ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 13, Paton Street, Piccadilly, Manchester.*

SAM FAY, *General Manager.*

Famine in the HOLY LAND

The rapid development of events in the Holy Land is, in a remarkable manner, opening up the way for the work of the Syria and Palestine Relief Fund.

The recent victory near Gaza means that we shall be able almost immediately to follow the Allied advance with FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the inhabitants who are in the last stage of destitution through the cruelties and privations which they have suffered.

To relieve the starving people of SYRIA and PALESTINE £50,000 is needed at once

Missionary Societies of all Denominations have united to carry out this great work. A strong administrative Committee is at work, plans for relief are already made, and goods are stored in Egypt ready to be poured into the country by sea or rail. The Fund will be economically administered by those who know the country and people best, and relief will be given to all—Christians, Jews and Arabs alike—according to their need.

Please send your donation NOW to the Hon. Secretary, Syria and Palestine Relief Fund, 110, Victoria Street, Westminster, S.W. 1.

BOOKS on the NEAR EAST.

EXPERIENCES OF A WOMAN DOCTOR IN SERBIA.

By Dr. CAROLINE MATTHEWS. 5s. net.

A striking volume full of adventure and courage. The narrative throws many sidelights on the war as waged in the Balkans. The author describes the real sympathies of the Greeks towards the Entente, the varied sides of the Serbian character, and in strong colours the brutality engendered by the Prussian military machine.

ARMENIAN LEGENDS AND POEMS.

Illustrated and Compiled by ZABELLE C. BOYAJIAN, with an Introduction by Viscount BRYCE, O.M., and a Contribution on "Armenia: its Epics, Folk-Songs, and Mediæval Poetry" by ARAM RAFFI. 21s. net.

A large and handsome volume, containing a typical selection of Armenian poetry, illustrated in colour on a decorative scheme based on Ancient Armenian art as seen in mediæval illuminations.

MODERN MOVEMENTS AMONG MOSLEMS.

By SAMUEL GRAHAM WILSON, D.D. 6s. 6d. net.

An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

MY RUSSIAN AND TURKISH JOURNALS.

By the Dowager MARCHIONESS OF DUFFERIN AND AVA. 10s. 6d. net.

A record of events during the time when Lord Dufferin was Ambassador of Petrograd (1879-1881) and Constantinople (1881-1884). These journals prove that the velvet glove is more efficacious than the iron hand. Lady Dufferin relates her experiences so vivaciously that her readers may almost be said to share them.

BIOGRAPHY OF LORD KITCHENER.

By E. S. GREW and Other Writers. 8s. 6d. net.

"SELF-TAUGHT" SERIES.

Paper 2s. Cloth 2s. 6d.

These books contain classified Vocabularies and useful Phrases and Conversations, with the English Phonetic Pronunciation of every word, so arranged that they may be Learned at a Glance, and a simplified Grammar which will prepare the way for more advanced study. ARABIC (Syrian); EGYPTIAN (Arabic), with Naval and Military Terms; GREEK (Modern), with Photographic and Archæological Terms; PERSIAN; TURKISH, with Dictionary.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

NOTES OF THE WEEK.

The news from Mesopotamia during the past week has been eminently satisfactory. After their defeat at Istabulat on April 22 the Turks abandoned not only Samarra station, as announced in Sir Stanley Maude's despatch, but the town of Samarra as well, and fell back on a position fifteen miles to the north. They had counted largely on their ability to hold Istabulat, which was a point of considerable strength, and consequently they had made no preparations for the destruction of the railway and rolling stock at Samarra. The station was gutted, but in the haste of the withdrawal it was not possible to destroy either the permanent way or the bulk of the locomotives and trucks which had been accumulated at railhead. Further details of the fighting show that the Turks, in the hope of saving Samarra, had hurried forward the 13th Army Corps from the Jebel Hamrin hills to attack the right flank of this section of General Maude's force on the Shatt-el-Adhaim. The defeat of this corps, after a second attack, rendered the Samarra position untenable, and a general withdrawal of the whole Turkish line ensued.

A later report from General Maude shows that he has been able to follow up his successes without allowing the enemy much respite. On April 30 British troops found the 13th Turkish Army Corps entrenched in a position on both banks of the Shatt-el-Adhaim, which they had spent some days in strengthening. The attack took them by surprise, and their first two lines, together with a fortified village, were captured. A strong counter-attack caused the village to be temporarily evacuated by our troops, but it was regained, and before the day was over the Turks were once more in full retreat.

At the point now reached, a little more than eighty miles north of Baghdad, General Maude encounters the main physical obstacle in his advance from Kut. The Jebel Hamrin range stretches from the Tigris to the Persian hills, and, although rising to only a moderate height above the surrounding country, some 600 feet, the barrier provides the Turks with an ideal position for defence. In the country between the Shatt-el-Adhaim and Kizil Robat the same range, inclining slightly to the south-east, has apparently enabled the enemy to hold both the right wing of General Maude's army and the Russian troops who are occupying the country between the Diala River and Kasr-i-Shirin. If a frontal attack on the Jebel Hamrin is to be avoided, the time has come for our Allies to make more use of the position they hold on the Turkish left flank. The enemy has evidently suffered severe losses in his attempt to challenge the British advance, and his chief attention will be directed towards the Tigris, where General Maude's strength is likely to be concentrated. The Russians, therefore, will probably find an appreciable weakening of the resistance hitherto offered them.

General Maude's successes in Mesopotamia are very necessary at the present time, if only as an off-set to the continued inability of our Russian Allies to make headway against the enemy either in Armenia or on the Persian frontier. A Constantinople report announces that Mush has been evacuated by the Russians and occupied by Turkish troops. If this be true, the Russian withdrawal may be regarded as the outcome of the steady pressure exercised by the enemy on the Armenian front for some time past. It has not been possible from the fragmentary reports issued by the Russian Government to piece together any detailed picture of the fighting that has been taking place in this region; but it is evident that the Turks have been making a determined effort to throw back our Allies along the whole front from the Black Sea to Lake Van. Mush has changed hands several times during the war; but its reoccupation by the Turks at the present moment is inopportune, as it may help to facilitate their communications with the army operating south and east of Mosul.

There is no need to view with any misgiving the long pause in the British advance in Palestine which has followed the Battle of Wadi Ghuzzeh. The progress of the expedition has been characterized throughout by the most thorough preparation, and the two principal engagements, last August and again in March, were really the outcome of the enemy's challenge. In each instance the Turks have doubtless felt compelled to give battle in the vain hope of breaking down the almost uncanny precision of Sir Archibald Murray's strategy. Their double discomfiture—they lost 9,000 out of a force of 23,000 at Katia and 8,000 at Wadi Ghuzzeh—will hardly encourage them to risk a third attack. Meanwhile, the consolidation of the territory occupied by General Dobell's expedition continues. The railway is being extended; the conditions of the desert are being entirely transformed by means of roads, water supplies and fortified centres. In a word, Egypt is being brought to Palestine, and the desert barrier that has hitherto separated the two countries is rapidly becoming eliminated

Digitized by Google

This aspect of the invasion of Palestine must be causing the Turkish Government far greater uneasiness than the advance of an ordinary expedition, however successful from a military point of view. The Turco-German raids on the Suez Canal entailed elaborate preparations; but they were directed to serve the immediate purposes of the invading force, and had nothing permanent about them. The British, on the other hand, both in Palestine and Mesopotamia, are acting as though the military operations were intended not only to defeat the enemy in the field, but also to give effect to the Allies' determination not to allow Turkey any longer to lie across the path of the world's progress, at least in the territories in question. In each case the blow is falling on a vulnerable spot in the Turkish armour. Ottoman rule has never been acceptable to the Arabs in Mesopotamia. There is something more than mere opportunism, therefore, behind the message of congratulation on the capture of Baghdad which the *Mujtahid* of Kerbellah and Nejef have sent to King George. His Majesty's answer, moreover, will have strengthened the hopes already raised by General Maude's proclamation to the people of Baghdad:—"My earnest desire is for the well-being of Irak and its people, the preservation of its Holy Places, and the restoration of its ancient prosperity." Something of the same foretaste of liberty will be heartening the people of Syria as they watch the methodical progress of the British force from Egypt. The Constantinople Government must realize that its hold on these parts, if once relaxed, can never be restored, and the offer of the Allies, before Turkey entered the war, to guarantee her integrity will be acquiring a new significance in Turkish eyes.

Not the least satisfactory feature of the campaigns in Palestine and Mesopotamia is that they appear to have been carried out so far with relatively small losses to the British forces engaged. This should be the case in all subsidiary theatres of the war, where the operations, however useful in their general effect, cannot exercise a decisive influence on the war as a whole. We should like to think that the operations in the Balkans will also be attended with small losses. The Battle of Doiran, however, recalls certain incidents on the Western front, where alternatives to frontal attacks are practically impossible. The Doiran sector, we are told, is one which the shape of the ground has made particularly strong. There were three distinct systems of enemy trenches to be negotiated, about a thousand yards apart, each position being higher up the steep slopes than those in front of it. The British attack was launched at night. On the left flank the troops were entirely successful; on the right some of the ground won had to be surrendered. Since April 24, the date of the attack, the British position has been subjected to fierce assaults on the part of the enemy, which have been invariably repulsed with heavy losses. It is fitting that steady pressure should be maintained on the Bulgarians; but after the long period of preparation allowed General Sarrail, it was hoped that an offensive, when it did come, would be based on more successful strategy than mere frontal attacks, especially when the preliminary artillery bombardment is not able to deal effectively with the enemy in his trenches.

In an article appearing elsewhere in this issue, Mr H. C. Woods, a well-known authority on the Near East, urges the application of "strategic diplomacy" to the Balkans, and shows how the application of the principle of nationality may be expected to work in regard to Bulgaria. The suggestion that the Allied Governments should endeavour to keep a sensitive finger on the political pulse of Bulgaria and Turkey has already been made in these columns, and as the struggle goes more and more against the Central Powers, diplomatic openings are likely to multiply. It would be a matter for regret, however, if the Allies allowed themselves to be beguiled into the comfortable theory that concentration on the diplomatic aspect of the problem justified a relaxation of military efforts. Diplomacy will speak with far greater weight after a signal defeat of the Bulgarians. So long as the German hold on the country is unimpaired, there are almost insuperable obstacles in the way of popular feeling asserting itself. So far, it must be remembered, the Bulgarians have experienced no serious reverse. The fighting on the Macedonian frontier has gone against them, and the prolongation of the war is having its effect on the country; but the Sofia Government can still pretend that with Austro-German help Bulgarians are invincible. Until General Sarrail has scotched this delusion diplomatic efforts may not find it easy to make headway, and it may be doubted whether they would prove, if actually successful, in the real interest of the Balkan Peninsula as a whole.

Hypnotism, we believe, is accepted in some quarters as a useful accessory to medical treatment, but its value in medico-political cases would seem to be problematical. The Allied Governments, called in to treat the Greek situation, could only agree upon submitting it to hypnotic influence; Greece was to be placed in a condition of political coma, and it was hoped by auto-suggestion to cure the Royalist Greeks of their evil ways and the Venizelists of their embarrassing energy. As might have been expected, the quack treatment has failed; the Royalists, including the King, remain incorrigible, and the Provisional Government has continued to make headway. The time has now come when important events may occur, and we cannot help thinking that the reputation of the Allied physicians calls for an official statement that their patient is no longer acting under their hypnotic influence, but is a free agent, and that they themselves have retired from the case

---

We should like to think that the two Allied Conferences which have taken place on the Continent within a fortnight have found time to deal with the Greek problem, whatever may be the weightier considerations which rendered the meetings necessary. When M. Venizelos, according to a report in a Salonika journal, has publicly declared that "it is impossible for King Constantine to remain in his position," and a resolution from a congress of Hellenic colonies records the similar conviction of all Greeks outside the kingdom as the result of recent events in Greece, the Entente Powers will be carrying their support of unconstitutional autocracy a little too far in continuing to protect King Constantine against the national demand for his deposition. There is no call for the Allies to play any part in the changes that may be about to take place in Greece. They have hitherto interposed an effective barrier for the benefit of an unconstitutional monarch, who has not had the saving grace of being loyal to his protectors. No doubt feeling is running high in Venizelist circles owing to the unjustifiable action of the Allied Governments, and it may be that mature consideration and direct negotiations may modify some of the opinions now held. But what is urgently required is that the embargo placed on Greek political development by the Allies should be removed, and that she should be allowed to work out her own salvation on her own lines. The resultant situation will be the healthier, even if some blood should be unfortunately spilled, than if a perfunctory settlement is imposed by the Entente Powers.

A further change in the Emirate of Koweit, to which reference is made on another page, has afforded an occasion for a fresh testimony of the loyalty of the Arabs on the Persian Gulf to the British cause and of their growing feeling of an identity of interests among themselves. Sheikh Mubarak, who was a good friend of the British, died, it will be remembered, on November 28, 1915, and was succeeded by his eldest son, Sheikh Jaber. On the death of the latter on February 5 last Sheikh Mubarak's second son succeeded to the Emirate. The ceremony associated with his accession was attended by Sheikh Ibn Saoud and the Emir of Mohammerah, as well as by a deputation sent by General Maude. The close association of the three most powerful Arab chiefs of Eastern Arabia is of satisfactory augury for the future consolidation of these regions for a new era of material development.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 3.

The Health of the Sultan.

From private information I have received, I gather that the Sultan has much improved in health, and is practically free from the discomfort which he suffered. The High Commissioner has had an interview out at Heliopolis with his Highness, who has been regularly receiving the Ministers during the past few days. It is expected that he will soon return to Abdin. The Sultan has just ordered the sum of £E1,000 to be given from his private purse to the students and employees of Al Azhar. This generous gift has been received with delight. The employees, who benefited in similar manner by the Sultan's munificence last year, owe the increase in their salaries, now provided for in the Al Azhar budget, entirely to the intervention of his Highness. The Sultan was much exercised in mind at the meagre pay which he found many of them received, and ordered the Prime Minister to investigate the matter and arrange to remedy this state of affairs.

The Summer Resort Question.

With reference to my recent remarks anent the summer resort question, the military authorities now announce that from the 15th inst. Aboukir is declared to be a military zone. This means that that district will be closed to visitors until further notice. Aboukir has in the past always been a resort much frequented by residents, especially Alexandrines, in the summer. This new decision, consequently, aggravates the situation and, if anything, strengthens my contention that Port Said should be reopened for the summer months, at any rate to approved residents.

The State University.

The Council of Ministers, to whom the proposal for the creation of a State University was submitted about a month ago, has appointed a special Commission for the purpose of studying the question and drawing up a scheme of organisation for final consideration by the Council. The Commission consists of H.E. Ismail Hassanein Pasha, Under-Secretary of State for Education (President); Mr. Sidney Wells, Director of Technical Education; Mr. Boyd Carpenter, Chief Inspector of Education; Dr. Keatinge, Principal of the School of Medicine; Mr. Walton, Principal of the School of Law; Mohammed Atef Barakat Bey, Principal of the School for Kadis; Ahmed Barreda Bey, Principal of the Sultania Normal School; Mr. Shearer, Principal of the School of Agriculture; and Mohammed Ali Bey El Maghrah, and Messrs. Quilici and Edgar, Inspectors in the Ministry of Education. The Commission has already started on its labours, and was welcomed at its first meeting by H.E. Adly Yeghen Pasha, Minister of Education. The task before it will not be altogether an easy one, for there are many interests to conciliate and various difficulties to overcome. The constitution of the Commission is, however, sure to give the assurance that the question will be ably and thoroughly studied, and that a final scheme, satisfactory to all parties and meeting all the requirements of the situation, will eventually be evolved. It would appear, nevertheless, that some time must elapse ere it is in a position to present its report.

Sir William Brunyate and the Mixed Bar.

Last Thursday the Mixed Bar of Alexandria gave a banquet to Sir William Brunyate in honour of his appointment as Judicial Adviser. The banquet, which had originally been fixed for March 15, but had had to be postponed for unavoidable reasons, was attended by a fully representative gathering, which included a lady barrister. Me. Mercinier, the doyen of the Mixed Bar, proposed the health of Sir William Brunyate, to whose ability and past career he referred in most felicitous terms. In the course of his reply, which was most happily worded and which has been exceedingly well received in legal circles, the Adviser referred to the impending judicial and administrative changes, and took the opportunity of explaining that the British Government, being of opinion that the time had come to exercise the reforms which would be rendered necessary by the declaration of a British Protectorate over Egypt, and by the eventual abolition of the Capitulations which would naturally follow from that event, had decided to call for the appointment of a strong Commission, which should be entrusted with the mandate to study the question, and to which should be accorded very extensive powers for the purpose. He added the hope that the Mixed Bar would lend this Commission its whole-hearted co-operation, and that the reorganisation would conduce to creating closer relationship and the kindling of a feeling of mutual goodwill and confidence between the various elements of the local legal community, especially between the Native and the Mixed Bars.

The Commission referred to by Sir William Brunyate has already been appointed. It consists of the Ministers of Finance, Education and Justice, the Financial, Judicial, and Interior Advisers, the Vice-President of the Mixed Court of Appeal, and one of the Sultania Counsellors. It is empowered to co-opt on to sub-commissions any persons whose assistance may appear desirable, to call for suggestions and criticisms from any qualified persons or bodies, and to publish in advance drafts of any laws or regulations which it intends to propose, with a view to obtaining the fullest amount of information on the points in question before finally submitting them to the Council of Ministers.

The Cairo Racing Season.

On Saturday last the eleventh race meeting was held at Gezira, and with it the Cairo Turf season for 1916-1917 was brought to a close. It has been in every respect a most successful season with some excellent racing, and the decision to hold meetings in spite of the war has been fully justified both by the fillip that has been given to horse-breeding and by the financial results, which have enabled the club to make handsome donations to military and other charities—the profits from the last meeting went entirely to charity. Altogether the stewards and the indefatigable acting secretary, Mr. B. P. Greenwood, are heartily to be congratulated upon the result of their labours, which have afforded healthful recreation and relaxation to hundreds of members of the Army which they would otherwise not have had.

Cairo, April 10.

The Late Duchess of Connaught.

The death of the Duchess of Connaught aroused widespread regret here in Egypt, where she was very well known. Her Royal Highness had visited this country on several occasions both before and during the period when the Duke was Inspector-General of the Overseas Forces, with headquarters at Malta, and it was she who laid the last stone at the inauguration of the Assuan Dam in 1902. The Duchess of Connaught had always endeared herself to all who had come in contact with her, and the High Commissioner truly represented local feeling when he sent the Duke and the other members of his family a telegram of sincere condolence on behalf of the British community.

All Saints' Church

Considerations of space prevented me from referring last week to the general meeting of the congregation of All Saints' Church, which took place on Saturday week last at the Residency, the High Commissioner being in the chair. Resolutions were proposed and passed to the effect, first, that with the object of obtaining a free-seated church no further seats should be allotted; and, secondly, that the whole of the collections on at least six Sundays in the year should be given to outside objects, the choice of which should be left to the chaplain. At the conclusion of the business of the day, Sir Reginald Wingate addressed the meeting. He congratulated the community upon the excellent result of the last financial year and paid a tribute to the work done by the National Mission, led in this country during the past two months by Dean Storrs and the Rev. Mr. Burroughs. His Excellency referred in feeling terms to the deaths of Lords Cromer and Kitchener, both of whom had been past-presidents of the Anglican community, and he proposed that the name of the "Maker of Modern Egypt" should also be associated with the Cairo Cathedral

scheme, which was originally intended to be a memorial to those who had fallen in this war, and especially to Lord Kitchener. It is certain that this proposal to link the names of the two most illustrious Anglo-Egyptians with the erection of this monument to our faith will meet with the unanimous approval of the Anglican community in Egypt. In conclusion, it is interesting to note, from the High Commissioner's speech, that a good deal of work in connection with the Cathedral scheme has been done during the past few months, and that the committee hope soon to bring forward some important and interesting proposals.

Exhibition of War Trophies.

An exceedingly interesting exhibition of trophies taken in the course of the fighting in the Sinai and on the Tripoli frontier has been held during the past week on the square opposite Abdin Palace. Specimens of all guns and arms captured were shown, including curious-looking German trench mortars, Krupp field guns with the name of the makers and the Turkish imperial arms clearly marked on them, and Turkish field guns. There were also some of the latest type of machine guns constructed for desert transport, some of them for conveyance on one man's shoulders. One of the most interesting groups was the collection of miscellaneous firearms, which had either been picked up on the field of battle or taken from the prisoners. Some of these were of the most antiquated pattern. The exhibition was held in a barbed-wire enclosure, into which admission was only permitted by ticket. However, it attracted crowds of Egyptians and local subjects, who were able to look at the trophies from without the "wire entanglement," and who appeared to be duly impressed by the sight that met their gaze.

The "Capitulations" Commission.

On Thursday the newly appointed "Capitulations" Commission held its first meeting at the Ministry of Justice under the presidency of H.E. Yusef Wahba Pasha, the Minister of Finance. The main lines on which the Commission will work were decided upon, and henceforward meetings will be held three times a week. The formation of this Commission appears to have met with the approval of the foreign communities, who see in the provision for the co-option in the sub-commissions of members from outside, and in the other facilities for sounding public opinion accorded to the Commission, an assurance that their views and their interests will receive the fullest consideration. From conversations I have had, I gather that Sir William Brunyate's speech to the Mixed Bar the other day has made an excellent impression, and that its effect will be to enable the Commission to start on its labours with the goodwill of all the local foreign elements concerned in the impending changes. Those who have any knowledge of the situation that ordinarily arises in this country whenever it is a question of administrative or legal reforms will readily appreciate how enormously the existence of this current of sympathy will conduce to the satisfactory settlement of the various delicate and intricate questions that are bound to arise in the course of the elaboration of the coming reorganisation.

THE GERMAN PERIL IN BULGARIA.

It appears that the Bulgars have realised what a peril the Germans will constitute for Bulgaria after the war, writes a correspondent. They are, therefore, already trying to secure themselves against their "Allies." The Serajevo paper, *Serajevski List*, of April 5, publishes the following information upon this matter:—"Since Bulgaria joined the Central Powers, the German Press has not ceased to repeat that as many Germans as possible, manufacturers for preference, should settle in Bulgaria and there push the interests of German industries and trade. For this purpose a special German paper, the *Deutsche Balkanzeitung*, was started in Sofia. This paper, in its issue of March 21, contains a note from the Bulgarian Sobranje, announcing that the Deputy Nedeljkov (Agrarian party) has submitted the draft of a Bill, signed by sixty Deputies, whereby it is to be made illegal for any foreigner to acquire landed property in Bulgaria. Likewise no foreigner may own any commericial concern in Bulgaria, unless 50 per cent. of the capital is owned by Bulgarian citizens."

The Ottoman Consulate at Vienna has notified that Turks between the ages of thirty-eight and forty-three, hitherto excused from military service, must report for examination within a week, and those found to be fit must join the army immediately.

CYPRUS NOTES.

(From a Correspondent.)

The New Bishop of Kyrenia.

A new Metropolitan for Kyrenia was elected on March 31, in the person of the Archimandrite Makarios, and the ratification of the High Commissioner has been published in the official *Gazette*. The electing body consisted of forty-four "general electors," of whom thirty-three voted for Makarios and eleven for Kleopas, Abbot of Kykkou; although the latter had stated that he did not desire to be elected, and would decline to accept the appointment, if offered. The service of enthronement took place at Nicosia. The Archbishop, conducting the Prelate to his throne, placed the mitre on his head and handed to him his pastoral staff.

The new Bishop is about forty-seven years of age. During his education he studied at Constantinople, Athens, Geneva, and Oxford. He has held different ecclesiastical appointments, at Larnaca and Alexandria, and in 1912 took part in the Turco-Greek War as army chaplain, seeing active service.

On April 3 the Archbishop presented the new Metropolitan to Sir John Clauson at Government House. The High Commissioner expressed his pleasure at the result of the election, which was increased by the fact that he had long known the new bishop as a friend. The visitors expressed their thanks to the High Commissioner, who stated that the Greek Church could always rely on the support of the Government in its good work. The Holy Synod is now complete.

The Greek Church and the Courts.

The Chief Justice, Sir Charles Tyser, in a recent interview, consulted the Greek Archbishop, Kyrillos, on several questions connected with crime, the law courts, and the employment of discharged prisoners. He referred to a case in which a village girl and her betrothed are both undergoing a sentence of imprisonment for an offence of which both were convicted. The girl is shortly to be released, while the young man's term will not expire for some time. Their fellow-villagers have earnestly petitioned the High Commissioner, praying that the remainder of the latter's sentence may be remitted, in order that the couple may be married, and the risks which would otherwise threaten the future of both may be avoided. His Excellency, said the Chief Justice, was favourably disposed, should the Archbishop he able to give an assurance that the Church would allow the marriage to take place in Lent. The Primate replied that in the circumstances of the case the Church would sanction the marriage even during the Holy Week. The couple are therefore likely to have an opportunity of living happily ever afterwards. It is not in many countries that such a petition would be put forward, but in Cyprus it seems natural enough.

The Chief Justice also consulted His Beatitude regarding the future of convicts on their discharge from prison. In Cyprus there are no societies corresponding to those in England which find employment and endeavour to reform prisoners. He suggested that the Church might step in and interest itself. The Archbishop acknowledged the Church's opportunity, and suggested that the Government should, by small allowances for the work of prisoners, especially of the long-sentence class, create a fund that could be applied to the purpose in view. The Chief Justice was not able to give any assurance on this subject. The Archbishop promised that the Church would devote increased attention to the matter.

Sir Charles Tyser also suggested, with a view to tracing and combating the causes which lead to serious crime in the island, that a competent representative of the Church should be regularly deputed to attend sittings of the Assize Court and follow the proceedings. The Archbishop concurred, and promised that in future a suitable person, clerical or layman, should attend and watch the cases for the purpose referred to.

Inter-School Athletics.

The athletic contests between the English School of Nicosia and the American School at Larnaca took place on March 31. The challenge cup presented by Sir Hamilton Gould Adams was won by the pupils of the former school.

THE ROUMANIAN PARLIAMENT.

Under date of April 30, Reuter's Jassy correspondent telegraphs:—

"During the sitting of Parliament on April 28, M. Bratiano, the Prime Minister and Minister for Foreign Affairs, read a Royal decree prolonging the session until May 9.

"During the absence of M. Bratiano in Russia, M. Pherekyde, Minister without portfolio, will act as Prime Minister, while M. Take Jonescu will take charge of the Ministry of Foreign Affairs."

NEWS OF SYRIA.

(From a Correspondent.)

Cairo, April 12.

A Moslem family arrived in Egypt from Tripoli, Syria, about a couple of weeks ago. The account of their escape reads more like fiction than reality. During many a long night, patiently and secretly, the work of building a small skiff was carried on inside the house; and, as soon as it was completed, the frail boat was launched on a rather rough sea. Even the old mother was dumped down in the boat under cover of darkness, and the journey to a place of safety—the name of which is withheld for obvious reasons—was a long-drawn agony; the occupants of the boat were almost all the time waist deep in water, and it was only through tireless and desperate baling that the constant danger of sinking was averted. To have thus braved such a voyage the situation left behind must have been as bad indeed as death. These fugitives gave the gist of Jemal Pasha's last manifesto to the Syrians, which bears the imprint of this modern Nero's cynicism. After praising the people for their loyalty, and for the sacrifices they have made to the Empire, he informed them of the Allies' sinister designs against that Empire. Already, he said, Constantinople has been promised to Russia, and Syria to France; but he expressed the conviction that the people would continue to work loyally with the Government to frustrate the designs of the foe.

For once this man of dark deeds and wily ways has blundered badly; for he has dispelled any lingering doubt in the minds of the people as to the inevitable fate of the already tattered Empire. After the fall of Baghdad, which sealed the doom of Turkish rule in Mesopotamia; after the conquest of practically all Armenia, after the successful revolt of Arabia proper, after the conquest of Sinai and the invasion of Southern Palestine, this official announcement as to the Allies' designs in regard to what is still left of the Empire, is said to have revived the failing hopes in the hearts of the Syrians, or at least those of them who are still left to be saved.

A young officer belonging to the leading Moslem family in Palestine was captured about a couple of months ago in one of the battles of Sinai, and, being an ardent Arab reformer, was placed on parole by the authorities here. The writer, in a very recent meeting, asked him if all that was being published in the papers as to wholesale deaths from famine and epidemic disease was true. "Alas," he replied, "it is only too true. I saw with my own eyes children and women dying from hunger in their own homes. That two-thirds of the population of Jerusalem have perished may not be an exaggerated estimate."

The new informant from Tripoli says that of the inhabitants of Jibeil (old Byblos) and neighbouring villages on the northern coast of the Lebanon only 15 per cent. are left; the remainder have either died or have emigrated to the interior to escape starvation. The price of 5 lbs. of bread in Beyrout and neighbouring sea ports, as well as in Kesrawan—the most sorely tried district of the Lebanon—was, a couple of months ago, 140 piastres in paper money, and 40 piastres (about 7s.) in gold or silver. This year's crop in Syria is estimated at about one-fourth of the normal average. The number of Christian families alone expelled from Beyrout is put at 150; while that of Moslem families is said to be still larger. Until the said informant's departure the Government was still accepting the exoneration tax, not, however, in gold or even paper money—as most, if not all of this has already been taken over by the Government—but in a supposed equivalent of grain, which, according to the then ruling prices in paper money, should be worth about £400.

The Syrian recruits, both Christian and Moslem, are exclusively employed on auxiliary work, such as transport, road making, trench digging, and similar work immediately behind the firing line.

The Lebanese had not yet been mobilised, but the Government had published a notice to the effect that they may yet be called to the colours in case of need.

The present Governor of the Lebanon is a Turk, Mumtaz Bey. The Turkish Government was contemplating the division of The Mountain into two districts, one to be annexed to the vilayet of Beyrout, and the other, larger one, to be included in the Mutessarifiat of Tripoli. This arrangement was to come into force at the beginning of this year, but up to the date of the informant's departure the order was still in abeyance.

The pound sterling was fixed by the Government at 108 piastres gold, the Turkish pound at 100 piastres, and the French pound (Napoleon) at 87 piastres, but the Turkish note has fallen to one-fourth its original value.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Germans and the Dead. April 30.

Mr. Ronald M'Neill asked if steps would be taken to make it known as widely as possible in Egypt, India and the East generally that the Germans use the dead bodies of their own soldiers and of their enemies, when they obtained possession of them, as food for swine.

Lord R. Cecil replied that the Government had no information at present beyond that contained in extracts from the German Press and published in the Press here. In view of other actions by the German military authorities, there was nothing incredible in the charges made against them.

Conditions in Greece. May 2.

Mr. Dillon asked the Leader of the House whether his attention had been called to the extremely unsatisfactory and conflicting telegrams from Greece which had been allowed to appear in the Press during the last few days and to the great and growing public uneasiness and bewilderment over the situation in Greece, and whether, in view of the condition of things, he could see his way to offer an opportunity for public discussion on the Greek situation and the Salonika Expedition.

The Chancellor of the Exchequer: The answer to the first part of the question is in the affirmative, but in my opinion any public discussion on either of these subjects would be against the national interest. The public anxiety is important, but there are other considerations which are even more so.

FOLKLORE OF PALESTINE.

Lady Evelyn Cobbold presided at a meeting of the Société Internationale de Philologie on April 23, when Mr. Marmaduke Pickthall delivered an address on the Folklore of Palestine.

Mr. Pickthall's paper was a long and very interesting one, containing many folklore stories. We reproduce the following:—A young man had been brought up by a holy man, the guardian of a famous wely or saint's tomb. At length the holy man sent him out to seek his fortune, giving him a little money and an ass. He rode away. As he was travelling in a desert place the donkey died, leaving him thus alone. The young man wept, and, having nothing else to do, buried the donkey and adorned its grave with stones. While he was doing this an Arab chief came up, saw the young man weeping, and inquired the reason of his grief. The young man using an unusual word for donkey, "Eyr," the chief imagined that the grave was that of some holy man; so he sent for stone and built a pretty shrine, of which the young man was appointed guardian at a salary. A village grew up round the tomb. The fame of this wely spread through all the country till it reached the ears of the young man's former tutor. He went to see it, recognised his former pupil, and elicited the whole story, under bond of secrecy. The young man in his turn asked, "Oh, my father, who is the holy man who lies beneath your dome? I have known his name from my youth up, and have heard the rumour of his miracles, but nothing more." The sheikh hesitated for a moment, and then replied: "To tell the truth he is the father of your donkey."

Another story told how the mosquito came to buzz:—After the fall of man the serpent was able to prove that he had been promised the most delicious kind of flesh for his food. There was a doubt as to what kind of flesh was the most delicious, and the mosquito, as an experienced taster, was sent round to try. He was quite impartial. But the swallow, a good friend of Adam, followed him throughout the world. At the end of a year the mosquito came back to the council ready to declare that the flesh of man was of all the most delicious. The insect had at that time an articulate, sonorous voice. But just as he was flying to the presence of the judges, the swallow, who knew what he would be at, flew up against him, thrust its beak into his mouth and plucked his tongue out. "Well, what is your report?" inquired the president. An angry buzz was the mosquito's only answer. The court was at a loss, but the swallow politely stepped forward and volunteered to speak for his poor friend, which he said he was qualified to do since he had been with him on his journey of inspection. Many of the creatures present could bear witness that they had seen the two together in far distant places, so the swallow's evidence was accepted; and he said: "My poor friend found the flesh of frogs to be the sweetest." The mosquito buzzed distractedly, but to no purpose. He was inarticulate. The flesh of frogs was thus appointed to be serpent's food. The serpent, angry with the swallow, tried to bite him as the crowd went out of court, but only succeeded in getting that little bit out of the tail which you see is missing at the present time.

King Solomon, Johha, the jester, and Karakash, the impartial judge, were the heroes of other stories. One of these related how a rich old miser was carried out to be buried. He was still alive, but was prone to swoons, and his two nephews, who wanted his money, had taken advantage of one of these to get rid of him. While the funeral was on its way he recovered, saw Karakash approaching, and cried to him for help. Karakash stopped the procession and held an inquiry. He asked the nephews whether their uncle was dead, and was assured that he was. He asked the hired mourners, who gave the same answer. "But you can see for yourself that I am alive," cried the miser. Karakash eyed him sternly "God forbid that I should trust to your bare word or to the evidence of my poor senses against the testimony of so many lawful witnesses. It has been proved that you are dead. Proceed with the funeral."

LETTER TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE RIGHT METHOD WITH BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your article in last week's issue touches the spot. Similes are apt to mislead, but to the writer the Central Powers and their Near Eastern allies constitute an arch of which Bulgaria is a voussoir, which, were it detached, would let down the rest: Turkey first, then Hungary, and so on. The thing was palpable, but escaped the vision of Lord Grey of Falloden, who, in his efforts to gain the worthless Greeks, was barking up the wrong tree.

To surround the entire Enemy-Alliance with a ring of steel and tighten it at all points is very slow work, and very expensive. It is time to try diplomacy, and to begin with the States with which our quarrel is not *à outrance*, as it is with Prussia. Of these Bulgaria is the most accessible, and presents the most favourable field.

It is probable that the actual negotiations had better be entrusted to Russia. Bulgaria has always been held to be peculiarly within the Russian sphere. The fall of the Romanoffs offers a most plausible excuse for renewing the *pourparlers* broken off a year ago. Unlike the Tzars, the Russian Republic has no old-standing quarrel with Sofia. M. Miliukoff would find himself a *persona grata* among many Bulgarian circles. The United States could assist; there has never been bad blood between Washington and Sofia, and the Balkans are sown thickly with the results of American Methodist and Congregational Missions. There are still a fair number of Bulgarians who were educated at Robert College, and these are usually level-headed and far-seeing men.

The dynasty presents a difficulty, but yielding to our prejudices and giving way to ill-humour will not help us. Ferdinand Coburg may not be all we want, but in what respect he has played the traitor, or to whom, those who persistently miscall him would be hard put to it to prove. He was as much at liberty to choose a side as was Italy, and chose the one which promised him most, and which seemed to be winning. Let us be fair and keep our tempers. Epithets make difficult diplomacy. To insist upon his abdication might protract or nullify our efforts. If the Bulgarians *like* him, why not leave him upon his throne? He may be at least as satisfactory a ruler as any we could substitute, and as stable as a rowdy uni-cameral republic composed of a dozen parties. In the recent past Ferdinand has been an excellent ruler and a fosterer of forestry and agriculture, and may settle down to another fifteen or twenty years of similar beneficent activities. I venture to suggest guaranteeing him his present frontiers—with or without Monastir and the Northern Dobruja; assisting him to regain his Austrian estates at the general peace, and granting him Kavalla and the facilities of free port at Salonika and monetary assistance to get lines built to both places, and running powers over the Serres-Drama railway, which, I think, is French-owned. The details of the proposed agreement need not be discussed yet, but in principle should be the inclusion of all Macedonians, and should be designedly generous; for it is of the first importance that *other minor States* of the Central Bloc should awaken to the possibility of surviving with Bulgaria as an alternative to perishing with Prussia. Let us eat the enemy artichoke leaf by leaf, and let diplomacy do its best, and not as hitherto. . . .

I am, etc.,

H. M. WALLIS.

Reading, April 18, 1917.

HELP to meet the needs of the

SERBIAN ARMY,

and send your Donation for the

SERBIAN RED CROSS

— to the —

SERBIAN LEGATION, 195, Queen's Gate, S.W.

TANGIER TO TEHERAN.

Whether in the vain hope of Magyarizing the Serbian capital, or merely as a further annoyance to the unhappy Serbians, I cannot say, but I learn from the *Budapest Hirlap* that "Magyar schools have been opened in Belgrade." It is scarcely necessary to add that in these institutions the study of the Magyar language is compulsory for Serbian children. From a trustworthy source I learn, further, that "there is no native Magyar element in Belgrade, and that the Magyar pupils—children of Magyar settlers—attending these schools make up less than 10 per cent. of the total. It looks to me as if there were a good deal of effort running to waste here. But the most astonishing point about the whole business is to find that military men are appointed (in some cases, at least) as directors of these schools. One of these gentlemen is described as "a captain of Honveds," and it is expressly mentioned that "he is not a pedagogue by profession." Presumably, what he lacks as a teacher he makes up as a disciplinarian!

***

Apropos of the teaching of young Serbians, I observe that an Englishman who is, or was, working for the Serbian War Victims' Relief Committee at Oxford, and whose age is 23, appeared before the Oxford Local Tribunal recently. He based his objections to serving his country (as a soldier) upon conscientious grounds; and on that point I do not propose to comment, holding that any other man's conscience is too delicate a machine for me to investigate. But I notice that an official of one of the Serbian Relief organizations is reported to have said that "the Serbian Government attached enormous importance to this work"—*i.e.*, the help with their lessons that the Objector was rendering to the Serbian boys. Is that not rather muddle-headed? The man is called on to help *his own* country; and refuses, preferring an occupation of his own choice. That is all as may be; but surely older men—and women—could do the "clerical work and helping the boys in their lessons" just as well as this young man. If so, the Serbian Government's views on the matter are not of any help in reaching a decision. I am not surprised to read that "the certificate was withdrawn."

***

From Indian papers to hand by the last mail I learn that the Madras Gardeners' Corps—to which I referred in these notes on February 23, has left India for Mesopotamia. The corps is under the command of Captain Kirwan, who has as his assistant Lieutenant Fraser; and before it left Madras it was inspected at Government House by Lord Pentland, Governor of Madras and President of the Madras War Fund. His lordship told the members that they were going to do valuable service for their brothers who were fighting in the field. That, I think, cannot be doubted. The speaker might have added that the gardeners would also do yeoman service for the people of Irak Arabi, or Lower Mesopotamia, if they showed them new methods of cultivation and introduced new varieties of vegetables into the country. But doubtless that prospect would appeal far less to the hearts of the gardeners than the idea of benefiting their own countrymen.

***

The *Englishman* reports that there is a "fan famine" in Calcutta, owing to shipments having been delayed; and the city and its suburbs are clamouring for fans. I am sorry for them, but what interests me most in the *Englishman's* announcement is the report that of 1,500 ceiling fans ordered for the military establishments in Mesopotamia "only about 150 could be scraped up in Calcutta." That is bad news, indeed, for the hot weather is just about setting in in earnest along the lower Tigris and Euphrates, and a 90 per cent. shortage of fans will mean a terrible increase of discomfort for our men during the next six months. Again, we know from Sir Arthur Lawley's letter to the Red Cross headquarters that a Hun submarine had sunk a ship that was taking out a good deal of the ice-making plant that had been ordered for military hospitals in Mesopotamia. Our forces in that region are certainly having their share of ill-luck in being done out of their comforts.

***

Omdurman, I am glad to observe, is shortly to have the boon of shade trees in its principal streets. Just what a blessing this will be sure to prove to all who have to pass along those streets in the hot hours of the day and in the hot season can only be fully appreciated by those who have stepped into the shade of trees after a spell in the grilling heat of the Oriental sun. Perhaps the glare of the sun is even worse than the heat; and the green of a tree is always a pleasant sight for sun-strained eyes to rest upon. So Omdurman may well congratulate itself on the coming change, which is really an "improvement," and one on which the local municipal authorities are to be unreservedly congratulated.

CORSAIR.

NEAR EAST BOOKSHELF.

A GLORIOUS TRAMP.*

To plan a journey on foot, and without any European companion, from Samsun, on the Black Sea, to Tarsus and Mersina, on the Mediterranean, argues no small share of originality; to carry it through successfully, and to add to it side-trips to Konia, Zeitun, Aleppo and Alexandretta requires other enviable characteristics. Mr. Childs planned the journey and carried it out, and in this goodly volume, with its singularly attractive pictures, he enables us to share many of the pleasures of his tramp, without having to endure any of its inconveniences and risks. Half-way through his book he tells us, incidentally, how he regarded the journey:—

Every morning I set out with keen anticipation of what was to follow: each evening I looked forward with pleasure to the next day upon the unknown ways of an ancient land. There was ever speculation as to what might be behind the next hill, what behind the next mountain ridge, and beyond each succeeding turn or dip of road seemed to lurk endless possibilities of scene and incident and adventure. . . .

And, again, we find him writing, in more subjective vein, of his feelings in the region of the Cilician Gates:—

The spirit of an immeasurable antiquity seemed to pervade the scene, an influence making known its presence and nature, and yet subtle as the diffusion of reflected light. This indefinable surviving influence—as one likes to think it is—may be perceived wherever men have lived throughout long ages with stirring and striving of mind and body, with strong hopes and fears, with vivid consciousness of success and failure. For millions who had passed this way the Gates marked definite exit or entry; they came in anticipation, with dangerous purpose before them, or a sense of safety happily reached; they had fears and hopes, and left, by long succession, a subtle impress of their feelings. At least, if one can hold some such theory of the long dead past influencing present scenes, one travels in old lands with added pleasure.

Is the last sentence a mere sop to the matter-of-fact man who hates subtlety? At any rate, it gives us an insight into our author's character, and makes us value his company the more highly; and, moreover, it conveys a truth.

Mr. Childs, however, is no mere dreamer. He has an excellent memory for the Past, and gives us the benefit of it frequently, but he is not blind to the Present or the Future either. His interest in the associations of the Cilician Gates does not debar him from studying the construction of the great Baghdad Railway; on first coming across that much-boomed road, he shows a very clear consciousness of being "a British tribesman with a bird's-eye view of subtle hostile operations contrived by German tribes for the undoing of my own"; and, later, when a newly-recruited Arab soldier takes a liberty with him, he shows himself at once no dreamer, but a man of very prompt action. He is, in short, a delightful travelling companion, and if, now and then, he seems to be somewhat too particular in the matter of his cooking, we can readily forgive him that nice failing; for he takes us along a fascinating road and introduces us to not a few pleasant acquaintances. Quite often, too, he calls our attention to points we had not noticed when we travelled in those parts by ourselves. As, for example, this strange fact about caravan camels:—

Camels travel tied head and tail, from saddle to head-stall, in sevens or eights. The halters of horsehair rope are of great strength, but in the coupling between each pair of animals a link is provided, breakable by slight strain. You may see a camel suddenly fling his head into the air and snap this link, the wisp of wool by which his halter is tied to the saddle of the next in front. That is as it should be, what the weak link is for, and the camel-man comes back presently and restores the lashing. You are told that, had nothing given way, the beast would have gone mad, and begun to plunge and scream, and set the whole group doing likewise, with broken legs and necks as the result. But the irksome tether broken, the beast is satisfied at once, and goes forward without faltering in his lurching stride.

At several points of his journey the author was the guest of American missionaries, and he tells us much that is interesting concerning them and their work. Like almost all other travellers, he realises that the hospital is, and must be, the most effective factor in any mission's work in this land, and his admiration of the American surgeons and nurses at Marsivan and other centres is very sincere and very well earned. All this notwithstanding, it seems that the American Missions are sometimes very badly imposed on by those they benefit. At Marsivan, for instance, Armenian students actually ran a revolutionary printing press in the mission compound, and on another occasion they sheltered Armenian revolutionaries in the college, secreting and feeding them all unknown to the College authorities!

Of all the places visited and described by the author, Amasia makes the strongest appeal to us. It is, he tells us, "called the most romantic and picturesque city in Asia Minor"; and both his descriptions and his photographs offer strong testimony in support of the claim thus advanced. We are ready to accept the prophecy: "When better conditions exist in Asia Minor, and railways and good roads make journeying easy, foreign visitors will come to Amasia in numbers and declare that in wonder of situation, combined with haunting charm, they have never seen anything quite its equal." Sivas, on the other hand, a place of which we have heard much lately, and are likely to hear more in the near future, appears to be a dull and unattractive city, with nothing handsome about it save the old Seljukian buildings. It is pleasant, by the way, to find Mr. Childs frequently paying well-deserved compliments to the architects and builders of the Seljuk period, whose work is often not appreciated as it should be.

From Injesu, south of Kaisariyeh, the author turned aside for a short trip into "the land of the cave-dwellers." The two chapters in which he describes his experiences in this extraordinary region are by no means the least interesting in the book; yet we must confess that we read them with but little pleasure, for the troglodytes and their dwellings fail to arouse our enthusiasm, though they stir our wonder; and we should certainly have shared the aversion that Mr. Childs confesses he felt to examining the remote interior of the underground dwellings without trustworthy companions. The region, indeed, appears to be not unlike one of those fantastic countries of the imagination that Sir Rider Haggard and Mr. H. G. Wells are—or used to be—fond of describing.

We would fain write more concerning this delightful book, and gladly would we reproduce some of the quaint stories, shrewd comments, and interesting information with which it is packed so full. But space forbids, and we can only mention briefly one or two points more. The subject of the Baghdad Railway crops up frequently, as one would expect, especially in the latter half of the book; and what the author has to say regarding it should be read by all who are interested in the great project—of which we have not yet heard the last, in all probability. Of the various races that are to be found in this oft-conquered region, the author tells us many things of interest, and writes with much sympathy upon the whole. Of Greeks and Armenians we hear more than of the other folk, perhaps, and some of it is pleasant; of Kurds and Circassians there is little that is pleasant; but of the Turks what we read is, upon the whole, not unfavourable, the Turkish peasant especially coming in for a good deal of friendly praise. "All the varied inhabitants of Northern Anatolia," the author tells us, quite early in the book, "live in expectancy of Russian annexation, an event which each race sees from a different point of view." Such annexation he himself appears to regard as inevitable. It may be probably is; and doubtless it will make for stability and progress. But one has an uneasy feeling that it will result in the destruction of much that is picturesque and attractive in the land as it is.

We are grateful to Mr. Childs for giving us one of the most fascinating books of travel that we have read for many a long day. He had a glorious tramp, and in this book he enables us to share in its pleasures, his descriptions and his photographs being alike admirable.

* "Across Asia Minor on Foot." By W. J. Childs. (Blackwood and Son. 15s. net.)

BOOKS RECEIVED.

The New Map of Africa. By Herbert Adams Gibbons. (New York: The Century Co. $2.00 net.)

Bulletin of the Imperial Institute. Vol. XIV. No. 4. October-December, 1916. (John Murray. 2s. 6d. net.)

Miss Haroun-al-Raschid. By Jessie Douglas Kerruish. (Hodder and Stoughton. 5s. net.)

Glory of Youth. By Temple Bailey. (Richmond. 6s.)

The Journal of the Manchester Geographical Society. Parts I.-IV., 1916. (Sherratt and Hughes.)

Our Cairo "season" contemporary, *The Sphinx*, with its issue of March 31 suspends publication for the summer months. Next winter the journal enters on the twenty-fifth year of its existence. We are glad to learn that in spite of adverse circumstances our confrère has had a successful season, and records an increasing circulation.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
The SUMMER TERM will begin on APRIL 30.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars, apply to E. DENISON ROSS, Director.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. May.	1917. April.		1335 Rejeb.	5677. Iyar.
4	21	Friday	12	12
5	22	Saturday	13	13
6	23	Sunday	14	14
7	24	Monday	15	15
8	25	Tuesday	16	16
9	26	Wednesday	17	17
10	27	Thursday	18	18

To-day is the birthday of Princess Catherine of Greece, third daughter and sixth child of King Constantine and his consort.

To-morrow is the birthday of Queen Milena of Montenegro, who was born at Cevo in 1847.

Prince Paul Karageorgevitch of Serbia has arrived in London.

Lady D'Abernon has left Esher Place for Italy, and will be absent some months.

Mr. and Mrs. Rudyard Kipling left London on Tuesday for the Continent.

Madame Take Jonescu returned to London from the country last week.

M. Pierre Plamenatz, formerly Minister for Foreign Affairs for Montenegro, arrived in London from Paris last week.

Lady Murray, wife of General Sir Archibald Murray, Commander-in-Chief in Egypt, was one of the ladies who received Queen Alexandra on her Majesty's visit to the offices of Queen Alexandra's Field Force Fund. Lady Murray is a vice-president of the fund.

According to the *Lokalanzeiger*, Mr. Bonar Law's second son was captured by the Turks in the recent fighting in Palestine, says a Reuter's message from Amsterdam.

M. Bratiano, the Roumanian Prime Minister, has left Jassy for Petrograd.

The bust of the late Earl Kitchener, by Mr. Richard Belt, presented by the sculptor to the Lord Kitchener National Memorial Fund, is now in his studio in London. It has been cast by the famous founder, Barbedienne, of Paris. The bust will stand on a pedestal cut from an oak raised from the bed of the River Mokaha, in Russia.

In view of the letter of thanks which Sir Stanley Maude wrote to the committee of Queen Alexandra's Field Force Fund, and which was published on Tuesday, it is explained that Queen Alexandra's Field Force Fund only filled requisitions from Mesopotamia until the Mesopotamia Comforts Fund had been thoroughly organised.

Among recent gifts received by the London Committee of the French Red Cross, 9, Knightsbridge, S.W.1, of which the French Ambassador is President d'Honneur, are £1,000 from Lady Ralli, making £7,362 given by her and by Sir Lucas Ralli.

Prince Dolgoroukoff, the general in command of the Roumanian front, lately visited Dr. Elsie Inglis's Hospital at Reni to confer the medal of St. George, for bravery, on two of the wounded soldiers. Afterwards he asked to see all the staff of the hospital, and when they had assembled he gave the medal of St. George to each, with the exception of Dr. Laird, who received the Service Medal. She joined the unit after the retreat in the Dobruja, and has not yet had the experience of working under fire.

Our Khartoum Correspondent writes on April 7:—

The annual sports were held at the Gordon College on April 5. There was a full programme, and events followed one another in swift succession. At the end of the sports the prizes were given away by Mrs. Stack, who was presented by the head boy with embroidery in the native style, made in Omdurman. A large number of the residents were present.

Colonel Hilaire, the Governor of Wadai, arrived at el Obeid on the 6th, and inspected in Khartoum on the 8th. He will stay a few days there, and then continue his journey to France, *viâ* Cairo. It is not unlikely that many French officers may find this route shorter and more convenient than the western road through Nigeria. From Abesha to el Fasher is a journey of some twelve days, thence to Nahud is ten days, from there to el Obeid is four or five days, and then the traveller can get the train and reach Khartoum in thirty-eight hours. Thus it is possible to go from Abesha to France in six weeks. The journey westward takes nearer three months, so that there is a very emphatic saving.

Major W. T. C. Hibbert arrived in Khartoum from Mongalla Province and proceeded North for change of air.

Mr. C. H. Thomson has arrived in Khartoum for the Arabic and law examinations. Another competitor is Mr. E. G. Coryton, from el Obeid.

It is anticipated that the Acting Governor-General will proceed with Mrs. Stack and his staff to Erkowit at the beginning of May.

The marriage arranged between Captain H. A. B. Johnson, Cavalry, Indian Army, only son of Brigadier-General Sir Henry Johnson, Bt., of 60, Lexham Gardens, Kensington, W., and Dorothy Nora, younger daughter of Mr. Martyn Cecil Gurney, C.M.G., M.V.O., H.B.M., Consul-General at Marseilles, and Mrs. Gurney, of Beauplan, Mazargues, Bouches-du-Rhône, and Château St. Laurent, Nice, will take place, very shortly, in Egypt.

The will, dated October 23, 1907, with codicils of April 11, 1908, May 28, 1909, and December 31, 1915, of Evelyn, first Earl of Cromer, O.M., P.C., G.C.B., G.C.M.G., of 36, Wimpole Street, W., British Agent and Consul-General in Egypt from 1883-1907, who died on January 29, in his 76th year, has been proved by his nephew, Lord Revelstoke, the value of the estate being £117,608, with net personalty £116,670. The testator bequeathed to his wife £1,000 and the income from £10,000; to the executor £500; to his wife's maid an annuity of £25; to his butler an annuity of £40, to be continued to his wife should she survive him. All stocks, shares, and securities are left as to two-thirds to his eldest son, Lord Errington, he bringing into account £34,000 already settled on him, and the remaining one-third for his son, the Hon. Windham Baring. The residue of the property goes to the eldest son. Lord Cromer also directed that the funds passing to him under the will of his father, the late Mr. Henry Baring, are to follow the trusts of his first marriage settlement.

Mr. Joseph Trewby, of Langford Lodge, New Park Road, Brixton Hill, late Deputy Chairman of the Ottoman Railway and Chancellor of the Ottoman Embassy, London, who died on March 26, in his eighty-first year, left estate of the value of £47,310.

The offices of the Syria and Palestine Relief Fund have been removed from Church House, Westminster, to 110, Victoria Street, S.W.1.

Major Robert Mervyn Richardson, late 14th Hussars, of Offley Holes, Hitchin, who saw much service in Egypt and South Africa, left property of the gross value of £44,585.

APPOINTMENTS, PROMOTIONS, ETC.

Captain N. A. G. Quicke, Duke of Cornwall's Light Infantry, and Captain B. Biggar, Royal Army Medical Corps, have been taken on the strength of the Egyptian Army as Special Service officers with the rank of Bimbashi and posted, the first to the 2nd Battalion and the second to the Medical Corps.

Kaimakam Lord Bey, of the Sudan Government Railways, has been granted the temporary rank of Miralai.

The *Gazette* announces that Major W. A. Kenny is placed on the half-pay list, and is continued in the service of the Egyptian Government (February 13).

Bimbashi H. B. Sayer, R.E., has been appointed Deputy-Assistant-Director of Posts and Telegraphs, Sudan Government.

The appointment of Miralai R. M. Fielden Bey, Governor of Bahr el Gazal as Civil Secretary, has now been officially confirmed with effect from April 1, 1917.

Mr. V. R. Woodland, 1st Inspector White Nile province, has been transferred to Kordofan province as Senior Inspector, to replace Mr. E. N. Corbyn, appointed Assistant Civil Secretary. Mr. Woodland has in turn been succeeded by Mr. E. W. Drummond Hay, 1st Inspector Berber province.

Bimbashi A. Wyllie, 11th Sudanese, has been transferred to the Eastern Arab Corps.

Captain R. P. Mahaffy, Devonshire Regiment, has been attached to the Egyptian Army as Special Service Officer. He has been promoted to the temporary rank of Bimbashi, and his services have been placed at the disposal of the Sudan Government.

Captain E. C. Mylne, Northamptonshire Regiment, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi, and has been attached to the 10th Sudanese for duty.

Bimbashi T. A. Nicholas, Bimbashi P. G. W. Maynard, Bimbashi E. D. Bally, and Bimbashi R. S. Hart, Sudan Government, have been promoted to the rank of Kaimakam.

OBITUARY.

SIR MARC ARMAND RUFFER, C.M.G.

A Reuter's message announces the death of Sir Marc Armand Ruffer. He was at the time on his way back to Egypt from Salonika, where he had been assisting in the organisation of the medical and sanitary service of the Greek Provisional Government's forces.

Sir Armand was President of the International Quarantine Board at Alexandria for many years, and had done invaluable work in that position, especially in regard to sanitary measures in connection with the Hajj. He was knighted last year in recognition of his services.

He was a son of the late Baron Alphonse Jacques de Ruffer, was born in 1859, and was educated at Oxford (Brasenose) and University College, London. He was formerly Director of the British Institute of Preventive Medicine, Professor of Bacteriology at the Cairo Medical School, and a member of the Indian Plague Commission.

Referring to his work in Egypt, the *Times* says:—"Sir Armand Ruffer showed great tact in the management of the International Quarantine Board. Owing to its efforts, and especially those of its President, Egypt has been immune from cholera of recent years, while the whole of the Eastern Mediterranean has on several occasions been infected by the disease. Sir Armand Ruffer, besides being an able administrator and something of a diplomatist, was also a great bacteriological expert, and there are probably few authorities with greater knowledge of cholera and kindred diseases and of the best method of combating them.

"He attended a number of international conferences at Paris and elsewhere as representative of the Egyptian Government, and his European reputation gave much weight to any opinions and recommendations that he put forward.

"Sir Armand Ruffer performed most useful work in connection with the Red Cross in Egypt, and was chief of the Red Cross administration in Alexandria, where an enormous number of wounded have passed through during the last year, and especially immediately after the landing at Gallipoli."

He held the Grand Cross of the Order of the Mejidieh, and was a Commander of the Order of the Redeemer (Greece), of St. Anne of Russia, and of the Cross of Italy.

MR. ALPIN ALEXANDER RAMSAY.

News has been received in this country of the death in Constantinople of Mr. Alpin Alexander Ramsay. Mr. Ramsay, who was the son of the late Mr. Alexander Ramsay, well known in Constantinople engineering circles half a century ago, had for many years held a responsible position in the Régie Ottoman des Tabacs, and was much esteemed and respected in business circles. He had a very strong sense of duty in things both great and small, and though his health had been far from robust during the last few years, he never failed to attend at his office. As his name implies, Mr. Ramsay was a thorough Scotsman, with the reserve and tenacity characteristic of his race. A man of striking merits, enjoying the respect of the British community in Constantinople, he will be missed by a large circle of friends.

Mr. Ramsay leaves a widow and five children, three daughters and two sons, the eldest of whom, Lieutenant F. R. E. Ramsay, left England a few days ago for the front.

The death occurred on Monday, at Cheltenham, of Colonel Charles Cooch, M.V.O., late H.M. Body Guard, in his 88th year. He served during the Crimean War, and was made town major in Sevastopol for his services during the siege and final assault. He was awarded the Crimean, Sardinian, and Turkish medals, and was nominated Knight of the Imperial Order of the Légion d'Honneur and the Mejidieh.

Lieut.-Colonel John Willoughby Scott, D.S.O., Somerset Light Infantry, who was killed on April 23, was born at Ramleh, Egypt, in 1879, and was the youngest son of the late Sir John Scott, K.C.M.G., former Judicial Adviser, Egypt, and of Lady Scott, 17, Cowley Street, Westminster, and the only surviving brother of Mr. Leslie Scott, K.C., M.P. Educated at Rugby, he entered Woolwich in 1895, and passed into the Royal Artillery in 1897. He served in the Boer war, receiving both the Queen's and the King's medals, and being mentioned in despatches. In 1908 he retired from the Army as captain, and, after being called to the Bar at the Inner Temple, joined the Northern Circuit in 1912, and by August, 1914, had begun to make substantial progress in his new profession. When war broke out he was captain in the Queen's Own Oxfordshire Hussars, and he went to the front with that regiment in September, 1914, being promoted major during the autumn. He was gazetted temporary lieutenant colonel in the Somerset Light Infantry in January, 1916, and in July of the same year he was wounded and was invalided home. He returned to the front in September, 1916. Since the outbreak of the war he had been twice mentioned in despatches, and was awarded the D.S.O. on January 1, 1917. In January, 1916, he married Madeline, eldest daughter of Canon Worsley, Canon of Peterborough and Vicar of Evenley, Northamptonshire.

Madame Devitch, the sister of Mr. Cheddo Miyatovitch, for many years Serbian Minister to the Court of St. James's, died in London last Friday. She was buried on Tuesday, the first part of the funeral service being held at St. Saviour's Church, St. George's Square, Pimlico. Father Nicolas and Father Safrome officiated. The principal mourner was M. Miyatovitch, and among others present were the Serbian Minister and Madame Yovanovitch, the personnel of the Legation, representatives from the Serbian Relief Fund, and members of the colony. The interment took place in West Norwood Cemetery.

The death is announced of Captain Leo L. Ralli, A.S.C., the younger son of Sir L. Ralli, Bart. He was born in London, 1884, and educated at Eton, and New College, Oxford. He joined Sir Edward Ward's staff at Scotland House at the beginning of the war, and worked there at the organizing of the special constabulary. He subsequently became Sir Edward Ward's private secretary, a post he relinquished to join the A.S.C. His work during the last six months was in Paris, when an affection of the kidneys, from which he had suffered from childhood, had become acute, and he had to go to the South of France in search of rest and warmth. It was, however, too late, and, after an illness of three weeks, he succumbed on April 20.

DOMESTIC ANNOUNCEMENTS.

DEATHS.

RALLI.—On April 22, at 351, West End Avenue, New York. after a short illness, Julia, aged twenty-eight, daughter of the late Anthony P. Ralli.

RALLI.—Died abroad, after a short illness, Captain Leo L. Ralli, A.S.C., beloved younger son of Sir Lucas and Lady Ralli. of 2, Park Street, W., in his thirty-third year.

RAMSAY.—At Constantinople, on March 29, 1917, Alpin Alexander Ramsay. Deeply regretted.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner, P.T.25.

FRIDAY, MAY 4, 1917.

KING CONSTANTINE AND THE ALLIES.

King Constantine of Greece is not the only Sovereign who has summoned to his aid forces that have ultimately proved too strong for him; but few have cut such a sorry figure in challenging fate. Apart from the brief interlude of the early days of last December when he and his army had the satisfaction of killing some Allied bluejackets and taking vengeance on political opponents among their own countrymen, there has been little of the heroic in the attitude which, under his direction, the Greek Government has maintained since M. Venizelos was excluded from office. Frequent changes in the Premiership have testified to the increasing embarrassment in which the Athens Administration found itself; and the pressure exerted by the Allies, though fitful, together with the standing reproof of the Salonika Government, has prevented either the King or his Ministers from posing for any length of time as successful statesmen upholding the national dignity. Such glory as King Constantine may consider that he has won for himself will have had to be concealed within the precincts of the Athens Palace, where German agents and Greek officers trained in Germany have formed an appreciative audience, and the questionings of democratic Greece have been unable to penetrate. But the fallacy of the King's reasoning has found him out. Instead of remembering that he existed for the Greek people, he imagined that the Greek people existed for him; his own predilections were allowed to determine the policy of the country, with the result that he has been in conflict not only with the Allies, but with his own subjects as well. An honourable neutrality for Greece was just possible; but it would have been difficult, in view of the fact that she had deliberately allied herself with Serbia. At the outbreak of the war, however, it was recognized that she could serve the alliance best by remaining out of the struggle and by keeping a watchful eye on Bulgaria. When Bulgaria attacked Serbia, Greece could still argue that she was not prepared for war, and that no help that she could give was likely to affect the scale against the combined strength of Bulgaria and the Central Powers. Her alliance with the Serbians at least compelled a friendly candour in the negotiations. But it was King Constantine who decided that Greece should act otherwise. He proved deliberately false to his pledge to Serbia both before Bulgaria declared war and when the Serbian Government appealed for aid. From that time not only has he maintained a double attitude in his dealings with the Entente Powers, but he has also been guilty of the betrayal of his country, by surrendering troops, territory and war material to its hereditary enemy, and by dividing the nation into hostile camps.

At one time we were ready to admit that King Constantine's path had been rendered difficult by the equivocal action of the Allied Governments. If his intentions had been honourable, that stage would soon have been passed. He elected, however, to adopt a policy of treachery, and in spite of the amazing forbearance of the Allies has persisted in it until the present time. Telegrams sent from Athens during the past week declare that the Palace continues to be a rendezvous for German officers, among them von Falkenhausen, the former German Military Attaché, who has been returning regularly through the neutral zone and has been as regularly received at the Palace. One of the objects of these visits, it is stated, is to supply the Greek Reservists' League with funds from Germany, and it is impossible that King Constantine should not be privy to what is taking place. On more than one occasion an undertaking to disband the Reservists' societies has been given by the King and his Government. They have not been disbanded, but have become more active than ever. They are now reported to be patrolling the streets of Athens, especially after dark, and to be in possession of arms and ammunition. In Thessaly and Epirus their activities have taken a more serious phase. They have attacked and massacred a French patrol, and the extent of their movements points to a widespread organization inspired by, if not actually under the orders of, the Athens Government. The situation in Greece as a whole appears to be as dangerous as it was when Admiral du Fournet made his ill-starred march upon Athens, and found the Greek army waiting to attack him. If the weakness then shown by the Allies is to be repeated, we may expect the same regrettable results.

