion of both increases is accounted for by recidive of theft." In the Delta there has been a marked decrease, whilst in Upper Egypt there is a further increase, especially in Beni Suef, Minia Qena and Assouan, where the figures are higher than in any previous year.

In the last report is was suggested that the increase in crime in 1914-15 was in part due to the absorption of the police in special duties of a semi-military character. In this connection Sir William remarks that "the furthest point to which I should be prepared to rely on such absorption is that of claiming that everyone has been much too busy to concern himself with the improvement of criminal statistics." He considers that the figures for the past two years may be relied on as being unvarnished figures, in which respect "they appear to supply some evidence that the country is settling down quietly under the new régime." Looking at the figures for crime as a whole, he thinks that the total increase in the ten years—4,302 in 1915-16, as against 3,586 in 1906—corresponds very closely to the increase of population, and they appear to him less discouraging than as a member of the general public he had been accustomed to suppose, more especially if his interpretation of the arson figures, which are responsible for most of the increase, is correct.

With regard to the effect of the Relegation Law of 1909, which was based on the theory that crime was largely the work of criminal associations, the relegation of the known leaders of which would be followed by a very large decrease in crime, the Adviser says that, although in certain districts and for certain classes of crime a permanent improvement followed the introduction of this law, the statistics as a whole appear to show "that no very widespread or permanent result was achieved, and that the theory in question failed to make allowance for the very large proportion of crime which is due to sporadic and almost accidental causes." Some confirmation of this view is supplied by the fact that of the 3,956 adults convicted of crimes last year, 154, or only 3.9 per cent., had previous convictions of crime, the corresponding figure for England being 41.9 per cent. He mentions that at about the date of the Relegation Law he analysed the statistics in the current Prisons Report, and that the striking feature brought out by that analysis was the extreme youth of the offenders sentenced to penal servitude. Crime, in other words, was the work of the generation which had grown up under the British Occupation; and although the type of gang robbery, which caused so much trouble in the early days of that Occupation, has been permanently stamped out, in his opinion "there is undoubtedly evidence of the relaxation of the old village discipline which was enforced by methods such as would no longer be tolerated." If, as he is informed by Assize Court Judges, the same conditions still hold good, the solution for the problem of crime "must be found in some new basis for the orderliness of village life."

Misdemeanours, which had risen in 1914-15, fell again to practically the 1913-14 level. Petty thefts have steadily risen, and, thanks to them, the 1915-16 figures are higher than for any year previous to 1914-15. Compared with 1906, however, the detailed figures show "a not unsatisfactory condition of things apart from the one item of theft." Of the total increase in reported misdemeanours of 34,710 in the ten years—in 1906 the figure was 63,864—no less than 26,527 are accounted for by thefts, while newly created offences stand for 2,199. Noteworthy increases are recorded in obtaining by false pretences and in abuse of confidence, due in part to an increasing tendency to appeal to the police. The figures as to abuse of confidence are, the Adviser thinks, near the point at which the machinery of public prosecution is being invoked in frivolous cases, but the minor increases in forgery, perjury, and attempted bribery are, in his opinion, entirely healthy, and leave room for further increase. During the ten years the figures for resistance to public authority, vagabondage, and breaches of rules by persons under police supervision have all fallen, the decrease in the first named being very satisfactory, since "frequent prosecutions by the police for the purpose of maintaining their own authority imply some confession of failure on their part." Reported contraventions fell in 1915-16 from 86,397 to 82,746. In Cairo the figures are less than at any time since 1899, but in Alexandria they are higher than any recorded since 1905. There have been considerable variations in the figures for the various offences, and "unless one is to assume very sudden and unsystematic variations in the orderliness of the population it is fairly clear that

Digitized by Google

these figures taken in detail largely reflect sporadic variations in the standard of administration of the law." An instance is given to show that in Cairo, at any rate, the fall is due in part to an effort to govern by the influence of authority rather than by constant authority. Of the 44,891 contraventions in the provinces 13,398 related to measures against the pink boll worm and 10,620 to breaches of public health regulations. The Adviser remarks that "it would appear a legitimate inference that under neither head do the measures ordered command the intelligent approval of the population." From the fact, however, that misdemeanours connected with cotton worm have decreased from 8,655 in 1911-12 to 2,217 in 1915-16, it would certainly appear that a period subsequent to the introduction of any measure directed at the ingrained and traditional habits of the masses must be allowed to elapse to permit of its utility penetrating to their minds; there is therefore some hope that in the course of a year or so the practical side of the boll worm regulations, which were introduced for the first time last year, will become evident to the rural population, and that it will show more readiness to comply with them.

Work of the Criminal Courts.

Of the 2,525 cases tried by the Assize Courts, 2,181, or 86.4 per cent., resulted in convictions, as against 85.8 per cent. and 86.7 per cent. in the two preceding years. In these 2,525 cases 5,354 persons were placed on their trial, and of these 1,326, or 24.7 per cent., were acquitted, as compared with 25.6 per cent. in 1914-15. From a comparison of the tables attached to his report with the corresponding ones for several years back, Sir William makes some very interesting deductions as to penalties at work. In the first place, there is some, but no very great, increase in the severity of penalties for serious offences; then, as compared with ten years ago, there is some shifting of the burden of proof as to premeditation and intention in cases of criminal homicide, courts being somewhat more ready to find premeditation, and, as regards intention, to presume that a man intended the natural consequences of his acts; and the increased proportion of convicted persons to cases of conviction in respect of most of the more serious offences indicates, he thinks, a better understanding of the criminal responsibility of accomplices of crime. On the subject of sending habitual offenders to the adult reformatory, the Adviser states that offenders who have already served one term are beginning to find their way back, and mentioning that responsible prison authorities have grave doubts as to the utility of such second sentences, he considers that the question deserves careful examination. Turning to the average number of cases tried a day by the Assize Courts, which was 4.2, as compared with 4.0 the previous year, he observes that this figure would not appear to have varied very much since these courts were first instituted; but, he adds, it is only rendered possible by a careful study of the earlier record of each case by the sitting judges before the formal hearing. Such a procedure is, as he says, open to the obvious criticism that it tends towards cases being decided upon the papers rather than upon the evidence taken in open courts, but he defends it as follows:—

"Upon the best opinion I can form, this criticism, which as an Englishman I should at one time have been prepared to support, makes inadequate allowance for the special conditions of the country. A disinterested witness in England is ordinarily assumed to be telling the truth. In this country the presumption in that sense is less strong, and there is much greater difficulty in knowing whether witnesses are disinterested. Hence the much greater importance of knowing at what date and under what circumstances a statement was first made, and of the careful comparison of conflicting statements made at different times. Nor, in our present stage of development, could the judges count upon the assistance of the Parquet and the Bar as adequate to raise and resolve such difficulties, if they themselves had no previous knowledge of the facts. But it by no means necessarily follows that the public hearing of the case is a mere formality. The mind of the judge necessarily adapts itself to the procedure according to which he works; and, apart from keeping his mind open on all points proper to be argued, he relies upon the hearing for testing the credibility of the material witnesses. The above observations, I believe, represent the attitude of the best of our English judges who, after practising at the English Bar, have had long experience of Egyptian conditions. I should hesitate to endorse their view, unless I had satisfied myself by personal experience that the considerations I have advanced have at least as great a bearing on the protection of innocent prisoners as on the conviction of the guilty."

The average number of days between the commission of crimes and judgment, which was sixty in 1906, was 110 days last year. Compared with what happened prior to the introduction of Assize Courts, when the time was 230 days, this is an improvement, but the period is still too long. The Adviser regards the matter as one calling for serious attention, and fears that the distribution of the Parquet throughout the provinces in 1912 has rendered the problem more difficult of solution. Under the present organisation, while the responsibility for directing inquiries is in the hands of the relatively experienced officials at the Mudiria headquarters, much of the detailed work is necessarily delegated to the substitutes in the Markaz, who can never wholly neglect their current routine work. As he says, crimes in the technical sense will be most rapidly and efficiently disposed of when they are dealt with by officials who can give their whole time to them. Cases which also tend to affect the average time before judgment are those which are sent before a summary tribunal, but which for purely technical reasons the summary judge declares outside his jurisdiction, and Sir William cites as illustration a case concerning the disappearance of a spirit stove. This case started in October, 1915, before the summary court; after a series of adjournments, and the hearing had been apparently concluded, it was declared by the judge in May, 1916, to be outside his jurisdiction, and it was finally dealt with by the Assize Court in January this year. Apart from the point which it serves to emphasise, this case revealed features which, as the Adviser points out, ought to be amenable to administrative action.

In the summary and Markaz courts, although the number of cases entered have increased but slightly, the arrears have risen considerably compared with 1906. To a material extent Sir William Brunyate ascribes this increase in arrears to the abolition of Markaz tribunals in the provinces, and of special Markaz judges in the Governorates. Some part of the arrears are, no doubt, due to special causes, as, for instance, the qink boll worm offences, which come mostly at the end of the statistical year, and so bulk largely on the arrears list for the new year. The obvious remedy, as he points out, would be to arrange special sittings for such cases. The question of the transfer, to the ordinary courts, of jurisdiction with respect to offences at present dealt with by special administrative tribunals, which comes up periodically for discussion, has always been objected to on the score of the difficulty of securing adequate sentences. The Adviser has long "held the opinion, based on some study of the work of administrative tribunals in this country, that any possible advantage under the head of penalties would be more than counterbalanced by disadvantages in other directions," and a study of the table of penalties imposed by the summary courts, as a whole, satisfies him "that the difficulty as to penalties is much less serious than it would have been some years ago."

Before the Cantonal Courts 4,127 cases of contravention were brought, but it is curious to note that 8,927 persons were put upon their trial, and that the proportion of accused persons varies in an extraordinary manner, running as high as 463 to 27 cases in one canton, and 477 persons to 10 cases in another. In the canton first referred to inquiry elicited the fact that some of the so-called contraventions were not single cases in which a large number of persons were involved, but batches of offences of the same type reported at one and the same time. In the case in question the offence was that of constructing reed huts without authorization at the time of the year when the villagers live out in the fields. Owing to a confusion between the word "Zarbia" (reed-hut) and "Zariba" (an enclosure for cattle), the offence was classified as one relating to public health, and the Adviser not unreasonably draws the conclusion that the clerks, by whom the returns are made and the clerical work of these courts is done, have but little acquaintance with the technicalities of their work. The most widely-distributed offences are minor assaults and insults. For these 5,889 persons were tried, as against 6,726 in the previous year, and 2,156 convicted, as compared with 2,341. "Having regard to the nature of the offences charged, the proportion of acquittals suggests a satisfactory measure of common sense on the part of the notable judges." The nature of the offences and their distribution appear to Sir William "to raise the question of whether the jurisdiction of these courts in cases of contravention serves any really useful purpose." In regard to minor assaults and insults, the necessity of proceeding to the Markaz town to lay a complaint before the Summary Court would have prevented the great majority of cases from being brought, and such a result he would have welcomed. In five-sixths of the cantons the aid of the courts is not being invoked in support of the authority of the Omda. As regards other offences, what little is done is unsystematic and capricious. Machinery must, it is true, be made available in the larger villages for the safeguarding of public lighting and public roads, which are bound to increase in importance in the future. But "the Cantonal Courts are, therefore, no more readily available than the Summary Courts; and while reasons could no doubt be advanced for preferring the trial of cases relating thereto by local notables to their trial by professional judges, I doubt whether it was for that purpose that the courts were created, and I incline to believe that the balance of opinion would be in the opposite sense."

CYPRUS NOTES.

(From a Correspondent.)

The Festival of St. Barnabas.

The Fête of St. Barnabas at Varosia (Famagusta) was celebrated with considerable pomp on June 11. As an endeavour is being made in the Greek community to arouse greater interest in Church and other anniversaries and functions, it was natural that there should be a movement this year to observe with increased ceremony the festival of an apostle who holds so high a place in the calendar of the Greek Church. The Archbishop of Cyprus claims succession from the Apostle, who was a native of Salamis (Constantia), the ruins of which lie to the north of the modern Famagusta. The independence of the Cypriot Church, which had been sometimes questioned, at Antioch and elsewhere, was confirmed by the Council of Ephesus in 431 A.D. Again in 438 the Emperor Zeno, by an Edict, gave effect to a similar recognition on the part of the Patriarch and Holy Synod of Constantinople. A few years before that date a most convenient discovery had been made of the body of St. Barnabas, and, on his heart, a MS. copy of the Gospel of St. Matthew. These relics were sent to the Emperor. The Bishop of Constantia was appointed Archbishop of all Cyprus, was authorised to sign his name in red ink, to wear a cope dyed with the Imperial purple, and to enjoy other privileges, all of which have been preserved to the present day. The Archbishop is thus a Patriarch in all but name.

As regards the death of the martyred St. Barnabas, one account states that the body was burned with fire, "so that even his bones became dust." According to another version, after the Apostle had been stoned, his body was secretly buried under a carob tree, "all traces being lost." The miraculous element, therefore, plays an important part in the annals of the early Greek Church, and the establishment of its autonomy.

Agricultural Progress.

The present year is one of considerable interest to all who have agricultural industries at heart, as it was gathered from the last very interesting report of the Director of Agriculture that it might witness some substantial results of the work which has been carried out by his Department since the recent expansion of its staff. The report showed that the office had dealt with a full and varied programme in many branches of agriculture. The development of the office, modest and long-delayed as it was, had rendered possible a very considerable increase of its activities, and the present Director is able to speak hopefully of progress in some important directions.

We were told that a few years ago agriculturists were scarcely aware of the Department's existence, or, if they were, viewed it with suspicion. It might have been added that not a few Cypriots regarded it with indifference, insinuating that the Directors of early years were theorists, who did not show the people in practice and by demonstration, what they wanted to know and to see with their own eyes. The charge was not a just one, as the Directors referred to, besides being men of high scientific attainments, were also skilled in practical work of the kind required in Cyprus. The trouble was that the Department was quite inadequately equipped for the work before it, and financially it was so starved that its officials, having their time fully occupied in a hard-worked, and, indeed, over-worked office, could not carry out in addition the field instruction which they were only too anxious to develop. The results cannot yet, of course, be very conspicuous, but the Director has already been able to show a good record of work accomplished and sketched out by his Department. Justice could not be done to any detailed account in the present note. What is most needed is that the peasants themselves should now respond to the encouragement which is being offered. The Director states that by far the most important factor in such *rapprochement* as has been effected between the office and agriculturists is due to the work of the travelling staff. But although it is satisfactory to read that there has been some awakening, in another part of the report referred to it is disappointing to find that, in the matter of demonstrations, "the cultivators remain apathetic and indifferent to the efforts made in their behalf."

The Greek members of the Legislative Council who sometimes liken their efforts to "the voice of one crying in the wilderness," are pressing for a much larger expansion of the Agricultural Department; and no doubt they can point to various needs which must be met before it can cope adequately with the increasing requirements. But unless the people themselves can be induced to come forward with more alacrity and a better spirit of enterprise, all efforts and exhortations of the Government might invite a similar comparison.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Mesopotamia Report. July 11, 12, 13.

The Report of the Mesopotamia Commission has occupied a large part of the attention of both Houses of Parliament during the past week. On July 11 it was announced that the Government had decided that a judicial inquiry into the conduct of all persons concerned was necessary in the interests of justice, and that the machinery most useful for the purpose was provided by the Army (Courts of Inquiry) Act, 1916. The intention was that the court should consist of three officers and two persons who hold or have held high judicial offices, one of whom would be president.

On July 12 the Attorney-General explained in the House of Commons the legal and more technical considerations which had led to the advice given to the Government in regard to the judicial inquiry, and read the terms of reference. As the court was to deal primarily with military officers, it was to be left to "reflexions" that might be made by the soldiers on the politicians to bring the latter within the purview of the court. But if the proposal was not acceptable to the House, the Attorney-General announced that the Government would be willing to set up by statute a tribunal to deal with both military officers and civilians. Later in the discussion Mr. Balfour stated that, in deference to the feeling of the House, the Government would proceed by a new statute.

It was during the debate that Mr. Chamberlain announced his resignation of the Secretaryship of State for India, and delivered a spirited defence of his action in connection with the Mesopotamia campaign. Mr. Balfour stated that Lord Hardinge had sent in his resignation, and had again pressed it upon him the previous day, but he (Mr. Balfour) had on each occasion refused to accept it.

The debate was continued in both Houses on Friday, July 13. In the House of Commons, Sir A. Williamson, a member of the Royal Commission, defended the Report and the Commissioners against the criticism of Mr. Balfour and others. Mr. Asquith expressed his satisfaction that the original form of a judicial inquiry had been abandoned, but had no very favourable remarks to make upon the proposed statutory tribunal. He expressed profound regret at Mr. Chamberlain's resignation, and proceeded to justify the decision to advance on Baghdad. Mr. Lloyd George followed. He said that Mr. Chamberlain's resignation was a matter of profound regret and a great surprise. There was nothing in the Report of the Commission to justify him in feeling that he ought to have resigned. Mr. Lloyd George continued:—

"This Commission was appointed by an Act of Parliament, and I think not merely is it the duty of the Government, but of the House of Commons as well, to thank them for the great services they have rendered. Their task was an exceedingly complicated and a very unpleasant one. There has been a good deal of suffering in consequence of acts of neglect on the part of someone. There was undoubted mismanagement, and as a consequence thousands of gallant lives were lost in conditions of unspeakable torture. Someone or something is to blame. It is either a system or individuals working that system, or perhaps both. If the system is to blame, then it ought to be remedied. Such steps as could be taken in the middle of a great war to improve the system have been taken, and at the present moment the administration of the Mesopotamia campaign is everything that could possibly be desired. The temporary remedies to meet the actual conditions of the campaign have been applied; but there are permanent remedies which are essential in order to improve the system itself. These matters must be looked into. But before you can introduce changes and reforms in the system of administration it must be recollected that we are working under the limitations of a great war, and that reforms which might be introduced, if the Government were at liberty to apply its mind to the question and the House of Commons had the time, are remedies that cannot be introduced when the whole thought of the country is on the prosecution of a great war in which its life is involved."

With regard to individuals, the Prime Minister admitted that the system was a bad one, but did the men make the best use of it? If they did not, proper punishment ought to be meted out to them after a fair investigation of the facts. He insisted on the necessity of a judicial inquiry before a man was deprived of his rank and turned out of the Army. Whatever tribunal was set up—and he expressed his preference for procedure under the Barrett Act—the Government had no desire to shield anyone who was to blame for the terrible catastrophe in Mesopotamia.

"But may I say now, with great respect," Mr. Lloyd George added, "that I think we are in danger of losing our sense of proportion. We are at the most critical stage of the world-war. There are twenty millions of men at this hour interlocked in deadly conflict for the future of the world. What has happened during the last few days? I am bound to tell the House. For two or three days you have had the Army Council, the Chiefs of the Army, the War Cabinet, the House of Commons, and the House of Lords, all those who are engaged in the direction of this world-war, in which the life of this country is concerned, discussing the method of dealing with the findings of a Commission which has nothing whatever to do with the practical prosecution of the war. . . . Yesterday we were in the middle of a discussion between the shipowners of this country, come to meet the heads of the Admiralty to discuss the whole question of protection against submarines. Never was there a more vital issue, and in the middle it is postponed because there is some question of what tribunal shall be set up. It is absolutely indefensible,

Digitized by Google

and I say so as one who has the leading responsibility for the government of the country, and who, as far as I can, am thinking about nothing else. Why do I say this? There is another report of another Commission. I do not know what it is. I do not know whether it is prepared, and I do not care; it has nothing to do with the conduct of the war, but in a few days it might be upon us, and are we again to occupy the minds of every man who is prosecuting the war with considering questions of this kind? The House of Commons is responsible. I do not care about the comments in the Press—the Press has no responsibility; the House of Commons has, and I beg of the House to rise above these things and to say to the Government, 'Get on with the war.'"

Montenegro. July 11.

Mr. RONALD M'NEILL: To ask the Secretary of State for Foreign Affairs if an arrangement was made for the payment by France and Great Britain in equal moieties of a subsidy to the Government of Montenegro after its expulsion from its own country and its temporary establishment in Paris; if he will say why the payment of the British portion was discontinued in 1916, although the French portion continued to be regularly paid; if he is aware that this circumstance is being used by enemies of Montenegro to show that this member of the alliance is lightly esteemed by Great Britain; and whether, in order to remove such false impression, he will arrange that this country shall resume sharing with France the payment of whatever subsidy may be deemed necessary for the support of the Montenegrin Government while in exile.

LORD R. CECIL: The answer to the first part of the question is in the affirmative, and that to the third part in the negative. The payments in question were temporarily suspended pending an examination of the actual needs of the Montenegrin Government, and steps are now being taken to equalise the payments made by France and Great Britain under the original agreement.

July 12.

Mr. RONALD M'NEILL: To ask the Secretary of State for Foreign Affairs whether the Governments of France, Italy, and Russia have diplomatic representatives accredited to the Court and Government of Montenegro now in Paris, whereas his Majesty's Government have no such representative, but depend on the services of a subordinate official at the Embassy in Paris for communication with the Montenegrin Government; whether he is aware that this treatment of an Ally whom the British people hold in honour is regarded in some quarters as an intentional slight on the King and Government of Montenegro; and whether he will take steps to correct this impression by accrediting a diplomatic representative to the Montenegrin Government and by inviting that Government to appoint a diplomatic representative in London.

LORD R. CECIL: H.M. Government are represented at the Court of Montenegro by the Counsellor of H.M. Embassy in Paris, who is duly accredited to the King of Montenegro as "Chargé des Affaires." There is no reason whatever for regarding this convenient and perfectly natural arrangement as a slight upon our Ally.

Operations in Arabia. July 12.

Mr. MACPHERSON, replying to Sir J. JARDINE, who asked whether there was any news as to what the King of the Hejaz and his forces had been doing lately in Arabia, said: The Turkish positions between Tifala Maan and Akaba are now in Arab hands. The total Turkish losses were 700 killed and 600 prisoners, including twenty officers, and one mounted gun was also captured. A Turkish battalion was destroyed on July 2. The Hejaz Railway has been damaged at many points.

Mr. Chamberlain's Resignation. July 16.

Sir H. CRAIK asked the Prime Minister if, in view of the fact that that House could not delegate to any other body its function of judging the conduct of Ministers, he was prepared to advise his Majesty, in the interests of the public service, to decline to accept the resignation of the Secretary of State for India (Mr. Chamberlain) unless and until that House had impugned the conduct of that right hon. gentleman.

Mr. BONAR LAW: The Prime Minister has not the right to refuse to accept the resignation of a colleague. If he had had such a right, he would have exercised it in this case, with, I may add, the full approval of all his colleagues.

Affairs in Greece. July 17.

Mr. LYNCH asked the Secretary for Foreign Affairs whether, with a view to associate both Russia and the United States in vital decisions affecting the campaign in the Balkans, he would take steps, consistent with treaties involving the co-operation of Greece with the Allies, to secure that the Greek people might choose their own form of Government, even to the exclusion of a King bound in ties of close relationship to the Kaiser.

Lord R. CECIL (Under-Secretary for Foreign Affairs): Any proposal for the future government of Greece should, in my opinion, come from the Greek Government, and not from his Majesty's Government.

The Greek Constitution. July 18.

Mr. LYNCH asked the Secretary for Foreign Affairs whether the King of the Hellenes had committed any breach of constitutional conduct; and, if so, whether the Allies would consent to his continued occupancy of the throne of Greece.

Mr. DILLON asked whether the new King of the Hellenes had refused to sign a decree presented to him by M. Venizelos summoning the Greek Chamber; and whether the Secretary for Foreign Affairs would make a full and frank statement on the situation in Greece and the Balkans on the Vote of Credit.

Mr. BALFOUR said that he had nothing to add to a reply given on the 17th inst., which was as follows:—"Greece is at present in process of settling down to a constitutional régime after the abnormal events of the last two years. I do not think anything would be gained by discussing points of detail during this period of transition." I ask that the House will accept that, Mr. Balfour added.

Mr. DILLON: Are we to take it as being a point of detail if this young King, who was nominated by the late King Constantine, has refused to sign a decree calling together the Greek Chamber that was laid before him by M. Venizelos? Is that a point of detail?

Mr. BALFOUR: The point is entirely covered really by my answer. The point is that it is not in the interests of Greece that her affairs during this period of transition should be discussed in foreign Parliaments.

Mr. DILLON: Do I understand that the right hon. gentleman will not make any statement as to the situation in Greece on any condition?

Mr. BALFOUR: That must depend on what the condition is and on what statement it is possible to make. That is quite different from answering questions dealing with separate points which I do not think it is in the interests of Greece should be discussed.

Mr. LYNCH: Does the right hon. gentleman consider it is in the interests of Greece that this nephew of the Kaiser should refuse to obey the Constitution?

Mr. BALFOUR: What has that got to do with the question on the paper? My sole point is this: Greece is working out, and rapidly working out, and I believe successfully working out, her salvation. Do not hamper her task.

The Government and the Report. July 18.

The CHANCELLOR OF THE EXCHEQUER (Mr. Bonar Law), replying to questions by Sir J. D. Rees and Sir H. Dalziel, said: The Government have given further attention to the question of the action which they ought to take in regard to individuals whose conduct was criticised in the Mesopotamia Commission's report. In view of the considerations urged during the recent debates and the objections raised to further inquiry (as a preliminary to executive action) in the case of the persons implicated in this report, whether the inquiry were by any existing tribunal or by a special statutory Court to be set up for this purpose, his Majesty's Government have decided not to proceed further with their former suggestion. In coming to this decision, they have also been influenced by the undesirability of diverting the thought and energies of the Legislature and Executive at this critical time from the prosecution of the war. As regards the soldiers, the Government have decided that they should be dealt with by the Army Council in the ordinary way. The decision of the Army Council as to the action taken by them will be announced as soon as possible. As regards Lord Hardinge, the Government, on the representations of the Foreign Secretary, who alone is in a position to judge, have decided that it would be detrimental to the public interest if the Foreign Office should be deprived at the present juncture of the services of Lord Hardinge as Permanent Under-Secretary of State, and have, therefore, refused his resignation, which has been for the third time proffered.

[On a motion for the adjournment of the House on July 18 a discussion took place on the refusal of the Government to accept Lord Hardinge's resignation. Mr. Balfour, speaking on behalf of the Government, maintained that Lord Hardinge had been "monstrously used," and that he was the man who had suffered most cruelly by the decision not to establish a fresh court of inquiry. The House divided on the motion for the adjournment, and there voted:—For, 81; against, 176—majority against, 95.]

ROUMANIAN CABINET CRISIS.

JASSY, July 13.

The King has charged M. Bratiano to reconstitute the Cabinet, in consequence of the crisis provoked by the resignation of the four Ministers representing the Conservative Opposition party. As his Majesty desires a Cabinet representing the concentrated strength of the nation, he has requested M. Bratiano to conduct the necessary pourparlers in a conciliatory spirit; but, in view of the demands of the Conservatives, M. Bratiano will probably form a Cabinet almost exclusively Liberal.—Reuter.

Turkish prisoners of war in British hands number about 34,400, only a few hundreds of whom are civilians. About 14,000 are interned in Egypt, 13,000 in India and Burma, and 5,000 in Cyprus.

According to *The Times* Athens correspondent, M. Venizelos, in replying to a deputation on the 9th inst. of all the workmen's unions of the Piræus, said that monarchs must be responsible above all to the people, who put them in their high place. The monarchs we wish for to-day are those who acknowledge that this is their call, and who are ready to be responsible in this world. If they feel they have also accounts to pay to God, these they must leave to be settled in another sphere after their death. For if sovereigns emerge from the whirlpool of war in which the world to-day gyrates, they will survive and rule only if they bow to and observe constitutional forms of government. Monarchs of our days are presidents of Republics who, instead of being elected every four or five years, are invested with an hereditary crown.

NEAR EAST BOOKSHELF.

THE RUSSIAN REVOLUTION.*

"There are some things," wrote a well-known humorist, "that begin badly and end well, *e.g.*, claret, olives, caviare; others, again, that begin well and end badly, such as kittens, revolutions, and platonic love."

History tells us that all cataclysmic movements in a nation's life commence under the fairest auspices. The French Revolution of 1789 was engineered by a handful of doctrinaires, and, as we have recently learnt, its Egeria was an enthusiastic woman. Their motto was "Liberty, Equality, Fraternity," and for a few brief months there seemed reason to believe that its application would bring about the millennium in France. But doctrinaires are notoriously ignorant of human nature, and even less versed in the still-embryonic science of Collective Psychology. While Condorcet and his fellow-dreamers were engaged in concocting projects of constitutional governments, a horde of demagogues was at work who knew the temper of the masses and evoked those bloodthirsty instincts which slumber in every human breast. By dint of organisation they wrested political power from the intellectual classes, and ushered in a Reign of Terror which put back the clock of democratic progress for a century.

History threatened to repeat itself in Petrograd during the throes of the recent revolution. It was planned by a small educated class, known in Russia as the *Intelligentsia*, who laboured with sleuth-hound persistence to destroy the reverence for established authority whose roots were embedded in a vital religion. That authority had proved unworthy to sway the destinies of Russia. It had conspired with her deadly foes to compass a breach of faith which would have staggered civilisation. There was a power behind the throne which deliberately weakened Russia's armies in the field, and took measures to starve Petrograd into a revolt which would have served as an excuse for bloody repression, and paved the way for a shameful peace. Their manœuvres were defeated by a popular rising, which began on March 13, and plunged the capital in complete anarchy. Mr. Stinton Jones was privileged to witness every phase of that volcanic movement, and he gives a lifelike picture of Petrograd during "Red Week" (March 13 to 20). It places the contradictions in the Russian character in a bewildering light, revealing immense capacity for self-control side by side with unbridled licence, episodes reminding one of Gilbert and Sullivan's operas together with road rioting which rivalled the worst excesses of the Paris Commune.

He would indeed be a bold man who ventured to dogmatise regarding Russia's immediate future. Her friends, however, have good reason for hoping that external pressure may consolidate her shaken social fabric. They have faith in the ability and patriotism of the Provincial Government; they disarm in the federated Zemstvos, or local governing bodies, a sustaining mechanism which may well enable Russia to tide over the crisis caused by the doctrines of anarchism.

Mr. Stinton Jones' least satisfactory chapter deals with the old régime, which apparently vanished like smoke during that fateful week in March. He does not give Tsar Nicolas II. the credit which is due to him for having initiated a reform of immense importance to his Empire. The Revolution was far from being bloodless; but the tale of killed and wounded would have been multiplied tenfold at least if the mob had been able to haunt the innumerable vodka shops which were closed in August, 1914. Mr. Jones admits that the ex-Tsar was "personally not unpopular," and no one who knew him can doubt that his sympathies were wholly on the side of the Entente. But he struggled vainly against the barbed wire entanglement with which German gold had surrounded him, and the wife of his bosom proved a traitress to her adopted country. The lesson taught by the Russian crisis is that no human being can be trusted with the destinies of 170,000,000 fellow-creatures. Its success will establish the truth of President Lincoln's epoch-making watch-cry: "Government of the people by the people for their benefit."

BOOKS RECEIVED.

Palestine: The Re-birth of an Ancient People. By A. M. Hyamson. (London: Sidgwick and Jackson, Ltd. 10s. 6d. net.)

In Greek Seas, and other Poems of Travel. By Oswald H. Hardy. (London: John Lane. 3s. 6d. net.)

La Bulgarie en Guerre. By Léon Savadjian. (Geneva: Librairie Georg and Cie. fr. 1.25.)

* "Russia in Revolution, being the Experiences of an Englishman in Petrograd during the Upheaval." By Stinton Jones. [Herbert Jenkins, Ltd. 1917. 5s. net.]

BOOK NOTES.

Messrs. W. Heffer and Son, Cambridge, have just published an Arabic conversation grammar and reader, *Egyptian Colloquial Arabic.* The work is written by W. H. T. Gardiner, B.A., C.M.S., Egypt, Superintendent of Arabic Studies at the Cairo Study Centre, assisted by Sheikh Kurayyim Saltam.

The History of Zionism in England and France, and with Reference to other Countries among Gentiles and Jews, 1600-1916, by Nahum Sokolow, is announced among Messrs. Longmans' forthcoming books. The author deals in an introduction with the present Jewish poblem.

The French Government has published in three volumes *Les Musulmans Français et la Guerre* (M. Ernest Leroux, Paris). The book reproduces addresses given in, and evidence by and from, Africa proving the fidelity to France of the chiefs and religious dignitaries. The three collections are those from Western Africa: Algeria, Tunis and Morocco. As educators of themselves and of their African subjects, the French are producing treatises that will explain the Indigènes' point of view to Frenchmen, and enlighten the Mussulmans on the true facts concerning their country and its history. The Morocco administration is publishing a long series, entitled *Villes et Tribus de Maroc.* A committee for Berber studies has been organised, and every quarter produces *Les Archives Berberes.* Algeria is responsible for the Arabic text of Ifrigiya's history of the Savants of Kairoan and Tunis, and also for a translation, with notes, of *Récits sur la Vie de Mohammed*, and M. Paul Marty has written his *Etudes sur l'Islam Maure.*

PRISONERS AND THE TURKS.

Mr. Hume-Williams took the chair at a meeting, held on July 17, which was attended by more than thirty members of Parliament. The following resolution was passed:—

"That, having in view the recent statements made in Parliament to the effect that the British and Indian prisoners in Turkey are in a deplorable condition and the men hungry, this meeting calls on the Government to take immediate steps either by negotiation, pressure, or the sending of money to ameliorate their condition."

A sub-committee was appointed to interview the various Departments, and, if necessary, to bring the matter again before the House.

The Prisoners of War Department has issued the following statement:—

At the request of his Majesty's Government the International Committee of the Red Cross at Geneva have expressed their readiness to send delgates to visit camps in Turkey in which British prisoners of war are interned, and have applied to the Turkish Government for the necessary permission.

The International Committee have based their request on the fact that his Majesty's Government has allowed Red Cross delegates to visit all the camps in which Turkish prisoners of war in British hands are interned, without attaching any restrictions to these visits. The Committee have, therefore, pointed out to the Turkish Government that it is entitled to ask, as a measure of reciprocal right, for permission to visit all the working camps in the Taurus and elsewhere. A prompt reply has been requested.

MESOPOTAMIA AND THE RED CROSS.

Speaking at Exeter on July 14, Sir Arthur Lawley said, in regard to the Mesopotamia report, that it was not strange, in view of the terrible stories revealed, that people asked him constantly what the Red Cross was doing. He had no hesitation in saying that their record there was one of which they had no need to be ashamed. During the summer and autumn of 1915, and again early in 1916, repeated offers of the Red Cross were made to the authorities in Mesopotamia, but for various reasons, not very evident, the offers were invariably declined, save in respect of a few motor launches, which were sent as soon as asked for. It was not until Lord Chelmsford's Viceroyalty, in 1916, that the Society's personal stores and material had access to the country. Since then they had not been idle, and Sir Stanley Maude had expressed approval of the Red Cross work and of the invaluable assistance the military received from the motor launches at the latter part of last summer. Alluding to the discussion on paddle-boats which had taken place, Sir Arthur said they were efficient for the carrying of wounded, for which they were required.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars apply to E. DENISON ROSS, Director.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. July. 20	1917. July. 7	Friday	1335. Ramadan 30 Shawall 1	5677. Av 1
21	8	Saturday.....	1	2
22	9	Sunday	2	3
23	10	Monday	3	4
24	11	Tuesday	4	5
25	12	Wednesday	5	6
26	13	Thursday	6	7

The King and Queen, attended by the Countess of Airlie, Brigadier-General the Earl of Shaftesbury, the Hon. Sir Derek Keppel, Lieut.-Colonel Clive Wigram, and the Earl of Cromer, arrived at the Palace on the 14th inst. from France and Belgium. During the past fortnight his Majesty, accompanied by the Prince of Wales, has visited General Headquarters, and all the different Army and Lines of Communication Areas.

The Hon. Sir Arthur Lawley has left London for Scotland.

Sir Roper and Lady Parkington have left Claridge's Hotel for Harrogate.

Mr. Balfour received the Roumanian Minister at the Foreign Office on July 17.

General Sir Ian Hamilton was recalled before the Dardanelles Commission on July 17.

M. P. Camaki, the Roumanian Consul-General at Athens, is spending the summer at Old Phaleron.

Madame Take Jonescu, owing to illness, was unable to hold her reception on the 18th inst. at 23, Cleveland Square.

There was a further sitting of the Dardanelles Commissioners at the House of Lords on July 14, but no witness was examined.

M. Yovan Tanovitch, formerly of the Serbian Press Bureau, has arrived in London from Salonika. He called on the Serbian Minister on Monday.

M. Gryparis, Greek Minister at Vienna, the Legation staff, and the Greek Consul-General at Budapest, M. Scassi, have left Vienna for Switzerland.

Sir Reginald Wingate, the Sirdar, has informed the Lord Mayor that Egypt's contribution in response to his appeal for France's Day will be £3,500.

Inspector-General Robert Bentham, R.N., who died recently at his residence in Ealing at the age of seventy, was for some time in charge of the hospital and medical establishments at Malta.

M. Gennadius, the Greek Minister, visited Mr. Balfour, Secretary of State for Foreign Affairs, at the House of Commons on Friday afternoon, July 13, and again at the Foreign Office on July 16.

The Vice-Admiral, Eastern Mediterranean, reports that in the course of attacks on the enemy positions on the Gallipoli Peninsula, Royal Naval Air Service machines sank a tug lying off Chanak.

Mr. E. R. Burgess, Inspector, White Nile Province, and Mr. C. H. Thomson, Inspector, Kassala Province, have been appointed Magistrates of the First Class under the Code of Criminal Procedure.

Count Clam Martinitz, the former Austrian Prime Minister, who has been appointed Military Governor-General of Montenegro, in succession to General Weber von Webenau, has arrived at Cettigne.

Captain M. D. Jephson, Norfolk Regiment, has been attached to the Egyptian Army as a Special Service Officer. He has been granted the temporary rank of Bimbashi and attached to the 10th Sudanese for duty.

A Turkish semi-official telegram, while denying that the Goeben and the Turkish Ministry of War at Constantinople were damaged by the recent hostile air attacks, admits that one torpedo-boat was damaged by a bomb.

In a telegram to Professor Masaryk, the President of the Czecho-Slovak National Council in Paris, in reply to congratulations, General Brusiloff says that the "Czech Brigade forms a worthy unit" of the Russian army.

Mr. H. T. Beresford-Hope, Third Secretary at the British Legation at Athens, died on Tuesday from cerebral meningitis. Born in 1882, he entered the diplomatic service in 1907, and had been employed at Washington, Berlin, and Rio de Janeiro.

A Constantinople telegram states that, as the Dutch Legation there recently declared itself unable to assume the protection of Hellenic interests in Turkey in view of the inadequate staff of the Legation, the Danish Government has taken over charge of Hellenic interests.

A thanksgiving Mass was celebrated in the Serbian Church at Corfu on the 12th instant for the long and happy life of King Peter. Diplomatic and military representatives of the Allied and friendly countries and the members of the Jugo-Slav Committee were present.

Captain Matila Costiesco-Ghyka, formerly Secretary to the Roumanian Legation in London, who has been on active service in Roumania, has been appointed Naval Assistant to Major Arion, the Military Attaché. Captain Costiesco-Ghyka arrived in London on July 15.

M. C. Simopoulos, who acted as Chargé d'Affaires of the Hellenic Legation of King Constantine in London, has handed over the records of the Legation to M. Gennadius, the Greek Minister. M. Simopoulos will leave for the Legation in Rome, where he was formerly secretary.

An Athens message states that General Bairas, who was arrested in connection with the treacherous attack on French troops at Larissa in June last, has arrived in Athens, and has been removed under escort to the Island of St. George, a small island between Salamis and the mainland.

Lieutenant Vlad Georgesco, son of General Georgesco, the Roumanian Military Representative attached to the British Headquarters, has been appointed a member of the Commission Internationale de Ravitaillement, Roumanian Government Committee. He has now entered upon his duties at Canada House, Kingsway.

The *Petit Parisien* states that the notorious Greek ex-Public Prosecutor, Livieratos, together with other noted partisans of the Greek Royalist faction, has succeeded in entering Albania and in gaining the Austrian lines. Other Royalist leaders are believed to be endeavouring to form bands in Albania to engage in a war of brigandage.

The marriage of Major Cecil Hunter Little, D.S.O., Somerset Light Infantry, attached Egyptian Army, only son of Colonel and Mrs. W. Hunter Little, of Harestock Lodge, Winchester, to Miss Dorothea Katharine Romilly, second daughter of Mr. Samuel Henry Romilly, of Huntington Park, Herefordshire, and of the late Lady Arabella Romilly, took place on July 14 at St. Margaret's Church, Westminster.

King Alexander, according to Reuter's Athens correspondent, sent the following telegram to President Poincairé:—"On the occasion of the national festival of your noble, dear country, I beg you to accept my most sincere wishes for the greatness and prosperity of France and the triumph of the cause of right, justice, and liberty for which France has been heroically struggling three years, and in which struggle Greece is happy henceforth to participate."

By command of the King, the Hon. Sir Arthur Walsh, Master of the Ceremonies, called upon the Serbian Minister on the occasion of the anniversary of the birthday of the King of Serbia on July 12, to offer King George's congratulations. A Te Deum was sung at the Russian Church. The Very Rev. Eugene Smirnoff, the Priest to the Russian Embassy, officiated. Among those present were the Serbian Minister, the *personnel* of the Legation, and the members of the colony.

The annual meeting of the Islamic Society will be held at the "Khankah," 86, Ladbroke Road, London, W., on Saturday next, the time of meeting being three in the afternoon. The Id-ul-Fitr (Feast of Ramadan) prayers—for those wishing to say their prayers in London—will be held on the same day and at the same address at 11 in the morning. The annual meeting above mentioned will be followed by an At Home, at which Mr. M. Kassimoff, one of the vice-presidents of the society, will take the chair. An address will be delivered by Syed H. R. Abdul Majid on "Sovereignty in Islam." Indian music will be performed.

According to the *Morning Post* correspondent at Rome, the following changes in the Serbian Diplomatic Service are imminent:—M. Ristitch, Minister at Rome since the beginning of 1915, will give place to M. Spalaikovitch, now Minister at Petrograd, who will be replaced by M. Gavrilovitch, now Minister to the Holy See. M. Ristitch, the message adds, was much liked in Rome, and his colleague, M. Gavrilovitch, was the first Serbian accredited to the Vatican. M. Spalaikovitch is considered to be one of the most experienced Serbian diplomatists. He has written a treatise on the Bosnian question, and while Under-Secretary at the Foreign Office he showed up the notorious Friedjung forgeries. He has also represented Serbia at Sofia.

At a meeting of the Grotius Society, on Tuesday of last week, Sir Malcolm McIlwraith, K.C., read a paper on "Legal War Work in Egypt," which dealt with the various problems of the administration in Egypt after the outbreak of war, particularly those concerned with international law. Among those present were Professor Goudy (in the chair), Sir John Macdonell, Dr. E. J. Schuster, Mr. G. G. Phillimore, Dr. Bisschop, Mr. de Montmorency, and Dr. Bellot, the hon. secretary.

Lieutenant Harold Hamer, R.F.C., reported missing on June 6, now reported killed on that date, in his twenty-sixth year, was the fourth son of the late Mrs. A. A. Hamer, of Alistre, St. Annes-on-Sea. He was at Shrewsbury School (1906-10), and enlisted in the Loyal North Lancashire Regiment in August, 1914, being shortly afterwards gazetted. In 1915 he transferred to the R.F.C., and saw active service in the Sudan, being engaged in the battle which resulted in the break-up of the forces of the Sultan of Darfur. In the summer of 1916 he was at Salonika, but returned to England in September. He obtained his wings early this year, and left for the front in May.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. Hugh F. Poynter was gazetted captain on July 7.

El Lewa P. J. V. Kelly, Pasha, D.S.O., Governor of Darfur Province, has been transferred to the Egyptian Army.

Chief Justice Wasey Sterry has been appointed Acting Legal Secretary to the Sudan Government in the absence of Mr. E. Bonham Carter, C.M.G.

Captain J. A. Anketell Jones, Reserve of Officers, 5th Lancers, who has been attached to the Egyptian Army as a Special Service Officer, has been granted the temporary rank of Bimbashi, and his services have been placed at the disposal of the Sudan Government.

The following transfers are announced in the *Sudan Times*:—
El Kaimakam S. M. Castle Bey, 9th Sudanese, to Blue Nile District;
El Kaimakam A. Craufurd Bey, Officer Commanding 12th Sudanese, to Western Arab Corps;
El Kaimakam Hon. B. A. Forbes Bey, General Staff, to Officer Commanding 12th Sudanese;
El Bimbashi J. H. M. Mee, 11th Sudanese, to Western Arab Corps;
El Bimbashi E. C. Mylne, 10 Sudanese, to 4th Battalion;
El Bimbashi A. M. Ryan, 4th Battalion, to 10th Sudanese.

The following appointments and transfers are announced in the Sudan Government *Gazette*:—
El Lewa R. V. Savile, Pasha, Governor, Kordofan Province, to be Governor Darfur Province;
Mr. J. W. Sagar, 1st Inspector, Blue Nile Province, to be Governor Kordofan Province;
El Kaimakam C. H. Stigand Bey, 1st Inspector, Upper Nile Province, to be Governor Upper Nile Province;
Mr. H. C. Jackson, 2nd Inspector, to be 1st Inspector, and appointed Senior Inspector Blue Nile Province;
Mr. P. Munro, 2nd Inspector, Upper Nile Province, to be 1st Inspector, and appointed Senior Inspector Upper Nile Province;
Mr. A. G. Pawson, Second Inspector, Upper Nile Province, to be Second Inspector, White Nile Province.
El Bimbashi H. Burges-Watson, Inspector, Finance Department, to be 2nd Inspector Bahr-el-Ghazal Province;
El Bimbashi F. V. Grieson, transferred to the Sudan Government, is appointed 2nd Inspector Darfur Province.

OBITUARY.

LADY MUNCASTER.

The death of Lady Muncaster occurred at Muncaster Castle, Cumberland, last Friday. She had for some time been in ill-health, and survived the late Lord Muncaster less than four months. Lady Muncaster married in April, 1863, Josslyn Francis, fifth Baron Muncaster, who died last March, and of whose will an abstract is given below. There is no issue of the marriage. One of Lady Muncaster's sisters is the present Countess of Erroll. It will be remembered that Lord and Lady Muncaster were members of the party of ladies and gentlemen captured by Geek brigands in 1870 during an excursion to the plain of Marathon.

The late Lord Muncaster left unsettled estate of the value of £8,187. Testator left everything he had power to dispose of to Sir John Frecheville Ramsden, Bt., of Bulstrode Park, Gerrards Cross, Bucks, and desired that those of his issue succeeding to Muncaster Castle should take the surname of Pennington.

He further desired that the "Luck of Muncaster" shall always remain deposited at Muncaster Castle.

[After King Henry VI.'s defeat at the battle of Hexham he was sheltered by Sir John Pennington at Muncaster Castle, and in gratitude he gave Sir John a crystal bowl, with the assurance that while the family retained it unbroken they should greatly thrive and never lack a male heir. "The Luck" failed, however, in regard to the second part of the promise, for the late Lord Muncaster left no son. He was the last of his line.]

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

ARCHBOLD—ROBERTS.—On July 9, at Hampton Hill, 2nd-Lieut. F. B. Archbold, Royal Fusiliers, of Chile and Rumania, to Gweneth Mary, eldest daughter of Mr. and Mrs. John Roberts, Hampton Hill, Middlesex.

FORTHCOMING MARRIAGE.

The engagement is announced of Mr. W. P. P. Archdale, of Barakat, Blue Nile Province, Sudan, second son of Mr. E. M. Archdale, M.P., of Riversdale, County Fermanagh, and Alice, third daughter of the late Captain C. A. P. Talbot, Consul-General, Boston, U.S.A., and granddaughter of the late Hon. Gerald Talbot.

KILLED IN ACTION.

LITTLEWOOD.—Killed in action on July 10, Second Lieut. C. W. S. Littlewood, M.C., R.E., only and dearly-loved son of Mr. and Mrs. William Littlewood, of Cairo, and grandson of the late C. F. Littlewood, of Hempstead, and Mrs. Littlewood, of Erpingham Lodge, Norfolk, aged nineteen. R.I.P.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

FRIDAY, JULY 20, 1917.

THE FUTURE OF GREECE.

Were it not for the fact that matters of absorbing interest crowd one upon the other these days and prevent attention being given for long to any one episode, the recent course of affairs in Greece must have claimed more notice than it has actually received. When it is recalled that King Constantine contrived to keep the Allied Powers at arm's length for two years, and throughout the greater part of this period gave a definitely anti-Entente character to Greece's official policy, even to the extent of ordering Franco-British troops to be fired upon, it may well be a matter for surprise that the dynastic and political changes in Greece should have been effected so rapidly and so smoothly. In due course, when the whole history of the part played by Greece during the war can be told, it is to be hoped that full credit will be given to those to whom it is due. All that can be said with certainty now is that very late in the day the Entente Powers accepted the view, long held by the ordinary observer, that, after the way in which it had been handled, the situation in Greece must remain impossible and even dangerous to the safety of the Allied Army in Macedonia as long as King Constantine was on the throne. Having once taken this decision, the Governments concerned acted promptly enough upon it. M. Jonnart was appointed the plenipotentiary of France and Great Britain, and proceeded to Greece. After a brief interview with General Sarrail at Salonika, he presented the Allies' ultimatum to the Athens Government. Within twenty-four hours King Constantine had vacated the throne; a few days later he had left Greece, and his second son became King. M. Venizelos returned at once to Athens, to be accepted without question as Prime Minister of a re-united Greece. Of the protagonists in this drama it is evident that M. Jonnart carried out his task with tact and the requisite firmness. The problem would have been far more difficult, if M. Venizelos had not been possessed of the qualities which have raised him so far above his fellow-countrymen. A man of smaller calibre might have hesitated to return to Athens without guarantees, without some security for his life and person. A masterly display of complete confidence in his own people carried the day; he was sure of himself, and the country accepted him at his own valuation. Apart from these two men we shall hope to find it established that General Sarrail has played a difficult rôle with actual distinction. Little glory attaches to a policy of inaction, and it is only right that the considerations which have kept his Army tied to their base should be revealed. The Greeks have reason to be grateful to M. Zaimis in that he proved himself to be the only one among many minor politicians broadminded enough not to be jealous of M. Venizelos's pre-eminence, but ready to serve his country in the part of intermediary, for which his integrity and the esteem accorded him by both sides particularly fitted him.

Not the least interesting feature in the situation is the way in which events have vindicated the soundness of every action on the part of M. Venizelos. It was not easy to follow him in his policy of abstaining from the elections which King Constantine forced upon the country in 1915, and when he left Athens last year he seemed to be surrendering the citadel of constitutionalism. The establishment of the Provisional Government at Salonika promised to introduce complications that could never be disentangled satisfactorily. But in the end both the Entente Powers and the whole of Greece came to share his views, and the solution has proved to be simplicity itself. Belief in the star of M. Venizelos should now carry the Greeks through the difficult days ahead of them. Organisation has not been a strong point in the country, as has been shown by the course of its political history. Greece will stand in special need of it, however, if she is to hold her own in the Balkan Peninsula of the future. M. Venizelos has already outlined the immediate programme—the reorganisation of the Army, the re-establishment of the country's finances, and the restoration of the economic life of the land. "The Chamber," he added, "will have to work hard for weeks, and when we have put our house in order we shall hold fresh elections for the Constituent Assembly, to which will be entrusted the revision of the Greek Constitution." It is natural that Greece should be "burning with the desire to purify herself of the ignominy which the criminal policy of the past has cast upon her"; and for that reason a reorganised army is necessary. But the task is far wider than this, and when once the question of the Constitution has been settled it would be well if politics could be relegated to a less prominent position in the national life.

For many years to come Greece will stand in need of a quiet period of recuperation. If M. Venizelos be spared long enough, the country should be able to count upon it under his guidance; but there will always be the fear lest the removal of his strong hand should once more plunge Greece into the turmoil arising from the rivalries of numerous mediocrities, none of them of sufficiently outstanding merit to be raised prominently above his fellows. To guard against this danger care should be exercised that the work of settling down is not unduly prolonged by German intrigue. The discovery that some two hundred of their own people were done to death in a few days under the German-Constantine regime ought to open the eyes of every living Greek to the extent of the evil from which the country has eventually emerged. But unless the new Government keeps a watchful eye upon this matter and secures a resolution of the whole people which can be used to exact, it may be from the prospective League of Nations, freedom from German machinations in the future, ex-King Constantine or his eldest son may yet try to fish in troubled waters. During the recent period of stress Liberal Greece has derived no little support from the sympathy and assistance of Greeks settled abroad. Their help, however, would be far more practical if they were resident in the country. Economic conditions may entail an annual stream of emigration, but there can be no doubt that Greece is thereby a loser in more than mere man-power. The marked success achieved by Greek emigrants suggests that their intellect and motive power could be well employed at home. The loyalty and devotion of the emigrants to their fatherland are an axiom in Greek modern history; but if the war and recent events have brought to the Greeks a new interpretation of nationality and patriotism, it is to be hoped that they will give practical effect to it by rendering personal service to their country. Greece will not stand alone among the nations in benefiting by the intelligence and driving force that her sons now abroad can contribute to the common stock. An enlightened economic policy may open up within the borders of Greece opportunities which have hitherto been lacking, and may not only be the means of keeping more of her population at home, but in bringing back those whose wealth and experience will add to the stability, the prosperity, and the political wisdom of Hellas.

ITALY AND THE BALKANS.*

THE PROBLEM OF DALMATIA.—III.

The Austrian statistics in regard to the Italian population of Dalmatia are exceedingly eloquent, if seen in their true perspective. Once the official census gave 56,000 Italians; in 1880 the official figure fell to 20,000; ten years later there were apparently only 16,000 Italians left. The conclusion is obvious; the Italians were being suppressed no less effectively than they could have been, if Vienna had followed the example of Constantinople and adopted its more primitive and more direct way of destroying the Armenians. Cruel or puerile, the persecution of the Italians is always directly traceable to Vienna. As long as the Austrian Lloyd ships belonged to a Trieste company they were named after cities and the heroes of mythology—there was the Venezia, the Milano, the Pandora, the Ettore. As soon as the Government stepped in and controlled the company, Achilles and Hector had to make way for the names of obscure Austrian statesmen. Of course, it was childish; but it was the *reductio ad absurdum* of Teutonic thoroughness. The church, the school, the police were handed over to an alien race. The names of things and places had to follow. When the war began it was considered that the game had been won in Dalmatia. Trieste was the next objective, and all the apparatus used in Dalmatia was brought to bear—provocation, intimidation, military force. In addition, Trieste being a commercial city and consequently less dependent on favours and less afraid of the displeasure of the Government, banks began to exercise their influence to finance and direct politico-commercial operations similar in every way to those undertaken by Germany to snare other unsuspecting peoples and making them dependent financially upon Berlin. The Government offices were filled with foreigners, of whom not one could speak correctly the language of the people. Every obstacle was placed in the way of Italian subjects wishing to establish themselves in Trieste, and to prevent the swelling of the Italian party, in spite of the fact that no foreign subject could obtain political rights. A M. Vernet was refused permission to build a mill because he happened to speak Italian like a native, having lived some years in Sicily. When he threatened to place the matter in the hands of the French Consul, he was told that had he made known his nationality sooner all the difficulties would have vanished, and the concession was given forthwith. An Italian was murdered by a drunken Croat. All that the murderer could say in defence was that he had killed "an Italian." He was condemned to four months' imprisonment. More than once Italian subjects accused of a trifling offence have been condemned to terms of imprisonment and—inevitable corollary—deportation. If the Court of Appeal cancelled the sentence and the imprisonment was remitted, the banishment was nevertheless upheld by the police even for those born in Trieste, if the parents were Italian subjects.

Throughout these years the animus of the Austrian authorities in these provinces was that of the bully who, although physically much stronger than his victim, is afraid and anxious lest he should be caught red-handed and his brutality punished. They lost their heads for no particular reason; they believed the wildest rumours. They mobilised suddenly all the available troops in Dalmatia and set them to defend the coast, because it had been reported (obviously by some wag) that 30,000 Garibaldian volunteers were preparing to invade it. The Athletic Club of Trieste, with 3,000 members, was closed by order of the police five times. But as there is no law against the formation of a new society, the closure of the club only meant a change of name. Some of the reasons given for the action of the authorities are perhaps worth recording. In 1864 the alleged reason was that a public entertainment had been given in the garden of the club; in 1882 the club postponed a meeting in sign of mourning for the death of Garibaldi, and this, the Austrian authorities said, showed that the club had "political aims dangerous to the safety of the State." "I want to clear out all these Italians," the chief of the police was overheard to say in Trieste. "We must do in Trieste *as we have done in Dalmatia;* help with every means the non-Italian elements and wipe out the Italians altogether," wrote Lieutenant-Marshal Foerstner in the *Oesterreichische Rundschau* shortly before the war.

The merciless persecution of the Italians in the unredeemed provinces must be taken into account even before the great historical and important military claims of Italy on these lands are considered. Any solution, any proposal which did not make full amends for the wrongs suffered during fifty years by the Italian population would be bound to encourage a policy which is not only immoral, when measured by every canon humanity ever evolved to save civilisation from barbarism, but is also bound to lead to international complications. The sufferer must needs revolt against the oppressor as soon as the opportunity arises. The oppressor himself who does wrong, and is conscious of it, redoubles his cruelties to stifle the victim before Nemesis can overtake him. Neither the most cynical and most hardened criminals nor the new tyrant can escape this instinctive dread of justice even when they have reason to think themselves beyond its reach. Germany was eager to "give France a lesson," although she knew that France was not in a position to attempt, and was far from contemplating, the recovery of Alsace-Lorraine. At the time of the Messina earthquake Austrian generals, betraying the instinct which combines fear and cruelty, suggested an attack on Italy to prevent even the remote possibility of a cry of anger from the mother country for the Italian population across the frontier deprived of its birthright. One wrong leads inevitably to another.

As for the strategical claims of Italy on these coastal provinces, their importance may have been thought exaggerated once. Now, however, it must be clear that for the mastery of the Adriatic the possession of the eastern coast is an indispensable condition. Neither Italian, English nor French commanders have been able to accomplish much, in spite of the great skill shown in smaller operations and the devotion of the sailors. "The long coastal State of Dalmatia, which flanks Bosnia-Herzegovina on the west," writes Sir Thomas Holdich, "is divided from them by the effective wall of the Dinaric Alps. Across that rugged system no railway has yet been carried, and Dalmatia owes her independent existence entirely to the natural strength of her frontier." This is the reason why her history and her civilisation were those of Rome and Venice, not those of the people living beyond the Alps. These are, of course, frontier provinces, and frontier provinces have always a more or less mixed population. If the Czechs obtain their autonomy and France recovers Alsace-Lorraine, the percentage of the foreign population will be higher there than it will be in these unredeemed provinces of Italy. Nor is it to be thought that the fulfilment of the Italian claim would mean the exclusion from the Adriatic of other nations. Both to the north and to the south of Dalmatia there are excellent harbours which would give the hinterland its outlet on the sea.

F. BONAVIA.

TANGIER TO TEHERAN.

Prophecy seems to be very much in the air just now—a not unnatural development after three years of this world upheaval. Only a fool would contend that the striking forecasts in the Bible are meaningless, but whether a wise man will seek to probe their meaning and fit them to contemporary events is another matter. In any case, the subject is a most fascinating one, and it has by no means been confined to the present year of grace. Those of us who are old enough will recall a perfect epidemic of alleged fulfilments of prophecy in the 'seventies and 'eighties including confident predictions of the end of the world. I cannot say that I analysed them carefully at the time or can do more now than vaguely recall them. But there they were. A few papers added to their advertisement revenue, and no one, I hope, was any the worse.

***

To come forward at this moment and lay claims to superwisdom, because you have discovered a very clear application of Biblical prophecy in current events may be all right, but it smacks a little of not being altogether cricket. I am reminded of a political trial in Serbia in its unregenerate days. The Government of the day arrested the whole of the Opposition and then took an unconscionable time to trump up charges against them. They also "obliged" their supporters in the country by arresting any embarrassing political opponents. A favourite charge, when the trial did come on, was to attribute treasonable designs and complicity in a plot on the strength of an alleged statement to the effect that things were going to change one day in Serbia. As they were changing politically with great frequency, it was rather an obvious remark on the part of the village wiseacre, and it was sheer bad luck that it should have entailed from three to five years' penal servitude. In the same way it seems to me that if there are any prophecies going about, it will be difficult for them to escape present-day application.

***

Be this as it may, the editor of *The Young Man and Woman* has no use for anybody who does not appreciate the fact that the twelfth verse of the twelfth chapter of Daniel is a definite prediction of the fall of Turkey—

"Blessed is he that waiteth, and cometh to the thousand three hundred and five and thirty days."

This year 1917 is the year 1335 according to the Turkish calendar, as is duly recorded week by week in THE NEAR EAST. It is plain enough. There is no doubt about Turkey being in a bad way, and, according to our authority, the fall of Turkey is "definitely dated to the year and even day," namely, "October, 1917." (No explanation, as far as I can discover, is given as to how the month is arrived at, and the day seems to be left a blank.)

***

Needless to say, we all hope that the editor of *The Young Man and Woman* is going to be right. I fear I shall offend him by saying that, as it is not a question of his being right. IT IS, so to speak, and there's an end of it. Let's hope that General Allenby has been duly acquainted with the fact, and, by the same token, General Sarrail. But without being a bit of a sceptic, what puzzles me is, why the reference must necessarily be to Turkey, and not, let us say, to China, Mexico, or Germany. Of course, the fact that Daniel's prophecies were addressed to the Children of Israel brings Palestine into the picture. But if verse 12 of chapter xii. refers to Turkey and the year 1335, ought not verse 11 to have a similar application?

11. And from the time that the daily (sacrifice) shall be taken away, and the abomination that maketh desolate set up, (there shall be) a thousand two hundred and ninety days.

12. Blessed is he that waiteth, etc.

It seems somewhat arbitrary to make 1335 (1917) fit in so nicely with things as they are, and to leave 1290 (1872) quite out in the cold. But for all I know there may be an explanation of the 1290.

***

It is really necessary to be precise about these matters, for there is no Defence of the World Act to place an embargo on prophets. So from *The Young Man and Woman* I turn to a pamphlet, price one halfpenny, entitled "A Prophecy of the Prophet 'Ahmad' and its Fulfilment." This opens with a long quotation—a distinctly poor effort compared with Daniel's stirring words.

"Some time later, the world shall witness a sign which will shake towns, villages, and meadows to the very foundations. . . . An earthquake shall suddenly bring a terrible shaking over men, trees, stones and sea. The earth shall turn upside down in the twinkling of an eye. . . . The time and the hour shall be very hard on every wayfarer who will miss the way in utter helplessness and total despair." And so on; in other words, there's to be a dickens of a time. Then we read:—"All men, rich and poor, and spirits shall be deeply affected and exhausted for fear, and even the Tsar of Russia shall feel miserable at that moment. . . . Do not deny this through impatience, O undiscerning youth, because on it rests the truth of my claim." The black lines are in the original.

***

The pamphlet continues:—

"These are the words of the Prophet of the Day, 'Ahmad,' of Qadian, India. They, depending on Divine Revelation, were written down in April, 1905, and made public. In many a subsequent writing the prophecy was repeatedly referred to. . . he notified emphatically that upon its fulfilment rested the truth of his claim. Now it has proved to be true. The Prophet proclaimed thousands of prophecies and they all came true. . . . If with all this, Ahmad is not a Prophet of God, then who in the world was ever a Prophet of God?"

Clearly a case for the aforesaid editor. But one cannot help thinking that some more halfpenny pamphlets are called for, dealing with some others of these "thousands of prophecies" which "all came true." The Prophet "Ahmad" would be on surer ground, if some of them were a little more definite than the one quoted above, which, after all, would fit in quite as well with a rather bad earthquake in the south of Russia, as with the present war. Of course, the more prophets the better these days; but we want them to get busy reforming the world and leading their fellow-men to better and higher things, rather than to devote all their time to insisting upon their claims to *be* Prophets.

***

As Palestine is to be freed from the Turks, I am glad to see that the Tank is to have a hand—or should it be a nose?—in it. There is not the least shadow of doubt that these weird engines of war have made good, and it is comforting to think that some of the "side shows" are to have the benefit of their presence. One is tempted to wonder, however, whether just south of Gaza our men would not almost set more store on tanks of the good old-fashioned sort that hold water, and plenty of it. Think of an allowance of a pint a day, to march and fight on, and in that climate, too. A veil hangs over the Gaza operations. It is to be hoped that General Allenby will be able to lift it before long.

CORSAIR.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

ZIONIST WORK IN PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The reference to Zionist work in Palestine contained in the summary of an address by Mr. M. Pickthall in your issue of July 13 is so full of misrepresentations that, as a Palestinian Zionist, I cannot let it go without a brief reply. In the first place, "extreme and narrow fanaticism" is the last quality which could be attributed to the Zionist settlers in Palestine by anybody who had any knowledge of their character and work. On the contrary, they are the most enlightened and progressive element in Palestine, to the regeneration of which they have made notable contributions. They have won the respect of their Arab neighbours, who often prefer to have their differences with the Jewish colonists settled by the courts of arbitration of the Jewish colonies (which have no compulsory powers) rather than bring them before the regular Turkish tribunals. Both the record of the Jewish colonies and the avowed policy of the Zionist organisation show how baseless is the suggestion that the achievement of Zionist aims in Palestine "would mean oppression for the other elements of the population."

Equally baseless is Mr. Pickthall's insinuation that the Zionist settlers were prevented from becoming Ottoman subjects by "wire-pullers" with ulterior political objects. The facts are that many of the settlers did become Ottoman subjects, and that those who did not do so preferred to retain their original nationality, because the notoriously unsatisfactory Turkish courts did not seem to afford them as much security as they obtained from the protection of their Consuls. I am, etc.,

S. TOLKOWSKY.

THE UNDERGROUND NILE.

By JOSEPH OFFORD.

A short time ago M. V. Mosseri published in the Bulletin of the Institut Egyptien an important article for all interested in increasing the fertility of Egypt, entitled "L'Utilisation du Reservoir Souterrain de l'Egypte," with three plates showing the levels of underground water at various annual periods. This subject had been treated previously by Mr. Ferrar in his work, "The Subsoil Water of Upper Egypt." M. Mosseri studies the question also as relating to Lower Egypt, and comes to the conclusion that an immense amount of the water which in Egypt, it is known, flows down beneath the ground into the Delta subsoil, and there becomes brackish, and probably ultimately reaches the sea, could be secured and utilised.

If this scheme is to be successful, the water must be intercepted about eighty miles south of the Mediterranean, before it becomes at all salted, and M. Messori's plan is to place a perfect barrage of wells right across the Nile Valley, pump the water from these into an artificially raised reservoir of such a height as to enable a large tract of country to be irrigated, when the water would be most beneficial. He calculated that 1,000 cubic metres could be obtained for about 10 piastres, and as it would be utilised when the Nile is at its lowest, when water for the crops is most valuable, it should be a payable proposition. Whether he has made sufficient allowance for evaporation is not clear.

There is an archæological side to this question, which is that the ancient Egyptians knew well of this underground water flow, and for one purpose, at any rate, used it. All the large temples had a sacred pond, or lake, and the smaller ones just a tank. The water contained in these was holy water, and in order to insure this was supposed to be only derived from a sacred reach of the Nile somewhere near Elephantine. To secure this being so it was not brought in boats or pipes from high up the river, but the underground flow was tapped by deep wells, and the water so reached was certified by the priests as having come by subterranean natural conduits from the site where the sacred water part of the Nile was situated. Whilst there may, in some cases, have been priestly deception, and they may have known their special temple well drew its supply from the neighbouring Nile, there is no reason to think this was the rule. By some means their learned men had detected that much of the Upper Nile water did not flow through Egypt by the river itself, but disappeared, and they also found out that fresh water, which, of course, in Egypt must have been originally Nilotic, was always running from south to north beneath the ground.

There is reason to think that in Pharaonic times the Delta stood higher than it does now and that the water beneath it was fresh, and hence the great agricultural districts spoken of there were produced, and the large cities like Tanis supported.

THE PRESS ON THE NEAR EAST.

Roumania's Choice.

The New Europe has an interesting article under the above heading from the pen of Mme. Take Jonescu. Among the personal touches which Mme. Jonescu is in a position to supply may be noted the expression attributed to King Carol, after the State Council of August 3:—"Gentlemen, you have acted, no doubt, according to what you consider the interests of your country, but you have destroyed my work of forty-six years." Again, the fact that King Carol wished Roumania to join the Central Powers did not prevent him from telegraphing to King Constantine his urgent counsel that Greece, as a maritime country, should remain on the side of the great naval Powers—England and France. The normal feeling of Roumanians towards Germany is well brought out by the following:—

The Roumanians, in the pride of their Latin descent, entertained a traditional contempt for the Germans, using, in reference to them or the Austro-Germans, the Slavonic word "Neamtzi," which had gradually become a term of disdain, applied, not unfrequently, even to the late King, by certain disrespectful subjects. It was only after months of lavish expenditure by the Germans in every form of corruption, and the most insidious and increasing Teuton propaganda, that one observed the more polite expression "Germani" was somewhat replacing the more familiar term of "Neamtzi."

General Iliescu's statement that Roumania decided to emerge from her neutrality in consequence of a "sort of summons" from Russia is denied, and the reason given is that "her leaders felt that the interests and dignity of the country prevented her from remaining longer a spectator in the war fought for her liberty—and that of all nations." Unfortunately, the Roumanian Government had given little heed to the subject of munitions, and this factor, combined with others equally well known, led to the disaster which the country has suffered.

Roumania and the Dobruja.

Mme. Take Jonescu makes an important statement in regard to the Roumanian attitude towards the question of the Dobruja. Speaking of the time before Bulgaria threw in her lot with the Central Powers, she writes:—

All far-seeing Roumanian statesmen at that time were of the opinion that, were it considered desirable, in order to facilitate the task of the Entente, Roumania should give up to Bulgaria some part of the recent addition to her territory in the Dobruja, provided that Greece and Serbia were willing to make similar sacrifices to the common cause. But, as events proved, Ferdinand coveted the whole of the Dobruja, and his ambitions in the direction of Macedonia were equally exaggerated. There are no ethnological claims to support Bulgarian pretensions in the Dobruja. A varied population of Turks, Tartars, Jews, Roumanians, and Bulgarians inhabited that district when it was taken from Turkey in the Russo-Turkish war of 1877, in which Bulgarian independence was gained. Nor should it be forgotten that 10,000 Roumanian soldiers fell on the field of Plevna and Grivitza in this struggle against Turkey. When, in 1878, Russia declared her intention of re-annexing Bessarabia, Roumania was offered the whole of the quadrilateral in compensation for the loss of Bessarabia. Unfortunately, Roumania's representatives (among them Ian Bratianu, father of the present Prime Minister) during the Congress of Berlin, for reasons of internal policy, did not accept this proposal. By the final decision of the Congress, they were obliged to content themselves with the smaller portion of territory with its indefensible frontier—rectified after the Balkan war—instead of the vast expanse of country between Varna and Rustchuk, including those two towns, which had at first been offered.

Egypt's Eastern Frontier.

Mr. E. G. Harmer, in *The Christian World*, considers that when in May, 1906, the British Government required the Sultan of Turkey to consent to the frontier of Egypt being drawn from Rafa "in an approximately straight line" south-east to the Gulf of Akaba, armchair diplomacy gained a triumph for which the nation has been paying dearly. He continues:—

We know better now. When the geographer and the soldier presently have their say, it can hardly be doubted that they will urge the readjustment of this artificial line to the boundary projected by Nature. Such a boundary may reasonably take into account the undulating plain from Gaza to Beersheba, the passes of Edom, and the western slopes of the Arabah. The full story of Gaza has yet to be told. Its deep, rich soil, which has enabled it to send an annual supply of 30,000 tons of barley to Great Britain in recent years, is in shining contrast with the barren limestone hills, topped with gravel and flint, that mark the desolation of the "approximately straight line" far to the south. Sinai meant more to Egypt than to Palestine ever since it gave to the valley of the Nile its treasures of copper ore, and in so doing ushered in the civilisation of mankind. Thus it was that the greater Pharaohs ever insisted upon Gaza being in friendly hands, for amid its abundant wells they found the indispensable base for their movements in Western Asia.

Gaza—In the Past.

Sketching briefly the history of Gaza Mr. Harmer writes:—

Thus we are not to think of Gaza as a city founded by the Philistines, but as a long-settled centre of neolithic life, into which there came from their far-off Anatolian home a non-Semitic, perhaps Pelasgian, people. They brought with them a knowledge of metals, an instinct for dominion, a new standard of comfort—for their women travelled in two-wheeled carts—and a capacity for social organization which enabled them to utilize the aboriginal peoples for their material advantage. Long centuries after Samson destroyed its temple gates, after Sennacherib gave to its king Zilbel a part of the land of Judah, after Pharaoh Necho smote the Gaza of Jeremiah's day, there was still a Dagon temple to be destroyed by one of the Maccabees. Still later, as Strabo hints, there lingered in its bazaars the patois first taught by the Philistines, with that mingling of Semite and Greek words which may be compared with the pidgin of the modern East. And when the Roman power, with its zest for fine buildings and settled law, gave place to the commercial instinct of the Byzantine, Gaza found a new era of prosperity in the terrace-cultivation of the desert wadis, developed by the storage of the winter rains in innumerable cisterns. It was an age of busy intercourse between east and west, when the silken produce of China was brought across the southern route to the threshold of Asia, and distributed thence to the markets of the west.

At length came Islam, and with it in due time the Turk. Gaza fell on evil days, and may never recover its ancient pride. But under the gentler rule that is coming it will yet be a pleasant city. Its hoary olive trees will burst into a vivider green; its black pottery, beloved of the wandering Bedouin, will become still more renowned. Then will it earn again the homage that once it had from Antonius of Placentia, when he wrote, "Gaza is a splendid, delicious city, full of the honestest of men and lovers of pilgrims."

Gaza—To-day.

N. B., in the *Manchester Guardian*, describes the scene of the present operations before Gaza:—

When I went down the line, the plain beyond the railhead, stretching away to the Gaza river and beyond, was populous

Digitized by Google

with camps and tents and horse-lines and wagons that dotted the barley fields, a blue lagoon was set between the palm trees and the sand dunes, and the ground sparkled and was fragrant with wild flowers. But oh! the heavy change now. Spring has gone. The barley has all been cut, and the ground is brown and burnt; the lagoon has almost dried up, or perhaps it has been drunk up by the myriad horses and camels; and the camp and tents have altogether disappeared from view. It is partly because our troops have gone forward since the second attack on Gaza and are now nearer the Turkish defences, but principally it is that they have gone underground.

The Egyptian Expeditionary Force at last has had to follow the example of the other British armies, and dig in. After a year and a-half on the desert sands, pursuing an elusive foe, it has met him face to face; and straightway both sides have been forced to hide. We have descended, in fact, to trench warfare. The British and the Turks confront each other—below the ground—on a line of some fifteen miles from the sea along ridges half-encircling Gaza, and thence south-eastwards to Hareni and the hills which overlook Beersheba. They are waging the thorough trench warfare, with all its regular incidents, the early morning and the evening artillery "strafes," the saps and the tunnellings, and the night raids. But so far we have escaped the hideousness of the model on the western front. There is no heartless desolation around, no diabolical overturning of the face of the land. Behind both lines are green orchards, and even the little farmhouses are allowed to stand, though they are respectfully recognised as "unhealthy" spots. No Man's Land is still green, and as the line is long, but not deep, the ugly business of the fighting machine is decently localised. When the men in the front trenches are changed and come into billet, they merely march back a few miles and camp in one of the wadis which scar the country and are tolerably shell-proof and bomb-proof. A few fortunate ones are sent to rest camps on the seashore.

Prosperous Egypt.

A writer in the *Lincoln Echo* gives a very satisfactory account of the state of Egypt to-day, as he sees the land after a three years' absence. There is now, he says, an air of prosperity everywhere; whereas—

It was apparent before this war that a commercial crisis was hanging over the country. Trade was almost at a standstill. Business was bad and agriculture was being restricted by legislation owing to over-production. Such a state of affairs naturally tended to breed discontent and unrest, but, true to traditions as the Land of Paradox, Egypt found her salvation in the war. To all other belligerents it brought its train of want, misery, and ruin, but to Egypt it brought prosperity, wealth, and content. . . .

The prices of all natural produce have so increased that agriculturists are reaping unprecedented prices for the yield of their lands. Never have all the conditions combined so happily to ensure the general welfare. The removal of all enemy influences and interests from our midst has prevented those intrigues which might nevertheless have found opportunities of fostering mischief, and this helps to explain another remarkable feature of the situation, viz., the changed attitude of the native towards the British soldier. That sullen yielding with ill-grace attitude of the native towards the British generally has largely disappeared, and has been replaced by a more frank and more trustful spirit. Our Tommies seem to feel themselves infinitely more at home in Egypt since the war, and the Egyptians are not only taking them for granted, but are beginning to realise their good-humoured and generous nature. It is, perhaps, too much to suggest that the native is beginning to show a sense of gratitude for the benefits conferred by our rule, but it would certainly appear that the knowledge is dawning upon him that his interests are bound up with ours.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

THE BAGHDAD RAILWAY.

On July 16, at the London Chamber of Commerce, Mr. F. Faithfull Begg delivered an address on Mesopotamia and the Baghdad Railway. Speaking of Germany's aspirations in Asia, he said that it was her intention to establish an empire extending from the mouth of the Rhine across Europe in a south-easterly direction to Constantinople and thence away through Asiatic Turkey to the Persian Gulf; as thus she would have a land empire giving her continuous communication throughout its area and preventing communication between States situated to the east and the west. German policy had long been gravitating towards the east. Moltke had been the first to see the importance to Germany of these lands, and had explored the Tigris and Euphrates valleys many years ago; but it was probably at the Congress of Berlin in 1878 that Germany first seriously felt that she had arrived at the parting of the ways, and that she might be able to secure for herself the reversion to the heritage of the Cæsars in Asia Minor. Sir William Willcocks had estimated that Mesopotamia could be connected with a Mediterranean port in the neighbourhood of Tyre and Sidon by a railway 600 miles long, and costing £4,000 a mile to build; but, of course, such a railway could not be made part of the German plan of through communication between Berlin and Baghdad via Constantinople. It was estimated that the Germans had already spent nearly £12,000,000 upon the railway they were engaged in constructing, which had been pushed on with feverish haste since the beginning of the war. It was said that they now had 1,500 miles constructed, and that of this length 1,100 miles were working; the gap at present extending only from Ras-el-Ain to Samarra.

Lord Desborough, who presided, said that Chesney's idea had been that the railway should end at the sea and be free to all. He had suggested that it should start at Alexandria. If the European Powers interested could agree to that route it had a great deal to recommend it.

Sir John Jackson spoke of his own experiences in constructing the Hindieh Barrage. He said that he had gone to Turkey with the idea that in that country no business could possibly be done without the payment of backsheesh. His transactions had been with the late Nazim Pasha, whom he had met at Baghdad, and with whom he had spent three days fixing up the details of the concession. The total financial expenditure involved was some £16,000,000 or £18,000,000, but not sixpence of backsheesh in any shape or form was asked or accepted by Nazim. Some 9,000 or 10,000 men had been employed on the work, and he (Sir John Jackson) had found both Arabs and Turks good people to deal with. When the war broke out he and his staff were courteously treated. They were taken over to the west and liberated. The Turks had not allowed the few ladies of the staff to leave Mesopotamia, because they did not think it safe for them to cross the seas; but they gave their word that the ladies should be taken every care of, and, had they remained in Baghdad, they would by now have been free. But about a year ago arrangements had been made for them to go to Constantinople, and there the ladies were now. If properly dealt with, Mesopotamia was as good a country as Egypt; the only question was whether all the water in the Euphrates and Tigris together was enough to irrigate the land that was available.

Mr. Arthur Whitley gave some further information about the Hindieh Barrage. He said that he had been told by Turkish officials that in three or four years this dam would have paid for itself, because of the extra revenue from the lands which it brought under irrigation.

Mr. A. Boddham Taylor said that whether the Euphrates and Tigris would or would not have enough water to irrigate the whole country, they certainly would not have enough water both for that purpose and to carry the produce of the irrigated lands down to the sea. Thus the railway was an absolute necessity. There was a question as to whether the railway should follow the Tigris or Euphrates. The Tigris valley was the more fertile of the two, for it was fertile right up to Mosul, whereas the Euphrates valley became rather mountainous about Anah.

Other speakers followed.

RED CROSS AID IN RUMANIA.

The Hon. Arthur Stanley, chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John, has received the following telegram of thanks to the Red Cross from the Queen of Roumania:—

"Deeply touched at all you are doing to help my country. I thank you with all my heart, begging you to express my feeling of gratitude to all those who have shared in this work. We can see the actual results of better feeding on our sick."

According to Reuter's correspondent, the exhumation of the bodies of the victims of the December outrages at Athens and the proofs that numbers of persons were murdered in cold blood have caused a considerable sensation. The relatives of the victims have made representations to M. Venizelos demanding the punishment of those responsible.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS

Devonshire Square,
London, E.C.

Speaking at the London Chamber of Commerce last week, in the course of a discussion on a paper on "Mesopotamia and the Baghdad Railway," read by Mr. Faithful Begg, Sir John Jackson paid a tribute to the Government of Egypt. He expressed the hope that, if the British retained possession of the country, it would not be tacked on to India, but would be given a government similar to that of Egypt. Sir John knows a great deal about the three countries, and, within certain limits, probably has a shrewd idea as to what is best for the land recently occupied. At the same time it would be ungrateful not to recognise what the Government of India has already accomplished in the Busreh vilayet. I have referred previously to the excellent work of organisation that has been carried out in, and in the vicinity of, the port by officers of the Indian establishments. Merchants and shippers who knew the Shatt-el-Arab port in the bad old days of Turkish misrule are enthusiastic about the improvements that have been effected, some of them in the face of the most serious obstacles.

***

It may not be worth while to enumerate them again, but for the benefit of those of my readers who do not happen to be up-to-date I will mention some of the successes that have been achieved. We may pass by the fact that it has long been possible to buy British postal orders in the Garden of Eden; but it is worthy of permanent record that in little more than a year a fully-equipped and easy-working Customs Service, untainted by Turkish corruption, is in operation, that public works are already carefully organised and effecting improvements in road and water communications, that the maintenance of order is satisfactorily undertaken by Indian native police under their European officers, and that the trial of commercial causes under conditions of perfect justice and impartiality is proceeding smoothly and to the satisfaction of the native merchants and traders. Remove the new land from the special control of the Government of India if it be thought fit to do so; but we must be just at the same time.

***

The April return of the Egyptian note circulation issued by the National Bank of Egypt, shows a substantial reduction in the amount outstanding as compared with December 31 last, the total being £E20,250,000, as compared with £E21,200,000 at the end of December last. Against this, the gold holding is £E5,307,584, against £E5,930,710 four months ago, while the holding of special British Treasury bills has increased from £E4,669,289 to £E4,817,416. Amongst the other securities, Egyptian Treasury bills, at £E2,876,250, and Egyptian Government securities and securities guaranteed by the Egyptian Government, at £E555,511, are practically unaltered, but there is a decline in the amount of British Treasury bills and Exchequer bonds, the holding of which is now £E6,693,239, as compared with £E7,167,990 at the end of 1916.

***

I learn from advices received by the British Empire Producers' Organisation from the new British province of Darfur that traders from Wadai, the adjoining French colony on the western side, now resort to Darfur for such commodities as sugar, soap, dyes, textiles, etc. The trade route from Wadai to Europe used formerly to pass through the Sudan, but the immense exactions of the now-abolished Sultanate of Darfur on commerce in transit caused the abandonment of the far shorter Eastern trade route via Khartoum and the substitution of the longer and for much of the year impracticable route via the west and north. The old order of things will now probably be restored, and the French in Wadai draw their imports by an all-red British route. Despite tariffs, there should accordingly be a good opening for certain British producers and manufacturers in the Darfur market. Quite apart, of course, from trade with the French in Wadai, trade in Darfur itself is certain to develop with the restoration of security in the rescued province; indeed, the revival has already begun.

***

It is stated in commercial circles in London that British shipowners are much impressed by the length of the period in which the German Government propose to give subsidies for the construction of new vessels. My friends in Near Eastern parts will have no difficulty in recalling the thorough manner in which the Germans managed their shipping business, and will realise, more vividly perhaps than people in this country, that when the Berlin Government declare that the object of the subsidy proposal is to enable Germany to "resume her world trade and world communications immediately after the war" they mean that they will bring all their capacity for hard work, all their undoubted skill, and all their power of clever double-dealing to bear on the problem. Shipping facilities mean trade development, and this fact must always be borne in mind. The Bill for the Restoration of the German Mercantile Marine must not be thought lightly of, therefore, and British traders in the Mediterranean will do well to prepare for another invasion of enemy traders when the end of the war will enable them to resume their old activities.

***

Shipping folk in Port Said, Alexandria and other places in the Eastern Mediterranean will agree with me in the view that we must not hold the Germans too cheaply. There is a tendency to do so none the less. Only too frequently the cry is heard that it will take them many years to recover all they have lost; so it will, if our own people shake off their sloth and begin now to consolidate the position which the absence of the Hun and Austrian rival has helped to consolidate. It may be taken for granted, however, that if things are allowed to slide, and the paralysis of German trade taken for granted, the dead will rise again to our discomfiture and loss. In brief, it will be fatal to wait until after the war. The campaign must be initiated now.

***

To return to the subsidies. So far no official attempt appears to have been made to estimate the probable expenditure involved by the Bill; but *The Times* quotes a telegram from Hamburg to the *Vossische Zeitung* which says that "the probable amount of the subsidies is estimated at Hamburg at 1,500,000,000 marks—or, at the rate of exchange before the war, about £75,000,000. It is said that the Hamburg shipowners only criticise the provision that a ship may not be sold to an alien during a period of ten years after it is put in commission; it is argued that German owners should be able to take any opportunity to sell old ships in a favourable market without having to wait for special licence. The Bill came before the Reichstag last week, and was sent to the Committee for Trade and Industry."

***

The news has reached London this week that the latest indications in Abyssinia point to another high Nile this year. Further information on this important point will be awaited with much interest in London, where recently Egyptian land shares have been particularly active, as will have been seen from the weekly letters of the City Correspondent of THE NEAR EAST.

***

The unfortunate Turk continues to pay the penalty imposed on him by the unwisdom of his rulers. According to Greek refugees from Asia Minor who have arrived at Mitylene, the situation among the population has become grave. In Smyrna, for example, wheat is retailed at about 3s. 7½d. an oke of 2¾ lbs., sugar, in normal times three or four piastres for the same quantity, has risen to 170 to 190 piastres, while a pair of boots may possibly be secured for £T8 or £T9. The *Amalthia*, a Greek paper in Smyrna, states that "the committee for preventing speculation publishes a notice prohibiting the sale of a case of Swedish matches at a higher price than £T16, while the price of first quality fezzes is fixed at forty piastres each, and of an inferior quality at ten piastres."

***

The situation in regard to silver is receiving anxious attention in this country. The present price fluctuates between 40d. and 42d. an ounce, the highest it has reached for many years. Indian demands, of course, are the supreme factor in the situation, and notwithstanding the many suggestions that have been made to find a solution of the problem there is some doubt of their practicability.

***

Discussing the problem recently, the *Metal Bulletin* remarked:—"The world cannot supply India with as much silver as she bought in 1916, as America is using a good deal for her own coinage, while Russia, Germany, Austria, and all the Balkan States are absolutely famished for want of silver currency. Even France, which years ago held over £20,000,000 of silver coinage, is now reduced to £10,000,000 in her Treasury, in spite of different small paper issues to replace francs."

MOROCCO.

Trade Openings for British Merchants.

(From a Correspondent.)

A British merchant told me the other day that he had attempted to do business in Morocco, but that the results were so insignificant that he cut his losses. What seemed to impress him most about his failure was the extreme difficulty he encountered in securing reliable agents—men, that is to say, who could be relied on to return correct accounts as well as to push trade.

There are some overseas markets in which direct representation is an essential to success. Morocco is one of them. There are no longer sufficient local agents to cater for the increasing trade. The country abounds with lucrative openings, purchasers await the right kind of goods, and, let it be said, the right kind of salesmen; but if the British merchant is not prepared to work through a branch of his own house he will find that the game is not worth the candle.

An official of a prominent bank told me a few days ago that he had been inundated with requests for the names of "suitable" agents in the country; to all he replied advising the sending out of representatives from England as the better method.

Morocco is not a new market by any means. In other days, in certain lines, British interests predominated; there is no need to go into the causes that led to a change. Some of them were political, and politics do not concern me much.

Britain—the Only Loser.

It will be convenient to take the figures of 1913, as being the last complete year before the war, to express a view regarding the openings that present themselves, and also to show how our own people have lost ground. In that year the total trade showed an increase of nearly two millions sterling—it rose from a little more than eleven millions in 1912 to about thirteen millions in 1913. The increase was entirely in imports, which rose in total value from eight millions sterling to more than eleven millions. These are important facts; and here is a fact which is even more important. In that year of increased buying in Morocco the only selling country that showed a falling-off in business was Great Britain! On the other hand, Germany, Austria-Hungary, France, Belgium, and other countries, in less degree, all increased their turnover. Britain was left at the post, so to speak.

One of the handicaps from which British trade suffered was the lack of shipping facilities. Only two lines of steamers visited the coast, and neither of them, at the time of which I write, was regular enough to be relied on. In addition, their charges were extremely high. Motor-car prices will illustrate this. A demand had sprung up for cars, and it was reported that the British vehicle could not compete with the French, and the reason was that while the charges for freight, etc., on the French car amounted to between eight and twelve pounds, the expenses on cars shipped from the United Kingdom varied from thirty-five to fifty pounds.

Beaten by Foreign Ships.

The matter was put to British shipowners, and they argued that owing to the bad condition of the ports, it was impossible to provide a better service except at a loss. The British Consul-General in Morocco, Mr. (now Sir) H. E. White, contested this view in his annual report for the year. "The fact, however, remains (he wrote) that French and German companies have been able to do it, and now a Dutch company is starting a good service to take the place of the German steamers that have had to cease running."

The official went further than that, however. "Trade with the United Kingdom would increase with greater shipping facilities," he wrote. "There can be no doubt that the absence of such facilities has adversely affected British trade, because importers in Morocco prefer to order their goods in a country from which they can be sure of receiving them within a reasonable time and at the smallest cost for freight, etc." Not an unreasonable preference.

Evidence of Opportunity.

I daresay that I shall be told that the war has changed conditions, and what was once a promising field has deteriorated, and so on. There is a complete reply to doubts of that character. To begin with, the Bank of British West Africa has recently opened operations at Tangier, Casablanca, and Mazagan, and banks do not, usually, incur the expense of establishing branches in areas which present no opportunities for business. The sagacious management of this particular concern is a pretty sure guarantee that its extension of scope was not undertaken without the fullest knowledge of all the conditions.

Another important and still more recent event is the formation of the British Merchants' Morocco Association. This body is more than a Chamber of Commerce or a Trade Protection Society; it is an Association of British manufacturers and merchants who have combined to develop British interests of all kinds. The scope of the Association includes the development of existing opportunities, the creation of new openings, the study of trade conditions, and, generally, to undertake the keeping of the British name in the fore rank in all the markets in the country. The members of the council of the Association are among the greatest powers in British industry, as the list will show:—

The Right Hon. the Earl of Onslow, President and Chairman.

Mr. Robert Samuel Hunter (Partner, Charles Murdoch and Co., London), Vice-President).

Mr. Samuel Lamb (Partner, Coddington and Lamb, Manchester), Deputy Chairman.

Mr. S. M. Afriat (Director, Aaron Afriat and Co., Ltd., London).

Mr. H. H. Brock (Director, A. and S. Henry and Co., Ltd., Manchester).

Mr. J. W. Clark (General Manager, The Royal Mail Steam Packet Co., London).

Mr. S. H. Cotton (Partner, Culverwell, Brooks, and Co., London).

Mr. L. Couper (Chief Manager, Bank of British West Africa, Ltd., London), Treasurer.

Mr. J. M. S. De Moraville (Director, Harrisons and Crosfield, Ltd., London).

Mr. F. C. Lamb (Partner, Lamb Bros., Manchester).

Mr. Joshua M. Levy (Partner, M. de J. Levy and Sons, London).

Mr. S. Linton (Director, Linton and Lamb, Ltd., London).

Mr. E. C. Lord (Partner, J. C. and W. Lord, Birmingham).

Mr. C. Radburn (General Manager, Price's Patent Candle Co., Ltd., London).

Mr. Mark Winder (Director, Ashton Bros. and Co., Ltd., Manchester).

Equally important is the fact that the French Government have recently undertaken extensive public works in order to improve road communications, concessions have been given for the extension of existing and the construction of new harbour works, and all the indications point to the certainty that important trade developments are events of the near future.

Facts and Figures.

I alluded just now to the fact that in 1913 Great Britain alone lost in the trade race. Here are the figures:—

	Total sales. £		Inc. or dec. £
Britain	1,385,337	..	— 353,973
France	2,775,430	..	+1,454,593
Germany	524,405	..	+ 171,585
Spain	165.054	..	+ 84,960
Belgium	272,850	..	+ 154,489
Austria-Hungary	171,591	..	+ 42,888
Holland	136,438	..	+ 50,402
Sweden	140,000	..	+ 88,660

If we except tea, the trade in which we shared with Germany, whose share was £40,000; candles, of which Belgium and Holland supplied considerable quantities; coal and rice—commodities of which Britain supplied the great bulk—imports were distributed among most European countries.

Germany exported to Morocco sugar, £214,493; woollens, £96,779; hardware, £53,317; flour, £43,424; wines and spirits, £41,246; tea, £40,087; rice, £35,659; corn, £20,620; machinery, glass, cottons, iron, paper, groceries, provisions, and toys.

Austria-Hungary exported sugar, £128,436; woollens, £29,940; timber, £13,215; cottons, hardware, furniture, wines, glass, and chinaware.

Belgium sent iron, £96,669; cement and lime, £72,572; sugar, £32,176; flour, £20,048; hardware, £17,628; timber, £17,085; candles, £16,672; glass, corn, tiles, confectionery, biscuits, and woollens.

Are We Ready?

The war cannot last for ever; perhaps the end will come as abruptly as the beginning. Will our merchants and manufacturers be ready to start off from the line when the time for action arrives? A glance at the figures given above will show that there will be a reversion to a large trade which was once in enemy hands? Who is to succeed to it? That is a question which I cannot answer; but there is an answer, and its character will depend entirely on the efforts made in this country to improve our shipping communications, our trading methods, and our trade-building institutions.

Spain has undertaken the protection of Greek interests in Turkey.

Trials are being made in Denmark with nettles as a substitute for cotton.

The cotton seed market in Alexandria was easier on July 12, and July was lower at £13 7s.

THE SUBMARINE WAR.

No Change in British Shipping Situation.

German submarines continue to harry British shipping, and the returns issued by the Secretary to the Admiralty on Wednesday last, up to July 15, show the situation to be about the same. The cause for satisfaction is that it is no worse.

There is no change from the previous week in the number of vessels of the largest class which have been sunk, and only an increase of one in the vessels of the smaller class. Two more fishing boats have been destroyed than were shown in last week's return. The number of British vessels unsuccessfully attacked by submarines shows a considerable drop. It is down this week to nine vessels, as compared with fifteen in the previous week, and is lower than it has ever been before since the return was issued.

The return is as follows:—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

(a) Arrivals	2,828
(b) Sailings	2,920

British merchant vessels sunk by mine or submarine:

(a) 1,600 tons (gross) or over	13
(b) Under 1,600 tons (gross)	4

British merchant vessels unsuccessfully attacked by submarines	9
British fishing vessels sunk	8

Mr. Archibald Hurd writes in the *Daily Telegraph*:—"The outlook is serious. There was never greater occasion for activity in ship construction than to-day, for with every week that passes the urgency of this matter grows. There is evidence which suggests that the naval forces are grappling with the problem with increasing success, but, on the other hand, the number of ships open to attack is, it must be remembered, steadily declining."

Italian Losses.

According to a Reuter message from Rome, it is officially stated there that during the same week 558 merchant vessels of all nationalities, with a total gross tonnage of 472,466 tons, entered Italian ports, while 499 sailed (total gross tonnage 345,731 tons). These figures do not include fishing boats and small coasters. The Italian shipping losses on all seas were one steamer and four small sailing vessels.

TAXATION AND OIL PROFITS.

Speaking at the annual general meeting of the Shell Transport and Trading Company, Limited, on July 5, Sir Marcus Samuel, the chairman, uttered a warning to the shareholders (and to the Treasury) in connection with taxation.

"Unless some solution can be found for this multiplication of taxation," he said, "it is quite inevitable that many businesses in which friendly aliens are interested will have to be removed from London.

"I am glad to say that we are working in close and very cordial co-operation with our friends the Burma Oil Company, Limited, and we both, wherever we can, use our resources in the best of the national interests. I am delighted to pay a tribute to the spirit of mutual confidence and goodwill which has enabled us to conclude with them, during the period of the war, arrangements which have redounded greatly to the national benefit, and especially to the saving of tonnage, which is a vital factor in the winning of the war.

LANCASHIRE COTTON.

First Signs of an Improved Market.

(From Our Own Correspondent.)

Manchester, July 19.

The general tone of the market during the past week has shown some improvement, and although no general buying movement can be recorded the inquiry in certain quarters has been of larger dimensions. A matter of considerable interest has been the decision of the Control Board not to recommend curtailment of production for the present.

The restrictions on trading in raw cotton continue, and the position in Liverpool remains most abnormal.

Prices in Egyptian cotton have continued to advance, and more firms are experiencing difficulty in obtaining supplies. Private advices relating to the outlook for the new crop are still fairly encouraging.

In Egyptian yarns business has been very irregular. Here and there special transactions have been arranged, but no business of a general character can be recorded. The inquiry in piece goods for Egypt has continued fairly healthy. Shippers are hampered by the shortage of boats, and more buying would undoubtedly take place if exporters were sure of adequate shipping facilities in the near future.

The inquiry for China has continued to broaden, and here and there very fair sales have been put through.

An increased demand has been experienced for India, especially in light fabrics, such as dhooties. There has not been much activity for South America. A steady demand has come through in fancies for the home trade. American yarns for home use have attracted rather more attention, but actual buying has been very irregular. Some spinners are now presenting a rather firmer front to buyers.

BRITISH TRADE IN JUNE.

The Board of Trade returns show that the foreign trade of the United Kingdom in June, though slightly under the good May total, was well above the monthly average for 1917, despite the various necessary restrictions on the one hand and the difficulty on the other of transport across perilous seas. A satisfactory feature of the returns is the fact that the excess of imports over exports at £42,416,679, is well under this year's average so far. The totals (in values) for the month as compared with June last year are as follows:—

	1917. £	1916. £
Imports	86,068,342	86,927,680
Exports	43,651,663	47,274,563

The raw cotton imports, at £4,843,480, show a decrease of £717,430 as compared with 1916, and of £1,084,022 as compared with last May's figures. The relation of value to bulk can be estimated from a comparison of three years' figures:—

	June, 1915.	1916.	1917.
Centals of 100 lb.	2,592,720	1,556,994	719,675
Value	£6,173,858	£5,560,910	£4,843,480

For the half-year the cotton imports amounted to 8,245,366 centals, as compared with 11,408,079 in 1916 and 18,813,908 in 1915. In respect of values for the same periods the figures are:—1917, £46,831,929; 1916, £40,130,309; 1915, £42,523,021. Other imports during June show falls all round, including £1,571,942 in metals and manufactures thereof and £1,002,831 in chemicals and dyes.

Cotton goods at £11,844,411 showed an increase of £509,861, and of £4,096,234 as compared with June, 1915. Piece goods of the value of £8,873,662 went abroad, or £430,954 more than in the corresponding month, but in yardage the figures have a different tale to tell: 1917, 395,594,200; 1916, 500,831,600. The weight of yarn exported was also considerably less, and sewing thread was some 200,000 lbs. under the 1916 total, though the value of the latter is given as £530,761, as against £422,459 in 1916. For the half-year the cotton yarn exported amounted to 65,907,040 lbs., as against 91,097,500 for the first half of 1916 and 102,449,200 of 1915; values rose from £5,460,407 for 1915 to £7,784,404 for the six months just closed. The piece goods total for the six months is slightly under the 1916 figure as regards bulk, but nearly 200 million yards more than in 1915; the value at £51,521,604 compares with £41,589,036 for the same period last year and £30,809,323 for the first six months of 1915.

TRADE NOTES.

Tangiers.

According to a new exports order, all clearances from Tangiers have to pass viâ the Customs depots. No clearance of material or merchandise can take place between sunset and sunrise without express official sanction. Goods imported into Tangiers, without restriction, can be cleared without restriction as to quantity.

"By the repeal of the regulations concerning merchandise imported into Tangiers under restrictive conditions" (writes a Paris paper), "the natives of the Tangiers zone and the neighbouring tribes who bring their produce to the market are authorised to take from Tangiers the quantities of alimentary commodities corresponding to their personal needs within the limits of the maximum quantities strictly determined."

Price Lists for the Caucasus.

Apropos the note on trade openings in the Caucasus in last week's Near East, it should be remembered that catalogues, price lists and other advertising literature should be prepared by persons knowing Russian thoroughly well, and should be extensively distributed. They should contain prices worked out, when practicable, in roubles and copecks, both with and without Customs duties, and charges and expenses, including railway rates to places of delivery. Russian weights should be given. A wider and more general system of banking facilities than has hitherto been placed at the disposel of traders is called for. Credit, where necessary, or asked for, should be prudently accorded after careful inquiry.

Restrictions.

The supplement to the *Board of Trade Journal* of July 19 contains complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported from British India, Australia, Canada, New Zealand, South Africa, Newfoundland, Egypt, Cyprus, and Ceylon. Copies may be obtained at a cost of 3d. (3½d. post free), either from any bookseller, or from H.M. Stationery Office, Imperial House, Kingsway, London, W.C.2.

THE PERSIAN GULF.

French interests in the Persian Gulf are strenuously championed by *La Dépêche Coloniale*.

"Our interests in the Persian Gulf," writes our contemporary, "worthy of the most serious attention before the war, are about to become of still more importance owing to the incorporation of the basins of the Tigris and the Euphrates in the zone of influence of the Allies under British hegemony. Correspondence to hand from Persia confirms the interest we should take in the re-establishment of a regular service of steamers between Djibouti, Bender-Bouchir, and Aden, in conjunction with our lines to East Africa, Australia, and the Far East.

"It is necessary to lose no time in considering our future programme. Our British Allies are on a fair way to found an immense Arabic-Persian empire between Egypt and India, with the unanimous co-operation of the Arab chiefs. We shall be guilty of serious neglect if we fail to reserve for our economic expansion the place which is our due.

"It is said that a French merchant and shipping concern, devoting its attention to Red Sea trade, would have great chances of success.

"When the time comes for the realisation of this project, the question of calling at Antwerp and Rotterdam, and at an English port for coal and freight, will have to be carefully examined, it being, of course, well understood that the home port of this line would be in France."

ENGINEERING NOTES.

Co-operation.

It is quite clear that when this destructive war is ended, great opportunities will appear, especially in the Near and Middle East, for all kinds of enterprise. There will be the construction of new and the reconstruction of damaged or destroyed railways, tramways, bridges, harbours, canals, factories, electric and gasworks, exploitation of mines and oil-fields, reclamation of land, re-establishment of old, and the opening of new, industrial, commercial, and shipping enterprises, etc., most of which were distinct features in the German grandiose schemes "from Berlin to Baghdad." In some of these enterprises civil engineers are directly concerned, while in others mechanical engineers will take a prominent part. In view of this forthcoming upheaval of energy and industry, it is gratifying to note that, in recent years, British civil engineers have shown an increasing interest and decided inclination to concern themselves with mechanical engineering and trade and commercial projects, in addition to questions which more particularly pertain to civil engineering; and as under the present conditions only co-operation and unity of effort can lead to success, the advantages to be gained from the participation in such projects of a faculty which, as a rule, has a distinct influence in enterprising and financial circles are too obvious to need explanation. The co-operation of civil and mechanical engineering is very essential if we are to win a trade victory commensurate with the victory of arms which there is every reason to suppose will be ours. It is, therefore, gratifying to find a distinct acknowledgment of the importance of mechanical engineering and trade projects in the ideas and particulars which were contained in a recent address of Mr. Edgar Crammond, at the Institution of Civil Engineers, on "Foreign Trade and Its Relations to the Investment of Capital Abroad."

Great British Investments.

Mr. Crammond, referring at the outset to the magnitude of British investments in the Overseas Dominions, and in foreign countries, pointed out that we had been investing capital abroad for more than four centuries; but that it was not until between 1830 and 1840, when the steam-engine and the factory had transformed Great Britain from an agricultural to a manufacturing country, that foreign investments assumed any great magnitude. To-day the income from British, Colonial, and foreign investments combined exceeded £118,000,000. This annual income, capitalised on a basis of a yield of 5 per cent., or twenty years' purchase, would represent a total capital of £2,360,000,000; and Mr. Crammond emphasised that the great bulk of this capital invested abroad had been applied to the construction of great engineering works such as railways, irrigation works, docks, and harbours, and to the development of such other undertakings as mines, nitrate fields, tea, coffee, and rubber plantations, oilfields, and "practically every other conceivable form of engineering enterprise calculated to increase the world's supplies of raw materials and food." Mr. Crammond claimed that British engineering policy in the past had not been conducted on selfish lines; "the additional supplies," he said, "of raw materials and food had been made accessible to the whole world, and had been for the whole world's benefit." In an instructive discussion which followed the address, a member of the institution, and member of a well-known engineering firm, said that one very necessary change should be the carrying out of considerable reform in the representation of British engineering firms abroad. Inter-competition between engineering firms should also be strictly avoided in regard to large contracts which came on to the open market.

Shipbuilding in Crimea.

According to official reports, the Azof-Don Commercial Bank has petitioned the Kertch municipality for the purchase of 216 acres of land situated near the metallurgical works, for the construction of shipbuilding works. According to the prospectus presented to the municipality, the enterprise will have a capital of not less than 5,000,000 roubles. The construction of the works must be started within one year from the date on which the Russian Government signs the treaty of peace. Within four years from the date of conclusion of peace not less than 2,500,000 roubles must be expended on the erection of works and the necessary machinery. The municipality has agreed to cede the land required, and the matter is now awaiting the sanction of the Central Government. It is said that the prospects are encouraging. It is not the first time that such a scheme has been suggested. In this case the name of the Bank is promising.

RUMANIAN OIL TRAIN BURNT.

A Budapest telegram to the *Vorwarts* says that a collision between two trains, one of which was laden with petroleum oil and benzine, occurred at Rakos Station, in Hungary. A tremendous explosion followed, and all the wagons, containing oil from Rumania, at once burst into flames. The fire extended to neighbouring buildings despite all efforts to extinguish it. Twenty cars with petroleum and 30 with mixed goods were destroyed. The damage is estimated at over £4,000.

COMPANY REPORTS.

Egyptian Markets.

The net revenue for 1916 was £44,746, against £31,585. After deducting £10,000 estimated to meet Government share of profits and of the excess profits duty, a balance of £34,746 remains, which, with the balance of £5,015 brought forward, makes a total of £39,760; to reserve, £2,349; final dividend on the ordinary shares, 5 per cent. with a bonus of 2 per cent., making 12 per cent. for the year, against 10 per cent.; and subject to the settlement of the proportion of profits due to the Government and excess profits duty, the payment of a dividend on the deferred shares at the rate of £13 3s. per share, against £6 2s. 5d.; forward, £5,919.

Mortgage Company of Egypt.

The report for the year ended March 31, 1917, to be submitted to the ninth ordinary general meeting of the company to be held at the Cannon Street Hotel, London E.C.4, on July 24, 1917, states that after providing for interest on the 4½ per cent first charge debentures and on temporary loans, and applying a sum of £28,000 in the aggregate in writing down the value of the freehold premises of the company in Cairo, the property acquired by foreclosure and the instalments in arrear, the accounts show a profit for the year of £75,394 19s. 7d. Deducting the amount of the dividend to June 30, 1916, paid on the 5 per cent. preferred shares on January 1, 1917, viz., £25,000, there remains a balance of £50,394 19s. 7d. Adding the amount brought forward from the previous account, £7,287 9s. 11d., there is available £57,682 9s. 6d. Out of this sum the directors have already paid the dividend accrued on the preferred shares from July 1, 1916, to March 31, 1917—viz., £37,500, and they propose to devote, as in previous years, to writing down the discount and expenses of the debenture issues, £2,800, and to carry forward to the next account the balance of £17,382 9s. 6d. Out of this balance the directors have since paid an interim dividend on the preferred shares for the period ended June 30, 1917, amounting to £12,500.

The economic situation in Egypt has continued to improve, and the increased payments by the company's clients mentioned in last year's report have been maintained during the year 1916-17. The board have, however, thought it necessary to make further provision for loss on arrears and properties acquired by foreclosure. They have applied a sum of £13,000 to writing off a portion of the instalments in arrear, and a sum of £12,000 in writing down the cost price of the property acquired by foreclosure. Any further depreciation in the value of loans or property acquired by foreclosure is, in the opinion of the board, amply covered by the general reserve of £152,500.

The following figures illustrate the course of the company's business since it began operations in December, 1908 :—

AMOUNT INVESTED IN FIRST MORTGAGES.

At March 31,	1910	£1,183,611
,, ,, ,,	1911	£2,064,178
,, ,, ,,	1912	£2,597,473
,, ,, ,,	1913	£3,037,991
,, ,, ,,	1914	£3,276,225
,, ,, ,,	1915	£3,481,545
,, ,, ,,	1916	£3,370,366
,, ,, ,,	1917	£3,166,043

The Right Hon. Viscount Milner, G.C.B., G.C.M.G., having become a member of the War Cabinet, was compelled, to the great regret of his colleagues, to resign the chairmanship of the company, which position he had held ever since it formation. In pursuance of the provisions of Article 92 of the Articles of Association the board have appointed Sir Henry Babington Smith, K.C.B., C.S.I., to fill the vacancy on the board occasioned by the retirement of Lord Milner. Under the terms of this same article this appointment terminates at the general meeting. Sir Henry Babington Smith, being eligible, offers himself for re-election. J. Mosseri Bey has resigned his position on the board. The board do not propose to fill this occasional vacancy

at the present moment. The board deeply regret the death of the Right Hon. the Earl of Cromer, O.M., P.C., G.C.B., G.C.M.G., K.C.S.I., C.I.E., which took place on January 29, 1917 Lord Cromer was one of the trustees of the trust deeds securing the debentures of the company, and he had taken a great interest in its affairs from the commencement. Lord Milner has been appointed a trustee in Lord Cromer's place His Excellency Harari Pacha, C.M.G., Brigadier-General the Hon. Everard Baring, C.V.O., and Edward William Perceval Foster, Esq., C.M.G., directors of the company, retire by rotation, and, being eligible, offer themselves for re-election. Messrs. W. B. Peat and Co., the auditors, retire, and offer themselves for re-appointment.

Anchor Line, Limited.

The report for the year ended April 30 last states that the services of the company have been maintained with as reasonable a degree of regularity as was possible under the existing conditions. Since the close of the financial year the whole of the company's steamers have been requisitioned by the Government, and, although continuing under the management of the company, are now entirely subject to the orders of the Ministry as to destination of voyages. Since the last report the company, in response to a circular invitation, has purchased and cancelled debenture stock to the extent of £85,970, the present amount of debentures outstanding being £379,030. An arrangement has been made between the company and the Donaldson Line for a fusion of interests of the two companies in the cargo and passenger service between Glasgow and Canada. A new company, known as the Anchor-Donaldson Line, has been formed, to which the steamers Letitia, Cassandra, Athenia, and Saturnia have been transferred. The profits, after providing for depreciation and a special reserve for war taxation and contingencies, amounted to £366,955, which with £107,607 brought forward makes £474,562, out of which there has been placed to reserve account £250,000, debenture interest, less income-tax, £14,243, dividend on preference shares, less income-tax, £13,406, leaving a balance of £196,912. The directors recommend a dividend on the ordinary shares at the rate of 10 per cent., free of income-tax, also a bonus at 10 per cent., free of tax, leaving to be carried forward £146,912.

COMPANY NOTES.

Dividends, Payments, etc.

The directors of the Egyptian Markets, Ltd., announce a final dividend on the Ordinary shares of 5 per cent. and a bonus of 2 per cent., making a total of 12 per cent. for the year ended 31st December last.

Messrs. C. J. Hambro and Son announce the purchase for cancellation of 1,750 bonds of the Greek Government Five per Cent. Loan of 1914.

Oil Outputs.

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.,
Thursday.

Our market in Egyptian shares has been gradually broadening out throughout the week, and prices are closing higher all along the line. The amount of business done has not been large, owing to the scarcity of sellers; but the demand for certain shares has been persistent on both home and Egyptian account.

In the banking group Nationals have risen ⅜ to 15⅜, and Agriculturals are ⅛ better at 5½. Anglo-Egyptian Banks have also firmed up ¼ to 12⅝, and Bank of Athens shares have been done at the higher price of 2¾.

Egyptian Government stocks have remained firm spots, but business has been very restricted owing to the absence of sellers.

Delta Light Railway prefs. have improved a further ⅛ to 6⅜.

In land shares Behéras have jumped ½ to 10¾, some business has been done in Delta Lands at the rather firmer level of about 11s., and a fair number of New Egyptians have been changing hands round 11s. Sidi Salem shares are about ⅛ up at 11-16, and Union Foncière d'Egyptes have risen from 1 9-16 to 1⅞ bid, with hardly any business resulting.

Among miscellaneous shares, Egyptian Markets have improved 6d. to 27s. 6d. on the excellent report and the increased dividend. Salts and Sodas are somewhat firmer at 25s., without very much business passing.

As regards Khedivial Mails, a quieter tendency has again been in evidence, and the shares are somewhat easier.

In Greek stocks the 1881, 1884, and 1887 loans are about ¼ up at 58 for the first two, and 54 for the third. Currant Bonds are rather quieter round 92, and some transactions have taken place in 1902 Loan at the somewhat easier price of about 60½.

Oil Shares.

The market has been moderately active; but, generally, prices are unchanged.

Paris Bourse.

Quotations on Wednesday included the following :—Egyptian Unified, 95.55 (unchanged); Serbian (1895), 56.25 (unchanged); Turkish Unified, 64.15 (against 64); Crédit Foncier Egyptien, 712 (against 713); Suez Canal 4,440 (unchanged).

THE MONEY MARKET.

London, July 19.

On some days this week the rate for day-to-day loans has ruled low; but this fact does not appear to have reduced visible supplies. Cash was plentiful yesterday at 3½ to 4 per cent., and at 4½ per cent. for weekly fixtures. This encouraged a demand for short-dated bills, and the discount market was slightly weaker. Next month's Treasuries were in demand at 4 9-16 per cent.

Exchange on Alexandria varies between 97¼ and 97¾ piastres to the pound sterling.

EGYPTIAN MARKETS.

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

BOOKS on the NEAR EAST

A History of Serbia. By Captain H. W. V. TEMPERLEY, M.A., F.R.H.S, **10s. 6d.** net.

This book is the fruit of some years of travel and study in the Near East. The author has been fortunate enough to approach his subject without prejudices; he envisages the Balkans as a whole, and his sympathies, springing from personal acquaintance with the land, are wide enough to embrace the entire Peninsula without being tinged by the miasma of racial antipathies. In this volume Captain Temperley gives a complete and scholarly record of the Serbian nation.

Greek Ideals. By C. DELISLE BURNS. **5s.** net.

A study of Greek life and thought as an inheritance belonging to every man of intelligence. The leading idea is that the Greeks value *sociability* most highly. This stands out among the Greek conceptions of an admirable life and an ideal character.

Soldier Men. By "YEO." **3s. 6d.** net.

Campaigning in Egypt is the chief theme of this volume of sketches.

The Future of Constantinople. By LEONARD S. WOOLF. **2s. 6d.** net.

This work deals with one of the most vital problems of British foreign policy—the settlement of the Ottoman Empire after the war. It proposes and discusses a settlement of Constantinople based upon the political, economic, and strategic interests of all nations.

The Immortal Gamble: and the Part Played in it by H.M.S. "Cornwallis." By A. T. STEWART and C. J. E. PESHALL, Chaplain. **6s.** net.

It was from the fore-turret of H.M.S. "Cornwallis" that the first shot was fired in the Dardanelles bombardment, and the book is written by the Acting Commander and the Chaplain of the ship.

Roumania and Great Britain. By A. HERSCOVICI HURST. **1s.** net.

A short concise statement of the history, characteristics, and resources of Roumania and her people, and of relation to international politics and the war, by a Roumanian who is a naturalised British subject.

The Rise of Nationality in the Balkans. By R. W. SETON-WATSON. With Maps. **10s. 6d.**

Miss Haroun Al-Raschid. By JESSIE D. KERRUISH. **5s.** net.

A great adventure novel of Mesopotamia and the Tigris plains.

In Mesopotamia. By MARTIN SWAYNE. **5s.** net.

The author, who served in Lower Irak, illustrates his descriptions with colour sketches drawn on the spot.

Modern Movements among Moslems. By SAMUEL GRAHAM WILSON, D.D. **6s.** net.

An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

The above-mentioned books, or any other publi ations, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.), **1, Devonshire Sq., London, E.C. 2.**

NOTES OF THE WEEK.

Unfortunately, the chief event of the week has been the utter collapse of the Russian army in Galicia. All the more disappointing after the high hopes inspired by the resumed offensive of a month ago, the Russian discipline seems to have given way over a long section of the line, and the frank official bulletins admit that the troops have broken and refused to obey orders. Against rank mutiny the best commanders can do little, and it is natural to see in this deplorable outcome the effect of German gold and German agents, both in Petrograd and in the army itself.

As a result, the important cities of Tarnopol and Stanislau have been evacuated by our Allies, and there seems a possibility that the whole of Galicia may have to be given up. The beautiful little land of the Bukovina, already conquered and reconquered more than once in the last three years, must necessarily be affected by the fate of Galicia, and this must of course react upon Roumania, whose army had been reorganised, after the disastrous autumn campaign of last year, in readiness for an offensive in consort with Russia. There are still some ten weeks during which heavy fighting is possible on the Eastern front, but each day that passes renders the possibility of definite results in this theatre less likely in 1917.

It may be hoped that the determination to mutiny is confined to a single section of the Russian army, and that M. Kerensky, who has now taken the dangerous post of Premier, with practically the powers of a dictator, will be able to infuse some of his enthusiasm into the troops at the front. His desire to fight the war out is evidently a bitter disappointment to some of the politicians of Petrograd, whose only desire seems to be a German peace. These gentry, who aimed at complete anarchy in the capital last week, have been suppressed for the time being, but they will almost certainly make their reappearance since they are in German pay and must do something to justify their salary. The man Lenin, who posed as a friend of the millennium, turns out to be a mere commonplace traitor, and has made himself scarce. He will very possibly change his name—this kind of occupation makes men adept at aliases, whether in a Council of Workmen and Soldiers in Russia or a Union of Democratic Control nearer home—and reappear somewhere else.

The Russian situation is bound to be one of the factors discussed at the Balkan Conference of the Allies, which met in Paris on Wednesday. All the belligerents, with the exception of the United States, are represented at this Conference, the United States only remaining outside because the war in the Balkans is outside their scope as newcomers into the business of fighting, and not because they do not purpose to play their due part in the final settlement of the Near East. Without in any way accepting the hypothetical rôle of international guardian of Constantinople, which some indiscreet journalists have attempted to thrust upon him, President Wilson has shown himself possessed of a grasp of Balkan realities which not every English statesman had in 1914.

The present Conference is a direct outcome of the previous discussion of the Allies, at which it was at last determined to eject King Constantine. It may perhaps be presumed that the Allied statesmen who decided on that step did not sketch out the subsequent line of policy in any but rather vague outlines, feeling that events in Athens might for the time being be left to settle themselves, under the wise guidance of M. Venizelos. That hope has been fulfilled, but the Balkan question has now reached another stage. With Greece restored to unity and ready to succour Serbia, whose Government is now at Salonika, the question of the stationary Allied force at Salonika can no longer be allowed to drift.

As was natural, Mr. John Dillon seized the eve of the Balkans Conference to deliver one of his pessimistic utterances in the House of Commons, devoting special attention to the situation in the Near East. Mr. Dillon's melancholy is proverbial, and he certainly does his best to make pessimists of us all—possibly the fact that he and his party are no longer sure of their footing in Ireland makes him all the more anxious to play the part of candid friend to England. But it is difficult to take him seriously when he suggests that the British Government does not appreciate and sympathise with the situation of Serbia. Party politics are so ingrained in some natures that Mr. Dillon's petulance might have been ascribed to Sir Edward Carson's recent inclusion in the War Cabinet, were it not that the latter gave proof positive of his interest in Serbia two years ago when he resigned from the first Coalition Government.

Lord Robert Cecil (who is gradually learning his experience of foreign affairs in the hard school of the blockade, where things are not what they seem and

Digitized by Google

figures may be made to prove anything from the starvation of the German to the innocence of the neutral) had no particular difficulty in answering Mr. Dillon. He admitted, of course, that Germany was our main enemy, and to that extent our interest in fighting Austria was less than in fighting Germany. But as to any idea of abandoning Serbia, such as the Nationalist critic seemed to suggest, he, of course, repudiated it with all emphasis. Possibly if Mr. Dillon had made fewer criticisms at Westminster and more recruiting speeches in Ireland he would be listened to with more attention.

The new German Chancellor made no direct reference to Balkan affairs in his inaugural speech, but his insistence on a German peace was enough to show that the Near Eastern ambitions which were the immediate origin of the war have not been abandoned. And if any doubt were entertained on that point, it would only be necessary to quote the semi-official *Fremdenblatt* of Vienna, whose comment on this pronouncement is that Austria must secure territorial guarantees both in Roumania and Serbia, that those two countries shall "choose sovereigns not inimical to our interests"—in other words, German princelings who will betray their adopted subjects for Teutonic bribes—and binding treaties of a military, economic and political nature. Indirect annexation is thus aimed at, and a series of servile States with puppet monarchs, whose right ear would always be listening to the direct telephone from Vienna. It is worthy of notice that Austria, who seemed to have flung away ambition a few weeks ago, is now raising her terms, thanks presumably to Dr. Michaelis and the Russian break in Galicia.

In addition to the mastery of the Danube from source to mouth, the Austrian organ also insists on the extirpation of Italian influence on the eastern side of the Adriatic. "We must make every effort," it says, "to prevent either Valona or any point whatever of the Eastern Adriatic coast remaining in the hands of Italy. If Albania and Montenegro are to continue to exist (*sic*), the Monarchy must assure itself of sufficient influence on the coast from Spizza to Valona to preclude the possibility of any power hostile to us misusing this coast in peace or in war." These terms are significantly higher than those of three years ago, when only Serbia was in question, and neither Albania nor Montenegro came into the published war aims of Austria at all. But the fact that they are published in an inspired organ of the Vienna Foreign Office appears to give them official sanction, and to demonstrate that the German parties in Austria have once more obtained control, and that the Emperor Charles's endeavour to conciliate the Southern Slavs at the outset of his reign has been frustrated, like so many similar attempts.

There has been some discussion in the Italian Press as to war aims which contrasts rather sharply with the Austrian programme. The *Giornale d'Italia*, which is believed to express the views of Baron Sonnino, declares definitely for an understanding with Serbia in the Adriatic on the ground that both have suffered heavily in this war, and neither can deny the other a reasonable satisfaction of its ambitions. Italy professes to have no desire for Albania, nor does she intend that it shall be divided among the Balkan States; for herself she demands Valona and the limiting of Southern Albania to Cape Stylos, in order that Greece shall not transform the Corfu Canal into a strategic base. As to the Levant, Italy takes up the general position that if the Allies, for one reason or another, decide to break up Turkey in Asia, Italy must have her share, on the ground that the balance of power should not be disturbed. There is nothing very new or very surprising in these statements, but the clear and moderate fashion in which they are urged will be appreciated.

Should these aims be, in fact, the official view of the Italian Cabinet, opinion would seem to be tending towards an accommodation with Serbia; the thorny question of Dalmatia is not yet out of the zone of friction—and the fact that the Italian Press rather ostentatiously ignored the existence of M. Venizelos during the Salonika period is scarcely a good augury for the equitable settlement of the Albanian problem. As to the Levant, the destiny of Asia Minor is obviously a matter for all the Allies, and in the present stage of the war any public debate on the matter would be useless.

The fact that there has been no news of importance from Greece this week may be taken to mean that the country is settling down under the new régime. The Allied troops are being evacuated from Old Greece, while the removal of the Greek Army from the Peloponnesus to Northern Greece is beginning. In the meantime M. Venizelos will not be greatly perturbed by the refusal of the German Government to "recognise" the new Government at Athens. The refusal, of course, serves as a warning that the German troops will not treat the Greek troops as regular soldiers, but as franc tireurs; but since the Germans have never shown themselves either scrupulous or chivalrous in their methods of warfare, it is difficult to see what new fashion in barbarism they can devise for the benefit of the Greeks. The insult will only nerve the Greek Army to greater bravery.

The decision of M. Venizelos to read the Treaty with Serbia in the Greek Chamber will at last add a document to history which has been as much discussed as the Belgian Treaty. The Serbian Government sanctioned the publication of the Treaty in 1915, but its permission reached Athens two days after M. Venizelos had been dismissed, and M. Zaimis, out of loyalty to King Constantine, refused to read an agreement the breach of which has branded that sovereign for ever as a recreant. Many who are familiar with Serb circles in London and Paris have seen copies of the Treaty, or at least extracts from its clauses, but for some reason, which it is not perhaps very difficult to fathom, the Treaty itself has never been published either in England or France. The reason, such as it was, against secrecy has now disappeared.

Further information as to the condition of the Serbs confirms the impression that the Bulgars are waging a war of extermination on that unhappy people. Serbian prisoners who have attempted to escape are being sentenced to whipping and hard labour, and are informed that any who may attempt to escape in future will be liable to the burning of their homes, the confiscation of their property, the deportation of their families, and sentence of death for themselves. These penalties are to be enforced indifferently on both civil and military prisoners, and the evidence goes to show that in their anxiety to enforce the penalty the Bulgars are not very rigid in their definition of the offence. Every inhabitant of Serbia is declared a fugitive and a suspect, and many teachers and priests have been murdered. Forced labour, under conditions which amount to actual slavery, has been imposed upon the population—a proceeding in which the Bulgars are no doubt instructed by their German allies.

Minor questions have taken place on the Palestine front, in which the enemy trenches at Gaza have been raided, and the Turkish cavalry have been driven back. On the Sinai frontier a more important action has been fought, the Arab forces of the Grand Sherif of Mecca having gained a substantial victory over the Turks. The Arabs have now advanced to Moab, and hold all the enemy positions between Akaba, at the head of the eastern gulf of the Red Sea, and Maan, a station on the Hejaz Railway, 65 miles south of the Dead Sea. The Turks, therefore, apart from the force in Medina and the army in the Yemen, appear to be driven out of Western Arabia. Unfortunately, the news from Aden does not indicate that this isolated body of the enemy is in any straits.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 1.

The High Commissioner.

His Excellency the High Commissioner came up to Cairo for a day in order to preside at the bi-centenary of the Grand Lodge of England, of the District Lodge of which he is Grand Master. All the other local recognised Lodges were represented at the ceremony. On Thursday last the High Commissioner and Lady Wingate gave a garden party at the Residency, Ramleh, to the British and European colonies of Alexandria. Over six hundred guests were present, and the event was a great success. No Moslem notables were invited, in view of the fact that none of them could have accepted the invitation owing to the fast of Ramadan, which is now on. In the course of this week Sir Reginald and Lady Wingate paid a visit to the Refugees' Camps at Alexandria. They made a very thorough inspection of the encampments at Minet el Bassel and Wardian, and expressed themselves as exceedingly satisfied with the excellent manner in which everything was organised. On their way back they also visited the workroom which has been opened at the old Governorate for the poor women of the city, and where a great deal of work is being done for the military authorities.

The Sultan's Generosity.

The Sultan has just given another proof of his great generosity by subscribing the sum of one thousand pounds to the fund that is being raised for the erection of an Anglican Cathedral in Cairo. Both the High Commissioner and the Bishop of Jerusalem, Dr. R. MacInnes, have written letters to his Highness warmly thanking him on behalf of the British Community. It should be recalled that recently the Egyptian Government presented the community with a most valuable site for the Cathedral. This offer was made on the initiative of the Sultan, and together with the gift which he has now made, it reflects in a marked manner the broad-mindedness and anglophile sympathies of the Sovereign of this country.

The Greek Community.

This week telegraphic instructions were sent from Athens to the Royal Diplomatic Agency of Greece in Egypt announcing the formation of the new Government and ordering the Royalist Agent to hand over to the representative of the Provisional Government, who will henceforward represent the Athens authorities. Thus, a satisfactory solution to one of the problems, which are troubling the local Venezelists, has been arrived at, and M. Xydakis, whose behaviour has aroused so much comment on the part of the community, will shortly leave the country. The other problem, that of the Patriarch, is still unsolved. It is expected that the mobilization orders issued by the Greek Government will be made applicable here, in which case a large contingent of recruits will become available from Egypt.

The Cotton Crisis.

The cotton futures market at Alexandria was closed by Ministerial order on the 26th ult., and was only allowed to reopen on the 30th. The reason for this step was that in view of the closing of the markets at Liverpool, Havre and Bombay it was considered advisable to suspend operations in this country until it was possible to know what decision had been arrived at in England. The decision at first was to close only for twenty-four hours which the Bourse Commission has power to do of its own accord; but it was considered wiser to keep the Bourse closed until the result of the Liverpool meeting was known, and so a deputation waited on the Government and obtained a Ministerial arrête as mentioned. The futures market opened yesterday morning with a rise of about three dollars on the price of November contracts ruling when the closure took place, but there were, as may be expected, very few sellers. A good deal of criticism has been levelled at the Bourse Commission for the step it took, but in the circumstances, and seeing that Alexandria is so dependent on other markets, it would appear to have been an exceedingly wise measure. In Alexandria various rumours are floating around as to the restrictions which will be placed on future operations; but nothing definite is known as yet, and for the present the only restriction imposed is on the jobbers, who are not to be allowed to operate for fifteen days.

The Philippides Case.

The police bribery case known as the "Philippides case," came to an end on Saturday. Philippides Bey has been sentenced to five years' imprisonment and a fine of £E784, and his wife to one year's imprisonment, and a fine of £E739, his servant was acquitted. The sentences have been very well received by the general public. The case has aroused great excitement amongst the local Syrians, who consider that the scandal reflects upon their community. They could well have spared themselves all the heartburning, as it has transpired that Philippides is a Greek, born at Syra, and that his connection with the Syrian community, of which he was generally regarded as a member, is confined to the fact that he was educated at Beyrout and married a Syrian.

The Elementary Education Commission.

The Commission appointed to study the best means of extending elementary education in this country held its first meeting last week. The members were welcomed by the Minister, H.E. Adly Yeghen Pasha, who was accompanied by the Adviser, Dr. Douglas Dunlop. In the course of a very interesting speech the Minister showed that the question was most urgent and important, in view of the great illiteracy of the people, of whom he estimated about 90 per cent. are still unable to read or write, and he added that the ignorance of the masses acts as a blight upon the country's progress. He pointed out that what is wanted is a simple and cheaper organisation for instruction in the vernacular to meet the requirements of children, whose school career will rarely extend beyond four years. This could be obtained by the creation of an elementary school (a Maktab) in every village. The scheme prepared by the Ministry provides for the creation of these schools throughout the country within a period, tentatively fixed at thirty years, and sub-divided into periods of six years each, so as to secure regular progress during the whole of the interval. A long period has been fixed, first, because the provision of these schools is mainly a question of funds; and secondly, because progress in the rural districts must not be too rapid at first, so as to allow the minimum interference with the agricultural industry of the country and to permit the village school organisation and agricultural exigencies to adapt themselves to each other in the most satisfactory manner. Although the introduction of the schools will depend, as stated, on the amount of funds at the disposal of the Ministry of Education, any locality that wishes will be permitted to speed up the supply of schools for its own population by providing the funds necessary for the construction of the schools in advance of the periods fixed.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—II.

Civil Statistics.

The new cases brought before the Civil Courts last year decreased somewhat compared with the preceding year, especially in the Cantonal Courts, where the cases fell by about 50 per cent. The Adviser expresses his belief that in some respects the statistics as to civil justice furnish the best statistical index to economic and social changes in Egypt, and points out that, as the fees in the Native Tribunals are on an almost exclusively *ad valorem* basis, the statistics are summarized with a high degree of accuracy by the total judicial receipts. He adds, however, that their precise meaning must be interpreted by reference to the general conditions known to obtain from year to year, for an increase in judicial receipts may be equally well-produced by a steady growth of commercial prosperity entailing an expansion in the normal work of the courts or by a sudden commercial crisis entailing abnormal recourse to the courts for the recovery of debts.

The judicial receipts of the Native Courts increased from £E103,049 in 1896 to a maximum of £E497,840 in 1912, as from which year a diminution occurred primarily attributable to the creation of the Cantonal Courts with their approximation to the ideal of free justice. It is interesting to note that, whereas in 1896 the Native Tribunals cost the State some £E63,000, in 1912 they produced a net revenue of £E127,800. Sir William proceeds to make an interesting analysis of the expansion which the judicial receipts underwent during the twenty years in question. The increase was at first a gradual one, reflecting the steady consolidation of the country's resources—it reached in 1902 50 per cent. of the 1896 figures; by 1904 the latter figures had doubled, and by 1906 trebled. Comparing the increase with that in the judicial receipts of the Mixed Courts, he finds evidence that such real prosperity as occurred during the years of speculation preceding the 1907-1908 crash was largely restricted to the native population. A continued rise in receipts during 1907-1909 he attributes to some extent to the liquidation of the crisis and a slight reaction in 1910-1911 to the completion of the liquidation. On that basis the remarkable increase in 1912 would be evidence of returning prosperity. The diminution in 1913-14 was due to the declaration of the moratorium on the outbreak of war. Since January, 1915, the figures have hovered round the pre-war level, and the Adviser would conclude from this fact that the difficulties of the 1914 crisis were definitely liquidated early in 1916, whilst any maintenance of the further recovery, which occurred towards the end of 1916, he would attribute to renewed prosperity.

Economic and Social Changes.

With regard to the deductions arrived at from the remarkable increase undergone by the receipts up to 1912, comparison with other statistics of a nature to reflect the same influences shows, however, that there must have been other factors at work, and the Adviser thinks that the explanation is, to some extent, the increased readiness to appeal to the authorities already noticed in the criminal statistics, and, even more, a somewhat rapid change in economic and social organization to which he considers that too little attention has been paid. He points out that it is not right to assume that what was true twenty years ago in Egypt is true to-day. Here the provision of reasonably adequate machinery and of protection from arbitrary oppression, enjoyed during nearly the whole period, has wrought a definite change in the economic organization of the country, and he concludes that "if it is not yet fully recognized that contracts ought to be carried out—a stage which, whenever it is reached should be marked by some diminution in litigation—it is at least recognized that legal rights are proper to be enforced." He mentions that he had striking evidence of this change during the four years he was responsible for directing the litigation of the Ministry of Public Works. Whereas former irrigation officers had been acclaimed as public benefactors for providing the country with water, the present officers found that their own efforts on lines no less scientifically sound were constantly ending in the law courts. In Sir William's opinion, the Irrigation Service is suffering from the consequences of its own success. Whilst the obtaining of water was formerly regarded as a privilege or fortunate accident, to-day water, and water in the exact quantity desired, has come to be regarded as a right, and land is being sold and leased on that basis. His four years' experience is that the Irrigation Service can justify itself as well on one basis as on the other. It must, however, in future, be prepared to defend its action in the courts, if called upon to do so, as a result of a change which is "only symptomatic of wider changes affecting the economic relations of the population in general."

The Work of the Courts.

As regards the actual work of the courts, it is to be noted that the Court of Appeal disposed of a number of appeals equal to but 65 per cent. of those dealt with during the preceding year, and that, as a result, the arrears increased somewhat. The explanation is that the courts were short handed. Of the normal complement of nine European judges, one is engaged on war work in England, two others are periodically required for the administration of martial law, while one post, which has been vacant for part of the year, has had to be filled by the appointment of an Egyptian. Since criminal work takes precedence, civil work naturally suffered as a result of this lack of judges. In the Central Tribunals the state of the cause lists is, in the Adviser's opinion, not satisfactory, although the position is markedly better than two years ago, and, as regards first instance cases, than a year ago. It would appear that, on an average, it takes about eight months to dispose of a summary court appeal and about a year of a case, in first instance, and, making the fullest allowance for the various factors contributing to delay, he considers that these periods as averages are excessive, especially as they include a substantial proportion of cases in which there is no serious defence. The arrears in the Appeal Court likewise comprise cases where plaintiffs have made hopeless appeals against first instance decisions, and so have every interest to delay trial. The great need is some special procedure for the speedy disposal of such cases. In the Summary Courts, where the proceedings are, naturally, more expeditious, the statistics show curious variations in arrears per tribunal, and in the manner in which the cases tried were disposed of, which are inexplicable, except that they must, as Sir William remarks, be due to the personal idiosyncrasies of the judges.

The Cantonal Courts.

The Adviser has some interesting remarks to make on the Cantonal Courts, which were first instituted in 1912. The work done by them in such an exceptional year as 1914-15, when they disposed of some 350,000 cases other than those referred to them with a view to settlement on their way to the Summary Tribunals, afforded very material relief to the latter, and he thinks it clear that if the Cantonal Courts had not been created, some further addition to the judicial staff of the country would by now have been necessary. "As it is, the cases left to the Summary Tribunals in some Markazes are so few in number as to raise the question whether we are justified in retaining a judge to give his whole time to the single Markaz." The fact that in 1915-16 the number of cases before these courts fell to 190,000 does not appear to him inconsistent with the view that they filled a definite want—a view confirmed, he thinks, by the fact that in Qena and Assouan, where the population is least prosperous and most scattered, the number of cases per thousand of the population is highest. In 1915-16 small fees were for the first time imposed on cases not exceeding £E1 in value, which had previously been heard without cost to the parties, and the fact that the number of cases dismissed for want of prosecution fell from 125,836 to 48,363, *i.e.*, from one third to one quarter of the cases disposed of during the year, in his opinion "goes far towards justifying the imposition of these small fees." To the obvious objection that the imposition of fees has made it more difficult to have recourse to these courts for the collection of debts—a result which he would personally regret—Sir William replies that there is no definite proof that such has been the effect. The fees in question are so small that he doubts whether they have much effect of any kind, and, taking into account the admitted easier circumstances of the fellahin, which would explain the diminution of cases of all values, especially of those not exceeding £E1, and the fact that of cases which proceeded to trial, the proportion of successful to unsuccessful has fallen, he is inclined to the view that, if anything, the imposition of fees has encouraged the payment of debts. He sees no evidence "that they have prevented the bringing of actions when debts have not been paid."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

CYPRUS NOTES.

(From a Correspondent.)

Tobacco Prospects.

Cyprus is feeling its way towards a revival of native industry in home-grown tobacco, both for local consumption and, it is hoped, for an export trade in the leaf. Particular interest attaches to this movement, which deserves full encouragement, since expert opinion in England has pronounced that there seems no reason why experiments should not be vigorously continued. These are now in progress, both on the part of the Agricultural Department and of private cultivators, who are said to have largely extended their operations. Cigarette smokers are generally conservative in their tastes. Then there was a time in Cyprus when the people, from bishop to peasant, smoked native tobacco if they could get it; but when the industry had been reduced to a minimum under Turkish rule, and stamped out, for fiscal reasons, under British rule, Cypriots smoked exclusively imported tobacco, which can be obtained of quite good quality, and at prices to suit all purses. They are not likely now, of course, to smoke any other tobacco, unless it can be sold, *ceteris paribus*, at a lower cost than that now offered by the local dealers, for which they have acquired a taste; especially as the tobacco is handled exclusively by Greek firms. Otherwise, the patriotic sentiment might, perhaps, be brought into play. The native factories, which work under Government supervision, turn out very good brands. Cyprus cigarettes are smoked by a considerable number of persons outside the island, including English. One well-known firm at Nicosia, sends out cigarettes of excellent quality and very moderate price to all parts of the world. The tobacco is "Turkish," and is imported from those regions which have been such a bone of contention in the Balkan, and in the present, war. Some day, possibly, Cyprus-grown tobacco may find favour. There is every reason for doing all that is possible to foster this industry in this as in other suitable parts of the Empire.

As regards the samples sent to England by the Agricultural Department, the report of the Imperial Institute in London appeared to show that the defects in all those submitted might be removed by improvement in the act of curing. It seems clear that the right leaf for the right place is still to be sought. Nature points to the Syrian varieties, since there is such similarity in climate, and other physical conditions, between the island and the neighbouring mainland. As regards private enterprise, the experiments of Messrs. Saade, in the Larnaca District, who appear to have been foremost in the new effort, have been, so far, the most promising. They have dealt with some success with the Latakieh leaf. Obviously, further experiments in growing and curing are essential, and the more industriously and courageously they are now carried out the better.

Roads and Communications.

Considerable damage was caused to roads and bridges by the last heavy rains. In the mountain districts roads suffer not a little annually from this cause, and maintenance always makes a heavy demand on the Public Works Department. Every year there has been a gradual extension of roads, which are a matter of anxious consideration for the Government. Endeavours are made to meet the needs of the six administrative districts, and the travelling public, in a spirit of fair distribution. The District Commissioners all have their annual claims for a share in this important work. Last year the High Commissioner stated that an increase of over £14,000 in expenditure would be devoted to raising that of Public Works Extraordinary by over £9,000, and that on Forests by about £5,000. The sum for Public Works was to be applied almost entirely to road improvement, *i.e.*, to the foundationing of roads throughout the island. Wages would thus be provided for the unemployed and other labourers, and communications would be vastly improved. It was a wise decision, for much road-making in Cyprus has been lacking in that essential element. Hence, there is, naturally, a good deal of grumbling annually on the part of those who employ wheeled traffic. But only those who have lived or travelled much in Cyprus know the difficulties which have to be encountered. Imagine an island about forty times the size of Malta, but whose total population is about half that of Cairo, and much less than that of several cities in the nearest mainland. When, in 1878, Britain occupied the island, it possessed not a single road except a small stretch of about twenty-five miles from Larnaca to Nicosia. The whole island, with its vast tracts of mountainous ranges and spurs, its countless mountain torrents, valleys and ravines, was merely traversed by mule tracks, and those mostly bad ones. Over these the villagers and their beasts had to toil, winter and summer, with their heavy loads of wine, corn and carobs. The process of road making was necessarily very gradual owing to lack of funds. A military road of thirty-one miles from Limassol to Troödes was constructed in almost record time by the Royal Engineers. Fair-weather roads began to connect the district headquarters, and these were replaced by very slow degrees, as circumstances permitted, by cart roads. But the foundationing of these works were only too often second rate and defective. In the wine-making districts villagers were exhorted to give up the tarred goat-skin and use barrels, for which carts were necessary. "Wine roads" were made, half the cost being defrayed by Government, and half by taxing the villages affected.

By degrees matters improved so much that the mileage of Cyprus roads began to look quite imposing in reports; and travellers coming to the island ten or twelve years ago wondered why motors had not made their appearance. At last an enterprising doctor in Limassol started one. Then, seven or eight years ago, a well-known company ventured to establish a service of motor diligences, which carried mails and passengers between the three principal towns of Nicosia, Larnaca, and Limassol. As the only railway in Cyprus is a light one, running from Famagusta to Nicosia, and through parts of the Central plains, this was a great acquisition. But the company soon found that in Cyprus many of the roads were broken beneath the surface. The wear-and-tear was very different from that which had been estimated for, and difficulties soon arose. The Cyprus annual report of two years ago mentioned, in regard to some of the principal main roads, that there were "miles of uncovered foundations which are very rough for motor cars." Of others it was naïvely said that they had been "improved, and are now passable for motor cars in all weathers, although they cannot yet be said to be really good for motor traffic, owing to uncovered foundations." It may, therefore, be well imagined that the recent road outlay was called for. That progress has been slow has not been due to any fault of the local government, but to the unfortunate circumstances of this impecunious island. The Public Works Department has done marvellously good work all round in Cyprus. It has helped greatly to transform the island. It has educated and opened the eyes of the villagers.

ARCHÆOLOGICAL NOTES.

By Joseph Offord.

Some very valuable discoveries of Roman remains were made last winter at Luxor as the result of excavations carried out under the superintendence of M. Legrain, who for many years has had charge of the great restorations at the temple of Karnak. Relics of the Roman period are not numerous in Egypt, because when the Cæsars held the country it was already supplied with a superfluity of temples and edifices. But it was known that at Thebes, which, before the Romans came, was much destroyed, they erected a Forum, and its site had been identified. Part of this was beneath the house of Mr. Mohareb Tadros, the German Consul, who was unwilling to part with his property until last year, when satisfactory arrangements were made by Sir Henry MacMahon. Explorations started last October and soon brought the Forum to light. A number of inscriptions have been found which show that the Forum was either erected or considerably restored in the time of the Emperor Julian. These notes are derived from M. Legrain's preliminary report, but fuller particulars will be given in this year's *Bulletin* of the Institut Egyptien of Cairo.

PARCEL MAILS LOST.

The following parcel mails have been lost through enemy action:—

MILITARY MAILS.

Destination.	Dates between which parcels reached Army Parcel Office, London, for despatch.
Salonika Force	2 p.m. June 29 and 2 p.m. July 4
Egyptian Expeditionary Force	2 p.m. July 3 and 2 p.m. July 8
Mesopotamian Expeditionary Force	2 p.m. July 3 and 2 p.m. July 16
East African Expeditionary Force Indian Base, Port Said	2 p.m. July 3 and 2 p.m. July 17

CIVIL MAILS.

Destination.	Dates between which parcels reached G.P.O., London, for dispatch.

TANGIER TO TEHERAN.

An ancient proverb warns us of the good manners of spinster's children; the layman's theology will soon be as suspect if many writers follow the sad example of Mr. H. G. Wells. This excellent novelist, who set out recently to reconstruct our religion, suddenly fell foul of Athanasius, who, as we all ought to remember, but don't, was once Archbishop of Alexandria. Mr. Wells seems to have conceived almost a personal dislike of Athanasius; he was "fussy," and he was "red-haired," and a wire-puller, and, incidentally, he wrote a creed; or rather he didn't, but someone who came after him summarised his teaching in that formidable confession of faith which still survives in our prayer-books.

***

Gibbon, by the way, who was not precisely respectful to the fathers of the Church, speaks very highly indeed of Athanasius; he mentions his tenacity, his ability, his courage, but he omits the red hair which seems to have annoyed Mr. Wells more even than the creed. It is very curious that Mr. Wells, who set out to write a book against Christianity, should have finished by attacking red hair, which has acted like a rag of the same colour to him. If one were to write a book against Socialism, and develop it into an attack on men who wore brown shoes, it would be equally convincing. Some men who wear brown shoes are probably Socialists, but nobody has ever claimed red hair as the distinctive mark of orthodoxy.

***

But this personal grudge against a man who has been in his grave some fifteen hundred years is strange; of course we all love or hate contemporaries in this way. I once heard a good Liberal say he would never trust a man who wore an eyeglass, because Mr. Chamberlain wore one; but even good Royalists nowadays do not object to Oliver Cromwell because of the warts; although Mr. Wells, as an acknowledged Republican may, for all I know, demonstrate that if there had been no warts there would have been no Protectorate, and that it was the absence of warts that proved fatal to Richard Cromwell. But, for most of us, when a man is dead, it is rather difficult to hate him because he was bald or not bald, or had some similar defect. Personally I dislike Addison's essays, which seem to be very tame stuff; but I object to Addison as a writer, and not because he had a hammer-toe. (Had he a hammer-toe? I do not know.)

***

There are certainly immense possibilities in history written on these lines. King John may have had a ganglion when he signed Magna Charta, and the early heresies may have been caused by varicose veins. But even if that were so, it would be difficult to feel any personal resentment against them, they have been dead quite a long time. I once saw a stone coffin dug up at Old Sarum which had contained a twelfth-century bishop. If it had been my grandmother I should have been shocked beyond measure at the desecration; for a great-great-grandmother even I might have felt some indignation. Now the good bishop could not have been an ancestor of mine, for his were the days of celibate clergy, and, in any case, my folk do not come from that part of the country. But even if he had been, I doubt if one would have felt very hot about his exhumation—not much hotter than the bishop. Yet Athanasius was ancient history when that prelate of Sarum was still weeping over *hic, haec, hoc.*

***

Some of our modern bishops, by the way, seem to have been getting into trouble lately. The Duke of Argyll has been exhorting them to go back to their belfries, a bishop being about as likely to live in a belfry as a duke in a dustbin. And because they have suggested that part of a Psalm should be omitted from public worship they have been attacked as though they were on a par with the Cretans in St. Paul's famous denunciation (which may have prompted King Constantine in his dislike of M. Venizelos). The bishops are suspect because they have condemned the Psalm as a glorification of vengeance and slaughter, and if the controversy waxes much hotter somebody will be calling them pro-Germans.

***

Once upon a time, when the Seychelles Islands were short of a magistrate, the Colonial Office is said to have suggested that a Mauritius official should put in one or two days a week at the Seychelles. The general standard of geography in the Civil Service and the Press is supposed to have improved since those days, but I confess to having some doubts on the subject on reading in two papers a certain paragraph headed "The Near East." Naturally, my interest was aroused, and the first sentence, "The war is bound to transform the East as well as the West," was so profound as to encourage me to proceed, and this is what I read:—"*The Near East*, published in English at Tokio, and edited by Mr. J. W. Robertson Scott, has," etc., etc. . . . The editor says: 'We have faith in the future of Japan. In that faith *The Near East* is founded.'" The writer of the paragraph shrewdly adds: "The Western reader hazy about the Eastern nations and their problems will be well advised to order *The Near East*. Its price in Tokio is 50 sen, and no doubt a London publisher and price will be found."

***

I can only hope that the erudite writers in the *Christian World* and the *Yorkshire Post* have acted upon this advice and have ordered THE NEAR EAST, without necessarily sending their order to Tokio. If carefully studied, it will have helped to correct some of their "haziness" about the Eastern nations and their problems, but I fear that they will have been disappointed when seeking enlightenment about Japan. It is strictly true that the editor has faith in Japan, but as it happens to be separated by the width of the continent of Asia from the sphere with which he deals, it is not possible to devote any space to that interesting country. When a German was arrested for saying, "What a fool the Emperor is!" and protested that he was referring to the Emperor of China, the reply of the *Schutzmann* was: "You said the Emperor was a fool; therefore you must mean the German Emperor." On the same analogy the "hazy" amongst us consider that, if the East is mentioned, "you must mean" the Near East. That is quite right up to a point, and the whole way so long as you are dealing with italics. But we should be poaching on the preserves of our contemporary the *New East*, which sets out to deal with the Far East, if we attempted to bring Japan into the Near Eastern picture.

***

I trust other people turn as instinctively as I do these days to anything that seems to point to there being a bright side to the existence of our men out in Mesopotamia. Sir Arthur Lawley's book, just out, "A Message from Mesopotamia," is much to my liking, and now comes the *Basrah Times*, which has often given me special pleasure, with an attractive pen-picture of "The Aboriginal in Mesopotamia." The author, by the way, is "Eye-Witness"—a genus with which we used to be acquainted ourselves at this end years and years ago. It was held to have become extinct, but a reincarnation has evidently cropped up in the Valley of the Two Rivers and is still capable of good work. He is describing the Labour Corps in Mesopotamia, "the nearest thing to Babel since the original confusion of tongues." This is his attempt at countries of origin. "Coolies and artisans have come in from China and Egypt and the East and West Indies, the Aboriginal Santals and the Paharias from Bengal, Moplas. Thyas and Nayars from the West Coast, Nepalese quarrymen, Indians of all races and creeds, Arabs and Chaldeans of the country."

***

Most of the article is devoted to the Santals, and perhaps some of the touches are happy enough to justify reproduction. The writer had encountered a crowd of Santals on the Bridge of Boats in Baghdad. "They were scurrying like a flock of sheep, not because they were rushed, I was told, but simply for fun. Someone had started it, and the others had broken into a jog-trot. One of them with bricks balanced on his head was playing a small reed flute—the Pipe of Pan . . . They were like happy gollywogs, and the dust in their elfin locks, the colour of tow, increased the impish suggestion of the toyshop."

***

When the Santal left his home, we are told, all he took with him was two brass cooking pots, his stick, and a bottle of mustard oil. The stick he uses to sling his belongings over his shoulder, with a net attached and generally his boots inside. He loves to rub himself all over with oil, but in this unfruitful land he can find little or none, and he had not even time to refill at Bombay. On board ship he saw coal for the first time. Each man was given a brickette with his rations for fuel, and Jangal Baski, Goomda Kisku and others put their vessel on the strange black substance and expected it to boil. A very simple, happy, and contented person is the Santal. Once gain his confidence, and he will work for you all day and half the night; abuse it and he will not work at all.

NEAR EAST BOOKSHELF.

ALL WELL IN MESOPOTAMIA.*

Time was when the punctuation of the night watches at sea with the look-out's cry seemed almost as much a labour of supererogation as the medical inspection on arrival at port. These days, however, the welcome sound will have an added significance for all who hear them, and in the same way much meaning attaches to the "All's Well" message that Sir Arthur Lawley has brought back to this country from Mesopotamia. He was invited by the Joint War Committee of the British Red Cross Society and the Order of St. John of Jerusalem to proceed to Busreh to report on the existing condition of things, and to investigate the possibility of extending the sphere and enlarging the scope of Red Cross activities in the Tigris Valley. Sir Arthur Lawley left Bombay in January, and in the course of a nine weeks' voyage visited Mesopotamia, advancing with General Maude's victorious army into Baghdad, and retracing his steps to India. The Mesopotamia Commission had not then published its report; but enough had leaked out in regard to the past conditions in that theatre of war to make it advisable for the Red Cross to send out an independent Commissioner to see whether they could do more than they had already done. Here let it be stated that, before General Nixon ordered General Townshend to advance on Baghdad, the Red Cross had telegraphed to ask whether they could help with hospital supplies, but only to have acceptance confined to two petrol-driven motor launches. When they repeated the offer after the disaster at Ctesiphon, they were told by General Nixon that nothing was required. By the latter half of 1916 a new régime was established in Mesopotamia, and the Red Cross was able to carry out the work for which the opportunity was denied it in 1915. Sir Arthur Lawley arrived to find all the medical arrangements and the supplies of comforts working satisfactorily. Where improvements could be made in Red Cross organization he was there to see them started or put in train. His story is at once reassuring and bears the impress of absolute sincerity.

"A Message from Mesopotamia," however, is not merely a chronicle of Red Cross achievements. The author went to a country very much in the public eye at the present moment. Those who know him as one of the most polished of our public speakers will not be surprised to find a delightfully written narrative that holds the reader and visualizes the scene for him with the lightest touch withal. Sir Arthur Lawley was an eye-witness of some of the fighting that led to the recapture of Kut, and of the subsequent pursuit of the beaten Turks. Nor has he overlooked the political aspect of the Mesopotamia Expedition. "It is, I think, impossible," he says, "not to ascribe the growing readiness of the Arab tribes to throw in their lot with us to the impression which must inevitably be caused by our having undertaken work of such magnitude and solidity." And he continues, as we think, very shrewdly: "It is certain that, if in an ill-starred moment when the war draws to an end we make up our minds to vacate the land, our withdrawal will be regarded as the betrayal of men whom we have wheedled into allegiance, and will have the worst possible effect on our Mohammedan subjects throughout the Empire. . . . I do not know whether from a political or from a purely economic point of view the abandonment of this vast territory would be the greater blunder."

CLAIMANTS TO CONSTANTINOPLE.†

The number of suggestions that have been made at one time or another for the disposal of Constantinople is legion, but the subject still exercises the imagination of all sorts of people. A few weeks ago the proposal for an international solution was discussed in these pages, and now comes an effective answer to such a scheme in a small volume of essays written for the American Historical Association. The essay on Constantinople is a valuable and dispassionate analysis of a vexed question, and, coming from an American pen, is less suspect than it would be if it emanated from any other source. Mr. Coolidge disposes of any qualms that might be raised by the principle of nationality by noting, to begin with, that "the question of the wishes of the inhabitants themselves can hardly be taken into serious consideration. At almost every stage of its history Constantinople has been a cosmopolitan city, and this has never been truer than since it has been under the Ottoman Empire." The possibility of the Turks remaining in possession is not altogether excluded by the author. "*Beati possidentes* is usually the easiest way out of any territorial dispute, especially when compromise is impossible between other conflicting and more radical proposals." What he will not allow is the international solution—a free State, with the proper mixture of self-government and of control by the Powers, with the Straits unfortified and wide open to the peaceful trade of mankind. It appeals to the imagination, but "the difficulty is that it is too imaginative." Modern democratic government, Mr. Coolidge continues, is not so successful that we can easily conceive of the elements that compose the present population of Constantinople administering all their own affairs. Still less can they be entrusted with the management of the vast interests of others." He then analyses international control, with special reference to the Danube Commission, and comes to the same conclusion as that already advanced in these pages, that the two problems—the Danube and Constantinople—do not stand comparison. Nor is sufficient consideration, in the opinion of our author, given to the distinction between times of peace and times of war. In times of peace commerce will be but little hampered: in a war between Russia and another Power there will always be the temptation to both parties to make a dash for the Straits.

Turning to the different claims, Mr. Coolidge finds that the Greeks have the strongest historical claim, and holds that the world may, after all, see Constantinople again in the hands, not of Greece but of Greeks. The Bulgarians have no historical claim but an excellent geographical reason for desiring the place. The Russian claims are numerous and weighty—both sentimental and practical—and this consideration leads to the aspirations of Germany. "The fulfilment of either the Russian or the German dream can only be achieved by the ruin of the other."

The author of the essay leaves the subject at that point. The war and the Powers, however, cannot afford to do so. A definite settlement must be found, and those who are interested in the subject will do well to study this excellent *exposé* of the position in regard to Constantinople.

The three Peace Congresses dealt with in the same volume are, of course, those of Vienna, Paris, and Berlin, and the purpose of the essays is to touch upon the mode of action of these gatherings rather than to discuss specific decisions. The idea of a Peace Conference is much in the public mind at this time. Perhaps the perusal of this volume will explain what ought to be more apparent than it is—that there is a very important distinction between ending the war and redrawing the map of Europe. The war must be ended before any congress meets, and it must be ended by Germany's acceptance of the Allies' terms of peace. A European Congress can subsequently be summoned to regularise the decisions which the Allies will have reached. It ought to be clearly understood that there can be no gathering, after the cessation of hostilities, at which the Central Powers can be allowed to haggle over the terms of surrender.

BOOKS RECEIVED.

Egyptian Colloquial Arabic: A Conversational Grammar. By W. H. T. Gairdner. (Cambridge: W. Heffer and Sons, Ltd. 12s. 6d. net.)

The Re-birth of Russia. By Isaac F. Marcosson. (London: The Bodley Head. 3s. 6d. net.)

Les Slovènes. By Ivan Krek. Translated by A. U. (Paris: Librairie Félix Alcan. 1 fr.)

La Bataille Economique de Demain. By Victor Boret, Député. (Paris: Payot et Cie. 3.50 frs.)

BOOK NOTES.

Messrs. Hodder and Stoughton will shortly be publishing "Tommy and the Maid of Athens," by Mr. Joseph Hocking. This story, which is a romance of the Balkan campaign, will form a sequel to the author's earlier war novel, "Tommy."

The same publishers also announce another war tale by Mr. Joseph Hocking, entitled "The Path of Glory," written round the history of the Turco-Germanic plot for the extermination of the Armenian race.

The Rev. R. Stewart Patterson, late Chaplain to the British Legation at Bucharest, has written a volume of verse entitled "Roumanian Songs and Ballads," to which Madame Také Jonescu contributes a preface. The work is published by Messrs. John Long, Ltd., at the price of 2s. 6d. net.

The headmaster of the Government Anglo-Vernacular Schools at Aden, Syed Hamood Hason, is the author of "Gems of Arabic Literature," being the English translation of Ar-Rauzat-Uz-Zakiah; the text-book for the higher standard examination in Arabic, with notes and references. This is the first time the work has been translated from the original Arabic into English. The price of the book is Rs.7.

* "A Message from Mesopotamia." By the Hon. Sir Arthur Lawley, G.C.S.I., G.C.I.E. (London: Hodder and Stoughton. Price 2s. 6d. net.) All author's profits from the sale of this book will be given to the Prisoners of War Fund.

† "Three Peace Congresses of the Nineteenth Century." By C. D. Hayen, W. R. Thayer, and R. H. Lord. "Claimants to Constantinople." By A. C. Coolidge. Harvard University Press. (London: Humphrey Milford. Price 75 cents.)

The King and Queen, accompanied by the Princess Mary, were present at the marriage of Major Harold Wernher (Machine Gun Corps) with the Countess Zia Torby, which was solemnized in the Chapel Royal, St. James's Palace, on the 20th inst.

Queen Alexandra, accompanied by the Princess Royal, with Princess Maud and the Princess Victoria, was also present.

Prince Alexander of Serbia, on his arrival at Salonika, left immediately for the Serbian section of the front.

Prince Alexis Karageorgevitch of Serbia left London on the 22nd inst. for the country.

M. Gennadius, the Greek Minister, was among the diplomatic visitors to the Foregn Office on July 19.

General Rudeano, the chief of the Roumanian Military Mission in France, arrived in London on July 23 from Paris.

Prince Antoine Bibesco, Secretary to the Roumanian Legation, has left London for the country.

Mr. Einstein, of the American Diplomatic Service, who had charge of British interests in Sofia, has arrived in London.

Mr. J. C. Wedgwood, D.S.O., M.P., of Moddershall, Stone, has been appointed a Deputy Lieutenant for Staffordshire.

The Hon. Sir Arthur Lawley has returned to London from Scotland.

Prince Brancovan of Roumania has arrived in London from the Continent.

The Earl of Mayo and Lord Oranmore and Browne left London on July 24 for Ireland.

Mrs. Bowen has been spending a week with Captain and Mrs. Hugh Poynter at Clifton.

According to the *Egyptian Gazette*, the Sultan has ordered that a special house shall be built at Gabares for the Palace officials.

M. Venizelos reviewed two regiments of the Serres Division in the Stadium at Athens on July 22. He was loudly cheered by the large crowd.

M. Ch. Simopoulos, the Greek Chargé d'Affaires in London under the Government of King Constantine, has left London for the Greek Legation in Rome.

Stores of benzine and other supplies for German submarines have been discovered at Eleusis, Greece. They had been collected by supporters of ex-King Constantine.

Serdar Resched, a former Governor-General of Azerbaijan, Persia, while on his way to Teheran, was killed by three shots fired at him as he was leaving the Governor's house.

M. Vladimir Martinatch, Attaché to the Serbian Foreign Office at Corfu, has arrived in London. He is leaving shortly for Paris to take up the post of Secretary to the Serbian Legation.

According to *Al Mokattam*, Sir Murdoch Macdonald, Bernard Pasha and Mr. Bonham Carter, who have recently come to England from Egypt, will approach the subject of the loan in connection with irrigation schemes for cotton cultivation and the completion of the dam on the Blue Nile, which was in hand before the war broke out.

The King of Serbia has conferred the Order of the White Eagle, Fourth Class (with swords), on Captain Sydney R. Olivier, R.N.; Captain Edward M. C. Mackenzie, R.M.; Commander William F. Sells, C.M.G., R.N. Lieutenant William G. Knight, R.N.R., has been awarded the Fifth Class (with swords) of the same Order.

M. Yovan K. Tanovitch, who has recently arrived from Salonika, has taken the place of Professor Dr. V. M. Yovanovitch as representative of the Serbian Press Bureau in London.

At the baptism of the daughter of Sir Maurice and Lady Bonham-Carter last week the child was named "Helen Laura," and the sponsors were Mr. Churchill, Mrs. Aubrey Herbert, and Lady Desborough.

The Secretary of the War Office made the following announcement on July 25 in regard to the operations in Mesopotamia:—There is nothing special to report. Great heat continues throughout Mesopotamia.

The death, at Malta, is announced of Father Strickland, for many years Professor of Philosophy at the College of Mondragone, near Rome, and chaplain with the British forces since the outbreak of the war.

Seven prominent health and sanitary authorities have been sent by the American Red Cross to Roumania for relief work. Twelve doctors and twelve nurses accompany them. A sum of £40,000 has been appropriated for the purpose.

The Lord Kitchener National Memorial Fund now amounts to £450,000. Mr. A. H. D. Acland, Sir Robert Blair, Mr. W. Pember Reeves, and Mr. James Currie have been added to the council and the executive committee.

The Swedish Minister at Constantinople has reported that the American colleges in Constantinople and Beyrout will not be closed, notwithstanding the severance of diplomatic relations between the United States and Turkey.

Mr. J. J. Stavridis has been reappointed Consul-General for Greece in London. He resigned his post in December last, after acting for thirteen years, and was then appointed Consul-General for the Salonika Provisional Government.

Official reports show that the harvest in Moldavia surpasses expectations. In spite of the fact that many districts are in the immediate neighbourhood of the fighting line, only about 30 per cent. of the land has remained uncultivated.

General Sir Archibald Murray had the honour of being received at Buckingham Palace on the 21st inst., when the King invested him with the insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George.

An official telegram to the Greek Ministry of Foreign Affairs announces that before the departure of the Greek Minister from Sofia the Bulgarian authorities arrested the First Secretary, the Military Attaché, and other members of the Legation staff.

M. Spyro Saltaferas, Secretary; M. Jean Doulidis, Attaché; and Captain A. Criezis, Naval Attaché, the personnel of the Greek Legation in London for the Government of King Constantine, have been requested to report themselves at the Foreign Office in Athens.

H.E. the Sultan of Egypt has conferred the Order of the Nile, Third Class, on Lieut.-Commander David G. Hogarth, R.N.V.R., and the Fourth Class of the Order on Major F. H. Smith, R.M., and Lieutenant Philip L. Neville, R.N. The King has given permission to the officers concerned to wear the decorations in question.

By the invitation of the Dean and Chapter of St. Paul's, the Rev. Father Nicolai Velimirovitch, late chaplain to King Peter of Serbia and head of the Theological Faculty in the University of Belgrade, preached the morning sermon in St. Paul's Cathedral on the 22nd inst.

Lady Swaythling has presented, on behalf of the Wounded Allies' Relief Committee, twenty cases of hospital requisites, of the value of £400, to the Roumanian Minister, for the use of the Roumanian Red Cross. A meeting in aid of the Roumanian Red Cross Fund is announced to take place at the Manchester Town Hall to-day. Among those who are expected to speak is the Roumanian Minister, Monsieur Misu.

Bulgarian crimes against the Serbian population are continually increasing, says a statement issued by the Serbian Press Bureau. Murder, robbery, forced recruiting, deportation of the civil population for forced labour, and the confiscation of property mark the Bulgarian *régime*. Serbian prisoners have been informed that any attempt to escape will render them liable, in addition to the death penalty, to the burning of their homes, the confiscation of their property, and the deportation of their families.

On the occasion of the anniversary of Belgian independence King Alexander, according to a message received from Athens, sent a telegram to King Albert expressing "the sincere and hearty good wishes of myself and of my people for the triumph of the cause of right, for which Greece also is happily fighting on the side of her Allies, and which will secure to your noble and heroic nation the supreme recompense for all the sufferings which you have endured with fortitude and courage, and which evoke the just sympathy and admiration of the civilised world."

Lieutenant Nicolas Misu, second son of the Roumanian Minister to the Court of St. James's, has arrived in London from Jassy. He has taken up a new appointment with the Roumanian Military Commission in London. The Roumanian Minister's elder son, who is in the medical service of the Roumanian army, is detained as a prisoner of war in charge of wounded at Ploeshti.

A fine mosaic of the early sixth century Christian Church, according to Reuter's Cairo correspondent, has been discovered in Palestine, north-west of Beersheba, under works recently occupied by the Turks. It bears a Græco-Syriac inscription referring in superlatives to a Saint George, whose bones were found beneath the mosaic. The mosaic has been somewhat injured by Turkish trench-digging, but is nevertheless a fine specimen. It is for the present stored at a depot in Cairo, where it will remain pending a decision as to its ultimate destination.

In an effort to ameliorate the condition of the Jewish communities in Palestine, the President of the United States has commissioned Mr. Henry Morgenthau, formerly American Ambassador at Constantinople, and Professor Felix Frankfurter, of the Harvard Law School, now serving as assistant to the Secretary of War, to proceed to Egypt, and from there to conduct an investigation to ascertain what measures of relief can be set on foot among the Jews in Palestine. It is understood that Mr. E. W. Lewin-Epstein, a member of the Zionist Provisional Committee, will accompany the Commission.

Sir Jacob Elias Sassoon, of Bombay, head of Messrs. E. D. Sassoon and Co., merchants and bankers, of India, London, Manchester, and China, who died on October 22, left property in England of the value of £60,670. Among various bequests left were to the Chief Rabbi of Jerusalem Rs.3,000 for the saying of prayers and Kadish for the deceased, and Rs. 2,000 for the poor, Rs.4,000 each to the Rabbis of Hebron, Suffet, and Tyberia, Palestine, as to Rs.3,000 for prayers and Kadish for him and Rs.1,000 for the poor; while he directed that the proceeds of the sale of jewels belonging to himself and his late wife should be given for the maintenance and support of needy, destitute, or crippled Jews in the United Kingdom, India, or Palestine.

APPOINTMENTS, PROMOTIONS, ETC.

Bimbashi R. H. W. Worsley, D.S.O., Equatorial Battalion, has been transferred to the Camel Corps.

Mr. Bury, Inspector of the Dongola Division, is to be transferred to Egypt, where he will be Inspector of the 2nd Division, and will be succeeded in Dongola by Mr. Hendeman.

Mr. Prowde, Secretary of Sir Murdoch Macdonald, has been appointed Inspector of Irrigation, White Nile Division, to succeed Mr. Buckley, who has been transferred to Assiout.

Captain B. H. C. Lea Wilson, Royal Army Medical Corps, has been attached to the Medical Corps of the Egyptian Army as a special service officer, with the temporary rank of Bimbashi.

A Supplement to the *London Gazette* issued on July 20 includes the following awards:—

DISTINGUISHED SERVICE CROSS.

Flight Commander JOHN CALLAGHAN BROOKE, R.N.A.S.
In recognition of his services in the East Indies and Egypt Seaplane Squadron during the period April 1, 1916-March 31, 1917. During this time he took part in several valuable reconnaissances and bombing flights, obtaining important information, and doing considerable damage to enemy organisations.

Flight Sub-Lieut. ROBERT FREDERICK LEA DICKEY, R.N.A.S.

Warrant Officer (2nd Grade) FRANK HENRY WHITMORE, R.N.A.S.
In recognition of his services in the East Indies and Egypt Seaplane Squadron during the period April 1, 1916, to March 31, 1917.

Flight Lieutenant GUY DUNCAN SMITH, R.N.A.S.
In recognition of his services in the East Indies and Egypt Seaplane Squadron during the period April 1, 1916-March 31, 1917. During this time he took part in several valuable reconnaissances and bombing flights, obtaining important information and doing considerable damage to enemy organisations.

OBITUARY.

The *Sudan Times* records the death of El Lewa W. B. Drury Pasha, Director of Steamers, Sudan Government, at the Continental Hotel, Cairo, on June 20. The funeral took place with full military honours at the New British Cemetery, Cairo, on the following day.

In the death of Drury Pasha the Sudan Government loses an old official. He joined the Sudan Government service with the rank of Bimbashi on July 1, 1902, was promoted to the rank of Kaimakam in 1905, to that of Miralai in 1909, and to Lewa in 1916. Upon the retirement of El Lewa Bond Pasha from the service of the Sudan Government, Drury Bey (as he was then) was appointed to succeed him as Director of Steamers Department, which post he occupied until his death.

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

WILLIAMS—ROGERS.—On July 24, at St. John's, Holdenhurst, by the Rev. Sydney Powell Townend, Vicar, Captain Montague Williams, A.S.C., elder son of Mr. J. D. Williams, M.F.H., J.P., of Clydach Court, Trealaw, Glam., and Nancy Gellatly Rogers, only daughter of Mr. and Mrs. E. Forster Rogers, of "Capri," Richmond Park Avenue, Bournemouth, and granddaughter of the late Rogers Bey, of Cairo, Egypt.

FORTHCOMING MARRIAGE.

The marriage arranged between Captain Donald S. Campbell, Yeomanry, eldest son of Mr. Colin and Lady Angela Campbell, and Margaret Emily (Madge), eldest daughter of Mr. and Mrs. Percy Carver, will take place on August 1 at Ramleh, Alexandria, Egypt.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

FRIDAY, JULY 27, 1917.

ROUMANIA.

It has not contributed to a better understanding of the situation in Roumania that a news agency should have circulated the erroneous information that the Senate had rejected the measure for the reform of the Constitution. The Bill, as a matter of fact, passed the Chamber by 130 votes to 14, and was accorded a correspondingly large majority in the Upper House. To those who had followed the recent trend of events in Roumania it was inconceivable that there should have been any other result, and the reasons for the alleged defeat in the Senate were awaited with considerable misgivings. That there is nothing more to explain away than a telegraphic error is in the circumstances most satisfactory. Roumania, unfortunately, has not yet emerged from her crisis; there may be still more anxious days ahead, and she needs a united people to enable her to face the future with confidence. The basis of the new hope that centres in her reorganised army is henceforth to be close co-operation and mutual understanding between all sections of the people. Even without the searching ordeal that the war has brought the good sense of the nation had recognised that steps had to be taken to improve the conditions of the peasants, which was not only an injustice to those concerned but also seriously impaired the national efficiency. Electoral reform and the amelioration of the system of land tenure went hand in hand; the third reform—the removal of disabilities pressing on the Jews—had also secured some measure of support, but could not be said to have taken a complete hold of the national conscience. The stimulus of the war, however, prompted the desire to make a clean sweep of all legitimate grievances. At the psychological moment King Ferdinand became the mouthpiece of his people, and pledged Roumania before the world to remove anything that had been in the part of the nature of a reproach in regard to her treatment of the peasants or the Jews. From that time the subject of reform has not looked back, and the constitutional formalities required to give effect to it have been carried through with the virtual unanimity of all parties. The agricultural measures provide for the expropriation of large tracts of land, and the peasants themselves, forming nearly five-sixths of the total population, can be relied upon to make a success of them. In regard to the Jews, legislation alone will not suffice to give effect to the spirit behind the reform. The outside world, therefore, will watch with interest the steps taken by the leaders of public opinion and of Roumanian society to show that a joint effort and common suffering have finally welded the nation together into a compact whole.

The report of a Ministerial crisis at Jassy, following close upon the successful passage of the Reform Bill through Parliament under the auspices of a Coalition Government, might be taken to imply that the solidarity of the nation was not as real as outward appearances indicated. Happily this does not necessarily follow. On all questions of national policy, we believe, the Liberals and Conservatives are at one. The great work which their co-operation in the Administration was intended to achieve has been accomplished in a splendid spirit of self-denial. It would be idle to maintain that the Coalition was a complete success from a personal point of view. Two strong men came together for a definite object, but could not altogether sink their personalities. M. Bratiano, the Prime Minister, commands a definite majority of Parliamentary support, and has the prestige of a great name as an earnest of his capacity to lead the country without advice from beyond the limits of his own party. Accustomed to think out problems for himself, he has found it difficult, as Baron Sonnino did in the Italian Government, to share his views with others at each stage of their development. M. Take Jonescu, on the other hand, is essentially a man of action. As head of the second Party forming the Coalition Government he could not indefinitely accept responsibility for decisions in which he had taken no part. He appears to have challenged a reconstruction of the Cabinet on lines that would give his party a stronger voice in the Government. In view of the impossibility of an election in Roumania at this stage, the King has adopted the strictly constitutional course of asking M. Bratiano, who has the largest following in Parliament, to remain in office. If, as seems likely, he decides that he cannot meet all M. Take Jonescu's wishes, his new Ministry may be exclusively Liberal, unless he considers it necessary to bespeak the support of the recently formed Labour Party, with representation in his Cabinet.

The absence of M. Take Jonescu from the Government at this stage will be a loss to Roumania. Theoretically his driving force and M. Bratiano's caution ought to make a sound combination, provided the resultant can be reached without undue friction. The exceedingly precarious situation in Russia will be viewed by none of the Allies with greater anxiety than by Roumania. If the whole Russian line has to be withdrawn to cover the treachery of the Maximalists, the Roumanian Army, with all that remains to it of the country, is likely to be in jeopardy. A graver crisis than the one through which she has already passed would then have to be faced, and the nation would feel more confident with a Government of all the talents than with a purely party Cabinet. The point, however, is for the Roumanians themselves to settle. Whether it be a Liberal or a Coalition Government, there can be no question of the spirit of the people or of their determination to see the war through. Though the Allies accept this attitude as a matter of course, they will not be oblivious of the terrible strain to which the Roumanians have been subjected, in a degree only second to that which the Belgians and Serbians have endured. Not the least of Roumania's misfortunes is her complete dependence on the Russians not only to guard her northern flank and to supplement her shortage of troops, but also as the clearing-house for all the munitions of war despatched to her by her Western Allies. The amazing conduct of certain Russian troops is immediately responsible for the reverse on that front; but, although great improvements have been made in internal organisation, it is not to be expected that the suborning of whole regiments will have taken place without affecting the transport services of the country. Roumania, therefore, stands to be gravely penalised in the matter of supplies, unless the Russian débâcle can be arrested. The signs of the last day or two are more propitious, but the Jassy Government will need to watch every development with the closest attention. Before Roumania entered the war caution was undoubtedly a sound policy and a valuable asset. Now that she is committed to the struggle, rapidity and boldness of decision may spell the difference between success and further disaster.

A RIDE FOR FREEDOM.

BY M. E. DURHAM.

Italy has proclaimed the independence of South Albania, and an episode in Albania's struggle for freedom may now be recalled without hurting any present-day feelings. It was in July, 1913, that in company of Mr. H. W. Nevinson, I rode over the long sun-scorched plain, entered the town, and pulled up at the door of the Albanian Girls' School at Koritza. It was in 1904, nearly ten years earlier, that I had last been in Koritza and heard of the gallant efforts for nationality and freedom that its patriots were then making. I had witnessed, too, the enthusiasm with which Albania received the Young Turk movement, and the immediate impetus given to the national Albanian movement, and had been kept constantly informed of the hopes and progress of Koritza.

Now I rode into a town occupied by Greek troops, and found my friends careworn and anxious. The Albanian school was closed, and the American missionary and his wife had been expelled at a few hours' notice by the Greek authorities.

We visited the Greek Colonel who was in command; and, anxious for Albania's freedom, asked him where the new frontiers should be drawn. Upon a map he drew a line which included even Tepeleni. "Half Albania!" I exclaimed. He did not pretend that it was not. He merely remarked that: "A French proverb says 'appetite comes with eating.' We have eaten; we have taken territory. We must take more and more." To which I replied: "Those that eat too much get belly-ache!" He then told us that an interesting meeting would be held shortly at which the population would ask for annexation to Greece, and invited us to be present. We were then taken to call on various individuals, including an old Turk. The Greek official, who personally conducted us, asked those whom we visited whether they would like Greek rule, and they obediently replied that they would. This did not appear to us the best way of ascertaining the truth of their sentiments.

By day this programme was carried out. At night we received many messages begging us to do our utmost to save the town and district, and many complaints of cruelty. Cruelty must, however, always be expected from an army of occupation. It is a part of war. And war is unkind.

As the time of the meeting drew near word reached us that soldiers were calling at houses and ordering the attendance of the inhabitants. The closing of shops and of the bazaar was also ordered. It did not appear that the meeting was wholly spontaneous.

As we had no intention of being made tools of and did not mean to appear on the platform chaperoned by Greek officials, we went out for a stroll. Then an odd thing happened. We had come from a few miles to the north, where Central European time ruled, and we had not discovered that in Koritza the clocks went by East European time. Consequently we were just an hour late, and the meeting, which had been carefully arranged for our benefit, missed fire altogether. One striking thing about it was the number of women and children who attended. In the evening this was explained by the fact that the Greek authorities had told them that an English lady and gentleman had come from England to speak to them. And as many of them knew that I was a friend of Albania, they had come, not to support Greek ambitions, but to see us.

The authorities had, however, at once sent a telegram to the Conference then sitting in London to the effect that the whole of Koritza desired to be Greek.

What was to be done? Our friends were dismayed. After dark messages came in from the surrounding country begging us to act at once. We had intended staying longer in Koritza, but to send a telegram thence was clearly impossible. The nearest free telegraph office was at Berat, two long days' ride distant. Difficulties there were, but these were overcome by the energy of the Albanians. A guide and mules were at once procured, and in a short time we were on our way with the news that we hoped "would save Koritza from her fate."

A never-to-be-forgotten ride it was. Up to the last the Greeks strove to "stage manage" the district. At Moskopol, a small town mainly inhabited by Kutzo-Vlachs, we were met by a pre-arranged band of "peasants rejoicing under Greek rule," after the fashion of a comic opera; and ascertained that they had been sent ahead for the purpose. Nor would this band of rejoicing Greeks let us out of their sight. Nevertheless, it was impossible to walk round town without observing that Greek was not the language spoken by the populace. One of our Greek guides I noticed spoke Albanian. He had learnt it as a child, he said, because it was his mother's tongue. I suggested that he was therefore half-Albanian. "Oh, no," said he, naively. "My mother, of course, is really a Greek, but there were no Greek schools here when she was young, so the poor woman has never learnt to speak properly!"

Then for two days we rode over Albanian mountains, where every village spoke Albanian, for the Greeks had not yet had time or money to teach them "to talk properly." Over passes and down into deep valleys we rode, and saw on our left the great square head of Tomor rise against the sky. There are times when it is safe for no man to go to the summit, for the Old Gods still hold their court there, and resent the approach of mortals. Through streams we rode and under great pine trees whose branches showed black against the brilliant blue of distant mountains. It was a land in which to linger and marvel and enjoy.

But we bore a precious message, and pressed on. Travel-stained and weary, we reached Berat in the early dawn, and the magic wires carried to London the message with which we had been entrusted—that Koritza did not wish to be Greek.

THE ISLAMIC SOCIETY.

The annual meeting of the Islamic Society was held on July 21 at the Khankah, 86, Ladbroke Road, London, W., the President, Dr. Abdul Majid, being in the chair. The report and accounts for the past year were read by the hon. secretary, Mr. M. W. Hassanalli, and adopted. The following gentlemen were elected or re-elected to fill the offices named:—President, Syed H. R. Abdul Majid, LL.D., Barrister-at-Law; Vice-Presidents, Mr. Ali Hilsmet Nahid Bey, his Excellency Kassim Zade, Mr. H. Omar Flight, Mr. S. A. Khan, Professor Mayat Khan Sufi, Mr. M. Zade, Mr. G. M. Kibria, Mr. M. Jabir, Lord Hadley, and the Hon. A. Peeperdy; hon. secretary, Mr. M. W. Hassanalli; joint hon. secretary, Mr. M. Jaffri; hon, treasurer, Mr. Qazi Abdullah, B.A., B.T.

A social gathering of members and friends, which was presided over by Dr. T. M. Maguire, followed. At this, Dr. Majid delivered an address on "Sovereignty in Islam." He traced a resemblance between the constitutional form of monarchy evolved in this country and the form of government prevailing in the Moslem Empire in early times. The Khalifs of the Ommayeid period, he said, were accustomed to convene an assembly to advise them on critical questions. Democracy, although in other ways the best, had the demerit that it was the weakest form of government; monarchial government had the single merit of strength. A constitutional monarchy combined the good points of both these forms of government, and this combination had been achieved in England, and much earlier in the Moslem Empire. Indeed, England owed it largely to the Moslem example. Any unprejudiced reader of the "Letters on Toleration," by the great English political philosopher Locke, would see how largely he had been influenced by Islamic ideas.

A short discussion followed, after which Professor Mayat Khan and Mohammed Ali Khan sang and performed on the veena and dilruba.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.2.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Position at Aden. July 19.

Earl CURZON made the following statement:—

The military and political situation at Aden continues unchanged. The Turks remain in possession of Lahej, and the adjoining country, but have not been able to seduce the bulk of the tribes of the Protectorate from their loyalty to Great Britain, or seriously to threaten the British position at Aden and Sheikh Othman. Patrol encounters and brushes with the enemy occur frequently, and there is occasional shelling, but no encounter of any consequence has taken place of late. The most important since May 1 last have been:—

May 26.—Patrol encounter near Mansur. Our losses, three Indian ranks killed and three wounded. Turks reported to have lost five killed and ten wounded.

June 6.—Turks attacked our post at Rabat, and were driven off. Our casualties, one British officer killed and one Indian rank wounded.

July 5.—Enemy attacked Rabat, and were driven off. Our casualties, one Indian rank killed and two wounded.

HOUSE OF COMMONS.

Military Operations at Gaza. July 19.

Mr. ELLIS DAVIES asked the Under-Secretary for War whether he could see his way clear to publish an official report as to what took place during the military operations at Gaza, so as to allay the anxiety of the relatives of the men in the regiments which took part.

Mr. MACPHERSON: The ordinary procedure in reporting operations is to issue *communiqués* briefly describing the events, and to follow these in due course with the publication of a despatch from the general in command. There is nothing in the Gaza operations to call for any alterations in the procedure. No anxiety need be felt as to the military situation on the frontier of Palestine, and the health of the troops is good. My hon. friend will understand that the publication of a despatch from a distant theatre of war necessarily is a matter of time.

Sir H. DALZIEL: Will the hon. gentleman say whether any, and, if so, how many, officers have been recalled?

Mr. MACPHERSON: Perhaps my hon. friend will give me notice of that question.

Turkish Treatment of British Officers.

Sir WILLIAM HOWELL DAVIES asked Mr. Hope whether his attention had been directed to the imprisonment, now for over three months, of six British officers by the Turkish Government in a Constantinople prison, as a reprisal for the alleged imprisonment of some Turkish officers in Egypt; whether our Foreign Office had requested the aid of a neutral Government to seek the release of these young officers from the Turkish dungeons; if he was aware that two of these young officers had already died from typhus fever, contracted during their incarceration; and if renewed efforts were now being made to secure the release of the survivors before a similar fate befell them?

Mr. HOPE: The reply to the first part of the question is in the affirmative, except that the number of British officers is five and not six. The United States Ambassador was requested on April 25 to explain to the Porte by telegraph that only one of the five Turkish officers in Egypt had been under arrest, and that for attempted escape. The Netherlands Minister, who subsequently took charge of our interests at Constantinople, was long unable to secure the release of the British officers, although he was urgently requested at frequent intervals to make every effort in this direction. I regret to state that one of the five British officers has died. We asked the Netherlands Minister at Constantinople by telegraph on the 27th ult. for full particulars as to the cause of his death and also of the death of another British officer, who was not one of the five in question. We have just received a telegram as follows from the Dutch Minister at Constantinople: "Four surviving officers returned to Afion Kara Hissar, July 4."

The Serbian Government. July 23.

Lord R. CECIL, replying to Mr. PALMER, said: I understand that the Serbian Government is about to move to Salonika. The British Minister accredited to the Serbian Government is Sir C. des Graz.

Kut-el-Amara. July 24.

Mr. MACPHERSON, replying to Mr. PETO, said that the number of guns captured by the Turks at Kut-el-Amara was thirty-five. They were rendered useless by the British garrison and thrown into the river. Afterwards they were salved by the Turks. All had been recaptured by Sir Stanley Maude.

Mr. PETO: Were they useless for offensive purposes when taken out of the river?

Mr. MACPHERSON: I believe that is so.

Great Britain and the Balkans.

In Committee of Supply, on the Supplementary Vote of Credit of £650,000,000, the subject of the Near East was raised:—

Mr. NOEL BUXTON, in the course of a review of the arguments for breaking up Austria, said that we did not enter upon the war to dismember that country, and the idea of adding that object to our programme was a mistaken one. The plans of Jugo-Slavdom were purely doctrinaire. He doubted whether the Slavs wanted independence. He thought they desired nationality federated with the Hapsburgs. The creation of a number of independent States would mean the creation of several Ulsters supported from outside.

Mr. KING said that one of the most difficult questions which the Government had to face was how they stood with regard to Austria and the Balkans. He referred to a statement put forward by the Jugo-Slav Committee. It set forth the extraordinary despair, disappointment, and exhaustion of the whole Serbian nation, and represented that the surrender of Serbia to Austria might be considered as a possibility.

Mr. DILLON was convinced the Balkan policy of the Western School was built up on a total misconception of the real aims of Germany. As long as Germany controlled the Balkans and had the Constantinople railway open with access to Asia Minor at the end of hostilities Germany would have won the war and obtained her object. By abandoning the Balkan campaign, as we had done during the last two years, we had played the game of Germany and prolonged the war. The army at Salonika was totally demoralised, and that was only to be expected, if they kept there a large number of troops without doing any fighting. The Serbians were entitled to know whether we were going to desert them. If they made peace with Austria, our position in the Balkans was ruined. The position in Roumania was also most serious. What was our aim and policy in keeping an army immured in the swamps of the Balkans? Then what about Greece? He believed the war could have been and would ultimately be settled in the Balkans. If it went forth to the world that every small nation that had come on our side had been destroyed by our enemies, then he was of opinion that the war would be lost.

Lord ROBERT CECIL said the last speaker had made certain charges against the *moral* of the troops at Salonika. He believed it to be utterly untrue that the force had become completely demoralised. It had also been alleged that we were about to abandon Serbia. Each Government in turn had given the most absolute pledge that they would stand by Serbia as they would stand by all their Allies. There was not the slightest ground for such a charge. It was absolutely and totally untrue. There was no intention of retreating from the pledge which the Government gave—namely, full restoration and reparation to Serbia. He trusted that declaration would receive full publicity.

In regard to the broad war aims of the Government and the objects for which they were fighting, he would say at once that he was in entire agreement with the hon. member who said that Austria-Hungary was not our chief enemy. There were three great principles for which this country stood. The first was to stand by our Allies. As for Alsace-Lorraine, it would be for the French to say what they desired. That principle held equally true of all the Allies, and particularly of Serbia. The second principle for which we were fighting was a stable settlement. We were fighting for peace. We wanted a sound, satisfactory peace, resting not on conflict or domination, but on some national principle, so far as may be, which would secure that the settlement to be arrived at, so far as any settlement could be, should be secure from change or alteration in the future. We wanted a satisfactory and stable peace, and we then wanted—and here he spoke for himself—to see how far those proposals which President Wilson had enunciated against future wars were capable of being carried into actual effect. The third great object for which we were fighting was one which had often been described as the destruction of German militarism. That was only part of the second aim. We desired the destruction of German militarism because it was to us the great danger for the future peace of Europe.

In the speech of the new German Chancellor two features stood out. In the first place, he demanded a victorious peace for Germany, and in the second place he rejected all real democratic power in the German Constitution. Those seemed to him two extremely ominous features of the utterance. The Prime Minister, in his eloquent speech the other day, said that it would be easier to make peace with a democratic Germany. He entirely agreed, because he did believe that, if there had been a democracy in Germany, this war would not have taken place, and that if there were a real democratic Government established in Germany—not a mere pretence of democratic Government—that would be in itself a strong guarantee that German policy had definitely changed, and that the dangers which we should have to fear in the future from that country would be proportionately decreased.

The Indian and Egyptian Armies. July 25.

The CHANCELLOR of the EXCHEQUER (Mr. Bonar Law), asked by Commander Wedgwood whether the Prime Minister proposed to take any steps, in accordance with the recommendation of the Mesopotamia Commission, to place the Indian and Egyptian Armies under the direction of the War Office till the end of the war so as to secure unity of control, said:—The administrative questions involved are so many and so far-reaching that it would not be practicable for the War Office to take over the Indian and Egyptian Armies during the war. Arrangements have, however, been made whereby unity of control is assured so far as operations are concerned.

Persia.

LORD R. CECIL, replying to Mr. KING, said that it had always been the policy of His Majesty's Government, and it would, no doubt, be the policy of the new Russian régime, to respect and further the independence and integrity of Persia.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

ROUMANIA AND THE ALLIED CONFERENCE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I notice in references in the Press to the conference which is to be held in Paris on the 25th instant to settle questions relative to the general policy of the Allies in the Balkans, that it is stated that Roumania, Greece, and Serbia are to have only a consultative vote.

I can hardly believe that the *consultative* vote only is what is intended, and hope that a *deliberative* vote is to be accorded to these small countries. To those conversant with conditions in the Balkans, it is impossible to imagine that a reasonable settlement of the future of that part of the world would be possible unless the Balkan nations themselves are accorded a deliberative vote in the Councils which will decide their future, including, of course, the final Peace Conference.

If one takes, for example, the case of a country which is situated nearer to this country than are the Balkans, Belgium, for instance, it will, I think, be impossible for your readers to entertain the idea that the Allies will be able to settle the future of Belgium without giving to the representatives of the Belgian people an equal and deliberative vote. The sense of fair play which is so strongly marked a characteristic of the inhabitants of these islands, will, I feel sure, assure this voice in their future to the small nations who have played their part in the common cause, and whose sufferings can hardly be realised by those living in comparative security here.

I sincerely hope that those responsible will accord to the smaller nations, and especially those concerned in this conference in Paris, what would appear to be their right.

I enclose my card, and remain, yours faithfully,

A ROUMANIAN.

THE CASE OF SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Will you allow us, as Members of Parliament belonging to the Executive Committee of the Serbian Society of Great Britain, to urge upon your readers the expediency of giving active and immediate support to the objects which the society was formed to promote? These objects had the hearty approval of the late Lord Cromer, the first president of the society, who associated himself publicly with them both in letters to the Press and in his speech at the Mansion House on October 20, 1916. They are, broadly, to make clear the importance of Serbia or, rather, of a united Southern Slavia to the peoples of the British Commonwealth, both as a permanent safeguard of European freedom and as an eminent British interest; and to work for friendly agreement between the Southern Slavs, Italy and Roumania as the surest foundation of peace in the Adriatic and the Balkans.

Since its formation, the society has found that the requirements of propaganda and other calls upon its funds tend to exceed revenue. In view of the present crisis in Serbia, the need for activity on its part was never more urgent than now, both in the interest of Serbia and in that of this country. Therefore it begs to urge upon the public the need for giving it active support.

Such support can be given either by membership or donations, which may be sent to the Hon. Treasurer, at 14, Great Smith Street, Westminster, S.W.1.—We are, etc.,

J. ANNAN BRYCE (Hon. Treas.), HEDWORTH MEUX,
DAVID DAVIES, TREOWEN,
H. J. MACKINDER A. F. WHYTE,
RONALD M'NEILL, E. HILTON YOUNG.

Houses of Parliament, July, 1917.

The *Revue de Turquie* is a new monthly periodical, issued from Lausanne, which discusses from the point of view of economics, the very considerable Swiss interests, and the possibility of their enlargement after the war, in the Ottoman Empire. Apart from some general articles of historic and literary interest, it contains a summary of the economic future of Switzerland in Turkey, information regarding finance, irrigation, agriculture and industry, and a monthly review of the Turkish press. The magazine should serve a useful purpose, provided the Ottoman Empire can be rescued from its present prospect of exploitation in the interests of Germany. It is published at 1 fr. 25 c.

THE PRESS ON THE NEAR EAST.

The Restoration of Serbia.

Father Nicholas Velimirovitch, who, as stated elsewhere in this issue, was invited to preach in St. Paul's Cathedral last Sunday, has a trenchant article in the *New Witness* on the future of Serbia. He points out that a third of Serbia's population (as it was in 1914) now lies under the earth, that another third now sickens in prison, internment or exile, and is likely to finish its existence in hospitals after the "free" Serbia comes again into existence, and that the "restoration of Serbia" in this respect, therefore, has only a third of its real meaning. Real restoration can only be effected by a reunion of the whole Jugoslav race, and if this is to come to pass Austria must be destroyed. He continues:—

It must be remembered that Serbia is ruined, and being ruined, she is weaker than any one of her neighbours. Restored within her old frontiers she will remain the weakest Balkan State for many long years, even until she heals her wounds and gathers her lost powers. But until she recovers, her neighbours will not stand still and wait for her recovery, but will grow and develop, so that Serbia will remain for an incalculable time the weakest of the Balkan States. Being the weakest, she will be always in danger of being attacked and injured by her neighbours.

Moreover, the restored Serbia will mean for all the Serbs a defeated Serbia. A defeated country is full also of internal dangers. Everybody will be dissatisfied with everybody, and everybody will accuse everybody of the catastrophe. Prolonged troubles will fill Serbian internal history.

Serbia and Bulgaria.

On the subject of Serbo-Bulgarian relations, Father Velimirovitch has some interesting remarks to make:—

The Serbs and Bulgars know each other very well. One thing surely they know better than all the great foreigners; they know that there is *no frontier* between them. There never has existed any such precise and durable frontier. There are Bulgars in old Bulgaria who call themselves Serbs, and there are Serbs in new Serbia who call themselves Bulgars. In a vast territory stretching from Sofia to Skoplje the difference is merely nominal. The Serbs and Bulgars in Macedonia are not different nationalities, but different political parties, and this is what a foreign journalist will never understand. The best elements in both countries tried always to compose their differences, and to find out a tolerable *administrative* frontier, knowing an *ethnographical* frontier was impossible. Some ten years ago a plan for the federation of Serbia and Bulgaria (long a dream of both parties alike) was shattered by the efforts of Austria and her supporters. Our Western brothers, wiser and more cultivated than we, instead of leading us towards the reconciliation which both countries always wished, knew better about the precise frontiers between Serbs and Bulgars, than the Serbs and Bulgars themselves. We knew our Western brothers were entirely ignorant, but we could not stop them talking and writing, nor could we induce them to refrain from creating a Balkan frontier between two peoples who desired to abolish any artificial barrier, or from forming "committees" to establish a union or a federation. There was no talk of Balkan committees a hundred years ago to liberate the Christian Balkans from the Turks—on the contrary, our Western brothers were friends of the Turks until quite recently. Later on they called "committees" into being to show their wisdom, after they had failed to show their courage.

Balkan Unity.

In an article in the *Nineteenth Century* entitled "Balkan Unity and the 'New Departure,'" Mr. A. F. Whyte, M.P., sets out to refute the suggestion of Mr. Noel Buxton, M.P., that a separate peace with Bulgaria is feasible and desirable. He starts off by championing the view that has been so consistently advanced for many years in THE NEAR EAST that we are constrained to repeat his statement of it:—

In the affairs of this distracting and fascinating peninsula we all take sides with a violence of party spirit that is apt to blind us to the best interests of those whose cause we think to espouse. The war of 1912 made us, in our ignorance, blatantly Bulgarophil when we ought to have distributed our applause more evenly over all three partners in the Balkan League, with the palm reserved for M. Venizelos, who was and is the supreme master of statecraft in Eastern Europe. The war of to-day has made us Bulgarophobe, doubtless with better reason, but none the less to excess. It is true that the Bulgars betrayed the cause of liberty in the Balkans when they delivered their treacherous attack on their Allies in June, 1913; it is true that they have continued in the same course by joining the Central European Alliance in company with the historic foe of their race, the Ottoman Turk; but none of these evil deeds should be allowed to blind any Western friend of the Balkans to the undeniable fact that the Bulgars, in common with all the Balkan races, do not yet enjoy that racial unity which is their right. It is clear to all candid observers that until such racial unity is substantially secured to Serb, Greek, Bulgar, and Rouman, there will be a temper of unrest in the Balkans which will always provide those very troubled waters in which the unscrupulous diplomat loves to fish. Our Balkan policy, therefore, which has hitherto been incoherent for lack of clear thinking, must pursue the line which

Digitized by Google

emerges from these considerations. We must see the peninsula steadily and see it whole. Setting aside the partisanship to which we are all prone, we must proclaim the ideal of Balkan solidarity and maintain it, even, if necessary, *impose* it upon the Balkan peoples.

In other words "we must uphold the principle of Balkan community of interest."

"A Separate Peace."

Mr. Whyte argues that a separate peace with Bulgaria is impossible and undesirable, on the ground that it is inseparably linked up with the settlement of the whole Balkan question, which in turn hinges on the disintegration of Austria-Hungary. He is probably right in supposing that the British Government and the Allied Governments as a whole are not prepared with a cut-and-dried scheme for the settlement of the whole of Near Eastern Europe and Asia Minor; but there are very cogent reasons why they should be. If the Allies have made up their minds as to the terms on which they will make peace with Germany, they ought to have reached the same degree of certainty in regard to the future of Austria-Hungary. In such circumstances there would seem to be no room for a controversy over "a separate peace," for the reason that Bulgaria's future position could be set out on half a sheet of notepaper, and if she chose to accept the position to-morrow, she could have peace. The fact that she could not have immediately usufruct of the conditions guaranteed her would not affect the situation; obviously she must wait until the settlement of the Near East can be rounded off as a whole. The military authorities have a right to expect from the Allied Governments such help as will enable the Bulgarians to realise their real position, which might be represented to them as follows:—"Here are the territorial terms you are going to get, whether you make peace to-day or two years hence. You will not be able to improve upon them, but if you want to prolong your present miseries, do so, and the Allies will take care that they add to your economic penalties for the prolongation of the war." It is not necessary to be a "pro-Bulgar" to realise that the stage when the Bulgarians will accept these terms with avidity will be reached before Germany acknowledges defeat. Be this as it may, THE NEAR EAST can only welcome the spirit in which Mr. Whyte's article is written. The following passage gives expression to it:—

Official vacillation alone is the enemy in this case, and I believe a fuller recognition of this fundamental fact might prepare the way for a reconciliation between the conflicting schools of Serbophil and Bulgarphil, whose aims can only be reached by combined action.

The Revival of the Arab Nation.

Under the above title, Mr. Sidney Low recapitulates the story of the Arab in *The Fortnightly Review*. He emphasises the fact that if the Arabs could have found a leader able to overcome their inveterate particularism and their incapacity to act in concert, they might have driven out Turkish pashadom long ago. For many generations past they have been a people rather than a nation. But they are a vigorous people still, endowed with many notable gifts of mind and body.

"The time is ripe for an Arab revival, and with their delivery from the crude military autocracy that usurped the Moslem papacy it should make rapid progress."

What will be the eventual political constitution of the countries wrested from the Turks it would be premature to discuss. Arab independence may be easier to achieve than Arab unity; for the cation and the growth of industry and commerce may gradually jealousies to come together easily. Improved railway communication and the growth of industry and commerce may gradually bridge the distances that separate the various branches of the race, and co-ordinate communities which move on such widely different planes of existence as the tribesmen of Nedud and the traders of Damascus, Beirut, and Hodeida. Mesopotamia, though predominantly Arabic in population, is economically linked to Persia and the Gulf region rather than to the Arabian Peninsula, and for a time at least, as Sir Thomas Holdich has pointed out in a recent number of this *Review*, an Arab Home Rule *régime* in Irak would have to be buttressed by British power, which cannot afford to relax its hold upon the Euphrates estuary and the line from Baghdad to Basra.

Articles to Note.

"Palestine: Its Resources and Suitability for Colonization." By E. W. G. Masterman, in *The Geographical Journal*.

"Albania and the Albanians." By Ismail Kemal Bey, in the *Quarterly Review*.

"The Railways of Bulgaria," by L. Renewal, in *Cassier's Engineering Monthly* (June and July).

"The Cedar Forests of Algeria," by Robert Gurney, in *Country Life*.

"A Night of Watching," in *The Zionist Review* (a newly established and interesting monthly, the organ of the English Zionist Federation.)

"The Historical Geography of Palestine," in *Palestine*.

PRISONERS IN TURKEY.

The service of postal parcels has been held up in Vienna, with the result that no parcels for prisoners in Turkish hands have reached Constantinople since May. Four hundred and two food parcels despatched by the Central Prisoners of War Committee on June 11 have been returned from Switzerland to London by the postal authorities. The committee has repeatedly telegraphed to the International Red Cross at Geneva to try to find out when the service is likely to be resumed, but they can get no assurance from the authorities in Vienna. Ordinarily two parcels per month are despatched to prisoners of war in Turkey. This has been done on the advice of the Ottoman Red Crescent, who know the transport facilities in Asia Minor. It is understood, however, that food is usually procurable locally in the camps in Asia Minor, and the committee therefore remits 10s. a fortnight to each prisoner of war through the International Red Cross at Geneva, and advises regimental care committees to do the same for their men.

CONDITIONS IN SYRIA.

Those who left Syria at the end of June, the *Egyptian Mail* is informed, say that is it impossible to describe the ravages of typhus in Damascus, Aleppo, Hama, Homs, and Beyrut, which are equalled only by those of the cholera of the last century. Whole districts of these towns, particularly those inhabited by the lower classes, have been depopulated. It will be remembered that the number of natives of Lebanon who died from starvation has already been estimated at 200,000. The official statement published by the Turkish Government estimates this number of 150,000, but it is understood that that is considerably below the real figures. The prices of foodstuffs and clothes have risen to an almost incredible degree. In fact, it is said that the price of a pair of shoes in Beyrut is now eight Turkish pounds.

The tablet to Lord Kitchener erected by the London Society of East Anglians in Lakenheath Church will be unveiled by Lord Derby on July 28. The King will be represented by Colonel H. A. Barclay, C.V.O., A.D.C.

The Stockholm Conference is to be enriched by the presence of Egyptian, Persian, and Indian "delegates" as well as by Turkish Labour representatives. According to the *Morning Post* correspondent, they communicated their programmes to the Dutch-Scandinavian Committee on July 19. The Egyptians, it is said, require the complete independence of their country, and the Persians entire economical and political liberty. The Indians express the hope that their country at the ultimate peace negotiations will be represented by a delegation possessing the confidence of all the peoples of India. The Turks want peace without annexations or indemnities.

A telegram from Athens, received by Reuter's Agency, states that the Greek Chamber held the ordinary reopening sitting on July 25. The tribunes were full, and all the civil and military authorities were present. After the benediction by the Archimandrite, M. Venizelos read the decree convoking the Chamber, and cries of "Long Live Free Greece!" and cheers re-echoed through the House. M. Venizelos received the congratulations of the deputies. The Chamber then adjourned, and will be summoned again by the provisional President in order to elect the officers of the House, probably on Monday. The Opposition deputies were not present on the 25th, but will take part in the sitting when their officers are elected.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Book Store.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS

Devonshire Square,
London, E.C.

The interesting announcement has been made in Athens that M. Massinezis, a well-known member of the Greek colony in London, has been appointed Joint Governor of the National Bank of Greece.

***

Although the Mortgage Company of Egypt has been unable to resume the payment of dividends on its ordinary shares, the results of the working for the past year were distinctly good, and it has been found possible to wipe off all the arrears on the preferred shares. At the annual meeting on Tuesday, the Chairman, Sir Henry Babington Smith, was able to report a considerable improvement on the previous year's results, and said that, if agricultural prosperity in the country continued, "it would not be surprising to see a demand spring up for loans for the purchase and development of land." During the year the arrears of instalments had been reduced from £410,938 to £353,237, partly as the result of foreclosure. Some loss has been incurred owing to the depreciation of property in towns; but, all things considered, the sum written off on this account, £12,000 is not unduly large, the position of the company is certainly an improved one, and, as usual, everything goes to show the able character of the management.

***

Another Egyptian concern that showed substantial improvement last year was the Delta Light Railways. The gross receipts amounted to £232,900, as compared with £192,800 in the previous twelve months, the net profits being £41,600, or £8,700 higher. After the payment of prior charges the surplus amounts to £106,800; but the directors have again followed the cautious policy of not paying dividend on preference shares—a factor in coming to that decision being that a sum of £57,600 stands at suspense account, which the auditors think is not available for distribution. The position of the company is certainly on the strong side, and it ought not to be necessary to defer payment of the arrears—always a source of irritation to the most patient shareholders—for much longer.

***

Judging from the correspondence that has reached this office during the week, the interest in trade conditions in Morocco is very considerable in this country. I cannot, therefore, be too emphatic regarding the great utility of the British Merchants' Association, to which I have referred on several recent occasions. The secretary, Mr. P. B. Robinson (17, Leadenhall Street, London, E.C.3) informs me that he is prepared to come in close touch with all inquirers; and since he is already in touch with the country itself he cannot well fail to be useful to all who desire to open up interests in the country. Everything goes to show that British merchants and British goods are wanted there, and that is half of the battle.

***

Death has removed a notable figure from the Moslem commercial and shipping community of Bombay in the person of Hajee Cassum Joosab Agboatwalla, who may fairly be described as the pioneer of Indian shipowners. I knew the old gentleman, who attained the great age of 107 years, a long time ago, when I first arrived in India as a "griffin," and he was a patriarch then. His ships used to trade up the Persian Gulf, to and through the Red Sea, down the African coast, and, indeed, wherever in Eastern waters there was trade to be done. The Haj traffic appealed to the Hajee particularly, and it has always been notorious that he never refused to assist destitute pilgrims back to their homes when the grand tour of the Moslems had proved too much for their financial resources. He was a great man in his day, and the community to which he belonged will miss him.

***

I hear that the Government of India, and their opium experts, have great hopes that soon it will be possible to place Indian opium on the European market—the medicinal drug, that is to say—as an article that will hit the Turkish product very hard when peace enables the Ottoman to resume his trade. When it was decided to put an end to the Indian traffic with China, it was felt that something had to be done to compensate for the loss; that has not yet been accomplished completely, of course, but some of the difficulties in adapting the Indian drug to its new use have been surmounted, and an important development may be heard of shortly.

***

It was not to be expected that the directors of the Constantinople Land and Building Company could do more than make a formal statement to the shareholders, and that is just what the yearly report amounts to. It is stated in the document that no accounts have been received from the Turkish capital, and that the profit and loss account for the year only shows the transactions in London. "So long as the war lasts," we are told, "it will be impossible to render full accounts or pay any dividend," an announcement with which it will not be possible to pick a quarrel. The company is not alone in its quandary; other concerns are similarly placed, notably the Smyrna-to-Aidin Railway.

***

The real trouble in these matters, of course, is ignorance as to what has happened to the property since direct news was last received. Suspension of dividends is bad enough; but if it could be certain that, at the end of the war, the property would be handed over to its owners intact and in a productive condition, it would be possible to be philosophic enough; but with that in doubt there is some cause for anxiety, although I presume the companies named have not failed to register their claims against the enemy Government. That will mean that some at least of the loss will be recouped.

***

An extract from *La Dépêche Coloniale*, published in the last issue of THE NEAR EAST, in which the well-known French commercial journal discussed the position in the Persian Gulf, raises several interesting questions, and not for the first time. Our friends and Allies have long been restless regarding the trade situation in the Gulf, although I well remember the time when the appearance of a Messageries Maritimes vessel in the Shatt-el-Arab caused something of a sensation, as did the manner of her departure, by the way. She could not cross the bar with her heavy draught of water. The French need not worry, however, because if I am not mistaken, there will be trade enough and to spare for the representatives of the Entente Powers after the war is over. Before hostilities began, the people who had more than their fair share were the Germans. The thing to do now is not to quarrel among ourselves, but to begin to make it impossible for the "Berliner" to win back the lion's share of the business. He has begun to prepare to do so, and the measure of his success will not be limited by his lack of enterprise, but by the amount of real earnest effort that is pitted against him.

***

If the accounts that have come through from the Balkans, viâ Athens, are true, the Germans are determined to take and send to their granaries every ounce of corn available in the occupied portion of Roumania. One report states that trainloads of unripe grain have already been despatched, which means, of course, that there will be no harvest. The real sufferers will be the unfortunate cultivators whose burdens are greater than any community ought to be called on to bear. Looking back and recalling the wicked intrigues that led to the betrayal of these people inculcates the desire for vengeance. In the meantime, it is astonishing that Roumanian securities are to be found in the bought-and-sold lists on the London and other Stock Exchanges; the fact can only be regarded as an indication that there still are people of standing who are prepared to back the industries of the gallant little country. Which is a good sign to-day. By the way, I learn that a firm of European brokers in Bombay have cabled to them daily the quotations of Roumanian Oil Consols, that the prices are published in the leading paper regularly, and that business in the stock has actually been done in the capital of Western India.

TRADE OPENINGS IN EGYPT.

II.—General.

(By Our Cairo Correspondent.)

In his first article our correspondent dealt with the neglect of openings caused by the elimination of enemy traders

If the situation as regards the cotton business requires attention, so also does that of the ordinary trade which is being left by the elimination of the enemy element. The business done with Egypt by the Central Empires in 1913 amounted to £E9,372,673 (£E3,549,393 in imports and £E5.823,280 in exports), or 15.7 per cent. of the total trade. It is true that British trade has improved its connection with Egypt since then, but so also has that of other nations, some to a sufficiently marked degree. We must, however, bear in mind that our most important competitors now are our Allies or countries which are engaged in producing munitions for our use, and that the competition of the former will increase very much as soon as they are able to concentrate their energies on industrial and commercial matters, whilst that of neutrals, which is already making itself felt, will become more intense as time goes on. Unless we bestir ourselves and take immediate and energetic steps to protect and further British trade interests in this country from now onwards, we shall certainly find that after peace has been declared the old condition of things will come into existence again—very probably on an aggravated scale.

The example of Egypt is not isolated; it may, indeed, be taken as typical of what is going on and will go on in other countries and other parts of the Empire. There is not a shadow of doubt that if some more determined action is not urgently taken in the direction of organising our trade and bringing our industries into more direct and constant contact with foreign markets, we may expect to find that all the openings will have been appropriated by other countries, whose Consular officials, most of whom are experienced business men, are certainly watching their interests and are reporting regularly on the situation to their home organisations.

What is Wanted.

Experience of our trade methods in Egypt and a comparison with those of other countries plainly show that what is wanted is a complete reorganisation of our commercial system and a readjustment of our ideas and theories. To begin with, if British trade is to come out on top, or is even to hold its own in the general trade war, which, as surely as sparks fly upwards, will follow the conclusion of peace, it is absolutely essential that the British trader should discard his traditional attitude of superiority and conservatism, and should display more readiness to adapt himself, his productions, and his conditions to the requirements of the foreign market, that the Government authorities at home and abroad should evince less indifference to commercial matters, a more sympathetic attitude towards the British trader, and a more material interest in the question of Customs' tariffs and railway shipping rates, and that some means should be found for effectually countering the German system of subsidising and dumping, which will recommence on an even greater scale after the war. We must further have close co-operation between the State and our traders both at home and abroad, and between our producers, our shipping companies, and our banks. We must also have greater combination and organization, as between traders in the same line of business, as between shipping companies, as between railway companies, and as between banks. Finally, there must be closer relations between the consumer and producer, and a more vigilant eye kept on industrial developments the world over.

Causes of Failure.

Hitherto the protection of British trade interests has been in the hands of the Foreign Office, the Consulates, the Chambers of Commerce, and the banks. There is little doubt that this procedure is entirely wrong and that too much has been left to the initiative of the trade and too little assistance and support have been given to him.

In the first place, it is absolutely certain that the fact that all commercial reports and all official action in commercial matters have to pass through the Foreign Office, where the staff is not qualified to deal with or judge of the importance of such questions, has conduced in a great measure to the failure of British trade before the war to hold its own against its foreign competitors.

Secondly, the Consular service staff is neither trained for nor capable of looking after trade interests. Our Consular service in Egypt, for example, is in reality not equipped for such work. It is represented by most able men, who carry out the multifarious duties, laid on them by the peculiar political situation, in an admirable manner, but who are neither qualified nor experienced enough—even if they had the time—to tackle commercial problems.

It would indeed be interesting to know what support the efforts of the Local Government authorities in the matter of bringing openings to the notice of the British trade, etc., received from our local Consular service and from the Foreign Office, to whom one presumes all these questions have been referred in the ordinary course of affairs.

Nor are the Chambers of Commerce really properly constituted to watch over Imperial trade from the general point of view.

Banking Defects.

Finally, our banking system is not organised for the promotion of British trade and industries or the encouragement of enterprise; its commercial intelligence is wholly inadequate, and whatever may be its relations to the home trade, it is insufficiently in touch with foreign trade markets to be of any real assistance to the British trader.

The creation of an Imperial Trade Bank with branches throughout the Empire and wherever else possible is absolutely essential, so that British enterprise may be encouraged and British traders and industries may everywhere receive the same financial and moral assistance, as that given to German trade and industry before the war by the Deutsche Bank and its allied and daughter-enterprises, of which the Deutsche Orient Bank in Egypt and Syria was one of the most prominent and the most active.

But what is wanted, above all, is some independent organisation, which, through representatives abroad, would act as the connecting link between the world's markets and British commerce, and would keep a watchful eye on industrial developments in every corner of the globe, and which, whenever the necessity arose, would, by the information at its disposal, and by the authority of its constitution, be enabled successfully and quickly to bring pressure to bear through the proper quarter on the British industry or enterprise, or on the Government Department, be it in the British Isles or in another part of the Empire, which might be adopting an attitude prejudicial to British trade interests. There may be a great deal of adverse criticism at first at this interference with the liberties hitherto enjoyed by every British trader and commercial enterprise, but unless there is thorough organisation and complete co-operation, and unless there is some supreme central authority to control, supervise and link together Imperial trade interests, and to stimulate enterprise within the Empire, British industry will not obtain the fullest fruit of its labour, British shipping will not receive its proper share of the world's carrying trade, and British finance and influence in the commercial and political world will suffer. If some such authoritative and efficient organisation had already been in existence, we would not, for instance, have had the misleading statement made last winter in the House *re* the cereal resources of Egypt and the Sudan.

(This is another argument for emancipating our foreign trade interests from the hands of the Foreign Office.)

An Alternative.

If the British Government cannot see its way to do the obvious, *i.e.*, the establishment of a Ministry of Commerce in London with a fully qualified staff under the direction of competent men of business, then the required organisation might take the form of an Imperial Trade Bureau—possibly a more useful extension of the existing Commercial Intelligence Bureau of the Board of Trade—with headquarters in London, with first-class men of business at its head and in control of its branches which would be created in each British dependency and colony—where Ministries of Commerce exist, the Bureau and its branches would be in direct relation with those administrations—and with properly-trained commercial attachés at our foreign Consulates, who would be in direct communication with the Bureau in London on all trade matters.

The branches of the Imperial Trade Bureau should either form an integral part of the various Colonial Governments or be in the closest of relations with the latter. Here in Egypt, where, it must be remembered, the diplomatic and consular service will disappear for all practical purposes after the war, the first alternative would appear to be the one likely to give most satisfactory results.

Duties of the Bureau.

The duties of the Bureau, its branches and the commercial attachés would be:—

(a) To obtain advance information of all Government projects, and of all public and private contracts, which it might be proposed to put up to tender.

(b) To reply to enquiries from British Trade organisations or British firms as to general commercial matters and especially as to trade openings, local resources, industrial activities and the appointment, the reliability and working of local agents over whom it would keep a watch and on whose conduct it would report, in collaboration with the Imperial Trade Bank.

(c) To report periodically on the financial and economic condition of each country.

(d) To give early publicity throughout the Empire to new developments which may be imminent and to new sources of supply which may become available all the world over.

(e) To initiate enquiries into and report on the situation in each country in regard to particular trades and industries.

(f) To give assistance and support to all bona-fide British traders, seeking to extend their business connection, and get into touch with the various Governments, or to obtain proper treatment for them or recognition of their claims.

(g) To press for local representation of British trade and industries by competent men having linguistic qualifications and thorough knowledge of their own particular branch.

(h) To keep the British trade informed of the quotations of its competitors and of the freights obtained per competing lines.

(i) To draw attention to the commercial activities in each country of other nations.

(j) To produce evidence, which would enable the Head Office or its branches to take decisive action on any question in which British trade interests are concerned.

(k) To hold and organise periodically local shows of British wares, so as to bring the industries of the Empire before the public—foreign, Colonial and Home—thus establishing closer relations between the consumer and British trade.*

(To be continued.)

* The duties outlined here could for the most part be carried out in collaboration or conjunction with the Imperial Trade Bank.

THE
LONDON DIRECTORY
(Published Annually)
Enables Traders throughout the World to communicate direct with English
MANUFACTURERS & DEALERS
in each class of goods. Besides being a complete commercial guide to London and its suburbs, the directory contains lists of
EXPORT MERCHANTS
with the goods they ship, and the Colonial and Foreign Markets they supply;
STEAMSHIP LINES
arranged under the Ports to which they sail, and indicating the approximate Sailings;
PROVINCIAL TRADE NOTICES
of leading Manufacturers, Merchants, &c., in the principal provincial towns and industrial centres of the United Kingdom.
A copy of the current edition will be forwarded, freight paid, on receipt of Postal Order for 20s.
Dealers seeking Agencies can advertise their trade cards for £1, or larger advertisements from £3.

EGYPTIAN FINANCES.

The Government Accounts for 1916-1917.

(From Our Own Correspondent.)

Cairo, July 12.

The State Accounts for the financial year 1916-1917 have just been made public, and, as the returns for the recent months had led one to expect, there is a substantial surplus. The final figures are:—Revenue, £E.19,927,274; expenditure, £E.17,240,606, leaving a surplus of £E.2,686,668. The following table indicates what remarkable progress the finances of the State have made during the past year:—

Revenue, Expenditure, Surplus.

Year.	£E.	£E.	£E.
1913	17,703,898 ..	17,659,961 ..	+ 43,937
1914	15,389,124 ..	16,857,783 ..	− 1,468,659
1915	17,759,418 ..	15,324,259 ..	+ 2,435,159
1916	19,927,274 ..	17,240,606 ..	+ 2,686,668
Budget 1916	16,530,000 ..	16,630,000 ..	− 100,000

Romantic Figures.

This table shows that, whereas in the first year of the war the revenues fell off by about two millions and a quarter, they have since recovered annually at the rate of about two millions, until in the financial year under review they have actually exceeded the figure for the last normal year before the war by £E.2,223,376. On the other hand, expenditure is still below what it was in 1913.

It may also be noted that the actual figures realised for revenue are £E.3,397,274 above the estimates, and that the result of the year is £E.2,786,668 better than was forecast by the Budget. Incidentally, it may be added that the revenue and surplus figures for the financial year just closed constitute records for this country. The previous highest revenue realised was £E.17,848,352, in 1912, whilst the greatest pre-war surplus obtained was £E.2,104,339, in 1905.

Customs Receipts.

During the year Customs receipts improved by £E.875,584, Tobacco Dues by £E.134,441, Mixed Courts Fees by £E.133,967, Railway Receipts by £E.736,549, Domains Receipts by £E.44,257, Investment of Funds by £E.258,462, Sale of Land by £E.32,272, Mehkemeh Fees by £E.21,591, Military Exemption by £E.18,540, Assay Fees by £E.14,148, and Post Office Receipts by £E.12,920. The main items which showed a falling off were Direct Taxes £E.18,976, Port Dues £E.35,098, Native Tribunal Fees, £E.16,524, and Telegraphic Receipts £E.17,566.

From this it can be seen that the improvement applies practically to every head of revenue; but perhaps the best way to bring out the remarkable progress made is to compare the figures for each head of revenue during the finacial year just closed with those for the years immediately preceding and following the outbreak of war. The appended table gives the figures for the three years in question:—

	1913. £E.	1914. £E.	1916. £E.
Direct taxes.....	5,517,854	5,254,096	5,575,338
Customs.....	2,134,439	1,362,181	2,714,854
Tobacco	1,720,446	1,742,995	2,125,309
Port dues	450,819	324,707	115,077
Assay.....	3,622	2,085	17,650
Mixed courts	985,318	727,248	881,004
Native courts	490,510	405,938	411,352
Mehkemehs.....	81,586	61,917	84,209
Railways	3,864,035	3,176,220	4,460,897
Telegraphs	130,412	123,041	150,355
Post Office.....	334,759	287,686	313,68
Rent of Land	169,538	155,530	184.779
Domains	256,505	205,465	669,440
Military Exemption.....	139,557	107,380	104,780
Investment of Funds.....	341,470	301,027	649,218
Sale of Land	123,017	118,943	127,263
Other Heads.....	960,011	1,032,635	1,342,068
Total.....	£E17,703,898	£E15.389,124	£E19,927,274

Analysis.

Thus compared with the state of affairs prior to the outbreak of war, direct taxes have improved by £E57,484, Customs by £E580,415, tobacco by £E404,863, railways by £E596,862, telegraphs by £E19,943, rent of land by £E15,241, domains by £E412,935, investment of funds by £E307,748, and other heads by £E382,057. The main decreases have been: mixed courts by £E104,314, native courts by £E79,158, post office by £E21,078—all of which have, however, improved by comparison with 1914—port dues by £E335,742—mainly due to the lack of shipping entering Egyptian ports—and military exemption by £E34,777. Assay receipts, it may be noted, have nearly quintupled. The increase in the railway, tobacco, and telegraph receipts are, of course, due in a great measure to the higher tariffs introduced since the war, and those in the Customs' receipts to the increased value of the articles imported, but taking the figures all together, there is little doubt that whether they are above those of 1913 or whether they are merely an improvement on those of 1914, they reflect the extraordinary prosperity of the country, and as such they may be regarded as eminently satisfactory.

Expenditure.

Expenditure during 1916-17 increased by £E1,916,347 as compared with the preceding year, but was still less than that of 1913 by £E463,292, whilst, if allowance be made for the extra credits granted in the course of the year, it was £E750,830 below the total authorised. This shows that a spirit of strict economy still actuates those responsible for the spending of the State's money. The principal item on the expenditure side, if one leaves out of account the Public Debt service, has been railways, which took £E3,620,576, an increase of £E1,495,838, or 70 per cent. on the figure for the preceding year.

The ratio of working expenses to receipts rose from 57 per cent. to 81 per cent., due, of course, to the very high cost of coal. The other heads showing increases over 1915-16 were (the figures are the total expended in each case): Irrigation £E1,182,365, Cairo-Tanzim £E197,933, post office £E317,037—this year that administration did not quite pay its way—ports and lights £E136,173, public instruction £E384,058, public health £425,876, mechanical service £E91,814, Ministry of Agriculture £E131,794, police £E483,413, War Office £E933,440, prisons £E203,418, Mecca caravan £E81,957.

The Surplus.

As mentioned there is a surplus of £E2,686,668 this year. From this amount a sum of £E996,000 has been taken and put to a Special Reserve Fund, which has been opened to meet the cost of redemption of the silver coinage issued during the past year. The Government has made a very large profit on the seigniorage and in view of the fact that not only will there be a loss in that direction when the new issue is returned from circulation but also that the silver thus redeemed will very probably have to be sold at a much lower price than that at which it was purchased, thus causing a further loss to the Government, it has very wisely been decided to make provision for that contingency, and the entire profit made on the issue, viz., £E996,000, has been passed to a special account. The balance of £E1,690,668 has been added to the General Reserve Fund, which now stands at £E6.490,310. At the end of 1913-14, i.e., prior to the outbreak of war, the Reserve amounted to £E5,103,549, so that to-day it is £E1,386,761 higher than it was before the present abnormal state of things came into existence. Incidentally it may be mentioned that the Reserve now stands at a higher figure than it has done since 1909, when it amounted to £E6.360,804. While Egypt in so far as the condition of her people is concerned is far better off than she has been for many years past, there is also little doubt that the position of the State is an exceedingly strong one; and even though, as so many rightly hold, the higher figures now recorded may be merely transitory and are bound to shrink when peace is declared and a more normal state of things comes again into existence, it is evident that the country is to-day better able to meet the emergencies that lie ahead of her than she could have done three years ago.

An Alexandria message of July 24 states that the cottonseed market is weaker; August is quoted 135 piastres (£12 1s. 8d.).

LANCASHIRE COTTON.

Maintained Improvement in Demand for Piece Goods.

(From Our Own Correspondent.)

Manchester, Thursday.

The recent improvement of demand in the market is being maintained, and the larger turnover mentioned last week has been followed by more business. Operations are still irregular, and sellers in certain sections complain that they have not yet participated in the general turnover, but there is a tendency for the demand to broaden.

Accurate information with regard to the Egyptian cotton crop is rather scarce, but available advices are favourable. Supplies in this country, however, continue limited, and users are hampered at every turn. The inquiry in yarns made from Egyptian cotton has again been very irregular. Here and there, however, a little more business has been done. The undercurrent of demand in cloth for Egypt has been of very fair extent, and steady buying has transpired in sized materials and also in fancy descriptions. In the piece goods section the feature of interest has been the revival of demand for China.

In a variety of cloths freer operations have transpired not only for Shanghai, but also for other markets of the Far East, such as Hong Kong, Singapore, Java, and the Straits Settlements. Certain manufacturers are in a stronger position than a fortnight ago. India has continued to provide a larger turnover in dhooties and other light fabrics, but offers in shirtings remain poor, and improved limits will have to be received from abroad before progress can be made.

It may be said that certain producers are filling order-books rather rapidly for China, and there is a possibility of the delivery question being very awkward for Indian dealers if they do not purchase more freely before very long. Formalities in connection with the spinners' wages question continue to be carried out, and it is said, owing to the refusal of the employers to entertain the application for an advance, the position of affairs is about to be placed before the Government Committee on Production.

A larger business has been done in home American yarns than for some time back, and producers of certain counts and qualities have improved their position. Rather more sales have been reported in bundle yarns for India.

TRADE NOTES.

The British Consul at Cairo has forwarded a copy of the specification and conditions of contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply and delivery of office requisites, paper and envelopes required for the use of the various Government Administrations during the year 1917-18, including writing and typewriting and blotting paper, pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc.

Copies of the conditions and form of tender may be obtained from the Director Central Stores, Ministry of Finance, Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on August 26. Samples of the goods required may be inspected at the Ministry of Finance, as above.

A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him.

A copy of the above-mentioned specification, etc., may be consulted by British manufacturers of the goods mentioned at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2.

ENGINEERING NOTES.

Organised Trade.

The British Engineers' Association is about to organise a number of trade sections as part of its everyday working in connection with home as well as foreign trade, the establishment of which will, it is considered, meet a long-felt want. To give engineering concerns the advantage of closer consultation with large buyers, the association has also recently created some new classes of membership, which are open to members of the engineering departments of public services and public companies. The decision of the association is praiseworthy and timely, for it is a known fact that the recent extension of the American trade in the Near East and South Russia is due to similar trade organisations in America.

Threshers for South Russia.

According to a recent Consular report, prior to the war Germany and Austria were the principal competitors of British makers of steam threshing machines and petroleum engines in South Russia. After the war, it is pointed out in the report, British manufacturers will have an excellent opportunity to obtain a large share of this trade, but competition from American manufacturers with a cheaper type of machine may be expected. It is to be hoped that British manufacturers will be prepared for it, and not let their machines be ousted by the American—as it happened with the harvesters.

A Reaper-Thrasher.

This is a worrying time for the farmer in the East. Labour is scarce, the harvest is slowly progressing, and the question is whether the required thrashing machines, or, in the absence of them, the local thrashing teams of horses, can be obtained in time, and before the rainy season begins. The wheat-grower has no rest until his wheat is thrashed, cleaned, and stored in the barn. To an agricultural engineer travelling a few years ago in Roumania a landed proprietor, who bought half-a-dozen English reapers, said: "I would pay ten times their value if they also could thrash the wheat at the same time. I daresay some day you English will invent such an impossible "combination." The prophecy of the landed proprietor has come true, and we hope that when the Huns are driven away from his country the newly invented "reaper-thrasher" will be very popular among his compatriots.

The Machines.

The machine is the invention of a farmer, and has recently been tested before a large gathering of farmers and others interested. In the test it picked up a much weather-beaten crop, and did not leave a head anywhere. The comb is made adjustable to be set to any width, according to the crop and condition of harvest. The knife works in a slot on a cutting plate on the adjustable comb tooth, making the cutting certain. In place of a reel and canvas conveyor, two spirals, with a double screen each, do the work perfectly, thus doing away with wear and complications. From the spirals the heads and straws are taken to the thresher by means of a float elevator, which works automatically on springs, allowing any quantity of stuff to pass under it with ease. From this elevator the straws and heads are fed into the threshing drum by means of a fluted roller.

Threshing and Separating.

The drum is of the usual English type, with ten threshing bars, and on each end of the drum fans are arranged, thus doing away with the extra fan drum and bearings, and saving space, which is most important. From the thesher drum the heads and straws are thrown on to the straw "walkers," which pass the straw on, leaving the grain and chaff to fall on to a tray, which conveys it back to the front of the riddles by a cranking motion. The machine is very simple and strongly constructed, with very few chains, and all drives are direct. The main drives are from an internal and external segment, thus causing no middle wheels to be required. The trial was thoroughly satisfactory in every way.

SUBMARINE WARFARE.

Increased Loss of British Merchan Vessels.

The Admiralty on Wednesday issued the following return of arrivals, sailings, war losses, and unsuccessful attacks for the week ended July 22, 3 p.m. :—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft) :

Arrivals	2,791
Sailings	2,791

British merchant vessels sunk by mine or submarine :—

1,600 tons (gross) or over	19
Under 1,600 tons (gross).....	3
British merchant vessels unsuccessfully attacked by submarines ...	12
British fishing vessel sunk	1

A Reuter message from Rome states :—During the week ended at midnight on Sunday, July 22, the number of merchant ships of all nationalities entering Italian ports was 693, of which the total gross tonnage was 389,815 tons. The sailings numbered 550; total gross tonnage, 403,460 tons. These figures do not include fishing craft or small coasters. The Italian losses in all seas were two steamers sunk and one small sailing vessel damaged.

THE RISE IN PRICES.

The advance in prices, so keenly realised by the people of the belligerent countries, is by no means peculiar to those nations. From the tea fields of Java and India, the tin mines of the Malayan Peninsula, the silk areas of China and Japan, the sugar fields of Java, Hawaii, and Cuba, the sisal plantations of Mexico, the copper mines of South America and Japan, the indigo farms of India, the hemp fields of the Philippines, the logwood forests of the West Indies, the currant orchards of Greece, the rubber plantations of the Orient, the champagne producing area of France, the cotton fields of Egypt, and even the diamond mines of South Africa, comes statistical proof of the rise in values of their respective products.

A compilation by the National City Bank of New York of the rates at which the varied products of these widely distributed areas are being sold in the places of production shows how general is the jump in prices. The United States has peculiar facilities for determining prices of world products at the source, as the Customs laws require that the valuations at which merchandise is imported shall be those of the merchandise in the exporting country, and not the values on reaching the port at which it enters the States.

Raw cotton, for example, most of it from Egypt, was imported in March, 1917, at an average price of 51.8c. per lb., against 16.3c. in March, 1914, a date immediately preceding the war. Sisal imports in March of the current year were $302 per ton, against $117 in March, 1914; copper 29.5c. per lb., against 14.1c. three years earlier; goat skins 62.2c. per lb., against 25.7c. three years earlier; cheese at an average of 34c. per lb., against 15.5c.; flax seed at $2.39 per bushel, against $1.29; beans at $5.21 per bushel, against $1.56; potatoes at $1.77, against 72c. three years ago; indigo at $2.00 per lb., against 15c. per lb. in the same months in 1914; logwood at $36.00 per ton, against $11.00; combing wool at 48c., against 24.6c. in March, 1914; lead at 6.5c. per lb., against 3c.; copper at 29.5c., against 14.1c. three years ago; cotton stockings at $3.27 per dozen pair, against $1.27 in March, 1914; sugar at exactly double the price of three years ago; currants at an advance of 300 per cent.; while cattle hides, manila hemp, raw silk, indiarubber, tin, lumber, cotton, and woollen cloth and many other articles show advances, some of them as much as 100 per cent. Wood pulp, mechanically ground, shows an average import price in March, 1917, of $30.73 per ton, against $16.35 in July, 1914; chemical pulp, unbleached, $96.90 per ton, against $36.75, and chemical pulp, bleached, $133.11 per ton, against $49.20 in 1914. All of these advances occur in the price at which the merchandise in question was sold in the country from which it was exported.

COMPANY MEETING.

MORTGAGE COMPANY OF EGYPT.

The ninth ordinary general meeting of the Mortgage Company of Egypt, Ltd., was held on Tuesday, at the Cannon Street Hotel, E.C., Sir Henry Babington Smith, K.C.B., C.S.I. (the chairman), presiding.

The Secretary (Mr. R. H. Eggar) read the notice convening the meeting and the report of the auditors.

The Chairman said that the satisfactory conditions in the military and political sphere in Egypt were accompanied by growing prosperity. The cotton crop and cotton prices were the principal factor. Last year's crop was not a good one. The ravages of the pink boll worm had not yet been effectually checked, although the Government was taking energetic steps to deal with the pest, and—in spite of an exceptionally good Nile—the yield was under five million cantars. This, however, was far more than compensated by the abnormal increase in the price. In the cotton season of 1915-16 the average price from the beginning of September to the end of April was just over $19 per cantar. For 1916-17 the price of $19 was doubled. The average price for the period September, 1916-April, 1917, was $38. Since then it had soared to heights previously unknown, and at present the spot price for fully good fair Sakellaridis was $56. At $38 the value of the cotton which arrived at Alexandria between the beginning of September, 1916, and the end of April, 1917, was about £E37,000,000, as compared with 14½ millions for the corresponding period in 1914-15 and 17¼ millions for the corresponding period in 1915-16. The presence of large armies in Egypt and in other places conveniently situated for drawing supplies from Egypt had created a very large demand for produce of most kinds. In all cases the present prices were higher than those of 1916 and much above the pre-war level. The cost of everything that the cultivator had to buy had increased also, but on the whole there had been a great improvement in the position of the cultivator and the landowner.

This improvement was naturally reflected in the company's accounts. Instalments in arrear last year stood at £410,938; this year they were £366.237, a decrease of nearly £45,000, and after the application of £13,000 to writing off this item it stood at £353.237. This reduction was in part the result of proceedings taken against debtors in arrear, and there was, therefore, simultaneously an increase in the item "Property acquired by foreclosure." The increased prosperity of the country had not yet created a very active demand for land, and it was to be hoped that it would not create an unhealthy epidemic of speculation. There were, however, signs that some increased demand was arising, and he hoped that, if the present favourable conditions continued, it would be possible to realise gradually a considerable part of the land they now held. They could not count upon effecting the realisation without some losses, especially in the case of town property, which had fallen heavily in value, and they had written off £12,000 under this head. There was a steady increase in the company's business up to the beginning of the war, but since that time there had been some decrease in the amount invested in mortgages, a result arising naturally from the circumstances of the time. It seemed probable that the money which had flowed into the country had enabled the landowners in some cases to do without borrowed capital, which they would otherwise have required, and in others to repay their debts. It was difficult to prophesy as to the future conditions attending their business, but if agricultural prosperity continued it would not be surprising to see a demand spring up for loans for the purchase and development of land. Having regard to the improvement in the position, the Board had decided that the time had arrived when the dividend on the preferred shares might be brought up to date. They thought it wise to await still further improvement before resuming the payment of a dividend on the ordinary shares. The sum of £28,000 had been employed in writing down various items in the balance-sheet, thus materially strengthening the position. It was the practice of mortgage companies to base the reckoning of their profits upon the interest which had fallen due, and not upon the sums actually collected, and to provide for possible failures to collect the arrears by making adequate reserves. For the purposes of income-tax and excess profits duty these reserves were not allowed to be deducted from profits unless there had been an actual writing off of debts known to be bad. The result was that they had received claims for excess profits duty in respect of the years which gave them the least favourable results that they had experienced. However, they hoped to be able to convince the authorities that the duties demanded were not properly due. He moved the adoption of the report and accounts.

The Hon. A. H. Mills seconded the motion, which was unanimously adopted.

The retiring directors—Sir Henry Babington Smith, his Excellency Harari Pasha, C.M.G., Brigadier-General the Hon. Everard Baring, C.V.O., and Mr. E. W. P. Foster, C.M.G.—and the auditors, Messrs. W. B. Peat and Co., were re-elected, and the proceedings terminated.

Lionda and Company, Ltd.,

34, Fenchurch Street, LONDON, E.C. 3.

COMPANY REPORTS.

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways, Limited, for the year ended March 31 last shows that the gross receipts were £232,927, as compared with £192,927 in the preceding year. The working expenses amount to £180,821, as compared with £142,109 for the previous year. The ratio of actual expenses to gross earnings was 77.63 per cent., as compared with 73.70 per cent. for the year ended March 31, 1916. This increase is almost entirely due to the unprecedented increase in the cost of fuel. The balance carried to net revenue account is £83,854, which, with interest and dividends earned amounting to £5,512 and with the balance brought forward from 1916 of £65,228, gives a total of £154,594 to be dealt with. After providing for interest on debentures and for all fixed charges, a balance of £106,807 remains. From this, however, must be deducted the sum of £57,558 in suspense account, which is not at present available for distribution. In consequence of the abnormal and increasing price of coal, stores, and materials, and the uncertainty for the future, both financial and industrial, which generally prevails, the directors have with much regret again decided that they are unable to recommend the payment of a dividend for the year under review.

COMPANY NOTES.

Dividends, Payments, etc.

The report of the Constantinople Land and Building Company for 1916 states that no accounts have been received from Constantinople, and the profit and loss account for the year only shows the transactions in London. The debit balance is £266, which, deducted from the balance of £5,706 brought forward, makes £5,440 to be carried forward. So long as the war with Turkey lasts it will be impossible to render full accounts or pay any dividend.

Privileged Company to Protect Production and Trade in Currants Five per Cent. Sterling Loan.—The half-yearly interest due August 1 next will be paid on that and any succeeding day (Saturdays excepted), between the hours of 11 and 2 o'clock, at the offices of Messrs. Erlangers, 8, Crosby Square, E.C.3. Coupons must be left three clear days for examination.

Oil Outputs.

Anglo-Egyptian.—Gemsah 365 tons against 326 tons; Hurgada 1.035 tons against 1,045 tons.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
July 17	110,000	190,000
July 18	80,000	270,000
July 19, 20, 21, 22	640.000	460,000
July 23	270.000	160,000

THE EGYPTIAN DELTA LIGHT RAILWAYS, LIMITED.

NOTICE IS HEREBY GIVEN that the Annual Ordinary General MEETING of the Company will be HELD in Hall No. 23, WINCHESTER HOUSE, Old Broad Street, in the City of London, on THURSDAY, 9th August, 1917, at 12 o'clock noon precisely, for the purpose of receiving the Directors' Report and Balance-sheet for the year ended 31st March, 1917, electing a Director, appointing Auditors for the ensuing year and fixing their remuneration, and transacting the Ordinary General Business of the Company.

By Order of the Board,
F. J. HORNE, Secretary.

211, Gresham House, Old Broad Street,
London, E.C., 23rd July, 1917.

N.B.—Shareholders who hold Share Warrants to Bearer are reminded that if they wish to attend the General Meeting of the Company they must first deposit their Bearer Warrants either in London at the Registered Offices of the Company, or at any London Clearing House Bank, or at the London Office of the National Bank of Egypt, the Anglo-Egyptian Bank, Limited, or the Crédit Lyonnais, in time to allow of the Proxies reaching the Offices of the Company at least 48 hours before the Meeting, or in Egypt with any of the last-mentioned Banks in time to allow of Proxies reaching the Company's Offices in London within the time aforesaid, the Share Warrants remaining so deposited until after the General Meeting shall have been held. Certificates of Deposit to be signed by the depositees in exchange for the Share Warrants so lodged, which must be produced by the holders attending the Meeting, may be obtained upon application to the London or Cairo Offices of the Company, or of the National Bank of Egypt, London, Cairo, or Alexandria. Should Shareholders wish to vote by proxy the Certificate of Deposit must be sent in to the Company's Office attached to the Proxy Form.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Street, E.C.,
Thursday.

Our market in Egyptian shares has again this week been active, and prices have been rising practically all along the line, the demand coming both from Egypt and from local quarters. Just at the close there is a somewhat quieter feeling, probably in sympathy with general markets, which are rather easier on the latest Russian developments; but sellers remain rather scarce, and shares are, generally speaking, more difficult to buy than to sell. In banks, Nationals have jumped ⅜ to 15¾. Agriculturals have been in constant demand, and are closing ⅛ higher at 5⅜, the best point so far reached. Anglo-Egyptians and Bank of Athens are also ⅛ higher at 12¾ and 2⅞ respectively. In Land Banks some business was done at 6, and the shares closed ¼ higher at 6¼. Delta Lights have exceptionally eased to 6 on disappointment in some quarters at the absence of a dividend, but the shares are not likely to remain down very long, as the company earned a dividend of about 4 per cent., and carried forward an amount equal to about 5 per cent., and its prospects when the war is over are very bright. In land shares, after transactions round 14s. 6d. and 14s. 10½d., Aboukirs finished 6d. higher at 15s. 6d. Behéras have been in constant demand, and have jumped up another ⅞ to 11⅝. Gharbieh have been wanted for Egypt, and show a rise of 1-16 at 1 7-16. New Egyptians have been quite a feature, and a large business has been transacted up to 12s. 9d., finishing 1s. up on balance at 12s. 3d. Sidi Salems have been done at 15s. and 16s., and close at 16s. 6d., showing a rise of 5s. since last week. United Egyptians are a trifle easier at 10½d. In miscellaneous shares Alexandria Waters have improved ⅛ to 12⅛, but sellers are very scarce; and Salts and Sodas are fractionally firmer at 25s., after business as high as 25s. 6d.

In Greek securities the market has continued on the whole very firm, but Monopolies are exceptionally ½ easier at 53½.

Oil Shares.

A few descriptions have been active in this market, but generally business has been quiet, with somewhat irregular prices. Roumanian Consols are firmer at 10s. 9d., and Anglo-Egyptian "B's" have been inquired for and strengthened to 14s. 3d. A rise of four points to 87½ has been marked in Anglo-Persian debentures.

Paris Bourse.

Closing quotations on Wednesday included the following:—Serbian, 1895, 56.25 (unchanged); Crédit Foncier Egyptien, 717 (against 715); Suez Canal shares, 4,500 (unchanged).

THE MONEY MARKET.

(From Our City Correspondent.)

London, E.C., July 26.

No changes have occurred in the working conditions in the Money Market either as regards money or bills. Lenders have been able to obtain 4 per cent. for day-to-day loans and 4½ per cent. for weekly fixtures. Demand has not been keen for the small number of bills on offer, and discount rates have been fully maintained for paper of all descriptions.

The exchange rate on Alexandria is 97½ to 97¾.

TERRIBLE NEWS from Syria—

3.—Lack of Medicines, Grain and Fuel.

"All advices from Syria tell of an utter lack of medicines. The daughter of a prominent man has been ill with dysentery for two months, but not a drop of medicine of any kind is in the City of Beirut.

"The grain crop was good this year, but most of it —all of it, in fact—has been taken over by the Government, a large part sent to feed Turkey's Allies, the remainder being sold back to the Syrians at prohibitive prices.

"There is no fuel in the land save charcoal. The railways were run by coal from Europe; but since the war began not an ounce has reached the country. Hence a train a week for military purposes runs between Beirut and Damascus. The engine is fed on the wood of the very few trees, and the last word from there says the people had been ordered to cut down their fruit trees for the engine."

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the

UTMOST URGENCY.

(Reproduced by permission of "The Times."

£300,000 WANTED

of which £50,000 is needed at once.

A strong administrative committee is at work. CONSIGNMENTS OF FOOD, MEDICINE & CLOTHING ARE NOW ENTERING PALESTINE, and goods stored in Egypt will continue to be poured into the country as further access is obtained. Relief will be given to all—Christian, Jew and Arab alike—according to their need.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110 Victoria Street, Westminster, S.W.1. or to J. F. W. Deacon, Esq. (Hon. Treas.), Williams Deacon's Bank, Ltd., 20, Birchin Lane, E.C.3. Chairman (London), Lt.-Col. Sir Henry MacMahon, G.C.M.G., &c. (late High Commissioner in Egypt).

BOOKS on the NEAR EAST

A History of Serbia. By Captain H. W. V. TEMPERLEY, M.A., F.R.H.S, **10s. 6d.** net.

This book is the fruit of some years of travel and study in the Near East. The author has been fortunate enough to approach his subject without prejudices; he envisages the Balkans as a whole, and his sympathies, springing from personal acquaintance with the land, are wide enough to embrace the entire Peninsula without being tinged by the miasma of racial antipathies. In this volume Captain Temperley gives a complete and scholarly record of the Serbian nation.

Greek Ideals. By C. DELISLE BURNS. **5s.** net.

A study of Greek life and thought as an inheritance belonging to every man of intelligence. The leading idea is that the Greeks value *sociability* most highly. This stands out among the Greek conceptions of an admirable life and an ideal character.

Soldier Men. By "YEO." **3s. 6d.** net.

Campaigning in Egypt is the chief theme of this volume of sketches.

The Future of Constantinople. By LEONARD S. WOOLF. **2s. 6d.** net.

This work deals with one of the most vital problems of British foreign policy—the settlement of the Ottoman Empire after the war. It proposes and discusses a settlement of Constantinople based upon the political, economic, and strategic interests of all nations.

The Immortal Gamble: and the Part Played in it by H.M.S. "Cornwallis." By A. T. STEWART and C. J. E. PESHALL, Chaplain. **6s.** net.

It was from the fore-turret of H.M.S. "Cornwallis" that the first shot was fired in the Dardanelles bombardment, and the book is written by the Acting Commander and the Chaplain of the ship.

Roumania and Great Britain. By A. HERSCOVICI HURST. **1s.** net.

A short concise statement of the history, characteristics, and resources of Roumania and her people, and of relation to international politics and the war, by a Roumanian who is a naturalised British subject.

The Rise of Nationality in the Balkans. By R. W. SETON-WATSON. With Maps. **10s. 6d.**

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.), 1, Devonshire Sq., London, E.C. 2.

NOTES OF THE WEEK.

On the eastern front the military events of the week have been the retreat of the Russians and the advance of the Roumanians. The latter army, reorganised and properly equipped after its disastrous campaign last autumn, has rendered a very good account of itself. The offensive, which covered the ground from the Casin to the Putna valleys, resulted in a loss to the enemy of between four and five thousand prisoners and nearly a hundred guns in four days; the enemy front was broken to a depth of twenty kilometres along a front of sixty kilometres. These are results which will be highly gratifying to the Allies, after the bitter disappointment of last year's defeats in Roumania, and there is every reason to hope that the Roumanians have not yet exhausted their effort.

From Russia, on the other hand, the news continues bad. The panic which spread through the Russian army some days ago has hardly yet been stemmed; the retreating troops covered sixty miles in ten days, abandoning everything but themselves, and making any orderly salvage of guns and munitions out of the question. It was rank cowardice, and has been admitted as such in the Russian army bulletins. The only redeeming feature in the whole story is the gallant conduct of the British auxiliaries in armoured cars under Commander Locker-Lampson.

Russia is now actually invaded. It is possible that Rovno will fall, and, since the country is flat, there is no particular obstacle to the Germans advancing as far as they please, unless the Russians can reform. But to do so means something more than a mere back-stiffening; it means an entire change of system; the abandonment of the pernicious Committee method of arguing over the offensive and even over the ordinary orders to the army while the Germans are advancing; it means more discipline and less talk, more belief in munitions and less in the millennium.

The Roumanian army are said to have shot sixty German agents who had dressed themselves in Russian uniforms and were spreading disaffection in the ranks during the past week; it would be well if the Russians, who have now restored the death penalty, would do the same to the far more numerous German agents who have undoubtedly been at work within their lines, and not merely there, but at Petrograd. But it is being rather sadly admitted in England that, unless Russia can make more haste in restoring her armies as well as her politics to a stable basis, we shall have to write her off as an effective asset in the war for this year. To her honour be it said that she will not make peace; unfortunately, she does not continue to make war. It is a paradoxical position.

The disabilities of Russia may not affect the result of the war, for the Western Allies are in good heart, and their resources were never greater—although they have not yet reached their maximum. But the anarchy which has come over Russia as the result of the revolution must have a profound effect on the settlement of Europe, and not least in the Balkans. For over a century Russian influence has been great in the Near East; the economic forces which have driven her to expand south and east have been a cardinal factor in the world's politics. It is not only the Tsar, but Russia itself as a great Power, that has now abdicated. A mere change of dynasty or even of constitution would have made little difference to Russia's economic outlook in the long run; a republic must still have kept an eye on Constantinople and have taken a peculiar interest in the Balkan kingdoms. But a Russia divided into petty separate States, in a word, a Russia that is no longer Russia, will not have the same economic outlook at all. An independent Finland, such as is now in prospect, would fall within the orbit of Sweden or Germany; an independent Lithuania would fall within the orbit of Germany; an independent Poland might or might not be strong enough to stand alone—it depends entirely on the territorial readjustments.

But an independent Ukraine, which is being discussed at Kieff, while the Austro-German armies every day cover more miles of the Ukraine, simply means the end of Russia as Europe knows it. The Ukraine would evidently not be entirely independent; the condition of its people, whose culture is lower than that of the Russians and certainly lower than that of the Poles, does not warrant the idea. If things were to go as the Russian Maximalists and our own pacifists desire, the Austrian Emperor would come to the Peace Conference with a large part of the Ukraine in his pocket. Austria has long hankered after the rich agricultural Ukraine, with its outlet on the Black Sea, and, promises of "no annexation" notwithstanding, Austria would take good care to control the Ukraine, economically in a direct way, politically possibly in indirect fashion,

Digitized by Google

if she could. By that means Austria would enormously increase her prestige, and would become the supreme Power in the Near East, with Germany at her back and Russia nowhere, while the districts in question would be practically closed to the Western Powers and their commerce, since the small Balkan States could not in those circumstances stand against the enormous power of the Central Empires. That is the immediate prospect which Russian disorganisation leads to, while the influence of Russia in Asia Minor and the Middle East would also decline almost to zero within a very short time.

The fears that were prompted last week by the news from Roumania have fortunately proved to be groundless. A new Coalition Government has been formed, and M. Take Jonescu's services are not lost to the country at a critical stage in its history. On the contrary, the reconstituted Cabinet contains five members of the Conservative Party instead of four, and two of them are appointed to the Ministries of Finance and Agriculture. M. Jonescu himself is Minister without Portfolio, and becomes Vice-President of the Council of Ministers. M. Bratiano, the Prime Minister, has certainly responded to the spirit actuating the nation by retaining a Coalition Government instead of using his majority in Parliament to form a purely Liberal Ministry. The brief crisis, it is to be hoped, will have brought the two chief men of Roumania closer together and enabled both to devote their conspicuous talents more effectively in joint harness to the service of their country.

The conclusion of the Balkan Conference in Paris has been followed by the visit of Baron Sonnino to London, an event which naturally has led to a further discussion in the Italian Press of the relations with Greece. If it cannot be said that the tone has been uniformly happy, it has at least shown more signs of a rapprochement, or at least more willingness to see that there is a Greek as well as an Italian standpoint, than was perceptible six months ago. The actual formula may yet have to be drafted which will entirely satisfy both countries, but the renewed ambition of Austria which comes from the Russian breakdown may have the effect of moderating any superficial differences that remain.

In the Kaiser's rhetorical address to his subjects which ushers in the fourth year of war it is natural that nothing should be said of the German ambitions in the Balkans. It is the Kaiser's cue that the war has been fought purely in self-defence, and therefore any allusion to Serbia or the Baghdad Railway would be out of place. It is noteworthy, too, that an official denial has been issued from Potsdam of the meeting on July 5, 1914, in which aggressive action as regards Serbia was decided upon in conjunction with Austria. But meantime the German Press continues to emphasise the importance of the Balkans, and no firm renunciations are made by German statesmen, for the best of all possible reasons.

Whatever designs Germany may have on Serbia, the Central Powers continue to oppress that wretched country. It is natural that sympathetic protests should be made in the House of Commons, but the British Government can do nothing directly in the nature of things, and as it was stated on Wednesday evening, in answer to a question, to allow food to go into the country to relieve the inhabitants from Allied sources would merely enable the enemy to export Serbian produce to feed his own people and so prolong the war. It is a miserable position, but one that unfortunately cannot be remedied.

The enemy, however, is not satisfied with oppression, but is endeavouring to sow despair in the Serbian ranks by representing England as ready to abandon their cause and country. There was another debate on war aims last week in the House of Commons—these debates are now as common as potatoes, but less nourishing—and the Austrian Government is using the speech made by Lord Robert Cecil on behalf of the British Cabinet to insinuate that we are ready to make peace with Austria, and that consequently we must be ready to abandon Serbia to her fate.

It is impossible to say whether this rather clumsy manœuvre will have any weight whatever in Serbia. If the Serbs can believe what the Austrian tells them, after a fairly long experience of Viennese economy of truth, they can believe anything. Lord Robert's point was that our chief enemy in the war was Germany, but that does not prevent us from having direct interests in the independence of small States in the Balkans, or from determining that Serbia shall not be crushed. These things have been stated so often that it seems superfluous to go on saying them, but memories are short, and it is the misfortune of these continual war debates that they always give the enemy some material. If the exponent of the Government's policy does not cover every point on the map, he is at once represented as having abandoned the cause on that particular point.

While Count Czernin has seized upon this small point, he has not deigned to notice the determination of the Jugoslavs at home to refuse to accommodate themselves with Austria or to abandon the cause of union with Serbia. As this is a vital factor in the future of Austria as a State, and directly affects both Adriatic and Balkan policy, his silence is the more remarkable. The manifesto which has been recently issued by the Southern Slavs opposes an uncompromising negative to Viennese aims, and furnishes a counter constructive policy which cannot be ignored by Austrian statesmen in fact, although it may be conveniently ignored in their speeches.

The Jugoslav programme is an excellent one, and it remains only to carry it out; it will do as much to settle the political future of South-Eastern Europe on a stable basis as a reconstructed Poland would do for Central and Eastern Europe. Unfortunately, it is only within the last few months that English publicists have taken the trouble to explain the matter to English audiences, and the Jugoslavs have not been so well served in this matter as the Poles, whose cause, perhaps from its being an older one, is better known and, therefore, more appreciated. There are signs of better things, but a general survey of the London and provincial papers—particularly the provincial papers—indicates a certain discretion in touching on the topic which can only be due to ignorance of the importance of the issues. In very many cases the Jugoslav programme was given entirely without comment, and for all the world as though it had no more bearing on the future of the world than an eclipse of the moon (invisible in Fleet Street).

The position in Greece has not materially altered, but a certain amount of uneasiness has been created, perhaps designedly created, by Members of Parliament asking questions about disaffection in the British force at Salonika. They would perhaps have been better occupied some time ago in asking questions about the health of the force, at the time when the advanced posts had to abandon the Struma line on account of malaria, but politicians fight shy of any but political diseases. It is admitted by the Government that there have been a few cases in which trouble has arisen, and that a small number of men have been sent home, some to serve terms of imprisonment of various lengths, a large part of which will be respited at the wish of the commanding officer and apparently of the Government. The truth appears to be that when men have nothing to do, whether at Salonika or Westminster, they make trouble, but in the one case they are sent home and in the other they refuse to consult their constituents. The latter is called constitutional government.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 9.

All arrangements have now been made for holding the annual pilgrimage to Mecca and for sending the usual Holy Carpet with its escort. The Prime Minister has this week issued a circular to the various provincial authorities laying down the conditions under which Egyptian Moslems will be allowed to make the pilgrimage. Owing to the difficulties of transport, it has not been possible to provide accommodation for more than one thousand persons from Egypt, and applications will be accepted in the date-order in which they are presented to the Government up to that total number. All the expenses up to Jedda and back must be paid in advance by intending pilgrims, but no deposit as in previous years will be required in respect of the transport expenses by camel from Jedda to Mecca and Arafat, in regard to which the Government is still carrying out negotiations. Pilgrims will, of course, not visit Medina again this year. The Holy Carpet ceremony has been fixed to take place in Cairo on August 25, and the Caravan will leave in September.

The Phillipides Case.

One of the most important witnesses in the Phillipides case, which was concluded last week, was Mahmoud Effendi Mahomed, assistant commandant of Cairo, who acted as agent for Phillipides in many of his bribery transactions, and finally obtained immunity from criminal proceedings by confessing his complicity. It has now been decided to the general satisfaction of the public to bring Mahmoud Mahomed, as well as two other police officers, the mamours of Abdin and Old Cairo, who likewise had a part in the affair and confessed, before a council of discipline. It is generally hoped that the severest possible sentence will be inflicted upon Mahmoud Mahomed, who appears altogether to have played a most disgraceful part in the whole affair. The day after her conviction Mrs. Phillipides had to be removed to the prison infirmary owing to her state of health.

The National Bank of Egypt.

With reference to a recent paragraph in this correspondence on the departure of Mr. Dickson from the National Bank of Egypt in order to fill the post of manager to the new Trade Bank that has been formed in London, I understand that Mr. B. Hornsby, who some little while back vacated the post of Controller-General of the National Bank in Cairo in order to take up the newly created post of Public Custodian at the Ministry of Finance, will very shortly return to the bank, and that he will succeed Mr. Dickson. The new Public Custodian will, it is believed, be Mr. J. Marshall, who has been employed for the past two years in the War Trade Department of the Ministry of Finance.

The Eclipse of the Moon.

The total eclipse of the moon set down for the night of the 4th inst. was plainly visible here on that date. The moon entered into shadow at a little before ten o'clock, and was completely covered by eleven o'clock. It remained concealed for about an hour, and then gradually emerged, the astronomical phenomenon being completely over by about one o'clock in the morning. As might well be expected, the eclipse greatly excited the Egyptian masses, who were very much impressed by the fact that it coincided with Ramadan and the war. Pans and drums as well as other noise-making appliances were beaten by them as long as the phenomenon was visible, and even after its disappearance, many servants refused to go to sleep on the roofs.

The Behera Torture Case.

Recently I referred in this correspondence to the investigation which was carried out in the province of Behera into certain allegations of torture made against local police officials in connection with a crime which had been committed at Teh el Baroud, and for which four men had been condemned to various terms of imprisonment. As a result of the evidence which then came to light, the four men in question were given a fresh trial, and were acquitted of the charge of murder. It has now come to the turn of the officials against whom the charge of torture was brought to stand their trial at the Assizes. They appeared this week before the Alexandria Assize Court, and were duly sentenced, the commandant of police of the province of Behera to two years' imprisonment with hard labour, and the police inspector of Tewfikia district to twelve months' imprisonment and a fine of £E10. The accused were suspended from their posts for periods of four and two years respectively; this suspension is, however, merely a formality, as no man who has undergone a term of imprisonment can remain in the Government service, and a council of discipline will in due course do what the Court had no power to order, viz., decree their dismissal from the service of the State.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—III.

The Cantonal Courts.

Taken as a whole, the Cantonal Courts in the Markaz towns are those with the largest volume of work. Since it is obvious that in such towns the village conditions, which are the basis of the Cantonal Court system, do not obtain, the Judicial Adviser thinks that the exclusion of such towns from the scope of the Cantonal Law might well be considered. There is also a possible danger that the Cantonal judges may be asked to do more work than can reasonably be expected of them. In the year under review in only three courts did the total number of cases disposed of exceed 3,000; in the previous year, with the much greater number disposed of, that figure was exceeded in twenty-seven cantons, in one of which more than 7,000 cases were dealt with. Even the lower figure of 3,000 the Adviser considers too much, for "the result of any such strain upon the good-will of unpaid judges must necessarily be the accumulation of arrears, one of the principal objects of the system being thereby defeated." It is suggested that one possible means of lightening their work would be to relieve them of the obligation to examine cases within the jurisdiction of the Summary Tribunals with a view to effecting a settlement. Of the 52,326 such cases submitted to them last year only 2,757 were settled, and in three cantons upwards of 1,000 summary cases were examined by each of the courts. As the Adviser very rightly remarks, the framers of the law cannot have realised that so much work would have been entailed, whilst the result scarcely justifies the delay in sending on these cases which the preliminary procedure necessarily involved. Whilst these courts have, in his opinion, met a definite want as regards the collection of petty debts, the fact that only 856 cases outside their normal jurisdiction were submitted to them by agreement between the parties appears to him to indicate that they have scarcely gained the confidence of the fellahin for any wider purposes. In regard to the limited jurisdiction enjoyed by these courts in matters connected with irrigation, etc., the Adviser thinks that the services of the Cantonal judges might be better utilised by the remission of such cases to them by the Summary judge for an expert opinion instead of their being responsible for the final decision, a procedure which, "if it proved successful, might be capable of extension."

Inspectorship of Native Tribunals.

The Committee of Judicial Surveillance, which was created by the late Sir John Scott when he was Judicial Adviser, for the inspection of the Native Tribunals, has now ceased to exist. When it was first instituted this committee had a separate inspectorate to that of the Ministry, but in 1906, owing to the strongly disintegrating effect which the independence of that inspectorate had on the general organisation of the Ministry, it was decided to combine its staff with that of the Ministry in a newly created directorate of Native Tribunals. Whilst being of opinion that the change was a wise one, the Adviser thinks that the time has come for taking the further step which is its logical outcome—viz., that the inspectors should report to the Minister through their director, and that the Minister should in his own name take upon their reports such action as may be called for. It is for this reason that the committee has now ceased to meet. The change he points out is more one of form than of substance, and he proceeds to indicate what he understands to be the proper scope of the inspectorate of the Native Tribunals. When the above committee was first set up, the magistracy it

Digitized by Google

had to supervise was inexperienced, and had little sound knowledge of legal principles and no traditions of judicial independence. There was, therefore, ample scope for a system of inspection directed to the correction of errors. But at the stage now reached the Adviser is clear that "we can better help our judges by reviewing their work upon broader lines." The judges, especially in Summary Court work, still make mistakes upon minor points of law, but these mistakes, as revealed by the inspectors' reports, are of the kind incident to hurried work rather than mistakes of principle, and he cannot think that an elaborate system of inspection is worth maintaining for the sole purpose of detecting them. On the criminal side, where the success or failure of the work of the judges, regarded as a whole, can only be judged in connection with the end to which it is a means, both judge and inspector require to be familiar with all the circumstances of the district in which the former sits, so far as they are relevant to criminal work. But under the existing system the inspector is not possessed of such knowledge. On the civil side the salient points appear to him to be that on four-fifths of the cases submitted to them the decisions of the Summary judges are final and without appeal, and that the judges come to their civil work with no previous training at the Bar. The Adviser suggests a remedy, but says that so long as the present system is retained some system of inspection appears to him necessary in the public interest. He adds that "whenever our judicial system comes to be recast, proposals for the transfer to the Superior Courts of some part of the responsibility at present vested in the Ministry for the supervision of the inferior courts would have my warm approval."

Civil Procedure.

Sir William Brunyate, who has just finished a four years' connection with the Courts as an advocate, proceeds to give the impressions left on his mind by the existing civil procedure. He says:—

"I had been led to suppose that before both the Mixed and the Native Tribunals I must expect a rather exaggeratedly high standard in passing judgment upon the action of the Government. As I have already had occasion to say, I found that I was expected to show that any discretion vested in the agents of the Government had been reasonably exercised. . . . There were, I admit, occasional judgments with which I was not in entire agreement, while in the case of the inferior courts such judgments were apt to be more numerous, but that I understand to be the universal experience of advocates. And I had at all times the feeling that when my delegates had anything to say worth saying they could count on a patient and not unsympathetic hearing. The question of procedure in the technical sense caused me at the outset some anxiety, because, while I was aware of the keenness with which minutiæ of procedure can be fought, with the minutiæ of Egyptian procedure I was frankly unfamiliar. On the whole my experience in that respect was disappointing. I never came across any details of procedure worth fighting about. Once or twice I took somewhat elaborate precautions to meet a difficulty I foresaw, but the difficulty was never raised. In a general way I found myself permitted to say anything I wished to say, and to rely on any document upon which I wished to rely. . . . As regards procedure in the wider sense, what specially impressed me was the absence of any attempt to come down to the exact facts of the case. I have fought and won on appeal a case in which, in first instance, an expert had found that we had unlawfully inundated land belonging to the plaintiff of greater extent than the whole of the land the plaintiff claimed to possess; and, again, a case in which the plaintiff claimed for the cost of preparing and sowing land and for loss of profit, when he had, in fact, sublet the whole of his land and had recovered the rents. . . . A somewhat similar phenomenon was the readiness with which a plaintiff, by his advocate, would put forward a story wholly inconsistent with ordinary business routine, or indeed with any conceivable conduct of business. . . . These defects would appear to me to be largely due to the rules of evidence which exclude as witnesses the parties themselves, and, before the Mixed Tribunals, most of the other persons who, in many cases, are in a position to give evidence of any value. The argument is, of course, that the parties themselves and persons under their influence are not reliable witnesses. To which I would reply that I am prepared to run the risk of the Court being misled by the plaintiff, if I can have the right to test his story by cross-examination, a view of which very full advantage is taken in Continental procedure. As it is, he is at liberty to mislead the Court with impunity. And not only are his own statements subject to no control, but so also are those which his advocate thinks right to make in his name. I have heard the view maintained that the parties are under so strong an inducement to adapt their evidence, if they are allowed to give it, to the interests of their case, that at least they should not be liable to penalties for giving false evidence. I confess that with any such view I am unable to sympathise. As I understand the matter, the only purposes for which civil courts of justice exist are to put pressure upon persons who wilfully abstain from carrying out their admitted obligations and to decide between the parties in case of a *bonâ-fide* dispute. The temptation to make false statements is no greater and no less than that to make use of false documents; and I am convinced that in Egypt courts of justice will continue to serve as instruments of fraud until persons wilfully making false statements, whether on oath or not, are regarded as no less worthy of and liable to punishment than persons wilfully using false documents."

He then proceeds to deal with the question of experts in irrigation matters, his principal criticisms as to which are "that courts which ordinarily regard the hearing of witnesses as an exceptional measure habitually entrust experts with power to hear witnesses without the sanction of an oath; that inadequate pains are taken to define the expert's mission or to see that he keeps within its terms; and that neither the parties (as represented by their advocates) nor the judges appear to regard it as necessary to form an independent opinion on any matter on which the expert may be instructed or may see fit to report." His remarks as to experts, he takes care to point out, refer rather to cases in which sums so substantial are involved that the parties are prepared to go to considerable expense to make good their claim. His experience of cases of this type is that a plaintiff seldom submits his claim to critical examination in advance, that he relies almost exclusively on the expert appointed by the court to define technical points constitutive of the violation of his rights, and that his final claim follows strictly the expert's report, whatever its character, except in so far as the compensation assessed by him is regarded by the plaintiff as insufficient. If the expert's report is unfavourable the plaintiff would most probably ask for the appointment of three experts to present a further report. The judges also are apt to follow the experts no less blindly, and the Adviser cites a typical case involving many debatable points in which the judgment gave as sole ground the expert's declaration that the Government should pay the plaintiff a certain sum. The extent to which judges are guided by experts' opinion gives special importance, he says, to the practice of allowing experts to take evidence, not upon oath, but upon the scene of their labours. They are necessarily influenced by the information so obtained, and the findings of the judge are thereby indirectly influenced, without his mind being directed to the value of this evidence. In the Adviser's opinion the clearer fixing of the issues prior to the appointment of the expert would effect a material improvement, as it would relieve the expert to a material extent of the necessity of taking the evidence of the parties themselves, and it would make it clear that many facts at present left to the expert could only be properly inquired into by the judge. As, however, the time has scarcely come for entrusting such experts as are available with the power to take evidence on oath, he offers two alternative solutions to the problem. "Either the judge should himself accompany the expert and hold the inquiry on the spot, or any evidence given before the expert should as a matter of right be sifted later by the formal examination of witnesses upon oath, should the parties so desire." And he adds: "Under either procedure it would probably be found necessary that the expert should himself be examined as a witness, so that his expert opinion might be adjusted to the extraneous facts as found by the court, a measure which I have every reason to believe would command the approval of a large body of opinion."

LOST MAILS.

The Postmaster-General announces that the letter and parcel mails for the United Kingdom which left Aden July 14, Port Said July 21, and Malta July 25, have been lost at sea through enemy action.

The lost mails would include correspondence from Aden, British Somaliland, Cyprus, Egypt, the Egyptian Expeditionary Force, and the Mesopotamian Expeditionary Force

Registration or insurance with the Post Office does not cover losses due to acts of war, and no claims arising out of the loss of this mail can accordingly be entertained.

The Postmaster-General announces that letters, newspapers, etc., but not parcels, for the Salonika Force which reached the Army Post Office, London, for despatch between 2.30 a.m. on the 3rd ult. and 2.30 a.m. on the 5th have been lost at sea through enemy action, also letters, newspapers, etc., for the civilian population of Salonika and district, and many of the Greek islands, which reached the General Post Office, London, for despatch from the 1st to the 3rd ult. inclusive.

CYPRUS NOTES.

(From a Correspondent.)

Island Travelling.

To complete what was said last week about island communications, it should be added that the weekly mail steamers carry passengers between the three or four ports at which they touch in normal times; and good use is made of them. There is no local steam service in this island of open roadsteads. As regards the small coasting craft, lighters, etc., there is little temptation to embark in them. Now and then it occurs to someone that it might be a pleasant experience to venture on a trip of forty or fifty miles. A fair breeze calls, with a promise that you should reach your destination in six or seven hours. All may go well half way or more; then the wind may drop or shift, and you may find yourself obliged, under a broiling sun, to take to the ponderous oars for a row of, say, ten or twenty miles, when, cursing your fate, you will probably vow never to repeat the experiment. For inland journeys, off the carriage roads, the best mode of travelling is on mule back. The muleteers of Cyprus are a very good class, and very pleasant tours can be made in all parts of the island, including the forests, the best seasons, of course, being the spring and autumn.

The Surplus Balance.

A Surplus Balance Appropriation Law has been passed by the Legislative Council. Provision is thereby made for certain calls not dealt with under any other law, by an expenditure of £22,000. This includes £4,000 for public works, to be spent on motor roads; £5,200 for forests (including forest roads and tree-planting); £3,000 for the anti-malarial campaign, and £8,000 for the relief of Cypriots abroad. Greek members of Council protested that the money should not be spent as indicated, but that it should be devoted entirely to progress in agriculture and the development of island resources.

Efforts Towards Afforestation.

Of the £5,000 voted for the Forest Department, the greater part is to be spent in the Famagusta district. One would imagine that the proposal would be hailed with great satisfaction in that region. Not at all. One of the Greek members for the division recently objected in the Legislative Council to the programme. He regards it as "a trap" to catch the poor villager. The Forest Department, he says, has cut down trees which ought not to have been cut. Then the Principal Forest Officer comes along and plants his favourite acacia, which brings with it the "white scale." When this is done, the forest, or plantation, is closed to goats, against which the department is waging a ruthless campaign. The flocks of the unhappy goat-herd stray and trespass, and the owner is heavily fined. Therefore the people do not want the new forests. *Timeo Britannos et dona ferentes.*

These new plantations are generally of the acacia, the Australian wattle, referred to. The tree has been found very useful as a drought resister, as a barrier against shifting sands and dunes, and on waste grounds, which it soon covers with a thick growth, that in time becomes to a certain extent remunerative for fuel. It is true that the tree is very susceptible to the white scale disease.

Meanwhile complaints are made that large tracts in the Government forests which have been denuded by fires have not been re-planted, and that had steps been taken to make good the damage these areas would be in a fair way to becoming wooded. Another grievance is that claims to ownership of lands included within the boundaries of the delimited State forests are still unsettled. Here it must be admitted that there is some ground for complaint. The matter is an example of the extreme slowness with which the Government machine has worked. After nearly forty years many questions respecting claims to private ownership still remain unsettled in various parts of the island.

Strictness in forest policy, and the enforcement of forest laws, which are so necessary in Cyprus, are a sore point. An honourable member who gets up a cry about them is sure to please a large section of the people; for the Cypriot has never got over his regret for the old days when he could take fuel, extract resin, and graze goats *ad libitum* in the best forests of the island, with nothing to fear except obstacles which a timely peace-offering could remove.

Personal.

The Imperial Service Order has been conferred on Mr. A. K. Bovill, Principal Forest Officer. Mr. Bovill came to Cyprus in 1882, being at first in the Public Works Department. In 1883 he became assistant to the Director of Survey and Principal Forest Officer, these offices being then combined, and in 1895 Principal Forest Officer. Mr. Bovill has travelled in the island more than any other official, and owing to his intimate acquaintance with all parts has frequently rendered valuable service to persons visiting the island on Government missions of various kinds.

Mr. Frederick Ongley has been appointed to act as a member of the Legislative Council during the absence of Dr. R. Cleveland, Chief Medical Officer. Mr. Ongley is one of the oldest officials, having joined the service in 1879, and has held various appointments. He became Director of the Land Registry Office in 1910. He is a good Turkish scholar. His translation into English of the Ottoman Land Code, published in 1892, has been a very useful work.

LETTERS TO THE EDITOR.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

ITALY AND THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issues of July 13 and 20 Mr. F. Bonavia appears to have continued his attempt to prove the pretended "Italianità" of Dalmatia.

Mr. Bonavia states that it is necessary to consider not only the statistics of to-day but those of the last fifty years, and to inquire very carefully into the "astonishing changes" which have taken place. I will go back more than fifty years as regards the statistics, and will quote an impartial authority, a British author, Sir J. Gardner-Wilkinson, who in his work "Dalmatia and Montenegro" (London, 1848) states:—"The population of Dalmatia in 1833 consisted of Slavonians, 340,000; Italians, mostly from Venice, 16,000; Albanians, 882; Jews, 552." According to these statistics of nearly eighty years ago, at a time when not even according to the Italian extremists was there any supposed denationalisation of Dalmatia, an impartial British authority gives the number of Italians in Dalmatia as only 16,000, and these not as natives of Dalmatia, but as immigrants from Venice.

It is also incorrect to state that in the year 1880 most of the important Dalmatian towns were under the administration of the Italian party. The so-called Italian party in Dalmatia is only of quite recent date; the late autonomist party, which evidently Mr. Bonavia has in his mind, was not identical with the Italian party of to-day; that autonomist party, to which belonged also a large number of loyal Slavs, aimed at the autonomy of Dalmatia, as is shown by its very name.

Mr. Bonavia states that when the Venetian Republic fell the Dalmatian cities showed in an unmistakable manner their attachment to Venice. In my letter published in your columns of July 13 I put forward certain facts to prove the satisfaction of Dalmatia at being free from the Venetian yoke. I will merely repeat the statement of Gardner-Wilkinson:—"Zara rebelled (1038-1041) in favour of Petar Kresimir, King of Croatia." By this we see that nine centuries ago Zadar (Zara), the city in which are centred the greatest Italian pretensions, endeavoured to rid itself of the Venetian yoke and to place itself under Croatian rule. The Venetian Republic did its best to keep the Slav inhabitants of Dalmatia in a state of ignorance, so that they might remain her slaves. With regard to this, Gardner-Wilkinson says:—"The care bestowed on education in Ragusa rendered the people greatly superior to the Dalmatians under Venetian rule, who were purposely kept in ignorance by the narrow policy of that Government."

The Slavs in Dalmatia do not date from yesterday, but existed long before the formation of the Venetian Republic. Space will not permit me to quote here every authority on this subject, so I will confine myself to the above-mentioned British authority:—"Heraclius invited the Chrowates to drive them (Avars) from Illyria and occupy that province. . . . They (the Chrowates) advanced with considerable forces into Dalmatia . . . and reduced the Avars to subjection."

Mr. Bonavia avers that the Croatians of to-day are one of the mainstays of the Hapsburg Monarchy, and in the meantime the Italians are sacrificed. The manly bearing of the Croatians in the Parliament of Vienna, and on the other side the silence of the Italian deputies and the pro-Austrian declaration of Mr. Faidutti, the leader of the Italian Viennese deputies, clearly show that Mr. Bonavia has no right to make such a statement. Besides this, there are in Italy thousands of Croatians and other Jugoslavs who surrendered to Italy solely for the purpose of joining the Serbian army to fight against Austria. But Italy does not

Digitized by Google

allow this, although both from the Serbian Government and from other quarters requests have reached her that she should grant this permission. One can count on the fingers the number of Italian irredentists of Dalmatia who have expressed a desire to join the Italian army, but there are large masses of Jugoslavs from Dalmatia who are anxious to join the Serbian army, but who are not granted the liberty to do so by Italy.

That it is not the Italians who have been persecuted in Dalmatia, but, on the contrary, the Jugoslavs, is shown also by the fact that all Dalmatian colonies and organisations in both Americas and the British Dominions consist of Jugoslavs; not one of them is Italian. And these Dalmatian organisations are the very ones which are providing the whole financial support for the Jugoslav movement and sending an aeroplane squadron, volunteers, etc., for the Serbian army.

To show how the Jugoslavs have been persecuted by the Italians, both civil and ecclesiastic authorities, I shall quote only the following instances:—For 80,000 Jugoslavs in Trieste the Italian municipality refused to provide even one elementary school, and the same treatment is applied by the Italian Government to the 40,000 Slovenes living in the North-East of Italy. In the Slovene village of Ricmanje (near Trieste), which is to-day included in the Italian claims, the peasants, for persisting in their ancient custom of praying in their own language, were denied a priest, and for years were obliged to bury their dead without the ministrations of a priest, to have no legal marriages, to leave their children unbaptised, etc.

This war is not waged for any "mastery," and, therefore, there can be no question of Italian mastery in the Adriatic. Freedom of nations. Freedom of seas. I will mention here the ninth clause of the official declaration of July 20, published and signed by Mr. Pashitch, Serbian Prime Minister, and Dr. Trumbitch, President of the Jugoslav Committee, which states:—"In the interest of freedom and of the equal rights of all nations, the Adriatic Sea shall be free and open to all." We hope that this official statement by the Serbian Government, showing its connection with the Jugoslav Committee, will put a stop to the continuous calumnies of the Italians, that the Jugoslav movement is backed by Austria.

The Italians lay claim to Dalmatia on the grounds of the historical rights of Venice; in Venice they erected a magnificent monument to the Dalmatian Nicolas Tomaseo; the Italians should remember the words of this same Tomaseo: "Dalmatia for centuries has been more successful in preserving her Slav character than Italy her Italian."

I am, etc.,

MICHAEL MICIC,
Member of the Jugoslav Committee.

45, Stanhope Gardens, S.W.,
July 31, 1917.

ZIONISTS IN PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My attention has just been called to a letter in THE NEAR EAST of July 20, in which Mr. S. Tolkowsky accuses me of misrepresentation. I had said:

"Among the recent 'Zionist' settlers in Palestine there is an extreme and narrow fanaticism which their enlightened co-religionists in Europe hardly, I think, realise."

Mr. Tolkowsky writes: "On the contrary, they are the most enlightened and progressive element in Palestine, to the regeneration of which they have made notable contributions. . . . Both the record of the Jewish colonies and the avowed policy of the Zionist organisation show how baseless is the suggestion that the achievement of Zionist aims in Palestine 'would mean oppression for the other elements of the population.'"

Mr. Tolkowsky evidently attaches some special and eclectic meaning to the word 'Zionist.' I mean by it those recent settlers—as contrasted with the Jewish immigrants of three or more centuries ago—who are strongly desirous of restoring the Jewish State as it existed of old, including the Temple and its sacrifices; who regard the present owners of the land as mere intruders upon territory which is Jewish by Divine decree. In my experience of centres like Jerusalem, Safed, and Tiberias, I find these as the vast majority of recent settlers; and, although I know that there are others who profess a milder view, I do not think those others strong enough numerically to control the fanatical religious element in the event of an independent Jewish State being set up in Palestine. For the majority, the restoration of the Temple on its ancient site is the principal objective; but that ancient site is now the Haram es-Sherif, the second Holy Place of El Islâm! I am entirely friendly in my feeling for the Jews, and it is in no unfriendly spirit that I repeat the words of my address:—

"If the Jews wish to be shamed in the sight of the world, let them have an independent Jewish State in Palestine at this stage of their development."

With regard to the second statement to which Mr. Tolkowsky takes exception, here again I think he attaches a special and limited meaning to the word Zionist. And my statement obviously referred less to the Jews who were admitted into Palestine than to the multitudes who were refused admission by the Turkish Government.

I am, Sir, yours faithfully,

MARMADUKE PICKTHALL.

Padstow, Cornwall, July 29.

TANGIER TO TEHERAN.

The discovery of a fine mosaic of the early sixth century Christian Church on the Palestine battlefield, under works recently occupied by the Turks, north-west of Beersheba, is not the first debt that archæology owes to British troops in this war. At Salonika, in conjunction with the French, they have converted the White Tower into a museum in order to house the archæological "finds" made in the course of trench digging and similar operations. I do not remember having heard what proportions the museum has attained, or whether any of its contents are of striking value; but the idea of collecting and preserving the antiquities for Greece's benefit would alone have given the lie to King Constantine's memorable dictum to the effect that he saw no difference between the occupation of Greek soil by the Allies and the German occupation of Belgium.

***

Interesting archæological discoveries in Greece are by no means confined to formal or official excavations. When I lived in Athens, a good many years ago, it is true, now, it was by no means an uncommon occurrence to tap some fresh source of antiquities, when, for instance, modern requirements necessitated the foundations of a house or building to be taken lower down than the last. Similar experiences were common up and down the country, and, of course, the world owes to that circumstance part of the steady enrichment of its archæological museums. The Greek Government now keeps a sharp look-out on all antiquities, and nothing of any value is supposed to leave the country, unless the Ephors of the Athens Museum certify that they have no use for the antiquity in question. But, as may be supposed, some valuable objects still find their way to the outside world.

***

The old definition of "news" is something that ought not to happen. I am reminded of it by a recent item of news about the exploits of Russia's women soldiers. Perhaps I am out of date in my ideas, but I like this development of the Russian Revolution as little as the cowardice and treachery of certain Russian regiments. It all points, surely, to a lack of balance. Could anything stand more self-condemned, when we are informed that the women carry with them a poison tablet, or something of the sort, for use, if necessary, when captured? In East Africa the white women whom the Germans, when they retreated, left on the hands of General Smuts' force, were found to be provided with such tablets for fear of a native rising before the British troops could reach them. But one of the first things to be done after our occupation was, I am told, to throw the hateful tablets into the bush.

***

But to get back to the Russian amazons. Of course, it is easy to make a "good story" out of their exploits, and possibly political capital as well. Perhaps some such action on women's part in Russia was necessary to shame the men who were refusing to fight. But we are told that among the German troops whom they captured women were also found. Is this an intermediate stage to the German Emperor's last cat and dog? The one thing Russia does not lack is man power, so there is no necessity for the women's corps; and if any considerable body of women was found so eager to take their part in the national defence, it would have been thought that ample scope could have been found for their energies in the munition factories which are lying idle, because the men are demanding impossible wages or are refusing to work. It looks as if we had to be rather chary as to the extent to which we heap eulogies on all the details of the Russian Revolution.

CORSAIR.

PARCELS FOR PRISONERS IN TURKEY.

According to information furnished by the Swiss Post Office, parcels may again be transmitted, in limited quantities, to prisoners of war in Turkey. Such parcels are, therefore, again being accepted at post offices, subject to the general regulations governing the acceptance and transmission of parcels for prisoners of war.

NEAR EAST BOOKSHELF.

THE EXPANSION OF EUROPE.*

Although Mr. Ramsay Muir does not profess to have written either an exhaustive or a very novel book, he has set out in clear and accurate form the various forces which have led to the growth of European Powers and to the spread of their colonising activities. If he is a little contemptuous of the commercial motive at times, and rather prone to insist on the free trade ideal of the British Empire, that is perhaps natural in a professor at Manchester, which in these times thinks to-day what England thought yesterday. The balance is redressed in Mr. Colvin's book, "The Unseen Hand in English History," which attributes a commercial motive to everything.

Mr. Muir does well to point out the supreme weight of the Baghdad Railway scheme in the German politics of domination; it is a point that is constantly forgotten in England from our absorption in the West. It would have been well, if he had given some details of the German methods of gaining concessions in Asia Minor, both before and since the war—it would have given his story just those convincing details in which it is something lacking at present.

We note his statement that a treaty between Britain and Germany, dealing with the future of the Baghdad Railway was on the point of being signed when war broke out. He does not give the details, but his reference to Herr Rohrbach's remark that England made generous terms prompts us to add that the terms were understood to be that Germany was the sole concessionnaire of the railway, but agreed to make its terminus at Busreh instead of the Persian Gulf; Britain and France obtained certain minor concessions, but on the strict understanding that these did not compete with the German line. In other words, we were to provide feeders for German traffic—a glorious rôle! But the curious thing is that the existence of these negotiations has been recently denied by Mr. Arthur Balfour, although they had been so generally commented on by both British and German publicists that a careful writer like Mr. Muir has no hesitation in accepting the statements as genuine. A cynic who has seen a good deal of history in the making once said that the only things which never happened were those which were solemnly vouched for by the leading documents in the case, and that sardonic view would seem to have some justification in the present instance.

Mr. Muir's book deserves to be widely read for its sane and balanced view of the forces which have led to the expansion of Europe, and precisely because it is so sound an exposition of the inevitable imperialism of a strong civilisation, it will be condemned by the pacifists and men of kindred schools.

THE ECONOMIC WAR†.

If anybody on the wrong side of the Rhine reads M. Victor Boret's "La Bataille Economique de Demain," he will see that France at least takes seriously the Paris Economic Conference. The author points out that the Entente consists of industrial and agricultural Powers, Britain being at the head of the former and France of the latter. He emphasises, however ,that France's position has some elements of weakness, since France cannot do without English goods, whereas England can do without French goods. That may be true in a strictly utilitarian sense, but it will be a bad day for this country when our men give up Burgundy and our women refuse the law of Paris. M. Boret recognises that neutrals may feel aggrieved by the Paris resolutions, but neither in France nor in England shall we lie awake o' nights over their tribulations; a more important matter is the development of commerce between Russia, Serbia, Roumania, and the Western Powers, on which he touches in one chapter, without, however, going into detail. Our own free traders, who are ready to be exploited again by Germany after the war, will derive no comfort from M. Boret's masculine reasoning.