Public opinion in the Entente countries is unable to find any justification or excuse for the policy hitherto adopted by the respective Governments. The doctrine propounded by a member of the British Government that there can be no question of a British or a French policy, but that individual opinion must be sacrificed to the harmony of the Alliance as a whole, has hitherto found expression, as far as Greece is concerned, in a policy at variance with common sense, the interests of the Allies and the principles for which they are fighting. Various explanations of the anomalous state of affairs have been advanced—all of them derogatory to the prestige of the Entente Governments and to the reputations of their responsible heads. It was hoped that the Rome Conference had cleared the way for sane action in Greece; but the situation has continued to be mishandled, and is admittedly becoming worse. Within the last two weeks, however, the British Prime Minister has met the heads of the French and Italian Governments in the Savoy and has now left for a second conference on the Continent. The elimination of autocracy from Russia has disposed of the theory that the unreasoning support given to King Constantine could be traced to Petrograd. The participation in the war of the United States, and President Wilson's pronouncement that the fight is for democracy against autocracy, have thrown a somewhat sinister light on the methods adopted by the Allied Governments to help Greece's autocratic and militarist King in his quarrel with the man who enjoys the support of the majority of the Greek nation. A policy of detachment would at least have allowed the issue in Greece to be decided by the people themselves; but the Allies' action has had the effect of bolstering up King Constantine and enabling him to defy the expressed will of the country. Little wonder if the Governments responsible have shrunk from the glare of the American searchlight on this peculiar feature of their joint diplomacy. To the majority of Britons we believe it to have brought a keen sense of disgust to find that, in spite of the change of Government, the blunders of the old regime, which were based on profound ignorance of the Near East and its peoples, have been perpetuated. There can be no doubt that Greek opinion is overwhelmingly opposed to King Constantine's policy, and that the bulk of those who are capable of appreciating the situation realize that he has shown personal traits during this war which unfit him for a position of trust and responsibility. It is not suggested that the Allies should cap their former mistakes by deposing King Constantine. They have only to stand aside to allow the leaven of constitutionalism to do its own work; but in order that the balance may start equal, they must make sure that their past action does not give an initial advantage to the forces of autocracy and reaction.

A NEW SITUATION IN THE BALKAN PENINSULA.

By H. CHARLES WOODS.

Events which have taken place in, or connected with, the Balkan Peninsula since the outbreak of hostilities may be divided into three phases. The first covered the entry of Turkey into the war and extended until, or almost until, Bulgaria threw in her lot upon the side of the enemy. During this period, had not the Allies ignored the all-preponderating importance of the Near East, diplomacy might, perhaps, have prevented Turkey from joining the Central Powers. Moreover, had this been impossible, if the requisite negotiations had been inaugurated at the right time and in the right way it would almost certainly have been feasible to secure the neutrality, if not the actual support, of Bulgaria, and thus to neutralise the effect of any policy adopted by the Ottoman Government.

The second phase lasted from the moment when it became impossible to achieve this object, that is from the time immediately preceding the rupture with Bulgaria until the advent of events which may be said to have begun to develop during the closing days of last year. During that time, the Central Powers having won a diplomatic victory, the temporary importance of which it is difficult to exaggerate, there was little if anything which could be done by the Allies except to await a moment when diplomacy might once more be employed either alone or in conjunction with military action. Though the actual advent of that moment was not at first clear, and though it is, therefore, difficult to define what constitutes the precise beginning of the third phase in Balkan war history, it is now perfectly clear that the various Notes which have passed between the Allies and President Wilson, the Russian Revolution and the entry of America into the war swept away many of the obstacles in the way of a settlement of the Balkan question, and that they have led up to and created a situation in which the ground may once more be favourable for a campaign based upon strategic diplomacy of a kind which would not have been conceivable under former conditions.

In order to understand the present Balkan position and to realise what might be done to alter it, we must of necessity go back to events which preceded and immediately followed the wars of 1912 and 1913. In the former year, as a result of negotiations which had been in progress for some time, the Balkan Alliance was formed. That Alliance depended largely upon a treaty, or more correctly upon a series of treaties, between Serbia and Bulgaria. The most important of these was the document and a then secret annexe signed early in March. This annexe defined the manner in which any territorial gains acquired by combined action were to be repartitioned. Subsequently (May, 1912), Bulgaria and Greece arrived at a defensive alliance, and just before the outbreak of the war concluded a Military Convention, neither of which agreements contained any definite stipulations as to the future division of territories. On the strength of these agreements the first Balkan war was fought.

Early in the year 1913, and before the conclusion of that war, Serbia and Greece came to a secret understanding at Salonika. On the initiative of the latter country, it is now well known, it was agreed that the Greeks would raise no objection to the Serbian retention of Monastir, allotted to Bulgaria by the Serbo-Bulgarian Treaty of 1912, provided the Government of Belgrade were willing to sanction the incorporation of Salonika in the Hellenic Kingdom. This arrangement was followed by a more formal Græco-Serbian Treaty, made during the early months of that year—a treaty which, to say the least of it, was in part the cause of the second war.

That war, commonly accepted as having been actually begun by Bulgaria, was terminated by the fatal Treaty of Bucharest, which unfortunately won praise even in now Allied countries. That treaty was arranged with the idea of maintaining an equilibrium in the Balkans and of preventing the advent of a fancied Bulgarian hegemony—a hegemony which would never have been possible—for, including the Serbs and Roumanes of the Dual Monarchy, the Serbians and Roumanians would always be more numerous than all the Bulgarians of Bulgaria and Macedonia put together. But instead of achieving the object for which it was intended the Treaty of Bucharest, favoured as it was by Germany and other events which took place about the same time, led not to a settlement but merely to a holding in suspense of the numerous Near Eastern questions which had already been the means of shaking the European Concert to its very foundation. In short, these events created a situation in which it was certain that the losses then suffered by Bulgaria would lead her to seize the first opportunity to try to regain her coveted territory, perhaps in Thrace, but certainly in Macedonia, either by peaceful negotiation or by war.

The existence of this situation—the rivalry between Serbia, Greece and Roumania on the one hand and Bulgaria on the other, and particularly the bad relations between Serbia and Bulgaria and between Serbia and Austria—left the way open for and rendered possible the present war. So far as Serbia was concerned, as no satisfactory settlement of many of the important questions for which the Balkan wars were fought was arrived at, the real source of danger lay in the impossibility of the development of the national aspirations of the people, and of an advance towards the Adriatic, without a conflict with the strongest of their enemies—Austria. Instead of considering this danger and of preparing to meet it by endeavouring to improve its relations with Bulgaria, the Serbian Government, relying upon the support of Autocratic Russia and upon its Treaty with Royalist Greece, closed its eyes until too late to the necessity of making the concessions required to secure the support of a State which could attack the Serbian rear at any moment. Bulgaria, on the other hand, who had every reason to distrust the Government of the Romanoffs, was in a position which rendered it certain that she would not throw in her lot with any side or countries which did not insist upon some form of compensation for the way in which she was treated immediately prior to and after the second Balkan war.

This was the key to the situation which existed up to the entry of Bulgaria into the war. Tardily, and when the time had all but passed, the Allies no doubt entered into negotiations with the object of securing concessions from her neighbours—concessions which at one moment would have won the neutrality, if not the active support, of Bulgaria. But no Balkan statesman, be he Serbian, Greek, Roumanian or Bulgarian, can or will make sacrifices, however advantageous to his country, until he finds himself compelled to do so. Equally, no Balkan Government can or will accept less than it demands, until the *necessity* for the adoption of such a course arises. It was largely because this fundamental condition of things was not realised, or because no steps were taken to meet it by the Allies, and particularly because the negotiations were placed in the hands of the then Russian Government, which was distrusted in Bulgaria, that those negotiations failed, and that Germany secured an Ally whose army and territory, the latter constituting the one and only bridge between Berlin and the East, have been invaluable to her.

From a local standpoint the diplomatic situation is practically the same to-day as it was early in October, 1915. But looking at the question from the larger or international side, the position has been changed by the three events or by the results of the three series of events to which I have already referred. Thus in replying to the German Peace Note of December last, the Allies declared that their war aims included the reorganisation of Europe guaranteed by a stable regime and based on respect for nationalities. President Wilson, in addressing Congress, said that the Americans were but one of the champions of the rights of mankind, and that they would be satisfied when those rights were as secure as fact and the freedom of the seas can make them. M. Miliukoff and M. Karensky have pronounced themselves to be in favour of the principle of nationalities. It is these changes and these declarations which may make

Digitized by Google

the present a favourable moment for a reversal of Allied policy in the Balkans—a reversal, perhaps, destined to detach Bulgaria, and consequently sooner or later Turkey, from their alliance with the Central Powers.

Bulgaria has conquered from her neighbours, and especially from Serbia, the districts which she claimed (in some cases much more than she claimed), but she knows as well as we do that the future ownership of Macedonia depends not so much upon its present occupation as upon the distribution of territory sooner or later to be decided upon by the Allies. The Allies on their part have declared themselves in favour of the principle of nationalities. If this declaration is to be adhered to, and we must presume that it will be adhered to honestly, it means, whenever the time comes, that the peoples of Europe, including the Bulgarians, are destined to get what they deserve and to be allotted to the Governments to which they belong. The only questions to be decided are, therefore, the true nationality of the peoples inhabiting doubtful or disputed areas, and the proper moment for the taking of diplomatic or other measures necessary to arrive at and to enforce the results of such a decision.

In the case of Macedonia, and particularly so far as it concerns Serbia and Bulgaria, there are three ways in which the question of nationality can be solved—according to language, by taking a plebiscite, or upon the basis of the Serbo-Bulgarian Treaty. If the first of these means were chosen the necessary measures would have to be taken to ascertain the areas of Macedonia in which the forms of speech particular to Bulgarians or Serbians are employed. Upon this question the information given by "Balcanicus" in his Serbian book, "The Aspirations of Bulgaria," is most important, for he admits the post-position of the article in the Macedonian dialect. Though the author endeavours to explain away this fact, his evidence is conclusive, for Bulgarian is the only Slav language in which the article is post fixed.

In theory the taking of a plebiscite would be a satisfactory manner of arriving at a solution of the question. But to enable the people to vote freely, a plebiscite could only be conducted under the direct auspices of the Allies, or better still under the control of the American Government. In such circumstances it is certain that the Serbians would lose heavily. Indeed, if proof of this contention be required, it can be found in the various concessions made by the ex-Sultan Abdul Hamid and his predecessors to the Bulgarian Exarchate; for the Turks have never admitted the jurisdiction of any Church in areas in which its members did not constitute an overwhelming majority of the population.

The third and last suggestion for a solution of the Macedonian question, therefore, seems to be the one by far the simplest and fairest of adoption. It is the simplest because the Serbo-Bulgarian Treaty and its annex of 1912 were arranged by the two contracting parties, without foreign interference, only five years ago, and when the question was looming not in the distance, but at a moment when a redistribution of territory was actually foreseen. To take that agreement as the basis for, though not necessarily the actual text of, a future arrangement would be the fairest settlement of the problem, for it allots to Bulgaria far less than she would have got from the Treaty of San Stefano. Moreover, for the reasons already given, the Serbians would certainly secure from it a settlement much more favourable to them than any which could result upon the language basis or follow the taking of a plebiscite under the conditions which I have indicated.

There are questions connected with the future ownership of parts of Greece and of Roumania now occupied by Bulgaria. In regard to those areas annexed to Greece after the wars of 1912 and 1913, measures would have to be taken to safeguard the prestige and, so far as possible, to secure the consent of M. Venizelos. But in this connection it must always be remembered that the Great Man of Modern Greece was at one time in favour of the concessions necessary to secure the support of Bulgaria, and that since his unconstitutional removal from office the Greek Government, in opposition to the wishes of the Allies, has voluntarily sacrificed large tracts of country to Bulgaria. The delimitation of the Roumano-Bulgarian frontier of the Dobruja would be more difficult, but here again we have as a guide the arrangement made between the two countries themselves by the Protocol of Petrograd signed in May, 1913—an arrangement which might in its turn constitute the basis of an agreement destined to secure a lasting understanding between the parties concerned.

The position of the Allies is perfectly clear. There can be no bargaining with their enemies at the unjustifiable expense of their smaller friends or of statesmen who have loyally supported their aims. But as they have taken their stand upon the principle of nationalities, and as that principle must obviously be the same to-day and after the war, it may conceivably be possible to listen to overtures enabling Bulgaria and consequently Turkey now to detach themselves from their alliances with Germany and Austria. The successful termination of overtures of that kind would mean for us a *coup* the diplomatic and military advantages of which it would be impossible to over-estimate. On the other side, the favourable termination of such negotiations would secure the termination of a war in which the Bulgarians have suffered heavily, and from which they have nothing to gain. Moreover, the moment is so favourable that it is probably unique in the history of a people one of whose outstanding characteristics is materialism. Indeed, Bulgaria always having lived on the most cordial terms with America and having no disagreement with the new Russian Government, the present is a time in which the Government of Sofia may well consider it desirable to take stock of the position before the advent of forces at present unforeseen—forces which might well prevent it from securing all that it really deserves after the war.

As a man who endeavoured to explain the interests and the merits of the Serbians during the period which followed the terrible events of 1903—a period in which it was almost impossible to get a hearing for a good word about a people whose merits have always been apparent to those who knew them—I know that I have made suggestions which if realised would entail a considerable concession by a race who have fought bravely for the Allied cause. But Serbia is one of the Allies, and her future prosperity depends upon, and her primary interest must, therefore, be bound up with, an Allied rather than a local Serbian or Balkan victory. She can play her part not only upon the field of battle, but in the arena of diplomacy. By agreeing voluntarily to allow Bulgaria to retain certain areas of Macedonia now occupied by her, Serbia would be making a temporary sacrifice. Such a sacrifice, difficult as it might be, would be less bitter now than were it later on to be forced upon her, by the promised redistribution of territory upon a nationality basis at a moment when the time had already passed for compensation in the establishment of a favourable position for the Southern Slavs as a whole.

NEW EMIR OF KOWEIT.

A Cairo correspondent writes on April 3:—The last mail from Busreh brought news of the succession to the Emirate of Koweit of his Highness Sheikh Salem Aal Sabah, the second son of the late Sheikh Mubarak, following the recent death of his elder brother, the late Sheikh Jaber. The ceremony of *Mubaya'at*—akin to the feudal ceremony of swearing of allegiance—was performed by the leading sheikhs and tribal chieftains in the presence of his highness Sheikh Khaz'al Khan, Emir of Mohammerah, and the delegate of Emir Abdul Aziz Aal Saoud, the Emir of Nejd, as well as of a deputation sent by General Maude to tender his condolences to the new Emir on the bereavement he had just sustained in the loss of his elder brother, and his congratulations on his succession to the Emirate.

The new Emir of Koweit is in his forty-fifth year, and already during the rule of his father he had established for himself a reputation for prowess in the battlefield and for coolness of judgment in critical moments. During his brother's tenure of the Emirate he held the command of the Koweit army. He is tall and full-limbed, and his dark eyes express intelligence and decision. He embodies the traditional qualities of the great Arab ruler, being a patron of poets and taking particular pleasure in the company of men of letters. He is especially fond of Arabian history, and spends much time in the study of works on this subject.

Arrangements have been made for British postal orders to be paid at the British Army Post Office at Salonika when presented by civilians.

THE PRESS ON THE NEAR EAST.

The Kinship of Jews and Arabs.

Under the above title, *Palestine* (April 28) publishes an interesting article. The writer begins by saying:—

The spirit of the times points towards the reconstitution of nationalities, that is, towards the creation of such political conditions as will enable individuals belonging to one and the same nation to unite freely their efforts for the realisation of their common aspirations and ideals. The carrying out of this general nationalist programme will, it is hoped, greatly reduce the future possibilities of such conflicts as the one which is at present devastating the world. It cannot be doubted, however, that the maintenance of peace will only very inadequately be ensured if the reunion of individuals and communities within their respective nationalities is not supplemented by the simultaneous establishment of relations of tolerance, of goodwill, and of friendly collaboration between the various national groups in their turn. It is obvious that such relations can most easily and most permanently be established between nations which geographically are close neighbours, and which at the same time are united by bonds of common origin and by similar traditions and parallel economic interests. Amongst the nations which satisfy these requirements none is more conspicuously marked out for future collaboration to the profit of humanity as a whole than the two foremost families of the Semitic race, the Jews and the Arabs.

Jews and Arabs alike, the writer goes on to say, have their descent from Abraham; and he proceeds to show how many customs and characteristics they had (and still have) in common. The article concludes:—

So we see that both the Hebrew and the Arab peoples owed their birth as a nation to the appearance of a great principle strong enough to gather round its banner the scattered tribes, and to weld them suddenly into mighty social organisms. Why should not history repeat itself in this matter as it does in many other matters less deserving? Why may not both the Jews and the Arabs re-assemble each their scattered tribes under their own honoured banner, and take up again their own national life each in their own national home, the Jews in Palestine, and the Arabs in Arabia, each nation according to its own ideals and aspirations, but both together in peaceful and friendly collaboration for their own advantage and for the advantage of the whole civilised world?

On the Salonika Front.

Pressure on our space has prevented us from referring earlier to an extremely interesting article in the April *Blackwood*. It is entitled "The End of a Long Pause," and its author, "H. R. W.," appears to be an officer till recently serving on the Salonika front. He tells us many quaint things regarding life under war conditions in that region; and we feel now and then, with the author, that the field would have afforded magnificent scope to W. S. Gilbert. For instance, certain Greek "guards" at a bridge "received a firm request to retire with obvious relief," and "went off without the slightest idea where any of their comrades were, and probably buried their uniforms and went back to civil life." But the writer has a good word to say for the other type of Greek soldier:—

For the justification of the nobler portions of the Greek Army, that much-tried but potentially gallant force, let it be said here that no army in the world—not Napoleon's Old Guard, let its discipline and courage be what it may—could have maintained its *morale* untarnished after the corrupt, chaotic, and callous ordeal through which it had had to pass. Many times I have sympathised with the Greek Army of Macedonia, especially its officers, loyally standing by their miserable monarch, and refusing to follow the primrose path of dalliance with their allegiance, yet who knew they were fulfilling a shameful, farcical, and useless rôle, when often enough their real sentiments would have sent them flying at the throats of their hereditary foes. I have seen a Greek officer, with tears in his eyes, deplore his nationality, and a man's heart must be almost broken before he can do that.

And here is another picture, less cheerful, but typical of the chronic state of lack of security in the Balkans. The writer had just had the task—painful and unpleasant—of clearing out a village which had been sheltering many refugees. As he was preparing to leave, "a very old gentleman appeared out of a farm driving his donkey before him. He waved to me cheerily and said," Finnish, Johnny," and that seemed to sum it up.

That is war in the Balkans, an accepted endemic evil to be cheerfully endured and made the best of. Some of these people I had just driven out had come all the way from the shores of the Black Sea in a series of enforced migrations, each time seeing their little store dissipated, their hard toil wasted, their little preparations ruined, their little enterprises failures. "They shall flee and take to the mountains." Yet some people wonder why Macedonia is not a flourishing land. I hope with all my heart that one day these poor folk will come back to repeople A——, that there will be again a cheerful hum around their threshing-floors, and that they will grow old in prosperity and learn to laugh over their last "three hours' notice."

A Separate Peace for Bulgaria.

The *Gazette de Lausanne* of April 4 contained an article by Maurice Muret, in which he discussed the influence of the Russian Revolution on "Mitteleuropa." He devoted special attention to Bulgaria, as may be seen from the following extracts from his article:—

The Russophil and pacifist overtures of the Bulgarian Prime Minister spring from the necessity of retaining the goodwill of the nation; but while Count Czernin's flattery will have no success with the new *régime* in Russia, it is not quite certain that Radoslavoff's appeal will not rouse an echo of sympathy in Russia. So far as we understand, negotiations to this effect have already begun, unless we are misinformed, in our own country, in Switzerland.

In the meantime, on October 12, 1915, Mons. Viviani solemnly declared that the Allies had decided to uphold the Treaty of Bucharest to the advantage of Serbia, Roumania, and Greece. It is open to doubt whether that Treaty was at the time a masterpiece of policy, but the behaviour of the Bulgars during the war should render a revision of the Treaty of Bucharest in their favour inconceivable. Thus the pledges of Mons. Viviani remain in full force. And no man could understand why the Allies should not keep those pledges. The success of the Berlin-Baghdad plan depends upon many things, but in the first place upon a Bulgarian hegemony in the Balkans. A separate peace with the Bulgars, a peace which would virtually bestow that hegemony upon the Germans, would be a fatal mistake on the part of the Allies. Everything leads us to understand that the new Russian Government is quite alive to all this, and that it will pay no attention to either the intrigues of Radoslavoff or the overtures of Count Czernin.

Arabs of the Tigris.

In its issue of April 30 the *Liverpool Daily Post* gave a sketch of Arab manners and customs, in an article headed "Tribes on the Tigris." This famous stream, says the writer, "is a river of great tribal confederations, immigrants from the deserts of the Arabian peninsula. Names that ring through the heroic legends of Arabia—Bani Tamin, Bani Rabi'ah—are to be found among them, and historical record confirms their claim to such high ancestry." He continues:

No structural alteration in the nature of their social organisation differentiates them from the Bedouin of to-day, but their long sojourn in the Irak has been productive of outward changes. They have become cultivators, or they take toll from the cultivation of smaller tribes, some of whom may represent an earlier stratum of population, while some are sections detached from other large Mesopotamian units. They have been affected by local religious influences, and have turned from the Sunni tenets of the desert to the Shia's creed, which centres in Nejef and Kerbellah. Physically they have profited by ampler conditions of living, and the powerful, big-boned type common among them contrasts with the hungry slenderness of the Bedouin. But if they have gained in worldly prosperity they have lost in honour. Their brothers of the wilderness will neither give their daughters in marriage to the Irak tribes nor take wives from among them. They are "Ma'dan," a loose denomination which applies generically to the social level below that of the speaker.

Life on the Bosphorus.

The April number of the *Badminton Magazine* contains a pleasant article on "The Bosphorus," by "A Naval Officer," who, by the way, provides his own illustrations—and remarkably good ones they are, too! Here is a typical passage, which follows the mention of Candilli, a village on the Asiatic side of the great waterway:—

This was a favourite place of residence for those of the English community who were not of the diplomatic circle, and who had made very delightful homes in old Turkish-built wooden houses, with gardens behind them, the Bosphorus at their doorstep, and most of the luxuries of life within their walls. The exterior aspect of a residence on the Bosphorus is no index whatever to the status or circumstances of its occupants. Nearly everyone lives in wooden houses, most of them warped, decayed, and unpainted. But it is one of those Oriental surprises to discover how extensive a suite of spacious and luxurious apartments may lie behind the most unpromising frontage. People who would keep a pair-horse brougham or a 20 h.p. motor in other countries keep their private caique with two or three rowers, and, in place of a coach-house or garage, the houses that border the water are constructed with a boathouse in the basement, like some of the Venetian houses. Moreover, the decay and dilapidation one meets with in nearly everything Turkish is, by some miracle, missing altogether in the caique of the Bosphorus, in which the limit of Oriental luxury is manifested.

M. Venizelos and His Sovereign.

Professor Nicholas Eumorfopoulos contributes to the *Pall Mall Gazette* (April 27) an article, "A New Greece," with the sub-title, "Will King Constantine be Deposed?" The writer holds that the dynastic question in Greece has been greatly modified by the disappearance of the Tsar, and adds that "Constantine is again attempting the game of reconciliation between himself and Venizelos." He goes on to say:

Apparently there are still responsible people in Athens who believe that a policy of reconciliation between Constantine and the Nationalist Leader is possible. No such attempts on the part of the murderer of the British and French soldiers and sailors should be tolerated for a single moment. Constantine has in no way changed his predilections or opinions, and his co-operation with Venizelos is absolutely impossible.

We must remember that Venizelos has not hitherto given an anti-dynastic character to his movement, because the Entente

Digitized by Google

Powers insisted that he should not do so. It is, perhaps, to be presumed that since the Tsar has disappeared from the realm of political consideration, the Greek statesman will be given a free hand. Indeed, he should be empowered to deal with the whole situation in Greece as he may think fit, and all so-called "neutral zones" should be abolished.

Professor Eumorfopoulos holds that King Constantine's conduct has set the Entente Powers free to repudiate any past agreement with him, and regards the creation of a Greek Republic as the only solution to the problem. He concludes his article:

M. Venizelos has long dreamed of a Confederation of Republics in the Balkan Peninsula, and the deposition of Constantine will bring it a step nearer realisation. The fact that the New Russian abjures all claim to Constantinople renders the solution of the Balkan question easier, if the idea is taken up as a definite aim on the part of the Entente. Constantinople would be the capital of the Balkan Confederation.

The Armenian Tragedy.

Mr. Lewis Einstein, who was till recently attached to the staff of the United States Embassy at Constantinople, and whose name is familiar to many of our readers, contributes to the April *Contemporary Review* a weighty article on "The Armenian Massacres." Very early he chronicles a curious fact:—

To the Western mind a massacre presupposes a prior condition of hatred so intense as to cause men to forget their normal restraints. In no other way is it explicable. There have never been wanting apologists who, while deprecating excesses, professed to understand the occasional outrages of the Turk, indignant at being exploited by the more economically developed Armenian. But though the Armenian is more developed, such a conclusion by no means follows. There is no evidence to indicate the existence at any time in Turkey of any widespread hatred or resentment. On the contrary, abundant testimony from the interior of Asia Minor shows that never had there been less fanaticism than in the period immediately preceding the massacres. Armenians and Turks were everywhere living side by side, usually on the best of terms.

The massacres were due to the Government, and "in the Orient," says Mr. Einstein, "in spite of the new Parliamentary veneer, Governmental ideas are not unlike what they were in Europe centuries ago, in the days of the massacres of the Albigenses, or even when St. Bartholomew was a policy of statecraft." The Young Turk leaders "had been bred in Macedonian adversity. They had seen the principle of nationality run riot over that distracted province, and had been the great losers in its name. . . . The new Turkish nationalism, built up in the dress of Europe, but with the spirit of Asia, was to prove far more ruthless than Hamidianism." There was, too, a question of revenge for the alacrity with which the Armenians had, so to say, thrown in their lot with Russia. Talaat, says Mr. Einstein, attributed the disasters that befel the Turks at Sarikamish, in Azerbaijan, and at Van to Armenian volunteers. And the native Press and Turkish officials sedulously spread tales of Armenian outrages on Moslems. As to the responsibility for the massacres, we read:

Talaat stands out as the directing power in this policy. From him emanated the vast organisation, the details of execution, the oral and written instructions. But though the major guilt is his, though it is impossible for those who saw him during all those terrible months not to realise that he was himself in monstrous sympathy with the policy of extermination, yet he shared this fully with the other members of the Committee, Doctor Nazim and those who worked in the dark and held the leash over Talaat as he held it over Turkey—for his position was by no means so omnipotent or secure as many believed abroad, nor was the policy one so universally endorsed.

Of Germany's share in the ghastly business we find Mr. Einstein in agreement with most other writers on the subject:—

The Germans have declared that their efforts herein were powerless, and that the Turks would not listen. It is altogether likely that to justify these statements the German Government will one day publish copies of its notes and memoranda on the subject, notes of a kind which those who have had experience in Oriental diplomacy appreciate at their true value, but which may satisfy their own people. The guilt was deeper, and, under the plea of not interfering with the internal affairs of an ally, nothing effective was done. That the German Embassy inspired the policy of deportation, as many Turks believed, is unlikely, though it was carried out under the plea of military necessity, and the military direction was theirs. But that German officials were well aware of what the deportations meant, and with nervous apprehension refused to take effective steps to stop the massacres, is certain. . . . The German official view was to obtain from Turkey the fullest possible assistance she could render, and to do nothing which could in any way impair this. Such assistance had already exceeded all expectations, and the success of the Ambassador's efforts was great enough to cause his admirers to discern in him the next Chancellor. But the price paid for this assistance included the blood of some six hundred thousand murdered Armenians.

Turkey's Fear of the Allies.

In an earlier part of Mr. Einstein's article a curious light is thrown upon the deterrent effect exercised upon the Turkish hotheads by France and Great Britain, even after war had broken out between Turkey and the Allies. The delay in the massacres after all things were ready for their perpetration is accounted for in the first of the following paragraphs; the second paragraph explains how the respite came to an end:—

Turkey, who had been ready to stake her all against Russia, was by no means so eager for war with England and France. Months after the rupture arms had not been measured. The fear of the English Navy was immense. The expedition against Suez had ended in disaster. The Persian Gulf and Busreh were lost. An entire army had perished in the Caucasus. The prestige of the Committee was then at its lowest ebb. Turkey, left to her own devices, with the burden of an unpopular war, with an unpopular and unrepresentative Government, face to face with seething discontent within, an uncertain Bulgaria threatening from the North, and the menace of Russia, was in no condition to enforce any such wholesale policy of murder as the Committee had in mind. When in February, 1915, the Allied Fleet battered down the ancient walls of Seddulbahr, a semi-panic seized the capital, and every preparation was made for transferring the seat of government to the interior of Anatolia. Even the Embassies of the Central Powers had selected their residences at Eski Shehir. The Turkish treasure and archives had been despatched, and at Haidar Pasha, on the Asiatic side, trains were in readiness for instant departure. It seemed at the time only a question of hours before the British Fleet would sail up the Marmara.

Then came March the eighteenth. The attack, half driven home, ceased with the loss of three battleships. They were old and of slight value, save for the lives of gallant sailors. But the historical test of great occasions is rarely measured in terms of men or of material. One great overwhelming fact impressed itself on the Turkish mind in such a way as to form a basis for all future reasoning. The Allied Fleet had failed to force its way through the Dardanelles, the Straits were impregnable, therefore they could do what they liked. The tragedy of the sinister policy was contained in this deduction, for "what they liked" meant the extermination of the Armenians.

THE ADVANCE IN PALESTINE.

(From a Correspondent.)

Before Gaza, April.

I had quite a good time in the recent "scrap-victory," as they call it. It was a battle of movement in the good old style. Our cavalry advanced at a gallop, well peppered with shrapnel over a beautiful rolling open country, in the Eastern sunset glow. Our troops had various serio-comic adventures, but I fear the Censor would hardly approve of my describing them. Suffice it to say that we all got back to camp in safety, and are now sitting down before the town where Samson pushed the pillars over, and within a long day's ride of Jerusalem. The whole country is covered with grass and fields of barley, while the wild flowers are a glorious sight—acres of yellow, white and blue, reminding one of Surrey meadows in June. We are now encamped by the sea, and I managed a dip, drying off afterwards on the beach. It was just splendid to feel clean again, as I had not had my clothes off for four days.

MOSLEM LEADERS AND GREAT BRITAIN.

The British authorities have received cordial letters from the Mujtahids (religious leaders) of Kerbellah and Nejef, and the following telegram has been addressed to the King by one of the principal Mujtahids of Kerbellah:—

"I and all the spiritual leaders of Islam here offer your Majesty our heartfelt congratulations on the capture of Baghdad, Dar-es-Salaam (the City of Peace)."

His Majesty has been pleased to reply as follows:—

"I have received with pleasure your congratulations on the brilliant achievements of my troops, whose victorious arms will assure the security of your famous shrines. My earnest desire is for the wellbeing of Irak (Babylonia) and its people, the preservation of its holy places, and the restoration of its ancient prosperity."

The Postmaster-General announces that a mail from the Salonika Force, despatched on April 8, and probably containing five days' correspondence for the United Kingdom, has been lost at sea through enemy action, also mails for the Egyptian Expeditionary Force, containing correspondence (but not parcels) for that Force, which reached London for despatch on March 31, April 1, 7 and 8.

The transmission of merchandise by letter post to Russia and Northern Persia is strictly prohibited, the Postmaster-General intimates. Packets which contravene this prohibition will be stopped and may be confiscated.

A Vienna telegram reports the arrival there on Tuesday of Talaat Pasha, the Turkish Grand Vizier and Minister of Finance, on his way back from Munich.

The Anglo-Hellenic League learns that the island of Ithaca is the latest to join the movement of National Defence, and its adherence is notified in a telegram of confidence addressed to M. Venizelos by Dr. Collyvas in the name of the united inhabitants.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

My readers will recall that some time ago THE NEAR EAST discussed the amazing attitude which British firms of exporters have adopted towards the postal "cash-on-delivery" system. Hitherto, most of the complaints have come to us from Egypt, but one has just reached me from Cyprus. Some months ago a reader of THE NEAR EAST recommended to a firm in Nicosia a Glasgow firm of shippers, and an order—the value of which was about £11—went forward with the request that the goods should be sent by the parcels post cash-on-delivery service. Back came the reply, "*On receipt of a remittance* we will forward the goods by *passenger train*." The clerk on the banks of the Clyde apparently did not realise that Cyprus is an island, and at least forty miles from the mainland! It is really difficult to understand how the railway journey could have been accomplished.

***

In the result the man who recommended the firm had to send to England his own cheque because the Nicosia traders had no representatives in the United Kingdom, and several weeks of delay ensued. "I am quite unable" (he wrote when sending the cheque) "to perceive why you did not despatch the goods on receipt of order by parcels post, *cash on delivery*. You would have received your money by return mail, and it would have reached you a fortnight ago. Local merchants, with no representatives in England, have a good deal of difficulty in transmitting money to England, and had I not intervened you might have lost the order altogether." Have Scottish firms so great a connection abroad that orders may literally be "thrown away"?

***

Another question is raised in the same case. The correspondent who sends me the facts writes:—"The Cyprus firm asked them to send the goods 'C.O.D.,' but the reply was, 'per passenger train.' The Cyprus firm then tried to get a bank draft, but the *commission was outrageous*! For many years the Cyprus firm have dealt exclusively, when possible, with British people. King George's words, 'Wake up, England!' are as needful as ever." I agree with my correspondent: the sooner the causes for these complaints are removed the better it will be for British trade. That seems commonplace, but in the face of such crude methods what can be said, indeed?

***

Greek trading firms, I learn, continue to look to the United States for supplies which the war has cut off from the Continent of Europe and Great Britain. I observe in an American official report that a Consular officer in Greece has reported to the Washington Bureau of Foreign and Domestic Commerce that a firm is in the market for woollen, cotton, silk, satin, and linen dress goods of all kinds; roller and spring blinds, window curtains of all kinds, silk and cotton for curtains, and other furnishings, "Wilton" rugs, plush table-covers, piqué bed-covers, etc. In this pretty comprehensive list are articles for which, in normal circumstances, no American house could compete with British firms of standing. Must trade of this sort be lost because we are at war? The answer to the question is worth looking for I think.

British manufacturers must not imagine that trade will wait for them. As a matter of fact a considerable bulk of that which belonged to Germany has passed beyond, and Continental firms are increasingly looking to the United States for their supplies, as the following, taken from a similar document, will serve to show:—"A firm desires to secure an agency for the sale of chemicals and drugs, such as aspirin, antipirine, benzoic acid, acetone, aniline colours, aniline arseniate, betel leaves, benzonaphthol, benzoates, bromide of potassium, pure bromide, chloroform, carbonate of guaiacol, cocaine, hydrochlorate and muriate, fluoric acid, heliotropine, camphor oil, mercurial preparations, naphthol, menthol, opium, iodine, iodate of potash, oxide of bismuth, iodoform, ipecac, urnate, etc. Quotations should be made c.i.f. destination. Correspondence may be in *English*. References." It is a warning.

***

Russian economic writers, as is perhaps only natural, are paying earnest attention to the trading possibilities of Persia just now. I have just read an interesting summary of an article in the Russian *Official Gazette*, in which M. G. J. Ter-Gusakoff discusses the question at considerable length and in somewhat frank terms. He concludes that the success of the development of Russian trading relations with Persia should stimulate Russians now to further progress, particularly because "the present moment is very critical." He observes that although at present 63 per cent. of the trading balance falls to Russia, the position may alter, because, besides England, there is a systematic and insistent penetration into the Persian market by Germany. This danger, he writes, ought to impel Russia to pay more attention to Persia and to turn to new and practical ways. Roads and transport, he believes, are keys to the question. The first do not correspond to the requirements of the trade, and transport is very expensive.

***

Banking is another of the keys. He insists that Russian credit establishments should be given the same wide rights as are possessed by the British banks of issuing notes in the country. "If," he writes, "twenty-five years ago, when Russian trade was less important than English, the grant by the Persian Government of the concession to issue bank notes was not of moment to Russian trade, it is so now when the Russo-Persian trade amounts to 63 per cent. of the entire volume of foreign trade and English to 22 per cent. only." M. Ter-Gusakoff discusses other matters, of more political than commercial interest, but he expresses the belief that "Russia is fated to play in Persia the rôle of pacifier and bearer of civilisation." I believe that this bold pronouncement is open to considerable qualification; nevertheless, the Russian point of view of Russia's future in the territory is worth remembering. There will be many problems for the Allies to settle between themselves after the war, but they are facing so much in the way of common sacrifice now that they are not likely to quarrel seriously then.

***

Djavid Bey is a young Turkish genius! So at least we learn from Dr. L. Stein, a Hun genius, who surveys in the *Vossische Zeitung* a speech delivered by the Turkish Minister in the Chamber. Stein tells us that Djavid has cleared away the fog that brooded over Ottoman finance and has revealed its abysses with the unsparing hand of a true reformer. When Turkey joined the Central Powers (we are told) the cupboard was bare—£T.1,212,000 in the Imperial Ottoman Bank represented the whole of its available credit. Djavid procured financial assistance from Germany and Austria, Germany coming forward with a loan of £T.142,000,000, while another for 240,000,000 kronen was floated in Austria. Turkey's total indebtedness was then as follows:—War debt, £T.180,000,000; pre-war debt, £T.150,000,000; a grand total of £T.330,000,000. At 6 per cent., the debt charged on this amounted to 20,000,000 in Turkish pounds. To meet this expenditure Turkey's pre-war receipts averaged £T.30,000,000 per annum; for the years immediately after the war Djavid estimated them at £T.26,000,000 to £T.27,000,000. In other words, genius was wanted to grapple with the uncertain future.

***

Is Djavid Bey the genius which his brother Hun declares him to be, however? By his fruits ye shall know them; and from all accounts the fruits of Djavid's financial operations are suspicion and distrust among his own brethren. It was not so long ago that we were told that in Constantinople two one-pound notes were about the equivalent of a pound in gold, and we all recall the lament of Djavid Bey himself that the people were so stupid that they declined to believe his promises of German sympathy and assistance. The fact is, that the Turks have never had much use for paper money, and their experience since their leaders plunged them into the vortex of disaster has converted their suspicion into absolute unbelief. Djavid Bey's enraptured claim that Turkish paper money is of such value that it is regarded as good collateral security by the Deutsche Bank does not deceive the Turkish people and is not likely to bluff us.

***

A new edition has been published of Dr. Preyer's book, "Egypt and India." An added chapter thereto is entitled "World Power Twilight," and, after reading it, one is impelled to ask, whose? The author apparently wrote this twaddle before certain events had transpired on the Western front, in Palestine, and in Mesopotamia, else how are we to account for the following conclusions:—(1) British supremacy on the Nile will no longer be what it has been; (2) Egypt's Eastern frontier is in a precarious condition; (3) Egypt's fate will be settled by Turkey in union with her Central European Allies; (4) France is played out; and so on. I am only concerned here with the economic side of this business, and, frankly, the Herr Doctor does not convince me. Admitting that the Allies are confronted with the very acute submarine problem, what then? Taken at its worst it might delay the end of the war; we shall have increasing difficulty in feeding our people, and scarcity of luxuries may, indeed, develop into actual privation. All that, however, in face of the great determination of the Entente to fight until it has won, will not give Germany the victory. It will only delay her defeat.

Egypt's Resources Increased by War Conditions.

The Financial Adviser's Estimate of an Addition of Thirty Millions Sterling.

(From Our Own Correspondent.)
Cairo, April 17.

The Financial Adviser's Note on the Budget this year is signed by Mr. Ronald Lindsay, who is acting for Lord Edward Cecil during the latter's absence in England on leave. The Note, which has just been published, is somewhat shorter than usual, but at the same time it is more precise on various points than its predecessors.

It is pointed out that the statement in last year's note to the effect that "the economic and financial conditions of Egypt must continue to be subject to vicissitudes during the war and probably for some time after it" has in no wise been disproved by the course of events during the past year, when the fortunes of the country took another unexpected development, which albeit it may have been a favourable one belongs nevertheless to "the category of the abnormal and fortuitous effects of the world-wide struggle which is taking place."

The extraordinary impulse given to the price of cotton by the demand for war purposes—a demand which has caused the crop to realise more than £40,000,000 or double the value of the preceding one—and the continued presence in the country of a large British force, drawing in every conceivable manner on local resources for its requirements, have been the two predominant factors in the extraordinary prosperity which Egypt has enjoyed during the past year, and they have combined to add greatly to the financial strength of the country as a whole. This increase in financial resources is susceptible of approximate measurement and from various calculations the Adviser arrives at the figure of £E30,000,000 as the total additions to Egypt's capital resources since the commencement of the war.

Some Problems—Raw Materials.

For the time being the difficulty of obtaining materials is preventing any fresh development of the country's economic resources being undertaken as a result of this considerable accession of wealth, and this difficulty is actually bringing about a tendency to retrogression by delaying very necessary up-keep work. It is, however, very satisfactory to note that these adventitious profits are being devoted to the repayment of debts abroad and to the relief of an overcharged financial situation.

The Acting Adviser refers to the previous occasion when Egypt had a similar sudden and unexpected increase in her wealth, and to the disastrous consequences which resulted from the wave of speculation which it brought about amongst the people, and he expresses a hope that "the country has learned from the past a lesson of prudence which will prevent the recurrence of such misfortunes when circumstances allow of the expenditure of the capital now accumulating." To this hope everyone will certainly subscribe, but it should be pointed out that the elements responsible for this wave of speculation still exist in the country, and that an avoidance of its recurrence will entirely depend on the attitude adopted by the local financial and credit establishments.

General Improvement.

The improvement in the general situation of the country is evident from the import statistics, which have increased enormously during the past year, thereby demonstrating the recovery in the purchasing power of the people. The Adviser points out that this development must not be assumed to indicate lavish expenditure on the part of the public, seeing that although the value has increased, the actual quantities have fallen off very considerably.

This is clearly seen from the figures quoted, which show that on the basis of the prices ruling in 1913 imports have risen by 69 per cent. and exports by 45 per cent. in value. Allowance made for the all-round increase in prices and for the commodities imported for the special needs of the military forces, however, he considers that "the amount of the imports gives no cause for uneasiness," and he hopes that "the reflection that the country is thus profiting from the terrible conflict which is convulsing the world may well exercise a restraining influence on any tendency to waste those profits on extravagant living."

Nevertheless, those of us who have been watching events have remarked that there is in certain circles, especially amongst those who have made profits in one way or another out of the war, a decided tendency to luxurious living, and there is certainly room for retrenchment in this respect.

Attention is drawn to the need for protection from the dangers of a high flood, which was emphasised during the past year, when the measures that had to be taken "made it apparent how great will be the advantage of the control of the river which it is expected to obtain from the works now under consideration in the Sudan."

Supplies.

Some idea of the exceedingly fortunate circumstances under which the country has dwelt during the past two and a half years is afforded by the statement, firstly, that, although Egypt has always been dependent on flour imports to supplement the home production of cereals and meet local requirements, and although such imports have dropped to practically nil, no serious shortage is anticipated until the forthcoming harvest, and future supplies will carry the country on to the spring of 1917; and secondly that the general level of wholesale prices of commodities produced in the country, as compared with July, has only risen by about 32 per cent., of which half was during the past year.

A warning is delivered that "if the war continues the diminution of the productive power of other countries will become more marked, and it may become necessary for Egypt to assist the Allied cause by contributing from her comparative abundance, even though to do so may entail on her further sacrifices." Considering what benefits Egypt has derived from the war, there should be no objection to the rendering of such assistance, within certain limits, though for more reasons than one it is sincerely to be hoped that it will not be necessary.

The Profiteers.

A well-merited, though mild, rebuke is administered to the element which, for its own interests, has been calling for control of prices of breadstuffs, and the impracticability of such a measure in a country like Egypt is clearly shown. Indeed, in regard to supplies, the country appears to be exceedingly well off, and both the avoidance of scarcity and the maintenance of relatively low prices, accompanied by the removal of the restrictions imposed in the early days of the war, whilst they are eloquent of the great resources of the country, at the same time speak volumes for the manner in which the situation has been watched throughout by the responsible authorities.

As the Adviser says, strict economy will have to be observed in the consumption of food as in other matters, but provided the same able supervision is continued in the future there is in the present situation little cause for real anxiety.

Notes and Currency.

The note issue, which, under the regime of forced currency, has replaced gold as the circulating medium, has continued to expand. Whilst the amount in the hands of the public in January, 1915, was £E7,751,000 and in January, 1916, was £E11,455,000, in November last it had risen to £E20,807,000. This was of course due to the rise in the price of cotton, but the remarkable feature in the situation is that during the spring and summer, when the needs for currency diminished, the contraction was very slight, showing that "the notes so retained represent the profits of the people from their crops and are hoarded in the same manner as gold was hoarded before."

The Adviser very rightly points out that this substitution of notes for gold in the hoards of the people is a distinct economic gain for the country, since the capital they represent is being usefully employed by the State; and he adds that it is to be hoped that after the war the process will be voluntarily continued.

It is to be feared, however, that the people will never give up their predilection for holding wealth in the form of gold. Indeed, there are signs that that tendency is as strong as ever. Premiums are actually being offered in the bazaars for bullion for gold ornaments, whilst the returns of the Assay Office show that during the six months from September 1, 1916, it hoarded gold ornaments amounting to no less than £E760,000,000, most of which represented newly manufactured articles.

As Mr. Lindsay remarks, "there can be no doubt that had gold been more freely obtainable, this popular form of hoarding would have been practised to an even greater extent." Notes have only been issued in response to the legitimate demands of trade and their equivalent has been automatically deposited in the form of liquid security in London.

The exchange with London has been maintained at or close to par., thus showing that there has been no inflation.

In regard to the reserve against the note issue the Acting Adviser points out that until last September the statutory minimum of one-half reserve in gold was maintained, but that in view of the expected expansion last winter and of the inexpediency of causing further withdrawals from the reserves of the Bank of England the National Bank was authorised to keep a lower proportion in gold.

The gold holding at present is £E5,500,000 against an issue of £E20,000,000, the balance being represented by British and Egyptian Treasury Bills and other first-class securities.

Last autumn a new coinage was introduced, and the opportunity was taken to make certain minor improvements in the existing monetary system, the status of the British sovereign and of the 20-fr. piece being definitely regularised, certain coins being abolished and others altered in size and composition. The committee which recommended these alterations also discussed the old question whether the British sovereign, which is the real gold basis of the Egyptian currency, and the legal equivalent of which is at present 97½ piastres, should be made equivalent to 100 piastres. The committee, however, concurred with the opinion of the Monetary Reform Commission, which had considered the question in 1885, and had recommended "that the advantages of the reform did not appear sufficient to justify the considerable temporary inconvenience and confusion which would attend its introduction." It was therefore decided not to alter the existing monetary standard.

Public Finances.

Turning to the public revenues, the Acting Adviser mentions the fact—already apparent from the periodical analyses of the monthly accounts in The Near East—that, as a result of the improvement in the general economic conditions, the total receipts for 1916-17 will reach a figure never before attained, and that there will be a substantial surplus; but he points out that "this accession of financial strength to the Government, considerable though it may appear, is by no means commensurate with that realised by the country as a whole."

This is due to the fact that under the existing fiscal system the revenues do not participate properly in the increased wealth of the country. The share of the State is limited to what it may derive from Customs and other indirect taxation, from the profits of the State Domains and from the expansion of the paper currency, but there is no means, as has been pointed out in these columns, of tapping the very large increments of profit made by the cultivators out of their cotton and other products or by contractors and traders.

The Future.

The situation after the war cannot be foretold. Both revenue and expenditure have been inflated by the present abnormal conditions, but whilst it is unlikely that they will remain in the near future, especially after the war, at their present high levels, it is highly

Digitized by Google

probable that expenditure will not be reducible in the same measure as the revenues will diminish.

Some other means of obtaining further revenue will have to be devised, for it is apparent—in view of the fact mentioned by Mr. Lindsay that the budget for this year was only balanced by the inclusion of balances of certain funds accumulated in past years, i.e., non-recurring items—that the revenue resources of the country as at present organised will not be adequate to permit of the execution of the various projects on which the future welfare of the country depends, or to meet the calls which the imperative extension of elementary and technical education, the administrative reforms attendant on the abolition of the Capitulations, and delayed maintenance works will make upon the Egyptian Exchequer.

Very rightly deprecating any recourse to the Reserve Fund, which, though increased beyond its pre-war figure by the recent surpluses, has certain heavy contingent liabilities chargeable against it, and in any case must be kept as a provision against unknown contingencies of the future, the Acting Adviser foreshadows an enlargement of the basis of taxation and some scheme which will call for "a better adjustment of burdens at the same time as . . . a larger contribution from the tax-payers who have been enriched by the war."

There should be no genuine objection to such a step as that indicated, for the inequality of the present system of taxation, recognised by a few before the war, must to-day be apparent to everyone. A rectification, without being unduly pressing on any element, should guarantee to the Government adequate revenue to enable it to meet all the calls which may be made upon it in the near future. Egypt as a whole will, in all probability, have at the end of the war, as Mr. Lindsay points out, a considerably greater reserve of financial strength than before, and, all things considered, the outlook for the country in general, and for the Government in particular, must be regarded as favourable.

LESSONS FROM HUN METHODS.

The following extract from a pamphlet issued by the Economic Service of the Residence-General in Morocco is published in the journal of the British Chamber of Commerce of Egypt, which states that the remarks apply equally to that country.

The success obtained by German importers was chiefly due to the following reasons: (1) the activity of their commercial representatives and local agents, who frequently and regularly visited their customers (native and European); (2) the cheapness of the articles offered (generally of very poor quality), and (3) the favourable conditions of despatch and packing, combined with facilities for payment, including long credits.

German firms endeavoured to persuade their customers that they could give a much more expeditious delivery of goods than their competitors in other countries. As a result of the organisation of the transit of goods and postal parcels, German and Austrian merchandise was, as a matter of fact, delivered speedily and these deliveries compared advantageously with those from other European countries. Freights were generally low, and were automatically diminished by rebates.

With regard to facilities for payment, German business houses would not protest a bill when the customer furnished a sufficient guarantee for its eventual settlement; the minimum interest for deferred payment was at the rate of 6 per cent. per annum, whilst the German firm was able to obtain advances from German banks at from 4 to 5 per cent.

Most of the Austro-German houses engaged in the import trade were agents for either German or Austro-Hungarian manufacturers, but, more frequently, for large commission houses located in Hamburg. These shipping houses endeavoured to keep their customers in ignorance of the name of the maker and of the place of manufacture of the goods they sold. Frequently, those articles bore only the label of a commision agent in Hamburg or some other town, who worked in connection with German firms abroad, and it was therefore impossible to tell the name of the manufacturer of the goods. The price was generally an inclusive one for delivery in the roadstead of the port most convenient to the purchaser.

LANCASHIRE COTTON REPORT.

Involved Situation in Egyptian Market.

(From Our Own Correspondent.)

Manchester, Thursday.

Prices in the market during the past week have tended to harden, but it cannot be said that buyers have been stimulated to place orders on a freer scale. The outlook remains uncertain and both buyers and sellers have been afraid to arrange contracts of weight. Demand from certain of our outlets abroad is undoubtedly looking up. Further developments in connection with the demand of the operative weavers for an advance in wages are expected to take place during the next few days.

Definite arrangements are now being made to deal with the Government restrictions upon the use of wood cases for packing goods. It is understood that the cotton industry will not be affected by the recent changes in the reserved occupations list so far as the Army is concerned.

The Egyptian raw cotton situation is very involved. The selection in Liverpool is very poor and the stock is much smaller than twelve months ago. Without there being any general buying movement in piece goods for Egypt the undercurrent of demand remains healthy. Merchants want to be sure of shipping facilities before committing themselves to lines of weight with manufacturers.

Operations for India have been irregular. Here and there fair lots have changed hands in light fabrics, and some improvement has taken place in the bids for grey shirtings. China, after being rather more active, is now not giving quite so much support. Printing cloths can only be sold at low rates. A fair inquiry has come through in sateens. Grey staples are still doing badly.

Some special contracts have been reported for the French Government. American yarns have been in slightly improved request, but orders have been placed very unevenly. Spinners are quite unable to lift prices on to a more remunerative basis.

Egyptian yarns have been very uncertain. Some mills are finding it increasingly difficult to secure supplies of the raw material. Export yarn business has been generally dull.

MOROCCO TRADE.

The British Consul-General at Tangier has sent to the Board of Trade some interesting statistics, from which we gather that in 1916 the trade of French Moroccan ports underwent a great expansion. Imports rose to 177,578,294 fr., from 144,254,087 fr. in the previous year.

Details of the figures of each port for three years are as follows:—

—	1914. Francs.	1915. Francs.	1916. Francs.
Rabat	18,940,851	25,981,102	32,361,755
Kenitra	3,965,027	19,412,585	14,001,275
Fedalah	311,616	560,910	195,071
Casablanca	47,007,746	59,844,409	85,366,776
Mazagan	10.976,826	13.080,526	16,592,598
Saffi	11,744,888	11,909,830	12,771,243
Mogador	11,268,246	13,464.725	16,289,576
Total	104,215,200	144,254,087	177,578,294

The principal imports were:—Rabat: Refined sugar, cotton, wool and silk textiles, tea and candles; Casablanca: Building materials, carriages, machinery, sugar, textiles, petroleum and motor spirit, preserves and wine; Mazagan: Sugar, cotton and woollen textiles, provisions and candles; Saffi: Sugar, cotton and woollen textiles, tea, candles and provisions; and Mogador: Sugar, cotton textiles, tea and candles.

Exports, too, largely increased in value, as the following comparative statement will show:—

—	1914. Francs.	1915. Francs.	1916. Francs.
Rabat	1,613,262	1,347,225	3,295,042
Kenitra	49,013	1,102,748	1,118,144
Fedalah	—	805,088	229,099
Casablanca	8,668,021	17.558,905	21.324,556
Mazagan	5,243.008	12,597,793	21 497,738
Saffi	1,706,069	8,793,019	11,905,045
Mogador	4.598.064	6.585,204	8,497,164
Total	21,877,437	48,789.982	67.866,788

The principal exports were:—Rabat: Wool, hides and various seeds; Casablanca: Wheat, barley, hides and wool; Mazagan: Eggs, hides, barley, wheat, various seeds and almonds; Saffi: Barley, wheat, various seeds and hides; and Mogador: Almonds, gums, hides and eggs.

TRADE NOTES.

Openings.

The British Consul at Fez (writes the Board of Trade *Journal*) reports that an agent, who corresponds in French, seeks agencies for United Kingdom manufacturers and exporters of the following goods:—Superfine cloth, fine woollen cloths (cashmeres), cottons, teapots, kettles, pails, enamelled ironware, candles, soaps, confectionery, coffee, and tea. In the case of such goods as are at present prohibited to be exported from the United Kingdom, it is suggested that negotiations might be entered into now, with a view to making arrangements for trade after the war. The inquirer also desires to get into touch with United Kingdom purchasers of untanned, salted hides and skins (cattle, goat, and sheep), and beeswax, which he would buy on commission. United Kingdom manufacturers and exporters of the goods mentioned, and importers of hides, skins, and beeswax, desirous of being represented in Morocco, may obtain the name and address of the inquirer on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C. 2.

The Egyptian Ministry of Education invites tenders for the supply and delivery of clothing materials for the pupils of the Bulac Elementary Training College for Women Teachers—viz., 5,600 metres of flannelette, 8,400 metres of printed calico, 4,800 metres of coloured zephyr, 3,200 metres of veil muslin, 2,400 dozen of white press buttons, and 800 pairs of girls' shoes. Samples may be inspected, and specifications and forms of tender obtained, at the Central Stores, Ministry of Education, Darb el Gamamiz, Cairo. Sealed tenders, accompanied by a deposit of 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer, will be received at the Central Stores of the Ministry of Education, as above, up to May 24. Local representation is necessary. The Ministry also invites tenders for the supply and delivery of 750 litres of black ink in accordance with sample. A sample of the ink required may be inspected at, and copies of the cahier des charges obtained from, the Central Stores, Darb el Gamamiz, Cairo, at which address also sealed tenders, on the proper forms, will be received up to May 20. Tenders must be accompanied by a deposit of 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer.

Applications have been recorded by the Department of Commercial Intelligence of the Board of Trade during the past week for the names of manufacturers or producers of the following (amongst other) articles. British manufacturers or producers of these articles now in a position to supply are invited to make application for the names of the inquirers—Brushes (tooth, hair and clothes) for Egypt, button (all kinds) for Egypt, fittings for manicure cases in bone and ebony (cheap), machinery for combining thin sheets of tortoiseshell to form thick sheets, machines for cutting-out and sewing fabric gloves, machines for filling quilts by air pressure, machines for making drawing-pins, pebble-grinding mills.

Exports to Greece.

The Director of the War Trade Department announces that all "recommendations" issued by the British Minister at Athens before October 1, 1916, have been cancelled. Exporters who desire to despatch goods under licence to that portion of Greece which is not under blockade, and who do not hold recommendations dated subsequently to October 1, 1916, should instruct their consignees to approach a British Consular Officer or the British Diplomatic Agent at Salonica, with the view of applying for the issue of a new "recommendation." The document will, if approved, be issued by the British Legation at Athens.

Cancelled Black List.

The *London Gazette* announces that all persons or bodies of persons in Porto Rico, in the Philippine Islands, and in the United States of America are by an Order in Council omitted from the Trading With the Enemy statutory list proclamation.

MANCHESTER AND EGYPT.

Work of the Importers and Exporters' Association.

We take the following from the report, for the year ended February 28, of the Manchester Association of Importers and Exporters :—

The Executive Committee of the Egyptian Section have had many meetings. The freight agreement for the conveyance of fine goods and yarns from Manchester warehouses to Alexandria during the year 1917 was arranged in the last months of 1916. The rate of freight that was finally agreed upon was 75s. per ton of 40 cubic feet, less a rebate of 5s. per ton, making a net rate of 70s. per ton. This was a marked increase on the previous contracts; but considering the unprecedented and uncertain state of freights and shipping it must be conceded this was a fair rate for all concerned.

The members of the section received a notice from the carrying contractors of the Conference Liners intimating increased rental and second handling charges to operate on and after January 1, 1917. This change in the forwarding arrangements was taken up vigorously with the Conference Liners, and it was shown that the limitation of the carting and warehousing services by one contractor, instead of allowing each shipper to employ whatever firm was able to take away the goods, had the effect of blocking their warehouses and restricting their output. It was explained that much of the confusion that had taken place was caused by the Government requisitioning space without notice; but the Conference and their contractors would do all in their power to avoid inconvenience and expense to their shippers.

In response to representations made by the Committee, the Conference wrote to the effect that in view of the hardship to shippers of fine goods under the contract which expired at the end of 1916, in not having a sailing, they decided that any goods in their possession ready for shipment at the end of December would be accepted at the 1916 rate. Unfortunately, no sooner had this letter been received than the collection of cargo was stopped, leading to much confusion, and the Committee is still in communication with the Liners with the view of clearing up the position.

There was some delay in the payment of claims for war risk insurance in connection with the s.s. Sebek, which was torpedoed. The question was taken up with the War Risks Insurance Office, with the result that the payment of the claims was at once expedited.

The Committee had gone into the question of folding and lapping of piece goods, between October, 1912, and November, 1913, and as the Manchester Chamber of Commerce are now taking this up with Government, all the transactions of the Committee, including correspondence with the British Chamber of Commerce in Alexandria, the British Diplomatic Agency in Cairo, and the late Lord Kitchener, were handed over to the Chamber so that they might be embodied in their negotiations.

The risks that shippers are liable to whilst goods are lying at quays awaiting shipment, on a warehouse to warehouse marine policy, are at present having the Executive's attention. Many other matters of minor importance have been dealt with to the satisfaction of all concerned.

BRITISH TRADE CORPORATION.

It is officially announced that the names of the first directors of the British Trade Corporation are :—

Lord Faringdon	Mr. F. Dudley Docker
Mr. F. Huth Jackson	Mr. W. H. V. Goschen
Mr. Arthur Balfour	Mr. J. H. B. Nobel

and Sir J. Hope Simpson.

The nominal capital is £10,000,000, divided into one million shares of £10 each.

In the House of Commons on Wednesday the Chancellor of the Exchequer stated that the President of the Board of Trade had undertaken to lay the charter before the House.

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

ENGINEERING NOTES.

Flax-Working Machinery.

Owing, evidently, to the high price of flax and linseed the cultivation of flax in the East has been greatly increased this year; farmers are discovering that it is one of the most profitable crops at the present time. According to recent information there is a great demand for flax-scutching and flax-threshing machines, but there is the usual difficulty of finding manufacturers in this country, much to the disappointment of the farmer and the local merchant who, until recently, depended on the visits and services of the German manufacturers' representatives, now, of course, engaged elsewhere. However, some orders have reached the United Kingdom recently, and a firm of flax-working machinery in Ireland is, we hear, exceptionally busy on orders from Egypt, the Ægean Islands, and British East Africa.

Water Power in Russia.

The Russian Ministry of Communications has prepared a Bill, at the request of the Duma, for the notification of centres of water power—waterfalls or stretches of water suitable for supplies of national or public importance. The Duma, apparently, recognises the necessity for the organisation and development of the water-power resources of Russia, and, with this end in view, legislation is to be introduced. The Bill proposes to empower the Government to declare any waterfall or stretch of water capable of being used as a source of water power as being of national importance, and to take possession of such source of power, either for direct Government use, or with a view to granting concessions for its use in industries which it is desirable to foster. Water-power resources are numerous in Southern Russia, a region which is very closely connected with commercial and shipping interests in the Near East.

A Tree Stump Burner.

It is well known that the appalling destruction by fire of forests, olive groves, and other plantations which occurs annually in the East is due more often to the ignorance and carelessness of the native agriculturists than to any other cause. For the rooting up, for instance, of an old tree, the removal of which is needed, after the trunk has been felled all kinds of implements, and often explosives, are used for the extraction or destruction of the stump, over the remains of which, as a rule, a fire is lighted to complete the work of uprooting. During the latter operation a light breeze is often sufficient to set fire to the neighbouring trees, and the result is obvious. A new device, therefore, which has recently been used with success will be of much interest to landowners, as well as to governments which control forests, etc. This is a stump-burner of an ingenious design. The burner is a portable stove, and is placed on a stump, which is then subjected to slow combustion until entirely charred, during which time the heavy oils from the wood are collected. When these operations have been completed on one stump they are repeated on another.

Clearing Facilitated.

The invention is said to be capable of rendering a great service on cleared forest land to be brought under cultivation, as it greatly facilitates clearing, which the laborious rooting-up of the stumps by ordinary means generally makes so expensive. It destroys the stumps to a sufficient depth to allow of ploughing without needing to cut roots or carry out any preparatory soil work. At the same time the process is advantageous from an economic point of view—provided the stumps are thoroughly dry—as it yields products the value of which may entirely cover the cost of extirpation. It is said that an ordinary pine stump, so treated, gave, in addition to excellent quality charcoal, about fifteen gallons of heavy oils.

Cyprus Olive-Stones.

From 2,000 to 3,000 tons of crushed olive-stones, together with all the residue of the olive after pressing, valued at from 18s. to £1 per ton, are exported annually from Cyprus to the Piræus, in Greece, for further crushing and the submission to an acid process, by which some 8 to 10 per cent. additional oil is extracted, which is used in the manufacture of soap, while the residue is used for fuel purposes. In Cyprus the olive crushed stones have been used as food for pigs, as fuel, and often as manure. It is strange, however, why the Cypriotes, who are almost experts in the manufacture of soap, instead of sending away that valuable material, do not utilise it themselves, as it is done at Piræus, and establish a modern soap manufactory in Cyprus, which will find a ready market throughout Asia Minor, Egypt, etc.

Artesian Well-Boring in Egypt.

According to recent information, artesian well boring has lately created a large demand for pumping machinery and pipes from Egypt, and orders have also increased for agricultural tools and appliances. Fortunately, the preoccupation of the Germans has prevented as many of these orders finding their way to Continental makers as usual, and British makers have distinctly benefited. In other lines, too, including tools of all sorts, the demand from Egypt for British workshops has very considerably increased since the war.

NEWS FROM ALL SOURCES.

The Bank of British West Africa has established a branch at Mazagan, Morocco.

An Alexandria telegram, dated April 25, stated that the cottonseed market was still rising on shortage of supplies, and spot was quoted 165p., and May, 160p.

There was a slight decrease in the value of the currants invoiced at Patras, Greece, for the United States during 1916, the total value being £246,428, compared with £262,007 for 1915.

A Budapest telegram states that large areas of the occupied districts of Roumania have been planted with corn and vegetables by Austrian and Hungarian soldiers. Vegetables are already being sent to Vienna.

The authorities have arranged with representatives of the export packing business of London and Manchester that the use of wooden cases for the packing of cotton goods shall be limited to certain of the finer fabrics. This, it is estimated, will effect a saving on wood of 50 per cent.

An interesting book describing the journey across Canada, illustrated with over 100 drawings, has been issued by the Canadian Pacific Railway Co., Charing Cross, London, S.W.1. It is supplied free on application to school-teachers and other interested in the Dominion of Canada.

At the last meeting of the council of the London Chamber of Commerce a proposal by the Russian Section that the Chamber should approach the Board of Trade and the Foreign Office, with a view to organising an exhibition of British industries in Russia, preferably in Petrograd or Moscow, after the war, was unanimously approved.

COMPANY MEETING.

Aboukir Company, Ltd.