BOOK NOTES.

Messrs. Hodder and Stoughton have recently published the following war pamphlets, at the price of 2d. each:—"The Justice of Roumania's Cause," by A. W. A. Lepper; "Greater Roumania: A Study in National Ideals," by D. Mitrany; "The Welfare of Egypt," by J. S. Willmore.

The Broadway House will shortly publish a book entitled "Roumania," by Leonard Magnus.

In the early autumn Mr. Murray will publish "Inside Constantinople: A Diplomatist's Diary during the Dardanelles Expedition, April to September, 1915," by Lewis Einstein. The author was special agent at the American Embassy at Constantinople during this period.

When M. Jean Maspero, the Curator of Papyri for the Cairo Museum, left Egypt in 1914 to take his place in the French Army, he brought with him the manuscript of the third volume of his "Catalogue des Papyrus Grecs d'Epoque Byzantine," a work which he had been editing since 1910. He was killed on February 15, 1915, but his work on the third volume has been brought to a conclusion by his father, Sir Gaston Maspero, and M. Bernard Haussoullier. The three volumes deal with the administrative and public life of Byzantine Egypt.

Lieutenant-General Sir Bryan T. Mahon has contributed a Foreword to "The Pals at Suvla Bay." This volume forms a record of "D" Company of the 7th Royal Dublin Fusiliers, and is written by Henry Harma. It is published by Mr. E. Ponsonby (Dublin) at 12s. 6d. net.

A KITCHENER TABLET.

A memorial tablet to the late Lord Kitchener was unveiled in Lakenheath Church, Suffolk, on Saturday, by Mr. W. Hayes Fisher, President of the Local Government Board. The tablet, which has been erected by the London Society of East Anglians, bears the following inscription:—"In memory of Earl Kitchener, K.G., K.P., P.C., O.M., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., soldier and statesman, 1850-1916, whose ancestors having resided in this parish, this tablet was erected by the London Society of East Anglians, of which he was president. Te Deum Laudamus." The King was represented at the ceremony by Colonel H. A. Barclay, C.V.O., A.D.C., and others present were Lieutenant-General Sir J. Wolfe Murray, Lieutenant-General Sir Bruce Hamilton, Mr. J. H. Monings, Sir Courtenay Warner, Lord and Lady Bristol, Sir John and Lady Aird, and Sir Henry and Lady Bunbury.

During the proceedings, Mr. Hayes Fisher read a letter from Lord Derby, who was to have unveiled the memorial, but was unavoidably prevented from being present, in the course of which the Secretary of State for War said:—"I would much have liked to talk to my audience about Lord Kitchener, though I feel a great difficulty in doing so at the present moment. After three years of war, it is perhaps not to be wondered at that the public are rather more apt to try to find out the failings of their servants, whether high or low, rather than their good work; and I do not suppose that even Lord Kitchener, if happily he had still been with us, would have escaped criticism. But as time rolls on, and people are able to look back and see the events of this great war in their proper perspective, then will the greatness of Lord Kitchener become more and more apparent. A friend of mine told me that he had heard Lord Kitchener likened to a lighthouse, and I cannot think of a better simile. He stood with the waves of criticism and complaint breaking against him, and leaving him untouched and unharmed, shedding a steady light on determined purpose and devotion to duty. . . .

"Of his personal character I would say very little. Only those who knew him well really understood him, but I claim that my great friendship with him and devotion to him entitle me to speak of him in his private capacity. To many he was an enigma, and some have likened him to a Sphinx. They may be right, but I know he was a great soldier and a straightforward, upright English gentleman, with a stern sense of duty—a duty which he invariably carried out himself in the strictest possible manner, and which he expected others to carry out in the same way. He was a very faithful friend, always searching for the good qualities of those who served him rather than trying to detect their faults. He realised the difficulties under which his subordinates, both civil and military, were working, and, recognizing those difficulties, was tolerant to those who may not have come up to his expectations, but who, he knew, were doing their best—and what can a man do more than his best? He never varied for a moment in his confidence as to the final result of the war, and though a year or more has passed away since his death, I feel perfectly certain that had he lived he would still have been found with the same confidence, and rightly so. He had implicit trust in the nation, just as the nation had trust in him, and I venture to say in conclusion that the best tribute that we can now pay to his memory is that everybody, man and woman, should do their best to carry on his work by devotion to the duty which lies in front of them."

In performing the unveiling ceremony, Mr. Hayes Fisher spoke of Lord Kitchener's great tenacity of purpose, his grim determination always to pursue any path to the end when once he had entered upon it, and his indefatigable industry. His two greatest achievements were his work in Egypt and the way in which he raised millions of men imbued with his spirit at a time when the giant German Army threatened to eat up the little British Army. His death was even more striking than his life. He ennobled his life by the death he died, as thousands more were doing.

3	21	Friday	14	15
4	22	Saturday.....	15	16
5	23	Sunday	16	17
6	24	Monday	17	18
7	25	Tuesday	18	19
8	26	Wednesday	19	20
9	27	Thursday	20	21

The Roumanian Minister returned to town on July 27 after his visit to Manchester.

M. Gennadius, the Greek Minister, visited Mr. Balfour at the Foreign Office on July 31.

General Rudeano, the head of the Roumanian Military Mission, left London on July 26 for Paris.

M. Beza, of the Roumanian Legation, arrived in London on July 26 from Jassy.

Viscount Gough has left his residence in Upper Belgrave Street for Harrogate.

Major N. Arion, Roumanian Military Attaché, left London on July 27 for the South of England.

M. Miroslav Spalaykovich, Serbian Minister in Petrograd, has been appointed Serbian Minister in Rome.

Mr. Dodge, the United States Minister to Serbia, arrived at Corfu with his family on July 24.

Mr. K. C. P. Struvé, Governor of the White Nile Province, returned to Khartoum on July 9.

Mahamed Ali Khan Ehtesham Homayoun, First Secretary to the Persian Legation in London, is confined to his room through illness.

The Greek Ministers lately accredited to Turkey, Bulgaria, and Austria-Hungary, with the Legation staffs, have returned to Athens.

Prince and Princess Alexis of Serbia have arrived at Stratford-on-Avon, where they intend to reside for the next two or three months.

Capt. Percival F. Crommelin d'Erf-Wheeler, who was killed on duty on July 24, was a grandson of the late Dr. Blyth, Bishop in Jerusalem.

Lieut. C. A. M. van Millingen, the Rifle Brigade, elder son of the late Professor van Millingen, D.D., has returned to the Front after ten days' leave in this country.

The Sultan of Egypt has conferred the Order of the Nile (Second Class) on General Birdwood and the Fourth Class on the Marquess of Carisbrooke and the Marquess of Anglesey.

M. Pashitch, the Serbian Premier, arrived in London on August 1 from Paris, where he had been attending the Balkan Conference. The Serbian Minister in London met him at the station.

The Queen of Montenegro has forwarded a signed photograph to Lady Roper Parkington, wife of the Consul-General for Montenegro, in appreciation of the services she, as hon. treasurer, has rendered to the Montenegrin Red Cross and Relief Fund.

Sir Malcolm McIlwraith, K.C., was called within the Bar on Tuesday morning in the Lord Chief Justice's Court. He afterwards visited the other Courts in accordance with custom, and was formally invited to take his place within the Bar.

Further search at Khalandri, near Athens, has resulted in the discovery of 400 rifles and 28,500 cartridges. A large quantity of arms and ammunition was found in April after all arms were supposed to have been removed to the Peloponnesus.

Mr. N. E. Ambatielos, the Greek shipowner of Cardiff, Argostoli, and Paris, has made a donation of £20,000 to the French Government to provide for the dependants of the French soldiers who lost their lives at Athens on December 1 and 2 last year.

The death, from typhus, of Major Edward T. Waller, the Commandant of the Alexandria Fire Brigade, took place on July 4, at the 19th General Hospital, Alexandria. Major Waller, who was one of the most popular of Alexandria's officials, was born in London in 1870. After serving for some time in the Queen's Bays, he was transferred to the Egyptian Military Mounted Police, in which he served up to 1899, when he was appointed officer in command of the Alexandria City Mounted Police. In 1905 he was appointed commandant of the Alexandria Fire Brigade.

It is announced that the Greek Government has decided to dismiss two members of the Court of Appeal, M. Dounias and M. Tatarakis, on account of a decision of the Court releasing from imprisonment a lieutenant of reserves who was accused of being one of the principal actors in the attack on the Allied troops last December.

Mr. Justice Horridge, in the Probate Division, has refused permission to presume the death of Sir Marc Armand Ruffer, who was on board the transport Arcadia when she was torpedoed last April between Salonika and Egypt. His Lordship held that as it was only a short while since Sir Marc Ruffer had been missing, the matter ought to be brought on after the Long Vacation.

Flight Sub-Lieutenant Dragusam, who enlisted in the French Army at the outbreak of war, started from Salonika on July 18 in an aeroplane presented by the French Government, flew over Bucharest and Constanza, where he threw out proclamations, and arrived at Galatz on the 20th ult. He alighted in Roumania after having flown about 1,000 kilometres. He has been decorated by the King of Roumania with the Order of Michael the Brave.

An academy has been formed at the Sultanieh Library in Cairo, under the presidency of Sheikh Selim el Bishri, Rector of Al Azhar University, for the purpose of creating Arabic terms to meet the modern requirements of sciences, arts, and inventions, to replace the foreign or colloquial words which have so far been used, and of subsequently preparing a dictionary in Arabic containing all modern terms so created.

On July 28, in the presence of the President of the French Republic and distinguished representatives of France and Roumania, the standard of Stephen the Great was handed over to the representatives of the Roumanian Government in the grand amphitheatre of the Sorbonne. The standard was found by French troops in a Bulgarian convent at Mount Athos, and was sent to France to be handed back to Roumania.

The death at Cairo on July 18 is announced of Captain Ian Macfarlane, R.A.M.C., formerly a medical missionary at Nazareth, who had just been appointed to the Victoria Hospital at Damascus when war broke out. He joined the British Army as a doctor, and went with the Expeditionary Force to France. After a year he was transferred to Egypt, and served with the Sinai troops. His death was due to typhus contracted while in charge of a hospital for Turkish prisoners.

Permission to wear the Insignia of the Third Class of the Order of the Nile, conferred upon them by his Highness the Sultan of Egypt in recognition of valuable services rendered by them, has been granted to Archibald McCorquodale, Esq., formerly Director-General of the Central Gharbia Drainage Projects; Frank Ford Peregrin Walsh, Esq., formerly Inspector in the Irrigation Department of the Egyptian Ministry of Public Works; and Arthur James Knowles, Esq., formerly Engineer in the Bridges Department of the Egyptian Ministry of Public Works. Permission has also been given to Reginald Humphrey Lee Pennell, Esq., of the Egyptian Ministry of Public Works, to wear the Insignia of the Fourth Class of the Order of the Nile.

A correspondent in *The Times* quotes the following extract from a letter received from an officer interned at Castamouni, in Asia Minor:—"The British cemetery here, which up to now contains six graves, three officers and three privates, is at present engaging our attention. We are having tombstones put on each grave, and a wall built round the graveyard. To save expense, 150 officers of all ranks, from colonels to second lieutenants, did coolie work for two days, quarrying and carrying huge stones and baskets of mud up to the cemetery for the purpose of erecting this wall. And the six tombstones now being erected over the graves have been paid for by a general subscription raised by us. One of our senior majors has designed the stones beautifully."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

Sir Albert K. Rollit, the Roumanian Consul-General in London, has been presented with an illuminated address in album form and a neatly-fashioned silver casket by a number of gentlemen representatives of principals of commercial proprietary schools. The presentation, which took place at the London Chamber of Commerce, as a practical acknowledgment of Sir Albert's twenty-five years' successful efforts for the betterment of British commercial education, was made by Mr. George Clark (Clark's College).

As the result of a meeting held in the Town Hall, Manchester, in aid of the Roumanian Red Cross Society on July 27, a committee was appointed to raise a fund for the purpose. The Lord Mayor presided. Monsieur Misu, Roumanian Minister to the Court of St. James's, spoke briefly of the friendly relations that had existed from times before the war between Great Britain and Roumania. He referred to the commercial development of Roumania, saying that the trade of the country was equal to the trade of all the other Balkan States taken together. He expressed his confidence that Great Britain would, after the war, take the biggest share in the development of a united and rejuvenated Roumania. Other speakers were Sir William Grey-Wilson, Miss Mary Henderson, who was in Roumania last year with the Scottish Women's Hospital unit; Bishop Welldon, and Mr. R. P. Goldschmidt, Roumanian Consul in Manchester.

APPOINTMENTS, PROMOTIONS, ETC.

Lieut. F. V. Grierson, King's Own Scottish Borderers, Lieut. A. B. James, Royal Engineers, Lieut. W. G. L. Montagu-Douglas Scott, Lovat's Scouts, Lieut. G. L. Owen, Royal Artillery, have been attached to the Egyptian Army as Special Service Officers with the temporary rank of Bimbashi.

Lieut. R. A. Willan, Royal Marine Artillery, has been attached to the Egyptian Army as a Special Service Officer. He has been granted the temporary rank of Bimbashi and attached to the 12th Sudanese for duty.

OBITUARY.

Lieutenant-Colonel Percy Macclesfield Heath, Indian Army, whose death from the effects of heat in Baghdad on July 14 has been reported, had seen two and a half years' service in Mesopotamia. Colonel Heath was the elder son of the late Captain P. C. Heath, Indian Army, who was killed in 1880 in the Battle of Maiwand. He had been twice wounded in addition to being invalided with sunstroke in August, 1915. Prior to the advance on Kut Colonel Heath was made Deputy Governor of Kurnah. He held the Serbian decoration, Kara George (4th Class), with swords.

THE NEW ROUMANIAN MINISTRY.

The new Roumanian Cabinet is as follows:—

Prime Minister and Minister for Foreign Affairs	M. BRATIANO
Minister of War	General JANCOVESCO
Minister of the Interior and Food	M. CONSTANTINE CONSTANTINESCO
Minister of Finance	M. TITULUSCO
Minister of Munitions	M. VENTILA BRATIANO
Minister of Public Instruction	M. DUCA
Minister of Public Works	M. GRACEANO
Minister of Commerce and Industry	M. DELAVRANCEA
Minister of Crown Lands	M. MARJESCO
Minister of Justice	M. MICHAEL CANTACUZENE

Ministers without Portfolio:—M. TAKE JONESCU, who will be Vice-President of the Council of Ministers, and M. TERIKIDE CONTINESCO.

The Cabinet consists of eight Liberals and five Conservatives.—Reuter.

NATIONAL WAR MUSEUM.

The Committee of the National War Museum are anxious to make, as far as possible, a complete history of the war in photograph. Such a record should be of permanent historic value and European importance. Efforts to obtain similar national collections are now being made by all the other belligerents. The Committee wish, therefore, to make a strong appeal to all friends and relations of officers now serving, or who have at any time served, with H.M. Forces during this present war, for free gifts of bromide photographs. Such photographs should be unmounted and printed on bromide paper, this in order to facilitate docketing and to secure their permanence. If the donors will write on the backs of the photographs they contribute such details as will form a minute concise biography, with dates of promotion distinctions, etc., they will very materially assist the Committee. All photographs received, which should be addressed to the National War Museum, H.M. Office of Works, Storey's Gate, Westminster, S.W.1, will be duly acknowledged.

DOMESTIC ANNOUNCEMENTS

MARRIAGES.

BEAUMONT—HOOLE.—On July 23, at Port Said, Major Henry Beaumont, Lancashire Fusiliers, to Dorice Hoole.

IRWIN—ARATCHITCH.—On the 25th July, at St. John's Church, Territet, Switzerland, by the Rev. A. H. Sewell, H. Greville Wood Irwin, Capt., South Lancs Regiment, only son of Henry Irwin, late of Sydney, Australia, and grandson of the late John Irwin, of Cheetham, Manchester, to Rougitsa V. Aratchitch, younger daughter of the late General Voukoman Aratchitch, of Belgrade.

DEATH.

CAMPBELL.—On June 27, at Jassy, Roumania, of blood poisoning, Ivan Stuart, younger son of the late James Campbell, of Craignish.

KILLED IN ACTION.

D'ERF-WHEELER.—Killed on duty, on July 24, Percival Francis Crommelin d'Erf-Wheeler, Captain, Dorset Regiment, attached R.F.C., beloved eldest son of Grace and Percy d'Erf-Wheeler and grandson of the late Dr. Blyth, Bishop of Jerusalem, aged 23. "Per ardua ad astra."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—

FRIDAY, AUGUST 3, 1917.

THE ALLIED CONFERENCE IN PARIS.

The fact that a Conference of the Allied Powers should be devoted almost exclusively to a consideration of the position in the Near East is in itself a conspicuous development in the general situation. That its proceedings should have been as brief and as businesslike as they obviously were, and yet have apparently given satisfaction to all who took part in them, affords striking testimony of the solidarity of opinion in the Grand Alliance. For it was a discussion on Balkan matters at which Italians, Serbians, Roumanians and Greeks, as well as representatives of the Entente Powers, were present. If there could ever be any excuse for divergence of views in the Allied camp, it would be among the four peoples first named and in regard to the Allied programme in the Balkans. The decisions of the Conference have not been made public, and there will be no desire to go behind the veil of secrecy which, no doubt very properly, has been drawn over them. But certain points emerge from the Allied gathering which are of importance to a general understanding of the whole situation. In the first place, as the French Prime Minister reminded the delegates, it had been decided by France and Great Britain at the London Conference of May 28-29 that they should meet in July with representatives of other Allied Powers to consider their future military action in the Balkans. It is just two months ago that the decision to deal drastically with King Constantine must have been taken by the British and French Governments. Until then the Salonika army had been compelled by the equivocal attitude of the Athens Government to mark time, and it was evident that it must continue to remain inactive so long as it was liable to attack in the rear. But if the Allies had determined to secure the removal of King Constantine from Greece, nothing was more natural than that they should wish to review the military situation once more, as soon as the effect of the new conditions could be gauged. The course of events since the London Conference, it may be presumed, has been, as a German *communiqué* would say, according to plan, if not actually an improvement upon expectations. Greece is now ranged on the Allies' side, and her accession to their cause modifies the conditions which have hitherto prevailed in regard to the military situation in the Balkans. The purpose of the Conference, therefore, was to examine the new state of things and to decide whether it affected the policy of inactivity which for two years has been imposed by circumstances on the Allied army in Macedonia.

The decision of the Conference on this point will be known in due course. In the meantime the Paris gathering has other claims upon our attention. As already stated, all the Balkan Governments, with the exception of Bulgaria, were represented, and for the first time, we must infer, something like a comprehensive view of the whole question was possible. There was no longer any need for reservations conditional upon the attitude of Greece. Two important developments that had to be faced were the proclamation by Italy of a protectorate over Albania and the appearance of Greece on the side of the Allies. From the official statement we learn that the Conference at once approached these questions and came to an agreement in regard to them. As Greek loyalty to the Allied cause was assured, France, Great Britain and Italy undertook to bring to an end simultaneously, and as soon as possible, the military occupations which they had been forced to establish in the territory of Old Greece, Thessaly and Epirus, while maintaining for the duration of the war a naval and military base in the island of Corfu. Only a slight modification of this arrangement was necessary in regard to a portion of Greek Epirus where the new road constructed by Italian and French enterprise to link Santi Quaranta with Florina on the Salonika-Monastir Railway enters Greek territory. It was agreed that for the security of this road the triangle which it cuts out of Epirus should remain under Italian military occupation, but that civil administration should be re-established under a Greek Commissioner. Such an arrangement presupposes a general understanding between Italy and Greece regarding the future status of Albania and the delimitation of its southern frontier. Moreover, as the military problem in the Balkans is the defeat of the enemy, which entails the restoration of Serbia, and as we have to infer that all the Allies left the Conference well satisfied with the decisions taken, it can hardly be supposed that the representatives of Italy and Serbia could be conscious of the existence of irreconcilable differences between them, such as would be calculated to rob the Allies' victory in the Balkans of its real significance. In this connection we may hope that the recent statement in the *Giornale d'Italia* to the effect that the Adriatic question was settled by means of an equitable compromise between Juvoslavs and Italian aspirations as far back as the Pact of London means all that can be read into the words. If the compromise was accepted by both parties and still represents an equitable settlement, then publicists and speakers on both sides have wasted energy that could have been put to better purpose.

Thus there is every indication that the Conference at Paris constitutes a definite landmark in the progress of the war. Nothing is better calculated to clinch the depression that the enemy must feel with the realization of his military failure than the knowledge that the Allies stand even more firmly united than they have been at any previous stage in the war. It has been impossible to ignore the Press polemics between Italians and Jugoslavs over the Adriatic and Dalmatia, and it was difficult to believe that there could be so much smoke without some fire. But evidently pacificatory influences have been at work, and have succeeded in removing misunderstandings. We should like to emphasise the salutary effect that would follow from an explicit statement that all difficulties between Italy and the Jugoslavs had been satisfactorily adjusted. The anxiety of the German Government, which, after all, knows its own people, to provide for it throughout the war a series of tonics to keep it braced up for the part it has to play is an admission that the German will-power is particularly susceptible to extraneous influences. It will do no harm if the Allies take advantage of this weakness. For this reason we welcome the promulgation of the agreement that has been reached between representatives of the Serbs, Croats and Slovenes in regard to the new Southern Slav kingdom. There have been forebodings in many quarters that, however much the Southern Slavs might proclaim their unity, they would never attain it in practice. Time only can decide the question, but it will be admitted that the respective units of the future joint kingdom have taken an important step towards realizing their aim. They have threshed the matter out among themselves, and boldly published the terms of their agreement. The various divisions of the Southern Slav nation have now a definite goal in front of them, and those of them who are still under the Austrian yoke will know how far the prospect corresponds with the sacrifices they have made to achieve that goal. The declaration may not improve the present lot of those within enemy jurisdiction; but it will bring home to Austria and her Ally the strength of the forces against which they are vainly contending.

LOCAL SELF-GOVERNMENT IN ANCIENT EGYPT.

By JOSEPH OFFORD.

The Pharaonic government of Egypt has always been considered as one of the most complete examples of an absolute monarchy. The Royal will was law; the command of the King's officials no subjects could contest, unless it were the priests, who as a body sometimes ventured to do so. A Pharaonic functionary was a despot in his province, and all the inhabitants were subject to his rule. The loss of a certain amount of popular liberty, it now appears from newly-found evidence, had not taken place or had not been completed under the earlier dynasties. During what is known as the Old Empire, at any rate, side by side with the Royal officials and administrators there was another class or body of quasi-authorities termed Sarou, who were independent of the State functionaries, and acted as directors and advisers of the people. Like British justices of the peace, they possessed some powers, as is succinctly illustrated by the fact that the expressive hieroglyph of the four which went to make up their title—"a man with a baton"—was identical with that which acted as determinative in the similar word *srw-t*, which stood for other State officials. Perhaps a better rendering of the meaning attached to a Sarou's position would be to term him an Elder, or Notable, and the French word *prudhomme* comes very close to an interpretation. The Sarou's authority appears to have always been a local one, and not exercised individually, but by a small or large council, or committee, which probably in primitive times, as in ancient Palestine, sat within the shade of the city gate, prototype of the once, but now no longer so, Sublime Porte. Like many old Egyptian words the root of *Sarou* and of *srw-t* appears to be connected with a Semitic form, in this case the word *sar*, a prince, or governor, in Babylonian and in Hittite.

During the period of several dynasties there was a special body of the Sarou which apparently acted as arbitrators and justices in cases submitted from all parts of Egypt. This assembly was called the *Kenbit*, which means angle or corner; and M. Moret, in his essay upon the "Appeal to the King," in ancient Egypt, explains that the title was derived from the body holding its sittings in the corner of the great hall of the palace. The Kenbit does not seem to have been in any sense a privy council, or to have partaken of the nature of the modern Japanese Board of Elder Statesmen, because its jurisdiction, as far as we know at present, did not embrace State or national administrative matters. Its decisions were rather appealed to in disputes concerning contracts, boundaries, the subdividing of property, wills, and sales. There is no record of the special designation of the Kenbit which was associated with the residence of the Court; but we know that the Kenbits of the capital cities, such as Memphis, enjoyed the epithet of Great Kenbit in contradistinction to those of the minor towns and country districts.

A good deal of information as to the powers and performances of the Sarou can now be obtained from the valuable series of royal decrees of immunity granted to the persons connected with certain temples at Coptos, first edited by MM. Adolphe Reinach and Weil, to which one or two similar records have been added by M. Moret. These ordinances are for the purpose of restricting the Sarou of Coptos from compelling the privileged persons there from performing various corvée to which all ordinary persons were liable. The special protection Pepi the Second grants in these very early edicts was accorded to the hierarchies and their dependents of the temple of the deity of Min, and of a kind of theological college termed the King's House, a monastic confraternity created to act as hierophants in the cult of a divine statue of the deified Pharaoh, to provide funds for the upkeep of which an agricultural sacred domain had been set aside. Everyone connected with these establishments was for all future time to be exempted. From the wording of these decrees it is evident that the Sarou commandeered for the corvée by two different processes. The first was by ordinances issued by themselves, which were not, however, finally compulsory, unless countersigned by the administrator of Southern Egypt. This arrangement appears, as does the whole series of facts concerning the Sarou, to have appertained because the Sarou system was intended to mitigate the rigidity of rule by despotic royal power, there being no evidence that the Pharaonic bureaucracy, however elevated a member of it might be, could visé the Sarou's regulations. Their sanctioner had to be the great provincial ruler who would know the circumstances of the inhabitants, and perhaps his sympathies might be contrary to the views of the royal officials.

The second process adaptable by the Sarou was to issue regulations copied from royal decrees or laws. In this case the provincial administrator need not countersign them. They were already commandments having State benediction, and if they happened to be similar in terms to that which the Sarou desired to enforce, they could be utilised without requiring any supervisor's permission.

We do not know all about these questions yet, so are not certain that it was not the duty of the Sarou to issue all the Royal decrees by having them engrossed and distributed, or whether they did not merely issue them when it suited their purpose. What is clear, however, is that if their orders were copied from the Royal decrees, they were immediately legal, acting quickly, like a special summons; whilst, if they were a new kind of regulation, there was delay until the Governor endorsed them. If they were not only new, but opposed to the Royal edicts, the difficulty of securing his assent, if his office depended upon the Royal prerogative, may have caused still more postponement, and perhaps refusal. But still, the very existence of the Sarou, whilst they did exist, exhibits some attempt to protect the people by preserving a faint appearance of local self-government. Moreover, the inscriptions refer to the Sarou being employed for the collection of taxes and for the keeping of the district fiscal accounts. Thus they may have tempered the severities of a rapacious administration. We must not hope that too much benefit was the result of their functions, for at some time or other, if not from their first inception, the Sarou's ordinances were not enforcible by their own power or their own officials, but only by means of the Royal functionaries, who were subordinates of the Administrator of Southern Egypt. If questions or lawsuits arose between persons concerning matters that were unconnected with Government regulations the Sarou could decide them. Probably dissatisfied and rich litigants could appeal to the palace royal Kenbit-Sarou assembly, if they cared to do so. Multitudes of the population were tenants upon lands forming part of the Royal domains. These were eternally claiming exemptions of all kinds, and doubtless gave the Sarou much work to do. The clerics were still more importunate in such alleged or genuine privileges, and more difficult to appease.

These facts introduce a curious and interesting question of what may be termed a specially Egyptian character, which is, are all these Coptos decrees genuine?

They state that certain benefits were bestowed upon selected shrines and their entourage—very valuable benefits indeed financially. Similar documents alleging endowments to persons and places, to the hereditary enjoyment of emoluments set up in much later times are known now, although they state they are authentic and careful copies of ancient pious foundations, to be forgeries, because they are not inscribed in the terms or with the hieroglyphical or the hieratic writing forms proper to the age from which they profess to be derived. The Coptos decrees do not indicate any signs of being even doubtful. Their contents are a surprise, because they set forth a degree of culture and organised legislation unexpected at so early a period. The crudities of the religious texts inscribed in the contemporary Sakkara pyramids had led Egyptologists to consider the civilisation of the time of the Pepis and Unas as very primitive indeed. It is never quite safe to judge of an age's progress and its people's environment by its theological books, because they are probably copies of a sacred literature composed long ago, but held in reverence partly because of its antiquarian obscurities and old world beliefs. The terms and composition of the decrees and their script are familiar to those of the many other inscriptions and funerary texts of the same era, and they are certainly originals, and not late replicas.

Finally, it may have been noticed, nothing has been said about a salary for the Sarou. So far as the records have hitherto been read the office seems to have been honorary. But then they were dwellers by the Nile, and there, whilst rain is absent, baksheesh, as far as we know, has ever been present. May it not be that this explains the omission. The varying and often arguable status of the numerous disputants would, perhaps, render the right decision, or precedents for it, obscure, and then? Well, even Thoth, at the very tribunal of Osiris, seems to have in some cases accepted baksheesh. If mortals whose devotion to duty was unremunerated did so, shall we complain?

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Dardanelles Report. July 26.

Mr. BONAR LAW, in reply to Colonel Archer-Shee, said that he was informed that it was not possible to say when the Dardanelles report would be received. The Government would, as the hon. member suggested, consider the advisability of refraining from publishing any more reports of commissions of inquiry. He was not aware of any report having been published by the German Government of the result of their inquiries into their failure to attain their military objectives on many occasions.

Rations in Palestine.

Mr. MACPHERSON informed Sir H. Dalziel that he had received no complaints in regard to the poorness of the food supplied to the British forces in Palestine, but inquiries were being made as to whether it was possible to introduce some variety into the scale of rations there. A demand had been made recently for an increase of the monthly reserves of personnel in relation to the care of the sick and wounded in Central and East Africa. They knew of no shortage of equipment or drugs, and could fully meet all demands, but a recent cable asked for expedition in supply.

Widows' Pensions. July 27.

Colonel YATE asked the Pensions Minister if he would state what pension the widows and children of officers who died during the siege of Kut would be entitled to under the new Royal Warrant; and what pension the widows and children of officers who died of cholera and other diseases during the operations in Mesopotamia prior to April 1, 1917, would be entitled to.

Sir ARTHUR BOSCAWEN: In cases where the illness causing the officer's death is directly traceable to fatigue, privation, or exposure incident to active operations, whether under the first or second part of the hon. member's question, the pension to the widows and children will be, before April 1, on the scale known as the "intermediate," and after April 1 on the scale known as the "highest." The rates are fully set out in the second schedule of the new Warrant, but I may say that the rates for the family of a captain or subaltern will be £75 for the widow and £20 for each child before April 1, and £100 for the widow and £24 for each child after that date.

The Balkans Question. July 30.

Mr. J. A. BRYCE alluded to the speech made by Mr. Noel Buxton on July 24 on the Balkans question. He said that the hon. member appeared to have gone back on the views expressed in a book published in 1915, wherein he put the case forcibly for the break-up of the Austrian Empire. But now the hon. member gave the House to understand that the Slovaks, Slovenes, Czechs, Croats, and other subjects of the Empire all had *une idée Autrichienne*. This he (Mr. Bryce) questioned very much. He could not believe that the attitude of the new Government in Russia would be one of the maintenance of tyranny in any region. The House was entitled to a statement from the Government regarding its attitude to Serbia and its attitude to the whole quesion of the Austro-Hungarian Monarchy.

Mr. A. J. BALFOUR, in the course of his reply, said: My hon. friend who has just sat down (Mr. A. F. Whyte) and the newspapers all call for precise statements as to what we are going to do in this or that part of Europe—what is the proper method of treating the Jugoslav question, and what is the proper method of treating Austria. You cannot deal with these problems in the precise spirit in which you can deal with an historic problem in the past. None of us has the power of foreseeing the circumstances in which the world will find itself when these problems are finally decided, unless you can arrogate to yourself the gift of prophecy. How can anybody commit himself and his country—and perhaps in a certain sense the Allied countries—to precise statements upon these immensely important questions? You cannot do it, and I feel I should be doing a very ill service to the country were I to attempt to do it now. The debate began by a dispute as to the precise method in which the Austrian Empire was to be treated. What we desire, of course, is that the nationalities composing that heterogeneous State should be allowed to develop on their own lines, carrying out their own civilization and determine the course in which their development should take place. But some of my friends are not content with that statement. They ask:—Do you mean to do that by joining Serbia with Croatia, by separating Bohemia from Hungary? Surely a Foreign Minister dealing with events which are still distant, I fear—I mean peace discussions—would be foolish to discuss that to-day. In any event, as everybody knows, we entered into this war in those early days with little in our mind besides the necessity of defending Belgium and the necessity of preventing France being crushed before our eyes. Those were the two motives that brought us into the war. Nobody with the smallest knowledge of the facts supposes that when Sir E. Grey and the Government of which he was a member made that fateful declaration on Monday, August 3, there was in the mind of either the people who made the declaration or those who listened to it the smallest thought of those great problems which in the course of the war have opened out upon us. Only this is clear: we did not enter the war with any selfish purpose. We hear the phrase now echoed and re-echoed—No Imperialist policy. No war indemnities. We did not go into this war for an Imperialist policy, and certainly not to get indemnities. We entered into it and we have remained in it for purposes which—nobody who understands public opinion in this country will doubt it for a moment—are really unselfish. I do not think, therefore, that we have got anything from that point of view to give up.

The Mesopotamia Campaign. August 1.

Mr. MACPHERSON, replying to an inquiry by Mr. KING whether officers blamed in the report of the Commission on Mesopotamia would be tried by court-martial, said:—The Army Council have called upon the officers subject to their jurisdiction to furnish written explanations of the statements contained in this Report relating to their conduct of their official duties. On receipt of those explanations the Council will consider what further action is to be taken in each case.

The United States and the Balkans.

Mr. KING asked the Secretary of State for Foreign Affairs whether the United States accepted the invitation to send a representative to the recent Paris conference on Balkan problems; and, if not, what reason could be given for the absence of such representative.

Mr. BALFOUR replied:—The United States Government were invited to the conference, but preferred not to accept the invitation. Their reasons for this decision are entirely the concern of the United States Government themselves.

Distress in Serbia.

Mr. BALFOUR, replying to Lord HENRY CAVENDISH-BENTINCK, said:—The distress in Serbia and various suggestions for relief have repeatedly engaged the anxious consideration of the Allies. The position of Serbia is by no means analogous to that of Belgium. Prior to the war there were net exports of foodstuffs from Serbia valued at about two millions sterling, while in Belgium there were net imports of about 23 millions. As regards Belgium, the Germans gave comprehensive guarantees covering not only foodstuffs imported by the Relief Commission, but also the reservation of native foodstuffs for the Belgians. As regards Serbia, it has been impossible to secure similar guarantees, and the Austro-Hungarians and Bulgarians have requisitioned practically all native foodstuffs. His Majesty's Government have several times declared their readiness to consider sympathetically any practical scheme for Serbian relief embodying essential precautions. No such scheme has yet been presented, and, so long as the hardships of the Serbians are chiefly due to the requisitions of the enemy, his Majesty's Government are unable to accept suggestions which appear only calculated to replace by imported supplies the rations now allowed by the enemy, who would, therefore, benefit directly to the extent of any such imports, without the position of the Serbian population being materially improved.

THE PRESS ON THE NEAR EAST.

Eastern Strategy.

Mr. Lloyd George has announced that the fate of Mesopotamia will be settled at the Peace Congress. Provided there is no confusion of thought between Germany's admission of defeat, with the implied acceptance of the Allies' peace terms, and the Congress which will re-draw the maps of Europe, Nearer Asia and Africa, no fault can be found with the decision. The new order must be formally accepted and ratified. In the meantime it is enough to have the assurance that Mesopotamia is never again to be "restored to the blasting tyranny of the Turk." The Russian fiasco, however, has given rise to some uneasiness with regard to the present military situation, a feeling to which the military correspondent of *The Times* is not altogether a stranger when he hints that

The Russian failure in Europe and the continuing absence of indications of any Russian activity in Asia Minor inspire serious reflections, and demand the reconsideration of all our Eastern strategy. . . .

As a matter of fact, climatic conditions are a formidable obstacle to military operations on the part of the Turks as well as our own forces, and before they mend the Russians will have recovered, let us hope, their self-mastery.

The Future of Mesopotamia.

The potentialities of the Arab race are the subject of an article by Dr. T. Miller Maguire in *The Outlook*. He dismisses the supposition that India will look favourably upon a scheme of colonisation in Mesopotamia:—

Are the Arabs fit to help us in our new burdens of Empire, especially if their present "Caliph" and head of their religious organisation, the Sultan of Turkey, is our foe? Are the wild Bedouin not the true descendants to-day of him from whom they claim descent—Ishmael? Is not their wandering spirit incapable of industrial rest?

All Arabs are not Bedouin by any means, and their townsfolk and tillers of the soil and caravan drivers and traders have no more fellow-feeling with Bedouin tribes than had Glasgow merchants with the MacGregors and with Rob Roy. Moreover, the several tribes are often at sincere variance with each other, just as were the Scottish clans in the seventeenth century.

It were a pity indeed if the Arabs could not take part once more in the revival of Syria and Assyria and in the further aggrandisements of their own Arabia Felix. Their present opportunities under British guidance and non-party rule can become unexampled, and unless I am strongly misinformed their revival is at hand, and cannot be interrupted either from Turkey or India, and their Egyptian and Sudan flanks are secure. Have they deteriorated? It is beyond any doubt that in physical prowess and types of body the Arabs are the equals of any other people in any land, and are superior, male and female, to the slum and feeble folk of the European manufacturing and labour types; in mental qualities they have still no superiors, and their religious and their traditional views and deeds under the influence of "Allah" (as lately expounded in London societies) become sublime. At any rate, we were well assured at the London meeting that the Arabs are a very fine race indeed, and capable of being rapidly organised for the restoration of the prosperity, agricultural and commercial, of Mesopotamia; and the sphere of industrial operations will extend from the mouth of the Euphrates to the site of ancient Nineveh.

In all schemes for the future of Mesopotamia, one of the chief problems must necessarily be the adequacy of the population to cope with the material capacity of the country. In other words, will the nomad Bedouins settle down to cultivate the soil? Dr. Maguire has no definite opinion to offer on this point. He writes:—

At present the so-called Arabs of the deserts north of Arabia and east of Palestine are rather marauders or guerilla soldiery than special constables for the safety of traffic and captains of industry. They must cease to trouble by their forays. One of our special correspondents is an expert soldier and man of science also, like the Arab engineers of the Caliphs, whose mighty dams and reservoirs and irrigation works still excite the awe-stricken admiration of the thirsty wayfarer in these lands. He writes to me: "I imagine if the Arabs—*i.e.*, certain Bedouin tribes—can be brought into order and the safety of peaceful settlers assured, that there will be an immense influx of non-Muhamadan settlers from Anatolia and the Caucasus." Indeed, in a very short time even Arabia itself, which has been more or less disturbed by civil wars and feuds of every description ever since Lord Byron, in the time of Napoleon, wrote about "Wahab's rebel brood," would be all the better if the fine qualities of mind and body and soul which were so distinguished in the seventh century could be diverted from Home Rule factions to restoring Mesopotamian civilisation in the early part of the nineteenth.

Great Britain and the Arabs.

The Statist, on the other hand, is attracted by the possibilities of Indian emigration to Mesopotamia. It takes it for granted that Arab interests would be safeguarded, and that the Arabs will supply a portion of the necessary colonisation. A settlement of extraneous populations of some kind, it holds, is indispensable, and it sees the probability of very great advantages in the introduction of both Arabs and Indians. But not the least interesting part of *The Statist's* article is the clear argument for Great Britain acknowledging unequivocally her interests and obligations in this region:—

It may well be doubted whether the Arabs, as they exist at present, are capable of forming an orderly, progressive, and self-supporting State. Presumably, therefore, it will have to be a protectorate of some Power greater than the Arabs just now are capable of creating. And there is much to suggest that the British Empire is the only Power capable of filling the place adequately. We do not think that the suggestion is dictated entirely by national greed or national ambition. Frankly, we of this journal are persuaded that the British Empire is already quite large enough, and that additions to it are much more likely to imperil its future than to strengthen it. Nevertheless, we fail to see what other State amongst the Great Powers can fill the place suggested. To begin with, Mesopotamia lies on the road to India, and it is important in the interests of India, to put the British Empire itself altogether out of the question, that there should not be introduced a neighbour that might prove a thorn in the side of India. In addition to this, Great Britain is intimately concerned with the Persian Gulf. She has made it known to be her policy for many a year that she will not tolerate serious interference with her interests in the Persian Gulf. Consequently, to avoid squabbling, it is advisable that no other Power should be put in a position which might enable it to dominate the Persian Gulf. It is unnecessary to adduce other reasons. Everyone who is capable of taking an impartial view will see that the most probable way of really giving Mesopotamia a chance of progress and of growth is to place it under the protectorate of the British Empire.

Serbia Reborn.

Under the above title a correspondent recently returned from the Macedonian front gives, in the *Illustrated London News*, a picturesque account of the reorganisation of the Serbian Army, and introduces his readers to the commander of the second Serb Army.

Near the camp of the Second Serb Army at Corfu a British motor transport unit had established a little open-air concert place. It was situated in an olive grove, had a central platform of raised turf, and circular benches of turf for seats. The Serbs, devoted to music, soon found out this grove. By some means a grand piano had been obtained. Serb national songs—the warring laments of Kossovo, the soft complainings of village love-songs—resounded from the grove, and were interspersed with "Tipperary" and with French chansonettes.

With the mornings, the music and the laughter of the night forgotten, the thinned numbers of the gallant Serbs remembered it was not so cheerful. The passer-by might see then from the grove, passing along a narrow path leading to a high cliff of the sea coast, Field-Marshal Stephen Stepanovitch, Commander of the Second Serb Army. Every morning, at the same hour he strode along the path—an old lion-like figure, his mane of white hair framing a weather-beaten, granite face. From that high cliff of Corfu, across the water, across Albania, the hills of Serbia could be seen; and the veteran general went up daily to look out on them, to plan, to hope, to resolve.

"Old Lion Stepanovitch."

This is the pen portrait of the Commander:—

A grand old man, Stephen Stepanovitch, standing out among a group of grand old men, as fierce and proud as Achilles, as wise (for he had seen many battles and had known the minds of many foes) as Ulysses. He could be tender to his soldiers, and he could be savagely stern in discipline. Rarely speaking, even to his officers, his few words won always instant obedience and respect. They say he entered the army as a private, and has fought his way up to be Field-Marshal. The story of his victories, and of his more glorious defeats, is an epic of heroism. During this last retreat—when the Serbs, having beaten back the Germans twice, were finally conquered through the foul and treacherous attack of the Bulgars—Stepanovitch brought forty-nine guns in safety over the Albanian hills to Scutari. His soldiers tell with awe and affection that the old Field-Marshal would at times himself haul at the drag-rope of a gun, and, crossing himself, the soldier would add: "His strength was the strength not of a man, but of horses."

Pathos—yes, in thinking of the old man on his daily pilgrimage to look upon the hills of Serbia! But hope and reassurance too; for now he is back to regain Serbia, and with such lion-hearted men the future of his race is assured.

The Balkan Theatre.

It is undoubtedly hard to accept as the last word in military strategy the statement that it is impossible for a regular army under modern conditions to carry out a successful campaign on the Macedonian front. The military correspondent of the *Times*, who has been in the forefront of the "Westerners," and was at one time very bitter against "side-shows," now admits that:—

We can certainly hope that the Allied Forces at Salonika, in Egypt, and in Mesopotamia, combined with such forces as

Digitized by Google

the Russians in Asia Minor are able to produce, can reduce the Turks to submission, if all the forces in this part of the world are governed by a single and an intelligent will. They are adequate for this purpose, and the single strategic impulsion must surely at last emerge from the urgent necessity of the case.

From this cautious attitude all the changes are rung until we come to an emphatic demand for an advance in Serbia, such as that put forward by "M.P." in the *Pall Mall Gazette*:—

It requires nothing more than common sense, I think, to see that South-Eastern Europe is a decisive front, and that successful offensive action in this theatre is essential if the Allies are to secure the overthrow of Prussian militarism and establish the principles and ideals for which they are fighting. . . If we ask what stands in the way of vigorous action, we shall hear plenty of excuses and a great deal about the political and military difficulties. What we probably shall not hear will be an account of the means of overcoming them. Yet they can be overcome, if we resolve to act up to our honourable engagements and consult our highest interests. To say that Serbia is unhopeful campaigning ground is to forget the brave and successful Serbian Field-Marshal Misitch, who has fought and won on this very ground time after time. To hint that difficulties might arise in associating the various Allied contingents with a strong policy is to overlook the obvious fact that our own country is interested in nothing beyond the restitution of Serbia's nationhood.

If necessary, "M.P." considers Mesopotamia and Egypt should be allowed to develop along the lines of defensive campaigns in order to feed the Salonika army. Then all that would be required would be to make Field-Marshal Misitch Commander-in-Chief, or at least Chief of Staff.

THE CORFU AGREEMENT.

A gala reception in honour of the delegates of the Jugoslav Provinces of Austria-Hungary was given at Salonika on July 26 by Prince Alexander of Serbia. These delegates, who for six weeks had been meeting in conclave with the Serbian Ministers at Corfu, had since visited the Serbian front in Macedonia as the guests of his Royal Highness. Both the Serbian Government and the delegates were highly pleased, according to the *Times* correspondent at Salonika, with the results of their joint deliberations, which have led to a complete agreement touching the main objects held in view and the means of attaining them. The essential features of this agreement, as published in the official organ of the Serbian Government, are as follow:—

The authorised representatives of the Serbs, Croats, and Slovenes, recognizing that the desire of our people is to free itself from all foreign yoke, and to constitute itself in an independent National State, agree in declaring that this State must be founded on the following principles:—

(1) The State of the Serbs, Croats, and Slovenes, who are also known as Southern Slavs, or Jugoslavs, will be a free and independent Kingdom, with indivisible territory and unity of allegiance. It will be a constitutional, democratic, and Parliamentary Monarchy, under the Karageorgevitch Dynasty, which has always shared the feelings of the nation and has placed the national will above all else.

(2) This State will be named "the Kingdom of the Serbs, Croats, and Slovenes," and the style of the Sovereign will be "King of the Serbs, Croats, and Slovenes." The State will have a single coat of arms, a single flag, and a single crown, its emblems being composed of the present existing emblems.

(3) The special Serb, Croat, and Slovene flags and coats of arms may be freely hoisted and used.

(4) The three national denominations will be equal before the law, and may be freely used in public life.

(5) The two alphabets, Cyrillic and Latin, will also rank equally throughout the Kingdom.

(6) All recognised religions shall be exercised freely and publicly, and in particular the Orthodox, Roman Catholic, and Musulman creeds, which are chiefly professed by our people, will be equal and will have the same rights in regard to the State.

(7) The calendar shall be unified as soon as possible.

(8) The territory of the Kingdom will include all territory compactly inhabited by our people, and cannot be mutilated without attaint to the vital interests of the community. Our nation demands nothing that belongs to others, but only what is its own. It desires freedom and unity. Therefore, it refuses consciously and firmly all partial solutions of the problem of its deliverance from Austro-Hungarian domination, and of union with Serbia and Montenegro in a State forming an indivisible whole.

(9) In the interests of freedom and of the equal rights of all nations, the Adriatic Sea shall be free and open to all.

(10) All citizens shall be equal and enjoy the same rights towards the State and before the law.

(11) Deputies to the National Parliament shall be elected by universal suffrage, with equal direct and secret ballot.

(12) The Constitution, to be established after the conclusion of peace by a Constituent Assembly elected by universal suffrage, will be the basis of the life of the State. It will create the possibility of organizing local autonomies. It will come into force after receiving Royal sanction. The nation thus unified would form a State of 12,000,000 inhabitants, which would be a powerful bulwark against German aggression and an inseparable ally of all civilized States and peoples.

NIKOLA PASHITCH, Premier and Foreign Minister of the Kingdom of Serbia;
DR. ANTE TRUMBITCH, President of the Southern Slav Committee.

Corfu, July 7-20, 1917.

At the annual representative meeting of the British Medical Association, held at Connaught Rooms on July 26, a resolution was adopted asking the Council to bestow a mark of the Association's appreciation of the great services which Lieut.-Col. Carter had rendered to the Army and to the State by his public-spirited action in bringing to the notice of the authorities the defects in the medical provision for the Mesopotamia Expedition.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Additional figures are now to hand regarding the trade of Morocco in the year 1916, which go to confirm all that was written on this subject in THE NEAR EAST a week or two ago. The value of the imports into Laraiche, Tetuan, and Arzila (the Spanish zone) was £833,814, to which the United Kingdom contributed £176,365, Egypt £35,586, and Spain £573,008. The figures are set out in greater detail elsewhere to-day.

***

Apropos Morocco, I observe that an important meeting of the British Merchants' (Morocco) Association was held in London on Wednesday at the Cannon Street Hotel. Mr. Robert Samuel Hunter, the chairman of the association, presided, and among the speakers was Mr. J. M. MacLeod, for long a British Consul in Morocco, who spoke from the experience he gained during his intimate residence in, and association with, the country. A fuller report will appear in next week's issue of THE NEAR EAST.

***

British merchants at home, and traders in the Near East, will appreciate the continued interest taken by the Board of Trade in the campaign to capture enemy trade. In order that British manufacturers may have an opportunity of familiarising themselves with German and Austrian methods of advertising, the Board have collected more than 8,000 specimen catalogues of German and Austrian origin, and these may be inspected at the British Industries Fair Office, 32, Cheapside, London, E.C.2. A new index has been prepared, in which the catalogues are classified both as regards articles of manufacture and names of manufacturers, thus rendering identification of any particular catalogue a simple matter. Copies of this index may be obtained by manufacturers in the United Kingdom on application to the Comptroller-General, Department of Commercial Intelligence, British Industries Fair Office.

***

A great deal of interest has been caused by the suggestion made the other day by the London Chamber of Commerce in its report on the Government control of trade that the Government in official undertakings should avail itself more extensively of the services of the business community. There is a general acceptance of the suggestion, although it is not alleged, of course, that the State is unable to manage any business concern successfully. The articles by our Cairo Correspondent, in which he deals with neglected trade opportunities in Egypt, suggest how conditions may be improved, emphasising the utility of State and private co-operation, and I think it will be in this direction that the greatest measure of success will be achieved.

***

The Empire Resources Development Committee supports this view, I see. "Past failures, or but partial successes, have been due to the inadequate recognition" of that principle, the honorary secretary of the committee pointed out recently, "and the committee, in advocating the development by the State of the natural resources of the Empire with a view to paying the Empire's war debt, has consistently laid it down that any board appointed for the development of Empire resources should be composed chiefly of business men. . . ." I do not necessarily express agreement with the aims of the committee—that is another question altogether—but its view regarding the introduction into State affairs of the outside business element is important and worth consideration.

***

I have before me the twelfth annual report of the British Cotton Growing Association for the year 1916, and all interested in this expanding and vital industry should provide themselves with a copy of the document. No point of interest is excluded, cotton interests in every part of the producing world are discussed, and many points of view bearing on production are set out with much lucidity. New fields have been opened up, or are being experimented with, difficulties are explained, and grievances — there are grievances in the cotton-growing business as there are in all others—are shown up.

***

An interesting matter discussed in the report is lack of tonnage. Owing to this exigency of the war, we are told, "it has only been possible to ship a very small proportion of the cotton seed produced in West Africa, Uganda, and Nyassaland, and in consequence many thousand tons of seed have had to be destroyed. It is a great pity that more shipping was not available. . . . It is estimated that the value of the cotton seed destroyed in 1916 amounts to more than £200,000." At the same time, the Council of the Association pay a tribute to Messrs. Elder Dempster and Co., Limited, "who have done everything possible under very difficult circumstances to maintain regular sailings."

***

Shareholders of the Egyptian Markets, Limited, were in great form at the annual ordinary meeting held in London on July 31, when the chairman, Major Le Breton, placed before them an elaborate statement of the working of the company in 1916 and of its position. The dividends and general results of the year have already been described in THE NEAR EAST, but Major Le Breton had many satisfactory things to place before the meeting. "Our present position *vis-à-vis* the Government is very satisfactory, and we need not be without hope that we might be able to continue under an extended or modified contract with the Government" (the concession is terminable in 1938) was one. "Our trading business, on the lines we are conducting it, requires but very little provision of money from us, and we hold that any surplus can be best utilised for the acquisition of further markets," was another.

***

These are matters which my readers may find for themselves in the report of the meeting, which will be found elsewhere to-day. It is a report of success and of progress, and the tribute paid to the management and staff was deserved, for no concern in the Near East has been better controlled and more efficiently administered.

***

The latest "deal" of the Peninsular and Oriental Steam Navigation Company, Limited, does not concern ships, but buildings—they have just purchased from the Public Trustee, who had taken possession under the Trading with the Enemy (Amendment) Act, "Hamburg-Amerika" House, the London headquarters of the famous German shipping company. These are magnificent premises in a fine thoroughfare in a leading locality, and everything in them testifies to the thoroughness of our chief enemy. As the auctioneer declared when putting the building up to sale, "even the indiarubber mat, which spread all over the ground floor, cost between £600 and £700"! The building is now in the occupation of the Ministry of Munitions. The price paid for it by the "P. and O." was £60,200.

***

The troubles of the Bibi Eibat Oil Company have been acute ever since the war broke out, and the chairman, Mr. Herbert Allen, has written to the *Financial Times* a letter in which he amplifies the statement he made at the annual meeting a fortnight ago. In his address to the shareholders, Mr. Allen declared that speeches of Ministers showed that recent events in Russia had brought the industries of the country into such a condition that only a miracle could save the country from economic ruin. He writes in the letter to which I have referred: "Since then" (the date of the meeting) "further letters and newspapers have arrived, and from these I gather that the Government . . . . has now requisitioned the oil required in the interior. That would matter little to the producers were they paid for each month's deliveries on the 15th of the following month, in accordance with the practice which has prevailed in Baku since the oil industry was first created. But the Government is getting more and more behind in its payments, and in the middle of June was only paying for oil taken last February"! Comment does not seem necessary.

THE SUDAN.

No. II.—The Nuba Mountains Province.

BY PERCY F. MARTIN, F.R.G.S.

As was pointed out in a previous article, dealing with Kordofan, the beginning of 1914 witnessed the dismemberment of that province to the extent of some 31,560 square miles of territory, the area being formed into a separate political department, under the title of the Nuba Mountains Province.

It is a country of many hills—few, however, being of any great elevation—but covered for a certain part to a height, say, of 300 ft. to 400 ft. from their base, with a generous soil, which enables cultivation of food crops to be undertaken with success. There are, likewise, lakes—such as the Abu Serai, the Sherkeila, El Rahad, and El Birka—some of which, however, dry up completely after the rains—picturesque wadis and mountain streams. Altogether a desirable land, one might say, but settled with a population not as yet exceeding 35,000.

Products.

The natural products of this favoured region are many, and with more systematic and assiduous cultivation they might be enormously increased. Dukhn, simsim, cotton, tobacco, and other crops are raised, and a small but increasing trade is carried on in the capital, Talodi, which one day may become a flourishing and important centre. Other trade centres and, at the same time, *mamurias* are Dilling, Kadugli, and Tendik.

As part of the Kordofan province, the country had long been regarded as a substantial contributor to the revenues of that department, so that a start had already been made on the road to prosperity. Year by year the area under dura has been extended, the Nubas unexpectedly proving themselves a very enterprising and hardworking lot when their own interests—clearly explained to them by their rulers—are in question. Particularly is this noticeable in the northern half of the province, where the proximity of the railway affords the inhabitants admirable facilities for the ready and lucrative sale of their produce.

When other parts of the Sudan have done poorly, the Nuba Mountains have been enabled to make quite an encouraging showing. Cotton, for instance, has done, and is doing, extremely well, the rains in this region of the Sudan being rather more dependable and, as a rule, more generous.

Not content, however, with the classes of produce enumerated, the Government has encouraged and has practically assisted the planting of date-palms on the banks of the Khor Tendik, near the headquarters of the district of that name. The plants have so far done well, but it must necessarily be some time yet before the experiment can definitely be pronounced a success. What can be said, however, is that Doleib palms flourish remarkably well all along the banks and in the neighbourhood of this khor.

Trade in 1917.

A feature of the trade of the Nuba Province this year has been the exports of simsim from Talodi to Omdurman. This has occurred for the first time in the history of the province. It is hoped that next year even a larger amount of the product will take place, since the natives are beginning to understand the advantages of cultivating it. The fact may in no small measure be attributed to the decrease in transport rates between Tonga and Khartoum. Things look very encouraging in the Nuba Province; the last news to hand shows that some slight showers of rain have been experienced with the promise of more to follow. For the year 1917 the revenue is expected to reach the sum of £E18,750, as against £E19,100 in 1916; on the other hand, the expenditure is expected to be £E21,631, against £E20,257 for the previous year.

Much care and attention have been given to the making of good roads, and one of the best in the Sudan is that between Talodi and Kadugli, the principal thoroughfare for interior trade. Unfortunately, the keeping in repair of this road is a continual expense, the heavy rains invariably causing great destruction to the surface.

Public Works.

In order to facilitate the transport of the ever-extending export trade of the province there has been lately constructed a permanent bridge over the Khor Abu Habl, between Rahad and Jebel Daier. It is believed that this route, at least, will be passable at all times of the year, notwithstanding the heaviest of rains. Another bridge is also contemplated—if not already commenced—over Khor-el-Afin, near Kadugli, on the main road between Talodi and El Obeid. Meanwhile, the road between El Sheg, in the centre of the Awlad Hameid country, and Kaka, on the Nile, has been greatly improved, and wheeled traffic upon its surface is now at almost all times possible. The provincial Administration is evidently, and rightly, of Carlyle's opinion that "good roads are the best proof of a country's advancement in civilisation."

Tendik is becoming of more importance as a trading centre, and has advanced since the headquarters of the district were removed there (some time in 1913) from Tagalle. Tendik is not only more centrally situated, but it has the advantage of being on the El Obeid-Rahad-Talodi road, and traversed also by one of the main Baggara Arab cattle routes of the province. That Tagalle has not itself suffered grievously from the change, however, is shown by the improvements that have ensued there also, the "Sultan" having dispensed with his common grass *tukl* and built himself, if not a "lordly pleasure house," at least a substantial two-storeyed residence, an example which has been followed by several of his more opulent subjects. That the Nubas and the Dinkas, who mainly form the inhabitants of the Nuba Mountains Province, are exceedingly prosperous is rendered abundantly clear by the manner in which many of them now live. They now demand money in place of trade goods in payment for their grain, and they prefer to purchase at their discretion such luxuries as mostly appeal to them—sugar, tea, coffee, and other things such as no native of the Sudan had even heard of before the British Government brought them the means of making money, and either keeping it or expending it upon articles of pleasure. Many of the women of their households have their own sewing-machines, and it is said that more Singer machines have been disposed of in this province than in any other.

Cattle Breeding.

The people have not been without their troubles. In 1914 there was a lamentable outbreak of contagious pleuro-pneumonia among their cattle, and some heavy losses among the stock, as well as among the goats, which were attacked in the Talodi district, ensued. But, with commendable promptitude, the Veterinary Department of the Government took the situation in hand, and the result was the suppression of the disease and the speedy reopening of the province to cattle trade. Herein there is undoubtedly a great future.

In the south there is a small and very active breed of goats, which seem to carry more meat in proportion to their size than the ordinary Arab breed. They could be multiplied and sold at good prices in Egypt or locally. The future of the horse-raising industry might also be assured were some pains to be taken in this direction. The Baggara tribes own a particularly poor-looking, weedy breed, which might, however, be very much improved by importing a few good stallions, and which, it is believed, would do very well in the country after a time.

The one drawback to Nuba Mountains is the climate for some—indeed, for the greater—part of the year. The rains being very heavy, there is always more or less malaria in the district, while the number of disease-carrying insects is very considerable. Nevertheless, the general health of the people, both European and native, is said to be "good," and if this is so, it is doubtless due to the precautions that are taken to keep in subjection, as much as is possible, the pests referred to.

TRADE AT MOROCCAN PORTS.

Figures of the Spanish Zone in 1916.

H.M. Agent and Consul-General at Tangier (Sir H. E. White, K.C.M.G.) has furnished the following particulars of the foreign seaborne trade of the ports of the Spanish and French Zones in Morocco during 1916, compiled from statistics published in the respective Official Bulletins of the Zones:—

The value of the imports during 1916 into the various ports of the Spanish Zone was as follows: Laraiche, £385,762; Tetuan, £423,020; and Arzila, £25,032; making a total of £833,814. The total value of imports into the above-mentioned three ports in 1915 was £853,996.

The value of imports from the principal countries of consignment during 1916, as compared with 1915, was as follows:—

—	1915.	1916.
	£	£
United Kingdom	218,882	176,365
Egypt	25,924	35,586
Spain	511,951	573,008
France	38,071	22,693
Netherlands	31,036	12,057
United States	9,544	9,380

The value of the exports from the ports of the Spanish Zone in 1916 was as follows: Laraiche, £103,934; Tetuan, £7,390; Arzila, £655; making a total of £111,979. The total value of the exports from these three ports in 1915 was £84,661.

The respective shares of the principal countries to which exports were consigned were as follows:—

—	1915.	1916.
	£	£
United Kingdom	27,792	28,212
Spain	43,179	79,368
France	8,147	4,205
Italy	5,204	137

It will be observed that the total value of imports into the Spanish Zone in 1916 was somewhat lower than in 1915, whilst that of exports was considerably higher. As was to be expected, it was Spanish trade that especially increased, whilst British and French trade both decreased. The importation of sugar from Egypt caused the greater part of the rise in the value of imports from that country.

The increase in the import trade of Tetuan as compared with that of Laraiche is a notable feature in the return, the trade of the former having been previously insignificant, whilst that of Laraiche was important, goods for Fez passing largely through the latter port. This trade, however, is gradually being diverted to Kenitra and Rabat, so that the imports at Laraiche are declining. It is difficult in the absence of detailed statistics to account for the great increase in the import trade of Tetuan in 1916, but, if statistics were available, it would probably be found that a large proportion of imports into that port consisted of Government and military stores.

The French Zone.

Supplementing the information contained in the notice on pp. 167-8 of the *Board of Trade Journal*, of April 26, relative to trade at French Moroccan ports in 1916, Sir H. E. White has forwarded provisional statistics showing the values of the principal articles imported into the various ports of the Zone during 1916. The most important items are the following (the values being calculated at par):—

	£
Sugar	1,723,723
Cotton piece goods	1,315,261
Tea	451,555
Candles	235,256
Machinery, iron, and hardware	215,245
Mineral oils	166,522
Flour and semolina	157,385
Coal	147,634
Cement	124,794
Soap	96,010

The *Neues Pester Journal* declares that crop prospects in Austria are unfavourable.

LANCASHIRE COTTON.

Diminished Demand for Piece Goods.

(From Our Own Correspondent.)

Manchester, August 2.

There have been indications of a falling demand in the market during the past week and sellers have met with rather less encouragement. The quieter state of affairs has been somewhat due to the uncertainty which prevails as to the position of the industry when the scheme of the Control Board with regard to the curtailment of production is put into force. It is understood that the proposal is for a stoppoge of 40 per cent. of the spinning and weaving machinery throughout Lancashire, but at the time of writing no official statement has been made.

The outlook for supplies of Egyptian cotton continues rather better, but there is much difficulty in shipping supplies from Alexandria to this country.

In the Egyptian yarn section there has been some anxiety owing to rumours relating to the financial position of certain firms. It is understood that the owners of some mills have gone short in the raw material, and of course the market has gone against them.

Buying in carded and combed qualities has been very irregular. The inquiry in cloth for Egypt remains healthy, and a fair turnover has again transpired in a variety of goods. The embargo on exports to Greece is very harassing, as supplies in that market are wanted badly.

Miscellaneous sales have occurred for India, chiefly in light goods, but the dulness in grey shirtings continues very pronounced. For China the turnover has not been so important as in recent previous weeks, but sales in bleaching and grey goods total to moderate dimensions. The prospects for manufacturers remain uncertain, but some makers have more work to go on with than a month ago. American yarns have moved off quietly, and, speaking generally, spinners have met with very little encouragement. It is extremely difficult to keep down stocks in certain counts and qualities. A steady demand has come through in single and two-fold yarns for India.

AMERICAN REPORTS.

A Reuter telegram from Washington dated August 1 reports that the United States Department of Agriculture states the average condition of the cotton crop up to July 25 was 70.3 per cent., as against 72.3 per cent. to the same date last year. The total cotton crop is estimated at 11,949,000 running bales.

A later message states that the announcement by the Agricultural Bureau that the crop condition was only 70.3 per cent. caused an excited and violent advance in cotton, as for several days prices have eased in expectation of the report showing an improvement. Consequently there was general surprise, and within ten minutes October advanced from 23.74 to 25.30.

Cotton opened steady, but 16 to 23 points lower. Values declined at first owing to selling by foreign and spot interests; then advanced rapidly on shorts becoming scared over the bullish Bureau condition report and Southern operators buying. Some realising followed on bearish private crop advices, but further advances took place later under buying by spot houses. The market closed steady, 63 to 77 points up. Spot quiet at 60 points gain. New Orleans spot is 25 points higher.

TRADE NOTES.

Tunis.

H.M. Consul-General at Tunis reports that a Swiss subject in that town, who claims to have had a considerable business experience in France, South Russia, Algeria, and Tunis, wishes to secure agencies in Tunis for United Kingdom manufacturers of cotton tissues (including shirtings, calico and madapollams); chemicals (including caustic soda, carbonate of soda and copper sulphate); aniline dyes; and also hardware (including nails, tinplates, and rod tin).

United Kingdom manufacturers and producers of the goods mentioned, desirous of appointing an agent in Tunis, may obtain the name and address of the enquirer on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2. In making application the reference number (266) should be quoted.

Algeria.

The following is a translation of the French Ministerial Decree of July 8, published in the *Journal Officiel* for July 9:—

Article 1.—As from July 9, 1917, the provisions of Article 7 of the Ministerial Decree of April 13 last, namely, that until the quantities which may be imported had been fixed French import licences need not be obtained in respect of goods subject to the arrangement as to "contingents," are withdrawn.

Consequently, as from that date, and except in the cases of "temporary importation," transhipment and transit operations and of goods in respect of which a general relaxation of the prohibition of importation has been decreed, goods produced in or coming from foreign countries may only be imported in virtue of a special licence granted on the advice of the "Comité des dérogations aux prohibitions d'entrée."

Article 2.—Unless they have duly lodged applications for import licences and have received notice of the decisions thereon, (French) importers are required to suspend all shipments and to refrain from ordering any shipments from abroad under penalty of liability to re-export any goods arriving before the necessary formalities are completed.

Article 3.—The preceding provisions do not apply to consignments of the goods referred to in the first paragraph of Article 1, which proved, to the satisfaction of the competent authorities, to have been shipped direct to France or Algeria prior to the publication of the present Decree (*i.e.*, July 9).

MORATORIUM IN TURKEY.

The German periodical *Deutsche Levante-Zeitung* of June 16 announced that the moratorium in Turkey had been extended until September 1-14 of this year. By that date 80 per cent. of all debts affected must have been paid off.

SUBMARINE WARFARE.

The Admiralty on Wednesday evening issued the following return of arrivals, sailings, war losses, and unsuccessful attacks during the week ended July 29, 3 p.m.:—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

Arrivals	2,747
Sailings	2,776

British merchant vessels sunk by mine or submarine:—

1,600 tons (gross) or over	18
Under 1,600 tons (gross)	3
British merchant vessels unsuccessfully attacked by submarines	6
British fishing vessels sunk	0

In the Admiralty report for the week ended July 22, 24 British merchant vessels were stated to have been lost by mine or submarine—namely, 21 vessels over and three vessels under 1,600 tons.

The following statement was issued in Paris on August 1 for the week ended July 29:—

Entries of vessels into French ports, 1,068; departures, 1,072; French vessels sunk, over 1,600 tons, two; below 1,600, one; vessels unsuccessfully attacked, three; fishing boats sunk, none.

During the week ending at midnight, July 29, the number of merchant ships of all nationalities entering Italian ports was 610, of which the gross tonnage was 412,045, is reported in a message from Rome. The sailings numbered 536, with total gross tonnage 401,168. These figures do not include fishing craft or small coasters. The Italian losses in all seas were four sailing vessels, only one of which was over 250 tons. One steamer was attacked and damaged, but was saved.

CEMENT IN THE SUDAN.

Among the projects which now receive the attention of the Egyptian Minister of Public Works, in connection with the construction of the dam on the White Nile, is one for the supply of the cement required for this great work. It is fortunate that there is a prospect of the required cement being obtained locally. *Al-Mokattam* states that the Finance Ministry has commissioned an expert to proceed to the Sudan to study the subject and select the most suitable place for the erection of the works. It is stated that the locality will probably be in the vicinity of the site decided upon by the Public Works Ministry for the White Nile Dam.

COTTON GROWING IN THE EMPIRE.

Presiding on Friday in Manchester at the annual meeting of the Master Cotton Spinners' Federation, Mr. J. B. Tattersall welcomed the appointment of the Cotton Control Board, and urged the Federation to co-operate with it heartily. He complained of frequent lack of co-ordination between Government Departments, instancing cases in which men whom one Department held to be employed on vital industrial work another Department sent into the Army. A matter for profound congratulation was that the Board of Trade had appointed a committee to consider cotton-growing in the Empire—a step which might have been taken profitably many years ago.

ENGINEERING NOTES.

Value of Lignite.

When coal in England is so scarce and prices are so prohibitive, it is easy to imagine the difficulties experienced abroad, especially in industrial centres, owing to the existing "famine." In the Near East the position is extremely difficult, and many factories have had to be closed, while electric lighting and power supplying plants have been disorganised, or temporarily discontinued—simply for want of coal. All kinds of available substitutes have been tried—wood, straw, olive residue, acorns, even seaweeds—but without satisfactory results. There is a substance which can be obtained in the Near East, and in considerable quantities, which forms an excellent substitute for coal, however. It is, in fact, undeveloped coal, sometimes called brown coal. It is the lignite which is found in many districts not far from the coast of the Eastern Mediterranean, the Ægean and Black Seas, also in many midland districts of the Balkan States and Asia Minor. In some parts there are developed or working mines, as, for instance, in Greece, in the island of Euboea, or Negropont, and elsewhere; while in others the existence of lignite is evident from deposits and other signs of it found on hillsides, gullies, etc., and where the natives often use it as coal for domestic purposes. In cases of emergency it has been used on board coastal steamers, but, of course, not with the same results as coal, although in some cases by a rearrangement of the fire-bars better results were obtained.

What is Lignite?

Lignite, or brown coal, is a kind of partially carbonised wood. It is formed when peat, which has subsided some distance in the earth, is submitted to a moderate pressure. Lignite contains about 55 per cent. of pure carbon, as against about 85 per cent. found in good coal. In Australia, according to official reports, the Institute of Victorian Industries has approved the utilisation of lignite as a source of power; and as the conditions under which the lignite is found in Australia, and the test results obtained there, are not dissimilar to those in the Near East, the observations and recommendations of the Australian institute may be of interest to local authorities or owners of lignite properties in the latter region. The institute recommends the use of lignite, as an efficient substitute for coal, for the supply of electrical power to various towns and districts of the State, also for producing town gas, tar and its derivatives, ammonia and coke, and for making briquets for household and other requirements.

The Cost.

With regard to cost, it was found that while Newcastle (N.S.W.) slack coal costs in Melbourne 20s. per ton, the cost of lignite is 2s. 3d. per ton at the mine, situated some eighty-five miles from Melbourne. Lignite, with 40 per cent. moisture, has 0.416 the heat value of Newcastle coal. Electrical energy produced at the mine by 5s. 5d. worth of lignite equals the amount produced in Melbourne from 20s. worth of Newcastle coal, and can be transmitted to town at about half the fuel cost of the latter. With regard to briqueting, lignite briquets need no binder, and can be produced for 11s. to 13s. per ton. The subject is worth the attention of local authorities in the Near East, where the question of fuel is often an impediment in the progress of industry.

The Big German Gun.

We heard much of the 17-in. German gun at the beginning of the war, but not so much recently, especially since the appearance on the battlefield of the "terrible," as the Huns call it, British arm, which has proved superior to the German war-machine in every way. However, the latter is still a wonderful machine. Two hundred men are necessary to work each gun; the mounting takes twenty-five to twenty-six hours, as every gun is composed of 172 parts. The complete gun weighs about eighty-eight tons, and the foundation-plate about thirty-eight, and twelve railway wagons are necessary for the transport of one of the weapons. It is electrically fired from a distance of 300 yards. The projectile weighs 880 lbs., and is about 5 ft. 6 ins. long. Each shot costs £550. The range of the gun may be estimated from the fact that the forts at Liege were destroyed from a distance of eighteen and a-half miles.

COMPANY MEETING.

EGYPTIAN MARKETS.

The ordinary general meeting of the Egyptian Markets, Ltd., was held on July 31 at Winchester House, Old Broad Street, E.C., Major W. I. Le Breton (chairman of the company) presiding.

The secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman said :—Gentlemen,—My colleagues and I felt considerable satisfaction in issuing to the proprietors on the 17th of this month our report and the accounts for the year 1916. I trust that your study of these may have afforded you similar satisfaction and that I may now take these documents as read. (Agreed.) The result of the year's working enables us, as you have been informed, to recommend what I will call our ordinary dividend of 10 per cent., together with a bonus of 2 per cent. We propose the distribution in this form because we consider the bonus due to circumstances more than usually subject to variation, and because we also ask your acceptance of it as making up to 10 per cent. the smaller dividend of 8 per cent. paid for the year 1914, and you will therefore be able to regard it that a continuous return to our ordinary shareholders of 10 per cent. has been made for six consecutive years. Our deferred shareholders stand to receive £3,945, equal to £13 3s. per share; we have added £2,348 11s. 6d. to our general reserve so as to bring it up to a round figure, and we have set aside the sum of £10,000 estimated to be due to the Government of Egypt as their participation in the year's profits and to the British Government as tax on excess profits. The balance carried forward is increased by £904 13s. 5d. This is by far the best showing that we have ever made, and again I hope to show you that our progress has been satisfactory in all important directions. (Hear, hear.)

On this occasion I wish to refer to the fact of which I know you are well aware, that our profits are derived from two main classes of our business—the one protected and the other unprotected by our contract with the Government of Egypt. In the first category fall the market earnings proper, including a very small amount received from three such establishments held by us outside our concession. This business constituted the basis on which this company was formed. In the second category falls our trading business, which has been gradually and independently built up by ourselves in recent years and from very small beginnings, and this is, and will be, we are proud to feel, a special testimony to the care with which your interests have been looked after by those to whom they have been entrusted, from the highest to the lowest. The gentleman to whom pre-eminence should be given in this matter is our general manager, Mr. C. E. Duffield—(hear, hear)—more particularly because during these many years he has hardly ever been free from some such addition to his work, the success of which depended upon his careful personal attention to it. In regard to the variations in our market earnings I cannot usefully repeat, and I have really nothing of interest to add to, the information supplied by the directors' report, while, in explanation of the special circumstances affecting our position during the past year, I am reduced to repeating what I said a year ago of the effect upon our markets of existing war conditions. We continued to be deprived of all supplies of camels and sheep from the countries both east and west of us, while war work has attracted numbers of inhabitants from our districts to places outside our zone of operations.

On the other hand, we have doubtless derived benefit from the prosperity of the cultivator owing to the higher prices obtained by him for his produce to meet the requirements of the largely increased army at present stationed in Egypt, and by the record prices which have ruled for Egyptian cotton. There is one other matter in this connection on which I have to speak. None of us can forget the losses and anxiety we suffered in earlier years from the prevalence of cattle plague. In more recent years I have had the satisfaction of describing the measures taken by the Government for dealing with it, and their success owing to the efficiency both of the measures themselves and the manner in which they were applied. More recently still I had to tell you that on the score of expenses the Government had been obliged to curtail its operations in this direction, but still I felt we had seen the worst of it. This opinion I still hold, but I regret to inform you that there has been some recrudescence of it, and in consequence of this and other diseases of cattle we have lost 853 market days, against 681 in the previous year. It has since become more serious, and at the date of our latest advices from Egypt we had all our markets closed to horned cattle, against about a quarter of that number at the corresponding time of the previous year.

In miscellaneous business, our report will have shown you that we made a profit of nearly £17,000, as against rather more than £7,000 in the previous year. You will remember that in reviewing the accounts of 1915 I pointed to the fact that in that period we had made our largest profits from sales of nitrate of soda, but we felt that this business must suffer from our reluctance to lay in stocks at the excessive costs of freight, insurance, etc., then, and indeed still, prevailing. We were practically forced to our conclusion in spite of the serious facts that we felt we were depriving ourselves of this source of present profit, and might be damaging the future prospects of this business. I am pleased to say that we have done neither to any serious extent, and, moreover, we see sufficient reason to believe that our decision may prove to be of advantage to the company. I told you that we were a year ago negotiating for a somewhat different business in another commodity of the same nature as, but generally considered superior to, nitrate of soda for our purposes. These negotiations, which were initiated by a friend in Egypt, to whom our thanks are due, were brought to a successful issue, and as a result we are now, and have been during part of the past year, conducting a business on commission in sulphate of ammonia with Messrs. Miller and Co., of Glasgow, who in this matter, and so far as we are concerned, represent the well-known Sulphate of Ammonia Association.

You will, of course, realise that the volume of the past year's business in this has been affected by a fractional period of time and by the high prices ruling, but we are satisfied with our beginning and have every reason to hope that it will to a large extent take the place of nitrate of soda. Our agreement provides that, where it cannot do so, we are free to continue business in nitrate of soda, but you can form your own opinion of the course of events when I tell you that, as against our fears of running short, we still had at the end of 1916 a small quantity of nitrate of soda in our possession—not by any means because it was not saleable at a good profit to ourselves, but because we wished to preserve the one for special purposes and to push the other. If all goes well I have said that the company will derive an advantage from the change, and no one will have so great a reason to welcome it as your board. Apart from the recognised security of a commission business, there did exist much cause for anxiety in the outright purchase of large supplies of nitrate of soda even in ordinary times. I may tell you, with considerable satisfaction, that we never made a bad bargain, and we made some exceptionally good ones—(hear, hear)—but in justice I must add to this statement the explanation that we were very efficiently protected by the advice of Mr. G. M. Bauer, one of our shareholders, whom I am pleased to see present on this occasion. I must also add that this gentleman materially assisted us in effecting the arrangement with our sulphate of ammonia friends, and I am not on forbidden ground in saying that these latter, in their turn, have now shown their confidence in us by becoming shareholders. (Hear, hear.) You will recollect that I also told you a year ago that we were embarking upon a business in phosphates with the Egyptian Phosphate Company, of Glasgow. The untutored and local use of the crude phosphates obtainable in Egypt for agricultural purposes is of ancient date in the vicinities of some of the existing beds, but attention has only recently been given to the more general use of this substance in improved forms. Some few years ago our company started upon the supply in the form of superphosphate, which had to be imported and was difficult and costly to handle. The company which we now represent claims to produce a specially treated basic phosphate, to which they have given the name of Ephos, and which is free from these objections. They assert that this is in every way superior to superphosphates; their works are conveniently situated for us, and we have the sole rights of sale in Egypt. We have recently taken over from Messrs. Cooper and Sons an agency for their cattle dip and other specialities.

Turning now to the net results of the year's working, I told you a year ago that the then resulting dividend was four times that of seven years before. If we now take the bonus into consideration we may say that it is nearly five times that figure, but this alone is an inadequate measure of our advance. The net revenue for the year from all sources amounted to £44,745 16s. 5d., against our previous best year, 1911, when it amounted to £33,605. On the present occasion we have had to provide for the excess profits tax payable here, and for an increased participation in our profits by the Government of Egypt, as well as for a higher rate of income-tax But in spite of this there remains to be dealt with on our operations for the year the sum of £34,745, against £32,504 in the year just referred to as our previous best. (Applause.) From this amount, in addition to our fixed charges, we are carrying nearly £2,350 to our general reserve, the total of which now stands at £6,500. (Applause.) It is the existence and probable more rapid growth in the future than in the past of our reserve fund which supplies the reason for my having asked you to keep in mind that our business is in part dependent upon and in part independent of our contract with the Government.

You are aware that our concession is terminable in 1938. Between this and then much of course, may happen. We know that our present position vis-à-vis the Government is very satisfactory, and we need not be without hope that we might be able to continue under an extended or modified contract with the Government; but in the absence of anything of the kind we should find ourselves much in the following position. Our debentures—that is, in 1938—would have been previously paid off, and our share capital would be then repaid at par by means of our sinking fund. We should have to relinquish our 120 markets covered by our concession, and should remain in possession of what I will call the rest. This latter would be comprised of our miscellaneous trading business and any duly authorised markets then worked by us. You will readily realise that these two classes of our remaining business would assist one another, and more especially that, in order to maintain our trading business, already of importance and promising, it is very necessary to have a sufficient number of markets as distributing centres. Our trading business, on the lines we are conducting it, requires but little provision of money by us, and we hold that any surplus can be best utilised for the acquisition of further markets. Even in the interval between now and the termination of our concession they are useful to us in adding to our earnings without materially increasing our expenses. We now have three outside markets, with the prospects of which we are satisfied. If it had not been for the outbreak of war we should by now have owned others. The directors believe that it is in the company's best interests to proceed in the direction indicated, and that, after the war, good opportunities will present themselves of doing so, some of which we have

already studied. We think it right to mention this, even at this early stage, for it will remove the impression that either our growing reserve will be available for distribution, or that the year 1938 is necessarily the end of all things for the company. (Hear, hear.) As usual, I will say a few words about the prospects of the current year. Our net earnings for the first quarter of the year show an increase of close upon £2,500, and at July 19 our markets' earnings showed an increase of more than £5,000 over those of the corresponding period of the year we have had under review. (Hear, hear.) The improvement indicated in these figures should be considered in connection with the fact, which I have already mentioned, of the serious increase of cattle plague—the one, indeed, being in spite of the other. (Hear, hear.) Such an event would in itself be satisfactory, but I ask you to regard it as more especially so, because the one represents the continuous growth of our business, and the other is, we may hope, a removable and, consequently, a temporary misfortune. The Government of Egypt has proved its ability to deal with the matter when other circumstances are favourable, and if somewhat out of hand at present, it is so, we may hope, like other ills, for the duration of the war only. The other conditions affecting our business remain practically the same, excepting that they are more unfavourable in regard to supplies of our most important fertilisers. At present the export of these is prohibited, but we have obtained from Egypt a recommendation to be allowed to ship a certain amount of sulphate of ammonia considered to be absolutely necessary for agricultural purposes there. On the other hand, we may look for a considerable increase in our business in forage for the Army. In conclusion, and again as usual, it is my pleasure and privilege to refer to the excellent services continued to be rendered by our general manager, Mr. C. E. Duffield, by our assistant managers, and by our indoor and outdoor staff generally. Our increased profits involved increased work and attention to it on their part, and this was intensified by the fact that nine of our European staff are absent on military duty. I feel that our best thanks are due to the staff, and again I have to give special prominence to the name of Mr. C. E. Duffield. (Applause.) If any shareholder has any question to ask, I shall be pleased to reply to the best of my ability. (Applause.)

As there are no questions, I beg to move: "That the report of the directors, dated July 17, 1917, together with the audited statement of accounts and balance-sheet for the year ended December 31, 1916, be and they are hereby approved, confirmed, and adopted."

Lieut.-Col. A. St. John Cooke, D.S.O., seconded the motion, which was carried unanimously, and the dividends already paid and recommended to be paid were respectively confirmed and approved.

The retiring directors, Lieut.-Col. A. St. John Cooke, D.S.O., and Mr. W. Home, C.I.E., were re-elected, and the auditors, Messrs. Price, Waterhouse and Co., were re-appointed.

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.,
August 2.

This has again been another good week for Egyptian shares, and there is a further almost general rise in prices. The demand has continued both from Egypt and on local account, and a very fair amount of business has been put through; but much more would have been done had there been a more plentiful supply of shares.

Government stocks have remained a firm spot, and Unifieds at 84½ are again ½ higher and with very few sellers. Agricultural Banks are ⅛ up at 5⅜ and Land Banks have been done at 6¼—also ⅛ up. Anglo-Egyptians have further improved 1-16 to 12 13-16, and Nationals have been a very strong market, closing over ¼ up at 16 bid after small dealings at this latter price.

In Land shares Behéras have jumped a further ⅞ to 12½ on buying orders from Egypt, and Behéra Prefs. have improved 5-32 to 4 5-32, but there have been no sellers of the latter.

In Delta Lands a steady local demand has carried the price up a further 3d. to 11s. 3d., and Foreign Trusts have also been fairly largely dealt in between 6s. 3d. and 7s. 3d., closing at the latter figure. Gharbieh Lands have been done at 30s. and 30s. 6d.—about 3s. up—and are still wanted, but for the moment there are no further sellers.

In New Egyptians there has been a steady inquiry, a fairly large number of shares changing hands, and the price closes 4½d. higher at 12s. 7½d. Union Foncières have changed hands to the extent of some 600 shares between 38s. 9d. and 40s. 6d., finishing at 40s., being a rise of 1-32. In United Lands some few thousand shares have been bought on Egyptian and local account.

In Miscellaneous shares, Alexandria Waters are a further ⅛ higher at 12¼, but sellers are very scarce. Salts and Sodas have been dealt in between 24s. 10½d. and 25s. 6d., finishing 3d. higher at 25s. 3d. In Khedivial Mails the market has been absolutely stagnant.

Greek securities, with the exception of Monopoly, which is ½ down at 53, are mostly firmer. The 1881, 1884, and Rente loans have improved a point, and Larissa are ½ higher.

Oil Shares.

Oil shares have been moderately active, but the tendency of the market has been towards irregularity. Anglo-Persian prefs. have been firmer at 23s. 3d., and Anglo-Egyptian "B.'s" fairly active round 15s. 3d. Roumanian Consols reached 12s.

Paris Bourse.

Quotations on Wednesday included the following:—Crédit Foncier Egyptien 720 (unchanged); Imperial Ottoman Bank 442 (against 447).

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
July 25, 26	450,000	380,000
July 27, 28, 29	500,000	540,000
July 30	130,000	120,000

EGYPTIAN MARKETS.

	1916. Week July 20.	1917. Week July 19.

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 19, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

NOTES OF THE WEEK.

The Roumanian offensive, which promised so well, and which succeeded in breaking the German-Austrian line on a long sector and securing a large number of prisoners and guns, has come to an end—only temporarily, it is to be hoped. This cessation of activity was not unexpected, for it was easy to foresee that the break-up of the Russian army in Galicia would affect the whole front, and the abrupt stoppage of the Roumanian advance was a necessary outcome of that astonishing collapse. Roumania has nothing to be ashamed of in turning from offensive to defensive; indeed, there was nothing else she could do when her mighty neighbour was stricken with paralysis. Her business now is to husband her strength and wait patiently while Russia restores internal order, and then march forward to victory. But it is clear that this can hardly be hoped for this year; in another few weeks the 1917 campaign must come to an end, and there is little chance of the necessary conditions for success being attained before the winter.

While Roumania necessarily depends on Russia, Russia has not yet learned to depend on herself. Some of her troops still collapse and flee at any German threat; others appear to put up a brave fight, but are overwhelmed by the flight of their comrades, not by the strength of the enemy. In Petrograd M. Kerensky labours hard to restore order, but against immense odds. The Council of Workmen's and Soldiers' Delegates will neither accept nor repudiate responsibility, but apparently still desire to be a superior power outside of and controlling the Government—plainly an impossible position, and one that is bound to mean a continuance of trouble, possibly of anarchy. One sign of advance, however, may be noted. M. Kerensky has succeeded in forming his Cabinet, and has secured the co-operation of the Cadet party, whose assistance will be an element of strength, as well as of two of the Socialist parties who support the war.

If this Cabinet can obtain the general support of the country, it should be able to maintain itself and restore order. Its first business, no doubt, will be to rout out the pro-German element and those in German pay; if it can succeed in silencing this propaganda, which has ruined the army and had much to do with the separatist troubles in Finland and the Ukraine, it can then proceed to restore the moral of the troops and prepare for a renewal of the offensive next spring. But internally a long and difficult way has to be traversed before any effective movement against the enemy can be inaugurated.

There has been some talk in apparently well-informed circles of a renewed Turkish offensive both in Palestine and Mesopotamia, under German direction. The German newspapers announce that Marshal von Falkenhayn has arrived in Palestine, presumably to oversee the condition of the Turkish troops, and if that announcement is true, it presupposes an active campaign against the British at Gaza, or possibly a feint in that direction and a real offensive against the British occupation of Baghdad. While it is, of course, impossible to foretell the intentions of the enemy, there are two relevant considerations which make a renewal of activity in the Ottoman Empire seem probable. In the first place, the collapse of Russia has removed a menace in the north-east corner of the Sultan's dominions; Russia can no longer advance in the Caucasus or Mesopotamia, and any hope of her co-operation with the British armies must be definitely abandoned for a long time to come. That fact naturally frees a large number of Turkish troops.

In the second place, the British capture of Baghdad was a serious blow, not only to German prestige, but also to German plans for domination in Asia Minor after the war. The Baghdad Railway scheme becomes a mockery if Baghdad is in British hands, and Mesopotamia cannot be exploited from Berlin; nor has German opinion lightly acquiesced in its loss, although the Press, probably under orders, has said little about it since the first grief at its capture was expressed. Further than that, German statesmen and strategists have long recognised that Egypt was the vital point in the British Empire, and that, if communication by way of the Suez Canal be interrupted or its control taken permanently from Britain, our hold on the East becomes precarious. For that reason, too, it is evident that, if we control Palestine, we secure the eastern route beyond dispute, and Germany has watched with apprehension our advance across Sinai and towards Gaza. On that account it is by no means unlikely that another "hammer-blow" is preparing in that direction.

No fault can be found with the Greek speech from the throne, except perhaps in Berlin and Vienna. The King recognises in explicit language his position as constitutional ruler of the country; he admits, both by implication and directly, the justice of the complaints against his father's methods of government; he rejoices that Greece is now ranged on the side of the

Digitized by Google

Allies. More could not well have been expected, and this frank statement will do much to encourage public opinion in France and Britain. The speech was obviously framed by M. Venizelos, and the fact that the King has accepted it publicly after taking his oath as constitutional sovereign is a good augury for the future.

M. Venizelos has also made a statement regarding the future of Epirus, in answer to a petition from the deputies of Northern Epirus demanding their admission to the Greek Chamber. It was the criminal policy of preceding Cabinets, remarked the Premier, which resulted in the withdrawal of Greek troops in occupation of Northern Epirus, and therefore the deputies cannot be admitted. He hoped, however, that the participation of Greece in the war on the side of the Allies would result in this question being settled in favour of Greece at the forthcoming Peace Conference. Had it not been for King Constantine the problem would never have arisen in this shape at all.

Italian organs continue to discuss the position in Epirus and the Corfu manifesto with animation. In the first place certain misconceptions have been cleared away, and the baseless idea that Mr. Balfour and Lord Robert Cecil were prepared to abandon the cause both of Italy and the Southern Slavs in favour of a separate peace with Austria has been dissipated by a statement that their recent speeches in the House of Commons were not intended to cover the whole ground. If any further assurance were needed, the presence of Baron Sonnino in London and the speeches at the third anniversary of the declaration of war and at the Serbian lunch on Wednesday should be sufficient. Britain has not, and will not abandon the cause of Serbia, and the propagandist work of the German and Austrian Press Bureau to that effect is therefore futile. It has, indeed, defeated its own purpose by causing British statesmen to reaffirm our attitude towards the Balkan nationalities.

The Jugoslav manifesto is now accepted as the policy of the Entente, and Italian opinion, which was distinctly contrary to the recognition of that document when it was first issued, is now veering slowly round to an admission of its necessity. The dilemma, indeed, is now frankly recognised that either Italy must see a Southern Slav State set up with an outlet on the Adriatic or allow the Southern Slavs as a whole to be incorporated with the Austrian Empire. There are certainly points at issue which may make for friction between the Italians and the Southern Slavs, and nothing is gained by denying the fact; but it is equally clear that those points are far less dangerous to Italian security than an aggrandisement of Austria, which would be inevitable were the Southern Slavs to make terms for themselves—supposing any reasonable terms were possible—at Vienna. It remains true that Austria is the permanent enemy of Italy, and that the weakening of Austria must continue in the forefront of Italian policy. Other matters, however important, are secondary to this main task. Once it is understood that Italian supremacy in the Adriatic has less to fear from a Southern Slav State than from a predominant Austria, the choice is clear.

Serbians in exile and those at home, if any report of the proceedings is allowed to reach them, will be cheered at the sympathy expressed for them at the luncheon to M. Pashitch in London. There was no ambiguity in the speeches of Mr. Lloyd George and Lord Robert Cecil, and M. Pashitch, in reply, made it clear that the Corfu agreement forms the basis of Serbian national aims. It is, of course, true that we cannot at this moment lay down the exact terms of peace; it would be folly to delimit frontiers at this stage in the war. But there has been so much ignorance and misunderstanding already, not only among the general public, but in circles that ought to be well informed, that the general outlines of our Balkan policy must be defined before the Peace Conference meets. Those aims, it is again made clear, are a final settlement in the Near East on a basis of nationality; and that policy, as President Wilson recognised, implies the creation of a Greater Serbia with an outlet to the sea, and consequently the disappearance of Austria as we now know it. This attitude, which is just and logical, may conceivably lengthen the war by forbidding any separate peace with Austria—a prospect which was already sufficiently remote and treacherous. But the possibility of a longer war is lightly purchased by the certainty of a longer peace; and the bringing into harmony of divergent aims in the Near East is an indispensable preliminary. Fortunately, the recent discussions have shown that these aims are not irreconcilable in presence of a common enemy, and that with time and patience conflicting interests can be brought into line.

A report has been spread from German sources that the harvests in Serbia and the occupied districts in Roumania are above the average, and will shortly be available for German and Austrian consumption. It is certain that the enemy have done their best to enforce cultivation of the soil, and that they will reduce the ration of the unfortunate inhabitants engaged in agriculture to the very lowest level consistent with existence, in order to export as much as possible to the German cities and so aid in the task of "holding out" for which the Kaiser now makes such agitated appeals. But in view of the known conditions of Serbia and to a less degree of Roumania after the terrorisation that both have passed through, it seems highly improbable that those countries should have produced as much as usual, and even less likely that they should have exceeded their normal supply. Frightfulness, whether of the German or Bulgarian variety, is not a good foundation for a policy of increased production. The report has very likely been spread to put the German people in good heart; they were similarly deceived last autumn by the promise of a vast booty from Roumania. But the booty never materialised, and it is possible that the crops will not. The chief product of Serbia at the moment appears to be disease and misery.

It is understood that a Jewish regiment is to be formed in the British Army, which may or may not attract to its ranks some of those able-bodied young men in the East of London whose affection for civilian costume has been rather forcibly commented on of late. Should the proposal materialise kosher meat will be provided, Jewish ceremonies will be observed, and a rabbi will be assigned as chaplain. Further, it is believed that after training they will be detailed for service in Palestine, and it is seriously suggested that they may arrive there in time for the siege and capture of Jerusalem. If anything could appeal to the martial instincts of the race that prospect should do so. It remains to be seen whether the attractions of Stepney are superior to those of Gaza. A very large number of Jews whose parents are settled in England have, it must be remembered, already enlisted in the regular regiments of the British Army, but it is a matter of regret in Jewry that the more recent arrivals in this country have abstained, and so brought some discredit upon the Jewish community which it by no means deserves. These people now have the opportunity of redeeming the stigma they have cast upon their creed.

It is natural that there should be some disquiet as to the position at Aden when a member of Parliament states, as did Mr. G. Lambert on Wednesday, that he has information that exceptional sickness exists among the troops there. The Government denies all knowledge of anything unusual, but inquiries are being made. The British force at Aden, which has fought very gallantly and with small recognition of its work, has been seldom mentioned in the newspapers, and has consequently almost dropped out of the public mind; but it is to be hoped that after this inquiry the Government will promptly obtain the information desired and publish it with all despatch.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 15.

The High Commissioner.

The High Commissioner and Lady Wingate are devoting a good deal of their time to visiting the various institutions in Alexandria, just as they did in Cairo during the past winter. This week their Excellencies visited Victoria College, the headquarters in Alexandria of the British Red Cross and Order of St. John, and the Schools of the Jewish community. In addition, Lady Wingate inspected the Alexandria branch of the Empire Nurses' Club. At each of these institutions their Excellencies spent considerable time, inspecting everything very thoroughly and discussing the work done with all whom they met during their visit. The lively interest which both Sir Reginald and Lady Wingate take in the social work that is being carried on in this country is very much appreciated by those immediately responsible for its execution.

An Egyptian Academy of Letters.

A few months ago, on the occasion of a dinner given in celebration of the anniversary of the foundation of "Al Muktataf," the scientific periodical conducted by the proprietors of "Al Mokattam," certain of the guests emphasized the necessity for a thorough overhaul of the Arabic language with a view to providing it with proper terms to meet the requirements of modern science, arts and industries. Since that date little had been heard of the question, and it was generally thought that the proposal to set up a special committee for the purpose, carried unanimously at the dinner, had met the fate that has so often befallen similar projects in this country in the past. The question has, however, been occupying the earnest attention of the leading Egyptian scholars, and it is now announced that as the result of recent negotiations, an Egyptian Academy of Letters has been formed, and that it has already started its labours. The new Academy consists of Sheikh Selim El Bishri, Rector of Al Azhar University, President; Sheikh Mohamed Bekhit, Grand Mufti of Egypt, Vice-President; Ahmed Bey Loutfi Sayed, Director of the Sultania Library, Secretary; and twenty-two members, amongst them some of the most distinguished Arabic scholars in the country. It has been laid down that the membership of the Academy is to be limited to twenty-eight members, three of whom must possess a knowledge of the Hebrew, Persian, and Syrian languages, as well as Arabic. The need for some such overhauling of the Arabic language as is now proposed has long been felt. Editors, men of science, and schoolmasters have been greatly handicapped in their work by the lack of expressions adequately rendering in the Arabic language the scientific and other modern terms currently used in the West. To meet the requirements of the situation phrases have had to be coined to represent these terms, or the latter have been given an Arabic form, and in this guise have been introduced into the Arabic language, which has consequently suffered in clearness and elegance of expression. The new Academy will endeavour to remedy this state of affairs, and, while regularizing by their inclusion in the Arabic vocabulary those newly coined terms which can be at once accepted, it will find for others phrases which, while leaving no doubt as to their meaning, will at the same time not affect the elegance of diction and expression for which the Arabic language is so justly famous. In view of the fact that the Academy includes amongst its members such well-known scholars as H.E. Ahmed Zaki Pasha, the Secretary of the Council of Ministers; Dr. Faris Nimr, whose renown as a stylist is known throughout the Arabic-speaking world; and Dr. Yacoub Sarruf, who is equally well known as a scientific writer, there should be little fear of the Academy not finding a satisfactory solution to its labours.

A Red Cross Libel Action.

The Supreme Consular Court in Cairo has been occupied for ten days with a case which has aroused the keenest interest in the local British colony. It was an action brought by Captain E. Yates. of the New Zealand Medical Corps, and lately of the Medical Staff of the Red Cross Hospital, at Giza, against Colonel Sir John Rogers, Commissioner for the Red Cross Society, for slander in respect of a statement made by him that Captain Yates was a disturbing element and that he had no right to wear the King's uniform. Mr. J. P. Foster, barrister-at-law, appeared for Captain Yates, and Mr. R. L. Devonshire defended Sir John Rogers. There were a great number of witnesses, including several high staff officers, Lieutenant-Colonel L. L. P. Phillips, Commandant of the Red Cross Hospital, and some of the staff. The jury found that the words "disturbing element" were uttered maliciously, and that the statement that the plaintiff had no right to wear the King's uniform was not true at the time it was made nor was it true now. They awarded Captain Yates the sum of £180 damages with costs, and associated themselves with Judge Grain in expressing regret that it had not been possible for the parties to settle their difference outside the court. It should be mentioned that every effort was made by the lawyers to obtain a settlement, and that the plaintiff in the early part of the hearing made quite a reasonable offer, but that the defendant could not see his way to accept it.

Whilst it is certainly in the highest degree regrettable that this case should have had to come into court, and thus waste the valuable time of many officials and residents, who at the present juncture could have been more profitably occupied, nevertheless, the public interest will in the long run undoubtedly benefit from the publicity given to the condition of things existing in the organisation of the Red Cross in Cairo. The impression which the evidence has made on the general public is that the internal organization leaves much to be desired, that too much work has been put on the shoulders of one or two of the members of the local committee, and that the various incidents which led up to this action, as well as those, of which details transpired in the course of the hearing, ought not to have taken place.

The Cotton Seed Market.

A curious situation has arisen in the local cotton seed market. As everyone knows, the price at Hull has been fixed at £19 per ton, and yet purchases have been, and are still being, made at Alexandria at prices which, if freight shipping and insurance are added, bring the C.I.F. Hull price to well above that fixed at the latter port. An explanation of this extraordinary state of things may be the very great activity of the local crushers, who are working night and day, turning out enormous quantities of cotton cake, oil and other by-products, and who since neither cake nor oil have had their maximum prices fixed in England can well afford to outbid exporters of seed. The situation merits the attention of the authorities, who might well consider whether it is really sound to limit the price of cotton seed and yet leave that of cake and oil entirely free. The Customs and other statistics are eloquent of the greater trade done by this country in oil and cake during recent months compared with pre-war days, despite the fact that the crop this year has been an exceedingly small one.

THE FOURTH YEAR OF WAR.

On the occasion of the third anniversary of the war the following telegram was despatched by King George to the King of Serbia and the King of Roumania :—

"On the third anniversary of the day on which my country entered the great struggle still in progress I desire to express to you the unwavering determination of the British Empire to pursue the contest until our joint efforts are crowned with success and our common aims attained. I am happy in the confidence which is shared, I feel assured, by you that the untiring will of our peoples and heroism of our forces will achieve a final victory securing the possibility of the peaceful progress of humanity.—George R.I."

NOTES FROM ROUMANIA.

(From a Correspondent.)

The Visit of M. Thomas.

The visit which the French statesman paid to Roumania was the occasion of a reassertion of the strong sentimental ties which unite that country to the Republican sister nation. The reception accorded to M. Thomas shows how deeply the Roumanians appreciated his presence in their midst in one of the most difficult moments of their history. "It is in human nature," Franklin once wrote, "that injuries as well as benefits received in times of weakness and distress, national as well as personal, make deep and lasting impressions." It is no wonder, therefore, that M. Thomas was the object of enthusiastic ovations on his visits to the Roumanian front and to various institutions in Jassy. He was the guest at a joint meeting of the two Houses of Parliament, when M. Mortzun assured him in a spirited speech that "the Roumanian people will never forget that at the most dangerous corners of our destiny we always found France at our side, leading our steps, helping our efforts, and rendering our sufferings fruitful." As a proof of their deep-felt gratitude, the Roumanian Parliament presented the French nation with one of the most charming residences in Jassy, the Villa Greerul, "to be a home for French scholars, artists, and travellers coming to Roumania to learn to know the country and its people." At the same time a special law bestowed upon General Berthelot, the chief of the French military mission, the quality of citizen of honour of the Roumanian kingdom.

M. Thomas addressed in Jassy a meeting of Russian soldiers, and also attended a sitting of the Parliamentary Committee entrusted with the drafting of the proposed internal reforms.

Russian Troops in Roumania.

The unrest which set in among the Russian troops in Roumania after the outbreak of the revolution was of short duration. Committees of officers and soldiers were established everywhere, but they proved an element of order and discipline. It is significant that two truck-loads of goods, presents to the Russian soldiers from an organisation of followers of Lenin, were returned to their senders by order of the committee of officers and soldiers in Jassy. The enemy made strenuous efforts to further disintegration among the troops at the front. Manifestoes were thrown into the Russian trenches, and a delegation of German officers waited upon General Strepin at Roman with an offer of armistice and peace. The delegation was sent back before it had time to expound its brotherly sentiments, and the committee of Russian officers and soldiers issued a manifesto from which we quote the following illuminating passage:—"If the enemy really wishes our good, then let him free the territory of our country and of Roumania, and in return we will help him to upset his Government, which is the enemy of all liberty. Then, and only then, will a lasting peace be possible."

CLIMATIC CONDITIONS IN MESOPOTAMIA.

The War Office issued the following announcement on August 2 concerning Mesopotamia:—

The intense heat, which was particularly severe during the middle of July, has subsided. On July 20 the highest shade temperature of Baghdad in recent years was exceeded by 4½ degrees, and the average shade temperature for the first 24 days in July exceeded the average of recent years for July by over 6 degrees. In spite of this heat, the health of the troops is very satisfactory, and the percentage of sick for the four weeks ended July 22 shows a great improvement over the corresponding period of 1916. There is no special military operation to report.

The Association of Chambers of Commerce of the United Kingdom is to consider at its next meeting a motion "that no subject of Germany, Austria, Bulgaria, or Turkey should be at liberty to hold land in this country to a greater extent than a seven years' lease without the consent of the Crown."

According to the *Arbeiter Zeitung*, of Vienna, six of the eleven prisoners sentenced for complicity in the assassination of the Archduke Francis Ferdinand and the Duchess of Hohenberg at Serajevo have died from the effects of solitary confinement and insufficient food.

CYPRUS NOTES.

(From a Correspondent.)

The Problem of Goats.

Rustem Pasha, when Governor of the Lebanon, used to say that what gave him most trouble was the goats and the priests. In Cyprus the question of goats has always been a source of worry and anxiety; but, unfortunately, it has never been handled with the firmness that the circumstances required. Just as the preservation of what remained of the forests became one of the principal subjects of consideration for the British Administration, so the depredations of goats called for serious attention and repressive measures. The British Government at once took in hand the protection of the forests, though with quite inadequate means at its disposal. On the other hand, the evil caused by goats both to forests and agriculture was left to a great extent unchecked. It is precisely as if a patient were treated methodically for a serious complaint, while allowed at the same time to indulge in a poisonous luxury which undermined the whole system.

Injury to Forests and Agriculture.

The earliest and best report on the Cyprus forests by M. Madon, an officer lent by the French Government, stated clearly the lines upon which forest policy should be based. All authorities have insisted on the fact that forest growth and the grazing of goats are incompatible. Anyone, indeed, who has studied treatises on the subject is perfectly well aware of this truth. Flocks of goats, however, have been allowed to exist and multiply in Cyprus, with the result that the island has suffered year by year injury which the principal forest officer has endeavoured roughly to estimate in recent reports. It would have been far better, in the long run, had the Government taken a firm line from the outset, and, putting up with perhaps a little outcry from a particular class, had served the general interests of agriculture by the reduction or destruction of this inveterate foe to husbandry. No doubt there would have been some bitter feeling and grumbling, even outside the flock-owning class; but that has been the case wherever action has been taken against goats.

As regards the State forests, the delimitation of which was undertaken in the early years, goats were excluded (though in a few localities rights to graze, possessed *ab antiquo*, were respected); but, of course, much depredation must inevitably take place over large areas which cannot be adequately patrolled by the small staff of forest guards. As to private properties the difficulty has been great, but in reality it only required firm handling. It has been left to the Legislative Council to discuss what remedies should be adopted, and the results up to date have certainly not been satisfactory. A law passed a few years ago allowed the inhabitants of any village to decide by majority whether goats should be tolerated in their lands or not. A fair number of villages have taken advantage of the measure, but ambiguities as to its application have rendered amendments necessary.

Either Goats or Agriculture.

Fortunately it would seem that the good sense of the native communities is at last tending more and more in favour of eliminating this island plague. At any rate, it is very satisfactory to know that there are now members in the Legislative Council who have the courage to defend a strict forest policy and war upon goats. No one has insisted on this more vigorously than Mr. Theodótou, one of the members for the Nicosia-Kyrenia division. A short time ago he warned his countrymen that it was a choice between goats and agriculture, and told them plainly that goats were just as great a pest as locusts. He aptly referred to the case of Algeria, where, owing to measures such as are required in Cyprus, the area of forest land has been quadrupled in about forty years. "Whenever I go on district tours," he said, "and advocate tree-planting, I hear the same reply: 'Let us plant trees, in order that shepherds may destroy them.' No wonder our agriculture does not advance." Those who kept goats, he continued, were in reality condemning the country to economic disaster, and he expressed himself in favour of the gradual abolition of goats "in order that the resources and productiveness of our fields and forests may prosper and be further developed." Breeds of sheep and cattle, he rightly argued, should be raised in their stead. Mr. Theodótou stated, as an example of the mischief caused, that in one village 3,000 trees were planted a few years ago, and of these all but thirty were destroyed by goats or shepherds. If a villager prosecuted a shepherd, and a fine was inflicted, next day he might find his animals mutilated, his trees cut down, his crops destroyed, or even his life in danger. This is one aspect of rural life in Cyprus. Very large sums have been spent in the destruction of locusts, and it might have been wise and expedient to devote a sum annually to the compensation of flock-owners while compulsorily reducing this other pest of the agriculturist.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE SOUTHERN SLAV QUESTION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondents who handle the Jugoslav problem ignore the vast issues which underlie it. These are fairly stated in Mr. A. D. McLaren's "Germany from Within" (Constable and Co., 1916); and I may add that its author's long residence in Germany qualifies him to write with knowledge of the designs of the Central Powers. At p. 108 we find:—

Germany, quite as much as any other nation, goes to war for an idea, and is willing to make any sacrifice to realise it. But she also knows how to bide her time. The establishment of German ascendancy from the North Sea to the Persian Gulf and control of the Balkan Peninsula are essential conditions of that ascendancy—that is what *Drang nach Osten!* means. Hence the Balkans form the pivot of the world-war, and the main point of leverage for the realisation of German ambitions. This all-important point was seen by every educated German as clearly as by any member of the Government. The real cause of the war was not the collision between Teuton and Slav civilisations—the time for that phase of *Weltpolitik* had not matured—but the determination of Germany to proceed viâ the Near East to a universal Kaiserdom to be built on the ruins of the British Empire.

In this remarkable passage the "Balkans" means Jugoslavia, including Serbia, Montenegro, and ten Slav provinces of Austria-Hungary. Welded into a State numbering 12,000,000 citizens, it is destined to play a great part in the new Europe which will emerge from the existing chaos.

For forty years Austria-Hungary has toiled and plotted to prevent this contingency from materialising. The Jugoslavs under her heel are "politically oppressed, socially persecuted, menaced in their intellectual, economic, and national development." As Mr. McLaren remarks at p. 67:—"The whole history of the smaller nationalities in Austria-Hungary—the *Nationchen*, as they are often contemptuously called in Vienna—is one chequered canvas, on which the lines of oppression cross the lines of revolt. It is exactly the same policy as Austria pursued against the Italian States (before 1859), a policy which materially helped to unite them."

The Jugoslav peril bulks largely among the causes which led Austria-Hungary to become the catspaw of Berlin three years ago; and the Pan-Germans who rule her know full well that a strong Jugoslav State would sound the death-knell of their sinister designs. It must, therefore, be one of the conditions imposed by the approaching re-settlement of Europe.

But Roman statesmen are asking, "Where do we come in? Is not the population of the Adriatic littoral largely Italian by birth and culture? Must we surrender Trieste and Istria to a brand-new Power which may become as aggressive as that which it has superseded?" Dangerous friction is engendered by the conflict of forces which should work in harmony to promote the interests of civilisation. On June 30 the Marchese Viti di Marco, who is an ardent advocate of a common understanding on this absolutely vital question, was greeted in the Italian Parliament with shouts of "Down with the Jugoslavs!"

The time has surely come for a conference between representatives of Italy and leaders of the Jugoslav revolt. With common-sense and a disposition to give and take, they would solve a problem of vast importance to Europe.—I am, Sir, your obedient servant,

F. H. S.

London, August 7.

SERBIA'S GRATITUDE.

We have been asked to give publicity to the following letter addressed to Mrs. Carrington Wilde by the Serbian Minister of Education:—

Madame,—In the tragical times through which we are passing our children have had from Great Britain a truly maternal and most unforgettable welcome. The Serbian Relief Fund, seconded by the people of Great Britain, has generously tried to soften for them the bitterness of exile. When these children landed on English soil, almost broken-hearted, they found a second motherland, and people who knew how to comfort them and wipe away their tears. And they are now preparing to become a generation worthy of the sacrifices made for them.

I count much on this generation. Soon it will be representative of British thought in Serbia and become a permanent link between your great country and our unfortunate one; it will be the means of making known to us your powerful Empire, for which we have always had the greatest admiration and sympathy; it will initiate our young country in your excellent methods, your splendid science, your incomparable education, your noble ideas, your practical sense, and that characteristic perseverance, continuous effort, and methodical work which rank among the highest qualities of your great nation. These young people will take a great part in the regeneration of Serbia.

In the misfortunes which are crushing us it is a great consolation that this generation should receive the exemplary education which your country is giving to it. Those who are contributing towards this work are rendering us valuable service. Your glorious motherland has already conferred upon us inestimable benefits, but the benefit to our children is, perhaps, that which will bear the most useful fruit. At any time this benefit would be very great; in the tragical days through which we are passing and when the number of our children has been so sadly diminished, this benefit is of the greatest value.

M. Pavle Popovitch, whom I have chosen out of the best of our educationalists to represent me in England, has given me a wonderfully detailed account of the circumstances in which our children find themselves in England and in Scotland—of the really maternal care with which the Serbian Relief Fund surrounds them. This account has moved me to tears.

I infinitely regret that very important work in connection with my own Government prevents me for the moment from going to London to bear witness to the great benefits your country has conferred on our children; but I wish to express to you my very sincere gratitude.

To you particularly, madame, our thanks go first, and through you to the whole of the Serbian Relief Fund; to the members of the Education Sub-Committee; to the local committees of education; to the administrator of the Education Branch; to all the heads of schools and the teachers therein; to all those persons who shrink from no sacrifice to secure the comfort of our children; to those who load them with favours and contribute so largely to their happiness.

It is not only my personal gratitude that I express to-day; it is that of the Royal Government of Serbia, and it is particularly that of those parents still in Serbia who know that their children are cared for; this will enable them to bear more hopefully the cross of suffering which is imposed upon them. I would also speak of the gratitude of the fathers who are fighting on the front against the common enemy, and who will discount even death for themselves, knowing that their children have escaped it and are safe in your glorious motherland.

L. M. DAVIDOVITCH, Minister of Education.

An interesting archæological discovery has been reported from the little island of Rouad by Naval Lieutenant Albert Frabaud, the Governor, in the shape of a Greek inscription in honour of Julius Quadratus, referring to his governorship of the mainland. This is, presumably, the C. Antius A. Julius Quadratus who is referred to in a Greek inscription from Ephesus in the British Museum as having been Governor of Syria under Trajan. Julius Quadratus held a number of important posts in Asia, and was at various times Legate of Pontus and Bithynia, Pro-Consul of Crete and Cyrene, and Proprætor of Lycia and Pamphylia. It may also be mentioned that Aelius Aristides refers to him as having made great donations to his native city of Pergamos.

NEAR EAST BOOKSHELF.

THE RUSSIAN ENIGMA.*

Mr. Marcosson has no doubt foreseen one obvious objection which the hardened reviewer is almost bound to bring against the attempt to write a book on the Russian Revolution; it is that the time for journalistic sketches of that event is over, and the day for a real history of it has not yet come. Indeed, as the revolution itself is by no means over, it is rather difficult to write even a contemporary record in any but a day-to-day diary form. Mr. Marcosson, however, keeps to the usual form of chapters, and, having been in Petrograd during the upheaval and an eye-witness of most of the events he narrates, we were prepared for an illuminating record of the last four months.

Unfortunately he does not tell us the very things we want to know. The whole world is aware that there was enthusiasm, excitement, bloodshed, and speechmaking in Petrograd; the newspaper correspondents have run amok with phrases about the millennium, and sober Reuter has burdened the cables with some of the innumerable manifestoes issued by the committees (several of which reappear like excitable midwives in *The Rebirth of Russia*). But talk does not decide events, as even the House of Commons is finding out in these days; and though we have had the talk, we have not yet had a connected account of the events behind the revolution. It would seem to be clear, for instance, that the Tsar and some at least of the Court party went into the war with a good heart. When and how did they change? And why? Count Witte and the Empress have been constantly spoken of as German partisans; yet in one of his books—"Ourselves and Germany"—Dr. E. J. Dillon speaks very highly of Count Witte as a statesman who had Russia's true interests at heart, and states categorically that the Empress did not rule her husband. There have been many sensational "revelations" of pro-German scandals, which were obviously invented to discredit the Russian Court. No doubt some of the accusations were true, particularly that which branded the Tsar as an individual infirm of purpose—witness his conduct on the black day of the 1905 revolution, when his appearance would have rallied the workmen to his throne; but how much of the gossip that was retailed to greedy ears in Petrograd had any foundation? Mr. Marcosson does not tell us; nor does he solve the extraordinary enigma of Protopopoff, who appears to English readers as a kind of lesser Strafford.

Then, again, it is quite clear that the scheme of the Council of Workmen's and Soldiers' Delegates was largely planned in advance. From information received, as they say at Bow Street, it cannot be pretended any longer that those who directed this movement were a purely fortuitous concourse of single-minded patriots, whose sole desire was to purge their country of all evil; but our author tells us nothing of the origin of this committee, or even the names of those who composed it—names, it will be remembered, which were indiscreetly blurted out by the *Morning Post* correspondent some weeks ago. If we remember rightly, the most essentially Slavonic name on the committee was something like Apfelbaum. Of this committee, whose constituents sounded more like the ingredients of a Palestine soup than a Council of National Safety, Mr. Marcosson has little that is new to say.

He is more communicative about the Duma, whose weakness was clearly that of every moderate element in every revolution—it is driven along against its will by the extremists who are necessary to its purpose, but when it wishes to slacken the pace it finds itself ignored or suppressed. But he does not tell us anything of the political forces behind the actual events. Who, for instance, started the "No annexations" cry? Was it one of the Apfelbaums, and, if so, what were his antecedents? Again, the "No offensive" theory, seeing that the Tsar was given his *congé* on the ground that he intended to make peace with Germany, is it not rather remarkable that the chief anxiety of his successors in the actual power in Petrograd was not to make further war on Germany? Probably the Stockholm bankers know more about the Russian revolution than Mr. Marcosson after all. Only unfortunately they do not write books about it.

This matter of "no annexations" may indeed turn out to be the root of the matter. Last year, when Germany desperately wanted to make peace with one at least of her enemies, she offered Russia certain terms which included Eastern Galicia and certain rights, apparent or real, at Constantinople. The old *régime* seems to have shown no great anxiety to accept these terms; the Entente, as a matter of fact, made a higher bid for the continuance of Russia's support, and she was promised the possession of Constantinople outright, on the implied condition that she captured the prize of war herself. The point is that both sides believed that the old *régime* was out for annexations and the aggrandisement of its territory, which may be right or wrong, but is at least intelligible. The people who succeeded to power condemned the Tsar as a pro-German, entreated the Allies to make what could only be a German peace, and took care to get rid of M. Miliukoff, who stood for the expansion of Russia. Now, does it not seem probable that those who acted in this fashion had either pro-German hearts or pro-German pockets? Yet we look in vain in this book for any explanation.

There is nothing about the happenings in the Baltic fleet, nothing about the troubles at Odessa, the interference with the Black Sea fleet, no indication of the anarchy and little about the rioting and the plunder.

A. W. T.

* "The Rebirth of Russia." By Isaac F. Marcosson. (John Lane, 3s. 6d. net.)

THE SLOVENES.*

"Les Slovènes" originally appeared in German at Jena last year. It was suppressed, at first for the duration of the war, and then altogether. But it is an entirely inoffensive book, which might be read by a German baby without detriment to its alleged morals or character. As M. Krek merely gives a succinct account of Slovène history and literature, with some pages on its geography, we must conclude that the Germans intend to deny the existence of a history or literature to one of the constituent nationalities among their Allies.

* "Les Slovènes." By Ivan Krek. (Librairie Félix, Boulevard St. Germain, Paris. 1 franc.)

A MORALIST ON MESOPOTAMIA.†

The medical service has done magnificent work in this war, and it has also contrived to produce some of the most interesting war literature. "In Mesopotamia" and "A Regimental Surgeon in War and Prison" are certainly among the most readable books dealing with the psychology of this world-struggle. The identity of our author is concealed behind his *nom de plume*, but if his medical work is up to the standard of his book the Mesopotamia armies will have reason to link his name with those of Sir Victor Horsley and Major Carter as being in the forefront of their benefactors.

The text does not set out to be more than the diary of a shrewd observer who was a member of that ill-starred Indian Expeditionary Force "D" in the earlier stages of the campaign; but the writer through all that trying time was apparently able to keep his sangfroid and his health. Both in his water-colours and his pen-pictures he has portrayed vividly what was, after all, the one dominant factor in the whole situation—the appalling heat. It was rendered the more insufferable because it was untempered by few, if any, of the comforts which experience has shown to be necessary. Such heat may just be borne in complete idleness, but those who had to face it in Mesopotamia were responsible for all the work connected with a modern campaign. Little wonder that men's nerves and brains were strained—that things were left to run themselves. The mischief, however, was not restricted to those who were suffering from the Mesopotamia climate. Behind the moralising of our author we see the breakdown of the system at the Indian end, as well as its inherent defects, not least among which was the senseless overlapping of authority, that compelled the smallest indent to run the gauntlet of innumerable departments or officials, gathering papers in triplicate or more at every stage.

The more obvious defects of the system have been remedied, we believe. In any case the conditions so graphically depicted by Martin Swayne no longer hold good, as far as the personal comfort of the troops is concerned. It is well, however, that the nation should have the details of that distressing chapter burnt into its consciousness. Those who take an interest in the future of Mesopotamia will also find much to interest them in these pages. Our author does not allow himself to go deeply into the subject. But he has no doubt regarding the fertility of the soil, and his comments on the Arabs ought to serve as a warning against a too easy optimism in this direction. No one who knows the country questions the potentialities of the future; but for them to be realized there must be firm and enlightened rule. This must be provided for the native population from without.

The "major, a dreamy soul," quoted by Martin Swayne, was not far wrong. "'All this show of ours out here is nothing in itself,' he said. 'It's a beginning of something that will materialize a hundred or two hundred or a thousand years hence. We are the great irrigating nation.

† "In Mesopotamia." By Martin Swayne. Illustrations by the Author. (Hodder and Stoughton. London. 5s. net.)

Digitized by Google

and that's why we're here now. We'll fix this land up and get it going, and then far ahead all the agricultural produce which we made possible will move the wheels of a new humanity.'" The major, it is to be hoped, will be a long way out in his dates; but only if the Mesopotamian problem is handled with wise foresight by the British Government.

BOOK NOTES.

Messrs. Allen and Unwin have recently published "The Tenedos Times," at the price of 21s. This work was compiled, sub-edited, and issued in editorial offices "somewhere in the Ægean Sea."

M. Berger Levrault announces "Face aux Bulgares," by Captain Henri Libermann, an officer in a French infantry regiment. The author describes the battles on the Tcherna, the defence of the bridgehead of Vozarçi and of the heights of Dracevisko Brdo, and, finally, the horrors of the retreat of the Vardar.

Mr. Andrew Melrose has just published a bright description of daily life in Salonika, entitled "In Salonika with Our Army," by Harold Lake, priced at 3s. 6d. net.

Major C. H. Barber is the author of "Besieged in Kut and After," published by Messrs. William Blackwood and Sons at 5s. net. The book contains a record of Major Barber's journey from Busreh to Kut, the return of the army from Ctesiphon, the siege, and a description of the author's life as a prisoner in Baghdad.

BOOKS RECEIVED.

The Pals at Suvla Bay. By Henry Hanna. (Dublin: Ponsonby, Ltd., 12s. 6d. net.)

The Man from Egypt. By Headon Hill. (London: Ward, Lock and Co., Ltd., 5s. net.)

TANGIER TO TEHERAN.

Most people would hardly require much further evidence as to the cordial nature of the relations existing between the Turks and their German allies. Still, for what it is worth, I am inclined to quote a Rome telegram referring to Falkenhayn's visit to Turkey for the interesting light it throws on the question. According to the telegram, his object is to persuade and, if necessary, to *goad* the Turks to an offensive. It is an interesting commentary on the whole-hearted enthusiasm with which the Turks are continuing the war against their former friends. In any case, I am sure that it will only be at a price that Falkenhayn will gain his alleged objective, for the subjects of the Sublime Porte are far too astute to lose such an opportunity of negotiating a little financial transaction. And I should imagine that the cost of an offensive would be rather heavy.

***

For his own sake, I trust the Kaiser is not a student of history, for it would be so mortifying, living as he is at a time when the "heroic" pose is distinctly unpopular and the theory of "Divine right" no more than an anachronism, to read the exquisite experiences of his ancestors in the kingly rôle in the Dark Ages and before that period. So many of them seem similar to him in all respects, except one—that in their case the stage fitted the part. One can quite well imagine, for instance, the Kaiser making the speech of Xerxes before his expedition to Greece, given by Herodotus in his "Polymnia," and quoted recently by a correspondent of the *Westminster Gazette*. There is a very proper reference to an invasion with fire and sword, and then the pompous utterance, "For I intend . . . to march through all parts of Europe and to reduce the whole earth into one Empire, being well informed that no city or nation will dare to resist my arms. Thus not only the guilty, but likewise those who have not offended us, must equally submit to the yoke of servitude." It really is a thousand pities that the Kaiser did not live in those days.

***

The perpetual incursion of new place names during the war has been a constant source of trouble to journalists and others whose pursuits lie in the writing line, the more so as few people, and, indeed, few papers are sufficiently consistent to spell them alike. It is a very old grievance, but it has been intensified by the war, and the Near East, in particular, has played a very fair share in increasing Fleet Street's difficulties. Where even the name of a country—Roumania, for instance—can be spelt in various ways, it is obviously hopeless to expect agreement over lesser-known and more complex names. It has always been a mystery to me why the Press has not united on the subject, and arranged for one spelling of all names which could possibly be the subject of divergence. Perhaps this will be done some day, and in the meantime I take consolation from the fact that our names are none too easy. I find confirmation of this view in the statement of a contemporary that in Greece the names of our King and the Prime Minister are spelt in different ways, while Mr. Balfour's name is charmingly rendered as "Mpalphour."

***

M. Pashitch has been commenting on the unhappy position of Austria. His view finds confirmation in signs which point to the fact that the strain of three years of war is producing an unenviable state of friction in the Dual Monarchy. Thus, according to a recent Paris telegram, news has been received from Budapest to the effect that Count Tisza has accused the Karolyi party in the *Igazmondo* of having incited the war against Serbia in July, 1914, and, what is even more amusing, Count Karolyi seems to have been "drawn" to the extent of accusing Count Tisza of taking part in the affair. This incident, which rather forcibly reminds me of the adage about honest men coming into their own, is one of the straws that show which way the wind is blowing.

***

I have often thought what an extraordinary freak of chance it was which led to the establishment of Byzantium on the shores of the Bosphorus. It seems difficult to give the Megarians credit for realising the precise importance of the site; indeed, is it not more likely that they were simply swayed by a more or less fatuous utterance from Delphi? Whatever their reason, they, no doubt, "builded better than they knew," and in so doing laid the foundation stone of a tradition destined to endure in another form to the present day. Chance, as a matter of fact, seems to be almost indelibly associated with the site, for a long series of fortuitous circumstances has marked or marred the history of Constantinople.

***

To give one instance. Constantine might quite easily have persuaded himself that some other site was preferable for his capital, for, whatever the evidence we have to-day of the impregnability or otherwise of the city, the fact remains that in his time it was singularly open to attack on one side at least. But then the redeeming merit of the site was not security pure and simple; it was its commanding position as a main artery between East and West. If safety had been all that Constantine desired, he would have chosen a site similar to that of Ravenna, a city useless for any purpose other than defence, but ideal as a fortress with its surrounding marshes.

***

The subject of prophecy, whether one likes it or not, continues to crop up. The Russians would seem to have found time to read Daniel, and have fixed fulfilment for May, 1918, That date certainly fits in better with the present state of affairs in our Eastern theatre than any month or day in 1917; but it shows that interpretation is not the cut-and-dried business that most of our modern seers would have us believe. Two more months have yet to run to enable us to witness the "certainty" promised for October—namely, the collapse of Turkey and the liberation of Palestine. This event has to take place before the middle of October, because by the 15th or 16th, I think, the Turkish year 1335 comes to an end. It is to be hoped that Falkenhayn, pig headed fellow that he is, who is now reported to be at Jerusalem, is not going to rob us of the pleasure of congratulating the Editor of *The Young Man and Woman* on his really comforting theory.

***

The suggestion I ventured to make that the prophet Ahmad of Qadian must rely on something fuller than a halfpenny pamphlet to carry conviction for his prophecy, seems to have commended itself independently to some of his followers, as I have now received a slightly thicker publication on the same subject. It deals mainly with the reference in the prophecy to the troubles in store for the Tsar, even to the extent now of over-labouring this particular subject. True, in a matter of this sort it may be difficult to hit upon the golden mean. In any case the followers of the Ahmadia movement—in the prophet's own language I suspect a happier term is used—will be glad to have all the proofs carefully marshalled. As the brochure points out, "the followers of different religions read in their respective scriptures certain prophecies, and then, accepting them as true, they begin to argue the supremacy of their respective creeds over all others, while as a matter of fact the nature and authorship of the prophecies are not above suspicion." Ahmadists are not troubled with any such difficulties. "The Promised Messiah lived (?lives) under a Government which professes an alien religion—I mean the British Government—and according to the laws of this Government a copy of each and every book, periodical, tract or notification that is published in India is sent to the Government Office for file at the time of its publication. Consequently the fact that these prophecies were actually published beforehand may be ascertained by reference to Government records and files."

Madame Take Jonescu has left London for Cromer.

M. Romanos, the Greek Minister in Paris, has left London for France.

Captain Ilitch, of the Serbian Army, has arrived in London from Corfu.

The Hon. Sir Arthur and Lady Lawley have left London for Scotland.

Lord Hardinge of Penshurst has arrived at Alloa House, Clackmannanshire.

The Bishop of Rochester has left Bishop's Court, Sevenoaks, for a few weeks' rest.

Lord Oranmore and Browne has left London for Castle Macgarrett, Co. Mayo.

The Earl and Countess of Bessborough have returned to their residence in Cavendish Square from Dorking.

M. Polychromaeles, the Chargé d'Affaires of the Greek Legation at The Hague, has arrived in London.

M. Roussos, who has been appointed Greek Minister at Washington, has arrived in London from Athens.

Princess Soutzo, wife of a former Roumanian Military Attaché, left London for Bournemouth last week.

General Peano, who has arrived in London from Rome, has been appointed Italian Military Attaché to the Legation in Jassy.

Mohamed Ali Khan Ehtesham Homayoun, First Secretary to the Persian Legation, is making satisfactory progress towards recovery.

Mr. Balfour saw the Roumanian Minister at the Foreign Office on August 2. The Greek Minister also visited the Department on that day.

On the occasion of his birthday on August 2, H.M. King Alexander gave a luncheon party at Tatoi, when those present included M. Venizelos and other Cabinet Ministers.

Earl Grey, who has been under the care of Sir Berkeley Moynihan at Leeds for the past few weeks, was able to be removed to Howick House, his Northumberland seat, on August 7.

Sledmere, the seat of Sir Mark and Lady Sykes, which was destroyed by fire some years ago, has now been restored, and on Monday the completion of the work was celebrated by a garden fête in aid of the Red Cross.

The Greek Minister and Madame Gennadius entertained at luncheon on August 7, at the Legation, De Vere Gardens, Kensington, M. Pashitch, the Serbian Premier, M. Nicolas Misu, the Roumanian Minister, M. Yovan Yovanovitch, the Serbian Minister, and Madame Yovanovitch.

An engagement is announced, and the wedding will shortly take place, between J. Angus Gillan, Sudan Civil Service, elder son of the Rev. James and Mrs. Gillan, 4, Regent Terrace, Edinburgh, and Margaret Douglas, younger daughter of Mr. and Mrs. Ord-Mackenzie, Headley Mount, Headley, Hampshire.

The Roumanian Minister, M. Nicolas Misu, was received in audience by His Majesty on August 6, and, on behalf of the King of Roumania, handed to the King the Order of Michael the Brave. Major Nicolas Arion also had the honour of being received by the King on his appointment as Roumanian Military Attaché.

M. Poincaré, who sent a telegram of congratulation on the recent Roumanian successes, has received a message from the King of Roumania declaring that although the offensive so auspiciously begun had had to be stopped for reasons independant of his will, his troops were burning with impatience to resume the forward march.

M. Pashitch, the Serbian Prime Minister, who arrived in London last week for a short visit after attending the Balkan Conference in Paris prior to returning to Salonika, visited the Foreign Office on August 2, and afterwards called at the Embassies and Legations of the Allied Powers. The same day he was visited by the Serbian Minister.

A meeting of the British community at Alexandria on August 4, presided over by Mr. Cameron, the British Consul-General, enthusiastically adopted a resolution reaffirming their intention to prosecute the war to a successful end. The meeting was also addressed by Sir Alexander Baird and Mr. Harry Farnall, and a stirring letter was read from Sir Reginald Wingate.

M. Yovan Yovanovitch, the Serbian Minister, and Mme. Yovanovitch entertained at dinner at the Legation on Tuesday evening M. Pashitch, the Serbian Premier; M. Jean Gennadius, the Greek Minister, and Mme. Gennadius; M. Nicolas Misu, the Roumanian Minister; Colonel J. Nicolaievitch, Military Attaché to the Serbian Legation; Mlle. Nicolaievitch; and M. Koitch, Secretary to the Serbian Premier.

The marriage was celebrated, on July 18, at St. Paul's Cathedral Church, Valletta, of Capt. H. R. Veale, R.N., son of the late Fleet Paymaster W. E. L. Neale, R.N., and Miss A. E. Denniss, daughter of the late General A. E. Denniss, R.A. The Rev. Michael Longridge performed the ceremony, assisted by the Rev. E. Edmonds Smith. The bride, who was attended by two bridesmaids, Miss Ballard and Miss Scott Moncrieff, was charmingly attired in a white dress, with hat to match. A large congregation was present at the service, including the Governor of Malta and Lady Methuen. A reception was subsequently held at Admiralty House, Vittoriosa, and later Capt. and Mrs. Veale left for Fort St. Angelo.

By command of the King, Mr. C. H. Montgomery called on the Greek Minister on August 2 to offer His Majesty's congratulations on the anniversary of the birthday of the King of the Hellenes. His Excellency thanked His Majesty's representative for King George's gracious message, the full text of which was immediately telegraphed to King Alexander. Sir Arthur Walsh, the King's Master of Ceremonies, also called on the Greek Minister to convey the King's congratulations.

Reuter's Athens correspondent, in a message dated August 1, says:—M. Sofoulis, Deputy for Samos, and the Government candidate for the Presidency of the Chamber, was elected to that post to-day by 180 votes to 14. The members of the Opposition, except M. Socolis, Deputy for Corfu, were not present. M. Sofoulis, on assuming the Presidency, emphasized the legality of the convocation of the Chamber, and declared that the Venizelist movement had brought about the salvation of Greece. M. Sofoulis then referred to the help which the Allied nations had given Greece, who, by tradition and spirit, had always sided with the Entente. The President's words were received with warm applause.

On the recommendation of the President of the Board of Trade, the King has awarded the silver medal for gallantry in saving life at sea to Belkacem den Mohammed Lekmiti, an Algerian villager, in recognition of his services to the survivors of a shipwrecked British crew on February 20.

M. Marcel Hutin states in the *Echo de Paris* that General von Falkenhayn, who has taken the place of von der Goltz, has just inspected the Turkish front at Gaza.

If you are willing to help

THE SERBIAN ARMY

SEND YOUR DONATION FOR

THE SERBIAN RED CROSS

to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the

RELIEF OF THE DISTRESS OF THE SERBIAN CIVIL POPULATION

at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

OBITUARY.

CAPTAIN P. F. C. D'ERF WHEELER, R.F.C.

A correspondent writes:—Captain Percival Francis Crommelin d'Erf Wheeler, Dorsetshire Regiment, attached Royal Flying Corps, who was killed on duty on July 24, was the eldest son of Captain d'Erf Wheeler, R.A.M.C. (formerly head of the English Hospital, Jerusalem, now attached Egyptian Expeditionary Force), and Mrs. d'Erf Wheeler, a daughter of the late Bishop Blyth of Jerusalem; his uncle, Captain R. C. Popham Blyth, Gloucestershire Regiment, was killed at Gallipoli in 1915. Captain Wheeler was born at Jerusalem on April 5, 1894, and was educated at Clare House, Beckenham, and Trent College. In May, 1913, he was gazetted to the Dorsetshire Regiment, and was trained at Belfast and at Weymouth. In September, 1914, he was sent out to France in charge of a draft from the regiment, and a month later was badly wounded at La Bassée in one of the severest engagements at that place. He tried to keep up with the advance, but was ordered out of action, and he then crawled along on hands and knees until a stretcher-party picked him up. As he was being carried along on the stretcher he was fired at by the Germans. He was not able to return to active service for fourteen months, during which time he remained in England under treatment, but for the last six months he was able to do duty with the regiment. He was made captain in February, 1915, being not yet twenty-one. In December, 1915, Captain Wheeler was sent to Mesopotamia, where he served for eight months, doing much valuable work; but he had several attacks of malaria during that time, and finally he was sent to Bombay to hospital, suffering from a severe attack of para-typhoid. He was about to return to Mesopotamia when he was recalled to England for training in the R.F.C., and he arrived home on January 1, 1917. Captain Wheeler trained in England and in France, his work here, as before, being very distinguished. He had finished his course, and was on the eve of receiving his wings, when he met his death flying on duty at an aerodrome in England.

Captain Wheeler's three years of active service were distinguished by excellent and faithful work, the real value of which could only be judged by military men. From his childhood he was always a leader, and his instinct and capacity to lead and to control men were never at fault. As a soldier and as an airman of whom a very brilliant future was confidently predicted, his loss is a severe one. Of the more intimate side of his character it is not possible to speak here, but few men had his power of calling out, and retaining, the affection of those with whom he came in contact. He had no thought of himself when he could help anyone. To those who knew him well remains the memory of one who was entirely single minded and steadfast, who spoke no evil nor listened to it, who in high ideal and achievement has won place in that great company of young soldiers whose unblemished record is their country's reverence and pride.

"O, Valiant Hearts, who to your glory came
Through dust of conflict and through battle-flame;
Tranquil you lie, your knightly virtue proved,
Your memory hallowed in the land you loved."

We regret to announce the death, which occurred on August 2, at The Warren House, Coombe Wood, of Lieutenant-Colonel Albert Edward Sydney Louis Paget, M.V.O., the eldest son of General and Lady Paget. The greatest sympathy will be felt for his parents in this bereavement, more especially as it comes at a time when they are undergoing anxiety with regard to their other two sons, both of whom are reported wounded, though happily not seriously. The late Lieutenant-Colonel Paget had been ill in hospital abroad for some months, and had been removed to a London nursing home. He was only thirty-eight years of age, and his early death will come as a great shock to his many friends. His military career met with a check at the commencement, for when he had passed into the Army he was declared medically unfit. When the South African War broke out, however, he volunteered, and was given his commission by Lord Roberts in the 11th Hussars. Subsequently he was for a time A.D.C. to the Lord-Lieutenant of Ireland, and from 1908 to 1902 acted as A.D.C. to his father, who held the Eastern command. In the present war he had been mentioned in despatches three times.

A memorial service was held in St. Peter's Church, Eaton Square, on Wednesday, for Lieutenant-Colonel Paget. Canon Sheppard, Sub-Dean of the Chapels Royal, officiated. The congregation included Lady Paget, Lady Alexander Paget, Miss Paget, Miss Amy Paget, Miss Alberta Paget, Lord Arthur Paget, Sir Ralph and Lady Paget, and Mr. Almeric Paget.

Major Arthur Justin Ross, D.S.O., Royal Engineers and Royal Flying Corps, who was accidentally killed while flying on August 2, was the only surviving son of Mr. G. E. A. Ross, K.C., and of Mrs. Ross, of 101, Warwick Road, S.W. He was seconded for service with the Egyptian Army in January, 1911. In June of last year Major Ross was appointed Flight Commander, Royal Flying Corps. He was awarded the D.S.O. in the Birthday Honours List of 1916, and also held the Egyptian Order of the Nile (4th class).

We regret to announce the death from rheumatic fever, which occurred on July 27 at Vomero, Naples, of Ronald Silley, aged twelve years, the only son of Mr. and Mrs. Ronald H. Silley, late of Lisbon and Constantinople.

DOMESTIC ANNOUNCEMENTS

BIRTH.

HORTON.—On August 4, at Alexandria, Egypt, to Jean (*née* Dunford, Newcastle-on-Tyne), wife of Lieut.-Col. Horton—a son.

MARRIAGES.

BURNETT—LEIGH.—On July 30, 1917, at St. James's, Grimsby, Lincs., by the Rev. Canon Markham, D.D., Francis Edgar Burnett, Lieutenant R.E., only son of Mrs. Scaramanga-Ralli, 2, Lygon Place, S.W., to Ethel May, daughter of Mr. William Leigh, Elmfield, Grimsby.

CAMPBELL—CARVER.—On August 1, at All Saints, Ramleh, Alexandria, by the Bishop in Jerusalem, assisted by Archdeacon Walow, Donald Swinton Campbell, Captain Yeomanry, eldest son of Mr. Collin and Lady Angela Campbell, Everlands, Sevenoaks, to Margaret Emily (Madge), eldest daughter of Mr. and Mrs. Percy Carver, Bulkeley, Alexandria, Egypt.

DEATHS.

HOARE.—On July 18, after a trying illness, contracted whilst on active service in Gallipoli, the Rev. Henry James Hoare, B.A., Chaplain of All Saints' Church, Ramleh, Egypt, and formerly Principal of the C.M.S. Edwardes College, Peshawar, India, aged 51.

HORE-RUTHVEN.—At Warwick House, St. James's, Alistair Malise, infant son of Zara and Alexander Hore-Ruthven.

KILLED IN ACTION.

CONRAN.—On July 28, when out on "night bombing" duty, Major Owen Mostyn Conran, R.F.C. and "King's Own" Regt., and late attached to the Egyptian Army, son of the late Major Conran and of Mrs. Conran, Brondyffryn, Denbigh, aged 36.

MAHOMED.—Killed in action, on July 31, Lieut. Claude Atkinson Etty Mahomed, Scots Guards, only son of Mr. and Mrs. George Mahomed, of Bournemouth. Argentine papers, please copy.

RODOCANACHI.—On July 27, 1917, killed in action, Second-Lieutenant Paul Rodocanachi, Royal Flying Corps, elder son of the late I. M. Rodocanachi and of Mrs. Rodocanachi, aged nearly nineteen.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

FRIDAY, AUGUST 10, 1917.

ITALIANS AND JUGOSLAVS.

Last week the hope was expressed in these pages that the circumstances in which the Allied Conference was recently held in Paris pointed to a satisfactory understanding having been reached between the Italians and the Serbs on the subject of the future of Dalmatia. It was not to be supposed that all the details of a final agreement had been reached; and the fact that the Conference was adjourned for a few days, to meet again in London, implied that further discussion probably on this as well as on other subjects was found to be necessary. The main consideration was that a pregnant source of future friction between some of the Allied States should be definitely removed. That this has actually happened receives confirmation in an article that has since appeared in the *Corriere della Sera*, which constitutes a striking appeal—possibly the first of its kind—from the Italian side for a moderate attitude towards the Southern Slav question. Starting from the premise that, in order to uproot German domination in the midst of Europe, Austria must not be allowed to survive in her present form, it is argued that it is indispensable that all the aspirations of the peoples directly engaged in warfare against her, or longing to throw off her yoke, shall be satisfied, and that around a central nucleus new independent States shall be formed as defences against all attempts at aggression. The best future guarantee against a beaten Austria, the Italian journal continues, consists in an agreement between the nations who can only satisfy their most sacred aspirations at the expense of Austria. In the Entente's duty of cementing the harmony between Austria's neighbours Italy should assume the leading part, as the formation of an anti-Austrian State beyond the other shore of the Adriatic is to her a vital interest. "It is a question whether we are to have as neighbours on the other shore an organic friendly nation ready to make common cause with us against every Austrian attempt at aggression, or shall tolerate the existence of a wedge on the Adriatic between the Italian and Serbian borders which Austria, backed up by the German *bloc*, could use for the inevitable attempt at getting even." Not unnaturally the article includes an appeal to the Jugoslavs for moderation on their part as well; but it is an eloquent recognition of the all-important fact that Italy has little to gain and much to lose by any policy calculated to leave bad blood between her and "the kingdom of the Serbs, Croats and Slovenes" after the war.

Those who have followed the recent exposition in these pages of the Italian case in regard to Dalmatia by an Italian writer and the reply from a Jugoslav source will have been able to satisfy themselves that an adjustment of the two conflicting views ought not to prove difficult. Briefly summarised—there can be no question that it was ably presented—the Italian case rested in part on an historical basis. Dalmatia, it was urged, had been Roman or Venetian for twenty centuries, and the fact that it now showed a preponderating Slav majority was due in part to the systematic persecution of Italians at the hands of the Austrian Government in pursuit of a definite policy of denationalising the Italian territories which came under its jurisdiction at the beginning of the nineteenth century. Thus a just settlement at the close of this war ought to make amends for the wrongs suffered by the Italians during the past fifty years. But in the end the Italian case came round with greater weight to the purely strategical aspect. For the mastery of the Adriatic, so ran the contention, the possession of the eastern coast is an indispensable condition. As was to be expected, the Jugoslav protagonist had no difficulty in countering the historical argument. The record of all Near Eastern countries has been too chequered to render history a safe authority for either party to cite; the more so, if the range is to be extended over twenty centuries. Any Latin tradition attaching to the eastern shores of the Adriatic was broken by the Slav irruption, and although the newcomers ultimately failed to maintain their government over the lands they had conquered, they remained in occupation and proved by no means easy subjects for those who exercised lordship over them. A settlement to-day obviously must be based in the main on actual conditions, or at least on conditions that were accepted as normal prior to the outbreak of the war. There cannot be the least doubt that the Austrian Government has acted in the manner attributed to it by both Italians and Jugoslavs. The utmost it has ever allowed itself to do towards winning the support of the alien communities subject to its jurisdiction has been to play one off against the other, and according to the need of the moment each party in turn will have been victimised. At one time the Italian element will have appeared dangerous; but it is certain that for some years past the Southern Slavs will have suffered the more from a policy of denationalisation.

The two disputants are on the safest ground when they start off from the point laid down by the *Corriere della Sera* that the vital interests of both require for the future absolute agreement and genuine co-operation between the two races. Italy will have her attention fully occupied by her own economic development and the necessity of guarding against the measures of revenge that the fertile brain of Germany may devise. The Southern Slav State is likely to find its own domestic problems quite serious enough to make it undesirable that they should coincide with the possibility of grave complications abroad. Even at this stage the differences of Serbs, Croats and Slovenes have actually caused a split in the Serb-Croatian Volunteer Corps which has been formed from among the Austro-Hungarian Jugoslav prisoners of war taken by the Russians. No doubt the misunderstanding which has given rise to the incident will in due course be removed; but when feeling can run high enough to prevent the adherents of two different schools of political thought from fighting side by side in the common national cause, it is certain that in the spacious times of peace there will be abundant occasions for conflicts of opinion which will tax Jugoslav statesmanship to the limit. It may be assumed, therefore, that what Italy wants is a reasonable guarantee that no Power shall find in the situation in the Adriatic the least encouragement to prompt it to aim at undermining Italy's position in that sea; she is not really concerned to claim political power for Dalmatian Italians who, if they did exist at one time, have been dead for several decades. The Jugoslavs, on the other hand, have a similar interest in seeing that no loophole is left in the Adriatic for Austro-German intrigue, and they will have no difficulty in satisfying themselves that Italy's "mastery" of the Adriatic—however unhappily chosen the expression may be—will entail no encroachment on the freedom of navigation in times of peace. It is only necessary, therefore, for a round-table conference to decide the portion or portions of the eastern coast which Italy needs for her naval bases and their protection on the land side, in such a way that the choice shall not deprive the future Jugoslav State of its most situable harbours on the Adriatic. An announcement that such an agreement has been reached and ratified will prove a fitting corollary to the recently promulgated constitution of the future Jugoslav State.

A GLIMPSE OF NORTHERN PERSIA.

By CHAUDERY LALL KHAN.

The following simple narrative of a week-end outing in Persia, told by a Persian, will not be without interest to those who try to picture conditions in that country.

It was the prime of the year, in the middle of July, when Persia is in the full glory of her youth that a party of Europeanized Persians (myself included) set out for an outing to spend their week-end at Umbran, an imposing little village situated at the distance of about twenty miles from Meshed, the capital of Khorasan. We quitted the city by Arak Gate, which, though crumbling into decay and ruins, reminded one still of the past glories of Persia and especially of the days of her old warrior Nadir Shah, the Napoleon of the East, whose sharp sword still flashes in the pages of its ancient history.

It was late in the afternoon, and the pale rays of the sun peeped into our carriage as we drove over a rough road, shrouded in the clouds of dust raised by the horses' hoofs. It is very uncomfortable to drive on these roads —or, rather, tracks, as there are no roads in Persia—in summer, when the surface is smothered in thick dust. The beautiful scenery, however, makes up for much discomfort. To the right, about half a dozen large fields of melons and water-melons had turned their gorgeous fruit towards the shining sun, while one corner of the field was flanked with maize, whose graceful plumes trembled and nodded at the gentle touch of the summer breeze. Beyond these was a long row of orchards full of fruit trees of various species, and especially of vines which had clothed the brown mud walls of the gardens with their stretching arms. Far away there stood a long line of poplar trees, bordering the banks of a stream which runs through the heart of the Holy City, their silver-lined leaves glistening like gems beneath the radiance of a tropical sun. To the left, the landscape was submerged in the golden sea of ripe corn, with here and there a farmer busy reaping and threshing, dressed in his picturesque garb typical of the Persian peasantry. In the distance beyond the fields stood a jagged rock known as "Koh-i-Sungei" beneath the shadows of a long chain of bare hills, as if spying the land round about. Looking ahead, the country is extremely wild and an uncultivated tract of land as far as the naked eye could reach, with the exception of a village here and there nestling either at the bottom of a hill or somewhere in the immensity of the plain. A drive of more than an hour through a solitary country, occasionally dotted with patches of furze, brought us to the steep banks of a stream winding quietly upon the pebbly bed of a low-lying river. After splashing through the water, we mounted the other side. It is here that the character of the scenery changes considerably; wild nature is left behind and an endless row of gardens, cultivated fields and villages appear. Hitherto, we had jogged along at a slow speed, but now the road began to be more promising, and we started off at a freshening pace. The fiery ball of the sun had set in the reddened sky behind the Nishapur Hills, and a beautiful moon had emerged, flooding the country with its light and throwing a silver sheen upon the vast expanses of land covered with limitless gardens and marked with low hills. Soon we came to the walls of a garden where the fragrant scent of different flowers and the intoxicating perfume of some aromatic trees, mingled with the penetrating fumes of some tiny shrubs growing wild on the steep bank of the brook, drifted into our carriages. On the farthest corner of the garden we halted for a few minutes at a country inn, "Kahwakhaneh," which makes no pretence to luxury, but its simplicity is charming to the lovers of country life. After having some refreshments, we were once more in our carriage and were driving upon a road lined with mulberry trees on either side. About a quarter of an hour's comfortable drive through the sweet-scented air of this beautiful land, where pleasure is rife and pain unknown on account of its healthy and pleasant climate, brought us on the verge of an extremely narrow road which winds in slight curves through the gardens to Umbran. The road is scarcely wide enough to allow two carriages to move abreast, and it often puzzled me to think what a driver would do if he was confronted with another vehicle coming from the opposite direction.

We had come through an extremely interesting stretch of country noted for its romantic scenery, magnificent panoramas, rushing torrents, picturesque gardens, and exhilarating air, and at last we found ourselves in the heart of a small village called Turkbeg. The village is surrounded by beautiful gardens and the houses are built of sun-dried bricks and small stones, bonded together with the cement of the same material, resembling much more tumbled-down cottages in outward appearance. As the further part of the journey had to be made on foot, we had to hire about half a dozen mules to convey our belongings to Umbran, which still stood two miles further on. There was no time to spend and we were soon out of the village once more. A narrow footpath ran by the side of the seemingly placid stream which, covered by the overhanging boughs of the trees, was winding through gardens full of alluring scent of the ripe fruits. There was nothing to disturb the stillness of this beautiful valley, with the exception of the echoes of the roar of many waterfalls, which seemed still to vibrate in the sweet-scented air. An exceedingly pleasant walk of about an hour brought us to the bottom of a hill on the brow of which perched the little village of Umbran, whose picturesque, beautiful and magnificent site enveloped in moonlight will always live vivid in my memory. It was here that we intended to pass our week-end.

Here, before giving further particulars of this place, I feel it my duty to thank Mr. Agha-Seyed Abol Ghassem, a member of the local staff of the Imperial Bank of Persia, who owns a valuable domain in the vicinity of this village, for it was in his beautiful garden where we spent our holidays. On the day following our arrival we woke at about seven o'clock in the morning on an elevated platform in the garden, aglow with the golden streaks of an early sun. The scenery of the surrounding gardens seen by the grey light of dawn was peculiarly charming. Sitting upon the gentle undulating slope of the hill, we could see the contents of all the gardens perched on the opposite slopes of the hills. We could also see a group of houses huddled together on the opposite slope of the valley, which is the village of Umbran. What this hill on the brow of which stood the little village of Umbran might be like in winter, when the cold winds sweep the corners of the houses and do not permit the inhabitants to thrust their heads out of the houses, that I leave my readers to judge; but if a traveller is fortunate enough to see this village and the beauty of its locality at this time of the year he will carry away with him a memory of a scene unsurpassed for picturesque beauty in the whole of Khorasan. This valley stretches in a continuous row of gardens for a long distance, until it is blocked by the Nishapur Hills. The gardens are crowded with fruit trees of nearly all species which could grow in a country where the winters are bitterly cold and the summers are correspondingly hot. The climate is delightful and pleasant. All that nature could do to beautify the place had been done. If only it could be made accessible, especially by railway, then Umbran would be the Switzerland of Asia, and the privilege of enjoying these picturesque gardens would not have been confined only to the sons of its soil, but many pleasure-seekers of Europe would have selected this spot as a place of resort. The fruits are plentiful, and as it is not possible for the farmers to transport all the fresh supplies for sale they resort to drying them for later markets. We spent our week-end in this paradise of gardens and listened to the birds' songs which filled the air with rapturous melody. The glorious afternoon in which we sped in two-horse carriages from Meshed to Umbran was not a festival—at least it is not so marked in the Persian Calendar—but the pleasurable excitement of seeing such an interesting country under such favourable conditions in the full glory of her beauty made it a high holiday to us all, and judging from the warbling of the nightingale and the beauty of the green summer mantle in which Dame Nature had arrayed herself, she, too, was making a holiday.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Men Missing at Gaza.

August 2.

Replying to a question on this subject by Sir HENRY DALZIEL, Mr. HOPE stated that up to Wednesday last there had been reported through various channels as being prisoners 246 of the men missing in March, and 185 of those missing in April. There had been received yesterday (Thursday) from the Netherlands Legation at Constantinople a report by the late United States Consul at Damascus, dated April 13, giving the names of three officers and 90 men captured at Gaza, who had reached Damascus. The Consul stated that he was permitted to communicate with the prisoners and to distribute to them relief in money, and, further, that on his representation to the local military authorities the men were supplied with such personal equipment as they lacked and it was possible to obtain locally. The three officers and 75 men left on April 15 for internment in Anatolia, 15 men being left in the hospital at Damascus. These were visited by the Consul, and most of them found to be suffering from fever.

Responsibility for the War.

Mr. DUNDAS WHITE asked the Foreign Secretary whether his attention had been called to the recent reference in the Reichstag by Herr Haase to the meeting on July 6, 1914, apparently at Potsdam, at which there appeared to have been present the Kaiser and the political, military, and naval leaders of Germany and Austria; whether the Allied Governments had any information about this or any similar meeting during that month; and, if so, whether they would consider the advisability of disclosing it.

Lord R. CECIL: I have seen what appeared in the Press on the subject. I cannot make any statement on the subject beyond saying that the information in possession of the Government indicates that the Central Empires decided in July on a policy which, in their views, would almost certainly lead to war against Russia, and consequently against France.

British Prisoners in Turkey.

August 3.

Sir JOHN SPEAR asked the First Lord of the Treasury if he could furnish any recent news of the condition of prisoners in the hands of the Turks, taken at Kut; could parcels be sent to them; and what means were being taken to improve their conditions.

Mr. HOPE: His Majesty's Government have received no recent reports respecting the condition of British prisoners of war in Turkey, but there is unfortunately no reason to think that it has improved. The Netherlands Minister at Constantinople is still pressing the Turkish Government for permission to visit the camps, and a request for a similar permission has also been made to the Turkish Government by the International Red Cross Society. The transmission of parcels through Austria was interrupted from February to April last, and again in June and July, but their transmission in limited quantities is now permitted. There is reason to think that a fair proportion of the parcels reached the prisoners, although irregularly and with great delay. As the hon. member is already aware, monthly relief allowance of £T3 is issued to all British non-commissioned officers and men in Turkey by the Netherlands Legation, which also forwards to them supplies in kind. There is no distinction in any of the above respects to be made between prisoners taken at Kut and other British prisoners in Turkey.

Italian Troops in Greece.

August 6.

Captain HERBERT asked the Foreign Secretary whether Italian troops were being withdrawn from Epirus, and, if so, whether the lives and property of the Albanian inhabitants of that country would be guaranteed.

Mr. BALFOUR: Negotiations are now proceeding between the Italian and the Greek Governments with regard to the withdrawal of troops beyond the Greek frontier. We may trust M. Venizelos to ensure that no unfortunate incidents will result from that withdrawal.

Policy in the Near East.

August 7.

Major DAVID DAVIES asked the Prime Minister whether, as a result of the recent Allied conferences on questions relating to the Balkans and our war policy in the Near East, he would make a statement in secret session before the adjournment of the House.

The CHANCELLOR of the EXCHEQUER said that he was not prepared to adopt the suggestion that, as a result of the recent Allied conferences on questions relating to the Balkans and other war policy in the Near East, he should make a statement in secret session before the adjournment of the House.

The Salonika Force.

Captain CARR GOMM asked the Prime Minister whether he was aware of the fact that, in consequence of official silence, recent statements had been made about the Salonika Army of an unfair and prejudicial character; and whether, in justice to the regimental officers, non-commissioned officers, and men of this force, he would cause such statements and suggestions to be refuted by some public recognition of their bravery and devotion to duty during a long and difficult period.

Mr. MACPHERSON: Any important operations carried out by the British Army in Macedonia are dealt with as fully as possible in official *communiqués*, and a dispatch, when received, will be published in due course. In the meantime, I may say that the British troops in Macedonia have acquitted themselves in accordance with the best traditions of the British Army, and that any statements to the contrary are devoid of foundation. In the matter of rewards to officers and men, recommendations by the General Officer Commanding in Chief, Salonika, have been and will be dealt with in exactly the same manner as those from other theatres of war. The Salonika Force received generous recognition in the list of honours and promotions published in the *Gazette* of June 4, 1917.

Colonel Carter.

Mr. GILBERT asked the Secretary for India what was the present position of Major R. M. Carter, I.M.S., was he still on service in India, or was he still detained in this country; if the latter, whether it made any difference in his pay and allowances, and, if so, to what extent; and whether, in view of the praise of this officer's action by the Mesopotamia Report, he proposed that he should be promoted or given any special recognition in view of his services to the British and Indian troops.

Mr. MONTAGU: Lieutenant-Colonel Carter is at present employed under the Admiralty on the equipment of hospital ships. Under Indian Regulations an officer placed on special duty in this country draws somewhat less than the full pay of his substantive appointment in India. Lieutenant-Colonel Carter's deputation pay—£1,057 10s. a year—is accordingly less than that attached to the last appointment which he held in India, viz., £1,360 a year. The answer to the last part of the question is in the affirmative, and I am in communication with the Government of India on the subject.

Mr. HOGGE: Does not my right hon. friend think that the one man who was responsible for exposing the scandal of Mesopotamia ought not to suffer either financially or in any other way as the result of his action?

Sir J. REES: Do not officers in the Indian Service regard serving at home for a time at slightly lower pay as a privilege and an advantage?

Mr. MONTAGU: It is because I recognise that the gallant officer's services deserve some recognition that I am in communication with the Government of India with regard to his promotion or other special recognition. The difference between service in England and service in India must, according to the regulations, obviously, and I think rightly, be represented by some difference in emolument.

Mr. HOGGE: Is it not a fact that Surgeon-General Babtie is serving at home on Indian pay?

The SPEAKER: That does not arise out of the question.

Mr. GILBERT: Why has this officer been transferred to the Admiralty and not kept in the Indian Medical Service?

Mr. MONTAGU: The gallant officer has shown himself peculiarly well equipped for the service he is rendering to the Admiralty, and has been loaned to the Admiralty for the purpose of assisting in the equipment of hospital ships.

The Troops at Aden.

August 8.

Mr. GEORGE LAMBERT asked the Under-Secretary for India whether excessive sickness prevailed among the troops at Aden; and whether any recognition had been made of the gallantry of the men there in fighting against largely predominant Turkish forces.

Mr. MONTAGU said no report had been received suggesting that there was excessive sickness among the troops at Aden. The names of a number of officers and men had been brought to notice for good service and a number of awards granted. A similar procedure would be adopted when the next despatch was received.

Mr. LAMBERT suggested that Mr. Montagu should specially inquire whether there was excessive sickness, as he had information that there was.

Mr. MONTAGU promised to make special inquiries, and asked for any information Mr. Lambert possessed.

The Navy and Baghdad.

Mr. GEORGE LAMBERT asked whether the First Lord of the Admiralty intended to issue any despatch recounting and recognising the services of the naval forces in Mesopotamia, without which the British troops would never have taken Baghdad.

Dr. MACNAMARA replied that a despatch would be published shortly.

The British Farmers' Red Cross Fund has now contributed the sum of £647,785 to the British Red Cross Society, out of which over £400,000 has been spent on hospital work at home and the following places abroad:—Serbia, Dardanelles, Persian Gulf, Egypt, and Salonika. The fund has also agreed to provide £30,000 for hospital work in Mesopotamia. Further help is urgently needed, and all offers of assistance will be gratefully received by the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.1.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

THE PRESS ON THE NEAR EAST.

Turkish Sandbags.

The Turkish method of dealing with a shortage of material for sandbags is indicated in a message from Jemal Pasha, which, according to the Beirout paper *El-Ikbal*, was recently sent to the Vali :—

"A million and a-half sandbags are required for the Gaza fortress for the construction of sand redoubts against the enemy shells, which are interminable. Their fleet and armoured trains also fire continually. The rents and breaches made daily must be repaired in this way. The bags should be made, if necessary, of all the silk hangings in all the houses of Syria and Palestine. The fortress of Gaza is of great importance to the future of the Hedjaz and Syria, and parapets constructed of sandbags made from the silk hangings will stand against the English shells."

"The bags," adds *El-Ikbal*, "have been distributed as follows: 250,000 to the vilayet of Adana; 250,000 to the Mutesarriflik of Jerusalem; 500,000 each to the vilayets of Aleppo and Beirout."

Commenting on this information, *El Kowkab* says:— "From a reliable informant who escaped from Syria at the end of last month we learn that the authorities are carrying out this order in the most brutal fashion; he has himself seen soldiers tearing off the *habbara* (long silk cloak) from Moslem women on the ground that it was required for sandbags for Gaza."

The Operations against Turkey.

In an article on "The Baghdad Railway in the War," in the *Fortnightly Review*, Mr. H. Charles Wood discusses the part played by that line in enabling the Turks to carry on their widely distributed military operations. Dealing with the probable effect of the pressure now being brought to bear on Turkey, he writes :—

Neither the Mesopotamian nor the Syrian campaign is in itself likely in the immediate future to bring about a situation destined to crush Turkey or Germanic power there. The capture of Baghdad has no doubt made a great impression in the Ottoman Empire, especially among the Arabs, and it must have increased British prestige throughout the East. Equally well our advance across the desert and our arrival in the more or less immediate vicinity of Jerusalem is clearly possessed of a more or less similar effect, and it must have strengthened the Independentist movement in Arabia. But, having regard to the distances between the areas in which we are fighting and any really vital part of the Ottoman Empire, and to the fact that our campaigns can have little direct connection with one another, it is not in the above-mentioned advantages that we must look for the *raison d'être* of a future desire on the part of the Turks for peace. The real value of these operations is twofold. From the military or more immediate standpoint it lies in the fact that, if they have not done so already, the allies or puppets of Germany must grow to understand that their future positions depend not so much upon the success of their local resistance as upon the general result of the war—a result which, sooner or later, they will recognise as destined to be favourable to the Allies. When that moment arrives they will also realise that the heavy cost of a continued resistance can have no counterbalancing advantages to set against those accruing from the early and independent conclusion of peace. It is then that Turkey, or at least the better elements of her people, may be influenced, partly by our actual successes on Ottoman soil, and partly by a knowledge of the real interests of the country, to turn her attention in the direction of the Allies, whose attitude towards the future of the Ottoman Empire has naturally been modified by the Russian Revolution.

A New Road in Southern Albania.

The reservation of a small portion of Epirus for military occupation by Italy is thus explained, according to the Rome correspondent of the *Morning Post*, in a semi-official *communiqué* :—

This territory is at present absolutely necessary for the protection of the main road from Santi Quaranta to the southern Albanian posts held by the Italians, and is the only practicable road from the sea to the interior. The road from Santi Quaranta beyond Delvinon divides at Giorgincati, one branch rising to Argyrokastron, the other branch falling towards Janina. This latter branch, a few kilometres beyond Giorgincati, cuts the Greek-Albanian frontier established by the Florence Protocol of 1913 at Arinisti bridge, on the river Fitochi, and enters Greek Epirus in almost a direct line at Hain Kalibaki, where it again divides. The southern branch leads to Janina, whilst the northern branch mounts towards Liaskoviki, and, cutting the Greek-Albanian frontier at Melisopetra, re-enters Albanian territory. It will therefore be seen that the small triangle retained momentarily by Italy has as apexes the bridge on the Fitochi river, the cross-roads at Kalibaki, and the village of Melisopetra.

Only a large scale map gives all the names mentioned. The road is described by Major Claude Askew in the *Daily Express* :—

The road (he says) has been practicable for the last four or five months, but it is only quite recently that it may be regarded as an established line of communication and safely open to regular traffic. This new road throughout, thanks to Italian and French energy, is in excellent condition. The total distance from Salonika to Santi Quaranta, the Albanian port, is some 280 miles. The journey may be accomplished in two days, though that means pretty heavy travelling. For the first ninety miles, however, advantage may be taken of the train, and you will descend at Florina, the present terminus of the Monastir railway. Beyond Florina the road strikes into the mountains by a steep ascent. Koritsa, an important Albanian town, is remarkably modern and civilised considering its out-of-the-world position, but Liaskoviki, a little further on, might well be the mountain retreat of some sixteenth-century brigand chief.

We spent the night at Perati, on the Greek frontier, for some distance beyond which the road lies in Greece, and it is like nothing so much as driving for miles through an undulating English park. At Delvinaki an abrupt turn west is made and Albania is re-entered, and we found ourselves among stern, forbidding mountains once more.

It is from these fastnesses that we descend on Delvino, a pleasant and picturesque little town. From Delvino it is an easy run to Santi Quaranta—"the Holy Forty"—presumably a band of monks, the ruined remains of whose monastery are still to be seen upon the summit of an adjoining hill.

By the opening up of this road, Corfu—a short hour and a half's journey by boat from Santi Quaranta—assumes a much greater importance as a base for the Balkan campaign.

The Roumanian Surprise.

The military correspondent of the *Daily Telegraph*, in a critical survey of the third year of war, says that the Roumanian disaster was one of the worst that had overtaken the cause of the Allies :—

Yet another small country trusting to the power of the Entente had been overwhelmed in a few weeks and ruined by the fierce conqueror. This German victory in the Carpathians acted as a set-off to the Allied successes in France, while the material resources of oil and grain seized by the Germans in the richest district of Europe were of immense importance in the war of blockade and attrition. Worst of all, perhaps, was the widespread conviction engendered by these events that the Entente States had no unity of strategy, no common military policy, and consequently no certainty of acting in concert on the most important and critical occasions. The chief military authorities in London and Paris could not possibly have been aware either of the state of things in Russia, or of Roumanian and Bulgarian armed strength, and still less of the reserve German army lying in wait for the occasion, or they would never have fallen into the trap by pushing Roumania into her fatal declaration of war. It was the turning-point in the gigantic campaign of 1916. From the depth of despondency German arrogance rose once more to the heights of imprudence, which led to the breach with the United States of America.

Another aspect of the Roumanian disaster is given by "Bukarest" in the *National Review* :—

The year 1916 ended in disaster for Roumania, but she had the satisfaction of knowing that her sacrifice had not been in vain, and that these successes of the Kaiser's troops had been largely made up for elsewhere. For by drawing down on herself the thirty-seven divisions of élite which would otherwise have been employed on other fronts, she had saved the armies of Letschitsky and Brusiloff from a counter-offensive which had caused the gravest anxiety. She could also claim with pride that she had not been quite a stranger to the fullness of the successes of her Allies on the Somme and the Ancre, and that she had contributed to the definite and complete check of the Germans in the Battle of Verdun—a battle second in importance only to that of the Marne—and whose name will predominate in the history of the war in 1916.

Gallipoli.

An article in *The Times*, on "Gallipoli Memories," contains a vivid pen picture of the present appearance of the peninsula :—

To-day all is quiet at Gallipoli. The rows on rows of wooden crosses at Anzac and Helles, at Nibrunesi Point, and Brighton Beach look out over the Aegean, doubtless as blue as ever it was; the dead who lie beneath these little monuments of great deeds have reached their rest. In the scrub Lee-Enfields lie rusting alongside shattered Mausers. The pebbles on the long bleak beaches are mixed with shrapnel bullets, and in the sand of the dunes west of the Long Sap are buried bones and scraps of leather, clips of corroded cartridges, and shreds of khaki clothing. The "Vineyard" has blossomed, and the small green grapes cluster on the vines. The well by the Fisherman's Hut has run sweet once more. The cave dwellings by Shrapnel Gully, Quinn's Post, and Courtenay's are as quiet and still as tombs. Grass and weeds have crept over the winding paths that thread the valleys and skirt the hilltops. The sandbags of the traverses and trenches have rotted and burst, spilling their earth on the litter of these battles of yesterday. And out through the chessboard fields grave-mounds of earth that we patted down with spade and entrenching tool have blossomed with wild flowers and green grass. The warm, tideless Aegean washes these empty beaches where once thousands of men from the Empire's back-blocks made war as it had never been made before.

SERBIA'S INDEPENDENCE.

The Serbian Society gave a luncheon in honour of M. Pashitch, the Serbian Prime Minister, at the Savoy Hotel on Wednesday. Lord Treowen presided in the absence, through indisposition, of Sir Edward Carson, and among those present were Lord Robert Cecil, the Greek Minister, the Roumanian Minister, the Serbian Minister, Sir A. Firth, Sir G. Riddell, Vice-Admiral Troubridge, Admiral Sir Hedworth Meux, Mr. H. Samuel, M.P., Sir Alfred Mond, M.P., Mr. W. Brace, M.P., Sir Edward and Lady Boyle, Mr. G. J. Wardle, M.P., Sir H. Dalziel, M.P., Colonel Yate, M.P., Captain Amery, M.P., Mr. Mackinder, M.P., Mr. A. F. Whyte, M.P., Major D. Davies, M.P., Mr. Ian Malcolm, M.P., Colonel Sir Mark Sykes, M.P., Sir Arthur Evans, and Mr. H. W. Steed.

In a letter expressing regret at his absence Sir Edward Carson wrote :—"To those who are inclined to make an indecisive or inglorious peace I would commend the example set by the Serbians, who, although their country is in the possession of the enemy, have continued to fight and have gained for themselves undying glory." Mr. Gallenga Stuart, an Italian deputy, wrote saying that he hoped Italy and Serbia would always move together against the common foe.

Lord Robert Cecil, Under-Secretary of State for Foreign Affairs, proposed the health of Monsieur Pashitch, who was, he said, the Grand Old Man of Serbia and one of the heroic figures of the war. We must aim at a final settlement, which could only be based on the principle of natural justice. That settlement must recognise the national and racial aspirations of the countries concerned, and must draw together and not divide our present Allies. He was convinced there was no inconsistency between the claims of Italy and Serbia. Those two nations could look forward to a long and prosperous future side by side.

M. Pashitch replied to the toast in Serbian, his speech being translated by Capt. Yovanovitch. He said that Austria, the vanguard of the German penetration to the East, tried during the Balkan war to bring Serbia by means of a customs union into the service of the Austro-German policy. When this attempt failed there came a series of ultimatums on the Albanian question, from which Serbia was able to escape, but then came the deplorable event of Serajevo, which Austria, in connivance with Germany, used to provoke this terrible war. Germany now talked of an honourable peace. An honourable peace should provide for the punishment of those who had provoked the present conflict; it should provide guarantees that such a catastrophe could not occur again; it should provide for the setting free of all the peoples under the Austrian yoke, and for the union of the Serbs with their kindred peoples.

Messieurs Gennadius and Misu replied on behalf of Greece and Roumania to the toast of "Our Allies," proposed by Mr. Herbert Samuel.

Mr. Lloyd George, who arrived late, said he had come from an important conference, and would have to attend its resumption in a very short time. But he felt he could not let the opportunity pass without coming to say that his heart was with Serbia. He had also come to pay a personal tribute of deep respect to the venerable and distinguished figure of the Serbian Prime Minister, whom he had known for many years as one of the wisest, most sagacious, and most patriotic figures in the East. He thought that not only Serbia, but also Europe owed a great deal to Monsieur Pashitch. To two statesmen produced by two small nations—Serbia and Greece—we owed far more than it was possible to reveal. Venizelos, by his steadfastness, courage, and insight, had kept the soul of Greece alive under most trying conditions. He (Mr. Lloyd George) was a believer in the little nations; he had the honour to belong to one himself. One point about the Serbs that had always touched him as a Welshman was that they had been able to sing of their defeat. Submerged beneath a deluge of barbarism, but not destroyed, they had sung the songs of Kossovo for centuries until the day of triumph came. A nation that could survive centuries of Turkish tyranny would not die because of three years of defeat. What he had ventured to say about Belgium he would repeat about Serbia—that the first condition of peace was restoration, complete and without reservation. However long the war might last, British honour was involved in seeing that Serbian independence was completely restored. And it was not merely a matter of the security of civilisation. What was true of Belgium was true also of Serbia—that she was the guardian of the gate. She had faithfully stood to her trust. We extended once more the hand of fellowship to Serbia, and said that, come weal come woe, we were not merely Allies, but friends and partners, and would go through the world together.

EARLY PERSIAN POTTERY.

A very interesting collection of Persian ceramics is now on view at the galleries of the Fine Art Society in Bond Street. In the main the exhibits are specimens of early Persian pottery found on the sites of the ancient cities of Ecbatana, Rhages, and Arak.

Particular value attaches to the exhibition from the fact that the pottery is representative of the best period of Persian ceramics. How the school of craftsmen arose which gained for Persia from the eleventh to the sixteenth centuries the distinction of possessing some of the finest workmen at this art is still a matter for discussion. The fact remains, however, that the pottery of this period was unrivalled for shape and colouring. The potters were able to produce a white surface on their wares, and over this they painted floral designs in many colours Then an alkaline glaze was used over this surface, giving a most brilliant and picturesque effect.

Some exquisite examples of these wares are to be seen in the exhibition, which is probably as fine a collection of its type as has been seen in London. Space prevents more than a cursory reference to the exhibits, and we, therefore, content ourselves with mentioning a few of the outstanding pieces. No. 51, a shallow bowl, a delicate example of the craftsmanship of the period in brown and black on a white surface, with an elaborately worked interior, was found at Ecbatana, and is of the thirteenth century. Of another type, and a century older, is 18, a small bowl, from Rhages, a rich design in blue and black. It is described as having "flaring sides, covered with smooth ivory glaze with black and blue painting, displaying a medallion of filiated scroll in centre and branching rosettes, and fleurs de lys on sides, with a ring of white incised ivory on black ground encircling the rim."

Then there is a curious mosque lamp (59) of the thirteenth century from Ecbatana, with a short neck and four handles, and another interesting exhibit is a tabouret (3) of the ninth century found at Rakka in Mesopotamia. Other important exhibits are 120, a ceremonial basin of metallic lustre from Ecbatana, of the twelfth century, with an arabesque ornamentation of gold and brown, and 49, a magnificent vase from Ecbatana of the thirteenth century. The latter exhibit is of particular interest for its patches of sunset iridescence, which are of surpassing beauty.

THE FIELD FORCE FUND.

An appeal is made by Lord Islington, chairman of the executive committee, and Mrs. W. L. Sclater, hon. secretary of Queen Alexandra's Field Force Fund, for supplies of warm clothing for the coming winter. Comforts for Salonika, Egypt, and France should be ready to go out early in October, and they must therefore be collected, packed, and despatched in September. About 25,000 parcels are packed and despatched per month. Contributors are invited to visit 24A, Hill Street, Knightsbridge, and see the vast amount of work done and the comfort ensured to our soldiers abroad. Gifts of warm clothing, especially socks, shirts, mufflers, and sweaters, and the small luxuries so much appreciated in the trenches, are asked for.

Dr. J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.
The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

The Merchants' Committee of the London Chamber of Commerce have made certain recommendations—which the Council of the Chamber have adopted in principle—with regard to the attitude of the Government to trade during the war. The recommendations are, in effect, a dignified protest against official intervention between producers and consumers. The committee suggest that the Government should cease to act as an intermediary, that the services of the business community should be utilised fully, the control of imports and exports should be organised, and that the control departments should be assisted by representative business men nominated by the trades concerned. In a word, Arcadia.

***

There can be no doubt that some system is urgently needed. The various official control agencies have not succeeded in regulating supplies or in securing the confidence either of the distributors, producers, or consumers of the commodities controlled; and the result, generally speaking, has been great confusion. This statement is not to be regarded as a reflection on the goodwill and patriotism of the officials; the trouble has been that the wrong men have been selected to perform duties which would have taxed the ability of experts. I do not suggest for a moment that all the trouble and discontent among the people, and the loss and inconvenience suffered by traders, would not have occurred; but it would certainly have been minimised, and if business men had been employed, and failed, to organise a perfect system of control, the real difficulties of the situation would have been more readily appreciated than is the case at present.

***

An interesting prize case has been decided this week by the Judicial Committee of the Privy Council. The Hamburg-Amerika Line appealed against the decision of the Egyptian Vice-Admiralty Court condemning their steamer the Sudmark as lawful prize. It will be recalled that this vessel was captured by a British man-of-war in the Red Sea a few days after the outbreak of the war, and towed, via Port Said, to Alexandria. The appeal from the condemnation was based on the technical point that the captors allowed the vessel to remain at Suez for more than twenty-four hours, in breach of the Suez Canal, the Hague Conventions, of the Egyptian Proclamation Act, and that the ship was only liable to detention. The contention failed, as it deserved to do. The fact remains that the Sudmark was "prize."

The war in the Middle East continues to be in a state of suspension. Reports reaching this country show that, as in Turkey proper, so in Asia Minor, the economic conditions are deplorable. "Constant revolts occur," the Athens correspondent of the *Daily Telegraph* cabled recently, the principal causes for which "are the dearness of all the necessaries of life, including foodstuffs, and the great depreciation of the currency. Paper money, the issues of which are guaranteed by bonds on the German Treasury, is refused absolutely in most districts. In certain banks, and by the money changers, *it is sometimes, but not always, accepted at the rate of* £14 *in paper for* £1 *in gold.*" The italics are mine; and I emphasise the phrase to show how completely the people have awakened to the hollowness of the promise of assistance by German agents. They will not even accept the currency of their own country backed by the "security" of the German name. It is not surprising to learn further that the Turkish Government, to avoid revolts and risings, is forced to pay gold against its own decree, which prohibited payments in specie throughout the Empire.

***

Germany herself, as a matter of fact, is little better off. Her gold reserve may remain in the neighbourhood of the normal —£120,100,000—but the great increase in the issue of paper money has reduced its proportion to currency obligations. The last return of the note issue showed an increase of £11,500,000, and the ratio of gold to notes is about 27 per cent. Before the war it was 71.7. The amazing depreciation of the mark needs no further explanation. All accounts go to show that the money situation in Germany is becoming desperate. Silver coins become rarer; all the larger coins gave place to paper early in the war, and now various German cities propose to replace 50 pfennig pieces by paper tokens. There would not appear to be much of a margin left for the assistance of a deceived and stricken ally, and the Turks have fully realised this for some time past.

***

Shareholders in Russian gold mines have not been in happy circumstance in recent times; but a recent decision of the new Government has provided them with a grain of comfort, small though it may be. The Government, according to certain Continental papers, has authorised for a period of ten years the free import of the equipment and machinery so much needed by the industry. The decree may not mean a great deal in itself, perhaps, but it is a valuable indication that the old sloth is being shaken off. What a pity it is that more liberal treatment and greater consideration are not given to the oil industry, in which British interests are so closely bound up.

The plan by which the British Empire Producers' Association proposes to pay off our war debt has already been discussed in these columns. A Frenchman, described by the *Petit Parisian* as "one of the most progressive business men in France" (M. André Citroen) has elaborated in that paper a most comprehensive scheme which is to accomplish a like result for all the belligerent nations. The scheme is to set up a "bank of all nations, whose notes shall be forced currency throughout the world. This bank alone would have note-issuing authority, and there need be no gold reserve to back its paper, the war having shown it to be possible to issue a certain quantity of bank notes on the basis of the credit of the issuing nation." It will be apparent, of course, that enemy countries would benefit under the scheme—the author, indeed, realises this—but it is pointed out that "the amount of war indemnities would be deducted from the sum allotted to them." In this way, so we are told, the belligerents would be able to wipe out all their interest-bearing war loans and Treasury Bill issues, and after the war take up national life with a clean balance sheet! But what about the countries which are in the position of fraudulent bankruptcy? And who will trust them?

***

According to the *Frankfurter Zeitung*—an authority not always to be believed, however—the present harvest in Serbia is the best for many years, and great quantities of food crops have already been despatched to Germany and Austria. If the first statement may be conceded, the latter claim may also be accepted, because neither Germany nor Austria would hesitate to steal all they could find, regardless of the fact that their victims would be left to starve. Another enemy paper, the *Deutsche Tageszeitung*, declares that Germany has already planned to divide the harvest in Bessarabia between herself and her allies.

***

On another page to-day will be found a report of the inaugural meeting of the British Merchants' Morocco Association. Space prevents the inclusion of an illuminating speech delivered by Mr. Macleod, of the Consular Service; but with this it is hoped to deal next week. The subject of Moroccan trade is of such profound interest to British merchants and manufacturers that I am sure the address delivered by Mr. Hunter will be read with attention. I wish the Association the greatest success in its mission, and in the hands of its influential Council and officers the wish is likely to be realised. Merchants who desire to come in close touch with the activities of the Association should communicate with the honorary secretary, Mr. P. B. Robinson, 17, Leadenhall Street, London, E.C.4.

THE SUDAN.

No. 12. The Red Sea Province.

By Percy F. Martin, F.R.G.S.

Anterior to the year 1905 you might have searched vainly the map of the Anglo-Egyptian Sudan for a province bearing the title of "The Red Sea." The greater part of the territory now known under that designation was called the Suakin Province (on the Red Sea littoral), and ranked as of second-class grade, in company with the provinces of Halfa, Gezira, and White Nile. The real importance of the Red Sea division commenced with the year 1906, which witnessed the opening of the Nile-Red Sea railway by the late Lord Cromer at Port Sudan, in the memorable month of January. From that time forward the province has made consistent economic progress, and it ranks to-day as one of the most prosperous—agriculturally—of the political divisions, and of primary importance as containing the two principal ports of the Sudan.

Although one of the smallest of the provinces so far as actual area is concerned—the superficial measurements show but 28,000 square miles of territory—the Red Sea comes next to that of Khartoum in respect to commercial development. It has, indeed, become the most successful of the cotton-producing districts of the Sudan, being favoured with almost ideal climatic conditions for this particular class of agriculture. Much, of course, depends on the frequency and degree of rains that fall, and in this respect the province ranks as one of the wettest. On the other hand, droughts are by no means rare; the northern portions in particular have suffered often and severely in this respect. The year of 1914 stands out prominently as *annus horribilis*, the scarcity of moisture resulting in the falling-off of the cotton crop by as much as 52,610 kantars, as compared with the yield of the previous year's season.

Best Days to Come.

The best days of the Red Sea Province have perhaps yet to dawn. When the projected railway between Suakin and Tokar is constructed—as constructed it will be shortly—the whole commerce of the district affected will receive an immense impetus. The long trains of camels, loaded with produce and goods from abroad and destined for Kassala, will gradually disappear, it is true, and the many wild-looking but picturesque Hadendowas who tend the caravans will likewise vanish into their mountain fastnesses. The iron-horse will once again supersede the ship of the desert, with the satisfactory result that freight charges will fall to a tithe of their present rates, while thousands of tons of merchandise—instead of hundreds, as at present—will pass backwards and forwards to the advantage of Suakin and its merchants, many of whom own both house-property and cotton-fields at Tokar, situated not far distant.

The three principal towns in the province are Tokar, Suakin and Port Sudan. The former, located so close to the scene of the late Baker Pasha's disastrous retreat in 1884, was relieved by Sir Gerald Graham, whose infantry troops, fighting in the middle of the Tropical rainy season, had to tramp from Suakin on the coast through a belt of liquid mud and sand, quite as bad as anything recently met with by our boys on the Somme or at Ypres. Although four-and-thirty years have passed since those unhappy days, the skulls and bones of some of the thousands of disorganised and shattered Egyptian troops still encumber the old battle-field. The present town of Tokar has been much improved within recent years. One notices almost at once the general orderliness of the place, and the cleanliness and the apparent contentedness of the people. Nothing that human enterprise or ingenuity could devise would ever serve to make Tokar into a desirable place of residence; but, at least, it has been rendered habitable for a certain period of the year, and to this distinction it would hardly have attained but for the many sanitary innovations introduced by the Administration.

A Fallacy.

It was generally supposed that when Port Sudan was established the whole economic future of Suakin was sealed, and that Ichabod could be written above its ancient gateways. But this has proved far from the case, although perhaps it may require something more than the bare assurance of the individual to bring home the fact to conviction. At first sight the town of Suakin looks like a settlement of ruins and an utter desolation. Fully one-half of the buildings are in various stages of decay, while many of the crowded inhabitants preferably dwell in miserable tent-like hovels in the last degree repellent to the sight, and offensive to the smell. The rise of its new rival, Port Sudan, has, it is true, meant for Suakin a decline in its maritime supremacy and a diminution in its commerce and trade, as well as in the number of its inhabitants, and the gradual withdrawal of foreign banking and financial interests. All of these signify a heavy decline on the once-great prosperity of the town and district; but that is a long way from admitting that the glory of the whole place has departed.

Evil of Mahdism.

It would be a lamentable thing were this indeed the case. To my mind, of all the towns in the Sudan Suakin is the most typically "Eastern," presenting a veritable feast of colour of decayed or decaying Oriental splendour and ruined magnificence, but possessed of an historical past without compare. The town suffered severely commercially during the fourteen dark years of Mahdism. Under those blighting conditions the important trading route between Suakin and Berber was completely closed to caravans. Even before the battle of Atbara, which finally released the province of Berber from the nightmare rule which had so long afflicted it, both imports and exports had shown signs of steady increase, for merchant steamers soon recommenced to plough their way to and from the busy little port. The town itself since those days has altered very little, except so far as its ruins are concerned. These have become still more ruinous. Several substantial Government buildings have been erected, but these are lost, except when seen from the water's front, among the mass of dilapidated constructions, many of which appear to be upon the point of falling from lack of repairs. Kitchener's Gate, a splendid piece of semi-Moorish architecture, and the lengthy, solid wall built of stone (or of coral rocks) which Kitchener constructed to keep out the Dervishes under Osman Digna, still remain. The wide breach in that wall which the wild followers of the Khalifa could not succeed in effecting, after months of tireless siege, a tidal wave achieved in the course of a single night.

The earliest of the charts of the Red Sea coast indicate the existence of a large, natural harbour known as Sheikh-el-Barghut, some twenty miles north of Suakin. A commission that examined the whole coast-line for the purpose of selecting the best spot for a harbour decided in favour of this situation, and it was forthwith named "Port Sudan." Opened to traffic in 1909 by the ex-Khedive Abbas Hilmi, the port has proved everything—or almost everything—that was hoped for. Disadvantages it has no doubt, but in any case they are inferior to those which would have had to be contended with at Suakin. Once the inside of the harbour is attained the safety of vessels is assured, and, unlike the entrance to Suakin, it can be negotiated at night. In fact, about 60 per cent. of the vessels entering arrive and berth at night. As regards its use as a naval base, nothing could be better. A whole fleet of men-of-war could be easily accommodated. Port Sudan likewise possesses great strategic advantages, for, were the Suez Canal blocked in times of war—as was the late idea and the hope of our friends "the clean-fighting Turks"—it would be a simple thing to send troops to India by way of Alexandria, the Nile, and Port Sudan.

War-time Adversity.

Naturally, the war has wrought untold harm to the fortunes of the port. This was, however, to have been expected. But its glory is in the shade only, and with the restoration of normal conditions in the shipping world there will ensue an increase in the prosperity of the harbour and of the province in which it is situated.

Port Sudan and harbour cost £E866,000 to build and equip. Since the port opened the external trade of the Sudan has doubled in value. The increase is mainly the result of the new railways, of which the port is the terminus; but it has been greatly assisted by the fact that the quick-despatch, up-to-date apparatus and safe entrance, both by day and by night, which the harbour offers make it attractive to the leading lines of cargo and passenger steamers which call there for traffic. In ordinary times the lines sending their vessels to Port Sudan at regular or intermittent intervals include the Khedivial Mail—their steamer, the Prince Abbas, with mails from London *vid* Brindisi, leaving England on October 31, 1907, was the first to cast her moorings in the new port on the evening of the following November 9—the Union-Castle, Bombay-American, and British India, the Clan, Bucknall, Harrison, City, Hall, Ellerman, Odessa and Società Nazionale dei Servizi Marittimi of Italy.

Shipping Handicaps.

At one time, also, the fine boats of the Austrian-Lloyd called there, and presumably at some future date they will call again. To-day, however, the greater part of the companies mentioned have withdrawn their vessels in entirety. Great difficulty has been found since the beginning of the war in obtaining either freight or passenger accommodation, while an increase of something approaching 50 per cent. upon the normal charges made has of a necessity been imposed. Indirectly, the town of Port Sudan has also suffered, and prices of land have fallen to practically nothing. Yet at one time great hopes were entertained of land values in this town and district, but as the longest leasehold granted by the Government (which owns all the building plots available) remains at ninety-nine years and stringent regulations regarding the character and the value of the buildings to be erected thereon exist, there is little opportunity afforded of anything like speculation in the prices proving successful. And this is precisely what the authorities have aimed at preventing.

ADEN'S IVORY TRADE.

Steady Falling Off in Imports and Exports.

We are indebted to a report submitted by the United States Consul (Mr. Addison E. Southard) for the following particulars regarding the Aden ivory trade.

Aden seems to be losing the importance it once occupied as an ivory market. In 1912 it imported ivory to the amount of 54,042 lb., valued at £27,600, and exported 77,132 lb., valued at £40,000. The import value averaged about 10s. 6d. per lb., and the export value about 10s. 11d. The excess of exports over imports is explained by stocks accumulated from the previous year. There has been a steady falling off until in 1916 Aden imported only 18,660 lb. of ivory, valued at £7,600, or an average of 8s. 4d. per lb., and exported 19,237 lb., valued at £8,100, or an average of 8s. 9d. per lb.

The above figures on the average value per lb. are for all grades. For the best grade of ivory the present local price per lb. is around 16s. 8d. as against 12s. 6d. twelve or fifteen years ago. This increased price is due not only to decreased general supplies, but to a proportionately much greater decrease in the supply of the better grade.

Sources of Supply.

Abyssinia is the principal source of supply for the Aden ivory market. At times much Abyssinian ivory has been exported through the Egyptian Sudan and East Africa. The prohibitions some years ago of the export of female or immature ivory by the governments of the two districts named has caused the bulk of the Abyssinian ivory, a lot of which is female or immature, to come out of the country through Djibouti. Some goes direct to Europe from Djibouti, but much of it comes to Aden. Ivory hunting is a Government monopoly in Abyssinia, and permission must be obtained to kill elephants, although no permission has been necessary to buy ivory. All of the ivory obtained must, however, be shared with the Government, this share ranging from one-half to three-fourths.

Hunters and buyers, when possible, have the ivory smuggled out to the coast in order to avoid giving the Government its share. If this is not immediately possible the tusks are buried in the ground to await a favourable opportunity for smuggling them out. The earth, however, soon stains the buried ivory and decreases its value. It is stated that this practice of smuggling has been responsible in part for the order prohibiting the killing of elephants. Another reason was, doubtless, the fact that the Abyssinian elephant herds have been seriously reduced by hunters in recent years.

Notwithstanding the prohibition of ivory hunting in Abyssinia, considerable quantities still arrive in the Aden market, a good part of which is said to be from stocks buried in past years.

United States a Good Market.

The greater part of the ivory exported from Aden goes to Great Britain and the United States. The bulk of the extra large and good tusks are sent to America, where good prices are obtained. The next best assortment goes to London. The inferior pieces go to India, China, and Japan. Nearly half of the ivory exported from Aden in 1916 went to America, the quantity being 6,485 lb., valued at £3,510. In 1912 Aden exported to the United States 35,510 lb. of ivory, valued at £18,240. This was more than half of the total exports. The American market has for many years taken a large share of the ivory exported from Aden.

LANCASHIRE COTTON.

A Quiet Week of Irregular Production.

(From Our Own Correspondent.)

Manchester, Wednesday.

We have experienced a quiet week, and the holiday season of the year is having some effect upon business. The "wakes" are being held in numerous Lancashire towns, and production is very irregular, especially in the weaving section.

The policy of the Control Board with regard to curtailment of production is still in abeyance, but arrangements had been made for the whole situation to be discussed by the Chairman of the Control Board and the President of the Board of Trade this Thursday, and it was hoped that some definite announcement would be available before the close of the week.

In the meantime spinners and manufacturers are very uncertain as to the extent of their production during the next few months.

Advices relating to the progress of the Egyptian cotton crop refer to probable damage by the pink worm, and the growth has still to pass through a critical period. Egyptian yarns remain very irregular in quotation. Rather more business has been done in the finer numbers, particularly in wefts. Coarse carded counts still drag.

There has not been very much activity in piece-goods for Egypt. Shippers are harassed by the limited freight space. According to letters and telegrams from Cairo, clearances remain on a healthy scale. Demand for India has not been very prominent, and many of the offers cannot be entertained.

Although buying for China has not been so active as a week or two ago, the undercurrent of demand keeps up fairly well. American yarns have been purchased sparingly, and spinners have experienced difficulty in maintaining their position. Stocks are now and again sold at very low figures as owners of mills do not wish to finance supplies on the high prices of to-day.

Further buying has been reported in single and two-fold yarns for India, and certain producers are in a much stronger position than a month ago.

TRADE NOTES.

Morocco.

The Acting British Vice-Consul at Laraiche (Mr. G. H. Selous) writes to the Board of Trade, under date July 7, that as long as British firms continue to send catalogues and price lists in the English language, and with prices in English currency, to Laraiche or other parts of the Spanish Zone of Morocco, such firms handicap themselves at the outset in their efforts to secure a market in that country. Catalogues sent to the Spanish Zone of Morocco should be printed in Spanish, and prices should be stated in Spanish pesetas, approximately if necessary, and based on a rate of exchange which should be given, with the proviso that any difference in the rate of exchange will entail a corresponding difference in the price.

RUSSIAN SUGAR EXPORTS.

The export of sugar to Persia has been subjected to repeated checks in recent years. In September, 1915, the export of sugar *vid* Baku was suspended for a time. In November permission was given again for lots of 3,610 tons monthly, which shortly afterward it was found possible to increase to 5,415 tons. From December 28 only Marseille refined was admitted to export. From February, 1916, the export of granulated sugar was permitted. On April 18, 1916, according to a statement of the President of the Special Conference on Supplies, the export to Persia of all kinds of sugar was prohibited by the Ministry of Finance. Finally, on May 10, the Council of Ministers permitted the exportation of 5,414 tons into Persia for sale against ready native cash, but only a part of the indicated quantity was exported.

ENGINEERING NOTES.

Plough Attachments.

The ancient methods of clod-breaking represented in old Egyptian engravings, which illustrate ploughing and hoeing, are still in vogue in many parts of the Near East, where modern hoeing machines are either unknown or too expensive for the average farmer to buy; but with the existing scarcity of labour even the antiquated method is now expensive. It will be of much interest to the farmers and land proprietors, therefore, to know that a device has been invented which will advantageously replace "the man who goes behind the plough to break the clods." The invention is a plough attachment for breaking up clods and earth. It is fitted to the back edge of the mould board in an upright position by a bracket, which is formed to provide bearings for a spindle, on which are mounted two bosses, carrying a couple of rotating cutters or beaters.

As the plough is drawn forward the share ploughs up the ground, and the latter is directed upwards by the shape of the share and the mould-board in the usual way. The earth ploughed up has a natural tendency to press against the mould-board, so that as the earth leaves or is delivered from the rear end it presses against the beaters which project beyond the furrow side of the mould-board. The pressure of the earth and sods against the beaters, combined with the forward movement of the plough, causes the former to rotate about the spindle, and in the course of their rotation the beaters automatically slice and break the sods and earth ploughed up into a more or less pulverised condition. The device has been patented.

Reinforced Concrete.

Although reinforced concrete has only recently been introduced on a comparatively large scale in the Near East, its efficiency or suitability for exposed structures is already being questioned by local "experts," and especially by contractors of public works. They say that deterioration takes place even under ordinary humidity. In such cases they may be sure that the design and construction of the concrete is faulty. There will be no deterioration if the concrete is waterproof, and free from cracks that will admit water. More moisture or any stationary water left in the concrete after its preparation is of small consequence, as water soon becomes saturated with lime, and then forms an alkaline medium well adapted for the preservation of steel; but continued access of water, involving anything of a flow, will remove the preservative lime, and thus cause the customary rusting of steel exposed to water. Therefore, the concrete of the reinforced concrete must be practically impervious. It is desirable to make the concrete containing the steel or iron reinforcement very dense, since by doing so its protective properties will be maintained for the longest time. Correctly designed and prepared reinforced concrete can be absolutely relied on to be free from any deterioration owing to age.

Oil-Well Machinery.

British makers of oil-well machinery and refining plant, have been wisely advised that they must be ready if they wish to secure some of the very large orders which will surely come from Roumania and South Russia after the war. It must be remembered that great destruction of oil-well machinery has taken place in Roumania, both below and above ground, in order to avoid the invaders utilising the wells. The value of the destroyed works on the surface of the oil-wells is estimated at £8,000,000, and in addition to this, a great deal of underground machinery has also been rendered useless. The destruction on the works of one company alone is authoritatively estimated at £900,000. There is no doubt that American engineers will compete very sharply with British firms for the restoration business; but it is anticipated that there will be abundant room for both.

Serbian Trade.

It is reported that a Serbian commercial association, with branches in Greece, desiring to enter into commercial relations with American manufacturers and exporters of general merchandise, has issued a complete list of the goods desired, and, through American official channels, have brought it to the latter's notice. Were British manufacturers and exporters indifferent or forgotten?

Prominent Industries of India

SUBMARINE WARFARE.

The Secretary to the Admiralty has issued the following return for the week ended 3 p.m., August 5, of arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

Arrivals	2,673
Sailings	2,796

British merchant vessels sunk by mine or submarine:—

1,600 tons (gross) or over	19
Under 1,600 tons (gross)	2
British merchant vessels unsuccessfully attacked by submarines	10
British fishing vessels sunk	None

A Reuter message from Amsterdam says:—It is reported from a German source that Germany intends shortly to concentrate her submarine activity exclusively against Great Britain, with the object of more intensive destruction of ships trading with England.

Four large French ships and two Italian were lost during the week by submarine action.

PORT WORKS AT TREBIZOND.

Reference has been made in THE NEAR EAST from time to time to the development of the port of Trebizond, which was undertaken along modern lines about five years ago. Two small breakwaters were built under English direction, one on the Molos side and the other on Dermen Dereh, and warehouses were erected on the quays. A large French company has been building, repairing, and making a study of the roads to connect various parts of the city with the interior and to ensure regular communication and the transportation of goods. A Belgian water company undertook the canalisation of the waters of Galiena, a village not far from Trebizond, and a considerable sum of money was collected in Trebizond itself, by which the canalisation of the city was assured.

The recent change to Russian administration has temporarily halted these enterprises; but the new Government is encouraging various projects that will increase Trebizond's commercial importance. Among these is the founding of the Commercial Bank of Trebizond. Refrigerating plants for military and private goods are to be established, most of the capital coming from Russia. A great bakery with machinery for kneading the dough and ovens of the latest French pattern is one of the projects discussed. Electric works at Dermen Dereh are also planned to supply power for an electric tannery.

SUGAR IN EGYPT.

The Egyptian sugar industry (writes a contemporary) has developed very considerably since the war broke out. This is ascribed in some quarters to a largely increased use of chemical fertilisers. Before 1914, Egypt imported for its sugar cane plantations 20,000 tons of such chemical aids, whereas in 1915 the amount rose to 70,000 tons. The present expense for artificial manures in Egypt per acre of canes is put at 20s. to 40s.; and as the results are favourable the allowance tends to increase.

LIFE INSURANCE.

ALL persons who are about to effect a Life Insurance Policy in any Office should send particulars of the proposed Policy to MR. E. P. HENDERSON, late of the Indian Civil Service, for his impartial opinion, which is given FREE OF CHARGE, on his usual conditions (obtainable by any person on application).

INDIAN RESIDENTS, while at home on leave, can obtain exceptionally favourable terms, and should make a point of applying for particulars of Mr. Henderson's Special Scheme for Insurance to cover the risks of the voyage out.

Pamphlets, describing special schemes for

EDUCATIONAL PURPOSES, IMPROVEMENT OF INCOME AFTER RETIREMENT, BACHELORS' POLICIES, AND INSURANCE AGAINST ENFORCED RETIREMENT DUE TO FAILURE OF HEALTH,

can be had on application by persons of known position, who agree to Mr. Henderson's conditions.

Interviews by Appointment.

42, LEINSTER GARDENS, LONDON, W.

TRADE IN MOROCCO.

Inauguration of the British Merchants' Association.

The inaugural meeting of the British Merchants' Morocco Association was held at the Cannon Street Hotel, London, E.C., on Wednesday, August 1, 1917, Mr. Robert Samuel Hunter (Vice-President of the Association) presiding.

The Secretary (Mr. P. B. Robinson) having read the notice calling the meeting,

The Chairman, in the course of a lengthy and highly interesting address, after referring to the regretted absence of the President and the Deputy-Chairman, and the recent death of Mr. de Moraville, said:

A Representative Council.

"You will all have received the council's report. You will not expect me to tell you of any important achievements by the Association. There has not been time for that. We have been busy organising the council and enrolling members. We hope the result will be considered very satisfactory.

"We have endeavoured to secure a thoroughly representative Council, and we believe we have succeeded. We believe we have done well in securing the services of Lord Onslow as President, and you will be asked to show your approval. You will also be asked to approve the election of the Vice-President and Treasurer. We have received very much help from Mr. Couper, who has very kindly given us, for the first year, at all events, an office free of rent and expenses. In regard to the enrolment of members, seventy-three have been elected, and applications keep coming in.

The Foreign Office.

"We who have interests in Morocco have at last an association through which we can make ourselves heard, and the Council intends to do everything in its power to make it impossible in the future for any Government to disregard British interests when Morocco is considered. The Foreign Office know of our existence. We have made a strong appeal for their confidence. We desire that our views shall be heard before steps affecting British interests in Morocco are taken.

"We have received very hearty good wishes from the British Consular Service in Morocco; and we welcome among us to-day our very able Consul at Fez, Mr. J. M. Macleod. The British Chamber of Commerce for Morocco—which is doing such good work and which deserves the support of all firms trading with Morocco—has told us how much they look to us to support them. And I know this is the feeling of all British subjects in Morocco. There is a tremendous future in Morocco for British trade. Whatever part politics may play in regard to Morocco, we must ensure that British trade will be safeguarded.

Bank of British West Africa.

"The Bank of British West Africa, Ltd., has opened branches at Tangier, Mazagan, and Casablanca, and, we hope, has other places in contemplation. This bank is rendering very great help to British trade. One of the present difficulties in regard to British interests in Morocco arises from the small number of British subjects in Morocco as compared with other nationals, and British subjects there look to us to support them to the utmost of our power. The French are rapidly developing Morocco, and deserve every credit for what they are doing under most difficult conditions. Roads and railways are being planned and built. Harbours are being improved and lighthouses erected, and British traders share the benefits. Provisional statistics give the seaborne trade of the ports in the French zone alone for 1916 as about ten millions, against seven millions for 1913.

British Share of Trade.

"Great Britain's share of the trade with Morocco could be much greater, but we must have better shipping facilities. We appeal to the steamship companies to give us a better service when the war comes to an end. Then there is the question of freight charges. If British manufacturers are to compete successfully with foreign manufacturers, freight must be made as low as possible. British steamship companies can only gain in the long run by regular and efficient services and low freights.

"There are other matters too which should claim the attention of the association—questions affecting the welfare of British subjects in Morocco. Our outlook should be a broad one, and the association does not propose to confine itself to merely commercial interests, important as they may be, but to study also conditions affecting British subjects resident in Morocco.

"In regard to the accounts of the Association, the preliminary expenses are comparatively heavy. This was unavoidable, but the expenses are all covered. We desired that the Association should be organised on the best possible basis, and, apart from the initial expenses, I do not think any comment is necessary.

"I now propose that we proceed to pass the necessary resolutions, and I give you all a very hearty invitation to make any recommendations you may desire as to the work of the Association, and I will do my best to answer any questions you may wish to put to me. I move that the Report of the Council and statements of Accounts be approved."

Other Speeches.

Mr. U. Arbib seconded the resolution, which was carried unanimously.

Mr. Joshua M. Levy asked the meeting to

Lionda and Company, Ltd.,

34, Fenchurch Street, LONDON, E.C. 3.

Tel. Address: "EXPLIONDAC FEN, LONDON."
During the War, Tel. Address: "LIONDA THIRTYFOUR FENCHURCH, LONDON."

In Greece—Ionian Bank, Ltd., Salonica; Banque Populaire, Athens, Piræus.

Digitized by Google

pass a resolution approving of the election of the officers of the Association, namely, the Right Hon. the Earl of Onslow (president), Mr. Robert Samuel Hunter (vice-president), and Mr. Leslie Couper (treasurer). Lord Onslow, said Mr. Levy, was attached for some time to the British Legation at Tangier and is therefore by no means a stranger to matters in Morocco. He is now occupied on duty and will be so during the war, but when that comes to an end we hope he will give us his very active assistance. Mr. Hunter knows the place and the people well. Mr. Leslie Couper is proposed as Treasurer. We are all very much indebted to the Bank of British West Africa and their energetic chief manager Mr. Couper, for the way in which he has thrown himself into the business of creating this Association.

Mr. E. W. Randle, who seconded the resolution, said they unquestionably owed a very great debt of gratitude to the Bank of British West Africa; it was, in the first place, the means of bringing them together, and, therefore, the origin of the association.

He continued: "As we shall be an organisation, I have no doubt that if we show energy in the development of our business we shall get all the help we can reasonably expect from the Foreign Office. I hope we shall not have difficulties with our French Allies, but that we may march hand in hand together for the development of Morocco. It is rather useful to remember at this time that but for the firmness of France we should not have had any business to consider. It seems to me, we have to give a good deal of consideration to whatever the French may do, while, of course, we shall look after ourselves and our own interests. Personally, one naturally hopes that the British merchant will be the one to become top dog in regard to trade. The Germans never seem to understand the foreigners with whom they try to do business, and, if we only realise it, there is a gap to fill in trade owing to the Germans being out of it. We ought to feel there is a great future. Morocco is a great country with great advantages, and I hope we shall not be backward in taking the share we ought to take in its development."

The resolution was then put and carried unanimously.

On the motion of Mr. T. W. Stanton, seconded by Mr. F. P. C. Forster, the auditors, Messrs. Harwood Banner and Son, were elected.

Mr. Macleod made a speech which was listened to with the deepest interest; we hope to deal with it in our next issue.

ALGERIAN SHIPPING CONTROL.

The French *Journal Officiel* of July 18 publishes the text of a Presidential Decree, dated July 17, placing the French mercantile fleet more effectively under the control of the Under-Secretary of the Merchant Marine. This Decree provides that from August 1, 1917, every French ship exceeding 100 tons gross register must, before clearing from a French or Algerian port, have a licence from the State Department approving its destination and cargo, and that if the Government considers a proposed voyage is unnecessary, in addition to refusing the permit, the vessel may be immediately requisitioned.

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.,
Thursday.

Business this week has been very much interfered with by the August Bank Holiday; but, during the few days that our market has been open, there has been a good deal of activity, and a gradually growing inquiry for many of the Egyptian shares. The scarcity of sellers is unfortunately becoming more pronounced at the higher levels of values now established, and this is making it more difficult to satisfy buyers. All accounts from Egypt continue to be of a very satisfactory nature, and at the moment all the indications are favourable to a further rise in prices.

In Government stocks there has been no change in prices, and very little business has been done, sellers being scarce. In Bank shares Nationals have jumped up a further 1 to 17½, and Agriculturals are 5-16 firmer at 6 1-16; Anglo-Egyptian Banks have also improved ¼ to 13 1-16, and Land Banks a like fraction to 6½. Some business has been done in Delta Lights at 6 and 6 1-16.

In Land shares, Aboukirs have been in strong demand on local account, and have risen 1s. 3d. to 17s. Behéras are unchanged round 12½, Delta Lands are slightly firmer at 12s., and Gharbieh Land have continued in demand at 30s.; but business has not been possible owing to the absence of sellers.

In New Egyptians there has again been a fairly large business doing, and the shares are again 9d. higher at 13s. 4½d. Union Foncières have been in demand for Egypt, and a fair amount of business has been done between 40s. and 40s. 6d. In United Egyptian Lands some small transactions have been carried through at 1s.

In Miscellaneous shares, Alexandria Waters were taken at 12 7-16, a rise of 3.16, and Salts and Sodas have jumped 9d. to 26s.

In Greek securities a further advance has to be recorded practically all along the line. The 1881, 1884, Monopoly, Funding, Rente, 1902 and 1904 loans are all one point higher. Currant Bonds are quoted about 90 ex. div.

Paris Bourse.

Wednesday.—Closing quotations included:—Crédit Foncier Egyptien, 724 (724); Suez Canal shares, 4,495 (4,475).

OIL OUTPUTS.

Anglo-Egyptian.—Gemsah, 22 tons, against 22 tons; Hurgada, 3,035 tons, against 1,129 tons.

The *Torgovo Promyshlennaya Gazeta* of May 10 publishes an article to the effect that from information received from forty-nine Russian cotton-spinning factories, representing 3,822,178 spindles, the stocks of raw cotton held at the works on April 14 amounted to 319,267 bales, as compared with 379,821 bales held at fifty works on the corresponding date of 1916. No replies were received from twenty-three factories, representing 1,906,889 spindles. The stocks of cotton held in Moscow warehouses and supplies in transit on April 14, amounted to 231,988 bales in 1917, as compared with 587,167 bales in 1916.

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Offices, 12, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

AYAHS' HOME,

26, King Edward Road, South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

TERRIBLE NEWS from Syria—

4.—From a Missionary in the Interior.

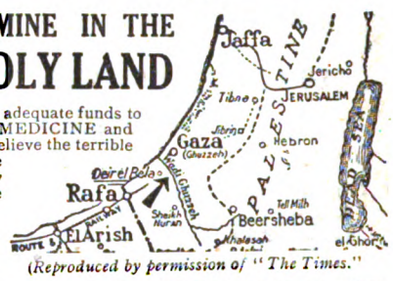
"Another thing which increases the death rate is that so many of the doctors have been sent to the front with the army or have died at home. Among the soldiers, typhus, 'the freckled fever,' as the people call it, and cholera are rampant. The Mayor said fifty wagons were kept busy carting away the dead from the streets.

"Another horror has been added to an already overflowing cup of woe, that of tetanus, as many as ten dying daily from it, and sometimes more.

"But more alarming than all is the pall of melancholia which is settling over the entire country. Omnipresent fear, famine, sickness, execution and news from the war have wiped smiles from every face. Not one family but wears black, and it seems to have entered the brains and hearts of a people particularly full of sympathy when sorrow comes, so that those left are now half demented, or wholly so."

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the UTMOST URGENCY.



(Reproduced by permission of "The Times."

£300,000 WANTED

of which £50,000 is needed at once.

A strong administrative committee is at work. CONSIGNMENTS OF FOOD, MEDICINE & CLOTHING ARE NOW ENTERING PALESTINE, and goods stored in Egypt will continue to be poured into the country as further access is obtained. Relief will be given to all—Christian, Jew and Arab alike—according to their need.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110 Victoria Street, Westminster, S.W.1. or to J. F. W. Deacon, Esq. (Hon. Treas.), Williams Deacon's Bank, Ltd., 20, Birchin Lane, E.C.3. Chairman (London), Lt.-Col. Sir Henry MacMahon, G.C.M.G., &c. (late High Commissioner in Egypt).

NOTES OF THE WEEK.

The military situation on the Roumanian front remains obscure. On one sector the Roumanian troops advanced with heavy fighting, but elsewhere they have had to retreat. They are undoubtedly making a stubborn resistance, but the German thrust is heavy, and the work of the enemy is facilitated by the inactivity which continues to prevail along the Russian front. The Roumanian Government has made arrangements to leave Jassy should the occasion unhappily arise, but for the time being, at any rate, the decision to evacuate the temporary capital has been postponed.

However bravely the Roumanians may fight—and they are making a resistance little short of heroic—they can, in the nature of things, hardly hope to put up a successful defensive, far less to engage in another offensive, without the co-operation of the Russians. That assistance is still delayed, and though there are signs of improvement in the internal conditions of Russia itself, there is still too much tendency to discuss political reform from the basis of the millennial standpoint, rather than to oppose the Germans in the only way in which they can be opposed. While proposals have been launched for the creation of a series of federal republics to be associated together on the model of the United States, ugly news has come from Kieff of the mutiny of Ruthenian regiments. The position in the Ukraine is by no means bettered by these outbreaks, which scarcely appear to have been coped with successfully.

There have been two peace programmes during the week. The first is that put forward by the British Labour Party (which must be carefully distinguished from Mr. Ramsay Macdonald's so-called Independent Labour Party). So far as the Near East is concerned, it insists on the restoration of Serbia and Montenegro, and suggests that "the whole problem of the reorganisation of the administration of the peoples of the Balkan Peninsula might be dealt with by a special conference of their representatives, or by an authoritative International Commission, on the basis of the complete freedom of these people to settle their own destinies, irrespective of Austrian, Turkish or other dominion." The wording seems to exclude the Jugo-slavs and Czechs, but it is not clear that that is the intention.

The manifesto hopes that Palestine may be set free from Turkish rule—indeed, the Labour Party seem inclined to put an end to the Ottoman Empire altogether, although that is not stated in express terms. Palestine is to be "a free State under international guarantee, to which such of the Jewish people as desire may return." Armenia, Mesopotamia and Arabia are not to be handed back to the Turk, and if "it is impracticable to leave it to the peoples to settle their own destinies," as the Committee evidently fears, it is suggested that they should be placed under a "Commission acting under the Supernational Authority or League of Nations." The same course is recommended for tropical Africa, including apparently some of the territories that even before the war were British protectorates. The only German comments on these proposals which have reached this country are that they are impossible and outrageous. They are not likely to be endorsed as a whole by British opinion, not only because we have no desire to hand over some of our own colonies to an international board, but also because experience has shown that wherever international control has been tried, it has led to continual friction. Egypt is the stock case, but the New Hebrides might also be cited. An international board would simply be a focus of intrigue, and human ambitions will not be eradicated by placing half the world under a League of Nations which does not yet exist.

The second proposal comes from the Pope. It is suspect from the start, because it includes "the freedom of the seas," which is an ancient German device, and the cessation of "economic war after the war," which is a modern German device, endorsed by Dr. Michaelis, in order that Germany, while retaining her own tariff, may continue the policy of peaceful penetration among the Allies. But the proposal does include the restoration of Belgium and Northern France—Serbia, Montenegro and Roumania are not mentioned in the text which has reached London—although it does not seem to contemplate compensation for damage done by Germany and Austria. The proposals would therefore seem to have come from Berlin viâ Vienna, where the young Emperor is understood to be desirous of making peace in order to avert disaster. Any proposals which the Pope puts forward are, of course,

Digitized by Google

assured of respectful consideration in every quarter, but it cannot be said that the published text of the appeal indicates any realisation at the Vatican of the objects of the Allies. German, and more particularly Austrian, influences are known to be strong at the Roman spiritual court, and it would be a misfortune if the Pope, whose good intentions are acknowledged, should, through excusable ignorance of worldly affairs, have been induced to see the position with Teutonic spectacles. No doubt the Allies, in the courteous answer which they will certainly return to the Pontiff's proposals, will acquaint him with their objects once again.

Two sensational revelations have been made during the week as to the Constantine régime in Greece. According to the Athens correspondent of the *Daily Telegraph*, on August 4, 1914, the very day that Britain declared war on Germany, the Kaiser sent King Constantine a minatory telegram, stating that "I signed to-day a treaty of alliance with Turkey. I hold the Balkans in my hands. Roumania, Turkey and Bulgaria have joined Germany in the war against Slavism. The German Fleet will unite with that of Turkey. Do not forget that, as you are a German field-marshal and the husband of my sister, your place is at my side. Do not forget also that I have given you Kavalla. I ask you to do what we have so often talked about."

King Constantine obediently played his part as the husband of the Kaiser's sister, who seems to have been an efficient ambassadress of Potsdam. Exactly what it was that "we have so often talked about" is not revealed, but no doubt the King, who accepted his rôle of tributary so easily, was docile in this respect, as in others. Nor was he without his reward. When Greece ran short of money, a loan was raised from Berlin, and the Kaiser promptly arranged the accommodation—on terms. Shortly afterwards, Greek territory was handed over to the Bulgars, but the loan was kept a profound secret. The correspondence relative to the loan was signed by MM. Skouloudis and Dragoumis, and as regards a second instalment by MM. Skouloudis and Rallis. A second loan was applied for by M. Lambros and others, but this transaction was not completed. It is expected that these complaisant Ministers will be tried by a special tribunal; there can be no doubt on the face of it that they and their master sold Greek territory for this consideration. Altogether King Constantine as the impecunious brother-in-law cuts a sorry figure.

It is notable, too, that in this correspondence Greece is informed on September 13, 1914, that Germany had that day concluded an alliance with Bulgaria, and this news was confidentially communicated to the Entente by M. Venizelos. It seems strange that nearly a year later, despite this knowledge and the further information—which was published in the Western Press—that Bulgaria had obtained a loan from Berlin in February, 1915, the Entente statesmen nevertheless still continued to hope that Bulgaria might be induced to join them. It is true that the wily King Ferdinand took his time, but the Allies certainly did not take his measure. It would appear that the Kaiser's boast that he held the Balkans in the hollow of his hands was effectively supported by his diplomatists. While we were offering Cyprus, our own territory, to Greece, and were repulsed, the Germans were offering Greek territory to Bulgaria—and were accepted.

The Jugoslav programme and Baron Sonnino's visit to London continue to be canvassed by the Italian Press, which has commented adversely on the fact that the Corfu agreement was signed by M. Antonio Trumbitch, who, although of Italian parentage, is famous as an anti-Italian. As a leader of the Croatian party which worked in accord with the late Archduke Franz Ferdinand for Trialism, he was naturally a source of irritation to Italy, and it is said that he even claims that Jugoslavia extends from the old Austrian frontier to Macedonia, and therefore includes Italian Irredenta—an impossible demand, and one which, if assented to by the rest of Europe, would only lead to continual friction and eventually to war with Italy. Presumably these demands have now been abated to their proper level, and the Italian view which sees in the Jugoslav propaganda a triumph of the subtle Austrian diplomacy can hardly be seriously maintained. The Corfu programme, if carried out in its entirety, necessarily means the partial dismemberment of the Austrian Empire and the reduction of Vienna from first to second rank in European affairs. Italy has more to gain from that than she stands to lose from a successful Jugoslav State as a neighbour, and to onlookers it appears by no means impossible that accommodation can be reached on outstanding points at issue.

In answer to this suggestion, of a Jugoslav programme influenced if not actually inspired by Austrian diplomacy, the *Corriere della Sera* replies in a commonsense article pointing out the similarities between the Jugoslav movement and the Italian *Risorgimento* in its early days—a movement which was also directed against Austria. Vienna, as this journal points out, has opposed at every stage the Serbo-Croat Coalition; the very ultimatum to Serbia which began the war was in itself a stroke of policy against the Serbo-Croats, parallel to the advance on Piedmont in 1859 to destroy the Italian movement. To deny a national character to the Southern Slav movement on the ground that there is a pro-Austrian party in Croatia is as inconclusive as to recall that there were pro-Austrians in Italy, and that Garibaldi had to fight Italians in Sicily and Naples in order to found a united Italy. "Once assured of our national strategic interests in the Adriatic," the journal concludes, "let us offer our hand to the Southern Slavs, encouraging them in their struggle against the Germans and Magyars as decisive for their future as for ours."

Another matter is authoritatively alluded to by the Italian Press as having come under discussion during Baron Sonnino's visit to Paris and London. It is stated that the future division of Asia Minor among the Entente Powers has been not only contemplated but the actual details arranged. The details of the proposed partition are not, of course, divulged, but as no criticism has been made by the Italian journal which reports the fact—and the journal in question is known to have excellent and, indeed, almost official sources of information—it may be assumed that Italy is not dissatisfied with her share of the bargain. Italian ambitions have, of course, long been directed to the Levant, and the country has large legitimate interests there which need not conflict with those of Britain and France. In these circumstances there is no reason whatever why the proper ambitions of Italy should not be satisfied.

An interesting summary of recent Montenegrin politics appearing in *The New Europe* throws a lurid light, if accurate in all its details, on the policy pursued by King Nicholas. The story of his underground activities in the early part of the war has yet to be cleared up, but the published memoranda suggest that both before and since his exile he has been ready to make terms with the enemy. As a way of achieving this object, which apparently presented itself to the monarch as the only means of retaining his throne and returning to Cettinje, he is represented as having browbeaten various Ministers, who have in consequence been compelled to advise him to abdicate in favour of a more vertebrate son; but he has treated any such suggestions with weak obstinacy, and has dismissed his Ministers. The result is naturally that the present Montenegrin Prime Minister has no weight whatever, and is disregarded by everybody but the King himself. The climax of degradation was reached at the recent conference on Balkan affairs in Paris, when the Montenegrins were not invited to attend, although the King issued a misleading notice to the Press on the subject, and his nominee waited about at the entrance apparently in the hope of an invitation which there was no possibility of his obtaining.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 22.

The Fast of Ramadan.

The fast of Ramadan came to an end on Wednesday last, and on the following day commenced the feast of Bairam, in honour of which the Government offices have been closed until this morning. This year the people have not been called upon to suffer during the thirty days' fast as great privations as fell to their lot last year, for the summer has so far been an exceedingly, in fact, one might almost say an unprecedently, mild one; indeed, so mild has it been that the cotton crop has been considerably delayed owing to the absence of the high temperature which usually characterises this period of the year. In pursuance of the custom introduced since the accession of the Sultan no reception was held on the first day of the feast, but a large number of officials and notables proceeded to Ras-el-Tin Palace to sign in the book.

The French National Fete.

The French National Fête was quietly celebrated in Alexandria and Cairo. Both cities were most profusely beflagged in honour of the event, the flags displayed including those of all the Allies. Receptions were held at the French Agency and Consulate in Cairo and at the Consulate-General in Alexandria; at each of these the Député de la Nation delivered a congratulatory address, and in the capital a most notable and characteristically eloquent speech was made by the French Agent, M. Defrance. In the morning a touching little ceremony took place at Alexandria, when wreaths were laid on the graves of French soldiers in the European cemetery. In the evening the aspect of the Esbekia Gardens reminded one of pre-war days, when on the occasion of the National Fête the French colony was wont to hold high revel there. Since the outbreak of the war these festivities have, of course, ceased, but this year the Maccabi Society took the opportunity of organising a fête in aid of the French Red Cross. The venture was very successful, and a substantial addition to the funds was obtained.

Government Officials and the Cost of Living.

It is understood that the Egyptian Government is considering the advisability of granting its smaller paid employees a special addition to their salaries to enable them to meet the extra cost of living. Various departments have sent in petitions on the subject to the Ministry of Finance, and the news that the latter is entertaining the idea is very welcome. There is absolutely no doubt that the smaller paid official has been very hard hit by the increased cost of living since the war. There is scarcely an article of daily consumption which has not gone up in price. According to the last monthly bulletin issued by the Ministries of Finance and Agriculture meat has risen by over 40 per cent. in Cairo and 60 per cent. in Alexandria, flour by 88 and 112 per cent., rice by 42 and 60 per cent., and petroleum by 77 per cent.; and the average increase in price of nine of the more important commodities at the end of May was 37 per cent. in Cairo and 61 per cent. in Alexandria. These percentages are based on the prices ruling in July, 1914. Compared with the situation in other countries, Egypt is admittedly very fortunate in that prices have not risen much higher, but even on the pre-war basis of the cost of living an official drawing between £5 and £12 per month never had much of a margin for unforeseen expenses in his domestic budget, and the increase which he has steadily been called upon to pay for his necessaries during the past two years is now quite beyond his means. It is true that a good many of these employees have received increases in salaries since the war, but such increases have all been based on pre-war conditions, and so do not go far enough to assist the smaller official to make both ends meet. In view of the fact that the banks and commercial houses have almost without exception granted their employees war bonuses, and that the junior officials in the home service have all received similar grants, there is no doubt that the case of the smaller Government official in this country merits some consideration. An announcement to the effect that the Ministry of Finance had decided to accord some form of increase to its lesser paid officials would, it is certain, give unbounded satisfaction, for such an increase would materially relieve the position of a very deserving class of the population.

The Pension Law.

The recent alteration in the Pension Law in favour of Ministers and their families has drawn attention to the anomalies which exist in that law in so far as concerns ordinary officials, especially in respect of the allowances made to their families. The question certainly would appear to merit the attention of the powers that be. There is no reason, for instance, why a widow without any children, or one left with grown-up sons or married daughters, should receive, relatively speaking, preferential treatment to the widow left with children to bring up. In the first two cases she receives one-third of the pension which her husband was drawing or would have been entitled to draw; in the third case one-half of that pension is allowed her and the children—one-quarter to the widow and one-quarter in equal parts to the children—but, as and when the sons attain the age of eighteen or the daughters marry, their portion lapses, but the widow continues to draw only one-quarter to the end of her days.

It is indeed difficult to understand why the fortuitous circumstance of a widow being left with grown-up boys or married daughters should place her in a better position financially as regards pension than one who has children to educate at the time of her husband's death, or why the widow with one child should be on the same footing as the widow with two or more dependent on her. Again, the condition which lays down that a boy forfeits his share of the pension as soon as he reaches the age of eighteen appears to be somewhat out of place in these days when education counts for so much in a man's after-life. Eighteen is just the age when a boy is about to decide on the career he will follow, and the stoppage at that stage in his education or the continuation for a further three years of the allowance, would in many cases mean all the difference between his continuing his studies and qualifying for a liberal profession, a technical calling, or the Civil Service, and his having to enter some walk in life to which he may not be so well adapted, but where he can forthwith find the wherewithal to keep himself and so compensate for the pension which he has lost.

Some alteration in the law would certainly appear to be called for so that, first, irrespective of whether she has any children dependent on her or not, a widow might receive an adequate pension; secondly, the allowance for children might be based on the number; and thirdly, some extension of the age limit might be made in the case of boys so as to avoid their having to stop their education at a critical stage and enable them to continue it to its logical conclusion. The foregoing considerations apply, of course, to European officials. It is quite possible that there is some very good explanation of these apparent anomalies from the point of view of the mass of Egyptian officials, for whom after all the code was mainly framed. Nevertheless, as regards British officials the regulations referred to appear for the reasons stated to require some more equitable amendment having regard to the peculiar conditions under which they and their families have to live and the change which the conditions of life have to-day undergone both here and in England. The alteration in the political status of the country is bringing in its train many amendments of the legislation in force hitherto in Egypt, and is entailing a more or less complete overhaul of the administrative regulations applicable to officials as well as to the general public. It is with a view to rendering this revision of the existing regulations as comprehensive as possible rather than with the object of captious criticism that the foregoing observations on the Pension Law are offered.

JUSTICE IN EGYPT.*

THE JUDICIAL ADVISER'S REPORT.—IV.

The Mixed Tribunals.

The Judicial Adviser gives an interesting estimate of the position which the mixed courts hold to-day in the Egyptian judicial system, and adds that he is prompted to do this by the fact that these courts have in the past been the subject of much political controversy, and that to-day, when the judicial institutions of the country are about to be recast, "it is very desirable that the situation should not be obscured by misunderstandings which have lost any foundation they may once have had." The two principal grounds of criticism have been the difficulty of bringing their procedure and the law they administer up to date, and the fact that their judgments have not infrequently embodied the obstacles imposed by the Capitulations. He ventures to think "that both criticisms relate in a large measure to an epoch which has passed away." As regards legislative difficulties, he is inclined to think that the absence of any large body of public or even professional opinion has had much to do with the matter. As he very rightly remarks, the non-existence of a large body of enlightened opinion is one of the characteristics of Egypt of which account has constantly to be taken, and which has necessarily made for slow progress. At the present time, however, there is an increasing body of opinion in favour of reform on a considerable scale. The situation as regards the obstacles offered by the Capitulations to administrative reform, and even to routine administrative action, which he discussed in a note appended to the late Lord Cromer's report for 1904, has, he says, materially changed since that date, and the previous antagonism between the agents of the occupying Power "irritated by the obstacles to reform," and the courts "properly jealous for the traditional privileges of foreigners," is now a thing of the past. In the bringing about of this change in relations, the judicial officers of the Government, among whom must be included Sir William Brunyate, have played a conspicuous part.

Increased Judicial Receipts.

His own principal criticism of the mixed tribunals ten years ago would have been "that they were steadily diminishing in importance as compared with the more recently established native tribunals." He founded this view on the judicial receipts of the two jurisdictions. Those of the mixed tribunals, which had amounted to £E91,000 in 1884, only totalled £E87,000 in 1906, when the receipts of the native tribunals came to £E300,000. The receipts of the mixed tribunals, he points out, include not only "judicial" receipts, but also fees for the registration of documents of title to land and other registration fees having no direct connection with the judicial activities of the courts. During the land boom these fees reached a very large figure, and, "perhaps not unnaturally, the partisans of the mixed tribunals pointed to these fees as indicative of the important place filled by the tribunals." This latter opinion, as well as his own forecast, were, however, falsified by subsequent events. The crisis intervened, and registration fees fell off, but at the same time the liquidation of the speculative position brought about an immediate and remarkable increase in judicial receipts. The situation was cleared up shortly before the war, but judicial receipts have continued to increase—"a fact which, I think, can best be accounted for by a new wave of commercial activity intervening"—and in the year under review they have reached the record total of £E301,000, for the first time exceeding the total expenses. The native tribunals have been a source of revenue to the State, the Adviser says, since 1904—"a situation which suggests the desirability of reducing judicial fees whenever Government is again in a position to remit taxation"—but he frankly admits that he had never expected that the mixed tribunals, with their more expensive organisation, would follow suit. The statistics show that cases before these courts have increased both in value and in number, and "whatever the position may have been twenty years ago, it is abundantly clear that at the present time the mixed tribunals stand for a very important part of the total judicial activity."

Comparison With Native Tribunals.

Comparing the work of the mixed tribunals with that of the native courts, whilst the latter are largely occupied with the collection of petty debts, the former have to deal with business of a different character. That case values should tend to run higher than in the native tribunals is a natural consequence of the difference of *clientèle*, but the Adviser is inclined to think that the difference between the two judicial tariffs is a factor of almost equal importance. For claims of trifling amount native justice is extremely cheap, while for claims of moderate amount mixed summary justice is likewise cheap; the petty cases on which the native tribunals thrive are to a large extent ruled out by the heaviness of the minimum fees, combined with the expense of going to the town where the mixed court sits. The great majority of heavy cases are within the jurisdiction of the mixed tribunals, owing to the fact that in most of them foreign interests are involved. The summary cases brought before the native tribunals exceed those before the mixed, but the mixed cases over £E100 in value have of late somewhat exceeded those before the native tribunals.

Work of the Courts.

As regards the working of the mixed courts, the figures for new summary cases and those for commercial cases before the Cairo court have fallen to a normal level. This feature, together with the decrease in bankruptcies, points to renewed prosperity. The most striking figures of cases disposed of are those of the Court of Appeal, where 490 more cases have been disposed of than in the previous year, and where arrears at the end of the year were within fifteen of the figure in October, 1907, since when the work of the court has greatly increased. Whilst this may be due primarily to the fact that the court now sits in three chambers of five instead of two of eight judges, the Adviser observes that it is also evidence that the efficiency of the court has not suffered from the temporary difficulties incident to the outbreak of war. Appeals in civil cases are relatively somewhat more than twice as numerous as those in commercial cases, "due in large part to the fact that in commercial cases appeal does not stay the execution of a first instance judgment." The arrears in the lower courts are not unsatisfactory, with the exception of Cairo, where the civil arrears have aroused comment for some years past. The explanation of this situation in the capital is that, contrary to what is done in the other courts, cases have been transferred to a suspense list in large numbers, and have been left there because neither party takes the trouble to have them restored to the active list. Since the end of the judicial year this practice has been abandoned, and large numbers of cases of no substance have been dismissed. Even allowing for the fact that as mixed lawsuits can be initiated at no great cost many people start actions without any serious intention of prosecuting, because they hope thereby to bring pressure to bear on an adversary, the Adviser is of opinion that the average time involved in the trial of a mixed action, especially before the Cairo court, is excessive. As he says, it is not altogether the fault of the courts, for leisureliness in legal proceedings is, according to his experience, to some extent ingrained in the habits of the country. And he proceeds to give some examples in illustration. One of these was a case which he won whilst at the Ministry of Public Works, and which had been pending for upwards of twenty years; another was settled soon after he left the Ministry which had been pending for upwards of nine years without reaching trial in first instance. The history of this latter case, which he gives in detail "for the benefit of law reformers in this country," is most extraordinary, and reveals a mental outlook on the part of litigants which is almost incredible.

Referring to the renewal of the mandate of the mixed tribunals in February, 1916, when Italy withheld her assent until the middle of March, the Adviser points out that, whilst the somewhat anomalous position created thereby led to an interesting and unexpected decision of the mixed Court of Appeal to the effect that "in existing circumstances the jurisdiction of the mixed tribunals over the subjects of any given Power continues, upon a renewal of the existence of the tribunal, at least until such time as the Power concerned has given definite notice that it does not propose to concur in the renewal," the incident made two propositions perfectly clear. They were, firstly, that under existing conditions "any inconvenience resulting from the non-concurrence of any Power in the renewal of the mixed tribunals falls primarily on the subjects of that Power"; and, secondly, that the inconvenience actually caused was less than was expected in some quarters. The non-realisation of the latter expectation was due, he dryly remarks, to "failure to appreciate how short a time is six weeks in the life history of an Egyptian lawsuit." In concluding his review of the mixed tribunals, Sir William Brunyate points out that the system of annual renewals into which we have fallen is purely a question of form. Until the recasting of the Egyptian judicial system, expected after the war, can take place, the mixed tribunals "are as integral a part of our judicial system as the sister native tribunals."

NOTES FROM ROUMANIA.

(From a Correspondent.)

Conditions in Jassy.

It was always a complaint of the people of Jassy that the old capital of Moldavia had been neglected in favour of the more fashionable Wallachian town of Bucharest, and the conditions of life created by the transference of the Government and the various public authorities to Jassy proved a painful justification of those complaints. In the first place, the town was absolutely incapable of providing even moderate accommodation for the public bodies and the surplus population by which it was invaded towards the end of last year. There was a scramble for lodgings, with the inevitable result that rents rose in a few weeks to a fantastic level. The authorities, fortunately, intervened without much delay, commandeered all the available houses, apartments, and rooms, and established an official bureau through which alone newcomers could secure accommodation at prices fixed by the authorities.

Once in possession of a precarious home, the unfortunate refugee was by no means at the end of his sufferings. There was all through the long and hard winter a serious deficiency in fuel, mainly due to the difficulties of transport. The lack of coal, in its turn, influenced the supply of gas and electricity, and the Government was forced to prohibit the use of more than one light in any living room. There was not even sufficient water in the town, and the pipes were kept dry except for a few hours each day.

But the greatest hardship of all was the lack of food, due as much to unsatisfactory organisation as to any actual deficiency in provisions. The local supplies were, of course, totally inadequate, and Roumania had to rely upon what assistance she could get from Russia. But Russia herself was unable to provide for her own population, and the difficulties of transport rendered any help from the Western Allies impossible. Sometimes there was no bread for days in succession; meat of any description was a rare luxury, reserved for the privileged few; sugar was unknown; and the visitor who took his meals in restaurants was confronted day after day with the stereotyped bill of fare, composed of sundry concoctions from the one produce which was more or less abundant—butter beans.

In addition, if this term may be employed without irony, there was a lack of all the necessaries of life—boots, clothes, etc.—and especially of sanitary material. When, therefore, the germ of exanthematic typhus was in some way or another introduced among the overcrowded population, the epidemic spread with appalling rapidity. The unselfish efforts of the foreign and Roumanian medical services were frustrated by the hopelessness of the general situation, and many patients who resisted the fever succumbed to insufficient nutriment.

Transylvanian Prisoners in Russia.

A committee consisting of 250 officers and 250 non-commissioned officers and men, representing 126,000 Transylvanians captured by the Russians since the beginning of the war, have petitioned the Russian Provisional Government for permission to fight with the Roumanian army for the realisation of Roumanian national aspirations. This demand was received with much satisfaction in Moldavia, supplying as it does a further proof of the unity of sentiment which animates the Roumanians on both sides of the Carpathians. The request has, naturally, been granted, and a certain number of these men are to be drafted forthwith in special regiments, commanded by their own officers.

German War Methods.

M. Antonescu, Secretary of State to the Department of Justice, has communicated to the Chamber the results of an investigation into German activities prior to Roumania's entry into the war. It appears that attempts were made against the lives of MM. Bratianu, Take Jonescu, and the late Nicholas Filipescu, but nothing has been disclosed so far regarding the methods employed. After the capture of Kronstadt by the Roumanians, infectious microbes were spread among the troops of the invading army. Tubes containing infectious microbes and poison were also discovered buried in the gardens of the German Legation at Bucharest, as well as a certain number of documents which supplied evidence of further similar German activities. A painful impression was created by M. Antonescu's intimation that the documents in question indicated that a prominent official of the Bucharest Secret Police had abetted these German doings. The investigation was carried out by a special commission, whose findings will be embodied later on in a special report for publication.

CYPRUS NOTES.

(From a Correspondent.)

The Summer Season.

Sir John and Lady Clauson are now at Government Cottage, and are holding their usual summer receptions. Mr. Stevenson, the Chief Secretary, with his family, are also in camp a short distance away, and there are as well a few visitors from Egypt. The whole camp is very quiet, as befits the times, and life is very different from what it was in pre-war days. Much hospitality is being shown by those in camp to families who are unable to spend the summer away from home.

Among the trials of the war must be reckoned the fact that not a few officials are deprived of leave, in some cases overdue, which they would otherwise be taking. What, it may be asked, about their families? As women and children cannot travel in these days, they must of necessity spend their summers in the island. It is now pretty generally recognised not only that the climate of Cyprus is excellent during the winter season, but that, thanks to its pine-clad heights, it is admirable all the year round for those who are able to spend the hot season in the hills. Going to the hills practically means going to Troödos; for although there are plenty of attractive spots in all the great mountain ranges of the island, there are no hotels, buildings, or bungalows elsewhere, and there would be difficulties as regards supplies. Families, therefore, continue to go to Troödos, and the place becomes a pleasant meeting ground for people from all parts of the island who are lucky enough to get there. The move to Troödos involves considerable expense both in travelling and living, especially for those who, while sending their families for a change of several months, must themselves remain in the plains.

A certain distinction must be made between the climate of the inland capital, Nicosia, which is comparatively dry (though less so than it was), and that of the coast towns, which is very damp. The climate of the latter bears a strong resemblance to that of the Egyptian coast towns of Alexandria, Ramleh, and Port Said. In fact, owing to the regularity of the north wind on the Egyptian coast, the climate of Ramleh or Port Said is perhaps preferable to that of Larnaca, Limasol, or Famagusta. Children can remain at Ramleh two consecutive summers, but should go home for the third, if not every alternate year. English families in Cyprus, as a rule, consider it desirable to take children home every few years, and this they cannot do at present.

The Question of Salaries.

An important consideration is that of salaries, and in this respect Cyprus officials are at a great disadvantage as compared with those in Egypt, as they are also in regard to pensions. There is a further hardship in the matter of travelling. English families in Cyprus must travel *vid* Egypt, as there is no direct service to England. They therefore have the additional expense of passages to Port Said or Alexandria, and often have to stay several days at expensive hotels while waiting for a liner. Moreover, the cost of living is now so high in Cyprus that the island offers no advantages over Egypt in this respect. It is clear, therefore, that British officials in the island are seriously affected by present conditions.

SALONIKA MAILS LOST AT SEA.

The Postmaster-General announces that letters, newspapers, etc., but not parcels, for the Salonika Force, which reached the Army Post Office, London, for despatch between 2.30 a.m. on July 17 and 2.30 a.m. on the 21st, have been lost at sea through enemy action; also letters, newspapers, etc., for the civilian population of Salonika and district and many of the Greek islands, which reached the General Post Office, London, for despatch from July 16 to 19, inclusive.

An Amsterdam telegram states that fifty Bulgarian and Turkish officers have arrived at Ostend, and are to be employed as aviators.

The High Commissioner for Egypt has forwarded to the Lord Mayor the sum of £3,793 0s. 7d., being the amount subscribed by Egypt for the "France's Day" Fund.

The Central Committee for National Patriotic Organisations have received cables stating that on August 4 the resolution recording determination to win the war was passed at Cairo, Alexandria, Suez, Port Said, Gibraltar, and Malta. The resolution was in the following terms: "That on this, the third anniversary of the declaration of a righteous war, this meeting of the citizens of —— records its inflexible determination to continue to a victorious end the struggle in maintenance of those ideals of liberty and justice which are the common and sacred cause of the Allies."

NOTES FROM PALESTINE.

(From an Occasional Correspondent.)

A good many isolated facts of interest have come to hand recently, chiefly from Americans who have had to leave Turkish dominions on account of the United States having declared war on Germany. The Grand New Hotel in Jerusalem has been converted into a hospital of 250 beds and put in charge of the "American Colony" of Jerusalem—that is, the community presided over by Mrs. Spafford. This community have always been on friendly terms with the "Turks," and Jemal Pasha, who, up till recently, was all powerful in Jerusalem, has given them his protection. Part of the building occupied by Mr. Hughes as his boarding house is now used as a club for German officers. The Russian Hospital is being used for the British wounded captured by the Turks. Eleven patients have died there, and were buried in the British cemetery by the C.M.S. native clergyman with Church of England rites.

Very few people remain at Jaffa, the Christians, Jews, and Mohammedans having been made to leave by order of the Turkish Government. The exodus was a terrible time, and many of those who went away are financially ruined, having been compelled to sell all they had at a few hours' notice. A similar stampede from Jerusalem very nearly occurred when, last April, the British attacked Gaza. It was considered by the Turks that had the attack been pushed a few hours more the British would have been through, as the soldiers were discouraged and demoralised by want of food. Jemal Pasha, thinking that the coming of the British was only a question of at most a few days, ordered that the city of Jerusalem should be evacuated at once—the Europeans to leave first. The Consuls protested, and also the German authorities, especially General von Cress, who threatened to resign and return to Germany if the order was persisted in. Finally, through German pressure being applied at Constantinople, orders came that the holy cities of Jerusalem, Bethlehem, Helwan and Nazareth were not to be evacuated under any consideration. But great panic and disorder prevailed for the four or five days during which the question was in a state of suspense, and many Europeans landed themselves in difficulties through having parted with provisions and fuel, at great loss, in preparation for departure.

In order to facilitate the carriage of provisions for the Palestine army, a fleet of lighters and boats, with steam tugs, are now working on the Dead Sea transporting goods —especially corn—from Kevale to the north-western shores, from whence some 200 autocars carry them on to the fighting front.

There have been many tales of public hangings in Jerusalem since the war. A recent case reported in detail by an eye-witness can be vouched for. Last spring some fifty runaways from the army at Beersheba were caught by the authorities; they were not in the ordinary sense deserters, but had come to Jerusalem partly through hunger and partly to see their families. As there had been several such incidents before, Jemal Pasha decided to make an example this time and to decimate the group. He made them draw lots, and five unfortunate men—two Christians, two Jews, and one Mohammedan—drawing black balls, they were hanged publicly next morning at the Jaffa gate.

Those recently in Jerusalem have noticed many indications of the growing unpopularity of the Germans, to whom many Turkish officials ascribe all their present misfortunes.

GUTHRIE & VALENTINE

Civil and Military Tailors :: and Outfitters, ::

(ESTABLISHED 1812)

12, CORK ST., BURLINGTON GARDENS, LONDON, W. Telephone: Mayfair 3222.

Complete Outfits for all Indian Regiments. Home Service Uniforms and Camp Equipment.

Outfits for Officers appointed to the (Unattached) Indian Army a speciality.

Full Estimates and price lists of mufti clothing and underwear on application.

THE GREEK PARLIAMENT.

The Greek Chamber now in session is the one which was elected in 1915. Reports from Athens speak of a certain shuffling of parties from one cause or another, but the overwhelming proportion of Venizelists is shown by the following analysis, which represents the position in the Chamber as it was in 1915.

Parliament, as elected on June 13, 1915, represented thirty-three constituencies.

	Members.	Venizelists.	Opposition.
Aetolia-Acarnania	12	11	1
Argolis-Corinth	11	6	5
Arcadia	12	2	10
Arta	4	2	2
Attica-Boeotia	22	20	2
Achaia-Elis	16	12	4
Euboea	9	3	6
Zante	3	3	—
Heracleon (Crete)	7	7	—
Janina (Epirus)	12	11	1
Corfu	8	1	7
Cephalonia	7	5	2
Cozani	11	5	6
Cyclades (Islands)	13	13	—
Laconia	9	2	7
Larissa	14	14	—
Lassithi (Crete)	4	4	—
Mitylene	11	11	—
Messina	14	6	8
Prevesa	3	3	—
Rethiruno (Crete)	5	5	—
Samos	4	4	—
Serres (Macedonia)	9	4	5
Spetzae (Island)	2	2	—
Trikkala (Thessaly)	12	8	4
Hydra (Island)	3	3	—
Phthiotis-Phocis	11	6	5
Canea (Crete)	7	6	1
Chios (Island)	5	5	—
Psara (Island)	2	—	2
	262	184	78

Some uncertainty prevailed in regard to the political leanings of the thirteen members for Drama, the nine members for Florina, and the Salonika deputies. The majority, however, in each case, if not all the members, were anti-Venizelists, and if these constituencies are fully represented in the Chamebr to-day the strength of the Opposition, unless deputies have changed their views, would be increased by thirty or more votes, leaving the position, roughly, as follows:—Venizelists, 184; Opposition, 110.

There were also eight members from North Epirus, viz., three representing Argyrocastro, two Delvino, two Premeti, and one Tepeleni; but they were not allowed to take their seats in the Chamber.

JUGOSLAVS IN AUSTRIA.

The Serbian Press Bureau in London has received the following telegram from its special correspondent in Geneva:—

The Parliamentary Commission of the Jugoslav Club at Vienna, under the presidency of Dr. Korosetch, has just published the following resolution, dated August 7:—"The Jugoslav Club refuses to form part of a Parliamentary Government, stating that they can only support a Government which would accept their programme included in their declaration of May 30. To grant national autonomies in the existing provincial limits does not correspond to the Jugoslav programme. The absolute régime in Bosnia and Herzegovina, as also the oppression of the Jugoslavs in Austria by alien usurpation, constitutes an insurmountable obstacle even to a Parliamentary collaboration with a governmental majority."

At the same time, President Korosetch categorically denies the rumours of the pretended rupture between the Jugoslav Club and the Czech Union, rumours provoked by the exaggerated exploitation in a part of the Press, and by discussion on the question of tactics. At the time when the above-mentioned declaration of May 30, as also that of the Czechs of the same date were published, the German and Magyar Press made an attack upon them on the ground that they were inspired by the Entente, and the Prime Minister of that time, Count Clam Martinitch, declared that those declarations could not possibly be included in any discussion. As a consequence of these declarations no Parliamentary work in Vienna is possible.

A Bill has been introduced in the Greek Chamber to establish a Naval Commission to investigate the qualifications of officers up to the rank of captain. The case of officers of higher rank will be submitted to the Cabinet with a view to purging the Navy of undesirable elements.

TANGIER TO TEHERAN.

Three years of war have made one so accustomed to the conditions of the German code of warfare that it is hardly possible to feel anything akin to surprise at the report that the Germans have almost completely sacked the town of Bucharest. Indeed, with their record in Belgium and elsewhere it would have been a greater cause for surprise if they had left Roumania's capital more or less untouched. If the report is correct, the Germans seem to have done their evil work with remarkable thoroughness. All portable artistic treasures are said to have been removed, and even the churches have suffered at the hands of the pillagers. In other words, the exceedingly happy precedent set by the Crown Prince in the West has been followed practically to the letter. All things considered, it is really a pity that that gentleman could not have been present to give the true Hohenzollern touch to the spectacle.

***

It seems absurd to look for truth in the enemy Press, but, all the same, that servile and well-disciplined instrument of the Central Powers continues every now and then to perpetrate a *faux pas* which helps to let the cat out of the bag. Thus at a time when Germany is emphasising the strong position of herself and her Allies, I find Dr. Ude, a professor of Graz University, drawing a very dismal picture of conditions in the Central Empires in an article in the *Arbeiter Zeitung*. He begins with the amusing warning that "all who suppress the truth or pervert it altogether are rendering a very bad service to their country. Therefore there is a terrible time in store for certain persons and certain parties when the people awaken." Reading a little further for the solution of this cryptic paragraph, I come across the statement that "it is imperative to furnish a reply to the question of how long our food supply is going to last and how our interior political situation will develop. . . . Both neutral and enemy countries know quite correctly how we stand. If we continue to pin our faith to Roumania we shall be mistaken in our speculations, because the Roumanian harvest will in the end be exhausted." I hope Dr. Ude will be allowed to continue his gloomy articles, though I very much doubt it, as I rather suspect the enemy censor was not quite up to the mark when he passed the above.

***

The Bulgarian Press comments on the new situation in Greece are so irresistibly comic that I cannot resist the temptation of giving one or two characteristic extracts on the subject. Evidently the official Bulgarian attitude towards Greece is one of pity, a most becoming emotion for the Bulgar, all things considered. Thus the *Narodni Prava* deplores "that the Greek nation will remain the victim of the Entente, and that yet another nation, forcibly drawn into the war, will have to pay dearly for the stupidity of such leaders as Venizelos"; and again: "Fresh sacrifices, fresh outrages, fresh outcries are now threatening Greece, who has fallen under the terrorising régime of the Entente." And so on and so on, until one feels that the Bulgar has been literally moved to tears on behalf of Greece—for, of course, his solicitude could not be governed by any thought of a possible change in the military situation detrimental to himself.

***

As a matter of fact, it may be mentioned in this connection that the Bulgarian Press, no doubt acting under the most rigid orders, affects to make light of possible future developments in Greece. Of course, there was no other attitude it could take, and its very insistence on it suggests considerable inward trepidation. Thus the *Mir* says: "Venizelos hopes to finish all his preparations in the interior of Greece in about three months. Let us be ready to receive him in about three weeks"; while the *Narodni Prava*, adopting a very lofty tone, says: "As far as we Bulgars are concerned, the entrance of Greece into the war will considerably simplify the Balkan problem." No doubt, but not quite—quite in the way suggested by the *Narodni Prava*.

***

For those who want a relief from Russian news I cannot do better than commend a study of the pages of *El-Qibla*, a Mecca contemporary. The fact that it is published in Arabic is certainly a drawback to its being widely read in this country. The anniversary of the Independence of Hejaz was celebrated a month or two ago, and was the occasion of special festivities at Mecca. There at any rate there would seem to be no question as to the unqualified success of the change. In the address delivered by the Under-Secretary of State for Foreign Affairs, who was evidently selected for his gift of oratory as the Government's spokesman, I find such passages as these:—"I witness before God that this happy movement has brought forth the ripest fruits and most abundant benefits. . . God has bestowed upon us the blessings of security, ease and the means of life, so that only by the news which reaches on the wings of the lightning do we know that yonder Death is reaping his harvest of lives, uprooting households and exterminating nations. . . . O ye Sons of Heroes, of the Line of the Prophet Princes and Emirs, be not cast down nor puffed up. The Right is on your side, the hand of God is with you, and far be it from His Divine Might to abandon a people who seek to live, who demand lawful rule, who walk in righteousness. . . . We, O my countrymen, are more fortunate than most nations in the struggle for independence. For God has bestowed upon us—praise and thanks be to Him—a man whose like other nations would ardently desire, even if possessed of one the tenth part of his right judgment, lofty character and wearying zeal." Little wonder that, in this spirit, the Arabs are satisfied that the Hejaz movement is destined to go a long way.

***

One of the results of the tortuous history of Constantinople, and especially its long tenure by the Turks, has been the partial loss to history and archæology of much evidence of the past which one might reasonably suppose might be revealed by a series of systematic excavations in the neighbourhood of the city. There are so many questions of ancient history the answers to which are only to be supplied there, as, for instance, whether the site of Byzantium had been previously occupied before Byzas brought his little colony of Megarians across the Ægean in one of the intermittent waves of Greek immigration. Then, again, excavation should make it possible to go beyond the unfortunate event of 196 A.D., and learn something more of Byzantium than we do to-day. But these things, it is to be feared, will be impossible while Constantinople is in its present ownership, for the Turks, whatever their merits or demerits, have never shown themselves other than the most indifferent patrons of research of any description.

***

The day may come when Constantinople will be as popular with scholars as other centres of the Near East, but for that to happen either the Turk will have said his last long farewell to the city or he will so far have revised his way of life as to have become a patron of letters. And the possibility of the latter eventuality ever coming to pass I very much doubt. No one will deny that the average Turk can be a gentleman under certain conditions, one of which, and, perhaps, the all essential, is that he has a wholesome respect for his *vis-a-vis*, but that it should be the part of a gentleman to encourage and take an interest in learning and research is something quite outside his vista. It may be that he realises his imperfections and is unwilling to encourage competition in this sinful world by doing anything which might be calculated to aid his competitors. In a mental backwater himself, it may be painful to see others on the main stream. But it is even more painful to others that, in his stupidity, he should be blocking up the backwater.

THE ORIGIN OF THE WAR.

The Times has received the following telegram from M. Také Jonescu, the eminent Roumanian statesman and Vice-President of the Council of Ministers:—

The Editor of *The Times* will remember conversations with me upon the origin of the war during my visit to London in the second half of July, 1914. I then said that I had known for months that Austria desired war at all costs, and I wrote for *The Times* an article to this effect. While in London I saw the German Ambassador almost daily, and sometimes twice daily. I am in a position to know that the ultimatum to Serbia was known to and approved by Berlin, that Herr von Tschirschky took part in drafting it, that he believed that Serbia could not accept it, and that the Austro-Germans feared lest she should accept it in spite of all.

Prince Lichnowsky, who personally desired peace, asked me on the eve of the presentation of the ultimatum at Belgrade to telegraph to M. Pashitch advising him to accept the ultimatum and to promise him, on behalf of Prince Lichnowsky, that the hard conditions of the ultimatum would be modified in application. I affirm that Prince Lichnowsky, who had assured me in April, 1914, that he was certain that England would never permit Germany to attack France, declared to me on Monday, July 27, that he no longer believed that England would abandon her neutrality. When I replied, somewhat vivaciously, that he was totally mistaken, and that England would never allow France to be crushed, Lichnowsky answered textually:—"I am not as certain of that as you are."

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. August.	1917. August		1335. Shawall	5677. Av
17	4	Friday	28	29
18	5	Saturday.....	29	30
			Dulkaada.	Elul.
19	6	Sunday	1	1
20	7	Monday	2	2
21	8	Tuesday	3	3
22	9	Wednesday	4	4
23	10	Thursday	5	5

Prince Constantin Brancovan has left London for Paris.

The Earl of Bessborough has left London for Birmingham.

Colonel Karatas, of the Roumanian Army, left London for Harrogate last week.

Captain Rjabin, of the Serbian Army, has left London for Russia on a special mission.

M. Nicolas Debbane, it is stated, has been appointed Chargé d'Affaires for Brazil at Cairo.

Mirza Abdol Ghaffar Khan, Counsellor to the Persian Legation, has left London for Brighton, on leave.

The Serbian Minister, M. Yovan Yovanovitch, visited M. Pashitch, the Serbian Premier, on August 15.

M. Alexis Catargi, Secretary of the Roumanian Legation in Paris, has arrived in London on leave of absence.

Mr. Alex. Devine, Commissioner for the Montenegrin Red Cross and Relief Fund in London, has left for Paris and Rome.

Madame Misu, wife of the Roumanian Minister, and Mlle. Misu arrived in London on August 10 from the country.

Among the honours gained by past and present students of St. Thomas's Hospital are four Serbian decorations and an Egyptian decoration.

Mr. A. G. M. Dickson, a former Sub-Governor of the National Bank of Egypt, has been created a Grand Officer of the Order of the Nile.

Colonel Ractivan, who acted as Greek Military Adviser at the recent Allied Conference held in Paris, has left London for the Continent.

It is stated that the list of first appointments to the Order of the British Empire is now practically complete, and its issue for publication is expected within the next few days.

General Georgesco, Chief of the Roumanian Military Mission attached to the British Headquarters, arrived in London on August 13 from Paris. He was accompanied by Madame Georgesco.

Mr. Justice Cator, of the Mixed Court of Appeal, has been appointed, by the Egyptian Council of Ministers, to serve on the Capitulations Committee during the absence on leave of Mr. Piola Caselli.

According to a telegram received in Paris from Athens, the Greek Government has decided to bring M. Gounaris, former Prime Minister of Greece, who is at present in Italy, before a special tribunal.

M. Pashitch, the Serbian Prime Minister, called at the Foreign Office on August 14, and had a long interview with Mr. Balfour. Other visitors to the Department included the Greek and Serbian Ministers.

Mr. Frank Sellwood, of Eastview, Cullompton, Devon, who died on April 1, leaving £89,138, gave £500 to the London Society for Promoting Christianity amongst the Jews, and £280 to the British Syrian Society.

M. Levidis, Councillor of the Greek Legation at Brussels; M. Metaxas, First Secretary of the Greek Legation in Paris; and M. Pappadopoulos, the Greek Consul-General at Alexandria, have been relieved of their posts.

M. Yovan Yovanovitch, the Serbian Minister, and Madame Yovanovitch, entertained at luncheon at the Legation, 195, Queens Gate, on August 10, M. Pashitch, the Serbian Premier, M. Koitch, his secretary, and the personnel of the Legation.

Both the sons of Count de Salis, the British Envoy to the Vatican, and formerly Acting Agent at Cairo, have been wounded at the front. The Pope, Cardinal Gasparri, and other high dignitaries of the Vatican, have expressed their deep sympathy with Count de Salis.

The Rear-Admiral in command of the Gibraltar Station paid an official visit to the Military Governor of Algeciras on August 10. A guard of honour was provided by a Spanish infantry regiment. The British Admiral received a warm welcome from a large crowd.

Included in the list of Army honours in a supplement to the *London Gazette* of August 8 is the award of the C.M.G. to El Lewa, El Sayed Pasha Ali, Egyptian Army, while Captain William Arthur Davenport, W. Yorks Regt., attached Egyptian Army, receives the Military Cross.

The committee for the organisation of Mesopotamia Day have handed over to the Mesopotamia Comforts Fund over £16,000. This very satisfactory result is largely due to the fact that the entire work of organisation was carried out gratuitously, with the exception of about £30 paid for clerical assistance.

M. Mitrovitch entertained at luncheon on August 11, M. Pashitch, the Serbian Premier; M .Yovan Yovanovitch, the Serbian Minister; M. Voislav Antonievitch, the First Secretary of the Legation; M. Gavrilovitch, M. Pavlé Karovitch, Colonel Nicolaievitch, Colonel Yovanovitch, M. Koitch, and members of the Serbian colony.

Reuter's Paris correspondent telegraphs under date August 15:—The Roumanian Press Bureau denies the rumour that the King and Queen of Roumania and the Government have left the capital of Moldavia for a town in the south of Russia. The population of Jassy, it asserts, retains an unshaken confidence in the resistance of the troops.

With the consent of his Majesty, Major-General Count Gleichen and Countess Gleichen will in future be known as Major-General Lord Edward Gleichen and Lady Edward Gleichen, and his sisters, Countesses Feodora and Helena Gleichen, as Lady Feodora and Lady Helena Gleichen, ranking as a younger son and daughters of a marquess.

The retirement is announced of Mr. H. Evans, Superintendent of Trams and Ferries, Sudan Government. Mr. Evans went to the Sudan in 1897, and four years later was appointed Head Clerk to the Steamers Department. In 1906 he was transferred to the Moudirieh, and was placed in charge of the Khartoum Light Railways. In this capacity he was responsible for much excellent work.

The Rev. A. J. Sacré, Rector of East Hanningfield, who has been appointed an Honorary Canon of the Cathedral at Chelmsford in succession to Canon Dormer Pierce, volunteered as a chaplain on the outbreak of war, and served at Gallipoli. Eventually he had to relinquish that work owing to the failure of his health. Mr. Sacré is shortly retiring from the Rectory of East Hanningfield.

A deputation of the Brotherhood Movement waited on M. Pashitch, the Serbian Prime Minister, at Claridge's Hotel on August 14, and presented to him £1,000 from the Brotherhood International Relief Fund, to assist in rehousing homeless Serbian families. M. Pashitch, in acknowledging the gift, said that the first need, after food, would be houses, and he rejoiced to hear that the Brotherhood Movement was engaged in such a work of humanity. To himself the gift was peculiarly sympathetic, because near to where he was born there were a bridge and houses built by kind English friends forty years ago, and they were still called the "English Bridge" and the "English Houses."

Captain Stanley Wilson, M.P., who was captured on a Greek vessel in the Mediterranean while on his way to England from Athens, some twenty months ago, and has since been interned in Austria, has been released, and arrived in London on August 12. At the time of his capture by an Austrian submarine Captain Wilson was travelling with Colonel Napier, former Military Attaché at Sofia, and Dr. Finlay, on board the Greek steamer "Spetzai," from Patros to Messina. When the steamer was about eighty miles from the island of Zante the submarine appeared and fired a shot. The vessel stopped, and the submarine approached and ordered the captain to come on board. An examination of the passenger list disclosed the presence of Captain Wilson and his companions to the submarine commander, who ordered them to be taken to his vessel. Captain Wilson and Colonel Napier were detained in the submarine, but Dr. Finlay, being a Red Cross officer, was permitted to return to the "Spetzai." Captain Wilson was first taken to Vienna, and was subsequently interned at Salserbad.

APPOINTMENTS, PROMOTIONS, ETC.

El Bimbashi W. St. J. F. McCartney has been appointed Veterinary Inspector, Sudan Government.

Mr. R. A. Bence-Pembroke, Inspector of El Nahud district, has been transferred to Khartoum Province.

Temporary Kaimakam P. E. Wylie Bey, Camel Corps, and Bimbashi (temporary Miralai) W. A. Davenport, Equatorial Battalion, have been granted the substantive rank of Kaimakam.

Mr. J. W. Crowfoot, Director of Education, Sudan Government, has been appointed an additional member of the Governor-General's Council in place of El Lewa M. Kennedy Pasha, who has resigned.

Captain A. C. Frame, Highland Light Infantry, and Captain W. M. H. Pollen, Cameronians, have been taken on the strength of the Egyptian Army as Special Service Officers with the rank of Bimbashi. Captain Frame has been posted to the Sudan Government, and Captain Pollen to a Sudanese Regiment.

The Acting Governor-General of the Sudan has approved of the appointment of El Bimbashi James Keith, District Judge, Sennar Province; El Bimbashi R. P. Mahaffy, District Judge, Blue Nile Province; and El Bimbashi J. J. Bramble, Inspector, Zeraf district, Upper Nile Province, to be magistrates of the first class under the Code of Criminal Procedure.

The Sultan has conferred the Order of the Nile on a number of officers, among whom are the following :—

2nd Class Order of the Nile.—Colonel Sir Courtauld Thomson, C.B.; Colonel Sir John Rogers, K.C.M.G., A.M.S.; Major-General Sydenham Campbell Urquhart Smith, C.B.; Surgeon-General James Maher, C.B., A.M.S.; Brigadier-General Sir Robert Murray MacCheyne Anderson, K.C.M.G.; Lieutenant-Colonel Stephen Hungerford Pollen, C.M.G., R. of O.

3rd Class Order of the Nile.—Colonel Charles Needham.

4th Class Order of the Nile.—Charles Henry Lyddon, Esq.; Captain John Falconer; Captain Walter Francis Stirling, D.S.O., R. of O.; Lieutenant-Colonel Hugh D. E. O'Sullivan, R.M.L.I.; Major Trant B. Luard, R.M.L.I.

OBITUARY.

The death occurred at his Flintshire residence, on August 11, of Alderman M. A. Ralli, formerly Greek Consul for Liverpool.

Lieutenant H. D. Lee, who was killed in action on August 5, was Chief of the Merchandise Department of the London Office of the Imperial Ottoman Bank. He joined the H.A.C. in February, 1915, and received his commission in the R.F.A. last January. He left for the front in May.

The Imperial Ottoman Bank has had a further loss in the death in action on July 20 of Paul de Fürst, Officer Interpreter in the French Army. He had been in the bank's service since 1897, and since 1913 had been Secretary of the Paris Committee.

Major Owen Mostyn Conran, King's Own Royal Lancaster Regiment, attached to the R.F.C., who was killed in action on July 28, was the youngest son of the late Major Conran, Essex Regiment, and of Mrs. Conran, of Brondyffryn, Denbigh. He was born in 1881, and educated at Shrewsbury. He served in the South African War, and joined the Royal Lancaster Regiment from the South Lancashire Militia in 1901. He was made captain in 1907, and in 1913 was seconded for service with the Egyptian Army, becoming major in September, 1915. He saw active service at the outbreak of war, and did a considerable amount of flying. In July, 1916, he was sent to England on sick leave, during which he obtained permission to become attached to the R.F.C. In November, 1916, he was made Flight Commander, and in April, 1917, he went to the front.

Lieutenant-Colonel A. G. Cartwright, whose death is announced, received his commission in the Yorkshire Regiment in 1879. He took part in the Nile Expedition, 1884-5, when he was on the lines of communication, and also served with the Sudan Frontier Field Force, 1885-6, receiving the medal and the bronze star. His last experience of active service prior to the present war was in the Tirah Expedition, for which he received the medal with two clasps. When the present war broke out he had reached the age of 56, and was no longer in the Reserve of Officers. He volunteered for service, and was at the front for five months in 1915 as second in command of a battalion of his regiment. Invalided home, he returned to service three months afterwards with another battalion at home, and in 1916 was appointed to a command, which he held until shortly before his death.

A Budapest telegram to the *Cologne Gazette* states that the Hungarian Government has prohibited the reopening of Roumanian schools, as numerous facts have occurred during the war which necessitate sharper State control of these schools. The Minister of Public Instruction declares that the partly unpatriotic attitude of the Roumanian intellectuals during the war is to be ascribed to the unpatriotic education of the young in Roumanian schools.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

NEVILLE.—On August 6, at Edinburgh, the wife of Captain W. S. Thacker-Neville, R.A.M.C. (Salonika Expeditionary Force)—a son.

KILLED IN ACTION.

WILSON.—Reported missing, presumed to have been killed in action on Chunuk Bair, Gallipoli, on August 10, 1915, Robert Meredith Wilson, Lieutenant, Loyal North Lancs Regt., younger and surviving son of Mr. and Mrs. E. T. Wilson, 38, West Cliff, Preston, aged 23.

Reuter's Athens correspondent in a message date August 8 says:—It is stated on trustworthy authority that the following amounts were remitted to the German Legation here for propagandist purposes: In 1915, 5,500,000 marks (£275,000); in 1916, 6,532,000 marks (£326,600). The largest amounts were remitted in June, July and August, 1916, when the Reservist Leagues were organized after their alleged dissolution. It is believed that the Legation also received other amounts.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

PEACE PROPOSALS AND THE NEAR EAST.

As the sincerity of the Pope's fresh appeal for peace is above challenge, its main interest for the Allies lies in its obvious inspiration by the wishes and necessities of the Central Powers. His Holiness satisfies himself that he heeds "neither the suggestions nor the interests of either of the belligerent parties," but the fact remains that he issues a document which will be welcomed in Germany and Austria-Hungary and will be summarily but courteously rejected by the Grand Alliance. His proposals ignore two important features of the war—the beginning and the most recent development, the participation of the United States. But here we are concerned mainly with the significant silence on the subject of the Near East. Save for a perfunctory reference to the Balkans and Armenia, the struggle as viewed from the Vatican might have been originated from and been restricted to an attempt on the part of the Entente Powers to seize German territory. No doubt the formula "No annexations and no indemnities" is meant to be applied to Western Asia as well as to Europe. It means, as President Wilson stated in his Message to the Russian Provisional Government last June, the restoration of the *status quo ante*, and nowhere is Germany more anxious to see this effected than in the Near East and in the Ottoman Empire. It was the *status quo ante*, the Russians were reminded, "out of which this iniquitous war issued forth, the power of the Imperial German Government within the Empire and its widespread domination and influence outside of that Empire." The Pope, we must infer, has heard of the part played by the Turkish Government in this war and of what has happened in Turkey. But while the questions of Alsace-Lorraine, Trentino and Trieste are to be "examined in a conciliatory spirit, taking into account the measure of what is just and possible of the aspirations of the peoples," His Holiness would seem prepared to leave Syria and Arabia as the outbreak of the war found them, while recommending that Armenia as well as Serbia and Belgium should be the victims of yet more "scraps of paper." For peace on these terms, with her African colonies restored to her as well, Germany would readily relinquish her hold on Belgium and even Alsace-Lorraine, both of which she now realises she has no chance of keeping.

In view of the fact that the proposals are associated with the Pope's name, nothing in them is, perhaps, more striking than their failure to show the least appreciation of the principles at stake in this vast upheaval of the civilised world. The Pope, it would appear, sees nothing in the war but a series of military operations between two sets of belligerents, which have met with sufficiently varying success to justify a return to peace conditions on the basis of an exchange of conquered territories. Some concession is paid to questions of such outstanding prominence that they could not well be ignored; but of the existence of any moral issues behind the life-and-death struggle of the nations His Holiness affects complete ignorance. As the Allies have lost no opportunity of stating their case, the reason for the omission of any reference to this aspect of the struggle must be found partly in the real source of the proposals. To have the least chance of success an appeal for peace at this stage ought in any case to take some notice of one or other of the official statements of the Allies' war aims. President Wilson's Message to Russia was as explicit as any, and although it was an independent utterance, a neutral observer would have no difficulty in finding in it, somewhat more effectively expressed, the resolve actuating the whole of the Grand Alliance. "We are fighting," said the President of the United States, "for the liberty, the self-government and the undictated development of all peoples, and every feature of the settlement that concludes this war must be conceived and executed for that purpose. Wrongs must first be righted, and then adequate safeguards must be created to prevent their being committed again." Readjustments will have to be made; these must follow a principle, and that principle is plain. "No people must be forced under a sovereignty under which it does not wish to live. No territory must change hands except for the purpose of securing those who inhabit it a fair chance of life and liberty."

It is very evident that the proposals for which the Pope has made himself responsible would not fulfil the conditions laid down by President Wilson. By ignoring the latter's declarations and by adopting a virtual silence towards the Near Eastern question they endorse the German contention that the war is merely the outcome of the Entente's jealousy of Germany and of its designs upon her position in Europe. Even if the cry of Belgians, Serbians, Armenians and Arabs had not penetrated through the carefully guarded portals of the Vatican, it would be thought that the political conditions in the neighbouring Empire of Austria-Hungary would at least be well enough known to call for some reference to the Southern Slav question. If the Trentino and Trieste are to be allowed to decide their fate according to the aspirations of the people, even with the suspicious qualification added, there must be equally good cause why the inhabitants of Styria, Carniola, Dalmatia, Bosnia and Herzegovina should also be allowed to determine their own future status. But the Trentino and Trieste are excrescences on the conception of the Central European *bloc* which, with or without her former African colonies, is to repay Germany amply for the outlay she has incurred in this war. These minor Austrian possessions, therefore, can be surrendered lightly, so long as the essentials of Germany's future world-dominion remain intact. It is to be hoped that the Allied Governments will avail themselves of the opportunity of making an even more definite pronouncement of their war-aims than they have ventured hitherto. Loyalty to Russia has prompted homage to the formula "No annexations and no indemnities"; but the more closely the subject of a peace settlement has been studied, the more numerous have become the reservations that have had to be placed upon the phrase, until it has ceased to serve any practical purpose, while the tenacity with which the Central Powers cling to it suggests that they may originally have prompted its adoption by the Russian extremists. As repeated references to the principles of liberty and self-government and to the right of peoples to develop on their own national lines have conveyed no meaning to His Holiness the Pope, it is more than probable that they have not been understood in the enemy countries and by some of those to whom political freedom has been promised. The interests of the Allies, therefore, can only be advanced by a definite statement of their war aims, showing *inter alia* how the Jugoslav people must be separated from the Austrian State and how Armenians, Arabs and others must be freed from Turkish rule.

SERBIA AND SOUTHERN SLAVS.

Amid the alarums and excursions of a great war quieter events of far-reaching and permanent effect are apt to be overlooked. For example, the British Empire has taken a few strides forward in its internal organisation during the war which the average Briton has scarcely noted. So in these last few weeks a pronouncement was made to the world from the little island of Corfu which may be decisive of world destiny. It may seem a small matter that a group of communities in that "museum of races," the Austrian Empire, should have declared in favour of their own unity and independence. Many people in England may still be unable to define in detail the secular aspirations of the Jugo- or Southern Slavs to freedom and union, but I am certain that everybody in England and Europe is nearly and definitely interested in the realisation of those ideals.

Let me quote the opening paragraph of the joint declaration of the Serbian Government (whose headquarters in exile are established in Corfu) and the Southern Slav Committee:—

> The State of the Serbs, Croats, and Slovenes, who are also known as Southern Slavs, or Jugoslavs, will be a free and independent kingdom, with indivisible territory and unity of allegiance. It will be a constitutional, democratic, and parliamentary Monarchy, under the Karageorgevitch Dynasty, which has always shared the feelings of the nation and has placed the national will above all else.

The concluding words of the declaration are also noteworthy:—

> The nation thus unified would form a State of some twelve million inhabitants, which would be a powerful bulwark against German aggression, and an inseparable ally of all civilised States and peoples.

This last sentence indicates briefly why the whole civilised world is concerned in this project of nation-building in the Near Orient. These Jugoslavs, dwelling in the southern provinces of Austria and Hungary, as well as in Serbia proper, Bosnia, Herzegovina and Montenegro, hold the passes through which the predatory Central Powers will have marched to the conquest of the world, or in which the path will in future be effectually barred. Where the Jugoslavs live is just where the friends of freedom and civilisation desire to erect a barrier strong enough to bear back the ambitions of an aggressive and oppressive pan-Germanism.

Everybody who has read a simple text-book of modern European history knows something about the internal race-conditions within the Dual Monarchy and its relations to the peoples across its borders. For a thousand years Germans and Magyars have held Slav and subject peoples under an enforced and often brutal sway. But going back no further than to 1815, when Metternich and Company thought they were fixing European boundaries for all time, the Austrian frontier was driven right through the two nations of Roumanians and Southern Slavs. In everything that constitutes nationality, in race, language and tradition, Serbs, Slovenes and Croats are a single nation. In any case, that was not an arrangement likely to continue, and it was greatly complicated by the fact that these Slavonic people lie right athwart the road along which the Germans have hoped to extend their dominion—across the Morava and Vardar valleys, which run down to Salonika and across the south-eastern "corridor" to Constantinople, Asia Minor and the Persian Gulf beyond.

Thus the sentiment of the Austro-Hungarian Government towards the Slavs of the south, especially as the *Drang nach Osten* has grown in strength and success, has been one of fear and irritation. "Since 1867," writes Mr. J. A. R. Marriott, "it has been the fixed policy of the leading statesmen of both Vienna and Budapest to keep the Slav majority in strict subordination to the German-Magyar minority." This reference to the populations of the "ramshackle empire" may still surprise some people. Yet it is true that out of the fifty-one million subjects of Mr. Charles Hapsburg, as we may some day call the Austrian Emperor, ten million are Magyars, eleven million German and twenty-six million Slavs. Many Governments have found it a difficult task to control a small alien minority. The Hapsburgs have set themselves the task of enforcing the rule of a minority of the people upon an unwilling and freedom-loving majority. They have attempted to build a "Dual" Monarchy upon a population which is conspicuously "Trial" in race and tradition. And they have not simplified the problem by annexing, in defiance of all right and law, two other States with two million more Slavs, Bosnia and Herzegovina, though, as has been truly said, that act was intended as a prelude to the eventual "strangulation" of Serbia. And no one with an elementary historic knowledge can doubt that the main motive of the Central Powers in plunging Christendom into the Gehenna of this war was to destroy Serbia and to remove for ever the obstacle to the pan-German dream of Oriental and world-wide dominion.

If the Central Powers had been called to a beneficent and civilising mission of government and administration in these backward regions of the Near and Middle East, if the results of their sway were likely to be for the benefit of those regions and the human race in general, there might have been a more widespread sympathy with their Eastern ambitions. But no one can believe any such thing. Germany has allied herself with the bloodiest tyranny in the world, that of the Turks. The Emperor William has grasped the hands of the Sultan when they were freshly reeking with the blood of his Christian subjects. Germany has steadily refused to check or even rebuke the sanguinary methods of repression employed by her Ally. The whole Germanic object in pressing southwards and eastwards is to increase her power and extend her dominion, to attack and undermine a great empire which, as its own subject peoples will admit, is founded on the ideas of justice, mercy and freedom, to found a new empire in Asia and Africa which shall incarnate the German principles of brute force and ascendancy, those pestilential doctrines which have been injected into German veins by such writers as Treitschke, Nietzsche and Bernhardi. As Professor Ramsay Muir has truly said, "Germany aimed at using the Turkish Empire to increase her already formidable military power, and this prospect was all the more alarming because of the central strategical position which Turkey occupies. Her supreme aim was dominion, not emancipation; monopoly, not the open door. Aiming herself solely at dominion for its own sake, she became the advocate and support of the oppressor, not of the oppressed. It has become very plain that a German control over the Turkish Empire would make not for increased justice and the greater security of the world's peace, but for the very opposite."

Just where the Jugoslavs dwell, we have to build a barrier, a "Gatun dam," deep and wide enough to set an enduring limit to these devastating and insane ambitions. Courageous little Serbia is not strong enough for this purpose. To her strength must be added that of the neighbouring Slavonic communities in a well-knit and progressive State of twelve million souls.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Position of Greece. August 13.

Mr. KING asked the Secretary for Foreign Affairs whether he could make a statement about the position of Greece, and especially whether Greece was at war with Germany, Austria, Bulgaria, and Turkey.

Mr. BALFOUR said Greece was at war with the Powers mentioned in the question.

Exchange of Prisoners.

Mr. HUME-WILLIAMS asked whether the Government would now endeavour to arrange a conference with Turkey similar to that recently held at the Hague with Germany at which an agreement could be concluded for the better treatment and the exchange of prisoners of war.

Mr. J. F. HOPE said that the question of arranging a conference with Turkey similar to that recently held at The Hague with Germany in order to secure better treatment and the exchange of prisoners, was engaging the anxious attention of His Majesty's Government. There were, unfortunately, greater difficulties involved than existed in the case of Germany.

Mr. ARNOLD WARD asked whether any steps were being taken, or could be taken, to effect an agreement with Austria-Hungary on the subject of prisoners of war.

Mr. HOPE said that if the Austro-Hungarian Government made proposals on the subject of the exchange of prisoners, he had no doubt His Majesty's Government would take them into consideration. The number of Austro-Hungarian prisoners was many times greater than that of British prisoners in Austria-Hungary.

The Mesopotamia Report. August 14.

Mr. KING asked the Under-Secretary for War whether he would be in a position to make any statement before the adjournment as to the intentions of the Army Council with respect to the trial by court-martial of the officers blamed in the Report of the Commission on Mesopotamia.

Mr. MACPHERSON: The hon. member must not assume that proceedings in these cases will be by court-martial. As I informed the House, in reply to a question put by him on August 1, the officers concerned have been called upon to submit their written explanations, and the Council will have to consider these before deciding what further action is to be taken in each case. In view of the complicated nature of the matters in respect of which the statements were made in the Commission's Report, I can hold out no hope that decisions will be reached before the adjournment.

Mesopotamian Administration. August 15.

Mr. MONTAGU, replying to a question by Sir J. JARDINE about Mesopotamia, said:—The Revenue administration of the occupied territory has been carried on as far as possible in general conformity with the principles laid down in The Hague Convention, viz., on the basis of the system that existed prior to the British occupation. I understand that Arab tax-collectors have been appointed for some districts, while in others the custom of collecting through village headmen has been revived. The Revenue administration is controlled by a Revenue Board, consisting of three British officers, who are assisted by two assistant Revenue officers.

Sir J. JARDINE: Is the administration still being carried on under the orders of the General Commanding the troops?

Mr. MONTAGU: My hon. friend is aware that there is a political officer as well as that in the present condition of affairs in Mesopotamia supreme command must be in the hands of the officer who is in command of His Majesty's forces.

Mr. MONTAGU, in answer to another question, said: Under the authority vested in him the General Officer Commanding the Army of Occupation has promulgated rules providing for the administration of civil and criminal justice in the territories which are effectively occupied by the Army. Under the rules the G.O.C. exercises powers resembling those of a High Court, a senior judicial officer those of a district and sessions Judge, a junior judicial officer those of an assistant Judge and district magistrate, and an assistant junior officer those of a subordinate Judge of the first class and a magistrate of the first class. There are other subordinate officers invested with civil and criminal powers in varying degrees.

The Aden Field Force.

Colonel YATE asked the Secretary of State for India whether the special field allowances had now been granted to the Aden Field Force similar to those granted to other Expeditionary Forces.

Mr. S. BALDWIN stated that, with effect from January 1, special field allowances had been sanctioned for the Aden Field Force on the same scale as those granted to Indian Forces in Mesopotamia, Egypt, and East Africa. He took the opportunity of informing the House that the control of military operations and the command of the troops in the Aden sphere had been transferred to the War Office.

ROUMANIA'S CONFIDENCE IN VICTORY.

Prince Constantin Brancovan, a member of the Roumanian Parliament, who recently arrived in London from Jassy on a short visit, has given an interesting interview to a representative of Reuter's Agency on Roumania's participation in the war:—

Even before 1914, he said, the Roumanians had been hostile to Austria on account of her injustice to Roumania in the Balkan war. As soon as Great Britain drew the sword and her armies, with those of France, had shown the futility of the German plan at the battle of the Marne, Roumania decided to do her share in the cause of liberty and justice, and for the fulfilment of her national aspirations. She therefore entered into negotiations almost at once with the Allies, offering her assistance when required. It would be difficult for an Englishman to realize the enormous influence Great Britain has had among the smaller nations whom she has championed. After Italy's entry into the war negotiations became still more definite, and Roumania declared war at the moment considered by all parties concerned to be the most suitable.

That our country was so quickly overrun is due to three things—first, that owing to the unsettled internal conditions in Russia—a prelude to the Revolution—that Ally was unable to assist us as much as had been hoped; secondly, Germany had been preparing an army for some weeks, probably for use either in Galicia or against the Salonika front, and this force was thrown against us; thirdly, we are only a small nation, with a difficult front of over 750 miles to hold against the immense might of Germany. In the circumstances, it was to the interest of the Germans to make large sacrifices in order to prevent the Roumanians from cutting off their communication with the East and in order to gain the rich Roumanian crops and oilfields, so that, had further outside help enabled Roumania to offer a greater resistance, it is more than probable that Germany, who even now is still powerful, would have made still greater sacrifices to attain her ends

However, though Roumania has suffered, she has no regrets for her action. Her army is strong again and perfectly trained, and it will have all that it needs when it has received the assistance that Great Britain has so generously promised. Roumania's oilfields have almost all been rendered useless to the Germans and will be so for a long time, and full confidence is felt by Roumania that the end of the war will see the liberation of her peoples from the Austrian yoke and the expansion of the commerce, already considerable, between her and the Allied Powers, to the fulfilment of her ambitions to see France and Great Britain take the place of Germany in her trade. The war has had a very useful democratic influence in our country, as is evidenced by the passing of the Universal Suffrage and Small Holdings Bills in Parliament. The Jewish question will also be solved as soon as possible.

Even should a further retreat of the Russian Army expose our flank in Moldavia and compel us to retire still further, we should still be proud to have done our "bit" by the side of Britain, France, Russia, Italy, America, and their Allies, and we are resolved to continue the war on the side of our Allies to a victorious end. Finally, I would express my deep appreciation of the sympathetic interest Great Britain has always shown in Roumania. Our gratitude to your country is very profound—you have given us enormous credits, you have sent us a military mission to supervise and suggest in matters of engineering, etc., and you made great sacrifices to supply us with necessaries at the time of our retreat. Your Red Cross Service is wonderful, and we owe much to it.

THE PRESS ON THE NEAR EAST.

Great Britain and Serbia.

We give below some representative Press comments on the speeches made at the luncheon in honour of M. Pashitch last week, and, in particular, on the speech of Mr. Lloyd George:—

The Morning Post:—

As Mr. Lloyd George declared, the British nation is determined that for Serbia there must be complete restoration and restitution. British honour is pledged to the fulfilment of that assurance, if British sympathy for all that the Serbian people have endured, and if British admiration for the way in which the Serbian Armies have fought, were not a sufficient guarantee in themselves. Assuredly we will stand by our Serbian Allies to the end, as they have stood by us in spite of all blandishments from the enemy. Nor in the strict fulfilment of this debt of honour need there be any incompatibility with our recognition of the legitimate claims and aspirations of other Allies. . . . One thing is certain—that no interest at stake is so important, either to Italy or to Serbia, as their interest in coming to a friendly understanding. It is for them to settle with each other the differences that have in the past hindered a perfect concord—differences which only embarrass and weaken both nations in facing a common enemy, and forfeit for them the great advantages that must accrue from mutual confidence and co-operation. To dispel the Austrian menace is not less vital to Italy than to Serbia; and with that interest in common, firm friendship should be a logical corollary. But it is for themselves, and for themselves alone, to find the way to a satisfactory accommodation; and the true friends of both nations can serve them best by strictly leaving the task to them.

The Times:—

It was fitting that the presence of M. Pashitch in London should be made the occasion for some public manifestation of our loyalty to the cause of Serbia and of our determination to stand with her to the end, not merely as Allies, "but as friends and partners"; and it was right that Mr. Lloyd George, despite exceptionally pressing engagements, should have made an effort to pay to the Serbian people a tribute of affection and respect. He brought out the full meaning of the fact that the Southern Slav race has, for five hundred years, sung the story of its greatest national disaster—in memory of which the Montenegrins still wear the black band round their caps—in the sure belief that redemption from alien rule and union in freedom would one day again be achieved. A race that survived centuries of Turkish barbarism cannot be extinguished by three years of struggle and heroic defeat, even were its powerful Allies not beholden to it, as the Prime Minister and Lord Robert Cecil said, for accepting, at fearful risk, the challenge thrown to civilisation "by the barbarism of Prussia." Lord Robert Cecil availed himself of the opportunity to place in their true light his own and Mr. Balfour's recent speeches, which have been so seriously misunderstood and criticised in Italy. We are bound, he declared, not only by our engagements, but by our history and our sympathies, to our Italian as much as to our Serbian Allies. We recognise the national wishes and demands of Italy, and shall support and maintain all her legitimate aspirations to the same full extent as we shall give support to those of our other Allies. He rightly insisted that there is nothing inconsistent between the true claims of Italy and those of Serbia, who, in agreement, may look forward to a long and prosperous future side by side.

The Daily Chronicle:—

In 1914 there was no alliance between us and Serbia; and Russia, with whom we became formally allied in September of that year by the Pact of London, was herself in the position of having responded to Serbia's call, not of having called on and been responded to by her. The tragic events of 1915 somewhat altered the relation. Austria-Hungary made Serbia a number of offers, which she very properly rejected, in reliance on the Great Powers who had taken up her cause; and when those Powers subsequently proved unable to prevent the complete conquest of her territory, they no less properly and necessarily made public acknowledgment of their obligation to see her restored. The acknowledgment was made in this country by Mr. Asquith, and there is no doubt that public opinion was and is entirely behind it. If anything could strengthen our resolve, it would be the magnificent heroism shown last year by the rehabilitated Serbian Army in the Allied offensive which recovered Monastir.