Mr. Arthur W. Ballance presided at the annual general meeting of the Aboukir Company held on April 30. He said that up to June 27 the manager had reported that the cotton crop promised well, that water was abundant, and the cotton worm, though found everywhere, was not severe. On July 10 they had their first warning that there was a shortage of water in the Mahmoudieh Canal, and the shortage developed. Eventually some water was obtained, but too late to benefit the cotton crop, and owing to the fact that they received what was called flood or "red" water, it was absolutely harmful. If water were not forthcoming at the proper season the crop weakened and flagged, and became the special prey of insect pests. He expressed regret that the report was not better, but the outcome was not so bad as it looked, and there were reasonable grounds for expecting a better result for the current year. According to their reports there was a good Nile this year, and the company ought not to have to suffer again for the bad misfortune of what he would call an inopportune supply of water. They were advised that the Irrigation Departmentment were taking measures to assure a good supply of water for 1917. The enforcement more vigorously of the order for the compulsory burning of all infected bolls before the cotton sticks—where the boll worm deposited its eggs—were uprooted was also a good feature. The fact that land would come under cotton this year that had not had that crop for two years, but had had a change and rest, was also a promising factor in the outlook. Also there was the probability that high prices for cotton might still obtain in the autumn.

COMPANY REPORTS.

Eastern Telegraph Co., Ltd.

The directors announce that in consequence of delays arising from the war in obtaining the necessary returns from foreign stations and Administrations, it will be impossible to present the accounts and balance-sheet duly audited in respect of the year to December 31, 1916, during May, when it has been usual to hold the annual general meeting. The directors, however, having satisfied themselves that the net earnings of the year will be sufficient for the purpose, have decided to make an additional payment to the stockholders on May 15 on the ordinary stock equal to a dividend of 1½ per cent. and a bonus of 2 per cent., making the distribution for the year 1916 8 per cent. free of income tax, the same rate as was paid for the previous year. The usual distribution at the rate of 3½ per cent. per annum, less income tax, on the preference stock for the first quarter of 1917 will be paid on the same date.

Eastern Extension Telegraph.

The directors of the Eastern Extension Australasia and China Telegraph Company, Limited, announce that in consequence of delays arising from the war in obtaining the necessary returns from foreign stations and Administrations, it will be impossible to present the accounts and balance-sheet duly audited in respect of the year to December 31, 1916, during May, when it has been usual to hold the annual meeting. Having, however, satisfied themselves that the net earnings of the year will be sufficient for the purpose, the directors have decided to make an additional payment to the shareholders, free of income tax, on May 15, of 7s. per share (equal to a dividend of 1½ per cent., and a bonus of 2 per cent.), making the distribution for the year 1916 8 per cent., tax free.

COMPANY NOTES.

Dividends, Payments, etc.

Piræus, Athens, and Peloponnesus Railway Four and a Half per Cent. Bonds.—The coupons and drawn bonds due on April 15 are now being paid at the office of Messrs. R. Raphael and Sons, Austin Friars House, and must be left three clear days for examination.

The Land and Mortgage Company of Egypt gives notice that the debenture interest coupons and also the debenture bonds (drawn for redemption), due May 15, 1917, will be paid on or after that date by the Bankers of the Company, Barclay's Bank, Limited, 54, Lombard Street, E.C.

The directors of the Canadian Pacific Railway have declared a dividend of 2½ per cent. on the common stock for the quarter ended March 31 last (being at the rate of 7 per cent. per annum) from revenue, and 3 per cent. per annum from special income account.

Oil Outputs.

Anglo-Egyptian.—Gemsah week, 22 tons (against 23). Hurgada, 2,058 tons (against 1,833).

Baku Russian.—Week ended April 21, 74,500 poods.

Bibi Eibat.—Week ended April 22, 62,033 poods (1,001 tons).

Black Sea Amalgamated.—Week ended April 21, 21,795 poods.

British Maikop.—Week ended April 21, 2,307 poods.

Cheleken.—Fortnight ended April 21, (n.s.), 422 tons.

European.—Week ended April 22, 83,000 poods.

Maikop Combine.—Week ended April 21, 15,110 poods

New Schibaieff.—March, net 221,090 poods.

North Caucasian.—Week ended April 11, 24, 649,116 poods.

Russian Petroleum.—Week ended April 21, 49,000 poods.

SUDAN COTTON DIFFICULTIES

(From Our Own Correspondent.)

Khartoum, April 7.

Reports from Tokar state that the cotton is all ripening at the same time, and difficulty is being experienced in finding enough labour to pick it. The price has already gone from two to three millems a rotl (½d. to ¾d. a lb.), and the normal price is one millem a rotl (½d. a lb.). The demand for labour has been continuous this year, and it is impossible to find enough. There is a considerable number of persons employed here in picking senna, which is practically a new industry, so that the difficulty is increased.

HUN CAPITAL IN THE BALKANS.

The Hungarian paper, *Pesti Naplo*, writes:—"The banking magnate, Engelhardt, has, with German capital, founded a company for agricultural exploitation under the name of 'The Bulgarian Agricultural Association.' The company has acquired a large number of estates in New Thrace, Macedonia, and the Morava region. The company also wished to rent the State-owned estates in the districts of Adrianople and Demotika, but the concession of these properties had already been granted to a Bulgarian company. German exploitation in the Near East, it will be seen, has thus begun even during the war."

EGYPTIAN MARKETS.

Weekly Situation.

	1916. Week ended April 20.	1917. Week ended April 19.
Cattle markets	577	825

Total from commencement of year (£)	20,897	24,901

THE GHARBIEH LAND COMPANY.—The Ordinary General Meeting of the above Company will be held in Cairo on May 31, 1917. Shareholders wishing to be represented at that Meeting should lodge their share warrants with the Anglo-Egyptian Bank, Limited, 27, Clements Lane, E.C., not later than May 16.

ON 'CHANGE.

By Our City Correspondent.

Throgmorton Street, E.C.,
Thursday.

Business has been interfered with this week by the usual Stock Exchange holiday on May 1, and by the closure of the House on the preceding Saturday. Work, therefore, had to be crowded into the remaining days. The arrangement to close on Saturdays, I may say, is to hold good until further notice. The interest in Egyptian securities has continued to develop, but business is still restricted by the lack of sellers. The Government bonds have remained strong and constantly in demand, with few transactions.

National Banks have risen ¼ to 13⅝, some 200 to 300 shares having changed hands. Agriculturals are slightly quieter at 5 15-32, about 500 shares having been done between 5⅜ and 5½. Anglo-Egyptians have again advanced ⅛ to 12⅛, and Land Banks have also improved from 5 to 5⅛ on a persistent demand.

Some transactions have been carried through in Delta Lands round 9s. 3d., and a feature has been the continued demand for New Egyptians, which are 9d. higher at 10s. 3d. Several thousand United Egyptian Lands have also changed hands in the neighbourhood of 9d. Behara are wanted round 7½.

Salt and Sodas have been big buyers, and after business round 21s. 6d., close 1s. up at 22s. Khedivial Mail have been active up to 33s., closing unchanged at 32s.

In Greek securities Monopolies have been inquired for at the advanced price of 49, and some further business has been done in Rentes round 44½.

Paris Bourse.

Closing quotations on the Paris Bourse on Wednesday included: Egyptian Unified, 92.25 (against 92.95); Turkish Unified, 62.95 (against 62.75); Crédit Foncier Egyptien, 667 (unchanged); Ottoman Bank, 420 (against 425); Suez Canal shares, 4,335 (against 4,358).

THE MONEY MARKET.

(By Our City Correspondent.)

London, May 3.

Towards the end of the week settlements which involved the payment, approximately, of £20,000,000 cleared the market of surplus credits; but yesterday the position had been restored somewhat and supplies were larger. Short-period loans were in fair demand, and early in the day 4 per cent to 4½ per cent. was the controlling rate; later, however, it came down to 3½. Weekly loans were in some demand at 4¼ to 4½ per cent.

Bills have been firm, and the Continental exchanges generally steady. That on Alexandria remains at 97 to 97⅝ piastres to the pound sterling.

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
April 23	260,000	180,000
April 24	490,000	380,000

BOOKS on the NEAR EAST.

WITH SERBIA INTO EXILE.

By PAUL FORTIER JONES. 6s. net.

The author, who was with the retreating Serbian Army all the way from the Danube to the Adriatic, tells in this book a story of facts which is at once incredibly hideous and incredibly heroic. It is one of the most profoundly moving books of the war.

ACROSS ASIA MINOR ON FOOT.

By W. J. CHILDS. 15s. With Outline Map and Illustrations.

A most interesting book of travel, which is particularly timely because it gives us a more detailed story than has hitherto been published of what Germany has been doing for years past in pursuit of her ambition for world-power east of the Dardanelles, and through Baghdad to India.

VENIZELOS AND THE WAR.

By CRAWFURD PRICE. 2s. net.

A sketch of personalities and politics.

ENGLAND IN THE MEDITERRANEAN.

By JULIAN S. CORBETT. 16s. net.

A study of the rise and influence of British Power within the Straits, 1603—1713. Two volumes.

WITH KITCHENER IN CAIRO.

By SYDNEY A. MOSELEY. 5s. net.

"Mr. Moseley has the courage of his convictions—he writes frankly, and his book is full of illuminating information."—*Liverpool Courier.*

DAY AND NIGHT STORIES.

By ALGERNON BLACKWOOD. 6s. net.

The keynote of this book is struck in the first episode, "The Tryst," which presents the very real but elusive, inexplicable, psychical connection that exists between the living and the non-living. There are fifteen enthralling psychic dramas in the book, including a number of Egyptian stories.

MODERN MOVEMENTS AMONG MOSLEMS.

By SAMUEL GRAHAM WILSON, D.D. 6s. 6d. net.

An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

NOTES OF THE WEEK.

Apart from the possible attitude of New Russia towards the future of Constantinople—a subject discussed elsewhere in this issue—it would be idle to ignore the fact that events in Petrograd are occupying much attention in the Allied countries. The test now imposed upon the Russian people is the harder by reason of the absence of a numerically strong middle class, which could rally to the support of the exponents of moderate views in the capital. On an occasion such as the present the obvious virtues of the Russian peasant prove a grave hindrance to the adoption of wise counsels. His instinct may not be much at fault; but his inexperience leads him to imagine that the most visionary ideals have merely to be enunciated to secure their immediate application, not only in Russia, but in the world at large. Great-hearted, generous and open-minded, he has all the qualifications which offer the most favourable ground for German intrigue, and nothing is calculated to appeal more strongly to him than a scheme for sharing with both his friends and his enemies the real blessings of which he has so suddenly become possessed.

As on previous occasions during this long war, when something has occurred to place the whole issue seemingly in the balance, the Allies are able to fall back on a profound belief in the justice of their cause, which has weathered Germany's preparedness, von Moltke's legions and Hindenburg's hammerings. Russia may not yet be out of the wood, but the national sanity is showing very satisfactory vitality, and there is some ground for the belief that the worst of the crisis is passed. Germany's reading of the psychology of foreign nations has proved so often wrong that we may regard it as of good augury that she still clings to the belief that the balance of probabilities in regard to the Russians is in her favour. There have been no great military operations on the Russian front; on the contrary, both men and guns would seem to have been withdrawn for service in the West, and the German authorities are staking much, if not all, on the success of Socialist agents and political intrigue among the Russian people. As soon as New Russia finds herself, she ought to be able to turn to good account the military respite thus allowed by Germany's miscalculations.

M. Zaimis is once again Prime Minister in Athens. He has played a consistent rôle in relation to King Constantine's conscience during this war. The Devil was sick, the Devil a monk would be. King Constantine, in a similar predicament, sends for M. Zaimis. The Devil grew well, the devil a monk was he—M. Zaimis resigns office. How often the comedy can be repeated with impunity remains to be seen. M. Zaimis is the only politician among those at the King's beck and call who commands any respect. On each occasion he has taken office, as far as is known, in a genuine endeavour to retrieve an almost hopeless situation and with the idea of serving his country's interests. He has resigned twice, because he found it impossible for Greece to make any real headway against the King's wilfulness and subserviency to Germany. A very marked change in the position in Greece to-day has probably impelled him to yet another effort on his country's behalf; but whether he hopes to bring about a reconciliation between the two hostile camps in Greece or is merely concerned to soften the impending blow to the dynasty is probably a matter which he keeps to himself.

The most noteworthy development in the Greek situation since M. Zaimis was last in office is the distinctly anti-dynastic character now given to the National Movement, which has its headquarters at Salonika. Parental tenderness on the part of the Allied Governments towards a spoilt child continues, although it has recently been tempered by an ostentatious exchange of confidences over his extreme naughtiness in his hearing, through the medium of newspaper correspondents. These *bourgeois* methods are no doubt supposed to be in keeping with the democratisation of foreign policy; but they are calculated in the long run to make things worse for King Constantine than the adoption of a firm attitude from the beginning. A report to the effect that an aide-de-camp of the King had left Athens on an unspecified mission to the National Government has been followed by an account of a mass meeting at Salonika, at which the deposition of King Constantine and his dynasty was proclaimed. There seems to be little doubt that a strong body of public opinion which a few months ago could not bring itself to take sides definitely against the King has been steadily veering round to the conviction that the only solution of an impossible situation is to be found in the abolition of the monarchy.

A problem of this nature must be left to the Greeks themselves to settle. But at this particular moment the Allied Governments can hardly fail to reflect upon the

Digitized by Google

disservice they have done King Constantine. In his obstinate resolve to thwart them as a champion of Germany, he has failed to realise how the breach between himself and his people was gradually widening. The Allies' tolerance made it possible for him to pack his Court with German agents, until neither his words nor his acts were his own. Even to the Greeks among whom his popularity was tinged at one time almost with religious belief, he showed himself more and more a German vassal rather than a constitutional sovereign trying to serve the country's interests. Such stupendous folly has been laid to the charge of King Constantine that it is charitable to suppose that he has to bear the blame for the shortcomings of others as well as for his own. He cannot, however, divest himself of responsibility for the policy which has brought both him and royalist Greece to the present crisis.

In a cogent letter to *The Times*, Dr. R. M. Burrows supports the contention repeatedly advanced in these columns that the present problem in Greece is one for which the Greeks must find their own solution. The Allied Governments have to stand aside, but in so doing must make it known that they have withdrawn the guarantees given to King Constantine that the Venizelists would not be allowed to encroach upon his domains. Dr. Burrows suggests, indeed, that the neutral zone should be transferred to south of Thessaly, in order that a plebiscite may be taken to determine whether the province wishes to transfer its allegiance to the Provisional Government. As the latter has removed one of the last obstacles to the extension of its jurisdiction by declaring that the population of any territory seceding to the National Movement will not be mobilized, it may be doubted whether in the case of Thessaly the formality of a plebiscite would be necessary. If there be any truth in the statement that the Royal Family were seriously considering last week the question of abdication, it is clear that M. Zaimis, provided he is equal to the occasion, could render the country a great service. In spite of the great disadvantages under which it has laboured, the National Movement is too strong to be ignored, and there is now no common ground for it and the King. The Germanophil party at the Athens Court may adopt a " die-hard " attitude, but can no longer claim to be master of the situation. M. Zaimis, with no personal interests to advance, is marked out as the ideal go-between for all the parties concerned. If the Allied Governments make it clear that they do not insist upon King Constantine's retention of the throne in the face of the wishes of his people, negotiations might be begun without delay. The prospective regime in Greece, however, may well claim that the Entente Powers, being in part responsible for the mismanagement of the Greek situation, are under an obligation to set the country on its feet again, by removing the effects of the blockade and by replenishing its depleted exchequer.

A somewhat pathetic appeal from the semi-official Press Correspondent with the British Army in Macedonia urging upon the consideration of the public at home the difficult conditions under which the operations of that front are being carried out misses the point of such criticism as has been levelled against the Salonika campaign. One thing that the war has taught us is that under modern conditions of fighting the most heroic troops can achieve little or nothing unless adequately supported by careful preparations and ample supplies. The chief ground for regret in connection with this front is that a large fighting force should have been virtually immobilised for so long without being in a position before now to assume the offensive. The fault does not lie with the troops or the command on the spot, but with the policy which has refused to recognise the potentialities of a vigorous campaign in the Balkans, and consequently has not taken the steps to enable the Army to advance. Without doubt the resources of the Allies have been hard put to it to maintain the efficiency of their armies at the high point actually reached; but it is only necessary to recall the strong objections urged against a landing at Salonika to realise how powerful will have been the influences at work to place obstacles in the way of the unrestricted equipment of General Sarrail's force. That the landing has justified itself up to the hilt is now universally admitted. In the light of recent developments, it becomes something of a nightmare to think of what the position in the Balkans and the Eastern Mediterranean would have been if an Allied force had not kept the Germans from reaching Salonika.

It is only too evident that General Sarrail's force, even when adequately equipped, has a hard task before it. The terrain it is called upon to attack is all in favour of the defenders, who have had ample time to make it as nearly impregnable as any position can be. So far, indeed, the enemy has revealed no shortage of men or munitions. The Bulgarians are excellent fighters, and any ground won from them has been the object of counter-attacks almost as fierce as those to which the Allies are accustomed on the Western front. But in the tactics now being adopted by General Sarrail it is possible to detect an echo of the master-policy which has achieved such signal success in France, and there is consequently the more readiness to await patiently the next developments.

A question put by a shareholder at the recent general meeting of the Deutsche Bank elicited the information, from Herr von Gwinner, that it had already been announced that it was impossible to go on with the construction of the Baghdad Railway. The Four per cent. Turkish Loans which were to provide the money could not be placed, and owing to the increased cost of money and of materials the terms of the Baghdad Railway concession of 1903 were entirely out of date. An amendment of the concession was, therefore, necessary, and in this matter Herr von Gwinner regarded it as certain that the Deutsche Bank would be supported not only by Turkey, but by the German Government. The statement seems to dispose of the various reports regarding the animated construction of the railway during the war. On the southern section we have seen that the railhead does not extend beyond Samarra; it is possible that by tearing up the rails of some French concessions the railway has been extended beyond Ras-el-Ain; but the announcement that the great Taurus range had been pierced must still be received with reserve.

Another phase in the kaleidoscopic history of Albania has to be recorded in the establishment of the microcosm of an independent State at Koritza under the presidency of Essad Pasha. The President belongs to Northern Albania, but the appointment is said to have been received with local satisfaction. Koritza was the channel of communication between Royalist Greece and Germany, and was for some time in the hands of the former. When it was occupied by the French as a measure of defence for the Allies' Army of the Orient it was found that operations on two fronts would be necessary, against King Constantine's irregulars on the south and against Albanian bands acting for Austria on the north. As the Albanians take kindly to no foreign control, the plan of handing Koritza back to them was adopted, in order that they might of their own accord keep the Greeks out of the district. A further result has been that the northern bands, attracted by the existence of an independent Albanian community, are showing a disposition to leave Austrian service. The simplicity of the device, however, has led to imitation in the Austrian sphere of Albania, with a view to keeping the northerners true to their allegiance to the Central Powers. Probably any experiments of this nature will prove useful training to the Albanians. The future of their country can hardly be evolved piecemeal, but must come up for settlement at the end of the war. Essad Pasha's presidency of Koritza will, perhaps, serve as an indication of the extent to which his leadership is likely to be accepted by Albania as a whole.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 17.

H. H. The Sultan.

H.H. the Sultan resumed his residence at Abdin Palace this week. He returned from Heliopolis sooner than had been intended, owing to an outbreak of measles there; but I understand, from people who have seen him since his return, that he is very much improved in health and spirits. His Highness has resumed his receptions, and one of the first to call on him at Abdin was the High Commissioner. H.H. the Sultana has now developed symptoms of measles, and the Grand Chamberlain has issued a *communiqué* warning ladies not to call at her villa at Heliopolis, where she is remaining for the present. The latest news is that her Highness is making satisfactory progress.

The Adviser to the Interior.

Mr. James Haines, the Adviser to the Interior, has returned from an extended tour in Upper Egypt. He visited practically every important centre and held meetings of the officials, notables and fellaheen. At these meetings various questions of general and local importance were discussed, and a free interchange of views took place, the Adviser making it clear, however, on what lines his policy would be based. The tour was a success from every point of view, and I gather that it has afforded intense satisfaction to the people in the districts.

The Greek Community.

The period accorded under General Murray's proclamation to the members of the local Greek colony to declare their adhesion to the Salonika Provisional Government and accept his protection expired last week. At the last moment a great rush took place on the part of those who had delayed making the requisite declaration, and even now registration notices are dribbling in. Throughout the month the Royalists have employed every means in their power to prevent the Venizelists from registering, but their efforts have proved unavailing. The number of persons who have officially adhered to the Provisional Government and accepted General Murray's protection is over 63,000. At the last census, taken in 1907, the Greek colony in Egypt numbered 62,973. Since then its size is admitted to have increased, and, making allowance for departures owing to the war and for adhesions received from Greek-born and Greek-speaking persons belonging to districts the nationality of which has not been regularised, it is officially computed that at least 90 per cent. of the Hellenic colony has declared itself for the Provisional Government. This is a decided victory for the local Venizelist committee and a corresponding defeat for the Royalists, who have been vigorously aided and abetted in all their campaign by the official representatives of Athens. Incidentally, since this adherence to the Salonika Provisional Government is accompanied by acceptance of General Murray's protection, the result of this "referendum" may be regarded as a demonstration of sympathy with and confidence in Great Britain. In conclusion, it is to be noted that the Greek colony has conducted itself with praiseworthy orderliness in spite of the great provocation offered by the Royalists.

The publication of the commissions empowering the representatives of the Provisional Government to convoke and hold the necessary courts and transact all the legal business connected therewith is momentarily expected. The judicial staff is already here, and is only awaiting authority to start work. There is considerable speculation as to what will be done with the Royalist representatives and their adherents. If their courts are allowed to carry on side by side with those of the Provisional Government, it looks as if the Mixed Courts will have to deal with cases which are bound to arise between Venizelists and Royalists. It is understood that the Anglo-Egyptian authorities are considering what steps should be taken in this connection, and it is to be hoped that they will succeed in avoiding for the Greek colony what will otherwise be a ludicrous state of affairs. It would certainly be more satisfactory if the Royalist authorities were relieved of their authority, especially their legal jurisdiction, even over the Royalist members of the local colony. It has been proved that their adherents constitute but a very small percentage of the community, and it is known that their activities are merely directed to the creation of dissension amongst the Venizelists. In other words, their actions are entirely anti-Ally; and on the ground of the necessity for preserving public order and safeguarding the interests of the Allies in this country, the elimination of the Royalist element and the proclamation of the Provisional Government representatives and courts as the sole Greek authority having legal and civil jurisdiction over the colony in Egypt, would be fully justified.

The Commerce of Egypt.

On Friday last a highly interesting paper on the commerce of Egypt and a comparison of its methods with those existing in other countries was read before the Sultania Society of Political Economy by Mr. C. W. Twelves, late President of the British Chamber of Commerce of Belgium and a member of the Imperial Council of Commerce in London. Mr. Twelves is at present attached to the Ministry of Finance in the War Trade Section, and during the time he has been out here he has, amongst other things, carried out a thorough investigation of local commercial conditions for the Commission of Industry and Commerce, of which he is a member. His practical business knowledge and his experience of commercial conditions in other countries, and especially of German methods, are proving of great utility to the Egyptian Government in their efforts to eradicate the Teuton influence on trade in this country and give a stimulus to local industries and a healthier complexion to commercial relations with other countries.

Amateur Theatricals.

The Cairo Amateur Repertory Players, who have for some time been indefatigable in their efforts to entertain our troops, gave a performance at the Sultania Opera House on Friday evening in aid of the Society for the Prevention of Cruelty to Animals. The audience included H.E. the High Commissioner and Lady Wingate. The piece chosen was Robert Marshall's "Duke of Killiecrankie," with Gertrude Jennings' "The Bathroom Door" as a curtain-raiser. The performance was in every respect a success. The acting was admirable, the *mise-en-scène* most artistic, and at no time had one the impression that one was watching amateurs. Where everyone was so uniformly good, it would be invidious to single out anyone for special praise. I therefore merely append the cast of the principal play:—

The Duke of Killiecrankie	E. W. Gandy
Mr. Henry Pitt Welby, M.P.	A. K. Barton
Mr. Ambrose Hicks	G. Storey
Alexander MacBayne	W. Webb
The Countess of Pangbourne	Miss Gretton
Lady Henrietta Addison	Miss Taylor
Mrs. Mulholland	Mrs. Ballon
Mrs. MacBayne	Miss Carr

(Produced by C. V. W. Grose; stage manager, Mrs. Gandy.)

It is to be hoped that the Cairo Amateur Repertory Players will long continue their activities, for they are certainly the most talented troupe we have seen on the boards for a very long time.

PUBLIC WORKS IN EGYPT.

SIR MURDOCH MACDONALD'S REPORT.

(By Our Cairo Correspondent.)

II.

With regard to the principal irrigation and drainage projects, Sir Murdoch Macdonald is of opinion that there are probably no serious technical difficulties in the way of their completion in a comparatively short period of time, and that "control of the river, with the assurance of a sufficient supply of water for the final limits of Egyptian cultivation at all times of the year, independently of natural conditions, is, so far as the engineer is concerned, a possibility already within sight."

Assuan marks the southern limit of the area where, whether in Egypt or the Sudan, cultivation by the river alone without the assistance of rain is practised on any important scale. The only exception to this is the Gezira, where irrigation from the Blue Nile is being arranged for. The Upper Nile projects were referred to in detail last year, but Sir Murdoch has some remarks to make on the subject of the Blue Nile portion which merit attention. The scheme is to construct a weir across the river at Sennar, about 120 miles south of Khartoum, and from upstream of it to cut a canal, which is already being excavated, to a point where it will deliver water to an area of some 300,000 acres, of which one-third will be put under green crop, one-third under cotton, and the remainder will lie fallow every year. It has been proved that cotton can be grown as a winter crop in the Sudan by contrast to Egypt, where it is a summer one, and thus its cultivation will not interfere with any summer requirements which Egypt may want to meet from the Blue Nile.

The maximum quantity required for these 300,000 acres is less than the lowest natural discharge recorded in the river at the critical period. Although the river has never been known to fail altogether, nevertheless failure is a contingency which must be reckoned with. But even if it did occur, and even if it lasted for as long as two months, Sir Murdoch says that it would be possible to counteract its effects, for the design of the weir provides "a height of building capable of dealing with the highest conceivable flood, and, though storage is not the object of the work, it

Digitized by Google

would be possible to impound, by the aid of this high structure, sufficient water to meet fully the requirements, not only of the 300,000 acres mentioned as necessary to a commercial enterprise, but of considerably more, without any assistance whatever from the river during these two months." Thus, the almost impossible contingency of a total failure of the Blue Nile is provided against. Incidentally, this extra storage would provide for an actual area of 500,000 instead of the original 300,000 acres mentioned, and if eventually further development takes place, then, says he, "during the period of greatest need recourse can be had to storage which will have been provided elsewhere on the Blue Nile." Sir Murdoch Macdonald does not, for obvious reasons, give any details of where this storage will be, but those who have followed irrigation developments in Egypt of late years will have no difficulty in putting their fingers on the spot on the map.

Of course, although the Sudan at present takes no summer water the time may come when she may require a certain quantity, but long before that day dawns Egypt will have made all her arrangements to meet her summer requirements, with ample margin to spare, so there is nothing to fear on this score.

The City of Cairo.

The Adviser makes an unusual departure by devoting some considerable space to the question of improvement in the town planning of Cairo, which has been occupying the attention of the engineering service controlling the city. He opens with a description of the city, the older and more densely populated quarters of which lie at the foot of the Citadel, where narrow, crooked streets, blind alleys, and covered pathways abound in a dense maze, with but one or two thoroughfares in the modern sense of the word. Undoubtedly this is the most picturesque part of the city, but it is, at the same time, entirely at variance with our own ideas of hygiene. "How to preserve the charm of the old town while introducing modern ideas is the not easy problem before the city engineer."

The introduction of improvements is, in the circumstances, a costly matter, but the local law is, in a certain degree, helpful in getting schemes through. "The making of new streets and squares, the cutting off of corners, the transformation of blind alleys into thoroughfares can be decreed by the Government on the recommendation of the Minister of Public Works. . . . The decree need not be enforced until the proprietor is actually reconstructing his property, and so it often happens provision need only be made for the value of the ground." Street widening in a tropical city has to be carried out on a different basis to what might hold in European cities. "It must not be forgotten "that a good street has not necessarily to be a straight street, and that the widening of a thoroughfare need not rule out the irregularity that largely gives it its character. Also, under a glaring eastern sun, too great width is sometimes most objectionable, as when it unduly exceeds the average line of shadow which is cast by the houses and gives instant relief, like a shadow of a great rock. Cairo, being in the latitude of 30°, the sun in midsummer stands at no great distance from the zenith; thus streets running east and west are, most of the day, in nearly full sunlight, and should not be too wide. It is not the same with those running north and south, and, besides, the prevailing wind is from the north, and thus a draught of fresh, cool air can be introduced through these avenues."

Sir Murdoch dwells on the value to health of the introduction of macadamized surfaces and tarred macadam roads. As yet, however, relatively few of the streets in the native quarters have been thus treated. Fortunately, wheeled traffic is light, but there is little doubt that the sooner the macadamised system is introduced generally throughout the city the better it will be for the health bill of the population.

Modern Cairo lies directly between the more ancient quarters and the river, whilst on the west bank of the Nile is the more important residential quarter, which is served by first-class roads and broad avenues lined with shady trees. With regard to future projects to provide for the expansion in population, Sir Murdoch writes as follows:—"To the north and east of the congested areas of the city lies a gravelly plateau partly occupied by the tombs of the Caliphs, and at present cut off from direct contact with the town by a line of hills or mounds composed of ancient débris. This area it will be possible to lay out for the future extension of middle-class property. With its clean soil, relative eminence, and northern exposure, it should form an attractive and very healthy suburb. To the south of the city is the district known as Old Cairo, the abandoned scene of the earlier Arab settlements, now a wilderness scattered over with small hillocks of ancient remains and pitted with the irregular excavation of old quarries. Here probably lies the area most adaptable by the hand of the engineer for the reconstruction of extension on modern lines of a poorer quarter. With its growth, population would flow back towards the neighbourhood once occupied by Fustat, and the associations of an historic site might join with the claims of health and education to require that, though poor and populous, the new quarter should be generously planned with houses of stable design."

The Year's Irrigation.

The 1915 flood was very low and very late, and, as forecast by the Ministry, resembled in most respects that of 1907. There were no untoward incidents, and, altogether, this eccentric flood was handled with exemplary ability on the part of the responsible irrigation authorities. Only 44,000 acres went unwatered, the greater part lying outside the main systems in isolated basins or on islands and foreshores of the Nile in Upper Egypt.

Projects in Progress.

Work in connection with the two projects for the improved drainage of about 1,000,000 acres in the Central Gharbia and Western Behera areas of the Delta, which has been interrupted by the war, has since been confined to that which was necessary to consolidate and turn to the best advantage the work already accomplished. There is no necessity to carry the main drains down to their designed depth until the pumps are installed, but dredging has been continued to carry them at least to levels which secure a fair drainage by free flow. Out of the £E2,446,000 marked down for these two enterprises, so far £E1,053,000 has been expended; of this but a small amount has been incurred during the year under review. "The provisional results already obtained are, however, important and convincing. In Gharbia . . . the drainage levels have been lowered by upwards of a metre in the main central zone served by the new branch drains. . . . As far north as Salahib land that was previously flooded for the greater part of the year now has drainage of from a half to one metre. A number of private drainage pumping installations have stopped working because they are no longer wanted, and considerable areas of new lands have been rendered cultivable, and are being put under crop by the fellahin."

As regards the Sudan irrigation works, drawings have been got out for the distributary system and the regulator in connection with the Sennar Weir and the Gezira canalisation scheme. Excavation of the main canal has been quietly carried on, but all the labour is manual and represents only the provisional carrying out of work during the war. This as well as the other projects are hung up until the necessary machinery can be got out, which will, of course, not be until after the conclusion of peace.

Public Works other than Irrigation.

All the other departments of the Public Works Ministry have been active during the year under review. The State Buildings, Mechanical and Physical Services, have all done considerable work for the Army in addition to carrying on their normal duties, whilst the Main Roads Department, which was created in 1912, and which is "one of the most interesting of Government Services," has completed its control by taking over from the Irrigation Department the agricultural roads of Upper Egypt. The total length of the main and agricultural roads managed by it is now 2,355 miles, on which 148 gangs are employed. The average Egyptian road, in its normal state, is quite unfit for wheeled traffic. All this is being changed, however; the surfaces are being put into a fit state for light use, the dangerous points are being rectified, and sign-posts are being erected. Altogether this department is doing a deal of important and useful work in this country, where roads as a quick means of communication have been lamentably lacking, but its sphere of usefulness will not receive its rightful expansion until it can obtain an adequate staff and a proper budget.

Personalia.

Sir Murdoch Macdonald pays a feeling tribute to Mr. W. R. Williams, who retired last year from the position of Inspector-General of Irrigation after fifteen years' service. "His experience and technical knowledge were closely associated with all the great works," and "his administrative work was conducted with a sympathy and understanding which made his departure a matter of wide personal regret." He also refers sympathetically to the deaths of Sir Colin Scott-Moncrieff and of Sir Gaston Maspero, both of whom are too well known to your readers for there to be any necessity to dwell on the great services rendered by each of them to Egypt. Attached to the report is a list of the officials of the Ministry who have served or are serving with the Allied Armies. These number eighty-two, of whom fifty are with the British forces, twenty-five with the French, six with the Italian, and one with the Russian. In addition, temporary and local commissions have been held by twenty-nine officials, whilst several are doing work with the Red Cross or in a civil capacity connected with the war.

CYPRUS NOTES.

(From a Correspondent.)

Fears for the Harvest.

The Greek Easter has been celebrated with a certain amount of gaiety. Races, athletic sports, dances, and other entertainments have taken place.

There is much fear that the cereal harvest, instead of being an excellent one, as had been confidently expected, will be, after all, a very bad one. Not only has no rain fallen for weeks, but summer heat has lately prevailed. The critical period is passing rapidly, and unless rain comes speedily the present gloomy outlook will be realised. It is disheartening to feel that, however abundant the early rains may have been, and however favourable the winter distribution, failure of the spring or "second" rains may in any year ruin all the prospects. Cyprus is no nearer to the realization of any scheme of artificial irrigation which should, and must, some day render husbandry independent of the seasons and restore Cyprus to agricultural prosperity. In this vital matter the island remains in the condition to which it has been reduced by centuries of misrule; though it must be added that there has been a considerable change for the better, as regards the rainfall, during the British occupation.

The Waste of Water.

During the winter months immense volumes of water run to waste in the sea which could be collected in reservoirs and stored. Again, underground water could be raised to a very large extent for irrigation. As regards storage, the works carried out in the east of the island, out of the loan sanctioned by Mr. J. Chamberlain, have not proved a success; and consequently similar works which might, under different circumstances, have been carried out in other parts of the island are not likely to be undertaken in any near future by the Government. It is needless to say that the investment of private capital in such projects is at present out of the question.

The prospect of artesian supplies is not encouraging, for the half-hearted experiments in boring which have been carried out by the Government have had no promising results, and it is unlikely that Cyprus will be blessed with help from that source.

A great deal could be done by means of water-lifting appliances. The water-wheel is used to a certain extent, but much more should be done in this direction. Sir Samuel Baker in 1879, and others since, have strongly advocated this system, so largely used in Egypt, especially for the Great Mesaoria and Morphou plains, where water lies but a few feet below the surface. In some places the *shadoof*, or pole and bucket contrivance, might also be used with advantage by hard-working farmers.

Again, subterranean aqueducts were at one period common in Cyprus. A number of wells are sunk, and these are connected by subterranean tunnels, the water being conducted by this chain of wells to given points. This system, which was formerly elaborated with great skill by Cypriots, has been practically abandoned; but it might be revived with advantage in many places. No doubt loans to the peasantry would be necessary for any of these works, and unhappily the problem of how to provide cheap credit, the solution of which appeared hopeful some years ago, has not yet been solved. On the contrary, it is feared that the people are being again driven by present difficulties into the hands of the moneylenders. The time is one of general suspense, and it follows that for any organised progress in artificial irrigation the agricultural class must wait in patience. Also one always comes back to the unfortunate fact that the sparseness of the population is one of the principal bars to progress. In the time of Strabo the population of Cyprus is said to have been about 1,100,000. It was self-supporting. According to the computation of M. Gennadius, the first Director of Agriculture, the yield of wheat was in Strabo's time probably about 10,000,000 bushels, whereas it is now about 2,000,000, or one-fifth. Even now the cereal harvests might under improved methods be doubled.

The third congress of the Czecho-Slovak societies in Russia has opened at Kieff. Three hundred delegates were present, as well as representatives of the Czecho-Slovak volunteer detachments and of Czech prisoners of war.

Two Greek torpedo-boat destroyers are to be handed over by the French authorities to the Provisional Government at Salonika. They will be manned by Greek officers and sailors, and will be used for assuring communication with the isles under the authority of the Provisional Government.

ARCHÆOLOGICAL NOTES.

BY JOSEPH OFFORD.

It is probable that some very important archæological discoveries will be soon reported from Alexandria. For some time past M. Etienne Combe, who during the absence in Italy upon military service of Dr. Breccia, director of the Alexandria Museum, has been acting for him, has been carrying on excavations beneath the playground of St. Andrew's School. Accidentally a large shaft or descending approach to a series of subterranean chambers and passages was come upon, and workmen are now clearing some of the galleries of the débris with which at present they are filled. Other shafts are known to exist in the neighbouring Coptic graveyard and in the grounds of Victoria House near by. It is to be hoped these remains will prove to be those of the long-lost and celebrated Cæsareum, or of the tomb of Alexander the Great.

An American scholar, Mr. Paton, is publishing a most costly and elaborate series of volumes giving in full every ancient Egyptian record concerning any connection of Egypt with Western Asia. In the January number of the *Journal of Egyptian Archæology* Dr. Alan Gardiner gives translations of a most interesting series of hieroglyphic texts found in the tomb of an old Egyptian official named Akhthoy, who terms himself a "sea captain." He, however, like most ancient Egyptians employed by Pharaoh, or the State, at different times held various and divergent positions, and seems to have been chiefly an inspector, or a governor, of mining stations, for most of his eulogistic biography concerns mining operations. Dr. Gardiner calls him a "much-travelled Theban official." This is because he mentions mining of such varied character. His record gives the titles of the different sites from which he obtained turquoises, lapis lazuli, and various precious metals and copper; but these names we cannot at present identify with their localities. One was almost certainly in the Sinai peninsula, and as Akhthoy boasts of having "punished Asiatics in their countries," it is probable that all the mining regions that he visited were in that direction or in Arabia. Of course he may have obtained some of the articles he enumerates by purchase. Upon his return home with the riches he had accumulated at various mines and times, he tells us "he filled the heart of his king with their preciousness," so he was awarded a sinecure, being appointed to look after the saloon in which the Pharaoh performed his toilet. Probably this office carried with it no remuneration, and so he was also made "Recorder of the Cattle Lists of Upper Egypt." He appears to have been something of a "ladies' man," for he mentions, in addition to the treasures he brought back from his expeditions for the king, that he also gave ornaments to the Court ladies and veils to the beautiful women." These veils would be of the lovely loom work of Babylon or Damascus, whose productions were world-famous; and the gifts show that he certainly had business relations with the caravan merchants who came into Syria and Palestine from places farther east. This new inscription, which comes from a sepulchre excavated at Thebes for Earl Carnarvon, will form an interesting addition to records edited by Mr. Paton.

The famous Babylonian Code of Laws of King Hammurabi became so universally recognised as binding in Mesopotamia that legal documents and deeds merely referred to one or two words indicative of any particular clause, in order to invoke the binding direction of such clause as being that upon which the signatories to the transaction relied. An interesting instance of this practice can be given from a tablet concerning a loan, which was engrossed as far away from Babylon as Susa, in Persia, thus showing how widespread was the recognition of Hammurabi's laws as being binding. In the transaction referred to, Iluhasami was borrower of a sum of five silver shekels from Nursamas; and as security for repayment of the loan he handed over to Nursamas certain fields, that the latter might cultivate them and pay himself out of the produce, after making allowance for the cost of raising the crops. The loan tablet condenses the part of the deed of agreement concerning the letting of the fields and hypothecation to the lender of their next crop to but few words saying it was to be in accordance with the Ezip-tabal—that is to say, harvest and taking therefrom of its grain. This is a reference to the 49th Clause of Hammurabi's Code, which, somewhat condensed, is as follows:—

> If a man borrows money and has given for it a field cultivated for grain, and said to the lender, "Plant the field and gather the wheat and sesame produced," and the planter causes them to be produced, at harvest the owner may take the crop, but shall give to the lender for his silver and for his interest (thereupon) which he received, and for the cost of the cultivation.

This, which may be termed an agrarian law concerning the mortgage of a crop, is a simple but significant specimen of the juridical acumen of the founders of early Mesopotamian legislation.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE ENTENTE AND BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The communications in your last issue from Mr. H. M. Wallis and Mr. Charles Woods call for a brief word of comment—brief because the subject has more than once been thrashed out, and because the ground advanced by the first-named for his special plea for Bulgaria is sufficient to put the case out of court.

In his second paragraph Mr. Wallis advocates diplomatic methods because the military policy is "very expensive." It cannot be denied that it is cheaper in some ways to sell your friends than to fight your enemies; indeed, the operation may sometimes be made a source of gain. The question at any given moment is whether anyone will make the proposition and whether, if made, any statesman can be found sufficiently base to carry it out. It is, perhaps, hardly worth while to discuss proposals introduced in such terms, but this much may be said, that if the Serbs, abandoned in 1915, have been sent forward to bear the brunt of the recent fighting and to reconquer Monastir at the expense of much of the manhood that is still left to them only that their allies should hand over the town to their enemies, then we shall have a reputation for naked perfidy and treacherous dealing second to none; for even Germany, so far, has confined her baseness to her enemies and neutrals. Not yet has she betrayed her allies on the field of battle, whatever she may do in the future. I can conceive of no course so cynical in its treachery—if we intended to give Bulgaria Monastir, we should have said so before we sent the Serbs forward to reconquer it for their foes. To abandon the Serbs now would be to destroy the last shreds of our reputation and honour in the Balkans. On one thing Mr. Wallis is to be congratulated—that he does not dissociate the Bulgars from the monarch whom he so admires.

I do not see why Greece, which would have been on our side had we treated M. Venizelos fairly, should be penalised for the sake of Bulgaria, which has actively fought us. We have supported King Constantine and then accuse the Greeks of the results. I suppose, however, that, once embarked on the course of abandoning friends to enemies, there is no particular term to be set to that course. It is a pity that Mr. Woods still continues to affix a strong protestation of his love for the Serbs to every proposal which he makes against them; the effect produced is not that desired. Mr. Wallis, at any rate, spares us this. He would be a bold man who should bank at this moment on M. Miljukov's position. Could not the war be cheapened by applying the same course to other quarters—*e.g.*, Alsace-Lorraine? Perhaps, on the whole, the best course is to be the friends of your friends.—I am, etc.,

A. H. E. TAYLOR.

Canterbury, May 5.

BRITISH REFUGEES FROM TURKEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Feeling that many people who lived in Turkey before the war would like to meet, but have perhaps not had the opportunity of doing so, the ladies of the "British Refugees from Turkey Fund" and myself have arranged a social gathering at the Alpine Club Hall, Mill Street, Conduit Street, W., on Wednesday, June 6, from 4 to 6.30.

We should be happy to see anyone who would care to avail themselves of this opportunity, and would be most grateful to you if you would make our idea known to your readers and their friends.

Owing to the impossibility of our obtaining many of the addresses, would those who may not receive an invitation kindly communicate with the Hon Sec., Lowndes House, Lowndes Place, S.W.—I am, etc.,

ALICE LOWTHER.

23, Belgrave Square,
May 9, 1917.

Reuter's Salonika correspondent reports that on Sunday a mass meeting in that city proclaimed the deposition of King Constantine and his dynasty. Over 40,000 people assembled in the square of the White Tower, and were addressed by various speakers, and cheered themselves hoarse with shouts—"Long live Venizelos," "Long live the National Government," "Down with the King."

TANGIER TO TEHERAN.

The war has brought about many paradoxical situations and led to innumerable topsy-turvy proposals. Indeed, at the present time every crank and faddist seems to be moving heaven and earth in order to push through his—or her—pet plan, to get his—or her!—pet hobby adopted as a war baby, so to say. And owing to the disturbed state of affairs generally, quite a number of these astute and pushful individuals—to say nothing of "societies," "unions," "leagues," and so forth—have actually scored. This is not to be wondered at. The Fanatic knows what he, or she, wants; and with more than half the other folk *not* knowing what *they* want, except victory, the Fanatic is almost certain to get his way, whether that is desirable in the interests of the majority or not. A great many improvements have been brought about "to win the war." But I am not quite sure that all the changes made, or promised—I had almost written "threatened"—*are* improvements. And, at any rate, I dislike seeing the Fanatic getting his—or her—way by sheer cheek and clap-trap.

***

That, however, is rather a digression from what I set out to say. I really had in mind a proposal that may not be quite so mad as it seems. Whence it actually emanated I am not certain. It has been fathered upon Constantinople, but I doubt whether (under the Germans) that city retains enough humour to produce such a joke. Now, you will have guessed, of course, that I refer to the suggestion that Abdul Hamid should be dragged out of the obscurity of his confinement, and entrusted with the negotiation of a peace favourable to Turkey. If only Abdul were in his old form, the suggestion might be, from the purely Turkish point of view, quite a good one; for he was undoubtedly a far cleverer man than any of the gang now nominally governing Turkey, and the Entente Powers would have to pick very wide-awake representatives to hold their own against him. But I take it that the ex-Sultan is very far indeed from his old form. Eight years' fairly close confinement, with the constant dread that "something may happen" (to you) at any moment, can hardly be calculated to improve your *finesse* or your ability to bluff unflinchingly. And it was those qualities that made Abdul Hamid.

***

The *Egyptian Gazette* recently referred to a strange situation in which M. Metaxas, who has been appointed King Constantine's representative in London, found himself. The Minister, it seems, "has taken the oath of his appointment before M. Xydakis, Royalist Diplomatic Agent at Cairo," this being "the first occasion that a Minister has been sworn before his official inferior." As you may remember, M. Metaxas was nominated as Greek Minister to the United States; but the Messageries' steamer on which he set out from Athens to take the oath was torpedoed, and he, being rescued, was taken on to Alexandria. There he has since remained. When M. Gennadius resigned his position here, King Constantine appointed M. Metaxas to London instead of to Washington; but M. Metaxas was unable to get to Athens to take the oath because (to quote the *Gazette* again) "the Greek coast was blockaded." The end of the chapter of accidents is not quite clear—but M. Metaxas has seemingly made up his mind to face the risks of the deep once more, as the *Gazette* says that he "will leave Egypt in due course for England, to take up his new post."

***

Apropos of the risks of the deep, I was a few days ago told a little story that goes to show that even the lot of a German U-boat commander is not always "a happy one—happy one." According to this yarn, a particular U-boat came to the surface only to find itself in the midst of quite a flotilla of our light craft, which instantly closed in on it. Of course, it dived at once; but after a good time it appeared on the surface again, only to find itself again the object of pressing attentions from our craft. Then, after a longer interval, up it bobbed once more—this time quite close to a torpedo destroyer. The T.D. commander hung over the side of his craft and hailed through his megaphone: "Do you surrender unconditionally?" Promptly came back the reply from a very hustled and angry German: "Of course, you fool. That's just what I've been trying to do for the past two hours." At any rate, that is the story as told to me. And, as the Arab story-tellers say, "Allah is all-knowing and all-merciful."

CORSAIR.

The Athens correspondent of *The Times* reports that the Allied Ministers have handed a protest to the Government for hiding arms and ammunition at Chalandri, near Athens, and have demanded searches for other hidden arms.

NEAR EAST BOOKSHELF.

THE NEW MAP OF AFRICA.*

It is interesting to read an outside opinion of British administration in Africa, even though the writer appears hardly to be qualified to deal with this important subject. Mr. Gibbons, the author of "The New Map of Africa," is an American citizen who for some years has been Professor of History at Robert College, Constantinople, and is therefore presumably competent to deal with affairs in the Near East. But apart from certain visits to Egypt, both during and before the war, he does not seem to have the requisite knowledge of African affairs nor the needful appreciation of the difficulties of administration on the Dark Continent to speak with authority on the redistribution of territory after the war. Mr. Gibbons apparently lacks historical knowledge of African evolution; he certainly is wanting in historical perspective. His book is, in fact, singularly badly arranged, lacks cohesion, is full of errors, and, strangely enough, though the author will probably deny this statement, is characterized by sentimentalism. The author does not appear to have consulted the best books upon the subject, and writes without appreciating the main factors of African development. He wanders aimlessly from the Sudan to the islands of Africa, from the Boer War to Liberia and Abyssinia, from Algeria and Tunisia to Livingstone and Rhodes, from the Germans in East Africa to European rivalry in Morocco, and from Egypt to the Rebellion in South Africa, without once seizing upon the main and essential factors that would bind the whole together into a coherent book.

We do not wish to be unkind in dealing with Mr. Gibbons. By far the best section of the book is that allotted to Egypt, a subject on which he must be well informed. But although he gives full credit to the brilliant work achieved by the British administration, and advances the sensible thesis that material prosperity does not necessarily mean national contentment, he wastes much sympathy over the ex-Khedive and goes out of his way to depreciate the qualifications of those engaged in the work of administration. "The British officials," he states, "do not feel and care for Egypt and the Egyptians as it is essential that they should feel and care to fill properly their positions," and "the Egyptians are made to accept in many official positions men whose mental caliber would not enable them to fill similar positions in Great Britain." Mr. Gibbons, however, has a high opinion of the capabilities of the Colonial Civil Servants in Africa, but makes the ludicrous statement that it is the enjoyment of caste privileges that attracts them to the service. "In order to enjoy the privileges of caste," he writes, "young men of good families are willing to leave home and friends. . . . They are content with an occasional visit to England and with little or no money, if only they preserve their caste. The moment the Englishman of the upper classes considers business as desirable a vocation as Government service, Britain's colonial empire will resemble France's or Germany's—or will collapse altogether." Of the African colonial he has the worst opinion. "The latter are too frequently," he says, "bounders of the worst sort, intolerant and intolerable when they have a little authority in their hands." To support this thesis he gives an account of the Zululand Rebellion of 1906 in an entirely one-sided and *ex parte* statement. This chapter is marked by such extraordinary misstatements that one altogether doubts the author's competency to deal with South African affairs. Mr. Gibbons states that the Zulus lost 3,500 in a little over two months (the real figures are 2,300 in four months), and expresses the opinion that the expedition was "a disgrace to civilisation and Christianity." Moreover, forgetting that Pretorius at the Battle of Blood River had only three men wounded against 3,000 Zulus killed, he remarks that the figures are entirely disproportionate to the numbers engaged, and states that the expedition was "just as merciless and just as disastrous to the Zulus as the German campaign to the Hereros"—sufficient evidence that he has really no knowledge of the history of the German colonies.

It is, however, when one studies his remarks about the Germans in Africa that Mr. Gibbons' personal bias becomes most pronounced. "The South-West African Campaign," he writes, "demonstrated beyond the possibility of doubt either that Germany was not expecting a war with Great Britain, or that, in case of war, there was no intention to stir up the Boers. It is difficult to see how a General Staff such as the German one has proved itself to be would not have been organising and preparing thoroughly for years in South-West Africa, if South-West Africa had been in the plan of future military operations." We can only recommend Mr. Gibbons to study carefully all available material on this question, when perhaps his opinions may be modified. On the great question of "the new map of Africa" Mr. Gibbons has little to say, except that Germany should retain her colonies. This opinion cannot be controverted here, but it is apparently based upon utilitarian policy coupled with a belief that the Germans have behaved well, at least recently, in their colonies. "Aside from the argument of punishment," he writes, "the only justification of France and Great Britain for retaining the German colonies would be: economic necessity of keeping the colonies, or the claim that Germany has forfeited the right to them, through barbarous treatment of the natives or incapacity to administer and develop the colonies." Both these grounds, he states, are invalid. Of the numerous mistakes of fact we need not speak, save to call attention to two alterations which should be made in a new edition. The Union of South Africa is constantly called the Commonwealth, and the coloured maps showing Africa in 1850 and 1902 are incorrect in several particulars. Mr. Gibbons' book is an ambitious attempt to deal adequately with a great subject, but we are reluctantly compelled to the opinion that the author has completely failed in his task.

E. L.

* The New Map of Africa. By Herbert Adams Gibbons. (New York: The Century Co. 1916. 2s.)

BOOK NOTES.

Messrs. Chatto and Windus have published the "Serbske Pesme" of "Owen Meredith," which was first published in the middle of last century. Mr. G. H. Powell contributes a bibliographical note.

Amongst the "War Pen Pictures" written by Mr. W. S. Brown and published (at 1s. net) by McQueen and Co. are several from Egypt, some from the Gallipoli Peninsula, and others from the islands of the Ægean.

There is much matter of interest in Mr. Arnold Wright's "Early English Adventures in the East" (Melrose, 10s. 6d. net). The greater part of the book is given up to India, but there is an entire chapter devoted to the Persian Gulf.

Professor John A. Todd has written "The Mechanism of Exchange," which Mr. Milford will shortly publish. The work deals with such subjects as trade in peace and in war, currency and banking.

Messrs. Allen and Unwin have published recently M. Bogumil Vosniak's "A Bulwark Against Germany: The Fight of the Slovenes, the Western Branch of the Jugo-Slavs, for National Existence." The translation into English is the work of Miss F. S. Copeland.

Nat Gould's latest book, issued at the price of 6d. only, is entitled "The White Arab." The "Arab" referred to is, of course, a steed, not a descendant of Ishmael.

The latest additions to the Anglo-Hellenic League's publications are: "Venizelos and his Fellow Countrymen," by Professor P. N. Ure; "Addresses by M. A. Diomedes, February 16, 1917"; and "Italy and Greece."

BOOKS RECEIVED.

Greek Ideals: A Study of Social Life. By C. Delisle Burns. (Bell and Sons. 5s. net.)

The Eastern Question: An Historical Study in European Diplomacy. By J. A. R. Marriott. (Oxford: At the Clarendon Press. 12s. 6d. net.)

The Swine-Gods. By Regina Miriam Bloch. (Richmond. 3s. 6d. net.)

NEW GREEK CABINET.

A Reuter's message from Athens, dated May 3, announces:—The New Cabinet has been formed as follows:—

M. ZAIMIS	Prime Minister and Foreign Affairs
E. NEGRIS	... Interior
COLONEL CHARALAMBIS ...	... War
M. LIDORYKI	... Justice
M. GEORGE RALLIS ...	... Finance
CAPTAIN P. ARGYROPOULOS	... Communications
M. CALLIGAS	... National Economy
M. DROSSOPOULOS ...	... Food
M. DEMIRTDJI	... Marine
M. EGENITIS	... Education

According to the Athens newspapers of May 6, Colonel Charalambis has declined to accept the office of Minister of War in the new Greek Cabinet in view of the conditions imposed, preferring to keep his position in the Army.

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. May.	1917. April.		1335. Rejeb.	5677. Iyar.
11	28	Friday	19	19
12	29	Saturday.....	20	20
13	30	Sunday	21	21
	May			
14	1	Monday	22	22
15	2	Tuesday	23	23
16	3	Wednesday	24	24
17	4	Thursday	25	25

Next Tuesday is the birthday of ex-Queen Natalie of Serbia, who was born, in Florence, in 1859.

Thursday is the birthday of H.M. the King of Spain, who will then enter his thirty-second year.

Thursday is also the birthday of Princess Arthur of Connaught.

The Duke of Connaught has been staying with Lieutenant-General Sir John Maxwell at York while inspecting the Volunteers in the Northern Command.

The Maharaja of Bikanir left London recently for Folkestone.

Prince Paul Kara-Georgevitch of Serbia left town on Sunday for the country.

Lady Decies is leaving for Roumania, having joined the Scottish Women's Hospital Contingent.

Madame Take Jonescu has returned to town, and is staying at 23, Cleveland Square.

M. Constantin Olanesco, formerly Roumanian Minister for Foreign Affairs, and Madame Olanesco left London for Paris last week.

Mr. Rudyard Kipling arrived in Rome last Saturday, and is proceeding to the Italian front.

Madame Misu and her daughter returned to London from Brighton last week.

The Dean of Rochester, who has been on a mission tour in Egypt and Cyprus, is expected to return to Rochester very shortly.

Father Nicolas Velimirovitch, of the Serbian Legation, left London on Monday for France, for the purpose of visiting Serbian refugees.

The marriage of Captain Gerald H. G. Williamson, younger son of Sir Archibald Williamson, Bart., M.P., and Miss Christian Forbes, elder daughter of Mr and Mrs. Edmund Forbes, was solemnized at Holy Trinity Church, Brompton, last Saturday afternoon.

Baron de Kusel is lying seriously ill at his daughter's residence, Oak Cottage, Dormans Park, Surrey.

Captain R. C. Cumberbatch, Rifle Brigade, who was invalided home in November, is now in Athens as Assistant Military Attaché to H.M. Legation.

His brother, Lieutenant H. D. Cumberbatch, The Buffs, who was invalided home at the end of last year after being wounded for the second time, has been seconded for special duty under the Admiralty abroad.

Princess Mary will represent the Queen at the variety entertainment which the Duchess of Wellington is giving at Apsley House on Tuesday afternoon, the 15th inst., in aid of the Mesopotamia Comforts Fund. Among the artists who have promised to assist are Miss Irene Vanbrugh, Miss Violet Loraine, Miss Mabel Russell, Mr. Gerald du Maurier, Mr. Charles Hawtrey, Mr. Harry Lauder and Mr. George Robey, while Miss May Harrison and Miss Louise Dale have undertaken to play and sing. Tickets can be obtained only at Apsley House, where applications should be made by letter to Lady Hope or Mr. J. H. Mossop.

Pir Syed Ibrahim of Baghdad, who has been resident in Bombay since 1912, has, says the *Times of India*, received the following telegram from the Nakeeb of Baghdad :—"All of us are well, thank God. The threshold, together with the sacred Jama Mosque, is protected. Let us know how you are." The following reply has been sent by Pir Syed Ibrahim to the Nakeeb of Baghdad :—"Received telegram. Thank God. Rejoiced to learn all safe and happy."

Colonel Hilaire, whose arrival in Khartoum was recently reported by our Sudan Correspondent, left that city for Cairo on April 13. Colonel Hilaire, who was accompanied by Lieut. Mercier, was the guest of his Excellency the Governor-General during his stay at Khartoum, and visited all places of interest in Khartoum and vicinity.

Captain J. E. Ellery, of Hull, captain of a British steamer which was sunk in the Mediterranean some time ago, writes from Salzerbad, Austria, paying a warm tribute to Captain Stanley Wilson, M.P., who is also a prisoner there. Captain Wilson, it will be remembered, was captured by a German submarine in the Mediterranean nearly two years ago, as reported in THE NEAR EAST at the time. Captain Ellery says : "I lost everything but what I stand up in, and can obtain nothing here. I am greatly indebted to Captain Stanley Wilson, M.P., for his very great kindness. He is keeping me supplied with extra food, etc., until some parcels can reach me from home. He is the 'fairy godmother' of the camp to British unfortunates like myself. He shares his parcels with us all, and uses his wealth for our general benefit as far as it is possible to do so. I am glad to say we are well treated by the Austrian officials."

The Anglo-Hellenic League is informed from Salonika that the Greek Press devotes long articles to the services rendered by Sir Armand Ruffer during his career in Egypt and to his disinterested attachment to the cause of M. Venizelos. He was the first to receive the Military Medal instituted by the Greek Government of National Defence.

The late Mrs. Louisa Logie, of Cambridge, left £1,000 to Cambridge University wherewith to establish a prize or scholarship in Arabic, as a memorial to her brother-in-law, the late Professor William Wright, to be awarded for the benefit of graduates of the University born in the United Kingdom and not being Jews. The Council of the Senate, while gratefully appreciating the goodwill to the University implied by this benefaction, state that they do not feel justified in recommending the Senate to accept and administer a bequest under the conditions attached. They accordingly recommend that the bequest be declined.

M. Voislav Antonievitch, Secretary to the Serbian Legation, left London for Paris on Sunday.

Mr. Perceval Landon will give a lecture on "Mesopotamia" at the Royal School of Art Needlework on Wednesday, May 30, at 3.30 p.m., when Princess Christian and Princess Marie Louise will be present.

In a message dated May 5, Reuter's Athens correspondent reports :—Colonel Scoumbourdis, Aide-de-Camp to King Constantine, has left for Salonika. The purpose of his journey is not known, but has given rise to various speculations.

Sir Courthauld Thomson, Chief Commissioner of the British Red Cross for Malta and the Near East, arrived in Rome on Wednesday afternoon.

A Reuter's message from Jassy, dated May 4, states :—M. Beldiman, former Roumanian Minister in Berlin, having published in the German Press a letter addressed by him last December to M. Bratiano, the Roumanian Premier, in which he criticised the policy of Roumania in the grossest language, has been dismissed from the service of the Government. Ever since Roumania's entry into the war M. Beldiman has been acting like a veritable enemy of Roumania.

Talaat Pasha arrived in Sofia on Saturday. On Sunday he was received by King Ferdinand, and, after taking luncheon with His Majesty, left for Constantinople.

During his visit to Vienna, says the *Neue Freie Presse*, Talaat Pasha had several private conversations with Count Czernin. The two statesmen were found to be in perfect agreement on all points, the paper adds.

APPOINTMENTS, PROMOTIONS, ETC.

M. E. Sabline, First Secretary to the Russian Embassy in London, is promoted Counsellor of Embassy in consequence of M. C. Nabokoff's appointment as Russian Minister in Berne. M. Sabline was for some time Russian Minister to Persia.

Capt. Basil A. Jarvis, Army Veterinary Corps, has been taken on the strength of the Egyptian Army with the rank of Bimbashi and posted to the Veterinary Department.

Bimbashi E. M. Hutchinson, Eastern Arab Corps, has been struck off the strength of the Egyptian Army.

Lewa C. H. Townsend Pasha, Sudan Government, has been struck off the strength of the Egyptian Army.

The following transfers have been approved :—
Bimbashi A. C. Marsh, 2nd Battalion, to Equatorial Battalion.
Bimbashi B. de W. Weldon, Cairo District, to Blue Nile District.
Bimbashi H. Smedly, Transport, to 4th Battalion.
Bimbashi C. W. Ritson, Eastern Arab Corps, to 1st Battalion

OBITUARY.

LADY MALLET.

Lady Mallet, widow of the Right Hon. Sir Louis Mallet, C.B., died at Clifton, Bristol, on Monday last, aged eighty-two. She was Frances Helen, the daughter of the Rev. the Hon. Edward Pellew, fourth son of the first Viscount Exmouth, and was married to Sir Louis Mallet in 1858.

MAJOR M. CORSE SCOTT.

It is announced that Major Michael Corse Scott, Royal Scots, attached Royal Scots Fusiliers, died from the effects of shell shock on March 29. The eldest son of Mr. John Corse Scott, of Synton, Hawick, he was born in 1882, and was educated at Eton. Early in 1900 he joined the Warwick Militia, and served through the South African War, receiving the Queen's medal with three clasps. In 1902 he became lieutenant in the 1st Royal Scots, and served in India for seven years. In January, 1912, he was selected for service with the Egyptian Army, and spent four years in Egypt, chiefly in the Sudan, where he commanded a company of the Camel Corps. He rejoined the 1st Royal Scots in September, 1916, and later was laid aside with shell shock, from the effects of which he died, while attached to a battalion of the Royal Scots Fusiliers, of which he was at the time second in command. Major Scott was a great favourite with his men. He became captain in 1913, and major last February.

MR. W. E. SILLEY.

We regret to announce the death of Mr. Walter E. Silley, which occurred suddenly at Limassol on the 7th inst. He was the youngest son of the late Edward C. Silley, of Constantinople. He joined the staff of the Imperial Ottoman Bank as a junior clerk in 1882, and went through the various departments of that well-known establishment, acquiring a general and detailed experience of banking, which, in conjunction with his knowledge of languages, fitted him well for the several responsible posts he had occupied at the head office of the bank at Constantinople. He was controller of the Stamboul branch on the outbreak of war in 1914, when he was compelled to leave his home in that city. In March, 1915, he was appointed manager of the branch at Limassol.

A man of sound British principles, Mr. Silley was of an unpretentious and kindly nature, a good husband and father. He was gifted with musical and humorous talents which on many occasions he turned to account in the interests of charitable objects. He was for many years a regular member of the choir of the Crimean Memorial Church. Mr. Silley, who leaves a widow, two daughters and a son, will be sadly missed by many friends both in Constantinople and Cyprus, and especially by his colleagues, by whom he was much esteemed and respected.

A Reuter's message from Simla, dated May 2, says:—"All India mourns to-day with Lord Chelmsford, who has lost his elder son, the Hon Frederic Ivor Thesiger, R.A.—killed in Mesopotamia."

The Hon. Frederic Ivor Thesiger was born on October 17, 1896, and was educated at his father's old school, Winchester. Afterwards he entered Woolwich, and passed out into the Royal Artillery in April, 1915, and very shortly after went to the front. In March of last year he was wounded in the operations in Mesopotamia, but he recovered and rejoined his battery. Lord Chelmsford's second son, the Hon. Andrew Charles Gerald Thesiger, was born in 1903.

Lieutenant-Colonel Nugent Macnamara, R.M.A., died on the 3rd inst., at 22, Park Crescent, Brighton. He was the son of Commander Timothy Macnamara, R.N., and of Mrs. Macnamara, formerly Miss Wynne Aubrey, of Clonger Court, Hereford. Colonel Macnamara fought in the Crimea, and his family have long been associated with the Navy, one being under Nelson's command at the battle of St. Vincent. His eldest grandson, Lieutenant Aubrey de St. Croix, was killed at Kut in February.

Mr. George Pierre Hunot, late British Vice-Consul at Saffi, Morocco, has died at his residence at Lee, at the age of seventy-nine years. After acting as Vice-Consul from 1869 till 1872, he was appointed to the post in the latter year, and held the same till his resignation at the close of 1911. Mr. Hunot was a Fellow of the Royal Geographical Society, and had received the Netherlands Order of Orange-Nassau.