"A Coming Turkish Offensive."

Under the above title Mr. Lovat Fraser discusses in the *Sunday Pictorial* the possible plans of the Turks, and expresses the view that an attempt will probably be made to recapture Baghdad. This is the situation in Asia Minor and Armenia as he sees it:—

The Russians in Armenia are believed to be held fast. The little Russian force which came through Persia and joined hands with our troops in Mesopotamia has been driven back. Parts of two Turkish corps, the 18th and the 13th, still hover on our front in Mesopotamia; but the Turks have been waiting for the autumn. They are collecting large forces at Aleppo. It is quite true that the total number of Turkish effectives is greatly reduced, but now that the Russians have forsaken the battlefield to dream Utopian dreams the Turks can muster very respectable armies against ourselves. They are said to be bringing back four divisions from Galicia and the Dobrudja, and to be drawing upon their reserves in Thrace. Marshal von Falkenhayn has gone to Syria, and he is not to be despised. He may have failed to take Verdun, but he will be a troublesome customer, if he appears before Baghdad. What will be the main direction of the new Turco-German offensive? My own view is that Marshal von Falkenhayn will act on the defensive in Palestine, and deliver his principal blow in Mesopotamia. The disappearance of the Russians gives him two lines of advance—by the Tigris and by the Euphrates. It was always foreseen that the Turks would attempt to retake Baghdad, but at first it was thought that they would make their principal advance by the Euphrates, because the Russians might have struck at their communications on the Upper Tigris. Now they can move by both routes. We are strong to-day in Mesopotamia, but not strong enough to remove anxiety. We have a fine commander in General Maude, but our forces are scattered over a wide area, and our outposts are probably 650 miles from the sea by the water route. Railhead on the Baghdad Railway is probably at Nisibin, south-east of Diarbekr, which means that on the Tigris route the Turks have only about 150 miles to cover by desert road, and less than 100 miles by river, before they reach the present British front.

The Palestine Front.

In the *Manchester Guardian* the Rev. H. S. Frank Williams, C.F., writing of the campaign in Palestine, gives a most picturesque account of life in the zone of war. Here is his description of the country:—

The country reminds one of home, the Sussex Downs especially—great bare, rolling green plains, with patches of cultivation, chiefly barley, clover, vetches, with here and there a small fig orchard, but very rarely a tree of any size, or indeed any conspicuous landmark. The surface makes fairly good going for the troops, but after a little use the green disappears and the surface reverts to desert sand once more. Yet we are continually marvelling at the fertility of this light, sandy soil. Everything seems to grow here—fruit, vegetables, grain, and flowers; the wild flowers are a perpetual joy, scarlet poppies, blue and red pimpernel, wild marigold, variegated anemones, campanulas, etc.

He confirms previous stories of the interest taken by the troops in that historic region.

Tommy takes a keen and intelligent interest in his surroundings, and his thirst for information is insatiable: "What sort of a place is Gaza?" "Why does the Bedouin wear a rope round his head?" "Where did all this sand come from?"—until one is tempted to sympathise with the distracted Hun parent's rebuke, "Be silent, my child, and eat your Hindenburg rock!" He is informed that he is treading on historic ground, and at once he sits up and takes notice; his knowledge of history is usually of the most nebulous. He fancies Moses had something to do with the disappearance of the gates of Gaza, and wonders what has become of all the "milk and honey," but he is intensely interested in hearing all he can about the various armies and expeditions which have preceded him along this age-old highway of the nations.

In Turkish Territory.

In "Beyond Baghdad" in *Land and Water*, Mr. L. Harrison gives an interesting pen picture of the country through which our soldiers have passed in pursuit of the Turks. Here is his description of the ancient cities of Istabulat and Samarra:—

Istabulat Station is itself a heap of ruins, having been blown up by the Turks before their retirement. The ancient city of Istabulat is not much more than a heap of mounds, and stands upon the bank of the river some six miles nearer Samarra. It is the first of a series of ruins, mostly dating from the days of the Caliphate, which stretch away from Samarra in all directions. How one regrets to have forgotten all one's ancient history! In this country there really should be an official archæologist attached to each unit, to explain places and events as we move along. But for many of the relics the explanation would appear to have been lost, and there is a curious fascination about those ancient remains that have left no impress whatever on history. It is appalling to think of the number of civilisations that have waxed and waned beneath the indifferent eyes of the inscrutable Arab, who has been in them, but not of them. The Arab makes one feel very small. We are fighting in what the Turk is pleased to call Turkish territory, and we have won what we shall hope to call a British province. But at the back of the Arab's eyes there is a look of calm, contemptuous assurance. Turk and Briton are passing phases. There have been many before, there will be others anon. They come, and strut awhile, and go. The Arab cringes to them, or harries them, according to expediency and opportunity, and without discrimination. But he has been the continuous possessor of his own country, and he is sure that he will always so remain. Meantime, we get our first glimpse of Samarra, by far the most striking of all the towns of the Tigris. It stands back a little on the high bank, a hundred feet above the river. It is small and completely walled, and is absolutely dominated by its noble mosque, which is for the moment all we see. A well-proportioned dome, gleaming gold in the sun, flanked by two slender and graceful minarets, with a second tiled dome a little away from the main group, the whole standing in bold outline, poised on rolling gravel hills, it is a picture different from anything we have seen before in this country. Behind the town stands up an enormous tower, a real tower of Babel, with a wide spiral path winding to its summit. Here is where our amateur archæology seizes its opportunities. My companion informs me that this is the tomb of the Emperor

Digitized by Google

Hadrian, and comments on the wide sphere of activity of an emperor who builds a wall in Britain, and is buried in Mesopotamia. Seeing that my map shows the tomb of the Emperor Julian, a large mound a few miles further off, I suspect some confusion of ideas. Later inquiries establish the fact that (a) this is a monument to Caliph Haroun al Raschid!; (b) it is simply a fort and watch-tower of the days of the Caliphate; (c) it is but three hundred years old, and has nothing whatever to do with the Caliphs. How much nicer this is than hearing one cut-and-dried explanation! One feels, too, that if none of these alternatives suit the mood of the moment, one is at perfect liberty to go on guessing until something really attractive suggests itself.

In the Cyclades.

The following passage is from an account of a visit to the Cyclades in the *Sphere*:—

We were warned that we must know Greek, and that Athens would interest us very much, but the Cyclades *not at all!* I was not, however, to be put off; we started one evening from Piræus—two ladies alone—and after two nights and a day anchored in the pretty little harbour of Santorin; and there, 900 ft. above us, perched on the top of the cliff, lies the modern town of Thera, or Phera. A collection of boys with their donkeys were waiting to take up the passengers and their luggage, as there are no carriages, and a twenty minutes' ride along a zigzag path brought us to the summit. The less said about the hotels the better, but with the assistance of some kind friends a charming ride was arranged for the following day. We went to the top of Mount Elias, the highest point of the island, and down below at our feet was Messavouna, the ancient town of Thera, full of interesting old remains. In Greek legend the island of Thera was connected with the story of the Argonauts, and was represented as sprung from a clod of earth which was presented to those heroes by Triton. After the fourth Crusade it received the name of Santorin, *i.e.*, St. Irene, the patron saint of the place. From earliest times it has been a centre of volcanic agency; we were reminded of this on the Kaumene islands, where the heat of the water, the smell of the sulphur, and the smoke that oozed out under our feet made it very evident that we were standing on the crater, and I was thankful when we got safely off to the harbour, where we had to wait for our boat, which was to take us to Naxos. There we sat on a terrace listening to the soothing sound of the water against the fishing boats and watching the approaching night coming on, faintly lit up by a beautiful new moon. About nine o'clock our Greek steamer appeared through the darkness, brilliantly lit up, and slowly glided into the harbour; it was like a scene in fairyland.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Readers of the "On 'Change Notes" in THE NEAR EAST will have observed the steady appreciation that has taken place in the Egyptian group of shares on the London Stock Exchange in the last few weeks. The increased values are not artificial, but are a true index of the rapidly expanding trade of the country and people. (Native-grown products of all kinds have been a wonderfully prosperous market in the last year, cotton in particular being the proverbial gold mine. Very high prices have been realised all round, and the presence of large numbers of troops in the country and on the Syrian frontier has added wealth and prosperity.

***

These factors have affected the various land companies to a considerable extent. There has been a livelier inquiry for land, debts have been liquidated, arrears of purchase instalments and interest paid off, and capital in all directions has been more liquid than it has been for years. It has been an Egyptian revival in the best sense of the word, and investors who have paid heed to the frequent favourable references in THE NEAR EAST to the country and its rapidly expanding prosperity will now be on the right side.

***

The outstanding feature of interest in London at the moment is the soaring to a great height of the price of silver. On Wednesday the rate—the highest since December 15, 1891—was 44d. an ounce, a rise of 1½d. on the day. It must not be thought that this leap is to be attributed to the amount of business transacted; that, as a matter of fact, was small. It was entirely a question of short supply of the metal. The demand on Wednesday would probably have been satisfied with £20,000 worth of the metal, which, however, was not forthcoming. I do not think the price will be maintained for long. Conditions are very uncertain, and a change may come at any moment, especially if China comes out as a seller. India will feel the pinch; if the price were to settle down in the neighbourhood of, say, 42d. the Government would be embarrassed seriously, and its minting operations would be conducted at a loss.

***

Reference was made in these notes last week to the excellent speech made at the inaugural meeting of the British Merchants' Morocco Association by Mr. McLeod, of the British Consular Service at Fez. Mr. McLeod called attention to the economic revolution which had been at work in Morocco, and said that, great as have been the developments at the coast, they are hardly comparable (as economic changes) with those which have occurred in the north-east interior of the French zone. By their position on the Atlantic and the comparatively peaceful character of the tribes there, the western districts were always, in normal times, more or less open to foreign trade and communications, on the old Moorish footing, which were there comparatively safe and easy. The north-eastern area, on the contrary, was lawless, and the further east one went the more this was the case, and "I suppose" (Mr. McLeod continued) "towards mitigating these conditions and encouraging trade, the custom arose of charging lower Customs duties at the land points of entry than at the seaports. Rightly or wrongly, this usage was left untouched by the Act of Algeciras. Goods came in, and still come in, at the land ports at 6 per cent. duty, whereas the Act of Algeciras fixed the import duty at the ports at 10 per cent. plus 2½ per cent., with some few and quite unimportant exceptions."

***

The Anglo-French Agreements of 1904 and 1916 provided for equality of treatment as between British and French goods as regards duties, railway rates, and the like at the frontier. In the meantime the north-eastern area has become as peaceful and accessible as any other. Railways (the narrow gauge was originally intended to be used) have been made from Algeria to Taza, and are now open to transport of passengers and goods, and the remaining section connecting Taza with the existing Fez, Mequinez, and the West Coast section is under construction. It will probably be finished within the next twelve or eighteen months. It was also pointed out that Oran and Nemours are already the best—practically the only—points of entry for foreign goods for all the areas east and south-east of Taza, and including the Tafilelt Oasis. Freights from the ports of Southern France, Eastern Spain, and from Italy, by reason of their nearness to Oran and Nemours, are normally much cheaper than from England to the western ports. So far, however, no British firm has yet opened branches to take up trade by this route. What the British Government can do it has done, and this led Mr. McLeod to urge that now the merchants should do their part; and, indeed, it rests with them to do so.

***

A marked feature on the London Stock Exchange this week has been a depreciation of several points in P. and O. deferred shares. Various explanations have been put forward for this decline in what, hitherto, has been an unavailable security. In some quarters it is suggested that the fall is due to selling by shareholders of the Union Steamship Company of New Zealand—a concern recently fused with the great English company—others look for a cause in the policy of the Government directed against a continuance of large shipping profits, and, of course, there is also the submarine campaign to be taken into account. The shipping share department on 'Change has not been so bright in the last few days, but in no case has stock fallen so much as that of the P. and O. Company. Nevertheless, investors will do well to remember that no concern can boast such up-to-date and sound management, and its stock should still be regarded as among the best of its kind.

***

According to recent advices from Abyssinia the war has placed a temporary check on the progress of the potash industry in that country. Difficulties have arisen in the matter of tonnage, and at the end of May there were considerable stocks in the ports awaiting shipment. Another handicap is the temporary suspension of the construction of the railway from the coast to the mine. This light line is to be on the sixty-centimetre gauge, the materials have been purchased, and as soon as certain difficulties connected with the management of the mine have been surmounted the remaining work—the laying of the track—will be pushed forward. In the meantime the work on the railway and at the mine itself has been "held up."

***

The deposit of potash salts was first discovered by an Italian resident of the Colonia Eritrea in 1911, and he promptly secured a thirty-five year concession from the Abyssinian Government. The mine is in a desperately isolated area forty-six miles inland from the Red Sea settlement of Fatimari, at the back of the island of Baka; it is about seventy-six miles south of Massowah and rather less than 400 miles from Aden. The deposit is large and is said to resemble those at Strassfurt, Germany. The operating company estimates there are available at least 850,000 tons of the salt deposit, averaging not less than 55 per cent. potash. There are hot springs that add steadily to the deposit. Shortly after the outbreak of the war the Italian company, Compagnia Mineraria Coloniale, was formed and paid the concessionaire about £100,000 for his rights. This company started active work in opening up the deposit, and soon had approximately 8,000 men employed in mining the potash, making a road to the coast, and building a port at Fatimari.

***

There will be general regret in Persia and along the Eastern Mediterranean at the news of the murder in Antwerp by the German invaders of M. Frank, the well-known dealer in Oriental carpets. M. Frank was much respected by the thousands who have had business relations with him, and enjoyed the confidence alike of buyers and sellers.

THE BOLL WORM.

Report on the Official Campaign in Egypt.

(From Our Cairo Correspondent.)

An interesting report on the last boll worm campaign has just been submitted by Mr. A. T. McKillop, Inspector-General of Agriculture, who was in charge of the work. The policy of the campaign was based on past experience and on results of the research work so far carried out by the scientific experts of the Government.

This research work shows, in the first place, that the greatest danger of propagation is to be expected from those worms which are present in October in the bolls, where the majority hibernate in the larval or pupal state until the following cotton crop is available for the moths they produce to deposit their eggs, and, secondly, that those worms which have reached their maturity in September chiefly undergo their changes rapidly, and emerge as moths when there is no food for their succeeding brood to live upon. Consequently it was clear that the combative measures to be successful must provide for the removal and destruction of the bolls remaining in the fields immediately after the last picking.

Some of the Difficulties.

The campaign was carried out under a law, passed in the summer of 1916, which laid down that the bolls remaining after the harvest were to be removed and destroyed before certain dates fixed for each district by the Government; that all bolls that fell to the ground were to be collected and destroyed, and that the transport, detention and purchase or sale of bolls which should have been destroyed, and of cotton sticks which should have been shorn of bolls, should be prohibited.

The Government, whose work consisted in seeing that the law was strictly carried out, had to encounter many difficulties, chief amongst which were the fact that its European controlling staff had been reduced to below minimum by the exigencies of the war, that it was exceedingly difficult to recruit in sufficiently large numbers a satisfactory Egyptian junior staff, and that the cultivators either would not or could not understand the utility of the law which they were called upon to carry out. It is, indeed, a fact that notwithstanding the explanations afforded them, not only did the general mass of cultivators withhold all cordial co-operation with the State, but their attitude was frequently one of open and avowed hostility to it. Nearly 40,000 contraventions were reported by the Government staff and about 100,000 tons of cotton stalks were burnt as a result of contraventions.

While all things considered the campaign last year was as successful as could in the circumstances be reasonably expected, it had one satisfactory result in that it afforded further valuable experience and proved that the work was proceeding on the proper lines.

A New Decree.

As a result of this fresh experience a decree, to which reference was recently made here, has been issued ordering the installation in every ginning factory of machines for the fumigation of cotton seed as it emerges from the ginneries, and prohibiting the storage of unginned cotton and cotton seed unless it is done in buildings which are so adapted that the boll worm moths cannot escape. The object of this is to prevent the propagation of the worm, which has in the past taken place not only through the channel of the immature bolls left in the fields and on the cotton sticks kept by the fellahin for fuel purposes, but also through the sowing seed, in which it hibernates, and through the promiscuous storage of unginned cotton and seed in premises whence the moth has been able to escape, and, perpetuating its life cycle, has jumped from one cotton crop to another.

The complete enforcement of this decree is necessarily delayed by the difficulty in procuring the machines from Europe; for the current year its application will be limited to Upper Egypt. It will, however, be applied with the utmost vigour as soon as all the machines necessary to the country are obtainable, and meanwhile the work of destruction of the bolls left in the fields after the final picking will continue to be carried out with equal energy.

Wanted—Co-operation.

While the Government may exert every effort to execute the measures which it is convinced are the only means of preventing the spread, if not of bringing about the extermination, of the pink boll worm, the result can, however, only be partially successful so long as the mass of the cultivators do not lend the Government their hearty co-operation. Until the people can be brought to see in the law a sincere effort to assist them and protect their crops from the onslaught of the pink boll worm, nothing the Government can do will bring about any appreciable reduction in the ravages done by that pest.

The same indifference and obstruction were displayed by the cultivators to the enforcement of the Cotton Worm Law some ten years ago, and the fact that the same cultivators are to-day most active in carrying out the provisions of that measure leads one to hope that in course of time a similar change will manifest itself in their attitude towards the execution of the boll worm decree.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market during the past week has presented a quiet appearance there being no initiative on the part of buyers. Considerable interest has been taken in the scheme of the Control Board for curtailing production. Briefly it may be said that spinners and manufacturers from the beginning of September will be compelled to work only 60 per cent. of their machinery. On certain conditions, however, firms will be allowed to extend production beyond this limit on the payment of levies. The fund raised in this way will be used to compensate operatives who are thrown out of employment.

Much difference of opinion has prevailed as to the effects of these regulations but numerous spinners and manufactuers have put up their prices rather stiffly, owing to the probability of the increased cost of production and the smaller supply in the near future of manufactured articles. In view of the arrangement made the Trade Union Officials have withdrawn their demand for an increase in wages.

Rather mixed advices have been received relating to the progress of the Egyptian crop. The pink worm is said to be doing serious damage in some districts. Egyptian yarns have been very irregular in quotation and apart from a few special sales the offtake has been limited. No general activity can be recorded in piece goods for Egypt. Some merchants are restricting their purchases in view of the uncertainty as to the tonnage available during the next few months.

A very indifferent demand has been reported in cloth for India. Comparatively few wires have been received from Calcutta, Bombay and Madras. Only occasional transactions have been mentioned for China, but some useful orders continue to be booked for Singapore and the Straits Settlements. There is cause for satisfaction with our foreign trade in cloth at the present time, our shipments during July being 469,087,600 yards against 470,996,200 yards in the same month last year. American yarns have been put up in price but users have not followed at the higher rates and business to a large extent has been blocked. A fair inquiry has come through in bundles for India and isolated transactions have occurred for France. Our shipments of yarn last month were 14,073,400 lbs. as compared with 14,680, 500 lbs. in July, 1916.

SERBIAN INDUSTRIES.

M. Pachitch, the Prime Minister of Serbia, who is deeply interested in the industrial development of his country, has received during his stay in London a delegation which desired to bring to his notice what was being done and was in prospect with a view to the advancement of the trade of Serbia after the war, having regard especially to the elimination of all enemy influences in the commercial relations of the country.

PERSIAN TRADE IN WAR TIME.

Decrease of Nearly One Quarter Last Year.

News from Persia recently has been scanty, and an account of the foreign trade of the country in the year ended March 20, 1916, although belated, will be of interest.

The statistics for the year afford an opportunity to note, by comparison with those for 1913-14, the effect of the war. The foreign commerce was estimated in 1889 to amount in value to no less than £8,000,000 sterling. Customs statistics for 1903 give figures which are but little in excess of the 1889 total. Since 1903, trade has gradually increased, until the total value of the foreign trade (excluding bullion and specie) amounted to nearly £20,000,000 in 1913-14. The war caused a decrease of nearly one-fourth of the country's trade in 1915-16, when the total value amounted to a little more than £15,000,000. Imports were reduced in value from £11,700,000 to £8,300,000, or by nearly 30 per cent.; and exports from £8,100,000 to £6,900,000, or by nearly 15 per cent.

Inflated War Prices.

Owing to inflated war prices, writes Mr. H W. Maclean, Honorary Attaché at the British Legation in a recent report, this loss of trade is much greater if measured by the quantity of merchandise handled. Half of the imports into Persia consists of sugar and cotton textiles; the quantity of sugar imported was 50 per cent. less, although the value remained the same as in 1913-14; imports of cotton tissues decreased by 30 per cent. in value, but over 40 per cent in quantity; and woollen goods, by 80 per cent. in quantity. In short, it is probable that less than half the usual quantities of manufactured goods were imported into Persia in 1915-16.

The Customs valuation of exports in 1915-16, however, does not appear to have risen much; and although there was a great reduction in the exports of live stock, hides and skins, gums, raw silk and carpets, there was an increase in exports of dried fruits, rice, wool, fish and opium. Again, important quantities of live stock, grain, and other food stuffs were supplied to the foreign services operating in Persia, so that the total sales to foreigners were little, if at all, below the average. On the whole, therefore it seems that Persia has had during the war a steady market for her products, and also that, owing to restricted imports of sugar, textiles and other less necessary foreign commodities, the country's foreign indebtedness has been less than usual.

Rise in Exchange.

The combined effect of this reversal of the usual trade position, together with the securing of foreign loans by the Persian Government, and a great reduction in the paper currency of the country, has been a marked rise in exchange; and since the beginning of 1916 the exchange value of the kran has been far above its intrinsic value.

The customary channels of foreign trade have been greatly changed by war conditions. The former considerable trade with Germany, Austria, France, Italy, Holland, and Belgium has almost ceased; and trade with Turkey, the only German ally in direct contact with Persia, has been reduced to one-third. Transport difficulties have almost put an end to the exportation of carpets, wool, opium, raw silk, and gums, to Western Europe and the United States, via Russia; the export of carpets to the United States, however, has been diverted to the Persian Gulf routes. In fact, the value of trade with all countries other than the British Empire and Russia declined from £3,780,000 in 1913-14 to £912,000 in 1915-16, or by about 75 per cent., the decrease in the value of exports exceeding that in the case of imports.

Trade with Russia.

The total value of trade with Russia decreased from £11,800,000 in 1913-14 to £9,800,000 in 1915-16, or by about 16 per cent., the value of imports being reduced from £6,500,000 to £4,900,000, and that of exports from £5,300,000 to £4,900,000. The war has stopped imports of Indian tea into northern Persia, via Batoum; of cotton textiles only two-thirds, and of sugar only one half of the usual quantities were imported from Russia.

Trade with the British Empire has increased in value during the war by 5 per cent. The value of imports from the British Empire was reduced from £3,170,000 in 1913-14 to £3,000,000 in 1915-16, or by 5 per cent., but exports to the British Empire increased in value from £1,000,000 to £1,375,000, or by 37½ per cent. Imports of textiles decreased by one half, but there were exceptionally large imports of tea and of metal work (for an oil company).

Imports from India.

In 1915-16 the value of imports into Persia from India was £2,080,000, as compared with £1,470,000 in 1913-14. Exports to India in 1915-16 were valued at £650,000, as compared with £380,000 in 1913-14.

The difficulties attending transport through Russia have diverted much of the trade in heavily taxed commodities, such as tea and opium, from the northern routes to the Persian Gulf routes. The gross Customs revenue of Southern Persia increased from £177,000 in 1913-14 to £240,000 in 1915-16, whilst the northern revenue fell from £700,000 in 1913-14 to £305,000 in 1915-16.

The parcel post service had been increasingly used by traders up to 1913-14, when the total value of parcel post imports (exclusive of bullion) was over £640,000, one half of such imports being from Germany and Austria. In 1915-16 the total value of parcel post imports fell to £330,000.

For years past facilities for inland transport in Persia have been unable to keep pace with the growing commerce of the country. During 1915 and 1916 transport charges were exceedingly high, owing to disturbances in the south and to absorption in military operations of much of the available facilities in the north. The cost of transport per ton from Mohammerah to Isfahan has varied from twice to four times the rate ruling in 1913 (£22), and the rate from Isfahan to Tehran (which was £13 in 1913) has increased by one half. On account of reduced imports from Russia, rates from Enzeli to Tehran, and from Tehran to Isfahan, have not risen by more than from 25 to 50 per cent.

A receiving order in bankruptcy has been made against Lord Rotherham (Sir William Holland), chairman of the Fine Cotton Spinners' and Doublers' Association and a director of the Eagle Oil Transport Co. He is an ex-president of the Associated Chambers of Commerce.

ADEN COFFEE TRADE.

American Report on Market Conditions.

Since the beginning of the present year coffee prices in the Aden market have been going steadily downward. Superior grades of Mocha coffee that rarely sell for less than 20s. or 25s. a maund of 28 lbs. have recently been offered for 12s. 10d., about a shilling of this amount representing the cost of cleaning, wrote the U.S. Consul at Aden in a recent report.

The Yemen coffees known as Mattari and Hemi, from the districts in which they are grown, are the two finest of the superior grades of Mocha. Practically none of the Mattari and only small quantities of Hemi have been able to reach Aden on account of military operations in the districts through which they must pass; accordingly, large stocks of these two fancy grades are accumulating in the interior. These accumulated stocks will, of course, reach Hodeida and Aden when the blockade of the former is lifted and caravan traffic with the latter is resumed, and may be expected to have an important effect upon the market. Other and less choice grades of Mocha coffee are arriving in good quantities, but are selling at proportionately low prices, reported the United States Consul recently.

Important causes for current low prices are unusually heavy coffee crops during the past two years in the Yemen, a light demand, limited shipping space for export, and high freight and insurance rates. The favourable effect of recent prospects of increased shipping space has been somewhat counteracted by the prohibition of the import of coffee into the United Kingdom.

Outlets for Mocha Coffee.

Mocha coffee has for many years been exported largely from Hodeida, but the port has been closed for nearly two years by blockade on account of the war. An interesting result of this has been the recent marketing of considerable quantities of the Yemen coffee crop through the old town of Mocha, which many years ago, as the principal market and port of shipment, gave its name to all Yemen coffee, but which of late has had a very minor part in the trade.

Its renewed importance as a coffee port can only be temporary, however, as its harbour has filled and become shallow practically beyond restoration. In fact, the disadvantages of Mocha as a shipping port are so great that it is already losing its recently regained importance as an outlet for Yemen coffee. A little port to the north, known as Medi, the name of which is found on very few maps, is being made a point of shipment for coffee because of having fewer disadvantages than Mocha.

Export Facilities.

When Hodeida is available as a point of shipment a great deal of the Mocha coffee is exported directly from there to European and American ports. Facilities for this direct export are not available from Mocha and Medi, which accommodate only small coasting steamers and sailing dhows, and as a result the coffee which has come out through those ports during the past year has been brought to Aden for foreign export. The falling off of Aden's receipts by land has been more than made up by arrivals from the Arabian Red Sea ports. As a result the Aden market has handled much more of the Mocha coffee than it normally does.

LIFE INSURANCE.

ALL persons who are about to effect a Life Insurance Policy in any Office should send particulars of the proposed Policy to MR. E. P. HENDERSON, late of the Indian Civil Service, for his impartial opinion, which is given FREE OF CHARGE, on his usual conditions (obtainable by any person on application).

INDIAN RESIDENTS, while at home on leave, can obtain exceptionally favourable terms, and should make a point of applying for particulars of Mr. Henderson's Special Scheme for Insurance to cover the risks of the voyage out.

Pamphlets, describing special schemes for

EDUCATIONAL PURPOSES, IMPROVEMENT OF INCOME AFTER RETIREMENT, BACHELORS' POLICIES, AND INSURANCE AGAINST ENFORCED RETIREMENT DUE TO FAILURE OF HEALTH,

can be had on application by persons of known position, who agree to Mr. Henderson's conditions.

Interviews by Appointment.

ENGINEERING NOTES.

Public Works in Morocco.

The British Consul-General at Tangier (Sir H. E. White, K.C.M.G.) reports that tenders will be received by "M. le Président de la Commission Générale des Adjudications et des Marchés," Dar-en-Niaba, Tangier, up to 11 a.m. on October 6, for the construction of the Ain Kerma section of the French part of the Tangier-Fez railway. This contract comprises the construction of a length of line of about twenty-one kilometres (thirteen miles). The estimated value of the contract is placed at 4,300,000 francs (about £172,000 at par rate of exchange), and a provisional deposit of 35,000 francs (about £1,400) is required to qualify any tender. The contractor must elect legal domicile in Morocco, and at least forty days before the time for the receipt of tenders must forward certificates of competency to the Direction Générale des Travaux Publics, Rabat. The *cahier des charges* may be consulted at the office of the "Commission Générale" above-mentioned, or at the office of the Tangier-Fez Railway Company, 41, Avenue de l'Opera, Paris. In publishing this note the Board of Trade *Journal* draws attention to certain restrictions on exports to Morocco.

Suction Gas Vehicles.

Further experiments are being carried out in France with suction gas vehicles of a type that was introduced before the war, and of which mention was made at the time in these Notes. The early tests were declared to have been quite satisfactory, but the construction of these vehicles was not proceeded with owing to the prejudice against the use of suction gas for motor vehicles. According to reports, the experiments are now being resumed because, it is argued, the producer can be fed with charcoal obtainable in unlimited quantities near the front. It appears that the wholesale felling of trees has left huge quantities of small wood which can be turned into charcoal, and thus an abundant supply of fuel is available wherever the vehicles may be in service. The question is important to proprietors and users of automobile vehicles in the Near East, where the use of suction gas as a motive power for industrial and agricultural purposes is steadily increasing, owing chiefly to the existing local facilities for obtaining cheap supplies of charcoal and other kinds of fuel.

Miralite.

A newly-invented alloy of great strength, said to be as light as aluminium and considerably stronger, is being now manufactured in London. It is known as miralite, and is capable of being spun into various forms on the lathe, which renders it very applicable to the demands made for such a metal in the motor trade, but for marine use it remains to be proved if it is able to withstand the action of sea water and salt air.

Embargo on Locomotives.

An embargo has been placed during July on the export of locomotive and fixed multitubular boilers, whether firmly attached to steam-engines or not, of which the normal capacity exceeds 20 h.p. or the heating surface 12 square metres, and on safety appliances, accessories, and spare parts of such boilers. Tractors, steam-rollers, and steam ploughs are excluded from the Order.

Trade Restrictions.

Comment has been elicited by the Government announcement that under the Defence of the Realm Acts no one is allowed to sell, purchase, hire, or loan, or send on approval, any new or second-hand machine-tools and plant of that description without the written permission of the Ministry of Munitions. This is interpreted as extending the "control" to innumerable small machines which are not of such value as to have brought them within the scope of previous orders; it is feared that the new order will hamper trade and buyers and sellers. Applications from intending purchasers should be addressed to the Central Clearing House, Charing Cross Buildings, London, W.C. 2.

Railways in Morocco.

In connection with the Bill now before the French Parliament for the construction of the railway between Tangiers and Fez, it is of some interest to note that there already exist 773 kilometres of railway in Morocco. These are lines actually working and exclusive of railways under construction. All the lines now working are narrow gauge (60 centimetres, or 2 ft. gauge) military railways, which, owing to diplomatic conventions with Germany, could not be used for civilian or ordinary traffic up to the outbreak of war in 1914. France, however, considers herself free from all diplomatic conventions made with Germany, and all lines are now open to ordinary traffic. The following places are now linked up by narrow-gauge lines:—Rabat to Casablanca, 90 kilometres; Salé to Fez, 246 kilometres; Taza to Oudjda, 235 kilometres; Casablanca to Caid-Tounsi (towards the south), 153 kilometres; Ber-Rechid to Ben-Ahmed (in the direction of Oued-Zem), 49 kilometres; total, 773 kilometres. The traffic receipts per kilometre for the whole of 1916 varied between £740 and £935. The proposed Tangiers-Fez line is to be of normal gauge. The French Government proposes to give a concession for the whole of the normal gauge lines (altogether 1,080 kilometres) to a private consortium.

COMPANY MEETING.

EGYPTIAN DELTA LIGHT RAILWAYS.

Evidences of Returning Prosperity

The annual general meeting of the Egyptian Delta Light Railways, Ltd., was held on August 9, at Winchester House, Old Broad Street, E.C., Sir William E. Garstin, G.C.M.G. (Chairman of the company) presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditor's report,

The Chairman said: Gentlemen,—I sincerely wish that I were able to tell you that the results of the past year's working indicated a near return to the favourable prospects that existed previous to the outbreak of war. This, I regret to say, is impossible. The unfavourable conditions that have handicapped our undertaking for nearly three years still exist, and no one can as yet say when they will disappear. When last I addressed this meeting I felt obliged to warn you that it was possible that the results of the year now under review might be even more discouraging than those which I was then discussing. I am glad to tell you that my worst forebodings have not been fulfilled. It is true that, under ordinary conditions, last year's results are not such as we could regard to be deserving of favourable reception, but under the abnormal circumstances existing throughout the world they do, I assert, indicate that the strength of the position of our undertaking has been well maintained, and that, moreover, it holds out good promise for the time when peace shall return to the world. I trust that the explanations which I am about to offer to you may lead you to the same conclusions. You will remember that last year I expressed the fear that we might be compelled to encroach upon our reserves. I am happy to tell you that this has not been found necessary, and that we are able to show net earnings of £52,106. This amount is not a large one, it is true, but it shows that, even in a year of very exceptional stress, we have been able not only to carry on, but to add something to the amount carried forward. I think you will agree with me that this result is encouraging and warrants confidence in our future when the bad times shall have passed away. I should, perhaps, again explain, as I did last year, that the above figure is independent of the credit arising from the transfer to the suspense account of those working expenses that are in excess of 64 per cent. of our earnings. The sum of £52,106, therefore, represents our actual working profit for the year under review. It is, I suppose, unnecessary for me to explain that the balance of £106,806 shown in our net revenue account as carried forward is similarly affected by our suspense account. If, then, the sum of £57,558 indicated in the accounts as at the debit of suspense account be deducted, it leaves an available balance to be carried forward of £49,248.

The conditions that have affected profits are:—(1) A reduction in our earnings due to war conditions. (2) The increased cost of fuel. As regards No. 1, although we can show an increase of £40,125 in comparison with that of the year preceding, we are still a long way below the average figure for the years previous to the war—this in spite of the surtax that we were authorised to impose upon our charges for the carriage of passengers and goods. (3) The cost of fuel. This item, as was the case last year, is the real cause of the heavy increase in our working expenses, and must, as long as the war lasts, be the chief cause of anxiety for the future. It is unnecessary for me to tell you how abnormally freight and insurances have risen. Their tendency is still to rise, and I fear it would be unwise to anticipate any fall in the near future. When I tell you that our expenditure in coal alone for last year has been £33,000 more than was the case in the year preceding, you will understand what a large addition has been made to our working expenses and how serious has been the situation that we have had to face. We have used every endeavour within our power to obtain a decrease in our working expenses. Our train mileage has been reduced by nearly one third of what it was previous to the war. No expenditure that was not absolutely indispensable for the safe working of our lines has been incurred, and economy in every direction has been rigidly enforced. We have passed through an anxious period during the past year, and it gives us much satisfaction to be able to report to you that the results are less unfavourable than at one time seemed probable. We are not, however, by any means out of danger yet, and you will readily understand that our policy of economy must be vigorously maintained as long as the war lasts. I dwelt at some length last year upon the seriousness of our position, due to the abnormal rates to which coal had then risen in Egypt. I need not recapitulate what I then said. I will only tell you that since then the price of coal has risen very considerably, and that consequently the grave situation still exists and must inevitably continue until freights shall again fall to normal levels, and until transport shall again be available. Neither of these conditions can ensue until the war is over.

The stock of coal in our possession stands in our books at a price which, though very excessive, is considerably less than that which now prevails in the local markets. I may mention here that, in spite of our having had to pay enormously increased rates, both here and in Egypt, for the sundry stores required for our operations, the total increase in our expenditure is less by some thousands of pounds than the increase directly attributable to the extra cost of coal and to a special item of expenditure to which I shall refer later.

I am, of course, better able on this occasion than I was last year to make comparison between the results of last year's working and those of the year preceding. Both periods have been affected by war conditions. The improved prosperity of Egypt has, to a certain extent, affected our railway system, as the improvement in our coaching earnings proves. The increase for last year was nearly £20,000, or about 17 per cent. The number of passengers carried was nearly 5,000,000, or about 1,000,000 more than the figure for the year before. This increase is the more encouraging when it is considered that our passenger train kilometrage has been reduced by over a quarter of a million. The increase was distributed fairly and evenly over our entire system. The improvement in our goods earnings is not in proportion to that derived from our coaching traffic, being only £8,500, or about 12 per cent. The cotton crop of last year was not a good one, although the exceptionally high prices recouped the producer and put money into his pocket, thus enabling him to travel by rail.

Both our coaching and goods earnings have, of course, benefited to a certain extent by the surtax that we were permitted to impose. In discussing our increased expenditure I mentioned that there was a special item to which I would refer later. I will now do so. You will doubtless have noticed the considerable increase in our "Sundry receipts." This increase, as far as the accounts under review are concerned, is more apparent than real. I will explain to you why. In this item of sundry earnings is included a sum of £12,500 for hire of rolling stock and material for the military authorities. This is, of course, a perfectly legitimate item of credit to our earnings. But on the other hand we have sold to the military authorities certain of our rolling stock. These sales resulted in the loss of rather over £11,000 on the book values of this stock. It was, of course, valued in our books at the sum which it had originally cost us. This loss we have now charged off to expenditure, and thus the net credit for the year on the combined account is only about £1,400. At the same time, by this transaction we have written off the entire depreciation of this stock. All of it was old, and although fully up to the uses to which it is now being put, it would all of it have had to be replaced by us in a reasonably near future. You will then understand that by having now charged off the depreciation the transaction has been a profitable one for us. We are in a position to replace the old stock, so far as necessary, and when times are favourable, by stocks more suited economically to our present requirements. At the same time we have a net credit to show.

Our net earnings for the year amounted to £52,106, but, in accordance with the provisions of our modified contract, the excess expenditure beyond 64 per cent. of our earnings is carried to suspense account, which increases the balance shown to £83,853. I explained to you the nature of these adjustments last year and informed you then that the credits thus resulting are not available for distribution unless, at some future time, their recovery shall have been effected. I should here state that the immediate cause of the heavy transfers to the debit of this suspense account has been the reduction in our earnings owing to the war. This reduction, ipso facto, has, of course, increased the percentage of our expenses to our earnings. We may, however, confidently anticipate an improvement in our earnings after the war, and also that we shall be able to clear off these temporary debits to suspense account within the period at our disposal for the purpose. The explanation which I have given above applies equally to the balances carried forward. In consequence the sum of £106,807 shown in our net revenue account for the year must be reduced to £49,249, as compared with a balance of £39,418 so carried forward at the close of the previous year. The net revenue account will have shown you that we earned some £5,500 in interest on investments. This, however, was absorbed by the increased charges for income-tax. With regard to the investments which have yielded the interest just referred to, I hope you will have shared our satisfaction at having been able to invest so large a sum as £85,000 in the latest War Loan.

I wish that I could say to you that I see any likelihood of material improvement in our prospects for the present year. Unfortunately I cannot do so. The termination of the war is not yet in sight, and even the cessation of hostilities is not likely immediately to remove or even greatly to modify the difficulties which we are now encountering. We cannot, I am afraid, look for any immediate drop in freights when peace has been declared, and I fear that, for a considerable time after this event the price of fuel and of all materials will remain very high. It is with the greatest regret that the Board has found itself unable to recommend the payment of a dividend, but I feel certain, gentlemen, that you will recognise that under present conditions it would have been impossible for the Board to have taken any other course. The future is still very uncertain, and the period of strain through which we have been passing during the last three years still continues. But serious as the present position is, and disappointing as the results obtained must be to you, I see no cause whatever for pessimism or for alarm as regards the future of your railways. The fact that your undertaking has successfully held its own through this exceptionally trying period shows, to my mind, how sound its position is. I feel personally more confident than ever that when peace shall be re-established and when normal conditions shall be realised we shall speedily return to the conditions existing before the war, when

our prospects looked so bright. Each succeeding year of the war has, in fact, increased my confidence in the future of our railways.

As regards the undertaking in which we are immediately concerned, I am glad to be able to tell you that our traffic returns for the first quarter show an improvement of £6,453 over the corresponding period of the year under review. This is an encouraging sign, and I have good hope that this rate of improvement will be maintained. Meanwhile, it is needless to say, we must continue the conservative policy that we have followed throughout the war. In every direction the strictest economy, consistent with efficiency, must be maintained. You need have no fears upon this score. Everything that can be done to reduce expenditure will be done. The real danger lies in the cost of our coal. If, as I trust, the measures that we have taken enable us to surmount this, then I feel reasonably confident—even should the war continue—that we shall be able next year to tell you not only that we have held our own, but that our situation as regards the future is fairly secure. I repeat, gentlemen, that there is no reason whatever for despondency. We, like everyone else, are going through bad times, and times that must cause us anxiety. But if we continue our present policy I feel sure that prosperity will return to us in the future. May that future be a near one. I shall be glad to answer any questions which you may wish to ask.

He then moved :—"That the report of the directors, dated July 23, 1917, together with the statement of accounts and balance-sheet for the year ended March 31, 1917, be and they are hereby confirmed and adopted."

The Hon. W. B. L. Barrington seconded the resolution, which was carried unanimously.

Mr. Montagu Sharpe and Major W. I. le Breton (Managing Director) paid a fine tribute to the services rendered by Mr. W. Garstin, who was re-elected a director.

A Government monopoly for the sale of solid mineral fuel has been established in Russia.

ON 'CHANGE.

(From Our City Correspondent.)

Thursday.

We have had a very active market in Egyptian shares this week, and a large business has been put through. The Government stocks have continued very firm, but with hardly any business passing. In the Bank shares the feature was the rise at one time in Agriculturals to 6½, but there was afterwards a smart reaction to 6 3-16, and the shares are closing ⅜ up at 6 7-16.

Nationals, after their big rise, have reacted ¼ to 16¼, and Land Banks are also a similar traction easier at 6¼. Delta Light Railways Pref. have been in demand, 3-16 firmer at 6¼.

In Land shares there has been great activity. Aboukirs have been in persistent demand and are 1s. 6d. up at 18s. 6d. Allotments have been bought up to £3, a rise of 1-16. Behéras have been steadily absorbed and are a further ¼ higher at 12¾; Delta Lands have been quite a feature, jumping 1s. 9d. to 13s. 9d.; and Egyptians and Foreign Trusts close 6d. higher at 7s. 6d., after dealings as high as 8s.

Gharbieh Lands have been wanted at 31s.—a further rise of 1s.—but there have been no sellers. In New Egyptians a very large business has been done, and the shares close 4½d. up at 13s. 9d., after some transactions as high as 14s. Sidi Salems are 6d. up at 17s. 6d., after dealings up to 18s. Union Foncières have continued to be bought up to 2⅛, a rise of ⅛. In United Egyptian Lands a fair amount of transactions have taken place between 10d. and 1s. 3d.

In Miscellaneous shares, Egyptian Markets have been done round the slightly higher price of 26s. 6d. ex div., and a large business has been doing in Salts and Sodas, which, after dealings as high as 27s. 6d., close 1s. up at 27s. Khedivial Mails continue a dull spot and are a further shilling lower at 35s.

In Greek securities some business has been done in 1881 and 1884 in the neighbourhood of 60, and a few thousand Monopoly were done at 55, at which price there are further sellers. In 4 per cent. 1910 Loan a fairly important transaction took place at 59.

NOTES OF THE WEEK.

The position in Roumania remains substantially unaltered. The Germans have made little progress, and the great thrust under Mackensen has not yet fulfilled the expectations of the Central Powers. The Roumanian Court remains at Jassy, which is in itself an indication that the situation has not become worse, since all arrangements were made a month ago for its departure into the interior of Russia. Nevertheless, it would be unwise to indulge yet in any great optimism. There are still several weeks during which military operations are possible before the winter comes on, and it is hinted that Mackensen may only have halted until more supplies have reached him. For the present, Southern Moldavia is considered out of danger, but it becomes more and more clear that Roumania can hardly hope to win back her lost territories until Russia has reorganised herself sufficiently to take part in a joint offensive.

There have been two unfortunate incidents during the week. A Roumanian diplomatist was insulted in a Petrograd tramcar, but since a prompt apology was forthcoming the affair may be forgotten. But, in addition, a protest has been made against the interference of Russian agents in the Roumanian armies—a disturbing fact which shows that the opponents of discipline who have been let loose all over Russia are doing their best to corrupt their allies. The experience of Russia has itself shown Roumania that the only way to deal with these sowers of discord is to get rid of them with all possible speed.

It is announced by the Czech newspaper *Venkow*—but on what authority is not stated—that the total Roumanian crop for 1917 is estimated at 1,200,000 tons, and that half of this will be apportioned to Austria, whose deficiencies are very great. The remainder is presumably destined for the Roumanians in the conquered territories themselves, German science not having yet discovered a means of feeding their captives on air, and German propaganda refusing to feed them on hope. From these figures, therefore, it seems that there is not sufficient surplus of grain to provide Germany itself with any addition to its own harvest—a fact which must somewhat tend to discount the recent successes of the German arms on the Eastern Front with the hungry people at home. It is known, of course, that the Germans have done their utmost to ensure a large harvest in Roumania, in the expectation of relieving their own necessities. The Roumanians, without distinction of age or sex, have been compelled to labour in the fields twelve, fourteen, or sixteen hours a day; and not only this, but they have been employed in constructing fresh roads to facilitate the military operations of Mackensen.

If it is true that Germany can obtain no wheat from Roumania this year, the fact must have been known to the Food Controller in Berlin for some time, which may explain the urgency the Germans have shown in pressing forward towards Bessarabia and Southern Russia. It is their object, no doubt, to secure the harvests of those rich countries. They have succeeded in so far as Eastern Galicia is concerned, but that happens to be more a pastoral than an arable country, and although the cattle they have obtained will certainly be useful to them, they will scarcely be so welcome as corn. Every day that their advance is held up makes the prospect of this booty more improbable, and if its capture can be prevented altogether, it will have some effect in increasing the physical and diminishing the territorial appetites of the enemy. It must always be remembered, however, that the districts of Poland which are in their possession produce a considerable amount of food, most of which will no doubt find its way to the German cities.

Meantime, open expression has been given in Germany to the desire to capture the Ukraine. A writer in *Der Tag* propounds the view that the Ruthenians are more sympathetic to the Germans than to Russia, and from this thesis argues that Germany should draw closer to the people of the Ukraine—in the same way that the wolf drew closer to the lamb. He points out that not only would Germany gain an important advantage in commerce, but the independence of the Ukraine would improve the prospects of a satisfactory settlement of the Balkans. If the settlement were to be entirely under German and Austrian control, no doubt the proposition is true; but we imagine that the Constitution-makers of Kieff will look a little askance at the angel of peace when its wings are tipped with a trimming of Berlin wool.

Mr. Gerard, the late American Ambassador at Berlin, has published the peace terms to which Germany was ready to assent last December. While Belgium was to be reduced to the status of a German military and com-

Digitized by Google

mercial colony, and the frontier of Northern France was to be "rectified," there was to be "a very substantial rectification" of the eastern frontier of Germany. The late Chancellor added that "We shall leave Bulgaria to deal with Roumania; a very small Serbia may be allowed to exist, but that question is for Austria. Austria must be left to do what she wishes to Italy, and we must have indemnities from all the countries and all our ships and colonies back." There is no reason to believe that these terms have been substantially modified, either for Stockholm or Rome, and the "give-and-take peace" of Dr. Michaelis presumably means that the Entente gives and Germany takes. But if, as we suppose, the "moderate" Bethmann-Hollweg was speaking sincerely, the terms throw a certain light on the policy of Berlin.

Apparently Germany was to annex—for "rectification" is merely Teutonese for annex—Russian Poland, Lithuania, and the Baltic Provinces, as has been advocated by certain German expansionists during and since Bismarck's time; Austria was to extend southwards and eastwards; Bulgaria was to obtain a good part of Roumania, and probably part of Serbia. Even the existence of Serbia was doubtful. Clearly, then, so late as December, 1916, Germany was still convinced that she could dominate Europe, although our pacifists were assuring us, out of their inner consciousness, that their friends in Berlin had changed their hearts, and would now make very moderate terms if we met them halfway. Since Bethmann-Hollweg has now confuted them, they will probably pin their faith to Dr. Michaelis; but as he is regarded in Germany as less lukewarm than his predecessor, we need not expect much from his moderation. It is perhaps noteworthy that the Pope's peace proposals do not expressly contradict these terms, although it is true that they are prefaced by a pious desire for disarmament.

An Austrian comment on the Papal Peace Note has furnished a striking confirmation of Viennese ambitions in the Eastern Mediterranean. The *Reichspost* suggests that in order to conform with the Vatican theory of peace by negotiation, Britain should give up, not only Gibraltar, but Malta as well, and her control of the Suez Canal. If this is seriously meant—and as a joke it is so ponderous that it is less worthy of Vienna than Berlin—it would mean that Britain gave up the road to India and her influence in the Eastern Mediterranean altogether, while the overland road through the Balkans and Asia Minor to India would remain a secure asset of the Central Powers. The *Reichspost* appears to have reduced the Papal Note to an absurdity.

The publication of the Greek official documents relating to the war is a sufficient exposure of King Constantine's policy. When he was adjured, as the husband of the Kaiser's sister, to remember the place to which it had pleased Berlin to call him, he answered that he was indeed grateful for the benefits he had received, but that, nevertheless, he thought he could help Germany better by remaining neutral than by entering the war against the Allies. It is simple justice to admit that he carried out his word in this respect by dismissing his Minister, hampering the Allies at every turn, selling his own territory, and deserting an ally. Open enmity would have been at least respectable, but his tortuous policy probably helped Germany as well in the long run. Whether it advantaged Constantine as much is a matter on which he has now leisure to reflect. The publication of these documents at least puts any question of his return to Athens out of court, but he appears to have been a willing dupe. It is instructive, by the way, to notice the different tone which the German Emperor adopted towards the King and towards President Wilson in the first week of the war. In the former case he brandished a stick, in the latter the olive branch, which now looks more like a fig-leaf to cover the nakedness of his diplomacy.

The publication of these documents can only increase the demand in Greece for the punishment of those servile politicians who showed themselves willing tools of the King. There does not appear to have been any protest against the handing over of Greek soil or the surrender of Greek troops, while the desertion of Serbia in flat defiance of the treaty did not determine certain politicians against the King's methods of government. No doubt they calculated on his holding out and obtaining their reward from an eventual German victory. The minor fact that they were bartering the honour of their country and its future interests does not appear to have occurred to them.

One of the most interesting of the documents in the Greek White Book is that in which, on August 9, 1914, von Jagow stated that King Constantine's policy of maintaining Greek neutrality "for the present" was understood by the Kaiser, but that Greece should as speedily as possible come to an understanding with Sofia and Constantinople, as Serbia to-day constituted the skin of the bear. Naturally; but the point is that the telegram admits that this advice nad also been given previously by von Jagow. Since the telegram is dated a week after the war broke out, it seems certain that "the advice von Jagow had formerly given" was conveyed before the outbreak of the war. In that case the last pretext for urging that Germany was taken by surprise by Austria's attack on Serbia vanishes. And this is corroborated by the phrase in the Kaiser's telegram to King Constantine on the outbreak of war as to the policy "we have often spoken of," which presumably refers to the same fact.

A report has been circulated by Bulgarian deserters that the insurrectionary movement in Serbia has spread through the Morava, and also in part of Macedonia and even in Old Bulgaria as well. No doubt this outbreak is the natural result of the policy of outrage and murder which Bulgaria has pursued in the conquered country: frightfulness overreaches itself when it makes death so common.

The latest news from Stockholm is that two leaders of the Persian Constitutional Society have laid their demands before the Conference. The short point of those demands is that Persia is to be absolutely independent of all foreign control, both politically and economically. Incidentally, also, she is to have the right to contract a loan with any country she desires (or which desires to lend to Persia, one presumes). The difficulty is that these two aims cannot be easily reconciled, since loans are not often granted without conditions. But the fact that the demands also include a statement that the Anglo-Russian Agreement is to be cancelled so far as Persia is concerned assures the Persian standpoint sympathetic consideration from the German and Austrian delegates. It is improbable that the Russian delegates will refuse their beneficent support to this doctrine; and the fact that other nations are increasingly less likely to be represented at the Conference will not, in these circumstances, be regrettable to the Persian politicians.

The *Saturday Review*, which seems to have changed its tone a good deal lately and to be as mildly contemptuous of Serbian and Jugoslav aspirations as it used to be towards the Nonconformist conscience, has been asking by what means the Jugoslav propaganda is financed. A convincing answer is given by a prominent member of the Jugoslav Committee in the last issue. He states that the expenses, which are heavy and increasing, have been provided by subscriptions from Southern Slavs in America, who have come forward in large numbers to aid in this way of popularising the aims of their country. The answer is complete and adequate; perhaps the *Saturday Review* will now turn its attention to the more fruitful topic of the financing of the pacifist groups in this country, which should promise better results.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 28.

The Question of Foodstuffs.

After having been permitted to enjoy a free market ever since the summer of 1915—leaving out of account, as one should, a short interlude last autumn, when they were tentatively retariffed for a week or so—cereals, with the exception of barley, which was treated in a similar manner at the beginning of the month, and of wheat, which has been left free, have been again put on the tariff this week. This step, which was taken on the recommendation of the Egyptian Government Supplies Commission, which has been entrusted since the outbreak of war with the task of watching over the supply of foodstuffs and articles of first necessity in the country, has been forced on the Government by the abnormally high prices which such foodstuffs as maize, millet, lentils, beans, barley, and rice have been fetching of late—prices which, in the opinion of the Commission, are in the present circumstances wholly unjustified. It was, of course, to be expected that with the high price which cotton was commanding, with the increased cost of cultivation, and with the enhanced prices which cereals are fetching on the world's markets, cereals in Egypt would likewise go up in price, but seeing that there is an ample stock of foodstuffs, taken all together, in the country to meet its requirements, there was no reason why all the prices should be allowed to follow the abnormal upward tendency, which they have recently displayed, and thus get beyond the reach of certain important elements of the population.

A perusal of the Customs statistics for the past few years reveals the interesting fact that Egypt has always been self-supporting in all cereals except wheat, of which in the form of flour she has annually imported on an average 160,000 tons. To-day the scarcity of freights and other difficulties have caused flour imports to stop, at all events for all practical purposes, and there is little doubt that there is a shortage of wheat and wheat flour in the country. Obviously, therefore, there would be no good tariffing wheat and wheat flour, since that action could not make the quantity available go any further; at the same time, since tariffing would connote the fixing of a low price relative to that ruling abroad, it would tend to discourage imports of flour, which, after all, it is highly desirable should be attracted.

Of the other commodities, which can quite usefully replace wheat and wheat flour in the popular daily consumption, there is an ample supply in the country. In the circumstances, therefore, wheat and wheat flour become articles de luxe, and as such should not be tariffed; those still persisting on eating such flour must be prepared to pay whatever price it commands. On the other hand, however, the sufficiency of the stock of cereal substitutes calls, in the interest of the non-cultivating element of the population, which predominates in the towns, and which has already been hard hit by the rise in prices, for some control of those substitutes by the Government, and the latter has very wisely placed them once again on the tariff.

These cereals are being at first re-tariffed at the current market rate, but the official prices will each week gradually be reduced, until they reach what the Government considers to be a reasonable figure, having due regard to all the circumstances. At the same time very strict instructions have been issued to the police in the towns and the provinces to exercise rigorous control over the prices charged by the merchants, and to prevent holding up of stocks. Both these measures will hit the speculators, who to a great extent have been at the back of the recent persistent and unjustified rise in prices, and who, in the absence of an official tariff, could not be compelled to unload at any but their own fancy prices. The Government's action has given the greatest satisfaction to those elements of the population, which, albeit a minority compared with the purely agricultural community, that from its peculiar favoured situation never wants for foodstuffs, constitutes an important section of the population, and which were being made to suffer unnecessarily in the matter of foodstuff prices. Provided the instructions issued by the Ministry of the Interior in regard to the enforcement of the tariff are scrupulously carried out by the responsible authorities, the discontent which was making itself apparent among the elements of the population referred to should subside, and should not manifest itself again.

The Red Cross Action.

The recent case which came before the Supreme Consular Court in Cairo, and in which Sir John Rogers was condemned to £180 damages and costs for slander uttered against Captain Yeates, is still occupying public attention. The question which is arousing comment is as to who is paying the costs of the defence. In the course of the hearing Sir John, in a reply to a question on the point addressed to him by Mr. Foster, plaintiff's counsel, said that he did not know who would pay the costs of the action, if he lost, and this has been interpreted to mean that it is possible that the Red Cross will foot the bill. To such a course the local subscribers would strongly object, on the ground, first, that the funds subscribed were not intended to defray the cost of unnecessary litigation, and secondly, the case in question was entirely due to the personal action of Sir John Rogers, and did not arise out of the ordinary routine work of the Society in Cairo. Correspondence, which is beginning to appear in the local Press, shows that there is a strong feeling in the matter, and I have had sufficient conversations with influential subscribers to know that, if any attempt were to be made by the Red Cross to defray from its own funds all or part of the costs of this action, such a step would have its repercussion on the local subscription lists. The full facts of the case ought to be brought to the attention of those who are responsible for the direction of the affairs of the Society from London. If they were in possession of those facts, it is argued here, they would hardly countenance the payment of the costs of this action out of the funds which they are administering. They would certainly be well advised to issue a statement to the effect that those costs are not being either directly or indirectly met from Red Cross funds, for there is no doubt that in the absence of such a statement the local subscription lists will suffer considerably.

The Philippides Case.

In view of the state of health of Mrs. Philippides, who was recently condemned to one year's imprisonment, and of the fact that she has several children dependent upon her, the Sultan, on the occasion of the Bairam feast, issued an order pardoning her, and she has now been released from prison. The Sovereign's clemency has been acclaimed by the Syrian community, of which Mrs. Philippides is a member.

JUSTICE IN EGYPT.*

THE JUDICIAL ADVISER'S REPORT.—V.

Legal Education.

Owing to the absence of most of the European staff with the Colours, the work of the Law School was carried on under considerable difficulties. The examinations were satisfactory except as regards the external students. The examiners and the Principal again complain of the candidates' deficient knowledge of European languages, and it has been found necessary to establish lectures in the English language at the school itself. This, the Adviser points out, is "the inevitable result of the change in policy adopted some ten years ago, in pursuance of which the Arabic language is now almost exclusively used as the medium of instruction in the primary and secondary schools," and he records that, "for the purpose of the Ministry of Justice it is a serious disadvantage that our future magistrates should be to a measurable extent in less direct touch with European thought." The transfer of the control of the school to the Ministry of Justice tends, he thinks, somewhat "to obscure the fact that legal studies as a form of education and professional training of would-be practitioners are by no means indistinguishable." They have been treated as identical hitherto for the purposes of the Native Tribunals, because until quite recently the output of legal students barely met the country's professional needs. To-day the number of would-be legal students considerably exceeds the accommodation in the school and the requirements of the legal profession, and the time has come for insisting on the distinction. "Such insistence will be materially facilitated if, as is proposed, the higher Educational Colleges are to be grouped in an institution of university rank." Under that scheme legal studies would become a form of education, but on the one hand "the educationists would be responsible for providing instruction in legal studies as part of a carefully considered scheme for meeting the demand for higher educational facilities, and on the other hand we should be freed from any responsibility, express or implied, towards those students who had elected to specialise in law."

With regard to the question of the conditions additional to the possession of a legal diploma to be required for admission to the Bar, the Adviser points out that purely theoretical studies are an inadequate qualification to admission to practise, especially in Egypt, where the members of the Bar have to perform the duties of a barrister, a solicitor, and in large part that of a notary. The question, he says, is in substance one of making a reality of the "stage," but the whole matter is one for examination in concert with the representatives of the Bar itself. There are 1,029 members of the native Bar, of whom only 716 are in actual practice. Of these no less than 352 have their offices in Cairo, which leads the Adviser to remark that, if the profession is not to become overcrowded, its members should be prepared to go to the provinces and take up there the duties which an English solicitor performs towards his clients rather than strive, as they appear to do, to earn a living by pleading. A similar and even more acute problem exists as regards the Mixed Bar, where the numbers have increased out of all proportion to the work available. Here there are 745 members, of whom 239 are stagiares; of the total, 351 are Ottomans and Egyptians. There would appear on the face of it to have been an invasion of the Mixed Bar by Native Court advocates, and the natural remedy for this would be a fusion of the two Bars. The problem is complicated by the fact that under the existing rules of admission to the Mixed Bar a lower standard of education is secured than ought to be required of candidates for admission to a learned profession. The complete solution appears to the Adviser "to be connected with wider questions of educational policy, many aspects of which are outside the province of the Ministry to which I am attached."

Judicial Organisation.

Sir William Brunyate has some interesting remarks to make regarding the Commission of which he has been appointed rapporteur, and which has been set up to study the administrative and judicial reforms which the disappearance of the Capitulations will call for. At the dinner given in his honour at Alexandria by the Mixed Bar he made some reference to the work which lies before this Commission, and he proceeds to repeat and amplify one or two of the more important points. In his opinion no solution of the problem can be reasonably satisfactory which has not been substantially acquiesced in by all the interests concerned, and he believes that no such fundamental differences divide them as to render an agreed solution of the problem impossible. It is obvious that "in any remodelling of our institutions both the privileged position heretofore enjoyed by foreigners and the non-British origin of the system of law heretofore administered will call for special consideration." It is, in his opinion, clear that "if the efficient despatch of legal business is to be assured some fusion of the systems of Courts must take place, but it in no way follows . . . . that such reasonable safeguards as may be compatible with the efficient working of unified Courts should be withdrawn from foreigners." Although both the Mixed and Native Bars feel some apprehension as to the possible results of fusion, he is convinced that such apprehension is without serious foundation, and that both have something to gain from more intimate relations with one another. If, however, the Mixed elements in the Bar are afraid of being swamped by mere numbers, it appears to him reasonable that special and adequate representation should be assured to them in any professional governing body, but only as a transitional measure, for if "we are to have a living Bar, its leaders will in the long run hold their position by personal merit and not by special privilege." As regards the type of law to be applied by unified Courts one consideration is, he thinks, decisive. No system of law can be a success unless it is understood by the professional men, whether judges or advocates, responsible for its administration, and "for that reason I should assume that the future law of Egypt must take as its starting point the law at present administered by the Mixed and Native Tribunals." He is convinced that in taking stock of the existing law many gaps and defects will be found, and in view of the new political status of the country he conceives that "we shall be bound to consider very carefully what help we can get from the many precedents offered us by the legislation of the British Empire." Sir William concludes by saying that he has in general avoided advocating any specific reforms, because he regards his professional brethren, as a body, as much more competent than himself to make recommendations as to the law by which we shall agree to be governed, and he adds "that it is in this spirit that the newly-appointed Commission has made the widest appeal to all branches of the profession for assistance in its task, and that answers already received lead me to believe that the ideas expressed in the present chapter are very widely shared."

Personnel.

In his closing pages the Adviser refers to the losses by death sustained by the Ministry of Justice. These losses include Mr. Lionel Sandars, president of the Mixed Court of Appeal; Mr. G. H. Fox, judge of the Native Tribunals; and Dr. T. B. Hamilton, medico-legal expert to the Native Parquet. Of Mr. Sandars he says that no one could have been more helpful in assisting to fix the attitude of the Mixed Courts towards the administration of martial law during the early days of the war, and he places on record "the debt of gratitude which I believe the country to owe him for his share in assuring harmonious relations between the military and judicial authorities." Mr. Fox, who was killed at Katia, did specially good work in the Native Courts, and had already made his mark as a sound lawyer and as a man of high character. With Sir William's remark that "there was about him a certain loveableness which makes his death a personal loss to all who worked with him" everyone who knew Mr. Fox will cordially agree. Dr. Hamilton, who became medico-legal expert in 1909, devoted all his spare time to voluntary work in the military hospitals, and it was to the strain of this work, combined with absence of leave, that his untimely death last November was due. As the Adviser says, "the best tribute to his work is the increasing reliance of the Courts on the Department of which he was head." To Mr. (now Sir Walter) Bond, who retired last year from the post of Vice-President of the Native Court of Appeal, which he had held since 1899, Sir William Brunyate refers in the following terms:—"As Vice-President he rendered excellent service, being mainly responsible for the successful introduction of the Assize system in 1905. A man of high ideals, he had a striking power of impressing his personality on his colleagues." The Adviser finally alludes to the spirit of loyal and friendly co-operation which he has met since his appointment amongst magistrates and other legal officials, and he finds in it "evidence of a general willingness to see in the changes which are inevitable a natural step in the evolution of our judicial institutions, full of promise for future development."

NOTES FROM ROUMANIA.

(From a Correspondent.)

Internal Politics.

The last two months will count as one of the outstanding periods in the making of New Roumania, marking, as they do, a forward leap towards the internal unity of the Roumanian people and remaining behind in historical importance only to that period in which the external unity of the Roumanian nation will be achieved. In a few weeks Roumania has travelled centuries of constitutional evolution, emerging from mediævalism and taking her place in the society of modern democratic communities. The phases of that change are as interesting as its effects are important, and I will attempt to give your readers a graphic description of the development of things.

It was obvious that the Russian Revolution was bound to react upon Roumania's internal affairs, not only because of the proximity of the two countries, but more especially because of the similarity of many aspects of Roumanian and Russian internal organisation. That process, however, was quickened, to a dangerous degree indeed, by the accidental presence of large bodies of Russian troops on Roumanian soil. As elsewhere, the Russian troops in Moldavia inaugurated the new era by a total disregard of their own and of the Roumanian authorities. They set up at once committees of officers and soldiers at the front, behind the lines, and in the various towns in which they were quartered, organised meetings and street demonstrations, calling upon the Roumanian people to follow the example of the Russian democracy, and passing occasionally from words to acts, such as the liberation of the Socialist Rakovsky and other political prisoners.

The situation was a difficult and delicate one. The Commander of the Russian forces in Roumania issued an appeal urging his men not to interfere with the affairs of a foreign and friendly State, but for a time the authority of the Commander was merely a nominal one. On the other hand, it was impossible for the Roumanian authorities to take any action against a body of troops over which they had no jurisdiction, and the assistance of which was paramount for the maintenance of the military situation; the more so as any coercive measures would have met, in all probability, with the active disapproval of the organisations which were then ruling Russia. The only possible course was to establish contact with the various committees of soldiers, and induce them to renounce such actions as would constitute an abuse of the hospitality they were enjoying.

But here another difficulty barred the way. The Russians had no confidence whatever in, and refused to have anything to do with, the "bourgeois" Government of Roumania; on the other hand, there existed no Roumanian Socialist organisation which should serve as a link between the Russian committees and the Roumanian Government. It was then that, in order to obviate the dangers of the situation, a small group of politicians belonging to the Left of the Liberal Party seceded, and hastily constituted themselves into a Labour Party; and it is interesting to note that the first document issued in their name was not the declaration of faith usual with any new political organisation, but an appeal to the Russian soldiers to abstain from creating new embarrassments to the much-tried Roumanian Government. The appeal was signed by several deputies, Dr. Lupu and M. G. Diamandy acting as the leaders of the new group.

The second immediate effect of the Russian Revolution was of far greater consequence. The example of Russia and the agitation carried on by the Russian troops were apt to foster some popular movement in Roumania, not indeed of such an extreme character as the Russian Revolution, but sufficiently active seriously to hamper the military reorganisation in which the Government were engaged. In order to anticipate such an eventuality, and at the same time to come also more into line with the policy of the new Russian régime, the King and the Government suddenly decided to embark upon a programme of sweeping constitutional reforms. By an order of the day the King announced to his army that it was intended to proceed to an extensive distribution of land to the peasants as soon as normal conditions will have been restored, and that in place of the antiquated three-class franchise of Prussian extraction, universal franchise was to be introduced. Later, as a result of representations from home and from certain Roumanian representatives abroad—as well as of the experience gained by M. Bratianu during his visit to Petrograd—Jewish emancipation was added as a third reform, completing the transformation, unique for its rapidity and intensity, of the constitutional organisation of Roumania.

I will reserve myself to give in my next correspondence a description of how the announcement was received by Roumanian public opinion, and of the Parliamentary progress of the proposed reforms.

CYPRUS NOTES.

(From a Correspondent.)

The Carob Season.

The time for gathering locust beans is approaching, and prospects are good; but there is still a short period during which hot winds might largely affect the crop. Last year the yield was reduced by about 20 per cent. at the last by excessive heat. The disposal of the present year's harvest will be a matter for anxiety, as war again interferes with the normal course of commercial operations, including shipments.

In many parts of the island the carob tree is one of the principal features of the landscape, the monotony of which is broken by its bright evergreen foliage and by the paler tints of the olive. Carobs flourish in countless numbers, and afford a grateful shade to man and beast under the burning summer sun. In cultivated lands it becomes a thickly covered tree, often with a diameter, for its branches, of about 40 ft., thus covering an area of over 1,500 square feet. Mr. Gennadius, who has written at length on the tree, mentions, in order to refute it, the idea that it provided the food of the famous Lotus-eaters. According to another opinion, it is referred to in the parable of the Prodigal Son, who would fain have eaten the husks on which swine fed. In France and Germany a distorted tradition regarded the fruit, or "bean," as the locust which the Baptist ate, and hence the tree was called St. John's bread-tree. Greeks often called it the bean of Pythagoras. In the time of the Christian era the tree grew extensively in Judæa and Syria. It is now found in most countries bordering on the Mediterranean, and many of its islands. The Arabs called it *El-Kharouba*, whence our name. The Greeks called the bean *Keration*, from its supposed resemblance to a goat's horn. It is put to many uses. It contains about 82 per cent. of digestible matter, of which 50 per cent. is sugar. It is used largely as food for cattle, horses, pigs, and other animals. In South Russia and the Sudan it is eaten by the people and greatly appreciated. In Egypt and other parts of the Levant "sherbets," or refreshing drinks, are made from it. In Spain it is sometimes blended, like chicory, with coffee. Mixed with chocolate in moderate proportions it is palatable, and at the time of the Indian and Colonial Exhibition in London, in 1886, it found favour in that form. In Cyprus a brittle candy, called *pastéli*, is made of it and used as a laxative sweetmeat, being sold by itinerant vendors throughout the island. When distilled it yields 18 per cent. of good spirit, which pays, if the price is exceptionally low.

Seeing how valuable is the crop it yields, and how widely its cultivation might be extended, wonder is often expressed why the tree is not more extensively grown from seed. The reason is that the hopeless depredations of goats are the main obstacle to this, as to all unprotected trees. Cultivation from seed is, however, being encouraged by Government, and large numbers of seedlings are sold annually at the Government nursery gardens. In the forests there are great numbers of wild trees, which are grafted by degrees. Transplantation is difficult but practicable. The carob suffers from extremes of cold, as well as from intense summer heat.

Cyprus Beccaficos.

August brings the beccafico, which has for ages been a much-esteemed dainty in the island and for exportation. The beccafico of Cyprus is the black cap warbler, which is called locally the *Ambelopouli*, or vine-bird. The black caps come in huge flights, like those of quails, in August and September and even later. They fly high, and at night, and as cranes pass over annually at the same time in large bodies, the Cypriots have a legend that they give the beccaficos a lift, carrying them on their backs. They soon become very fat, feeding on small berries, and are very good either cooked fresh or pickled.

The Cypriots snare them by placing sticks covered with birdlime in places which they frequent thickly. They are preserved in great quantities in *Commanderia* wine or in vinegar. The traveller Ludwig Ross, writing about 1850, says (Colham's translation) that in the days of the chronographer Lusignan (about 1570) they cost nine Venetian ducats the thousand, and that hundreds of thousands were exported to Venice and other parts of Italy, and especially as presents to Smyrna, Alexandria, Constantinople, Marseilles, Genoa, Trieste, etc.; and no doubt many reached London, as did Cyprus wines.

NEAR EAST BOOKSHELF.

PALESTINE AS THE INHERITANCE OF THE JEWS.*

"The Zionism which has been an integral part of Judaism for the past eighteen centuries has until very recent times been a purely religious hope." This book represents very clearly the Zionism of the twentieth century, which is practical, persistent, and independent of any special religious views; it embraces all who by birth are heirs of Jewish thought and culture.

The book before us prepares the reader for the modern view by a recital of all that the Jews have suffered through the ages in relation to Palestine. Though written with moderation and fairness, it is a dismal tale reflecting little credit upon Christendom. To the Crusaders "all non-Christians were the enemies of God and to be utterly rooted out." "The Jews (in Palestine) for their part were driven into their synagogues, where they were burnt." "In Jewish history the second crusade opened a long period of murder, rapine and plunder which lasted for centuries after the last of Eugenius' warriors had passed to their rest." Under enlightened Moslem rulers, such as the successors of Saladin, the Jews were treated with humanity, and Moslem Palestine became "a haven of refuge for the persecuted Jews of Europe." During the earlier half of the fourteenth century, "so comfortable were the Jews of Palestine compared with those of other lands that the rumours spread in Europe that the Jews had bought Mount Zion and the Holy Sepulchre, and had demolished the buildings upon them." This was made an excuse for fresh persecution. Under the earlier Turkish Sultans the Jews also flourished. "Suleiman the Magnificent accorded his Jewish subjects full liberty," and even his degenerate successors, though lagging behind the more enlightened Christian Governments, cannot be said to have shown a fraction of the intolerance and persecution of mediæval Christendom. "Turkish rule is by no means unfavourable to the Jewish development in Palestine." Many Zionists before the war were ardent supporters of the "Young Turk" party in its first and more broad-minded views.

The chapters of this book upon the earlier and the present-day attempts at colonization in Palestine are excellent, and are made all the more so by well-selected illustrations taken from photographs. The map at the end is a much-needed key to the understanding of the text, as these new names—in Hebrew—have not yet found their way into ordinary atlases. The general impression of this narrative is one of steady and uphill progress carried out amid extraordinary difficulties. Many of these last will, we hope, be done away with, and this half-desolated land will be gradually restored by means of Jewish capital and Jewish workers to its once condition of prosperity. The hindrance to all progress in Palestine, whether by indigenous inhabitants or by European settlers, has been the want of a decent Government. The Turkish Government at once fleeced the people and did nothing for their benefit.

The writer, if he has visited Palestine at all, must have seen it through rose-coloured spectacles. In describing its agricultural possibilities he uses the language of poetry rather than that of sober prose. For example, the statement that "the so-called Desert of Judæa is capable of supporting innumerable flocks of sheep and goats" will not be seconded by those who know this dreary waste. It is an exaggeration to refer to "innumerable waterfalls" which are capable of furnishing "an inexhaustible supply" of motor power. It is difficult to understand what the writer means by the statement that "the constitution of the mountains of Lebanon and Antelebanon is admirably suited to supply the country to the south with all necessary water." It is more than fanciful to suggest that a further extension of railways in the land will make "Palestine the railway centre of the world." As regards many suggested possible products of Palestine, time alone will show whether such a glowing description as here given is justified. It is exaggerated claims of this sort which have made so much of the propaganda of Zionism repellant to outsiders. These are, however, but small faults in a most interesting and attractive book which can be unreservedly commended to many who have not studied the question. Palestine after the war will be in bad need of capital, and, as it develops, there will be considerable room for an increased population. Except for the indigenous inhabitants no people but the Jews have any special claim to, or interest in, Palestine, and if their settlement in the land is to be a "peaceful penetration" desiring "no favour as compared with the other inhabitants of the land, and willing for all the advantages of a free and liberal government to be enjoyed by all equally," then English people should view the colonization movement with every sympathy. Many difficulties, too, might be avoided, if the status of the land after the war could be an autonomous State, controlled by England or the Allies, in which all creeds should enjoy equal liberty. While, as at present, the great majority of the people are Moslem, there should be a Moslem Governor, but later, as the Jews acquire an overwhelming influence in local government they would obtain quite certainly a predominant position in the country at large, whereas any attempt to obtain it at once would create a sense of injustice on the part of the indigenous inhabitants and raise up powerful opposition. The writer of this book fully recognises that Zionism does not mean the return of all Jews to Palestine. "In the most favourable circumstances, after perhaps a century of preparation, Palestine cannot hold more than one-sixth of the Jewish population of the world"—it would be safer, in our opinion, to say one-twentieth, unless the descendants of the indigenous inhabitants are to disappear altogether. E. W. G. M.

* "Palestine: The Re-birth of an Ancient People." By A. M. Hyamson (London: Sidgwick and Jackson, Ltd. 10s. 6d. net).

BOOK NOTES.

Professor Henry Browne, of University College, Dublin, has written a series of essays on the reform and revival of classical studies, entitled "Our Renaissance," to which Sir Frederic Kenyon has contributed a preface. The work will include a paper on "Greece, the Cradle of Democracy."

Messrs. Kegan Paul will shortly publish an account of the causes and beginnings of the war between Roumania and Austria, by Mr. Leonard A. Magnus.

"The Revolt in Arabia," by Dr. Snouck Hurgrouje, has been published by Messrs. Putnam, priced at 4s. net. A foreword is contributed by Mr. Richard J. H. Gottheil.

Among Messrs. Hodder and Stoughton's announcements for the autumn is a book by the Rev. William Ewing, D.D., the Presbyterian chaplain who won the Military Cross and was wounded before Baghdad, giving an account of his campaigning experiences extending over the last two years.

"The Business Guide and Handbook to Malta and Gibraltar" has just been issued by the Bureau of Commerce and Industries.

M. Marcel Dunan, a correspondent of the *Temps*, gives an account in his book, "L'Eté Bulgare: Juillet-Octobre, 1915," which is published by Librairie Chapelot, of the Bulgarian treachery at the commencement of the Greek war.

"La Syrie et la France," by Dr. C. and M. Paul Roederer, which has just been published by M. Berger-Levrault, priced at 4 frs., puts forward the special claims of France in Syria. M. Paul Roederer, who has fallen in the war, formed the Société d'Initiative Economique en Syrie five years ago, and an appendix to the volume shows how vast a field will be open to commerce after the war.

Professor Stephen Langdon is the author of "Sumerian Grammatical Texts," which forms Vol. XII., No. 1, of the publications of the Babylonian Section, and is published by the University Museum at Philadelphia. This volume includes the greater portion of the grammatical texts in the Nippur collection of the Philadelphia Museum which were omitted from Vol. V.

La Société Internationale de Philologie, Sciences et Beaux-Arts has published a reprint of a paper read by M. Henri M. Léon on "The Chelonia, or 'Shield Reptiles' of Palestine," which he read before the Society at its Annual Conference held in June, 1916. The book contains a glossary of technical terms, and is sold at a shilling.

The Serbian Minister, M. Y. Yovanovitch, has contributed a preface to a history of "Serbia," written by L. F. Waring, to be published by Messrs. Williams and Norgate during the autumn in the "Home University Library."

Messrs. Heath, Cranston and Ousley are the publishers of a book entitled "There is a Destiny," by Reginald J. Burge, the price of which is five shillings net. The author has taken as his theme destiny in the spirit of Greek tragedy.

The Rt. Hon. Viscount Bryce, O.M., has written a preface to Mr. A. P. Hacobian's book on "Armenia and the War," published by Messrs. Hodder and Stoughton. The Armenian's point of view is put forward, with an appeal to Britain and the coming Peace Conference for the formation of an autonomous Armenia.

TANGIER TO TEHERAN.

King Ferdinand of Roumania reaches his fifty-second birthday to-day, and while his subjects and his allies would have preferred that he should be celebrating the occasion in Bucharest, or rather at Sinaia, there is some cause for thankfulness that he is still, as far as one knows, at Jassy. It was an ominous report that told of the preparations for the departure of the Roumanian Court to Russia. The move may yet have to take place, but there has been a magnificent rally on the part of the Roumanian Army, and the Germans are not going to have a walk through. Everything depends, of course, on the Russians. The Roumanians, I believe, are quite able to look after themselves; but if their allies cannot or will not hold their ground, what might have been a successful offensive becomes a further retreat.

***

The events of the next few days will be watched very anxiously in Jassy, we may be sure. Russia, it has to be remembered, is not the most comfortable of places for a Royal Family to withdraw to at this moment. There has been a slight indication of what a poor asylum it might prove in the action of the local committee of the Soviet at Kherson in refusing to turn out of the Governor's house in order to make room, if necessary, for the Roumanian Court. No doubt the difficulty will be overcome, but the incident will not make things happier for King Ferdinand and Queen Marie.

***

I doubt whether it is generally realized in this country what a terrible ordeal the Roumanians have had to go through. The acme of suffering had already been reached by the Serbians and Belgians, but the Roumanians have also harrowing tales to tell. Apart from the experiences of the civilian population, there was the tragedy of an army altogether unequipped for a war of this nature having to be thrown in front of the advancing enemy in order to cover the retreat at the cost of sacrificing itself. It is to their credit that the Roumanians have not made much of their sufferings, and on the whole I expect they were content that the few Britons who reached their country were armoured-car men, and not journalists. Not the least bitter disappointment will be the shattering of their hopes for this year. If Russia had played her part, Roumanian soil might have been free of the enemy by the end of the autumn. It does not do to think of these things, but it is hard to avoid the temptation, particularly at the moment when British, French, and Italians are administering particularly hard blows on their respective fronts.

***

The average Englishman does not take kindly to decorating his walls with mottoes or commands. We leave that to railway and omnibus companies, although I believe the tendency is creeping in upon us, mainly through the numerous Government offices. But some mural legends do justify their existence—for instance, the Canadian "Come to the point, but do not sit upon it." If the war-strain continues much longer it may be advisable to adopt a less humorous but equally necessary injunction, "Avoid recriminations," or, as our American Allies would perhaps say, "Sling slanging." I fancy most of us are inclined to slang Russia these days; Canada is having almost as vigorous a slanging match as Australia had a little while ago over precisely the same question; Italians and Jugoslavs are only just beginning to discover that there are better ways of getting what you want, and to judge from a letter I saw in the Press the other day I infer that one Roumanian at least thinks that the situation will be improved by apportioning blame everywhere but in Roumania. There is probably abundant justification for all the remarks made; each one of us knows that everybody else is growing more and more "cussed" as the war goes on, and that we ourselves are the only ones who are really keeping our heads and an equable temperament. But it is really better to keep the knowledge to ourselves, and not let other people know about it.

***

It grieves me to find that two alleged leaders of Persia's Constitutional Party have arrived at Stockholm claiming to speak on behalf of their country. Not that one does not wish Persia practically all they would claim for her; but it would be with this difference—that a real friend of the country would want her, after so many years of starvation diet, to receive her cake in portions which she can readily swallow instead of trying to gulp it down whole and choking herself in the attempt. One of their demands, for instance, is that Persia is to possess the full right to organize herself, her finances, and her army. The delegates might just as well have added—and the solar system. What is the use of talking about finances and organization, when the arrival of a German with his pockets full of gold is sufficient to disorganize the country from one end to the other? Of course, every right-minded person wants to see Persia on her feet again, enjoying "complete independence and unhampered peaceful development"; but the sending of delegates to a conference designed to perpetuate German militarism is not the way to set about it.

***

I sometimes wonder to myself how much our pacifists and pro-Germans know of the people Mr. Ramsay Macdonald calls "our German friends." Of course, one ought not to generalize, but it is ridiculous to contend that there are not certain national characteristics applicable to a people as a whole. Without doubt brutality, or at best an absence of spontaneous sympathy, is a feature of the German character. It is the trait which renders possible the outrages and horrors the Germans have perpetrated during the struggle. The war was not necessary to make one realize it. Anyone who has lived for some time in Germany is conscious of it. They have practically raised the trait to a virtue under the term "*Schneidigkeit.*" But the other day I had a striking confirmation of my contention. I was talking to the matron of a hospital for German prisoners of war, and, without any lead from me, she said that one of the things that struck her most was the callousness of the men—in one point in particular. The wards were vast; there was some way to go for meals, and one or two men could only walk very slowly and with great difficulty, if they were not supported. Now, in the whole of her experience of that hospital not a single man in the wards would ever lend a helping hand to either of the two bad cases, and if an orderly were not available, those men would be left to reach the dining-hall long after the others had begun their meal, for want of the support of a friendly arm. A small point, perhaps, but typical. None of the prisoners seemed bad fellows (one was before the war an assistant in ——'s hairdressing department, and was confident that the moment peace was declared a train and a 'bus would find him installed at his former chair), but it does not occur to them to help a crippled comrade any more than it would occur to a beetle in similar circumstances.

***

The existence of an "International College of Chromatics," I confess, was news to me; but a distinctly interesting article in *The Occult Review*, entitled "Symbolism in Colour, Ancient and Modern," by Miss Grace Ethel Cowell, drew my attention to it. Miss Cowell is a vice-president and registrar of the college. In the article she has embodied a mass of colour lore which seems to prove that, according as you are Buddhist, Christian, Mohammedan, Italian, Chinese, Ancient Greek, or American Indian, you will attach different conceptions to the different colours. But that is just the point at which the ignorant layman trips up. "Colour, like everything else in the manifested universe, is a matter of vibration, and at the back of all these local and arbitrary interpretations of the meaning of colour lies, after all, the universal Law of Correspondences, as a manifestation of which the occultist sees in the colours of the spectrum definite relationships with the seven planes of the cosmos and the seven principles of man." Now you know; or, if you don't, there is the International College of Chromatics, and I am certainly going to be an assiduous reader of its official organ.

25	12	Saturday.....	7	7
26	13	Sunday	8	8
27	14	Monday	9	9
28	15	Tuesday	10	10
29	16	Wednesday	11	11
30	17	Thursday	12	12

To-day is the birthday of King Ferdinand of Roumania, who was born at Sigmaringen on August 24, 1865. In contradiction of previous reports, it is announced that the King and Queen of Roumania are still at the Palace Cuza, Jassy.

The Serbian Minister and the Roumanian Minister visited the Foreign Office on August 22.

Mme. Misu, wife of the Roumanian Minister, and Mlle. Elizabeth Misu are staying at Eastbourne.

Mr. Leopold Jullien, Manager of the Union Foncière d'Egypte, has just been nominated Brigadier in the French Army.

El Bimbashi A. C. Hewitt, 12th Sudanese, has been transferred to the Equatorial Battalion.

Mohamed Ali Khan Ehtesham Homayoun, Secretary to the Persian Legation in London, has recovered from his illness, and resumed his diplomatic duties.

General Georgesco, Chief of the Roumanian Military Mission attached to the British Headquarters, has returned to London from France.

The present population of Alexandria is estimated at 411,000 and that of Cairo at 749,000. The total urban population of Egypt is returned officially at 1,754,000.

M. Romanos, the Greek Minister in Paris, presented his credentials to President Poincaré on August 22, and handed to him an autograph letter from King Alexander.

M. Gabriel Remeraud, late of the French Diplomatic Agency, Cairo, who is now sub-lieutenant in the French Army, has received the Croix de Guerre for distinguished conduct on the field of battle.

Captain J. H. R. Yardley, Royal Inniskilling Fusiliers, and Lieutenant G. G. Macdonald, R.E., have been taken on the strength of the Egyptian Army as special service officers with the rank of Bimbashi.

Brevet Lieut.-Colonel H. Barstow, Indian Infantry, whilst Deputy Adjutant-General, and Brevet Lieut.-Colonel C. L. Norman, M.V.O., Indian Cavalry, whilst Director of Staff Duties, have been appointed Brigadier-Generals.

M. René Labuyère, of the Land Bank of Egypt, has gained the French Academy's Bordin Prize for his work "Two Years of Naval Warfare." The Bordin Prize is awarded for a work of literary merit calculated to be of service to the State.

The marriage took place at Barbon, Westmorland, on August 22, of Lieutenant Charles Symonds Leaf, son of Mr. and Mrs. Walter Leaf, and the Hon. Catherine Blanche Kay-Shuttleworth, youngest daughter of Lord and Lady Shuttleworth.

It is reported from Athens that M. Zaimis, the Governor of the Greek National Bank, has decided to resign as the result of the recent revelations in the Chamber, and it is probable that the Government will appeal to British financiers to reorganize the bank.

The appointment is announced of M. Debilly as French Minister at Athens. This appointment, together with that of Lord Granville as British Minister, marks the close of the tenure of office as High Commissioner of the two Powers of M. Jonnart, who was so largely instrumental in bringing about the improved situation in Greece.

M. Pashitch, the Serbian Premier, left London on August 18 for Paris. At the station were M. Yovan Yovanovitch, the Serbian Minister, and the staff of the Legation, and a representative of the Foreign Office. After a short stay in Paris M. Pashitch proceeds to Rome to pay a visit to Baron Sonnino, the Italian Minister for Foreign Affairs.

The marriage arranged between J. Angus Gillan, of the Sudan Civil Service, and Margaret Douglas, younger daughter of Mr. and Mrs. Ord-Mackenzie, of Headley Mount, Headley, Hampshire, formerly of Walton Heath, Surrey, will take place on August 28 at 2.30 p.m., at Holy Trinity Church, Brompton. No invitations will be issued, but all friends will be welcome at the church.

Captain R. C. Cooke, M.C., Norfolk Regiment, Captain G. N. I. Morrison, the Black Watch, Lieutenant J. H. Hardy, M.C., the Royal Lancaster Regiment, and Lieutenant L. Rowell, Army Service Corps, have been attached to the Egyptian Army as Special Service officers, and have been posted for duty to the 12th, 13th, and 9th Sudanese and the Department of Supplies respectively.

General Sarrail, Commander-in-Chief of the Allied Forces at Salonika, has conferred the Order of the Légion d'Honneur upon Prince George of Serbia, Chief of the 18th Serbian Infantry Regiment, in recognition of his courage and ability. Prince George, who is the elder brother of the Prince Regent, celebrates his thirtieth birthday on September 9. He has been twice wounded during the present war.

The King has been pleased to appoint Earl Granville to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary to the King of the Hellenes in succession to Sir Francis Elliot. Lord Granville, it will be remembered, was accredited to the Provisional Government at Salonika, where his tactfulness and sympathetic handling of a delicate situation won the confidence of M. Venizelos and his colleagues. Lord Granville's first post in the Diplomatic Service was in Berlin; he has served subsequently in Cairo, Vienna, The Hague, Brussels, and Paris, in the latter capital as Counsellor of Legation.

The President of the Southern Slav colony in London has sent the following telegram to the Serbian Prince Regent Alexander:—

The agreement concluded in Corfu among the representatives of our oppressed people has deeply and agreeably moved all the Serbs, Croats, and Slovenes in London. I am happy to be able to submit to your Royal Highness, in the name of the Jugoslav Colony in London, the assurance of our most devoted loyalty and our deep appreciation of this act of true statesmanship, which will be the foundation-stone in the building of the free State of the United Slovenes, Croats, and Serbs.

Among the passengers on the torpedoed P. and O. *Mooltan* was M. Demetrius Frangoudis, of the Union Foncière d'Egypt, of Alexandria, who is on his way to New York. Towards the end of last year M. Frangoudis's brother, Colonel John Frangoudis, who was in America, at the head of a military mission, met his death as the result of inadvertently coming in contact with a broken electric wire in the streets of New York. M. Frangoudis has been deputed by his fellow passengers from Egypt to express their profound gratitude for and admiration of the manner in which the ship's officers handled the situation after the *Mooltan* was struck. Within six minutes the last passenger had been got off without the least confusion.

The British Farmers' Red Cross Fund has handed over this week to the Red Cross Society the sum of £10,000 for hospital work in Mesopotamia, and to provide and maintain six motor launches and one steam tug for work on the Tigris. One of the most important parts of the splendid work in Mesopotamia which the British Red Cross Society is carrying out is done by the motor launches, some fifty in number, which have rendered wonderful service during all the operations of General Maude's forces. Several of these launches have been working right away up river at Baghdad ever since the occupation. The maintenance of hospital stores with a river line of communication that is now over 500 miles in length is no light undertaking. The need for continued help is still urgent, and all contributions will be gratefully acknowledged by the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.1.

There is a wonderfully happy appreciation of the late Mr. G. B. Allen, by Sir Valentine Chirol, in *The Pioneer Mail* of July 14, from which the following passages are taken:—"With George Berney Allen there has gone out of this world one of those who sweetened it for all who knew him at all well. His influence was always an influence for good. His was not a commanding personality, and he never played a conspicuous part in great affairs, but he had so many interests in life that he came into contact with not a few who did, and by his transparent integrity of purpose and his invariable honesty and kindliness of judgment, he exerted upon them an influence which they themselves probably never wholly realized, and which his own modesty would assuredly never have claimed. . . . He was incapable of thinking and *a fortiori* of speaking ill of anyone. He clung steadfastly to his own gentle optimism, and nothing could shake his conviction that human nature is generally better than it seems, and that all things, even when the outlook is darkest, are being shaped towards higher ends. This belief sustained him during the war, though its horrors weighed heavily upon him. In his personal relations he was the kindest and most considerate of men. There was nothing he would not do for his friends."

And Sir Valentine concludes:—"I am not only myself the poorer by one of the truest of friends, but the world, too, is the poorer by one of the best of men."

OBITUARY.

DR. MARIAN ELIZABETH WILSON, M.B., Ch.B.

Dr. Marian Wilson, M.B., Ch.B. (Edin.), surgeon to the Scottish Women's Hospital at Abbaye de Royaumont, France, died on August 1, after four days' illness, at St. Martin-Vesubie, where she had joined her family for a few weeks' rest. Dr. Wilson was the only daughter of the late Rev. John Wilson, D.D., of Abernyte, and of Mrs. Wilson, of Lausanne. Dr. Wilson graduated in Edinburgh in 1906, her first medical post being at Barrow-in-Furness. She was appointed assistant-doctor to Dr. Paterson at Hebron in 1911, and had been there for nearly four years when the outbreak of war necessitated the closing of all the British mission stations. On returning to England she worked for six months at York, and in November, 1915, she joined the staff of the Scottish Women's Hospital at Abbaye de Royaumont, where her skilful and devoted services made her a most valuable member of the medical staff. Early in the present year her very distinguished services to the French wounded were recognised by the French Government, and she was awarded the Médaille des Epidémies en vermeil.

Dr. Wilson was unusually gifted in many ways, but especially so in languages. Her French was as pure as her English, she knew both Greek and Latin extremely well, and had a fair knowledge of Italian, while she mastered Arabic with extraordinary ease and quickness. Her personal charm, and her endless care for and interest in her patients won her their great affection and gratitude wherever she worked. Her patients at Royaumont, after leaving the hospital, wrote constantly to her, and they would walk miles to see her during their short periods of leave. Their grief at her death is intense.

Dr. Wilson was not robust, but her love for her work and her high, courageous spirit, carried her unflinchingly through every period of extra anxiety or fatigue, such as every hospital, whether military or mission, must experience. She was one of those who raise the name of their country very high in foreign lands, and whose memory is a constant call to us who are left to "Carry on!"

Lieutenant-Colonel Boyd Francis Alexander, late Rifle Brigade, who died on August 19, was the third son of Boyd Alexander of Ballochmyle and Southbar. He was born in 1834 and educated at Harrow. He served with the Rifle Brigade in Turkey in 1854 and afterwards in the suppression of the Indian Mutiny, when he fought in the battle of Cawnpore, in the siege and capture of Lucknow, and in the Oudh campaign. He commanded the storming party in the attack on Fort Birwah, and was twice wounded. Colonel Alexander had the Mutiny medal with clasp, and was mentioned in despatches. In 1870 he also saw service in Canada in connection with the Fenian raid.

We regret to learn of the death on August 3 at Port Said of Mr. Whitfield the manager of the Imperial Ottoman Bank at Port Said. It seems that Mr. Whitfield was sitting at his desk transacting business as usual, when he suddenly complained of feeling ill. Help was at once summoned, but he expired an hour or so later. Mr. Whitfield had been for many years in Port Said as manager, and his loss will be felt by a large circle of friends and acquaintances. Great sympathy is felt for Mrs. Whitfield and the children in their sad bereavement.

EGYPTIAN DECORATIONS.

The King has granted the undermentioned gentlemen authority to wear decorations (as stated against their respective names) which have been conferred upon them by the Sultan of Egypt, in recognition of valuable services rendered by them:—

Second Class of the Order of the Nile.—Mr. N. T. Borton, Postmaster-General, Alexandria.

Third Class of the Order of the Nile.—Mr. W. A. E. Coxon, Inspector of Mines, Cairo; Mr. W. B. Trelawny, Director of Government Press, Boulaq, Cairo; Mr. R. V. Wild, Sub-Director-General, Direct Taxes, Finance Ministry, Cairo; and Mr. C. Barton, Assistant Sub-Director-General, State Accounts, Finance Ministry, Cairo.

Fourth Class of the Order of the Nile.—Mr. A. Holden, Director, State Domains Administration, Cairo; Mr. A. Wood, Chief Engineer, State Domains Administration, Cairo; Mr. L. Royle, Assistant Director, Coast Guards Administration, Cairo; Mr. K. Dowson, Assistant Director, Coast Guards Administration, Cairo; Mr. S. C. Peacock, Senior Inspector, Ports and Lights Administration, Alexandria; Mr. C. E. D. Trelawny, Captain of Port, Port Said; and Mr. J. J. Jelf, Private Secretary to the Financial Adviser, Cairo.

Fifth Class of the Order of the Nile.—Mr. R. Phillips, Officer Commanding the cruiser Abdel Monem, Coast Guards Administration, Cairo; Mr. D. R. Tweedie, Officer Commanding Salloum District, Coast Guards Administration, Cairo; and Mr. A. Borg, Superintendent of the General Post Office, Alexandria.

Before leaving London for Paris, the *Morning Post* is informed, M. Pashitch, the Serbian Prime Minister, asked M. Miyatovitch to write in Serbian a popular history of the British Empire, which the Serbian Government will publish in order to acquaint the Serbian nation with the true "greatness of the honour of being an Ally of the British nation." M. Miyatovitch was formerly Serbian Minister in London, and is the author of "The Memoirs of a Balkan Diplomatist," recently published.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

BONHAM-CARTER.—On the 16th August, 1917, at 24, Carisbrooke Road, St. Leonards-on-Sea, the wife of Captain B. H. Bonham-Carter, Indian Army, of a son.

DEATH.

WILSON.—On August 1, very peacefully, after four days' illness, Marian Elizabeth Wilson, M.B., Ch.B. (Edin.), of Hebron, Palestine, and of the Scottish Women's Hospital, Abbaye de Royaumont, France, the beloved only daughter of the late Rev. John Wilson, D.D., of Abernyte, and Mrs. Wilson, Lausanne.

Twenty-four Jugoslav officers, who served in the Austrian Army, and who surrendered to the Italians on the Isonzo front, have sent a telegram to M. Ristitch, the Serbian Minister in Rome, declaring that they are ready to sacrifice their lives in order to contribute to the liberation of Serbia, and hailing King Peter as the King of the Jugoslavs.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—

FRIDAY, AUGUST 24, 1917.

THE FALLEN IDOL.

The Greek Government is well advised, before ex-King Constantine passes out of the ken of the world at large, to disclose, as far as it is able, the true story of his relations with Germany. Greece owes it to herself to see that there is no room for misunderstanding in regard to this unsavoury chapter of her history; for until most of the facts of the case were known she was in danger of appearing to have stood by the Sovereign up to a certain point, and then to have abandoned him in favour of the winning side. The quarrel of the Greeks with King Constantine, however, covers more points than one. It is at least open to argument that the outbreak of the European war momentarily obliterated the *casus fœderis* between Greece and Serbia, and the Greek Government was free to place its sympathies with either of the belligerent groups. The fact that the Entente had in the past rendered special services to Greece did not necessarily entail that its cause in the present struggle was just and that its enemies must be in the wrong. On the other hand—still apart from the alliance with Serbia—the past relations between Greece and the Entente Powers did require that she should not lightly ally herself with their enemies. This, however, is precisely what King Constantine did, and his action was taken without reference to the wishes of his people. Even when Serbia was threatened with disaster, and appealed to Greece to honour her treaty of alliance, it might have been possible to adduce sound military reasons which prevented the latter from risking suicide without the prospect of being able to bring any practical assistance to the hard-pressed Serbians. But whatever course Greece adopted on the King's initiative, the people had the right to expect that it should at least be honourable and consistent with the interests of the country. The policy actually followed by King Constantine, however, entailed the violation of his own personal honour, of his country's pledges, and of its material interests, in consequence of which Greece was compelled to endure a period of bitter humiliation.

As far as can be judged from the telegraphic summary of the White Book issued in Athens, the Greek Government has been successful in laying hands on the material documents in King Constantine's amazing record of infamy. That on the outbreak of the war the Emperor William should have telegraphed to remind him of the reasons "why Greece should stand by Germany's side" is not a matter for wonder. Nor can exception strictly be taken to the King's reply, which, while stating that his personal sympathies and political opinions drew him towards the Emperor, amounted to a declaration of neutrality. What was to have been expected was that King Constantine, having shrewdly diagnosed the situation and realizing that Greece was for the time being at the mercy of the Entente Powers, would have been very careful to adhere to a policy of the strictest neutrality. This he did not do. It will be of interest to follow the workings of his mind and to trace the connection between his change of attitude and the course of military events. When once he had satisfied himself that the Central Powers were bound to win the war, he seems to have thrown discretion to the winds. To gauge the extent of his treachery to Greece, we have to bear in mind the normal relations between Greeks and Bulgars. If King Constantine's dealings had been exclusively with the Germans they would have been more venial. But from the outset he had recognized with whom he would have to work. In his reply to the Emperor William's first telegram he suggested that Greek neutrality would be profitable to Germany, "considering that I engage not to harm his (the Emperor's) friends and my neighbours so long as they do not harm our local Balkan interests." The reference to the Bulgarians clearly shows what the attitude of the two peoples to one another was. Yet a little later King Constantine was to be found making an agreement for the surrender of Fort Rupel and a considerable amount of Greek territory and Greek material of war to these very Bulgarians. It is for that act that he will never be forgiven by the Greeks as a nation. The documents now published show that the subordination of Greek interests was carried even to the extent of suppressing reports of the maltreatment of Greeks at the hands of Bulgarians. Finally, to clinch the sordidness of the whole story, there is the inference to be drawn from the secret loan obtained from Germany that King Constantine and his corrupt Government simply bartered Greek interests for a financial consideration.

When ex-King Constantine has become more accustomed to the leisure of private life we may look for his version of the part played by Greece, for it is hardly to be supposed that he will allow himself to pass down into history with his present reputation without some attempt to clear himself. At the time when he was in particularly close touch with Germany, it will be remembered, he chose to ventilate his grievances and to protest his innocence in the British and American Press. Those declarations, in the light of subsequent events, make him appear still more contemptible. They proved that he realized that his place was by the side of the Allies, but the crookedness of his character prevented him from acting up to his own interests and to those of Greece. The only explanation of King Constantine's action would seem to be found in his physical fear of what the German Emperor would do to him in the event of a German victory. There the matter must, perhaps, be allowed to rest. The disclosures now made by the Greek Government exonerate Great Britain and France from any possible charge of highhandedness in demanding the King's abdication. Their chief fault was that they should have tolerated for so long an impossible situation. M. Venizelos and his colleagues in the Provisional Government are once more justified in their decision to cut themselves adrift from the regime of intrigue and corruption in Athens. Greece is now shown to have been the victim of peculiarly malignant circumstances, and leaves the bar of public opinion with a clear conscience. Some sympathy may be felt for King Alexander, whose position is rendered even more anomalous by the publication of the White Book. But the more hopeless the regime to which he succeeded is shown to have been the greater the merit, if he is able to live the stigma down and to lead Greece along the path of constitutionalism and progress. The presence of M. Venizelos at the head of affairs should be a guarantee that Greece will be able to count on generous treatment at the hands of the Allies, in order that in the prosperity opened up to her by the new era she may find ample compensation for the tragedy of the past three years.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.2.

THE UKRAINE QUESTION AND THE BALKANS.

The Ukraine question is far less known in England than the Polish question, nor is the reason far to seek. The Ukraine has played a much smaller part in the political history of Europe than Poland; the Poles themselves have filled a bigger place on the world's stage, in its art, literature, and more especially its music, than the Ruthenes; nobody could deny that the Poles were a distinct nation, even after the partition, whereas the status of the Ruthenes was a matter of indifference. Recent events in Russia have changed things considerably, and the future destiny of the Ukraine will not only react on the Polish question, but will have a vital bearing on the position in the Balkans. If the Ukraine is divorced from Russia, then Germany's path through the Balkans is cleared of one great obstacle. It is, therefore, Germany's interest to stimulate the separatist movement at Kieff, and there are signs that her agents have been busily engaged in the agreeable task.

The Ukraine is a rich and fertile country which stretches from Lemberg in the west to Odessa in the east. The Ruthenes, or Little Russians, who inhabit it are remembered as having put up a valiant fight against the Ottoman invader, but their empire fell to pieces, passing first to Lithuania, then to Poland, and finally being divided between Austria, which obtained Eastern Galicia, and Russia, which obtained the lion's share. The nationalist movement was late in waking, but about the beginning of the twentieth century it showed signs of becoming a force. The Russian Government, after its customary manner, endeavoured to suppress the propaganda; the Austrian Government was more wily. It saw that the Ruthenes who owed allegiance to Vienna could hardly be a serious danger, since their numbers were small, and they were confined to the farther end of a remote province; on the other hand, the Ruthenes disliked the Poles, and it might be useful to play them off against the Poles in Galicia. That cunning policy was adopted; the Ruthenes were patronised, a Ruthene review, published in German, was founded in Vienna, and for a time the new nationalist movement basked in the sun of Imperial and official favour. Presently other advantages became apparent to the authorities. The Ruthene movement could be used as a means of embarrassing Russia by increasing the tension already existing between the Ukraine and the Government at Petrograd. The contrast between the position of the Ruthenes in Galicia and in Southern Russia was emphasised; the Ukraine movement across the border spread, newspapers, novels, histories appeared discussing the Ruthenian national ideal—all of which was extremely awkward for Russia, and by no means awkward for Austria. A great deal of money must have been spent in encouraging this movement, which in time reached out far beyond Austria and Russia. A gentleman of Polish parentage lectured to English audiences under the pseudonym of "Bedwin Sands" on the wrongs of the Ukraine, which had hitherto been a *terra incognita* to the stolid Briton; presently he wrote a book on the subject, which was beautifully illustrated and sumptuously produced. When war broke out in 1914, this gentleman did not find it convenient to remain in London to pursue the good work of enlightening us on the Ukraine movement; he migrated to New York. In the leisure which he could spare from Ukraine propaganda he was frequently seen in company with his intimate friend, the head of the Wolff Bureau in London—a Prussian gentleman who may or may not have been absorbed in the nationalist movement of the Ruthenes, but whose more visible activities were connected with the German Embassy and von Kuhlmann.

The Ukraine movement has certainly made headway since the Russian revolution. It has demanded something more than autonomy; its Provisional Government, set up at Kieff, appears to be reaching out for independence. If that were attained, there would be a new state in Europe, reaching from the Austrian frontier to the Black Sea, built up of a sturdy peasant stock—the Ruthenes are an agricultural people—and Russia's access to the south, to the Black Sea and the Balkans would be cut off. Petrograd would hardly count for more in the Balkan capitals than Stockholm.

Obviously, therefore, it is to Germany's interest to foment this unrest, much of which is legitimate and the natural consequence of past Russian policy, in the Ukraine. And not in the Ukraine only. Germany would like to see Russia split up into a series of little states—a nominally independent Finland, which would cut Russia off from the west, a nominally independent Lithuania, a shrunken and dependent Poland. Germany herself is contemplating, as one of her statesmen admitted a few days ago, an "enlargement of her eastern marches," which means, presumably, an expansion of East Prussia by the annexation of the Baltic Provinces; were that secured, and Russia split up into a collection of little states, none of which were strong enough to stand alone against pressure from Berlin, Germany could make terms with the Western Powers with equanimity, for she would have won the war on the Eastern front, and the menace from Russia would be removed for a century at least. Moreover, she would strengthen her internal political position, for her Socialists, both tame and wild, were convinced of the defensive war theory by the insistence upon the plea that Russia had attacked Germany. They would be convinced that Germany had repelled the attack and had then proceeded to make a magnanimous peace, after liberating the Russians from servitude. The German Socialists have swallowed so much that they would find no difficulty in digesting that agreeable pill—and supporting the Government thereafter.

No doubt the Central Powers have provisionally apportioned the spoil. German manufacturers would then have a free run in Russia, and the securing of that great open market would do much to pay for the war, and compensate the commercial interests for the loss of trade in the rest of the world. Meantime, Germany, through Austria, would dominate the Balkans, for Vienna would no longer have to fear that Petrograd would intervene in Serbia or elsewhere. Indeed, there would be no Serbia left on the Austrian assumption, and now that Greece has rejected "the husband of the Kaiser's sister" and declared war upon the Central Empires, Austria's last scruples against gratifying her old desire to seize Salonika are dispelled. She has pursued that ambition for a generation and more, and no doubt she calculates that a "give-and-take peace" on the Michaelis model may end in her taking Salonika in return for giving the Ukraine—her blessing.

Hence the present peace manœuvres. Germany is content to postpone the decision in the West for a generation, and even perhaps to give up Belgium, if she can secure peace (the Pope's offer seems explicit on that score), provided she can rely upon the war-weariness of the Western Powers to snatch a victory in the East and its consequences, the elimination of Russia and the domination of that country and the Balkans by Germany and Austria. It is an ingenious scheme, not unworthy of a shrewd diplomacy.

A. Wyatt Tilby.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.
For particulars, apply to E. DENISON ROSS, Director.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Serbian Deportations. August 16.

Mr. W. THORNE asked the Secretary for Foreign Affairs whether he had any official information showing that the Turkish Government had ordered 8,000 young Serbian girls into Turkey; and whether anything could be done in the matter.

Mr. BALFOUR, in reply, said: I have no official confirmation of the report alluded to by the hon. member. I have no doubt that, if true, the Serbian Government will take whatever action is possible, and I can assure them that, if they desire it, they will receive all support from his Majesty's Government.

English Prisoners in Turkey.

Mr. J. F. HOPE (Lord of the Treasury), replying to Mr. HUME-WILLIAMS, who asked whether Turkey had yet consented to allow a representative of the Geneva Red Cross to visit the camps in which English soldiers are imprisoned, said that the request for permission to visit camps was addressed by the International Red Cross Committee to the Turkish Minister at Berne. No reply had, so far as his Majesty's Government knew, yet been received, nor had the Netherlands Minister at Constantinople yet succeeded in obtaining similar permission.

The Troops at Aden.

Colonel YATE asked the Secretary of State for India what arrangements are now in force for the provision of the troops at Aden and other places on the Arabian coast of an adequate supply of fresh vegetables and ice?

Mr. PRATT: As regards Aden, the bulk of the vegetables are imported from Bombay, but the Government of India were arranging last summer to restart the old Commissariat Garden at Sheikh Othman. The free issue of ice was sanctioned in October last. I have no information regarding the other places on the Arabian coast, but I will inquire.

Allied Policy in the Balkans. August 17.

Major D. DAVIES asked for information regarding the results of the conferences of the Allies on war policy in the Balkans. On behalf of the friends of Serbia, he expressed their gratitude to the Prime Minister and the Under-Secretary for Foreign Affairs for their speeches at the luncheon to M. Pashitch. Those speeches were a renewal of specific pledges, but the speech of the Prime Minister was a great advance on some earlier speeches. If the promises made to Serbia were redeemed, she would become again, as Mr. Lloyd George had described her, "the keeper of the gate in the East," and hold it to the end. In regard to the health of our troops at Salonika, he asked whether, before the troops went there, the medical authorities were consulted and measures taken to guard against malaria. He asked whether there was an Allied Staff at Salonika, whether the War Cabinet were satisfied that overland routes were being used as far as possible in order to economise tonnage, and whether everything possible was being done to keep in close touch with the Serbian General Staff, who had the most intimate knowledge of fighting in the Balkans.

Mr. CARR-GOMM called attention to the question of recognition of the services of the officers and men of the Salonika force. He protested against complaints that the offensive was not taken in the Balkan theatre of war. It was unfair to ask infantry to go forward to attack in such a country without the artillery and aircraft support which infantry had on the Western front. Then, when a position had been taken in mountainous country, it was often impossible to dig in owing to the rocky nature of the ground. He thought the Government ought to make some statement in regard to the allegations brought against the Salonika troops. Great difficulties beset that expedition. He agreed, however, that, after making all due allowances, we seemed never to have succeeded in making up our minds as to our exact plan of action. There had been a lack of coherence in seeking our objective. One had a slight fear that, as on the Tigris, there was a certain divided responsibility—in this case between the Foreign Office and the War Office.

Mr. BALFOUR: My hon. and gallant friend who has just sat down has called upon me to vindicate the character of the British troops on the Salonika front. I confess when I came down to this House this afternoon it never occurred to me that anybody at any time had called in question either the discipline, courage, or competence of the British force which is now on that front, and maintaining the honour of the British flag with the same courage, with the same high qualities with which the British soldiers are maintaining the honour of the British flag on other fronts. My hon. friend referred to some debate in which rather wild charges appear to have been tossed about in the House in regard to these troops. If I understand him rightly these charges were immediately, categorically, and emphatically repudiated by the Under-Secretary of State for Foreign Affairs. I do not know why the defence of the soldiers on the Salonika front should always fall on the Foreign Office, but the defence appears to have been undertaken with considerable success by my noble friend on the previous occasion. I think I can certainly say with confidence not less than he showed that the Government are entirely in agreement with my hon. and gallant friend, that the attempt to discredit either the character, discipline, or courage of the British troops on the Salonika front has no foundation whatever.

After repudiating the suggestion that there was any divided responsibility between the War Office and the Foreign Office, Mr. Balfour continued:—

Not only has the Foreign Office nothing whatever to do with military matters on the Salonika front, but no British general and no British officer has control of the operations on the Salonika front. The force fighting there, as everybody knows, is a mixed force. There are Russians, Italians, Serbians, British, and French, and the Commander-in-Chief of the whole force is not appointed by the War Office and does not belong to the British Army. He is a French general of great distinction.

Mr. KING: Would the right hon. gentleman say whether there is not an Allied staff over which General Sarrail presides?

Mr. BALFOUR: I presume that General Sarrail settles his own staff with his own Government. Certainly the Foreign Office has no knowledge of these matters, and the question should be addressed to some other Department. Whether it should be another Department in this country, or in another country, is a different question.

Mr. Balfour noted that the speeches of the Prime Minister and Lord Robert Cecil at the luncheon in honour of M. Pashitch had been quoted with approval, and pointed out that those speeches represented the views of the Government.

We yield to no man and to no body of men in our admiration of the courage and the distinguished and incomparable valour with which the Serbians, amid great misfortunes, amid almost overwhelming trials, have sustained the reputation of their race. We look forward with hope and with confidence to the restoration of the Serbian kingdom under conditions which will make its future more successful and more glorious, more full of promise, than was the case in the years which preceded these great disasters. More than that it would be impossible for me to say. We share my hon. friend's hopes, and we are confident that these hopes will find final and adequate fruition.

My hon. friend apparently carried his natural and legitimate enthusiasm for the Serbian cause to the extent of thinking that the proper main front on which an attack should be conducted on the Central Powers was the Balkan front. It would be very presumptuous of me to offer observations on military strategy, but I think ——

Major DAVIES: May I interrupt my right hon. friend? I think he misunderstood what I said. What I intended to say was that the Balkan was one of the possible fronts, if not the main one.

Mr. BALFOUR: I rather gathered that my hon. friend thought that the public attention in this country—I am sure he said so—had been unduly concentrated upon the Western front, and to the loss and sacrifices on that front through the great operations that have been carried on there. It would be very presumptuous of me to offer upon a purely strategic problem any opinion to the House, but I may venture to call my hon. friend's attention to what fell from my hon. friend the member for Southwark (Mr. Carr-Gomm), because my hon. friend the member for Southwark has personal acquaintance with the Salonika front. He gave a description of that front, of its means of communication, of the character of its terrain, and other important military aspects of it, which clearly indicated that, at first sight at all events, it was not the front on which the attack could be carried on with the best hope of immediate success. I trust we shall see on that front activities successfully displayed. (Hear, hear.) But that will depend on a great many circumstances—physical, moral, international, material—and it seems very unlikely to me that in the immediate future we can expect any operations on that front on the scale my hon friend appears to desire, which would be comparable to the great operations which are now going on in France, and possibly elsewhere. My hon. friend asked me a great many questions which are purely military, and on which I am not qualified to give an opinion. But he asked one question, with regard to transport, on which I hope I can give him some satisfaction. He asked me to assure the House that every effort is being made to increase the land transport on the Salonika front in order, among other purposes, to relieve the tonnage which is now necessarily employed in supplying the troops. I can assure my hon. friend that is an aspect of the case which has not escaped the attention of any of the Allied Governments. France, Italy, and Greece have to assist. That is a policy to which we are deeply committed and which has been successfully carried out, and which I hope will produce valuable, important results in the near future.

Essad Pasha. August 20.

Captain AUBREY HERBERT asked the Secretary for Foreign Affairs whether his Majesty's Government has officially recognised Essad Pasha as representative of Albania.

Lord R. CECIL replied that the answer was in the negative.

Commissions to Indians.

Replying to Mr. Charles Roberts, who asked whether the Secretary of State for India could state the Government's decision as to the granting of commissions in the Army to Indians,

Mr. MONTAGU said: The Government have decided that the bar which has hitherto precluded the admission of Indians to commissioned rank in his Majesty's Army should be removed, and in accordance with this decision steps are being taken for the grant of commissions to nine Indian officers belonging to the Native Indian Land Forces who have served in the field in the present war and have been recommended for this honour by the Government of India in recognition of their services. Their names will be notified in the *London Gazette*, and they will be posted to the Indian Army in the same *Gazette*. The general conditions under which Indians should in future be eligible for commissions are under discussion between the Government of India and myself. I shall

Digitized by Google

in due course consult the Army Council, with a view to the introduction of a carefully-considered scheme which will provide for the selection of candidates and for their training in the important duties which will devolve upon them.

Commander WEDGWOOD: Will that training take place in India or at Sandhurst?

Mr. MONTAGU: These gallant officers require no training. They have earned their commissions on the field of battle. With regard to the future, that matter is under consideration.

A New Policy in India.

Mr. MONTAGU (Secretary of State for India) made the following statement in regard to the Government's policy in India:—The policy of his Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. They have decided that substantial steps in this direction shall be taken as soon as possible, and it is of the highest importance as a preliminary in considering what these steps should be that there should be a free and informal exchange of opinion between those in authority at home and in India. His Majesty's Government have accordingly decided, with his Majesty's approval, that I should accept the Viceroy's invitation and proceed to India to discuss these matters with the Viceroy and Government of India, to consider with the Viceroy the views of local government, and receive with him suggestions of representative bodies and others. I would add that progress in this policy can only be achieved by successive change. The British Government and the Government of India, on whom responsibility lies for the welfare and advancement of the Indian people, must be the judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility. Ample opportunity will be afforded for public discussion of the proposals which will be submitted in due course to Parliament.

Mr. ROBERTS: While congratulating the right hon. gentleman on the very far-reaching statement of policy which he has made, I would ask him whether a statement to the like effect will be made officially in India?

Mr. MONTAGU: The same statement will be made in India to-day.

Sir J. REES: When does the right hon. gentleman go to India?

Mr. MONTAGU: During the winter.

Italy and the Near East.

Mr. KING asked the Foreign Secretary whether, on the occasion of the visit of Baron Sonnino to this country, it was agreed to increase the tonnage for the service of Italy, to accept the Italian modifications in their demands for spheres of influence in Asia Minor, and to maintain the previous claims made by Italy for the Dalmatian coast.

Mr. MOLTENO also asked the Foreign Secretary whether, on the occasion of the recent conference in London with Baron Sonnino, the modification demanded by Italy in the division of the spheres of influence in Asia Minor was discussed and accepted.

Lord R. CECIL, replying to both questions, said he was not prepared to make any statement on the subject.

THE HEALTH OF THE ADEN TROOPS.

It is officially announced that returns of the health of the troops at Aden received up to July, 1917, show rather high rates of admission for the previous six months, viz., 60.01 per cent. for British troops and 30.6 for Indian troops, but they are in each case an improvement on the corresponding six months of 1916. Slight malaria and sandfly fevers are the prevailing complaints, and the more serious tropical diseases, enteric, scurvy, and dysentery, are almost entirely absent.

The figures are not considered excessive in view of the fact that during the great heat the troops have been constantly engaged in minor operations against the Turks.

ARCHÆOLOGICAL NOTES.

By JOSEPH OFFORD.

A Roman Road from Syria to the Euphrates.

At a recent meeting of the French Academy, the Belgian savant, M. Franz Cumoret, described the inscriptions upon two Roman milestones discovered in Syria a few years ago, which explain the route taken by the great Roman roadway which was constructed between Antioch and the Euphrates. These two texts were found, one between Hierapolis (now called Mimbidj) and Tell Batnan, the ancient Batnea; and the other at Sheikh Nedjar, about two hours' journey north of Aleppo, on the way to Batnea. The first monument gives the number thirteen as being its distance upon the road from Hierapolis; whilst the figures upon the other stone are obliterated. These inscriptions disclose more than the mileage, for they also inform us that the stones were erected to commemorate a work by the Emperor Septimus Severus and Caracalla in the year A.D. 197.

The date supplies the historical value of the texts, for it explains the cause for the building of the important military highway that assured rapid communication between Antioch and Mesopotamia. In A.D. 196 Septimus Severus crossed the Euphrates and captured Nisibis, and in A.D. 197 undertook his Parthian expedition. It must have been his experience of the necessity of such an important highway, gathered during the vicissitudes of the 196 campaign, that induced him to order the road to be constructed in readiness for the next war in A.D. 197, when he was to march his legions against Parthia, doubtless by the new route. The portion of the work of a classical historian, Dion Cassius, describing the Emperor's advance, has been lost, and the precise line of march taken was hitherto uncertain. The Romans, with their usual special regard for all means of communication within their dominions, carefully kept up Severus' highway, and by it Julian advanced upon his ill-fated expedition to his death; for Amminianus Marcellinus especially mentions that he went towards the Euphrates from Antioch by way of Hierapolis. By this road also a Spanish Christian lady pilgrim to the Holy Places went when she journeyed, at the end of the fourth century, to Edessa.

Through the facilities it afforded for the passage of an army later on, unfortunately for the Romans, the road was utilised by Chosroes, marching from east to west, when he invaded Syria and sacked Berea and Antioch. Under the enlightened earlier Arab Khalifs the road was still kept in repair, but with the arrival of the Turks it was neglected and fell into disrepair. Finally it became entirely obliterated in many stretches, and remained forgotten until the discovery of these two memorial inscriptions have thrown light on its conception and creation, and have served to remind us of its many centuries of existence.

"ROMÂNUL."

A group of Roumanian journalists and publicists now residing in Paris have undertaken to issue a weekly paper, which will supply general information relating to Roumanian affairs, and thus contribute to place on a more solid foundation the sympathy which has always united the French and the Roumanian peoples. The first issue of the *Românul* appeared on July 26. The text is mainly French, with occasionally Roumanian articles and notes, and interesting illustrations of Roumanian places and events. The well-printed paper has evidently set itself a high journalistic standard, and by its very moderation should prove a valuable means for the creation of a better understanding for Roumanian problems and affairs. We wish that interesting publication a fruitful career, and recommend it very heartily to the attention of those interested in Roumania and her people.

(The editorial offices of the *Românul* are at 7, Rue Meyerbeer, Paris. The annual subscription, post-free, is 15 francs.)

THE SALONIKA ARMY.

In a communiqué issued recently the following reference was made to the health of the British troops at Salonika:—

The health of the troops shows a marked improvement. In proportion to the strength of the force admissions to hospital during July, 1917, show a reduction of one-third compared with July, 1916, and deaths from all diseases a reduction of nearly two-thirds. Cases of malaria are slightly fewer than last year, in spite of the fact that a considerable number of cases are occurring among men who contracted the disease last year. Dysentery and diarrhœa are appreciably less prevalent. The admission rate for fevers other than malaria shows a reduction of nearly four-fifths.

THE PRESS ON THE NEAR EAST.

Egypt in War-Time.

Sir Malcolm McIlwraith writes interestingly of Egypt in war time in the *Fortnightly Review*:—

In almost every letter one receives from friends in Cairo or Alexandria one is told that, were it not for certain restrictions on travelling, both in the interior and abroad, they would scarcely know that the greatest war in history is still in full progress within a few days' steaming from their ports. Such are the natural resources of that fertile land—thanks, mainly, to the British engineers and their mastery of irrigation problems—that, in spite of the German and Austrian submarines in the Mediterranean, there is hardly any food scarcity or menu restrictions of the kind to which we are becoming accustomed here, and such as most of our Allies are undergoing in a far more drastic degree. The general cost of living has increased but little in the last two years as compared with conditions at home, and few commodities of domestic use have become unprocurable. And the only really great advance in price is that of coal—which, at one time, was as high as £8 a ton!

All the fears of disaster that the early days of the war conjured up, particularly in regard to the stoppage of the tourist traffic, were quickly dissipated when the Imperial troops began to reach the country. The writer depicts the altered conditions very graphically, and then gives another side of the picture:—

From the point of view of the Egyptian official, on a tour of inspection, the altered conditions were by no means devoid of charm. As to the principal Upper Egypt towns, notably Luxor and Assouan—those favourite winter health resorts of the rich and leisured classes from all the countries of the old and new world—they wore an aspect very different from their ordinary appearance. Luxor, usually crowded at that time of year with beautifully-dressed ladies and their attendant straw-hatted and white-trousered cavaliers, was full of convalescent, blue-suited soldiers—the wounded from Gallipoli or the western desert—and of nothing else. There were, literally, no other visitors, and there was only one small hotel open, where occasional officials and officers from Cairo could be accommodated.

As for Assouan, it was like a city of the dead. No hospital had been established there, as it was considered to be too far up the river, and not a soldier or a visitor of any kind was to be seen.

The Egyptian Capitulations Commission.

Of the Commission appointed to study the legal and other changes involved by the impending abolition of the Egyptian capitulations, Sir Malcolm McIlwraith writes:—

The composition of this Commission is typical of Egyptian administration. It consists of three Native Ministers, one of them being President, three British Advisers, one Frenchman, and one Italian—these last two being both eminent lawyers. So heterogeneous a composition of so vital a Commission in the new British Protectorate may possibly occasion some surprise, but in reality it is perfectly right and proper.

The Commission itself is small and somewhat ultra-governmental—seven functionaries and one judge. It might, perhaps, with advantage, have been of a rather more representative character, but it is satisfactory to note that it is empowered not only to co-opt other members, but to call for suggestions and criticisms from any qualified persons or bodies, and to publish in advance drafts of any laws or regulations which it intends to propose, with a view to obtaining the fullest amount of information on the points in question. Doubtless the various Chambers of Commerce will be consulted. It may also prove advisable to submit the proposals, in some form, for the opinion and recommendations of the Legislative Assembly, or any other representative Chamber which may take the place of that body after the war. The present Assembly contains several men of ability and special knowledge, whose criticisms, especially under the altered political conditions, would probably prove helpful to the Government. There is room in Egypt for a larger number of able and independent critics of Government measures, provided they never allow the principle of systematic opposition to official proposals to exceed legitimate bounds of conduct and speech.

Babylonian Civilisation.

A graphic account of the commercial development of Babylonia at the height of its prosperity is given by Mr. Bernard Maimon in the *World*:—

Already in the time of Hammurabi there was a continual intercourse between the different towns in the North and South, stimulated by the requirements of products which were peculiar to each, all of which were situated either on the Euphrates or on the principal canals. It is this king who promulgated laws determining the relations between sellers and buyers, and the forms to adopt in order to make the transactions between them binding. All business had to be done in writing—no other was considered valid. Most business was negotiated at the gates of the city walls where the caravans were camping, but important business was transacted in the precincts of the sanctuaries, the priests acting on behalf of their gods, to whom, in principle, all land belonged, as also the free and slave labour, who had virtually the monopoly of the produce of the soil, as they had the monopoly of the cattle and sheep who were grazing on fields under their control and led by shepherds they supplied. The priests were scribes at the same time. They knew the style of contracts for each individual transaction, and they had witnesses at hand whose signatures were obligatory. As a rule, each free man carried his seal cylinder on a string round his neck. He who had none, pressed his finger-nails into the clay and the scribe added—"Instead of a seal he impressed his finger-nails in my presence." If history is to do justice to the Babylonians it should then record postal communication as one of their numerous inventions. There was a regular postal system between the southern and northern parts of Babylonia, between Sumir and Accad, certainly as far back as 2,000 B.C.

Articles to Note.

"With the Serbian Forces," by F. Fox, in *The Field*.

"A Jugoslav Federation," by Sir Thomas H. Holdich, in the *Fortnightly Review*.

THE SALONIKA FIRE.

As a result of a conflagration which broke out at Salonika in the afternoon of August 18 practically two-thirds of the town have been destroyed. It is reported that 100,000 persons, including 42,000 Jews, have been rendered homeless. The Government buildings and the Church of St. Sophia have been saved, but it is reported that all the banks, business premises, hotels, and most of the shops have been destroyed. The Greek Government is discussing measures for the relief of the sufferers, for which a large credit will be voted.

The Serbian Relief Fund announces that it has received the following cable from their representative at Salonika:—

All goods in our stores completely destroyed by fire and should be replaced. Will you authorise me to purchase from military authorities foodstuffs in order to carry on our work? Personnel all safe.

These goods, it is pointed out, comprised some hundreds of bales of clothing and large quantities of foodstuffs, valued at many thousands of pounds, which were destined for the hospital, wayside dispensaries, canteens, orphanage, and distributing centres for clothing and food, which are some of the extensive relief operations of this Fund, among the civil population in Southern Macedonia. A special appeal is, therefore, made for funds to replace the losses caused by the fire.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

An interesting review of the foreign trade of Russia in 1916 appears in the official Consular reports of the United States Department of Commerce at Washington. A good many people will be surprised to learn that the imports in the year exceeded those of 1915 by 100 per cent., and that as the figures given do not include war material the value of goods actually received must have been much in excess of the value recorded. In view of all that has happened it is significant, I think, that Austria-Hungary was a considerable supplier—to the extent of nearly two millions and a half of roubles, while Germany contributed nine millions to the import value, Turkey also finding mention.

***

A marked decline occurred in imports of raw cotton, but this is apparently accounted for by a shifting of trade routes. Thus the quantity received at European Russian ports declined from 360,000,000 pounds in 1913 to 28,000,000 in 1916, but imports over Asiatic frontiers increased from 74,000,000 to 198,000,000. Owing to increased prices the total value only showed a decrease of 36 per cent.—not an indication of prosperity, but of an additional handicap on the Russian textile industry.

***

I referred some months ago to the establishment at Salonika of a commercial institution which was designed to develop trade relations between the Allies at the end of the war. The concern appears already to have begun its work and is attempting to secure information from manufacturers. The question of prices cannot be discussed at the moment, of course, but requests are being circulated for samples, particulars regarding weights, catalogues, etc. Serbian members of the institution are particularly active, as will be seen from an extract of a letter from the Consul-General, which is printed elsewhere in this issue of THE NEAR EAST.

***

I hear that owing to a recent (and temporary) demand from Egypt the prices for Mocha coffee in the Aden market advanced by something like 33 1-3 per cent. It is pointed out that owing to shipping conditions the Egyptian coffee trade, which was formerly in American hands, has been diverted to Aden, with its easier transport facilities for Egypt. At the beginning of the year superior grades of Mocha in the Aden market sold at Rs.9.8 a maund of 28 lbs. In June lsat it was up to Rs.13 8a., and is still rising.

***

An interesting return has been made available recently of Swiss trade in 1915. Egypt, I see, increased both exports and imports. Roumanian imports were down by nearly half, but exports were better by nearly £150,000, while Algeria and Tunis showed increases on both sides of the ledger. Germany maintained its position at the top of the list of contributing countries, but exported £2,400,000 less than in 1914; Swiss exports to Germany, however, advanced by nearly £7,000,000. In the same way Austria-Hungary also decreased her exports, but bought nearly £4,000,000 more of goods than in the preceding year. I wonder where all the extra merchandise came from originally and what it consisted of!

***

The returns of the foreign trade of Egypt for the first half of 1917 are published in THE NEAR EAST to-day, and as will be seen the result of operations was satisfactory. Exports continued to increase, while imports, less in value certainly, were not much behind those of previous years. The net result was a decline of £581,473 in the value of imports, and an increase of £4,600,226 in exports—figures which show an excellent favourable trade balance. It is interesting to note, too, that Greece and Persia both increased their sales to the Land of the Nile.

***

I referred in these Notes last week to the excellent address delivered by Mr. Macleod, British Consul at Fez, at the inaugural meeting of the British Merchants' Morocco Association. I overlooked at the moment an interesting account he gave of an interview he had with a deputation from the Oran Chamber of Commerce. "They all said" (Mr. Macleod stated) "that just now the one British article they traded in was *coal*: but they would be perfectly willing to take up any British business which offered prospects of profit." Mr. Macleod emphasised the necessity—from a general point of view for the development of a big trade—of the "establishment of British firms on the spot." I have consistently advocated this in these Notes.

***

Scarcely a limit can be placed on the trade openings in the country, and the three principles which, it seems, are indispensable are co-operation, cheapness, and due appreciation of the fact that a market is not merely a geographical or political area, but rather a group of persons who are able and willing to buy. These are facts which British manufacturers and merchants have not always heeded in the past; they have an important and constant bearing on trade, and they cannot be emphasised too strongly.

***

I wonder how many of the British firms that aspire to strengthen pre-war trade relations, or to open up new relations with Baghdad, understand the conditions that prevail out yonder. Mr. C. F. Brissel, the United States Consul in the city of the Khalifs discussed the question recently in a report which he presented to his department—the document is summarised elsewhere in this issue—and I am interested in his view that economic pressure has had much to do with the development of the enormous and complicated credit arrangements which were ushered in after the advent of German traders, who, indeed, have been blamed pretty generally for the long and extensive credit given in the Persian Gulf.

***

Assuming that at the outbreak of the war something like £300,000 was out at credit with local traders, it is estimated that that sum represents a large "proportion of the capital of many of the firms operating in the city, including the personal funds of many business men and others." This may, or may not, be true—I am inclined to think it is not quite accurate—but it certainly shows that there is need for reform, and that British merchants will do well to devise a way of re-inaugurating a cash-on-delivery business. Some credit will have to be given, of course, but it ought to be given with a wiser discrimination than was displayed in the bad old days of Turkish ownership.

***

One of the interesting points raised is that of the moratorium. When the war broke out, and this trade device was adopted, it was made to apply only to merchants in the city, and it was declared that five per cent. per month was to be paid. British business firms were all closed, of course, when Turkey took the wrong turning, and no debts were paid to British nationals. How many of the debtors will be found when the time comes for a readjustment one may wonder; and of those who will be there, how many of them will be solvent? An interesting, but uncomfortable meal for reflection!

ADVANCE, EGYPT!

Excellent Trade Returns in First Half of 1917.

(From Our Own Correspondent.)

Cairo, July 30.

The Customs returns for June published this week show a satisfactory state of affairs; exports continue to increase, while imports are very little behind previous years. Imports during June came to £E2,594,455 and exports to £E2,835,114, as against £E2,673,820 and £E1,498,230 respectively in June, 1916. During the half-year the figures were £E13,830,277 and £E20,921,955, as compared with £E14,411,750 and £E16,321,729 in the corresponding period of 1916. Thus, whilst imports have fallen off by the very small amount of 4 per cent., exports have increased by nearly 30 per cent.

The principal imports during the half-year were:—Preserved meat, £E633,738; skins and tanned goods, £E138,017; rice, £E245,300; flour, £E279,652; coffee, £E272,349; raw sugar, £E147,419; tea, £E170,856; petroleum, £E314,144; stationery, £E264,165; coal, £E1,515,918; natural indigo, £E90,195; medical drugs, £E128,934; chemical manure, £E374,651; worked iron and steel, £E495,257; machinery, £E132,531; tobacco, £E993,160; textiles, £E5,016,322; cotton threads, £E293,599; cotton tissues, £E3,281,090; wool tissues, £E257,962; silk tissues, £E128,884; sacks, £E236,722; ready-made linen and millinery, £E186,156; beer, £E88,756; liqueurs, £E97,211.

Chief Increases.

Under imports, the chief increases were:—Preserved meat, £E531,343; rice, £E220,444; raw sugar, £E147,113; tea, £E102,721; natural indigo, £E25,845; chemical manures, £E175,078; cotton tissues, £E651,837; tobacco, £E559,597. On the other hand, the following decreases were recorded:—Flour, £E89,880; jams and preserves, £E188,392; beer, £E238,419; liqueurs, £E149,470; petroleum, £E88,146; coal, £E681,216; medical drugs, £E72,568.

The principal exports during the six months were:—Eggs, £E304,399; skins and tanned goods, £E238,287; cotton seed, £E1,222,545; cotton cake, £E449,539; onions, £E271,750; cereals, £E431,856; sugar, £E523,930; gum, £E147,821; cotton seed oil, £E68,877; cotton, £E16,700,421; wool, £E92,724; and cigarettes, £E171,762. The chief items showing increases were:—Cotton, £E4,922,573; cotton seed, £E294,532; cotton cake, £E242,603; gum, £E137,085; cotton seed oil, £E59,787; whilst the decreases were:—Eggs, £E105,664; cereals, £E840,906; alcohol, £E125,037; wool, £E82,030.

Pre-War Figures.

A comparison with pre-war figures, for example, with those for the first half of 1914 shows that imports up to the end of June this year amounted to about the same as three years ago, whereas exports had increased by over 35 per cent. This is, of course, in regard to value. The same does not apply, however, to quantities. Except in the case of some of the exports, practically all the articles passing through the Egyptian Customs show a marked decrease in quantity, and the table at foot of page throws an interesting light on the manner in which, in this respect, the war has affected the foreign trade of the country.

High Prices.

The above figures are, I think, sufficiently striking to show that, albeit Egypt is receiving the full benefit of the world's high market prices for whatever she can export from her own production, she is at the same time having to pay very heavily for whatever she takes from abroad, and that even then, if one takes pre-war figures as the normal, she is not obtaining sufficient for her requirements in some of the most essential articles.

Turning now to the share taken by the different countries, we find that Great Britain sent goods worth about one million less than during the first half of 1916, but that this diminution was more than made up by the British colonies, who between them sent £E1,147,000 more. All the other countries exported less to Egypt with the exception of Chili, Greece, China, Persia, and Japan, all of whom showed marked improvement. On the export side, Great Britain increased her share from 47 per cent. to 55 per cent. She took half the cotton, all the eggs, cotton-seed, and cake, 90 per cent. of the onions, and 17 per cent. of the gum. India also improved. Russia, Switzerland, and America all increased their purchases, mainly cotton. The only countries showing any important diminution were Spain, France, and Japan.

The Sudan.

Trade between Egypt and the Sudan during the half-year has been very brisk. Imports into Egypt more than doubled—£E1,111,905, against £E517,292 at the end of June, 1916; and exports to the Sudan rose from £E559,780 to £E678,345. The principal imports into Egypt (figures in brackets are for the corresponding period of 1916) were:—Livestock, £E189,478 (£E72,881)—the number of sheep trebled; skins and tanned goods, £E29,618 (£E11,523); maize, £E297,310 (£E47,111); sesame, £E136,427 (£E106,069); ground nuts, £E43,646 (£E12,225); gum, £E46,241 (£E16,687)—the quantity trebled; cotton, £E210,099 (£E125,178). The chief exports from Egypt were:—Flour, £E14,116 (£E9,737); sacks, £E33,651 (£E10,693); sugar, £E160,865 (£E145,531)—the quantity fell off by 20 per cent.; and cotton tissues, £E155,399 (£E113,844).

The *Neue Freie Presse* (Vienna) states that after supplying the home population and the Austrian and German armies, Roumania will be able to send 100,000 wagon-loads of wheat, barley and maize to Germany and Austria-Hungary.

FRUIT IN BULGARIA.

Acreage Doubled in Less than Seven Years.

No other country in South-Eastern Europe offers such an excellent field for extensive and profitable fruit growing as Bulgaria, writes Mr. D. I. Murphy, United States Consul at Sofia, in a recent despatch to Washington. Better soil or more favourable climate can hardly be found anywhere than in the region about Kustendil. Fruit grows in abundance throughout Bulgaria, but in the Kustendil section greater care is given to its culture, with much better results. While the apples, pears, peaches and plums grown there are almost as fine as those raised in the Rhine Valley or the Southern Tyrol, they could be greatly improved if modern methods of cultivation were introduced.

The Kustendil region is the only one in Bulgaria with a large area of orchards in close proximity to each other, and it is the only one with definite statistics relative to fruit culture.

Acreage Under Fruits.

The earliest records are those of the year 1897, when the area planted in fruit trees in the Kustendil district was 11,317 acres. By 1911 this area had increased to 24,390 acres. In 1911, the latest year of which there is record, the orchards in that section consisted of 35,755 separate holdings, in the hands of 34,491 proprietors, Bulgaria being then, as now, a country of small landowners. It appears that fruit trees in 1905, 1910, and 1911 were classed as follows:—

Year.	Plums. Acres.	Apples. Acres.	Other fruit. Acres.	Total. Acres.
1905 ..	10,820 ..	120 ..	6,612 ..	17,552
1910 ..	12,218 ..	205 ..	7,895 ..	20,318
1911 ..	12,060 ..	3,225 ..	9,105 ..	24,390

These figures represent but a small fraction of the fruit-growing industry in Bulgaria. From general information, it is certain that since 1911 the acreage has increased at least 100 per cent. The average fruit production for the period 1900-1910, according to the Director of Statistics, was approximately as follows:—Prunes, 50,000 tons; apples, 5,000; pears, 3,500; cherries, 800; apricots, 100; and peaches, 500 tons.

No reliable information can be gathered as to prices during that period.

Imports, Canning and Preserving.

While the entire crops were consumed in the country, they were not sufficient for its needs, as will be noted from the following table showing the imports of fruits:—

Year.	Fresh fruits. Tons.	Dried fruits. Tons.	Other fruits Tons.
1895	542	23	196
1900	323	30	27
1905	1,058	120	38
1910	331	273	60
1911	85	6	8

There are no canning or preserving factories in Bulgaria. The single establishment that was kept running at Philippopolis for a time has discontinued operations, and no attempt has been made in the section about Kustendil in the way of canning or preserving. There is a fine field in Bulgaria for the introduction of modern methods of fruit growing; likewise for the establishment of canning and preserving establishments, with the aid of capital.

Imports.

	1914. Quantity.	1914. Value.	1917. Quantity.	1917. Value.
	Tons.	£E.	Tons.	£E.
Rice	29,779	253,342	14,543	245,300

SERBIAN TRADE.

Preparation for After-the-War Campaign.

The Serbian Consul-General at Salonika wrote recently to his American colleague:—

The Royal Government, taking into consideration the precarious state in which we shall find our territories after a long occupation by our enemies, and animated by the desire to provide for the first necessities of our population, has taken the decision of establishing in Salonika an economic and military direction, a common institution of the Ministry of Commerce and Agriculture and the Ministry of War, with the task of helping commerce and industry, by laying a solid basis for the development of the relations, already close, between Serbia and the Allies during and after the world war.

The economic and military direction will, through its work, encourage agricultural production, lend its co-operation to the organisation of the flour-mill industry, to forest and mine working, with a view of providing for the most urgent needs of the army and population, and will assist the Ministry of Commerce and Agriculture in order to obtain for the country the most indispensable goods.

In addition to that, by gathering data relative to the agricultural, commercial, and industrial resources of our Allies, the economic and military direction will contribute for a large part to the extension of relations between our tradesmen and those of the Allied countries.

I have the honour to request you to put to the disposal of said direction the addresses of all commercial corporations, enterprises, manufacturers, and exporters in order that they may be able to gather the information necessary to their working.

Among the articles of principal interest to the association, which is termed La Direction Economique Militaire Serbe, are electrical apparatus, groceries, cotton goods, shoes, drugs and pharmaceutical articles, iron and steel, locomotives and cars and railway material.

LANCASHIRE COTTON.

Little Change in Conditions in the Market.

(From Our Own Correspondent.)

Manchester, Thursday.

The conditions prevailing in the market during the week have not shown very much change. A miscellaneous business has been done in certain quarters, but very few producers have met with any real encouragement. The feeling is growing that lower prices are about to be experienced in raw cotton rates, as crop advices are more favourable, but it is doubtful whether yarn and cloth will be much cheaper to buy even if values decline to a considerable extent in the New York and Liverpool markets.