Egyptian papers received by the last mail announce that news has been received in Cairo of the death in Paris of Leon Meunier Bey, who was for many years in the service of the Egyptian Government as Inspector of the State Domains, and subsequently as Director of the Bulak Technical School. He retired some years ago and went to live in France.

HELP to meet the needs of the
SERBIAN ARMY,
and send your Donation for the
SERBIAN RED CROSS
— to the —
SERBIAN LEGATION, 195, Queen's Gate, S.W.

The Armenian Red Cross and Refugee Fund has opened an orphanage at Alexandropol. Contributions will be received by the hon. secretary, Miss E. J. Robinson, 35a, Elsham Road, London. Cheques should be made payable to the hon. treasurer, Mrs. Lydia Chambers, and crossed London and South Western Bank, Holland Park Branch.

"It is said that an important group of the Young Turk party are thinking of releasing the ex-Sultan Abdul Hamid from his prison in order to put him on the throne again," says "The Clubman," writing in the *Pall Mall Gazette*. "They consider, I am informed by a neutral friend who had a talk with a prominent Young Turk in Switzerland a few days ago, that his return would alone be capable of ending the Arab separation, and prevent, by an accord with the Entente Powers, the breaking up of the Empire. In this connection it may be mentioned that Abdul Hamid has for some time enjoyed a certain liberty, and has received quite a number of visitors."

DOMESTIC ANNOUNCEMENTS.

BIRTH.

OAKES.—On April 29, at Port Sudan, Sudan, the wife of Francis Edward Oakes, of a son.

DEATHS.

HUNOT.—On the 5th inst., at his residence, "Asfee," Burnt Ash Hill, Lee, George Pierre Hunot, F.R.G.S., late British Vice-Consul at Saffi, Morocco, aged seventy-nine.

PALMER.—Died of wounds May 2, at Cairo, Surgeon-Major Palmer, Yeomanry, eldest son of Dr. Palmer, Barton-under-Needwood, aged forty-seven.

SILLEY.—Died suddenly, on May 7, 1917, at Limassol, Cyprus, Walter Edward Silley, manager, Imperial Ottoman Bank, aged 50.

KILLED IN ACTION.

DANIELL.—Killed in action, on April 24, George Francis Blackburne Daniell, Second Lieutenant Royal Fusiliers, and of the Egyptian Civil Service, eldest son of Mr. and Mrs. Blackburne Daniell, of 19, Nevern Place, London, S.W., and dearly-loved husband of Mary Blackburne Daniell, aged 38 years.

FRIDAY, MAY 11, 1917.

NEW RUSSIA AND CONSTANTINOPLE.

The entry of the United States into the war and the revolution in Russia are developments of profound significance, but the tendency to accept first impressions as lasting factors is causing a few people to credit these events with a bearing on the issues of the war that they cannot and ought not to exercise. In his message to Congress President Wilson, speaking for the United States, said: "We desire no conquests and no dominion. We seek no indemnities for ourselves, and no material compensation for sacrifices we shall freely make." It is felt in some circles that such a declaration to a certain extent involves the Allies as well, or at least imposes upon them the necessity of revising any terms of peace they may have previously counted upon exacting from their enemies. Events in Russia, or rather in Petrograd, have given a special Near Eastern application to this doctrine of a no-conquest peace. Two schools of thought, as is known, are striving for political power in New Russia, one representing Liberal Democracy, the other Extreme Socialism. For the present the country speaks with no certain voice; there is a confusion of tongues as well as of issues in Petrograd, and it has been thought more necessary to define the principles upon which democratic Russia is to act in an unrealized future than to take the necessary steps to set her free, in order that she may become democratic. The announcement of the Provisional Government that "Free Russia does not aim at the domination of other nations, at depriving them of their national patrimony, or at occupying by force foreign territories. . . . The Russian nation does not lust after the strengthening of its power abroad at the expense of other nations," is taken to have special reference to Constantinople, and it is at once inferred that there can no longer be any question of the elimination of Turkish sovereignty from Europe.

Russia, it is very evident, is passing through a transition stage, and time must be given her to find herself after the great political upheaval which she has experienced. There is naturally a desire on the part of those who have made the revolution to dissociate themselves from any aggressive Imperialism to which the old régime may seem to have been wedded. But the interests of the country will hardly be served by turning from one extreme to another. The antidote to Pan-Slavism is not necessarily a resolve that Russia should henceforth live entirely to herself and emulate the exclusiveness of China a century or two ago. She may not aim at dominating other peoples, but presumably she still hopes to live as well as to let live, and recognition of the fact that it is essential to her economic development that she should have free egress from the Black Sea to the Mediterranean is a matter of geography rather than a political theory. However loudly Russia may proclaim the brotherhood of man in Petrograd these days, there cannot be the least doubt that, unless the army fights on until victory is achieved, she will find herself in no better plight in regard to an unrestricted right of way through the Bosphorus and the Dardanelles than she was in 1914. Ignorance of history in the streets of the Russian capital will not of itself secure lasting peace for the world. The Balkans have been a storm centre of European politics ever since the Turks crossed over from Asia Minor, and the last use to which their presence in Europe has been put is to provide the foundation for Germany's attempt to extend her domination as far as the Persian Gulf. Permanent peace for Europe can be attained only by finding a solution for this state of affairs. Nothing that has happened in Russia can alter the circumstance that so long as Constantinople and the Straits remain in the hands of the Turks Germany will derive encouragement for designs which are directed against the peace of the world. However weakened she may be as the result of this war, she will find in Constantinople a stimulus to fresh effort and the nucleus of a revived Central Block of Powers. Such considerations may seem too remote for the Petrograd Socialists in the early days of their new-won liberty, but they carry great weight with the settled countries of Western Europe, who sprang to arms in defence of Russia when Germany declared war upon her. Even if the Russians decide to dispense with freedom of navigation between the Black Sea and the Mediterranean, Roumania, it may be pointed out, is not in a position to do the same. The future of Constantinople is a matter of vital importance to her, as her commerce, which is equal to that of all the other Balkan States together, is dependent on egress to the Mediterranean being freed from all possibility of the arbitrary restrictions imposed in the past.

When the initial difficulties of the Revolution have been overcome, Russia, we are confident, will realize that a further orientation of her foreign policy is necessary. In the meantime it is to be hoped that public opinion in the Allied countries, the United States included, will not lose sight of the great principles for which the war is being waged. First and foremost is a peace as lasting as human foresight can make it. To this end a solution must be found for the conditions which made the Balkans not only one of the main battlegrounds of Europe, but also a fruitful cause of its wars. For past discord among the constituent States the peace settlement should aim at introducing harmony on lines that will help the peoples to discover that their future lies in a confederation which leaves room for individual development, but acts as a deterrent to any neighbour who may be tempted to interfere in their affairs. In such a scheme, apart from other considerations, there is no room for a Turkey which has it in her power to thwart the progress of the Confederation. New Russia may not be as anxious as the Tsar's Government was to make sure of unimpeded egress to the Mediterranean by keeping Constantinople in its own possession; but she will recognize sooner or later that she is laying up for herself a heritage of considerable trouble if she refrains from dealing drastically with the causes which contributed to the war. Fortunately in this matter her Allies do not need to go to the streets of Petrograd for their policy, particularly as the Russian Provisional Government has shown that the march of events has not robbed the country of all statesmanship. President Wilson has announced that a menace to peace and freedom lies in the existence of autocratic Governments backed by organized force, which is controlled wholly by their will and not by the will of their people. He looks forward to a "steadfast concert for peace," and holds that "no autocratic Government could be trusted to keep faith with it." If these views are endorsed by the people of the United States, they must welcome a solution which eliminates Turkish rule from Europe (regretfully as many others who can distinguish between the Turk and his Government may have reached the decision), and they might even, in the compelling cause of peace, meet Russian scruples by accepting responsibility themselves for the administration of Constantinople and the Straits. The other Allied Governments have been more explicit. In their reply to President Wilson's appeal last January they pledged themselves to "the setting free of the populations subject to the bloody tyranny of the Turks, and the turning out of Europe of the Ottoman Empire as decidedly foreign to Western civilization." Such a policy is avowedly in the interests of Europe; and it can hardly be doubted that it is also in the true interests of the Turk, who will no longer be subjected to the slavery of a militarist tyranny for the defence of conquered territories, which have always been a thorn in his side and the proximate cause of his undoing.

SHEIKH SIR ABD-EL-AZIZ IBN SAOUD, K.C.I.E.

By C. STANLEY G. MYLREA.

In the present world war the Arab is only indirectly concerned, but he has been forced to take sides and to show by the weight of his resources whether he wishes one European Power or another to be the paramount influence in his part of the world. Both England and Germany have their champion in the interior of Arabia, and the two Powers have been able to make use of the feud which has for so long existed between the house of Ibn Rashid, backed by the powerful and numerous Shammar tribe, having its capital at Hail, and the house of Ibn Saoud, backed by the rest of the Nejdi tribes, and having its capital at Riadh.

It was comparatively easy for the Turks, under German guidance, to win Ibn Rashid to their side, if only for the reason that Ibn Saoud seemed to be leaning towards the British. They could promise him unlimited supplies by way of Damascus, and, in the early days of the war, by way of Baghdad and Mesopotamia. Now, however, that Baghdad and Busreh have come under British control, Ibn Rashid can receive little or nothing from Mesopotamia, and Damascus remains his only certain source.

Ibn Saoud, on the other hand, is absolutely dependent on the ports of the Persian Gulf; and, indeed, since his capture of the province of El-Hasa from the Turks, in 1912, his own territory is now washed by the waters of the Persian Gulf.

Germany has spared no effort to keep the friendship of Ibn Rashid, sending him with liberal hand both money and munitions. She has also endeavoured to wean Ibn Saoud away from England, but her intrigues in this direction have met with no success. On the contrary, some of Ibn Rashid's best men are leaving him and coming over to England's side, a sure indication on their part that they believe that England will win this war. There is no doubt that in proportion to the vigour with which the Mesopotamian and Egyptian campaigns are prosecuted, will it become increasingly difficult for Ibn Rashid to get any benefit out of his alliance with Turkey and Germany.

The man of strongest personality in Arabia to-day is Abd-el-Aziz Ibn Saoud; and his loyalty to the British, in a country where self-interest is the first instinct, is undoubtedly equal to considerable strain. He is a man who has only of recent years come into prominence, and prior to 1897 was an emir without a dominion, for Ibn Rashid held his capital, Riadh. But in that year Mohammed Ibn Rashid died, and Ibn Saoud, backed up by Sheikh Mubarek of Kuweit, who furnished him with fourscore camels and riders, seized Riadh suddenly one night, completely overwhelming its defenders. From that time Ibn Saoud's star has been in the ascendant, since in force of character he far surpasses the successor of Mohammed Ibn Rashid; and to-day he is the strongest man in Arabia and the man of the hour.

It is now nearly three years since I first met Abd-el-Aziz Ibn Saoud. He was at that time in camp some twenty miles west of Kuweit, near a small town called Jahreh, and had come up from El-Hasa, which he had conquered from the Turks some two years previously. He wanted to discuss the then burning question of British and Turkish relations with Central and Eastern Arabia. He could not be persuaded to accept Kuweit's hospitality, most probably fearing Turkish treachery; for there were several Turkish agents in the town at that time, and Ibn Saoud's head was a tempting prize. In his own camp, however, he was absolute master, and could protect himself.

In response to an invitation from the Sheikh, I went out to his camp to treat him and some of his people professionally. Having come up from malaria-stricken Hasa, many of Ibn Saoud's men were down with fever, and needed the benefits of modern medicine. His camp was a fine sight, and the two hundred odd glistening white tents made a brave show in the strong sunlight of a May morning. I was rather surprised to find white tents, but "the black tents of Kedar" are going out of fashion among the aristocracy, and the "house of hair," the true Arab tent, is now the dwelling of the Bedouin only. As a matter of fact, the true Arab tent has been much overrated by travellers; for when it is a *little* bit old, it leaks like a sieve in a shower of rain.

The Sheikh's marquee was at the end of a long avenue of tents pitched much truer to line than one expects in this part of the world, where no one has a straight eye. On my arrival I was at once conducted into the presence of Ibn Saoud. He rose to welcome me as I entered, and pointed me to the seat of honour beside him. The tent was furnished in the typical desert style. Persian carpets covered the floor, and, for pillows, camel saddles overlaid with sheepskins were ranged along the sides of the tent. A pleasing dash of colour was added by the gaudy camel housings which hung from the tent poles; but the air of comfort was toned down by rows of exceedingly good rifles which were hung up ready for instant use.

The minute Ibn Saoud stood up, I was struck with the personality of the man. In stature he is a good six feet, and with his broad, powerful shoulders presents a truly athletic figure, clean cut and symmetrically developed. He has all the graces of a polished Arabian nobleman, and, in addition, his open countenance invites confidence. As he talks, you feel that he is sincere; there is a ring of truth in all he says. His frequent gestures accentuate the beauty of his shapely hands. Our conversation touched upon many subjects, but perhaps the following instance shows up the man's character in all its desert ruggedness. We were talking of the opening up of Central Arabia to the white men. He said: "They will be welcome, but on one condition only, that they do not interfere in religious matters. In Central Arabia, we are not only one religion, we are all one sect. In many parts of the Mohammedan world you have all the principal sects living together—Hanifi, Maliki, Shafi, Hanbali. In Central Arabia we are all Hanbalis, and there is absolute harmony in consequence. Introduce new faiths, and there will be an end of peace." (The Sheikh's idea of peace, when one considers the endless raiding and petty fighting for which the Arab is famous, is obviously relative.)

"Ours is the true religion," he went on, "but we must follow the teachings of the prophet Mohammed, on whom be prayers and peace. Only recently people have been inviting me to join my interests with theirs because they are Moslems." (The Sheikh mentioned no names, but was no doubt referring to the Turks who had been using the cry of Pan-Islam in order to induce him to come into their political schemes.) "But are these people Moslems? They have thrown aside all of the Prophet's ordinances, they neither pray nor fast nor give alms nor make the pilgrimage. They murder, they oppress, they lie, they steal. They have forsaken the old religion, they are infidels. I will have nothing to do with such people."

"Listen!" he cried, and he sat up straighter, and his eyes glistened. "I will tell you a story. By the orders of the angel Gabriel, a large idol was set up just outside the gates of Paradise. Presently a believer came along and was about to pass into Paradise when the idol's attendant stopped him and said: 'You must offer a beast to the idol.' 'I cannot,' replied the believer, 'for I do not respect idols. Allah has no partners; He is One.' 'Well, then,' said the attendant, 'you must offer a fowl.' The believer still refused. 'In any case,' the attendant went on, 'you must at least offer a fly.' This time the believer yielded, and at once came the order from Gabriel, 'Away with him to Jehannum.' After a while another believer came along, and again the attendant demanded: 'You must sacrifice a beast to the idol before you enter Paradise.' 'Never,' said the believer, 'I believe in Allah; He has no partners.' 'Then,' tempted the attendant, 'if you cannot afford a beast you must offer a fowl.' 'No,' persisted the believer, 'I offer no fowls to idols.' 'I really cannot let you pass unless you offer at least a fly to the idol,' the attendant maintained. But the believer was unshaken. 'Beast, fowl, or fly, it is all the same to me; I make no reverence to stone images.' This time came the order from Gabriel, 'He is a true believer; admit him to Paradise.' And," added Ibn Saoud, "I will follow my Prophet absolutely. Not even a fly will I offer to any other religion."

It was on November 19 of last year that Ibn Saoud next visited this part of the country. The circumstances were markedly different. On the former occasion the vague claims of Turkey to Kuweit were a subject of discussion, and the Crescent and Star still flew from Mubarek's flagstaff. At that time the decision of this question was of momentous importance to Ibn Saoud. England and himself regarded one another as unknown quantities, and the Turk was standing by, waiting to see how the sum would work out. Then Ibn Saoud would not trust himself in Kuweit.

even with the powerful Mubarek as his host; but now he is not afraid to take up his residence in the palace, in the very centre of the town. A new standard now floats over the palace, a simple flag, the word "Kuweit" embroidered in white letters on a scarlet ground. As on the occasion of his last visit, he has come up from El Hasa, not overland as formerly, but by sea, an honoured guest on board H.M.S. ——, under the personal escort of the Commodore. The sea is a strange element to the Sheikh. As he himself puts it, he is a son of the desert, not of the sea. He is not a little impressed with the wonders of a modern ship of war.

The Chief Political Officer of the Persian Gulf, Sir Percy Zachariah Cox, K.C.S.I., K.C.I.E., had preceded Ibn Saoud by a day, and, in addition, Sheikh Khazal of Mohammerah, besides, of course, Sheikh Jab'r of Kuweit, successor to Mubarek, were all in readiness to receive the important visitor.

On the following day a durbar was held at the palace, and it was then that I had the opportunity of renewing my acquaintance with Ibn Saoud. Among all the richly dressed Arabs in the room, he was easily the conspicuous figure. His magnificent bearing still commanded the attention. The three years had only improved the attractiveness of his personality, and when presently the Chief Political Officer decorated him with the K.C.I.E., and the beautiful ornament glittered on his handsome brown cloak, he would have made an unusual subject for an artist.

There were several fine speeches made at the durbar, but that of Ibn Saoud was remarkable for its importance and transparent sincerity. He laid great stress on the fact that Turkey had no real love for the Arab, and that, amid all her pretensions of friendship, she had always sought to promote enmity between tribe and tribe. England, on the other hand, was doing all she could to unite the chiefs of Arabia into a powerful and harmonious confederacy.

Ibn Saoud is possibly quieter and more deliberate than he was three years ago, but his beautiful smile is scarcely ever absent from his face even when he is apparently engrossed in thought. There was never a trace of conceit in his kingly bearing, and I was reminded of Mark Twain's description of King Arthur where he made the King himself say: "Armour is a proud burden, and a man standeth straight in it."

After the durbar I saw Ibn Saoud twice in the Kuweit Sheikh's *mejlis* and once when he made a personal call, and I was able to chat with him informally and further study the man. It is always an extremely difficult thing to estimate Arab character from a political point of view; but a straightforward friendship will, without doubt, make a valuable ally of Ibn Saoud, and go a long way towards bringing all the chiefs of Arabia into harmony, an event far more likely to-day than yesterday. Once the Arab chiefs can be made to realise that their welfare lies, not in constant feud, but in peace and mutual confidence, what England desires for Arabia will be accomplished. It may be that Ibn Saoud is the instrument that can bring those desires to pass.

THE BRITISH IN CONSTANTINOPLE.

The *Daily News* published recently an article, "Turkey's Time of Crisis," which, we are told, "represents the expressed views of a foreign official who has had recent opportunity of personally investigating the everyday conditions of life in Turkey." The whole article is full of interest, but for British readers the passage describing the lot of the British colony is the most interesting part of all. The writer says:—"Most of the members of the British colony at Constantinople left at the outbreak of the war, and those who remain—numbering from 100 to 150—have won the admiration of friends and enemies alike by their courage and dignity in very difficult circumstances. The British business houses in Constantinople are open as usual, and, generally speaking, the members of the present British colony are unmolested. About thirty members of the colony have undergone periods of internment inland in 'reprisals' by the Turkish Government for alleged bombardments of undefended towns by British and French aviators. All British subjects in Constantinople must be at home before nine o'clock in the evenings. About half a dozen members of the colony are at present 'interned' in a house in Constantinople. Their imprisonment, also described as a 'reprisal,' is a formal one, and they suffer no privations. The American Embassy at Constantinople looks after the interests of the British colony very thoroughly. The American Ambassador is on excellent terms with the Turkish authorities, and his tactful intervention often prevents internments."

An appeal was made in Birmingham on Saturday, through the medium of a street collection, on behalf of the Roumanian relief fund to provide Red Cross equipment and to relieve the distress among the wives and dependents of the Roumanian soldiers. About £800 was contributed in the streets, and with the subscriptions already promised a total sum of about £1,000 will be realised.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Deaths at Salonika. May 8.

Mr. Macpherson informed Mr. Outhwaite that he thought it was undesirable to publish figures as to the number of deaths from disease in the British forces at Salonika, but he would be happy to let him know privately.

Post to Mesopotamia.

Mr. Chamberlain, answering Mr. McCallum Scott, said he had reason to believe that during the last six months the postal service in Mesopotamia had been greatly improved, and that the arrangements now made for the return to India of letters and parcels addressed to men who had been invalided from the Mesopotamian Force and for their transmission to the addresses were now fairly adequate. The Director-General of Indian Posts and Telegraphs had personally inquired into the matter, and was giving it his close attention.

The Situation at Salonika. May 9.

Replying to a question by Sir H. Dalziel about the position of affairs in Salonika, Mr. Bonar Law said: The Prime Minister intends to refer to this subject at the private Session of the House to-morrow.

The Mesopotamian Theatre of War.

In moving a new Vote of Credit, Mr. Bonar Law referred to the Mesopotamia theatre of war. "That was," he said, "an operation which began very badly. It was one of our great reverses. All that has been changed. It is now—it is not too much to say—not only one of the most successful, but one of the most brilliant operations that have been conducted throughout the war. Not only have we succeeded in taking Baghdad, but after that was done the General Commanding our Forces has given the enemy no rest. He has seized every opportunity; he has used to the full the advantage which his interior lines give him; and again and again, by brilliant attacks between the Tigris and the Diala, he has defeated the enemy, with the result that now we not only hold Baghdad itself, but we practically hold the vilayet of Baghdad, and, what is more, we hold it securely. Part of the credit for this result, and not a small part, is due, as I think, to the work of our General Staff at home who made the arrangements, part is due to the splendid courage and ardour of our troops, but much is due to the British Commander in that theatre of operations, who has shown, if I may be permitted to express an opinion, military ability of the very highest order in all the operations connected with that campaign. I may add that the Cabinet only the other day sent out to him a message of congratulation and thanks."

THE MEVLEVI DERVISHES.

Last Sunday evening, at the headquarters of the Sufi Brotherhood, Professor Henri Léon gave a sympathetic and very interesting account of the Mevlevi, otherwise known as the "Whirling" or "Dancing" Dervishes. He said that, in common with the other thirty-three orders of Dervishes, the Mevlevi traced their origin back to Abraham and earlier. He told the Arabic tradition of the intended sacrifice by Abraham of his son, a story which is identical with the biblical story, except that it is more elaborated and that Ishmael takes the place of Isaac. Dr. Léon said that before the Mevlevi novitiate is accepted, the first ceremony of his initiation is the building by his own hands of a rough stone altar in commemoration of this incident in the life of Abraham and Ishmael, and in token of the immolation of himself and his devotion to the religious life. Thereafter, during a period of a thousand and one days, he passes from cell to cell in the Mevlevi monastery to the number of eighteen, every such transition having its own symbolical meaning, until, finally, he goes through a ceremony commemorating the building of the Kaaba by Abraham and his two sons. After this he is attired in symbolical garments, and is admitted to the order. Dr. Léon described the religious ceremony by which the Mevlevi are best known to the western world. It is performed, he said, in a building something like a large circus, for there is an arena in the centre, two tiers of seats around this for spectators, and a chamber in which concealed musicians perform mystic music upon drums and a kind of reed flute. The ceremony commences with a hymn in praise of the Prophet, after which the brethren come in quietly one by one and take their places around the arena. Then the Sheikh enters, bows to the brethren, and takes his stand on a goatskin mat, turns towards Mecca and offers a prayer to God, and in praise of the Prophet and of the founder of that order of dervishes. After he is finished he sits upon the mat, and the Dervishes advance and bow to him and one another. Then they take their places in the arena. In the centre of this stands the director of ceremonies, around whom they all dance, each Dervish continually spinning round and at the same time circling round the arena. Two, instead of circling, pass in an ellipse amongst the others, while one walks in amongst the dancers, going where he pleases. In spite of all this complication of modes of motion, no one collides with anyone else, and the Dervishes do not become giddy, although the dance is performed with an ever increasing momentum, and lasts about twenty minutes or half an hour before it stops. It is repeated three times. Dr. Léon explained the mystic dance as a relic of sun worship. The Dervish in the centre who does not move symbolises the sun, those who pass in a circle round him represent the planets, the two who go in an ellipse are comets, and the one who goes where he pleases is the lightning.

THE PRESS ON THE NEAR EAST.

General Maude's Achievement.

The following is the concluding paragraph from a leading article, "The Increasing Battle," in Saturday's *Times*. It is good to find our Mesopotamia Force receiving generous recognition at last from Press and Public:—

The great events in the West tend to overshadow the very efficient and successful campaign in Mesopotamia. This is natural, but none the less unfair to General Maude and his troops, who can have no higher praise than that they are worthy of their commander. It took General Maude from the middle of December till nearly the end of February to break the resistance of the Turks defending Kut-el-Amara. But it was time well spent. Since then he has given the Turks no rest, and has proved once again that, excellent as they are behind defensive positions, they have little rallying power when they have been driven out of their trenches and are forced to battle in the open. It was a routed Turkish army that fled beyond Baghdad without more than the semblance of a stand. It is in even worse position now. General Maude has thrown a column across the desert to the Euphrates, where he holds Feluja. His main body is operating in two columns. One has advanced up the Tigris and has driven the Turkish 18th Army Corps from the whole seventy miles of rail between Baghdad and the terminus at Samarra. This Turkish Army Corps, a much-battered survival, has now been forced fifteen miles beyond Samarra. The other British column has pushed up the Shatt-el-Adhaim, an eastern tributary of the Tigris, has attacked the 13th Turkish Army Corps in the foothills of Jebel Hamrin, and has scattered it into the hills. All this has been done with the heat increasing upon our men. It shows what British troops can do under a general who gives his enemy no rest when once he has him on the move. British prestige in Mesopotamia stands higher than ever before. The country, however indifferent it may seem to be just now, will assuredly not fail when the time comes to show its gratitude to General Maude and his men, Indian as well as British.

The Evacuation of Mush.

In a note on the operations in Mesopotamia, the *Nation* (May 5) expresses the opinion that while reports from our own front are most encouraging, reports suggest an unsatisfactory state of things on part of the Russian front:—

General Baratoff is in Petrograd when his co-operation is most needed on the Persian frontier, and apparently the Russians have evacuated Mush. There is no reason to think that this will affect the main position in Armenia. But it should not have been allowed when the British are advancing, and need security on their right flank. General Maude is still master of the situation in his neighbourhood.

"The Future of Palestine."

In an important article with the above title the *Spectator* (May 5) expresses strong disapproval of a suggestion put forward in the *New Europe*, that the Jews shall go back to Canaan and establish a self-governing Jewry under the British flag; and of the other suggestion that because our armies have gone to Palestine we shall insist on holding the country hereafter. Says the writer:—

We have never met any serious person who thought that the possession of Palestine was necessary to the defence of the Suez Canal or that it was desirable on other grounds. The Sinai Desert has not, indeed, proved an impassable barrier to would-be invaders of Egypt, any more than it was in the days of the Hittites or the Assyrians, and we, like Napoleon, have crossed it to attack the Turks in Palestine. But a belt of almost waterless wastes a hundred miles across is a far better defence than most frontiers have, and even in these days, with railways and pipe-lines and aeroplanes at a general's command, the Sinai Desert is a very awkward obstacle to overcome in face of a well-armed and vigilant defending force. We should need a good deal of evidence to convince us that the Suez Canal would be more easily and cheaply defended by holding the mountains from Mount Carmel to the Jordan Valley and the hills of Judæa than by watching the few tracks across the Sinai Desert.

There is, he adds, "not the least likelihood that Turkey will remain after the war either a vassal of Germany or the ruler of Palestine. . . . The alleged military necessity for annexing Palestine is thus disposed of." On other grounds, he considers, the project is wholly objectionable. We may have to assume the duty of restoring Mesopotamia to something like its old prosperity; but it would be madness for us to undertake such a task in Palestine. We can employ our capital to better advantage in East Africa or Nigeria. "And from the political standpoint annexing Palestine would be like putting one's hand into a wasps' nest."

Jewish Colonisation.

The writer then turns to a consideration of the proposal to colonise Palestine with Jews, which he finds entirely commendable.

It is said that the Jews already form a sixth of the scanty population, which is under seven hundred thousand, so that newcomers would find a Jewish environment in most parts of Palestine. If so much has been done despite the misgovernment of the Turk and the chronic disorder caused by the unruly nomad tribes, it is probable that the Jews would multiply and prosper were Palestine freed from the Turk and given peace and order. Mr. Zangwill's Jewish Territorial Organisation has sought the world over for suitable sites for Jewish colonies, and in East Africa, in Cyrenaica, and in Angola has met with apparently insuperable difficulties. Palestine, with its great stretches of untilled land and its lack of people, seems to offer more to the Jews than any of the proposed alternatives. A thriving Jewish colony in the Holy Land would benefit everyone and offend none.

The existence of an isolated Jewish State would be precarious. It must have behind it some Christian Power or Powers, or it would become as bad a centre of political intrigues as Turkey or Morocco or Persia. Yet, as we have said, the question of the Holy Places involves so much religious and national jealousy that we could not become their protector, and probably no other European Power alone could do so with safety. It seems to us that America has here a great opportunity for rendering a service to Europe and the East. She might very well undertake the task of protecting the Jewish Republic of Palestine—a neutral international Republic in which no Power was unduly favoured to the exclusion of others—just as she has fulfilled the task of protecting the Republics of Cuba and Panama. America would excite no jealousy. She is on the best of terms with all the Allies, and is universally respected outside Germany. Her medical missionaries have for many years pervaded Asiatic Turkey from the Black Sea to the Red Sea, and have won the confidence and affection of the many races. America has no political aims to serve in the Near East. Her assumption of a Protectorate would simply be a guarantee that the little Palestine Republic would have no external enemy to fear and would be required to maintain an honest and competent administration. Many conflicting and irreconcilable ambitions would thus be stilled for ever, and Christians, Jews, and Moslems alike could visit peacefully the sacred places which have an eternal appeal for mankind.

Another Massacre?

The *Jewish Chronicle* of May 4 contains an article, "The Peril of Palestine Jews," which begins as follows:—

As we go to press news of a terrible character reaches us concerning our co-religionists in Palestine. It will be seen from the statement we print in another column that the Turkish authorities are virtually running amok among the Jews in the Holy Land, and it is with bitter regret that we learn that the splendid suburb of Jaffa, Tel Aviv—a pride of the regenerated Jewry—lies a heap of ruins, the fell work of Turkish ruthlessness. These Turks have imbibed their lesson freely from their German masters, and the dastardly passion for iconoclasm in which the Teuton has shown himself supreme in his progress through Belgium and in his retreat through France, his Turkish pupils appear to be bettering in Palestine.

The material damage inflicted upon our people is, however, as nothing when compared with the unspeakably infamous threat that has been levelled against them. In plain, unvarnished language, there is hanging over them the prospect of such a massacre as only Turks are capable of, and of which the civilised world will understand the measure when they are told, by the Turks themselves, that it is to be of the Armenian sort. This, in a word, means the extermination of our people there, the very flower of our flock, the pioneers of Jewry, whose lives have been inspired by a noble hope, who have been infused with the splendid aspiration of building up anew Israel's nation in Israel's ancient land.

After referring to the joy felt recently at the removal of the ban from the Jews of Russia, the article goes on to say that though the Jews involved in this, Israel's latest agony, are but few compared with the Jews in Russia, yet the fact that they are Palestinian Jews makes their case one in which the Jewry of the world is deeply and supremely concerned. The writer continues:—

If it were necessary to point to one added circumstance that renders this disaster the more piteous and the more galling, it is that it has come just at the moment when the prospects and the hopes of the Jew for centuries of being re-gathered to the home of his fathers seemed to be fructifying. It looks as if the Turkish authorities, with that malignant spite which, to be fair to them, is far more Teutonic than Turkish, had made up their minds that since Palestine cannot be held by them it shall be the scene of a holocaust. Since they cannot win the applause of the world by victory, they are determined at least to win something, even if it be but the execration of the world for unparalleled infamy.

The Situation in Athens.

In the course of an interesting despatch, sent off on May 2, and published last Wednesday, the Athens correspondent of *The Times* remarks that, while no one contests the integrity of M. Zaimis, the new Prime Minister, there is some doubt about his power to deal with the situation. But those most closely in touch with the situation are lending him their support, and—

It is argued that M. Zaimis will carry on the government of the country decently for a period during which our enemies here will be unable to react and that so the question will be at least temporarily shelved, than which nothing could be more desirable. The supporters of M. Zaimis's solution recognize that the occult

government of General Dousmanis, M. Gounaris and the rest of Germany's agents has worked harm, but they say that the Royal Family and the mass of the people, once these influences are set aside, will, either from choice or interest, remain quiescent.

The King is steadily losing his followers. . . . Most of the King's following came from the fact that he made Athens into a sort of Noah's Ark, where people could take refuge from the deluge of the war. But since the Provisional Government has within the last week declared that the populations of any territory henceforth seceding to the national movement will not be mobilized, the last plank has been hit from under the King's feet, and it is at least very doubtful if any rank and file would be found to stand between him and his fate.

The writer adds that it is the opinion of many competent observers that if M. Venizelos were granted a loan to enable him to reduce the price of foodstuffs immediately on his arrival in Athens, and if the blockade were raised, "all opposition would crumple up in a day."

Germany's Grip on Turkey.

In an editorial note upon "The Middle East," *United Empire* regrets that "where the Allies' ring of steel is contracting most rapidly the effect is diminished by the distance from the nerve-centre of the enemy's organization." The successes in Mesopotamia and Palestine are of first importance, but their effect on Germany's military plans will not make itself felt, or apparent, very quickly. The note continues:—

German thoroughness has left nothing to chance in connection with Turkey's fulfilment of her share of the Central European pact. Austro-German troops overawe the capital, and German officials in every ministerial office and Government department are a guarantee of the good behaviour of those who have bound themselves to Germany for a price. Turkey, therefore, is likely to suffer much before she finds an opportunity of shaking herself free of the shackles her rulers have fastened upon her. In the matter of prestige the blow that has fallen upon the Ottoman Empire in Mesopotamia is graver than the worst defeat it could experience in Europe, short of the capture of Constantinople. Coupled with the menace to Palestine and the revolt of the Hedjaz, it signs the death-warrant of the Turkish Government's hopes of being able to recover its hold upon the Arabs. An independent Arabia must destroy the mythical importance attached by European peoples to Turkey's position in the Moslem world by virtue of the Ottoman Sultans' usurpation of the Khalifate; while the actual loss of territory, even if no further ills befall her, must seriously impair her value in the eyes of those who are at present her allies. Of this aspect of the Allies' success in Mesopotamia there will be no mention in Constantinople for the time being. Rather will the Turkish Government receive fresh assurances that the fate of the Ottoman Empire is being decided in France and Russia, and for this reason it will be pressed not only to keep in Europe the troops she so urgently needed elsewhere, but also to reinforce them.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Admiral von Capelle, the German Naval Secretary of State, claims that in three months his submarines have sunk 2,800,000 tons of Entente merchant shipping—an equivalent of a fleet of 500 ships, each of 5,600 tons. It is probable that this is a gross exaggeration, but the actual position is the amazing one that we are unable to contest the claim because the naval authorities of the Allies refuse to give any information which would enable us to know exactly how the lost tonnage account stands. All we are able to realise is that the shipping situation is admittedly grave, that it has caused an acute shortage of food, and that oversea commerce, generally, is dislocated seriously.

***

It is true that the figures published by the Admiralty yesterday show a decrease in the number of vessels sunk in the week, nineteen ships of 1,600 tons or more, and twenty-two of less than that tonnage, against thirty-eight and twelve, respectively, in the week ended on April 29. Nevertheless, there is not a word to indicate whether the actual tonnage involved is less or greater. It is not for me to say that the Admiralty authorities are not right in refusing to publish information which, conceivably, would assist our enemies; but I see no reason why, at the end of each official statement, such a note as "the aggregate tonnage sunk is —— less than last week" (or more, as the case might be). Surely that would not be a present to the amiable Hun of an invaluable military secret. We may depend on it that submarine commanders rarely fail to ascertain the names of the vessels which they destroy, and know by reference to the register exactly what their tonnage is.

***

I should like to invite the attention of my readers to a letter published in this issue of THE NEAR EAST, in which an exceptionally well-informed correspondent combats the view that Constantinople has no commercial future worth talking about. I agree with him that such an opinion is uninformed, and merely indicates that those who hold it are out of touch with all the possibilities of the region. The Turk has never stood for efficiency and enterprise—he has had other stones to turn—and with reform in this respect there is no reason why the South-Eastern corner of Europe should not be one of the world's gardens; and, contrariwise, there is every reason why it should be.

***

The Buenos Aires correspondent of *The Times* raises an important point in a letter in the Trade Supplement of the paper. He writes: "The question of the extent to which British textile goods are reaching enemy firms through the large number of Turkish importing firms which have come into existence here during the last couple of years is worthy of a good deal of consideration, not only from the point of view of the immediate and temporary effect, which is undesirable enough, but also from that of the probability of the creation of a serious and permanent menace to British trade in this particular branch." Before the war broke out, the correspondent tells us, a few Turkish firms imported direct, as a rule, from their own house in Manchester; "they were not numerous, but were, in their way, respectable, established, and recognised import houses. Nowadays it is difficult to keep pace with the number of new names which appear every month in the special districts of Buenos Aires where the Turk flourishes."

***

It is made clear that "Turk" means anything that hails from the Eastern Mediterranean. "It is a generic term; it must be read in this connection as including Turks—Christian and Mohammedan—Syrians, Jews, all varieties, and Levantines, and of these a recent calculation revealed the fact that there are now between 100 and 150 firms importing direct from Manchester and Bradford. Most of them come from the Mount Lebanon district, the Levant, and the Mediterranean generally; they have come here on account of the stoppage of export trade to those districts, and they have done uncommonly well, especially last year." There are "Turks" to-day in Buenos Aires who "are worth £20,000 who live, eat, and keep their accounts in a little room behind a modest showroom in a poor quarter of the town, and who are seldom seen in a coat and still more seldom in a collar." An amusing picture, indeed.

***

According to a "distinguished neutral" who has recently been permitted to leave Constantinople, that city suffers from a great dearth of every kind of import, and the poorer classes from great privation owing to the scarcity of food. "On the other hand," we are told, "some few people have been so lucky as to make good profits, and they make a parade of their newly-acquired riches by buying new furniture and especially pianos, for which there is great demand in Constantinople just now." Quite a set-off to the collarless "Turk" who makes his fortune in the slums of the great Argentine city!

***

Somebody, the other day, made the statement that the Deutsche Bank had the large sum of £16,000,000 "tied up" in the Baghdad Railway, and because, I presume, in view of recent developments in the Middle East, the "investment" is not now regarded in German banking circles as "safe," Herr von Gwinner brands the statement as "a malicious invention by an author who had lived for years in Germany." The author, who appears to be Mr. F. W. Wile, the late correspondent in Berlin of *The Times*, deals very caustically with the denial. He writes in that paper:—"The figures in question were not only derived from statistical data supplied to me by the librarian of the Deutsche Bank at Herr von Gwinner's direction, but the chapter containing them was submitted to Herr von Gwinner in proof and approved by him before publication. In the German translation of my book (*Männer um den Kaiser*), issued in Berlin in 1913, a few months after the appearance of the original English edition, the same figures, expressed in marks, were published without evoking challenge from any quarter. The only comment Herr von Gwinner ever made to me about the contents of the book was that exalted personages had taken him to task for appearing in such biographical bad company as August Bebel and Maximilian Harden."

***

It is common knowledge that it takes thirty German marks to make one pound sterling—instead of twenty—and Mr. Wile very properly suggests that what the President of the Baghdad and Anatolian Railway Companies meant was that as a consequence of this unparalleled depreciation in German money the value of the "investment" had dwindled to £10,666,666. What other meaning can be attached, in the circumstances, to the denial, unless it be that, recognising the inexorable working of the authority that punishes wrong-doing, the Deutsche Bank's holding in these railway companies is likely to be reduced still further in value? At any rate, that precisely is what will happen in the not distant future.

***

We are to have a world famine in the months to come. At least, the Vienna paper, *Arbiter Zeitung*, has decreed it to be so. "Our broad acres have now for the third time been ploughed too little and too shallow," lugubriously writes the paper. "Our diminished, deteriorated, and insufficiently fed stock produces little and poor manure, while artificial manure is not to be had. Farm buildings, machines, and implements fall to pieces, and the previous zeal of the farmer's wife is slackening in the face of increasing adversity. Farmers generally express the fear that unless our arable land is attended to, at all events this autumn, with the full energy of male labour in sufficient quantity, it will go back so far that the damage will not be made good for many, many years. Economists see a world famine approaching with no uncertain strides. It will indeed put an end to the war, but then it will be too late. And yet there are still leaders of States and peoples who are awaiting 'ultimate victory,' and who overlook the fact that nothing is to be awaited but the collapse of the ancient cultivation of the whole of Europe." And not a word about the much boomed loot which the fortune of war was to secure in Roumania. Dear, dear!

Agricultural Problems in the Sudan.

The Ancient Waterwheel versus the Modern Pump.

(BY OUR KHARTOUM CORRESPONDENT.)

Visitors to Egypt are accustomed to the sight of the water-wheel, and are acquainted, in a general way, with the system of agriculture which it implies; it is easy to imagine that the same system continues up the length of the Nile. The conditions further up the Nile, however, very soon alter very materially from those applying in Egypt, and agriculture has to be adapted accordingly.

The heavy black cotton soil, so typical of Egypt, is not to be found in the Sudan, where it is always mixed with a certain proportion of sand; the result is a much lighter soil.

Between Egypt and the Sudan there is the long reach from Dongola to Shellal which is cut up by cataracts, or the river passes between rocky hills and sandy wastes, with but a small patch, if that, of cultivable soil on each side. In Dongola and Berber provinces the system of water-wheel cultivation is worked out as far as it can be in the Sudan. There is ample soil suitable for growing various kinds of grain and the lift, except in an exceptionally low Nile, is not prohibitive.

Winter Crops.

The native is accustomed to try and get a winter crop of wheat or barley between October and April, then a short crop probably of some leguminous sort to tide over until the flood comes and he starts his largest cultivation, generally of dura or maize. The river is high and his cattle can lift the water with ease so that a far larger area can be dealt with than in winter when there may be a lift of five metres to cope with.

This summer crop which has the most favourable conditions for watering is, unfortunately, not suitable for any but dura or maize crops owing to the extreme heat; but it supplies the native with his own food, so that he can apply himself in the other seasons to growing a more marketable article.

Throughout the year, however, the land has to be watered by lifting the water from the river over the bank into the canals and ditches which disseminate it over the land. The success of the cultivation is therefore dependent on the strength and number of cattle available for working the wheels. The cattle have to be fed, and so a not inconsiderable part of the land watered has to be set apart for grass to feed the animals. This is supplemented by grass which grows on land submerged by the Nile and islands and foreshores, which are covered with grass as the Nile recedes.

An Expensive Method.

It is customary to reckon that the cattle use up one-quarter of their energy in watering the land required for their keep. It is clear then that the water-wheel is an expensive method of lifting the water.

It is a cumbrous and antiquated form of machine, and the native is tiresomely conservative about it. Everyone who has seen one at work must have been struck by the whining noise made by the turning of the wheel on its wooden base. The noise is due to excessive friction and a new kind of wheel was soon made which reduced much of it. The native would have none of it, however, because he could not hear whether the wheel was at work from afar, and even when this was remedied by an attachment that clicked as the wheel went round, it did not make the new wheel popular.

An Unpopular Substitute.

This was due partly, no doubt, to the fact that the new wheel required a good brick foundation, which the native was too lazy or too poor to build, chiefly the former, because he would have no difficulty in raising the money required for the purpose of building a good wheel. Moreover, the European style of waterwheel was extremely cheap and cost less than a native wheel, which, being made of solid timber, is a costly affair.

It has been reckoned that 95 per cent. of the labour of a native wheel is wasted in friction. It is, therefore, not a really economical machine, and its only claim to consideration is that it is established, and it does, at any rate, work. It is dependent on cattle, and these are liable to all manner of diseases and, if they die, are not easily replaced, as the ordinary bull has to be trained to turn a wheel, and he can only be trained by the native when he is very young.

Thus the cattle are not only a serious drain on the land, but may render the land idle and fallow because they are not to be obtained. In effect, the cultivation by water-wheel is a somewhat precarious matter, and this was shown by the distress in Dongola a few years ago, when cattle plague and an attack of aphides caused general starvation. It was enhanced by the record lowness of the river; but the main causes lay in the "aphis" and the dearth of cattle, whereby the cultivators were compelled to stop cultivating because they had no bulls to turn the wheels.

The Basin Lands.

Fortunately there is another source of living, from the basin lands. These are scattered along the Nile and are being developed as opportunity offers. It must be remembered that the Egyptian basins have been worked for centuries, and they have been gradually levelled and worked through generations, until they are easy enough to manage, provided the necessary water is available.

In the Sudan there has been little, if any, previous work on the basins, and it all remains to be done, and there are not generations of time to spend on the work. Here, too, the native has his preconceived notions, and it is only by the most strenuous action that he can be made to do the necessary ploughing. Without this the cutworm appears, and the rising crops simply disappear.

In the past the basins were only watered at remote intervals, and the land had lain so long fallow in the interval that the cutworm had been eliminated by time. Now, however, when the water is to be a yearly occurrence, the native has to be taught that he must plough.

"Selooka."

His own method, "selooka," is, perhaps, the simplest form of cultivation in the world, as it consists in twisting a stick into the ground so as to make a hole, and into this hole the husbandman drops the seed.

Then he leaves the work to God, after the fatalism of his kind, and it is a burden and an oppression to him to plough the land and spend both money and time where he is accustomed to give neither.

The basins vary greatly in size. Some, and more especially the largest, will take many years of work before they will be more than experimental, but there are many that require comparatively little labour to make into very paying concerns. This land is, as a rule, very suitable for wheat or barley, according to the time that the water has lain on it.

The basins are divided up into ten-acre plots, and these are allotted as seems best. A record is kept year by year, so that a man who has taken no trouble to work his land to advantage may find that his allotment is curtailed. Every plot has to be examined separately, because, until the land is levelled up, each ten acres varies—on one plot there will be a certain amount of land that has been insufficiently watered, while some of the soil may be salt, and useless for any purpose, and the allottee claims exemption from payment on that area, and a lighter charge on the land which has received an inadequate supply of water.

A Problem.

There is still experience to be obtained regarding the exact time to leave the land under water, and too long is as bad, if not worse, than too little. Where a basin is several miles long it is obviously a lengthy business to get the water off the land. At present the Government is specially engaged on the development of a basin at Wad Hamid, which, being close to the railway line, and easily watered, is likely to become a paying proposition.

A great quantity of land has been taken up this year in the basin, but it is rather with an idea to the future, because the land is overgrown with trees and undergrowth, and a great deal of clearing has to be done to start with. Notwithstanding this good crops have been obtained, and the allottees are extremely contented with the prospects.

Basin land is, however, only obtained by the rise of the river, and, clearly, the object should be to develop the land that can be cultivated at all times of the year. This is naturally the land immediately on the river bank, extending for whatever depth can be successfully watered from the river, and this varies with the way in which the land rises or falls behind the river bank. There is usually a considerable stretch which is slightly lower than the river bank, and this is what is normally cultivable.

To get all the available land under cultivation in the course of the year requires a revolution in the system of watering. In effect, it means the employment of pumps instead of waterwheels. At present there are waterwheels every few yards along the bank where the soil is good for cultivation, and if it were reckoned what capital value had been expended in supplying this form of power, it would seem a simple affair to substitute the more effective kind.

Pump or Mill?

Instead of every owner working a wheel for every four or five acres, and sometimes two, one above the other, where the lift is great or otherwise awkward, there should be a common pump to supply the needs of several of these small estates together.

No doubt there would be difficulties and local jealousies, but these will be overcome as the farmers find out that they only harm themselves by quarrelling, and they have before them the examples of those who have used a pump. There are a few old engines working which must be almost curiosities in the engineering world, not merely for their age, but for the extraordinary way in which they continue to work, notwithstanding ignorant treatment and "repairs" which would make a professional shudder. Repairs are, indeed, one of the questions that will need careful consideration, for there is not a blacksmith in every village, and ironwork is looked on as servile and degrading.

There are already in the Sudan a certain number of estates, such as that at Darmali or at Tayebe and Barakat, where the native can see, and, in some cases, has tried the effect of taking water from the company. But the Sudanese cultivator, as I have said, is a conservative creature, and requires encouragement.

But the obvious line of progress lies along this line, namely, the establishment of many pumps and the gradual substitution of these for the old-fashioned water-wheel. This will not only be a safer and more economical form of lifting the necessary water, but it will free the cattle for the business of ploughing and the like, work which is only done at present by the most progressive farmers.

Manure.

It is possible that, with a more intensive culture, the land would require a certain amount of artificial manure, but in this fortune is kind to the northern districts. South of Khartoum every bit of manure is required for the making of "zibala," an unpleasant compound which is smeared on to the outside of all houses in order to render them proof against the rain. The result is that at times manure reaches quite a high price.

North of Khartoum the rains are comparatively light, and the buildings require only a small amount of this dressing; and, indeed, in some districts, it is not considered necessary at all, so rare is rain. There are, too, ancient sites of buildings from which the

Digitized by Google

native digs a form of manure in which he has great faith. This is used in Egypt also, and so much sought after is it that some supervision has to be used to prevent the reckless digging up of ancient sites that are of interest to the antiquarian.

South of Khartoum.

South of Khartoum the style of cultivation alters. Neither on the Blue nor on the White Nile is the native dependent on artificial irrigation to grow the food that he needs. The rains at Khartoum and in the country immediately south of it are rarely sufficient to supply an adequate rain crop, but the distance that separates the land dependent on the river and that which relies on rainfall is short. In the latter case a far wider area is thrown open to cultivation because it is not limited to that which can be reached with ease from the river bank, but the rain only falls at one time of the year, and it is the object of all schemes of development to utilise those periods when the rain is not available and resort must be had to irrigation.

Almost the whole area lying between the two Niles up to the 12th parallel is suitable for cultivation, and the only problem is how to get the water on to the land. This is the great question which has been more especially occupying the thoughts of the Sudan Government recently. It is one primarily for the irrigation expert, and there are very many vexed questions to be solved. One thing at least is certain, that they will be solved, and the greater part of this vast area will ultimately be supplied with artificial irrigation.

Education.

In the meantime much can be, and, indeed, has been, done. The cultivation of cotton is not to be taught to the "untutored savage" without the expenditure of both time and care. The interval during which these schemes are being matured will be of the greatest value for the education of native owners in the science of agriculture. The most appropriate time for the sowing of cotton, the rotation of crops, the best class of manure that can be obtained cheaply, the supply of adequate labour at the necessary seasons are all questions which will be worked out in practice as well as on paper.

Further afield, in Kordofan, the lighter soil is not so favourable to extensive schemes of agriculture, but much may still be done by the construction of reservoirs at suitable spots, which will not only be of value in increasing a scattered and rather uncertain water supply, but will also assist in the formation of larger townships where markets can be located.

Tobacco.

Further south it is possible that the local custom of growing tobacco which prevails in the Nubia Mountains may develop into an industry. At present there are certain restrictions, but there are indications that the existing conditions in Egypt may lead to change in legislation, which would, no doubt, produce a corresponding modification in the Sudan. The tobacco grown so far is suitable for native use only, or for certain kinds of snuff, but much may be done by adopting more suitable methods of preparation; there is no reason to suppose that the plant cannot be grown successfully.

Until the railway facilities to Darfur are much improved, it is unlikely that the richest part of the province which lies to the west can adequately be used for commercial purposes. The people there, too, have suffered from bad years, epidemics, and bad management; but they have, at least, the prospect of supplying the local needs with much that has at present to be carried from the Nile. Wheat has always been grown in some quantity on the slopes of Jebel Marra, and the gardens there have been proverbial.

LANCASHIRE COTTON REPORT.

Unsatisfactory Market Conditions Continue.

(From Our Own Correspondent.)

Manchester, May 9.

Unsatisfactory conditions continue to prevail throughout the market. Complaints from producers tend to increase in volume. Prospects are very unsettled, and there are no indications of buyers being more willing to commit themselves to contracts of importance.

The depression in spinning circles has become more acute, and it is proposed to close down mills for the whole of Whit week and the Monday following. The suggestion of the Masters' Federation is being considered by the members, and they have been asked to vote as to whether they are in favour of such action. It is expected that the necessary majority will be obtained.

The operative weavers threaten to strike to enforce their demand for an increase in wages of 20 per cent., and notices to cease work are being given to the employers, which will take effect on May 26. No one is alarmed at the situation, because it is taken for granted that the Government Committee on Production will interfere and prevent any stoppage of machinery.

The Egyptian raw cotton situation remains very involved. Certain grades in Liverpool seem to be scarcer than ever. There has been plenty of demand in piece goods for Egypt, with fairly substantial sales in certain quarters. Merchants for that part of the world would welcome greater shipping facilities. Yarns made from Egyptian cotton have moved off slowly.

There has been a tendency to stop more machinery in the Bolton area, and it is said that nearly a dozen factories are closed down.

The inquiry in cloth for India has been disappointing. Something has been done in miscellaneous cloths, but standard makes have attracted very little attention. China has not given any general support, but some useful orders have been secured in a variety of fabrics, and a little more activity has prevailed for the minor outlets of the Far East, such as Java and Singapore.

The position of manufacturers as a body leaves much to be desired. Fresh business is badly wanted in some districts. The yarn market has been slow. Prices, however, in American qualities appear to be grounding somewhat. Producers are still disposed to purchase from hand to mouth. Some contracts have been mentioned in coarse counts for France, but export business as a whole is very much upset by the difficulties in obtaining licenses and the restriction upon shipping.

EGYPTIAN COTTON.

Liverpool reports show that Egyptian cotton futures have been depressed by liquidation, and closed weak on May 9, at a loss of 70 to 80 points. Sales reported on that day were 200 bales, making 700 so far this week. Imports were returned at 2,534.

THE WEALTH OF MESOPOTAMIA.

It is understood by the British Empire Producers' Organisation that it is the intention of the Indian Government to proceed promptly and vigorously with the economic development of Mesopotamia. It was one of the drawbacks of Turkish rule that the natives were discouraged from cultivating this extremely rich and fertile territory by the fact that when they had brought production to a certain stage the property was on one pretext or another taken away from them. With safe tenure and with irrigation and transport improvements, Mesopotamia can very soon contribute much more largely to the world's food stock. In connection with these plans, it is expected that the general reorganising of the administration of Baghdad will also be pushed forward, and this will probably include the early installation of an electric light, power, and tramways scheme. It is on all grounds highly important that the immense possibilities of economic expansion of this ancient city should be realised without delay.

TRADE NOTES.

Openings.

The British Consul at Cairo reports that an Italian firm of buying and commission agents in that city desires to get in touch with British manufacturers of needles, boot and shoe protectors, laces, curtains, and mosquito nets of Nottingham manufacture, with a view to obtaining the representation of the manufacturers in Egypt, or the sole right of sale in that country. Applications should be sent to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2.

The Board of Trade *Journal* reports that an agent at Candia, Crete, is about to open an office in order to promote and assist British trade in the island, and to replace goods previously imported from Germany. The agent invites from British manufacturers complete ranges of samples and illustrated catalogues which will be placed in a special show-room and used to secure orders. Counter samples and market prices will occasionally be sent to manufacturers to indicate the requirements of the local markets. A commission will be charged on all catalogues received to cover expenses.

The agent mentions the following goods, previously imported from Germany, as being in great demand in the Cretan markets:—

Textiles, Clothing, Etc.—Lace and hosiery; clothing, including ready-made clothing for men and boys; woollen and cotton goods; woollen and cotton underwear, blankets and flannels; collars, ties, mercery articles; mercerised cotton; reels of cotton thread; boots and shoes; haberdashery; and straw and felt hats.

Metal Goods.—Beds and bedsteads, ironmongery, cutlery, hardware, kitchen utensils, enamelled goods, nails, galvanised nails, galvanised sheets, locks, lamps, and machinery.

Miscellaneous.—Paints and oil paints, paper, stationery, novelties, leather, fancy leather goods, silver-plated goods,, preserved fruit and fish, condensed milk, tea, biscuits, chocolate, buttons, linseed oil, guano, copper sulphate, soda, potash, and indigo.

Changes in Statutory List.

The name of Mahomed ben Mahomed el Lebady, Tetuan, Morocco, has been added to the British list of persons and firms with whom trading is prohibited. The name of Aga Mahomed Ismail Isfahani, Meshed, Persia, has been removed.

THE EGYPTIAN BLACK LIST.

A Second Supplement to Tuesday's *London Gazette* contains a list of persons and firms in Egypt with enemy interests which have been licensed to carry on business for the purpose of liquidation only, or to which a receiver has been appointed for the purpose of liquidation. No new transactions must be entered into with any person or firm mentioned in the list.

SUBMARINED SHIPS.

The weekly return of arrivals and sailings from United Kingdom ports, war losses, and unsuccessful submarine attacks in respect of British shipping for the week ended Sunday, May 6, 1917, was issued on Wednesday by the Secretary of the Admiralty.

Arrivals and sailings of merchant vessels of all nationalities over 100 tons net (exclusive of fishing and local craft):—

Arrivals	2,374
Sailings	2,499

British merchant vessels sunk by mine or submarine:—

2,600 tons (gross) or over	19
Under 1,600 tons (gross)	22
British merchant vessels unsuccessfully attacked by mines	28
British fishing vessels sunk	15

From these figures have been deducted the vessels included in returns of previous weeks.

Italian Losses.—The Italian Ministry of Marine issues the following particulars for the week ended May 6:—

	No.	Tonnage.
Arrivals of merchant ships of all nationalities at Italian ports	465	412,568
Sailings, ditto	430	326,375
Italian steamers sunk	7	—
Italian sailing ships sunk	8	—

Two sailing ships and one steamer were unsuccessfully attacked.

The Commercial Future of Constantinople.

A Reply to Writers who Declare that the Turkish Capital is Dead.

Reuter's Agency stated on Wednesday that it has been "officially informed that numbers of Turks and Turkish agents are at work in Switzerland with the object of assuring the continued existence of Turkey in Europe. These agents," it was said, "are making it understood that, provided the Turks are not driven out of Constantinople, they are willing to allow complete freedom of the Dardanelles to all comers."

A correspondent, "A. C. S.," who was long resident in Constantinople, writes to THE NEAR EAST as follows:—

"We have recently read a great deal about the future of Constantinople, and, as an old resident who was in business there for many years, I should like to criticise some of the views and opinions which have been published, and to state my own—based on the assumption that Constantinople will be a free port—for what they may be worth.

A Mistaken View.

"One writer declared recently that, 'Constantinople is not likely ever again to possess the same importance which it once had in the world, especially as a commercial centre.' I protest most emphatically against this statement, because it is erroneous and misleading. If it were correct, may I ask how it is that, for ten years and more prior to the war, shipping companies, merchants, traders, shippers, and the various Foreign Embassies and Legations, demanded vigorously the provision of more berthing space in the harbour, more lighters, more warehouses, bonded warehouses, and increased space in the Custom Houses? Sir Richard Crawford, who was sent by the British Government to Turkey to reorganise the Customs Service would, I imagine, bear witness to this. The new Custom Houses, it may be added, cover three or four times the space of the former. Does not that show the continued expansion in the trade of the port?

What the Turks Did.

"The Turkish Government realised that it was necessary to do something to alleviate the congestion and pressure in the port, and appointed a mixed committee to study the whole question; it was even suggested to build a commercial port at Koum Kapou just outside the Seraglio Point, on the Marmora. Surely these facts indicate that the trade of Constantinople has been steadily increasing.

"There are other facts, too. The extension of the Anatolian Railway from Ismidt on to Angora and Konia; the impulse given to agriculture by the same railway—backed by the Deutsche Bank of Berlin—the despatch of German agriculturists to those regions; the enormous quantity of cereals, mohair, wool, skins, tobacco, timber, etc., transported by the railway, both for local consumption and for transhipment at Constantinople. Then there is the coasting trade along the Sea of Marmora, carried on by small steamers and sailing craft. All bring produce to the capital, both for local consumption and for transhipment, to say nothing of the steamers which used to load part or full cargoes at Haidar Pasha. So much for the facts of the period immediately before the war broke out. Constantinople as a free city has prospect of immense prosperity.

The Future.

"And what of the future? With the improved condition of affairs which will necessarily follow after the war, and the establishment of other railways in the district, the natural desire for a period of peace, during which the peasant may cultivate his lands, the working of mines in the vicinity of Constantinople—which has always been obstructed by the authorities for reasons known to themselves—will all tend to increase the importance of the much-coveted city as a commercial centre. Its natural harbour, its position as a link between Europe and Asia, will add to its importance, which will never be reduced.

"The writer I have referred to goes on to observe:—'It is a mistake to speak of this region as a fertile country, and there are dozens of villages in Asia Minor where at present it is not worth anyone's while to produce more than can be bartered with his own neighbour, as the cost of transport to the nearest market would be prohibitive.'

A Contradiction.

"This is not only error; it is also contradiction. All who know the region will be ready to declare that it is fertile, and that if it has not been cultivated in the past it was not because 'it was not worth anyone's while,' but because cultivation was prohibited. The facilities which it may be hoped will be given to the agriculturist, together with financial and administrative aid in the future, as well as the increased demand which may be expected in Europe for raw material and produce—to which Asia Minor is well able to respond—will all contribute to make it 'worth anyone's while to produce more' than can be disposed of in local barter. I have no doubt at all that Constantinople will become a more important commercial centre than it was even in the times of Justinian.

"Are those who so erroneously depreciate the value and importance of Constantinople aware that the port and city was a buying centre for all parts of the Ottoman Empire, and that produce was shipped thence so far as Vladivostok, Kobe, Yokohama, Beira, Natal, Baghdad, Busreh, San Francisco, New York, Boston, not to speak of the whole of Europe? Is it likely that the demand for Turkish carpets, Turkish tobacco, cereals, mohair, etc., and even for new laid eggs, which used to find their way to English markets, will not be resumed as soon as supplies begin to be available?

CYPRUS TRADE IN 1916.

A brief statement regarding the trade of Cyprus in 1916 has already been published in THE NEAR EAST. The following further details are now available:—

According to official returns issued by the Chief Collector of Customs at Larnaca, the total value of imports of merchandise into Cyprus in 1916 was £843,388, an increase of £298,239 as compared with 1915. The principal items contributing to this increase were flour, cotton piece goods, and coal. The value of exports of merchandise from the colony in 1916 amounted to £708,446, an increase of £57,956 as compared with the preceding year. The principal increases in exports were in potatoes, mules, sheep, and hides and skins.

The following table shows the value of some of the principal classes of goods imported into Cyprus in 1916 as compared with the two previous years:—

	1914. £	1915. £	1916. £
Coal	5,282	1,613	15,340
Iron and steel manufactures	11,931	5,753	5,763
Machinery, parts, fittings, &c.	17,076	4,818	4,482
Cotton yarn and thread	25,002	31,614	29,543
Cotton piece-goods	54,789	56,833	84,483
Haberdashery and millinery	11,020	6,742	13,669
Woollen manufactures	19,910	17,657	24,179
Leather and leather manufactures	28,921	33,826	50,333
Soap	17,271	15,009	20,531
Wheat	1,159	48,050	40,469
Flour	9,668	47,035	176,825
Olive oil	4,837	15,146	16,035
Rice	9,037	17,158	24,239
Sugar	19,331	36,232	44,415
Tobacco (leaf)	23,422	24,589	27,668
Petroleum	20,706	21,850	32,703

Although letters and newspapers are again being forwarded to Greece, the Postmaster-General has notified that postal parcels can only be accepted for Salonika and its immediate locality and Crete and other islands not in the blockaded area.

TO CAPTURE GERMAN TRADE.

Interesting Commercial Exhibits in London.

An interesting and valuable exhibition is now being held in the sample rooms at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2. This consists of samples of goods of enemy manufacture, and is open to British manufacturers and exporters. The samples, which number approximately 3,000, writes the Board of Trade *Journal*, are of considerable variety, and are labelled with the prices where those are available and the name of the country in which the goods are sold. Certain of the samples represent quite recent designs from enemy sources, and should be of interest to British manufacturers who desire to obtain information respecting the new style of goods at present manufactured in enemy countries.

We are glad to learn from the same source that the Foreign Trade Department of the Board of Trade has taken up the question of obtaining from British Diplomatic and Consular officers in certain foreign countries fuller and more systematised information than has been available hitherto in regard to possible importers or buyers of British goods.

Official Instructions.

With this object in view, we learn, the Department has issued a circular to the Diplomatic and Consular officers in the following countries:—

Spain,	Dutch East Indies,
Portugal,	Philippine Islands,
Persia,	Morocco,
Siam,	Liberia, and the
China,	Central and South
Japan,	American Republics.

The officers in these countries have been instructed to furnish the names and addresses of recommended firms who desire to trade with the United Kingdom. The firms reported on are to be classified under certain numerous trade heads.

In order to enhance the value of these lists the Consuls have been requested to supply certain particulars in regard to the firms whose names they furnish, including such items as European references and local bankers, whether their business is wholesale or retail, whether the firms import on their own account or consignment, or on a commission basis, and terms of trading; the principal goods required and the method of transport and the route from the nearest port; the names of the firms on the statutory list which the recommended firms can replace; the composition of the recommended firms and the rationalities of the principals and the language in which correspondence may be carried on.

The Real Need.

It is pointed out that the mass of information which it is hoped to obtain by this scheme is in addition to that which has hitherto been circulated by the Department; we hope the scheme will justify the immense additional labour it will entail on British Diplomatic and Consular officers. Its promoters will probably not claim that it is the perfection of wisdom; but at any rate it is the beginning, and if—as we presume is the case—it is intended to be developed as opportunities occur it should be an excellent foundation for the reforms in our official foreign trade propaganda which we, in common with other journals, have consistently advocated for a long time past.

Considered as a measure of reform, the scheme does not touch the real need in our Consular service. However successful it may become, there still remains the serious problem of the *personnel* of this important service. Great Britain, like every country which has made an intelligent attempt to grasp all the trade opportunities which present themselves abroad, should possess a Consular chain round the world, and its links should be specially trained and exclusively employed experts. While it would be unjust not to admit that the Board of Trade has awakened to the disaster which is involved in inactivity, the outstanding necessity for the complete and speedy reorganisation of the Consular service remains apparent.

ENGINEERING NOTES.

Deep Well Pumping and Air Lifts.

Reference has been made in THE NEAR EAST to the memorandum of the Arab Bureau on the subject of agriculture and supplies in Palestine. In connection with the irrigation of the new orange-groves in the Jaffa district, it stated that "the water is raised by 4 in. tubes sunk vertically into the sand strata to a depth of between 130 ft. and 197 ft., the water rising to a height of 39 ft. in the pipes, while the pumps raise from 5,500 to 8,800 gallons of water per hour." The system, probably, is what is known as the Abyssinian well, and, considering the depth from which the water has to be pumped, 90 to 150 ft., deep-well pumps are probably being used, which, if they bring to the surface such quantities of water per hour through a 4-in. tube, which, it is presumed, submerges to the necessary depth, the working barrel, plunger and other working parts are wonderfully efficient, especially since they are of local manufacture. However, British manufacturers of deep-well pumps and artesian or Abyssinian well-boring tools and machinery will do well to study, in time, the requirements of the Palestine and other Syrian districts. They will find the whole region a most desirable market.

Air Lifts.

It must be admitted that deep-well pumping has often presented features of peculiar difficulty, as, for instance, the difficulty, in certain cases, of having access to the pump end, and of rapid wear of the working parts, in sandy districts where repairs or replacement of spare parts cannot easily be effected owing to the lack of skilful mechanics. In such cases the air-lift probably is the best solution. In principle and operation the air-lift is extremely simple. Air is injected through a nozzle placed below the working water level, and, rising, carries water up with it. The submerged parts are subject to no wear whatever, and except for corrosion are practically indestructible, even when working in the gritty water so fatal to deep-well pistons. The air compressor and receiver, the only parts needing attention, are at the surface, and easily accessible. It has been found in certain cases that when proper submergence of the air nozzle can be assured the yield of a well previously fitted with a deep-well pump is doubled or trebled by the use of the air-lift. The sparkle and life imparted to the water raised, and the cooling effect of the expanding air, make this method peculiarly suitable for water works purposes, a point which will be of great interest to numerous towns and communities in the Near East, besides farmers and fruit growers.

COMPANY NOTES.

Dividends, Payments, etc.

Notice is given that the coupons of the Imperial Government of Persia 5 per cent. sterling loan of 1911, due May 15, will be payable on and after that date at the bank, 25, Abchurch Lane, E.C. 4.

Meetings.

The general meeting of shareholders of the Suez Canal Company will be held in Paris on June 11, 1917.

An ordinary general meeting of the shareholders of the Bank of Abyssinia will be held at the offices of the National Bank of Egypt, Cairo, on May 31, 1917, at 4 p.m., for the purpose of receiving the reports of the directors and auditors, the accounts, and transacting other business.

Oil Outputs.

Anglo-Egyptian.—Gemsah, week, 21 tons (previous week 22 tons); Hurgada, week, 2.197 tons, against 2,068 tons.

COMPANY MEETING.

EGYPTIAN ENTERPRISE AND DEVELOPMENT.

The following is a translation of the report of the directors submitted to the annual general meeting of shareholders held in Cairo on March 31 last:—

Gentlemen,—We beg to submit the balance-sheet for the year ended December 31, 1916, being the 12th year of the company's existence.

Agricultural Lands.—The work of developing the Bercache-Mansourieh estate has not been resumed; this can only be profitably done when we are quite sure as to the system of irrigation reserved for this region. The programme to be followed will, in fact, depend upon the decision which will eventually be come to in this connection, and it is unlikely that the question can be settled before the end of the war. Meantime, we are taking every step to secure as complete a utilisation as possible of our present resources, and we thus hope to increase to a notable extent the working profits on cultivation.

Building Lands.—Rodah Island.—The increase in area observable under this head is a result of the partition which has taken place during the year. The portions which have been allotted to us are situated on both sides of the Avenue Centrale; owing to their conformation, they are suitable for parcelling out on favourable terms, and we will endeavour to turn this to account as soon as circumstances permit.

Gizeh.—The land that we have acquired in this locality through partition measures 48,234 square metres. The reduction in area resulting from this division is amply compensated for, as we stated in our last report, by the exceptionally favourable position occupied by our land as compared with the lot granted to our co-proprietor. This property has a frontage of 238 metres on the Avenue des Pyramides, and the greatest depth does not exceed 210 metres.

Alexandria.—We have sold during the year a lot of about 105 square metres, which reduces the area of the remaining lots to 934 metres.

Business in Turkey.—We are still without news of our properties in Syria and Constantinople.

Portfolio.—We have kept the shares in our portfolio at the same figure as last year.

Debtor Account.—Purchasers of Land.—The payments made by buyers during the year have reduced this account from £E89,744.765 to £E77,094.829. These debts are guaranteed by the *privilège du vendeur*.

Miscellaneous Debts.—This account comprises rents in arrear, advances to cultivators, various provisions, amounts in suspense, interest not collected, and other debts, some of which are guaranteed by a deposit of securities or otherwise.

Gharbieh Land Co.—The position of this company has considerably improved since our last report. The results of the 1916 cotton crop were satisfactory, and the financial assistance we have afforded it has enabled the company partly to overcome the difficulties with which it was faced in consequence of the reverses of 1914 and 1915. In order to facilitate the transaction referred to in our last report, the Gharbieh Land Company had, it will be remembered, to give up the exchange of its Sawalem estate, and was thus deprived of the resources that would have accrued to it as a result of this exchange; consequently, the sale of our Dakahla estate was maintained and helped greatly to ease our situation. It was only right, therefore, that the Gharbieh Land Company should look to us for help, and this was afforded it in the shape of the necessary advances and by guaranteeing debenture-holders, by a mortgage on a part of the Bercache-Mansourieh estate, the payment of the coupons in arrear, amounting on December 31, 1916, to £E10,144.875 in principal and interest. The Gharbieh Land Company will, we trust, be able to liquidate this charge without our assistance, and the improvement already noted in its situation will certainly be more marked in 1917 if the price of cotton is maintained at about the rates now ruling.

Profit and Loss.—The profits for the year amounted to £E4,977,704, and the debit balance of the profit and loss account is, consequently, reduced to £E151,606.819.

Report of the Auditors.

Gentlemen,—We beg to inform you that we have compared the balance-sheet with the books and documents, and certify that we have found them in order. We have verified the cash in hand and at bankers, with the exception of a sum of £E415, which is in the hands of the Crédit Mobilier de Belgique, from whom it has not been possible to obtain a certificate to this effect on account of the war. There is, on the other hand, a balance of £E13,734 to the credit of this same bank in other accounts under the heading "bank credits"; for the same reason we have found it impossible to ascertain the exact amount. The securities, constituting the directors' qualifications, are in order. Owing to the war, we have been unable to ascertain the existence, at December 31, 1916, of two thousand Kafr-el-Dawar shares and 25,989 Koubbeh Garden shares, which were deposited with the Crédit Mobilier de Belgique at Antwerp before the war; and likewise we could not find out from the solicitor of the company in Turkey whether the properties in Constantinople and Beyrout were free of any charges at the date of the balance sheet. In accordance with Article 20 of the statutes, the board should meet at least twelve times a year; this rule has not been observed since the outbreak of war. In the absence of our colleague, M. Jules Rolin, with whom we cannot communicate at present, M. Guido Levi, deputy-auditor, has signed the present report for him. With the above reservations we certify that the balance-sheet is in conformity with the accounts and statutes of the company.

(Signed) F. H. RUSSELL, Auditor.
G. LEVI, Deputy-Auditor.

Resolutions.

The following resolutions were passed unanimously:—(1) The balance-sheet and accounts for the twelfth year, ended December 31, 1916, are approved, and discharge is given to the directors. (2) Resolved to transfer the debit balance to the profit and loss account—viz., £E151,606.819 to the new current year's account. (3) Re-election of M. Ernest Rolin as director. (4) Re-election of M. Jules Rolin, as auditor. (5) Re-election of M. Guido Levi deputy-auditor for 1917. (6) The indemnity of the auditors for the year 1917 is fixed at £E150.

COMPANY REPORT.

Ionian Bank.

The report of the Ionian Bank for the year ended December 31, 1916, shows that the net profit for the twelve months amounted to £43,729, against £25,594 in the preceding year. After placing £10,000 to reserve and £3,000 to staff pension fund, the directors recommend a final dividend at the rate of 5 per cent. per annum, together with a bonus of 1 per cent., free of income tax, making a total distribution of 6 per cent. for the year, and leaving £7,147 to be carried forward.

In 1915 there were no allocations either to the reserve or to the staff pension fund, the dividend was 5 per cent., and only £5.553 was carried forward. There was a marked increase during the year in the deposits, which at December 31 last amounted to £3.273,190 against £1,986,312 at the end of 1915, and although money at short notice decreased from £147.600 to £94,400, the cash in hand was £237.206 against £171.631, the investments £1.283,572 against £435.134, and the bills receivable £1,523,574 against £763.128.

BANK of ABYSSINIA.

Notice is hereby given that, in conformity with Article 30 of the Statutes an ORDINARY GENERAL MEETING of the Shareholders of the Bank of Abyssinia will be held on Thursday, the 31st May, 1917, at 4 p.m., at the Offices of the National Bank of Egypt, Cairo, Egypt, for the purpose of:—

Presenting the Directors' Report, presenting the Auditors' Report, Submitting the Accounts to the 31st December, 1916, Electing Directors, Electing the Auditors for the year 1917 and fixing their remuneration.

Any shareholder holding a minimum of five shares is entitled to take part in this Meeting, provided the Shares be deposited at one of the following places, where a Card of Admission or Form of Proxy will be given:—

In Egypt (at Cairo and Alexandria), at least five days before the date of the Meeting:—At the National Bank of Egypt, Anglo-Egyptian Bank, Ltd., Banque d'Athenes, Banque Belge pour l'Etranger, Imperial Ottoman Bank, Banque d'Orient, Banco di Roma Cassa di Sconto e di Risparmio, Comptoir National d'Escompte de Paris, Crédit Lyonnais and Deutsche Orientbank.

In Abyssinia, at least ten days before the date of the Meeting:—At the Bank of Abyssinia, Adis-Abeba, Dire-Dowa, and Harrar.

In New York, at least ten days before the date of the Meeting:—At Messrs. Kidder, Peabody, and Co., Bankers.

In Europe, at least ten days before the date of the Meeting:—

In Paris, at the Société Générale de Crédit Industriel et Commerciale, 66, Rue de la Victoire.

In Rome, at the Banca d'Italia.

In London, at National Bank of Egypt, 6/7, King William Street, E.C.

F. T. ROWLATT, President.

Cairo, 10th May, 1917.

THE ALEXANDRIA WATER COMPANY, LIMITED.

Notice is hereby given that the thirty-ninth ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Offices, Alexandria, on Thursday, June 7, 1917, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to Act of Parliament.

Holders of share warrants to bearer desiring to attend or to be represented at the Meeting must deposit their share warrants in London before May 23, 1917, or in Alexandria before June 3, 1917 until after the Meeting, at Messrs. Barclay and Company, Limited, 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Limited, Alexandria, or at some other approved bank in London or Alexandria.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

Dated, Alexandria, April 20, 1917.

ON 'CHANGE.

(BY OUR CITY CORRESPONDENT.)

Throgmorton Street, E.C.,
Thursday.

There has been a fair amount of business this week, and, generally speaking, prices have again moved towards a higher level. The demand from Egypt has been pretty persistent, and there has also been a fair amount of inquiry on local account; but the great drawback to an active market is the continued scarcity of sellers.

Egyptian Unifieds are about a point higher at 83 x.d., and Prefs. are also better at 70⅜, both issues being largely inquired for, but with a very small business passing. The lack of sellers in these two securities is no doubt to a great extent to be attributed to the large deposits which have been made on loan to the British Government.

National Banks have been done to the extent of about 150 shares round 13⅜, and are further buyers to-night. Agriculturals have changed hands for about 500 shares round 5½, closing unchanged at 5 15-32. Land Banks have improved 3-16 to 5 5-16, with a small transaction at 5 9-32. Anglo-Egyptians have risen 5-16 to 12 7-16.

Delta Light and Land Allotments are each ⅛ higher at 5 11-16 and 2⅜ respectively, but without business. Behéras continue wanted round 7½. Some 500 Delta Lands have been done between 9s. and 9s. 3d. New Egyptians have been in continuous demand, and are 6d. higher at 10s. 9d., some 1,500 shares having changed hands. United Egyptian Lands have also been handled in the neighbourhood of 9d., while a further demand has carried Alexandria Waters 3-16 higher at 12 5-16, and Markets are 6d. better at 27s. 6d.

Salt and Sodas have been active, and, after business has been done, are closing 3d. easier at 31s. 3d.

Khedivial Mails, in which a fair amount of business has been done, are closing 9d. easier at 31s. 3d.

In Greeks some few thousand Rentes have changed hands round 44½, and there has been a small transaction in Currant Bonds at 90. Fundings are wanted round 53. Monopolies are somewhat firmer at about 49½, and Larissa at 53. Both 1881 and 1884 are nominally lower at 52.

Oil Shares.

Anglo-Persian Preferences have strengthened to 22s. 6d., but Anglo-Egyptian "B's" fell 3d. to 12s. 3d. Roumanian Consolidateds were quoted at 10s.

Paris Bourse.

Quotations of Near Eastern interest yesterday were:—Egyptian Unified Four per Cent., 90 (unchanged); Serbian (1895), 58; Turkish Unified, 62.75 (against 62.80); Crédit Foncier Egyptien, 671 (against 668); Ottoman Bank, 425 (against 430); Suez Canal, 4,345 (against 4,310).

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

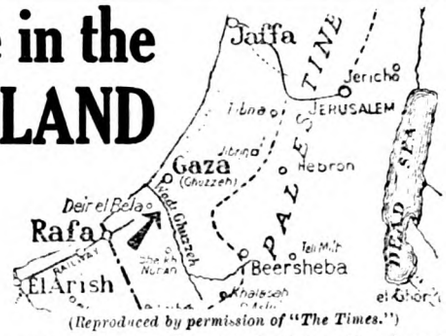
Famine in the HOLY LAND



(*Reproduced by permission of "The Times."*)

The recent victory near Gaza means that we shall be able almost immediately to follow up the Allied advance with FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the inhabitants. The demand for adequate funds to provide all these necessaries has now become one of the *utmost urgency*.

To relieve the starving peoples in SYRIA and PALESTINE £50,000 is needed at once.

In the land where Christ walked and taught and died, thousands of people—not Turks, but Christians, Jews, and Arabs—are in the last stage of destitution through the cruelties which they have suffered. Unless supplies can be sent immediately it will be too late to save the lives of many of these poor people.

MISSIONARY SOCIETIES of ALL denominations have united to carry out this great work.

A strong administrative Committee is now at work, plans for relief are already made, and goods stored in Egypt ready to be poured into the country, by sea or rail, as soon as access is obtained. The Fund will be economically administered by those who know the country and people best, and relief will be given to all, irrespective of race or creed.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110, Victoria Street, Westminster, S.W. 1.

NOTES OF THE WEEK.

Agreement has been achieved by the different political parties in Russia, and the Government has been reconstituted in order to include representatives of the Council of Workmen's and Soldiers' Delegates. By this step it is to be hoped that order will at last have been evolved out of chaos, to enable Russia soon to pull her full weight in the Grand Alliance. How near she has been to disaster during these past weeks can only be surmised. The resignation of M. Gutchkoff, the Minister for War, who seems to have appreciated the danger ahead and to have felt that there was only one way open to him of bringing the position home to his fellow-countrymen, together with the request of General Brusiloff and General Gurko to be relieved of their commands, is an indication that even authoritative quarters were beginning to despair. His action has been denounced by his colleagues, who consider that the Government ought to have seen the crisis through with its ranks intact. The present arrangement, which is a compromise between the Moderate Democrats and the Socialists, seems to have brought Russia back more or less into line with the Allies' war aims, and in any case to confirm the unity of the Allied fronts. It disposes of the bogey of a separate peace. The advocates of the latter have quitted the Socialist party for the wilderness of anarchy, but, taking advantage of the confusion in the popular mind between licence and liberty, they may for a time succeed in embarrassing the Government yet further.

The compromise now reached has entailed the resignation of M. Miliukoff, whose absence from the Government will be regretted in Allied countries. It is stated that the Socialists regard his foreign policy as being too "Imperialistic." If this be the case, it may point to the survival of a difference of opinion in regard to the future of Constantinople, or it may be a tactful concession on the part of the Democrats to show that their so-called Imperialism is not an aggressive policy to be forced upon the country against its will, but merely voices Russia's true interests in a way which the nation will come to understand when it is able to settle down after the preliminary stages of the revolution. One thing must be evident to the more able of the Socialist leaders, that so long as they remained an organisation apart, outside the Government, they were not qualified to pass judgment on all the intricacies of Russia's foreign affairs. Until the new Cabinet has had time to take stock of the international position, there will be no desire on the part of the Allies to press for declarations of policy. Among the mistakes of the past few weeks, for which the Alliance has had to suffer, has been the well-meant attempt to reassure public opinion abroad before any steps had been taken to educate public opinion at home on the questions at issue.

In Mesopotamia the chief event of importance during the past fortnight has been the reopening to traffic of the railway between Baghdad and Samarra. The work of reconstruction has been pushed on rapidly, and it will facilitate to no small extent General Maude's future operations to have this line in working order. For the rest, British columns have been engaged in pushing back the enemy into the Jebel Hamrin range, where, no doubt, he will elect to remain until the Allied forces have completed their preparations for his ejection. A move on the part of the Russians on the British right flank gave rise to the hope that reinforcements had been received, and that concerted action between the Allies would be possible. The Russians, however, have met with only indifferent success. They crossed the Diala River at two points, about thirty miles apart, east-north-east of Kifri, and would thus be threatening the Jebel Hamrin position from the rear. But they were forced to retire, and, although fighting continues in this region, it is not yet clear that our Allies are able to make much progress. A forward move in the direction of Kifri must exercise an immediate effect on the enemy forces confronting General Maude. It would be the natural sequel to the reopening of the railway to Samarra, as the two movements, if pressed home, would bring the Turks between two fires and cause them to withdraw once more a considerable distance to the north.

The situation in Greece is probably running the course that it was intended to run by King Constantine when he made the new appointment to the Premiership. M. Zaimis can be relied upon to grapple with his task to the best of his ability, but it is to be feared that it remains as likely as ever that the effect of any steps taken by him will be at once nullified by the actions of the King or his Germanophil coterie. Thus, there will be the customary pronouncements against the concealment of arms, and the Premier will be able to inform the Entente Powers that he has left nothing undone to insure the strict observance of all their stipulations. But, the good results of the early days of the Zaimis *régime* will quickly wear off, and the power of the Premier will avail nothing against the Gounarists and the Court camarilla. In the first trial of strength M. Zaimis has proved successful, he has had seven

Digitized by Google

officers removed to the Peloponnese, and has upheld the decision against a deputation which challenged it. But, as the officers in question remain at Corinth, which is only fifty miles from Athens, it is evident that the Premier realized that he must temper his disciplinary measures to the circumstances of the moment. The punishment of seven officers, however, does not provide a solution for the Greek situation, and far more drastic measures ought to be taken, if the new Government is to give effect to that part of its programme which aims at the re-establishment of friendly relations with the Entente.

Throughout the past week there has been considerable activity on the Macedonian front, and a steady pressure has been brought to bear on the enemy in every sector. The Bulgarians, it has to be admitted, continue to show themselves capable of a stubborn resistance, and have hardly failed anywhere to launch counter-attacks on the Allied troops. As the balance of success has invariably rested with the latter, we may be content with the course of the operations. It is evident that the enemy accepts the seriousness of General Sarrail's intentions, as well as the critical nature of his own position, and in view of his tactics elsewhere at this time, he may be expected to make heavy sacrifices and run many risks to avoid having to yield much ground. The progress made by the Allies, therefore, is likely to be slow, in spite of the stimulus given to the campaign by the presence of Serbians, Greeks and Italians in the Army of the Orient, all anxious to register a national success against the enemy.

The policy of the British advance into Palestine is sufficiently understood to prevent the absence of news from this theatre from evoking surprise. Behind the strong front with which the Turks show little inclination to try conclusions, the work of consolidating the ground gained, by the extension of the railway, by the construction of roads, and by a multiplicity of other means, proceeds, we may be sure, apace. From this steady and sure plan of campaign General Dobell is not to be enticed, until the moment of his own choice for the next advance has come. In the meantime the Turks are not allowed too much respite. Patrols and mounted troops, it is announced, are harrying the enemy at Gaza, taking prisoners almost daily. In minor encounters during April over four hundred prisoners were brought in.

A full and true account of Germany's relations with Turkey during this war would make interesting reading, and the dossier against the former Power will never be complete without it. As is known, the Ottoman Government insisted upon the abolition of the Capitulations as part of the price to be paid for its military help. Germany seems to have agreed with alacrity, but the process of drafting treaties between the two countries to take the place of the Capitulations has proved a slow and thorny one. There can be little doubt that the Turks were by no means eager to have any binding agreements in lieu of the Capitulations. In the heyday of their new liberty one of their first enactments was to make Turkish the obligatory language of the country. Germany was forced to intervene, and has secured a postponement and some modification of this unwelcome measure.

The new treaties have taken a whole year to negotiate. In introducing them to the Reichstag for its approval the German Foreign Secretary was at pains to show that due care had been taken to protect Germany's interests. The statement that " Turkey no more than Germany went to war to conquer foreign countries, or politically or economically to overthrow her neighbours, but solely to be able to live freely and securely with other people " will, no doubt, have impressed Herr Zimmermann's audience, unless they happened to recall the Entente's offer to guarantee Turkey her integrity in return for her neutrality. The abolition of the Capitulations " was for Turkey the chief, perhaps the sole, war aim," but it could not stand by itself. The Capitulations had to be replaced by new treaties which will carefully take into account the conditions existing, no matter how much they differ from past conditions, " so as to leave as little room as possible for misunderstanding and arbitrary action." The German Government, the Foreign Secretary added, believes that this task is fulfilled by these treaties. If the existing conditions to be perpetuated by the new agreements include the presence of German assessors in every Government department in Turkey and the maintenance of Turco-German authority by the presence of German troops in the Turkish capital the Turks might find that the little finger of Germany was thicker than the loin of the old European Concert.

Roumania has shared with the rest of the Eastern front a long period of comparative quiet. The special considerations which are helping to deter the Germans from attacking the Russians are wanting in the case of the Roumanians; but weather conditions and preoccupations elsewhere have postponed a vigorous campaign for the time being. On the other hand, nothing more has been heard of the withdrawal which the enemy was reported to be contemplating. Confident in the protection which their own army and its substantial Russian supports afford them, the Roumanian people are now directing their attention to problems of domestic reform. This week Parliament is to meet at Jassy to vote the principles of the reform of the Constitution. The two chief measures concern the electoral system and land tenure. Under the existing franchise voters are divided into several electoral colleges, and the restricted landed class have an undue share of political power. This method is to be replaced by direct and equal universal suffrage with secret voting and proportional representation. Moreover, the pernicious " spoils " system is to be abolished; all State officials, all officials of departments and of communes are to be entirely independent of the Government, and their nomination and promotion free from party influence.

The proposed agrarian reform in Roumania contemplates the placing of 920,000 acres of cultivable land at the disposal of the peasant owners. At the time of the agrarian riots in 1907, when nearly five-sixths of the population of a little over six millions derived their livelihood from the land, it was found that only one-sixth of the total number of peasants could be regarded as leading an independent existence. The remainder were wholly or in part bound as serfs to the land they cultivated. Certain improvements have been introduced since then; but the need for a far-reaching policy of land purchase was recognised by the Liberal Party before the outbreak of the European war. The scheme which it is expected the Jassy Parliament will endorse will increase the peasants' holding of land to 85 per cent. of the whole area of cultivable land, or approximately to the percentage that they themselves are of the total population of the country. Roumania in the years to come can hardly fail to benefit by this bold stroke. The two reforms are a fitting preparation for the part she can fill in a Balkan confederation, when all existing difficulties arising from racial antagonisms are overcome.

The House of Commons pacifists who sought last Wednesday to put a spoke in their country's wheel by opening the way for misunderstanding among the Allies have unwittingly rendered the Alliance a good service. Any statement that clears the international position of ambiguities is to be welcomed at this stage. Lord Robert Cecil's speech went far in this direction, as it wrung from the pacifists the unwilling admission that there was nothing in the Allies' Note to President Wilson to which exception could be taken, when critically examined in the light of facts. The vague demand of the Russian Socialists for " no annexation " cannot be discussed, until it is brought up in connection with concrete proposals. The pacifists' strongest case has regard to Turkey, but Lord Robert Cecil's statement that he did not think there was any ground for saying there was any substantial difference of opinion between those who had spoken on the subject in the House does not seem to have been challenged.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 23.

Two Police Cause Celebres.

For some little time the public has been watching with great interest an official inquiry which has been conducted in the province of Behera by representatives of the Ministers of the Interior and Justice. The object of the inquiry has been to investigate certain charges of cruelty that had been brought against the local police. It appears that three murders took place in the district of Teh-el-Baroud, and that, as they could not find the culprits, the police proceeded to obtain evidence in the fashion which was current before the British Occupation, but which is no longer tolerated in this country. They ordered all the suspects in the district to be rounded up, and, after flogging and bastinadoing them wholesale, they had them deported on foot to other parts of the province, where they were again flogged and had to submit to more cruelty and all manner of indignities, such as, among other things, wearing "yashmaks" and being made to beat their faces after the manner of women, the while the officers and people stood by and jeered at them. What aggravated the case was the fact that the responsible officials declared that they were acting for the protection of military interests, whereas the military authorities had nothing whatever to do with the murders, or even with the district in question. The inquiry has now been terminated, and the Commandant of Police of the province and district and police officers of Teh-el-Baroud have been suspended, and are to be brought before the next assizes at Alexandria on a charge of abuse of their powers and cruelty in the exercise of their duties. It is highly probable that a complete reorganisation of the higher personnel of the Mudiria will be carried out as a result of this inquiry. It would certainly appear to be necessary.

The inquiry into what is known as the "Philippides Case," of which I gave you some particulars a few weeks ago, has been terminated, and the report has now been drafted and submitted to the authorities. It is understood that Philippides Bey will be sent before the June Cairo Assizes. His wife has now been arrested on a similar charge to that preferred against Philippides Bey himself.

Sudan Officials in Cairo.

Colonel E. E. Bernard, Financial Secretary, and Mr. E. Bonham-Carter, Legal Secretary, have arrived in Cairo from Khartoum. Their visit relates to the usual current matters which have to be dealt with in Cairo at this period of the year, but it is understood that advantage will be taken of their presence to discuss the possibility of undertaking further work in connection with the irrigation projects in the Upper Nile. Even if it is decided to push on the work more energetically, there will always be the difficulty of getting the requisite material, a difficulty which will exist so long as the war lasts, and even, it is to be feared, for some time after peace has been declared. In view, however, of the vital importance, from both the Egyptian and the Sudan standpoint, of the early execution of this work, as pointed out in the Public Works and Finance Reports recently published, it is to be hoped that some arrangement in this direction will be found possible. I have reason to believe that a very serious effort is about to be made to come to some such arrangement, and that in all probability negotiations to that end will shortly be opened up at home.

The Hellenic Colony.

The "commissions" authorising the special courts for the Venizelists have not yet been published by the local British authorities, and the situation in this respect remains unchanged. Beyond recording their adherence to the Provisional Government, it must be admitted that the local Venizelists are not showing much desire further to render active assistance to the cause. General Lapathiotis, who has been in Egypt during the past three months to reorganise and stimulate the recruiting movement, has been busy addressing meetings and trying to awaken the local Hellenic youth from its apathy, but his energetic efforts and those of his fellow-workers have by no means met with encouraging results. The recruiting movement has, indeed, made remarkably little progress, and but a small percentage of the military-age Greeks have signed on, whilst, as a recent circular from the Venizelist authorities attests, some of those who in the first enthusiasm signified their desire to join the colours have since paid no attention to the summons to report themselves or take the oath. It is a most deplorable state of affairs, and the General is frankly disappointed at the unpatriotic and selfish attitude of his local compatriots, whose keenness evidently wears off so soon as they find that something more than shouting is expected of them. If the British Government would only consent to a general call to arms being made in Egypt by the Salonika Government the ranks of the Army of National Defence would be very considerably reinforced. There are, of course, difficulties in the way at the present moment, but they could no doubt be smoothed over. At any rate, compulsory service is the only solution for the present state of affairs in the Hellenic Colony of Egypt.

Social Work in Cairo.

As those who know them quite expected, Sir Reginald and Lady Wingate are taking very active interest in the social work that is being conducted out here, and scarce a week passes that they do not visit one of the local institutions or attend meetings. By their kind permission the annual meeting of the local Y.W.C.A. was held at the Residency last week, when there was a very good attendance of workers and of those interested in the object. Chaplain the Rev. C. T. Horan was in the chair. The report of the year's administration showed that the association had done excellent work in connection with the large number of V.A.D.s, nurses, and other women-workers who had come to Cairo, and that there was a small credit balance in hand. There is a sum of £E6,000 still due on the purchase money of the new premises, which had had to be acquired to enable the great demand for accommodation now made on the association to be met, and it is hoped that this will soon be paid off, if possible in the course of the current year. It was decided to ask H.R.H. Princess Patricia to fill the place of patroness, which had been held by the late Duchess of Connaught, who had always taken the liveliest interest in the association, and had, indeed, given her name to its building. Very great regret was expressed at the departure of their lady patroness, Lady McMahon, whose place Lady Wingate had graciously consented to take. At the close of the meeting her ladyship addressed a few words to those present, and invited them to take tea and visit the Residency gardens.

THE CAPITULATIONS IN TURKEY.

Under date of May 10, Reuter's Amsterdam correspondent telegraphs:—According to a Berlin telegram, during the discussion in the Reichstag on the ten law treaties with Turkey the Foreign Secretary, Herr Zimmerman, dwelt on the great political importance of these treaties, which are destined to replace the system of Capitulations. The German Government, from the standpoint of international law, he said, could not consider a unilateral abolition of the Capitulations as effective, because the rights of Germans were secured by treaties. Germany, however, recognised that freedom from the chains of Capitulations was for Turkey the chief, perhaps the sole, war aim, because Turkey no more than Germany went to war to conquer foreign countries, or politically and economically to overthrow her neighbours, but solely to be able to live freely and securely with other people. She therefore needed a state of law no longer enabling political agents of predatory Powers, under the cover of the Capitulations, to incite whole provinces in Turkey to revolt and work for the disruption of the Ottoman Empire.

Germany will help Turkey as much as she can to attain this war aim, and it is also in her own interest to do so because Germany of all the Powers, for political and economic reasons, must attach the greatest value to Turkey's independent and strong development. The abolition of the Capitulations is not sufficient. They must be replaced by new ones, which will carefully take into account the conditions existing, no matter how much they differ from them, so as to leave as little room as possible for misunderstanding and arbitrary action. The Government believes this task is fulfilled by these treaties. The Reichstag has adopted all three readings of the measure ratifying the legal treaties with Turkey, which are to replace the system of Capitulations.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, April 21.

Tour of the Governor-General.

General Stack, C.M.G., left Khartoum on the night of April 13 by special train for the South. He was accompanied by Major Pattisson, A.A.G., Captain Willis, the Assistant Director of Intelligence, and Mr. Howell, the assistant private secretary, and M. A. Hilmi Leff, Abdalla Abu Sin, the A.D.C. The Hon. C. C. Pelham, assistant traffic manager of the railways, accompanied the train in his saloon.

The train proceeded as far as Tayeba, where it stayed till the morning, when the Governor-General went all over the estate by motor-car, and then drove on to Wad Medani for breakfast. At ten o'clock there was a levée at the *Mudiria*, at which the local notables were presented to His Excellency, and some of them received presents from him. In the afternoon a visit was paid to Barakat by motor. In the evening the Governor, Mr. Iles, entertained His Excellency to dinner.

Canal Works at Makwar.

During the night the train proceeded to Sennar and thence to Makwar, where the excavation of the canal is being begun and the proposed dam is in course of construction. His Excellency started one of the new excavators and watched it working for a while, and then inspected the offices. Mr. Pizzigalli, the contractor, was presented to His Excellency and congratulated on his plant. On returning to the train the Governor-General continued his journey to Sennar, where he was met by the Governor of the Province, Major Cameron, and the inspector, Mr. Hussey. A levée was held here, at which all the local notables were presented to the Governor-General.

The journey was continued that evening to Kosti, where after a brief stop the train was coupled to a new train and went on to Um Ruaba, where Captain Gibson met it with a large number of his people. After a short stay the progress was carried on to Rahad, where General Stack inspected the motor-car plant that had been employed on the Darfur expedition, being met by Captain Claxton and Mr. Smith, of the Public Works Department. Thence the train went on to El Obeid, which was reached at about half-past four.

At El Obeid.

The Governor of Kordofan, Mr. Sagar, met the train, and a guard of honour was drawn up outside the station, and a number of prominent natives were introduced to His Excellency, who, after inspecting the guard, rode round the town, which had been decorated for the occasion. He visited the school, where the pupils sang a special poem in honour of the day, and complimented the headmaster on the excellent state of the school. He then went to the Governor's house, where he was staying.

In the morning there was an inspection of the garrison, and after breakfast a levée. A number of natives were given presents. In the afternoon three motor-cars were requisitioned to go along a part of the road to Nahud, to show the kind of difficulties involved in motor transport in this country. They proceeded some seventeen miles along the road and returned at sunset. In the evening His Excellency and his staff were entertained by the El Obeid Mess at dinner.

The morning of the 18th was begun by the inspection of the hospital. After breakfast preparations for departure were seen to be in progress. A guard of honour paraded, and the chief officials and notables came to say good-bye to His Excellency, and the train started on its homeward journey at 10.30 a.m. Kosti was reached shortly after 9 p.m., and there Mrs. Stack had arrived with Mrs. Burges and Captain Chester Master, the A.D.C., on the Sudan Government steamer Gedid. A transfer was made to the boat for an early start next day.

Inspection at Dueim.

On the morning of the 19th His Excellency and Staff disembarked at Goz Abu Guma, accompanied by Mr. Struvé, the Governor of the White Nile Province, Mr. Burgess, the Inspector of the district, and Mr. Munro, the Inspector of Kosti. After meeting a number of the notables and seeing the buildings of the district headquarters, all re-embarked and returned to Kosti, where there was a further inspection. In the afternoon a call was made at Kawa for a similar purpose, and the journey continued to the vicinity of Dueim, the headquarters of the province. The Governor-General landed early on the 20th, and rode round the town, calling at the school and mosque, the prison and the hospital, and a short levée was held in the *Mudiria*.

The steamer got under way again soon after nine o'clock, and steamed down stream to Geteina. Here Mr. Ball, the Inspector, met the boat and showed His Excellency round the "markaz." One of the features of this visit was a charge by some 200 horsemen, who drew up within a few feet of the party. It was interesting to observe that some of the horses were caparisoned with armour and quilted hangings with brightly coloured ornamentation, making a very striking appearance. From Kawa the journey continued with a short stop during the night, and Khartoum was reached on the morning of the 21st, thus ending a most interesting though somewhat exhausting tour.

CYPRUS NOTES.

(From a Correspondent.)

The Legislative Council.

As the session approaches, the elected Greek members are exhorted by the Press not to relax their efforts to bring about a forward movement. It is the old story of political agitation. Leading articles in the Greek papers are just what one would expect in present circumstances. Now, they argue, is the opportunity—such as perhaps never occurred before and may not arrive again—for united action by leaders in Church and Council. The new political situation which finds the troops of M. Venizelos fighting side by side with those of the Entente is one that fulfils the conditions on which Great Britain offered Cyprus to Greece. Let, then, our Councillors lose no time, but lay before his Majesty the King and the liberty-loving British people their earnest petition that the offer may be renewed and carried into execution. The circumstances are favourable. Any difference regarding local matters which may divide the community must be put aside, and everything must be subordinated to the one great aim of union. At the same time, it is urged, there is no valid reason why, on account of the war, the time of the Council should be devoted solely to the passing of the annual estimates. On the contrary, Cyprus is happily unaffected by the war, and there is ample time and reason for dealing with various matters of urgency. One is that of educational reform, which is overdue and is being shelved. The system, *e.g.*, under which excessive school fees are levied on the people is burdensome, while the teachers are, having regard to present prices, paid only starvation salaries. Another matter of urgency is that, in view of a probable shortage of wheat, Government should provide for the purchase of sufficient grain to carry the people through the coming crisis.

Bread Complaints.

At Nicosia the public has had reason to complain of the quality of the mixed wheat and flour bread. Bakers have disregarded warnings given to them; the Commissioner has therefore withdrawn from two bakers the permits which enabled them to obtain wheat and barley from the Government stores, and the others have been cautioned that, should further complaints be proved, offenders will be similarly treated.

The Greek Easter.

The festival has been celebrated with considerable animation throughout the island. At Limassol the athletic sports extended over four days. The Commissioner, Major Bolton, and Canon Newham were present at some of the meetings. Boys from the English School at Nicosia competed and won prizes as well as the football match. On the last day the Archbishop was present and distributed the prizes. Several dances were given by the leading Greek clubs, and there were other entertainments. At Larnaca, Papho, and other towns there were various entertainments.

General News.

By an order of the High Commissioner in the Official Gazette, District Commissioners are empowered to grant permits to farmers, up to May 31, to shoot jackdaws, flocks of which birds commit great depredations annually in the growing cereal crops.

The new Bishop of Salamis, Nicodemus, has been presented to the High Commissioner at Government House by the Archbishop Cyril.

Unhappily the drought has continued, and agriculturists are beginning to despair of a good cereal harvest.

THE STATE OF SYRIA.

(From a Correspondent.)

Cairo, April 24.

With the entry of the United States into the war, the last but one channel of communication with Turkey has been closed. Even the last remaining route, viâ Switzerland, is practically shut, as few if any letters have lately been coming thereby, and the only means of getting any news of Syria—apart from that occasionally furnished by rare fugitives and war prisoners—is through the State-controlled Syrian papers, copies of which still find their way here. Strictly censored as are these papers, they yet give some inkling of the state of the country, even the official notices and *communiqués* being of use in this way. Thus, the paper *Sharq* (East), which is published in Damascus, contains in its issue of February 22 last the following announcement:—"The Court-martial at Damascus warns the persons whose names follow hereafter [They number eleven, and one of them is a sheikh (mayor) of a village] to appear before the said Court-martial within ten days of the present date, as they are accused of complicity in the Hauran rebellion. In case they fail to present themselves within the period fixed, they will be judged by default, and the Government will confiscate their property." This may be taken as a conclusive proof of the existence of rebellion in the Hauran.

The severity of the mobilisation measures taken by the Turkish Government is revealed in the following notice published by the Government in the issue of the above-mentioned paper for February 10:—"All classes from the year 1295 to 1314, who have been exempted from military service by the payment of the exoneration tax, have to present themselves at the recruiting office within the next ten days. Anyone acquainted with this notice who does not present himself within the stipulated period will be condemned to death by execution."

Again, the following notice, published on March 8 in the official journal *Beyrout*, betrays the Government's growing need of both foodstuffs and beasts of burden, and the means to which it resorts to dispossess the people of what little is yet left with them:—"All those who have been exempted from military service by the payment of the exoneration tax may be exempted for another year if they offer, within one month from this date, to the military authorities either of the following articles:—4,000 kilogrammes of wheat, 4,550 kilogrammes of barley, 4,000 kilogrammes of potatoes, 5,150 kilogrammes of lentils, 3,200 kilogrammes of dry peas, 3,320 kilogrammes of burghul (crushed wheat), 4,300 kilogrammes of durrha, 8,000 kilogrammes of berseem."

Everyone is aware of the great need in which the Ottoman Government stands of foodstuffs and beasts of burden, and it behoves all those who had not been sufficiently acquainted with this to take cognisance of the following notice, which appeared in the issue of *Al Belagh* published in Beyrout on February 10:—"All persons owning horses and mules have to bring the same over, before to-morrow evening, to the Transport Committee, who will buy them. Defaulters will be liable to the severest punishment."

It is not difficult to assign the reasons for which the owners feel a strong disinclination to sell their animals to the Government, as the latter pays in paper money which has to be accepted at its face value, although, in point of fact, it can be discounted only at a very heavy loss. It is highly significant that, in spite of the passing of a law imposing the death penalty on those who refuse to deal in these Government notes at their face value, the depreciation has been very considerable and continuous. Nothing indicates more clearly the serious condition of the Turkish Government's credit than the statement made by the Finance Minister in the Mejliss, and published in the *Lloyd Ottoman* of February 13, to the effect that he was astonished to learn of the depreciation of the Government notes, a fact which he ascribed to the ignorance of the people, and as being all the more regrettable as it entails unnecessary loss to them. The Minister added: "It behoves us, under these circumstances, to exercise the utmost efforts with a view to enlighten the people as to the solid guarantees on which this paper issue rests, and then the people will realise that no difference can exist between a one-pound note and its equivalent in gold." But the population possesses more shrewdness than this wily Minister credits it with; for if these guarantees were as solid as he would have them believe, why does the Government insist on the payment of the exoneration tax in gold?

Resolutions renouncing allegiance to the dynasty of King Constantine, and adhering to the Government of M. Venizelos, have been passed in Skopelos and Halonesus, two islands of the Northern Sporades.

REMAINS OF ARAB ART IN EGYPT.

By JOSEPH OFFORD.

The "Committee for the Preservation of Monuments of Arab Art in Egypt" has recently presented its report for 1915. This contains the first record of its work since the resignation of Herz Pasha in 1914. The most important work carried out was that of restoring to the perpendicular the leaning columns in the Kalaun Mosque, and these operations and their successful achievement are illustrated by some thirty-four excellent heliogravures. An old Arabic inscription upon the minaret explains that thirty years after the edifice was erected an earthquake shock greatly injured it, causing the supporting pillars and the arches on their summits to lean over, and the first minaret to fall. The straightening of the columns was a difficult affair, because the committee desired to avoid cracking and mutilating the stuccoed decorations upon the walls above the arcades. Therefore, all the arches were supported at a height of about ten metres from the floor. Then the columns were carefully removed, while stronger foundations for each were provided, and they were then replaced, upright and true. Another valuable restoration was the readjustment to vertical of the façade of the Mosque of Kait Bey-es-Seifi Emir Achor. This had become more than forty centimetres out of perpendicular. Minor repairs and adjustments were carried out at other mosques, but much intended work had to be postponed.

The ancient domestic architecture of Cairo was not neglected. One of the houses that had been selected for preservation as a specimen was the old mansion of Ibrahim Khatkhoda Es-Sennari. This was repaired and put in better condition generally, to the delight of our French friends, because it was the residence, in the time of the first Napoleon, of the savants of the French expedition, and there they compiled the voluminous sketches and notes, afterwards expanded into the great work, "La Description de l'Egypte." Photographs of the most interesting features of the building are given, including the marvellous mushrabia work upon the interior balcony.

Some urgent repairs were executed at the Tombs of the Khalifs, and also to a few Coptic churches, especially to the chancel of Anba Chenouba.

The Museum administration now forms a separate department, and the report of its acquisitions and doings is from the hand of M. Ali Bahgat Bey. Although the museum is a good-sized fine modern building, placed at a corner site of the Sharia Mehemet Ali, it proves already to be of insufficient dimensions to contain any large architectural specimens, because already crowded with smaller antiquities. Therefore, the larger pieces are still preserved, or rather stored, in the courtyard of the El Hakim Mosque.

From 1893 to 1904 some two hundred objects were annually added to the museum, mostly derived from partly ruined mosques, or found neglected in various places. But the new collections from such sources gradually dwindled; and so in the ten more prosperous years before the war many antiquities were acquired by purchase. Once the handsome new building was inaugurated, many gifts were also received, but no donations were of more value and beauty than the series of lamps and enamelled glass bottles recently given by H.H. Prince Yussuf Kamel. One of the specimens of glass originally belonged to Saleh-ed-Din Daoud, Sultan of Damascus, early in the thirteenth century, and is the most ancient perfect piece of Arabic glassware that can be dated that is known. Of late years the purchases have been chiefly of carpets and arms and armour, the price of the various objects of metal work having become excessive. About seven years ago the authorities commenced to have recourse to excavations in a small way, but during the last three years they have been carried out on a large scale near Old Cairo, on the site of Fostat, with most excellent results. The chief fruits of this exploration will appear in subsequent reports, but in the one at present being summarised mention is made of the immense number of fragments of pottery with fine enamelling, also of enamelled glass and plaster and stucco fragments from Saracenic buildings, also gold coins and jewellery. The manuscripts—all, unfortunately, mutilated—from the twelfth to the fifteenth century are very numerous. We hope that the administration will make special efforts to prove that although German officials and excavators are no longer in Egypt, yet the search for, and due display of, the antiquities of the country will proceed as actively as ever.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE PROFESSOR OF HISTORY, ROBERT COLLEGE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In to-day's copy of THE NEAR EAST, under the heading "Near East Bookshelf," I see in a review by "E. L." of Professor Gibbons's new book, "The New Map of Africa," that "E. L." describes Mr. Gibbons as "an American citizen who for some years has been Professor of History at Robert College, Constantinople."

"E. L." is mistaken in his facts, as who should know better than myself? I am the widow of the late Professor Alexander van Millingen, D.D., who, up to the time we were obliged to leave Turkey in January, 1915, had been Professor of History at Robert College for thirty-eight years.

Mr. Gibbons took my husband's place *pro tem.* in 1909 or 1910, whilst my husband was away on a year's leave, and he remained on as *Assistant* Professor of History for a couple of years after my husband's return. For the last four or five years he has been living in Paris and in America. His place as *Assistant* Professor was taken in 1913 by Dr. Edgar Fisher, but I have not heard that a successor to my husband as Professor of History has been appointed. In any case, Mr. Gibbons is *not* Professor of History at Robert College. I may add that he was a friend and admirer of my husband, and he and Mrs. Gibbons are both friends of mine.—I am, etc.,

HOPE VAN MILLINGEN.

The Avenue Hotel,
Portishead, Somerset,
May 11, 1917.

[We are grateful to our correspondent for calling attention to the point referred to; but in fairness to our reviewer it is but right to add that on the wrapper of "The New Map of Africa," Mr. Herbert Adams Gibbons is described as "Professor of History at Robert College, Constantinople."—ED.]

THE RIGHT METHOD WITH BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondent Mr. A. H. E. Taylor would carry more weight if he cast fewer aspersions. Upon what grounds is Mr. Woods held up to reprobation as a secret enemy of the Serb? Why am I assumed to be an "admirer" of Tsar Ferdinand? The man is astute, able and experienced; his record from the 'eighties until 1912 is before us; we have wanted his alliance pretty badly, and should be glad to secure it now. To fight him seems a deplorable necessity, but one need not deny him such merits as he possesses. Is patriotism incompatible with truth?

Again, nobody wants to "sell" the Serbs. That little people has suffered, and is still suffering horribly; its well-wishers should welcome any reasonable plan for its redemption. Timely concessions to Bulgaria in 1914-1915 might have secured its southern flank, even if they failed in gaining an ally. If the creation of a Greater Serbia can be accelerated by yielding to Sofia part of the "Contested Zone," wisdom bids concede it. My letter expressly reserved the future of Monastir. The town has changed masters four times in five years. There is some reason to believe Bulgaria ready to bow to the fortune of war since her recent loss of it.

Mr. Woods is well able to speak for himself, but personally I give him credit for the spirit with which I am animated—anxiety to assist the Entente—Serbia included—by eliminating Bulgaria from the ranks of our foes. We have high warrant for agreeing with our enemy while we are in the way with him (though for the moment he seems in *our* way). The future security of the Levant depends upon the reconstitution of the Balkan League with Customs and Postal Union, arbitration clauses, and, if possible, a central Senate. Something of the sort seemed within sight in 1912; whether its consummation is possible to-day depends upon concessions all round. One thing is certain—a continuation of this fratricidal war between peoples—Serb and Bulgar—of identical creed and mutually intelligible speech, is an evil preparation for future concord. It can but end in general exhaustion, permanent embitterment, and a dismal heritage of hate. Whatever Power stands to gain by the continuance of this struggle in the Near East, Serbia is quite obviously in a bad way, and is unlikely to be a gainer by more fighting.

We shall all agree that there are degrees of turpitude among our enemies; that whilst the Prussian and the Turk have roused the races of five continents to resistance *à outrance*, the Magyar, the Saxon, the Tiroler and the Bulgar excite our pity rather than our hatred. We feel we could, and we hope we shall, resume relations with these, and with some others; we would willingly see them again in friendly cohabitation of the European family house. We do not propose to exterminate or enslave them, or to subjugate or partition them. I venture to suggest that it is with these peoples, and certain others, that Strategic Diplomacy (Mr. Woods' phrase) should concern itself. Let us begin with the Bulgars.—I am, etc.,

H. M. WALLIS.

Reading, May 14, 1917.

TANGIER TO TEHERAN.

Two days ago a former resident in Constantinople was giving me his views of the situation in Russia, which, he said, strongly reminded him of conditions in the Turkish capital after the Young Turks' Revolution. "Then," said he, "everyone was mad for 'liberty'—for himself; and the result was, of course, not liberty but licence. I remember asking a cabman what he would drive me to a certain point for. He demanded half a lira. I pointed out that the correct fare was a beshlik. 'Ah,' he retorted, 'but now we have Liberty!' And if a policeman asked a cab-driver why he had only one lamp alight—or perhaps none—he was sure to be told much the same thing. Glorious 'Liberty'! Eventually the Government had to issue an official statement pointing out what true Liberty was—and what it was not. This was printed in Turkish, Greek, Armenian, and so on; and I have a copy somewhere." I wonder whether Russia will have to borrow a leaf from Turkey's book. Certainly her extremists appear to be in need of some elementary instruction.

***

The House of Commons is truly a remarkable institution. It seems to me that the thirst for information displayed by certain members is equalled only by their desire to give information, or to convey an impression—very commonly a wrong one—when putting their questions; and one wonders why, having so much to give, they find it necessary to ask at all. In this connection the solicitude displayed by certain Irish members for Egyptian "nationalism" is, or used to be, quite touching. One notorious member used to fire off more than a dozen questions a day on this subject, and I remember a friend calling my attention to the fact that his queries and the replies given to them occupied several pages of the official Parliamentary Reports, at a time when we were being implored to economise in our use of paper. Such things cannot be helped, I suppose; but they hardly serve to enhance the prestige of Parliament.

***

Now I observe a tendency on the part of another Irish member to weary the House, the public, and the world at large by suggesting—in the form of a question, nine times out of ten—that King Constantine has been "protected" by his "Royal relations," and that as a result the Allies' whole Balkan campaign has been imperilled. Recently Lord Robert Cecil informed this persistent person that the imputation contained in his question was quite untrue, and added that in his (Lord Robert's) judgment it was "very cowardly." The questioner, unabashed, replied that he could afford to ignore that charge, or words to that effect. But is he quite the best judge on that subject? At any rate, I notice that Lord Robert's snub drew cheers from the House. After all, if the Commons are to discuss the affairs of the Near East they are entitled to ask that criticism of the Allies' policy and actions shall at least be well informed; and that is just what the Irish member's is not.

***

The Turks are, and have been for some time, distinctly "nervy," and nowhere does their jumpiness show itself more clearly than in Syria and Palestine. *El Kowkab* has recently been publishing some tales of the Turkish Army, told by an Arab officer, and these illustrate the Turkish state of mind very vividly. Thus, we are told that a French cruiser made prisoners of three boatmen who had been going from Haifa to Acre, but that they were subsequently set at liberty and provided with a letter to the Commandant at Haifa, stating that they had been made prisoners under suspicion of conveying supplies to the army, but were given their freedom because this was found not to be the case.

Digitized by Google

The unlucky boatmen were promptly clapped into gaol by the Commandant, pending inquiries. Then the German consul took a hand in the game, and the result was that the trio were sent on to Damascus and there—executed. Surely a case of "nerves" on the part of the Turkish authorities!

***

A similar case, but even worse in its sheer stupidity, is put on record by the same writer. Two soldiers were captured by our forces at the fighting at Maghdaba, but after a few hours they succeeded in making their escape and eventually returned to their camp. Their enterprise and fidelity were instantly rewarded, for they were hanged on the spot, as being "spies" in the employ of the British. After this one is hardly surprised to find that the Turks, having forced women to work, unpaid, at the construction of trenches and so forth at certain desert posts, have been showing extraordinary brutality to these poor slaves, and have treated runaways with the greatest savagery. Having cast Islam from them, the "Turanians," it seems, now consider themselves free to ignore entirely all claims of decency. And their "nerviness" does the rest.

***

I have seen references in the *Busreh Times* to football matches—even, I think, to a football tournament—and to cricket matches; but I do not remember seeing any mention of a local gymkhana meeting. Yet one feels almost certain that, with so many keen sportsmen assembled in the one spot, and with other facilities for the gratification of the sporting instinct, there must have been something of the kind. Be that as it may, I observe that at the Barrackpore Gymkhana meeting one of the events was styled "The Busreh Plate," and another "The Baghdad Plate," the former a race over four furlongs, the latter over 3½ furlongs. The short, sharp affair is presumably a compliment to General Maude's swift advance from Kut to the City of the Khalifs.

***

Beyrout was recently favoured by the arrival of a special Turkish mission, composed of some four dozen women teachers and headed by the learned Khalidat Edib. The object of this mission, I am informed by a friend, who has learned the news from *Al Moustakbal*, is to establish girls' schools and orphanages in Syria and the Lebanon. The need for orphanages I can readily understand, in view of Turkey's treatment of the unhappy Syrians of late. But why on earth should the extraordinary Young Turks worry about schools in Syria just now? Are Constantinople and Brusa so overstocked with such things? And is the Turkish Treasury so full that outlets must be found for the surplus wealth? Or can it be the outcome of genuine womanly pity for the sufferings of the Syrians, expressing itself in characteristically roundabout Oriental fashion? Or, finally, is it prompted by genuine enthusiasm for educational reform and progress? My friend thinks this possible; "for," says he, "educated Turkish women are seekers after wisdom, whereas their men, in a general way, are not."

CORSAIR.

GREECE AND THE FIGHT FOR FREEDOM.

At the Newspaper Press Fund anniversary dinner at the Mansion House last Saturday, M. Gennadius replied to the toast "The Visitors," proposed by Sir Edward Russell. M. Gennadius said that he represented in a diplomatic capacity Britain's friend and ally M. Venizelos. Amid great difficulties and unfair and bitter opposition M. Venizelos had striven from the beginning to carry out the only policy which the honour and dignity of Greece required that she should pursue. He regarded it as the destiny of Greece that she should fight side by side with the Powers who all along had been her friends, and who were fighting for nothing less than freedom and civilisation in the world. Quite 45,000 Greek troops, organised by M. Venizelos, were now at the front, and within a few weeks they were confident that the number would be raised to close on 100,000. Greece and the other small nationalities looked to Britain and her powerful Allies for the triumph of freedom over serfdom, and of humanity over barbarous brutality.

THE POPULATION OF EGYPT.

Under date of May 11, the Cairo correspondent of *The Times* reports: Mr. J. I. Craig, Controller of Egyptian State statistics, publishes the provisional returns of the decennial census taken on March 6. The total population is 12,566,000, against 11,143,000 in 1907, or an increase of 12.7 per cent. The figures do not include the Bedouin inhabitants of the desert, now in the Western Directorate, or civilians, etc., in the military zone, but they suffice to indicate the nature of the increase in the population. The most marked increase is in the large towns. Cairo has a population of 785,000. It is noticeable that the population has grown rapidly in districts where irrigation has most extended since 1907; also migration into the towns from the country has begun on a considerable scale. In view of Egypt's dependence on agriculture this feature merits the careful attention of the authorities.

NEAR EAST BOOKSHELF.

LORD KITCHENER.*

This book, the latest about Lord Kitchener, has wisely, we think, delayed its appearance until after the first rush of popular biographies. Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, from India; closing with his fine, measured utterances as Secretary of State for War. The force and majesty, the stern, unbending strength, the unsuspected simplicity and sensitiveness of "the greatest personality of our day" (the phrase is General Ivanov's) strike us afresh as we read, for the mighty personality of the man rises up before us, magnificently justified by his words to his own generation, as he will be to the end of history by his achievements.

Lord Kitchener's genius as a statesman was greatly subordinated to the demands of the profession he loved, but the combination of soldier and statesman, though not uncommon, is seldom united in such strength as it was in him. His handling of South Africa after conquest, of the Fashoda incident, of the various Eastern peoples he had to deal with, of the thorny Labour problems that confronted him latterly at home, were inspired by statesmanship of no mean degree, by a delicacy of understanding and a sincerity and sympathy as admirable as they are rare. To-day we are reaping the good seed that he sowed.

It is only possible to glance at the wide field indicated by this book, but we refer readers to the statesmanlike presentation of the Cyprus question by the young lieutenant of twenty-nine; to the comprehensive Memorandum on the Administration of the Vilayet of Kastamuni, with its stern indictment of Turkish misrule; to the vivid little picture of the Bulgarians at close quarters—"Our impression of the Bulgarians was not favourable. They seem to be a most despicable race. Morally they appear to be at the lowest ebb"; to what is herein well termed the "Magna Charta of the Sudan"; to his speech at Johannesburg, with its tribute to the Boers' fighting qualities, paid by a soldier to soldiers; to the exhaustive Memoranda on the Organisation of the Army in India, and the Defence of Australia. To read these attentively is to acquire some idea of the magnitude of the problems he was called on to tackle.

We hear sometimes that Lord Kitchener was not always generous to his colleagues and subordinates. Was it not rather that his own standard was so high, and so loyally adhered to, that he could not tolerate anyone who did *less* than his or her best? His praise, when he gave it, was frank and generous—all the more valued for being somewhat rare. His absolute straightness of purpose and of speech commended him, curiously enough, to the poles of humanity—Easterns and our own Labour element at home. It pierced the finesse of the one and the obstinacy of the other, and found its way straight to the heart of each. The East trusted him implicitly; and as to Labour, surely one of Lord Kitchener's happiest victories was that won at the meeting of June 2, 1915, which opened with criticism and closed with a vote of thanks from Mr. Will Crooks. We all allowed his greatness, but his sensitiveness we overlooked, because he never stooped to "clear" himself nor explain his motives to the herd. But he was keenly alive to unjust criticism; he welcomed approbation with simplicity, while never courting it, and his outward impassivity to both stung petty souls into making bitter attacks on him, which many people thought had no power to wound. There is sadness for us now in Lord Desborough's little story of him, recounted here: "I hope the Army does not think I have let them down." The Army certainly never misunderstood him.

We have left ourselves no space wherein to speak of the book itself—which is the best compliment we could pay the writers on their presentation of Lord Kitchener. They have given us a delightful and a valuable book, which no student of Lord Kitchener's life can afford to overlook: one which should be in every library, and certainly in every school library. Though a wholesome strain of hero-worship runs right through, we are all the while aware that the object is not to air the writers' views, but to give an honest representation of one to whom the fine words of Sir Thomas Browne very fittingly apply:—

"Bright thoughts, clear deeds, constancy, fidelity, and generous honesty are the gems of noble minds; wherein (to derogate from none) the true heroic English gentleman hath no peer."

The Dardanelles Commission sat on Monday at the House of Lords.

M. Venizelos has consented to lend the Athens Government a thousand tons from the wheat destined for New Greece.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. May.	1917. May.		1335. Rejeb.	5677. Iyar.
18	5	Friday	26	26
19	6	Saturday.....	27	27
20	7	Sunday	28	28
21	8	Monday	29	29
22	9	Tuesday	Sivan 1	30 Shaaban
23	10	Wednesday	2	1
24	11	Thursday	3	2

Next Thursday is the birthday of Princess Elizabeth of Greece, second daughter of Prince Nicholas, King Constantine's second brother, who was born at Tatoi, May 11, 1904 (o.s.).

Princess Mary, representing the Queen, was present on Tuesday afternoon at the variety entertainment arranged by the Duchess of Wellington at Apsley House, on behalf of the Mesopotamia Comforts Fund. Queen Amelia and the Duchess of Teck, with Princess Mary and Princess Ilona of Teck, were also present, and the large audience also included:—The Duke and Duchess of Wellington, Lady Mary Scott, the Countess of Albemarle, the Countess of Carnarvon, Lady Constance Leslie, Lady Ermyntrude Malet, Viscountess Sandhurst, Lady Greville, Lady Carew, Lady Dallas, Viscountess Cowdray, Colonel Sir Henry and Lady Emma Crichton, Lord and Lady Lamington, Viscountess Allendale, Viscountess Errington, Sir Edward and Lady Hope, the Hon. Mrs. Pelham, Lady Pearson, Lady FitzRoy, Sir Hugh and Lady Barnes, Mr. Wardbrook, Lady Cynthia Hamilton, Miss Stella Maude and her sister, Miss Jessel, and Miss Mary Damer.

M. George Cretziano, the Roumanian Minister to Madrid, has arrived in London from Jassy.

A Reuter's message sent off from Udine last Saturday says:—Although Mr. Rudyard Kipling arrived here during a period of great activity, which he declared to be just what he desired to see, he has been shown all kinds of courtesies. He is treated as the guest of the Supreme Command, and has been received by Count Cadorna, General Porro, and other military leaders, who have put all means at his disposal for visiting the different sections of the front.

M. Antonievitch, First Secretary to the Serbian Legation, has returned to London from Paris.

Colonel Caretasu, of the Roumanian Army, arrived in London on Wednesday from Jassy.

Sir Courtauld Thomson, Chief Commissioner of the British Red Cross for Malta and the Near East, arrived in Rome on May 9.

Mr. William Charles F. Robertson has arrived at Malta, and been sworn in as Lieutenant-Governor in succession to Mr. H. A. Byatt.

Mr. P. F. Mumford, A.S.C., is now training, as a cadet, at Woolwidh Military Academy.

We are informed that the statement that Lady Decies is leaving for Roumania, having joined the Scottish Women's Hospital Contingent, is incorrect.

The marriage arranged between Captain Basil H. H. Spence, Royal Army Medical Corps, attached Egyptian Army, and Margaret Alice Mackenzie will take place shortly in London.

An engagement is announced between Charles William Montagu Douglas Scott, elder son of the late Admiral Lord Charles Montagu Douglas Scott, G.C.B., and Lady Charles Scott, of Boughton House, Kettering, and Hope Janet, only daughter of Lieutenant-Colonel William J. Younger and Mrs. Younger, of Harmeny, Balerno, Mid Lothian.

The engagement is announced between Major H. V. Venables Kyrke, Royal Welsh Fusiliers (attached Egyptian Army), eldest son of Colonel and Mrs. A. Venables Kyrke, of Staplegrove Elm, Staplegrove, Taunton, and Frances Mary C. Craven Hoyle, only daughter of Colonel and Mrs. Craven Hoyle, of Leabank Hall, Cloughfold, Lancashire.

In the list of names of officers and others deserving of special mention which has been received from Sir Douglas Haig, we note with peculiar satisfaction that of Lieutenant (temporary Captain) R. C. S. Morrison-Scott, Royal Marine Artillery. Mr. Morrison-Scott, who lived for some time in Egypt, is keenly interested in the Near East, and especially in Arabia and Islam; and he was for some time on the staff of this journal.

A Cairo correspondent writes:—"A very successful gala entertainment in aid of the Syrian Refugees was given at the Sultania Opera House on Wednesday evening, April 18. The performance consisted of three charmingly staged tableaux in which the younger members of the Syrian colony displayed remarkable histrionic and vocal talent. Between the second and last tableaux the Fray Bentos concert party gave a few numbers from their repertoire, which were much applauded, and in which they were assisted by Mrs. Sydney Merton, whose singing was greatly appreciated. The whole entertainment was a distinct success, socially and financially; and the audience, which included the High Commissioner and Lady Wingate, H.H. Prince Fuad, the Prime Minister and M. and Mme. Defrance, spent a delightful evening."

Lady Lowther and those other ladies of the British Refugees from Turkey Fund who are arranging for the social gathering of former residents in Turkey deserve hearty congratulations upon the idea. Wednesday, June 6, is the date fixed, from 4 to 6.30 is the time, and the Alpine Club Hall, Mill Street, Conduit Street, is the place. Former British residents in Turkey who may not have received an invitation should communicate with the Hon. Sec., Lowndes House, Lowndes Place, S.W.

The Sirdar and Governor-General of the Sudan has issued a special army order on the occasion of the retirement of Lewa C. H. Townsend Pasha, Governor of Kassala, on pension, in which the eminent services which this officer has rendered during the 18 years he spent in the Egyptian Army and Sudan Government as O.C. 2nd Battalion, Assistant Adjutant General and Governor of Halfa, Berber and Kassala, have been placed on record.

At a meeting of the Central Asian Society, to be held on Wednesday, May 30, at half-past four in the afternoon, Mr. Demetrius Boulger will read a paper on "Mesopotamia and Syria after the War." The Rt. Hon. Sir H. Mortimer Durand, P.C., etc., will preside.

Mr. Arthur de Vere Vere, of Pera, Constantinople, and temporarily residing at the Hotel Rubens, Buckingham Palace Road, S.W., one of the oldest members of the British Colony in Constantinople, left property of the value of £12,403.

APPOINTMENTS, PROMOTIONS, ETC.

M. M. Theodossiou is now acting in London as the Consul-General of the Greek Royal Government.

M. Saltaferas, who has been appointed Secretary to the Royal Greek Legation, has arrived in London and entered on his duties.

M. Doulidis has been appointed an Attaché to the Royal Greek Legation in London. He has arrived in London from Athens and has taken up the duties of his post.