Owing to representations made to the Cotton Control Board, an alteration has been made in the system of levies for those spinning firms who decide to run more than 60 per cent. of their machinery from the beginning of next month. Instead of such mills paying penalties for the full quantity of machinery, levies will now be required for spindles worked beyond the 60 per cent. The total amount received will probably be much the same as under the original scheme, but the scale of charges will be more equitable.

The Egyptian cotton crop is understood to be making steady progress, and although the plants have still to pass through a critical period, there are hopes of a fairly large output.

Egyptian yarns remain very irregular. The difference in prices quoted for similar counts and qualities is surprising. Buying has not been at a standstill, but transactions of weight have been isolated. The undercurrent of demand in piece goods for Egypt keeps up fairly well, but increased difficulties are now being experienced in arranging sales. More business would undoubtedly be done if shipping arrangements were not so awkward.

Grey shirtings for India have been slow of sale, and only a miscellaneous business has been done in lighter materials.

China has given a little support in bleaching cloths, and some fair lots have changed hands in a variety of goods for Singapore and the Straits Settlements. In view of the uncertain outlook, some manufacturers have got as much work to go on with as they care for, and prices all round have been firmly held.

American yarns have moved off slowly from day to day at very irregular rates. Particulars against old contracts have been pressed for by producers of medium numbers. A fair business has been offering in single and two-fold yarns for India.

BULGARIA'S SILK INDUSTRY.

Mr. Murphy, United States Consul at Sofia, gave an interesting outline of the silk industry in Bulgaria in a recent report.

The first silk factory in Bulgaria was established at Stanimaka about 1888, he writes. The modest capital invested, which was entirely American, was insufficient, and after struggling for a few years the establishment was forced to close. At that time spun silk had to be imported, the silkworm, the culture of which had been a prosperous industry in Bulgaria for a century, having become practically extinct from the ravages of the pebrine.

Other factories started up later with more success, keeping pace with the revival of silkworm culture. These establishments, three of which are located at Adrianople and two at Dimotika, have enjoyed a fair degree of prosperity. They turn out a good quality of silk, which is almost entirely disposed of in the home market. There is every reason to believe that, with sufficient capital and the application of modern methods of production, the silk industry of Bulgaria would become a most profitable industry.

Favourable Conditions.

The conditions are most favourable for raising silkworms—an ideal climate and splendid groves of mulberry trees covering many miles of territory. Besides, the Government gives an annual subsidy to the grower of 3 dollars for every hundred mulberry trees, and has established special courses of study in the silkworm culture at the National Gymnasia at Vratza and Sadovo. It has likewise established cocoon markets at Philippopolis, Tatar-Pazardjik, Adrianople, Svilen, Xanthi, Soflu, Dimotika, Vratza, and several other places, and it is announced officially that the Agricultural Bank (under Government control) will purchase vast quantities of cocoons this year.

It is likewise officially announced that the Government, in its anxiety for the development of the silkworm industry, will proceed to take possession of all private mulberry groves that are found upon inspection to be improperly cared for, and will instal custodians who thoroughly understand modern methods of culture.

In 1878, the year of Bulgaria's liberation, over 5,000 one-ounce boxes of silkworm eggs were produced. The amount had increased in 1907 to 26,649 boxes, in 1909 to 61,367, and in the present year, from January 1 to March 31, 46,000 boxes have been the output. As for the cocoons, it has been ascertained that the production in 1887 was 280,000 kilos, valued at £26,920; in 1897, 500,000 kilos, valued at £38,480; and in 1907, 2,000,000 kilos, valued at £192,300. Since that year the annual production has averaged 2,500,000 kilos, valued at £384,600. From official reports it is ascertained that fully 50,000 families are supported, at least in part, by the cocoon industry.

WHEAT IN EGYPT.

The current number of the *Bulletin of the Imperial Institute* contains an interesting article by Mr. G. C. Dudgeon, or the Egyption Ministry of Agriculture, on the "Production of Wheat in Egypt." Mr. Dudgeon is of opinion that so long as Egypt finds cotton her most remunerative crop no considerable extension of the area devoted to wheat or other cereals will take place. It is possible that by the development of intensive cultivation an increase in the yield per acre of cereals may occur, though this increase is hardly likely to do more than keep pace with the growing consumption of wheat and other cereals in the country itself. It is interesting to note that in 1914-15 there was for the first time a surplus of cereals of about 27,475 tons produced in Egypt. This appears to have been used for the military forces in the country.

For BUILDING UP your HEALTH take ("The best PICK-ME-UP.")

ENGINEERING NOTES.

Agricultural Machinery for Greece.

A correspondent writes that as a result of Thessaly having now returned to normal conditions, the demand for agricultural machinery and implements this autumn and next year will be very great. The statement is quite correct, although the fact is that not only in Thessaly, but in all agricultural districts of the Balkan States there has been an unsatisfied demand for such machinery from the time the Balkan war ended. The remarks of the correspondent, however, as regards the prevalent system of agriculture in Thessaly, may be discouraging to manufacturers intending to do business in that market; for in a country where "the prevalent system is primitive to a large degree, and there is *now* a desire on the part of farmers and landowners to discard the old wooden plough, which to-day is practically identical with the plough that was used there 3,000 years ago!" the prospects of introducing modern machinery and implements, and doing business, are not so very hopeful as in a country where modern systems of agriculture, and up-to-date machinery are well understood and used. And such, as the latter category, is Thessaly. At the time of her annexation to Greece in 1882, the very extensive lands and large fertile estates belonging to Turks were bought by rich Greeks living abroad. These hastened to send there competent engineers, agriculturists and practical men, with the most modern agricultural machinery and implements, mostly of British manufacture, introducing, thus, new systems of cultivation, machinery and practices which have ever since been followed by other landowners and farmers in that province as well as in other districts of Greece with success. Ploughs made by well known firms at Ipswich, Lincolnshire, Bedfordshire, Suffolk, etc., have soon replaced the plough of Heriod to which the correspondent refers above, and which perhaps is still being used in some out of the way corner of Thessaly by poor farmers. The monopoly of the British plough, however, was of short duration. The indifference, to say the least, of their manufacturers gave ample opportunity to their German competitors to step in and capture the plough market in Thessaly, as well as in other parts of Greece, and the Americans to almost monopolise the harvesters of all types, while great Britain is still leading in the supply of thrashing machines.

There is undoubtedly a great demand in Greece for ploughs of all classes, harrows, sowing machines, harvesters, thrashing machines, flour mills (for fine country flour) and small tractors, and as the time when farmers and landowners realise their crop is approaching there may be a special demand for prompt delivery on cash terms.

Geology of Oilfields.

From geological evidence the following explanation of the petroleum formation in England appears to be the most rational. Upwards of a quarter of a million years ago beds of sand accumulated in shallow water near their existing continents, just as at present sand is being deposited round the English coasts. In many cases decaying animal and vegetable refuse was buried along with the sand, and, after many centuries, the whole accumulation was submerged deep in the sea by *some* great earth movement, compared with which modern earthquakes are insignificant. Deposition still went on, but the character of the deposit was changed, very fine silt being deposited instead of sand. The layer of silt and mud, after an enormous lapse of time, formed beds of clay and shale. It may be mentioned that a similar process of deposition is going on to-day, sand being deposited near the coast, while fine mud and silt are carried by ocean currents into deeper water before they fall to the bottom. In the course of hundreds of centuries the animal and vegetable refuse, protected from contact with air, has undergone a complete chemical change, the chief result of which has been the formation of petroleum and the natural gas associated by it. An impermeable layer of shale or clay on top of the oil-bearing sand is necessary for the accumulation of petroleum, otherwise in the course of centuries it would evaporate.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

MOROCCAN PRODUCTS.

Important Mineral Resources in the Spanish Zone.

Much has been done to develop the native resources of Morocco under Spanish influence. Roads have been extended, harbour and port works advanced, and a permanent exposition established in Melilla by the Centros Comerciales Hispano-Marroquies. Representatives of the Spanish Government and the Spanish press attended the opening in 1916 and commented favourably upon the display of products by 800 Spanish exhibitors.

Among the products of Melilla in 1916 were 2,975 metric tons of wheat, 3,838 tons of straw, 14,659 tons of barley, 422 tons of oats, 385 tons of corn, 58 tons of chick-peas, 142 tons of horse beans, and 187 tons of grapes. The agricultural possibilities in Spanish North Africa are excellent; fertile land is found in Larache, Rio Martin, Ceuta, and Tetuan. With slight effort, grapes, olives, almonds, and oranges could be raised in commercial quantities, and there are vast plains suitable for the cultivation of sugar beets, cotton, and tobacco.

Mineral Resources.

The mineral resources of the Spanish zone in Africa are valuable. About 100,000 tons of different ores are shipped from the various ports annually, the district of El Rif leading in this production.

In 1914 was formed the Spanish Company of Colonization, to procure capital and promote investments in all kinds of economic activity in Spanish North Africa and also encourage colonization. Rights were acquired on about 120,000 acres at Dahir del Garet in the vicinity of Monte Arrui. Four-fifths of this land is susceptible of cultivation and the remainder is adapted for forestation. The company provides for three groups of colonization, classified as agricultural colonization, public-service work and construction, and city works, each having its sub-divisions.

Much has been done to facilitate the import of Spanish merchandise into Spanish possessions in North Africa. In February, 1916, the customs duty on sugar from the Peninsula was removed, with the provision that sugar should not be re-exported without the payment of a tax. Before the war German, French, and English merchandise was imported in considerable volume, but now the Spanish exporter has less competition and the products of the Peninsula are assuming a leading place in the Moroccan market.

EXPORTS OF SULPHUR FROM SICILY

There was a marked falling off in exports of sulphur, both crude and refined, from Catania as well as from all other parts of Sicily for the first three months of 1917. The exports from Catania during the first quarter of 1916 were 40,976 metric tons as against 12,372 tons during the first quarter of 1917. During the 1916 period Sicily's total exportation was 151,382 tons as against 39,673 tons for 1917.

BAGHDAD PROBLEMS.

Some Debts that will Never be Recovered.

Writing recently on the Baghdad credit system, Mr. C. F. Brissel, the United States Consul in the city, remarked that the question of granting credit for a considerable period of time has been a noticeable and growing factor in foreign trade for a number of years past, not only in Baghdad and along the Persian Gulf, but also along the West Coast of Africa and in China. It has been stated that in Persian Gulf trade and the trade of the West African Coast, the advent of German merchants who granted longer credits than those formerly given by the British merchants is the reason for the excessive credits extended; but I am inclined to believe that economic pressure has had much to do with the development of the present conditions. Certainly Baghdad's credit system is much older than ten or fifteen years; in fact the local system seems to be an integral part of the commercial life of this city and the surrounding vicinity.

Credit in Import Trade.

There is scarcely any business done for cash except from the last seller to the consumer. Shipments of freight from England to Baghdad usually require two months; and if there is a considerable quantity of freight congested at Busreh, the delay between Busreh and Baghdad may prolong the period. There are thus two months of credit required. While there is much cash in Baghdad, it does not pass freely and the consignee of the goods in Baghdad often delays payment for a considerable period after the date his bill is due by means of a *compiala*. That is a promissory note and runs from four to twelve months, or perhaps longer. In addition, many Baghdad merchants finance their businesses by borrowing comparatively large sums from foreigners here and paying 8 to 10 per cent. interest, giving a *compiala*.

War Credit Conditions.

It is impossible to say just how much money was out in *compialas* at the outbreak of the war. The business community of Baghdad is not large, and if £300,000 was so placed it represents a very large proportion of the capital of many of the firms operating in Baghdad, including the personal funds of many business men and others in the city.

At the outbreak of the war the moratorium was declared and only 5 per cent. per month was to be paid. This, however, applies only to merchants in the city, for the agricultural population who buy oil and pumps can not pay, as their crops were not exported by reason of a military measure taken by the Ottoman Government. Then, too, the Ottoman Government closed all the British business firms and issued an order that no debts due to British subjects by Ottoman subjects should be paid.

Those who had out large sums in *compialas* thus face a most serious situation. Many men have been sent to the war and may never come back, hence their *compialas* may never be collected. The British firms who had large sums out may find, upon endeavouring to resume business, that those who owe the *compialas* are dead or bankrupt, and no collections or only small ones can be made on the papers formerly considered good.

A Glasgow steamer (name unknown, but believed to belong to the Clan Line) has been sunk in the Mediterranean through collision with an Italian vessel, the "Europe." Eight sailors were drowned; the rest of the crew have been brought to Gibraltar.

BANK OF BRITISH WEST AFRICA, Limited.

Established 1894.

Bankers to the Governments of the Colonies, of the Gambia, Sierra Leone, Gold Coast, and Nigeria.

HEAD OFFICE: 17 and 18, LEADENHALL STREET, LONDON, E.C.3.

TRADE NOTES.

The British Consul-General at Algiers (Mr. B. Cave, C.B.) reports that an agent in that city desires to obtain agencies for Algeria for United Kingdom manufacturers or exporters of all classes of textiles. United Kingdom manufacturers or exporters of textiles, desirous of appointing an agent in Algeria, may obtain the name and address of the inquirer on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2. In making application the reference number (291) should be quoted.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1917 (New Style: January 14 to June 13, 1917):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, May, 1917		3,257,804	500,000
Do. do. do 1916		2,830,202	2,475,000
Estimated Receipts for 5 months (Law of Control)		12,041,666	4,458,333
Actual do. do., 1917		12,408,121	4,952,000
Do. do. do., 1916		14,647,925	12,025,000
Difference between estimated and actual receipts for 5 months	1917	+ 366,455	+ 493,666
	1916	+ 2,606,258	+ 7,566,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average ate.

BAY SEED FOR EGYPT.

Last August a quantity of bay seed was sent from the Botanic Station, Montserrat, to Egypt and East Africa, and in connection with the seed sent to Egypt interesting results have now to be recorded. The seed was sent packed in two different ways. First of all, 5½ oz. of seed were despatched in damp charcoal, 4 oz. of water being added to 1 lb. of charcoal; shortly after, two more tins were sent, one with water at 3 oz. to 1 lb. of charcoal, and the other at 2 oz. to 1 lb. of charcoal. The seed was received in Egypt towards the end of September. Those packed in damp charcoal containing the larger proportion of water germinated *en route*, but seedlings were saved and have been established. The seed in the other packages containing lesser amounts of water arrived without having germinated, but on being sown no plants developed. No particulars concerning the supply of seed sent to East Africa have yet been received. It will be remembered that bay seed in the ordinary way very quickly loses its vitality. The method of sending germinating seed is of interest, for it is that which is made use of in sending hevea seed by post over long distances, and similarly in transporting living sugar-cane.

The Egyptian Government has nominated Sir Henry McMahon as their representative on the board of the Anglo-Egyptian Oilfields, in place of the Hon. Hugo Baring, who is serving in the British Army.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Street, E.C.,
Thursday.

There has again been a large business doing in Egyptian shares, without very much fluctuation in quotations. Government bonds are firm and unchanged, with a small business passing round the quoted prices.

In Bank shares, National Banks have not been very active, but some transactions have been effected between 16¾ and 17. On the other hand, Agriculturals have been a very active spot, with business at one time as high as 6⅞, but finishing unchanged at 6 7-16. There have also been some transactions in Anglo-Egyptians round 13, whilst several hundred Land Banks have changed hands in the neighbourhood of 6⅛.

A small business has been done in Delta Light Railway pref. at about 6⅛. In land shares, Aboukir has been quite a feature, rising from 18s. 6d. to 21s., and finishing 2s. up at 20s. 6d. Allotments have been picked up round 3, and some transactions have taken place in Behéra at about 12¾. Delta Lands have been dealt in pretty largely, and close 3d. firmer at 14s., while New Egyptian have changed hands freely between 13s. 9d. and 14s.

In Egyptian and Foreign Trust and in Sidi Salem some quiet buying has been going on round 7s. 6d. and 17s 6d. respectively. Gharbieh Lands have advanced a further 1s. 6d. to 33s., at about which price some business was put through; and Union Foncière has been done to the extent of some few hundred shares between 2 and 2⅛.

There has also been a fair amount of business passing in United Egyptian Lands between 1s. and 1. 3d. In miscellaneous shares, some few hundred Egyptian Markets have changed hands round 26s. 6d., and there have been many transactions in Salt and Soda, which finished about unchanged at 27s. Khedivial Mail are unchanged, but are looking a firmer market than for some time past. In Greek securities business has been at a complete standstill, and prices are all unchanged.

COMPANY NOTES.

Dividends, Payments, etc.

The Egyptian Markets, Ltd., have declared a final dividend of 5 per cent. and a bonus of 2 per cent. (less income-tax at 4s. 6d. in the £) for the year ended December 31, 1916, on the ordinary shares, payable on and after August 10, 1917, at the Anglo-Egyptian Bank, Clements Lane, London, E.C.

All Garments cut by Experienced English Cutters.

RELIABLE ENGLISH GOODS ONLY KEPT IN STOCK.

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of Industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

HOTEL SOMERSET,

ORCHARD STREET (by Selfridge's) OXFORD STREET, W.

Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms.
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 6/- daily.

NOTES OF THE WEEK.

Some account of the great battle which was fought on the Roumanian front during the first fortnight in August has now been received. It is clear—indeed, there is direct evidence of the fact from the correspondence and admissions of captured officers—that the Germans intended to make an end once for all of Roumania in the war; the aim of Mackensen was to smash their army or to drive it disorganised into Russia, and to occupy the whole of the kingdom. It is probable that this was to be but the prelude to a further thrust which might have given Germany Kieff and Odessa, and the control of the rich countries that lie between.

The Roumanians have put up an extraordinarily brave and so far successful resistance. They have lost very little ground, and part of what has been lost during one day's incidental operations has often been recovered on another. The greatest battle in which Roumanian troops have ever been engaged is giving the Roumanian army the most distinguished laurels it has ever earned. The defensive has been a magnificent success, and if it can be maintained, it will set the bounds to the German advance in the east.

Unfortunately, the question of holding the front on this section is not exclusively a Roumanian one, or it might be answered more hopefully. The Roumanian troops only hold part of the line, and the Russian troops further west are not to be depended on. One of the characteristically frank Russian communiqués admits that the Russian infantry began their retreat without waiting to be attacked; and the speeches at the Moscow Conference have been full of sensational revelations of relaxed discipline and mutiny at the front. The whole line is imperilled by the loss of spirit in the Russian army: the grain-growing districts of the south are in danger, and in the north Riga is insecure and the road to Petrograd lies open. The whole position is deplorable.

Everything is being done by the authorities to restore order, but there are so many authorities that their orders conflict, and few are obeyed. Moreover, the process of disintegration continues, and the many allusions made at the Conference to the movements in Finland and the Ukraine in favour of independence show how serious the position is now recognised to be. It is notable that the German Press is devoting a great deal of attention to these activities, and remarking how pleasant it would be to make peace on the basis of a friendly Russia, an independent Courland, Lithuania and (Russian) Poland. The oracles of Berlin hint that it would not take long for Russia to see that her road in future lay with Germany against the Anglo-Saxon tyranny of England and America. We are likely to hear a great deal more of this in the future.

It is hardly likely that Russia, which has amid all her difficulties again repudiated the idea of a separate peace, will walk into this particular mantrap, for the German publicists who have set it have, after their own peculiar fashion, pointed out how rotten is the bait with which it is equipped. The separatist tendencies in Russia—the position in Finland may be different—are essentially towards independence; they are anti-imperial in the sense that they do not intend to be part of a great Russian centralised empire, but they have no desire to exchange that to become in effect if not in name a part of a German Empire which would embrace the whole eastern part of Europe. That is now admittedly the whole German idea.

It pleases the Germans to think that France is no longer a great Power—was there ever a more incredible instance of their blindness?—and that Germany, admitting a drawn war on the western front, could enlarge the Mitteleuropa idea so as to include Russia and the whole of the Balkans. These could be then welded together in an economic alliance, of which the head would be Berlin; political control would, of course, follow, and in a decade or so this great union of Powers under Prussian direction would be mobilised against England. The calculation is that its power would be irresistible.

The Berlin programme is not one to appeal to Russians, who would merely renounce a Slav control for a Teutonic control, and, as a series of petty States, whose divisions would be carefully maintained by the Germans, would be helpless in the hands of their new masters. The whole of the Balkans would come under German-Austrian control—it is significant that the Balkan railways are now controlled entirely by Prus-

Digitized by Google

sians—and any chance of the Balkan nationalities achieving their independence would be gone for a century. Even Bulgaria might regret the iron hand of her ally after she had experienced a few years of it.

The position in Palestine has not undergone any real change. No announcement has been made by the British Commander, but the Turks report an artillery and cavalry attack at Beersheba. They state that we retired precipitately, but as they can only claim the capture of four horses and several rifles they can scarcely suggest a victory, even in a communiqué. On the other hand, it is reported through a Dutch newspaper that Marshal Falkenhayn has visited Palestine. There is nothing very improbable in the news, even though it appears in a neutral journal which is not usually the vehicle of German military information; but the deduction that his presence there is conclusive evidence of a strong Turko-German offensive is not necessarily sound.

It is generally believed, and there is evidence to support the belief, that the Germans have been urging the Turks to resume the offensive on a large scale. It is very possible, too, that the Turks, whom none would accuse of reluctance to fight, have not needed much persuasion, and that they have been considerably helped by Prussia, both in reorganising their armies and in the supply of the much-needed material. At the same time, it must be remembered that the Turks have the choice of two fronts for their offensive; that they have lost Baghdad, but not Jerusalem, and that the loss of Mesopotamia was a far more serious blow to their prestige than the loss of southern Palestine. Moreover, the withdrawal of the Russian army in the former, small though their forces were, will not have been without its effect on Turkey's attitude.

In Germany itself there are two views as to the question. On the one hand, there is the Berlin-Byzantium-Baghdad school, which looks towards the Persian Gulf, and will certainly not rest while there is any chance of recapturing Baghdad, the loss of which was very seriously felt in those Oriental and financial circles there which are heavily engaged in that colossal enterprise. On the other hand, there is the older strategic school which looks upon Egypt as the vital centre of the British Empire, and which holds that a blow there would not only be easier for Germany to deliver, because it is less remote from headquarters, but also more effective. (In some ways, however, this argument is countered by the fact that a blow there would also be easier for England to parry.) This strategic school is naturally enforced by the colonial school, which, having given up hope of expansion in the Pacific, is now devoting all its energies to convincing the Government and the people of Germany that a great Central African Empire is not merely a possibility, but a necessity. The colonial school is not perhaps very influential, but it has won some support from the powerful industrial or National Liberal party, which is perturbed about the supply of raw materials for German manufacturers after the war. It is quite certain that these various parties have represented their views in the proper quarters, but it does not in the least follow that the German High Command will act in accordance with their wishes.

Mr. Athelstan Riley has written a very important and timely letter to the daily Press pointing out the danger of German schemes of conquest in the Near and Middle East. As one who is intimately acquainted with the countries about which he speaks, his warning that Germany may aim at drawing the war in the West in order to win a great objective in the East—a warning that has already been given in these columns—is very necessary. It is all the more appropriate in view of the fact that various Socialist parties in this country, whose names appear to be chosen on the principle that the fewer the members the more imposing should be the title, have been issuing various peace programmes suggesting that the Turkish Empire should be left intact. These ideas (which are combined with the strange confession that even Alsace-Lorraine should be abandoned) have no chance of influencing public opinion in this country; nor in America, where President Wilson's firm reply to the Pope, although it does not specifically mention the Balkans or Asia Minor, retracts not a jot from his previous standpoint of relief for oppressed nationalities. But it is nevertheless well that Mr. Riley should have stated the situation in so cogent a form.

King Alexander has done well to pay a personal visit to Salonika, and thus to testify to his sympathy with the unfortunate inhabitants of that town. He has a difficult position to fill these days. No doubt M. Venizelos is adopting the right course in withholding nothing from the youthful Sovereign. He has announced in the Chamber that monarchy in Greece is on its final trial. The sincerity of his desire to make a success of it is above suspicion; but the bluntness of the declaration does not render King Alexander's task the easier. It will call for a very old head on his young shoulders to allow him to make a friend of his Prime Minister, and if M. Venizelos cannot fill that part, there is a danger that someone less worthy will seek to occupy the post. When there was no thought of his occupying the throne, Prince Alexander was more conspicuous for his partiality for youthful companions than for the pleasure with which he followed the advice of his elders. He has been called upon to make a very sudden and a very complete break with the past. Indeed, the wrench is such that he can hardly be expected to bring it off single-handed without a wise counsellor always at his elbow. M. Venizelos, it is to be hoped, will not lose sight of this fact, but will recognise the value of unofficial as well as of official advisers to the King.

The debates in the Greek Chamber have been full of interest this last week. After the revelations that have been made, any shadow of doubt that could have remained in even the most prejudiced quarters as to the intention of King Constantine's policy must be dissipated. Prince George's urgent and moving appeal to join the Entente Powers, to avoid "the suicide of the nation," left him utterly unmoved. The lie that Greece need not have fulfilled her treaty obligations to Serbia because Serbia had already refused Greece military support in May, 1914, was also refuted. When Greece asked for her support at that time in the event of war against Turkey, Serbia replied on June 3 that she recognised it was her duty to fulfil her obligations, and took care to inform the Grand Vizier that what affected Greece also affected Serbia. It is almost incredible that such allegations should have been made—or believed.

Some further information has also been given as to the method of communication between King Constantine and Berlin. It seems that at first communication was made viâ Monastir, and beyond Sorovitch the telegraph line was divided and carried secretly on to Monastir by two routes, one of which followed the railway, the other going by way of Kenali. These lines were used by the German, Austrian and Bulgarian Ministers at Athens to communicate with their Governments, and Berlin was also given information concerning the army of the Orient. It would not be surprising to learn that this line was also used by Berlin to keep in touch with their submarine bases in Greece. It is to be noted that only last week a German naval officer dressed as a peasant was arrested in Laconia; he is said to have been the organiser of the system of provisioning the German submarines on that coast, and to have been helped by two deputies of the old régime, who are to be prosecuted by M. Venizelos. No doubt there are others connected with this submarine traffic still at large. But now that they have lost the protection of the Court they will scarcely be able to do much more mischief.

Digitized by Google

One point in the letter of M. Venizelos to King Constantine in 1914, now at last published, is worthy of special attention. "We know," he said, "even from the mouth of Count von Quadt (the German Minister to Greece in 1914), that Germany, in agreement with the fixed idea of Austria, is inclined, in the event of a complete victory, to create a Great Bulgaria, stretching as far as the Adriatic, to serve as a bulwark against Slavism, since the discovery recently made in Germany, according to which the Bulgarians are not Slavs but Tartars."

One need not, perhaps, devote too much attention to the question of racial origin; Prussian ethnographical discoveries are apt to coincide with the necessities of *Real-politik* in the most happy fashion, and the discovery that the Bulgars are Tartars was probably subsequent to the much more certain evidence that King Ferdinand was inclined to throw in his lot with the Central Powers. But here again King Constantine would not listen to his adviser; conceivably he anticipated that some German university would presently discover that Greece was really the original home of the Teuton, with the inevitable consequences.

Some terrible stories are quoted in the *Basrah Times* as to the Turkish treatment of subject races. To some of these, such as the method of deporting and assassinating Armenians at Erzerum, we have already referred; but it is now related that Jews in Baghdad, who were suspected of having trafficked in notes, were summoned secretly to the Court of the Prefect of Police at night. They were confined by day and taken out after dark and tortured; finally, they were murdered and thrown into the Tigris. The nineteen Jews in question have never been seen alive since, although the bodies of five of them, one of whom was headless, have been washed up by the river. The Turkish argument appears to have been that by no milder methods could they have given discredited paper the value of gold—murder as a means of influencing economic laws, however, will hardly prove a very effectual method. Their idea was that if they killed one or two of the Jews, the remainder would soon come to their senses and stop the trafficking in notes.

Beyond a vague knowledge that there was trouble on the North-West frontier of India, the British public had no very exact information at the time regarding the extent of the disaffection among the border tribes, which was understood to be connected in some way with enemy intrigues. A Statement issued from the India Office on the "moral and material progress and conditions of India" during the year 1915-16 gives a more comprehensive picture of the anxieties under which the Government of India laboured during the earlier part of the war. The story of the steps taken by Turco-German agents to corrupt the Afghans has already been told. The measure of the success they achieved is now set forth in some detail by the Statement. By March, 1915, attacks by the people of the Afghan province of Khost, on the Tochi and Kurram, had been engineered by the fanatics, who had been fed on tales to the effect that the British Government was destined to disappear, and that a great Islamic renaissance was beginning. In April 4,000 Mohmands invaded the Peshawur district. Repulsed with indecisive results, they returned in June with reinforcements, and the unrest spread to Swat and Bunar. By August the employment of troops on a large scale became necessary. The following month a force of 10,000 Mohmands was operating at one point, and the losses among the tribesmen assumed more serious proportions. Fighting and demonstrations continued into November, and the Mohmands carried out a series of raids in the Peshawur district in December. But the arrest of cis-border Mohmands suspected of assisting the raiders put an end to the trouble. Throughout all these events on the Peshawur border, it is stated, the loyal adhesion of the Afridis to the Government was of the greatest value, while in all districts real proofs of devotion to Government were evoked.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 2.

Garden Party at the Residency.

The High Commissioner and Lady Wingate gave another garden party, on Saturday last, at Bulkeley. It was even more numerously attended and much more representative than the first one, held about a month ago, owing to the fact that on this occasion the Moslem element was able to be present. (The last garden party took place during the fast of Ramadan). Amongst the guests on Saturday last were T.H. Princes Ahmed Fuad, Kemal-ed-Dine, Toussoun and Ismail Daoud. Both Sir Reginald and Lady Wingate were most indefatigable in the manner in which they moved about amongst, conversed with, and looked after their several hundred guests, and all those who were present spent a most delightful afternoon.

Bairam Feast and Our Turkish Prisoners.

On the occasion of the feast of Bairam, the Ministry of Wakfs, on the initiative of the British military authorities, delegated various of its preachers to visit each of the camps where Turkish Moslem prisoners are detained, with instructions to carry out the religious ceremonies customary on the first day of the feast. Needless to say, this action on the part of the British authorities has profoundly impressed the Egyptian Moslem element, which has not hesitated to comment in most favourable terms on the generosity and religious tolerance displayed by the British towards their enemies.

An Egyptian Medal for Merit.

In view of the fact that there are many services rendered to the State and society which deserve some public recognition, but for which the existing orders and honours cannot be awarded, H.H. the Sultan has decided to strike a special medal called "the Medal for Acts of Merit," which can be conferred on any person, without distinction of sex or nationality, who may distinguish himself or herself by long service to the State or by a special act, whether rendered to the State or to society. There will be two medals, one in silver and one in bronze. The medal will be circular, having on the obverse the Sultan's Arms with the date A.H. 1335, the year of the institution of the medal, and on the reverse in the middle the inscription "Sultan of Egypt" with "Medal for Act of Merit" above, and "He who serves best, serves most," below, and the name of the recipient engraved underneath. The new medal will take precedence immediately after the other decorations at present conferred, and all War Medals awarded by the Sultan. His Highness has issued a rescript and decree ordering the new medal to be struck.

The Pay of the Smaller Government Official.

As a result of the various petitions presented to the Government by its junior officials, a committee has been appointed to investigate the question and report on what steps, if any, should be taken to mitigate the lot of the smaller paid Government officials, who, as already mentioned in this correspondence, have been and still are badly hit by the great rise in the cost of living. The committee has already held several meetings, and has, it is understood, reached an advanced stage in its deliberations. It is generally admitted that if assistance is afforded all those classes which are in need of it, *i.e.*, all officials up to and including those drawing £E200 per annum, the cost to the State will be a considerable one, but it is considered that no matter how large the amount involved may be, the Government should make the utmost effort to provide the money, as the situation of many of the officials in question has become deplorable through no fault of their own.

The Foodstuffs Question.

Notwithstanding the reinsertion of cereals in the tariff at the current market price, and an intimation that in subsequent weekly tariff lists those prices will be gradually reduced until they reach what the Government considers to be a reasonable figure, there are indications that holders of stocks are still withholding them from the market in the hopes that the hands of the Government will be forced and higher prices will again be fixed. An interview, which the Prime Minister has

Digitized by Google

had with the editor of *Al Ahali*, and which has just been published by that paper, should, however, effectually shatter the hopes of these "cornerers." H. E. Rushdi Pasha clearly affirms the intention of the Government further to reduce cereal prices and keep them at a lower level than at present, and he adds a significant warning that the military authorities have the power to commandeer at tariff prices all stocks that are being withheld. With regard to future crops it is interesting to note that the local press is becoming alive to the situation, and that more than one journal is foreshadowing legislation in regard to the areas to be cultivated during the next agricultural year.

NOTES FROM ROUMANIA.

(From a Correspondent.)

The Occupied Territory.

For reasons which it is difficult to explain, the German authorities, from the very first day of their occupation, have systematically cut off the invaded Roumanian territory from the rest of the world. Under the pretext that the Government to which they were accredited no longer existed, the neutral Ministers who had remained in Bucharest were requested to leave. Postal communication with neutral and Allied countries was practically prohibited; and there was no means of securing the papers which appeared in the invaded territory. The old organ of the German community, *Bukarester Tageblatt*, was resuscitated after the fall of Bucharest, and for the benefit and enlightenment of the native population a new daily, *Gazeta Bucurestilor*, is being issued from the offices and press of the *Adevarul*.

Isolated copies of these publications sometimes escape across the frontier, and from them and occasional information in Bulgarian and Austrian papers one gets a glimpse of the life and activity in invaded Wallachia. The country is administered by a German general, with an Austrian colonel as second-in-command, but it is interesting to note that many public services have been placed under the direction of Roumanians, responsible, of course, to the German Governor. One gathers, for instance, that an ex-Minister, M. Virgil Arion, has been placed at the head of the Department of Education. Many schools have been re-opened, primarily those in which German teaching is provided. In the German schools at Ploeshti and elsewhere special classes are run for Roumanian children desirous of learning German.

All technical and mechanical installations are in the service of the military authorities, who also supervise and regulate agricultural labour, fix prices, and determine the distribution of the various products. Commerce is at a complete standstill. The numerous advertisements tend to convey an impression that life was never so comfortable and enjoyable as under the rule of the German general: there are endless announcements of theatrical performances, concerts, and cinematographs, many of the performances being in German. A special company from Vienna is amusing the population of Bucharest with the latest success of the well-known composer of musical comedies, Fall, "The Rose of Stamboul." A somewhat different picture is suggested by the lists of persons fined or imprisoned for having disregarded the *Befehle*, which one guesses are many and multifarious; in Bucharest alone 192 persons were sentenced for not having complied with the regulations concerning the billeting of German troops.

It is not surprising to find that the Roumanian politicians who have stayed behind take but a small share in the public life of the town. The journalists whose accommodating imagination supplies the material for that "official" independent Press are either totally unknown or personages whom the German occupation has at last provided with an opportunity to publish signed articles. There are perennial rumours of revolutions which have taken place, or are about to take place, in Jassy, and the news of the deposition of King Ferdinand by the Russians reappears from time to time with a somewhat touching consistency.

The Death of M. Maiorescu.

A few weeks back M. Titu Maiorescu, the well-known Roumanian scholar and politician, died in Bucharest, at the age of seventy-seven. He was one of the few "pro-Germans" who remained in Bucharest when that town had to be abandoned by the Roumanian armies, and now he has died in the midst of a foreign invader, while the country which gave him birth, Transylvania, is groaning under Magyar oppression, and the town which saw his intellectual awakening, Jassy, shelters the leaders and the supporters of the broken Roumanian nation. That, in a certain way, has been the doing of Maiorescu. For it was he who, by an article of historical importance which he published in the *Deutsche Revue* of 1883, laid down the intellectual foundation for the political alliance which was to be achieved in the same year between Roumania and the Central Powers. It was a strange coincidence which made Maiorescu preside, as Prime Minister and Secretary for Foreign Affairs, over the events of 1912-1913, whose inevitable effect was the breakdown of that uncongenial connection. Having been educated in Austria and Germany, Maiorescu had undoubtedly intellectual leanings towards those countries; what made him advocate a political co-operation with them was, however, mistrust of the Russian autocratic regime. The alliance with the Central Powers he considered a necessity as a guard against Russia, but he never understood it to mean a wall between Roumania and the Western Powers. For England especially he entertained an unbounded admiration. His students well remember the enthusiasm with which he expounded the teachings of English philosophers and the praise which he bestowed upon English political organisation; and it may be mentioned here that some time before Roumania's entry into the war, while he still considered it imperative for Roumania not to embark upon hostilities against the Central Powers, Maiorescu made an intimate friend of his publish in the *Adevarul* an article which was nothing less than an Anglophile profession of faith. It is difficult to say what his attitude towards the war would have been had the Russian revolution been achieved one year earlier. That we disagreed with him in that emergency shall not prevent us from proclaiming that his character was as fine as his intellect was brilliant, and that in him Roumania loses one of her best sons.

Foreign Visitors.

After the visits of MM. Thomas and Vandervelde Jassy had the privilege of entertaining an American military mission composed of nine officers, under the leadership of General Hugh Scott. The lofty attitude adopted by President Wilson on the question of oppressed nationalities had naturally found a grateful echo in the heart of the Roumanians, and they welcomed the opportunity which was afforded them by the visit of the American officers to express their appreciation of America's policy and action. The visitors were received by the King and the Queen, were entertained at a dinner by the Prime Minister, and honoured at a special joint sitting of the Houses of Parliament. One of the most interesting incidents was a military review, at which one of the new Transylvanian regiments took part.

General News.

The dearth of small coinage which has made itself felt in many of the countries at war became especially acute in Roumania after the great retreat. A large quantity of the existing stock had remained, of course, in the occupied territory; but, in addition, there was a deficiency in the metals necessary for coining new supplies, and a continuous reduction of the available currency on account of hoarding by the rural population. The Government has, therefore, decided to print paper money for the value of ten million lei in notes of 50, 25, and 10 centimes (5d., 2½d., and 1d. respectively). Soon one will be able to afford the luxury of having a pocket full of notes.

Unfortunately, not all necessaries can be so easily multiplied. The supply of fuel remains as bad as before, notwithstanding efforts to increase the output of the Moldavian oilfields, and the supply of meat is worse than ever—so much, indeed, that, by order of the military authorities, meat may only be eaten now once a week—on Sunday—if it can be obtained. We rejoiced at hearing that a consignment of sugar had been received from Russia, and that it was to be distributed forthwith. But the well-meaning authorities decided that only those persons should be provided with sugar who had submitted to vaccination against smallpox; there was a rush upon hospitals and infirmaries, and then a tragic discovery—there was not enough serum.

The main cause was lack of transport. To improve local transport the authorities have decided that the electric tramways of Jassy are henceforth to be used only for military purposes and for the transport of goods. But we have no control over, and no possibility of improving, the means of transport outside our own boundaries. A certain improvement may be hoped for from the establishment of two Roumanian Commissions, at Petrograd and at Odessa, for the purpose of acquiring the necessary supplies for Moldavia. They are to be under the direction of a superior official attached to the Embassy in Petrograd, and will keep in contact with the Russian military authorities through the Roumanian representative at the Russian headquarters. The whole organisation is placed under the direct control of the Roumanian Minister at Petrograd. Much strenuous effort on our part and much sympathetic consideration on the part of our friends will be necessary in order to spare the Roumanian people a repetition of the misery which all had to undergo, and to which so many succumbed, last winter.

CYPRUS NOTES.

(From a Correspondent.)

The Situation in Greece.

News from Athens and Salonika has continued to cause great excitement in the Greek community. Great as the popularity of King Constantine had been, owing to his military achievements for Greece, there has always been an ardent feeling of admiration for M. Venizelos; and while the Greeks have been divided in their political views as regards the part Hellas should play in the war, a large proportion of the people and the Press has been strongly in favour of active co-operation with the Allies.

Olive Prospects.

The olive crop is likely to be only a moderate one. No tree calls more loudly for attention than the olive tree. Both berry and oil are largely consumed as food, and importation of a large quantity of both is required where there ought to be exportation. Insufficient production is due not only to failure to graft, but also to faulty methods of cultivation, and to a very injurious system of beating down, instead of gathering, the fruit; while the modes of extracting oil are antiquated and wasteful, as well as insanitary. Very little good oil is prepared, most of it being what in Europe would be sold for burning. Here again an important item in the list of island products is suffering from ignorance and neglect.

Game and Sport.

The season for game shooting is at hand, and is looked forward to by British and native alike. Hares and red-legged partridges will again be in the market, and sport, such as it now is, will be afforded to those who care for hard exercise, under a hot sun, chiefly over hilly tracts. The prospect of good sport was held out as one of the attractions of Cyprus at the time of the occupation, but expectations were doomed to considerable disappointment. Noted for sport, with hound and falcon, in the middle ages, the island now has but little to offer. Fair snipe and duck shooting can be enjoyed in a few marshes, and in cold winters plenty of woodcock visit the island. During the early years of the occupation fairly good bags could be made of partridges and hares from September onwards; but this sport has greatly deteriorated. Native "sportsmen" have increased tenfold, and more; and much of the best land has been cleared of cover and brought under vine and other cultivation. Sporting attempts were made by the late Lord John Kennedy to introduce pheasants, and by Mr. (now Sir John) Middleton to put down English partridges, but neither succeeded. A fair number of quail visit the island during the great trans-Mediterranean flights, but they are only picked up here and there. The only big game is the large-horned moufflon, or wild sheep (*ovis ophion*), which is distinct from, though it greatly resembles, the Sardinian and Corsican species. It was very soon perceived that the limited number of herds which remained in the Cyprus forests were being steadily reduced by shepherds and village poachers. Attempts were made to arrive at an approximate census, the forest staff being called upon to report the numbers of moufflon seen, and a law was passed to save them from extinction. The use of a bullet was made compulsory, and a permit, costing £1, and valid for one month, to kill one buck moufflon, could be obtained. But before long it was found necessary to prohibit shooting this game at all, except under special permission of the High Commissioner. The Cyprus hare differs but little from the English, and is much appreciated. The francolin used to be found in fair numbers in parts of the island, but this excellent bird, so abundant in many parts of Asia Minor, has also so diminished in numbers that protection by legislation became necessary.

KING ALEXANDER AT SALONIKA.

Reuter's Salonika correspondent, in a message dated August 25, says:—King Alexander arrived here this morning, and was received by the Greek authorities and General Sarrail, General Milne, and the Consular body. Guards of honour from the Allied Armies were drawn up outside the station and presented arms, the bands playing the Greek National Anthem. The crowds cheered the young King. King Alexander inspected the burnt-down parts of the town and the concentration camps and refugees. Later he received in audience General Sarrail and General Milne, and left in the evening for Athens. The Royal visit has produced a good impression and afforded the townsfolk of Salonika their first opportunity of seeing the new King.

During the year ended December 31, 1916, the Home Secretary issued certificates of readmission to British nationality to one man and one woman belonging to the Ottoman Empire.

Proclamations have been issued by General Allenby, Commander-in-Chief in Egypt, referring to lighting and landing for further safeguarding the northern coast.

THE TURANIAN MOVEMENT AND ISLAM.

References have appeared from time to time in these pages to the campaign being waged in Turkey under the present Constantinople *régime* against Islam. The following translation of an article in *El Qibla*, the Arab organ published in Mecca, throws further light on the activities of official Turkey in this direction. *El Qibla* writes:—

"We learn from the camp of H.H. the Emir Zeid that amongst the papers found in the portfolio of the brother of Ghalib Bey, District Commandant of Medina, who was killed in the recent engagement, is a circular issued by the Central Committee of the well-known 'Turk Ojaghi' Society, of which branches exist in every town and village of Turkey, as well as abroad, and whose functions are the dissemination of the Turanian doctrine and the substitution of this for Islam amongst all Turanian peoples, in order that they may thereby reduce all other Moslems to subjection to themselves and their own aims. All decisions and reports of this committee are distributed to the branch committees of the society, and to their travelling delegates, who are charged with the duty of spreading the doctrine in the country. It is beyond doubt that the paper now in question, of which a translation follows, is a resolution of this kind. We do not conceal from our readers that we have for some while past wished to abstain from discussion of the principles, aims, and intentions of the Turanians, as we are convinced that these are generally known, and we are weary of writing about these fellows; nevertheless, circumstances may at times compel us to reopen the subject, and the present document, dated April 24, 1916, furnishes one of such occasions. This is the translation:—

"'To the branches of the Turk-Ojaghi Society and the travelling delegates.

"'That monstrous figment of imagination which is known as the Community of Islam, and which has for long past stood in the way of present progress generally, and of the realization of the principles of Turanian Unity in particular, has now entered on a phase of decline and ruin. We need not apprehend from it any further danger to the execution of our hopes and principles.

"'This is abundantly shown by the state of affairs among the Moslems in India. These belong to a number of Islamic sects, being divided into the Nushiri, the Kadiani, the Wahhabi, and others. A small remainder, with whom we are now concerned, are known as "the People of the Law and the Community." We have succeeded in enlisting the services of a number of these, under the guise of the "Society of Servants of the Kaaba," this band consisting of active individuals who are skilled in explaining our utterances and proceedings and zealous in our cause; so much so that they can convince the people of India that black is white, or white black. For this purpose they have special methods which dispense them from the necessity of logical discussion or argument; they merely sow in the minds of the people the seeds which we consider suitable, and on this issue we need not count upon any general public opposition.

"'In these circumstances, the branches of our society, and the travelling delegates in the various countries, must not in future be afraid of encountering any opposition to our Turanian Community on the part of the Community of Islam, as the latter is completely decadent and no longer capable of standing in our way, or in the way of our hopes and aims.

"'The moment has arrived for openly proclaiming all those matters which we had previously advised you to keep secret for the present. Go on confidently and act in all security. Deal the final blow to those ideas and trammels which have hampered our Turanian Community for hundreds of years. Greeting to all the Brethren.

"Doubtless much of what has been published in regard to the Turanian gang has been attributed by some to prejudice, and our zeal for the Faith makes it therefore incumbent on us to reproduce this circular or resolution literally, without addition or comment, acting in accordance with the saying of the Prophet, 'Religion is in counsel with God, His Prophet, and the Moslems at large,' and in the hope that our Indian brethren will take warning by what is here attributed to them."

The Times correspondent at Athens learns from a reliable source that the authorities have arrested, at the village of Gerakis, in Laconia, a man, dressed as a peasant, who was proved to be a German naval officer, and who had on him a very large sum of money. He was the organiser of the system of provisioning German submarines on the Kardamyli coast in Laconia, and was helped by two deputies of the old *régime*, against whom M. Venizelos's Government is at present taking proceedings.

NEAR EAST BOOKSHELF.

JUGOSLAVS AND THE BERLIN CONGRESS*

Bosnia and Herzegovina have been household words in Western Europe since 1878, when their fate was temporarily settled by the Berlin Congress. They are, however, little but geographical expressions for many, and M. Nikola Stoïanovich has done good service to the cause of civilisation by furnishing a vivid sketch of their history. They occupy the north-eastern extremity of the Balkan peninsula, and are a vast natural fortress, protected on all sides by mountain and river. Although only 5 per cent. of their area—about a third less than that of Ireland—is level ground, the soil is very fertile everywhere, and produces every species of crop known to temperate latitudes. With such natural advantages Bosnia and Herzegovina have bred a remarkably virile type of man. The eminent geographer Elysée Réclus states that the people of those provinces are tall, slender, beautifully built, and gifted with an inborn distinction which mark them as a superior race. The indigenous population, which numbered 1,898,000 souls in 1910, are Slavs of the purest stock, and their ancestors formed part of the great Jugoslav immigration which colonised the Balkan peninsula in early centuries of our era. Réclus aptly styles their habitat "the Switzerland of the Near East," but the two countries have nothing in common except physical formation. While the Swiss had to struggle for freedom with comparatively petty feudal despots, Bosnians and Herzegovinians found their territory a bone of contention for two mighty empires. The peninsula fell under Turkish sway at the end of the fourteenth century and for five hundred years the Jugoslavs suffered extortion and injustice which would have killed the soul of a less vital race. One-third of them were forcibly converted to the tenets of Islam, about 23 per cent. are Catholics, and 43 per cent. have remained faithful members of the Greek Church. But their national spirit has never been affected by religious differences. Again and again did the entire population rise in revolt against their oppressors, and in 1875 a rebellion broke out which eventually lit up the Russo-Turkish War of 1877.

The Great Powers attempted to intervene in favour of the insurgents, and sent representatives to a conference which met at Constantinople in December, 1876. But concerted action was precluded by radical divergence of interests. Austria-Hungary had always opposed the formation of a powerful Slav State on her frontiers, Russia sought an opportunity of adjusting the Balkan imbroglio in her favour. Bismarck's settled policy it was to weaken Russia, in view of increasing her dependence on Germany. The Man of Blood and Iron had another aim in view—to thrust Austria-Hungary into the Balkans, in order that she might forget her ancient claim to the hegemony of Central Europe. Great Britain was swayed by two currents of public opinion. The Russophobe school, led by Lord Beaconsfield, regarded the integrity of the Ottoman Empire as essential to the protection of India from Muscovite invasion. Gladstone's followers, on the other hand, wished to evict Turkey from Europe, "bag and baggage."

Wily Abdul Hamid knew that he had nothing to fear from a coalition of the Great Powers. He promised reforms in his Balkan provinces, but soon showed that the *status quo* would be maintained there. Russia was goaded by a Pan-Slav agitation to declare war against the oppressors of her co-religionists in Bulgaria and Bosnia-Herzegovina. The phases of that struggle are too well known to need recapitulation. British sea-power forbade Russia to crown her victory by capturing Constantinople, and Bismarck's influence as an "honest (?) broker" induced the Powers to meet in congress at Berlin (June, 1878). Then for the first time did Austria-Hungary advance a claim to administer Bosnia and Herzegovina. It was made at Bismarck's instigation, and secured his heart-whole support. Our representatives were no match for their German and Austrian colleagues. They assented to the proposal, which was embodied in Article 25 of the Treaty of Berlin. In vain did Italy protest; in vain was the Congress flooded with remonstrances from Serbia, Montenegro and the population handed over to the tender mercies of their hereditary foe. The essentially piratical character of the enterprise was cleverly veiled. The Austrian occupation would be provisional, and the local autonomy was guaranteed by a *Sabor*, or national assembly. Soon after taking possession of her booty Austria-Hungary entered into a convention with Abdul Hamid which professed to safeguard Turkish suzerainty and all that it implied; but she also concluded a secret alliance with Germany for the mutual defence of their outlying possessions, namely, Bosnia-Herzegovina, and Alsace-Lorraine. Such was the origin of the Mittel-Europa doctrine, which makes these provinces stepping-stones for the achievement of Teuton hegemony in East and West.

Once firmly established in Bosnia-Herzegovina, Austria-Hungary cynically threw off the mask She swept the country into her Customs Union, forbade the use of Turkish currency, and enrolled the male population in her army. Immigrants poured in, and in twenty-six years the non-Slav population increased sevenfold. At length the luckless natives rose in rebellion against oppressors more deadly even than the Turks; and a campaign of six months, conducted by eight army divisions, proved necessary to bring them again to heel (1882). For twenty years thereafter they had in Benjamin Kallay a Viceroy of the worst Teuto-Magyar type. He wasted their resources in "window dressings" and strategic railways, forbade public meetings, literary leagues, and the spread of education; he maintained a vast system of espionage—in short, left no measure untried which would kill the national soul. All was in vain; for it was kept alive by outbursts of national song.

In October, 1908, Germany deemed events ripe for another act of piracy. Great Britain was then rent by political and social strife. The Young Turks were open to bribery; and in February, 1909, they concluded a convention with Austria-Hungary which converted occupation into annexation, and the people of Bosnia-Herzegovina were sold to their oppressors for a cash consideration of exactly £1 7s. per head! This shameful breach of international law was undoubtedly instigated by the German Emperor, who met Russia's protest with an ultimatum, and stood forward "in shining armour" pledged to support his fellow-conspirator against the peace of Europe. The outbreak of the Balkan War of 1912 raised hopes of deliverance in the people's breasts, and many thousands of them fought as volunteers under the Serbian banner. It served as an excuse for further oppression. Austria-Hungary assumed control of the postal and telegraph services, made German the sole official language, and swept away the last vestiges of autonomy.

The little country was seething with suppressed revolt in June, 1914, when the Archduke Francis Ferdinand announced his intention of paying an official visit to Serajevo, which, with Teuton tactlessness, he made coincident with the National Festival in Commemoration of the Battle of Kossovo. The true story of his assassination has yet to be told. There is no doubt that the Heir-Apparent was cordially detested throughout Austria-Hungary, except perhaps in Bohemia, the country of his semi-morganatic wife. All the circumstances attending his tragic death point to complicity in Vienna and Budapest. But the wretched man had incurred the enmity of Jugoslavs, and M. Stoïanovich declares that many of them were accessories before the fact; that, indeed, the intended crime was known even to girls attending the local secondary school! Thus for the second time was this little country made the occasion of a German ultimatum, which caused the greatest war in history.

M. Stoïanovich's account of the measures adopted by Austria-Hungary since August, 1914, is simply heartrending. Martial law was at once proclaimed; the Viceroy Potiorek—destined to win notoriety on the battlefield—placed every educated male under arrest or forcibly enrolled him in armies sent against his brother-Slavs. Schools, newspaper offices, and the headquarters of literary societies were sacked by a mercenary mob, and their property to the tune of nearly half a million sterling was confiscated. Thousands of patriots were hanged or shot, others perished by hunger and disease in the dungeons of Arad. For three years a reign of terror has prevailed in Bosnia and Herzegovina, but the spirit of the population is still unsubdued, and their eyes are turning westwards in ardent hope of deliverance.

Their chequered history affords a clue to many phases of the Eastern Question, and M. Stoïanovich's able treatise should be translated for circulation on both sides of the Atlantic.

HONOURS FOR SERVICE IN MESOPOTAMIA

There will be general satisfaction at the issue, long delayed, in a Supplement to the *London Gazette* on August 25, of a list of honours for services in Mesopotamia. Included in the list are a number of awards of the C.B., the C.M.G., the D.S.O., and the Military Cross, as well as various promotions. The Supplement also includes two awards of the C.S.I., and a number of appointments to the Order of the Indian Empire for meritorious service in connection with the war. Notable among the honours is the G.C.I.E. conferred on Lieut.-Colonel Sir Percy Cox, while Brigadier-General Sir George Buchanan, Major-General Sir Raleigh Gilbert Egerton, and Major-General Sir Harry D'Urban Keary receive the K.C.I.E.

A subsequent list, containing awards of Distinguished Conduct Medals and Meritorious Service Medals, conferred for services in Mesopotamia, was published in the *London Gazette* on August 29.

CORRESPONDENCE.

THE FALLEN IDOL.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The revelations of the Greek White Book prove to all the world how little reliance can be placed on any of the statements of the Greek Government made when Constantine was on the throne. Among them was the denial that the Greek Government had any part in the infamous attempt in the spring and summer of 1914 to seize South Albania. That this was the work of Greek regulars was proved by all the evidence. Greek soldiers who gave their names, regiments, and the names of their officers were taken prisoner. All the refugees—and they were from many different districts—told of soldiers, and in many places of artillery. But as first-hand evidence is the very best, I went myself to the mountains to try to spy out the position of the Greek troops. Creeping along the mountain side in the neighbourhood of Tepeleni, which had already been captured by them, I saw with field glasses their military outposts and men in khaki, on the other side of the valley. That they were military posts and not a native encampment was obvious. I returned in haste to Valona, meaning to try to arouse Europe on the subject. But I arrived there to find that the present great war had broken out. England had, in fact, declared war forty-eight hours before I had news that we were likely to be drawn into it.

In the whirlpool of excitement which I found when I reached England at the end of August, 1914, any attempts to draw attention to the miseries of South Albania were hopeless.

That the seizure of South Albania was part of the German scheme is fairly obvious. The Kaiser himself, some time before, had visited that land from his *pied à terre* at Corfu, and his visit had aroused great distrust in the minds of the Albanians. Many persons at the time were surprised that the Prince of Wied, feeble stick though he was, made no effort to claim those districts which formed part of his realm. The patriots of Koritza hoped and longed for his coming.

It would appear, however, from papers which Wied left when he fled, that he had been instructed from Germany not to move in the matter, as his realm would later be extended in the direction of Serbia and Montenegro. In the light of recent revelations this report seems highly probable.

During the few months that Wied was at Durazzo, so multitudinous and conflicting were European political interests that we can best describe it by saying that diamonds busily strove to cut diamonds, while wheels ran within wheels, troubled waters were fished in, and everyone tried to make a catspaw of the other. A nice "confusion of epitaphs" for confusion worse confounded. We may add another, and say Constantine's finger was in the pie.

Yours, etc.,

M. E. DURHAM.

71, Belsize Park Gardens.
August 24.

THE ANGLO-ROUMANIAN SOCIETY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—A year ago next Monday Roumania entered the war in order to liberate the three and a-half million Roumanians of Austria-Hungary, who have been the victims of perhaps the most iniquitous oppression that the last fifty years of European history have known.

Years of negotiation with the Central Powers had failed to secure for the Roumanians of Austria-Hungary any alleviation of their lot. Promises were made only to be broken, pledges given only to be disregarded, until at last, when diplomacy had failed, there was no course left but to draw the sword. The Roumanian armies crossed the Carpathians, but a month of brilliant success was followed by disaster after disaster. Partly owing to military inexperience, but far more to political and strategic reasons over which she had no control, Roumania had to submit to the humiliation of retreat and to the evacuation of two-thirds of her territory. Undismayed, the Government, Army and nation have continued the struggle. The fighting forces of the country have been reorganised and their spirit is unfaltering. Once again, last month, they renewed the offensive. Once again, unfortunately, events abroad have robbed the Roumanian armies of the prospect of success, and now the country is threatened with complete occupation by the enemy. The moment is a critical one. The Roumanian armies are fighting most gallantly and tenaciously against a foe ably led and of superior equipment. The Roumanian King and Government are determined to leave their country rather than yield to any suggestion of a dishonourable peace. During the past three months the Roumanian Parliament, with the cordial approval of the King, has come into line with Western Democracy by enacting far-reaching electoral and agrarian reforms, guaranteeing also equal rights for the hitherto unassimilated Jewish element of the population.

Relations between Roumania and the British Empire have hitherto been scanty and spasmodic, largely owing to mutual ignorance and indifference. We believe that this hour of crisis offers a fruitful opportunity to give the official Anglo-Roumanian Alliance a broader basis of permanent, cordial relations between the two peoples, who are inspired by a common purpose. From such a beginning we look forward with confidence to a future of intellectual, social, economic, and political co-operation. Already other members of the Alliance, notably France and the United States, have been working towards the goal, and it is time for the British people to realise the importance of a permanent political alliance with Roumania. Though far removed from the Roumanians geographically and by reasons of language and history, we are one with them to-day in the determination to secure for all nations the free choice of their own destiny. The Allies have publicly pledged themselves to the full liberation and restoration of the Roumanian people. We wish on this solemn occasion to offer to our Roumanian Ally this tribute of admiration, sympathy, and warm encouragement in the fiery ordeal she is enduring in pursuance of her noble aims.

On behalf of the Anglo-Roumanian Society, we are—

Yours, etc.,

BESSBOROUGH, Chairman of the Provisional Executive Committee.

A. W. A. LEEPER, Hon. Secretary.

17, Cavendish Square,
August 25.

A SALONIKA MEMORIAL TO MRS. HARLEY

The Serbian Legation has issued the following account of the unveiling of the memorial to Mrs. Harley at Salonika :—

There took place yesterday (*i.e.*, June 24, Greek Calendar), at the Allies' Cemetery at Zeytinlik, Salonika, the ceremony of the unveiling of the memorial to Mrs. Harley, a never-to-be-forgotten benefactress of the Serbian race, the noble sister of the great English General, Field-Marshal Lord French, who fell a victim to the barbarities of the enemy over Monastir.

All the Serbian Colony of Salonika came to express their deep sense of gratitude to this courageous Englishwoman. Poor refugees were there, side by side with English nurses, British officers and soldiers, and also many Serbian and other Allied officers. Near to the veiled memorial were Mrs. Harley's daughters, also representatives of King Peter and the Crown Prince. With them were the officers of the Headquarters Staff, officials of the Department for Internal Affairs, and other representatives of the Serbian Government and institutions. From the tombstone hung the Serbian tricolour and British flags, and there was an English inscription on the memorial telling how Mrs. Harley had given her life for the service of Serbia.

After the service, conducted by ten of the higher clergy of the Serbian Church, Lieutenant-Colonel Athanasievitch, Commandant of Miera, delivered a short but touching speech, first in English and afterwards in the mother tongue. He said: "On behalf of myself and my officers in Micra, I have now to ask the authorities to accept the charge of this memorial. In erecting this monument we simply express our appreciation of the services which Mrs. Harley had rendered to our people and of the spirit by which she was animated." Speaking in Serbian, he then explained how greatly the officers and men of the Command were impressed by the news of Mrs. Harley's death, at the very moment when she was bravely ministering to the needs of the sorely-afflicted people in Monastir.

The monument bears the following inscription in both Serbian and English. The following is a translation of the Serbian lines :—

"Upon thy grave in place of flowers
Serbian thanks shall ever bloom;
In days far off thy name and fame
A later kindred shall acclaim!"

Erected by
The Officers of the Supplementary Command.

The Lord Mayor of London has opened a subscription list at the Mansion House in aid of the sufferers through the fire at Salonika. Messrs. N. M. Rothschild and Sons have sent a donation of £1,000 to the Lord Mayor as a first instalment.

The *Round Table* is an invaluable publication owing to the judicial spirit in which it approaches every subject it handles. Though primarily a review of the politics of the British Empire, it touches of necessity from time to time upon Near Eastern subjects as they come within the sphere of British interests. In the issue for the current quarter (September) one article deals shrewdly with the reasons that brought Great Britain into the war and keep her there. Other articles of special interest are "The Internal Problem in Germany," "Finance After the War," and "Some Problems in Democracy and Reconstruction."

4	22	Tuesday	17	17
5	23	Wednesday	18	18
6	24	Thursday	19	19

By the command of His Majesty, Mr. C. H. Montgomery, C.V.O., Marshal of the Ceremonies, called upon the Roumanian Minister, M. Nicolas Misu, on August 24, to offer King George's congratulations on the occasion of the anniversary of the birthday of the King of Roumania. His Excellency thanked Mr. Montgomery for His Majesty's most gracious message, the full text of which was immediately telegraphed to King Ferdinand. In the course of the day cards were left on behalf of the Prime Minister, the Secretary of State for Foreign Affairs, the Lord Chamberlain, and Colonel Sir Douglas Dawson, Comptroller of the Lord Chamberlain's Department. Several members of the Corps Diplomatique and members of the Roumanian colony called at the Legation.

The Earl of Cromer has left London for Minto House, Hawick.

Sir H. Babington Smith, K.C.B., has been appointed a Companion of the Order of the Companions of Honour.

The Hon. Sir Arthur Lawley arrived in London from Scotland last week.

M. Eulambios has been appointed an Attaché to the Greek Legation in London.

Colonel Caratasu, of the Roumanian Army, has returned to London from Harrogate.

M. Lahovary, the Roumanian Minister in Paris, arrives in London this week from France.

Major Arion, the Roumanian Military Attaché, arrived in London on Monday evening. On Wednesday he visited the Earl of Derby, Secretary of State for War.

General Rudeano, of the Roumanian Military Mission, has arrived in London from Paris.

Madame Gennadius, the wife of the Greek Minister, left the Legation on August 25 for Eastbourne.

Twelve classes of Greek Reservists who have not yet been trained have been called to the Colours.

Captain Dr. David Albala, of the Serbian Army, arrived in London on August 25 from Corfu on a special mission.

Sir J. Roper Parkington, Consul-General for Montenegro, and Lady Parkington have left Harrogate for Tunbridge Wells.

It is understood that ex-King Constantine is settling at Zurich for the winter, and has taken a furnished villa on the Dolderberg.

M. Roussos, the newly-appointed Greek Minister to Washington, has left London for New York to take up his diplomatic duties.

Mrs. Mardon, the wife of Major E. J. Mardon, Rifle Brigade, I.C.S., retired, gave birth to a son on August 22, at New Court, Topsham, Devon.

Viscount Hardinge, Under-Secretary for Foreign Affairs, who has been away for a brief holiday in Scotland, has returned to the Foreign Office.

M. Pavlé Karovitch, Secretary to the Serbian Legation in London, arrived in town on August 27 from Paris, where he has been on a special mission.

The Rev. William Alan Rutherford, who died at Penrith on August 27, at the age of eighty-eight years, was Chaplain of Malta Hospital, 1875-6.

The Rome correspondent of the *Morning Post* states that Prince Ghika, the Roumanian Minister in that capital, has been placed on the retired list. He had asked to be sent to America, but his request was not granted.

Second-Lieutenant W. E. Polge, London Regiment, of the Imperial Ottoman Bank in London, is reported "Wounded and missing."

The Crown Prince of Serbia has conferred on Mrs. Agnes Bennett, M.D., chairman of the English hospital in Ostrovo, the Order of St. Sava, Class III.

Mr. Anthony, Director-General of the State Domains Administration, Egyptian Government, has been making a tour of inspection in the Sakha Domain. He was expected to return to Cairo about the middle of August.

The *Münchener Neueste Nachrichten* gives confirmation to the report that Count Bernstorff, formerly German Ambassador in Washington, is to be Herr von Kühlmann's successor as Ambassador in Constantinople.

The engagement is announced of Major Aubrey Jarrett, M.C., R.G.A., younger son of Colonel H. S. Jarrett, C.I.E., and Mrs. Jarrett, of South Lodge, East Grinstead, and Miss Dorothea Mary Campbell, daughter of Brevet-Colonel G. P. Campbell, Royal Engineers, and Mrs. Campbell, Quetta.

The King has given authority to Sir George Russell Clerk, K.C.M.G., C.B., Senior Clerk in the Foreign Office, to wear the Insignia of Commander of the Order of St. Maurice and St. Lazarus, which has been conferred upon him by the King of Italy, in recognition of valuable services rendered by him in the Allied cause.

An engagement is announced between Mr. Douglas E. H. Egremont, of the Assam-Bengal Railway, eldest son of the Rev. H. E. Egremont, of Southsea, and grandson of the late Mr. John Egremont, J.P., of Reedness Hall, Yorkshire, and Miss Gladys Murray Charlett, second daughter of the late Captain C. G. D. Newington, Indian Army, and Mrs. Newington, of 15, Nettlecombe Avenue, Southsea.

Sir James Walker has presented a challenge cup to the Indian Gymkhana Club for lawn tennis. The cup will be competed for annually by the members. The club, which was founded for the benefit of the Indian students in England, has its ground at Mill Hill Park, Acton. It has been very much to the fore this summer owing to the achievements of its cricket team, which has had a most successful season.

All male Roumanian subjects born between January 1, 1877, and December 31, 1898, both inclusive, residing in the United Kingdom who have not been called up for military service should present themselves before Major Arion, the Roumanian Military Attaché, at No. 1, Canada House, Kingsway, between 10 a.m. and 1 p.m. any day this or next week, bringing their military and civil papers with them.

The Dardanelles Commissioners examined a number of witnesses on August 28, including Colonel Keble, D.S.O., Assistant Director of Medical Services, who served throughout the Gallipoli operations, Colonel Riley, Colonel C. M. Begg, C.M.G., and Captain Jacka, V.C., M.C. The Commissioners sat again at the House of Lords on August 29, when Surgeon-General Sir R. W. Ford, D.S.O., Lieut.-Colonel P. C. Fenwick, and Lieut.-Colonel M. P. Corkery were examined.

Among the names of the first recipients of the new Imperial "Order of the British Empire" appears that of Lady Paget, who has been made a Dame Grand Cross of the Order. This honour has been conferred on Lady Paget in recognition of her services in connection with the Serbian Relief Fund. The Hon. Lady Lawley has also been appointed a Dame Grand Cross of the Order. Lady Lawley is hon. secretary of Queen Mary's Needlework Guild.

The other divisions of the new Order also contain many names of interest. Among the Knight Commanders, for instance, is Sir Richard Crawford, K.C.M.G., Commercial Adviser at the British Embassy at Washington. The Commanders include Lieut.-Colonel Jay Gould, M.B., I.M.S., late Commissioner, British Red Cross Society, Mesopotamia.

By no means the least interesting of the awards is the appointment as Commander of Miss Gertrude Lowthian Bell. The services for which the honour has been conferred are briefly recorded as having been rendered in the East. It might have been added that they are unique in the record of women's activities, even in a war that is conspicuous for the varied forms that women's work has taken. Miss Bell has an almost unrivalled knowledge of the Middle East, and it is gratifying to find that the authorities have been able to make the fullest use of this knowledge.

Mr. George Mounsey, First Secretary at the British Embassy at Rome, and Mr. John Henry Silley, of Messrs. Green, Silley, and Weir, are made Officers of the Order, while the Members include Mr. Albert Cocking, Commissioner of the Church Army for Egypt; Mr. William Charles Grant, Temporary Admiralty Overseer at Boat Yard, Abadan, Persian Gulf; Mr. George Price, Storekeeper, Headquarters, British Red Cross Society, Malta; and Mr. Leonard Charles Tricker, Storekeeper, British Red Cross Society, Malta.

In the reference that was made last week to the mishap to the P. and O. Mooltan it would seem that only half the tale was told when the gratitude of the passengers was expressed for the conduct of the officers at the time when the vessel was struck. The passengers speak most warmly of the generous treatment they received from the company both when they reached land and subsequently in London, and especially of the courtesy they experienced at the hands of Mr. G. Brenier, the agent at Marseilles.

APPOINTMENTS, PROMOTIONS, ETC.

El Bimbashi C. H. Gore, Department of Supplies, has been appointed Assistant Financial Secretary, E.A.

Mr. J. M. Marshall, of the Ministry of Finance, has been apponted Public Custodian of Enemy Property in Egypt, in succession to Mr. Hornsby.

Lewa E. C. Midwinter Pasha, C.B., C.M.G., D.S.O., General Manager Sudan Government Railways, is now on four months' leave of absence, and will return to duty on November 4.

His Highness the Sultan has been most graciously pleased to confer the Order of the Nile, Fourth Class, upon the undermentioned officers:—Kaimakam C. A. Barker Bey, Military Secretary; Kaimakam A. Craufurd Bey, Western Arab Corps, late Sudanese; Kaimakam R. S. Hart Bey, late Sudan Government; Kaimakam C. W. W. Sandes Bey, Deputy-Assistant Adjutant-General; Bimbashi D. A. Fairbairn, late Sudanese; and Bimbashi H. F. C. Hobbs, Camel Corps.

His Highness the Sultan has also conferred the Order of the Nile, Fourth Class, on Captain the Marquess of Carisbrooke, G.C.V.O., and Captain the Marquess of Anglesey.

OBITUARY.

The death took place on August 23 of Eva, Lady Beville, daughter of the late Captain Edward Grove, and widow of General Sir George F. Beville, K.C.B., I.A.

The death occurred on August 21, of Lieutenant Harry Kemp Sewell, R.F.A., deputy coroner of West Kent, and son of Mr. H. B. Sewell, of Greenwich, coroner of West Kent and deputy-coroner of South-East London. Lieutenant Sewell took part in the Kut Relief Expedition, when he was wounded. He was invalided home, and never recovered his strength. The funeral took place on August 24, at Charlton Cemetery, with military honours.

The death occurred suddenly, on August 22, at his country house near Windsor, of Prince Emmanuel Bibesco, brother of Prince Antoine Bibesco, Secretary to the Roumanian Legation in London. Prince Emmanuel Bibesco, who was educated in France and England, was one of the largest landowners in Roumania. The late Prince, who was about thirty-five years of age, and unmarried, had many friends in diplomatic and other circles, among whom he enjoyed great popularity, and the news of his death will be received with deep regret.

The first part of the funeral service for Prince Bibesco was held in the Russian Church in Welbeck Street at eleven o'clock on August 25. The coffin rested on a catafalque facing the altar, and was surrounded by flowers and lighted candles. The Very Rev. Eugene Smirnoff, the Archpriest to the Russian Embassy, officiated, and was assisted by the Deacon. Relatives and intimate friends attended the service, and were also present at Brompton Cemetery, where the interment took place.

A correspondent writes:—Flight-Lieut. Richard Keyser, whose death occurred on August 22, was the fifth son of the late Mr. Edward Keyser, for many years Director of the Bank of Salonica at Smyrna, and was educated at Uppingham School. When the war broke out he left Smyrna for England in company with twenty young British residents, and joined the Colours. He received his commission in the East Lancashire Regiment, with which he saw service at the front. Promoted to the rank of lieutenant, he was subsequently ordered to another front on special duty as an Intelligence Officer, but his work there proving too tame for one who craved for adventure, he enlisted in the R.F.C., and after a course of training abroad, where he won his wings, returned to England a few weeks ago to meet his tragic fate near Hounslow. It is stated by eye-witnesses that in the act of alighting in a field where some women were working, he swerved rapidly to avoid an accident, and lost control of his machine. Lieut. Keyser and Captain Hollanby, who was unfortunately killed on the same day, were laid to rest on August 27 at Heston Hounslow Cemetery, and received the honours of a military funeral amid a scene most solemn and impressive, rendered still more so when their coffins, borne on the shoulders of brother officers, were lowered into their graves, three volleys were fired, and the Last Post was sounded. Captain Albert Keyser, brother of the deceased, arrived from the front in time to be present at the funeral, and with him were his mother and sisters. Following the procession were a large number of officers and intimate friends, anxious to offer a last tribute to the memory of an able and gallant officer, whose genial disposition and kindliness of heart had endeared him to all with whom he came in contact.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

BECKETT.—On August 22, the wife of Henry Walton Beckett, Secretary of Mines, Cairo, of a son.

DANIELL.—To Major W. A. Daniell, Ontario Rifles, and Mrs. Daniell, at Crowborough, on August 27, 1917—a son.

MARRIAGE.

GILLAN—ORD-MACKENZIE.—On August 28, at Holy Trinity, Brompton, by the Rev. R. E. Vernon Hanson, C.F., J. Angus Gillan, Sudan Civil Service, eldest son of the Rev. James and Mrs. Gillan, 4, Regent Terrace, Edinburgh, to Margaret Douglas, younger daughter of Mr. and Mrs. Ord-Mackenzie, Headley Mount, Headley, Hampshire, and late of Walton Heath.

DEATH.

RUSSELL.—On August 23, in Cairo, H. E. Russell, of Sydney, N.S.W., aged 81.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

FRIDAY, AUGUST 31, 1917.

THE POLITICAL FUTURE OF INDIA.

Recent events have directed attention once again to the question of Indian constitutional reform, a question of profound importance not merely to the inhabitants of the great Dependency, but to every portion of the British Empire, and, indeed, to the whole civilised world, which cannot view without concern the future of a population exceeding three hundred millions in number. That future has now been declared, so far at least as its decision depends on the statesmen of the Empire; the Secretary of State has announced formally that India is eventually to govern herself, and that her progress towards the ultimate goal is to be gradual, the time and measure of each advance being determined by the responsible Governments. To thinking men this announcement contains little that is new, since the goal of self-government has for many years past been implicit in the policy pursued by successive administrations, and any other aim has long been seen to be impossible; but Indian politicians have of late been seeking for a sign, and the Government has been well advised to respond to their wishes and to state the position in such a way that all men of goodwill can join in the effort needed to secure the accomplishment of the accepted policy. Of the need for earnest and united effort there can be no question. The gradual but complete transformation of the established system of government presents a long series of problems as complex as any that have ever tested the quality of British statesmanship, and their satisfactory solution can be attained only by the cordial and harmonious co-operation of the Englishmen in India with the leaders and representatives of the people.

From this point of view particular interest attaches to the document published a few days before Mr. Montagu's announcement, and described not inaptly as the political testament of Mr. Gokhale. Alike in England and in India, Mr. Gokhale was known and respected as a statesman of outstanding capacity, readier than most of his contemporaries to recognise hard facts, and without faltering in allegiance to his ideals to lay his course towards them in accordance with the exigencies of the existing situation. These characteristics are shown in the document in question, in which he furnished a sketch of the constitutional arrangements which he considered might be adopted as the first halting-place on the long road leading to responsible government. The fundamental points in his scheme can be stated in a few words. Each of the provinces into which India is divided should be given full representative, but not responsible, government, with the supreme administration standing in the background, not as at present to scrutinise and interfere in a thousand details, but watching, and prepared to step in to prevent a serious breakdown. A hybrid executive would be appointed for each province, subject to the Legislature in financial arrangements, but not responsible to it in the technical sense of the word, the relations between the two bodies being, roughly, similar to those which exist in Germany between the Reichstag and the Imperial Government. The Legislature would be mainly elected, with due provision for the representation of those special interests which bulk so largely in Indian political life; and the presence of officials at its deliberations would be limited to the number required to represent the views of the executive. This scheme contrasts favourably with the efforts of the amateur constitution-builders who have been so busy in India during the last two years. Its salient feature, the internal autonomy of the provinces, has already been adopted as an administrative ideal, though it must be recognised that the efforts made to achieve it have been lamentably weak and inadequate. Everyone admits in theory that the existing system is over-centralised, but each concrete proposal for decentralisation is subjected to damaging criticism, sometimes from the standpoint of departmental efficiency, sometimes in the supposed interests of financial stability, and in the result is usually so much whittled down and so overloaded with reservations and safeguards that no real progress is attained. There is much, therefore, to be said for proceeding in this particular matter *per saltum*, for cutting the bonds of the provinces once for all, and for setting them free to mould their own destinies, under an executive appointed from above, but subjected to financial control and to continuous criticism by a definitely representative Legislature. The arrangement offers too many opportunities for friction to be recommended as a permanency, but that is not the intention with which it was put forward: judged as a measure designed to tide over a period of transition and to advance the political education of the Indian peoples, it is worthy of fair and dispassionate consideration.

Of the details of Mr. Gokhale's scheme it is unnecessary to say much. Many of them are open to more or less serious question, but the author of the scheme would have been the first to admit that details are matters for adjustment, and they may safely be left to the authorities charged by the decision of the British Government with working out the measures to be definitely adopted. Such criticism as we have to offer relates rather to a fundamental question on which Mr. Gokhale did not touch. Each provincial Executive is to be controlled by an elected Legislature. Who is this Legislature to represent? The small minority of the people who have benefited by Western culture and are inclined to monopolise the political activity of the country, or the overwhelming majority of peasants and labourers and artisans, who at present have no votes and are nearly as destitute of direct political influence as they were in the days of Akbar or of Aurangzeb? This question is evaded with greater or less dexterity in all the schemes which emanate from the regular political organisations, the authors of which are naturally more anxious to increase the power they already possess than to share it with the silent masses of the people. Their attitude will not, however, commend itself to the British nations, who are so deeply interested in the future of India, and who will insist that the measures now to be taken, while framed in accordance with the facts of the existing situation, shall be such as to prepare the way for democracy rather than for oligarchy. The simple course of enfranchising the masses forthwith is not practical politics. For a thousand years they have been taught to consider themselves of no account, and the lesson has been too well learned to render such action expedient. The task in hand is much more difficult: it is necessary to foster and develop the awakening of the political consciousness of the masses, already beginning to show faint traces of life, to provide them with suitable means of expressing their ideals, and to ensure to them an amount of influence, substantial from the outset, and increasing steadily with every increase in their power of self-expression, until finally the people as a whole are prepared and equipped to control their own destinies. To our mind that is the essence of the problem which has now to be solved: the questions of administrative machinery are difficult, and we have no wish to minimise their importance, but they shrink almost into insignificance when compared with the need for developing and educating an electorate qualified to sustain the burden which it will ultimately have to bear.

THE CAUCASUS AND THE REVOLUTION.

(From an Armenian Correspondent.)

While in the second week of March last the Revolutionary movement was developing in Petrograd, people in the Caucasus were only told that "grave events were happening in the capital." In anticipation of coming events, the Grand Duke Nicholas, the Viceroy, asked all the editors of papers at Tiflis to meet him at the Palace to discuss measures of public order and safety—an unprecedented step for a Viceroy to take. On the abdication of the Tsar, the whole truth was telegraphed by M. Rodzianko to the Town Council of Tiflis. The President of the State Duma at the same time asked the municipal authorities to keep order and to await further instructions from the Duma. All bureaucratic governors, chiefs of police, gendarmerie and secret agents were arrested without much resistance, and volunteer militiamen were engaged to keep order. As there was no Zemstvo Government in the Caucasus, the Town Council of Tiflis, strengthened by a few public men representing various nationalities, established itself as a government under the leadership of Khatissian, the able mayor of that town. These twenty-three men, increased later on to forty-four, appointed on the principle of proportional representation, managed affairs fairly well for the first three weeks, while the townspeople and the inhabitants of the provinces were holding demonstrations and making speeches. The Grand Duke Nicholas, General Janushkevitch, and others of the old régime left for Petrograd in the first week, seen off at the station by only a few representatives of the Georgian aristocracy and the mayor. In Baku, Batum, Erivan, Kars, and other centres the devolution of authority was effected by almost the same processes as in Tiflis. Agents of the old Government, from Governors downwards, were arrested and imprisoned, and municipal authorities everywhere assumed the work of administration pending new instructions from above.

At the beginning of April the State Duma sent its five members from the Caucasian constituencies to Tiflis as Commissioners to organise the new administration in the Caucasus. These Commissioners—M. Kharlamoff, the chairman, a Russian; M. Babajanian, an Armenian; M. Apashitze, a Georgian; M. Jafaroff, a Tartar; and M. Tchekhengeli, the well-known Georgian Social Democrat and representative of the Petrograd Council of Workmen's and Soldiers' Delegates—together with a number of local bodies, are now called the Special Commission of Trans-Caucasia. The Commissioners have been touring various centres of the Caucasus, organizing authority, and directing the development of devolution on lines similar to those carried out in Petrograd. They represent nominally the supreme power in the Caucasus, but as time goes on authority seems to be slipping from their hands. M. Tchekhengeli and others have organized local Councils of Workmen's and Soldiers' Delegates in Tiflis and other centres; but so far they have achieved little success in this direction. They have established the *Kawkasskoe Rabotchi*, a daily paper in Tiflis. In the general confusion, however, the masses are hesitating as to what to do and whom to follow. The changes proposed by the extreme Socialists in regard to the land, wages, and working hours are so radical that people seem to doubt their feasibility. Towards the end of May the Caucasian Soldiers' and Officers' Delegates met at a Congress in Tiflis and held discussions on many points. One distinguishing feature of the situation in the Caucasus is indeed striking: it is the lack of co-operation between the soldiers and workmen, or between the former and Socialists.

To turn now to the question of nationalities and inter-racial relationships. For the sake of convenience, the inquiry may be restricted to the three main elements of the people of the Caucasus—Armenians, Georgians and Tartars. Russians count for little, because most of them, being officials of the old Government, have taken only an inconsiderable part in public life. (Even in March, 1916, during the conference held at the Grand Duke's palace in Tiflis for considering measures for introducing Zemstvo government in the Caucasus, most of the nominated representatives of Russian origin voted with the Armenian party and some others with the Georgians.) The same was the case of the Jews, who number several tens of thousands.

Armenians.—On the whole the Armenians have felt great satisfaction and joy at the downfall of the old régime, which had been anything but friendly to themselves. The behaviour of the Grand Duke Nicholas towards the Armenian Volunteer Movement had created indignation and disgust throughout the country. While some hot-headed and irresponsible groups of Armenians have been indulging in violent propaganda of socialism and social democracy, the mass of the people and responsible bodies, from the Catholicos downwards, have maintained a cautious and sympathetic attitude towards the movement, exerting themselves in the meantime to consolidate the new régime. Recent bitter lessons in Turkey are uppermost in the minds of Armenian leaders and committees. Under the revolutionary régime Armenians and Georgians jointly predominate in administrative posts and the work of reorganisation. The Armenian *bourgeoisie* and industrial classes seem rather to be standing aloof, whereas the Daschnakzutiun party and *Intelligentzia* have wholeheartedly thrown themselves into the forefront. Armenian papers are full of advice for moderation and caution; *Mschak*, a Liberal daily, insists on concentrating attention on national requirements and needs.

The Catholicos, the supreme head of the Armenian Church, has officially applied to the Provisional Government demanding a revision of the restrictions which were inflicted upon the spiritual and hierarchical independence of the Armenian Church by the "Polojenie" statute of 1836. Leaders are arranging an Armenian Conference soon to be held at Etchmiadzin to determine *inter alia* the Armenian attitude towards the Constituent Assembly, the position of Armenians in the Caucasus, and problems of their future there and in Turkish Armenia. There is a fresh revival of nationalist movement in consequence of the new freedom. Keen interest is being manifested by people who had almost forgotten their Armenian origin. The *Mschak* party is strengthening itself by new elements into a National Liberal party. A "Haikazian" society has just been formed by millionaires and conservative intellectuals solely to encourage Armenia's arts, literature, science and historical research. Large capital has been subscribed to support it.

Georgians.—After a century of willing submission to Russian rule and submergence in the Greek Orthodox Church, Georgians had been moving fast into a new sense of national self-consciousness and nationalism for the last twenty years. The Georgian *Intelligentzia* and some aristocratic University men combined have brought about this new movement, first starting as internationalists and then, most of them, developing on nationalist lines. The chief party was the Social Democratic party (Marxist), which had no great difficulty in breaking down to any large extent the patronising tendencies of the Georgian people by an effete and impoverished artistocracy, an influential class of landowners and State officials. The Russian revolution

WHITE HORSE WHISKY.

gave a great impetus to tendencies for which, after a generation of propaganda and education, the Georgian people were ripe. The will to assert themselves as a distinct nationality and to establish the independence of their Church from the Russian Orthodox Church, into which they merged themselves in 1801, manifested itself from the first day of the revolution.

The first act of this nationalist movement was embodied in an appeal by the Georgian Holy Synod of Tiflis to the Provisional Government at Petrograd, requesting the latter to cancel the union of the Georgian Church with that of the Russian Church; to recognise the spiritual autocephaly of the Georgian Church with its seat of a Georgian Catholicos at Matzkhet (near Tiflis), and to nominate this new supreme patriarch for their own Church as distinct from the Russian Exarch appointed for Georgia by the Holy Synod at Petrograd. In answer to this appeal, which was made early in April, the Provisional Government has in principle recognised the right of the Georgians to spiritual self-determination and hierarchical independence, leaving the other points for later consideration. Elated by this initial success, Georgians are developing a strong sense of nationality, preparing new programmes of national education, of democratising their institutions, and making efforts for the economic uplifting of their peasantry. So far most of the Georgian aristocrats have conspicuously held aloof from all this activity, as if showing their mistrust in the endurance of the present order of things.

There is complete understanding and co-operation between the Armenian and Georgian *Intelligentzia* and political parties in matters affecting the future régime—labour, economic problems, and inter-racial relationships. But the aloofness displayed by the greater part of the Georgian aristocracy and part of the Armenian rich *bourgeoisie* indicates that their antagonism has not yet disappeared completely, even in the heyday of the great occasion.

Tartars.—Mohammedans of various categories number about 5,000,000 in the Caucasus, a little more than the total of Armenians and Georgians combined; but they are not well organised, and possess no national institutions like the other elements. Since the revolution their first pre-occupation has been religious and social rather than political. The Tartar Press, from Turkestan, Orenburg, Kazan, down to Transcaucasia, is discussing means of raising the status of their women and of removing the petty schismatic differences between Shia and Sunni sects. Under the auspices of the Union of Benevolence of Baku, a Congress was held on April 28 in which representatives of Southern Russia and all the Caucasus took part. After much discussion they did not reach an agreement as to whether Mohammedan women ought to be allowed to go about without their faces being veiled. The Congress drew up a political platform of radical reforms to be submitted to the Pan-islamic Congress, which will be held in Petrograd, to discuss the Tartar aims and aspirations to be presented to the Constituent Assembly.

As to their present state of mind, the Baku daily paper *Sevkat* reflects the position in the following words:—"Georgians have raised the banner of the autonomy of Georgia; Armenians have raised the banner of the autonomy of Armenia, which they have cherished for so long. And what have we decided to do? Nothing. Let us gather ourselves under one banner and raise it. But what is going to be that banner which will fully answer our national and religious aspirations? The banner of a democratic Republic. Let us come together and raise that banner."

A. S. S.

The London County Council has issued for the schools under its control an account of the work done by London children in providing and buying material and making clothing for the Belgian and Serbian children. Some of the Serbian clothing has already been distributed in the villages which have been retaken from the Bulgarians, and the gifts have been very greatly appreciated. In all, about 10,000 kits have been supplied for Belgian and Serbian children, while £100 has been devoted to providing clothes for Serbian boys in England.

TANGIER TO TEHERAN.

So much has happened since 1914 that it is rather difficult to keep in mind the brief and very inglorious career of the ex-Mpret in Albania. Since his hasty departure from Durazzo, just under three years ago, very little has been heard of Prince William of Wied, and quite naturally so, for his Albanian failure is very much on a par with the type of social indiscretion for which a year or two's retreat is usually prescribed. Evidently the ex-Mpret feels that his retirement has lasted long enough, for, according to the *Vossische Zeitung* he has come into the limelight again with a memorandum addressed to the Central and neutral Powers upholding his claims to the Albanian throne. I quite understand the motive that has prompted him to this action. He is doubtless of the opinion that another twelve months or so will see the conclusion of the struggle, and he probably fears that the employment market will be overstocked even with German princes, and he is therefore anxious to stake his claim first.

***

I fear, however—if I may be allowed to use a term which is admittedly a euphemism in the circumstances—that all the wiles of the ex-Mpret are unlikely to result in the removal of the preposition. "Ex" he will probably be, as far as Albania is concerned, to the end of his days. And I very much doubt whether his "august" sovereign would be willing, if he were able to do so, to find him a position outside Germany after the war, for failure has invariably a very chilling effect. The contingency, in any case, is not one that need cause us any concern. The day of German princelings set up by the Hohenzollerns has gone, never to return, and individuals like the ex-Mpret will have to be content in future with little principalities in the "Fatherland," where their peculiar abilities will have a much more appreciative audience than could possibly be the case elsewhere.

***

Elsewhere in this issue will be found some extracts from an article describing some of the more piquant passages of the visit of the ex-Sultan of Morocco to Vichy. If I may be allowed to say so without any suspicion of *lèse majesté*, the incidents of which his Highness was the central figure remind me of nothing so much as some of the lighter adventures of Gulliver. To fall in with Vichy's ways the ex-Sultan needed a very complete mental orientation, but as he met life with his normal outlook it was only to be expected that there would be some ludicrous occurrences. And so it happened. It would be interesting to know how Vichy as a whole received the news of the ex-Sultan's *faux pas*. And it would be still more interesting if someone in his entourage could be prevailed upon to keep a diary of events, for there must have been other priceless incidents besides those related by the correspondent which ought not to be lost to posterity.

***

The end of the Russian tragedy is not yet in sight, and I find myself wondering whether the Allies have really adopted the best means of trying to save the Russians from themselves. There seems to me to have been too much indiscriminate back-patting, and not enough care exercised to discriminate between the Possibles and the Impossibles who have been thrown together to the surface by the revolution. A little less hob-nobbing with the Impossibles might have rendered M. Kerensky's task somewhat lighter. The discretion displayed by Mr. Henderson, for instance, since his return does not make for excessive confidence in the discretion which he probably brought to bear on the situation in Russia. As far as I can make out, the handling of the revolutionary movement has been carried out best in Roumania. For a time it promised to be the "whole hog," not only for the Russians in the country, but at their instigation for the Roumanians as well. In the words of the prophet, however, the latter "were not taking any," and if the Russian extremists had not seen the wisdom of becoming "little piggers," things might have assumed an ugly complexion. The moral, as I read it, is that the stand taken by the Roumanian authorities gave the Russian officers and the more sensible of the soldiery just the support they needed and enabled them to recover mastery of the situation. No doubt the position at Petrograd has not been on all fours. What the representatives of the Allies could not teach them, the Russians have to learn for themselves by bitter experience.

THE PRESS ON THE NEAR EAST.

The Ex-Sultan of Morocco.

A vivid glimpse of the adventures that fate sometimes has in store for special correspondents has been given by the Morocco correspondent of *The Times* in a recent article describing his amusing experiences while in the entourage of the ex-Sultan of Morocco at Vichy, where that potentate was living at an annexe of the Hotel Majestic. The ex-Sultan, it should be explained, met *The Times* correspondent at Gibraltar, and insisted on his accompanying him as a member of his suite, declaring that otherwise he would claim British protection. And so it happened that he went with him to Vichy, where the ex-Sultan soon contrived to give a lighter and more breezy aspect to life. A characteristic episode shows him as a dog fancier. Intrigued by the wiles of a little puppy he had bought in the street, he sent out his slaves to buy dogs, telling them that every dog on a string was for sale:—

As, of course, none of the slaves spoke anything but Arabic, they were ordered to bring dogs and sellers alike to the villa, where the bargains would be completed. Now, the municipal authorities of Vichy had recently issued an order that all dogs were either to be led or muzzled, so when the fashionable world went out to drink its early morning waters at least half of the ladies had little dogs at the end of a string. The writer was at breakfast when he was hurriedly summoned to the villa. At an open window on the ground floor, sitting cross-legged on an armchair, was his Majesty looking down with a puzzled expression upon the little garden, crowded with excited ladies and little dogs. Some were in tears, others wore expressions of interested curiosity, and a few were evidently trying to look their best, for no social distinctions had been recognised by the slaves who had "rounded them up" in the promenades of Vichy. "I want to buy," said the ex-Sultan from his window, "all these little dogs, but the sellers do not seem to understand the first principles of trade, and seem to be making a terrible fuss." The situation was evident—and acute. I explained it to the ex-Sultan, who politely apologised for having disturbed the ladies' early walks, but still insisted, without success, in trying to buy the dogs. It required all the writer's tact and diplomacy to put an end to a difficult situation and to restore equanimity to the indignant ladies.

Then followed an amusing episode with twenty-seven cows which the ex-Sultan took a fancy to, and had them delivered in the courtyard of the hotel. A boiling August morning was the indirect cause of the following even more grotesque incident:—

The villa reception rooms faced south-east, and by eight o'clock in the morning were insufferably hot, for the Sultan refused to close the outside shutters, as he liked to see and to be seen. Half an hour later he decided to change his quarters. On the opposite side of the road was a charming villa, in the deepest shade, with a balcony on the first floor wreathed in flowering creepers. Ordering his slaves to follow him, the ex-Sultan strode across the road, entered the villa, and found his way to the upstair room with the balcony. It was gorgeous but empty. An immense bed, which had evidently been slept in, stood with its head against the wall. A word from his Majesty and the bed was wheeled by the slaves into the window which opened on to the balcony, and, arranging the silk quilt and lace-fringed pillows, the ex-Sultan seated himself cross-legged, gazing down into the street below.

Now, the Russian lady of title who had occupied the bed had retired a few moments previously into her adjacent cabinet de toilette to take her morning bath. Her ablutions completed, but not clad for a reception, she entered her room to find a dusky Oriental potentate, with his still more dusky slaves, in possession. The ex-Sultan's politeness was extreme. He bade her welcome, and invited her to sit down beside him.

An overflowing sense of humour on the part of the lady saved a situation which might otherwise have been embarrassing, and when the writer, hastily summoned, arrived, the lady, now more suitably arrayed, and her husband were thoroughly enjoying the novelty of the situation.

One final passage, at least as picturesque as the above, concerns a night at the opera, the piece being Meyerbeer's "Roma," when the ex-Sultan was seriously concerned at the gesticulations of the basso:—

Springing to his feet, his Majesty cried, "Where is Dr. V.—?" (Dr. V— was his English doctor who had accompanied him on his visit to France); "Where is Dr. V—? Find him quickly, someone. He may yet be able to save his life," and with an expression of terrible anxiety the ex-Sultan's eyes alternately gazed fascinated at the singer or sought for the doctor in the gloomy recesses of the Royal box. It was not without difficulty that his Majesty was persuaded that the singer was suffering no pain; but that he was actually supposed to be giving pleasure to the audience he entirely refused to believe. The ex-Sultan was bored and left the theatre before the end. The following morning he asked the writer what had taken place in the last act, and on being told of the terrible fate that almost all the characters in the tragedy had suffered, he replied: "I am sorry I did not stay. I should have sent for the manager and insisted that the piece should end happily. The young lady should have married the soldier with the big sword. The blind woman should have had her sight restored by an able doctor—and no one should have been stabbed or built up in a tomb."

Mesopotamia's Possibilities.

The present administration in Mesopotamia and the immense possibilities of the country form the subject of an illuminating article by Colonel C. E. Yate, M.P., in the *Star*. Referring to the statement of Sir Thomas Holdich in a lecture before the Central Asian Society, to the effect that Central Arabia, Mecca and Medina, Syria, and Mesopotamia would always remain separate entities, he comments as follows on the actual conditions in Mesopotamia:—

In Central Arabia and Mesopotamia at the present day no portion will own allegiance to another. There could be no possible Arab claimant for the honour of governing Baghdad equal in religious, political, and military strength to the Shereef of Mecca, now known as the Malik-ul-Hejaz, but he has no influence in Mesopotamia, and not one of the Sheikhs of the three big tribes in Mesopotamia—the Shammar, the Anizieh, and the Moutafik—would accept the overlordship of an Arab from Hejaz. Nor would they accept the supremacy of one of themselves. The smaller tribes own no allegiance to either of the three big tribes, and would not become subservient to them, neither would they accept the overlordship of a Hejaz man. Consequently there is no one in Mesopotamia with sufficient status or power to rule the country. Then, again, the population of Baghdad . . . is a very mixed one. Some 50,000 or 60,000 are Jews, another 10,000 are Chaldeans, Nestorians, and old-world Christians of sorts, and the remainder are a mixed lot of Arabs, Persians, Kurds, etc., some Sunni-Mohammedans, and some Shiahs, who probably own no allegiance to anything but the strong hand.

Colonel Yate proceeds to point out that the Government inaugurated by General Sir Stanley Maude, which has already produced order out of "all this chaos," is an administration formed by officials of the Government of India working on Indian lines:—

Mesopotamia under a strong and honest administration, such as it now has, will in days to come be one of the richest countries in the world. It will be the granary of Asia, and it is also very rich in oil. No one has yet fathomed the possibilities of its mineral resources, and time will be required to open these out and complete the railways. The carrying out of the magnificent irrigation projects designed by Sir William Willcocks has already been commenced, and the great Hindia barrage constructed by Sir John Jackson and Co. is an earnest of what is to come. Once the flood waters have been controlled and the ancient Babylonian canals restored, Mesopotamia will become a second Egypt; in fact, Egypt will be nothing to it, and the good work now so well set in hand by the officers of the Government of India will, I hope, not be interfered with. Think what Burma was when the Government of India took it over in 1885, and what it is now—one of the most peaceful and prosperous provinces of the Indian Empire. What has been done by the officials of the Government of India in an outlying province like Burma on the east in the last generation can be equally well done in another outlying province like Mesopotamia in the west in the coming generation. The Indian system of government is now becoming more generally known. I hope the day may not be far distant when we shall see Mesopotamia having, like India, its own local Governor and its own Provincial Legislative Council composed of members partially elected and partly nominated, representing all the various races inhabiting the country, and just as flourishing as Burma is at the present day under a similar Constitution.

The Crisis in Austria.

The political situation in Austria-Hungary, as it is understood in Italy to-day, is analysed in the *Corriere della Sera* as follows:—

There is strong ground for the supposition that active work is proceeding in Vienna on a plan for the transformation and reconstitution of the Empire on a federal basis, in which side by side with Austria and Hungary there will arise the autonomous States of Galicia, Croatia, Bohemia, and other minor nationalities grouped together. There would be a species of Confederation, like that of Germany, in which the German element would have the function of the Prussian element in the Germanic Confederation, and in which the Habsburgs would have a position

like that of the Hohenzollern. These plans for transformation, which apparently are intended to satisfy the aspirations of the peoples and give effect to the principle of nationality, are being very cleverly adumbrated and discussed precisely at a moment when a steady activity in favour of Austria has begun in various parts abroad.

Of this activity it is possible to perceive some extremely significant indications. An attempt is made to present Austria under a benign light, and as a State that is, as it were, on the road to—repentance! There are discreet hints as to the possibility of detaching her from Germany, offering her good conditions, and of making her, transformed, into a sort of anti-Germanic barrier towards the East. An effort is made to exploit the "sympathy" which the Austro-Hungarian Empire has enjoyed in certain countries, especially in England. Symptomatic and instructing in this connection is an article in a Vienna journal, the *Sonn-und-Montagszeitung*, in which it is affirmed that the adversaries' hatred is directed specially against Germany, and it is regretted that "in the actual situation of things it is not possible, in connection with the question of the conclusion of peace, to utilise the *sympathy* which Austria and its inhabitants enjoy in many parts of the world."

Bulgaria and Germany.

A Bulgarian association for the maintenance of *Kultur* and economic relations with Germany is one of the latest products of the Central Alliance. In giving a reception in honour of the new society the German Minister to Sofia gave, according to the *Deutsche Tageszeitung*, the following sketch of the future in the Near East for the edification of his audience:—

Relying on God's help, we may look forward to peace with perfect self-confidence. A peaceful mind and a mailed fist will secure us peace also in the future. Then, in peace and in the future, we shall rejoice together over the creation of a great united Bulgaria, who will bring home the brothers who for centuries were divided, and hand in hand with our faithful Turkish allies securely guard the road to Asia from the Danube to the Ægean.

The reference to the mailed fist ought to encourage our pacifists to redouble their efforts to save German militarism from final and complete defeat.

THE ANGLO-ROUMANIAN SOCIETY.

We give below particulars of the constitution of the Anglo-Roumanian Society, the formation of which, in commemoration of the first anniversary of Roumania's entry into the war, is announced in a letter from the Earl of Bessborough and Mr. A. W. A. Leeper, chairman and hon. secretary respectively of the society, which is given elsewhere in this issue. The objects of the society are as follows:—

1. To promote closer relations between the British Empire and Roumania by mutual study of the life, literature, and economic conditions of both countries.
2. To support and to make known Roumania's just aspirations.
3. To spread a knowledge of Roumania, its political and geographical position in the Near East, and its importance for the welfare of the British Empire and for the maintenance of peace in Europe.

The following have accepted the office of vice-presidents:—The Marquis of Crewe, Viscount Bryce, Viscount Gladstone, the Bishop of London, Lord Burnham, Lord Carnock, Lord Dunedin, Lord Tennyson, Lord Hugh Cecil, M.P., the Lord Mayor of London, Sir Starr Jameson, Sir George Reid, Sir Alfred Pearce Gould (Vice-Chancellor of the University of London), Sir James Alfred Ewing (Vice-Chancellor of the University of Edinburgh).

The following are the members of the provisional executive committee:—The Earl of Bessborough (chairman), Sir Francis H. Barker, Mr. E. W. H. Barry (joint hon. treas.), Mr. Arnold Bennett, Mr. A. C. Benson, the Right Rev. Sir William Boyd-Carpenter, Mr. J. Annan Bryce, M.P., Lieut.-Col. John Buchan, Mr. R. M. Burrows (Principal of King's College, London), Mr. Howard Corbett, Commander Sir A. Trevor Dawson, R.N., Mr. Robert Donald, Professor Sir Arthur Evans, Mr. J. L. Garvin, Professor Maurice Gerothwohl, Mr. J. G. Hodder-Williams, Mr. Kennedy Jones, M.P., Mr. Hugh A. Law, M.P., Professor Sir Sidney Lee, Mr. A. W. A. Leeper (hon. sec.), Mr. H. Locke (joint hon. treas.), Mr. H. J. Mackintosh, M.P., Mr. E. D. Madge, Mr. G. H. Mair, Professor Paul Joseph Mantoux, Mr. Arthur Maquarie, Professor George Gilbert Murray, Sir Henry Newbolt, Dr. G. W. Prothero, Professor Sir Walter Raleigh, Dr. Michael E. Sadler (Vice-Chancellor of the University of Leeds), Dr. R. W. Seton-Watson, Mr. A. L. Smith (Master of Balliol College), Mr. J. St. Loe Strachey, Mr. A. F. Whyte, M.P., Sir William Grey-Wilson, K.C.M.G.

ROUMANIA'S WAR ANNIVERSARY.

The following telegram, dated August 22, has been sent by the King to the King of Roumania:—

"At a time when your Majesty is engaged in a bitter struggle in the defence of your country, I desire to convey to you the admiration of the British peoples at the magnificent way in which the Allied armies under your Majesty's command have fought, and at the very gallant resistance they are making to the assaults of the enemy. The British peoples are closely following the course of the great battle now raging, and they trust in the valour of the Roumanian and Russian troops under the leadership of your Majesty to bring the enemy's efforts to nought. The British forces in the West, in co-operation with our gallant French comrades, are striking hard at the common enemy, and will continue by all means in their power to render all possible assistance to your Majesty's forces and their Allies.—GEORGE R.I."

Mr. Lloyd George has telegraphed as follows to the Prime Minister of Roumania:—

"On the anniversary of Roumania's entry into the war, I wish to express on behalf of the British Government our heartfelt admiration for the heroic courage and endurance displayed by the Roumanian people during a year of almost unparalleled trial. In declaring against the Central Powers, Roumania took her stand for the cause of freedom against autocracy and of right against might. This cause can never fail, however long delayed its triumph may seem. The re-creation of their Army and the stubborn and invaluable resistance which it is now making against the enemy under conditions of exceptional difficulty is a magnificent example of the strength which freedom inspires in a free people. It is no less a proof of the resolution which animates all the Allied Armies to prosecute the war until victory is won, a victory which I have never doubted they will ultimately achieve.—LLOYD GEORGE."

EDUCATIONAL.

UNIVERSITY OF LONDON.

KING'S COLLEGE and KING'S COLLEGE for WOMEN.

COMPLETE COURSES of STUDY are arranged for DEGREES in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH and BACTERIOLOGY, ENGINEERING.

Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.

Facilities for research. Arrangements made for attending special or isolated courses.

EVENING CLASSES as well as Day in most faculties.

STUDENTS' HOSTELS. The Platanes, Denmark Hill, and Vincent Square, Westminster.

KING'S COLLEGE for Women now transferred to Strand, with full privileges.

Apply to Secretary, King's College, Strand.

UNIVERSITY OF LONDON, KING'S COLLEGE.

CLASSES are held in

SLAVONIC LANGUAGES AND LITERATURE,

RUSSIAN, POLISH, SERBIAN, also in MODERN GREEK.

For Leaflet and List of Public Lectures, apply to the Secretary.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

PRINCESS HELENA COLLEGE

EALING, W.

PRINCIPAL · MISS PARKER.

Boarding and Day School for the Daughters of Gentlemen. Special Attention to Languages, English, Art, Music. Holidays arranged for if required. Large Grounds.

Fees 66 gns. to 75 gns. a year.
Officers' Daughters 66 gns. a year.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

So many alleged adequate substitutes for textile materials have been introduced since the war began that further developments in this respect do not awaken very great interest. This is not to be wondered at, perhaps; but a recent French discovery is an exception to this. Algerian alfa fibre has been known for long, and, so we are told, a new process for its treatment has recently been devised with the view to utilise it for textile purposes. The process consists in the removal of the gum and resinous matters from the plant, which renders the fibre smooth and silky. The fibres so treated can be readily dyed, particularly with black dye, when, it is said, the fibre greatly resembles animal hair. It is claimed that fibre prepared by this process does not rot nora decay while in water. A by-product similar to tow is also obtained, which can be reeled or corded and used for making bagging, cordage, etc.

***

I was unable last week to deal in these notes with the published results of British foreign trade in July; the figures are as interesting as they are important. Increased values are shown both in imports and exports, the former having advanced by nearly thirteen and a half million pounds, and the latter by three and a half millions. Coming to an analysis, it is recorded that with regard to imports raw material and articles mainly unmanufactured are decreased by £1,004,464, articles wholly or mainly manufactured by £2,946,800, while miscellaneous and unclassified articles are increased by £349,570. Among raw materials the imports of raw cotton are reduced in quantity by 835,531 centals and in value by £635,659, equal to 56.2 and 12.3 per cent. respectively; sheep or lambs' wool is reduced in quantity by 5,431,318 lb., but is increased in value by £280,627. The imports of flax, hemp, and silk are decreased both in quantity and value, but those of jute are increased to the extent of 303.8 per cent. in quantity and to the extent of 338.4 per cent. in value.

***

On the export side raw materials and articles mainly unmanufactured are increased by £178,605, articles wholly or mainly manufactured by £4,777,428, and miscellaneous and unclassified articles by £134,406. Cotton yarn and twist is decreased in quantity by 606,900 lb., but is increased in value by £536,280; and cotton piece-goods are decreased in quantity by 1,908,600 yards, but are increased in value by £2,514,729. Woollen and worsted yarn is decreased in quantity by 892,600 lb., and in value by £117,570; woollen tissues are decreased in quantity by 1,849,000 yards, but are increased in value by £405,534, and worsted tissues are decreased in quantity by 856,300 yards, but are increased in value by £66,330. The exports of jute yarn and piece-goods are increased both in quantity and value, the former to the extent of 19.2 and 32.6 per cent.; and the latter to the extent of 46.0 and 51.2 per cent.; linen yarn is increased almost equally in quantity and in value, but piece-goods are decreased by 5,444,500 yards in quantity and by £204,137 in value.

***

A summary of the report by the British Consul-General at Lyons on the world's supply of raw silk is published elsewhere in THE NEAR EAST to-day, and from it will be seen that the estimated production of last year was greater than that of any previous year except 1912 and 1913. The figures for the Levant and Central Asia were practically the same as in 1915, while the provisional estimate for the whole of Europe was greatly in excess. The outstanding fact seems to be that, despite all the extraordinary difficulties caused by the war and the conditions it has ushered in, the production and marketing of silk throughout the world is being maintained on an excellent basis.

***

The *Textile Mercury*, in an illuminating article in a recent issue discusses frankly, and without fear or favour, some of the "tricks of the trade" as they are employed in the Lancashire cotton trade. It is a very severe indictment of abuses which affect nearly every branch of the cotton textile industry, and the *Mercury* deserves thanks and congratulation for its courage in dealing with the subject. It would seem that there are many black sheep in the fold. Buyers of yarn, spinners, and manufacturers—all seem to have been in the "swim." Indeed, the writer of the article concludes by quoting a "cynic" who, some years ago, said that "the roof of the Manchester Royal Exchange covered the heads of more men of questionable trading honesty than any other building in the country." I cannot believe the position is as bad as that to-day; but it would certainly seem to call for amendment.

***

I am glad to observe that the commercial community in London is responding generously to the appeal made by the Lord Mayor in aid of the stricken population of Salonika. Great distress has been caused in the famous Greek town by the devastating fire of a few days ago, a graphic and intensely moving picture of which was sent to the *Daily Express* by Mr. Owen, its correspondent there. I understand that many traders have been absolutely ruined, and that, apart from the distress suffered by the ordinary population, it will require a great deal of money to restore the trade and commerce of the town. The fund at the Mansion House reached a total of nearly £3,000 yesterday.

***

People in this country are more in sympathy with the Greeks than they were, because a great deal, if not all, of the odium of the last two years was caused by the treachery and ingratitude of the ex-King Constantine and his immediate entourage. The people themselves have always been on the side of justice and freedom—they have been the victims too frequently of the other thing to be otherwise—and now that M. Venizelos has come into his own their real character is being indicated. I hope, therefore, the commendable attempt of Sir William Dunn to provide relief for the unfortunate people of Salonika will be as successful as it deserves to be.

***

The Roumanian Chamber of Commerce, I am glad to learn, continues to prepare for the coming of peace, and while recent unfortunate events in the Eastern European theatre of the war would seem at the moment to be retarding the progress of the Entente Powers, it is as well that we should be fully prepared for the day when trade and commerce will be reopened. Before the war there were amazing German influences at work in the Balkans, particularly in Roumania; but the excesses of the Teutons, their grasping dishonesty and utter disregard of interests that were not their own, have all served a useful purpose after all. The Roumanians now know what it means to be under the domination of Berlin, and the Hun will not be as popular in Bucharest as he has been. This will help in the campaign on behalf of British trade, and we may be sure that the Chamber will not fail to make the most of the opportunities thus presented.

***

It is probably only too true that the Germans have profited by their partial occupation of the country to send to Berlin and Vienna considerable quantities of produce, just as they have done from Serbia, and indeed from Bulgaria, in the latter of which countries they have exploited their allies almost as shamelessly as they have done their enemies. To what extent these supplies have been secured it is impossible to say; but I do not believe that they have been so great as was alleged some weeks ago in the Central European Press. Even so, it is bad enough: internal conditions in Germany and Austria were acute last year, and the imported food and material have, practically, been as much value to those countries as an important victory in the field would have been. We can only "wait and see," as Mr. Asquith would tell us. And the side that can "wait" longest will win.

THE SUDAN.

No. 13.—The Province of Sennar.

By Percy F. Martin, F.R.G.S.

So recently has the territory, of which the Province of Sennar forms part, been redeemed from savagery and desolation, that some ten years ago, when the Darfung and Burun country (to the south) were taken over, no white man had been seen in the district. To-day those same regions are ranged among the more civilised and economically prosperous in the Sudan markets, are open and are well attended; trade is encouraged; and road transportation is everywhere rendered facile and followed unrestrictedly. It would be untrue to say that *all* the members of *all* the tribes are yet to be counted within the fold; various lawless people like the Beni Shangul, the Ghomasha, the Assossa, etc., continue to occasion trouble to the local authorities, but as time goes on and communications are improved they are destined to become less and less able to effect much more than temporary annoyance.

Irrigation Works.

The Province of Sennar is likely to enjoy a particularly generous share of the Sudan's economic prosperity on account of the vast irrigation works that are to be constructed—indeed, they have already been commenced—within its borders in connection with the great Ghezira Scheme. With an area of 40,440 square miles and a population of some 112,250—including tribes both sedentary and nomadic—the province contains some of the most attractive semi-tropical scenery to be found in the Sudan. The banks of the Blue Nile are especially interesting on account of the immense variety of *fauna*, *flora* and *insectum*—both winged and wingless—that abound. Unfortunately, this apparently beautiful region likewise forms the haunts of the detestable *serut* fly, which appears and disappears with the rains, and of mosquitoes which, in myriads plague the life of the human dwellers in these parts. On the other hand, game is plentiful—elephants, buffalo, giraffe, hippopotamus, hartebeeste, triang, roan antelope kudu, water-buck, bushbuck, *Cobus leucotis*, gazelle, lion, leopard, cheetah and numerous other wild beasts, constituting the country a veritable hunter's paradise.

Historic Interest.

Sennar, moreover, is historically one of the most interesting of the Sudan's political divisions. Under the powerful Fung kings, the old empire of Sennar extended from the Abyssinian frontier, on the south, to Dongola, on the north, and hence along the entire length of the Blue Nile and the main Nile as far as the present Egyptian frontier province of Halfa. One by one the integral parts of this federated kingdom were lost in battle or seceded, and at the time of the final conquest at the hands of the Egyptian Ismail Bey (a son of Mohammed Ali) the whole empire was in a condition of distintegration. It was annexed to Mohammed Ali's Sudan possessions in 1838. General Gordon was there in 1877, on his way to Khartoum, his great desire being to relieve the unfortunate and suffering population of that place. One of his last acts some seven years later—in 1884—was to send an armed force to clear the country of the Dervishes who had held it since 1882—when the garrison of the town of Sennar—after a brave and sustained defence—fell. An entry in his "Diary" (Book VI.) reads as follows:—"They state the Mahdi sent a party of Arabs to Sennar, but the garrison sallied out and killed nearly all of them."

Economic Future.

The economic future of the Sennar Province may be regarded with hopefulness, as much for its great natural resources as for the fact that education has made as much advance in this district as in any within the Sudan. Not only has the Government given great attention to the moral and intellectual improvement of the people, establishing excellent schools, which are well attended, and encouraged actively the several schools presided over by the various religious celebrities; but Mr. Henry S. Wellcome, the philanthropist and scientific explorer, has wrought a great and—it may be believed—permanent reformation among the people by means of the welfare scheme which for several years he has carried on among the people, many thousands of whom he has employed in connection with the valuable exploration and excavation works carried on at Gebel Moya.

Then, again, the Sennar province is likely to prove a substantial contributor to the general revenue by reason of its almost untouched, but admittedly wealthy, gum forests. These exist to an unknown extent in the districts of Singa, Karkoj, Dinder, and Roseires. This forest wealth is of some moment; but, unfortunately, there has been pursued little—I might say no—system of exploitation or preservation, with the result that some of the finest stretches of timber-land have been devastated either by reckless cutting or by fires, wilful or accidental.

The collection of both hashab and talh gum is also increasing year by year in this province. In the as yet untapped forests lying between the two Niles in the neighbourhood of Jebel Matmum, hashab is found in considerable quantities.

Farming.

Farming, as we understand the term, is as yet in its infancy, but the Government has established some experimental agricultural farms at Singa and Saoleil, where "dry-farming" is carried on. The crops raised include sesame, dura, cotton, and ground nuts, and all of these products have proved encouraging from a marketing point of view. The establishment at Saoleil has done especially well, notwithstanding the small rainfalls that have been experienced in past seasons. The trees are rubber, and the tapping stage arrived some three years ago, so that the eventual success of the enterprise can now hardly be in doubt.

Sennar province is divided into seven mamurias, namely:—Dar Fung (the mamuria being at Soda), Dinder (the mamuria at Abu Hashim), Karkoj, Kurmuk, Roseires, Sennar Town, and Singa. Dar Fung marks the commencement of the dense forest district which stretches continuously east and west from Nile to Nile. The town of Dar Fung is situated in a district of little value now compared with its great importance of former days. The Fung tribe, which inhabited the whole of the surrounding country, was once extremely powerful; and although the race still continues to exist—a genuine Fung now rules as the mek, or king, of Dar Fung—its power has been broken for all time. The principal trade carried on is conducted with Abyssinia, immediately adjoining, lengthy caravans passing to and fro through Keili, the headquarters of the district of Dar Fung.

Abyssinian Problem.

The one disadvantage from which the province of Sennar suffers is its proximity to Abyssinia. The relations which have existed between the two countries recall Macaulay's observation upon the "system in which the two great commandments were to hate your neighbour and to love your neighbour's wife." The dusky ladies of Sennar and districts have always had a peculiar attraction for the wild hordes owning the Abyssinian Negus as lord (at present the sovereign is a lady); raids and armed expeditions across the border have prevailed for years, but nowadays the invasions would appear to be more in the smuggling than the kidnapping line. In any case, the Abyssinians make very bad neighbours, and prove a source of continual annoyance to the authorities of the Sudan. Moreover, the people of the Ethiopian Empire have never exhibited any great friendliness towards the British, nor, indeed, to any Europeans—a fact which sufficiently explains the failure of the German Minister and his agents at Addis Ababba—the capital of Abyssinia—to stir up strife against the British and the French resident in that country when war broke out. At various times the Abyssinians have found themselves in armed conflict with Great Britain, France and Italy, and a dangerous precedent was established when the French helped King Menelik to defy us over the arms-importation matter, and thus, indirectly, gave rise to the war with Italy, which ended at the battle of Adowa on March 1, 1896, with such disastrous consequences for our gallant Southern Ally of to-day.

Frontiers.

The frontier delimitation between Abyssinia and the Anglo-Egyptian Sudan was formally agreed to in 1902, but this has in no great measure assisted to put an end to the troublesome traffic in contraband. Through the numerous mountain passes quantities of forbidden arms and ammunition still continue to find their way into the Sudan, notwithstanding the great vigilance and precautions exercised by the Sudan authorities. Probably this traffic can never be completely stopped, but it can be, and is being, kept within certain limits by increasing the number and strength of the military patrols employed by the authorities on the Sudan side of the frontier, and consisting of men who are picked and engaged especially for the purpose. "Still profoundly unsatisfactory" was the official description of the situation at the end of the year 1914; and the position has improved very little, if at all, since then.

The Provincial Government's headquarters are established at Singa, the removal thither having taken place in 1905. Ranking at all times as a considerable village, Singa has now developed into a thriving town, even if it be composed mainly of grass *tukls*. The Government buildings, of brick, are commodious and adequate. In normal times the administration is composed of the Governor and a staff of six European Inspectors, one of senior and five of second rank. At present, however, there are but four of the latter.

SHIPPING AFTER THE WAR.

British Owners' Proposals and Recommendations.

There was issued on Wednesday a voluminous report which has been prepared by the Committee appointed by the Chamber of Shipping of the United Kingdom and the Liverpool Steamship Owners' Association, in March, 1916, to advise as to the measures requisite for the maintenance of a British mercantile marine adequate to the Empire's interests in peace as well as its needs in war. The report deals with oversea trade during the ten years preceding the war, which is illustrated by a number of coloured diagrams, and discusses trade policy. The following are the principal conclusions reached:—

Victory the First Essential.

The victorious termination of the war is the first essential to the formation of a successful trade policy after the war. An incomplete victory can never be perfected and an insecure peace can never be made stable by means of any form of trade policy. The objects for which the Empire and its Allies are fighting—reparation for the wrongs done, restitution, so far as is possible, for the losses sustained, and security for the future—must be attained. The peace of the world can never be secure so long as Germany has a military system at home and colonies abroad from which to carry into execution a policy of piracy and murder on land and sea against the world at large. It is only through the complete defeat of the enemy that these ends can be reached and the purpose of the war accomplished; and when that has been done our trade policy will of necessity be a peace policy.

State Control.

In determining upon the trade policy to be adopted after the war, the first care of the State must be to do nothing to imperil the pre-eminent position the United Kingdom holds in the international trade of the world. Our manufacturing power, our commerce, and our shipping have been established for the world's trade, and no smaller field can provide scope for their employment. To maintain that position the nation must, with the utmost possible speed after peace is restored, bring back its fighting forces into productive industry, so as to re-establish its manufacturing power, and to replace the war wastage in its shipping; and it must adjust its trading operations to meet the altered conditions in international exchange resulting from the prodigious war borrowings and war lendings between the nations. To accomplish these ends the greatest asset of the nation will be the energy and enterprise of its individual citizens; an asset which could never be replaced by either State assistance or State control.

The ruling principle of our trade policy after the war should therefore consist in the maintenance for each individual citizen, be he producer or consumer, manufacturer, trader, banker, underwriter, shipowner, employer or workman, of the fullest possible opportunities for the exercise of his energies and enterprise in the markets of the world, subject only to such restrictions as must be imposed in the interest of national safety. We are satisfied that so far as shipping is concerned, apart from any exceptional case for establishing a new trade, it can only hold its own in competition with the world free from State control, and therefore free from State assistance, and that speaking generally, State intervention can most profitably be directed and limited to increasing the trading efficiency of the nation as a whole.

Ocean Transport.

To assist in the development of our foreign trade ocean transports should be relieved from special and onerous charges, *e.g.*:—

SUEZ CANAL DUES.—The dividends received by the British Government in respect of its shareholding in the Suez Canal Company should be applied for the purposes of developing British trade through the Canal.

LIGHT DUES.—The levying of light dues on shipping should be abolished. Responsibility for lighting the coasts should be assumed as a national duty.

TURKISH LIGHT DUES.—The lighting of the Dardanelles and of the Red Sea should cease to be managed inefficiently for the profit of any Government and of the holders of the concessions granted by that Government.

FRENCH BROKERAGE AND SURTAX D'ENTREPOT.—Steps should be taken to place British shipping in French ports on an equality with French shipping in British ports.

The State should render all such assistance as may be necessary to re-establish, at the earliest possible moment, the British ocean services which have had to be abandoned owing to war demands on British shipping. The State should render financial help where necessary for the opening up of new markets. The freedom of the passenger to travel without hindrance by land and sea on the route he selects should be established by international agreement, and should no longer be controlled by any nation with the object of securing commercial advantages for the vessels under its flag. The State should aid in the development of those ports of the United Kingdom which are of national importance. The conditions of labour in the ports of the United Kingdom can only be materially improved if the workers for whom there is employment will accept the responsibility of giving regular work in exchange for regular pay. It cannot be improved so long as the individual worker declines to work regularly.

State control over the general design, building, and equipment of the vessels of the British mercantile marine would be fatal to its improvement and development. The control exercised by the State over shipping should be in the nature of police control, exercised through a sufficient number of fully qualified surveyors, and directed to detecting and preventing the sending to sea of vessels in an unseaworthy condition. A uniform system of State control, limited as above, should be applied equally to vessels under all flags in all ports of the Empire. The standards of safety enforced should be international standards. The standards of safety adopted by the United Kingdom should be accepted throughout the Empire.

WORLD'S SUPPLY OF RAW SILK.

The British Consul-General at Lyons has forwarded a table of statistics, which has been published by the Lyons Silk Merchants' Union, showing the estimated world's supply of raw silk in 1916, together with the definitive figures for the previous year. The provisional estimate for 1916 puts the total for Europe at 857,000 kilogrammes in excess of the definite figure for 1915. The estimated production in the Levant and Central Asia in 1916 remains the same as the definite total for 1915, though it may be assumed that the estimate is only conjectural, having regard to the impossibility of forming anything like a definite estimate in circumstances existing in most of the countries included in this group. The production in the Far East in 1916 is estimated at 1,173,000 kilogrammes more than in 1915, by far the greatest proportion of the increase being contributed by Japan, although the exports from India—never an important figure—show a considerable increase. The estimated total output of raw silk in 1916 is higher than that of any previous year, with the exception of 1912 and 1913. It will thus be seen that, in spite of all difficulties, the production and export of silk throughout the world is being satisfactorily maintained.

SUNK BY SUBMARINE.

Eighteen large merchant ships were lost in the week ended on Sunday last, according to the official return issued on Wednesday night. This figure compares with a revised total of fourteen in the two previous weeks.

In addition, four small merchant ships were sunk.

The return is as follows:—

Arrivals 2,629
Sailings 2,680

British merchant vessels sunk by mine or submarine:—

1,600 tons (gross) or over 18
Under 1,600 tons (gross) ..... 5 (a)

(a) Includes one vessel sunk in the week ending August 19.

British merchant vessels unsuccessfully attacked by submarines ..... 6 (b)

(b) Includes two vessels attacked in the previous week.

British fishing vessels sunk ... Nil.

French merchant ships between January 1 and August 1, 1917, were successful in 106 encounters with enemy submarines.

In thirty-four cases this was due to manœuvring to avoid torpedoes, and in sixty-two cases to the use of artillery, chiefly in reply to the submarine. In thirteen cases it was not the submarine which began the fight.

ANGLO-EGYPTIAN OILFIELDS.

Gemsah production for the week 22 tons (last week 22 tons); Hurgada production for the week, 2,029 tons (last week 3,683 tons).

ENGINEERING NOTES.

Portable Buildings for Salonika.

The great fire in Salonika has practically entirely destroyed two-thirds of the town, and many thousands of people are homeless and destitute at the present moment, living under temporary inadequate shelters until means are available to transfer them to other parts of Greece. But there are also many hundreds of rich and well-to-do people—landowners, bankers, merchants, etc.—whose affairs or interests do not allow them to leave the half-destroyed town; and as, under the existing circumstances, there is no possibility of attempting at present the re-building of their houses, or even temporary small houses, owing to the scarcity of labour and building material, there is already a demand for either iron or composite portable buildings. British firms wishing to secure orders should act promptly, either by sending representatives—which is rather difficult at present—or advertising in papers which are allowed to circulate in Salonika. In the latter case it is advisable to insert one or two designs (woodcuts), by preference of summer buildings, and in answering inquiries to give the fullest possible particulars in order to save further correspondence, which under the existing postal difficulties takes longer than the usual time.

The Value of Sawdust.

Sawdust is generally considered a waste product. At present its principal uses, especially in the Continent and the East, are for spreading on floors of cafés, cabarets, shops, etc., on wet or muddy days; also for fuel (when briquetted), and for stuffing dolls; whilst in Germany, if recent reports are correct, the humble sawdust is raised at the present time to a higher plane of utility by being used as one of the principal ingredients in the "manufacture" of war-bread! Its adequacy, however, in the latter form is very doubtful. But, whether as a medium for the protection of shop-floors, or as a convenient substance for stuffing dolls or Germans, sawdust is wastefully used. Yet, as in many other so-called waste products, there is wealth in it; for, as we had occasion to mention in previous Engineering Notes, besides a variety of by-products that can be obtained by chemical treatment from sawdust, an efficient motive power can also be obtained from it by its use as fuel in suction gas-producers. Its utilisation for such purpose will relieve the situation, especially in the Near East where the use of suction gas-plants is very extensive and the difficulty in obtaining the necessary anthracite is much greater than here. It is satisfactory, therefore, to note that with the same object in view a correspondent has recently suggested that there should be brought to the notice of all users of suction gas-plants the value of sawdust and shavings; and that their gas engines will work equally as well on sawdust as coal or anthracite, and that three tons of sawdust will give the same result as one ton of anthracite.

For the conversion of sawdust into gas, the plant is slightly larger than for coal, and with the addition of a tar extractor the principle is the same. The possibility of the use of this waste is not generally known, consequently the volume of sawdust destroyed and wasted is serious.

If British manufacturers of suction gas plants would let buyers and users in the Near East know that they can supply such plants for the conversion of sawdust, wood refuse, etc., into gas, the results would persuade them that there are great opportunities for them at the present moment in those markets.

Americans and Russian Mines.

According to reliable reports the Special Mining Committee of the Russian Ministry of Commerce has decided to recommend the transfer to American hands of a great part of the Empire's mines and mineral deposits. It was well known—an allusion was made in these columns at the time—that since the early part of last year American engineers have been visiting various mining districts of Russia and especially those between the Black Sea and Caspian Sea, and as far south as the Baku district. The transfer to American hands of mines and possibly accompanied with certain privileges in that region will have considerable influence in the prospects of other engineering enterprises there as well as in Asia Minor.

TRICKS IN THE COTTON TRADE.

Lancashire, as Lancashire Sees Itself.

A correspondent writes in the *Textile Mercury*:—

The cotton trade is full of anomalies and abuses of one kind and another, which spinners and manufacturers have allowed to grow until in many cases they have become almost recognised institutions. Owing to want of cohesion, those concerned are unable determinedly to clean out the Augean stable. One of the most glaring abuses just now making itself felt in many quarters is the practice, on the part of spinners' agents, of speculating in yarns.

Spinners are finding that their own yarns are being sold at prices considerably below those ruling on the day, and by this means manufacturers are having money put into their pockets by spinners' agents, who no doubt think they are preparing the way for favours to come. Spinners themselves are more or less responsible for these irregularities—for, undoubtedly, they are irregularities, if a stronger word would not more fittingly describe this sort of trade. A yarn agent receives a commission from the spinner to find him a customer; he is, therefore, purely the servant of the spinner, for he is in his pay.

Agents' Commission.

In all cases the buyer of the yarn should be disclosed, but it is probable that all spinners' salesmen do not insist upon this condition being complied with. A result is that agents now and again buy the yarn for themselves unknown to the spinner. In such cases the agents draw their commission without contracting a muscle, although they must know they are not legitimately entitled to it. They buy the yarn as a speculation pure and simple. If the market prices go in their favour they pocket the difference and say nothing about it. In the same market they will be offering the yarn against the spinner and undercutting him. It is a reprehensible, if not a dishonest, practice. But this is not the worst feature of it: in reality it is a game of "heads I win, tails you lose." If quotations favour the agent-speculator he wins and pockets the ill-gotten gains; if prices go against him, then either the manufacturer is not using that class of yarn or he notifies that he cannot meet his engagements. In either instance the spinner is hit. In the one case he has to carry his cotton to suit the agent, and in the other he has to accept a composition.

Another phase of the agent-speculator is that he can also sell yarns without buying. Many a spinning firm is to-day suffering from a policy of this kind, because an agent by this means can be brought down and the spinner will be left to whistle for the guaranteed yarn accounts, which may have been paid for by the manufacturer. But spinners have the whole matter in their hands; they can put a stop to these juggling practices and they can clear the trade of these speculative agents whenever they are so disposed. They can insist that the name of the customer accompanies every contract. If this is not done the spinner should have no compunction in cutting the agent. Were this action taken by all spinners the market would be cleared of men who are not content with doing an honest trade.

Manufacturers.

Manufacturers are sometimes guilty of offending practices. To take a typical case, we will suppose that a spinner is desirous of keeping down his stock and is securing orders for specified delivery. He purchases his cotton and commences to spin the yarn, so as to meet the manufacturer, but days pass by and he gets no particulars as to delivery. He becomes anxious, and writes to the manufacturer, but no notice is taken of his letters. The period of time lapses, and the spinner becomes still more anxious. Again he tries to get particulars for delivery, but all of no avail. Then, to protect himself, he notifies that unless particulars come to hand by a certain date steps will be taken to cancel the order. This procedure is carried out to the full. The manufacturer suddenly awakes, and declares it is all a mistake, due to the carelessness of one or other of his subordinates, or some other circumstance.

Manipulations.

In this way many a manufacturer manipulates his position. It may be that he has overbought himself, and seeks to put off the spinner until the time it suits him to take up the contract. Another trick of manufacturers is to tell the spinner that they are not at present using the class of yarn on order, and, in consequence, delivery is stopped until further notice. Many a time and oft the spinner knows that the manufacturer is deluding him, though he has not full proof of it, and that, simply because prices have fallen, his client is getting his requirements elsewhere. When prices again improve the manufacturer looks up the spinner whose deliveries he has stopped, and signifies his willingness to take in yarns. And so the oracle is worked. By such manipulation a manufacturer is enabled to stave off a loss. Nor are spinners themselves free from blame in regard to tricks of trade. Cases are known of spinning firms who, when cotton prices have risen considerably, have declined to deliver the lower-priced orders. On the day it would probably mean a great loss to complete these orders. But as these firms purchase the cotton to cover the yarn sales, they want to have the advantage of a rising market, and then when prices come back again to deliver the yarn, because the cotton quotations suit them. These firms are just as blameworthy as are manufacturers and agents.

None of these practices are allowed in the Liverpool cotton market, and very rightly so. The terms of the cotton contracts are precise, and must be complied with. Why should not the same terms obtain in the spinning trade, and also in the manufacturing trade if similar abuses exist? Traders should have their contracts so drawn that their terms must be met whether the market goes in favour of the buyer or seller, and there should be uniformity of contract terms throughout the trade. Attempts have at times been made to remedy abuses, but the trade has failed to respond to the occasion, till one almost despairs of spinners being united as one man to put their trading relations with their customers on a sound basis.

What a Cynic Said.

It may readily be confessed there are honest men among manufacturers and agents and spinners, and perhaps it is their balancing power which keeps affairs going as they do. Many have read around the middle dome of the Manchester Royal Exchange the words, "A good name is rather to be chosen than great riches, and loving favour rather than silver and gold." How many traders make this the practice of their lives? A cynic said some years ago that the roof of the Manchester Royal Exchange covered the heads of more men of questionable trading honesty than any other building in the country. It is not by any means so bad as this cynic would have us believe, but, without doubt, there is need of improvement in the trading practices of the cotton trade.

LANCASHIRE COTTON.

Markets Still Unsettled.

(From Our Own Correspondent.)

Manchester, Thursday.

The market continues very unsettled. There are various disturbing influences at work at the moment, which result in a cautious policy being adopted not only in the way of buyers placing orders, but in producers hesitating to commit themselves to deliveries a long way ahead. A more bearish feeling has prevailed than for some time back, and the opinion is held in many quarters that in the near future prices will be on a lower level. It is quite possible, however, for a distinct decline to take place in raw cotton rates without there being a similar reduction in yarn and cloth values. The Control Board has decided to postpone the reduction of output scheme for one week until September 10. Numerous spinners and manufacturers scarcely know what to do: that is to say, whether to stop machinery according to the regulations, or run additional spindles and looms and pay the levies. It is said that certain reports relating to the damage to the Egyptian crop are exaggerated, and the growth on the whole is doing fairly well. Certain qualities in Alexandria are quite 6d. per lb. cheaper than a month ago. The official quotations in Liverpool are very little to go by. Business in Egyptian yarns has been demoralised by the developments in the raw cotton situation. Merchants who trade in piece goods for Egypt have welcomed the announcement of another boat for that market. Goods are wanted abroad, but much uncertainty exists as to future shipping facilities. There has been an absence of workable demand for India. Makers of grey shirtings are very depressed. Only sorting up lots have been put through for China. Rather less activity is now showing itself for the minor markets of the Far East. American yarns are easier on the week, and there seems to have been more irregularity in prices than ever. Now and again low figures have been taken by needy sellers of medium counts. Export bundles have been in moderate request for India, but our trade in yarns for Holland continues at a standstill.

RESTRICTION ON COTTON GROWING IN EGYPT.

A Reuter message from Alexandria, dated August 28, stated that the Government has decided to restrict the acreage under cotton in the coming season.

BRITISH SHIPS AND GREECE.

In response to representations made by the Manchester Chamber of Commerce to the Shipping Controller with reference to the despatch of British steamships from this country to Greece, the following communication has been received by the Chamber:—

"In reply, I am to state that the change in the political situation in Greece cannot be considered as sufficient justification for exposing British ships to the very serious risk involved in a voyage to and from Greece. This risk ought not, in Sir Joseph Maclay's opinion, to be run except for the carriage of war material or supplies essential to allied interests, and in these circumstances Sir Joseph Maclay can hold out no hope of the immediate resumption of the facilities previously available for ordinary commercial purposes."

The Supplement to the *Board of Trade Journal* of August 30 contains complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported from Denmark, France (including Algeria), Italy, Japan, and the Netherlands. The Supplement also contains the list of articles (complete to date) which are prohibited to be exported from the United Kingdom. Copies may be obtained at a cost of 3d. (3½d. post free), either from any bookseller, or from His Majesty's Stationery Office, Imperial House, Kingsway, London, W.C.2.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Avenue, London, E.C., Thursday.

The great activity prevailing in the Egyptian share market during the last few weeks has given way to a much quieter state of affairs, and here and there this has led to some profit taking by holders in a hurry to snatch their profits, with the result that most prices are somewhat lower than last week.

The reaction may be considered a healthy one, and should it make further progress it will probably afford a good opportunity for many investors who missed getting in before the last sharp movement.

National Banks have receded ¼ to 16⅝, and Agriculturals are 5-32 easier at 6 9-32, but in both cases the business has been on rather a small scale. Land Banks have also shed ⅛ at 6⅛, about one hundred shares having changed hands.

Delta Light Railway Preferences are a further ⅛ down at 6, and in miscellaneous shares Salt and Sodas have reacted 6d. to 26s. 6d.; while Khedivial Mails are 2s. down at 34s. On the other hand, Egyptian Markets have been an exceptionally bright spot, and close 1s. higher at 27s. 6d.

In Land Shares, Aboukir has dropped 6d. to 20s., and Behéras are ½ down at 12¼. Delta Land have continued a very firm market, and are unaltered at 14s., after having been changing hands freely round 14s. 3d. In New Egyptians there has also been some profit taking, and the shares are 4½d. lower at 13s. 6d. Sidi Salem have also been subjected to a little selling pressure, with the result that they are 1-32 easier at 27-32.

With regard to the latter property, it is said that there is already a great improvement noticeable in the area which has since the war come under the new drainage installations made by the Behéra Company. In Egyptian Government stocks Unified are ½ lower at 84.

In Greek securities the market continues practically stagnant. Generally speaking there are buyers about, but sellers are very scarce. Some small transactions have been effected in Currant Bonds at 91, a rise of 2½ points.

Oil Shares.

Roumanian Consols have been easier at 125.

OBITUARY.

Mr. Wm. Johnston, a prominent Liverpool shipowner, passed away on Monday last at the age of 76. Mr. Johnston, who was senior partner of the firm of William Johnston and Co., Ltd., better known as the Johnston Line, the management of which some eighteen months ago was taken over by Furness, Withy and Co., Ltd., founded the business, together with his brother, Mr. Edmund Johnston, half a century ago.

In addition to their well-known services from Liverpool to the Levant and other parts of the Mediterranean, they maintained regular connections between Liverpool and the United States. Mr. Johnston gave £20,000 towards the establishment of a laboratory for the study of tropical diseases at the University of Liverpool.

The death is also announced of Mr. Edward Catchpole, at the age of 81, who retired from the Moss Steamship Co., Liverpool, in March last, after being in their service for fifty-six years. He occupied the position of manager of their Forwarding and Shipping Department.

FRENCH MISSION TO MECCA.

The French Government has sent M. Cherchali to Mecca with the object of settling questions of Moslem interest, especially in regard to the definite acquisition and installation of French hotels at Mecca.

M. Cherchali has been invited to visit, under conduct of the Minister of Public Works, various buildings erected by the Malik of Hedjaz, with a view to facilitating the ritual ablutions of the pilgrims and benefiting the health of the city.

The attention which the Malik has shown to our envoy (writes a Paris contemporary) is a further proof of his friendly feeling for France. His vigilant care for all that concerns the welfare of the pilgrims proves his desire to make it as easy as possible for them to carry out their religious obligations.

TERRIBLE NEWS
from Syria—

5.—From an American Missionary.

"The City of Tripoli, Syria (Trablus), has lost one-half of its population from hunger and disease. Hums (a town of from 80,000 to 100,000 and the terminus of the railway from Tripoli) has added another ten thousand to the death roll, sixty per cent. of whom were women and children. In some places the inhabitants set a guard lest anyone come and try to get the grass and weeds. Your friend in Hums, H———, died of hunger, and we endeavoured to save his property for his family, but were not successful. For a time we fed them, but cholera came along and they all died. There are only three doctors left in the city, and when we sent for them to come to this family not one responded (perhaps because there was no medicine to give them). A very common sight is two bodies on one bier borne to burial."

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the UTMOST URGENCY.

(Reproduced by permission of "The Times."

£300,000 WANTED
of which £50,000 is needed at once.

A strong administrative committee is at work. CONSIGNMENTS OF FOOD, MEDICINE & CLOTHING ARE NOW ENTERING PALESTINE, and goods stored in Egypt will continue to be poured into the country as further access is obtained. Relief will be given to all—Christian, Jew and Arab alike—according to their need.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110 Victoria Street, Westminster, S.W.1. or to J. F. W. Deacon, Esq. (Hon. Treas.), Williams Deacon's Bank, Ltd., 20, Birchin Lane, E.C.3. Chairman (London), Lt.-Col. Sir Henry MacMahon, G.C.M.G., &c. (late High Commissioner in Egypt).

NOTES OF THE WEEK.

The few details that have been received from Roumania during the week indicate that the fighting continues on normal lines—that is to say, that the Germans have not ceased to attack, while the Roumanian army has resisted and, so far as it can, has repulsed them with a vigour and a heroism worthy of all praise. The task, which would in any case have been sufficiently arduous, has been rendered desperate by the defection of Russian units—which has been made good, so far as possible, by hurrying up Roumanian reserves—and also by the revolutionary propaganda of German and Russian agents. But this kind of persuasion is likely to fail of its effect. The insinuating German has his own ends to serve, and it is not usual to take the advice of one's enemy; while the success of the Russian plea in favour of a revolution is very seriously discounted by the utter failure of their own revolution to ensure any kind of order or authority.

The great military event of the week, however, has occurred at the other end of the eastern front. Since Riga was saved two years ago by the Russians after a whole summer of disaster, there is little doubt that it could have been saved now. But the utter collapse of the Russian army gave the Germans an easy task, and if the enemy have the ambition to take Petrograd, there appears nothing particular to stop them, the continual efforts to restore a fighting spirit in the Russians apparently failing as often as they are made. It is evidently useless to minimise the extreme gravity of the position in the east, and indeed there is no longer any attempt to do so in any responsible English journal.

A minor but not less disturbing indication of the disorganisation of Russia is the demand put forward this week for autonomy by Siberia. Autonomy in this, as in other cases in Russia since the revolution, means in effect independence, and this last demand, following as it does on the similar programme put forward in Finland and the Ukraine, is only one more step in the general process of disintegration. For the time being M. Kerensky's efforts to stop the rot seem to have failed. It was at first hoped that the disaster to the Galician army would have convinced his political opponents of the need for discipline, but the Moscow Conference proved the contrary. It has yet to be seen whether the loss of Riga and the direct threat to the capital will waken these theorists from their dream, but it cannot be said that the omens are propitious. Should the policy of disintegration be persisted in, the downfall of Russia as a great Power could not be long delayed.

The German Press is naturally jubilant over the capture of Riga. It provides an effective debating-point against the visible blessings of democracy and revolution from the point of view of the upholders of the opposite system, which is of some use to Potsdam; incidentally, it strengthens those who are in favour of a policy of eastern adventure against the colonial school which is still hankering after Central Africa. Although it is difficult to gauge the weight of enemy parties, it would seem that the course of the war must have discredited the colonial school to a certain extent, and added to the prestige of the continentalists. The newspapers, and therefore the Government, are now desperately anxious to agree with Russia—on their own terms—and it is a peculiar misfortune for the enemy that at this very moment the bottom has fallen out of his elaborately-built Polish policy. Poland is proving indigestible just as the German was getting ready to swallow the neighbouring provinces.

The Greek Government has wisely introduced a Bill to impeach the Ministers of the late King who were so active in seconding his policy. At present the Bill only contemplates the trial of the Skouloudis and Lambros Cabinets, but it is believed that another Bill will be introduced to include the Gounaris Cabinet. M. Venizelos has silenced the opposition of M. Ralli by pointing out that they will be allowed time to prepare their defence, but they will not be permitted to evade the responsibility for the national disasters which their policy produced. The decision is just and, after the disclosures made since the abdication of King Constantine, inevitable.