General Mossoloff has been appointed Russian Minister to Roumania.

OBITUARY.

General Sir Samuel James Graham, K.C.B., formerly of the Royal Marines, died last Friday at South Kensington. Born in January, 1837, he was the eldest son of Colonel J. J. Graham, and grandson of Lieut.-General S. Graham, Governor of Stirling Castle. He was given his commission in 1854 and reached General's rank in 1900. General Graham served with the Baltic Expeditions in the Russian War of 1854-55, and was lieutenant-colonel in command of the Royal Marines in the Egyptian War of 1882. He was present at the seizure of the Suez Canal (twice mentioned in despatches) and in the land actions of that campaign, including the battle of Tel-el-Kebir (C.B., medal, clasp, Khedive's Star, and Osmanieh, 4th Class); he was also mentioned in Viscount Wolseley's despatches. In 1902 he was made a Knight Commander of the Bath.

Major-General Henry Miller, formerly of the 21st (Royal Scots Fusiliers) Regiment, and a Staff Officer of Pensioners, has died at his residence at Clifton, Bristol, in the eighty-eighth year of his age. He served in the Crimean Campaign, taking part in the Siege of Sebastopol and being awarded the medal with clasp and the Turkish medal. For his services in connection with the Abyssinian Campaign, 1867, he received the thanks of the Secretary of State for War and of the Commander-in-Chief of the Army.

The death was announced last Friday of Cecil Rice, of Kingscote House, East Grinstead, late colonel 72nd Highlanders (1st Seaforth Highlanders). He was born in 1831, and was one of the few remaining Crimean veterans. Gazetted in 1848, he saw service in the Crimean Campaign as a captain in the Highland Brigade under Sir Colin Campbell; also as Staff officer to the brigade in the Indian Mutiny, in which he was promoted major for distinguished service in the field. After commanding the 72nd Highlanders at home for two years he retired, in 1870, with the rank of lieutenant-colonel.

The death is announced, in a message from the *Morning Post* Rome Correspondent, of the well-known Serbian political leader, Prota, or Archdeacon, Milan Dturich, Deputy for Utitze, who

Digitized by Google

had sat in Parliament for over thirty years, entering it simultaneously with M. Pashitch, whose great friend he was. Prota Dturich died in Professor Bastianellis' private hospital. He was greatly respected, and will be buried at the expense of the Serbian Government.

Captain Russell Alexander Colvin, Argyll and Sutherland Highlanders, who is reported killed in action on May 1, was thirty-five years of age and the second son of the late Russell Pakenham Colvin, B.C.S., and of the late Mrs Colvin, of 24, Castletown Road, West Kensington. An engineer by profession, he belonged to the London Scottish till he went to Egypt, where he spent some years on irrigation works, and later in survey work in the Sudan, where, alone with his retinue of natives, he penetrated country hitherto untrodden by the white man. He had a wonderful gift with natives and of leadership, and this, combined with his extremely attractive and lovable personality, carried him safely through many dangers. He was a keen sportsman. A breakdown in health obliged him to seek a different climate, and in 1909 he went to British Columbia, where he was successfully carrying on his profession when war broke out. He came to England at the end of 1914, was gazetted lieutenant in the Argyll and Sutherland Highlanders in January, 1915, and went to France the following October. He was sniping officer till wounded a year ago, and rejoined last November, returning to France in December, soon after which he was promoted.

We regret to learn that Lieutenant R. H. Coles, Yeomanry and Royal Flying Corps, was killed on May 9, whilst carrying out artillery observations. He was the youngest son of Coles Pasha, C.M.G., formerly Inspector-General of Prisons, Egypt, and Mrs. Coles, of Stone House, Bishops Hull, Taunton. He was educated at Cheam, Wellington, and the Agricultural College, Cirencester, where he obtained a diploma. He served with the Yeomanry in Gallipoli and Egypt, and obtained his wings last July. He was Master of the Cirencester Beagles, was a fearless rider across country, and a good athlete, winning many long-distance races whilst at the Cirencester College. His squadron commander writes of him: "He was one of the best, if not the best officer in the squadron, and I have already twice recommended him for promotion to flight commander, and only a few days ago I had forwarded his name for special mention to his wing commander." His elder brother, Crewe, was killed in Gallipoli on June 4, 1915.

A conspiracy has been discovered at Salonika to assassinate M. Venizelos. Nine men confessed that they were acting under instructions from a secret committee formed in Athens by certain military officers and politicians.

M. Potié, a Senator and Mayor of Haubourdin, who has just been released from imprisonment in Germany, declares that the German officer in command at Haubourdin is of Greek origin, a major named Argyropoulos.

M. Demirtiji, the Greek Minister of Marine, while acting Minister for War pending Colonel Charalambi's taking of the oath, ordered the transfer to the Peloponnessus of six colonels, including two officers belonging to the General Staff, and the King's assistant equerry and one naval captain.

Placards have been posted in Jassy, by order of the Roumanian Minister of War, denouncing the intrigues of agents in the pay of Germany and Bulgaria for the purpose of creating discord between Russia and Roumania.

All Jewish inhabitants of Jaffa were expelled during the Passover feast With the connivance of the Turkish authorities the Jews were robbed during their flight and their homes destroyed and propefty sacked. Those who resisted pillage were hanged.

In reply to a demonstration before the Roumanian Consulate at Odessa, the Consul said: "The King has promised that equal rights shall be given to Jews during the present session of Parliament."

During the Germano-Turkish Treaties debate in the Reichstag last week the Socialist, Herr Landsberg, said the Socialists would not support the extradition treaty, which provided that there could be no extradition for political offences, but excluded anarchist offences.

The Vienna *Arbeiter Zeitung* says that henceforth each Austrian soldier home on leave from Serbia will be allowed to take home 22lb. of meat, 10 fowls, 200 eggs, 22lb. of lard, 55lb. of vegetables, 220 lb. of fruit, and one cheese.

If you are willing to help
THE SERBIAN ARMY
SEND YOUR DONATION FOR
THE SERBIAN RED CROSS
to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the
RELIEF OF THE DISTRESS OF THE
SERBIAN CIVIL POPULATION
at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

FLATAU.—On April 19, at 15, Souk-re-Tewfikieh, Cairo, to Lieut. and Mrs. A. Flatau (née Jeanne Mosseri), formerly of 250, Queen's Road, Dalston, a daughter, Annie.

MARRIAGE.

GOLDSMITH—COOTE.—On May 9, 1917, at the English Church, Port Sudan, John Henry Goldsmith, Sudan Civil Service, eldest son of the late Rev. Henry and Mrs. Goldsmith, Cambridge, to Mary Melesina, younger daughter of Sir Algernon and Lady Coote, of Ballyfin.

DEATHS.

CUMBERBATCH.—On March 31, at Odessa, Mary Anne Cumberbatch, dearly beloved wife of Arthur H. Cumberbatch, formerly of Constantinople and daughter of the late Mr. and Mrs. Uvedale B. Tristram, aged 55.

HARRIS.—On April 29, at Teheran, Frederick Knox Harris, Vice-Consul, and beloved son of George S. T. Harris and Caroline Harris, in his twenty-sixth year.

KILLED IN ACTION.

COLES.—Killed in action, on May 9, Lt. R. H. Coles (Humphrey), Yeomanry and Royal Flying Corps, the youngest and dearly-loved son of Coles Pasha, C.M.G., and Mrs. Coles, of Stonehouse, Bishops Hull, Taunton, aged 23 years.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to

FRIDAY, MAY 18, 1917.

PUBLIC WORKS ON THE NILE.

Less than twenty years have elapsed since the Sudan Provinces were recovered for the Anglo-Egyptian condominium. In the matter-of-fact record of the new Governor-General's tour, which our Khartoum correspondent sends us this week, there is little to suggest that Great Britain's threefold policy—"to acquire the confidence of the people, to develop their resources, and to raise them to a higher level"—has been in vogue for such a short time. Summing up the duties of the local officials on their first appointment in 1899, Lord Kitchener declared that their object should be to make the government of their district "as great a contrast as possible to that of the Dervishes," whose "almost indescribable oppression" had racked the land and its inhabitants for the previous thirteen years. Only those who know at first hand the old and the new Sudan, or have followed the record of its progress during recent years, as outlined in our own columns, can realize how faithfully Lord Kitchener's policy has been carried out, and the success that has attended it. The confidence of the people has been won, and probably no conscious effort is required to retain it; but that there can be no end to the task of developing the country's resources, and raising the people to a higher level, is shown by the need felt of proceeding with irrigation work, in spite of the war. One of the objectives of General Stack's tour was to inspect the canal which is now being constructed near Sennar for the purpose of delivering over an area of some three hundred thousand acres the water obtained by means of a weir across the Blue Nile. Dependent as they are on one and the same river, Egypt and the Sudan are virtually one in irrigation matters. Local schemes are called for in each, but the object of the British authorities is so to control the Nile and its head streams that there may be the assurance for both countries of a sufficient supply of water for the final limits of cultivation at all times of the year. As was pointed out in the analysis, published last week, of Sir Murdoch Macdonald's report on Public Works in Egypt, it has been proved that cotton can be grown as a winter crop in the Sudan in contrast with Egypt, where it is a summer crop. For the present, the Sudan takes no summer water; but as the time may come when she may require a supply, it is to the interests of both countries that the necessary works should be carried out betimes, apart from the immediate benefits that each stands to receive locally from further steps taken to control the Nile flood.

Public works, however, entail expenditure, and in the critical financial conditions now obtaining as a result of the war, a good case has to be made out before any substantial outlay is likely to be authorized. An almost equally important consideration is the supply of material, which involves transport, and on this point Egypt and the Sudan have to adjust their requirements to the urgent demands on the world's tonnage. If this aspect of the problem can be satisfactorily settled, there is nothing in the financial position of Egypt to rule new public works entirely out of the question in war time. In the early stages of the struggle the decision to curtail rigorously all expenditure on them was rightly taken. But Egypt has not only weathered the crisis; she has actually emerged from it in a stronger financial position than she was before. The public revenues, the acting Financial Adviser has pointed out, have benefited to an unhoped-for extent, as the result of the improvement in general economic conditions, so that the total receipts for the current financial year will reach a figure never before attained. A substantial surplus, it is anticipated, will be realized to be added to the Reserve Fund. But this accession of financial strength to the Government, considerable though it may appear, is by no means commensurate with that experienced by the country as a whole. The Egyptian fiscal system, Mr. R. C. Lindsay points out, is so conceived as to limit the share of the public revenues in the increased wealth of the country to what they may derive from Customs and other indirect taxation, from the profits of the State Domains, and from the expansion in the paper currency. The land tax, the principal instrument of taxation and the mainstay of the revenue, is unalterable; the very large increments of profit which have been reaped by cultivators through the unexpected rise in price of their crops, and which, under an income-tax or other form of proportional taxation, could have constituted a legitimate and lucrative source of revenue, escape taxation altogether. In so far as the Government is able to pay its way, this condition of things might be considered as by no means unsatisfactory; but the reverse of the shield is shown when it is necessary to take a long-sighted view of the circumstances of the country. The war has contributed directly to Egypt's well-being. Owing to the demand for cotton, the Egyptian product doubled in price; another factor in the exceptional prosperity is the continual presence of a large British force, while the resources of Egypt and the Sudan have been drawn upon in every conceivable manner for military requirements. These are factors which must be expected to pass with the end of the war, when Egypt will be confronted with a particularly difficult problem.

In addition to certain adventitious sources of revenue the war has brought a general inflation of prices, though in this respect Egypt is more fortunately situated than other belligerent countries. Prices may remain high, when the additional sources of income have disappeared. But, although this contingency can be met by the individual by a self-denying ordinance, the Government may be placed in a different position. Not only have certain public works, with some claim to be considered indispensable, been held in abeyance during the war, but such matters as renewal and maintenance of railways, buildings, and different enterprises have, largely through the difficulty of procuring material, been allowed to fall into arrear. After the war it is unlikely that the revenue will be sufficient to meet these arrears of maintenance, as well as the resumption of expenditure on new works and new administrative charges. There will naturally be great reluctance to encroach upon the reserve fund to an extent that would reduce it below the figure at which it stood before the war. Thus, the Government may find that, owing to the inelasticity of the revenue, it is actually on the threshold of a position which is far from reassuring, and, as was recorded in our pages a fortnight ago, the acting Financial Adviser considers it prudent to drop a hint regarding the possibility of increased taxation. The turn of events after the war, Mr. Lindsay writes, may prove it essential for the stability of the public finances that the basis of taxation should be enlarged. Should it be found necessary to do so, he adds, it is to be hoped that circumstances will permit of a revision of the fiscal system, which will secure a better adjustment of burdens at the same time that it calls for a larger contribution from the taxpayers who have been enriched by the war. Fortunately, Egypt's experience of expenditure on public works is a happy one. The Assuan Dam, which cost £5,000,000, produces, with the water it stores, crops worth annually between £5,000,000 and £10,000,000; and it is estimated that the works on the White and Blue Niles now projected will, quite as a side issue, produce an additional £1,000,000 worth of crops in regard to land at present lying idle for want of summer water. As the future of Egypt and the Sudan is held to depend on the early execution of a certain programme of public works agreed upon by the Adviser to the Ministry, we may hope that all difficulties in the way of carrying through the work without delay will be overcome in the interest of the two countries.

A PERSIAN ADVENTURE.

It was a dark winter evening at the ancient city of Kerman, and I had been out for a ride, accompanied by one *suwar*, over the sandy desert which lies to the south of the town. Before returning to the Consulate I decided to look in at the house of the Telegraph Superintendent, which is situated in a network of narrow lanes constituting the residential quarter of the city. When I left his house to go home it was raining hard, and so dark that it was hardly possible to distinguish the high blank walls of the houses on either side. However, both I and my *suwar* knew the way well, and there seemed no need of a lamp. Not a soul was out of doors except ourselves; Persians do not love wet weather, especially in the streets at night, when lofty walls of unbaked brick have a nasty way of collapsing on top of you, and there are also other dangers to be avoided.

The *suwar* was a little ahead, and I was allowing my horse to pick his own way among the seas of mud. He was a strong, solidly-built, grey Waler belonging to Government, and had been brought by the Consul from Mesopotamia, where he had done good service. On we plodded, I wrapped in my thoughts and the Telegraph Superintendent's trusty greatcoat, never dreaming of danger. Suddenly I felt my horse's hindquarters sinking under me. Thinking it was a ditch, I urged him forward, but in spite of his struggles he sank deeper until I was on a level with the ground. I hurriedly got out of the saddle, fortunately disengaging my foot without difficulty from the stirrup, and found myself on the crumbling edge of a pit. For a moment I thought I was going down, but by dint of frantic struggling I managed to scramble up on to terra-firma. Holding on to the horse's headstall, I attempted to help him out, but it was useless; I had a vision of his white head framed in darkness, the headstall broke, and next moment he was gone! For a second or two there was a horrible sound of scraping and snorting, which died away into the depths, and then—silence.

I could hardly realise that it was not a dream. A moment before I had been riding quietly along with a good horse under me, and now—the horse simply was not there! The *suwar*, hearing my shouts, had groped his way towards me, and together we listened at the mouth of the pit. Not a sound but that of wind and rain. There was nothing for it but to hurry on foot to the Consulate, more than a mile away, for help. Three-quarters of an hour later twenty *suwars* of the Consular Escort and two or three other British officers besides myself were gathered round the pit with lanterns and spades. A lantern was let down at the end of a rope. The pit proved a very deep and narrow well, not more than four feet in diameter, situated almost in the middle of the lane. It seemed as if the lamp was never going to reach the bottom. At last the flickering light revealed a piteous sight. There was the horse, jammed forty feet down at the narrow bottom of the well, nothing of him visible but his forelegs and his muddy head, which swayed miserably from side to side. Now and then a terrified snort came faintly up to us. The poor beast bit fiercely at the lamp when it was allowed too close to his head. In his cramped position it was doubtful whether he could breathe properly, while the icy chill of the mud must have struck to his vitals. It was evidently only a question of hours before he must succumb.

The *suwars* were set digging, but only two or three men could work at a time in the narrow space available, and very soon it became apparent that it would take two or three days to get the animal out by this method. After a while, two or three Persian well-diggers who had been sent for arrived on the scene. One of them, helped by the onlookers, let the other down by means of a rope tied round his waist. A lamp was sent down at the end of a separate line. When the man signalled to us to stop lowering, we could see him hanging above the horse, partly supporting himself by pressing his head against one side of the well and his feet against the other. My knowledge of Persian was not quite equal to the running comment in patois that he shouted up to us, but I gathered that he was speculating on the chance of being able to slip a rope round the animal's shoulders. Suddenly there was a frantic pull on the rope, and the well-digger came scrambling up, for all the world as if the devil were after him for trespassing on his preserves! He told us breathlessly that he had approached the horse too close, and it had snapped at him furiously, nearly biting his hand off. He also said that the beast was too tightly jammed for it to be possible to get a rope round his middle. Things looked very black.

However, after consultation we sent the other well-digger down. He stayed at the bottom for nearly an hour, carrying on a bawling conversation the while with his friends at the top. All he could suggest was slipping a loop round the horse's neck and hauling. As this would certainly have resulted in the animal's death by strangulation before he was half-way up, it was vetoed. Someone suggested chloroforming him, so as to allow him to be tackled at close quarters. This could have been done by letting a sponge full of chloroform down on a string; but even if we could have been sure of administering the right dose to the horse, the man who tried to tie the rope to him would have been chloroformed too. Another idea was to send a sack down for the well-digger to place over the horse's head; but the man himself was not very enthusiastic about this, evidently distrusting the horse's inability to bite through a sack; and personally I did not blame him.

When the man at last came up with as little accomplished as his predecessor, our efforts appeared indeed futile, and I was strongly advised to send for a rifle and put an end to the unfortunate animal's trials at once. However, the idea of dooming so good a horse to a miserable end without trying every means to save him was a hateful one, and the second well-digger was sent down once more with instructions to try and fasten the end of a rope round the horse's mouth. This, after repeated failures, he succeeded in doing, and by hauling on the rope we had the horse trussed so that he could not move his head. The well-digger then tried to pass another rope round the animal's shoulders, but failed to do so. Instead, he tied it securely to his fore-legs, and then returned to the top. Horrible gurgling sounds were coming from the horse, and it seemed as if he had not much longer to live. Time was short, but hope had sprung up once more, and twenty pairs of hands laid hold of the rope. It was a strangely fantastic, unreal scene. In the midnight blackness of the high-walled lane, the uncertain gleam of the lanterns lit up what might have been an episode from some mediæval legend, of gnomes that toiled to draw magic waters from some infernal ocean.

At first the rope would not budge, owing no doubt to the suction of the mud on the horse's body. I shivered to think of the strain on the poor beast, and wondered as I hauled whether his fore-legs would come right off or not. At last the rope began to come. It was a great moment. Shouts of "Allah Akbar!" "Ya Ali!" "Shabash!" rent the air. I did not dare to leave the rope and look down the well, for fear of what I should see coming up. It was difficult work hoisting him over the edge of the pit, but at last it was done, and he lay in the mud, unable to move and scarcely breathing, but alive.

To cut a long story short, half-an-hour later our equine hero was comfortably installed in a warm, roomy stable close by. Miraculous to relate, his injuries were slight. He was weak and hardly able to stand, but an hour's vigorous rubbing, a stiff dose of whisky, four blankets and plenty of dry grass put life into him. In a week's time, beyond a few scratches he had nothing to show for his misadventure. Needless to say, the well-digger who had successfully carried out so risky and unpleasant a job was liberally rewarded. How much of the reward went into his pocket and how much, *more Persico*, into those of the police who (though they had done nothing to help the night before) officiously brought the well-diggers up to the Consulate next morning, is another matter.

Subsequent investigation revealed the interesting fact that in the same lane—in fact, within fifty yards of the well in question—there were two similar covered wells. Over one of them the earth had already sunk six inches—a fact which did not seem to disturb the owner at all. Apparently such wells are sunk, when houses are built in towns, to obtain water for building purposes, and when they are no longer required no one ever thinks of doing more than covering them over with sticks and a layer of earth. I was informed afterwards that scores of such wells existed hidden under the roads of the city, and that it was quite an ordinary thing for them to fall in during wet weather. I no longer wonder at the Persian's reluctance to walk the streets of his town on a rainy night. Personally, I still wake up at night sometimes thinking of what it would have been like if my foot had been caught in the stirrup and I had been dragged down with the horse. There are pleasanter places than the bottom of a forty-foot well on a dark night, in the company of a terrified horse struggling and snapping for his life.

C. P. S.

THE GERMANS IN ROUMANIA.

According to authentic news from Bucharest, the Germans are interning the wives of leading Roumanians in the villages around the city, says a Reuter's message from Jassy, dated May 12. This measure is in striking contrast with the action of the Roumanian Government, which allowed the wives of Germans who were interned at the beginning of the war to remain at liberty, though a large number of them displayed an openly hostile attitude. The Roumanian Government is protesting through diplomatic channels to the Allied and neutral Governments, while the Press denounces this fresh German outrage and calls for immediate reprisals.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Greece and the Allies. May 10.

Mr. DILLON asked whether the Prime Minister's attention had been called to the strong attitude of the leading Parisian newspapers on the Greek situation and to the impression conveyed by these journals that the British Government stands in the way of a definite and resolute policy in Greece and in connection with the Salonika expedition; whether the time had now come for a full and clear public statement of the policy of the British Government on the situation in Greece and the Salonika expedition; and whether he could state why the King of Greece had been allowed for so long to carry on a policy of hostility to the Allied Governments, and why the Provisional Government of M. Venizelos had not been fully recognised?

Lord R. CECIL, who replied, said: I am not aware of the facts stated in the first part of the question. I will consider the suggestion made in the second part. It would in any case be impossible to discuss the topics raised by the last part of the question adequately or fully in public.

Mr. LYNCH: Is it not a fact that the whole Balkan campaign has been imperilled by the protection given to King Constantine, and has not that protection been partly on account of his Royal relations?

Lord R. CECIL: I have repeatedly told the hon. gentleman that the imputation contained in the last part of his question is absolutely untrue, and in my judgment is a very cowardly imputation. (Cheers.)

Mr. F. WHYTE: Is it not a fact that as long as the Government refuses to alter its policy in relation to Thessaly, it is retaining the army at Salonika in an extremely unhealthy situation, and is refusing to adopt a policy which would place it in possession of a healthy base of operations?

Lord R. CECIL: I can assure the hon. gentleman that these and all other relevant topics have been considered in connection with this subject. I am sure he will see that it is impossible to discuss this matter in public with any satisfaction to the House or the country.

Mr. H. LAW asked the Prime Minister why the Allied Governments had refused for over five months, in spite of repeated requests, to transfer to the Government of M. Venizelos the fleet of torpedo-boats taken over by them from the Government of Athens; whether three of these vessels had recently been so transferred; and if his Majesty's Government would favourably consider the advisability of dealing similarly with the seventeen vessels remaining in the hands of the Allies, with a view to increasing the prestige of the Entente party in Greece, insuring the due policing of the Greek waters, and facilitating the flow of reinforcements for the Venizelist army.

Lord ROBERT CECIL, who replied, said: My honourable friend must recollect that the supreme command of the Allied Fleets in the Eastern Mediterranean is not in British hands, and it does not, therefore, primarily rest with his Majesty's Government to deal with the points raised in this question. They will, however, be considered.

Serbian Prisoners of War.

Mr. HOPE, replying to Lord H. CAVENDISH-BENTINCK, said: In the report of the Prisoners' Sub-Committee of the Serbian Relief Fund, dated January 31, the number of Serbian prisoners of war in Germany and Austria-Hungary is stated to be nearly 57,500, and I have no doubt that these prisoners are largely dependent on the supply of bread from Berne. As far as I am aware, no restrictions have been placed on the importation of flour into Switzerland, but the shortage of flour in France had made it difficult for the French Government to continue to supply flour from their stocks. This has been explained to the Serbian Relief Fund. The commission established in Paris has for its object the supervision and control of purchases of clothing, not food. We are in communication with the Food Controller with regard to supplying flour for the Serbian section of the Bureau de Secours at Berne, and I understand that the matter is receiving his consideration.

The Price of Dates.

Captain BATHURST, replying to Mr. T. DAVIES, said he was aware that the price of Persian dates had been more than doubled during the last six months; but they could hardly be regarded as essential foodstuffs, and the fixing of maximum prices except for commodities of this description was not a policy which it was desirable to extend without complete control of the supplies.

The Government of Greece. May 11.

Mr. LYNCH asked whether the attention of the Secretary for Foreign Affairs has been called to the fact that the Mayor of Salonika, giving effect to the views of the bulk of Greek citizens there, has issued a proclamation urging the deposition of King Constantine; and whether, in view of the attitude of the King and the importance to the Allied cause of a friendly Government in Greece, he would advise a reversal of the policy hitherto pursued of restraining the Republican movement and of protecting the dynasty.

Mr. RONALD M'NEILL asked the Secretary for Foreign Affairs, having regard to the fact that the instrument by which the three protecting Powers guaranteed constitutional government and monarchical institutions to Greece was made at a time when France and Russia were monarchical States, whether he had any information showing that either of those Powers would now refuse, if requested by his Majesty's Government, to join in deleting from the guarantee all reference to monarchical institutions, thus leaving it open to the Greek people to decide whether their Constitution shall be Monarchical or Republican; and whether, in view of the unconstitutional character of the present régime in Greece, he would propose to the French and Russian Governments to follow the precedent of the Treaty of London of 1863, which sanctioned a change of dynasty in Greece.

Mr. J. F. HOPE, who replied, said I can only say that my noble friend will bear in mind the suggestions, but that he does not think the present a suitable time to promote far-reaching constitutional changes in Greece.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

THE NEAR EAST.

"Baghdad, the Khalifate, and the Arab States of To-day," was the title of a lecture delivered by Professor L. W. King at King's College, Strand, on May 2. Dr. Denison Ross, C.I.E., Director of the London School of Oriental Studies, presided.

The lecturer said that he would lay stress upon the past records of the country only so far as they had a direct bearing upon the present and future. We were to-day reading history in the making, and were principally absorbed in strategic events. Nevertheless it was essential that we should turn our thoughts also as to how those events would act upon the peoples of the adjacent countries. The population was mainly composed of Arabs, and the fact should be borne in mind that there were to-day more than one hundred million Mohammedans under British rule, to whom the future of their kindred must be a matter of deep concern. Provinces and whole tribes were now claiming their freedom from the Turkish yoke, and very clear evidence existed that they intended to hold it when once obtained. It was, therefore, urgent that Great Britain should seriously consider what her policy should be towards this incipient Arab movement, and what obligations her occupation of Mesopotamia enforced upon her. It was obvious that in Arab estimation Turkey had forfeited her right to the Khalifate.

From the dawn of history Southern Mesopotamia had been the seat of great commercial development, whilst Arabia was essentially the home of the nomad, a land of isolation. The contrast between the two countries had a direct bearing upon many problems, for Arabia, although it was the cradle of Islam and the present religious centre, was denied the political focus of the Khalifate. Baghdad was purely an Arabian foundation, although the Moslem conquest had materially altered the language and character of the country. The failure of the Khalifs to induce the Jews to become followers of the Prophet had not led to their extinction, for there were 45,000 Jews to-day in the vilayet of Baghdad at the present time. The city was the scene of the golden age of Islam in the ninth century, whereas the Sultan's claim to the Khalifate dated only from the sixteenth century. The attack of the Young Turkish Party upon the foundations of the Moslem faith after the revolution of 1908 had exercised considerable influence in moulding the present policy of the Arabs. Admittedly, a united Arabia was still only an ideal, but it was the duty of the Entente Powers to see that she was given an opportunity of working that problem out for herself. To that end it was absolutely vital that Turkey should no longer be permitted to retain control over the two great routes from Syria to the Euphrates Valley.

The following extracts from the letters of an American which were smuggled out of Syria by a kind-hearted German missionary returning to Germany, and which he mailed in a neutral country to elude the Censor, have recently appeared in the Arabic New York daily *Al Hoda*. They show the terrible plight of the sick in Syria.

"Your friend in Hums, H——, died of hunger, and we endeavoured to save his property for his family, but were not successful. For a time we fed them, but cholera came along, and they all died. There are only three doctors left in the city, and when we sent for them to come to this family not one responded (perhaps because there was no medicine to give them). A very common sight is two bodies in one bier borne to burial. Pray to God for Syria and its people that there remain at least a remnant of those we have laboured among and loved."

All advices from Syria tell of an utter lack of medicines. The daughter of a prominent man has been ill with dysentery for two months, but not a drop of medicine of any kind is in the city of Beirut.

To relieve the starving and destitute people of the Holy Land, the Syria and Palestine Relief Fund, of 110, Victoria Street, Westminster, appeals for the sum of £50,000. Missionary societies of all denominations have united to carry out the work, and goods are being stored in Egypt ready to be poured into the country as soon as access is obtained.

THE PRESS ON THE NEAR EAST.

Kut and Charing Cross.

Last week's *Graphic* contained a short article, "The Recapture of Kut," with some extremely interesting illustrations. Referring to the outmanœuvring of the Turk by General Maude, the writer says:—

The method by which this was done is extremely simple on the map. It is also extremely interesting because the manœuvre was repeated at Baghdad, and its conception, as well as its execution, showed that General Maude understood the psychology of the Turk and the Turk's unconquerable nervousness about having his communications cut. What happened can be roughly indicated by supposing that Kut lay somewhere in the bend of the Thames between Charing Cross and the Temple, and that General Maude's force was on the southern bank, trying to force a crossing from the Southwark side somewhere near London Bridge. He hammers away at London Bridge. The Turks, secure in the fact that when he crosses they can still hold him up by a most elaborate series of entrenchments in Lombard Street, and that he cannot get round them by the Bank because it is a swamp, hold on with all the tenacity born of a year's success at that kind of warfare. But the British commander has meanwhile sent a force along the southern bank to Westminster. They are across before the Turks realise what they would be at; and lo! the sudden fear seizes the Turk that he will be cut off, shut in, ground between the upper and the nether millstone. That, with the Sanna-i-Yat for London Bridge and the Shatt-al-Hai for Westminster, is the story of the capture of Kut.

Words of Wisdom.

Under the heading "Changes and Chances," *The Times* published last Friday a review of the military situation, by its military correspondent, from which we quote the following passage:—

If we glance round at other theatres we see that our forces in Mesopotamia and Palestine will be greatly prejudiced if the Russian Army of the Caucasus proves unable this year to take the offensive. The Turks will in this case concentrate against our forces, and indeed are already doing so. By his great activity, and with the aid of his river lines, General Maude strikes right and left and holds his own gallantly. Sir Archibald Murray's army on the borders of Palestine has an arduous task. He has no Tigris to help him. He is up against several Turkish divisions, well entrenched, with infantry and machine-guns concealed in the cactus hedges built in high mudbanks which enclose gardens and orchards. One flank of the enemy rests on the sea, and the other on a broken waterless country, impassable by wheeled vehicles, where even the dongas have to be ramped before cavalry can move over them. Palestine, we must never forget, practically is in direct railway communication with Berlin. It is necessary for us all to realise the immense difficulties with which our generals in these two theatres have to contend, and for the Government to support them with might and main, and not to render their task more difficult by expecting small bodies of troops to perform impossibilities.

"The Balkan Fox."

Monday's *Pall Mall Gazette* contained an article with the above title, by Mr. Crawfurd Price. He thinks that there is sufficient evidence to justify the suspicion that Bulgaria may be contemplating a break with her allies. "Save that, under certain conditions, a further display of treachery by Tsar Ferdinand's subjects would speed the dawn of happier days, the proposition is not an attractive one," he writes. "We have no cause for sympathy with Bulgaria, and certainly nothing to thank her for. On the contrary, her intervention has entailed us in graver consequences than any other event since Armageddon smote the world." And he proceeds to set out some of the injuries Bulgaria has inflicted upon us. But, he thinks,

it may be dawning upon even the unimaginative but extremely practical Bulgarians that, in view of the augmenting strength of the grand Alliance, they may find some difficulty in retaining their conquests. They have so long been the spoilt children of Europe, and they are, in addition, so eminently egoistical, that they are doubtless minded that, when the opportune moment (for them) arrives, they will be received by all the Allies with open arms on their own terms.

Mr. Price concludes his article by asking whether Bulgaria is a free agent, and by hinting that Germany may try a very deep game indeed:—

But the question naturally arises, is Bulgaria a free agent? We know that her convict-Premier Radoslavoff and her leading statesmen are the venal agents of Germany. Germany also maintains a garrison and controls the Bulgarian Army, railways, telegraphs, and censorship, and the Turkish Army is a potent danger. A *volte face* would, therefore, be at once difficult and attended with no little risk, unless—and herein lies the important consideration—such a development happened to suit Teutonic diplomacy. Strange as it may appear at first sight, this is not an impossible hypothesis. The big Bulgaria is an essential factor in the pan-German scheme, and when it is realised in Berlin that the present effort has failed, it would not be surprising were Bulgaria advised to make the best terms possible, in order that at some future date her insatiable rapacity might again be employed as the catspaw of German diplomacy in the Balkans.

In Praise of Serbia.

Writing in the *London Magazine* ("All Hands on Deck: No. 6. The Shock-Absorbers"), Mr. Bernard B. Falk adds his homage to that already bestowed so liberally upon Serbia for her part in the war. He writes:—

If suffering be the hall-mark of nobility, then after this war the Serbians may claim an exalted birthright, for beyond the loss of their beloved country, they have had to mourn the destruction of all but a tithe of their sturdy army.

Two wars had made ominous gaps in the nation's manhood when the present conflict drove them to arms once more. They had desired a decade of peace to bind up their wounds and recuperate, yet when the European war broke loose on an unsuspecting world, it was in no weariness of heart and with no lack of resolution that they prepared to face their Austrian oppressors.

They were the Belgians of the Balkans. They came between the Germans and their ambitions. It was their fate to stand on the road from Berlin to Bagdad, a little State that refused in the spirit of vassalage to become a mere thoroughfare for Germany. . . .

We measure the extent of the Serbian sacrifices for the commonweal of the Allies in no niggardly manner when we remember that this little nation of four million people has been fighting for its existence, more or less without a break, for nearly five years; that during this period it has sustained a terrible casualty list of 750,000; that of the total population between one-fourth and one-fifth has been totally destroyed, that all males between the ages of eight and seventeen, other than 30,000 who followed the gun-waggons on the awful retreat through the Albanian mountains to the sea, have been seized by the Austrians and the Bulgars; and that of these 30,000 boys and youths who fled before the enemy, 7,000 alone remain alive to-day. . . .

In Serbia itself, the population, groaning under the iron heel of the conqueror, has never lost its faith in ultimate deliverance. This spirit has not quailed before excesses as ruthless as those that have marked the slave raids in Belgium. The people have seen their males and females carried into bondage, and the national imprint of their land partially obliterated, but they have never despaired.

The Egyptian Theatre of War.

The particular "Scene of War" described by "Odysseus" in this month's *Blackwood* is that along the Suez Canal, in Egypt, and the Sinai Desert. The author reviews the military operations at some length; but, though he writes of facts that are familiar to us in their outline at least, he adds so many fresh details that we find the narrative an absorbing one. His mention of and tribute to the services rendered by the Egyptian Army and the Egyptian Labour Corps are welcome, and he gives the names of several of the warships, French and British, that played a part in repulsing the Turkish attack on the Canal. One of the most interesting portions of his article is that headed "The Desert Express," which describes a journey on "the desert railway that is moving steadily on its way across the sands to Palestine." Here is the scene at the journey's end:—

The train came to a halt; it was an hour to sunset, and the scene that set in was one of indescribable animation. From the carriages the officers and men jumped out, throwing their kit out on to the yielding sand; the horse-vans emptied, the horses' ears twitching with excitement, their eyes bright with interest; the mail-bags were piled in a mountainous heap, upon which a fatigue party fell with the cool decisiveness of the white man, rapidly sorting out the bags for each regiment. These had come straight from England, labelled an ticketed from there with precise instructions—a precious freight. As each separate heap was collected, it was rapidly transferred to the backs of the camels, whose grumbling protests rose above the babel of sounds. Many of these were of the beautiful white Bisharin breed, and as they moved off one by one against the reddening sky, under a guard of cavalry or camel patrols, they made a picture of singular, almost romantic charm.

"For," comments the writer, "when you come to think of it, a letter means a great deal to a man who is far from home."

The description of Suez may surprise some travellers who entertain no pleasant recollections of that port:—

Suez itself is a miracle of beauty; a miracle, because out of some very unpromising materials—a desert, a range of barren uninhabitable hills, a shallow water, an old and dirty town with some modern embellishments—it makes a harmony of the most exquisite colours. Its principal secret is light, with some added grace of form. But War also has come here to add to its manifest attraction.

Turkey's Changed Tone.

El Kibleh of March 12 contained an article entitled "Yesterday and To-day—a Word on the Occasion of Talaat Bey's Speech." From this we quote the following passage, which compares the vainglorious talking of the Turks in the early days of the war with their more subdued tone to-day. Says the writer:—

But yesterday, the shouting of the Turkish newspapers, and the voices of their orators, filled heaven and earth, raving about the war, warning their enemy that every fortress would be taken and every trench assaulted, whether in the East or the West, until Turkey had regained every fallen village and every lost

Digitized by Google

inch of territory. Meanwhile, the Turkish Ministry sat swelling with conceit and pride, almost to bursting-point, crying always: "We will do this, then we will do that," until the foolish imagined that the Unionists were about to possess the whole world, and the crowns of kings to be like balls in their hands, to play with as they would.

To-day, however, the crest is lowered which was so lofty yesterday; Mesopotamia, the Caucasus, Armenia, and Sinai are lost; the Turkish empire has suffered terribly; famine is abroad amongst its people; the Unionist is confounded, eagerly seeking safety for himself from an angry and excited nation. Truly, yesterday and to-day are two.

There can be no better proof of this than the speech of the new Grand Vizier. In reading that speech, I saw that every word, nay, every letter, spoke of weakness and was indicative of abasement. In it, Talaat Bey said: "We will fight until our enemies admit that we have the right to exist." In God's Name! was it for this, O Talaat, that you rushed into the midst of war and bloodshed? Did you not say but yesterday that you had entered upon war for conquest and extension of territory? Where are those countries, the raiding and conquest of which you falsely promised to the people? Where are you yourself, with your saying that you would bring the East under the Turkish flag from the mountains of the Caucasus to the river Ganges? Is this your end? Is it thus that your affairs have declined? In truth, you were misguided and have misguided others; you are humiliated and have humiliated others; in you the words of the poet are verified: "Enemies cannot do to the fool the harm which the fool does to himself."

The writer then proceeds to ask a question which Talaat and his gang will find it difficult indeed to answer:—

You have said that you would fight until your enemies admitted your right to exist. Have you and your brutal gang admitted the right of existence to those other races who shared the Ottoman empire with you, who made you and your fellows lords and masters over them, who shed their blood, wasted their houses, expended their means, for the sake of your Ottoman flag and your Turkish sovereignty? Do you to-day blame the Arabs, who, as the whole world bears witness, are fighting in defence of their lives and national being, and in order that you and your like may admit that they have the right to exist? It is you who have done this, and now your crest is lowered, your hands are tied, your flag trails in the dust, the dignity of your empire is rent to tatters, for God is watchful.

No Phil-Hellene!

Writing in the *Aberdeen Journal* on "Modern Greece," "D." begins by declaring:—

No one need go into ecstasies over modern Athens as a matter of fact, no one does. Everything proclaims that the glory is departed. All around are evidences that this is the capital of a nation without a distinctive individuality. The race is not pure. The gayest feathers are borrowed plumes. The modern city is skilfully planned and admirably laid out, but its architecture is not Greek; it is, indeed, obtrusively Continental.

A strange blending of Eastern and Western habits offends the eye and the taste on every hand; Turkish coarseness and French æstheticism do not mingle well. Of course, the Acropolis, the Theatre of Dionysius. . . and other monuments of ancient grandeur, exert an irresistible fascination, but apart from these relics of the past there is not much to admire.

Other things of which the writer does not approve are the "swaggering airs of the officers of the Greek Army," the Greek way of conducting funerals, and Greek priests.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c. &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Negotiations are in progress, I understand, between the Governments of the British and French Sudans, to promote commercial intercourse between the two spheres. It is also suggested that French officials proceeding to, or returning from, French Equatorial Africa should be permitted to travel by the Sudan route.

***

Although the Roumanian Chamber of Commerce does not blow a trumpet, but prefers to develop its organisation quietly, I am in a position to know that it is working effectively, and will be ready when the time comes to discharge all the functions which such bodies usually undertake. I understand that commercial men who are interested in the country are confident regarding the future, and believe that the dislocation caused by enemy occupation and vandalism will, at the very worst, be temporary. It goes without saying that a great deal of leeway will have to be made up, but this will be all the easier when the German and Austrian influence, which was so powerful before the war, will not be in existence to prejudice honest men. Roumania will then offer tremendous opportunities to reputable traders and manufacturers, and the fact is worth keeping in mind.

***

A correspondent who writes to THE NEAR EAST regarding the industrial situation in Cyprus expresses the hope that something will be done to restore drooping, and to bring new, industries into being. He instances the success already achieved by Syrian refugees in the matter of tobacco, and leaves it to readers to infer that what these stricken victims of Turkish oppression can do in one direction the Cypriotes, more happily circumstanced, can do in another. The excellent trade figures of the island for the last year certainly bear this out to the extent, at least, that there is room for development and that there are opportunities for enterprise which have not yet been exploited. At the same time it should be borne in mind that industrial development is almost entirely a matter for the people. The Administration can do much by offering facilities, but, generally speaking, the question is one almost entirely of self-help.

***

News from Busreh goes to show that the Labour Corps sent there from India is doing good work, and that the men give little trouble. This is the more gratifying because of the experiment to utilise a certain number of prisoners from Indian gaols. The men selected to go with the corps were all "good conduct" men, of course, and their offences involved no great degree of moral taint. The terms on which they were "recruited" were that the remainder of their sentences were cancelled soon after they began their voyage, that they would be allowed almost complete liberty in their new country, and that they would receive the same rates of pay as the "free" labourers. Many people viewed the experiment with considerable uneasiness, but the result has justified the scheme. I learn that, encouraged by its success, the Government of Burma, whose gaols are not large enough to accommodate all the erring humanity in the province, has also offered a contingent for the Persian Gulf. There is no wish to turn Busreh into a kind of Botany Bay, of course, but sympathetic people will hope that it will be possible to combine a solution of the labour problem with a gift to these men of a new and useful future. That would be an economic triumph indeed.

***

Still another imposing piece of evidence of the prosperity of Egypt is forthcoming. The Agricultural Bank has been able to declare a dividend of 7 per cent. on its ordinary shares, as compared with 5 per cent. a year ago, and of £40 per deferred share against £15. Results such as these speak for themselves, and nothing remains but to congratulate the management on their successful year's work and the shareholders on their dividends—and officials. I hope in an early issue to deal with the report for the year.

***

If the Egyptian agriculturist can "make good" in his attempt to grow potatoes on a commercial scale, he will tap a comparatively new source of wealth. The trial shipment of five tons which the Imperial Institute secured from the Egyptian Government recently sold in London at something like £37 a ton. I cannot say, of course, what freight, insurance, and other charges amounted to, but it may be taken for granted that they were out of all proportion to what they would have been on the same quantity as part of a large consignment. In normal times fourpence a pound would never be realised, but there is profit in the trade, as any Italian exporter could show if he cared. It is stated that it is proposed to sow 4,000 acres in September and to ship one-half of the crop to the United Kingdom. I dare say 10,000 tons of potatoes will be useful in this country at the end of the year, and I hope the forecast will not prove to be too optimistic. If they arrive safe and sound they will sell at good prices.

***

An interesting point is raised in the annual report of the Sudan Chamber of Commerce in connection with the condition in which country produce is received from the interior. It appears that there are grave complaints on this score, and the hope is expressed that the Government will intervene and fix a maximum beyond which impurities must not go. It is pointed out that if Sudan produce is to meet with success and confidence abroad, it should be clean and of good quality, and this fact is so obvious that it is surprising that producers and merchants do not realise it for themselves. Something of the same kind used to occur in India in connection with cotton, jute, and other shipments; shippers were mulcted in heavy claims, and in the end trade suffered seriously. A check was imposed and while, perhaps, perfection has not been achieved, the conditions have greatly improved.

***

I wish I could inform the Chamber of Commerce that the culprits were induced to mend their ways without pressure of a very severe character being brought to bear; that is impossible, however, but I am able to advise that the best kind of pressure to use is that which affects the pocket—try it on whatever receptacle the Sudanese produce-faker uses as a bank!

***

The Venizelists, I learn, have established a trade bank in Salonika with a capital of £120,000, and to it will be extended the active sympathy of all who admire those gallant Greeks who prefer the welfare of the country and its people to the Germanised smiles of the King and his satellites. The Provisional Government has given its approval to the venture, and Greeks in London assure me that the concern will not lack adequate support. It is pleasing to know that the new bank will strike a blow against any resumption of Austro-German trade influence in the country after the war, and that so far as possible nationals of the present Entente Powers will receive preferential treatment. To accomplish this the bank proposes to invite manufacturers and producers to entrust it with their representation, and to guarantee all the orders it places on behalf of clients. If it succeeds in eliminating the element of doubt which has always been more or less of a barrier between the West and the Near East, its future will be assured.

***

The fact that the Food Controller's Department had assumed the supreme control of all British oil-crushing mills, with a view to regulating their outputs, was reported in THE NEAR EAST at the time, but the fact serves to recall that for the first time in the history of the industry crushers will have to rely nearly altogether on Empire products. According to a correspondent in the *Economist*, the supply of oilseeds will constitute a serious problem. For the bulk of our cottonseed we shall have to rely on Egypt, and on receiving from that country, as we have done for the last two years, the whole of the exportable crop. Much the same applies to cottoncake, our stocks of which are at a low ebb, so that Egypt ought to continue to make a very good thing out of it all.

***

I wonder whether adequate attention is paid to the fact that Germany continues, even now, when it might be thought she has her hands full in carrying on the war, to prepare for what she believes will happen, resumption of domination in the Near and Middle East. The *Hamburgische Corespondent* reported recently the activities of the German-Turkish Society, which include the maintenance of a German school in Adana and the despatch of a German director to the Turkish technical school at Damascus. In 1916 the society is said to have placed about 250 Turkish students in secondary schools in Germany, and to have employed numerous Turkish artisans and workmen. Several thousand Turkish apprentices are about to be allotted to German factories, and "courses in the Turkish language" have been started in Berlin and other towns. If and when we are in a position to deal with this thoroughpaced all-for-Germany scheme, it must be "scotched," else even an Entente military victory will fail to defeat Germany in one of the things that most matters.

The Sudan and Its Economic Development.

No. 7.—The Kassala Province.

By PERCY F. MARTIN, F.R.G.S.

Were it not for its unfortunate geographical contiguity to Abyssinia, and its present lack of means of communication, the Province of Kassala might very well prove one of the most useful and remunerative of the fifteen political divisions of the Sudan. The first drawback unfortunately, can never be overcome; the second may be removed, or, at least, mitigated. Although it ranks as one of the smaller of the provinces—its superficial area is 44,150 square miles, and its population is 84,000—Kassala possesses many physical advantages not to be found, to the same degree, in other of the departments.

The country, for the most part, consists of a vast plain of almost unbroken continuity, but there are few parts where vegetation of some kind, even it be no more than low scrub, coarse grass tamarisk or tarfa trees, is not to be found. On the other hand there are large ranges of hills esparated by wide valleys, containing good cotton soil, while the abundant khors and wells—which depend, however, on the amount of rain-fall—supply water for the sheep, goats and cattle which the people possess in considerable quantities. Indeed, the traveller who passes through the country on camel-back may be sure of water, at any time of the year.

The five *mamurias* into which the province is politically divided—Kassala District, Butana, Gallabat, Gedaref, and Mefaza—are all of economic importance. The seat of government, Kassala Town, is on the right bank of the Khor Gash, which not only supplies water but likewise fish in abundance during the first weeks of July. The precincts of the Khor are decidedly attractive from a scientific point of view; thousands of Beni Amer cattle and sheep browse there peacefully during the dry season, although few, if any, human habitations are to be seen.

Kassala Town.

Kassala is a pleasant town, as towns go in the Sudan, and it has a romantic history. The old Italian fortress—a rectangular vellum of burnt mud-brick, which covers an area of about five acres—could tell some thrilling stories of the Dervish sieges and assaults, as could the ruins of the blood-stained walls of the old town, which stood to the west of the fortress. The town was handed over to the Sudan in 1897 by the Italians who had held it for about three years, during which they were at continual war with the Dervishes, whom they fought and eventually defeated.

Before the blight of Mahdiism fell on the town, it was happy and prosperous. In 1896 a murderous horde of Dervishes overran the country, and for miles around every human being was killed in cold blood. The raiders were less successful in Kassala town itself, which they invested fruitlessly. To-day it once more enjoys prosperity; it is the centre of industry and instruction, and is only awaiting the advent of the long projected railway to convert it into the great trade-centre that in process of time it is bound to become.

Gedaref is already the centre of a steadily improving agricultural and cattle-breeding industry of some importance. Much of its success depends on a seasonal rainfall, however, and this, of course, as throughout the Sudan, is unreliable. The district is likewise largely interested in the gum trade, to which it contributes on an average some 25,000 kantars annually. Destructive forest fires have, more than once, wrought disaster to this enterprise, as, for instance, in 1913, when the total yield was little more than 8,000 kantars. Unfortunately, prairie fires are not uncommon in the Sudan, the vast areas of high, dead grass being readily inflammable.

Abyssinian Troubles.

Gallabat, known to the Abyssinians as Matemma, is at the foot of a steep slope on the left bank of the Khor Abnaheir. It is considered of great importance from a trading point of view, and as it constitutes the boundary line of the Abyssinian frontier, it has witnessed a long succession of sanguinary conflicts between the tribes who dwell on either side.

Dervishes fiercely attacked it in 1886, while three years later King John of Abyssinia fought with them—and lost—a great battle, between 80,000 and 100,000 Abyssinians being engaged. One of the results was the total destruction of the trade that had flourished there. Under the peaceful and progressive Administration of to-day, however, much of this has been restored, coffee forming one of the principal articles of commerce. In fact, Abyssinian coffee is now practically a monopoly of the Sudan market, the annual value of the imports in normal times amounting to £E57,000.

Mafaza is little more than a village, basking on the banks of the Rahad, and is the centre of a large, scattered population engaged in agriculture and cattle-breeding. A fair amount of trade is carried on in the place, and its importance is increasing.

One advantage enjoyed by the province is the amount of labour available. Large numbers of Beni-Amer Arabs constantly present themselves, and are used to carry out the irrigation works around Kassala. The principle of piece-work is employed. Irrigation developments are in prospect in Kassala, Commendatore Coletta, the eminent Italian engineer, having many years ago submitted to the Sudan Government a scheme to utilise the waters of the rivers Setit and Gash. The daily pay of native labourers in Kassala amounts to 3½ piastres (7½d.), except in harvest-time, when it is reckoned at between 4 and 5 piastres (10d. to 1s.).

The People.

The people as a whole are not difficult to manage. Unfortunately, there are many nomadic tribes, and a certain amount of trouble is always to be expected. Then there are the Abyssinians, who constantly send hunting and poaching parties across the border, while smuggling is responsible for considerable worry and loss to the Government. Even the establishment of police posts on the frontier have not, and probably never will, put this down. Since the railway was completed to Port Sudan a large amount of the European import trade has been diverted from Eritrea.

Except when visited by locusts—and this affliction is by no means rare—or cattle plague breaks out, the people of the Kassala province are fairly prosperous. They are undoubtedly intelligent and enterprising, and display a regard for education second to none in the Sudan. Indeed, the progress of public instruction is one of the most gratifying evidences of the peoples' advancement. Much of this is due to the excellent and painstaking work undertaken by the late Director of Education, Mr. James Currie, C.M.G., whose devotion to his task is too well known to need further comment. The technical schools which he succeeded in establishing at Kassala, and the school carried on at Gallabat, are cases in point.

In fact, Kassala people have been singularly fortunate in regard to Governors. Colonel Wilkinson, Major Cameron and Captain Townsend each has left his mark, and added something to the welfare of the community. Each succeeded in inducing the cultivators to take up cotton-growing seriously; this is an industry which is capable of great increase, especially in the valley of the Gash. An agricultural inspector is employed, the methods of growing a high-grade cotton, so successful at Tokar, being also adopted here. Much may, and no doubt will be, done with the rich agricultural districts of Gedaref, Gallabat and Mefaza, and additions made to the already considerable areas of dura and sesame which are cultivated.

Mr. C. E. Lyall has been acting as Governor during the absence of Captain C. H. Townsend, on medical grounds.

EGYPTIAN REVENUE.

Anticipated Surplus of More than Two and a Half Millions.

(From Our Own Correspondent.)

Cairo, April 27.

Owing to pressure of work in connection with the Budget the State accounts for January have been delayed and were published only last night in the *Official Journal*. Revenue during the month was maintained, the figure being £E1,301,050 against £E1,278,081 in January, 1916, while expenditure increased somewhat to £E1,044,672 against £E811,517.

It is noticeable that the total revenue, which amounts to £E16,567,417, is only £E62,583 less than the estimate for the entire year, so that with still two months to run the actual figure for the financial year will much exceed what was expected in the Budget. Expenditure for the ten months comes to £E14,020,521, or £E2,609,409 less than the total estimate, and there is so far a surplus of £E2,546,826, as against one of £E1,871,792 at the same date last year.

The most important revenue items during the month were Direct Taxes £E176,099, Customs £E253,585—about half as much again as during January, 1916, and the total for the ten months is already half a million in excess of the estimates. Tobacco Dues £E179,515, Judicial Receipts £E137,415, Railways £E370.597—the total is also in excess already of the estimates, and Divers Receipts £E56,556.

Under Expenditure the principal heads during the month were Railways £E181,829, or £E175,000 more, Public Health £E44,578, Irrigation £E118.819 or£E27,000 more, War Office £E78.265, Pensions £E49.670, and Reservoir Annuity £E76.647.

SUBMARINED SHIPS.

Another Satisfactory Reduction in British Losses.

The weekly return issued by the Secretary of the Admiralty on May 16 of the arrivals, sailings, war losses, and unsuccessful attacks in regard to British vessels, showed another satisfactory reduction in the number of vessels lost.

After making allowance for vessels lost in previous weeks, but only scheduled in the last return, the details are as follows:—

Week ended Sunday, May 13. Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):

Arrivals	2,568
Sailings	2,552

Merchant vessels sunk by mine or submarine:

1,600 tons (gross) or over	17
Under 1,600 tons (gross)	5
Unsuccessfully attacked by submarines	14
Fishing vessels sunk	3

The first of these returns was issued in respect of the week ended on February 24, 1917, and the following is a summary of losses from and including that date:—

Sunk (over 1,600 tons)	249
Sunk (under 1,600 tons)	112
Total	361
Fishing craft sunk	105
Unsuccessfully attacked	220

The official return of the Italian Ministry of Marine for the week ended March 13 is as follows:

Arrivals	580 (416,980 tons)
Sailings	562 (458,550 tons)

Two vessels of less than 1,900 tons were sunk and seven sailing ships of less than 100 tons. A few fishing craft were also lost.

Lost Mails.

Mails continue to be lost, notifications during the week including parcels for Egypt and letters and parcels from Persia (Teheran, March 12-19; Enzeli, March 15-18; Tabriz, March 17-24).

SUDAN CHAMBER OF COMMERCE.

Interesting Report of Trade Activities During the Year.

Mr. Law, the chairman, at the annual meeting of the Sudan Chamber of Commerce, held on April 11, read an interesting report of the trade activities in the year 1916-17. In a useful discussion of the gum industry it was stated that, on the initiative of the Committee of the Chamber, the Government had taken in consideration the question of preserving existing gum trees and the planting of new areas. There was little likelihood of diminishing crops in the future.

It was disappointing to find that the form of gum contract drawn up by the Committee had not been adopted by all merchants. "We feel, however," the report continued, "that it is a step in the right direction, and can only hope that in time all merchants, whether members of the Chamber or not, will recognise that unity is strength."

Adulterated Produce.

The report continued:—"The very high percentage of impurities found in produce (chiefly Simsim and Durra) received from the interior, is a matter requiring attention. Your Committee has been giving this question careful consideration, and has interviewed the Government on the subject. This matter has also been engaging the attention of the Government, and it is hoped that some steps will be taken to fix a standard of impurities for local trade and for export.

"It should certainly be recognised by all merchants in the Sudan that it is to the benefit of the trade of the country in general that all products should be exported in as clean a condition as possible, so that buyers abroad would have confidence in the standard of quality of shipments from this country. This point should not be lost sight of by all merchants when making shipments abroad."

Comments on Trade.

After setting out in detail the various items of import and export—these have already been published in THE NEAR EAST—it was stated:—"Although the great increase in the value of the trade is due, in a large measure, to the enhanced price of all articles, nevertheless the future progress of the Sudan seems assured. Large irrigation schemes are being taken in hand at once in the Dongola and Berber Provinces, and there seems every likelihood of the Gezira scheme being pushed forward without delay.

"It is gratifying that at last the misrule of Darfur has come to an end, and it is hoped that the natives of this Province under the beneficent rule of the Sudan Government will soon arrive to the same prosperous condition as the natives of Kordofan.

"Doubtless, owing to the difficulty of securing material the extension of the railway from El Obeid has been postponed, but no doubt when conditions become more normal the line will be pushed forward to Nehoud, which should assist greatly in the development of Darfur.

"On all occasions the Government has shown an earnest desire to assist the Commercial Community, and we must express our thanks that the efforts of the Government have enabled the country to reach such a highly prosperous state notwithstanding that the European war still continues."

New Committee.

The following members were elected on the Committee for the ensuing year:—Messrs. Law, Norton, Birch, Contomichalos, G. Dello Strologo, Lake, Izmirlian, E. Dello Strologo, Licos, Rizg, Ades, Carapanayotti, Fawaz, and Amer.

LANCASHIRE COTTON MARKETS.

No Improvement Expected during the War.

(FROM OUR OWN CORRESPONDENT.)
MANCHESTER, May 16.

The conditions prevailing in the market during the week have not shown very much change, and the majority of sellers have had a disappointing experience. Most authorities seem to think that business will be even more restricted during the next few months and no definite improvement in the outlook is likely until peace is declared.

Rather more favourable advices are now being received as to the prospects for the new Egyptian cotton crop, and the plant is said to be making good progress. Reports from the American belt are not altogether satisfactory, and the weather during the next few weeks will have an important effect upon the output.

The demand in cloth for Egypt keeps up well, and that market is undoubtedly in a prosperous condition. I am glad to be able to report that rather more freight space is now available. Although fair buying has transpired in sized goods, the bulk of the business coming round has been in fancies, and some very high prices have been paid for special makes.

The inactivity for India continues to be pronounced, and in addition to dealers abroad not being in the mood to purchase with any freedom, local merchant houses are inclined to restrict business as much as possible.

A fairly encouraging trade has transpired for China, and it is quite evident customers in Shanghai are finding it necessary to replenish supplies.

There has not been much activity for the nearer Continental outlets. Common printing cloths are doing very badly. Fresh orders are wanted by producers of light fabrics as made in Blackburn. Some makers of heavy materials have substantial engagements.

A rather larger turnover has been reported in coarse American yarns, and prices have stiffened somewhat. No relief is in sight, however, for spinners of medium numbers, the depression in wefts being acute. Very doleful reports have again been received from producers of export yarns.

Egyptian spinnings have been generally slow, and sales of weight at the moment are quite isolated.

POTATOES FROM EGYPT.

The Imperial Institute, which has been active in promoting new supplies of foodstuffs within the Empire, recently received from the Government of Egypt a consignment of five tons of potatoes, representing a trial cultivation from Italian seed in the Nile islands. This consignment was sold last week in London, and realised, on an average, over 4d. a lb.

There are, it is stated, large areas in Egypt in which potatoes could well be grown, and in view of the favourable outlook, it is intended to sow 4,000 acres next September, from which it is expected that a yield of 20,000 tons will be obtained. So far Egypt has imported potatoes in large quantities, and the native-grown produce will, no doubt, be readily absorbed in the country. It is expected that about 10,000 tons of this crop will be available for export to England.

NEW TANNERY AT ATBARA.

The Sudan Government Railway Administration proposes to erect and equip a tannery at Atbara. The present idea is to manufacture leather for the boots required by the troops of the Railway Battalion only. It is hoped, however, that this programme will be extended, and that the leather and boot-making industries will be developed.

ENGINEERING NOTES.

Water Power in Morocco.

The French Government in Morocco are about to consider how the water power in that country may be utilised for industrial purposes. A consortium of French companies and firms of Schneider (Creuzot), Pavillier, Giros and Loucheur, Compagnie Marocaine, Compagnie Générale, and the P.L.M. and Orléans Railway Companies has been formed for the purpose. It is said that the consortium proposes in the first place to utilise the falls of the Oum-er-Rebia river, and probably, later, the river heads in the Atlas Mountains.

Mechanical Cotton-Harvesters.

With the increase of cotton growing in the East, especially in the Sudan, and the anticipated greater scarcity of workers during the approaching crop season, the labour problem threatens again to embarrass the growers. There are many mechanical means in use to aid in the cultivation of cotton, but the greatest difficulty experienced is the want of means to gather or "pick" it at the proper time. That work is still done by hand, and during the harvest all available workers in the cotton districts are employed at high wages. It follows, as a rule, that a grower does not think of the acreage he has available for cotton, but the area he can handle when the time comes to pick the crop. Several attempts have been made, mostly in America, to cope with this serious difficulty, and to produce a mechanical and labour-saving cotton-picker; but most of them were futile, while those which claimed to possess the desired efficiency were either of a complicated design, or heavy, bulky, or expensive—three great obstacles to their adoption in the East. It is interesting, therefore, to hear that a new cotton harvester has been placed on the market, which may meet, to a certain extent, the requirements of the Oriental cotton grower.

Advantage of the Machine.

It is well known that cotton bolls do not all ripen simultaneously in a field. The picker, therefore, whether human or mechanical, has to go more than once through the field, picking the ripe or open boll, and when a large machine is used the disadvantages are obvious. The new cotton harvester is more adaptable to the work, and is doing it with considerable success. It is designed to carry the human picker and the bag in which he places the cotton when he picks it; and it has another advantage. After the opened cotton has been picked there is a large quantity of unopened bolls remaining on the stalks. In these there is much cotton that can be, and should be, saved. It is impossible to pick and save the unopened bolls by the old method, because, owing to the weight of the bolls, the picker is unable to drag the heavy sack on the ground. With the new harvester all the unopened bolls can be saved, while the work is easy for the picker, and is done rapidly. It is claimed that the cotton saved in two days' work will more than pay for the cost of the machine.

A Light Plough.

We have had occasion in previous notes to point out that the apparent indifference of the Oriental farmer towards the British plough is due to the weight of the latter. It is too heavy for the native draught animals, and, more or less, unsuitable for the average farmer's system of ploughing. Thirty years ago only British ploughs were imported in the principal agricultural districts in the Near East; they have been superseded by the American, German, Austrian, and Greek ploughs, which are made to suit the native farmer's wants. These have a comparatively

coarse finish, but they are light, and, above all, cheaper. The increased number of small-holders and market gardeners throughout the United Kingdom has, apparently, induced agricultural implement makers to design and supply, among other appliances, ploughs suitable for the above class of land cultivators. A light plough which has recently been brought out, and which seems to find great favour among small-holders, is undoubtedly an implement that would appeal to the Oriental; although light, it is very strong, with a high swan-neck beam which affords good clearance and enables manure, cabbage stalks, weeds, stubble, etc., to be ploughed in without choking up. The frame is of cast steel, and a nicely shaped short concave breast is fitted, which lays a very regular furrow 8 ins. wide. The weight of this implement is about one cwt. (40 okes.)—an ideal plough for the Oriental small-holder, and the majority of land-owners in the East are really small-holders.

CYPRUS INDUSTRIES.

Lamentable Stagnation in Native Handicrafts.

(From a Correspondent.)

It would be well if more attention were given—to the exclusion, perhaps, of "politics"—to the need of concerted action for the development of Cyprus industries, which are so backward. A start has been made to improve pottery by enterprising Greeks in the Kyrenia district, but in many native handicrafts there is lamentable stagnation.

In the silk industry much might be done. The silk materials which are sold, especially in the Nicosia bazaars, are attractive, as are also various combinations of silk and cotton. Many of the cotton stuffs made are strong and durable, but in almost all cases there is a lack of that finish and perfection which characterise European goods.

The silks of Syria, sold so largely in the Levantine bazaars, including those of Cairo, are far superior in manufacture and colour-blending. Improved methods might be easily introduced if a spark of fresh enterprise could be kindled and if Cypriotes would learn to co-operate. As it is, people, especially in the towns, have accustomed themselves more and more, as the island has prospered, to imported materials, for dress and for all household needs. Many of these could be dispensed with, not only in war time, in favour of native work. The present is a very good moment for an advance, in the same way as refugees from Syria have resuscitated the cultivation of tobacco. Native artisans would then, in time, compete with Europeans. The Cypriotes work which, besides that of the best silks, finds most favour with Europeans is the embroidery generally called "Lefkara" work, from the village in which it was originally chiefly made. It maintains its reputation, and good prices are obtained for it. It is now made in many other villages.

There has been hardly any exportation of caroobs since last autumn, owing to lack of tonnage. All beans purchased by the Government were subject to delivery at Famagusta, which, for vendors in the west of the island, was a considerable burden.

TRADE NOTES.

Openings.

The Egyptian Ministry of Education will receive tenders up to May 31 for the supply and delivery of linen and table requisites, including towels, sheets, tulle for mosquito-nets, tape, blankets, plates, dishes, tumblers, cups and saucers, carafes, salt-sellars, sugar-basins, and metal knives. Local representation of tenderers is necessary.

The Egyptian State Railways and Telegraphs Administration invite tenders, up to June 25, for the supply of 5,000 khaki uniforms for the staff during 1918. Sealed tenders on the proper form, which, with specifications, may be obtained on payment of two shillings, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.1, should be sent to the general manager at Cairo. Samples of the uniforms it is proposed to supply should be sent to the Superintendent of Stores, Cairo, not later than June 18. A standard sample of the uniform may be inspected at the office of Sir A. L. Webb.

COMPANY REPORT.

Agricultural Bank of Egypt.

The report of the directors on the working of the bank for the financial year 1916-17, which was submitted to the shareholders at the fourteenth ordinary general meeting, held in Cairo on April 25, was as follows:—

The directors have to report that the net profits of the bank for the financial year 1916-17, in accordance with Articles 40 and 41 of the Statutes, amount to £E859,853.046. From this amount there has to be deducted: (1) The repayment, under Article 41 of the Statutes, of liabilities incurred in 1914, £E157,538.636; (2) the service of the debentures, £E234,540.346; (3) the provision for the reserve fund, £E41,692.142; (4) the provision for the special reserve fund as per Article 40 of the Statutes, £E8,179.528; total, £E441,950.652, leaving £E417,902.394. And there has to be further deducted: (5) Dividend on £1,250,000stg. preferred shares, £E48,750, and (6) commission to the National Bank of Egypt, £E14,103.809, leaving £E355,048.585, which is available for distribution as dividend on ordinary and deferred shares.

The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900; the balance of £E234,148.585 is available to the extent of one-half, or £E117,074.293, for the ordinary shares and to the extent of one-half, or £E117,074.292 for the deferred shares.

Ordinary Shares.—The amounts therefore available for dividend on these shares are as follows:—Balance from the year ending January 31, 1916, £E12,264.334; for dividend at the rate of 5 per cent. per annum, £120,900; further amount available, £E117,074.293; total, £E250.238.627. The directors propose to pay a dividend at the rate of 7s. per annum for the financial year 1916-17 amounting to £E169.260, and to carry forward the balance of £E80,978.627.

Deferred Shares.—The amounts available for dividend on these shares are as follows:—Balance from the year ending January 31, 1916, £E2,444.869; further amount available, £E117,074.292; total, £E119,519.161. The directors propose to pay a dividend of £E40 per share amounting to £E78,000, and to carry forward the balance of £E41,519.161.

The circumstances which have produced the large receipts of the present year cannot be regarded as normal; and the continuance of the war necessarily makes the prospect uncertain. As a measure of prudence in these circumstances, and with a view to maintaining, if possible, a steady rate of dividend, the directors recommend the carrying forward of the above substantial amounts.

It will be remembered that in accordance with the terms of the Government 3 per cent. guarantee, the general reserve fund was drawn upon, in the profit and loss account of January 31, 1915, to the extent of £E472,700, and that any collections of arrears of the capital due in 1914-15 have to be applied, in the first instance, to reconstituting the general reserve fund. The sum so applied in the account for the year ended January 31, 1916, was £E170,405, leaving £E302,295 still to be made up.

During the financial year under review £E157,538 of the capital in arrears due in 1914 have been encashed and carried to the credit of the general reserve fund, so that the above charge of £E302,295 stands reduced on January 31, 1917, to £E144,757. This sum of £E157,538 has been invested for the account of the general reserve fund by re-transferring to the general reserve investment account, at cost price, securities which were transferred from that account to the ordinary investment account when the general reserve fund was drawn upon, as stated above, in connection with the 3 per cent. guarantee.

The depreciation of £E92,009 on securities now forming the investment of the general reserve fund account would, if they had to be realised, fall on the general reserve fund.

We have thought it advisable to set aside out of this year's profits, which are exceptionally large, a sum of £E160,000 as provision for depreciation on investments, making with the £E20,000 set aside from the profits of last year a total sum of £E180,000. We do not propose to allocate this provision, which would, however, allow us to value our Government Securities at the market price of January 31, 1917, excluding those securities not yet retransferred to the general reserve investment account, and the Mortgage Company of Egypt shares at £1 10s. a share.

The general reserve fund now amounts to £E420.056. We have bought for this account up to date:—

	Nominal Value. £.E.
British Government 5 per cent. Exchequer Bonds (since converted into British Government 5 per cent. War Loan) ..	52,00

And for the Account of the General Investment Account we have bought:—

	Nominal Value.
British Government 4½ per Cent. War Loan (since converted into British Government 5 per Cent. War Loan)	£ 90,000
British Government 5 per Cent. Exchequer Bonds (since converted into British Government 5 per Cent. War Loan) ..	500,000
British Government 5 per Cent. War Loan	500,000
British Government 6 per Cent. Exchequer Bonds	732,000

ARREARS.

On January 31, 1917, the total arrears outstanding were £E817.254 — against £E1,209,186 on January 31, 1916—as shown by the following table:—

	Capital.	Interest.	Total.
	£E	£E	£E
Accrued up to Jan. 31, 1916	772,099	437,057.	1,209,186
Of which collected from Feb. 1, 1916, to Jan. 31, 1917	317,161	194,542	511,703
Leaving	454,938	242,545	697,483
To which have to be added the arrears of 1916-17	71,077	48,694	119,771
Making a total on Jan. 31, 1917, of	526,015	291,239	817,254

Of the sum of £E817,254 in arrear shown above, £E291,239 represent interest. No credit has been taken in the profit and loss account for any part of this sum, since, in accordance with the statutes, only interest actually encashed can be included in the profits. The whole of the remainder, viz., £E526,015, representing capital overdue, has, as required by the statutes, been deducted from the profit and loss account before arriving at the balance available for distribution.

Consequently any encashments made on account of the sum of £E817,254 will go entirely to the profit of the year in which they are effected, except in so far as—in accordance with Article 41 of the Statutes—the sums still due to the general reserve fund must be repaid from the arrears of capital due in 1914-15, when encashed.

Up to March 31 the encashments since February 1, 1917, on account of the arrears of £E817,254, amount to £E61,000.

The following tables give details of annual collections, of arrears and of output, as regards "A" and "B" loans:—

Year.	Annuity Due. £E.	Amount of Annuity in Arrears at end of Year. £E.	Percentage of Arrears to Annuity.

Totals	4,543,778	127,093	820,192	119,771	697,483

The sums collected during the past year from the annual instalment due and from the arrears of past years are, we consider, satisfactory. £E700,421 were collected out of the annual instalment of £E820,192 and £E511,703 from the arrears, making a total collection as regards these two items of £E1,212,124. Our encashments, therefore, exceed the annual instalment by £E391,932, and the total of outstanding arrears is decreased by this amount. This result fulfils the hopes expressed in our report of last year. It is in great part due to the very high prices at which our clients were able to sell their crops of all kinds, the price of cotton especially reaching an unprecedented figure. There is reason to expect that our clients will be able to dispose of their produce at good prices during the current year.

The Egyptian Government extended in 1916 the limits of time imposed by the 5 feddan law for the settlement of debts that were repayable by annuities. We hoped to be able in many cases to renew such loans, but these hopes have been only partially realised, the chief obstacles being the unwillingness of our clients themselves and the existence of other charges on the land. We have not, however, lost sight of the possibility of granting such facilities for lightening the payment of arrears, and we shall endeavour during 1917 to make satisfactory arrangements wherever we can.

The details of the loans made in the year 1916-17 are as follows:—

Total		402	....	123,129	Average £E306.2

Making a total of 592 loans for £E127,093 compared with 351 loans for £E72,351 last year.

There has thus been a slight increase in the output of loans in our guaranteed business, but the total falls far short of the capital reimbursed by our clients during the year. This was to be expected, as the result of the operation of the 5 feddan law. The comparative prosperity of the fellaheen and the conservative policy we have followed in making loans during the past year have also tended to restrict the output.

While, however, the present war crisis enjoins caution and has restricted our loan business it has enabled us to place our money temporarily on advantageous terms and we have therefore suffered less than might have been expected from the reduction in the amount of our capital employed in our regular business.

During the year the bank has made 34 loans on mortgage in sums exceeding £E1,000 each for a total of £E121,500, bringing the total outstanding of these loans, exclusive of arrears, to £E177,147 on January 31, 1917. Our arrears on these loans were £E1,663, which have been reduced on March 31 to £E1,548.

LAND ACQUIRED.—Every effort was made during 1916 year to realise our holdings of land which have been steadily increasing for some years past. We are glad to say the result has been successful, since although we were forced to buy in over 2,600 feddans during the year, the area we owned at the beginning of 1916 has been reduced by some 300 feddans

The following table shows the position of land acquired by foreclosure:—

	F.	K.	S.	Cost. £E	Sale Price £E
Land in hand on 31/1/16	5,039	6	15	138,420	
Acquir'd during 1916/17	2,610	7	18	65,986	
Total	7,649	14	9	204,406	
Less sales during 1916/17.....	2,922	23	19	77,786	77,976
Balance in hand 31/1/17	4,726	14	14	126,620	

It will be seen, therefore, that we have sold land costing us £E77,786 for £E77,976; of which sum £E45,560 was paid in cash, the balance being payable by instalments guaranteed by a privileged charge on the land. These figures are satisfactory, but the expropriation of clients in arrear and the buying of their property by the bank entail expenses which we gladly avoid in cases where our debts can be collected without legal action.

We have good reason to hope that we shall gradually sell the 4,726 feddans remaining in our hands at prices approaching the £E126,620 at which they stand in our books. The high prices obtained by agriculturists during 1916 for all their crops are still maintained, and there is a distinct revival in land purchase amongst those who form the bulk of our clients.

The number of expropriations made by the bank during the year are as follows:—

Number of cases in hand, February 1, 1916, 3,029; number of new cases begun during 1916-17, 2,401; total, 5,430; cases settled, 1,811; balance, 3,619; cases brought to expropriation, 555; balance pending, 3,064.

In 331 of these cases of expropriation 1,861 feddans were bought in by the bank, and in 224 remaining cases 1,269 feddans were bought in by third parties.

The total amount advanced to the Mortgage Company of Egypt was on January 31, 1917, £E736,125 secured by the deposit of registered scrip of their 4½ first charge debentures, to an amount of £1,500,000. The collections of this company, as of other companies doing similar business in Egypt, were unfavourably affected during the early part of the war, and no dividend has been paid on the shares which we hold. The company has, however, benefited from the general revival of agricultural prosperity. Lord Milner, having become a member of the British Cabinet, has resigned the chairmanship of the company. He has been succeeded by Sir Henry Babington Smith, K.C.B., who is one of the London Committee of our Board.

The loans outstanding on the London Stock Exchange at January 31, 1917, amounted to £14,500 against £20,165 on January 31, 1916.

The absence of many of the bank staff at the war has greatly increased the responsibilities of those remaining; fifteen members out of our English staff of twenty-three have joined the British Army since the outbreak of war, and we have learnt with deep regret that S. G. Bennett and J. T. Broomfield have been killed in action. We offer our respectful condolences to their relatives. In addition eight subjects of our Allies have been mobilised by the orders of their respective Governments.

The directors beg to thank the employees at Head Office and in the Agencies for their satisfactory work during the past year, and to express to those who have joined the Allied Armies best wishes for their success and safe return.

The report is signed for the Board by Mr. F. T. Rowlatt, the President.

COMPANY NOTES.

Dividends, Payments, etc.

Subject to audit of the accounts for the year 1916, the Court of Directors of the Royal Mail Steam Packet Company recommend the payment of the usual half-yearly dividend on the preference stock, and a balance dividend of 5 per cent., less income-tax, on the ordinary stock, making, together with the interim dividend paid in November last, a total of 7 per cent. for the year. The dividend on the ordinary stock issued in March, 1916, will be calculated from the dates of payment of the instalments.

The interest on the five per cent. First Debentures of the Aboukir Company, due on June 1, will be paid on that date on presentation of Coupon No. 36 at the offices of the company, 134, Palmerston House, Bishopsgate, London.

The Agricultural Bank of Egypt has declared a dividend of 7 per cent. on its ordinary shares (6 per cent. last year), and of £40 on the deferred shares (£15 last year). The dividends are payable at the National Bank of Egypt, 6 and 7, King William Street, London, E.C., and at the offices of the Bank in Cairo and Alexandria.

Oil Outputs.

Anglo-Egyptian.—Gemsah (week), 23 tons; previous week, 21 tons. Hurgada, 2,164 tons, against 2,197 tons.

MOROCCAN TRADE.

Statistics of trade which entered Moroccan ports in January, 1917, are as follows:—

	Tons.		Fr.
Casablanca.....	18,891	....	9,930,541
Mazagan	5,773	....	4,015,570
Rabat	3,475	....	4,693,866
Kerrifra	4,111	....	—
Saffi	2,223	....	—
Mogador	1,768	....	—

The totals of all ports were 36,241 tons, valued at 24,468,816 francs.

According to the *Sudan Times*, Colonel E. Bernard Pasha, Financial Secretary to the Sudan Government, and Mr. Bonham-Carter, who left Khartoum in the middle of April, are coming to England in connection with the Sudan Loan and the Gezira Irrigation projects. Their departure was intended to take place in February, but had to be delayed.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to February 28, 1917 (New Style: January 14 to March 13, 1917):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Feb., 1917		1,902,101	768,000
Do. do. do 1916		3,027,076	1,990,000
Estimated Receipts for 2 months (Law of Control)		4,8 6,666	1,783,333
Actual do. do., 1917		5,075,936	2,223,0.0
Do. do. do., 1916		6,642,947	3,822,000
Difference between estimated and actual receipts for 2 months	1917	+ 259,319	+ 439,666
	1916	+ 1,826,281	+ 2,038,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange of the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
May 8	280,000	330,000
May 9	60,000	110,000
May 11		
May 12	770,000	450,000
May 13		
May 14	360,000	70,000

NOTICES.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that at a General Meeting of the above named Company, held in Cairo on the 11th May, 1917, it was decided that a DIVIDEND of 7s. per Share on the ORDINARY SHARES of £5 each and £40 per Share on the DEFERRED SHARES of £5 each should be PAID on and after the 14th May, 1917, at the National Bank of Egypt, in Cairo, Alexandria, and London (6 and 7, King William Street, E.C. 4).

Payments will be made in London less Income Tax.

The said Dividends will be paid to the holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 14, Deferred No. 13) at the above Banks.

Forms for listing the above mentioned Coupons will be supplied on application by the bankers above named.

Coupons must be left with the bankers for previous examination.

By Order,
F. T. ROWLATT, President.

Cairo, 11th May, 1917.

THE ALEXANDRIA WATER COMPANY LIMITED.

Notice is hereby given that the thirty-ninth ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Offices, Alexandria, on Thursday, June 7, 1917, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to Act of Parliament.

Holders of share warrants to bearer desiring to attend or to be represented at the Meeting must deposit their share warrants in London before May 23, 1917, or in Alexandria before June 3, 1917, until after the Meeting, at Messrs. Barclay and Company, Limited, 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Limited, Alexandria, or at some other approved bank in London or Alexandria.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

Dated, Alexandria, April 20, 1917.

THE GHARBIEH LAND COMPANY.—The Ordinary General Meeting of the above Company will be held in Cairo on May 31, 1917. Shareholders wishing to be represented at that Meeting should lodge their share warrants with the Anglo-Egyptian Bank, Limited, 27, Clements Lane, E.C., not later than May 16.

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.,
Thursday.

The tone of our market has continued favourable, and there has been a fair amount of business going on, but any real activity has been quite out of the question with the continued scarcity of sellers. Egypt has been inclined to buy almost anything offering on this side, and the improvement in telephonic communication has occasionally helped business.

Egyptian Unified and Prefs. have been in constant demand, and close about ½ higher than last week at 83½ and 71 respectively. The business concluded has been small as sellers are very scarce.

National Banks have again changed hands round 15⅝ for about 200 shares. Agriculturals are slightly firmer at 5 3-16ths x.d., and deferred shares are wanted at 410 c.d. Some business has also been done in Agricultural Prefs. round 7⅛. Anglo-Egyptian Banks are ⅛ easier at 12¼. Land Banks continue a firm spot, and Land Bank Deferreds have been in some demand round 24¾.

Delta Light Railway Prefs. are buyers at about 5¾, and Land Allotments are also wanted; but business is impossible because there are no sellers.

Aboukirs have changed hands round 15s. 6d., and Behéras have jumped over ½ to 8 bid. New Egyptians, after business at 11s., close unchanged round 10s. 9d., and some transactions have taken place in Sidi Salem in the neighbourhood of 17-32. Union Foncières have been done to-day between 23s. 6d. and 25s. for about 200 shares, and there have been some transactions in United Lands at about 9d.

Alexandria Waters have been done in a small way at 12 9-32, with further buyers at the price, and Markets have been somewhat quieter round 27s.

Salts have again been fairly active, more than 2,000 shares changing hands at 23s. and 23s. 1½d. Khedivial Mails are again somewhat easier round 30s.

In Greek Bonds '81's and '84's are quoted a point higher at 53, and Monopolies are ½ up at 50. Rentes are exceptionally half a point down round 44. Some transactions have taken place in Currant Bonds at 90, at which price there are still buyers, and a few thousand Fundings have been done at about 53. There has also been a fairly important transaction in Greek 4 per cents. (1910) in the neighbourhood of 58.

Oil Shares.

Fairly satisfactory business has been done in oil shares. Roumanian Consols were firmer at 10s., and Anglo-Egyptians hardened to 12s. 9d.

Paris Bourse.

Closing quotations on Wednesday included the following:—Egyptian Unified, 91 (unchanged); Serbian (1895), 59 (against 58); Turkish Unified, 63.10 (against 63); Crédit Foncier Egyptien, 685 (against 689.50); Ottoman Bank, 430 (unchanged); Suez Canal, 4,335 (against 4,345).

THE MONEY MARKET.

(From Our City Correspondent.)
London, May 17.

There has been no scarcity of money in the last few days, and there has been some demand for short-period accommodation. The rate for day-to-day loans has ranged between four and three per cent., while weekly transactions have commanded from 4¼ to 4½ per cent.

Easiness of money caused some weakness in the discount market, though here rates were not largely altered. Treasury Bills were much easier, the bulk of whatever business was done being put through on the basis of 4 11-16 per cent., August-November inclusive. Twelve months' treasuries were quoted last night at 4⅞ to 4 15-16.

Exchange on Alexandria has been in the neighbourhood of 97-97⅝.

British firms interested in the protection of patents, designs and trade-marks in French Morocco may consult copies of the new protective regulations at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.

BOOKS on the NEAR EAST.

WITH SERBIA INTO EXILE.

By PAUL FORTIER JONES. 6s. net.

The author, who was with the retreating Serbian Army all the way from the Danube to the Adriatic, tells in this book a story of facts which is at once incredibly hideous and incredibly heroic. It is one of the most profoundly moving books of the war.

ACROSS ASIA MINOR ON FOOT.

By W. J. CHILDS. 15s. With Outline Map and Illustrations.

A most interesting book of travel, which is particularly timely because it gives us a more detailed story than has hitherto been published of what Germany has been doing for years past in pursuit of her ambition for world-power east of the Dardanelles, and through Baghdad to India.

VENIZELOS AND THE WAR.

By CRAWFURD PRICE. 2s. net.

A sketch of personalities and politics.

ENGLAND IN THE MEDITERRANEAN.

By JULIAN S. CORBETT. 16s. net.

A study of the rise and influence of British Power within the Straits, 1603—1713. Two volumes.

WITH KITCHENER IN CAIRO.

By SYDNEY A. MOSELEY. 5s. net.

"Mr. Moseley has the courage of his convictions—he writes frankly, and his book is full of illuminating information."—*Liverpool Courier.*

DAY AND NIGHT STORIES.

By ALGERNON BLACKWOOD. 6s. net.

The keynote of this book is struck in the first episode, "The Tryst," which presents the very real but elusive, inexplicable, psychical connection that exists between the living and the non-living. There are fifteen enthralling psychic dramas in the book, including a number of Egyptian stories.

MODERN MOVEMENTS AMONG MOSLEMS.

By SAMUEL GRAHAM WILSON, D.D. 6s. 6d. net.

An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

NOTES OF THE WEEK.

A formal declaration by the Russian Provisional Government, in which it states that it rejects, in concert with the entire people, all thought of a separate peace, and direct assurances to the same effect given to France and to the United States confirm the views expressed in these columns last week that the crisis which menaced the Grand Alliance had passed its zenith. But between this stage and the effective resumption of the offensive in the Eastern theatre of the war may intervene a period of unknown length. It is significant that a pronouncement so emphatic in other respects should have to refer to the Government's conviction that the defeat of Russia and her Allies would not only be a source of the greatest calamities to the people, but would postpone or make impossible the conclusion of a world-wide peace. In regard to the military situation, the Coalition Cabinet still feels the obligation to tread warily, and it contents itself by announcing that it believes firmly "that the Russian revolutionary army will not suffer the German troops to destroy our Western Allies and then throw themselves upon us with the full force of their arms."

The more that is known of the conditions of things that has prevailed for the last few weeks in the Eastern theatre, the more remarkable becomes the respite from military disaster enjoyed by the Russians. In an official report describing the impressions formed during a recent visit to the North the Commander-in-Chief of the Black Sea Fleet is stated to have drawn a sombre picture of the actual situation. At the front not only has there been a decline of interest in the war, but in some parts military duties have been abandoned; in others there is a total lack of officers, whole commands being usurped by the soldiers. The army, it is stated, may be regarded as having practically concluded peace with Germany, and that at a moment when a Russian offensive might have played a decisive part in the European campaign. Fortunately, the position is not entirely desperate. The new Ministry has taken charge just in time, and the firm language used by M. Kerensky, the Minister for War, who does not hesitate to speak of the necessity of reinstating iron discipline in the army, is of the best augury. Some time, however, must necessarily elapse before this spirit can permeate through the whole machine, and the ultimate value of Russian assistance will depend on the progress made in the meantime in accumulating supplies of munitions.

The first steps in the direction of a return to normal conditions in the Russian army have been taken at a congress of delegates of officers of the army and navy at the Petrograd headquarters. General Alexeieff confirmed the sinister reports to which reference has already been made. He declared that there had been good reason for the cry that the country was in danger, for "the combativeness of the Russian army had indeed noticeably decreased in consequence of the dissension and mistrust existing between the officers and men. The Russian army which had been still so formidable yesterday has been stricken with a fatal impotence." The congress pledged itself to do all that was possible to restore vanished discipline and to bring together officers and soldiers once more in a close union, rendering them again capable of marching to victory. A clear appreciation of the internal situation in Russia renders it more easy to appreciate the prominence still given in official pronouncements to the policy of "no conquests and no annexations," a phrase which has brought much unction to the souls of those who are anxious to prevent the defeat of Germany by the Allies. On this point, however, there seems to be no longer any room for misunderstanding between the Allied Governments themselves, and the business of winning the war can now proceed with redoubled vigour.

There can be little doubt that the Allied offensive on the Western front has played an important part in the German resolve to leave the Russians alone. It was hoped that professions of friendship would expedite the process of disintegration which the revolution had begun; but it probably suited the policy of the German Higher Command to withdraw men and guns from the Eastern front in the hope of being able to stem the tide in France and Flanders. More recently the successful Italian offensive in the Carso region will have increased the Austro-German desire to allow the sleeping dogs of the Eastern theatre to continue their passive existence. Public opinion in the Central Powers could more easily be brought to understand the tactics adopted towards the Russians than to acquiesce in an unmistakable de-

Digitized by Google

feat in the West. The Italians have helped to extend the transfer of enemy troops from one front to the other; and if the offensive both in France and on the Isonzo can be maintained and increased during the next few weeks, there will be a good chance of a reorganised Russian Army finding its task materially simplified.

So far there has been no achievement in Macedonia on a scale sufficient to enable us to see in the activities now taking place along the whole Allied line any serious threat to the enemy's lines of communication. It is true that the nature of the country necessitates much manœuvring for position before an advance is feasible, and for this reason we must expect to find the Bulgarian line being continually probed until the relative strength and weakness of the various parts have been established. After testing the Doiran sector with no little success, the British have turned their attention once more to the Struma front, where we have not yet secured complete possession of the lateral railway which connects Seres with Demirhissar. It is possible that some of the ground previously held here had to be abandoned during the winter. If that were so, the capture of Kiupri brings us once more to close quarters with the line. Farther to the west the French and Serbians continue to give the enemy little respite; but the nature of the terrain causes an advance to be measured by yards instead of by miles.

The official statement given in the House of Commons on Wednesday regarding the operations in Palestine adds little to the explanation offered in these pages last week. General Dobell's force has not advanced, because any attempt to do so was likely to prove too costly. Close touch is maintained with the enemy's main positions defending Gaza between the sea and Sheik Abbas, a front of eight miles. This position has been extended by a series of redoubts and trenches to Abu Hareira, three miles farther to the south-east, and the Turkish flank is thus protected by a stretch of broken and waterless country. With the enemy in any force on this strong line it would be folly to risk a frontal attack, until his defences can be pulverized by artillery fire. The alternatives are for General Dobell to wait until the consolidation of the ground already won, with the construction of railway and roads, enables him to mass in overwhelming strength, or to carry out a turning movement. The difficulties in the way of the latter are obvious.

It is a matter for regret that M. Zaimis, whose good intentions are beyond dispute, should allow his reputation to be compromised by remaining in an office in which he finds himself vested with full responsibility for all that happens in Greece, but with no power to shape the trend of events. The pessimistic messages that reach this country from Athens constitute a bewildering anomaly in these days of censorship. A correspondent of the *Morning Post* is allowed to report that the situation is becoming dangerous again. "M. Zaimis seems to be getting no further with his programme of establishing more cordial relations between Greece and the Entente. There can be no doubt that he is deliberately, though covertly, opposed by the military cabal, whose boldness cannot well be explained except as due to a certain amount of secret encouragement from Court circles. . . . The Reservists declare that a crisis is rapidly approaching when they will settle all scores in full with the Venizelists, some even going so far as to state that the Allied Ministers will be killed. . . . The Germanophil Press is busily trying to inflame the masses against the Allies." Now, if there is no truth in these statements, they ought not to be published. If they are true, the state of affairs which they describe ought not to have been allowed to arise and ought not to be tolerated. The impotence which General Alexeieff deplores in the Russian army finds a counterpart in the counsels of the Allied Governments in the face of the Greek situation. The question arises whether it would not be better to impose an absolute veto on all messages from Greece rather than, by allowing the truth to be published, to lay bare the failure of the Allies to deal with the situation. In their relation to the war events in Greece have, of course, no longer any special significance; but those who are jealous of the reputation of the Allies as the arbiters of a final, just and acceptable settlement in the Near East regret to find this apparent indifference towards even the least important item in the Near Eastern question.

By no means the least satisfactory feature of the new spirit that is inspiring Roumania, as a result of her sore trials, is the determination to remove any reproach that may have lingered in connection with her handling of the Jewish question in the past. As is well known, the question has been complicated by a variety of issues; it has not been as simple of solution as was urged in some quarters; but there remained the impression in the minds of impartial students of Roumanian affairs, and, let it be said, in the minds of many Roumanians themselves, that with a little more good will and a definite effort to arrive at an understanding it was possible to deal once and for all with the problem in a way satisfactory to all concerned. This stage, there is good reason to suppose, has now been reached. The whole Jewish question is to be brought before the Jassy Parliament this session. King Ferdinand, however, has in the meantime taken upon himself to be the mouthpiece of the new spirit.

One of the old grievances against the Jews in Roumania was that they did not identify themselves sufficiently with the national interests. The fact that they offered their services in the war against Bulgaria turned opinion some way in their favour; but the easy circumstances attending that campaign, perhaps, prevented the good impression from sinking very far down in the mind of the public as a whole. With the present war the whole situation is changed. The Jews have suffered with the rest of the community. There may be doubtful instances among those who have remained in the conquered territory, but these will not affect the general record. King Ferdinand could not anticipate the details of any decision to be reached by the Roumanian Parliament; but to a deputation of Jews which waited on him on May 11 he could give a very clear undertaking: "All who have striven for the realization of the aspirations which Roumanians had entertained for so many ages, by shedding their blood, by enduring the difficulties and sacrifices imposed by war and invasion, whether they are Christians, Jews, or adherents of any other form of belief, will equally have a right to the gratitude of the country and to that of the King, and will enjoy equal rights in a free, great, and flourishing Roumania, closely united, all of us, under the folds of the national flag."

The report that German intrigues have been revived in Afghanistan destroys the good impression conveyed by Mr. Austen Chamberlain when a few months ago he was able to announce the failure of the German mission to the Ameer. Enemy agents, it is stated, are once more striving to persuade the Afghans to make a move against Turkestan, declaring that the Russian forces are insufficient to prevent an invasion, and that the Mohammedan population is in a state verging on revolution against the Russians. As the Allies have been able to rely upon the Ameer until now to defeat such plans, we need not be unduly perturbed by these fresh intrigues. Their existence, however, points to the necessity for vigilance on the borders of Afghanistan, and for offering the Ameer the strongest moral support amid the difficulties that confront him in his efforts to stand loyally by Great Britain and her Allies.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

The High Commissioner at the Native Courts.

Cairo, April 30.

The High Commissioner paid a ceremonial visit this week to the Native Court of Appeal. His Excellency, who was accompanied by the Hon. Mervyn Herbert, was received on his arrival by the President, Yehia Pasha Ibrahim, and the Vice-President, Judge H. W. Halton. He was conducted to the former's private room, where the Procureur-General, Ahmed Pasha Talaat, the Counsellors of the Appeal Court, and the legal staff were presented to him. Sir Reginald then went round the various offices, including the Parquet-General, where Talaat Pasha introduced to him Attia Bey Husni, Chief of the Cairo Parquet; Mr. George Hughes, Senior Inspector, and the other inspectors. Subsequently he visited the library, where Yehia Pasha presented the Leader of the Native Bar, Ahmed Bey Loutfi, and his two predecessors in that dignity, Ibrahim Bey Helbawi and Abdel Aziz Bey Fahmy; and before he left he inspected the court-room of the Cassation and Assize Court, where, at the time, a case was in course of hearing. The High Commissioner's visit has given the greatest pleasure in native legal circles, more especially as this is the first time for many years that H.B.M's representative has paid the Egyptian Courts this compliment. The last occasion, if I am not mistaken, was during Lord Cromer's tenure of office.

This morning His Excellency visited the premises of the Legislative Assembly, where he was received by Ahmed Pasha Mazlum, the President, and Saad Pasha Zaghlul, the Vice-President.

Anzac Day.

Anzac Day was fittingly celebrated here. A memorial service was held at the Anzac Hostel, where the Rev. E. A. Burroughs delivered an admirable address. The High Commissioner was represented by Lieut.-Colonel Watson, who brought a letter from His Excellency, which was read out by Mr. Jessop, the Secretary to the Y.M.C.A.; and General Murray by Major T. B. Arbuthnot. The service, which was well attended, was simple, but very impressive, and closed with Kipling's Recessional, the Dead March in "Saul," and the "Last Post." A most beautiful and generous contribution of flowers was made by various residents and by the hospitals, notable among the latter being the floral crosses made by "Gallipoli" men at Bulac Dacrur Convalescent Hospital. All these floral tributes were conveyed to the British Cemetery at Old Cairo, where they were placed on the graves of the Gallipoli heroes who have been laid to rest there.

The National Mission.

The last meeting in connection with the National Mission of Repentance and Hope was held on Tuesday at the Sultania Opera House, where a large number of residents and military responded to the invitations which had been issued. Bishop MacInnes presided, and he was accompanied on the stage, where accommodation had been found for about 200 soldiers, by the Archbishop's Messengers, the Very Rev. Dr. Storrs, Dean of Rochester; the Rev. E. A. Burroughs, Fellow of Hertford College; and the Rev. C. T. Horan, Chaplain of All Saints'. The meeting opened with a short prayer, after which the Bishop read a letter he had received from the High Commissioner, in which he expressed his great regret at not being able to be present, and thanked the Messengers for their work, from which he hoped much good would result in directions where a change for the better is greatly needed. Mr. Burroughs and Dean Storrs then delivered their addresses, after a few introductory words in each case from the Bishop. Both dealt with the after-war problems, and dwelt on the many weak points in our religion and our relations with our Creator; and both speakers were listened to with rapt attention, especially the Dean, who spoke without notes, and whose serious, though optimistic, words, contrasting with the equally serious, but somewhat pessimistic views of his colleague, seemed more accurately to reflect and more directly to appeal to the feelings of his audience.

The Late Sir Armand Ruffer.

It was with widespread regret that Egypt received the news of the tragic death of Sir Armand Ruffer whilst on his way back from Salonika, where he had gone some three or four months ago at the request of the Provisional Government to give his advice on local sanitary matters. Sir Armand Ruffer had been connected with Egypt since 1896, when he came out here as a Professor of Bacteriology at Kasr-el-Aini. In the following year he was appointed President of the International Quarantine Board at Alexandria, a post which he still held at his death. He was an indefatigable worker and a born organiser—his administration of the Quarantine Board showed that. In addition to his ordinary duties, he was Vice-President of the Alexandria Municipality, a post he had held for several years, and since the war he had also acted as Deputy Commissioner of the British Red Cross in Alexandria; to both the Municipality and the Red Cross he rendered invaluable services. Sir Armand Ruffer, who had a most charming personality, was *persona grata* with every element of the local population. Egyptians, foreigners, and Britons alike had a great respect for his ability and his sterling qualities. By his death Egypt loses a trusted worker and sincere friend, and the medical and scientific world a member whose contributions to research work were asknowledged by all to be of the greatest value.

The "Philippides" Case.

The indictment in what is known as the "Philippides" case has now been drawn up, and the trial has been set down for the Cairo Assizes on June 4. There are several charges, the more important being that Philippides Bey, as head of the Secret Police in Cairo, took bribes from Mahmud Eff. Mohammed, his assistant, and various Mamurs (officers in charge of police districts) to obtain their promotion, and from relations of political prisoners and other accused persons to secure their release. His wife and his orderly are accused of having acted as intermediaries in these transactions.

With regard to the Behera torturing case, about which I wrote last week, the men who were accused of murder in one of the cases in connection with which the torturing took place, and who had in the meantime been sentenced to imprisonment for life, have appealed against their conviction on the grounds that the confessions on which the Court based its decision were obtained by unfair means. As the details of the investigation lend a certain colour of truth to their allegations, the Court of Cassation, to which they made their appeal, has decided that a retrial is desirable, and has ordered the accused men to be brought before another Assize Court.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Book Store.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

Digitized by Google

CYPRUS NOTES.

(From a Correspondent.)

The Legislative Council.

The first session of the new Council was opened on the 24th April. After reading his opening speech the High Commissioner left the Chamber, and—the office of Chief Secretary being vacant—his place was taken by the King's Advocate, Mr. Rupell. The speech was then read in Turkish and Greek, the former having precedence, as when the island was still an Ottoman possession. It was agreed, as usual, that a sub-committee, consisting of two official members with one Turkish and three Greek members, should draft a reply, to be submitted to the Council on April 30. The reply consists of one paragraph only, thanking the High Commissioner for his address. Other paragraphs were proposed by the Greek members, but these were rejected by the British, the Turkish member, Irfan Bey, concurring. They included, as need hardly be added, a statement of the Greek aspirations for union with Hellas.

Sir John Clauson in his speech congratulated the members of the new Assembly on their election. Of the twelve native members whom he knew ten years ago, only four now have seats. The new members, he was sure, would maintain the traditions of the Council, and work to advance the interests of the people. Mention was made of the draft laws (about seventeen in number) which will be introduced for consideration. Allusion was made at some length to the need of a new law to deal with the election of village headmen (*mukhtars*). The Chief Justice, Sir Charles Tyser, in his report on Criminal Statistics for 1914-15, stated that "the election of village officials is a fruitful source of crime." The persons elected are often unsuitable, and the elections "stir up bad feeling and hostility among the people, which is frequently a cause of crime." Again, the Mukhtar is in many cases the money-lender of the village, and by virtue of his office has to sell up the villagers in execution of the judgments he has obtained against them! In a case of attempting to murder a Mukhtar, which came before the Assize Court, "the defence, which turned on a question of identity, was that there were at least six or seven persons likely to shoot him. . . . He had to seek police protection when going from his house to the café." A law of an experimental character will be introduced to alter the mode of election. Reference was also made to the Field Watchmen Law, a very important one for Cypriot agriculturists, which has been found open to many objections and requires considerable amendments.

A Notable Pronouncement.

By far the most remarkable part of the speech referred to a proposed measure for the relief of debtors. Very interesting allusions were made to Solon, and his legislative enactments in this field. The proposed law is based on principles recognised by that great law-giver. The High Commissioner again quoted the Chief Justice, whose reports have shown how the poor Cypriot who falls into the clutches of the money-lender is never again a free man, but, except in the rare cases in which he can repay both capital and exorbitant interest, sinks into a state of abject and hopeless servitude. The draft law deals with the present disastrous situation in the spirit of Solon, who grappled with the troubles and difficulties that existed in Attica in the 6th century B.C., including some not dissimilar to those in Cyprus, so far as regards the grievous condition of debtors. Solon, who naturally met with some opposition, exacted an oath from the Athenians that they would observe his laws without alteration for ten years (according to Herodotus). He then left Athens for ten years, and, after visiting Egypt, was received in Cyprus with honour by King Philocyprus. It is to be hoped that now, after the lapse of 2,500 years, Cyprus may profit from his economic teaching. Solon, in view of the existing distress, cancelled outstanding debts; but his great measure, the *σεισάχθεια*, or disburdening law, contained various provisions for the relief of debtors, without infringing more than was necessary the lawful rights of creditors. He made it illegal to lend money on the security of the borrower's person, or to sell into slavery for debt, while a limit was also set to the rate of interest. The measure now contemplated will not, observed the High Commissioner, interfere with the legal interests of creditors or the business transactions of merchants. The present law of Cyprus allows creditors to obtain 12 per cent. interest. It is right that creditors should be protected against the risk they incur by advancing money to poor debtors; but that a poor man who honestly tries, but fails, to fulfil his obligations should be obliged indefinitely to bring all his produce to his creditor, at prices fixed by the latter, and should be reduced to slavish dependence, with nothing to look forward to but hopeless labour or emigration to a foreign country, implies an intolerable state of things, and one which is injurious to the State. Such a man must be enabled to make a fresh start and find a livelihood, as a free man, in his own country. The object of the projected law, which is much needed, is most praiseworthy, and the statement of Sir John Clauson may be regarded as perhaps the most noteworthy pronouncement yet made by a High Commissioner in an opening address to the Council.

Estimates for 1917.

The estimated revenue for the current year, including the grant in aid of £50,000, is computed at £455,500, as against £414,620 for the last financial year. The expenditure, including the £92,800 levied for the Turkish Debt, is estimated at £419,933, as against £401,779. The surplus would thus be £35,567, as against £12,841 last year. Some critics are sceptical as regards the yield of tithes, estimated at £111,000, in view of the unfavourable agricultural outlook.

According to statistics of births and deaths during the last calendar year, there were 8,414 births, or about 28 per thousand; and 5,128 deaths, or 17 per thousand. The total population is given as 298,775.

THE JEWS OF ROUMANIA.

The following message has been received by H.E. the Roumanian Minister from his Government, and by him communicated to the Press:—

On May 11 a deputation from the Roumanian Jews waited upon the King to present to him the assurance of their loyalty and devotion. The deputation expressed to his Majesty the griefs of the indigenous Jews and assured him that they would prove in all circumstances that they were an element of order, sincerely devoted to their native land and to the Crown, as was the case with the Jews in all countries where they enjoyed full equality.

The deputation handed to his Majesty a note in which they respectfully begged him to take the native Jews under his protection as he had done with regard to other sons of the Fatherland. To this note the deputation joined a copy of an appeal which the native Jews distributed at Jassy the previous Sunday. In this appeal the Jewish Committee set forth their wish for national unity and the victory of our armies; they denounce those among them who have shown that they do not share the patriotic views of the nation, and they state that they rely on the wisdom of the Roumanian people as regards the solution of their question. The manifesto lays stress on the decision arrived at by the Roumanian Jews at the beginning of the war not to increase the difficulties of the situation in which the common Fatherland found itself by raising their question at the present time. The manifesto concluded as follows: "Having confidence in our fellow-citizens, we will do our duty towards our country, sparing no sacrifice and taking into consideration nothing but the welfare of Roumania.

His Majesty the King replied as follows:—

After having been long in close touch with the daily life of all classes of people in the country, I formed the conviction—and I am pleased to bear testimony to the fact that in the present circumstances that I was not mistaken—that all the inhabitants of Roumanian soil, irrespective of differences of origin, of race, or of religion, were actuated by the same exalted notions of fraternity. This fraternity and community of ideas and aspirations constitute the surest guarantee for the future of the country and the realisation of our national ideal. One of the glorious characteristics of our native Princes was that, while preserving the faith in its traditions, they permitted the existence and the celebration of all the religions of their subjects. King Carol was so faithful to this tradition that he, a Roman Catholic, requested that his body might be laid to rest in one of the oldest religious monuments belonging to the worship of our ancestors. I ascended the throne impressed with the same sentiments. When I undertook the task of uniting all Roumanians under the same flag, I realised that that flag must be at the same time a symbol of the union and of the religious, political, and economic freedom of all the sons of the Fatherland. All who have striven for the realisation of the aspirations which Roumanians have entertained for so many ages, by shedding their blood, by enduring the difficulties and sacrifices imposed by war and invasion, whether they are Christians, Jews, or adherents of any other form of belief, will equally have a right to the gratitude of the country and to that of the King, and will enjoy equal rights in a free, great, and flourishing Roumania, closely united, all of us, under the folds of the national flag.

It is announced that Serbia will shortly open Legations at Lisbon, Copenhagen, and Stockholm.

Reuter's Stockholm correspondent reports under date of May 19:—The Secretarial Department of the Socialist Conference has received a telegram from the Jewish Societies in Palestine stating that the Turkish Government has given orders for the Jewish population to evacuate Palestine, and has proceeded with the execution of these measures with increasing severity. The orders received are aimed at Judea, Jerusalem, and afterwards Galilee. The official Turkish agencies do not even take the trouble to deny the bad treatment and pillage of the population of Palestine.

THE MEVLEVI DERVISHES.

The Mevlevi order of Dervishes is the most widely known to European travellers of all the religious "paths" in Islam. Few tourists who can spare the time omit to witness the Friday performance of the "Whirlers"; and those who can squeeze it into their programme also visit some meeting place of the "Howlers." In Professor H. Léon's recent lecture at the Sufi Khankah in Ladbroke Road, an excellent account was given of the Mevleviyeh, of which mention was made in THE NEAR EAST of May 11. Some points not touched upon by him may be of interest.

The Mevlevi order is not one of the earliest. It was founded by Jelal-ed-din Rûmi, the famous author of the Mesnevi esh-Sherif, who was born at Balkh in 604 A.H. and died at Konieh in 672 A.H. (1273 A.D.) His father was a noted Sheikh, Beha-ed-din, who, after various changes of abode, settled at Konieh, at the time when the dynasty of the Seljukian Turks in Asia Minor was coming to an end, and the Osmanli Turks were beginning to consolidate their power in the diminished territories.

The headquarters of the order is at Konieh, and the office of Sheikh, or spiritual chief, is hereditary in the family of the Chélebi. It is said that should the line of Osman become extinct (as it very nearly did, in the person of Murad IV., in 1640 A.D.) it is from the family of the Chélebi that a new Sultan of the Ottoman Empire should be chosen. The Superior of the order has the privilege of girding on the sword of Osman at the enthronement of a new Sultan at Constantinople. The order regards itself, and is perhaps regarded generally, as the most aristocratic, or, so to speak, exclusive of orders. Many princes of the families of Sultans, Khedives of Egypt, and others have been affiliated to it. Rich presents have often been made to its Sheikhs, and the *tekkiehs* of the Mevlevis have not fallen into that state of decay to which so many have been reduced in Mohammedan countries.

The order has had its vicissitudes in the course of Turkish history, and has not escaped attacks, when the hostility of orthodox Ulema, and of the people, towards the free-thinking tenets of the Dervishes and Sufis have reached a climax. Thus, to take two instances, in 1656, in the Vizirate of Mehmet Kauprili (reign of Mehmed IV.), an attempt was made to suppress at least four of the principal orders, including the Mevleviyeh. Again, in 1826, the destruction of the Janissaries by Mahmud II. was at once followed by a raid upon the convents of the Bektashi order, whose association with the Janissaries was so intimate, and then on those of other fraternities. Mahmud, however, relented, or intervened, and the orders were soon able to restore their influence. The Sultan himself was a member of the Mevlevi order, whose *tekké* in Pera he sometimes visited, as he did that of the Nakshibendi order.

The *zikr* of the Mevlevis, as well as the *Sema' Khan*, in which it takes place, has often been described. No one witnessing it can fail to conclude that it symbolises the motions of planets round a central sun, though the *zikr* is not, perhaps, a relic of sun worship. The Mevlevi must go through his 1,001 days of probation in lower grades of domestic service, chiefly the kitchen (being called at this period a *Kara Kolak*, or jackal), passing, theoretically, at least, through eighteen cells, until he can partake in the mystical building of the Kaaba. The points of resemblance with the grades of Freemasonry in the Mevlevi, as in the Bektashi, order have often been touched upon. The common, but erroneous, definition of a Dervish used to be that he was "the monk and Freemason of the East." After the probationary period it depends on the individual himself whether he will be of the few who pursue the upward path towards those higher grades to which a *murid* may aspire.

As regards the outward appearance, everything in dress is, as Professor Léon pointed out, symbolical. Perhaps the most conspicuous feature is the "sugar-loaf" felt cap of the Mevlevi. This is said to represent the vase, purer than crystal, in which the soul, not only of Mohammed, but of every mortal descended, and in which it will return.

In addition to what we know of Jelal-ed-din—no sketch could be attempted here—innumerable legends have grown up around his name, as in the case of other saints of Islam. He is regarded as the "Sultan i-evlia," or chief of the *Welis*. The Meshevi reveals the religious philosophy and the poetic talent of Jelal. It treats of Divine unity. From the Deity all existing beings proceed, and to Him all should return. The visible creation is but a reflection of the reality which it symbolises. The form changes, the essence remains. We may trace glimpses of the doctrine of the indestructability of matter and of the persistence of force. All nature is filled with Divine love, and Easterly unions are but symbolical of the Divine. There are remarkable descriptions of the material world and its beauties. All is mystic and allegorical. According to Sufi doctrine the soul was created before the body, which is the perishable frame. The vital element lives on and must seek reunion with that from which it emanates. We know not what we were, though we may have vague reminiscences of previous existences, and in the future the soul may pass through various stages or migrations. Since all is one, good and evil are both from God. They are terms for exaggeration of a state which may become good or bad, according as original potentialities are applied or misapplied; just as the earth may bring forth either fruits and flowers or poisonous weeds.

If we assume original purity and lofty aims in the original doctrines of some of the *Pirs*, or founders of orders, or of some of the Sufi poets, we see, nevertheless, that they contain the seeds of a corrupt fatalism, and lead—when pushed to extremes—by logical process, to conclusions that are destructive of all religion and morality. If man is identified with the Deity, and there is no difference between good and evil, God is the author of all the actions of men, who are thus relieved of responsibility. And so Sufism meets, on common ground, the conclusions of extreme materialism.

R. M.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"A NEW SITUATION IN THE BALKAN PENINSULA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—A friend has sent me a copy of Mr. Woods' article on this subject, and—though my letter is somewhat belated—I hope you may be able to spare room for it.

Mr. Woods seems to me to have struck fundamentally the right note—to have made the right qualifications. Neither Serbia nor Bulgaria can repudiate logically the arrangements made mutually and freely by themselves at a time when both foresaw a redistribution of territory; the basis of their understanding was the Allies' principle of nationality, and neither of them should feel serious hesitation—still less see anything dishonourable—in accepting the decision of the Allies on that point. That is to say, while accepting the voluntary and private agreement between the two States as the basis of settlement—because the embodiment of the principles asserted—the Allies would draw the actual text of the treaty to suit topographical, economic, strategic, and other details.

For instance, assuming Serbia to have got full access to the Adriatic, she would have no longer any excuse for extension into a region where the article is post-fixed—*e.g.*, south of Uskub; and, assuming Greece—as the trading nation—to have secured control of the railway system along the coast as far eastward as the Struma and up the Vardar valley (where it is on the *west* bank), she would have no longer any excuse for demanding Kavalla. So, assuming the Turk to have vanished from Europe, there would be no excuse for not allowing Bulgaria to advance up to the lake-and-swamp belt which makes the natural Chatalja lines.—Yours, etc.,

L. W. LYDE.

THE CHAIR OF HISTORY AT ROBERT COLLEGE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My attention is called to a letter that appeared in THE NEAR EAST, in which Mrs. Alexander van Millingen very fittingly corrects a misstatement of one of your reviewers about my connection with Robert College. Since I have not been in Constantinople for four years, and was at Robert College only temporarily to replace Professor van Millingen during a sabbatical year, I am very much surprised that this error should have been made. Neither in the *New Map of Africa* nor in any other book or article have I ever spoken of myself as the holder of Professor van Millingen's chair. In fact, I have never mentioned Robert College, or my connection with the college, in anything I have ever written, on title page, in preface, in text, or in footnotes. On the other hand, when I have had occasion to refer to my personal knowledge of the Near East, it has always been as correspondent of the *New York Herald*. I live many thousands of miles away from my American publishers, and am not responsible for their advertisements. As I have no copy of the *New Map of Africa*, I do not know what they may have put upon the paper jacket of the book in question, but feel sure that they did not intend to make it appear that I was still in Constantinople or the holder of Professor van Millingen's chair.—Faithfully yours,

HERBERT ADAMS GIBBONS.

[As stated in our issue last week, the paper jacket of Mr. Gibbons' book described him as Professor of History at Robert College.—ED.]

TANGIER TO TEHERAN.

As far as one can judge from various indications, "Tsar" Ferdinand of Bulgaria seems to be enjoying a certain amount of popularity among his subjects at present. But it was not always thus. Not many years ago he was an object of mingled contempt and dislike to most Bulgarians, and his frequent and prolonged absences from the country did nothing to restore him to favour. A tale, told by one who took part in the entertainment referred to, illustrates this phase of Ferdi's career. At a party given in Sofia and attended chiefly by university professors and men of letters, the company was amusing itself by playing a game not unlike our "Animal, Vegetable, or Mineral," in which one person, by questioning the others, must find out who, or what, they are thinking of. In the Western game—or exercise, rather, for most "players" find it a very stiff mental exercise—every question must be so put that it can be answered either "yes" or "no"; in the Bulgarian version more latitude is allowed. In both cases, of course, all the company except the "guesser" have to think of the same person or thing.

***

In the particular game at Sofia to which I refer, a lady had been selected as the guesser, and when she returned to the room, after the others had selected their object, she asked the usual questions. First came, "Is it a man or a thing?" The answer was: "It is a man, but it is also a thing." The lady's eye twinkled, and she began to put her questions very quickly. At last she asked: "Is it often seen in Bulgaria?" "It is seen," came the cautious reply, "but not often." And at once she guessed, correctly, that it was King Ferdinand. The incident was significant. For the players of this game were amongst the élite of Sofia intellectual society; and their opinion—their contempt of their ruler—was quite unconcealed, although there was at least one foreigner present. Yet Ferdinand is still in the saddle!

***

A quaint story about Bulgar acquisitiveness is told by a well-known Serbian professor. Before the war, and before the Balkan Wars also, this professor was spending some time in Sofia writing up a particular subject, and put in a good deal of time at one of the museums and libraries. The head of this institution one day said to him: "Ah, the Bulgarians are terrible thieves of books and manuscripts." The Serbian guest treated the remark as a joke, but the Bulgarian assured him that it was true, adding: "I know only too well." Soon afterwards the Bulgarian went out of the room, and on returning carried in a pair of goloshes. "Are these yours?" he asked. "Yes," said the visitor. "Then, for goodness sake, why leave them outside the door?" "Because they are very dirty." "True, but never mind. You will have them stolen." Again the Serbian treated the matter as a joke. But the Bulgarian put the goloshes *in* the room. The sequel came some days later. Then the Serbian attended a lecture by the Bulgarian; left his goloshes at the door, and—found them stolen when he wanted to put them on when leaving. Sorrowfully he sought out the Bulgarian. "You know your countrymen better than I do, after all," he said. "I left my goloshes at the door this evening, and——" "And now you will believe, perhaps, about the books and manuscripts," said the Bulgarian calmly.

***

The *Welsh Gazette*, of Aberystwyth, contained recently a long article about King Nicholas of Montenegro and the state of the Balkans generally. This article began: "Our townsman, Mr. T. D. Jenkins, of Bodhyfryd, had the honour of being received last week by H.M. the King of Montenegro, at his residence in Paris. King Nicholas, who is now the oldest crowned head in Europe, is a great admirer of our compatriot, Mr. Lloyd George, and considers he is to-day the astutest statesman in Europe," etc., etc. And it concluded: "The King gave one the impression of a kind and thoughtful monarch, absolutely democratic in his ideas, in sympathy with all sections of his kingdom, and in touch with all the tortuous currents of European politics. One could not fail to be struck with his simplicity and 'agosrwydd'; dysgai wers mewn symlrwydd boneddigaidd i lawer Cadeirydd Pwyllgor Cymreig." I have heard before of King Nicholas's simplicity, but never of his "agosrwydd." I hope it is all right.

***

I heard recently a pleasing story of Queen Marie of Roumania, in the days when she was only the Crown Princess. She had accompanied the late King Carol to Constanza in connection with the official opening of that port, and the Royal party was on board one of the boats owned by the Roumanian Maritime Service. King Carol discovered by chance that the chief engineer was a Scotsman; and thereupon promptly took steps to present the lucky man to Princess Marie, describing him playfully as "a fellow countryman of yours." The Princess was very gracious, and the engineer's heart was completely won in the short time she chatted to him. Later, when the Royal party was about to leave the boat, she remembered the Scot, and sent for him. "For," said she, "I must say good-bye to my fellow-countryman." He came; and once more the Royal lady spoke graciously. The Scot sought desperately to rise to the occasion. He cudgelled his brain for a pretty phrase, but all he could produce was: "Aye, but ye're a bonnie lassie." The genuineness of the feeling behind the words was, however, evident; and I suspect that Princess Marie left the boat not unpleased by the Scottish compliment.

***

How would it sound, I wonder, if, instead of "The Order of St. Michael and St. George," we had "The Order of St. Spiridion"? It looks strange in print, and it has a strange sound, too; but, as a matter of fact, the shorter name was first suggested, and before Michael and George entered the field, "St. John of the Isles" was Spiridion's only serious rival. All these facts, together with a great many more about the famous Order, are set out in a most interesting article contributed by Mr. Ernest C. Stembridge to the May *United Empire*, which I would strongly advise you to read. The idea of the Order sprang from the brain of Sir Thomas Maitland, the first Lord High Commissioner of the Ionian Islands, who wanted to have some showy reward for the services of distinguished Ionians. Then Malta, of which Sir Thomas Maitland was also the Governor, was included in the scheme. So "St. John of the Isles" does seem to have been quite a happy suggestion.

***

But the title actually chosen is more suitable for the extended scope of the Order—if one may use such an expression of so august a thing as an Order. A few years after the British Protectorate over the Ionian Isles ceased, membership of the Order was extended to the colonies generally, and since then the membership has been enlarged by admitting those who have served the Empire in foreign countries as well as those whose work has been done in the colonies. But it is curious to reflect that the Order, one of our proudest and most coveted, may almost be regarded as a souvenir of our occupation of a group of fascinating little islands which we held for a half-century.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Prisoners in Mesopotamia. May 22.

In reply to Mr. MACCALLUM SCOTT, Mr. MACPHERSON said two men who had only recently been missing in the course of the military advance in Mesopotamia had been reported recaptured from the enemy. This fact was at once notified to the relatives. The other prisoners of war had been removed from Baghdad prior to our entry.

The Operations in Palestine. May 23.

Mr. MACPHERSON, replying to Sir P. MAGNUS and Colonel SANDERS, said:—As already announced, the operations in Southern Palestine which took place between April 17 and 19 resulted after heavy fighting in the capture of the Turkish advanced positions in the vicinity of Gaza, and we are now in close touch with the enemy's main positions defending the town between the sea and Sheikh Abbas, a front of 14,000 yards. This position has been extended by a series of redoubts and trenches to Abu Hareira, 11 miles south-east of Gaza. The Turkish forces, which have been reinforced, have made good use of natural obstacles, and their main position in front of Gaza is one of great strength, while the left bank is protected by broken and waterless country. In view of these conditions our progress has necessarily been slow, and there has been no serious fighting since April 19, but we have continued to gain ground and have organised and consolidated the positions captured in April.

FISHING-RODS FOR MESOPOTAMIAN TROOPS.

The rivers of Mesopotamia are full of fish, and there is a great demand for fishing-rods and tackle by our troops there. The Mesopotamia Comforts Fund appeals to fishermen at home to contribute from their stores of old salmon, trout, and trolling rods, reels, artificial and spinning baits, and the like. Messrs. Hardy Brothers, 61, Pall-mall, S.W.1, and Messrs. C. Farlow and Co., 10, Charles Street, S.W.,1, have consented to receive and forward gifts of these to the offices of the Fund, provided that labels are attached, "For Mesopotamia Comforts Fund." All kinds of rods and tackle are welcome, but it will facilitate despatch if units are sent complete—the rod with all its lengths in canvas cover, with reel to fit.

NEAR EAST BOOKSHELF.

THE RUIN OF HELLENIC IDEALS.*

MM. Louis-Paul Alaux and René Puaux have enjoyed exceptional facilities for following the tangled politics of the Near East. Before war broke out M. Alaux represented the Paris *Temps* at Constantinople, and his collaborator has served as special correspondent of that journal during the Balkanic struggles of 1912-13. They speak with the authority of experts on a subject of vast, if not vital, importance to the future of civilization; and their work should be studied by statesmen on whom the herculean task of reconstruction will devolve. It traces the successive phases of Hellenic effort during last century. The process of evolution began by building up an organised State amid the wreckage left by Turkish misgovernment. With consistent support from the Western Powers, it proceeded to assimilate populations of Greek descent which had groaned for ages under an alien yoke. Lastly, it created many centres of Hellenic influence in the Ottoman Empire which had proved themselves capable of limitless expansion.

But the "Young Turk" faction, the Bulgars, and the Germans were plotting to thwart the realisation of a dream of empire which might well have become the bulwark of civilization in South-Eastern Europe. The party in power in Constantinople had abandoned Mohammed the Second's policy of toleration in favour of one which was calculated to destroy every Christian element in their puppet Sultan's dominions. The innately warlike and restless Bulgars saw in the Hellenic renascence an obstacle to their design of securing the hegemony of the Balkans. The Teuton hordes had made catspaws of their partners in an unholy Alliance inspired by the Pan-German chimera.

One statesman, and one alone, was capable of withstanding these destructive forces. While King Constantine followed the advice of Elevtherios Venizelos, he was able to steer the ship of State through stormy waters. When he threw the empire-builder overboard at the instigation of Berlin he startled the world by a display of unparalleled ingratitude, and sealed his country's fate as a factor capable of counting in the resettlement of Europe. The triumph of civilization is assured; but it would, perhaps, have come ere now, if King Constantine had pursued the policy dictated by the genius of the Hellenic race and the geographical position of its territory.

Our authors are tactfully silent regarding the manifold blunders perpetrated by Western diplomacy. But, reading between the lines, it is clear that they attribute the existing deadlock in South-Eastern Europe to the vacillations of our Foreign Office and of those of our allies. A firmer attitude with regard to King Constantine's ceaseless intrigues would have saved the Entente from incalculable loss of blood, treasure and prestige.

F. H. S.

A ROUMANIAN MANUAL.†

When the war broke out there was a dearth of Roumanian grammars in English. An attempt has since been made to supply the deficiency, but there was still room for a book which, without advancing any elaborate claims, set out to enable the student to acquire easily an elementary knowledge of the Roumanian language on practical lines. Those who remember the previous grammar issued by the Trübner Press will welcome the appearance of a new volume, which is a marked improvement on its predecessor. Mr. Ackerley was prompted to write the book by his experience a few years ago when he started to learn Roumanian. Consequently he gives us most of the things a beginner wants to learn, and anyone mastering the contents of the small manual will have a workable acquaintance with the language. The index might be made a little more complete; it does not contain all the words required for the exercises. Further, the printing of the Roumanian and English words in a sentence in the same type is not to be commended, especially when stops are economised. One paragraph begins as follows:—Tot all before the definite substantive must be translated "all the"; or again: "another" is expressed by alt other preceded by the indefinite article. Italics would overcome the difficulty.

* "Le Déclin de l'Hellenisme," par L. P. Alaux et René Puaux. [Paris: Librairie Payot and Cie., 1916. 2 fr. 5 cs.]

† "A Roumanian Manual." By Fred G. Ackerley, B.A. (London: Kegan Paul, Trench, Trübner and Co., Ltd.)

BOOK NOTES.

The Oxford University Press will publish shortly "Akbar, the Great Mogul, 1542-1605," by Mr. Vincent A. Smith.

In "The Revolt in Arabia," Dr. C. Snonck Hurgronje discusses the rising of the Grand Shereef of Mecca against Turkish tyranny. Messrs. Putnam are the publishers of the book.

The latest number (144) of "The Times' History of the War" gives the story of the Salonika Expedition up to the capture of Monastir. It contains some useful maps and many interesting illustrations.

The brilliant series of articles, "The Scene of War," that has been appearing in *Blackwood's Magazine* is now published in book form by Messrs. Blackwood, at the price of 5s. net.

Messrs. Constable have just published "The Expansion of Europe," by Professor Ramsay Muir. The volume is a continuation of the author's former work, "Nationalism and Internationalism."

Messrs. Hodder and Stoughton have published "Roumania and Great Britain," by A. Herscovici Hurst. The volume, to which a preface is contributed by Sir Thomas Dunlop, Bart., Lord Provost of Glasgow, contains a brief, concise summary of the history, characteristics, and resources of Roumania and her people, and of Roumania's relations to international politics and the war. It is intended to inform the people of Great Britain as to their Ally, and to assist the funds of the National Roumanian Relief Fund.

Among Mr. Humphrey Milford's recent publications is "The Intermixture of Races in Asia Minor," by Sir William Mitchell Ramsay.

The Royal Asiatic Society has undertaken for the Prize Publication Fund a volume by Sir George Grierson on "Iskasmi, Zebaki, and Yazyulami," three members of the Pamir group of Iranian languages.

BOOKS RECEIVED.

The Mechanism of Exchange: A Handbook of Currency, Banking, and Trade in Peace and in War. By John A. Todd, B.L. (Oxford University Press. 5s. net.)

The Russian Revolution and Who's Who in Russia. By Zinovy N. Preev. (Bale, Sons and Danielsson. 2s. net.)

History of Serbia. By Captain H. W. V. Temperley, M.A., F.R.H.S. (London: G. Bell and Sons, Ltd. 10s. 6d. net.)

A young Egyptian doctor has been engaged to attend to 3,000 panel patients in the Benwell district of Newcastle in the absence on war service of the resident medical practitioner.

The Wounded Allies' Relief Committee has removed from Grosvenor Gardens, and the headquarters of the organisation are now at Bank Chambers, 329, High Holborn, W.C.1.

Speaking at an English Zionist Conference at the Armfields Hotel, the other day, the president, Dr. Weizman, officially stated that it was premature to speak of an independent Jewish State in Palestine, but he could say that His Majesty's Government, in conjunction with the Allies, favoured the grant of self-government to the Jews in Palestine under the protection of a just great Power.

A congress of Mussulman delegates from all parts of Russia adopted by 446 votes to 271 a resolution in favour of the institution of a Federal Republic in Russia.

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),

25	12	Friday	3	4
26	13	Saturday.....	4	5
27	14	Sunday	5	6
28	15	Monday	6	7
29	16	Tuesday	7	8
30	17	Wednesday	8	9
31	18	Thursday	9	10

To-morrow is the birthday of H.M. the Queen.

Wednesday is the birthday of Princess Theodora of Greece, second daughter of Prince Andrew and Princess Alice, who was born in Athens, in 1906.

The Roumanian Minister, on Wednesday, received at the Legation the members of the Colony, who came to offer congratulations on the occasion of the anniversary of the National Independence and Proclamation of the Kingdom of Roumania.

M. Cretziano, the Roumanian Minister in Madrid, left London for Spain last week.

A Reuter message from Jassy states that in an audience granted to the French Minister by the King and the Crown Prince Carol, the Minister informed the King that the French Government had conferred the Grand Cordon of the Legion of Honour upon Prince Carol as it was anxious to show that it was not ignorant of the active part played by his Royal Highness since the outbreak of war at the front as well as at home. Prince Carol, while entirely devoting himself to his patriotic and democratic duties, had shown his deep affection and enlightened devotion for the valiant Roumanian people whose misfortunes had not depressed their courage or confidence. Prince Carol has very often remained several days with the troops, gaining the admiration of all for his coolness, taking a great interest in all details, and showing an extensive knowledge of technical matters. The Prince, on returning from his last inspection of the troops, expressed his satisfaction at the moral of the army and his conviction that Roumania had an army in which the country could place its entire confidence.

M. Venizelos has returned to Salonika from Crete. He had a triumphal reception in his native island, and was received with enthusiasm during a nine-days' progress through various districts where he reviewed the Cretan troops destined for the Macedonian front.

M. Gennadius, Agent to M. Venizelos' Government, was among the callers at the Foreign Office on Wednesday.

Sir Courtauld Thomson, Chief Commissioner of the British Red Cross for Malta and the Near East, has left Rome for the East.

Mr. Rudyard Kipling has returned from his visit to the Italian fronts on the Carso, Isonzo, and in Trentino.

Under date of May 22, Reuter's Petrograd correspondent reports:—Owing to the change of Government on the eve of M. Sazonoff's departure to succeed Count Benckendorff as Russian Ambassador in London, the question of a successor to the latter remained open. It is now definitely announced that M. Isvolsky, Russian Ambassador in Paris, will be the new Ambassador in London.