Digitized by Google

It was no crime, of course, for the Ministers in question to be Germanophil. They might have had legitimate reasons for holding that the interests of Greece coincided more nearly with those of Berlin than with those of the Allies. Their real crimes were that they went out of their way to help Germany, by deserting their ally to whom they had sworn, by ceding their territory to Bulgaria at Germany's behest, and by taking money for this shameful transaction. On the facts, so far as they are known, there can be no excuse for the Greek Ministers of King Constantine, and it will be interesting to see what kind of a defence they are able to allege in their favour. A further charge is that they plotted with the King to introduce an absolute monarchy, which, if proved, is a crime against the Greek Constitution.

As a contribution to the discussion on the possibility of detaching Bulgaria from the Central Alliance we publish on another page an article by M. Djuritch. The writer sets out to prove from the utterances of public men and from the Bulgarian Press the closeness of the ties binding Bulgaria to Germany and the satisfaction felt by the Bulgarians with conditions as they are. It is hardly to be expected that the official attitude of the country should be otherwise, and to propose coming to terms with an undefeated Bulgaria is merely to extend pacifist machinations to another sphere. Whether it is equally necessary that Germany as well as Bulgaria should no longer count as a "military power" before the latter may be prepared to listen to peace overtures is another question. On this point we should not be inclined to set much store on the stout words appearing in the Bulgarian Press. There can be little doubt, as is insisted elsewhere in regard to Turkey, that the only useful medium of communication at the present moment is to be found on the battle field. But as it is expected that Bulgaria will come to appreciate the fact that she is both in the Balkans and of the Balkans, and that therefore her true interests are really linked up with those of the neighbouring States, so sooner or later a stage must be reached when it will be worth the Allies' while to encourage the Bulgarians to look at things in a different light from that in which they are presented in their own Press. It need not be taken for granted that those who now direct the affairs of the nation will always be in power.

A terrible account has been published of the sufferings of the people of Montenegro under enemy rule. A sworn statement is published that "there are certainly two hundred people a day" dying of famine; that the soldiers treat the population badly, men being made to work on the roads, and if any of them stops work to rest or drink he is shot on the spot. Although the conditions in Cettigne are slightly better, the witness of these facts states his belief that altogether from ten to fifteen thousand people have died of starvation. It would have appeared that this was part of the German policy of frightfulness, but for the further statement that the Austrian army of occupation can get little to eat, and are also dying in numbers; they tell the people that the war cannot last more than a month or two longer, owing to famine. If this is correct, it seems that the much-trumpeted announcement of supplies from Roumania and Serbia for the support of the Austrian army must have been untrue, as was more than suspected at the time. Unfortunately there is no reason to hope that the conditions in Serbia or Roumania are much, if at all, better.

"Everywhere the people are too poor and badly nourished to try to revolt," says this witness. No doubt the aim of Austrian policy has been to produce this result, which is a legitimate proceeding according to the war theory of the Central Powers. To that extent it is admittedly successful, and no doubt, if it could be pursued to the end, which would mean the extirpation of most of the inhabitants, it would facilitate the task of those Austrian conquerors who desire to hold the country permanently. But those that survive this terrible experience, whether in Serbia or Montenegro, will never forget, nor will their children, the calculated policy of Vienna; and the bulk of the manhood of these countries being outside the Austrian grip, means that the policy of frightfulness will not only fail of its present effect, but will raise up undying enmity among the Serbian and Montenegrin armies. The treatment of their nationals will not lessen the intention of the Jugoslavs to see the thing through and to exact vengeance upon their oppressors. Nor will these facts be lost upon those who have insinuated that there is a possibility of compromise between the Jugoslav leaders and the Austrian throne.

Whatever feelings there may have been in that direction during the time of the Archduke Franz Ferdinand and even so late as the present Emperor's apparent disposition in favour of trialism during the early weeks of his reign, will hardly survive the present methods. There were a few among the Jugoslavs who at one time believed a satisfactory compromise with Vienna might be a possible, although hardly a probable or, in the long run, a satisfactory solution of the problem. But the determined enmity of the German element in Austria, backed as it is by the whole of the Prussian Press, has sufficiently shown how hopeless these aspirations were. Real autonomy for the Slav nationalities within the Austrian Empire has been shown again and again to be impossible: the alternatives are clearly independence or servitude. The policy of terror and starvation which is now being pursued only points the moral of that conclusion.

The curtain has hardly been lifted over the scene of events in Palestine and the Salonika fronts. From the former we have had only a Turkish communiqué announcing an intense British artillery fire against Gaza; there has been no British announcement. From Salonika a slightly more detailed statement has been issued of a combined British, French and Serbian offensive, which was no doubt undertaken in order to relieve the pressure on the Roumanian front—in which the magnificent Italian effort against Trieste has also had an undoubted effect—but no further details have been issued. There is, however, a point beyond which military reticence becomes absurd, and this point appears to have been reached some time ago in Palestine.

The Stockholm Conference has been abandoned, or at least adjourned *sine die*. No other course had become possible, and although Mr. Ramsay Macdonald will still try to meet his German friends, the whole business of the Conference has now been hopelessly discredited. Some idea of the way in which the machinery was to be worked in the interests of Germany may be gathered from the fact that the two Serbian delegates, who were chosen by methods that have not been published, were to be accommodated with a passage through Germany and Austria—a courtesy which Germany would only extend to those who have given guarantees to work in her own interests. In addition, the two so-called representatives of Persia whose presence as delegates was announced a week or two ago are, we understand, gentlemen who were exiled from Persia some time back, and who had to leave their country in order to save their skins. Subject to this trifling disadvantage, which might perhaps have been rather a recommendation to some of the delegates at Stockholm, they were no doubt given equal facilities with the Serb renegades for their journey through Austria and Germany. But the intrigue, although

Digitized by Google

cleverly planned, has fallen as flat as the Pope's peace note.

With the latest apologia of Lord Haldane—the fourth, by dead reckoning, since his spiritual home was transferred by circumstances over which he had no control from Germany to Queen Anne's Gate—THE NEAR EAST is not directly concerned. But it may be pointed out that the inspired chronicler (or his informant) was grossly misinformed as to the negotiations concerning the Baghdad Railway—the negotiations whose existence was denied in a recent statement in Parliament, to the edification of our jesting Pilates. But it is suggested, in these reminiscences and anecdotes, that Britain secured by negotiation from Germany in the Middle East as much as she has since obtained by fighting. This would seem to indicate that Lord Haldane brought back Baghdad in his pocket from Berlin. If he did, he evidently dropped it back into the German Ocean on his way to England, for no such suggestion has ever been made since in the accounts that have appeared from both English and German sources, and since those accounts agree in the main that England did most of the giving and Germany most of the taking, there would seem to be no reason for distrusting them. Lord Haldane's revised version will have to be corrected again. At present it is like some of the prophecies—full of revelations, but nobody can understand them.

The difficulties that have arisen in certain countries in regard to Indian indentured labour have gradually produced in India a strong body of opinion opposed to the whole system. It was in response to this feeling that the Government of India in 1913 appointed Commissioners to report on the conditions of life of Indian immigrants in various British colonies. Their investigations were restricted to British Guiana, Trinidad, Jamaica, and Fiji, and in May, 1915, the results of their inquiries were published in two Blue Books. In the main the Commissioners pronounced in favour of a system of protected emigration, which would lead to the colonisation by poor but industrious Indians of lands offering prospects much more favourable than they could hope to realise at home. The fact that the Commission's recommendations had been accepted as a substitute for indentured labour was indicated by Lord Hardinge in March, 1916, shortly before he left India, when he announced that the Secretary of State had agreed to a policy of total abolition, but with the proviso that the system must be maintained until the new conditions had been worked out in conjunction with the Colonial Office and the Crown Colonies concerned.

This task has been performed by the Inter-Departmental Conference presided over by Lord Islington, which has now issued its proposals, the aim of which is to encourage the settlement of Indians, after a probationary period of employment, in the colonies in such a way that the interests of both the colony and the immigrant are promoted. The latter's conditions of life and his wages will be under Government supervision, but he remains a free agent. The intention, however, is that he should stay where he is, and while he can command assistance in returning to India, if he so wishes, special inducements will be offered him to remain in the colony. Further, he is to be encouraged to take with him his whole family. This scheme will for the present be restricted to the four colonies named. It clearly has nothing to do with the treatment of Indians in the Dominions; but it is not difficult to see that the scheme does just reach the fringe of the subject. Following upon the acceptance by the Imperial War Conference of the principle of reciprocity of treatment as between India and the Dominions, it constitutes a stepping-stone to the ultimate adjustment of a problem which has been a fruitful source of friction within the Empire.

NOTES FROM ROUMANIA.

(FROM A CORRESPONDENT.)

Internal Reforms.

The sudden decision of the Government to carry out internal reforms was received on the whole with considerable enthusiasm, an impression emphasised by the fact that those whom the intended reforms did not attract had sufficient common sense and tact to keep their feelings private. Indeed, the abstention of the landed class from antagonistic criticism, both in the Press and in Parliament, would have deserved much credit had they not been equally sparing of approval. The Governmental Press interpreted this silence as a ready acceptance of the reforms, and in the enthusiasm of the moment volunteered observations which amount to a self-indictment of the old *régime*. So a leader in *l'Independance Roumaine* considers that, in different circumstances, it would have been natural for the reforms to meet with a certain opposition in Parliament, which contains so many landowners. For, "properly speaking, these two reforms (adult suffrage and expropriation) mean the renunciation by the propertied and governing classes of their privilege of riches and authority. The principle of power and the monopoly of property were until now only nominally the ownership of the whole people; to-day that fiction becomes reality."

In opening the new session of the Parliament M. Bratianu outlined the scope of the three reforms. Each Chamber then elected a commission which, working in common, proceeded to elaborate a draft embodying the various changes. It cannot be said that there was any actual opposition to the Government suggestions; criticism only concerned itself with the details of the reforms. The newly formed Labour party tabled a draft of its own which went beyond the limits adopted by the Government in their outline, and contained in addition a proposal for woman suffrage. During the discussion which followed several speakers insisted that the reforms ought to be introduced by a Cabinet reorganised on a non-party basis, but as the Liberals form the great majority of both Houses the suggestion found naturally only slight support. First the Chamber and then the Senate adopted, with but slight modifications, the official draft, and it now only remains for circumstances to allow the application of those praiseworthy measures. Expropriation, of course, cannot be proceeded with as long as a large portion of the country is in enemy occupation, and in the opinion of the majority of the Cabinet the purely political reforms should be made to coincide with the integration of the Roumanian nation.

Space does not allow me to comment on the various speeches delivered during the discussion of the reforms, but one I must mention on account of its bearing upon general Roumanian politics. The speech delivered by M. Take Jonescu in the Roumanian Chamber of Deputies was worthy of the war and of the time. He spoke out with such directness of argument, with such unhesitating sincerity, that the assembly was roused to a high pitch of enthusiasm and cheered loudly his eloquent utterances. Perhaps the most interesting part of his speech was that in which he disclosed the political alliance concluded between him and the late M. Filipescu in the autumn of 1914, a disclosure which throws light upon the activities of the interventionist party during the period of Roumanian neutrality, as well as upon the inception of the internal reforms which have been recently enacted.

After the Crown Council held at Sinaia on August 4, 1914, under the influence of King Carol, had decided upon neutrality, M. Jonescu and M. Filipescu, who had not been on speaking terms for several years back, met, and with the concurrence of a third personality, whose name has not been disclosed, agreed upon doing everything in their power in order to make Roumania side with the Allies. "It was the unique hour in a period of nineteen centuries," he said, "an hour which had never been before nor could ever be again, for never had it been possible to form a coalition of four Great Powers against Austria, the only circumstance in which we could hope to bring about, sword in hand, our national unity." They had not overlooked the fact that Roumanian intervention on the side of the democracies of the West, and the new conditions arising from the creation of a Great Roumania, would hasten by half a century the transference of power from the small ruling class to the broad mass of the people. Far from engendering hesitation, the knowledge of that fact led them to look into the future and consciously prepare the transference of the power which they were yet wielding. They agreed that six points required immediate reform:—

1. Reform of the Chamber of Deputies, based on universal franchise, by secret, equal, and direct vote.
2. Reform of the Senate, following broadly the organisation of the French Second Chamber.
3. A considerable transformation of rural ownership in favour of the broad masses of the peasantry.

Digitized by Google

4. The complete emancipation of the Roumanian Jews, without restrictions, reservations, or ambiguous provisions.

5. Reform of the organisation of the Church, with a view to its separation from the State.

6. Reform of the administration for the purpose of excluding from it party influence and securing a greater stability in office for public servants. It was also contemplated to follow in a certain measure the English system of administrative decentralisation.

The influence of English organisation was also evident in M. Jonescu's remark that, while he considered Parliamentary franchise for women as premature for Roumania, he was prepared to support the admission of women in the bodies entrusted with the function of local government.

"And what will be the reward for all this?" M. Jonescu exclaimed. "Individual reward?—None. History will forget even the names of all of us. But history will not forget that, though crowded of necessity into a corner of the land, and stricken with unspeakable suffering, not only did we have the courage to believe in victory and to say: 'We will perish, but we will not surrender,' but that we also had the courage to commit in a way suicide, for the sake of future generations."

Local Conditions.

The deficiency of fuel has reached such a stage that the municipality of Jassy has been forced to discontinue the supply of electricity, for lighting and other purposes, except between the hours of 8.30 and 11.30 p.m. The authorities have also introduced the system of summer time on the English model.

The supply of food continues to be unsatisfactory. The bread is of poor quality, and sometimes no bread at all can be baked on account of lack of flour or of fuel. A certain amount of sugar was obtained from Russia, and during July it was possible to distribute about three-quarters of a pound per head to the population of Jassy. Even home-grown products are scarce and expensive. Here are some of the current market prices for vegetables:—Potatoes lei 1.75 (1s. 6d.) per kilogramme; marrows, cucumbers, and a bunch of onions, 1 leu (about 10d.) each.

Much distress is also felt on account of lack of footwear. The wholesale loss and killing of cattle during last winter's retreat has made the country completely dependent upon foreign supplies for leather; what can be obtained, however, hardly suffices for the adequate provisioning of the army.

Occupied Territory.

I mentioned in my last correspondence that M. Virgil Arion, an ex-Minister and ex-editor of the notorious pro-German paper *Moldova*, has been placed by the German authorities in occupied Roumania at the head of the Department of Education. I now learn that several other well-known Roumanians have accepted service under German rule, namely, M. Demeter Nenitzescu, also an ex-Minister; M. Gregory Antipa, some time Director of the State Fisheries; and M. Lupu Costache. It is not yet known what functions have been alloted to these gentlemen. Jassy strongly condemns their action, and one can well understand that feeling. But, feeling aside, once they had made up their minds to remain in occupied territory, was it not more correct for them to work than to await in idleness the end of the war, as well as more reasonable to agree to serve the population of Wallachia than let it be administered by some stiff-necked German official?

How the German military authorities treat the unfortunate province may be gathered from the following information, supplied by a Roumanian non-commissioned officer who succeeded in escaping into Moldavia. The whole of the available supply of maize has been requisitioned by the Germans, without payment or any form of acknowledgment. The native population receives daily 300 grammes (about 2-3rd lb.) of maize per head, but they have to pay for it according to prices fixed by the German authorities. Cattle, in so far as not needed for field work, have also been commandeered.

As to the spirit of German rule, the following official communication, taken from the *Gazeta Bucurestilor*, is very suggestive: "All Roumanians born between 1877 and 1901 shall present themselves at the school Dinicu Golescu, in order to receive identification cards and instructions concerning their obligation of presentation on demand. The persons falling within these categories will not be sent away from Bucharest provided that they follow in all detail the instructions which they will receive concerning their presentation. Those failing to answer this notice will be sentenced to a fine of 3,000 lei and six months' imprisonment. It will be the duty of the police, and its responsibility, to see that all concerned by this notice do not fail to attend, even those who are unable to read it; all the members of their families and their priests could eventually be held responsible for their non-presentation."

Meanwhile a new publication, the *Weekly Illustrated*, has been issued for the benefit of the population, its chief feature consisting of abusive caricatures of the leaders of the Roumanian Government—MM. Bratianu and Jonescu.

PERSIAN NOTES.

(From Our Own Correspondent.)

Meshed, May 14.

The Crops.

We had no snow last winter nor enough frost to produce a crop of ice. Now we have had no spring rains. The country is very dry, and the crops are suffering. The coming harvest is likely to be very poor. There is plenty of wheat in the storehouses of the rich men, but bread riots have been threatened. The Government seems to have taken the matter in hand, and arranged for a sufficient amount of wheat to be released to meet the immediate needs. The price of bread has been reduced, and for the present the people are more or less quiet, though apprehensive.

Symptoms of Unrest.

During the evening of May 1 the Musidig-e-dolleh, Chief of Police, was shot through the back as he was riding through the city. He fell from his horse, and died in a few minutes. It appears that two men were on the spot at the moment, and one of them has been arrested.

On May 3 a notice was posted in the shrine exhorting the people to be faithful in the way of God, and inciting them to a Holy Revolution. After quoting a passage from the Koran, the message, in a somewhat free translation, ran as follows:—

"Let it not remain secret that the deceivers of our country and people knew that this would be the fruit of a decade of shedding the blood of our young men of Persia; that wolves in sheep's clothing, men with the spirit of the devil, useless sons of Persia, who were sellers of our fatherland, untrue persons falsely professing to establish so-called constitutional government, keeping secret their lawlessness and brutal nature under the outward show of order, whose pretended justice is nothing else but using their country to the best advantage for themselves, would persuade us that they are genuine patriots. They do not realise that the nation, having by many sacrifices and the desolation of many thousands of households gained blessed freedom, will not quickly renounce it. They know that men who have strong determination will not be turned aside from their purpose by the mere changes of time and circumstance. The real patriots and revolutionaries who seek independence have not and will not show any weakness in their efforts to gain their objects. Instead of that, as long as they have not cleaned the soil of the fatherland from the pollution caused by the deceivers and the trickery of the cursed self-seekers, the sword of revenge will not be sheathed. The thing which during these last years has caused silence on the part of the zealous ones (this refers to the interference of foreigners) ought not to be any longer taken into consideration, but must now give place to the protection of the property and reputation of the Persian people. Our northern brothers, notwithstanding the difference of race and religion, have extended to us a fraternal hand, and will not refuse us help in rooting out tyranny and deception. We, the Society of Zealots, in accordance with the provisions of Article 5 (this doubtless refers to some agreement among themselves) having in secret called every man's attention to his shortcomings three times, exhort the rectifying thereof. In case of not heeding this warning, he will drink of the wine tasted by the Chief of Police."

Two days later, on May 5, another notice was posted in the shrine, a free translation of which runs as follows:—

"To the Governor-General and all the heads of Government Departments in this province of Khorasan: Since slave traffic among the savages of Africa has ceased, the wretched Persians are bought and sold from hand to hand. If the lesser appointments and Government positions continue to be sold to vulture-resembling and corpse-devouring people, you must expect to receive the fruits of your actions. Yes, O, democrats! these are not the times for silence and sluggishness. Constitute your assemblies, and watch the actions of the officials. Do not fear. Expose the truth of every matter and in regard to every person. The patriotic extremists, sacrificing themselves for our nation, will render you all possible help."

The above two documents bore identical seals, and appeared to emanate from the same source. Of course, they were promptly torn down, and public affairs seem to be moving on as usual.

Trade Conditions.

The condition of trade continues to be bad. There is plenty of money in the market. English exchange continues to hover around thirty krans to the pound sterling, and roubles are about one and a-half to one kran and seventy centimes to the rouble. High prices prevail, as they have

Digitized by Google

been doing all through the war. Recently silver coins of the one and two-kran denominations have appeared in circulation that were "made in Germany" and put into circulation in the Hamadan and Kermanshah districts when the Germans were operating there. These coins are full weight and of approximate average fineness. They are slightly more in diameter and less in thickness than the corresponding coins minted in Persia. They are beautifully minted, and no one but an expert would detect them. They bear the Mohammedan date of 1330 A.H., which corresponds to 1912-1913 A.D.

M. Kornelis, the Belgian who has been until now the Chief of the Khorasan Customs Department, has been appointed Chief of the Khorasan Revenue Department. It is a most excellent appointment. M. Kornelis is highly esteemed by all who know him as a man of the very best qualities. The *Baha* and the *Chamman*, two Persian newspapers of democratic tendencies, have published articles protesting against the appointment, but I understand their objections to be not at all against M. Kornelis personally, but rather that they would have preferred to see a Persian appointed.

THE POSITION IN SYRIA.

(FROM A CORRESPONDENT.)

Cairo, August.

A corner of the veil which enshrouds Syria has just been lifted by an intrepid Syrian who, a few weeks ago, contrived to leave that unhappy country. Although this informant has brought little intelligence that was not known before, the value of his information lies in its precision. Thus, we now know that official statistics confirm the appalling loss of life in the Lebanon, and put down the total at 150,000, of whom 10 per cent. died from disease and the remainder from starvation. Typhus fever appears to be still raging in Syria and the Lebanese littoral, and what is hardly credible is not so much the almost utter lack of sanitary precautions which has always characterized Turkish administration as the absence of all control on the part of the Germans. On the top of this there is a serious shortage of medicines and doctors.

The economic condition may be judged from the almost total exhaustion of imported articles. A pair of boots made of native leather, which swells on contact with water, cost the Syrian eight Turkish pounds. Leather could be imported from Austria, but, after the first trial consignment, which was at once requisitioned by the military authorities, the merchants stopped all further orders. Last year's silk crop was deficient. That of this year, however, is said to be better, and the bulk, if not all, of it has been bought by native merchants, who had all the cocoons turned into silk yarn in the native spinning factories in the hope of selling it at remunerative prices after the war. But the Government dashed all their hopes to the ground by forcing them to sell the silk bales at prices nominally normal, but which, owing to payment in paper money, were positively ruinous.

Paper Money.

In this connection it is important to give a brief history of the issue of paper currency by the Ottoman Government, and an indication of the causes that brought about the continuously heavy fall in its values. The first issue consisted of notes of high values, the lowest being £T5. Owing to the scarcity of coins of low value, these notes could be changed, in most cases, only at a premium, varying in amount with the quantity of small coins in circulation, and this state of things led the Government to make further issues of, first, £T1, then of half a lira, and finally it flooded the country with a whole series comprising all the values of the currency scale, even to the lowest coin of half a metalik (a quarter of a penny), and all this against hardly any gold reserve. The notes for the lower values are said to resemble postage stamps. The par value of the notes was maintained until the Government itself caused its depreciation by ordering the people to pay for the grain sold by the Government, one quarter in gold and the remainder in paper money. There could be no more glaring proof of the Government's lack of confidence in its own notes, and the panic was such that the depreciation continued progressively until it reached the low level of less than a quarter of the par value. At the time of our informant's departure the pound note was worth 23/24 piastres gold. This enormous depreciation explains the seemingly fabulous prices of all commodities in Syria.

Now the Young Turks, hoping to be still in power after the war, began to feel concerned about the maintenance of their future credit. How were they to redeem all this enormous unsecured issue of notes? Finally they decided in favour of the following expedient. A so-called National Bank, under the auspices of the Government, was founded with a capital of ten million Turkish pounds, of which ten per cent. was said to be guaranteed by the German and Austrian Governments. Of course, no one could have the least confidence in such an institution, founded under the auspices of a bankrupt Government; and as no spontaneous demand for shares was forthcoming, instructions were sent to the Governors with a view to their exercising pressure on merchants and all persons of some financial standing to acquire shares in the new bank, to the utmost limit of their means. Against payment of the value of the shares in notes the person was given a share warrant. If, as seems to be a foregone conclusion, the bank were to "go smash," if it ever materialised, these warrants would be worth the paper they are made of. Meanwhile, however, they would have been the means of enabling the Government to withdraw a large amount of their notes, and reduce by so much their liability. In cases where persons pleaded pecuniary inability, facility was accorded them of offering, instead of money, the equivalent in silk bales, or other easily convertible goods.

Commandeering.

The authorities, according to the informant, have seized the grain stocks of the country, in order to institute the system of distribution by tickets. With the exception of the Hauran and the Nusariyeh Mountains, and the region round Hama, where the people were able to defy the Government and compel it to pay for their grain in gold, the population had to give up their stocks at low prices fixed by the Government, and against payment in paper money. The Government, in its turn, resold this grain at higher prices, and required part payment in gold. But the Government did not stop at that, for in secret agreement with the agents in charge of the grain depots the governors exploited the helplessness of the population. These agents, by creating all sorts of difficulties, forced the holders of tickets to sell at ridiculous prices to persons who would know the ways and means for obtaining their acceptance.

Now that the Government has taken away all the gold it could from the population, it is requiring the payment of the military exemption tax in articles of foodstuffs tariffed at its will. Thanks to the tight blockade, it is running short of many articles of prime necessity, and when the extended military operations in Southern Palestine necessitated an unusual supply of sand bags, two and a-half million bags were allotted for requisitioning from the Syrian provinces. Of this quantity only 200,000 bags are said to have been collected. In its anxiety to get the balance, the Government notified the people that they were expected to offer, in the absence of canvas bags, any material, even silk curtains, if need be, by way of substitute.

The privileges of the Lebanon have been abolished. The late Turkish Mutessarif, Ali Munif Bey, has been succeeded by Ismail Hakki Bey, the former having taken the portfolio of the Ministry of Public Works. The Administrative Council, constituted by virtue of the Organic Law laid down by the representatives of the six protecting Powers, has been dissolved, and there has been instituted in its place a General Assembly, each of whose members is supposed to represent 10,000 voters. It need hardly be said that the election of the candidates was a farce, and it would be more correct to say that the members of this assembly are the chosen nominees of the Young Turks. Even in the exercise of tyranny the Young Turk will continue to give his work the semblance of constitutionalism.

Conscription has not been applied to the Lebanon yet. Many of the Druses of military age have gone over to the Hauran, where their brave coreligionists have held the Turks at bay, while in the northern part of the Lebanon those hardy sons of the mountain have, so far, defied Turkish authority, and being well armed are likely to hold their own till the end. As to the rest, they have mostly been disposed of by starvation. In these circumstances we need not wonder at the Turks making a show of generosity by keeping this last privilege of the Lebanese intact. The aged Maronite patriarch, once a great power in the Lebanon, has been shorn of all his authority, and is said to be utterly broken down. He is living in his winter residence at Diman, on the higher hills of Northern Lebanon, and, knowing that resistance is useless, he relegates his nominal authority to his episcopal council whenever his sanction is demanded by the Turkish Government in matters of detail.

THE SALONIKA FIRE.

Thanks to the devotion of the staff and the assistance of the military authorities, the office of the Imperial Ottoman Bank in Salonika escaped the worst results of the recent terrible fire. The building took fire, and the upper part, which formed the manager's residence, was entirely destroyed; but the ground floor and offices were saved, together with all valuables and books, etc. It is hoped that the building can be sufficiently repaired for business in a few days.

The Ionian Bank and the National Bank of Greece were less fortunate, these buildings being entirely destroyed.

ABYSSINIA.

(From a Correspondent.)

Cairo, August 3.

Correspondence recently received by the *Mokattam* throws some interesting light on the present situation, and recent political happenings of importance in Abyssinia, which, removed though it is from the main theatre of the war, has yet had its share of bloodshed and trouble, thanks to German intrigue. Although it is over nine months now since the young Negus Lij Yassu was dethroned, yet he has not ceased, from his fastness refuge, to intrigue, through the remnant of his party, and to trouble the minds of the simple and ignorant by all sorts of lying reports. His last stand was on the wild heights of the Mountain Mekdela, which is almost impregnable, as only one narrow track of less than three yards' width, with precipices of dizzy depth on either side, leads thereto. The strong force sent against him by the new Government, over six months ago, under the command of Ras Dasi, Governor of El Walaha Province, had to retire after six hours of fighting and fruitless attempts to storm that formidable natural fortress. Considerable reinforcements were then despatched under the command of Qubta Jorjis, the Minister of War himself, who was the moving spirit of the revolution. He posted his troops all round the mountain and closely besieged it. Faced by certain death, through hunger or a losing fight, the men of the runaway Negus began to flock in batches to the camp of the Minister, and these wholesale surrenders continued until, by the confession of the fugitives themselves, there remained with Yassu only a small following of about 500 men. The capture or surrender of Yassu is now daily expected.

Ras Abana has been appointed Governor of Al Walla Province in the place of El Negushi Mikhail, father of the dethroned Negus, who was taken prisoner when fighting against the new Government on behalf of his son.

Ras Seinem, Governor of El Tughra Province, arrived lately at the capital. He was the only Governor who had not yet been there after the revolution, to swear allegiance to the new Government in accordance with Abyssinian traditions.

Ras Abana has been appointed Governor of El Walla capital, after having remained there about six months on a political mission of importance. The Regent Ras Nafari has proceeded energetically with his work of reorganisation by discarding all those who are suspected of secretly working for the reinstatement of the old regime, and by appointing, on the other hand, men of merit and loyalty in the posts of the new Government. Practically the whole country now stands firmly behind him.

The late Government had prevented the completion of the railway to the capital, but immediately after the re-establishment of order the new Government ordered the resumption of the work, and trains are now arriving at the capital twice a week. The French company was further granted a large piece of ground for the erection of the station.

THE CAIRO RED CROSS LIBEL CASE.

In commenting upon the action for libel brought against Colonel Sir John Rogers, the local commissioner for the Red Cross Society, by Captain Yates, formerly of the medical staff of the Red Cross Hospital at Giya, our Cairo correspondent drew attention in our issue of August 24 to the fears expressed that there might be some question of the damages or costs of the action being defrayed out of Red Cross funds. It did not seem likely that such a course would be adopted, but to allay any possible misapprehension on the subject we are authorised by the Chairman of the British Red Cross Society to state that no part of the damages awarded against Sir John Rogers or of the costs in the case will be borne by the society.

A Cairo telegram states that the Holy Carpet will leave for Mecca to-morrow.

A first contingent of Jugoslav volunteers from the United States has reached Corfu.

Twenty Serbian boys from various Oxford schools, with thirty boys from Cheltenham College, have formed an agricultural camp at Calne. They will remain in camp three weeks. Some of the Serbian forestry students from Oxford are working under Sir Wilhelm Schlich in the Forest of Dean.

CORRESPONDENCE.

WOMEN'S WAR WORK.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow me a short space in the columns of your valuable paper to say a word in praise of the good work of the women doctors and nurses in the present war?

Although by now these services are well known and valued by the Military Medical Board, it is only right that the public should know more of them, and that just appreciation, by some special attention, should be made of these services. It was a happy inspiration on the part of that distinguished but sorely pressed medical department to invite medical women to take part in its arduous work, since the admittance of women to the work of the Royal Army Medical Corps set free a number of men, medical practitioners, to work in more distant parts where their help was urgently needed.

Malta owes much to Lord Methuen for having given a cordial welcome to the medical women who came to work in the numerous well organised hospitals in the island. I feel sure his Excellency could testify, from information gained in his daily visits to the wards, how well cared for the patients have been by the women doctors and nurses, both inside as well as outside the purely medical and nursing spheres.

Women doctors are keen workers and enjoy the confidence of their colleagues. The hospitals have done excellent work this winter, and women doctors have taken part in the work of all departments. It is inspiring to see how they place duty above all other considerations, and act upon its dictates regardless of risks, danger and fatigue.

Fanny Blunt.

Malta, August, 1917.

AUSTRIAN RULE IN MONTENEGRO.

Mr. Alex Devine, the Headmaster of Clayesmore School, Winchester, who during his holidays acts on the Continent as Commissioner on behalf of the Montenegro Red Cross and Relief Fund of London, has received the following statement, duly sworn and attested before the American Consul at Bordeaux by a Montenegrin, who, as an American subject, was able to pass out of this country before war was declared by the United States:—

I, Sabonovic John, American citizen of Montenegrin origin, was born in Montenegro March 13, 1886, Grahovo, Montenegro, and I went to the U.S. 1906, where I stayed until 1914, when I returned to Montenegro in April to get my wife at Cettigne, staying there for three years until 2 May, 1917. During this time I visited Grahovo on 26 April, 1917, when I saw 182 persons, women, children, etc., die in twelve days because of lack of food, there being no food in the country whatever, except a mixture of grass and millet, and not enough of that. The people have eaten up all the dogs, etc., they can find; Nicksich city is like this, also Drobnjoci, Piva, and Kolasin, and all the people are in the same condition, rich as well as poor, as money will not buy food. I believe there are certainly 200 people a day dying of famine in the country. The Austrian authorities allow each person in Cettigne to buy ten "dek" of corn meal a day (a handful about), so the situation there is a little better than in the rest of the country, where no such food can be bought. I believe that there are but two battalions of Austrian soldiers, one in Cettigne and the other spread around the country, in all Montenegro, and about 20,000 in Albania, Scutari, and Droc, which are all I know of. The soldiers treat the population badly, making all the men work on the roads, and if from fatigue or thirst a man stops work to rest or drink he is shot on the spot. Work is about ten or twelve hours a day, and pay of 2 kronen paper a day, equal to 300 paper and 100 silver kronen. A person in 1916 (there is no food now) would buy something to sell, food, etc., and soldiers would take it without money. They treat the people better in Cettigne than other places, but everywhere the people are too poor and badly nourished to try to revolt. The Austrian soldiers in the country are perhaps more badly nourished than the people, and I have seen in the same villages above mentioned, myself, from March until April 2, 1917, 200 soldiers, Austrians, die of starvation in Cettigne alone. The men on the front are a little better than those in the interior, but there they are also dying of starvation, as from time to time soldiers return from the front in starved condition.

The Governor of Montenegro is Von Webber, who stays at Cettigne in the King's house, is a civilian, and does not try to misuse the people, the reason the condition of the population in the capital is better than that in the rest of the country, perhaps. I believe that from 10,000 to 15,000 persons have died of starvation in Montenegro. I am sure that the Austrians can get no food, as they are dying, and also the soldiers talk to the population and tell them that they know the war cannot last more than a month or two more, as they themselves can get nothing to eat. All the country is in the same impoverished, starving, and subject condition, the only city a little better than the others being Cettigne, above stated.

I hereby certify that the above statements are all true and correct to my best knowledge, and that I actually saw and know the things which I have related above.

TANGIER TO TEHERAN.

The word Republic is being bandied about with wonderful freedom in Greece these days. Perhaps it is inevitable that it should be so. But few people, I fancy, who have the interests of Greece at heart will have the least hesitation in hoping that M. Venizelos will succeed in re-establishing the monarchical principle on a firm basis. Of course Pope's lines hold good:

> For forms of government let fools contest;
> Whate'er is best administer'd is best.

And we may feel sure that Greece would fare as well, if not better, with M. Venizelos as President of the Republic. Looking further ahead, however, one seems to see troublesome days in store for the country in the periods between the appearances of strong men to direct its destinies. So far Tricoupis and Venizelos are the only men who have stood out in their generations, and at that rate the supply is clearly not equal to the demand.

***

One's ideas may be old-fashioned, but until Greek politics have steadied down a bit and evolved parties based on political principles in the place of groups attached to this or that politician, it would appear that the presence of a king on the throne must exercise a steadying effect. Probably no nation is more politically inclined, so to speak, than the Greeks, and it can only be a matter of time before conditions adjust themselves to the true interests of the country. M. Venizelos has given things a satisfactory start in the right direction; but it remains to be seen to what extent they will survive him without experiencing any setback when his strong hand and wise judgment are removed.

***

I am indebted to a friend for the loan of "Bradshaw's Overland Guide to India, Egypt, and China," for the year 1857—a most interesting and entertaining volume. Perhaps the first thing that strikes one about it is its wonderful aptitude for calling a spade a spade. Nowadays guide-books are written more or less after the manner of shop catalogues: just as every article in the latter is represented as a gem of utility, workmanship, and cheapness so the traveller is encouraged to believe that everything, more or less, in the country he is to visit will be found to be all that can be desired. Not so our author of 1857. "We then enter that miserable hole," is the introduction to Suez, and after this uncompromising exordium, it is hardly necessary to be told that the one and only hotel is badly conducted. Constantinople fares no better: "the streets are miserably narrow and filthy in the extreme," and then follows an enumeration of all the worst features that a disgruntled foreigner would be inclined to seize upon. Still less complimentary is our guide to the people of these unattractive places. In Constantinople, where "nothing is more annoying than the continual dread of fires," the visitor, if he should be obliged to remove his traps, is to avoid confiding them to a certain nationality, because they are "the most arrant rogues in existence," his boatmen in Egypt will be "unscrupulous rascals," while the prospect of what the traveller will endure at the hands of those "plagues," the "lazy Arabs or Egyptians," who will demand backshish, is painted in sufficiently lurid colours to keep all but the stout-hearted away from Egypt.

***

Nor when India is reached does the author allow himself to become more imperially minded. He is still on the look-out for the things that annoy rather than please, and a formidable cross-head, "NUISANCES," inevitably arrests attention. A full quotation must be permitted:—

"Should he find, on taking possession of his residence, that there exist any NUISANCES next to or in the immediate vicinity of his compound, such as a small hut on the ground adjoining, in the front or rear of the premises which he occupies, it will be perfectly useless for him to call the sepoy (policeman), attempt to complain to the owner of the property, or to offer to rent the same. All his endeavours will prove abortive; the most effectual, safest, easiest and most economical plan will be to purchase a small pig, price 5 rupees, or 10s., have a hole made in the hut, either at the side or back, and send the unclean animal into the premises, at the appearance or sound of which the whole of the inmates will abandon it *instanter*, as it is against their creed to remain in any place which a pig has crossed or inhabited."

***

The explanation of the author's outlook on life and travel is found when we come to read the very elaborate instructions to those who intend to take up their residence in India. All through the book there are minute injunctions in regard to what must or must not be done in order to preserve the traveller's health; but in the chapter devoted to India rules are given for every hour of the day, every season of the year, and every condition of existence. When, finally, we read that "the mind should in India be kept constantly employed in fresh scenes and actions; for inactivity produces *ennui*, irritability, spleen, and a host of other complaints," one is tempted to add, "*crede experto*." The author has evidently returned with an Indian liver, and views his former experiences with a jaundiced eye—a confirmed valetudinarian. It is of interest, however, to let him recall the days of sixty years ago, when M. Lesseps was "engaged in forming a canal across this isthmus . . . but the British Government have most strongly opposed this undertaking." The Empire has progressed since then. We quickly learned to appreciate the advantages of the Suez Canal, and to accept our responsibilities in India in a different spirit from that displayed in the recommendation to drive pigs into native dwellings that might happen to be an eyesore to the new arrival.

***

The statement that an iron box containing £4,500 in silver, destined for the relief of the Serbian Army, fell into the sea at Durazzo when being landed, and that a diver was sent down but failed to recover it, suggests the endless possibilities awaiting an energetic Deep Sea Recovery Association at the end of the war. A few years ago they were still recovering Spanish doubloons in the harbour of Tobermory, and if the Durazzo box was lost in the process of being conveyed ashore it will hardly be in very deep water. Its recovery, given time and patience, therefore, ought not to be a very formidable matter. In regard to the oceans as a whole the loss of shipping during this war has been on such a terrific scale that it can hardly fail to give an impetus to inventions to perfect deep-sea research. One can almost imagine on certain trade routes experienced divers setting up records for the number of vessels inspected in a morning's operations. Are we destined to see a great revival of treasure hunting? If so, the credulous public may have to be safeguarded from an industry which lends itself admirably to wild-cat exploits.

CORSAIR.

The Serbian Government has thanked M. Venizelos for the resolution voted by the Greek Chamber affirming the determination of Greece to observe the engagements of the Greco-Serbian treaty.

12	30	Wednesday	25	25
13	31	Thursday	26	26

M. Gennadius, the Greek Minister, was received in audience by His Majesty at Buckingham Palace on September 5, and presented his Letter of Credence as Envoy Extraordinary and Minister Plenipotentiary from Greece, and also handed to the King an autograph letter from King Alexander.

M. Venizelos has left Athens for Ipati to take the waters.

M. Pashitch, the Serbian Prime Minister, has left Nice for Rome.

M. Venizelos has submitted to the Greek Chamber a preventive Press Censorship Bill.

Colonel Kotchsis, Greek Military Attaché, arrived in London on September 4 from Jassy.

M. Pavlé Karovitch, Secretary to the Serbian Legation, has arrived in London from Paris.

It is announced that the Sultan of Egypt has presented one of the finest sites in Cairo for a cathedral.

M. George Roussos, recently appointed Greek Minister to the United States, has arrived at an Atlantic port.

Professor Moskovlyevitch has arrived in London from Corfu on his way to Petrograd on a special mission.

M. Vesnitch, the Serbian Minister, and Mme. Vesnitch have returned to the Legation in Paris from Villiers.

Sunday will be the anniversary of the birthday of Prince George of Serbia, who was born on September 9, 1887.

Major-General Beadon and Surgeon-General Birrell gave evidence before the Dardanelles Commissioners on August 31.

M. Justin Godard, French Under-Secretary for War, and M. de Billy, the newly-appointed Minister to Greece, have arrived at Athens.

Madame Lahovary, the wife of the Roumanian Minister in Paris, arrived in London on September 2, on a visit to her daughters.

Djemal Pasha, the Turkish Minister of Marine, is reported to have arrived at Berlin on his way to inspect the German Fleet and naval works.

M. Eulambios, who has been appointed an Attaché to the Royal Greek Legation, has arrived in London from Athens, and entered on his duties.

According to a message received in Paris from Rabat, El Mokri, who has been appointed Grand Vizier, arrived at Rabat on August 30 from Fez.

An engagement is announced between Lieut. J. J. Devrack, I.A.R., attached Indian Cavalry, and Miss Diana Wentworth, of Stenor Farm House, Henley-on-Thames.

Prince Ypsilanti, Master of the Horse to ex-King Constantine, who is alleged to have taken a prominent part in the events of last December in Athens, has been provisionally released.

Captain Charles Moxon Quiller Orchardson, attached Imperial Camel Corps, of Stratford Studios, Kensington, who died from wounds on April 26, left estate of the gross value of £1,302.

According to the *Augsburger Postzeitung* the railway from Belgrade to Constantinople is being operated by German railwaymen, while German soldiers form a guard at every station.

It is stated that a special tribunal will be proposed for the trial of M. Skouloudis and M. Lambros and other members of the Cabinets which served German interests to the detriment of Greece.

According to a message from Switzerland, the Hungarian Minister of Education, has issued an order that in all Roumanian public schools in Transylvania the language of instruction must in future be Magyar.

Mrs. Summers, wife of Lt.-Commander H. C. Summers, gave birth to a son at Paignton on September 2. Lt.-Commander Summers was for many years instructor of the Black Sea lifesaving station on the Asiatic coast.

The Greek Parliament has sanctioned the prosecution of M. Canakaris-Roufos for declaring, it is alleged, that Captain Astley Shute, of the Passport Control Commission, came to Athens to assassinate King Constantine.

Mr. Thomas H. Mawson, of the School of Civic Design, Liverpool University, who had in hand at the outbreak of the war a commission for the replanning of Athens, has received a cable from M. Venizelos inviting him to undertake the replanning of Salonika.

Persons resident outside Greece who have claims for compensation for loss in connection with the events of December 1 and 2, 1916, in Athens, should present them to the Secretary-General of the Mixed Indemnities Commission at Athens before November 14.

Captain W. H. Lang, Indian Cavalry, has been promoted Brevet-Major, and has also been awarded the Croix de Guerre. Major Lang is the son of Lady Hamilton Lang and the late Sir B. Hamilton Lang, who was in Egypt for many years as British Controller of the Davia Sanieh.

General Georgesco, the representative of the Roumanian Military Mission attached to the British Headquarters, entertained at luncheon on August 30 the Portuguese Minister, the Roumanian Minister, and General Dessino, the chief of the Russian Military Mission attached to the British Headquarters.

Captain Wedgwood Benn, M.P., who has for some weeks been in hospital in Rome, suffering from malaria, is now convalescent. In addition to receiving the D.S.O. and being twice mentioned in despatches, Captain Benn has just been cited in the French Orders of the Division de Syrie for gallantry.

It is reported that Herr von Henting, who returned to Germany some three months ago, has received the Chevalier's Cross with swords of the Order of the House of Hohenzollern for services during his two years' political mission in Asia, in the course of which he visited Persia, Afghanistan, Turkestan, and China

The death has occurred at a French Red Cross ambulance of Sister Fanny Kessissoglu. She had worked indefatigably with the French unit of the Secours aux Blessés all through the Balkan campaign, and again joined her unit, doing duty at different points on the French front with the greatest courage and devotion.

M. Ribot, the French Prime Minister, in a telegram to the Roumanian Prime Minister, M. Bratiano, on the occasion of the anniversary of Roumania's entry into the war, says that France salutes in the Roumanian nation a brave sister who is at this moment in the midst of difficulties displaying qualities more than heroic, and which are the pledge of victory.

The Greek Minister, M. Gennadius, has conveyed to the Lord Mayor the lively gratitude of the Hellenic Government for his prompt initiative in appealing for succour on behalf of the victims of the great fire at Salonika. The Mansion House Fund for the relief of the sufferers is now well over £3,500. M. Gennadius has contributed £25 to the fund. Other subscriptions include £250 from Alderman Sir Marcus Samuel, £105 from Mr. J. A. Mango, £105 from Sir John R. Ellerman, £105 from Mr. and Mrs. P. J. Calvocoressi, and £100 from the Anglo-Greek Magnesite Company, Limited.

Reuter's Agency is informed by the Anglo-Hellenic League that telegrams from Salonika show that the situation created by the great fire is now well in hand. The relief of the sufferers has been organised by M. Voutzinas, Prefect of Serres, who began by dividing the town into eighteen districts, each of which is under the supervision of a local committee. No fewer than 80,000 rations of bread are distributed daily. The bread is supplied by the Greek Government and distributed with the assistance of a large number of motor lorries which have been lent for the purpose by the British military authorities. The Greek authorities are also undertaking the supply of timber necessary for the construction of huts and other temporary shelters.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. A. J. Fisher, of the Ministry of Education, Cairo, was gazetted Lieutenant in the Hants R.G.A. on September 28, with seniority as from June 1, 1916, and to remain seconded for duty with the regular R.G.A.

OBITUARY.

Colonel Frederick Vincent Eyre, R.A., Bengal, who died on Sunday at Rockville, Lansdown, Bath, in his eighty-second year, was the eldest son of General Sir Vincent Eyre, C.B., K.C.S.I., and was a descendant of Colonel Thomas Eyre, who served at Marston Moor, and who, according to tradition, engaged Cromwell in an encounter and died from the wounds he received.

Captain Jack Humphrey Miller, Loyal North Lancashire Regiment, attached Egyptian Army, who died on August 25 while on leave, was the son of the late Mr. Miller, of Thistleton, Lancashire, and of Mrs. W. P. Miller, of Merlewood, Grange-over-Sands. He was thirty-four years of age, and received his captaincy in October, 1914.

Miss Agnes de Selincourt, Principal of Westfield College, London University, who has died as the result of a cycling accident, was the first Principal of the Lady Muir Memorial College for Indian Women at Allahabad. She held this post for about ten years, and then the effect of a tropical climate on her health compelled her to return home, and in 1912 she left India. The following year she was appointed Principal of Westfield College.

The death has taken place at Tarbert of Mr. Alexander Bremner, who was for a number of years engaged in the development of Indian railways. His first employment in India was in Kathiawar in the 'eighties, and he subsequently worked on the Delhi-Umballa-Kalka line, and later as a district engineer of the G.I.P. Railway. Last year he retired owing to failing health. Mr. Bremner came of a family of engineers. Mr. J. R. Bell, who laid the line of the Ruk Sibi Railway from south of Sukkur to the Bolan Pass in 1879-80—an extraordinary feat in those days—was his cousin, and both Mr. Bremner and his cousin were grandsons of the Scottish engineer, James Bremner, who in 1847 contrived to float the Great Britain off the Dundrum coast. Mr. Bremner leaves a widow and two daughters.

Captain Gerald Patrick Manson, M.C., Somerset Light Infantry, who was killed on August 24, was the second son of the late Mr. J. Manson, Indian Public Works Department. He was born in 1896, and educated at Clifton College and St. Paul's School. Obtaining his commission in September, 1914, he went with his regiment to the front in May, 1915, and was wounded on July 19, 1915. He was gazetted captain in the following September, and mentioned in despatches on April 30, 1916. He was awarded the Military Cross for gallantry on August 18, 1916, when he was severely wounded. Captain Manson's elder brother, Second-Lieutenant C. C. E. Manson, Gurkha Rifles, who had also been awarded the Military Cross, was killed in action in the Dardanelles on December 4, 1915.

Captain David Arthur, M.C., I.M.S., the youngest son of the late Provost Arthur, of Airdrie, and of Mrs. Arthur, 2, St. Stephen's Avenue, West Ealing, died on July 31, as a prisoner of war, at Entelli, in Turkey in Asia. Educated at Airdrie Academy and Glasgow University, he entered the Indian Medical Service in 1909. He was on leave when war broke out, and at once returned to India. He saw service with the original Mesopotamia Expeditionary Force, was present at the landing at Muhammorah, and took part in the early fighting on the Karun River and the battle of Kurna, when he was twice mentioned in despatches. He accompanied General Townshend's force up the Tigris, was wounded at the battle of Ctesiphon, when he was awarded the Military Cross, and went through the siege of Kut.

Mr. William Henry Arthur St. John Leeds, I.C.S., retired, has died suddenly at his residence in Cranley Gardens. The son of the late Mr. Henry Leeds, and grandson of the late Sir Joseph Edward Leeds, of Croxton Hall, Cambridgeshire, he was educated at Cheltenham College and New College, Oxford, and entered the I.C.S. in 1885, and served in Bengal as Assistant Magistrate and Collector. He was transferred to Burma in 1888 as Assistant Commissioner, officiated as Director of Land Records and Agriculture in 1890-91, was promoted Deputy Commissioner in 1896, and afterwards officiated as Commissioner of Arakan, and was Commissioner of Meiktila, Upper Burma. He was President of the Rangoon Municipality from 1899 to 1904. Mr. Leeds, who retired in 1911, married Edith Mabel, daughter of Major-General Jackson Muspratt Muspratt-Williams, of Fernihurst, Cheltenham.

Brigadier-General Malcolm Peake, C.M.G., R.A., who was killed on August 27, was the youngest son of Mr. Frederic Peake, of Burrough-on-the-Hill, Leicestershire. He was born in 1865, and he was educated at Charterhouse and the Royal Military Academy, from which he passed into the Royal Artillery at the end of 1884. For ten years, from 1895 to 1905, he was attached to the Egyptian Army, and served with the Dongola Expedition in 1896, being mentioned in despatches and receiving the 4th Class Medjidieh and the Egyptian medal with two clasps. In the Nile Expedition of the following year he was in command of a battery of Egyptian Artillery, and was again mentioned in despatches, and added a clasp to his medal. In the expedition of 1898 he took part in two important cavalry reconnaissances and commanded a battery of artillery at the battles of Atbara and Khartoum. He was again mentioned in despatches, received the brevet of major, and gained two further clasps. In the operations in 1899 he commanded the artillery and received the 4th class of the Osmanieh and a sixth clasp to the medal. From 1914 to 1916 he was A.A.G. at the War Office.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

BOYLE.—On August 22, at Gibraltar, the wife of Lieut. G. T. Boyle, Cheshire Regiment—a son.

MANWARING.—On August 28, at Stoney Stanton Rectory, Leicestershire, the wife of Hugh Manwaring, of Baghdad—a son.

SUMMERS.—On September 2, to Lieut.-Commander H. C. Summers and Mrs. Summers, 3, Avenue Crescent, Paignton—a son.

MARRIAGE.

LEAF—KAY-SHUTTLEWORTH.—On August 22, at St. Bartholomew's, Barbon, by the Rev. F. Meyrick Jones and the Rev. James Harrison, Charles Symonds Leaf, Lieut., The Buffs, attached to M.G.S., only son of Mr. and Mrs. Walter Leaf, of Heatherside, Camberley, to the Hon. Catherine Blanche Kay-Shuttleworth, youngest daughter of Lord and Lady Shuttleworth of Gawthorpe.

ROLL OF HONOUR.

ARTHUR.—On the 31st July, while prisoner of war at Entelli, Asia Minor, Captain David Arthur, M.C., M.B., B.Sc., I.M.S., youngest son of the late Provost Arthur of Airdrie, and of Mrs. Arthur, 2, St. Stephen's Avenue, West Ealing.

WHERE TO STAY.

THE CHOICE BEFORE TURKEY.

Indications are not wanting that the Turks are beginning to see things in a different light from that in which they saw them two or more years ago. Even if we do not accept the report that Turkish censors are making up for arrears of pay by the sale of foreign newspapers at fabulous prices, it is not difficult to imagine that the thinking section of the population has by now found some means of keeping itself informed of the general situation abroad and of the real military position of the Central Alliance. Switzerland would seem to be combining the rôles of a business and a holiday centre for the enemy States, and however intent the emissaries may be on their Governments' affairs, they can hardly fail to be brought into contact with views which hitherto have found few opportunities for expression in their own countries. In regard to the Turks, it is an axiom that they are entirely under military domination, and one that is probably even more effective than the German, inasmuch as it combines the thoroughness of the German system, of which it is actually a part, with all the cruder terrorism of the Committee régime. Consequently there can be no question of a practical change in the attitude of Turkey towards the war, until the Prusso-Committee domination has been shattered, or at least is tottering to its fall. Military operations, therefore, remain the only medium by which the Allied Powers can hope to make their voice heard in that country; but that is no reason why they should not prepare the way, as far as they are able, for a readier understanding, when the time comes, of the full meaning of the war and of the completeness of the Turko-German defeat. In the discussion that has taken place on the subject of a separate peace for Turkey or Bulgaria, a point that is often ignored on both sides is that, while the attitude of those in power must be determined by the fact that they stand to lose all by the collapse of their plans, each country as a whole might in given circumstances be convinced that it stands to gain in the long run even at the cost of present sacrifices; but it is not likely to adopt this view until it has adequate evidence of the failure of the Government's military policy. Diplomacy must necessarily play second fiddle to the Army, but is not called upon to remain silent.

The one thing that the Turks know already is what an alliance with Germany means. Here again it is well not to allow the wish to be father to the thought. For the Committee of Union and Progress, the advantages gained personally from the German protectorate probably outweigh all the inconveniences; it is also conceivable that for the Turks as a whole the glamour of Gallipoli and the misrepresentations that disguised the military failures in other directions left a self-satisfaction which was for a long time proof against suffering and privation. But if there has not yet been any marked revulsion of feeling, the ground must have been steadily prepared, as the war becomes more and more protracted, for a modification of views. Even a recognition of the efficacy of German supervision will hardly suffice to reconcile the individual Turk to the fact, and he must have ample occasion to appreciate by now the nature of the hold which the Germans have secured upon the country. German officers command the Turkish army, a German is Generalissimo, and a German military mission controls the whole military system of Turkey, and may be regarded as responsible for the steady extension of the age limits within which the male population is being called up for service. In the same way the navy and the air services are directed from Berlin, while German assessors sit in every Turkish Ministry. A German protectorate could not be more strictly controlled in Germany's interests. For the time being military exigencies can be pleaded as an excuse for the complete disappearance of Turkish independence; but even if the war ended in a victory for the Central Alliance, there could be no abatement of German control. Economic exigencies after the war are likely to prove no less compelling than military needs during it. All that has happened in Turkey had been planned beforehand in Germany; the incidence of the war has merely enabled what was to be attained slowly as the result of economic penetration to be carried into effect all at once. "All economic measures we may take in Turkey," wrote Dr. Wiedenfeld, "are only a means to an end, not an end in themselves," and previously he had declared that while "the means will still be economic, the goal will be of a political order." If Germany retains a free hand to mould the destinies of the Near East, Turkey will be even more necessary to her after the war than she is now, for without complete control of Turkish administration and Turkish production there can be no hope of the country being able to meet German requirements.

The choice, therefore, before Turkey is as clear-cut to-day as it will be when the victory of the Allies has been won. She must either retain her present territory with all the burdens, administrative and military, that it entails, merely to become a German province, or she must accept the Allies' terms, be content to lose the regions she has never known how to govern to her own satisfaction or theirs, and become within legitimate limits what the Young Turks have mapped out for the country—a purely Ottoman State. The dilemma is not a happy one for any people, but Turkey cannot find a means of escape by postponing it. Her experiences during the last two years may prove to have reconciled her to the inevitable more than appears on the surface. The glamour of empire began to pass from her at the time of the Italian war, and the process has continued without interruption ever since. With the defection of the Arabs the last stage was reached, and the Turkish Government showed that it accepted the eclipse of its power by proceeding to massacre as many as it conveniently could of the alien population still within its jurisdiction. For the Ottoman people of the present generation empire spells little more than national disgrace and individual suffering. The attempt to govern other nationalities has meant for them merely an incentive to and a cloak for bad government at home. If they can be brought to realise that the future now opening out to them entails relief from military burdens, freedom to live their own life and prospects of abundant prosperity, the passing of empire will be accompanied by no vain regrets. The task of the Allies, therefore, is to demolish the claims of the Turco-German régime to invincibility and to secure a hearing for the correct interpretation of their war aims. But the military success must be achieved first. Those who have consistently maintained that the East is a short cut to victory in the West derive what consolation they can from the reflection that after two years there are signs of their views gaining acceptance in authoritative quarters.

BULGARIA AND THE CENTRAL POWERS.*

The question of the possibility of detaching Bulgaria from the Central Powers has already been discussed in England. Some people—a small number, I believe—seem to imagine that Bulgarian intervention could have been avoided and that, in any case, it is not yet too late to bring Bulgaria on the Allied side. Later, I should like to discuss at length the possibility or the impossibility of such an idea, but here I wish only to put forward by quotations from Bulgarian official statements and writings the Bulgarian idea on this point. This will show better than argument what the British people may expect from her.

It is not in the interest of either Germany or Bulgaria, nor have they the right, to-day, to discuss the principle of nationality. Their present conquests can be maintained only if every nation in opposition thereto is crushed. Bulgaria fully realises this. Bulgarian public opinion became very agitated during the last German political crisis, because the smallest prospect of a settlement towards democratic government endangers Bulgarian conquests. Luckily, from her point of view, the idea of democratic government disappeared completely, and the principle of crushing nations remains.

When the new German Chancellor, therefore, telegraphed to the Bulgarian Premier and assured him of the ultimate victory of the Central Powers and of his loyalty to the contracts passed between them, the Bulgarian Premier was pleased to reply that the blood they had shed in common sealed once and for all those treaties, which were inviolable, and that Bulgaria looked forward to a victorious peace when she would have a brilliant future on the side of a mighty Germany. The *Kölnische Zeitung* (July 23, 1917) comments on this exchange of telegrams, and asserts that since it took place the Bulgarians once more breathe freely, and are convinced, more than ever, of the success of the Central Powers. This assertion sums up the whole attitude of the Bulgarian Press.

But this military supremacy of Germany, Austria-Hungary, and Bulgaria must endure also in times of peace. These States must retain what they have won, and they must be in direct touch with one another. This is possible only if the nations whose armies they have defeated are dominated after the war by German-Bulgarian *Kultur* and by German-Bulgarian economic supremacy. They have founded, therefore, German-Bulgarian and Austro-Hungarian-Bulgarian *Kultur-Gesellschaften* and societies for the furtherance of mutual economic interests.

According to Professors Miletich and Daniloff (*Narodni Prava*, June 10, 1917), the purpose of the recently-formed *Kultur* Society for the furtherance of relations between Austria-Hungary and Bulgaria is, that the people who excelled together in war should know each other in peace, and thus by closer contact learn to esteem each other highly. According to this society, this must be attained by *Kultur* relations, voyages, exhibitions, and more especially by courses of languages.

The German-Bulgarian *Kultur* Society, too, has as its object the development of *Kultur* relations between Germany and Bulgaria. The German Minister in Sofia, Count Oberndorff, who is also honorary president of this society, said, in a speech delivered by him at a dinner given in the German Legation to celebrate its inauguration, that the friendship between Germany and Bulgaria, sealed with their common blood, must seek its foundation in times of peace in German *Kultur*, so that the two nations may enjoy in contentment their mutual intellectual and material riches. The president of the society, K. H. Kalcheff, replied that the chief result of the German-Bulgarian Alliance must be the development of *Kultur* and of intellectual relations between Germany and Bulgaria (*Narodni Prava*, August 1, 1917).

For their future economic relations Germany, Austria-Hungary, and Bulgaria are no less anxious, and the Hungarian-Bulgarian Economic Society is at present busily engaged in organizing courses in the Bulgarian and Hungarian languages.

Bulgarian economists point out that it is to the economic advantage of their country to form a part of the economic organization of Central Europe. This is very significant, because even in Germany such an idea has not been so fully admitted (see the discussion between Naumann and Prince Lichnowsky in the *Berliner Tageblatt*).

In a recent book published in Bulgarian ("Our Economic Bonds with the Central Powers," Sofia, 1917) the author, Dr. A. Stoyanoff, points out where Bulgaria's interest lies. He wishes to see a Central Europe economically united, formed out of the States at present constituting the Central Alliance, and spreading from Hamburg to the Persian Gulf.

This Bulgarian writer desires a *Great Central Europe* for two reasons; (1) Because Bulgaria should not merely for the time being and for military reasons be allied with Germany, but should establish with her permanent economic relations; and (2) Because this great Central Europe would be capable of offering economic resistance to the Allied Powers, to *France, England, Russia, and the United States*, whom Dr. Stoyanoff terms the *Imperialistic Powers*.

Encouraged by such ideas, it is natural that the Bulgarian Press, referring to the Allied Balkan Conference and forgetting that though represented in Berlin, Bulgaria is certainly not represented in Paris, should say:—

(1) That Bulgaria must know the result of the Balkan Conference in Paris, because the Balkan question is purely a Bulgarian one; and

(2) That Serbia entered into the war in order to dominate Bulgarian territory and to seize Austrian countries! (*Narodni Pravá*, July 19, 1917).

In conclusion, how does Bulgaria regard the idea of her detachment from the Central Powers, as formulated by some English writers?

To take the most important and striking example, let us consider what the Bulgarian paper *Mir*, of July 4, has to say in reply to Mr. Noel Buxton's article in the *Nineteenth Century*, entitled "A New Departure in Balkan Diplomacy." The *Mir* emphasizes one point, namely, that Bulgaria does not admit the accusation that she has been guilty of any treason towards the Entente (consequently she should be regarded as an enemy pure and simple), and all Mr. Buxton's arguments are answered thus: "Against these accusations some brave foreigners, mostly Englishmen, have taken up our defence. It is our duty to collect all these impartial acknowledgments, because one day they will be very useful to us."

This is clear. As long as Germany is a great military Power, Bulgaria wishes to be allied with her politically and economically, and to be associated with her *Kultur*. If the tide of fortune changed she would turn to "brave foreigners" because "their defence may be useful" to her. Therefore, to offer to Bulgaria a policy of detachment as long as Germany is a military power, is to offer her nineteen shillings to the pound.

G. Djuritch.

* Reference is made to this article in Notes of the Week.

DEPORTED SERBIANS.

A *communiqué* issued by the Serbian Press Bureau says:—The *Journal de Genève* publishes a telegram from Vienna, dated August 19, contradicting a communication from the Serbian Premier with reference to the deportation *en masse* of Serbian women and children. According to this telegram, the only women and children deported have been a very small number who voluntarily consented to accompany the heads of their families. The real state of affairs is that Serbian women and children are interned in the prison camps of Aschas, Braunau, Neszider, Nagymegyer, Heinrichsgrdünn, and Szegled, and number in some cases hundreds. According to a document of the Austrian Red Cross, dated October 28 last, nearly a thousand Serbian children were interned at Braunau in Austria. The Austrians have constantly refused to furnish exact lists of interned women and children. That is the best proof that the number is greater than the Austrians dare to admit to the civilised world.

MAILS LOST AT SEA.

The Secretary to the Post Office states that parcels for the Egyptian Expeditionary Force posted in this country, which reached the Army Parcel Office between 6 p.m. on July 24 and 6 p.m. on July 31, have been lost through enemy action.

NEAR EAST BOOKSHELF.

GALLIPOLI AGAIN.*

Amid the flood of literature which the astonishing national adventure of Gallipoli has called forth, "The Immortal Gamble"—its very name is an inspiration—and "The Pals at Suvla Bay" are books which each have a lasting value of their own. "The Immortal Gamble" describes the part played in it by H.M.S. Cornwallis, which, after many providential escapes, was finally torpedoed January 9, 1917, after it left these fated shores. The ship was in the neighbourhood of the Dardanelles ten months from the first tragic purely naval attack till after the evacuation of Suvla Bay: "On forty days the enemy had fired at her, and she herself had fired five hundred 12-in. shells and six thousand 6-in. shells." The outlook is naval, and what the authors have to say is a real contribution to history. Its style is so racy that even those familiar with the bare facts will find their interest sustained throughout, and no boy can find a work of imaginary naval adventure to compare with this. It is right that the naval share in the great landing—"in all the history of our Empire there has been no feat as April 25, 1915, witnessed"—should be given in detail, and the chapter on that and the "Sidelights" giving the reports of individual midshipmen and engineers makes one realize, as the writers remark, "those compensations which, hidden though they may be in a welter of blood and tears, are never absent." "The beauty of the courage displayed shines too steadily throughout for any blows of fortune to repel us." "The Gallipoli campaign left the wisest speechless," yet no Englishman can read such a record without pride and thankfulness for such a fresh exhibition of those qualities which have made England great. Whoever failed, it was not the rank and file or the junior officers. The writers consider that the moral effects, which were used as an argument against our withdrawal—and what a miracle that was this book shows—were very much over-estimated. "Rubbish!" they write. "The Turks knew—none so well—we were the better men, and that it was merely a question of effort renewed again and again to carry the job."

"The Pals of Suvla Bay" is a book primarily for a special circle. Its preparation has been a labour of love; the publishers have given their services gratuitously, as have the contributors, and the entire proceeds of its sale will be handed over to the "Royal Dublin Fusiliers Prisoners of War Fund." The book is a record of D Company of the 7th Royal Dublin Fusiliers, and narrates how this famous "football" company, "composed almost entirely of Dublin gentlemen," was raised; how it was trained in Ireland and at Basingstoke, and how magnificently it acquitted itself at Suvla Bay. "In my opinion," writes Lieut.-General Sir B. T. Mahon in the "Foreword," "D Company was unexcelled in the British Army for bravery, dash, discipline, and sense of duty." After Suvla, what with war losses and the transference of most of its remaining members into other battalions with commissioned rank, the original company ceased to exist. Written as it is from the military and the land aspect, this book is a complement to the naval "Immortal Gamble." It contains a detailed and graphic description of certain military operations around Suvla Bay, less well known to the general reader than the earlier operations at Hellas. There are extracts from the letters of men in the trenches which will appeal on account of their vivid realism and literary power.

Both books are profusely illustrated with reproductions from original photographs and excellent sketch maps. "The Pals," besides an almost complete series of portraits of members of the company, has eight beautiful coloured pictures of the scenery around Suvla Bay, by Lieutenant Drummond Fish, the well-known artist, himself a member of the company. He writes thus of the scenery:—"The colours were the most wonderful thing about Gallipoli. There were mornings when the hills were as rosy as peaches—times when the sea looked like the tail of some gigantic peacock and the sands looked like great carpets of glittering cloth of gold—the place was an inspiration in itself, and if beauty could have stopped a war, that scenery would have done it." It is a new aspect of this land of tragedy.

We cannot but quote the weighty and reasonable words which conclude the narrative of "The Immortal Gamble":

"Reasons how and why we failed stand outside the scope of our account. We can only say, as is known to all the world, that the enterprise was undertaken without due regard to the difficulties in the way, that the warnings of neutrals were ignored and the known defensive fighting powers of the Turks minimized. The expedition was a gamble, a gamble undertaken with insufficient forces—and when such forces did arrive they were always just too late. Just as every defeat is a victory, so every failure is a step to success, and the Saga of the Straits will be sung by our people long years after all who gave it orchestration are dead and turned to dust. It will be chanted in notes of triumph; the master-spirit of heroism displayed will uplift it above all thought of disappointment. No greater feat of arms has been writ in our history; no more wonderful story of indomitable courage—

"More active-valiant, or more valiant young,
More daring, or more bold, is now alive,
To grace this latter age with noble deeds."

* "The Immortal Gamble." By A. T. Stewart and C. J. Peskall. (London: A. and C. Black, Ltd. 6s. net). "The Pals at Suvla Bay." By Henry Hanna, K.C. (Dublin: E. Ponsonby, Ltd.).

IN GREEK SEAS.*

The author of these sixteen poems anticipates and disarms criticism by explaining that "things of the spirit cannot be stifled even by war." The fact that these poems are remote from the tragedy of the times will doubtless be a commendation to many. The more ambitious pieces are those entitled "In Greek Seas" and the "Tomb of Columbus," each of which is illustrated by a beautiful photograph. A chord of melancholy sentiment runs through all the poems, which will doubtless appeal to the "few chance readers" to whom they are submitted. The lines addressed to a child—Helen—appeal most to us.

ROUMANIAN SONGS AND BALLADS.†

This little volume, dedicated to "The Genius of the Brave Roumanian Race," contains a series of translations in verse made by the Rev. R. Stewart Patterson, late Chaplain to H.B.M. Legation at Bucharest, with a preface of commendation by Mme. Take Jonescu. To those who love folk-lore this collection of some of the characteristic tales of a land peculiarly rich in this direction will be a delight. We are introduced to the brave Boyard, to the Shepherd and his sheep, to the gipsy Zurai and his tragedy, and to the three brigand chiefs, Groza, Folga, and Kara-'Katutch, all characteristic types of the land. The "Cuckoo and the Dove," the "Brother of the Lord," and the incomplete and ancient song, "Miorita," all, too, have a special charm and interest. It is a collection well worth publishing, and should be widely read.

BOOK NOTES.

Messrs. George Allen and Unwin have just published a volume entitled "After-War Problems," by the late Earl of Cromer, Viscount Haldane, and others, priced at 7s. 6d. net.

"The Rise of Nationality in the Balkans," by Dr. R. W. Seton-Walton, will shortly be published by Messrs. Constable. The work will be largely in the nature of an historical guide to affairs in the Near East.

Mr. Donald A. Mackenzie is the author of a book dealing with "Myths of Crete and Pre-Hellenic Europe," issued by the Gresham Publishing Company at the price of 10s. net. The work contains an account of the Cretan civilization as revealed by recent discoveries at Knossos and elsewhere.

The publishers of the *Malta Chronicle* at Valetta have just issued in book form a series of sonnets, mainly reprinted from that newspaper, entitled "Memories of Malta," and priced at 1s.

Mr. John Murray has just published "Six Years of Politics—1910-1916," by Mr. D. M. Mason, containing speeches on finance, foreign affairs, and home rule. Among the subjects dealt with are "The Massacre in the Oasis of Tripoli," and "The Integrity of Persia." The price of the book is 3s. 6d. net.

The Cambridge University Press have just published a handbook providing a comprehensive view of the great religions of the world. The volume, entitled "The Religions of the World," by Mr. George A. Barton, includes a description of the main religious elements in Egypt and Babylon and India, and chapters are also devoted to the religions of Greece and Rome.

Messrs. Hodder and Stoughton will shortly publish "The Great Crime and Its Moral," by Mr. J. S. Wilmore. The book constitutes the essential links in the chain of evidence regarding the origin of the war.

Messrs. Hutchinson have nearly ready an anonymous account of the Mesopotamian campaign, entitled "On the Road to Kut."

Messrs. Allen and Unwin will be publishing shortly a volume of Serbian national ballads and folk-songs entitled "Serbian Songs and Poems: Chords of a Yugo-Slav Harp,"

* "In Greek Seas and other Poems of Travel." By Oswald H. Hardy. (London: John Lane. 3s. 6d. net.)

by Mr. J. W. Wiles. The author was English Lecturer in the University of Belgrade, and gathered the material for the volume while working for the Serbian Relief Fund.

Among Messrs. Macmillan and Co.'s latest books is included "Main Currents of European History, 1815-1915," by Dr. Hearnshaw, Professor of History in King's College, University of London.

"The Land of Two Rivers," by Edwyn Bevan, will be published in the autumn by Mr. Arnold. The author traces the history of Mesopotamia from its earliest days till it fell under the rule of the Ottoman Turk.

Mr. Heinemann is shortly issuing a historical romance of the East by Mrs. Flora A. Steel, entitled "Mistress of Men." a tale of the seventeenth century.

The Anglo-Hellenic League has published in pamphlet form the report of the annual general meeting held on July 5, including the addresses delivered by the Hon. W. Pember Reeves, Mr. Ronald McNeill, M.P., Mr. Hugh Law, M.P., and Dr. R. M. Burrows. Under the title "The Abdication of King Constantine" another pamphlet contains five articles written by Dr. R. M. Burrows.

BOOKS RECEIVED.

THE PRESS ON THE NEAR EAST

Morocco Under the French.

Economic conditions in Morocco are summarised by Mr. Ralph Richardson in the *Scottish Geographical Magazine* in the course of a review of a new French work, "Le Maroc," by Victor Piquet (Librairie Armand Colin, Paris, 1917; 6 frs.). He writes:—

"While wheat is an important cereal in Morocco, barley is the one most developed at present. Maize demands abundant irrigation, but on the moist Atlantic coast it can be cultivated without it. Maize and sorghum seem capable of great development. Oats were formerly unknown to the natives of North Africa, but have been introduced successfully during the French Protectorate. Kitchen gardens are also much neglected by the natives, who have prejudices against eating vegetables, some declaring that potatoes give them the itch. They confine themselves to growing plants to make dried vegetables, and the chick, or dwarf pea, is one of the most remunerative of these plants. The vine would do well, but is not developed, as the Mohammedan law interdicts wine. Henna is one of the important resources of Morocco. Cotton was once largely grown, and its cultivation, as well as that of the sugar-cane, might be resuscitated. . . .

Turning next to the *industrial possibilities* of Morocco, we find that each of its towns has acquired a great reputation in certain specialities. Thus, at Fez are manufactured the most beautiful stuffs, embroidery, the finest goldsmith's work, and pottery. Marakesh and Tetuan are the great markets for leather and arms. At Rabat and Safi carpets, coarse stuffs, and coverings are woven. At the present day there are silk and cotton manufactories at Fez, besides pottery of a very particular kind, generally coloured blue. Although Fez is not the chief market for leather in Morocco, it has not less than three thousand tanners. Several local industries, especially weaving, will disappear in competition with European importations. For a long time past, cotton goods imported from England have competed with those manufactured in Morocco. Local metallurgical industries will likewise suffer, but leather manufactures will continue to prosper, as well as those of rugs and carpets. Embroidery and pottery will also hold their own. While the fisheries of Morocco will develop as its ports are improved, very little yet is known of the mineral wealth of the country. . . .

"The *Commerce* of Morocco was in full force, and showed magnificent progress when the European war began. It is satisfactory to add that, after a short crisis, the economic activity revived, and that 1915 was almost a normal year. The imports of Morocco in 1915 amounted in value to 143,751,000 francs, and the exports to 48,680.000 francs. The total was 192 million francs, against 126 millions in 1914 and 180 millions in 1913.

Championing Essad Pasha.

In the August issue of the *Contemporary Review* "O. de L." couches a lance for Essad Pasha. After reviewing the course of events in connection with Albania since the outbreak of the war, he inquires how it came about that the Serbian Army ever came out of the Albanian fastnesses alive. For centuries the two races, he points out, have robbed and butchered one another wherever they have been in contact; three years before, in the Balkan War, Serbian troops had marched cross Albania, burning and slaying; and now the wheel had gone full turn. The Serbians in their headlong flight were at the mercy of the Albanians.

By what miracle, then, were the hands of the highlander held in those days of November, 1915? There were doubtless more restraining forces than one. In the north, for instance, the Archbishop of Scutari, one of the most far-seeing politicians in the Balkans, held back the Catholic tribes of his diocese: and the Abbott of the Mirdites contained Mirdita. But neither prelate could influence the Moslems. There was one man alone whose hand could reach, and whose name could awe, the fierce tribes of Central Albania. That was the chieftain of Tirana, whose palace is at Durazzo, Essad Toptan Pasha, and everyone waited breathlessly to see what he would do.

It is true that the Italians were at this time in force at Durazzo, and could at any time have seized Essad and held him on board an Italian warship, or shipped him across the Adriatic. But this would not have held the tribesmen's hands. It is true also that Essad had the best of reasons for not falling into the Austrian's hand. But there are no offences which Austria will not forgive, at a price, and Essad's friendship was worth buying. He might have continued to protest friendship for the Allies, and at the same time secretly have made his peace with the General of the advancing Austrian army. He might have issued stringent orders to his gendarmes to protect and assist the retreating Serbians, and at the same time have caused to be whispered a word in the bazaars at Elbassan and Berat, which would not have allowed a man of them to escape alive. For either policy he could have found precedents in his own past career, and it was certainly not love of Serbians which was likely to deter him. But he did neither of these things. Except in the South, where his writ does not run, the Serbians passed the mountains unmolested. And in the hour of our discomfiture, when Serb and Italian, French and English, were all preparing for the retreat from Durazzo, the Pasha continued to support the Alliance, and left the town with us when we left.

"O. de L.'s" conclusion is as follows:—

"Apart from all considerations of gratitude or loyalty to a faithful and unfortunate ally, a fundamental political blunder will be made by the Western Powers if the claims of Essad are left out of account. Rich or poor, in power or in exile, so long as the Toptani chieftain lives he is bound to be a factor of the first importance in the politics of his native land."

The River of Gaza.

A correspondent of the *Manchester Dispatch* with the Egyptian Expeditionary Force gives an interesting account of the Wadi Guzzeh. He says, *inter alia*:—

The river of Gaza runs in curious and devious windings from its source above the Byzantine ruins of Khalassa to the sea, and all the way it is full of history. It has been at all periods the defensive line between Syria and Egypt, along which the armies of the Pharaohs faced the hordes of the Hittites, Assyrians met Egyptians, Selucid conquerors countered the Ptolemies, and Crusaders fought with Saracens, and now for nearly six months Britons and Turks have fought each other here. The relics of war are imprinted on its banks Tracing its career backwards, at its mouth we find large deep caves now inhabited by owls, but once the "dug-outs" of warriors. Then passing Om Djerrar, the Gerar of the Bible, where Abraham and Isaac dwelt, we come to the fastness of Tel-el-Djemmi. It is a towering earthwork where man's hand has improved on nature. Our amateur antiquaries declare it to be a Crusader's bastion, because the skeleton of a man was found there with crossed knees. At Shellal, a few miles beyond, our amateur archæologists—to wit, a squadron of Anzac cavalry—lighted on a splendid mosaic pavement, with a design and an inscription which proclaimed it Byzantine of the early centuries of the Christian era. The pavement was lying half exposed in one of the Turkish prepared positions, and is to find its way to one of the museums of the Dominions. Beyond Shellal, again, rises another of those dominating mounds, Tel-el-Fara, which is likewise ascribed to the Crusaders, and provides a providential place for an observation post. Thence the Wadi runs eastwards, almost at right angles to its original

course, and is known now as the Wadi Shanag, and later as the Wadi Khalasra after the ancient stronghold at the meeting of its sources.

A Palestine Discovery.

A very interesting article, by Mr. W. T. Massey in the *Daily Telegraph*, describes the discovery by the Australian troops in Southern Palestine of the remains of an ancient Christian Church. This is, as it happens, the third memorial of the ancient Greek Christianity which has been brought to light on the army's journey from the Suez Canal to Palestine. The honour of the discovery belongs to Captain Jordan, who saw the edge of a mosaic floor on a high mound at Shellal. The story of the removal of the mosaic is given by Mr. Massey, as told to him by the Rev. Maitland Woods:—

"A number of engineers, under Major C. E. Wilson, R.E., assisted me in the removal," the chaplain said. "First, a trench was dug all round the floor, so that we could work only stooping as low as our knees. Then, after carefully cleaning the portion to be first removed, hot glue was poured over it, and linen canvas spread over the glue. When the glue was cold a razor blade was inserted between the mosaic along a line previously agreed upon, the blade was worked gently to and fro until a very small chisel could be inserted. This slow and laborious method was persevered in until the portion was isolated, and then three layers of (a) rubble, (b) grey cement, and (c) white thin plaster, immediately under the mosaic stones were all carefully withdrawn from the part to be removed, which then was like a drum head. As the substrata were taken away boards were placed underneath the mosaic, and were built up with flat stones, these 'piers' taking the weight and preventing fractures. The inscription was the most ambitious removal so far as size was concerned. We worked from six a.m. till two p.m. on a floor of earth burning with intense heat from the sun without a single stop. But the result was worthy of the effort, as, although the inscription contains 8,000 small pieces of mosaic, we did not lose one stone. The box in which it was to be placed had been specially made by the engineers. In it was mixed a bath, two inches deep, of plaster of Paris, and when this was at the setting point the fragile mosaic was freed from the ground, was slowly pushed into the sticky substance, and coaxed down absolutely level. In two hours' time the canvas and glue were washed off, and the mosaic padded with tibbin (the finely-cut straw used for camel feed) was sealed in its case. This process was carried out with each separate piece. The work took fourteen days, and when we were half through I was told I could have no more plaster of Paris, as there was no more available. This was a terrible blow to me, but young Coveney, an engineer officer, said he knew where there was an excellent pocket of clay a mile down the wadi, and Egyptian labourers were set to tread it and mix it with tibbin, and the rest of the mosaic was slid into boxes filled with a 'float' of this mixture, which has now set admirably."

KING FERDINAND OF ROUMANIA.

Telegram to King George.

The following telegram has been received by the King from the King of Roumania:—

"Your Majesty's message has reached me at a moment when the Russo-Roumanian front has been withstanding the enemy's savage attacks for two weeks of uninterrupted fighting. Coming at a moment of such grave trial for me and for my country it has touched me deeply, for in such a time as this there is nothing more comforting than to feel the solidarity which knits all the Allies so closely together. In its struggles by the side of its Russian brothers-in-arms, my army, reformed in spite of all the adversities which surround it, has shown itself worthy of all the hopes founded on its patriotism and valour by its victorious resistance to the enemy's violent and reiterated onslaughts, and in its struggle it has displayed all its force, sustained by the unbreakable faith that is in us all, that by its courage it will contribute to the final victory in which Roumania has the right to expect the re-establishment of all her rights and compensation for all her losses; she is certain she will find in the bonds of solidarity that unite us the sure guarantee for the realisation of her claims. It is with a feeling of profound admiration, accompanied with our best wishes, that the Russo-Roumanian Army and I are following the magnificent efforts of the brave British Army which, co-operating with the valiant French troops, is covering itself with glory for the good of the common cause.—FERDINAND."

CONDITIONS IN SERBIA.

A member of the Szegedin Chamber of Commerce, in the Magyar paper *Szegedi Naplo* of August 2, gives the following description of conditions in Serbia:—

"I have traversed Serbia, which the Allies have in 1915 divided into two parts, assigning the Western to Austria-Hungary and the Eastern and Southern to the Bulgars. The Germans, who bore the greatest share in the conquest of Serbia, take no part in the administration; they hold the line from Belgrade to Gevgeli because the greater part of the army on the Salonika front is German. Traces of the war are everywhere in evidence. Several towns, and especially Belgrade, have suffered heavily. The industrial quarter of Belgrade has been almost entirely demolished by bombardment during the siege of Belgrade, and in some parts of the town traces of the fighting are still visible. Few civilians are to be seen at the stations, practically only soldiers of the various allied nationalities: Austro-Hungarians, Germans, Bulgars, and Turks. This year's harvest, it is added, promises excellently. The plum crop is exceedingly good.

The Serbian Press Bureau in London draws attention to the deplorable condition of the people in Serbia, who have been deprived by the enemy of the whole of this year's harvest. Most families have only one loaf of bread per week, and meat, lard, butter, and milk are practically unobtainable. Children are dying by thousands. Twenty-five thousand Serbian families have appealed to the Serbian Red Cross Society in Geneva for help. The interned Serbians, as well as prsoners of war in Austria-Hungary and Bulgaria are dying from hunger and disease. Private information states that 80,000 of them have died in Austria-Hungary alone.

The death has occurred at Bridgwater of Colour-Sergeant Robert Cross, aged eighty-five, who held the Crimean, Turkish, long service, good conduct, and meritorious service medals.

EDUCATIONAL.

UNIVERSITY OF LONDON.

KING'S COLLEGE and KING'S COLLEGE for WOMEN.

COMPLETE COURSES of STUDY are arranged for DEGREES in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH and BACTERIOLOGY, ENGINEERING.

Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.

Facilities for research. Arrangements made for attending special or isolated courses.

EVENING CLASSES as well as Day in most faculties.

STUDENTS' HOSTELS. The Platanes, Denmark Hill, and Vincent Square, Westminster.

KING'S COLLEGE for Women now transferred to Strand, with full privileges.

Apply to Secretary, King's College, Strand.

UNIVERSITY OF LONDON, KING'S COLLEGE.

CLASSES are held in

SLAVONIC LANGUAGES AND LITERATURE,

RUSSIAN, POLISH, SERBIAN, also in MODERN GREEK.

For Leaflet and List of Public Lectures, apply to the Secretary.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

ROYAL SCHOOL

FOR

Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

An interesting situation has arisen with regard to the Greek currant crop. Great Britain is the principal purchaser of this crop, without which there would, under present circumstances be a serious shortage of this commodity. Unfortunately war conditions have conduced to the raising of prices to an absurd level, with the result that a ton of currants now costs more than three times what it did before the war. The question is fully discussed in an article in this issue, in which it is pointed out that the time has come for the Government to pay attention to the problem, and that the most likely way of keeping down prices would be for the Government to treat currants as it has treated sugar. The one certain thing is that the Government is alone able to deal with the situation, for two of the main factors in the rise in prices are the increased freightage and insurance. Both these causes are well within the powers of the Government to remedy.

***

If there is one question that is of absorbing interest to the business world in general at the present time it is the probable state of things that will obtain with regard to trade after the war. Ever since 1914 the subject has been discussed in the Press with a greater or lesser degree of knowledge, and a variety of opinions have been set forward, ranging from the optimism which expects a period of unexampled prosperity to the pessimism which fears that it will be impossible to make up the lost ground. One of the latest, and in my view the most logical, of these expositions appears in the current issue of the *Round Table*, a quarterly review whose articles on economic subjects are obtaining for it a constantly enlarged audience in business circles. It is the writer's opinion that the conditions which he expects to obtain after the war—such as high prices, an abundance of currency, an extraordinary demand for commodities, and an increased labour force—point to a period of unusual industrial and commercial activity. But this is not unqualified, for the writer instances three contingencies—one certain and two merely possible—which may have a retarding effect.

***

Shortage of transport is naturally the certain factor in the writer's calculation, and the other contingencies, with which I do not propose to deal at the moment, are the question of credit and the labour situation. There is no escaping the question of transport, which must inevitably react unfavourably on any trade revival for some time after the war. In the first place peace will almost certainly find the shipping resources of the world seriously impaired, and the shortage then existing will not be made good in a day. Meanwhile severe demands will still be made on the available shipping for the processes connected with demobilisation. On the other hand the end of the struggle will mean increased facilities for the construction of new shipping, so that the shortage ought to be made good fairly quickly. The transport difficulty, however, is not only one of shipping, for, as the writer of the article very aptly points out, "the railroads of the world will certainly be in bad condition, with their roadbed and equipment deteriorated and their rolling stock worn out and short in quantity." Here, too, reconstruction will have to play its part before there can be a return to the normal state of things.

***

An interesting sidelight on the vital importance of the transport question is given by Mr. G. H. Selous, the Acting British Vice-Consul at Larache, in a report which will be found elsewhere in this issue. What he has to say is also, incidentally, a most crushing condemnation of the lackadaisical methods of British traders before the war. Germany, as my readers know, managed to establish herself very securely in the Morocco market, very largely owing to the fact that British traders were handicapped by the lack of adequate shipping facilities. The fact that British steamship companies lacked enterprise to establish a satisfactory service between the United Kingdom and Morocco was taken full advantage of by the Germans. The Oldenburg line arranged a frequent service of steamships, and this and their remarkable commercial intelligence system gave them the desired increase of trade. Here, if anywhere, was a case where Germany's methods might have been followed with advantage.

***

As to the future of the trade of the United Kingdom with Morocco, Mr. Selous lays stress on the fact that it will be dependent on the transport question, which means, of course, that it will be difficult, if not impossible, to make up the leeway until some time after the war. It is the more regrettable since Morocco presents one of the most promising markets for British goods, and under auspicious circumstances it would probably not be a very difficult matter almost wholly to replace enemy trade there. It is a most hopeful sign that the principal British articles in that market fully hold their own, though here, as in India, and indeed in every country that has been the scene of German competition, the need is for goods of a cheaper quality.

***

The announcement that the Egyptian Government has decided to restrict the acreage under cotton in the coming season was not unexpected. It had, indeed, been foreseen for some time that the economic circumstances of the country brought about by the war would necessitate this step, and only last week some such action was foreshadowed by our Cairo Correspondent. The crux of the position is, of course, Egypt's food supply. This question was discussed fully by our Cairo Correspondent in a recent letter, in which he pointed out that Egypt has always been self-supporting in all cereals except wheat, which she has annually imported in the form of flour to the extent of 160,000 tons. Naturally the war has exercised a constantly increasing effect on this import of flour, and at the present time, owing principally to scarcity of freights, importation is at a standstill. At the same time, the presence of troops in the country means that a larger population has to be considered. The Egyptian Government has, therefore, been faced with a problem to which, failing the provision of increased tonnage, there could be only one solution.

***

Hardly a week passes without some fresh and even more curious instance of Germany's trade methods coming to light. The latest is furnished by the British Empire Producers' Organisation, which publishes in its monthly *Empire Trade Notes* a pretty example of the way in which the Germans contrived to act as middlemen between two parts of the British Empire. There is an immense demand in India for glass bangles, specially for those of blue glass, the colouring of which is obtained from cobalt, and the cobalt for this purpose comes from Canada. But instead of this commodity being shipped direct or through Great Britain, it was actually purchased by Germany, and re-exported to India. So that Germany was able to derive a profit from introducing the producer in Canada to the consumer in India. When war broke out the Indian bangle manufacturer was in ignorance that the cobalt was mined outside Germany, and was in doubt as to his supplies, and it is only comparatively recently that he has understood that Canada is the source of his supplies!

***

During the past few months much has been heard of profiteering, and there has been a good deal said of the petty transactions of small tradesmen, as well as of the larger deals of the wholesalers and retailers. But beyond that, presumably on the principle "the higher you go the fewer," there has been little or no criticism, though some assert that the Government itself is a great offender as far as profiteering is concerned. In the leather trade, for instance, there is a great shortage of light leather for civilian use. The Government is represented as meeting this by selling the lighter part of the hides used for the manufacture of army boots at prices which are abnormally high owing to the fact that imports and the sale of imported stocks in the country are vetoed.

Commercial Intelligence.

The New Scheme for the Promotion of British Trade.

Before the war came to invest with new interest many questions hitherto regarded with apathy, or, at best, merely from an academic standpoint, criticism of our Consular Service and of our system of commercial intelligence in general, whether emanating from within or without the service, failed to carry sufficient force to win conviction and consequent reform. Commissions were appointed, held their meetings, and passed away, leaving things much as they were. The last of these, set up as lately as 1912 as a result of renewed evidence of discontent within the service, made various recommendations which had not been carried into effect at the time when the Central Powers united to disturb the harmony of Europe. Whether anything would have been done but for the war is a delicate point and one which, happily, need not concern us. No one, however, looking back on the deplorable history of the service can very well be in doubt as to what would have happened. Fortunately, the evidence brought to light by the war of the amazing thoroughness of Germany's trade methods, which placed her at an immense advantage with regard to her competitors, made it quite clear that if we were to hold our own in the struggle for commercial supremacy in the future very drastic reforms would be required. In this connection it is worth recalling the evidence given in these columns of the extraordinary activities of a German Consul in Morocco, whose office files were to all intents and purposes a complete index of trade information in his district. Obviously, a British commercial traveller, lacking anything like the inside knowledge that his German rivals would have free access to in this instance, would be at a hopeless disadvantage. And this illuminating example is merely typical of the state of things that obtained before the war.

The Present System.

To do the Government justice it must be admitted that it was readily recognized that this kind of thing could not be allowed to continue, and that changes must be introduced which would make it possible for British commerce to compete with its rivals on equal terms after the war. But owing to the complex nature of our system of commercial intelligence any steps that might be taken to reorganize it were of necessity bound to be slow, for the system as it stands at present concerns not one but two departments. Commercial Attachés and Consuls are under the control and administration of the Foreign Office, but the commercial intelligence they provide is dealt with by the Department of Commercial Intelligence of the Board of Trade, which also receives the reports of the Trade Commissioners and Trade Correspondents within the Empire. This duality of control has been the inevitable cause of much inconvenience, and, unfortunately, it is impossible to remove it altogether, even by the creation of a separate department, for the Foreign Office in the nature of things must be concerned with the Commercial Attachés and with the Consular Service in anything that raises a question of international relations. The problem before the authorities, then, has been, in short, to formulate a scheme of reform, which, while leaving to the Foreign Office its necessary authority, would be most efficacious as regards the procuring of commercial intelligence.

The New Department.

The Government's solution of the problem, announced in a memorandum issued last week in the form of a White Paper (some extracts from which are given on page 379) takes the form of the creation of a new department represented in Parliament by an Under-Secretary, jointly responsible to the Foreign Office and the Board of Trade. The scheme is indirectly the outcome of the work of the Committee appointed last January to deal with the question. This Committee, while agreeing that the Foreign Office should continue to control the Commercial Attachés, and that this and the Consular Services should be enlarged and improved (towards which end we are glad to note that substantial progress has been made), altogether failed to attain agreement on the other main issue as to whether the work of collating and distributing commercial intelligence should be dealt with by a special department to be created at the Foreign Office or as now by the Department of Commercial Intelligence of the Board of Trade. The two Departments concerned gave the matter further consideration in the light of the Committee's reports, and as a result we have the present scheme, which is in its essence a compromise between the school of thought that would have handed over the whole question to the Foreign Office and the school that would have left it to the Board of Trade.

Relations with other Departments.

The most important and at the same time the most controversial question with regard to the new department will be its relations with the Foreign Office and the Board of Trade. While the Department will have its own official head appointed by these Departments it will be linked to each of them by the Parliamentary Under-Secretary, who "will be responsible to the President of the Board of Trade for all matters within the competence of that Department, and responsible to the Secretary of State for Foreign Affairs for all matters concerning the Foreign Office." This in itself, it is to be feared, perpetuates the old difficulty of the overlapping of functions, and this fear is not dispelled by the definition of the concerns of each Department "By matters concerning the Foreign Office," we are told, "is meant all questions concerning the direction and organisation of the Commercial Attaché and Consular Services, and the commercial work of officers of these Services, and of the Diplomatic Service, so far as these matters are not dealt with by the Consular or other Departments of the Foreign Office, and also matters concerning the *personnel* of the Foreign Office and of the above Services who may be temporarily attached to the Department, and any matters arising out of the work of the Department involving questions of foreign policy. All instructions issued to Commercial Attaché or other Diplomatic or Consular officers will be issued in the name of the Secretary of State for Foreign Affairs. On all other matters the responsibility will lie with the Board of Trade." In the past there has unquestionably been a certain amount of friction between the two Departments owing to a divergence of views as to their respective functions, and it is this which conduced to the growth of the Foreign Trade Department of the Foreign Office and the Commercial Intelligence Department of the Board of Trade. These two sub-Departments, it may be added, were largely concerned with the same questions, a significant comment on our pre-war trade organisation. By combining the functions of these sub-Departments it may be hoped that much of the friction which has occurred will henceforth be obviated, but this will largely depend on the spirit which inspires the new department, and in particular on the view taken of their respective functions by the officials of the Board of Trade and the Foreign Office.

A Promising Departure.

While a mere definite cleavage with the old traditions would in our view have been preferable in some respects to the new arrangement, the main point is that the Government's decision marks a decisive break with the old *laissez faire* policy. Recognition is at last given to the fact that it is as much the business of the Government to concern itself with measures for promoting foreign trade as it is its duty to prevent the outbreak of sickness at home, for instance. Once admit the principle and the rest will follow in due course. It is important to note that the present change involves no more drastic measures than are entailed in the alteration of an organisation, and it would be unwise, therefore, to indulge in any premature hopes because the Government is merging two sub-Departments into one, for that is really what it amounts to. And in this connection the fact must not be overlooked that the chief criticism of our commercial intelligence system has been that it has failed to give British representatives abroad assistance on a par with that obtainable from the consular services of other countries. Organisation at home is, however, the obvious prelude to reform abroad. The establishment of the Department of Commercial Intelligence is, therefore, a step in the right direction, and we welcome the Government's decision as a sign of its intention to do everything in its power to promote the future of British trade.

The Consular Service.

With the all-important question of the reform of the Consular Service we need not concern ourselves at present. There will be time enough for that when we know the nature of the measures which are now under consideration in this connection. In the meantime it must suffice to say that we hope reform, when it comes, will be Wentworthian in character. Anything short of the most thorough reorganisation will fail in its object, for it is not as if there were shortcomings in one direction only. The whole fabric of the service needs strengthening, if not actually rebuilding. Recruitment must be placed on a sounder basis, a career in the service must be made more attractive, there must be fewer of those sudden changes by which a consul is transferred from a sphere where his knowledge is of use to one in which all he knows is of little value, and there must be an end of the strange divisions in the service which make it impossible, for instance, to transfer a consul from Sofia to Bucharest. There are other points that require attention; these must, however, suffice to show the needs of the service. We have expressed the hope that the reform will be thorough. We add the wish that it may be also speedy.

OPENINGS FOR BRITISH TRADE.

Since the outbreak of the war, says the *Board of Trade Journal*, applications have been received at the Department of Commercial Intelligence from a large number of firms in all parts of the United Kingdom and abroad, who wish to get into communication with British manufacturers or producers of various classes of goods which have previously been obtained from Germany and Austria-Hungary. Applications have been recorded (adds the "Journal") for the names of manufacturers or producers of the following (amongst other) articles; British manufacturers or producers of these articles now in a position to supply are invited to make application for the names of the inquirers:—Advertising novelties; combs, amber, for export; cryolite; eucalyptus, red gum; heavy steel spoons, electro-tanned; machinery, etc.—machine for making firelighters, machinery for making textile name tabs, machines for waterproofing paper by coating with pitch and canvas; needles, suitable for the Moroccan market; olive oil foots (30 tons); red sulphide of arsenic; synthetic essential oil of mustard; thimbles, nickel, for Italy.

Reuter's Amsterdam correspondent telegraphs that according to the *Frankfurter Zeitung* the German military authorities have seized the entire Roumanian vintage for army purposes. The paper is delighted, and says that by this measure a great proportion of the German vintage is secured for the civilian population at home.

GREEK CURRANTS.

The Greek currant has been harvested. For some weeks dark patches of currants drying on the ground will have been a common sight all along the shores of the Gulf of Corinth; but it is with the subsequent history of this fruit that the British public is mainly interested. Of the annual export of Greek currants to the amount of about 125,000 tons Great Britain normally takes 65,000 tons, America being Greece's second best customer with a modest 25,000 tons. The currants, collected from the individual growers, are packed and consigned to Greek merchants in England, and from them find their way through brokers to the retail trade. Wholesale prices before the war ranged between £25 and £40 a ton at this end, and the consumer was content so long as the retail price was somewhere between 4d. and 6d. a pound. The war has, of course, changed all that. At every stage of the currant's existence, prenatal included, prices have advanced. The grower pays more for his fertilisers, and must get more for his produce; each intermediary has to incur a larger outlay and expects a bigger return upon it. Freights have soared from 15s. or £1 5s. a ton to £17. In the end, helped by the shortage of supplies reaching this country, the market price in England reached £140 per ton. At this stage, not unnaturally, the currant problem calls for Government attention. Apart from the price, there is the difficulty experienced by importers in securing tonnage for their consignments, and unless the Government intervenes there is a strong probability of a currant famine in Great Britain. Usually the first shipments arrive towards the middle of September.

Several courses are open to the Government. It may stand aside and benevolently place the necessary tonnage (if it is to be found) at the disposal of the importers. In this case, provided enemy submarines are looking the other way, a supply of currants will duly reach the country and prices will remain where they are at present. Another course would be to treat currants as sugar has been treated. The Government would enter the market as purchasers and distribute the stocks secured to the retailers. Some intermediary would be necessary, but it would be possible to eliminate at least one middleman and the consumer would benefit accordingly. Again, the Government undertake to find the tonnage and leave the existing machinery to function as before, but exercise a more rigorous control over the profits of all concerned.

The whole question is of particular interest both to the people of the country as a whole, to whom currants are, if not actually an essential, at least an important food stuff, and to the merchants who are concerned in a trade the annual value of which may be reckoned at present prices at anything between £3,000,000 and £5,000,000. With a view to keeping down prices it might be thought that the second course mentioned above would commend itself to the Government. It is the one, however, which would cause considerable consternation to the "Trade." Unless gross profiteering in the past can be proved, the Government will hardly be anxious to penalise those who have played a recognised and legitimate part in the supply of foodstuffs to the nation. Moreover the currants have to be obtained in Greece, and the services of someone with knowledge of the trade will have to be secured for that purpose. It is urged, probably not without reason, that if the Government buyers are outside the trade, they will not prove as efficient as those who have devoted their whole lives to the enterprise; whereas, if they are taken from the trade by private arrangement then one or more firms stand to be benefited at the expense of others. In these circumstances the plan which seems to have secured the approval of the London Dried Fruit Importers or the Currant Importers Association is that either a committee of recognised merchants should act for the whole trade in such a way that profits should be divided, or that one or more of their number should be appointed as the Food Controller's Buyers and should call for offers on the f.o.b. basis through the usual channels hitherto employed and under the usual trade conditions. In the latter case, it is held, merchants deprived of any outlet in this country other than through Government channels will compete for orders and will quote prices as low as the markets abroad will allow.

For the sake of the consumer it is to be hoped that a satisfactory settlement will shortly be reached. If the plan that commends itself to the merchants were adopted, the Government would have to safeguard itself against rings, and would still be expected to help in the matter of tonnage.. Its powers should be adequate to keep a check on profits and to ensure that a supply of currants will be available at a reasonable price. There can be no question that Government intervention is necessary, for without it the trade may be unable to import any supplies at all. In these circumstances there seems no reason why a reasonable spirit should not prevail all round, and that every intermediary should not make up his mind that profits will have to be cut to a narrow margin compared with those of more halcyon days.

PROSPECTS OF TUNISIAN OLIVE CROP.

No official estimate of the Tunisian olive crop for the 1917-18 season, says the United States Consul at Tunis (Mr. Edwin C. Kemp), in a report dated July 3, has yet been issued, but the following notice is translated from the *Dépêche Sfaxienne*, published at Sfax, the centre of the Tunisian olive district:—"Opinions are not in accord upon this subject, which is natural, as conditions vary with localities. Some orchards are suffering from dropping fruits, and others, better situated, promise a fine crop. Regarding the crop *en bloc*, however, it is quite certain that the result will be much inferior to the preceding crop. One can, nevertheless, and for the present at least, count on a production of more than a third of that of last year."

The crop of 1916-17 was an exceptionally good one. Official figures showing the amount have not yet been published. Exportation has been prohibited to countries other than France, and to France only in specified quantities, with stocks equal to a quarter of the amount exported held at the disposition of the Tunisian Government.

In view of the scarcity of flour on the Russian South-Western front it is reported that the corn in the provinces adjoining the South-Western and Rumanian fronts is to be requisitioned.

LANCASHIRE COTTON.

The Egyptian Restriction.

(From Our Own Correspondent.)

Manchester, Wednesday.

The conditions prevailing in the market during the past week have not been favourable to a large turnover. When prices fall in the raw material there is always nervousness on the part of buyers of yarn and cloth in placing orders. Bearish sentiment has again been prominent. At the beginning of next week the curtailment of production scheme of the Control Board will be put into operation, and while some saving of supplies in raw cotton may be anticipated, there seems to be no fear on the part of buyers of any shortage of yarn and cloth. There has been considerable discussion with regard to the report that it is the intention of the Egyptian Government to restrict the area under cotton next season by one-third. Although at a time like the moment foodstuffs must be given first place, such action is being strongly criticised in Lancashire. The report appears to have very little effect upon prices, and the market, especially in Alexandria, has been very unsettled. Users of Egyptian yarns have again purchased from hand to mouth, the bulk of the demand having run on the finer numbers and specialities. Piece goods are wanted in Egypt, but there is much uncertainty as to the future, and it is useless to place orders with manufacturers here if goods cannot be shipped. Not much has been done in sized materials, but steady buying continues to take place in fancies. Rather more testing of prices has been reported in cloth for India, but definite offers from abroad remain very poor. Some special transactions have been put through for China in a well-known make of shirtings. An encouraging business continues to be put through for Java and Singapore. Makers of heavy goods remain busy on Government contracts. American yarns have been easier and very irregular in quotation. A little more business has been done in twists, but medium wefts remain in plentiful supply. Comparatively few of the offers put forward in shipping counts have been at all practicable.

ENGINEERING NOTES.

Austrian Firms Amalgamating.

According to reports from France, a movement is afoot in Vienna for an amalgamation of the whole of the motor-manufacturing concerns of Austria, in order to prepare the industry in that country for the fight with foreign competition. Steps have already been taken in this direction, notably the effort—almost accomplished—to amalgamate the Austrian Daimler Co. and the Austrian Fiat Co. It is definitely asserted that after the conclusion of hostilities the Austrian Daimler Co. will confine its energies to the construction in large quantities of commercial motors.

Trade after the War.

In view of the apparent disinclination of British engineers and manufacturers to prepare themselves in a practical way for the forthcoming trade-war, or at least to follow the example of their Continental and American competitors by keeping in touch, during the war, with their clients and foreign markets generally, one is inclined to draw the conclusion that opinions, such as those recently expressed by Sir Joseph Compton-Rickett, M.P., have, sometimes, a misleading influence. Sir Joseph said that "after the war we are in for plenty of trade, high prices, and good wages"; and he added that if this were not so, or something like it, he would be willing to forfeit his reputation as a trade authority. He went on to state that British engineering firms were the first engineers in the world, the cheapest producers of certain specific descriptions of engineer-work entailing a constant and enormous yearly outlay in orders, and that he saw no limits to the expansion of some new branches of engineering in the near future. Engineers were very much interested in this view, and it is not improbable that the allusion to the "good old times," and the ultra-optimistic attitude towards the near future has induced many of them to be content with the expectation of "plenty of trade" coming with little or no effort on their part.

Mr. Lloyd George's View.

Whilst Sir J. Compton-Rickett's opinion may be taken as encouraging a *laissez faire* attitude, Mr. Lloyd George's opinion is different, and his advice very clear and convincing. In addressing a deputation of the Labour Party, it will be remembered that he said: "The country will be prepared for bigger things immediately after the war than it will be when it begins to resume the normal clash of selfish interests. Therefore, you are doing well in giving your time and thought to considering, and considering deeply, and considering on a bold scale, on a daring scale, what you are going to do after the war. I believe the settlement after the war will succeed in proportion to its audacity. The readier we are to cut away from the past the better are we likely to succeed." This is the advice of a practical, clear-sighted man, which should be taken not only by engineers but the leaders of every branch of British industry. The belief in Germany of an approaching cessation of hostilities last year resulted in the launching by an engineering firm, as by countless other firms in Germany, of a great advertisement campaign. The effect of all this publicity and the continued manufacture of goods for export, which in some cases has been going on in Germany at an increasing rate ever since the war began, will be that engineering—an industry in which Germany has made considerable progress and profit—will be specially open to attack. British firms must, therefore, take adequate steps well in advance of the coming peace. The idea of faint-hearted manufacturers that the present is not the time for spending money in advertising their goods is a suicidal policy.

Agricultural Motors in Morocco.

It is evident that in spite of the existing difficulties through the war, Morocco is anxious to develop her agricultural resources. The Automobile Club of Morocco has decided to hold in the latter part of this month agricultural motor trials, which will be open to all manufacturers of the Allied countries. Particulars can be obtained from the Ministry of the Board of Agriculture in London. In view of the new market thus opened, the trials will be followed with great interest.

Heavy British Ploughs.

We had often occasion in previous notes to allude to the mistake of sending to the Near East ploughs whose weight makes them unsuitable for work with the available horses or oxen. This drawback, coupled with the disinclination of the makers to design a lighter pattern, helped the Austro-Hungarian and German firms to supplant the British in the supply of agricultural implements by introducing light and suitable ploughs.

It is said that there is a great similarity between the soil and farming methods of New Zealand and those of the Near East, and it is evident that the same reason that affected the sale of the British plough in the markets of the latter is responsible for similar results in New Zealand. Mr. R. W. Dalton, H.M. Trade Commissioner in New Zealand, says that a farmer once told him that "he had an English plough which had not been used for twenty-five years. When he asked him what was the matter with it, he replied that there was nothing the matter with the plough; in fact, it was probably the finest plough that had ever been produced, but no four horses in the Dominion could pull it." And Mr. Dalton, in his report, observes that, generally speaking, British machinery was too heavy for New Zealand farming. The same thing we have often said in these columns with regard to the Near East, and we may mention here that whenever a description of a new light machine or plough appeared in these columns, readers from various parts in the Near East wrote to us asking where it could be obtained.

GOVERNMENT AND TRADE.

The New Scheme.

The War Cabinet has sanctioned a new scheme for the supervision of commercial intelligence, and a memorandum describing the plan was issued last week. The scheme, which provides, *inter alia*, for the creation of an enlarged commercial intelligence department, is the subject of an article on page 376. Below are given some extracts from the memorandum :—

An enlarged Commercial Intelligence Department will be created on a scale adequate to meet the reasonable requirements of British trade after the war. Parliamentary control over the Department will be exercised through a new Parliamentary Secretary, who will occupy the position both of Additional Parliamentary Secretary at the Board of Trade, and also additional Parliamentary Under-Secretary for Foreign Affairs. This Parliamentary Secretary will be responsible to the President of the Board of Trade for all matters within the competence of that Department, and responsible to the Secretary of State for Foreign Affairs for all matters concerning the Foreign Office. By matters concerning the Foreign Office is meant all questions concerning the direction and organisation of the Commercial Attaché and Consular Services and the commercial work of officers of these services, and of the Diplomatic Service, so far as these matters are not dealt with by the Consular or other departments of the Foreign Office, and also matters concerning the *personnel* of the Foreign Office and of the above services who may be temporarily attached to the Department, and any matters arising out of the work of the department involving questions of foreign policy. All instructions issued to Commercial Attachés or other Diplomatic or Consular Officers will be issued in the name of the Secretary of State for Foreign Affairs. On all other matters the responsibility will lie with the Board of Trade.

The Commercial Intelligence Department will eventually comprise the existing Department of Commercial Intelligence of the Board of Trade and the Foreign Trade Department of the Foreign Office; and will take over such of the staff and records of the War Trade Intelligence and Statistical Departments as may be available and required.

The official head of the department will be an officer appointed jointly by the President of the Board of Trade and the Secretary of State for Foreign Affairs, working under the new Parliamentary Secretary. The appointment and control of the Trade Commissioners within the Empire will, as at present, rest with the Board of Trade, and the appointment and control of the Commercial Attachés and Consular Service with the Foreign Office, but the work of the new department will comprise all matters dealing with commercial intelligence, and, so far as is necessary for that purpose, it will give directions to the oversea services and make the necessary arrangements for keeping them in close touch with the commercial classes in this country.

There will be a constant interchange of staff between the department and both the Foreign Office and the Board of Trade, so that members of those departments may be thoroughly acquainted with the work. Opportunity will be given to diplomats and consuls in training to serve for a period in the department. It will also draw *personnel* from the Commercial Attaché and Consular Services, and from men of outside business experience. In the same way officers of the Trade Commissioner Service will be trained in the department and will be attached to it from time to time.

The Department will be assisted by an Advisory Committee of business men, and it is hoped that it will be possible to arrange for a sub-committee of this committee to meet at frequent intervals in order to advise the department on its current work.

It is believed that these proposals afford a satisfactory solution of a problem which for some years past has been urged on the attention of H.M. Government by the commercial and industrial community. Their criticisms have been especially directed against the duality of the existing systems under which, while the direction of the Commercial Attaché and Consular Services rests with the Foreign Office, the utilisation of the fruits of their commercial work lies with the Board of Trade. Under the new scheme the direction of the commercial work of the foreign services and the distribution of the intelligence collected by them will be dealt with by a single department, and as the same department will also direct the Trade Commissioner Service within the Empire, uniformity of policy will be secured in respect of overseas trade as a whole.

The Bank, through its Branches and Correspondents in Morocco, is fully equipped for all kinds of Banking business with that country and business between Morocco and Egypt is facilitated through its Correspondents in Egypt.

MOROCCO TRADE.

Need for Adequate Shipping Facilities after the War.

The Acting British Vice-Consul at Larache (Mr. G. H. Selous), writing under date July 16, remarks that prior to the war British trade with Morocco was seriously hampered by the inadequate shipping facilities between the United Kingdom and Morocco. This handicap was taken full advantage of by Germany, the increase of whose trade with Morocco in recent years was in great part due to the very frequent, punctual, and regular steamship service between the ports of Hamburg, Rotterdam, and Antwerp, and Morocco, which was instituted by the Oldenburg Portugiesische Dampfschiff Gesellschaft of Hamburg. If the United Kingdom is to maintain and increase its trade with Morocco, a frequent and efficient steamer service between the two countries must be established by a company which will make a point of studying and, if possible, satisfying suggestions and requests put forward by the merchants of various Moroccan ports. The methods of the Oldenburg Line might well be studied, imitated, and, if and when necessary, improved upon.

Enemy Trade to be Captured.

The staple British articles for the Moroccan market, such as candles, tea, common soap, woollen cloth, cotton goods, brass candlesticks, kettles, samovars, and teapots, electro-plated goods, galvanised iron buckets and kettles, etc., have always held their own, but attention should be given to the production of a cheaper and inferior quality woollen cloth to compete with the cheap article introduced in recent years from Austria and Germany. Foreign competition in candles must also be kept in view. The trade in lines more particularly Austrian and German, such as glassware, china and earthenware, beads, locks, bolts, padlocks, pocket knives, etc., should be carefully studied on the spot.

RAPID SHIPBUILDING.

Two supplements have been published by Lloyd's Register of Shipping showing the number of new vessels inserted in the Register from June 8 to July 17. From this it appears that over 100 new steamers were added to the Register, of which sixty-three are British. Most of the vessels were of large tonnage, and the rate of building is understood to be rapidly increasing.

CHEESE PRODUCTION IN EASTERN GREECE.

An Unfavourable Outlook.

For the following particulars we are indebted to a report submitted by the United States Consul-General at Athens (Mr. Alexander W. Weddell):—

Estimates for the cheese output of 1916-17 are not favourable so far as the Athens consular district is concerned. It is feared in some circles that the production will not exceed half of that of the preceding year. This 50 per cent. loss is attributed to the scarcity of salt (essential to the production of Greek "Feta" cheese in brine), and to the fact that, owing to the blockade and the scarcity of meat throughout this district, shepherds disposed of their flocks for slaughtering instead of retaining them and making cheese during the lambing season. The growing popularity and rise in price of giaourt or yiarouti (goats' or sheep's milk coagulated by a process almost identical with that employed in making the better known "Lait Caillé") has also diverted a large quantity of raw milk that would otherwise have been consumed in the production of cheese.

Estimates, in pounds, for last year's cheese output in the various centres of production are:—Epirus, macaroni and sliced cheese, 1,410,750 lbs. Attica, sliced cheese, 1.692,900 lbs.; macaroni cheese, 496,584 lbs.; Casseri cheese, 423.225 lbs. Tripoli, sliced cheese, 705,375 lbs.; macaroni cheese, 1.241,460 lbs. Eastern Thessaly, sliced cheese, 282,150 lbs.; Casseri cheese, 705,375 lbs. Argolis, macaroni cheese, 310,365 lbs.

NEWS FROM ALL SOURCES.

War profits in Greece are to be subject to a tax of 30 per cent.

The Egyptian Government has granted £10,000 for investigations concerning the oilfields on the Red Sea coast.

The Serbian Press Bureau has issued a statement announcing that the removal of this year's grain harvest and other agricultural products from Serbia has begun, and that considerable consignments have already been sent to Vienna.

The Amsterdam correspondent of the *Morning Post* states that Djavid Bey, Turkish Minister of Finance, arrived in Berlin on August 30 in order to discuss pending matters with German statesmen.

The Russian Minister of Finance has agreed to the establishment of Russo-Armenian banks, founded by a group of Armenian capitalists and another group at Bokhara, including local co-operative associations.

In Egypt since 1913 it is stated that buffaloes have decreased by twenty-four per cent., cows and oxen by twenty-eight per cent., and donkeys by thirty per cent. There has been a corresponding decrease in the number of horses and mules.

According to a Sofia message to the *Vossische Zeitung* a steamship company has been founded under the name of the Bielomorski Lloyd with a capital of £400,000, towards which not only Bulgarian but also German and Austro-Hungarian financiers have contributed.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Avenue,
London, Thursday.

There is very little to report this week, our market has been exceedingly quiet and business has been on a very small scale. The reaction referred to last week has made further slight progress on selling by profit snatchers.

In Government stocks both Egyptian Unifieds at 83⅜ and 3½ per cent. Pref. at 72½ are somewhat lower. In Bank shares Nationals are down a further ⅛ at 16 and Agriculturals are ⅝ lower at 6⅛. Anglo-Egyptians on the other hand are ⅛ up at 13⅛.

In Land shares Aboukirs have dropped 6d. to 19s. 6d., Delta Lands and New Egyptians are each 3d. lower at 13s. 9d., and 13s. 3d. respectively, and Egyptian and Foreign Trusts have reacted 3/32 to 1/32.

Amongst Miscellaneous shares Egyptian Markets are 6d. easier at 27s., and Salts and Sodas are 10½d. down at 1 9/32; Alexandria Waters are, however, exceptionally a firmer spot, being 5/16 higher at 12¾.

In Greek securities, apart from a transaction in Monopoly at 54½, there has been practically nothing doing, but Rentes are rather quieter at 44½.

Oil Shares.

Wednesday's prices show some fluctuations. Anglo-Egyptians (B) closed 2s. up at 21s., while Roumanian Consols showed a trifling decline to 12s. 3d.

Paris Bourse.

Quotations on Wednesday included:—Turkish Unified, 61.15, against 60.80; Credit Foncier Egyptien, 760, unchanged; Suez Canal Shares, 4,600, unchanged.

SILVER IN INDIA.

Reuter's Simla correspondent, in a message dated September 5, says:—The Government has issued an order prohibiting the export of silver coin or bullion out of India. Imports of silver are also prohibited. Up to this point the Government has permitted imports, but has acquired all the silver imported.

ANGLO-EGYPTIAN OILFIELDS.

Anglo-Egyptian Oilfields.—Gemsah production for the week, 749 tons (last week, 22 tons). Hurgada production for the week, 8,137 tons (last week, 2,029 tons).

THE SUBMARINE WAR.

The following is the Admiralty return of arrivals, sailings, losses, and unsuccessful attacks for the week ended September 2:—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

Arrivals	2,384
Sailings	2,432

British merchant vessels sunk by mine or submarine:—

1,600 tons gross or over	*20
Under 1,600 tons gross	†5
British merchant vessels unsuccessfully attacked by submarines	‡9
British fishing vessels sunk	0

* Including two sunk during week ended August 26.

† Including one sunk during week ended August 26.

‡ Including two attacked during week ended August 19 and three during week ended August 26.

The receipts of the Suez Canal for August 30 and 31, and September 1 and 2 were 720,000 francs, against 780,000 francs.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to June 30, 1917 (New Style: January 14 to July 13, 1917):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, June 1917		2,594,547	800,000
Do. do. do. 1916		2,868,243	1,859,000
Estimated Receipts for 6 months (Law of Control)		14,450,000	5,350,000
Actual do. do., 1917		15,002,668	5,752,000
Do. do. do., 1916		17,017,169	13,884,000
Difference between estimated and actual receipts for 6 months	1917	+ 552,668	+ 402,000
	1916	+ 2,567,169	+ 8,534,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average ate.

Messrs. Wm. Duff and Son, Ltd., will shortly be losing the services of their shipping manager, Mr. A. Palmer Surgey, who, after thirty-eight years in their employ, is retiring upon a well-earned pension. Mr. Surgey, who was well known in the Far Eastern, Australian, Indian, and South African trades, will be greatly missed by the various shipowners and shipbrokers with whom he has had such close business relations for so many years past.

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

NOTES OF THE WEEK.

While fighting has continued on the Roumanian front, and the Roumanian Army has maintained its resistance to the Germans, the whole interest of the situation in the Eastern theatre has shifted to the internal conflict which has at length broken out in Russia. For some time past it has been evident that M. Kerensky has not been able to control the situation so completely as was anticipated at one time. He has apparently been afraid of the Soviet, and unable to abolish the pernicious committee system which has helped to ruin the Russian Army. General Korniloff's plain speech at the Moscow Conference has been followed by plainer action; indeed, nothing else was possible to a strong man, since the Soviet would not accept his assurances that Russia was in danger, and even the fall of Riga failed to bring that body to their senses.

The position makes it, of course, impossible to judge events clearly from a distance, since M. Kerensky has seized the cables to isolate General Korniloff from the outer world, and there is evidence of ruthless censoring. But from the scanty evidence that has been allowed to pass, it is clear that there is a certain indecision on the part of M. Kerensky, as though he was not altogether sure of his ground; and it requires no evidence but common sense to be sure that General Korniloff would not have taken his stand unless he were convinced that he had a good chance of success. Since his only hope lies in the support of the army, he has presumably satisfied himself that the army will follow him rather than M. Kerensky or the Socialists; and since General Korniloff, if he gains control, will at once restore discipline and prepare for an offensive, he must be convinced that the army is sound at heart. Evidently he has faith that, if the fatuous council and committee system can be abolished, the Russian Army can be made a fighting weapon once more.

Meantime the Germans, with some sagacity, have not pressed forward, as it obviously suits their book for Russian to fight Russian, while the Teuton hopes to pick up the pieces afterwards. But these events hold the future of Russia as a political country. If civil war broke out and were prolonged, the weakness of the existing Government, or rather Governments, would be even greater than at present, and this would supply an irresistible argument to the Ukraine and Lithuanian separatists. (Undoubtedly Germany is actively intriguing with the Finns for the same purpose, and after the revelations of pro-German activity in Sweden this week, it would not be the least surprising to learn that Germany had offered Sweden the reversion of Finland.) But the destiny of Russia, and consequently of the whole Near East, remains extremely uncertain.

This week, for instance, the report has come that Germany will hand over nine-tenths of Poland to Austria, which will then construct an autonomous Polish State, including Galicia; by this means the Polish deputies would be excluded from the Reichsrath, and the German deputies would obtain the majority. It is a new trialism of the north, as distinguished from the late Archduke's trialism of the Southern Slavs. Superficially it looks a plausible solution, but so does every Polish solution until it is tried, when it has a habit of breaking down utterly. Meanwhile the Poles in Lithuania have put forward a demand for their incorporation with Poland—a demand which is as likely to be heard in Germany as a sneeze in a typhoon.

Germany has again been scattering her peace terms about the world. The *Daily Chronicle* reports from New York that she is willing to give up Serbia and Roumania on condition that Britain buys the German colonies from her; Belgium is to be evacuated, but Alsace-Lorraine is to be independent. This is a more excellent song than the other, but the words do not altogether fit the music. Even if they were genuine, which is by no means certain, there is nothing about compensation to Serbia and Belgium.

It is at least conceivable, however, that they are Austrian rather than German suggestions. They would avoid the break-up of Austria, which is the real fear of Vienna, and apparently of the Vatican, too, which, apart from its desire to resume the temporal power—a hopeless dream—may yet hope to enlarge its spiritual dominions eastwards. They terminate at present in Austria and Poland, but the disaster which has overtaken Slavdom this year may probably react on the Orthodox Church, and Rome may hope to resume her influence over the schismatic East. There have been significant whispers that Rome may yet aspire to add this enormous congregation to her flock. It must be remembered that some of the Southern Slavs are Catholics, that the Uniat Church of the Ruthenians owes allegiance to the Vatican, and that any agitation of the Ukraine question must therefore interest the latter. To a

Digitized by Google

political-minded Cardinal, or to an ambitious Pope, the prize is well worth striving for; while the religious feelings of the Slavs would probably make them more favourable to the doctrine of temporal power than England or France.

There is some evidence to show that the Papal Note, which fell so exceedingly flat in the West, and was not altogether well received in Germany, is still relied on in Austria. Its definiteness as regards Poland, coupled with its indefiniteness concerning the Near East, have both found an echo in Austrian circles. The Catholic movement in favour of peace in Germany is to some extent associated with the position of Austria as the one devoted friend of the Papacy, and the Catholic Press of both countries has been inclined to discuss peace from a somewhat different angle than the purely Prussian writers. A Hungarian Bishop, too, has joined the fray, and while he condemns Stockholm, he has made it clear that he is by no means opposed to a general settlement by the Governments. The German Government, it is understood, intends merely to reply sympathetically in general terms to the Papal Note—it could, of course, hardly do otherwise—but it may be presumed that Austria, in conjunction with the Vatican, will continue to pursue its aims. At no point are the two opposed, and the temporal aims of Vienna can now easily be combined with the spiritual ambitions of Rome in a manner that would have been impossible before the Russian revolution and the general shifting of the position in the Near East. In any event, it is demonstrated that the Vatican must be as opposed to Jugoslav ideals as Austria itself.

For reasons which are elaborated elsewhere, it is to be hoped that there will be a genuine attempt on the part of both Italians and Serbians to make the best of the agreement which is meant to decide the future of Dalmatia. It will be easy enough to stir up bad blood on both sides. The Jugoslavs can lay stress on the intolerable position of their compatriots who are to be excluded from Dalmatia proper and placed under Italian jurisdiction. The Italian extremists can point to the precarious nature of their tenure, unless they are given a "strategic" frontier. But if both parties make up their minds that it is in the interests of each to live amicably side by side, and to promote the closest intercourse between them for their joint economic development, all difficulties will be smoothed over. Italy should desire only to control the ceded coast line; she can have no object in alienating her non-Italian subjects by harsh measures. The Jugoslavs, on the other hand, will always have a congenial place of refuge close at hand, if they should find Italian jurisdiction at any time irksome. The readiness which both sides display in loyally accepting the position will be an earnest of the statesmanship which they may be expected to bring to bear on the problems of the future.

The contemplated visit of M. Venizelos to this country during the autumn will be very heartily welcomed. M. Venizelos is, of course, not a stranger to London, but since his last visit he has become transformed from a mere name to a familiar headline to the man in the street. It may be taken for granted that M. Venizelos will also make a stay in Paris on his way to or from London, and it would perhaps be well, if he were to include Rome on his journey, perfect accord between Italian and Greek aims being yet to seek.

The veil has not been lifted from the military operations in the Near East. From Palestine a two-line communiqué announces that there is nothing to report; a brief message from Salonika tells of an advance by the Allies of some miles, but nothing more. The advance in the latter case is no doubt to assist in relieving the pressure on Roumania, and Italian progress on the Isonzo has likewise assisted to that end by engaging Austrian troops that would otherwise have been employed in the Galician or Roumanian terrain. But the real position continues as obscure as ever. From Mesopotamia also the lack of news is not altogether compensated by the spread of rumours, some of the less incredible of which find their way into print.

The German expansionists are steadily turning their faces from west to east. Even Count Reventlow, the foremost of that school, admits that if part of Russia and most of the Balkans can be secured for German influence the Belgian question is not immediately of primary importance—that little matter and the final downfall of England may be left to the next war, for which Germany will begin to prepare as soon as this is over. While the chief fire-eater speaks in this wise, the milder-mannered journalists and professors who are trying to steer the ship of State in the desired direction are also enlarging at some length on the same subject. The accepted view now appears to be that England shall be let off with a warning not to do it again upon entering into recognisances not to abandon free trade, that France shall be cajoled by the heavy German wooer, and that the *Drang nach Osten* is the pure milk of the Prussian word.

There is no lack of definiteness in the discussions. Starting with the theory that the only way to pay for the cost of the war is to form State monopolies, it is assumed that the whole Ottoman Empire shall in effect become a State monopoly of Germany, the Balkan route being secured, and the Turkish Government's consent having been already obtained through advances to finance the war. It must be noticed that the only real opponents of this view in Germany are those who still cling to a belief in sea-power as the final word in *Machtpolitik*, but that view appears to be continuously less popular outside of Bremen and Hamburg, for the obvious reason that the German fleet has not fulfilled the *rôle* accorded to it by popular expectation three years ago.

Some further particulars have been published of the policy of terrorism pursued by the Austrian and Bulgarian Governments in Serbia. Scores of persons are still put to death without trial, but the latest development of the system is to hold the executions in public, when photographs are taken of the wretched victims, and these are then circulated by the thousand among the Serbs as an indication of their fate if they refuse to take the oath of allegiance to the Austrian Emperor. Several of these photographs have been found on Austrian and German officers who have recently been taken prisoners on the Salonika front, and others are now in possession of the Czechs in Paris. We need not record our conviction that this is precisely the worst way possible for Austria to set about the work of encouraging the Southern Slavs to reconcile themselves to incorporation within the Empire. Whatever hope there might have been—and it was always a frail one—that the Archduke Franz Ferdinand's policy of trialism would reconcile the Southern Slavs to their position as subjects of Vienna has now finally evaporated.

It may be taken, perhaps, that this method has been adopted by the German elements in Austria as a sign of their power to control the young Emperor. He began his reign with the apparent desire, sincere or assumed, to conciliate the non-German elements. As a Parliamentary policy it failed hopelessly; the whole German Press was mobilised to defeat it, and the German Austrians utterly refused to admit it as a conceivable method of statecraft in any shape or form. The Emperor obviously was not strong enough, or too infirm of purpose, to carry out his ideas against this solid block of opinion, backed as it evidently was by the protests of Prussia, which has no belief in the reconciliation of Slavdom; and the Germans thereupon have instituted a reign of terror, in order to make the milder policy impossible for ever.

It is quite conceivable that the Germans themselves will soon institute a similar policy in Poland. After the occupation of that country they assumed the mask of conciliation, and founded the Polish army in order to strengthen their own military resources—the Polish army

Digitized by Google

being, of course, looked upon as a branch of the German Army for the period of the war. In order to give this policy a chance of success, they had to pretend to encourage Polish nationalism, a rather dangerous game to play. The Poles, not being a stupid people, realised that they were being fooled, and the national army has broken down. In these circumstances the Germans will probably proclaim that conciliation has failed, and that the more congenial frightfulness must be resumed.

The suggestion that Bulgaria might be persuaded to conclude a separate peace continues to be hotly contested in many quarters. There can be little doubt that the present régime in Sofia is not likely to allow it to be thought in Germany that such an eventuality is possible. For this reason the marshalling of formidable evidence to prove how hopelessly and whole-heartedly the Bulgaria of the Press and the Radoslavoff Government is committed to the Central Alliance is for the most part beside the mark. In the current issue of the *Fortnightly Review* there is a strong indictment of Bulgaria and all her ways, the truth of which cannot be gainsaid. But towards the end of the article, of which an extract is given on another page, the author, Mr. Crawfurd Price, touches the key of the situation, but has failed to make use of it in what he has previously written. The ideal solution in the Balkans, he states, implies federation; and he adds: "But we shall make no progress towards that goal until Bulgaria has been punished for her misdeeds and so reduced that she will be compelled to jettison the lust after hegemony and seek salvation in friendship with her neighbours."

It is correct to say that military defeat must precede a settlement. That part can be left to the soldiers; politicians and publicists should busy themselves with subsequent solutions of the problem. Federation is not merely the ideal, it is the only practical solution, and should not be lost sight of in any denunciation of Bulgaria's conduct. The Allies' task in the Balkans will only be half done, if they do not pave the way for ultimate federation. It is obvious that, if matters are left to themselves, Bulgaria will remain in Germany's clutches, and there will be deep-seated bitterness in the Balkans. The Allies have to change all that. What is wanted is not insistence upon Bulgaria's villainy—that leaps to the eye. A more valuable contribution to Near Eastern politics would be a practical suggestion as to how Bulgaria can be brought to change her whole outlook on Near Eastern affairs. This work has to be done at one time or another.

The anniversary of Roumania's declaration of war was marked in this country by the formation of the Anglo-Roumanian Society. In our issue of August 31 were set forth the objects of the society and a list of those who had consented to become vice-presidents or to constitute the provisional executive committee. It is now announced that Lord Hugh Cecil will be the first president of the society, and that M. Misu, the Roumanian Minister to the Court of St. James's, has consented to be the honorary president. There is plenty of work ahead of an organisation formed for the purpose of making Roumania better known in this country and in educating the British industrial and commercial world to a fuller understanding of her economic potentialities. Roumania is a great granary and a rich oilfield, but her industries are relatively in their infancy, and she relies largely on imports for many of the everyday necessaries of life. Hitherto the Central Powers have supplied the bulk of these. No doubt they will be ready to continue to do so after the war, but they will find the Roumanians less eager to do business than they were formerly. The latter, however, must have their requirements satisfied from some source, and there must be no hiatus at the end of the war. In no country, unless it be Serbia, will organisation and co-ordination of effort be more required to make good the ravages of war than in Roumania, for the distance from her sources of supplies will make the problem more difficult than in the case of Belgium.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 10.*

The Anniversary of the War.

Special meetings of the British community were held here and in Alexandria on the occasion of the third anniversary of the war. The meeting in Cairo took place at the Anzac Hostel under the presidency of Mr. W. E. Kingsford, chairman of the local committee of the British Chamber of Commerce. Bishop MacInnes, Colonel E. S. Herbert, representing the High Commissioner, and Sir William Willcocks were among those who were seated on the platform. After a stirring letter from Sir Reginald Wingate had been read to the meeting by the President, and received with much applause, the resolution "To continue to a victorious end the struggle in maintenance of those ideals of liberty and justice which are the common and sacred cause of the Allies" was proposed by Bishop MacInnes and seconded by Sir William Willcocks. The singing of the National Anthem brought the proceedings to a close. A similar meeting took place at the Savoy Palace Hotel in Alexandria, under the charmanship of Mr. D. Cameron, British Consul-General, who was supported on the platform by Sir Alexander Baird, Mr. H. Farnall, Judge Cator and Judge Grain, and Messrs. Percy Carver, President of the British Chamber of Commerce, K. P. Birley, Moss, Hopkinson Pasha, and Dr. Granville. Mr. Cameron opened the proceedings with a very eloquent address, and was followed by Mr. Percy Carver, who read a similar letter to that to which reference was made above, from the High Commissioner. Mr. H. Farnall delivered one of his characteristically scholarly speeches, and Sir Alexander Baird made a few witty remarks, after which the meeting passed a resolution in the same terms as that voted in Cairo. In the morning representatives of the French colony paid a graceful tribute to the memory of those of their Allies who had given their lives for the common cause by proceeding to the British Cemetery and laying wreaths on the graves of the British soldiers buried there during the past three years.

The Philippides Case.

Philippides Bey, the head of the Cairo Secret Police, who was recently sentenced to five years' imprisonment for accepting bribes, appealed to the Cassation Court for the quashing of his sentence on the grounds that certain evidence was illegally admitted and that the offences of which he was accused were not offences under the penal code. His appeal was heard last week, and the Cassation Court, under the presidency of Mr. H. W. Halton, rejected it.

The Fuel Question.

As I have already pointed out on previous occasions, the fuel question is threatening to become a very serious one for the country. Egypt produces no coal, grows very few trees and those not for timber, and her oilfields are as yet not sufficiently productive to meet local requirements. Consequently the country has to rely entirely on imports for her industrial, agricultural and household needs in the matter of fuel. Imports have fallen off very considerably—no timber can be obtained from Syria and Asia Minor so long as those regions are in the hands of the enemy; petroleum imports have fallen by over one half, whilst coal barely sufficient for eighteen months' normal requirements has been brought in since the outbreak of war, and there is little prospect of any substantial addition to the present stock being obtainable in the near future. The Government has a good stock of coal, as also has the railway administration. The former brought in its coal to meet the demand which it was thought would be made by cultivators to drive the water lifting pumps, but which owing to the very good flood was not realised. The Government must, however, exercise extreme care in the manner in which it disposes of this stock, for, as mentioned, it cannot expect to obtain further supplies on any adequate scale. The railways, on their side, have had to curtail their services in part with a view to economising the consumption of coal, and further retrenchments will possibly have to be made. The other large consumers in the country are the tramway, electric, light and gas companies, which are faced with a very serious prospect if they continue their services on the present scale. Indeed, economy of the strictest nature must be the order of the day, and the Government, fully alive to the danger which lurks ahead, has appointed a special committee to study the matter and report on the steps that should be taken to reduce consumption and on the substitutes that it might be possible to employ. As regards reduction of consumption, it has been decided to forbid the use of all luminous trade signs, to close all shops at 7 p.m., all restaurants at 10 p.m., and all places of amusement at 11 p.m., and to reduce street lighting by one quarter. This

* Delayed in transmission.

Digitized by Google

should certainly bring about a marked reduction in consumption, and should enable the country to tide over the coming winter, but in the meantime some substitute must be found for the fuel which is required by the people either in their own houses or in connection with the cultivation of their land. It was understood that Mr. J. F. Wells, the well-known engineer, was carrying out experiments with cotton sticks, with a view to producing some combustible that would take the place of coal, and that he had obtained very satisfactory results. If those results are really practicable from a commercial point of view they should prove invaluable to Egypt, but, of course, the great obstacle to the carrying out of the process on any scale calculated to afford relief in the matter of fuel requirements will be the impossibility of getting the necessary machinery. At any rate, the special committee studying this very important question has a very hard task before it, and its recommendations will be awaited with great interest.

The Red Cross.

It was recently announced that Lieut.-Colonel L. L. P. Phillips, Commandant of the Red Cross Hospital, had been appointed to act as Commissioner in Cairo during the absence on leave of Sir John Rogers. The appointment gave rise to a certain amount of comment, coming as it did immediately after the recent libel action, in the course of which the Commissioner and the Commandant of the Red Cross Hospital figured rather prominently. It has now been decided that Mr. H. W. Halton, Vice-President of the Native Court of Appeal, shall officiate for Sir John Rogers, and that Lieut.-Colonel Phillips will remain Commandant of the Red Cross Hospital. This decision has given general satisfaction.

CAIRO, August 17.

Continuing their inspection of the institutions of Alexandria, the High Commissioner and Lady Wingate this past week visited the Cotton Market at Minet el Bassel and the presses of the Société Générale de Pressage et des Dépôts, one of the largest establishments of the kind in this country. Their Excellencies were conducted over the pressing factory by Mr. Percy Carver, chairman of the company, and over the Cotton Market by Mr. C. Choremi, president of the Alexandria General Produce Association. They spent a very interesting morning and expressed themselves as greatly pleased with all they had seen.

A Successful Charity Kermesse.

A most successful Kermesse was held on Friday last at the Jardin Rosette, Alexandria, in aid of the United Services Welfare Fund. There were side shows of every description, including merry-go-rounds, roulette tables, an auction, a shooting gallery, and a concert given by the Lena Ashwell Y.M.C.A. Concert Party. The Jardin was crowded from the time the doors opened until late into the evening, and everyone seemed to be thoroughly enjoying him or her self. The committee responsible for the organisation are heartily to be congratulated on the excellent manner in which everything was arranged, and also on the financial success which their efforts met with. It is understood that the net results of the Kermesse will run into four figures, which will be a very welcome addition to the resources of the United Services Welfare Fund, which has done, and is still doing, so much good work amongst the troops out here.

The Financial Adviser.

It is understood that the Hon. Ronald Lindsay, who has been acting as Financial Adviser since Lord Edward Cecil went home last spring and obtained a post on the War Office staff, has resigned in order to return to the Foreign Office, from which he was seconded five years ago, when he was appointed Under-Secretary of State for Finance. It is not known who will succeed to the Financial Advisership if Lord Edward does not return, but there is every reason to believe that Mr. E. M. Dowson, who has been acting Under-Secretary, will be confirmed in the post in due course. Mr. Lindsay's departure from Egypt, which will take place early in the new year, will cause much regret, for he has made many friends in this country and has displayed marked ability in the execution of the varied duties which have fallen to him during his service with the Egyptian Government.

The Red Cross Libel Action.

It is officially announced that the costs and damages in the Yeates-Rogers libel action will not be defrayed out of British Red Cross funds. This matter was referred to in recent correspondence from here, in which it was pointed out that the ambiguous reply made by Sir John Rogers to a question on this point put to him by counsel for Captain Yeates had aroused considerable apprehension that the expenses in question would come out of the Society's funds. The declaration now made by the Commissioner has given great satisfaction, as might well be expected in the circumstances.

[A similar announcement appeared in THE NEAR EAST of last week.]

The Question of Cotton Seed.

Somewhat of a bombshell was sprung on the commercial community on Monday morning by the publication of a proclamation by General Allenby closing the Alexandria Merchandise Bourse for dealings in cotton seed futures for the new crop, ordering existing positions in those futures to be liquidated at the closing prices of the preceding Saturday, and prohibiting purchases of new crop seed, except that contained in unginned cotton, of which it forms a part, without a licence granted by the G.O.C.-in-C., or unless such purchases are made in virtue of such proclamations as may be issued for dealings in sowing seed or for providing for the requirements of local industries.

From the preamble of the proclamation and a notice issued simultaneously it is understood that the British Government intends to purchase all the seed from the new crop available for export. The action taken by General Allenby is to enable this intention to be carried out, and the closing of the future Bourse is a natural consequence of the fixing of the price by the British Government on the basis of £T100 per ardeb. A scheme for the execution of this purchase is being drafted, and, pending its adoption, arrangements have been made with the firm of Carver Brothers and Co., Limited, to receive seed from any holders who may wish to dispose of it immediately on its arrival at Alexandria instead of waiting for the purchase scheme to be put into effect, and the National Bank of Egypt has agreed to make advances without interest to the owners of any seed received by Messrs. Carver.

No reason has been given for this step by the British Government, but there is little doubt that it has been compelled to take this action by the speculation which has been going on of late, and which has forced prices up beyond their proper level. At the same time the purchase in this manner of the entire crop means that the Egyptian cultivator will be assured throughout the season of a steady and reasonable price, instead of being made to suffer the wide fluctuations which the accumulation of stock in Alexandria due to the difficulty in obtaining sufficient shipping for the regular removal of the seed as it arrived from the interior could not fail to produce. It will be interesting to see how the local trade takes the new situation created by this proclamation, but, if it is wise, it will bow to the inevitable, and, indeed, be very thankful that the difficulties which lay before it in regard to the removal of the new crop seed have been settled for it under such favourable terms.

NOTES FROM ROUMANIA.

(FROM A CORRESPONDENT.)

Roumania and the War.

For the first time since the autumn of 1916 the public has been allowed to know certain facts referring to the circumstances in which Roumania joined the war. The revelations were made by M. Ion Gradishteanu, an ex-Minister, who began a remarkable speech delivered before the Senate by declaring that Roumania's participation in the war on the side of the Allies was imperative. But that, if anything, rendered more heavy the guilt of those by whose fault the country had to enter the fray insufficiently prepared and organized. True enough, there had been circumstances over which Roumania had no control, and others which must be imputed to all who have governed Roumania during the last fifty years. But there have been failings, the responsibility of which falls upon those entrusted with the organization of the army. M. Gradishteanu went on to give several instances. When a change of government took place in 1914 the first action of the new Secretary for War was to postpone all contracts which were under consideration. Three batteries of howitzers ordered in France were ready and awaited delivery, which the authorities failed to take in time, with the result that the howitzers remained in France. Opportunities of acquiring a number of heavy guns, as well as 100,000 rifles of the type used in the Roumanian Army, were lost in October, 1914. The suggestion that the heavy guns, immobilized in the various forts should be made available for service in the field could not be carried out on account of the procrastination of the War Office. The question of transport was, of course, a serious difficulty, especially after the Salonika line was cut; but, continued M. Gradishteanu, "had our external policy been less hesitating and more definite, I have no doubt but that we should have been able to secure at least some of the necessary material. But that policy, intended to mislead our enemies, roused doubts in the minds of our friends, and became an obstacle to the satisfaction of our needs." The speaker then condemned in strong words the much too "neutral" attitude which the old Liberal Government maintained towards German propagandist activity in Roumania, during the first

Digitized by Google

two years of war, and its persistent refusal to allow non-Liberals a share in the government of the country.

The Cabinet Crisis.

It was only in December, 1916, after the disaster which befel the Roumanian armies, that four members of the Conservative Party were given a place in the Cabinet. Disposing of a majority both in the Cabinet and in Parliament, the Liberals continued however to assume the sole direction of affairs, and M. Take Jonescu and his followers found themselves co-responsible for a policy, the settlement of which they were in no way able to influence. There was a considerable difference of opinion between the Liberals and the Conservative members of the Government concerning the application of the proposed internal reforms, and agreement was equally absent with regard to foreign policy. The situation came to a head when M. Bratianu induced the Senate to accord him a vote of confidence for his past, present, and future policy; notwithstanding the difficult circumstances in which the country found itself, the Conservative Ministers considered it impossible to continue in office, unless the Cabinet was re-organized in such a way as to give equal share to Liberals and Conservatives, while at the same time admitting the representation of those who stood outside these two main parties. They wanted, in short, a national ministry. After the resignation of the Conservative Ministers the controversy became a public one, through M. Bratianu declaring, in a speech to his supporters that, as many important elements of the Conservative Party no longer belonged to it, that party no longer maintained its original importance. He was referring to those Conservatives who, like MM. Carp and Marghiloman, had remained in occupied territory. M. Jonescu took up the challenge and retorted by pointing out that the gentleman in question had not left, but had been excluded from the Conservative Party, and that the force of an organization depended primarily, not upon the number, but upon the faith and agreement of its members. "The advancement or retrogression of a party," he wrote, "cannot be measured by the number of those who leave it, but by the moral value of those who remain. In excluding those gentlemen—for they did not leave of their own will, but were ejected—the Conservative Party did an act which, far from lowering it, raised it to a level it had never reached before."

It seemed as if all agreement between the two groups was out of the question when the Russian disaster in Galicia occurred, and Liberals and Conservatives hastened to make up their private quarrels in order to ward off with united effort the new dangers threatening the unfortunate country. A sort of compromise was arrived at, which took into consideration certain wishes of the Conservatives. The new office of Vice-President of the Council was created for M. Take Jonescu; two more of his followers, MM. Titulescu and Delavrancea, were admitted in the Cabinet, while the Ministry of War was entrusted to a non-party man, General Jancovescu. The late Secretary of State for War, M. Vintila Bratianu, has been given care of a newly created department—the Ministry of War Material. The following is a complete list of the new Government:—

LIBERALS.

M. ION BRATIANU	President of the Council, and Secretary of State for Foreign Affairs.
M. AL. CONSTANTINESCU...	Interior and Supply.
M. VINTILA BRATIANU.....	War Material.
M. G. MARZESCU	Agriculture.
M. I. DUCA	Education and Public Worship.
M. M. PHEREKYDE.....	Without portfolio.
M. E. COSTINESCU	

CONSERVATIVES.

M. TAKE JONESCU	Vice-President of the Council, without portfolio.
M. U. TITULESCU	Finance.
M. B. DELAVRANCEA	Industry and Commerce.
M. DEM. GRECEANU.....	Public Works.
M. M. CANTACUZINO.....	Justice.

NON-PARTY.

General JANCOVESCU	War.

Only two members of the previous Cabinet have not been included in the new formation—M. Victor Antonescu, Justice, Liberal, and Dr. Istrati, Industry and Commerce, Conservative. This reconstruction of the Government should be regarded only as a temporary solution of the crisis, which any development of importance in either internal or external affairs will render again acute.

Few Words that Tell a Tale.

A brief order of the day of the Russian Command in Moldavia announces that six companies of the —th Regiment of Fusiliers refused to appoint representatives to the Disciplinary Courts and generally disobeyed orders; further, that six companies of the —th Turkestan Regiment refused to build roads.

The Jassy Civil Tribunal publishes in the *Monitorul Oficial* the following announcement:—

"M. C. Talpanescu, lately domiciled in the Roumanian railway carriages in the station of Jassy, and whose present domicile is unknown, is to appear on September 20, 1917, at 11 a.m., before the 2nd Section of this Tribunal, etc."

The same official publication supplies a list of the members of Parliament who have remained in occupied territory:—

MM. V. Antonescu, C. Arion, P. Carp, Gr. Coanda, A. Cristof, A. Cristopol, Em. Culoglu, N. Fleva, T. Frumusanu, C. Garlesteanu, V. Gussi, D. Iarca, P. Ioanitescu, A. Noica, V. Oroveanu, D. Patrascanu, E. Petrescu, I. Procupiu, P. Radulascu, C. Stere, I. Simionescu, G. Stirbey, C. Tiuleanu, C. Iarca, S. Filipescu, G. Popa.

SYRIAN NOTES.

(FROM A CORRESPONDENT.)

CAIRO, August 14.

Appointments.

The following information, apparently culled from certain copies of Syrian papers, of which the perusal is occasionally allowed to the local Press, supplements my last notes on Syria, and constitutes, in certain cases, an amplification of some of the items of news contained therein. Thus Ismail Hakki Bey, whose nomination as Governor of the Lebanon I have already reported, is said to have assumed office in May last. Another interesting appointment is that of Hashem Muhyeddine as Mutessarif of Hauran; his predecessor had been dismissed after the disturbances already reported.

The German Consul at Alexandretta has been appointed Consul-General at Damascus, in succession to the late Consul-General, who died recently.

Cigarettes and Sand Bags.

A committee composed of Moslems, Christians and Druses was lately formed at Damascus with the object of collecting presents of cigarettes from Damascus and sweetmeats from Beyrout for the Ottoman Army at Gaza. Fifty thousand boxes were presented to the men and two thousand boxes to the officers, together with a considerable quantity of sweetmeats for which the Beyrout confectioners are renowned. The latter gift must have been quite a luxury, in view of the enormously high price of sugar. The president of the committee is the only member of his family (the leading Moslem family in Damascus) who has supported the Unionists throughout; it is significant that other members have suffered various penalties, including death or exile, for their staunch Liberal principles. He was presented by Jemal Pasha with a sword, while the other members of the committee received each a military medal.

References have previously been made to the efforts of the Turkish military authorities to procure sandbags. This is the *communiqué* on the subject issued by the High Command of the Ottoman Army in Syria and at the Gaza front:—

"The strong defences of Gaza require a supply of one and a half million bags to be filled with sand, so as to withstand the action of the big guns that the enemy is incessantly using against us. The future of Syria and of the Hejaz (*sic*) depends on the measure of resistance of the Gaza defences. We, therefore, require the different National Defence Committees in Syria to do their utmost to this end; and we urge the Valis and Mutessarifs to manifest such patriotic zeal as will cause the bones of the men of the great French Revolution to shake in their graves. It is the duty of all Ottomans—men, women, old men and children—to hasten in the making of such bags, as they constitute the best present that the children of the fatherland can offer to the army on the Palestine front."

General News.

The Turkish Government at the beginning of May last made another large issue of notes of the following values: 100, 25, 10, and 2 piastres.

Rice is said to have been sown in large quantities last year, and the present crop is reported to be good. It has been decided to increase further the rice acreage in Syria.

Three members—two Christians and one Druse—have been representing the Lebanon in the Ottoman Parliament during its last sessions, and they are said to have returned from the capital at the end of May last. Thus the Young Turks would seem to have realised at last their ambition to have every part of the Empire sharing in the blessings of the Constitution.

Azmy Bey, Vali of Beyrout, has been granted the honorary rank of captain in the Cavalry Corps in recognition of the energy he has displayed in connection with military matters. Enver Pasha visited Beyrout on the 3rd of Ramadan. In spite of the rupture of relations between Turkey and the

Digitized by Google

United States of America, the Syrian Protestant College of Beyrout is still open, and the fact that the total number of students has been maintained up to the average in normal times, viz., about 700 students, reflects great credit on the president. If, as it is hoped, the college continues to afford not only security, but also the sure means of subsistence, it will not be a matter for surprise if the total number of students rises still higher next year.

Vandalism.

The following extract from the diary of an Arab officer in the Turkish Army in Palestine is illustrative of the brutality and contempt with which German officers have been treating the Turks, as well as of the same brutal disregard for artistic and historical remains that characterised their invasion of Belgium and France. In El Arish there is an ancient fortress built in the time of Sultan Selim, which has since withstood the vicissitudes of time and the ravages of successive wars. When the Turkish Army came to El Arish at the beginning of the war a German officer, Laufer Bey by name, was in command of the garrison, and it occurred to him to have this ancient fortress pulled down and to build with its stones a comfortable house for himself and the other Germans who were with him. He accordingly wrote to Jerusalem asking for some men and an officer of the fortification section to be sent to him for the alleged purpose of demolishing the fortress and building with its material new fortifications. When the men had demolished the greater part of the fortress, as well as a neighbouring tomb held in deep veneration by the inhabitants of El Arish, and offered to start building the new fortifications, Laufer Bey told them that these were no longer necessary, and he ordered them to remove the stones to the side of a sandy hill overlooking Wady-el-Arish. There he gathered together a few men, ex-masons, from the camp, and ordered them to build a private house with an oven attached thereto. When the officer in charge of the men sent from Jerusalem with the explosives and implements for demolishing the fortress protested, saying that he had come for the purpose of pulling down the old fortress and building with its material new fortifications, and not of building private houses and ovens, the German officer flew into a rage and heaped insults on the officer who dared use such frank language; he then ordered that he should be imprisoned and sent back by the first opportunity to Jerusalem under escort, to be tried for insubordination. When far more precious monuments, like those of Louvain and Rheims, have been mercilessly mutilated and destroyed, the German soul can hardly be expected to be moved by sentimental and artistic scruples before an old remain such as this in the far confines of the Sinaitic desert.

The diary also records another incident illustrative of the brutality of the Germans in their treatment of sick soldiers, but cases of this sort are of such frequent occurrence that it is not worth while reproducing them in detail.

TANGIER TO TEHERAN.

The kindlier disposition of the average Briton prompts him to avoid the blunt directness of speech which characterizes Teuton diplomacy. Hence, the mild use of a couple of letters such as N.Q. conveys all that seems required in regard to anyone who falls short of a certain social standard. So far as the people in this country have given Sven Hedin a thought during the war, they have probably dismissed him as the N.Q. he is, unless special attention to his lapses has made them go still further and dub him N.E.T.—to indicate that N.Q. is too good for him, as he is "not even that." In any case, they have felt pretty certain that there was only one Sven Hedin in Sweden, and that there was no need to saddle a whole nation with the shortcomings of a particularly aggressive self-advertiser. Now, however, comes this distinct shock to find that Sven Hedin has been a model knight of chivalry compared with the members of the Swedish Government and some of their representatives abroad. At least, he played his game openly. He owed all his achievements and his international reputation to Great Britain; but there was no obligation not to love the Germans more. All that Britons are likely to complain of is, that having received so many favours at our hands, he did not moderate his denunciations in the earlier stages of the war—in his own interests, of course.

***

The action of the Swedish Government in accepting officially the rôle of messenger for Germany occupies a special niche of its own in the history of this war's villainies. One point that cannot be overlooked is the extent of the practice. The British Government found that something of the sort was going on at the beginning of the war; now we learn that the system is still in full vogue in America. Nothing is more calculated to put a permanent extinguisher on Anglo-Swedish relations. Unless the Swedish nation takes prompt steps to remove the stain upon its escutcheon by removing those who were responsible for putting it there. On the other hand, there may be difficulties in bringing home to the Swedes the full enormity of their Government's offence. They happen to be useful to both groups of belligerents, and probably must remain so; but in this instance there is no reason why the episode should not join the by no means small category of matter which will come up for settlement after the war. Sven Hedin ought not to be the only Swede to find himself *ausser Dienst* when Germany makes peace.

***

In an article in the *Windsor Magazine* the story is told of a Serbian soldier in Macedonia coming up to his captain, holding a big Bulgarian by the crook of the elbow. "Both men were grinning. 'This is Stefan,' said the Serbian. 'He captured me in the last war.' Then, Balkan fashion, the Serb and Bulgarian kissed each other on both cheeks and patted each other on the back, and acted as though this reunion was one of the joyful incidents of two particularly sunny lives. The captain gave them bread and cheese. . . . That afternoon they sat on a mud-bank gossiping. When the day's catch of prisoners started down the road that night, the Serbian secured an assignment as guard. The two good enemies marched side by side, chatting like two bearded children."

***

On a par with this is an incident of the Boer war, which, I hope, I have not already mentioned in these pages. A driving column was coming back to the main camp, and the soldiers of the latter had lined up to see it return with its quota of prisoners. As the latter passed, a Tommy rushed forward and shook one of the Boers warmly by the hand, much to the latter's embarrassment. Asked whether he knew the fellow, Tommy replied: "Know him? Of course I do; why the blighter's wearing my trousers." Enquiry elicited the fact that Tommy had recently been taken prisoner, and, as the custom then was, having been stripped of everything he had on except his shirt, was left to find his way back to the nearest camp. But he bore his captor not the least ill-will.

***

A good deal of sympathy will be felt in these days of allotments with the gardener who complained that it was no use killing caterpillars, as forty others turned up to the funeral of each one. I should like to know whether migrations of these pests on a large scale ever take place in this country. I recall one in Greece many years ago. The "army" was between fifty and sixty yards wide and nearly the same in depth. It marched unconcernedly over or through everything. The British School at Athens happened to be on the line of advance, and carried traces of the invasion for months later. The library in particular suffered, as the window was open at the time. Caterpillars covered the walls and the floor; they found their way among the books, in hundreds of cases never to emerge again of their own volition, as the chrysalis stage overtook them at that point. For the rest, like Gammer Gurton's man who had nought, they got up the chimney-top and got down on the other side, advancing steadily in a straight line until fate, in a natural or unnatural form, overtook them. Altogether, it was a squashy, uncanny sight; but not to compare with a swarm of locusts, which in Africa may be hundreds of yards wide and a hundred yards in depth. On the wing they are a veritable cloud; in the hopping stage, if a train should encounter them up the slightest "bank," it is sure to be brought to a standstill.

NEAR EAST BOOKSHELF.

THE FOREIGN LEGION*.

France's world-famous Foreign Legion dates from 1831, when the conquest of Algeria made serious inroads upon her man-power, depleted as it had been by twenty years of incessant warfare. It originated in the theory that most of life's failures arise from unchecked exuberance of nature, which the pruning-knife of discipline may render capable of splendid achievements. The Minister of War announced that he would accept able-bodied natives of every country, except France, as members of a "Foreign Legion," consisting of two regiments and four battalions, with a total strength of 5,000 men. No questions were to be asked regarding a postulant's previous career; the age limit was elastic; and the term of service five years. Adventurous spirits flocked to the recruiting headquarters at Toulon. Their pay and uniform were those of line regiments, a blue cummerbund being their only distinctive mark. The deeds of the Foreign Legion soon proved its founder's consummate knowledge of human nature. It won undying glory in Northern Africa, the Crimea and Mexico. It was the terror of machine-made Teutons during the disastrous war of 1870-1. It afterwards helped France to build up empires in Central Africa and Indo-China, which counter-balanced the loss of territory during her struggle with Prussia. Many German ne'er-do-wells enrolled themselves under its banners; and Bismarck set his reptile Press at work to stem the exodus. When the history of the last fifty years is dispassionately written it will prove that nearly every cause of strained foreign relations and domestic unrest was "Made in Germany." The Legion throve apace, despite slanderous lies spawned by incapacity to understand the psychology of other nations. In 1884 it was reorganised into eight battalions, comprising as many thousand officers and men. In 1914 Germany's brutal aggression gave a mighty stimulus to recruitment; and on August 28 of that terrible year the Foreign Legion, 20,000 strong, paraded on the Esplanade of the Invalides amid frantic cheering from a vast concourse of spectators.

M. Albert Erlande has given us a most vivid account of its exploits during the war now raging. It is evidently autobiographical, although, in order to avoid the perpetual recurrence of the personal pronoun, he has fathered his own experiences on a mythical Briton, yclept Richard Grant. After enlistment at Marseilles, he was despatched to Avignon, where a motley crowd of fellow-recruits were subjected in the gloomy Palace of the Popes to intensive training for the ordeal that awaited them. In spite of the incessant drilling which the process involved, our author acquired a peace of mind unknown in his previous career. The change of mood was thus explained by a non-commissioned officer named "Charles":—

> You're thinking, as a soldier thinks. Now a soldier has definite duties to fulfil; and while performing them his intelligence, however acute it may be, is no longer racked by agonizing uncertainty. He has no longer to decide for himself; he renders implicit obedience to orders in the conviction that he can do no more. The despair and moral cowardice which tortured you as a civilian have given place to a novel sentiment—hatred of the invader. In me it was suddenly awakened when I heard that the Huns had shelled Reims Cathedral. On that evening I heard the soil of France cry aloud!

M. Erlande found himself a private in Company D1 of Battalion D, which included sombre Spaniards; Russians given to sweet, plaintive song; Scandinavians, whose steel-blue eyes seemed still to reflect the stern atmosphere of the North; eager Italians, whose fathers had fought under Garibaldi. It is a fact that fifty-two languages are spoken in the Legion, and that every grade of society is represented, from the aristocracies of birth and wealth down to human derelicts who have plumbed its very depths. One may well ask how so heterogeneous a crew could possibly be welded into a compact and co-ordinated entity. The secret lies in that intangible but all-powerful force known as *esprit de corps*. Recruits heard their commandant and officers constantly referring to the Legion as a thing apart, to the rationale of its severe but fatherly discipline, to its customs, the growth of eighty-five strenuous years. They saw in its distinctive girdle and in its band of trumpets, drums, and fifes concrete evidence that the Legion was a *corps d'élite*, and gave it mystical devotion.

Such apparently trivial details engender *esprit de corps*, which is not founded on a sense of duty, nor yet on fear of punishment, but results from an appeal to the individual's *amour propre*. It is a body of traditions more efficacious than the most inflexible rules, a tacit convention, a moral uniform. It links men so differently constituted as Latins, Scandinavians and Slavs in the ties of brotherhood; and after a month's training it makes efficient soldiers of young fellows who had never handled a rifle.

In these evolutionary processes the personal equation played an overwhelming part, and Battalion D was fortunate in possessing a great soldier as its commandant. Maurice Muller's relentless energy and perfect self-control won every man's respect. Awe-inspiring was the impression he gave, seated on his snow-white Arab charger, and directing the manœuvres of parade. He had every quality fitting him to command so exceptional a corps; he could make Russians, Spaniards, and Italians understand him perfectly. The battalion was his very own. Men styled it "Muller's." All the subordinate officers were worthy to serve under that born leader of men; their corps was a great family, consisting of father, elder brethren and children.

Towards the end of August it received a baptism of fire in Champagne, and endured all the horrors of trench warfare during the winter that followed. But perpetual shelling to which no adequate return could be made, excessive spells of duty, viscous mud and vermin were powerless to subdue the men's cheerful stoicism. The return of spring brought a change of scene. The Legion was transferred to the Aisne, and served as a forlorn hope in that mighty thrust which is known as the Battle of Arras (May 9, 1915). Battalion D penetrated far into the enemy's second line, where it was literally cut to pieces by a converging fire, losing three-fourths of its strength. Colonel Muller and nearly all his officers died like heroes. Although it was reorganised with fresh drafts, it never recovered from the blow.

M. Erlande's fascinating story proves the Foreign Legion to be a powerful influence making for brotherhood and social regeneration. One is inclined to ask whether the idea which underlies it might not be profitably copied in this country.

F. H. S.

* "En Campagne Avec la Légion Etrangere," par Albert Erlande, Paris, Payot et Cie., 1917. 3f. 50.

BOOK NOTES.

"The Devout Russian: A Book of Spiritual Wisdom from the Writings of the Græco-Slavonic Fathers and Modern Russian Authors," by Mrs. Rosa Newmarch, is included among Messrs Herbert Jenkins' forthcoming publications.

Mr. John Lane will shortly publish "At the Serbian Front in Macedonia," by Mr. E. P. Stebbing. The author saw much of the recent fighting, and concludes his narrative with an account of the Allies' operations on the western wing from July to November, 1916.

Mr. Walter A. Hawley has just written an illustrated book of travel and description entitled "Asia Minor," the early publication of which is announced by Mr. John Lane.

"Recollections of a Rebel Reefer," by Colonel J. Morris Morgan, contains the record of an adventurous career, including experiences as a Confederate blockade-runner and as a soldier of fortune in the Khedive's army. This book will be published during the autumn by Messrs. Constable.

The same publishers also announce Sir Edwin Pears's biography of "Abdul Hamid."

Mr. John Murray's list of forthcoming books includes a story of the Egyptian Sudan entitled "Hawk of the Desert," by Miss G. E. Mitton.

BOOKS RECEIVED.

Nelson's History of the War, Vol. XII.: From the Opening of the Roumanian Campaign to the Change of Government in Britain. By John Buchan. (London: T. Nelson and Sons, Limited. 1s. 3d. net.)

British Foreign Policy in Europe to the end of the Nineteenth Century. By H. E. Egerton, M.A. (London: Macmillan and Co., Limited.) 6s. net.

The aim of Zionism is to create for the Jewish people a home in Palestine secured by public law.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. September.	1917. September.		1335. Dulkaada.	5677. Ellul.
14	1	Friday	27	27
15	2	Saturday.....	28	28
16	3	Sunday	29	29
				5678. Tishri.
17	4	Monday	30 Dulheggia.	1
18	5	Tuesday	1	2
19	6	Wednesday	2	3
20	7	Thursda.	3	4

The Earl of Cromer arrived in town on September 16 from Scotland.

The Dean of Rochester has returned to the Deanery after a few weeks' rest.

M. Comsa, a Roumanian delegate of the prisoners of war in Berne, has arrived in London.

His Highness the Sultan of Egypt has given a donation of £1,000 to the Cairo Cathedral Fund.

General Rudeano, the Chief of the Roumanian Military Mission in France, has arrived in London.

Prince Antoine Bibesco, First Secretary to the Roumanian Legation, has left London for the Continent.

Professor Stanvic Stanvicvitch and Professor Lozanitch, of the University of Belgrade, have left London for Paris.

A hostel has been opened in Norwood for twenty-seven Serbian boys, who are being educated at the Strand School.

M. Blondel, formerly French Minister in Bucharest, and Mme. Blondel arrived in London yesterday from Roumania.

Essad Pasha, Commander of the First Turkish Army, is stated by the German Press to have arrived in Berlin with his staff.

M. Victor Antonesco, formerly Roumanian Minister of Justice, and Mme. Antonesco arrived in London on September 11 from Jassy.

Arrangements made by the Banque Franco-Serbe to open a branch in Salonika have had to be suspended in consequence of the fire.

King Nicholas of Montenegro has conferred the Obilitch Medal in gold upon General Pétain for his successes before Verdun.

According to the Athens correspondent of the *Matin*, M. Venizelos will visit Paris and London after the close of the Parliamentary session.

Lady Muriel Paget, says Reuter's Petrograd correspondent, is now convalescent after a slight attack of typhoid fever. Her condition is satisfactory.

The appointment is now gazetted of Earl Granville to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary to the King of the Hellenes.

Pilgrims bearing the Holy Carpet left Cairo for Mecca on September 8. The King of the Heja has guaranteed safe conduct from Jedda to Mecca and back, as he did last year.

M. Pasitch, the Serbian Premier, who has been visiting Rome, has had an interview with Baron Sonnino, and has also been received by Signor Bosselli, the Premier. He has since arrived at Corfu.

Greek recruits of the classes which have been called up presented themselves on September 9. The number of absences was far below the average in peace time, and the recruits displayed great enthusiasm.

M. Demetrius Frangoudis, of l'Union Foncière d'Egypte, who recently arrived in England from Alexandria, has left London *en route* to New York.

A trustworthy correspondent who has recently left Syria confirms the report that the Turks are slowly exterminating the inhabitants by privations or famine. He estimates that practically half the population of the Lebanon has died of starvation. It was quite a common sight, he says, in Beyrout and the surrounding country to see the bodies of poor people who had died of starvation left lying on the ground for days.

Lord Hugh Cecil has accepted the office of President of the Anglo-Roumanian Society, and his Excellency the Roumanian Minister has consented to become the Honorary President.

Mr. Samuel Maurice Johnson, of Broad Oak, Cambridge Park, Twickenham, Middlesex, formerly managing director of the Muir Mills Company, of Cawnpore, who died on July 9, has left property of the value of £26,949.

Captain Frederico Antonio Ferreira de Sinias, Military Attaché to the Portuguese Legation in London, entertained at luncheon, on September 6, Major Arion, Military Attaché to the Roumanian Legation, Captain T. W. Fernandes, and other officers.

The death in action is reported of Second Lieutenant Lord Basil Blackwood, Grenadier Guards, who was reported missing from July 3. Born in 1870, he was the third son of the first Marquess of Dufferin, Governor-General in turn of Canada and India, and Ambassador in Paris.

News has been received through Reuter's agent at Adis Abeba of the death of the ex-Emperor of Abyssinia, Lij Yassu. A fierce battle had taken place near Dessie, and it is believed that the ex-Emperor succumbed to wounds received while escaping, his army having been completely routed.

An Athens telegram states that the forest of Pentelicus has again caught fire. Fanned by a strong wind the fire assumed large proportions, and it is estimated that 8,000 pine trees have been destroyed. Four flocks of sheep are missing, and it is feared there has been some loss of life. The fire appears now to have spent itself.

A marriage has been arranged, and will take place in the autumn at Quetta, between Captain Aubrey Francis Vincent Jarrett, M.C., Royal Artillery, youngest son of Colonel H. S. Jarrett, C.I.E., late Indian Cavalry, of East Grinstead, Sussex, and Dorothea Mary, second daughter of Colonel G. P. Campbell, Royal Engineers.

A marriage has been arranged, and will take place shortly, between the Rev. A. H. Longley, Delta Chaplain, Egypt, son of the Rev. J. Longley, Tydd St. Mary Rectory, Wisbech, and Margaret Lauder Lilian Muirhead, daughter of the late John Muirhead, and niece of Alexander Muirhead, D.Sc., F.R.S., The Lodge, Shortlands, Kent.

It is notified in an Army Order, issued on September 11, that the special outfit allowance of £5 10s. granted to officers proceeding to the Mediterranean (including Egypt, Salonika, Corfu) and North China is suspended in the cases of officers embarking for, or granted commissions while serving at, those stations on and after October 15, 1917.

King Alexander of Greece, in receiving the Grand Parliamentary Committee charged to hand to him the response of the Chamber to the Speech from the Throne, said that the Chamber would find in him not only the faithful guardian of the Constitution and national traditions, but also a sincere collaborator in all decisions tending to the realisation of the national aims.

Information which has reached the Imperial Merchant Service Guild indicates that the Germans are transferring a large number of merchant captains and officers taken captive by U-boats from ordinary internment camps to officers' internment camps. A merchant captain at Salzerbad, Austria, and two others, interned at the Magnesie Camp, Turkey, write to say that all in these camps are well.

The British Farmers' Red Cross Fund announces that its contribution of £10,000 to the British Red Cross Society for the current week is for further hospital work in Mesopotamia. The Farmers' Fund—besides having presented six motor-launches and one steam-tug—is now responsible for the upkeep of about fifty launches at work on the Tigris, and three repair shops and slipways at Basrah, Amarah, and Baghdad.

The needs of the British Red Cross Society are now greater than ever, and to enable the Farmers' Fund to continue its steady flow of contributions to this society, it is necessary that each district shall hold its agricultural jumble sale every six months or so, and in cases where one has not been recently held, it is earnestly hoped that a sale will be arranged for this autumn.

Some ninety Jews from Jerusalem, says the Basle correspondent of the *Jewish Chronicle*, have recently arrived in Switzerland. They left Palestine with the intention of proceeding to America, and have been obliged to stay some days in Berne in order that their passports might be put *en règle*. Their journey from Palestine was a long one. In Berne they were very cordially received by the Jewish community. The travellers are mostly women and children, but there are also among them some old and young men. All are American citizens, and they were neither interned nor expelled by the Turkish authorities. Only the frightful distress in Jerusalem and dread of the coming winter impelled them to leave their beloved homeland. The emigrants state that of the 65,000 Jews formerly resident in Jerusalem only about 24,000 now remain there. They also state that there were no progroms in Palestine and that no inimical acts were directed against the Jews as such.

The Secretary of the War Office makes the following announcement:—

The public are notified that the following are the latest dates on which parcels above the postal limits of weight should be despatched to troops serving abroad (other than in France) in order to secure delivery by Christmas:—India, September 20; Mesopotamia, October 10; South and East Africa, October 25; Salonika, November 1; Egypt, November 1; Malta, November 20; Gibraltar, December 1. Such parcels, which must not be under 11 lb. or over 56 lb. in weight, should be sent to the Military Forwarding Officer, Avonmouth Docks.

The *Giornale d'Italia*, says the Rome correspondent of *The Times*, in a message dated August 29, publishes an interview with the Serbian General Vasitch, who has arrived from Macedonia to present the Gold Medal for Military Valour to the King of Italy on behalf of the Serbian Crown Prince. The General expressed his satisfaction at the cordial relations which existed between the Serbian and Italian troops in Macedonia, and said that Italo-Serbian friendship, strengthened on the battlefield, would after the war facilitate commercial relations between the two nations. The Adriatic only apparently divided Serbia and Italy; their hands would meet across the water.

APPOINTMENTS, PROMOTIONS, ETC.

El Kaimakam D. C. Percy-Smith Bey, D.S.O., has been granted the temporary rank of Miralai.

M. Petros Calogeropoulos, the son of the former President of the Greek Government, has been appointed Persian Consul in Alexandria.

M. Evangelos Hatzioannou, formerly Mayor of Larnaca and Deputy of Cyprus, has been appointed Greek Consul-General at Adis Abeba.

Mr. Monteith Smith, of the Public Security Department, has been appointed Assistant Director-General for that Department in succession to Abdulla Sfer Pasha, recently placed on pension.

OBITUARY.

QUEEN ELEONORE OF BULGARIA.

Queen Eleonore of Bulgaria, whose death is reported to have taken place on September 12, was the elder daughter of Prince Henry IV. of Reuss-Köstritz, and was connected with the Imperial House of Russia. She was born at Trebschen on August 22, 1860, and a part of her early life was spent in Petrograd on visits to her relatives.

She took a keen interest in sanitary science, and while in Russia attended the hospitals, and obtained her certificate as a qualified nurse. In the Russo-Japanese war she went to Manchuria in a hospital train equipped by the Grand Duchess Vladimir. During the campaign she served for a time with a field ambulance.

Princess Eleonore married on February 28, 1908, as his second wife, Prince Ferdinand. Report had it that the Pope had refused his dispefisation for the marriage to take place according to the Roman Catholic rite on the ground that the Prince was excommunicated on account of the schismatical baptism of his son. A dispensation was, however, granted by the Archbishop of Bulgaria, and the marriage was celebrated with the Roman Catholic rite at Coburg, and with the Protestant rite at Osterstein, Gera.

Her career in Bulgaria has been notable for the interest taken by Queen Eleonore in all matters affecting hygiene. She proved a most enthusiastic sanitary reformer, and to her initiative many improvements are to be attributed. Then during the war with Turkey, when the arrangements for the sick and wounded proved at the commencement to be inadequate, the Queen undertook much of the necessary work of organisation, and, besides that, even played her part in the ordinary round of hospital duties. In the subsequent war the menace of famine appeared, and again the Queen showed herself competent to cope with the resultant circumstances. In happier auspices she might have bequeathed a great reputation; as it is, her death will be the source of deep regret throughout Bulgaria, where her qualities were known and appreciated.

The death occurred, on August 30, at Spetisbury, Blandford, Dorset, at the age of eighty-eight years, of Major-General Algernon Brendon, formerly of the Royal Regiment of Artillery. General Brendon, who retired from the service in 1881, saw service in the Crimean war, where he took part in the battles of the Alma and Inkerman, and also the siege of Sevastopol. For his services he received the medal with three clasps, the Turkish medal, and the Order of the Medjidieh (5th Class).

Colonel William Oliver Thompson, D.S.O., whose death has just taken place, retired from the Indian Army in 1905. He served in the Afghan War of 1878-9, for which he received the medal; with the Mahsud Waziri Expedition; the Hazara Expedition, receiving the medal with clasp; the first and second Miranzai Expeditions, for which he was mentioned in despatches; and the Waziristan Expedition, when he again received mention and was awarded the Distinguished Service Order.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

SMITH.—On July 28, in Alexandria, the wife of (Temp.) Lt.-Col. Leonard Kirke Smith, D.S.O., the Royal Scots, attached Egyptian Army, of a son.

DEATHS.

BILLING.—On September 2, at 27, Eversley Road, Bexhill, William Billing, M.A., Indian Education Service (retired), aged sixty-eight.

BLANDY.—On September 2, 1917, at Darjeeling, Helen, the much-loved wife of E. Nicolas Blandy, I.C.S., daughter of W. N. Marshall, of Darjeeling and Calcutta, aged twenty-three.

ROLL OF HONOUR.

ALDERSON.—On September 2, on active service, the result of an accident, Major Bernard H. Alderson, Indian Cavalry, elder son of Mr. and Mrs. C. Alderson, Wellfield House, Barnsley, aged thirty-five.

PEAKE.—Killed in action, on August 27, Brigadier-General Malcolm Peake, C.M.G., beloved husband of Louisa Peake, 33, Wilton Place, S.W.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.

FRIDAY, SEPTEMBER 14, 1917.

THE ADRIATIC TREATY.

A genuine service has been rendered to the Allied cause by the publication in an Italian newspaper of an outline of the treaty signed by the Entente Powers and Italy in April, 1915. The whole of the agreement is not set forth, but it is stated that, in addition to Valona, Italy is to receive Istria and a strip of Dalmatia running from the north of Zara to a point between Träu and Spalato, together with several islands. When it is remembered that the claims which have received most ventilation in the Italian Press bespoke the whole of Dalmatia, and that for two years it has generally been believed in Jugoslav circles that the full extent of these claims had been conceded either actually or in principle to the Italians by the Entente Powers, there would seem to be some ground for hoping that both peoples will accept the compromise with goodwill and set to work to make a complete success of it. Now that so much of the treaty has been divulged, it would be well if the text of the whole document were given officially, in order that both the Italians and the Jugoslavs may know exactly how the matter stands. Much ill-feeling and recrimination would have been avoided if the terms of the treaty had been made public earlier. Even now, unless Signor Bevione's revelations in the *Gazeta del Popolo* have been unduly curtailed in the telegraphic reports, there is room for considerable misunderstanding. Italy's rights to the western half of Istria have never been challenged; but her occupation of the whole of the peninsula, together with Fiume, would be a source of grave misgivings to the Jugoslavs. Again, the "several islands" that are said to have been promised to Italy require to be specified, as it will make a great difference to the reception of the treaty on the other side of the Adriatic whether these are merely the islands lying off the coast between Zara and Träu, or whether they include all or some of the Croatian islands in the Quarnero or of those between Spalato and Ragusa. The visit of the Serbian Prime Minister to Rome indicates, we may hope, that the Italian and Serbian Governments are engaged in filling in the details of the general *modus vivendi* that was agreed upon at the Paris Conference. It would be of excellent augury for the future, now that Serbian and Italian troops are fighting side by side in Macedonia, if at the conclusion of M. Pasitch's visit the terms of the Adriatic Treaty were announced, with an intimation that a complete understanding existed between the Serbian and Italian Governments.

If we may accept Signor Bevione's version of the treaty, it means that Italy is prepared to be content with a narrow strip of the Dalmatian coast, which, with the naval bases of Pola in the north and Valona in the south, will serve to round off her control of the Adriatic. Only an exaggerated attitude of intransigeance will deny the Italian claim to a foothold on the Dalmatian coast. The possession by a foreign Power of the country between Zara and Spalato must always constitute a potential menace to Italy, in so far as it may offer an inducement to a challenge of the latter's predominant position in the Adriatic. In Italian occupation, on the other hand, this strip of territory affords, *per se*, no encouragement to schemes of conquest in the Balkans. Owing to the geographical configuration of the country, the ports of Zara, Sebenico, and Träu are merely stages of a voyage along the coast; they are ports of call rather than outlets for the Balkan *Hinterland*. Dalmatia is no land of promise that the possession of its soil offers a rich economic prize to rival claimants. All that those who occupy the narrow plain between the sea and the Dinaric Alps have to offer in the way of produce the owners of the three ports will be far too anxious to receive to impose tariff restrictions upon their goods. If they should be so ill-advised as to adopt a suicidal policy, Spalato will afford the up-country Slavs all the market they require. In so far as Dalmatia is concerned, the compromise may be said to have been most happily devised. For Italy, naval requirements will be met by the possession of a fortified base at Sebenico, opposite Ancona; and historical association will be satisfied by the recovery of Zara, where the winged lion of St. Mark over one of the gateways keeps alive the Venetian tradition, and of Träu, the most distinctively Italian port on the coast. The Serbians in turn have secured not only political recognition for the new Jugoslav State, but an acknowledgment of its economic importance in Europe. Spalato is the natural terminus of the railway which at one and the same time will link Dalmatia with the rest of Jugoslavia and provide Serbia with her natural outlet on the Adriatic. The greater the part played by the Serbs in the new composite State, the brighter the future of Spalato.

Even if it should be found that Fiume has been promised to the Italians, we believe that the Jugoslavs will learn one day that its loss is less serious than they are now inclined to think. There is much in the contention of Dr. Newbigin in likening those who would make Fiume the outlet of an enlarged Serbia to those who would build a city on a sandbank at the mouth of a torrential stream. "Sooner or later the flood-water would sweep away both city and foundation. It has often been remarked that within the Balkan Peninsula the villages tend to avoid the main routes, the inhabitants having learnt by sad experience that these are the high road of the invader. The small Balkan States would similarly be well advised to keep clear, as far as may be, of the great stream-lines of commerce, and to obtain channels for their own trade more in accordance with its probable dimensions." There can be little doubt that the advice is sound. The new Jugoslav State comes into being late in the day; it must enter upon its career with many handicaps, and cannot hope to tread the paths of prosperity all at once. To hold its own in one of "the great stream-lines of commerce" already established, it might be tempted to rely on preferential treatment, which would create antagonism and prove prejudicial to it in other directions. Faith in its own future will prompt it to be content with hastening slowly, with building up its resources *pari passu* with the political consciousness of the people, and with developing channels of trade in which it will hold unchallenged sway from the outset. Northern Jugoslavia will make use of Fiume and Trieste in whosoever hands they are; but if the new State is to justify the expectations formed of it, and if Serbia is to play the part in the federation that her position bespeaks for her, then the centre of gravity must tend towards the south, and the lower ports of the Adriatic will amply fulfil all her requirements. Even the loss of Fiume would be well compensated by the permanence of good relations with Italy.

MONTENEGRIN HOPES.

Mr. Lloyd George has received the following letter from King Nicholas of Montenegro:—

"I beg your Excellency to receive the assurance of the feelings of lasting gratitude which I send you in my own name and that of my people for the noble speech at Birkenhead, in which the unshakable decisions of your glorious and powerful country were reiterated, and in which you spoke so warmly of the obligation to restore to the small nations the independence they have lost as victims of German aggression in the struggle for justice and liberty. Montenegro cannot but be proud of never having for a moment regretted having taken up the gauntlet thrown down by the legions of the oppressor."

DWELLERS IN MESOPOTAMIA.

The following information, based on letters from native correspondents in Mesopotamia, gives the Arab view of recent events in that country:—

A book that should prove of considerable interest is about to be published by an Arab who has had special opportunities of studying the Turco-German *régime* in the Ottoman Empire. In 1913 the author, a son of the ex-Mufti of Baghdad, was in Constantinople co-operating with other compatriots in the Arab reform movement, which at that time was making good headway. The Committee of Union and Progress, which regarded the movement with considerable misgivings, tried to get rid of the Ulema by charging him with complicity in the plot for the assassination of Mahmoud Shefket Pasha. He was arrested and imprisoned, as were so many others on the same charge. As soon as Turkey entered the war, however, the Government bethought itself of exploiting his influence. He was liberated, honours were conferred upon him, and he was sent back to Baghdad with the promise of a liberal monthly allowance if he would stimulate the patriotism of the people of Baghdad and inspire them with a real and active interest in the war. The commission, however, was entirely opposed to his inclinations and the dictates of his conscience. Refusing to lend himself to Unionist propaganda, he continued to preach Arab solidarity and freedom. News of this reached the authorities, and he was arrested, and was about to be tried by court-martial when the British advance caused the Turks to evacuate Baghdad. The Ulema dedicates the book to H.H. Sirdar Arfa Sheikh Khaz'al Khan in appreciation of the valuable services he has rendered to the Arab cause by his co-operation with the British. He has much to say about the Turco-German atrocities. The number of people executed or drowned in the Tigris was considerable, but those who were dispossessed of their property could be counted by thousands. The weight of Turkish tyranny pressed heaviest on the Moslems at first, but was extended at the end to the Jews. The Unionists used to say: "Our rule over the Arabs is coming to an end, but we shall only leave their country a heap of ruins." These threats were repeated in so many circles that the conviction finally gained ground among the inhabitants of Baghdad that the Turks were resolved to set fire to the city before evacuating it. It is still believed that they were frustrated in this sinister design by the unexpectedly rapid advance of the British army. The Ulema describes the relief of the inhabitants at the triumphal entry of the British troops, and declares that this feeling developed into veritable joy when General Maude issued his memorable proclamation, in which he told the people of Baghdad and all the Arabs of Irak that the British were not coming for conquest, but to save the country from Turkish misrule, and to help the people to revive the ancient glories of Arab civilisation. The Arabs could, indeed, see in the advancement and prosperity resulting from the just and beneficent rule of Great Britain in India and Egypt an earnest of its forthcoming achievements in Irak.

The occupation of Samarra and Tekrit was the occasion for fresh rejoicing among the Arabs, as it was held to complete the liberation of the whole of Irak. The policy of Sirdar Arfa again came in for fresh commendation on the part of the people, who felt that many lives had been spared by his whole-hearted co-operation with the British.

The following incident is related in connection with the retreat of the Turks from Baghdad. The bulk of their military stores, arms and supplies, such as barley, sugar, and coffee, lay at Mehallet el Kazimein, and the local inhabitants successfully prevented their removal. On the arrival of General Maude, the chief of Mehallat el Kazimein said to him, as he presented this booty: "We Arabs are a hospitable people; but the Unionists have reduced us to a state of poverty such as does not enable us to receive your victorious army as it deserves. The least we can do, therefore, is to offer you what we have been able to regain from the spoils which the Turks had plundered from our people." General Maude, in reply, said: "The army of his Majesty the King of Great Britain is satisfied with the loyalty of the noble Arab people, and considers this as the best hospitality that can be offered it. Be sure that we shall not let the people share any of our burdens, as we have come to help you in resuscitating your old glories." In commenting on this incident, the correspondent remarks: "When it was seen that such words were not long in being translated into action, could any of the Arabs withhold their loyalty from the great nation who, in the mouth of one of its greatest generals, made such noble and sincere utterances."

A correspondent, writing from Nejef, gives an account of the visits of Sir Percy Cox, the Chief Political Officer in Mesopotamia, to Baghdad, Kerbela, and Nejef. At Baghdad Sir Percy achieved a notable task by effecting a friendly understanding between the respective chiefs of the Shiites and Sunnites, whose rivalries and dissensions had been studiously exploited by the Turks ever since they came to the country. Thanks to his tact, sagacity, and sincerity, these two great divisions of the Moslem population of Irak are said to have become practically as one in the love of their country and the unity of their efforts to reform it under the ægis of Great Britain.

At Kerbela, where Sir Percy Cox's visit had been announced a few days beforehand, the nobles and ulemas, together with a large number of notables, went outside the town to receive him with suitable honours. Their surprise and delight were great when they heard their distinguished visitor converse with them in perfect Arabic and Persian. The correspondent proceeds: "On entering the town the first spot visited was the sacred shrine of El Hussein, 'the martyr of martyrs.' Sir Percy Cox then repaired with the nobles and ulemas to the Government House, where the notables of the town were already gathered. His whole demeanour as he engaged in conversation with those about him charmed everyone, as it recalled by contrast the rough and haughty manner of Unionist officials. In the course of his speech Sir Percy Cox said: 'There is a current Arabic proverb which says, "If you come from a journey, bring with you at least a stone." (In the original the proverb acquires a special pithiness from the rhyming of "journey" and "stone.") Present circumstances prevented me from bringing fit presents to the nobles and ulemas; wherefore I beg you to accept from me instead an equivalent.' The equivalent was a sum of money which Sir Percy Cox handed over to be distributed among the poor and needy. This thoughtful act of generosity on the part of the Chief Political Officer elicited loud exclamations of praise and gratitude."

During his few days' sojourn in Kerbela Sir Percy Cox inspected the town, and testified to his admiration of the provisional government which the inhabitants had set up on the expulsion of the Unionist officials. He gave them encouraging and useful advice, and held out to them the prospect of a near era of prosperity and peace. The ceremony of farewell was no less impressive than that of welcome. Some of the nobles and ulemas insisted on accompanying Sir Percy to Nejef-el-Ashraf, where lies the famous shrine of Syed Ali, Emir el Mu'mineen (the Prince of the Faithful), and the great Shiite School. At the Government House Sir Percy explained, in perfect Arabic, to the assembly, composed

of the nobles, ulemas, and notables, the admiration that British men of letters and legislators have for the wisdom, eloquence, and courage of Syed Ali, Emir el Mu'mineen, adding that the British Government is the true friend of the Arabs, that one of its chief aims in this war is to help the weaker nations to revive their historical glories, and that it considers it among its sacred duties to help in lifting up the noble Arab nation to its former proud position in the East. He also said that nothing would please Great Britain more than to see the Arabs regain the glory of their Islamic civilisation, which the Turks had destroyed. Here, again, a sum of money was handed over to the nobles and ulemas for the poor and needy, "the present of a traveller." The marks of loyal attachment to England which Sir Percy Cox witnessed on the part of the Shiite Arabs of Nejef and Kerbela made him say, on his departure, that Great Britain will never forget the feelings manifested by the Arabs, and that she fully reciprocates those feelings.

The inhabitants of Nejef and Kerbela saw fit to address a letter of thanks to H.H. Sirdar Arfa' Sheikh Khaz'al Khan for the inestimable services which he had rendered to the Arab nation by consolidating the ties of love and loyalty between it and the British authorities. This letter, which was signed by the nobles and ulemas, was received with the liveliest satisfaction by his Highness.

EDUCATIONAL.

UNIVERSITY OF LONDON.

KING'S COLLEGE and KING'S COLLEGE for WOMEN.

COMPLETE COURSES of STUDY are arranged for DEGREES in ARTS, LAWS. SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH and BACTERIOLOGY, ENGINEERING.

Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.

Facilities for research. Arrangements made for attending special or isolated courses.

EVENING CLASSES as well as Day in most faculties.

STUDENTS' HOSTELS. The Platanes, Denmark Hill, and Vincent Square, Westminster.

KING'S COLLEGE for Women now transferred to Strand, with full privileges.

Apply to Secretary, King's College, Strand.

UNIVERSITY OF LONDON, KING'S COLLEGE.

CLASSES are held in

SLAVONIC LANGUAGES AND LITERATURE,

RUSSIAN, POLISH, SERBIAN, also in MODERN GREEK.

For Leaflet and List of Public Lectures, apply to the Secretary.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE SCHOOL IS NOW CLOSED FOR THE VACATION AND WILL RE-OPEN ON OCTOBER 1.

For particulars, apply to E. DENISON ROSS, Director.

PRINCESS HELENA COLLEGE
EALING, W.

PRINCIPAL - MISS PARKER.

Boarding and Day School for the Daughters of Gentlemen. Special Attention to Languages, English, Art, Music. Holidays arranged for if required. Large Grounds.

Fees 66 gns. to 75 gns. a year.
Officers' Daughters 66 gns. a year.

CORRESPONDENCE.

THE CAROB TREE IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Cyprus is an agricultural country (see the High Commissioner's report). With the statement no one will quarrel. Agriculture *is* the mainstay. Take as proof one product alone, viz., carobs or locust bean. The amount exported annually varies from 63,000 tons to 40,000 tons. It is a crop well worthy of attention, and yet, after nearly forty years' occupation by the British, the cultivation and the management of the tree remains very much the same as under Turkish rule.

The newly formed Agricultural Department is endeavouring to mend matters, but one doubts whether the officials are on the right track yet. Two things have to be done—one is to keep an eye on the carob trees of the island, owned principally in small numbers by peasant proprietors; the other is to establish a large orchard under Government control in which hundreds of young trees would be grown, and each tree as carefully handled as would a pear or an apple tree in British Columbia. Were this done, in twenty years' time only the best beans would be grown; the best type would be found there, an example to the carob tree owners of the island; and more important still, all would be known about the carob bean disease now so universally prevalent.

The department is taking action about the first point; there is no sign of the suggestion tendered as regards the second point being adopted. Want of funds will probably be urged.—I am, etc.,

G. L. H.

August 14, 1917.

INDIAN CIVIL SERVICE.

The following are declared by the Civil Service Commissioners to have obtained the first five places in the recent open competitive examination for the Indian Civil Service. The selection of every candidate is conditional on his passing a medical examination, which will be held in London in the course of a few days.

Rank in Order of Merit.	Name.	Total Marks.
1	*Reuben, David Ezra	2,565
2	Gupta, Satyendra Nath	2,492
3	Jayaratnam, Thomas Cooke Samuel	2,334
4	Ellis, Thomas Hobart	2,230
5	*Rau, Pendyala Satvanarains	2,203
The following stand next in order of merit:—		
6	Bhadkamkar, Balkeisha Vasudeo	2,165
7	Chunder, Kamal Chunder	2,124

* Provisionally admitted to the examination.

PARCELS FOR PRISONERS OF WAR IN TURKEY.

It is announced by the Secretary to the Post Office that, according to information furnished by the Swiss Post Office, the transmission abroad of parcels addressed to prisoners of war in Turkey in Asia, except those interned at Magnesia, is suspended, and until further notice such parcels cannot be accepted at post offices. The parcels on hand will be returned to the senders. Letters and money orders for prisoners of war in Turkey in Asia are still being forwarded.

THE CUSTOMERS OF

Messrs. HENRY S. KING & CO.,

AND THEIR BRANCH FIRMS,

are invited to make use of their Correspondents,

THE NATIONAL BANK OF EGYPT,

at CAIRO and ALEXANDRIA,

who will be pleased to open Banking Accounts with them, and transact general Financial Business for them during their stay in Egypt.

HENRY S. KING & CO., London.
KING, KING & CO., Bombay, Delhi and Simla.
KING, HAMILTON & CO., Calcutta.

THE PRESS ON THE NEAR EAST

The Baghdad Railway.

In *The Fortnightly Review* Mr. W. P. D. Stebbing describes a journey undertaken before the war along the line of the Baghdad Railway between Adana and Aleppo. Apart from the interest attaching to his personal experiences, the narrative fills in some lacunæ in our knowledge of the railway.

The strength of a chain, Mr. Stebbing writes, is its weakest link. This aphorism well applies to the Baghdad Railway; and the Germans, with the Turks as their cat's paw, must have often cursed the slowness of the construction of this oft-discussed line. Over a year ago much still remained to be done at the Cilician Gates, and in and about the Amanus Mountains, though it was reported in the Press that a party of engineers had gone to this latter district to finish the work of construction, and subsequently that the tunnel had been pierced. From a recent article in *The Times* it appears that the break in the railway at the Taurus Mountains is now about forty-five miles, and is covered by a motor service.

Again:—

The western entrance to the tunnel through the Amanus Range starts at Airan; here the long boring was being rapidly driven in shales and slates, but at the eastern end, after a short distance in a soft bed, the heading had entered a hard light blue quartzite, and progress was very slow.

At the end of the article Mr. Stebbing expresses an opinion, previously advanced in these pages, that the news of the piercing of the Amanus Tunnel does not necessarily mean that through communication follows the next day, or even shortly afterwards. He makes some interesting remarks with regard to British prisoners in Turkish hands:—

The above notes were written some months ago, when it had been reported that through rail traffic was open between Konia and Aleppo. Much inaccurate information has been published about the Baghdad Railway, and even now there is no certainty as to its state of completion, while the British prisoners who are interned in various camps along its line have not been able to enlighten us.

A list of internment camps in the rather desolate country about the Amanus Range appears in a list of British prisoners of war dated Constantinople, March 5. Three of the six—Bagtche, Airan, and Entille—are actually on the railway, the two latter miserably cold spots at each end of the tunnel through the range. It might almost seem that the prisoners were congregated here to help forward the tunnel works, especially as there are large cantonments for the workpeople and small hospitals. From Entille are extensive views to the east and north-east, but from Airan the only outlook is down the narrow valley to the west. In these places there is practically nothing in the way of timber, the soil supporting little more than a scrubby evergreen oak.

Bagtche, although about equally desolate as a site for prisoners, is some distance down the valley to the west of Airan, where it broadens out and is joined by another coming from the north-east. At the junction of the two valleys there is a large unwalled Moslem cemetery. Below the station the valley widens, and, while a part of it is very damp and a jungle of swamp-loving bushes, there are numerous small cultivated patches.

From the death-roll it must be feared that the prisoners feel the rigour of these high-level camps, but being on the railway, the problem of feeding is easier, and use is almost certainly made of their labour along the permanent way.

Bulgaria and Peace.

The Fortnightly Review has a second article of Near Eastern interest in Mr. Crawfurd Price's powerful indictment of Bulgarian policy both before and during the war. He is under the impression that there may be some question of making peace with Bulgaria's present rulers on terms that would not leave them chastened—surely an impossible proposition. The drift of the article is discussed in the "Notes of the Week" of this issue, but his argument for taking care of the future may be quoted here:—

There has thus far been nothing to suggest that the Bulgarians regret their choice; but, as we are definitely asked by the pro-Bulgars to accept their nominee as guardian of the road to India and Egypt, let us, for the sake of argument, ignore her *liason* with the Central Powers and examine her qualifications from another point of view. We have need of a very staunch and trustworthy friend in the Balkans, for we cannot afford to be let down, and the *rôle* in question is one demanding a considerable measure of confidence on the one hand and absolute loyalty on the other. We have already noted that though in 1912 Bulgaria signed a secret treaty with Serbia under the ægis of Russia, she did not confirm that pact until Ferdinand had visited Vienna and Budapest and betrayed the scheme to Russia's principal antagonist. During the war of 1912 she looked to Russia while Macedonia was the prize, and sought the support of Austria immediately there appeared a chance to obtain Constantinople. In 1913 she promised Russia to proceed to arbitration (in accordance with the terms of the Serbo-Bulgarian Treaty), and simultaneously attacked Serbia and Greece in connivance with Austria. So much for Bulgaria's loyalty during the Balkan wars. And now what of the present conflict? She persistently humbugged the Entente, pretending to be ready to take sides with us eventually, when all the while, according both to the declarations of her own statesmen and the evidence of facts, she was pledged to go to the support of the Central Powers. Despite her protestations of friendship, she nevertheless dealt us the most tragic blow of the war. It is now alleged that if we will make it worth her while she will become a modern Judas, and betray her masters for thirty pieces of silver. Carry the argument farther, and it becomes self-evident that the moment Germany is prepared to offer her a still higher price than we can or will pay, she will again betray us in turn. In other words, she is ever ready to sell her allegiance for material gain. Can it, then, be suggested seriously that we should engage as door-keeper of the vital route to Egypt and India a nation always disposed to open it at the instance of the highest bidder?

The Situation in Greece.

In last week's issue "Corsair" referred to the difficulties that might be in store for Greece with M. Venizelos's strong hand removed, and no steadying influence remaining in Greece. The same subject is the burden of an article in *The Daily Telegraph* by Mr. G. J. Stevens.

"Political parties," he writes, "in the sense we understand them, do not exist in Greece. Personalities take the place of political ideals and principles, and herein lies a great danger in the present situation in Greece. If M. Venizelos were to disappear chaos would ensue. Among his followers there are capable men, like M. Repoulis, and the young but very promising M. Michalacopoulo, who could continue his work, but the absence of any defined party organisation in M. Venizelos's following, and the personal jealousies which would inevitably break out in its midst with his disappearance, would split it up into several parts, and thus leave it not only leaderless but an easy prey to its opponents. It would be the chance for the pro-Germans to agitate and clamour for the return of the ex-King, and for a recommencement of previous intrigues, methods, and policy. I have mentioned above that M. Venizelos is gradually gaining the average Greek over to his side, but this does not include the pro-German, who remains pro-German, and continues to be an adherent of the ex-King. This element still comprises a good many of the officers and non-commissioned officers of the army, the members who remained behind of the former Palace clique, a good number of the secondary agents of the German propaganda, a large section of the Athenian bourgeoisie, which complacently styles itself the 'aristocracy,' but whose lineage can easily be traced to very matter-of-fact commoners, and the several thousands who have lost their rich emoluments and comfortable billets by the change of *régime*. What makes this group dangerous, should anything happen to M. Venizelos, is its organisation, which up to my departure from Athens a short time ago had not been allowed to lose its efficiency. It is the heirloom left by its German mentors."

THE BULGARIANS IN SERBIA.

(*Contributed.*)

Not long ago, in the Vienna Parliament, Deputy Dr. V. Ribar declared that the horrors of this war affected none of the Allies so terribly and gravely as the Jugoslav people. Once flourishing cities and villages are now in ruins. From the district of Nish alone the Bulgarians have deported more than 30,000 people to the deserts of Asia Minor. Since the times of Kossovo the Serbian people have experienced no greater catastrophe.

An important document, which illustrates the state of affairs prevailing in subjugated Serbia, has now come into the possession of the Allies. It was despatched by the Bulgarian War Ministry to the Bulgarian Headquarter Staff, and fell into the hands of the British Army at the Salonika front. From this document, of which we give the exact translation, it is clearly to be seen that the enforced recruiting of Serbians in the Morava districts is being conducted by Bulgarians, and that when these recruits were deported to Bulgaria "regrettable events occurred"—*i.e.*, the mutiny of the Serbian recruits in the neighbourhood of Karlova, etc. Many of these recruits deserted. The Bulgarians punished these deserters by whipping and hard labour. Afterwards, contrary to the law of nations and The Hague Convention, these unfortunate deserters were shot, their houses burnt down, their belongings confiscated, and their families deported from Serbia to Krpali. The Bulgarians also armed their civil population in order to complete the extermination of the Serbian nation.

This document runs as follows:—

[COPY.]

War Ministry Office, No. 463.
Sofia, May 20, 1917.

Very urgent.

To the Headquarter Staff, Field Office, Rustendil.

In reply to No. 28012 of May 13, 1917, and according to order of the War Minister, we inform the Headquarter Staff that the rumours circulated amongst the soldiers at the front with regard to ill-treatment of the peaceful field labourer by the labourer from the Morava valley are unfounded. Such rumours were circulated in the kingdom, but the inquiry ordered proved that these rumours are exaggerated. Until now only a few cases, which are regrettable, have been discovered, *i.e.*—(1) In the neighbourhood of Karlova; (2) in the district of Orchania, near Novacheni; (3) between Orchania and Mesdra; and (4) in the neighbourhood of Bakarala and Kanika.

These cases only are known to the War Ministry and the Ministry of the Interior; no reliance can be placed on any other cases reported. And, as a matter of fact, until the arrival of labourer recruits from the Morava districts desertions by Serbian war prisoners were few and far between and without plan, and occurred only in those places where they were not watched, as, for instance, at the requisition commissions, at reserve supply places, and where prisoners were working on farms privately. But since the arrival of men from the Morava districts these desertions have become very frequent. Recently the War Minister gave orders to the authorities of the Morava districts to arrest the deserters. At that time all such persons were sent to Pashmakly and Chiroka Luka, where they were punished by hard labour on the roads and by whipping; but afterwards a telegraphic notice was issued and communicated to all Serbians, those who were prisoners as well as those interned and recruited from the districts of Morava, that anyone who tried to desert would be shot, his house burnt down, his belonging confiscated, and his family deported to the districts of Krpali; the companions of the fugitive would also be punished if timely warning was not given (to the authorities) by them as to the intentions of the fugitive.

The War Minister also intends to transfer all the Serbian prisoners of war, as well as other Serbians, from the first and sixth divisional territory to the third and fourth, and to replace them, as far as possible, with Russians and Roumanians. At the same time, an order was given to all persons employing Serbians as labourers to remove them during the harvest time to depots, and afterwards to use them for work in ports, on the roads and railway lines at Becovil. Besides this, an order was given to distribute arms and munitions amongst the Bulgarian population all along the old Bulgaro-Serbian frontier, as well as to those persons along the roads, wherever desertions were possible.

With reference to the above, the War Minister begs the Headquarter Staff to communicate the same to the soldiers at the front, showing that these rumours are unfounded.

(Signed)

Major-General BRADISTILOFF,
Chief of the General Staff of the War Ministry.
Lieut.-Col. DIMITRIOFF.
Chief of the Inspectorial Section of the War Ministry.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

A decree has now been issued restricting cotton production in Egypt. Some uncertainty attached at first to the extent of the restriction, but later messages indicate that it amounts to one-third of the acreage under cotton, which exactly accords with previous forecasts. This restriction, drastic as it undoubtedly is, is not surprising in view of the circumstances with which the Egyptian Government found itself faced. Coming at the present time, when the Egyptian outlook is so promising, the curtailment is most unfortunate, for however short its operation it is bound to exercise a detrimental effect on the country's prosperity. Lancashire will, of course, be seriously affected by the measure. The Lancashire cotton trade is in a most critical condition owing to the shortage of cotton, and only recently an arrangement was made by which users of Egyptian cotton should pay levies in support of the operatives engaged in using American cotton. Now that this source of supply is to be diminished the situation will be very difficult.

***

The question of industrial and commercial prospects immediately after the war, on which I touched last week, will not be by any means the only problem in the economic reconstruction. Through the war the means of production in this country, and, indeed, throughout the world, have been improved out of all recognition, so that whatever the conditions, production is certain to proceed after the war at a greatly enhanced rate. This will be all to the good, for the world's stocks will be at their lowest, but the time will not be long in coming when this shortage will have been made good, and then, failing palliative measures, the problem of over-production will ensue with its usual consequences. It needs no special prevision to see that this is a very real danger, and one which must be guarded against at all costs.

***

This eventuality is discussed in the article in the *Round Table*, from which I previously quoted, the writer's conclusion briefly being that it is not necessary that this should happen, and that the surplus production may be absorbed in the development of new countries. To open up new and unproductive areas, however, where the return is often very doubtful, a willingness to take risks is required, and, as the writer points out, everything will depend on those who manage the world's finances. If, he says, "they find themselves in a timid and conservative frame of mind, credit will grow difficult, and the over-production of commodities, finding no new fields to absorb it, will soon make itself felt." In view of the consequences hinging on their action it hardly seems within the bounds of probability, however, that they would be so lost to the needs of the situation as to take any action in the direction of restricting credit.

***

Even the policy of peaceful penetration is capable of proving infectious under certain conditions, and, judging by the signs, I rather imagine that Turkey is suffering from a slight attack of it. For some time there have been indications that Turkey has been making most strenuous efforts to establish commercial relations with Switzerland, and now the *Wirtschafteszeitung der Zentralmächte* comes out with an article in which it is stated that Fuad Selim Bey, the Turkish Minister in Berne, regards the economic *rapprochement* of these countries as his most important task. The fact that a large number of business men from various towns in the former Turkish provinces in Macedonia have settled in Switzerland is quoted as a favourable circumstance in bringing about commercial relations between the two countries. "At the beginning of the world-war," the article continues, "many business men also from Constantinople went to Switzerland to await calmer and more peaceful times. These traders, most of them competent and experienced men, are employing the opportunity to establish relations with Swiss industry, finance, and commerce." At this rate Turkey will soon be a fitting acolyte of her masters. She has evidently applied herself to the study of their methods most industriously.

***

The fuel shortage, which is now threatening Egypt, as will be seen from a letter from Our Cairo Correspondent, published elsewhere, is leading the authorities to undertake investigations with a view to discovering artificial substitutes for this commodity. Mr. Wells, the well-known engineer, is stated to have conducted successful experiments with cotton sticks, but the difficulty of obtaining machinery makes it doubtful whether it will be possible to utilise his discovery. In this connection it is of interest to note that in Scandinavia, where the same difficulty with regard to fuel has long obtained, some ingenious devices have been resorted to to conserve supplies. Thus the United States Commercial Attaché at Copenhagen (Mr. Edwin W. Thompson) writes in a recent report:—"In Copenhagen all kinds of apparatus for economical cooking are being tried, including small, cheap forms of charcoal burners adapted for short blocks of hardwood. Several forms of fireless cookers (locally known as 'hay boxes') are being extensively tried; all of them are cheap, crude, and inefficient. The cheapest is a plain pine box about 18 ins. square with a hinged cover and no lining, intended to be packed by the purchaser with paper or hay. This retails for 2$." Perhaps some manufacturer will be sufficiently enterprising to come to Egypt's assistance with a similar contrivance.

***

I understand that satisfactory results are attending the attempt to cultivate Turkish tobacco in South Africa. The climate seems to suit the plants fairly well, and the resultant tobacco is of a sufficiently high standard to justify the belief that South Africa will have to be considered as a producer of this brand of tobacco. The best proof of the quality of the tobacco lies in the fact that efforts are now being made to enter the American market. It is, of course, too early to determine whether the South African product will be likely to be a serious competitor with Turkey's tobacco trade after the war, but it may be said that the omens are favourable, and South Africa's venture will not improbably cause the Turk more than a little misquiet.

***

The report of the Roumanian Consolidated Oilfields for the year ended June 30, which is now presented, as was only to be expected in view of the destruction of the company's property last November, makes anything but cheerful reading. During the period under review the gross profits amounted to £26,400, and the net result is a loss of £3. The adjusted accounts for 1915-16 show a profit of £106,700, making the credit balance £220,200. Claims have been made by the company for compensation to the extent of £1,270,000, and when the end of the struggle makes it possible for these to be adjusted, and also for the company to obtain damages for the German occupation of the property, the position may be quite favourable for the shareholders.

***

Since attention was directed in these columns last week to the need for Government action with regard to the Greek currant crop, with a view to the reduction of prices, an order has been made under which the Food Controller becomes the sole importer except in cases in which special licences are granted. Opinion in the trade will probably not be altogether in favour of this drastic measure, more especially as freights and insurance are held to be two of the main factors in the present prices. Still, I think that the consumer is more likely to benefit by this order than by any less direct action that might have been taken.

***

The forthcoming issue of sugar tickets raises an interesting question as to the position of people who come to this country on leave after the date on which the tickets come into operation. In some quarters the idea seems to obtain that no allowance has been made for any subsequent issue of tickets. If that view is correct, then a number of people are going to suffer very severe inconvenience. The question is one which concerns many others than those who happen to be temporarily absent from this country. It affects everyone who henceforward may contemplate taking a house, for sugar enters so largely into domestic economy that it cannot be altogether dispensed with. In the circumstances it would be well for the position to be made clear.

Trade After the War.

Competition for Near East Markets.

In the light of the past there can be little doubt that the Balkans will be one of the chief centres of the commercial rivalry that will come when peace is declared. There, if anywhere, before the war the policy of so-called peaceful penetration may be said to have reached its highest expression, and to such a pass had things come that Germany and her ally enjoyed a practical monopoly of the Balkan trade. For this several factors were responsible. For one thing, the Central Powers are more conveniently situated than other nations for trade relations with the Balkans, and to the advantage of convenient access to the markets Germany brought methods of trade organisation without parallel in commercial history. Even so, the success of the Central Powers would not have been so pronounced but for the failings of their competitors. This country, for instance, showed a regrettable disinclination to compete for smaller markets, and British manufacturers who sought openings for trade in the Balkans only too often adopted faulty methods, and, as we know, their representatives failed to obtain the assistance in official quarters that they had the right to expect, and the natural result was that before war broke out they were at a hopeless disadvantage there.

Britain's Opportunity.

The war has undoubtedly given Great Britain and the other members of the Entente their opportunity to secure a good footing in the Balkan markets. But anyone who imagines that they will do this without the most strenuous opposition on the part of the Central Powers will be very greatly mistaken. After their terrible experiences of the treachery, the brutality, and the total disregard of the recognised tenets of civilisation shown by Germany and Austria, the Serbians, and the Roumanians would be less than human if they wished to resume trade with them. But, failing adequate facilities on the part of their friends, they may have no option. By reason of their circumstances, the Balkan peoples as a whole are bound to give preference to a system which allows them time to pay for commodities, and here Germany and Austria-Hungary found the lever for their peaceful penetration. Their terms of payment were arranged over long periods, and they catered for their customers in every possible direction. We, on the other hand, eschewed the credit system, adhered to hide-bound methods, failed to accommodate ourselves to the requirements of the market, and, in consequence, had to stand aside and watch the trade going elsewhere.

Germany in Roumania.

The strength of the pre-war position of the Central Powers in the Balkan market was such that the greatest and most united efforts will be needed to ensure a reversal of the position. How completely Germany and her accomplice dominated the situation may be gathered by a glance back at their trade relations with Roumania before that country joined the Allies. There the process of peaceful penetration reached such extraordinary limits that, in the graphic description of a correspondent, quoted in these columns, "To study Roumanian commerce, industry and finance is to know the story of German enterprise, German work and German initiative gaining the mastery everywhere and in every walk of life." This strong view is by no means an over-estimate. Germans swarmed throughout the country, and exercised a most vital influence on its commercial and industrial affairs. In Bucharest alone there were 20,000 Germans, and outside Bucharest more than double that number, and they marked their presence by the establishment of clubs, chambers of commerce and all the *tout ensemble* that go to mark German trade supremacy. They had the dominant interest in the oil industry, while their capital was also generally present in the development of Roumania's natural resources. The import trade was practically their monopoly as may be gathered from the figures for 1913, when Germany was responsible for £5,600,000 out of the total imports of £9,520,000, while her ally took a large share of the balance. When we add that Germany established banks to prevent the smallest share of the profits of this trade going elsewhere we have completed the picture. There is nothing more to say.

Central Powers' Preparations.

The preparations that the Central Powers are now making show very clearly that their egoism is such that they do not think that the treatment they have dealt out to their former customers in Roumania and Serbia will in any way prove a bar to the resumption of normal trade relations after the war. And from this very fact we can measure the future struggle. The market was theirs, and they are determined to retain it at all costs. For the measures they are now taking to this end we are indebted to the enemy Press. Thus the *Vossische Zeitung* speaks of the establishment at Leipzig University this winter of an "Institute for South Eastern Europe and the study of Islam." The Institute, we are told, "will be devoted to the study of spiritual and material civilisation, and in the first place to the study of the political, social and economic conditions in the countries of South-Eastern Europe, with which is included the whole of the Balkan Peninsula and the study of the Mahommedan Near East. On a strictly pædagogic basis this institute will in the first place afford facilities for studying the politico-economic problems of Germany in the countries in question."

Then the Austrian *Tagespost* refers to the foundation of a Balkan Institute at Graz University, and says: "The demand for the special preparation of Austrians for employment in the Balkans will find this Institute a most important and all-round training ground. Besides lectures from University professors there will also be practical classes and special training to acquaint business men with the special conditions prevailing in the Balkan countries. Moreover numerous practical courses in languages will render possible the quick study of the chief Balkan tongues. Travelling parties will facilitate an acquaintance with conditions in the Balkans." One final instance will serve to emphasise our point. In the Hungarian *Szegedi Naplo* reference is made to a decision to organise a scientific expedition through Serbia, Albania and Montenegro. "The expedition," says the paper, "will explore the country from the economic point of view and with the object of acquainting Austrian and Hungarian professional men by direct experience with the changes that have taken place in those parts. The expedition will be in two sections, one for Serbia, and one for Albania and Montenegro, and the Chief Military Command has already invited all notable Austrian and Hungarian economists to take part in it." Is any further proof wanted that the Central Powers are looking with confidence not only to the re-establishment of the *status quo*, but even to the extension of their influence in the Balkans?

Promising Outlook.

Fortunately there is every reason for thinking that these charming expectations will be disappointed. For one thing, Germany and Austria-Hungary will find a vastly different type of competition. British traders, for instance, will come to the market with revised ideas, and a willingness to study and cater for market requirements. Then there is the all-important factor that the trend of trade is bound in the future to flow with ever increasing strength in the direction of the south instead of as previously towards the north. Finally there is the natural reluctance of the Balkan peoples to resume relations with their enemies to which we have already referred, but that, as we have indicated, would for economic reasons be inadequate by itself. Measures are, however, being taken which will have the effect of placing Serbians and Roumanians in a position to trade with those countries which have their welfare at heart. In another column we give details of a projected bank at Salonika with branches in Serbia and elsewhere. This is only one of the steps now in view, and in this connection we may remind our readers of the deputation received by Mr. Pasitch when he was in this country which brought to the notice of the veteran Serbian Prime Minister "what was being done and what was in prospect with a view to the advancement of the trade of Serbia after the war, having regard especially to the elimination of all enemy influences in the commercial relations of the country." Measures such as those indicated in these words, and the formation of the Anglo-Roumanian Society, are the best possible proof that we may await with confidence the outcome of all the efforts of the Central Powers after the war.

THE FUTURE OF SHIPPING.

Restoration of the Mercantile Marine.

Commenting on the report of the committee appointed by the Chamber of Shipping of the United Kingdom and the Liverpool Steamship Owners' Association (the principal conclusions of which were given in THE NEAR EAST of August 31), the *Syren and Shipping* says:—

The committee's figures emphasise the very important point that if we suffer through failure to restore our mercantile marine to its pre-war eminence, then the whole civilised world whose ministers we have been, will suffer also, and to an equal, if not a greater, extent than ourselves. In this connection, and having regard to peace aims, we would especially commend to our politicians the following extract from this clear-cut report:—"The shipowners' point of view is a broad one, and although it must not dictate national policy, it is of the first importance that it should be considered in the framing of such a policy; and this is especially the case in regard to the British Empire, dependent as it is for its existence in both peace and war on its mercantile marine. The war could never have been fought if the United Kingdom had not owned nearly one-half of the steam tonnage of the world, and the British mercantile marine can only be maintained as it now exists so long as it continues to carry one-half of the overseas trade of the world."

Shipowners and the Settlement.

The shipowning interest should be adequately represented and consulted when the time comes for the drawing up of the deed of settlement that will free the world from the danger of German domination. That the adoption of such a suggestion would result in a reasonable and equitable policy being carried out is abundantly shown by the far-seeing proposals which the report formulates for the treatment of enemy shipping after the war. They suggest, for example, that the owners of foreign vessels in English ports should be brought for all purposes within the jurisdiction of the English Courts, and also that foreign ships which use our ports should be made to contribute to the upkeep, although they do not actually enter those ports. There has been in the past too much of the open door for the stranger.

Why should the Germans, for example, have been allowed to use the machinery of our ports in exploiting England for their passenger business, and yet leave the maintenance of our harbours to be wrought out by their British users? With regard, too, to the realisation of enemy shipping, the committee's proposals equally appeal to commonsense and justice.

GREEK CURRANT CROP.

The following extracts are from Messrs. Burlumi's annual report on currants published on September 6 :—The stock of old fruit carried over to the present season is estimated at about 15,000 tons, making a total of 90,500 tons. Deducting 2,500 tons of old fruit brought over from the previous season, 1915-16, we find that the crop of 1916 has given us 88,000 tons against 125,800 in 1915, and 145,000 in 1914.

The 53,000 tons shipped to foreign countries were distributed as follows :—

To the United Kingdom and New Zealand....	45,700	against	70,000 in 1915-16
To the United States and Canada.....	4,600	,,	12,700 ,,
To the rest of the world.....	2,700	,,	17,300 ,,
Total tons	53,000	,,	100,000 ,,

The shortness of supplies and the higher prices in Greece caused the markets to rise in England until about the middle of November, when there was a slight weakness, especially in the common kinds of Provincials, some of which arrived in indifferent condition, and were forced upon the market at 52s. 6d. per cwt., duty paid, while sound fruit could not be had under 70s. This state of the market lasted for about a month. In the middle of December prices went up from 3s. to 5s. per cwt., according to quality, sound Pyrgos in quarters being sold at as much as 75s. per cwt., duty paid, while the finest Vostizza were held for 88s. to 90s. At the end of the year prices were firm at 82s. to 90s. for Vostizzas; 81s. to 83s. for Gulf; 79s. to 80s. for Patras; 78s. to 79s. for Amalaias; and 75s. to 76s. for Pyrgos, in quarter cases, per cwt., duty paid. These prices remained unchanged until the beginning of February, when the reduction of the stock, without much hope of new importations, induced buyers to pay 1s. to 2s. per cwt. more for the cheaper growths. This rise gradually continued to the end of March, when prices shortened their range from 90s. for sound Pyrgos to 98s. for the finest Vostizza. In April, the limit of the 100s was overpast, and Vostizzas were paid as high as 110s., with Pyrgos at 98s. In the first week of May 120s. to 125s. was asked for Vostizza and 112s. for Pyrgos. There was no change in June and July because stocks were practically exhausted.

The deteriorated and out of condition fruit of the 1915 crop, which the retailers would not touch, found eventually buyers for manufacturing purposes at various prices, beginning at 18s., in October, 1916, and going up to 60s. per cwt. in May, 1917. At this latter price new crop damaged currants have also been disposed of for the same use. The fluctuations in prices all through the season have been, as we have seen, in one direction—viz., in favour of holders. The cheapest purchases were made in July, at 46s. to 47s. per cwt., c.i.f. for Pyrgos in quarter cases, but the quantities sold at these figures were very small, and the deliveries made upon these contracts turned out the reverse from satisfactory in regard to quality. The average selling price f.o.b. Greece for the fruit exported has been much higher than in the previous season, but the difference, in a great measure, was absorbed by the higher packing charges, especially the more than double price of packages and the increase in wages. The growers have obtained no more money for their crop because they have sold much less fruit and they have spent much more money to produce it. The dealers in England have done very well, and the grocers very much better. Their only disappointment must have been the want of supplies during the last four months of the season. The Greek exchange for cheques on London has fluctuated between 23.80 and 24.50 drachmas per £1 sterling.

The New Crop.

The new crop is estimated according to the latest news received from Greece at 130,000 to 135,000 tons. Fortunately no péronosporos has attacked the vines this year, and the ravages of the oidium have been checked by the use of newly invented chemicals in default of a sufficient supply of sulphur. The quality is promised good, but it depends in a great measure upon the weather during the harvest time. So far, we have no news of any damage. No samples of new fruit have yet come to hand by post, as was invariably the case in former years, and no prices have been mentioned on our markets. The great question is the tonnage that will be available, and that is an unknown quantity. It was reported a week ago that the freight demanded by shipowners from Greece to the United Kingdom was 400s. per ton of currants but later news raised this figure to 600s., while 500s. is quoted for New York. This uncertainty renders it almost impossible for respectable shippers to undertake firm engagements. Here, in England, the decision of the Food Controller to buy in the countries of production and import for account of the State all dried fruits, has put an end, for the present to the business of importers.

IMPORTANT BANKING DEVELOPMENT.

We learn that a commercial bank is about to be established by a group of English, Greek, and Serbian capitalists to further commercial and other relations between England, Greece, and Serbia. The headquarters of the bank are to be at Salonika, and there will be branches in the principal towns of Greece and Serbia.

Mr. G. Lionda, managing director of Lionda and Co., Ltd., is shortly proceeding to Athens entrusted with the negotiation of this business, which will provide a large field not only from the commercial, but also from the political point of view.

THE BANK OF ENGLAND.

The London Chamber of Commerce, on the recommendation of the Financial Section of the Chamber, has appointed a special Committee to examine the constitution and functions of the Bank of England and to report to the Chamber.

BANK OF ABYSSINIA.

The Bank of Abyssinia, Cairo, has informed the National Bank of Egypt, London, that her Majesty the Empress of Abyssinia has been graciously pleased to become honorary president of the Bank of Abyssinia, and that his Royal Highness Ras Taffari, the Regent, has done the bank the honour of joining the board of directors.

THE CHARTERED BANK.

At a meeting of the court of directors of the Chartered Bank of India, Australia and China, held on September 12, it was decided to declare an interim dividend for the half-year ended June 30 last at the rate of 14 per cent. per annum, free of income-tax, payable on and after Wednesday, the 19th inst.

SUBMARINE WARFARE.

The Admiralty has issued the following return of arrivals, sailings, war losses, and unsuccessful attacks during the week ended September 9—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

Arrivals	2,744
Sailings	2,363

British merchant vessels sunk by mine or submarine :—

1,600 tons gross or over	*12
Under 1,600 tons gross	†6
British merchant vessels unsuccessfully attacked by submarines	‡12
British fishing vessels sunk	4

* Including one sunk during week ended September 2.
† Including one sunk during week ended August 26.
‡ Including two during week ended September 2 and one during week ended August 26.

LANCASHIRE COTTON.

Influence of Egyptian Restrictions.

FROM OUR OWN CORRESPONDENT.

MANCHESTER, Wednesday.

Much interest has again been taken in the market in the report that the acreage under cotton in Egypt for next season will be reduced by one-third. The importance of the growth of foodstuffs is, of course, well known, but this decision is a serious blow for fine spinners in Lancashire. It is rather hard for leaders of the industry to be met by this development at a time when strong representations are being made to the Government to increase the growth of cotton throughout the British Empire. The downward movement in prices has been checked, and demand to some extent in yarn and cloth has been stimulated. Egyptian spinnings have been firmer in quotation, especially the higher numbers, and a little more trade has been done. In piece goods for Egypt there has been very little activity. Buyers distrust current rates, and it is useless to purchase goods if there are to be no export facilities. Values of cloth in Cairo are said to be hardening. A fair turnover has transpired in light materials for India, but ordinary grey shirtings show no improvement whatever. Moderate transactions have been mentioned in finishing cloths for China. Printed goods have moved off a little more freely for South America. American yarns for home use have attracted rather increased attention, and in certain quarters a steadier tone has prevailed. Only, a small trade has occurred in shipping yarns.

TUNISIAN TUNNY FISHING IN 1917.

A Poor Catch.

Unofficial figures show that the Tunisian tunny catch during the season just closed, says the United States Consul at Tunis (Mr. Edwin C. Kemp), has been very small—less even than the catch of 1916, which was described as "most mediocre." The two stations of Sidi Daoud and Ras El Ahmar are reported to have caught about 4,000 fish, Monastir about 3,500 fish, and Bordj Khadidja hardly 1,000. Fishing in the last-named place was suspended in mid-season. The fishing is done under Government concession, the concessionaire paying 1 franc per 100 kilos (kilo equals 2,2046 pounds) of fish caught, plus 5 francs per quintal for amounts over 8,000 quintals. (At normal exchange the franc is worth 19.3 cents.)

For the tunny fishing large nets are used extending out to sea and sunk to a depth of 20 fathoms. One hundred and twenty men are required to haul in the net. A complete madrague ready for working may be worth $30,000, and must be accompanied by a camp for the employees, smacks, and a packing establishment, so that the total investment may easily reach $100,000, to which must be added some $20,000 for yearly expenses. The season lasts about 120 days, from April to July, and in a good year the station of Sidi Daoud alone is reported to have caught 8,000 fish, which, when prepared for the market, were valued at over $120,000.

The official return of the present Egyptian cotton crop condition gives the average in Lower Egypt at 99 and in Upper Egypt at 96.

ENGINEERING NOTES.

Opportunities in Morocco.

The attention of British engineers and contractors should be more closely drawn to the rapidly increasing importance of Morocco as a market and new field for engineering and other enterprises. In previous Engineering Notes we alluded to the large sums of money that are being spent, and will be spent in the near future, on the improvement and construction of roads. An expenditure of 66,710,000 frs. has been authorised for the construction of 1,190 miles of roads, and 14,290,000 frs. for the provision of telegraphs, irrigation works, experimental farms, buildings, etc., whilst other sums, amounting altogether to 17,645,853 frs., have been granted to the municipalities of the various towns for municipal public works.

Water-Power Utilisation.

Another important scheme for the development of Morocco's resources is the utilisation of the water-power of the country for industrial purposes. It is proposed to use for the purpose the falls of the Oum-er-Rebia river, and probably the riverheads in the Atlas Mountains. From either source a great amount of motive power can be obtained.

According to recent reports, owing to the unprecedented economic development in the French zone of Morocco, which enjoys "a prosperity unknown in the annals of the country," several construction works of common utility are now being planned, such as the exploitation of a tramway concession, the building of better-class houses, and the amelioration of water supplies; whilst "there is an uncommonly large demand for all kinds of machinery, tools, motor-cars, agricultural implements, hardware, etc."

Apart from the economic agreement or understanding with the Allies, the participation of British firms in the work of progress and economic development of Morocco will undoubtedly be agreeable to the French.

An Egyptian Problem.

The question of the utilisation of the sun-power in Egypt has again arisen, and new tests are being suggested. The subject, which has been dealt with in these columns on previous occasions, is very interesting, for the utility of the sun's rays in tropical climates for the production of motive power will undoubtedly be very beneficial to many places where other means are inaccessible, or are obtainable only at a very high cost. There are many places on the Nile where water power could be developed at a very reasonable capital outlay, and power supplied at very cheap rates. Engineers have often wondered why turbines were not utilised at the great Assuan Dam, where, combined with a hydraulic power plant, a great amount of power would be available for irrigation pumping, or driving factories in districts further away from the river. It is admitted that wherever water is available for power purposes it has a positive commercial value, and when an installation is made, its freedom from breakdown or repairs, and its high efficiency, places it in the front rank among prime movers. The owner of a water-power plant is rightly compared with a mine owner, the only difference being that the former is raising "white" coal instead of black. It is asserted that many large plants abroad produce power at an extremely low cost; in some cases it is less than £1 per horse-power year, when running on a twenty-four-hour service. And when mines of "white" coal are so numerous on the Nile, and power can be produced so very cheaply, is it advisable and more economic to attempt the utilisation of the sun's rays for what can easily be obtained by the utilisation of the water-power of the Nile?

Agricultural College in Bulgaria.

It is reported that when the war ceases, it the intention of the Bulgarian Government to establish a large agricultural college, with German experts as instructors, with a view to introducing a new system in farming and the employment of modern agricultural machinery and implements. The old system of taking the same crop year after year, it is felt, is leading to the ruin of the soil, and the five and seven-crop rotation system will be enforced by Government decree.

AN ARABIAN SOAP SUBSTITUTE.

Aden Hottom Trade.

Although the consumption of soap has largely increased in this district, says the United States Consul at Aden (Mr. Addison E. Southard) in a recent report, there is still an important local trade in hottom, which is used as a substitute for soap. Hottom is the Arabic name for the ash cakes which result from the burning of a desert plant that grows plentifully in this part of Arabia. The plant from which hottom is made is a glasswort or saltwort; both *Salicornia herbacea* and *Salsola kali* are said to be found in this region and used for the purpose. The Arabs call this plant dalook, and say that it is a natural one, because it sprouts from the ground where it would not seem possible that there could have been seeds, or any other means of reproduction. As a reason for their belief they point to the parched and barren rock of Aden, from which, when there is one of the rare rainfalls, these plants sprout in great numbers, but usually never to mature. The Arabs of the desert gather these plants and pile them in pits dug in the sand. They are then burned to ashes, the ashes forming a hard cake at the bottom of the pit.

Prices and Principal Consumers.

The present selling price in the Aden market is 1 rupee ($0.3244) per maund of 28 pounds, although before the war, when communication with the mainland was free and subject to less interruption than at present, hottom could be had for 4 annas ($0.08) per maund. The product comes into Aden by camel caravan from the mainland, one camel carrying from two to three cakes. It is estimated that 6,500 to 7,000 maunds of hottom are sold each year in the Aden market. Much greater quantities are produced and used in the Aden hinterland and in the Arabian Red Sea provinces. The local government levies a tax of a half anna ($0.01) per maund on all the hottom sold in Aden.

The principal purchasers of this product are the native laundrymen and dyers. From the former it derives another local name much used by Europeans. The hottom has the appearance of dried cakes of hard mud. Native laundrymen are known as "dhobies," and hottom is frequently referred to as "dhobie mud." It is quite effective in washing very dirty or stained clothing, but is said to be sufficiently strong in alkali to have an injurious effect upon the wearing quality of the clothing if used regularly. Hottom is claimed to be an excellent mordant, and the native dyers use it in their work. A large quantity is used in this way.

Uses for the Dried Leaves.

The plant (dalook) has other important uses. The Arab women gather the branches and leaves and dry them thoroughly. They then crush the dried material into a powder. This powder is sold in the native bazaars and is also hawked about the streets. The price is 1 pice (½ cent) per cupful, the cup being about one-third of a pint in size. This form of dalook is used for cleansing the body, particularly by the Arab and the Somali women. It is invariably used when the hair receives one of its infrequent washings. The dalook powder is also used to make tough meat tender. While hottom and dalook are still extensively used, they are slowly giving way to imported soap. The use of soap in this district is increasing, and that it will continue to increase is a certainty.

DRIED FRUITS ORDER.

The Ministry of Food has issued the following announcement:—The Dried Fruits (Restriction) Order, 1917, prohibits all dealings in dried fruits of specified varieties outside the United Kingdom. Goods already on passage to the United Kingdom at the date of the Order are excepted. The effect is that the Food Controller becomes the sole importer, except in cases in which he gives a special licence. The Order also requires all persons concerned to furnish a statement to the Ministry of Food before September 15, 1917, showing the quantities of fruits purchased but not shipped on September 8 and the quantity thereof sold or unsold.

GOLD STANDARD RESERVE.

The India Office has issued the following statement, showing the form in which the balance of the gold standard reserve was held on August 31, 1917:—In India: Gold, £45,000. In England: Cash placed by the Secretary of State for India in Council at short notice, £6,000,043; British and Colonial Government securities (value as on March 31, 1917), £16,742,581; British Government securities since purchased (cost price), £10,182,856; giving a total of £32,980,480.

COMPANY REPORTS.

ROUMANIAN CONSOLIDATED.

The report of the Roumanian Consolidated Oilfields, Limited, for the year to June 30 last states that the profit and loss account, adjusted as between the year ended June 30, 1916, and the present year, shows for the former a profit of £106,728 and for the latter a debit of £2 16s. 2d. Profits were earned during the first four years of the company to the amount of £500,537, which, after writing off £9,708 for preliminary expenses, were applied as follows:—Depreciation, £161,591; reserve funds, £109,060; credit of profit and loss account on June 30, 1916, £220,179. While the development work incident to every new undertaking was being actively carried out, crude oil was produced to the amount of 313,628 tons, and, notwithstanding all the difficulties caused by the European war (in which Roumania was neutral until the end of August, 1916), the company's position in November, 1916, was:—Acreage (upwards of 90 per cent. still undeveloped and large areas not yet tested), over 5,000 acres; refineries, two; workshops, five; oil pipelines, 175 kilometres; steam, water and other pipelines, 120 kilometres; tankage on fields, etc., 60,500 tons; tankage at Constanza (for shipping purposes), 5,000 tons. The company had installations with producing wells at Bana Mereni, Baicoi, Chiciura, Bordeni, Telega, Bustenari and Campina, all of which were in operation in November, 1916.

A description is given in the pamphlet of the arrival in Roumania last November of the British Military Mission under Sir John Norton Griffiths, the convention arrived at with the company when the whole property and the services of the staff were, at Sir John Norton Griffiths' request, promptly placed at his disposal, and there is a full account of the destruction which was so efficiently carried out. Details are also given of the company's audited and certified claims, amounting to £1,270,725, and the company reserves the right to claim additional sums if the claims are not admitted with reasonable promptitude. Briefly summarised, the position is as follows:—Lands, £697,000; certified claims, £1,270,000; issued share capital, £1,177,000; debentures, £43,000. The surplus is accounted for to the extent of about £240,000 by the rise in values and about £320,000 by reserve funds and undistributed profits. The above claims take no account of another claim which the company will undoubtedly have in respect of the occupation by the enemy. A movement is on foot for the amalgamation and consolidation of all (or the major part) of the British petroleum undertakings, about fifteen in number, operating in Roumania, in view of securing co-operation and mutual assistance in formulating and dealing with the several claims, and in order to preserve the industry while in suspense during the war, and with the object of constituting a distinctive British petroleum undertaking available for the support of British interests after the war. The directors look with favour upon the progress of this movement, and may have to consult the shareholders thereon at an early date. The annual meeting will be held at the Cannon Street Hotel on September 24 at 2.30 p.m.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Avenue,
London, Thursday.

We have again this week had an exceedingly quiet market, and business has been on a very restricted scale. There has again been some weakening of prices here and there, which is not to be wondered at, as a stagnant market generally brings in a few sellers. There was also a Reuter cable published on Tuesday stating that the area under cotton next year would be restricted to 200,000 feddans, and this has possibly affected some holders of Egyptian securities. There is no doubt that there is some error of transmission in the cable referred to, and it is probable that the figure of 200,000 should have been 1,200,000. No doubt this matter will be cleared up.

There has been an improvement in the price of cotton during the past few days, and it is quite on the cards that, should the news from Russia improve, the Egyptian market will readily respond.

In Government stocks prices have kept firm. In Bank shares Nationals are ⅛ lower at 15⅞, and Agriculturals have receded 1/16 to 5 15/16. Some business has been done in Agricultural Prefs. at 7, and Anglo-Egyptian Banks are again ⅛ higher at 13¼, at which price there are several buyers about, while sellers are very scarce.

In Land shares Behéras are ¼ down at 12, Union Foncières 1s. lower at 39s., and Sidi Salems 9d. down at 15s. 6d. New Egyptians have remained firm round 13s. 3d., but Delta Lands are a trifle easier at 13s. 3d.

In Miscellaneous shares Salts are 6d. quieter at 25s. 6d., and Khedivial Mails have receded 3s. to 31s.

Greek securities have been inclined to weaken, but there has been no pressure to sell. Both 1881 and 1884 are half a point down at 59½, Monopolies and Larissas have lost 1 point at about 53 and 55 respectively, and Rentes are ½ down at 44. The other Greek loans have all remained quite firm.

Oil Shares.

The only change on Wednesday was in Roumanian Consols, which closed 3d. down at 12s. 6d.

Paris Bourse.

Quotations on Wednesday included:—Egyptian Unified, 96 (unchanged); Serbian, 1895, 59 (unchanged); Turkish Unified, 62 (unchanged); Credit Foncier Egyptien, 751 (against 741); Suez Canal shares, 4,600 (against 4,570).

COMPANY MEETING.

RAPHAEL TUCK AND SONS.

The annual meeting of this company was held on September 5, Sir Adolph Tuck, Bart., managing director, presiding. After referring to the many difficulties of the past year, the Chairman observed that the business of the company in this the fourth year of the war was again on the upward grade, the net profit for the year amounting to £14,530. With regard to the outlook for the future, he gave some interesting particulars with regard to the new collections placed upon the market by the company for the coming season, which, he stated, were already meeting with a splendid reception by the trade and the trade Press. Having dealt with the accounts in detail, the Chairman went on to refer to the American company, observing that the certified balance-sheet vouched for by one of the first firms of accountants in America had been carefully studied by the board, and, in view of the limited number of publications which London in these difficult times was able to place at the disposal of the American company, and upon the sale of which the latter so largely depended, added to the fact that it was now over three and a half years since one of the London directors had been able to pay the necessary periodical visit to the States, the results for the past year were more encouraging, and gave promise that when normal conditions once again prevailed the American business would make up for its losses in the past. The adoption of the report was seconded by Sir Arthur Conan Doyle, and was unanimously agreed to.

TERRIBLE REPORTS
from Syria—

1.—From an American Missionary:

"Your friend, Rev.———. fasted twenty days that he might give his portion to others, and then died himself of hunger. His family is still living with us. The contagious diseases, hunger, and more work than we can possibly do, threaten the lives of all Missionaries here. We expect to die, and then this unfortunate people will be left with no one to help or serve them.

"I visited Junieh recently (Junieh is a town of some 10,000 inhabitants near Beirut), and sought from the officials permission to help as I was able in relief work: THEY TOLD ME IN THE TOWN AND JUST OUTSIDE THERE WERE 5,000 DEAD. A village two miles distant did not have one inhabitant left alive. As I visited among the Lebanon villages, I found the want greater than anywhere else in Syria. The Wali of the Lebanon sent for me and thanked me for what I had tried to do. He asserted that 200,000 had died of hunger.'

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the UTMOST URGENCY.

£300,000 WANTED
of which £50,000 is needed at once.

FOOD, MEDICINE and CLOTHING are being distributed. Stored goods will be sent into the country as further access is obtained. Relief will be given to all in need—Christian, Jew and Arab alike

Chairman (London), Lt.-Col. Sir Henry MacMahon, G.C.M.G., &c. (late High Commissioner in Egypt).

Hon. Treasurer, J. F. W. Deacon, Esq., Williams Deacon's Bank, Ltd.

Please send your donation to-day to the Secretary, Syria and Palestine Relief Fund, 110, Victoria Street, Westminster, S.W.1.

NOTES OF THE WEEK.

Little news has come from Roumania during the week, and the Germans have made no claims in that direction. Bulgaria also has done nothing of moment, but on the western Balkan front the Allies have had a marked success. French and Russian troops advanced twenty miles in Albania, and are now established on the south-western shores of Lake Ochrida. It would appear that the enemy was taken by surprise, and that no serious resistance was attempted.

But all military events in this sphere are still overshadowed by the situation in Russia. General Korniloff's movement failed to win sufficient support from the troops to carry through his purpose, and M. Kerensky triumphed. He is now nominally Commander-in-Chief, and the head of the War Cabinet of five which is in charge of the new Government. A Republic has been proclaimed, but words are not necessarily adequate substitutes for things, and it remains to be seen whether M. Kerensky has the real power which he claims. Certainly General Korniloff had not. He stood for a restoration of discipline and a resumption of the offensive, and it seemed probable that he had assured himself of support from the army in advance. Clearly he miscalculated badly; but it is uncertain whether he struck at an inopportune moment for himself or whether the army resented the idea of a restoration of discipline.

Certainly the first movements of M. Kerensky in this matter show a hesitancy which does not augur well. He has issued an order of the day addressing the rank and file, advising them not to arrest their officers, which is, he says, the function of the judiciary. That such an obvious order should have to be issued almost in the form of an appeal is a sufficient indication of the pass to which things have come—and there have been more disturbing statements as to mutinies in the army and navy which show that the trouble is rather spreading than diminishing. Without discipline and the will to fight nothing can be done; and the Germans, who stayed their hand while there was a chance of Russia embarking on civil war, will no longer hold back any offensive they may have in contemplation. They have already given vent to their fury at the recently reiterated refusal of M. Kerensky to contemplate a separate peace, and as that prospect fades, they will no doubt attempt to make the most of the brief period which remains for military action before the winter.

Meantime the Soviet is divided, and the two parties are issuing manifestoes against each other. They are only agreed upon their refusal to have any Cadets in the Government, and so far M. Kerensky has obeyed their mandate. But M. Kerensky himself is claimed as a Moderate by some voices—a fact which in itself shows how far to the left the extremists have moved. A demand for a general peace of all the peoples has been put forward by some parties, which has, of course, been backed by German ink and will certainly be backed by German gold—from which source also came the rumour, no doubt, that the Entente diplomatists had taken the side of General Korniloff against M. Kerensky. That lie was easily disposed of; all that the Entente want is to see Russia united against the enemy.

The idea that Germany is ready for a "peace of the peoples" has received a curious commentary this week in the announcement that a new Polish Cabinet is to be formed. The Poles are to have the choice of the Ministers of Fine Arts, Justice, and Education, but the Germans propose to nominate the Ministers for Finance, for the Interior, and for War. The Teutonic modesty in recognising that the Poles are more fitted to deal with art than the heavy Prussian sculptors and painters is an engaging and even a redeeming trait in their character; so also is their reluctance to touch the Ministry of Justice, justice being a commodity which Germany neither imports nor exports in these days. But while these matters are handed over to the Poles, the real running of the country devolves on the Departments of Finance and the Interior, and for these only Germans need apply. It would probably have been better to appoint a Potsdam bureaucrat at once—it would have saved the appearance of mockery. Meanwhile, the Polish Legion has been deprived of even the semblance of nationalism, and is henceforth to be called the Auxiliary Polish Corps of the Austrian Army.

There is sufficient indication in these steps of the policy that the German Powers would pursue in the Balkans were they able to conclude a victorious peace in the East and South-east of Europe. The Polish Legion was a volunteer force, yet it disappears beneath the pressure of Austrian centralisation; the actual enemies of Austria in Serbia would be treated far more drastically; and the German promise of a constitutional régime for Poland resolves itself into a Polish Minister for non-political offices and German Ministers for political offices, and, to make assurance doubly

Digitized by Google

sure, a power of veto even over that. These things are not likely to reconcile their enemies to Germany's peace offers.

The latest news of that particular game appears to be the suggestion that Germany will give up Belgium. If it be true, it is a continuance of the policy which is becoming more and more recognised in Germany, of a draw on the Western front in exchange for a victory in the East. It is probably calculated that England may be tempted to make peace by this means—indeed, an audacious lie has been floated in Berlin to the effect that we have made an offer of peace—and that our war-weariness will induce us to agree to what would be practically a German control of the East of Europe. Further hints to the same effect come from Austria, which, with Serbia and Montenegro in its pocket and its great enemy disorganised, can never have a more favourable moment for peace than the present. If peace were concluded at the present time Austria could probably afford to give up even the Trentino and Gorizia to Italy, if she could by any means secure Serbia and avert the dissolution with which the Jugo-slav movement threatens her.

The best answer to these schemes is the fact that the *Giornale d'Italia* announces that, on his recent visit to London and Paris, Baron Sonnino has come to an understanding with England and France on the Adriatic question. That, coupled with the cordial reception of the Serbian Premier in Rome, is an indication that the Italo-Jugoslav question has reached a satisfactory accommodation. Austria has, of course, long reckoned on and profited by Italo-Slav dissensions, and it is the knowledge that those dissensions are fast disappearing, as well as the increasing internal difficulties that face the Cabinet at Vienna, which makes Austria, and, through Austria, the Vatican, so anxious for peace.

A curious report has been published to the effect that the Bulgarian Government is sending out political missionaries to spread the doctrine of the necessity of Bulgarian annexation of the Serbian and Roumanian territories at present occupied by the Bulgarian armies. These envoys are to be accredited to Germany, Austria, Switzerland and Sweden. Germany at least should require no conversion to the doctrine of annexation, although she is perhaps not quite so ready to approve of the aggrandisement of her allies as of her own expansion. But the envoy to Austria will have a more delicate task, since, if report speaks truly, Austria herself has designs on Serbia, and will not see the point of having fought the war for the *beaux yeux* of Bulgaria; Vienna would no doubt be ready to cede part of Serbia to her ambitious ally, but the lion's share she wants for herself, and in any event she is not likely to forget the fact that she entered the war at the beginning, and Bulgaria came in only a year later. The interest of Switzerland in the destiny of Serbia are not altogether apparent; and while we know that Sweden is rather aggressively friendly to Germany the world was not altogether prepared to hear that the authorities at Stockholm were ready to extend a benevolent ear to all the allies of the Central Powers. Quite possibly the envoy to Stockholm is really accredited to Petrograd *in partibus*.

At the same time, the practical difficulty in the way of Bulgaria's campaign is the fact that she has been financed by Germany. She obtained a loan six months before she entered the war, presumably as the price of her intervention. Her finances are in no state to stand the stress of a long war, and probably Bulgaria anticipated that one campaign would settle the whole business; but it has lasted, so far as she is concerned, nearly two years already, and shows no signs of coming to an end yet. In these circumstances, Sofia must have drawn rather heavily on Berlin, and the German Government does not make advances, even to allies, without a very definite *quid pro quo*. In the case of Turkey, the world knows already what the consideration was—the Ottoman Empire was forced to concede fiscal rights to Germany which in effect gave her master the right to exploit Asia Minor after the war. In the case of Bulgaria, the terms have not been divulged, but undoubtedly the bargain has been struck. Apparently the conditions have not proved quite satisfactory to Bulgaria, or there would be no necessity to embark on the present agitation. But neither Berlin nor Vienna is very likely to be moved by a political tourist party—they have used that kind of machinery too often at Potsdam themselves to have any particular respect for it. Bulgaria has made her bed, and will have to lie on it.

The announcement that the Greek Government has committed for trial those prelates who took part in the ceremony of anathematising M. Venizelos was not unexpected. In the events of last December it will be remembered that certain bishops were persuaded to support the King's policy so far as to place M. Venizelos under an ecclesiastical ban. It was an outrageous interference of the spiritual power in a purely temporal matter, and it is now meeting with its just punishment. There was no excuse whatever for the episcopal censure, and, indeed, no need for the Church to intervene at all. It may be assumed that after the bishops have had a fair trial they will be given an opportunity of reflecting on the folly of their acts in the leisured retirement of a convenient monastery.

The deplorable disaster at Salonika, which moved the whole Western world to sympathy—sympathy that has been happily expressed in a tangible form by the raising in London of a fund to relieve distress—has evoked a cordial expression of goodwill from the British Government. M. Politis, the Greek Foreign Minister, has replied that "the Royal Hellenic Government is deeply grateful for the noble sentiments, which will be a precious comfort in the cruel blow which has struck us." As further details of the disaster reach this country, the more active will sympathy become for the unfortunate city. Although the loss of life was happily small, a large proportion of the people have been rendered homeless. Their houses can be rebuilt in time, but some irreplaceable monuments of antiquity in the shape of ancient Byzantine churches have been ruined or completely destroyed.

Some further details have been published this week of the British medical aid to Serbia. Field hospitals have been erected on the Salonika front with a total of ten thousand beds. The equipment is, of course, on modern lines, and the official organ of the Serbian General Headquarters pays a warm tribute to "the liberality of the hospital administration, the conscientiousness and dutifulness of the members of the staff, and the whole-heartedness and warmth which made every patient feel thoroughly at home." As a result of this "there has grown up among Serbians an ardent desire for a lasting Anglo-Serbian friendship and a longing for closer association." This feeling will be warmly reciprocated in England, which has been greatly moved by the accounts that have been received from British doctors and nurses on the Serbian field of war of the heroism and uncomplaining fortitude of the Serbs.

The German propagandists have tried a singularly futile trick in Morocco. They have spread the report that General Lyautey, the French Resident-General, has been disparaging the British effort in the war. The statement was almost too absurd to need denial, but it serves as an indication that Germany has not altogether resigned her ambitions in Morocco, although little has been heard of them since Agadir, and even the obedient German Press has almost forgotten the alleged German commercial interests in Morocco during the war.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 23.

H.H. The Sultan.

The Sultan still remains on his estate at Gabaris, where the climate suits him far better than that of Alexandria. In his speech at the recent meeting of the local British Red Cross and Order of St. John Committee the High Commissioner referred to the indifferent state of health which his Highness has enjoyed for some time, and I understand that it is unlikely that the Sultan will leave Gabaris or hold any Court ceremonies until the cooler weather sets in.

The Nile

On Friday evening there took place out at Old Cairo the historic ceremony of "Cutting the Khelig." Nowadays the ceremony is shorn of much of its attraction and pomp owing to the fact that the old canal, which used to run from Old Cairo through the city, and which on this occasion had the dam at its mouth cut so as to allow the high waters of the Nile to enter it, no longer exists. Nowadays the traditional boat, which used to enter the canal with the first rush of water, still proceeds to Old Cairo amid the booming of guns and with a crowd of official guests on board, but beyond that the ceremonial part of the event is confined to the signing, in the presence of the representative of the Sovereign, of a Hedja drawn up to record the fact that the Nile has risen to the point where the collection of the land tax becomes permissible, and to a firework display. This year the ceremonies were carried out in the presence of Ali Pasha Zulfikar, Governor of Cairo, representing H.H. the Sultan, and the attendance of Egyptians within and without the enclosure was unusually great.

The Nile is rising rapidly, but, although it appears certain that the flood will be a high one, it is as yet impossible to say how long the high levels will last. Meanwhile, so good is the water supply, that it has been found possible to allow water from the river to lands which would normally receive it between November and the arrival of the 1918 flood. A Proclamation to this effect and giving certain powers to the officials of the Irrigation Service has been issued by General Allenby. This should result in an extension of the maize area and should further alleviate the cereal foodstuffs situation next year.

The British Red Cross.

At the meeting of the local committee of the British Red Cross, already referred to above as having been held at the Residency under the presidency of the High Commissioner, it was decided to accede to the request of the authorities at home for a third appeal to be made to Egypt and the Sudan for funds, and October 17 has been fixed as "Our Day" out here. Egypt has benefited so much from the protection afforded to the country by the British forces, and the population both in Egypt and the Sudan has derived so much prosperity from their immunity from the ravages which the war has made elsewhere, that it is to be hoped that they will once again respond with alacrity to the call now made upon them, even as they did on the previous two occasions. With his customary magnanimity and charitableness whenever it is a question of alleviating suffering, his Highness, immediately he heard that it had been decided to hold an "Our Day" for Egypt and the Sudan, headed the subscription list with the sum of £E500.

The Financial Advisership.

I understand that owing to Mr. Ronald Lindsay's resignation Lord Edward Cecil, for whom he was acting, will return to Egypt very soon. No decision as to the Under-Secretaryship in the Ministry of Finance will be taken until Lord Edward arrives.

The Lighting Economy Order.

The Order for the early closing of public establishments and for the reduction in the lighting of the streets so as to effect an economy in the consumption of fuel came into operation last week throughout the country. The Order was enforced with very little trouble, and the streets in consequence assumed an exceedingly gloomy appearance. Some establishments managed to remain open by burning candles and petroleum lamps, but such devices for evading the law were soon put a stop to. The present Order aims directly at reducing the amount of coal used for lighting purposes, but since coal imports have fallen to practically nil, it is quite on the cards that the domestic as well as the public consumption of electric light, gas and coal will have to be regulated in the very near future, in which case other lighting and heating substitutes will have to be used. Of these substitutes, candles, petroleum, and alcohol are the most important, at any rate in the towns. The two former are almost entirely imported—the Red Sea oilfields do not produce anything near enough for Egypt's requirements—and as imports are at their lowest ebb, it follows that the strictest economy even in these substitutes ought to be practised. It is indeed abundantly evident that further restrictions will have to be introduced very soon; that, in fact, some control will have to be instituted, for already with a view to profiting by the situation some far-seeing persons have bought up the available stocks of candles and have driven up the price enormously.

Egyptian Finances during April.

Cairo, August 20.

The State accounts for April, the first month of the new financial year, just published, show that the upward trend of revenue still continues. Revenue during the month amounted to £E1,408,287, as compared with £E1,329,037 in April, 1916. The chief heads were land tax, £E311,664; Customs, £E216,302; tobacco dues, £E95,178; mixed courts fees, £E79,049; native courts fees, £E33,194; railways, £E371,756; domains receipts, £E48,510; Ghaffir cess (which makes its first appearance in the accounts), £E41,639; and miscellaneous receipts, £E51,924. The only decrease of importance was in tobacco dues, which fell off by £E89,855. Both land tax and customs showed large increases over April last year. Expenditure during the month amounted to £E1,585,418, as against £E1,610,138, and the deficit at the end of the month—there is always an excess of expenditure over revenue during the early part of the financial year—was £E177,131, over £E100,000 less than at the end of April, 1916.

SALONIKA MAILS LOST.

The Postmaster-General announces that letters, newspapers, etc., but not parcels, for the Salonika Force, which reached the Army Post Office, London, for despatch between 2.30 a.m. on July 31 and 2.30 a.m. on August 4, have been lost at sea through enemy action, also letters, etc., for the civilian population of Salonika and district and many of the Greek islands which reached the General Post Office, London, for despatch from July 30 to August 2, inclusive.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August.*

Reorganisation.

On returning to Athens one finds a different atmosphere from that which prevailed seven months ago. Under the masterly leadership of M. Venizelos, efforts are being made to evolve some order out of the chaos into which the country has drifted during the past two years. Athens seems to have quite settled down to the new regime, and the various controls of the Allies are being relaxed or removed. The situation called for firm treatment, and the promulgation of martial law was evidently a necessary measure to control the Press and to prevent mischievous meetings.

The Government's Disclosures.

Telegrams will already have informed the British public of the chief features of the White Book, which has brought out into such strong relief the efforts of the German Government at the outbreak of the war to induce Greece to abandon her treaty obligations towards Serbia, and the unscrupulous efforts made by the King and his entourage to play into the hands of the Germans to the prejudice of the Allies and of Greece's true interests. The White Book also sets forth the details of Greece's betrayal of her Ally. Its publication and the disclosures regarding German loans to Greece have naturally provoked much comment in Parliament, and M. Venizelos has spoken in strong terms of the part played by the National Bank in the transactions. The recompense that the Bank was to receive from the Government for the part it took in realising the loans was the extension for another term of years of its privileges; but there had not been time to effect this renewal. M. Venizelos states that before this extension is granted certain necessary changes will have to be made, and a process of cleansing carried out.

The Reply to the King's Speech.

The debate in the Chamber on the address in reply to the King's Speech from the Throne clearly revealed the two currents of political feeling. Two replies had been submitted, one from the Majority and the other from the Opposition. That of the Majority began by expressing the conviction that the advent to the throne of King Alexander, after the abdication of King Constantine and the Crown Prince, would mark the opening of a new era for the nation, and that the people looked with calmness on the future evolution of the political life of the country. The hope was expressed that there would be an early removal of the obstacles in the way of the convocation of the National Assembly, which is to fix definitely the regime in accordance with the democratic views of the nation, with the object of excluding the possibility of a misinterpretation of constitutional procedure. Parliament, it was added, had learnt with satisfaction of the recall of the diplomatic representatives from the Central Powers, and, thanks to this measure, Greece was now able to take her place alongside other democratic nations who are fighting against despotism and absolutism. The address expressed satisfaction at the measures initiated to bring into line the whole forces of the country in support of the nation's grand aspirations, and referred with satisfaction to the steps taken to reorganise the public services for the benefit of the country. The address of the Minority was, of course, couched in a different tone. It stated that a divergence of views in the policy of the country did not create a real split in the State, and criticised the action of the Powers in interfering. It commented on the action of the Government in revoking the Royal Decree which dissolved the Chamber of May, 1915, describing it as a violation of constitutional government, and deprecated the blame thrown against the Church, the treatment of some of the clergy, and also the suspension of many public functionaries. This address, in fact, criticised the entire actions of the Government in power. But, in conclusion, it expressed the hope that Greece would emerge from the present crisis stronger morally and materially, that her territorial integrity would be conserved, and that she would be free to settle her own affairs independent of any influences and in accordance with her sovereign rights.

Effects of the Blockade.

At the end of a long blockade Greece finds her stocks of all foodstuffs quite depleted, and measures are now being taken to ration the country, but the want of the necessary tonnage is likely to restrict importations. Everything has naturally gone up in price, and the cost of living has become much heavier. The bread is now brown, containing a certain percentage of bran, but seems of a better quality than that consumed in France and Italy. Coal practically does not exist here, and has been replaced by lignite, wood, and pine cones. Various lignite deposits have been opened up, and steamers, trains, and industrial establishments are making use of this fuel; but large quantities of timber are also consumed, the burnt part of Tatoi forest being cleared.

General News.

The disastrous fire which destroyed a large part of Salonika somewhat preoccupied public attention here last week. The fire is a great calamity for Salonika, all the more so in present circumstances, when the replenishment of stocks and the reconstruction of buildings will be extremely difficult. It was hard enough before the fire to find accommodation for the great influx of people due to the military operations, but now it has become absolutely impossible to do so. King Alexander, having expressed a wish to visit the town, left here on Friday in a special train, and returned two days later.

The Military Commander has issued a circular to the police that in future no foreigners will be allowed to travel in the country without a passport which has been visé by their authorities. All foreign subjects residing in the district of Athens must within five days notify their presence to the Prefecture of Police and register themselves and give two copies of their photographs. They will be given a police permit to stay in the country with a copy of their photograph attached, and in the event of a foreigner going abroad a police permit will be necessary. These measures do not apply to the staffs of the foreign missions.

Athens is again this summer suffering from a shortage of water, the public supplies being wholly inadequate to meet the requirements of the city. This is a great misfortune for a town like Athens, where an unlimited supply of water is indispensable in a summer temperature of over 90 degrees.

The establishment of a through service of trains from here to Salonika has greatly improved communications with that town.

According to the papers, the extermination of the Greek communities in Asia Minor seems to be proceeding almost as badly as in the case of the Armenians. In any case, what with the persecution by the Turks and the insufficiency of nourishment, the Christians in Asia Minor are evidently in a miserable condition, and the mortality is said to be very heavy.

Delayed in transmission.

CYPRUS NOTES.

(From a Correspondent.)

Forty Years on.

Cyprus has entered the fortieth year of British Administration, the flag having been hoisted on July 12, 1878. There are no longer any British officials on the island who witnessed that historic event, but there are several who came soon after. They have seen many changes, and life is very different in many aspects from what it was in the days of the early pioneers.

Bairam was quietly celebrated by the Moslem community in town and village. The tranquillity of the Turkish element has remained unruffled, affording another example of quiet progress and contentment under a just and stable Government, which carries out its duties and obligations with clockwork regularity. In the recent session of the Legislative Council the Ottoman members held their own and voted with the Government whenever Greek claims or proposals were brought into question as clashing with a sane view of the political situation, or the ordered course of debates.

The bulk of the well-to-do and leading Turks is gathered in the capital, Nicosia, forming a loyal and compact society which embraces all the institutions which make Ottoman society complete in itself. The transfer of the island from the Sultan's authority to British has made no perceptible change in the course of events. The few appointments which were made, or confirmed, at Constantinople are now made independently. All the establishments provided for under the Anglo-Turkish Convention are maintained, including the District Kadi's courts, which take cognisance of religious matters. A Turkish judge sits in the civil courts with British and Greek colleagues. The Evkaf Department, which deals with properties dedicated to religious and charitable purposes, is administered by one Turkish and one British delegate. There are a high school and other

educational establishments. Many Turks speak excellent English, especially among Government officials. Not a few were educated at Canon Newnham's school.

The principal mosque is the beautiful Latin Cathedral Agia Sophia, converted for Mohammedan worship after the Turkish conquest in the 16th century; as its great namesake was at Constantinople after the conquest by Mehmet II., in the 15th century. There is a *Tekké* of "Whirling" (Mevlevieh) Dervishes, and the large order of the (Kadrieh) "Howlers," and others are represented. As in all Moslem communities, large numbers of residents are affiliated to one, or more, of the principal *taryks*, or Orders. There is a Dervish *Tekké* which gives picturesqueness to the western margin of the Salt Lake near Larnaca. Here lies buried a daughter of one of the Companions of the Prophet. As regards the Mecca pilgrimage, it is not very often undertaken from Cyprus, and now the war has placed additional obstacles.

The title of Hadji, or pilgrim, is, by the way, borne far more in Cyprus by Greeks than by Turks. Many Greeks bear this prefix to their names. Thus we have Hadji-Pavlos, Hadji-Ioannou, Hadji-Dimitri, and the title is prefixed to many other of the commoner names, such as John, Peter, George, Michail, Nikolas, Kyriakos, Andreas, Andoni, Savas, etc. It has been earned in bygone days by ancestors who have made the pilgrimage to Jerusalem. This journey was, of course, more perilous and expensive in past ages. Nowadays there is far less desire to bear a name partly of Moslem origin. In normal times Cypriot Greeks go in large numbers to Jerusalem, and steamers are often chartered for passages to and from Jaffa. The war has temporarily stopped the annual stream, but it will, no doubt, flow again in happier times. Greeks must now content themselves with visits to local shrines, which are numerous.

In the Greek Community there is much more movement. Commercial activity is, of course, far greater, and Greeks now go to the hills in large numbers for a change during the hot months. Members of Council take note of the needs or grievances of their constituents. Looking back at the past half year, one of the most conspicuous features has, perhaps, been the strengthening of the combination of members of Council and the leading members of the Greek Church since the election of the new Archbishop Kyrillos. They work in a more vigorous partnership in local "politics" and for the advancement of Greek interests.

ROUMANIA'S ARMY.

(From a Correspondent.)

Jassy, July.

The Retreat and the Future.

Rumania is again menaced. The Germans are at her gates, and she is facing the enemy who would destroy her, not only with her own troops but with those of Russia. The Roumanian troops, by general admission, are of the best quality: the proof of this was given quite recently, when they took the offensive in the south and repulsed the invader, inflicting heavy losses upon him, besides taking nearly 4,000 prisoners and much booty. Unfortunately this action, which began so well, had to be broken off for strategic reasons on account of the position of the Russian army in Galicia. As to the Allied troops, it is hoped that they will oppose the invader again on the new line of resistance. The Russian soldier is very amenable. The unhappy retreats in Galicia and Bukovina have been due to the spirit of non-resistance which has spread through the Russian lines since the revolution; the German victory is thus not really a victory, but an occupation of territory without battle. One cannot call the retreat of the Russians a defeat—they have not fought. Wherever they have resisted the enemy the German push has been stopped. It is thought the enemy cannot advance further, because, according to the calculations of competent authorities, they have not sufficient strength to follow up adequately the action begun in Galicia. On the other hand, what now opposes them is an army determined to fight. The Moldavian and Bukovinan fronts have been strengthened by the Russian troops which took part in the recent offensive, as well as by certain Roumanian units which gave a good example.

A United Country.

In face of the danger which menaces the country, all sections in Roumania are united. The two historical political parties, represented by their chiefs, M. Bratianu and M. Take Jonescu, are in power. The feeling against a separate peace is stronger than ever. As the enemy armies are still active the necessary steps have been taken to remove the valuables of the State into safety—the banks, etc., have sent every day trains loaded with their deposits into Russia. Part of the population has also quitted its native soil, preferring exile to living under the German heel. The Government, however, like the King, will not leave until the last moment, and the army will fight to the last man. People remember a phrase of King Ferdinand's on this matter; he remarked that if danger approached he would send his family away, but he himself would remain at the head of the army to conquer or die.

The Army.

The morale of the Roumanian army is excellent. This army, which only a few short months ago brought tears to one's eyes, is to-day the pride of the nation and compels the admiration of foreigners. The officers of foreign missions who have helped or who have taken part in recent battles marvel at its prowess. The little Roumanian soldiers, after an artillery preparation which demolished the German trenches, went forward to the attack with a gaiety wonderful to see. Victory was assured. The enemy had quitted his positions and prepared to retreat: in a few days it would have been possible to recover all the occupied territory as far as Buzeu. Unfortunately, events in the north forbade the achievement and the offensive was stopped. The army which should have advanced on Braila and freed the lower course of the Danube and the mouths of the river, has now many of its officers and men sick. This army, under General Christescu, had laid its plans down to the minutest details, had bombarded the enemy uninterruptedly for two days, and the Germans, unable to hold out any longer, had quitted their positions. But just as the infantry were to be given the order to attack the telegram from Headquarters arrived to stop the advance. The disappointment of this army and of its chief, who was about to reap the fruits of so long a preparation for victory and was now unexpectedly condemned to inaction by the orders of their superiors, may be imagined.

The army of General Averescu has done wonders. The enemy positions have been rushed, and the troops have shown unparalleled enthusiasm. Severely wounded men shouted with enthusiasm at having given their blood for their country. The reconquered territory had everywhere been cultivated, not for the inhabitants, but for the invader, and the Germans had carried off everything they could lay hands on. Not a single chicken had been left behind; the people behind the German lines had suffered, it was found, greatly from hunger. Thus has vanished for ever the legend created by the agents and spies of the Kaiser that the German troops had treated the occupied lands generously.

Roumania and Her Allies.

The feeling of gratitude and affection for the Allies is as great as that of hatred for the Germans. The visits of M. Albert Thomas, of M. Vandervelde, and of General Hugh Scott have given an opportunity for Roumania to show her feeling for France, Belgium, and America. The representatives of these three countries, who came so great a distance to encourage the Roumanians in their difficult position, have been publicly fêted and officially received by Parliament, and the splendid speeches of MM. Take Jonescu and Bratianu faithfully expressed the feelings of every Roumanian. Full confidence is felt in England, who entered the war to defend the rights of small nations, and France, like America, will not let Roumania perish. It is therefore with great satisfaction that Roumania has learnt that the Allies have again insisted on Russia giving as much assistance as possible to her neighbour, and that Moldavia is to be defended at all costs. The other point—a reaffirmation of the promises made regarding the national aims—has also reassured public opinion. Certain of the final issue of the war and of the justice of their cause, the Roumanians await the future with confidence.

The Montenegrin Committee for National Unity has issued a memorandum expressing accord with the principles of the Corfu Declaration, as expressing the will and the wish of the Serbian people in Montenegro. The memorandum adds: "The Montenegrin Committee for National Unity will continue its work, which aims at the union of all Serbs, Croats, and Slovenes."

AYAHS' HOME,

26, King Edward Road, South Hackney, London.

ESTABLISHED 1825.

IN CONNECTI · WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. Fletcher, Matron.

CORRESPONDENCE.

THE ADRIATIC TREATY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I confess to a certain surprise at one or two expressions in the first part of your leading article under the above heading. You would seem to imply that until the publication of the interview with Signor Bevione nothing had been known of the terms of the Adriatic treaty with Italy, and you state that Jugoslav circles have believed erroneously that the treaty conceded to Italy the whole of Dalmatia. The "secret" of this treaty, concluded on April 27, 1915, was from the first an open one. I was myself apprised of its leading features a month later, and in September, 1915, in the *British Review*, I gave an outline of its terms as I had received it, an outline which was correct in its main features, but requiring modification chiefly in the matter of the allocation of the islands. In February, 1916, Dr. Seton Watson, in the *English Review*, also stated the main provisions of the treaty, his *exposé* containing the necessary modifications in my own statement alluded to above. Jugoslav circles were throughout well informed of the actual contents.

There is unfortunately some misapprehension, if I may say so, in your article as to what the actual terms of the treaty are. Italy is conceded a great deal more than a "strip of Dalmatia" from the north of Zara to Spalato. As a fact, she is given the whole of Dalmatia north of Spalato, about three-fifths at least of the area of Continental Dalmatia, the southern boundary running from the neighbourhood of the Arzano Pass to the immediate north of Spalato. Your remark as to the allocation of the islands is just, but unfortunately that allocation is far different from that which evidently would have been advocated in your article. All the Quarnero Islands, both inner and outer, go to Italy, together with all the islands off the coast of the ceded territory. Moreover, beyond that she receives all the southern islands except the small islands, Lopud, etc., which lie immediately to the north of Ragusa. The case of Meleda and Lagosta is particularly flagitious, for they did not form part even of the Venetian dominion such as it was, but belonged to the independent republic of Ragusa, which overlooked Venice.

The treaty boundary assigns a good slice of Carniola to Italy and strikes the sea just west of Fiume, which is left to Croatia; it then passes along the coast so as to give all the islands to Italy till it joins the point where the northern boundary of Dalmatia touches the sea; it then follows the Dalmatian frontier along the Dinaric Alps to the neighbourhood of the Arzano Pass and then strikes across to the Bay of Spalato between that town and Traü. The harbour of Spalato will therefore be covered by Italian guns across the bay. The boundary then again hugs the coast, and even passes through the Curzola channel so as to include that island in Italian territory, finally enclosing Meleda and Lagosta. The character of the treaty, it will be seen, is hardly that envisaged in your "leader." I forbear comment on it here, but in my book on the Jugoslav future, shortly to be published by Mr. Unwin, I have devoted some sixty pages to the Adriatic question. It should be stated that the above account of the delimitation has never been challenged as inaccurate by the Governments concerned.

Perhaps I may be allowed to take this opportunity to mention two other matters. It has been stated in the Press that M. Pashitch went to Rome with the idea of entering upon a detailed agreement with Italy, and his visit has been described as disappointing. It may save disappointment to state that his object was only to block out a general agreement, leaving the settlement of details to stand over. Whether he has been successful in his more limited aim I do not know.

The statement in the *New Europe* that Montenegro was outside the Paris Conference has been contradicted by the contents of a message from the Rome correspondent of the *Morning Post*, which said that Montenegro had been duly represented. As a fact the Montenegrin delegate was not admitted except to the final meeting, to which he was invited on the proposition of Italy.

May I conclude with a plea for aid to Serbia? One quarter of the population at least has perished, as shown by statistics, women and girls and others have been carted away to Turkey, thousands are dying in Austria-Hungary, the seeds of death and disease threaten the future vitality of the nation, and the administration of the blockade, so tender to the susceptibilities of Swedes and Dutch, is adamant to the suggestion that the starving Serbs should be fed through Switzerland—the plan of extermination is working towards its end. M. Pashitch needs all the support, moral, diplomatic, military, and material, that we can give, if he is to answer satisfactorily the question to be put to him by the nation, "What has been the result of your blind trust in the Allies?" If the Serbs feel that they have been left in the lurch in the war and abandoned in the peace treaty there may be a real danger of possible reaction. A merely greater Serbia (with Bosnia and southern Dalmatia) would be for fifty years the poorest and weakest of the Balkan States, and she might be tempted to seek safety in the arms of Austria. Some such solution is indeed envisaged by H. N. Brailsford, but I do not think that others will share his complaisance.

I may add that a Press polemic on the subject of the Adriatic treaty would be undesirable, and is not, I know, desired in authoritative Serb circles. It must be remembered also that Italian opinion shows signs of a distinct *rapprochement* with the Jugoslav idea.—I am, etc.,

A. H. E. TAYLOR.

Canterbury, Sept. 18.

THE FUTURE OF ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the *Fortnightly Review* for July "Politicus," writing on the formula of "no annexations, no indemnities," refers also to the problem of Armenia, for the solution of which he proposed an illusory scheme. "Armenia must fall to Russia," he says; "but, of course, Russia can give the Armenians a large measure of self-government and can make them entirely independent when they have shown the ability for complete self-government and have developed sufficient strength for self-defence." Any student of the economic development and political expansion of Russia will readily see the absurdity of this proposal. "Politicus" expects too much from the nature of the *political animal*, even if that happens to be the Revolutionary Government of Russia. It would seem, moreover, to be a mistaken policy to sharpen the appetite of the strong at first, and then attempt to teach him morality and justice. Armenia will never get independence or even some sort of self-government once she falls to Russia. Those who base their reasoning on the avowed professions which for the present seem to rule Russia may be expected to modify their views when the centrifugal forces now at work will necessarily disappear. Then there may be a chance for a permanent partnership between Russia herself and such large units as Ukranians and Poles, but almost none for Armenians and Georgians.

Another doubt which is often expressed in this country is that the Armenians shall not be able to defend themselves. If one asks against whom the Armenians shall not be able to defend themselves, the answer will be against Turks or Kurds, or both combined. This is an assumption obviously based on a misconception of Kurdish social conditions.

In the Armenian provinces of Turkey at least about 70 per cent. of the Kurdish population is now settled down to agricultural or cattle-rearing occupations; under Turkish rule this large mass of Kurds was almost as defenceless as the Christians. They were often as much robbed and killed as the latter. It was the remaining 30 per cent. of the Kurds, with chieftains and their hangers-on, whose only means of subsistence consisted of robbing not only the Christian but also the defenceless Kurdish peasant, and sometimes even the Turkish tax-collector and gendarme.

It was this latter class of Kurd who was an instrument of oppression in the hands of Turkish parasites. Clear out at once the Turk, bag and baggage, from the country and give a decent and honest Government both to Kurd and Christian. It would be a paradox of human nature if the settled Kurd, with whom religion is a very loose matter, did not entirely fall in with a new order of things which promised a good market for his cattle and corn. To mention only one instance of Kurdish character. In the summer of 1909, a year after the proclamation of the Turkish Constitution, I met Major Seifeddin Bey of the Turkish Hamidic Cavalry, in Bulanik (Bitlis). He was the chief agent of the notorious Colonel Fetullah Bey, who practically commanded about 5,000 armed Hamidics of the Hassanauli tribe. I had seen the major in his "splendour" under Abdul Hamid. On the advent of the Turkish revolution in 1908, Hamidic Kurds were cowed and some of their chiefs imprisoned. For more than a year these Kurds were not allowed to rob and kill. Almost all notorious murderous robbers repaired to their lairs, and many of them took to peaceful labour. Then in 1909 Major Seifeddin Bey had taken to muleteering, and he was none the less happy in driving his pack-horses and "earning his bread by his toil," as he said. But as Young Turks began to instigate the predatory instincts of Kurds in 1911, Seifeddin and thousands like him recommenced their old game.

In 1910 the Turks opened a school in Mush for Turkish children. But many of the Kurds refused to entrust their

Digitized by Google

children to the Turks, because they had no faith in the morals of Turkish teachers.

"Politicus," and others who think like him, might worthily promote the cause of peace in that country not by generously assigning Armenia to Russia, but by removing the Turk and putting instead an honest administration for all. Then Armenian and Kurd together will see where their genuine interests lie.—Yours, etc.,

A. S. SAFRASTIAN.

NEAR EAST BOOKSHELF.

THE UNITED STATES AND GERMANY.*

This is a most extraordinary book. Everyone will recollect reading in the newspapers from time to time during the first two and a-half years of the war accounts of German intrigues or outrages in the United States. At first one read them with a certain amusement—they seemed so futile; then with irritation, and finally with boredom—they were so stupid. It did not quite dawn on the world at first that they were part of the system of frightfulness, which was meant to terrify the United States, originally to prevent them from supplying the Allies with munitions, and later to keep Washington neutral. These elaborate manœuvres, together with an enormous Press propaganda directed by Count Bernstorff, had in the end a precisely opposite effect to that intended. In another century or two some Prussian professor will attack this puzzling phenomenon, when probably he will decide, after exhaustive investigation, that the psychology of the American people was too premature for these experiments. He will certainly never suspect that the German method was wrong.

In the meantime, M. Alphand has made a collection of these outrages, from the blowing up of a munition works in the States to the attempted invasion of Canada and the elaborate plots in Mexico, which were intended to keep President Wilson busy with troubles too near at home to give him time to attend to Europe. The latter were the most likely to succeed, and they were not perhaps so very far from being successful; most of the remaining Teutonic activities were simply grotesque. However, here they all are, from the recall of Dumba to the outbreak of war, fully documented, a kind of nightmare of subterranean activity. One would like an equally full account of Germany's intrigues against England, say from the time of Lord Haldane's visit to Berlin in 1912; perhaps Lord Haldane will himself undertake the task.

"HINDENBURGLAND."

The French, like ourselves, have sometimes been rather forgetful of European politics east of the Vistula. Now, however, that the destiny of those countries is reshaping, many pamphlets are appearing both in French and English to guide public opinion. Of these, in addition to the monthly *Pro-Lithuania*, published at Lausanne, we may mention "La Question Lithuanienne," a memoir presented by the Lithuanian delegation to the third Conference of Nationalities at Lausanne; and "Ober-Ost," by M. C. Rivas. This latter consists of a series of timely quotations from German newspapers advocating a German annexation of Lithuania and Courland—which, it is suggested by the enthusiastic admirers of the Prussian marshal, should be called in future Hindenburgland. This particular suggestion does not seem to have been remarked by the English Press, and it is well to be reminded that German ambitions in that quarter have by no means been checked. Indeed, recent events have greatly strengthened the party in Germany which contends that the western war may be postponed for twenty years, so long as the eastern war is won and its fruits gathered in.

BOOK NOTES.

Among Messrs. Methuen's new books is "A Boswell of Baghdad and other Essays," by Mr. E. V. Lucas. The work includes a number of Mr. Lucas's recent contributions to *Punch* and the *Sphere*.

Messrs. Blackie will shortly publish Captain Brereton's new book "From the Nile to the Tigris," in which the author relates the further futures of the quartet whose earlier exploits were told in "At Grips with the Turks."

Miss Bessie Marchant is the author of an illustrated war book entitled "A 'V.A.D.' in Salonika: The Story of a Girl's Work in the Great War," which will be issued by the same publishers.

Among Mr. Heinemann's latest announcements is "Serbian Fairy Tales," translated by Mme. Elodie Mijatovich.

Messrs. Melrose will shortly publish "Ancient Stories of the Dardanelles," by Frances Delanoy Little.

Lady Kennard is the author of "A Roumanian Diary," which Mr. Heinemann will issue in the autumn. Another forthcoming work from this publisher is "My Round of the War," by Mr. Basil Clarke, who records his travels and adventures as a special correspondent in France and the Balkans.

Mr. G. Ward-Price, the official Eye-Witness with the Allied Armies in the Balkans, has now finished a record of his experiences, which he has put into a book, entitled "Salonika," to be published by Mr. Heinemann in the autumn.

Messrs. Simpkin, Marshall have just issued "The Last Cruise of the 'Majestic,'" by George Goodchild, priced at 1s. 6d. net. The "Majestic" was the first battleship to enter the Dardanelles. The book gives an account of the writer's experiences from the day of mobilisation till the following May.

BOOKS RECEIVED.

Knights of Araby. By Marmaduke Pickthall. (London: Messrs. W. Collins, Sons and Co., Ltd. 6s. net.)

Petite Histoire Politique de l Angleterre depuis 1914. With Foreword by M. Stephen Pichon. (Paris: Librairie Grasset. 50 centimes.)

24	11	Monday	7	8
25	12	Tuesday	8	9
26	13	Wednesday	9	10
27	14	Thursday	10	11

The King is to hold an Investiture in connection with the new Order of the British Empire on September 27. On the previous day his Majesty will hold a Naval and Military Investiture.

Mr. John Stavridi, Hon. Counsellor of the Greek Legation, has left London for the country.

General Basil Rudeanu, Chief of the Roumanian Military Mission, has left London for France.

Lieutenant-Colonel Sir John and Lady Norton-Griffiths have taken 24, Buckingham Gate for the winter.

Mr. H. E. Mountain has returned to Athens, and has joined the commercial staff at the British Legation.

Professor S. Mandriescu, of the University in Jassy, arrived in London on September 18 from Roumania.

Colonel Vasescu, of the Roumanian army, and his family arrived in London on September 18 from Roumania.

M. Blondel, formerly French Minister in Bucharest, and Madame Blondel have left London for the Continent.

Ex-King Constantine arrived at Zurich on September 17 with his family and Dr. Streit, ex-Minister of Foreign Affairs.

Mr. Ivan Stuart Campbell, of Cadogan Place, S.W., who died on June 28 at Jassy, left estate of the gross value of £5,906.

Madame Lahovary, the wife of the Roumanian Minister in Paris, arrived in town on September 17 from Bournemouth.

Essad Pasha, the Governor of Albania, has been entertained by the Serbian Government at dinner at Corfu. He has now left for France.

The Secretary of State for India has appointed Miss Alice Sergeant, to the Indian Educational Service to be Inspectress of Schools in Madras.

M. Michale Antonescu, former Vice-President of the Roumanian Chamber, is stated to have been deported and interned in a war prisoners' camp in Germany.

According to a Sofia telegram, among the numerous wreaths sent for the funeral of the Queen of Bulgaria were two or three from French and British prisoners of war.

Major-General Sir George Tindal Pretyman, K.C.M.G., C.B., of Beech Hurst, Camberley, Surrey, Military Secretary to Lord Roberts in Madras 1881-84, left estate of the gross value of £1,827.

Earl Granville was received in audience by the King at Windsor Castle on September 17, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens.

Reuter's correspondent at Athens states that the arrest is announced at Missolonghi of General Papoulos, who ordered the Greek troops to fire on the Allies on December 1 and who is considered a dangerous reactionary.

The King of Montenegro has appointed Dr. Pierre Chotch to be Minister of Instruction and Public Worship and also Minister of Justice and the Interior. Dr. Chotch was formerly Director of the Royal Ministry of Finance and Public Works.

A Military Mission of the Spanish Red Cross has visited the German prisoners' camp at Gibraltar, says Reuter's Algeciras correspondent, making a minute examination into the arrangements of the camp and conversing with the prisoners. The Mission will in due course issue a report of the visit, and will testify to the favourable impressions it gained.

Colonel Dimitrievitch, of the Serbian Army, has arrived in London from Petrograd.

It is reported from Constantinople that the Turkish Government now allow women to study medicine, and that they have also permitted commercial schools to admit female students.

The Roumanian Minister entertained at luncheon on September 13 the Portuguese Minister, General Dessino, of the Russian Army, M. Victor Antonescu, formerly Roumanian Minister of Justice, and Madame Antonescu.

Messrs. Paterson, Zochonis and Co., Ltd., Manchester, have forwarded to the Lord Mayor of Manchester £500 for the relief fund which is being raised by the Lord Mayor of London on behalf of the sufferers by the Salonika fire.

The Greek Minister to the Court of St. James, M. Jean Gennadius, who recently presented to King George his credentials from King Alexander of the Hellenes, paid formal visits to the members of the Corps Diplomatique on September 18.

The engagement is announced of Major E. C. Hodgson, I.M.S., son of the late Lieut.-Colonel G. R. Hodgson, I.A., and Mrs. Hodgson, to Guelda Kathleen, daughter of Mr. B. T. Earle and Mrs. Earle, of Meadowcroft, Camberley.

The wedding of the Rev. Charles Egerton Chadwick, M.C., Senior Chaplain to the Royal Flying Corps, and Miss Dorothy Elwin Harris, only daughter of Dr. Elwin Harris, of Clifton, was celebrated at Clifton on September 18. The Rev. H. Chester Master, C.F., was best man.

Sir James Walker has presented the Red Cross Gift House (for the Prisoners-of-War Central Fund) at 20, King Street, St. James', with a valuable inlaid Indian writing-box, six Indian plaques, a four-panelled screen with jade and soapstone flowers inlaid, and a picture by Orrock.

M. Pashitch, the Serbian Prime Minister, has received from a great meeting organized recently at New York by the Committee of Serbian National Defence an acknowledgment of "our gratitude for the understanding come to at Corfu," which settled a scheme for the eventual formation of a united Southern Slav State.

The Czech Press Bureau states that, according to the *Narodni Politika*, Magyar has been made the language of instruction not only in the Roumanian schools in Transylvania but also in the few Slovak public schools which were still left not Magyarised. The Slovak children are henceforward forbidden to use their own tongue even in saying prayers.

According to the *Egyptian Gazette*, Colonel Sir David Semple, Director-General Public Health Department, will in all probability retire from the service on the expiration of his contract in March next. It is stated that he will be replaced by Dr. John Warnock, Director of the Lunacy Department, Ministry of Interior, who in turn will be replaced by Dr. Dudgeon, Director of the Khanka Lunatic Asylum.

The *Jewish Chronicle* states that Joseph Hirsch, of the Zichron Jacob Colony, Palestine (who was in Paris at the outbreak of war), a volunteer in the French Foreign Legion, has been mentioned in a Divisional Order in the following terms:—"A thorough soldier, who distinguished himself by the spontaneity with which he volunteered to accomplish most perilous missions. He was seriously wounded April 17, 1917."

At the conclusion of the Liturgy on September 16 at the Greek Church in Moscow Road, Bayswater, a Te Deum was sung in commemoration of the name-day of the King of the Hellenes. The Great Archimandrite, the Very Rev. Dr. Pagonis, officiated, assisted by a Deacon. There were present the Greek Minister, attended by the *personnel* of the Legation, all wearing uniform, Madame Gennadius, the staff of the Consulate, and a large Hellenic congregation.

If you are willing to help

THE SERBIAN ARMY

SEND YOUR DONATION FOR

THE SERBIAN RED CROSS

to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the

RELIEF OF THE DISTRESS OF THE

SERBIAN CIVIL POPULATION

at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

Digitized by Google

The engagement is announced of Major (temporary Lieut.-Colonel) G. H. Richard, R.A.M.C., eldest son of Mr. H. J. Richard, late Chief Engineer and Secretary to the Government of Burma in the P.W.D., and Mrs. Richard, of 67, Gordon Road, Ealing, and Dorothy Dundas, younger daughter of Mr. and Mrs. J. Rothbarth, of 30, Quex Road, West Hampstead.

It is announced in a Supplement to the *Gazette* issued on September 17 that Major-General William George Lawrence Beynon, C.B., C.I.E., D.S.O., has been made a K.C.I.E. for services connected with the war, and that Major (temporary Lieut.-Colonel) R. M. Carter, F.R.C.S., Indian Medical Service, has been promoted to be brevet lieut.-colonel, with effect from April 26, 1916, as a reward for distinguished service in the field.

The Consul-General for Greece in London informs Reuter's Agency that instructions have been received from Athens to the effect that all Greek subjects belonging to the provinces both of Old and New Greece born between the years 1884 and 1897 inclusive are, with some exceptions, to be called to the colours. Greeks of these categories residing in the United Kingdom should apply immediately to the Greek Consulate-General, 40, Old Broad Street, E.C., when they will receive their marching orders.

The depositions of three Serbian prisoners who recently escaped from Austria, says *The Times* correspondent with the Serbian Army in a message dated September 18, relate that the treatment of Serbian prisoners in Austria latterly has undergone a marked change for the better, and that this change is accompanied by much talk among the guards and the population generally of approaching peace and the restoration of Serbia. Serbian paper money, which at pre-war parity was ten dinars to nine Austrian crowns, and the currency of which was officially fixed after the Austrian occupation at ten dinars to five crowns, has lately risen in Austria to a premium, ten dinars being valued at over twelve crowns.

APPOINTMENTS, PROMOTIONS, ETC.

The following appointments were notified in Wednesday's *London Gazette*:—Memoranda.—The undermentioned Lieutenant-Generals, Indian Army, to be Generals:—Sir A. A. Barrett, K.C.B., K.C.S.I., K.C.V.O., in succession to Sir R. I. Scallon, K.C.B., K.C.I.E., D.S.O., supernumerary. August 1. Sir M. H. S. Grover, K.C.B., K.C.I.E., in succession to Sir J. B. Woon, K.C.B., supernumerary. August 27.