Admiral Sir Douglas A. Gamble, K.C.V.O., who has been placed on the retired list, at his own request, was formerly head of the British Naval Mission to Turkey. He resigned that appointment owing to ill-health, and was succeeded by Admiral Williams, who, in turn, was succeeded by Admiral Limpus.

Admiral Sir John M. de Robeck, K.C.B., who has been promoted from Rear-Admiral to Vice-Admiral, relieved Admiral Carden as Commander-in-Chief at the Dardanelles when the latter's health gave way.

Professor W. J. R. Simpson, C.M.G., vice-president of the London School of Tropical Medicine and Professor of Hygiene at King's College, London, has left for the Salonika front, where he will act as chief doctor to the Serbian Relief Fund Hospital Unit No. 6, in succession to Dr. Aldo Castellani, who has been appointed Italian representative on the International Committee of Hygiene in Paris. Professor Simpson, as a Government Commissioner, has inquired into the causes of various epidemics abroad.

It is understood that the tour of inspection which the Acting Sirdar and Governor-General of the Sudan has just made, and which was the first undertaken since he assumed his new post, was in every respect most satisfactory. The demonstrations of loyalty and esteem with which he was met at every place he visited were marked with genuine enthusiasm. At each of the principal towns he visited he held a levée at which the principal sheikhs and notables of the province or district were present. To many of these he gave presents as mementoes of his visit, and at each place liberal distributions of alms were made to the poor. In all the places he saw, Major-General Stack paid special visits to the schools, where he was received with songs and addresses of welcome by the boys. His Excellency took several opportunities of conversing with both boys and masters, and his evident interest in all that the schools were doing cannot fail to be a great encouragement to all concerned in their work. He was much impressed throughout his tour by the prosperity and contentment apparent among all the communities which he met.

As the result of a special meeting held on April 25, at Omdurman, presided over by Mr. J. W. Crowfoot, Director of Education, a sum of over £E400 was subscribed for the Kitchener Memorial Fund. Mr. Crowfoot was assisted by Mr. A. B. B. Howell (Asst. Private Secretary), Mr. J. D. Craig (Senior Inspector, Khartoum Province), and Samuel Bey Atiyeh (of the Intelligence Department).

The *Egyptian Gazette* says:—"A local newspaper announces that Mr. Ronald Storrs, of the Residency, will shortly leave Egypt to occupy a high position in Mesopotamia, and that it is rumoured that Mr. Robb, of the Ministry of Education, will most likely be his successor owing to his knowledge of Arabic. We have not been able to obtain official confirmation of this news."

According to the *Egyptian Gazette*, the late Sir Armand Ruffer sent the Minister of War of the Greek National Government a letter written in ancient Greek, in which he said: "I will keep the diploma and the medal of the National Government in order to recall to my mind the country where blooms the olive-tree of Minerva and the sacred laurel of Apollo, a symbol of wisdom and harmony." The Minister of War has ordered that the name of Sir Armand be given to a ward of all the field hospitals, and has sent a cable to Lady Ruffer announcing this decision.

Cardinal Gasparri has telegraphed to Mgr. Dolci, the Apostolic Delegate at Constantinople, to ascertain any available details about the reported capture of Mr. Bonar Law's son by the Turks in Palestine. If it is proved that the officer is among the prisoners the Apostolic Delegate is instructed to obtain from the Ottoman authorities permission to communicate with him.

Mrs. Lloyd George was unable to be present on Wednesday at a meeting held at the Holborn Restaurant of helpers and workers in connection with the Armenian Flag Day on June 13. She wrote expressing her great interest in the work and promising to help. Lieutenant-Colonel Gregory said that since the Armenian Relief Fund had been started £75,000 had been raised. A report had been received from Mr. Backhouse, their agent in the Caucasus, that the work of repatriation had already begun. The Committee immediately sent him £5,000, and another similar amount would be sent.

Miss Emily J. Robinson, hon. sec. of the Armenian Red Cross and Refugee Fund, will read a paper on "Armenia and the Armenians" before the members of the Anglo-Russian Literary Society, at the Imperial Institute, on June 5, at 3 p.m. The Rt. Hon. G. W. E. Russell, LL.D., will preside.

Captain A. T. Cull, Seaforth Highlanders, attached R.F.C., a member of the Egyptian Staff of the Imperial Ottoman Bank, is reported missing on the 11th inst. He was heavily engaged in an aerial fight at the time, but he is known to have been a skilful pilot; so it is hoped that news may come through that he is safe though a prisoner.

An engagement is announced between Mr. J. P. McGeagh, Sherwood Foresters, attached Nigeria Regiment, second son of Dr. and Mrs. R. T. McGeagh, of Lezayre, I.O.M., and grandson of the late Sir George Morice, R.N., K.C.M.G., of Alexandria, and Evelyn, younger daughter of Mr. C. F. Boston, of Liverpool.

The marriage will take place in the autumn of Major C. Robert L. FitzGerald, D.S.O., Indian Infantry, lately attached Northumberland Fusiliers, eldest son of the late Mr. G. Beresford FitzGerald and of Mrs. FitzGerald, 14, Kensington Court Mansions, and Edith Barbara, younger daughter of Mr. Francis E. Crow, C.M.G., H.B.M. Consul, Busreh, and of Mrs. Crow, 17, Pembridge Gardens, Notting Hill Gate, W.2.

It is reported that Herr von Bethmann Hollweg, at the invitation of the Turkish Grand Vizier, will visit Constantinople and the Turkish fronts in the summer. He will also have an audience of the Sultan.

King Ferdinand of Bulgaria is to visit the Kaiser at main headquarters He will also visit the King of Bavaria at Munich.

OBITUARY.

MARSHAL PUTNIK.

A Reuter's telegram from Nice announces the death in that town last week of Marshal Putnik, formerly Commander-in-Chief of the Serbian Army. He was in his seventieth year.

The son of a schoolmaster, he was born in the Shimadia district, and he was sent by his parents to the Military Academy at Petrograd, where he soon acquired quite a reputation as a brilliant student. In 1886, in the war against the Turks, he was a captain, and nine years later, in the fighting against Bulgaria, he had risen to Chief of Staff. In the Balkan wars he was in supreme command, and his great talent was largely responsible for Serbia's successes.

In the present war he was again placed in command of the Serbian forces, and at first achieved wonderful success, holding the enemy's advance up in a way that won the admiration of the world. His achievement was all the more noteworthy because he suffered from ill-health, being a victim of asthma, and he had to travel from point to point in a specially warmed carriage, which he seldom left. It may be mentioned, to Austria's credit, that on the outbreak of war Marshal Putnik was in Austria, for his health's sake, and was made prisoner, but on the personal intervention of the Emperor Franz Josef he was released.

He was a keen student of mathematics and of tactics, and was the author of several military books of repute. Before taking command of the Serbian forces in the field, he had been Minister for War, and had been very active in the work of reorganising the Army.

The death is announced, at the age of forty-three, of Dr. Webb-Jones, M.D., F.C.R.C., who had for several years practised in Egypt. The funeral, which took place on the 1st inst., was attended by practically the whole British community of Alexandria.

The death is also announced of Mr. W. Chatterton Adams, late director of the Technical School, Boulac, Cairo. Mr. Adams had been in the service of the Egyptian Government for about fourteen years. For the last few years his health had given cause for some anxiety to his friends and relatives, but it was only quite recently that he was invalided out of Government service.

It is announced that Colonel Warner Heriot, late of the Oxfordshire Light Infantry, has died at Norham-on-Tweed, aged seventy-one. The eldest son of the late Rev. George Heriot, of Newcastle-on-Tyne, he was educated at Rugby and Cambridge. He became private secretary to Musurus Pasha, who was at that time Turkish Ambassador to the Court of St. James, and in 1872 he married the Ambassador's daughter, Imaragda. A sister of Colonel Heriot married Lord Byron's grandson, Lord Wentworth.

The death has taken place at Billingshurst of Mr. Israel Harding, V.C., R.N., at the age of eighty-four years. On board the *Alexandra* he took part in the bombardment of Alexandria, during which he picked up a ten-inch shell that had penetrated the side of the ship and plunged it into a tub of water.

The Dardanelles Commissioners further considered their Report at the House of Lords last Friday.

The *Morning Post* last Friday announced that it was authorised to state that the Mesopotamia Commission Report had been signed and presented to the Government.

The Postmaster-General announced last Friday that letter mails from Northern Persia (amongst other places) had been lost at sea through enemy action. The probable dates of posting of the lost correspondence at some places is given as :—Teheran, March 12-29; Enzeli, March 15-18; Tabriz, March 17-24. The notice adds that no compensation is given by the Post Office for losses due to enemy action; and if more definite information is required the sender should apply to the office of posting.

In the course of a letter recently received, a member of our Mesopotamia Expeditionary Force writes :—"Whatever may have happened at the beginning of this campaign I can only say that our rations now are absolutely excellent, both in quantity and quality. In addition there are Expeditionary Force canteens, where all sorts of good things can be bought at cheap rates, and there are also retail ordnance stores for officers' kit, where one can buy everything one wants at pre-war contract prices! The whole show is really admirably run."

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

MUSTERS.—At 28, Victoria Avenue, Sliema, Malta, to Olga, wife of Lieutenant J. D. A. Musters, Royal Navy—a son.

PAXTON.—On April 30, in Cairo, the wife of B. C. Paxton, Ministry of the Interior, of a son.

MARRIAGES.

GAY—MOSS.—On April 30, at the British Consulate, Alexandria, Egypt, and afterwards at the R.C. Garrison Church, Mustapha, William George Moultrie Gay, Lieut., The Buffs, elder son of William Gay, Esq., Crowhurst Park, Battle, Sussex, to Katherine Josephine, widow of Frederick Wood Collins Moss, late Barrister-at-law, of Alexandria.

GOODE—TOWNEND.—On May 21, in Cairo, A. W. Norman Goode, Warrant Officer, A.E.F., attached to the Egyptian Survey Department, to Evelyn Mary, third daughter of the late Charles H. Townend and Mrs. Townend, of Park Lane, Carshalton.

MURRAY—KITCHENER.—On May 15, at the Brompton Oratory, by the Rev. Father Ross, Captain Terence Desmond Murray, Leinsters, eldest son of his Excellency J. H. P. Murray, C.M.G., Lieut.-Governor of Papua, and Mrs. Murray, to Philippa Chevalier, youngest daughter of the late Lieut.-General Sir Walter Kitchener, K.C.B., and Lady Kitchener. Colonial papers, please copy.

DEATH.

BARBER.—On the 18th inst., at 9, St. Albans Road, Highgate Road, N.W.5, Thomas Andrew Barber, for twenty-five years British Vice-Consul at Oran, Algeria, the eldest son of the late Thomas Barber, of East Looe, aged sixty-eight years.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, MAY 25, 1917.

THE SETTLEMENT OF MESOPOTAMIA.

So long as the military operations in Mesopotamia continue they inevitably command most of the attention that can be spared to this distant theatre of war from the more exacting interest of the Western front. But British troops have been in occupation of the major part of the Busreh vilayet for nearly two years, and, with the battle line now advanced a hundred miles north of Baghdad, there has been time for the administration of the country, which at first would reflect merely the military exigencies of the moment, to conform at least in part with the needs of a permanent settlement. Some light is thrown on the subject by a correspondent who writes to *The Times* clearly with inside knowledge. The picture drawn is "the peace of Great Britain invading in the track of her armies lands to which peace had long been a stranger." For generations the vilayet had been deliberately given over by the Turks to a regime of lawlessness. Conscious of their own inability to govern it, they had adopted the policy of keeping its peoples divided amongst themselves, to obviate the risk of common cause being made against the nominal rulers. "The bonds of union which existed were consistently weakened, any sheikh who showed capacity for exercising control was countered by official hostility and intrigue, group was pitted against group, tribe against tribe, and section against section, until through the chaos which ensued neither Turkish official, nor merchant, nor traveller could secure safe passage." It was into this scene of anarchy that the British administration was introduced in July, 1915, with the occupation of Nasiriyeh and Suk-es-Sheyukh on the Euphrates, west of Kurna. In spite of the difficulties of the position, and of the necessity of imposing on the inhabitants certain military measures, such as an embargo on goods passing to the enemy, the reports of local political officers, we are told, bear witness to the satisfactory nature of the results achieved. "Influential headmen have received recognition, and been made responsible for their communities. Arbitration on the basis of tribal custom is encouraged; petty disputes over boundaries are adjusted, and, with the help of sheikh and sayed, blood feuds are adjudicated and squabbles peacefully settled. Schools and dispensaries are being instituted and are eagerly welcomed, and a beginning has been made in the collection of revenue."

The Arab has not been slow to appreciate the advantages of the new order. His views on its moral aspect may not be strictly orthodox; but when moral and material progress go hand in hand, he is practical enough to accept the first in order to attain the second. Abundant and well remunerated employment both in the towns and in the country districts has more than compensated him for the disabilities arising from the war—the lack of river transport, a shortage of imported wares, the blockade and the enhanced price of living. Not the least important factor in the situation is railway construction—an invaluable aid in the settlement of all undeveloped countries. A statement quoted from a recent report from a district on the Euphrates illustrates the point: "The gradual progress of the railway is having a wonderfully calming effect. Perhaps more than anything else the advent of the line has quieted the tribes. The change from their almost openly hostile attitude last March (1916) has been remarkable. The permits issued to Arabs to travel by rail to Busreh did good. Many townsmen and tribesmen have ridden out to railhead on a visit of inspection, and all came back impressed." A railway, however, is not only a civilizing influence; in a country of great distances it may also bring with it a sense of solidarity, of a community of interests, which was altogether lacking in the era of slow and precarious communications. Attention has already been given to the connection between the advent of railways and the growth of the spirit of nationality. The Austro-Hungarian Government had divined something of the tendency at work, when it set itself so to develop its railway system that it should be of the least value to those parts of the Monarchy where it was anxious to see the influence of the natural barriers maintained. Those who despair of securing unity in the Arab world may pause to weigh the possibilities of the introduction of rapid communication into these parts. Again, as it is to Great Britain's interests to see settled conditions established from the Mediterranean to the Persian Gulf, that, in the words of the Proclamation to the people of the Baghdad vilayet, "the Arab race may rise once more to greatness and renown among the peoples of the earth, and that it shall bind itself together to this end in unity and concord," one of the first cares of the new administration should be to direct its railway policy not only to promote commercial prosperity, but also with an eye to the solidarity of the Arab race. From El Arish on the west and Kurna on the east the twin steel rails are heading boldly towards the intervening desert. For the moment there may be little intention of continuing them along the same latitude in order that they may meet, inasmuch as commercial considerations will require them to be deflected in order to tap more prosperous districts. But while the latter course calls for no vision, the former would testify to confidence on the part of Great Britain in the future of a people whose destinies this war has unexpectedly placed in her hands.

In addition to railways, irrigation work must also be taken in hand at the earliest moment. The absence of a large agricultural population may be held to render the financial success of big schemes problematical; but apart from the encouragement that settled conditions will give to the people to turn to agriculture—hitherto always at a discount, as it exposed the labourer to the exactions of the Turkish taxpayer—we have to reckon on the probable effect of the gradual extension of law and order among the purely nomadic tribes. Lacking the incentive to regard their neighbours as actual or potential enemies, they will also be brought into touch with the material advantages of the new regime, and each year will find them sending their quota from the desert to the land of plenty. At this stage it is hardly necessary to insist that nothing in these plans clashes with the principle of nationality which is being cited so freely these days as a handmaid of German propaganda. The Turk is an intruder in Lower Mesopotamia. His ejection will free the Arabs who have long resented his rule; and although a plebiscite might show a desire on the part of the people as a whole to be left entirely to their own devices, the interests of the world's peace—no less an object of the present war than the principle of nationality—require the retention of such authority as will enable the Arabs to be trained in the science of self-government without danger to the tranquillity and economic development of the country.

THE BAHARIA OASES.

(From a Correspondent.)

Not long ago Mr. Morcos Sidaros was kind enough to lend me the manuscript of a book in which he had described the Baharia Oases, their orchards, springs, monuments, and the life and customs of the inhabitants. As a Government official, the author had exceptional opportunities of gathering full and accurate data during a stay of a year in those outlandish parts; and his manuscript was, I found, of extraordinary interest.

The recent occupation of these oases by the British Forces has served to attract widespread attention to them; and in view of these circumstances some extracts from Mr. Sidaros's work will, I hope, be welcome to many readers.

An account of oasis life has always a peculiar interest; but when, as in this case, the oases described form centres of Senussi influence and teaching, such interest is greatly enhanced. It is noteworthy that up to the time these notes were made by their author, the influence of the Senussi was exercised exclusively along religious lines. The following account of some dealings which the author happened to have with a German so-called archæologist may serve to throw some light on the later development of that influence along political lines, which, under Turco-German intrigue, gradually led to the militant campaign that this sect carried on, first against the Italians and then against the Allies.

In the latter part of 1913 a party of Germans, said to be delegated by certain scientific societies, arrived in Egypt, with special recommendations from the German Government to their representatives, to afford them every possible facility and help in their research. In May, 1914, the author happened to meet a German who complained of having been swindled to the amount of £40 by a native, the latter having undertaken to guide him to Jaghabub, the Senussi stronghold, and failed to do so. He gave as his name Paul Burkhardt Batouta, and declared that he had embraced Islam, as he had the conviction that he was a descendant of the great Arab traveller and historian, Ibn Batouta. He said he was an officer in the German Army on the retired list, although he looked hardly over twenty-five years of age, and that he belonged to the German scientific mission. He had asked Lamloum Bey el Sa'di to provide him with an escort to Jaghabub, but the latter had declined, explaining to him the great risks of such a journey—especially at that time, when the Senussi was at war with the Italians—and that the fact of his having embraced Islam would not be likely to afford him any protection, on account of his being a German and Germany being (then) the ally of Italy. Herr Paul had, therefore, to be satisfied with the less ambitious trip to the Baharia Oases. He evinced special interest on learning of the book written about these oases, but expressed keen disappointment and regret when he was told that it was written in Arabic, which language he did not know. He was specially interested to learn that his interlocutor had taken another route from that which he had himself followed, and his interest developed into astonishment when he was further told that there are at least six other routes leading to these oases from the *mudirieh* of Minieh, besides two or three routes from the Fayoum, and others from Assiut. When he learned that a detailed description of the route was given in the preface of the book, he was quick to suggest that, since it was not yet published, it should at least be submitted to the Khedivial Geographical Society; and at once volunteered an introduction to Professor Schweinfuth, who, despite his age, had come out to Egypt to assist and direct the Mission. The Professor was one of the founders of the society, and he would be able to help in arranging for a lecture in French about the book, and especially that part dealing with the description of the desert route, to be delivered in the hall of the society. The Professor, in fact, recommended to the society not only to arrange for the delivery of the lecture, but also to help in printing the book at its own expense. He, also, was careful to recommend that the lecture should deal especially with a full description of the desert route, representing that this was of particular importance to travellers and scientific men, engaged in archæological research. The secretary of the society very kindly promised to comply with the Professor's recommendations; but as the lecture was to be delivered in French, and further time was required for the issue of invitation tickets, it was proposed to postpone the matter till after the summer vacation. Meantime, the war broke out and interfered with these, as with so many other, more important, arrangements.

It will be noticed that both of these German so-called scientists attached much more importance to the preface, embodying a description of the desert trip, than to the book itself, which, from a purely literary and scientific standpoint, has a far greater value and interest. My excuse for giving such a detailed account of these transactions is that they afford a further illustration of the Germans' method of gathering information of military value under the cloak of science.

Of all the routes leading to the Baharia Oases, the one followed by the author is the shortest and most practicable. It is called Darb el Asasawi, and starts from the village Al Messeed, Markaz Meghagha, taking, all along, a westerly direction. Camels, not dromedaries, were engaged for this trip, and the fact that as many as sixteen of them were required, one-half to carry the official, his servant and their baggage, and the other half to carry the water skins, shows how awkward and expensive is the present primitive means of communication with these oases. The whole distance is a waterless waste, which, at the slow camel pace, cannot be traversed in less than fifty-two hours, assuming, as in the case of the said official, that, in the four days' trip, an average travelling of twelve hours, out of the twenty-four, was done, meals being taken on camel back.

Along this route, mounds and dunes, rocks and gullies are met with, to which the Arabs have given special names, illustrative of an historical event, or legendary story. The following are those deserving special mention:—(1) A mound reached on the second day of the journey, and called El Balad el Kherba ("the ruined town"), in which a mass of broken pottery is to be seen, evidently remains of an old town whose existence in this arid desert spot opens up a field of speculation to the historian and scientist; (2) a gulley (wady), reached on the third day of the journey, and called Wady el Talh, where wild shrubs and trees grow; (3) the dry bed of a river called El Bahr (river), from the description of which it may be deducted that it used to be the canal through which the waters of the Nile even once led, to be stored in Lake Karun, Fayoum.

The Baharia Oases are encircled by a line of hillocks broken at intervals by passes that lead to the oases, thus forming a sort of natural defence. These hillocks rise above the surrounding country to a height of about 200 metres. Within this girdle of low hills lies a stretch of land mixed with pebbles of a variety of colours, in which red, yellow, and black predominate, with certain elevations, whence gush forth the springs that irrigate the rich patches of land that form the oases. The following order invariably obtains in the division of these cultivated lands: first comes the part containing the dwelling-houses, stretching from the southern limit northward; then the palm groves and orchards, where fruit trees are left to grow in wild confusion; and, finally, northward still, the fields where different kinds of grain are sown, rice for the summer crop, and wheat and berseem for the winter crop. These fields end generally in a sort of depression into which the surplus water flows, and which is bounded to the north by gradually rising hillocks of fine yellow sand. This order is determined by natural causes. The people built their houses first, next to the springs, to secure control of their waters and its distribution, and the facility of supply for domestic requirements: then they laid out the palm groves and orchards, so as to ensure for them an abundant and handy supply of water, since dates and olives, and olive oil, form the staple products constituting their chief revenue; and finally, the fields to grow the grain destined only for local consumption.

Each plot of land cultivated in the above-mentioned order is called by the oases people a *hatiya*, and these *hatiyas* are fairly numerous. Thus in Nahiet el Qasr there are about seventeen, besides those of Al Hayuz—a sort of secondary group; and in Nahiet el Baweety there are two, one of which belongs to the secondary group just mentioned; while Nahiet Mandeesha comprises twenty-three *hatiyas*, and Nahiet el Zebu eight *hatiyas*. These latter are detached from the principal group of *hatiyas* which constitute the chief wealth of the oases. While the orchards in each Nahiet have their respective limits well defined, there are two large patches of open land which are owned conjointly by

Nahiets el Qasr and el Baweety, one being used for growing rice in summer, and the other for growing wheat in winter.

All the cultivated land is irrigated by the water of the springs. As these springs stand on a higher level than that of the irrigated lands, the work of canalisation is facilitated by the force of gravitation and necessitates no mechanical appliances. The Baharia springs may be divided into two categories—the natural and the artificial. The first-named are those whose waters are driven to the surface according to the law of water seeking its level aided by two factors—viz., the nature of the geological formations—strata of porous soil and the proximity of a number of subterranean streamlets formed of infiltrations, which on meeting together acquire sufficient impetus not only to overcome the resistance of the overlying soil, but also to rise to the surface, with considerable momentum, a fact which distinguishes them from the artificial springs which will be described hereafter. The natural springs are by far the most important on account of their comparatively large volume of surface water, which constitutes the chief supply of the oases. The largest of these springs is Ain-el-Beshmu, known also by the name of Dardeer, which lies at the boundary separating the chief villages of El Qasr and El Baweety, and at the extremity of a rocky layer extending beneath some of the dwelling-houses of these villages, and ending at its northern extremity in a sort of a gorge about 100 metres long, 20 metres wide, and about as many high. This spring originates in two sources, about 25 metres apart, which burst out of a sandy layer underneath the rocky one just mentioned, and finally flows through the said gorge.

A remarkable phenomenon is that while the water of one of these sources is cold that of the other is hot, the difference of temperature between the two being 10 degrees. The cold water holds in suspension a kind of reddish earth, which is triturated and carried up from the depths of the soil in the course of its upward rush to the surface; while the hot water contains a sort of whitish sand. The joined waters of these two sources flow through mounds of sand and stone at the bed of the gorge until they reach the canals leading to the agricultural lands. The volume of water supplied by these double springs is estimated to be equal to that of a subsidiary canal of the Nile. The flow of this water is continuous and unabated day and night.

The artificial springs are those whose waters have been brought up to the surface by some of the industrious inhabitants of the oases digging through the rocky strata that lie on the surface, when the subterranean waters, held hitherto under them, are freed, and flow over the lower part of these rocky layers. As, however, there is not sufficient force to drive them up to the surface of the shaft a passage, leading gradually down through the earth until it opens out on the surface of the lower ground, is cut through, and in it the accumulated waters of subterranean infiltrations flow. These springs are, however, rather feeble, owing to improper subterranean canalisation, and are liable to be choked up through sandy accumulations, which, when not removed by the lazy owners, lead to the complete drying up of the springs, and, as a natural consequence, to the ruin of the cultivated lands which used to be supplied by them. By careful and watchful attendance to one of these artificial springs some industrious people of El Qasr have been able to reclaim as many as 5,000 feddans of land.

Each of the *hatiyas* aforementioned has a spring which bears its name. Besides these springs, there are many others. Thus in Nahiet El Qasr there are fifteen of them, besides a quarter of the powerful spring of El Beshmu, already described; while Nahiet el Baweety owns thirteen such springs, besides three-quarters of the waters of the spring El Beshmu. These springs serve to irrigate only the date groves and orchards, while the abundant waters of El Beshmu spring are mainly utilised for irrigating the grain fields lying further to the north of the orchards, only a small part being used for watering the date groves and orchards.

In Nahiet Mandeeshy there are, besides the springs which bear the names of their respective *hatiyas*, seven other springs, of which the largest is Ain Hamra; all of these irrigate the date groves and orchards. As to Hatiyat el Haret, which forms part of Nahiet Mandeeshy, there are five springs in it, which serve to irrigate both the orchards and grain fields; while in Nahiet el Zebu there are six such springs, which also serve to irrigate both the orchards and *hatiyas* pertaining thereto.

It is to be observed that the surplus water that exceeds the needs of the *hatiyas*, and cannot be utilised in other low-lying lands whose soil is unfit for cultivation, flows into the depression already mentioned, and forms there a stagnant pool, which serves as a breeding-place for mosquitoes, some of which are of the malaria-bearing species. Had it not been for the unusually dry desert air and the intense equatorial heat of summer, which cause rapid evaporation, the danger to the public health of these oases would have been greater than it is at present. In certain seasons birds of passage flock in large numbers to this pool, and the oases people contrive certain ambushes from which they shoot down the tired and unsuspecting birds.

ARCHÆOLOGICAL NOTES.

BY JOSEPH OFFORD.

In 1915 Monsieur Clédat, who supervises the search for antiquities in the neighbourhood of the Suez Canal and eastward to the Palestine boundary, published in the *Recueil de Travaux* a small object made of stone, the usage of which he was uncertain about. It proves to be a Gnomon, or shadow clock, and two Egyptologists, MM. Henri Sottos and Charles Kuentz, have published a description of the apparatus. This is so scientifically constructed as to be available as a fair computer of the time for a whole year. It is also sufficiently accurate astronomically for these savants to prove that it was made to be used in the latter part of the fourth or early part of the third century B.C. This is not the place for giving details of its construction and the lines and symbols placed upon it, together with a list of the Egyptian month names which is engraved upon the face of one of the stones making up the Gnomon: that upon which the shadow fell. It may, however, be mentioned that in order to enable a user to know that the shadow producing stele was absolutely vertical, there was a projection upon one side of it for the suspension of a plummet line. This utilisation of a plummet as indicator of accuracy was developed at a most primitive period in Egypt, because it may be seen attached to the scales, used for weighing the heart, or deeds, of the dead at the judgment seat of Osiris as depicted in vignettes which illustrate the "Book of the Dead." The Gnomon of this type is also used as one of the pictorial hieroglyphs determinative of the word for hour.

Sir Hanbury Brown, K.C.M.G., in the *Journal of Egyptian Archæology*, has been giving his views upon the historical "record" of some of the earlier wars of the Pharaoh Menepthah, which contains a reference to a defeat of Israelites. Although hitherto this inscription has not been considered as an allusion to the events of the Hebrew Exodus, Sir Hanbury thinks otherwise, and that it is really the Egyptian Annalistic report of that occurrence. He quotes from the 6th Anastasi papyrus, which dates from the eighth year of Menepthah, the account of Shasu nomads being allowed to dwell in Goshen, as proving that by this time the Israelites could no longer have been there, and well summarises the other evidence. One point that he makes is very interesting: while for the other tribes, or places, Menepthah boasts of conquering the usual determinative sign for a country or district is appended, for Israel, for some particular cause, this is omitted. He considers that reason to have been because they had disappeared into the wilderness, and so did not possess any locality as a people. The portion of the text referring to Syria does not indicate in any way the geographical direction in which the list is made up; it merely appears to enumerate the surrender of the various enemies in the order of their submission, Israel coming fourth upon the Asiatic catalogue.

Owing to the war, reports of discoveries in Egypt are belated, chiefly because of the difficulty of printing the journals in which they appear. In the *Annales* of the Cairo Museum we now have from Ahmed Bey Kamal an account of the exploration of the magnificent tomb at Meir, whose existence was disclosed quite accidentally just about the time when Sir Gaston Maspero left Egypt. This proves to be one of the finest sepulchres known of the early era of the sixth dynasty. Its owner's name was Pepi-onkh-her-ab, and he was a priest of the goddess Hathor of Cusae. So numerous are the tableaux and texts in the tomb that nearly fifty pages of the journal are occupied with a summary of them. Many of the scenes of farming, agriculture, hunting, and so forth, are similar to those in other grave chambers and passages; also the copy of the menu at the funeral banquet, and the list of all its constituents are of the usual kind. But one hall contains four specially fine and realistic representations of Nile boats which will be often used to illustrate nautical matters at this primitive period.

The smaller of these two barques has two steering sculls and what seems to be a tame lion cub, or cheetah, on board, standing close to the owner, or captain, upon the cabin roof. In addition to a few sailors, there is shown a row of ten men, whose heads only just project above the ship's side. They may be either servants or passengers, slaves, or part of the crew. Probably they were for use as tow rope toilers when the wind failed. Two other boats are for rowers only, with awnings instead of cabins, and the fourth is of smaller size. One other tableau should be mentioned because it is so particularly well done and well preserved. It shows the side show entertainment at a feast, and depicts a man playing upon a flute, and two young lady harpists coiffured as "flappers," with the hair tied up in a ball at the end, and two men playing at draughts with pieces of two various shapes. The tomb had been rifled by robbers many centuries ago, and so the jewellery and vestments and finer vases were absent.

THE PRESS ON THE NEAR EAST.

Progress in Mesopotamia.

On Saturday *The Times* published an article, "British Work in Mesopotamia," written by a correspondent in that region, and dealing with some of the good work done by British political officers. The article begins:—

The history of the Mesopotamian campaign has a double aspect. Side by side with the tale of conquest by arms runs the story of victories no less renowned, the peace of Great Britain invading in the track of her armies lands to which peace had long been a stranger. Before the smoke of conflict has lifted, within hearing of the guns, the work of reconstruction has been initiated.

In the days of Turkish dominance the entire region presented what the writer well describes as "a comprehensive picture of lawlessness," and it was Turkish policy to "rule" the Arabs by setting one against the other and carefully heading off any attempt at union. The Arabs, of course, passed their time largely in fighting and intriguing one against the other. The article goes on to say:—

Into this prevailing anarchy, enhanced if possible by European war, the British administration entered with the occupation of Nasiriyeh and Suk-es-Shuyukh in July, 1915. To north and south the Turks and their adherents were ready to tempt the tribes with bribes and promises; military needs imposed measures, such as the blockade of goods passing to the enemy, which were galling to the population, and, apart from circumstances connected with the war, the habit of social order is a delicate plant to rear Yet the periodical reports of local political officers bear witness to the wisdom of the measures adopted, and to the results which they have achieved. Influential headmen have received recognition and been made responsible for their communities. Arbitration on the basis of tribal custom is encouraged; petty disputes over boundaries are adjusted, and, with the help of Sheikh and Saiyid, blood feuds are adjudicated and squabbles peacefully settled. Schools and dispensaries are being instituted and are eagerly welcomed, and a beginning has been made in the collection of revenue.

It is gratifying to learn that the political officers have in many cases already won the goodwill and confidence of the natives:—

That the political officers in all parts of the occupied territories have been skilful in exercising a happy combination of force, patience and persuasion is shown by the personal friendship and confidence which exists between them and many of the Sheikhs with whom they have to deal. Not least among the elements of persuasion are the constructive works which have been undertaken, mainly for military purposes, along both rivers. A recent report from a district on the Euphrates says:—"The gradual progress of the railway is having a wonderfully calming effect. Perhaps more than anything else the advent of the line has quieted the tribes. The change from their almost openly hostile attitude last March has been remarkable. The permits issued to Arabs to travel by rail to Basra did good. Many townsmen and tribesmen have ridden out to railhead on a visit of inspection, and all came back impressed."

Ctesiphon: 1915.

The May *Blackwood* is of extreme interest to all who are following the operations in Mesopotamia, for it contains, besides the second part of "Besieged in Kut—and After," a vivid account of the fighting at Ctesiphon in 1915, written by "El Hamran." From the latter article we take this description of the fighting in the neighbourhood of the famous "Arch" of Khosroes palace:—

There were bunches of men, British and Indian, mixed together, irrespective of regiments. Some of these were firing over the bank of the ditch at an invisible enemy entrenched 150 yards away; many lay huddled up—the battle for them was over; others held the heads of wounded men above the rapidly rising tide of muddy water, now coloured with shifting streaks and flecks of red.

Twenty yards in rear of the ditch shells from a heavy howitzer were dropping at regular intervals, shaking the ground and sending up black columns of earth and smoke. So it went on.

But, by degrees, the crack of the rifles became less frequent; ammunition was running short, and no man had more than a few rounds left, although the dead and wounded, as their numbers increased, contributed to those who could still use their rifles.

A Sikh slammed back the bolt of his rifle and pressed a fresh charger into the magazine; he smiled as he poked his rifle over the bank, and with infinite caution raised his head; but before he could fire there was a thud, and he slipped slowly down the bank, turned over with a grotesque sprawl, and disappeared in the muddy water. A British soldier crawled to the spot and tried to lift him; another turned and looked. "'E's all right, poor blighter! Copped it in the 'ead, so you may as well let him stop; but give us 'is rounds." And the two divided the dead Sikh's remaining cartridges.

And here is a passage describing the transport of some of the wounded from the trenches, in which they had been sheltered, more or less, from the Turkish fire, to the boat that was dignified by the name of "Hospital Ship":—

The surfaces of the deserts vary; the surface of this particular desert, or of this part of it, may best be likened to that of ploughed fields baked hard to the consistency of concrete, and intersected every 200 to 300 yards by channels and nullahs. The springless iron carts bumped and jarred over the rough surface, and jolted into and out of the ditches; now and then the ponies broke into a bucketing trot. On their backs on the bottom of the carts lay the worst cases, while all who could possibly manage it were sitting huddled against the stretchers, clinging as best they could to the iron sides. The carts rattled and bumped and jarred; for the first few hundred yards (and *that* seemed eternity) the men stuck it, but before a mile was covered there arose from that slow procession sounds that are best forgotten.

There were endless delays and frequent stoppages—sometimes it was to pick up wounded men crawling over the desert who had somehow missed the stretcher-bearers; sometimes a man would give out and drop limply from the cart, unable to hold on any longer; at last, when twelve miles had been covered, the river and the Hospital Ship were reached.

Unhappily, that was not the end of their sufferings. But for the rest of the story the reader must refer to *Blackwood's* itself.

Bulgaria Under War Conditions.

A correspondent contributes to the *Manchester Guardian* (May 21) an article entitled "How It Goes in Bulgaria," which gives quite a rosy picture of the state of that country. "Of all the countries of the Central Alliance," says the writer, "Bulgaria has been the least affected by the war":—

Not only has her soil not been invaded, but her armies have occupied and are holding territories which even the most extreme of Bulgarian chauvinists has never thought of claiming. If participation in the European war was highly unpopular, it must be admitted that the occupation of the whole of Macedonia has done much to dispel the serious misgivings with which the people viewed King Ferdinand's policy. Their ardour found a further incentive in the war against Rumania, which was exceedingly popular, for the Bulgarians had not forgotten the attitude of their Rumanian neighbours during 1913.

The peasant population of Bulgaria, which forms 80 per cent. of the total, has undergone few privations, while on the other hand it has greatly profited by the increase in the prices of agricultural produce. Representatives of the German Food Bureau have been over-running the country and buying all foodstuffs at prices unheard of previously, and the thrifty Bulgarian has taken full advantage of the opportunities offered him. The ensuing prosperity can be gauged from the returns of the savings banks during 1916. Deposits reached 55 million francs, a figure far surpassing all records. Although the export of foodstuffs is prohibited, smuggling has been carried out to such an extent that even stocks of cereals have become depleted, and the Government has been obliged to order a search of all farmsteads and the requisitioning of hidden stocks of grain in order to assure the subsistence of the military and civil population. The Germans have conciliated the peasant population also by helping to build light railways in outlying districts, constructing roads, furnishing motor-ploughs, and tilling free of cost the farms of those peasant families whose men were at the front. Of course, all these things were not done for the purpose of placating the Bulgarians, but for military reasons that can be easily understood. Nevertheless, they have contributed to allay the hatred of the "Schwaba," common to all Slav people, the Bulgarians not excepted.

Nevertheless, the Germans do not appear to be entirely welcome guests, at any rate in the capital:—

The number of Germans in Sofia has greatly increased. Hotels are crowded, and housing accommodation is inadequate to lodge these uninvited guests. They seem to dispose of everything at their will. They even had the effrontery to commandeer some of the premises in which the Sofia University was lodged, and did not seem to be affected by the protests that the public raised. A big committee of German officers is permanently sitting at the Ministry of War, and to all intents and purposes seem to be in control of the military operations and of the railways and telegraphs. So considerable is the number of German officers that a big building has been transformed for their convenience into a German military club.

America and Armenia.

The *Independent* (New York) contains an article, "Our Ally Armenia," which suggests an idea that many people in the Old World, as well as in the New, would like to see put into practice. The writer begins by saying that since the Russian Revolution overthrew the "hateful autocracy" which was "the Achilles heel of the Grand Alliance," there is not one of the nations with which America is now associated of which Americans need be ashamed or distrustful. But, he continues, we must remember that there are other allies than those nations which march to the front under their own flags . . . these are the submerged, half-forgotten peoples who cannot stand in their own strength to fight the Central Powers, but have the best of reasons for wishing the victory of the Grand Alliance. The article continues:—

When we read of the sack of a Belgian or Polish village we are rightly stirred with pity and indignation, but what shall be said of the Government which drove more than half a million men, women and children from their homes to perish in the desert? American soldiers will be sent, of course, to whatever field of action where they can best assist the general cause; but we confess that we should like, for reasons of pure sentiment, to see the American flag floating by some new-chosen banner of a free Armenia on the hills of Asia Minor. In view of the long service of thousands of American teachers, doctors, and missionaries in that neglected corner of the world, it could scarcely be matter for surprise if our people should single out from the leagued nations afflicted Armenia as the particular ally and protégé of the United States.

Palestine and the Jews.

In view of the statements and discussions recently published relative to a projected Jewish settlement in Palestine on a national basis, the Conjoint Foreign Committee of the Board of Deputies of British Jews and the Anglo-Jewish Association have circulated to the Press the views they hold.

Since the dawn of their political emancipation in Europe, the Jews have made the rehabilitation of the Jewish community in the Holy Land one of their chief cares, and they have always cherished the hope that the result of their labours would be the regeneration on Palestian soil of a Jewish community, worthy of the great memories of their environment, and a source of spiritual inspiration to the whole of Jewry. Accordingly, the Conjoint Committee have welcomed with deep satisfaction the prospect of a rich fruition of this work, opened to them by the victorious progress of the British Army in Palestine.

The Committee intimated to the Zionist organisations as far back as the winter of 1914 their readiness to co-operate with them on the basis of the so-called "cultural" policy which had been adopted at the last two Zionist Congresses in 1911 and 1913. This policy aimed primarily at making Palestine a Jewish spiritual centre by securing for the local Jews, and the colonists who might join them, such conditions of life as would best enable them to develop the Jewish genius on lines of its own. Unfortunately, an agreement on these lines has not proved practicable, and the Conjoint Committee are consequently compelled to pursue their work alone on the basis that "the Jewish population will be secured in the enjoyment of civil and religious liberty, equal political rights with the rest of the population, reasonable facilities for immigration and colonisation, and such municipal privileges in the towns and colonies inhabited by them as may be shown to be necessary."

The Conjoint Committee does not approve of the Zionist leaders' claim that the Jewish settlements in Palestine should be recognised as preserving a national character in a political sense, nor the proposal to invest the Jewish settlers in Palestine with certain special rights in excess of those enjoyed by the rest of the population.

Our Fighting Friends.

In the *War Illustrated* Mr. H. Charles Woods draws an interesting pen-portrait of "The Serbian as I Know Him."

If we wish to understand anything of the depth and power of the character of the Serbian soldier it is a primary necessity that we should recognise that the army is the nation and the nation is the army. The true spirit of the people is seen not among the politicians and townsmen, but in the personalities of the peasants and country folk who constitute the backbone of the race and make up the army. Possessed of the strength of lions and the hearts of children, their lives, thoughts and actions are influenced by the traditions, proverbs and national customs according to which they have been brought up.

Partly as a result of the patriarchal or communal system, according to which large families live together in one homestead, the people are affectionate, simple and kind-hearted. Patriotic, of course, they are, but patriotism in Serbia means not so much love of king and country as absolute adoration of home, village and friends.

The character of the Serbian soldier may be described by saying simply that he is a hero, a born fighter, and a fatalist, or it may be dwelt upon in an account that would fill many pages.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The appointment of Mr. A. G. M. Dickson, Sub-Governor of the National Bank of Egypt, to be the first general manager of the British Trade Bank, or, to give the institution its authorised title, the British Trade Corporation, is not only a tribute to Mr. Dickson himself, but to Egypt. I have heard some criticism of the appointment on the ground that the great bulk of Mr. Dickson's experience has been gained in the Near East. Well, that is so, but it would have been impossible to have secured a man whose banking and financial experience embraced all the world, and, that being the case, no better appointment than Mr. Dickson could have been made.

***

Mr. Dickson began his career in the Imperial Ottoman Bank, and, after a year's training in the London office of that famous concern, went East, where he filled various posts in the bank in different parts of Turkey. The British authorities recognised his great abilities and appointed him Financial Adviser at Candia; later, he joined the Ionian Bank, in which he held the most important posts in Greece, and afterwards went over to the National Bank of Egypt. In Egypt Mr. Dickson has long been regarded as a pillar of finance and commerce, and there is no doubt that many companies in the Land of the Nile owe their existence to-day to his sound judgment and wise and fostering care.

***

It ought not to be necessary to point out that the Near East, after the war, will present as great trade and commercial problems to the British manufacturer and merchant as any region in the world, and that, of course, is one of the reasons why I regard Mr. Dickson's appointment as being so satisfactory. None has a greater knowledge than he of the complicated and peculiar conditions that prevail out there, and British traders may rely on it that their interests will be safe in his hands. Lord Faringdon and his colleagues have done well in this their initial appointment, and if they continue to choose as wisely all will be well with the corporation and the interests which it has been established to represent.

***

The corporation has been in the public eye and ear a great deal lately. Some weeks ago the fear was expressed that one of its principal objects would involve competition with the many excellent exchange banks already operating in the Empire, and it was suggested that owing to that fact it would not receive the financial backing from the banks which had been anticipated. In the last week or two the first necessary million of capital has been subscribed, and a considerable portion of it, if not all, has come from London banks. This point ought to be made clear because, if the money has been found by them, as the City Editor of the *Morning Post* points out, the fact will give a lead to investors, and, moreover, will dispose of the fear I have referred to. A more recent allegation was that the corporation is to be invested with all the privileges of monopolists. If that charge had been true, or even only partly true, it would have been a serious matter. It has been specifically denied, however, and in such a way as to be convincing.

***

The official returns of British vessels sunk by enemy submarines in the week ended on last Sunday leaves us very much where we were before. In the previous week, it will be recalled, the amended figures were:—Ships under 1,600 tons sunk, 5; over 1,600 tons, 17; unsuccessfully attacked, 14; total, 36. The figures this week are:—Ships under 1,600 tons sunk, 9; over 1,600 tons, 18; unsuccessfully attacked, 9; total, 36. At first sight this may seem satisfactory; but reflection will show that in proportion to the number of attacks more vessels have been lost, which, in view of all the optimistic estimates we have had lately, is not so rosy, after all. We are still without any information regarding the loss of tonnage, and, to judge from Sir Edward Carson's recent statement, we shall have to "carry on" patiently without it. After all, I suppose, we must assume that the Admiralty, which is responsible to the nation, must be allowed to know best.

***

A Greek correspondent informs me that the plight of tobacco merchants in Egypt is to be relieved. It is stated on very good authority that some time ago an arrangement was reached with the Venizelist Government that three Greek ships, belonging to the MacDowall Company, should leave Volo for Alexandria with full cargoes of tobacco, and that they should be convoyed by naval craft. If my information is correct—and I believe it is—some of the much-wanted weed is already in the possession of the importers in Egypt.

***

I am glad to see that the authorities in Egypt are checking the activities of those who trade with the enemy. Judge Kershaw has decided in the charges against Adolph Stross, and as he has convicted on certain of the counts, and imposed the pretty smart fine of £E1,000, there is little room for comment. The charges brought against Ch. Geahel and Pharaon were dismissed, but in another case a native was fined £E25 and warned to be more careful. I have read all the Egyptian proclamations regarding trading with the enemy, and see no reason why the simplest man need err. The matter is important, and I hope the authorities will continue to keep a watchful eye on it.

***

Sane Germans are awaking to the fact that the money which they have lent to Turkey is in some danger of being lost. Writing in the May number of the *Preussische Jahrbücher*, Herr Emil Zimmermann declares that unless that adequate flank protection is secured in Africa—which he appears to make the equivalent of the *status quo ante*—"Nearer Asiatic Turkey has no vitality. *Without this protection the money which we have advanced to Turkey during the war is lost.*" (The italics are Herr Zimmermann's.) "The sum involved is already nearly £T150,000,000. Turkey can never repay this sum if there arises in Africa a great self-contained British Empire, which, in order to be united with India, will continue to aim at the possession of Arabia and Southern Persia."

According to the translation of this frank article in *The Times*, Herr Zimmermann declares that "the great English Empires about the Indian Ocean will make their own policy, and a great British Empire in Africa will easily be able, after fifteen or twenty years, to mobilise a million men. Turkey will be protected from attacks from this side only if a great German Colonial Empire in Africa holds Anglo-African ambitions in check. Nearer Asia cannot continue to exist without this covering of its flank. That is the meaning of the German colonial question." If that *is* the meaning of the German colonial question, no banker who operates on common sense and prudent lines would regard Germany's £T150,000,000 as very sound security.

***

Three per cent. above the average does not represent a great quantity in bulk, perhaps, but the fact that official estimates of the Egyptian wheat and barley crops give that increase has been received in this country with much satisfaction. The world's supply will be very much on the short side this year; indeed, despite the acute food situation in this country. Italy has already had to appeal for wheat and substitutes, and, of course, the British authorities are proud to extend all the help they can. It is not possible to say definitely what form the assistance will take, but Lord Devonport, the Food Controller, has undertaken to do his best to meet Italian requirements, so that even the smallest additional aid from our oversea friends will be more than welcome.

***

Mr. C. W. Twelves, in a lecture before the Sultania Society of Economics, Statistics, and Legislation on the subject of "The Internal Trade of Egypt," indicted commission agents in the country with dishonesty. He quoted an Egyptian merchant as his authority, but disagreed that legislative intervention was necessary, at least for the present. He expressed the view that those who deal with the agents could exclude the "crooked" man and make honesty all the more profitable to the "straight" one. That is possible, of course, assuming that merchants and dealers could be induced to combine closely enough to impose conditions in a special form of contract; but would they be prepared to do so? The combination would have to be complete to be successful, and in every country there are always to be found men who prefer to retain absolute independence of action. The matter is none the less important, and should be taken in hand without delay.

ENGINEERING NOTES.

A Small Refuse Destructor.

Some time ago reference was made in these columns to a system of refuse destruction, used with success by a number of local authorities in England, and in France; and the writer pointed out the advisability of using similar means for the destruction of town refuse in certain large towns in the Near East, instead of dumping it over the outskirts of towns, thus endangering the health of the inhabitants. It has been stated recently that the question was discussed by a town corporation, but, owing to the cost, which was considered as beyond the means of the corporation, the matter was set aside. As the need seems to be pressing, and the danger arising from accumulation of refuse has been admitted, and as the hot season approaches, it may be as well to procure another destructor, of small size, which can easily be obtained and fixed quickly where needed. One of its leading features is that it is mounted on a circular track in such a way that, by means of suitable handles, it can easily be turned round to such a position that its large air inlet faces the wind, thus rendering the destruction of the refuse much easier than would otherwise be the case. The casing of the furnace is a strong square casting, into which is dropped a massive liner, or fire-box, provision being made for the free circulation of cold air between the casing and the firebox. The bottom grate is of a special shape to increase combustion, and can be tilted upright for the discharge of ashes. The chimney is from 8 ft. to 10 ft. high, and can easily be cleaned. One or two pairs used regularly are sufficient for a small town.

Land Reclamation in Egypt.

Commenting on Sir William Willcocks's suggestions regarding the reclamation of waste land in Egypt, a correspondent who, apparently, differs on some points, writing to an Egyptian paper, states that there are many other factors in the problem which require careful study and elucidation before reclamation can be regarded as anything more than an adventure; he suggests that it would be wiser for the Government to continue to devote its attention to irrigation and drainage, and to leave the completion of reclamation to the adventurer. The correspondent calls the attention of Sir William and others to what is "to his mind one of the most important questions in land reclamation schemes, that of cheap fuel." He tells them that "most land that has been left unreclaimed by Pharaoh and by the fellah has been so left either because its level is too high or too low," and that "in either case pumping for irrigation or for drainage is frequently the primary consideration. "Pumping," he writes, "requires energy, and in Egypt the production of energy outside that yielded by the muscles of its human and animal population means fuel consumption, and fuel means coal or mineral oil, whose transport makes their price always high and sometimes, especially in the Sudan, prohibitive."

Utilising Sun Energy.

He contends that even land of inferior quality may be made to yield vegetable growth which, if properly dealt with, will furnish excellent and economical fuel for internal combustion engines. He suggests, too, that the most satisfactory method of dealing with this vegetable growth, be it in the form of trees or sticks, or stalks, is to convert it into charcoal, which is well known as an explosive gas producer; and he firmly believes that by the use of a new system of charcoal producer, which is now being tried in Egypt, and in which (we presume) the sun's energy is utilised, the problem of economically converting sun energy into engine power will be solved, the essential of such conversion being the utilisation of vegetable growth as an intermediary between the engine and the sun. In conclusion, the correspondent says it is now "up to" the cultivator to set to work and grow a sufficiency of the necessary raw material. We cannot see the connection between "conversion of sun energy into engine power" and the suggestion of Sir William Willcocks regarding the reclamation of waste lands in Egypt. Is it wiser for the Government to "leave the completion of reclamation to the adventurer" and take no notice of Sir William's suggestions because a new method of producing charcoal from vegetable growth in Egypt has been invented? That the Government devotes its attention to irrigation and drainage is beyond question. In THE NEAR EAST (March 30, 1917) we referred to some interesting irrigation facts and figures which Mr. W. R. Williams, late Inspector of the Public Works Department in Egypt, gave to interested Australians. These proved the benefits of British rule.

The Charcoal Producer.

We have no details of the new charcoal producer in which the sun's energy is to be utilised; but it is probable that it is a very suitable apparatus for tropical climates. Whether it solves the problem of economically converting sun energy into engine power has to be proved. If we are not mistaken, this producer converts vegetable growth into charcoal by the sun's energy; and this charcoal is used for the production of gas for suction-gas engines. There are British types of suction-gas plants which will work continuously on chips, wooden blocks, shavings, sawdust, bark, olive refuse, cocoanut husks and shells, rice husks, cotton pods, and many other waste materials, and vegetable growth, as well as lignite coke, peat, etc. If the new charcoal producer can do the same work at less cost it will succeed.

LANCASHIRE COTTON.

Increase in Price of Raw Material.

(From Our Own Correspondent.)

Manchester, May 23.

The market during the past week has been under the influences of higher rates in raw cotton and, in sympathy, spinners and manufacturers have had to put up their quotations for yarn and cloth. The hardening tendency has forced out more inquiry in some directions, with increased sales, but many departments of the market are still badly in need of relief.

The proposal to stop the spinning mills for the whole of Whit week and the Monday following has failed to secure the support of the members of the Masters' Federation, and individual firms will have to make their own arrangements as to extending the usual holidays. The settlement of the weavers' wages dispute is in sight, and the trades union officials have agreed to recommend the acceptance by their members of the offer made by the employers.

It is understood the proposed settlement is for an increase in wages of 10 per cent., from the beginning of next July. Egyptian cotton rates have not advanced to the same extent as in the American staple, and, owing to favourable reports relating to the growth in Egypt, some people are looking forward to a fall in values.

In yarn made from Egyptian cotton, ordinary qualities continue to do badly, and in numbers such as 60's to 80's the prices ruling at the moment show a loss on the basis of current rates in the raw material. Some producers of specialities have booked fairly substantial orders in descriptions suitable for sewing cotton manufacturing.

The general demand in piece goods for Egypt remains healthy, but merchants are harassed by occasional losses on the sea and restricted shipping facilities. There has not been much doing in sized materials, but in printed and dyed goods quite an encouraging turnover has transpired.

The offtake in grey shirtings for India remains very disappointing, and many makers are in a wretched position. Some producers of dhooties and jaconets have sold rather more freely for Calcutta. The undercurrent of demand for China in several kinds of cloth has been fairly encouraging.

A little more activity has been reported for South America. A trying time continues to be experienced by manufacturers as a body, and, although more business has been done, the orders secured have not been sufficient to strengthen the general position.

Prices in American yarns have gone against buyers, and users have been stimulated to purchase rather more freely, chiefly in coarse and fine numbers. Supplies remain plentiful in medium counts, especially wefts. In small lots a little more trade has been reported in bundle yarns for India, and further buying has also transpired in yarns suitable for France.

THE CORINTH CANAL.

It is reported that, in order to defray certain expenditure which has been incurred in development, the Corinth Canal Company has decided to increase its passage dues by about 10 per cent. as from April 14.

A copy of the new tariff list (in French) may be consulted by British firms interested at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C. 2.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned :—

	1916. Francs.	1917. Francs.
May 15 } May 16 }	340.000	290,000
May 17	230.000	200,000
May 18	170,000	100,000
May 20	310.000	230,000
May 21	190,000	160,000

EGYPTIAN TRADE.

Lack of Tonnage Reduces Imports and Exports in March.

(From Our Own Correspondent.)

Cairo, April 30.

The March Customs returns show a slight falling off in both imports and exports, as compared with the same month of the previous year. This was only to be expected in view of the difficulty in finding ships for the transport of merchandise, and we must be prepared for the same feature in the returns for the coming months.

Imports during March came to £E2,173,241 and exports to £E3,230,867 as against £E2,469,781 and £E3,249,688 respectively in March, 1916, a decrease of £E296.540 and £E18,821. The totals for the quarter are, however, still in excess of the previous year, imports by £E185,928 and exports by £E1,047,801, whilst compared with 1914 the former are £E352,968 down and the latter £E2,846,112 up.

Principal Imports.

The principal imports during the month were :—Meat, £E114,325; flour, £E55,444; coffee, £E53,885; beer, £E24,349; stationery, £E40,050; coal, £E211,623; chemical manures, £E47,746; cotton tissues, £E500,132; cotton threads, £E53,679; wool tissues, £E48,232; silk tissues, £E36,624; sacks, £E36.012; ready-made linen and millinery, £E32,974; worked iron and steel, £E101,925; and tobacco, £E221,892.

The chief increases were in meat, £E92.897; coffee, £E22.348; cotton tissues, £E262,601; worked iron and steel, £E65,861; and tobacco, £E142,075; the main decreases were jams and preserves, £E48.673; beer, £E25,630; petroleum, £E110,709; and liquid fuel, £E26,159 (of which none was imported); furniture, £E141,370; coal, £E215,462 (the quantity fell off by 38,094 tons); chemical manures, £E68,077; sacks, £E34,048.

Exports.

Under exports the chief items were eggs, £E108,186; tanned goods, £E40,320; onions, £E75,273; cotton seed and cake, £E396,904; cereals, £E53,980; sugar, £E103,742; gum, £E22,871; cotton, £E2,341,896; and cigarettes, £E33,520. Increases were recorded in eggs, which improved by £E47,008, and 34 million in quantity; tanned goods, £E26,026; cotton seed and cake, £E216,132 (in both cases an increase also in quantity); gum, £E20,177; and cotton, £E29,073 (a decrease of 191,846 cantars). The chief items in which a diminution in value took place were onions, £E46,197, the quantity increased slightly, however; sugar, £E67,189; alcohol, £E14,205; and wool, £E42,388.

Distribution.

Great Britain accounted for 50 per cent. of the imports and 75 per cent. of the exports. Her chief sales to this country were beer (80 per cent.), coal (all), chemical manures (60 per cent.), textiles (70 per cent.), of which cotton and wool tissues represented the major portion, worked iron and steel (90 per cent.). She took from Egypt all the eggs, cotton seed and cake, and gold and silver, practically all the onions, and 75 per cent. of the cotton. India and Australia improved their sales, the latter sending as usual nearly all the meat and 30 per cent. of the flour, and the former a large portion of the flour and coffee, all the indigo, half the cotton threads, and all the sacks and gunny cloth. India also took 30 per cent. of the sugar exports. Of the other countries, France, Greece, China, and Sweden improved their sales, but the United States, Chili, and Italy showed a marked falling off; while under exports no country except Great Britain improved—her portion more than doubled—the United States, Spain, France, Greece, Japan, Russia, Italy, and Switzerland all having very large decreases against them.

Trade between Egypt and the Sudan was very much on the upward trend during March; imports from the latter to the former were £E225,831 against £E112,081 the previous March, and exports in the other direction £E124,417 against £E74,896. The principal imports into Egypt were live stock £E44,438, maize £E72,229, sesame £E50,322, charcoal £E7,542, and cotton £E12,371. Exports to the Sudan were flour £E4,677, sugar £E33,291, and textiles £E36,999.

TRADE NOTES.

Opening.

The Collector of Customs at Valetta, Malta, reports that a firm in that town desires to obtain sole agencies, for that centre, for United Kingdom manufacturers of silk, woollen and cotton hosiery and underwear. United Kingdom manufacturers of hosiery and underwear, desirous of being represented in Valetta may obtain the name and address of the firm referred to on application to the Department of Commercial Intelligence of the Board of Trade. The reference number (195) should be quoted.

Wool Restrictions.

The British Army Council have issued an Order, under date May 9, to the effect that (1) the Orders of the Army Council dated April 19 and April 30 are cancelled, and (2) no person shall after May 9 sell or offer to sell any crossbred or merino wool in stock in the United Kingdom at prices exceeding the basis of prices set out in a schedule to the Order.

The Army Council have issued a further Order, also dated May 9, ordering that (1) no person shall after the date of the Order sell or offer to sell any crossbred or merino tops, or East Indian, Egyptian, Persian and other foreign wools in stock in the United Kingdom, except under permit issued by or on behalf of the Director of Army Contracts; (2) possession is taken of all stocks of Australian, New Zealand, South African and South American crossbred and merino wools excepting any wool of the description aforesaid held by users for the purposes of manufacture by the holder; and (3) the Order of the Army Council dated April 27, 1917, of May 3, shall continue in force until further notice. For the purposes of the said Order tops invoiced or paid for on or before April 27 shall be deemed to have been delivered on or before the said date.

The Wool Section of the War Office notifies that the effect of the above two Army Council Orders is to remove the prohibition on dealings in alpaca, camel hair, cashmere, goat hair, and crossbred noils. As regards merino noils, all stocks that have been offered to the Department and released under permit may now be bought and sold. All restrictions on the purchase and sale of wool outside of the United Kingdom are removed, but any stocks of crossbred or merino wool which may be imported can only be sold under licence once they have arrived in the United Kingdom.

"NATIVE" RIGHTS.

Mr. H. Wilson Fox, M.P., honorary secretary of the Empire Resources Development Committee, writes to The Near East that it has been brought to the notice of his committee that "its proposals for the development of Empire resources are being widely misrepresented, and that the committee is being accused of a desire to interfere unjustly and ill-advisedly with the existing interests and trade of Europeans on the one hand and to disregard, on the other, the rights and the welfare of the native inhabitants of the tropical possessions of the Crown."

Mr. Fox proceeds :—"As the suggestion has been made in certain quarters that the committee has been formed to promote private interests, I am asked to place on record that the committee has been formed with the sole object of urging upon the Government the adoption of a certain line of policy. If and when it succeeds in this object the committee will disappear, and the Government alone will be responsible for the creation of the machinery required to carry out the policy, and for decisions as to the manner and the directions in which effect can best be given to it."

TRADING WITH THE ENEMY.

Fine of £E1,000 Imposed on Adolph Stross.

Judge Kershaw, at the special court at Alexandria, delivered judgment, on May 2, in the case in which Adolph Stross, an Austrian merchant, was charged on eight counts with trading with the enemy. The facts have already been reported in THE NEAR EAST.

On the two first charges that Stross made 294 new insurance contracts with the Assicurazioni Generali of Trieste, for the profit of Trieste, after the proclamation was published, the judge pronounced the accused "Guilty." On the third charge Stross was acquitted. Regarding the fourth charge his Honour found that the "compensation" was not paid by Stross until after the issue of the proclamation of January, 1915, and he was found "Guilty."

The judge said in regard to the fifth and sixth charges that if a man sent money under cover to a relation in order to pay money in an enemy country, it would constitute an offence. The present, however, was a *bonâ fide* case of caring for the well-being of a relative, and the two charges come under the heading of "Not guilty." With regard to charges seven and nine, the war put an end to floating policies. If Mr. Stross did make an error in this case it was a legal error such as might easily have been made by a man who was not very well versed in legal matters.

The fine was imposed in respect of the first, second, and fourth charges. The accused was warned in respect to the fifth, sixth, seventh, and ninth.

WARNED AND DISCHARGED.

On May 3, in the case of the Syrian firm (under French protection) of Ch. Geahel and Pharaon, coal and iron merchants, Judge Kershaw found the accused "Guilty" on three charges made, but, taking into consideration the "moral standing and well-known integrity of the firm," dismissed him with a warning.

The first charge was that the firm, being of enemy nationality, origin Beyrout, continued to do business without a licence, thus offending against the proclamation of August 15, 1915.

The second charge dealt with the payment of £5,000 to a person in Beyrout, being enemy territory. The third charge was that the firm in October, 1915, attempted to make a payment of 40,000 francs for the benefit of P. Pharaon and Geahel, Beyrout. This draft was negotiated through the Credit Lyonnais Bank, Alexandria. The sub-manager of the bank appeared in Court and said that after they had cabled this sum as requested doubt arose that it was to an enemy subject, and they cabled a second time annulling the draft and asking Mr. Ch. Geahel for the authority he had for sending this money. Under charge three, no offence was actually committed, the offence being in the "attempt" to pass money. Mr. Geahel pleaded ignorance of having to obtain a licence for trading nor did he consider himself an enemy firm, being under French protection. Philip Pharaon, to whom he had sent money, was considered by him as domiciled in Switzerland, though for business purposes he constantly went to Beyrout. The accused said he had nothing to hide, his books were open, he had simply never thought of obtaining a licence, and he had no intention whatever of infringing the proclamation.

FINED £E25.

In the case of Ramadan Youssef, the accused was charged with making payments in February and May, 1915, to G. Kaul, residing in Constantinople, thus violating the Proclamation of January, 1915. The second charge was that he failed to give notice of his indebtedness to Kaul to the Public Custodian, thereby infringing the Proclamation of July, 1916. Kaul was an engineer and had a contract for the Government in Alexandria, and when the work was finished there he went to Constantinople.

The money due to Kaul was eventually sent to him through Rudolph Misrachi, director of the Salonika Cigarette Company.

After two payments had been made in this manner, Ramadan said his attention was drawn to a reported case, the circumstances of which were similar to this, and he realised he had committed a breach of the Proclamation. He gave every facility to Mr. Bridson to make an examination of his books, even giving him more particulars than he had been asked for. He did not declare the sum of £75 still owing to Kaul to the Public Custodian because he considered Kaul a Belgian subject.

The Judge said the Court had decided that Ramadan should be fined £E25, and that he should be more careful to take cognisance of the Proclamations.

RIVAL TO BAGHDAD LINE.

American View of Anglo-Russian Scheme.

Railway connection between Europe and India through the Hindu Kush, reducing the mail time between London and Delhi to six days instead of seventeen, as required at present by the sea route by way of the Suez Canal, is proposed under British and Russian influences as a competitor to the Bagndad Railway projected by the Turkish and German Governments. The Bureau of Foreign and Domestic Commerce at Washington has received a communication on the subject from Mr. Henry D. Baker, United States Consul.

Mr. Baker approaches the subject of railway activity in this Transcontinental area from four different sides:—The Baghdad Railway to the south, and its probable extensions east, through Persia and Baluchistan; by way of the Caucasus district of Russia, Persia, and Baluchistan; the Afghanistan-Baluchistan route, viâ Kusha, in Turkestan, to Herat and Kandahar, in Baluchistan, the latter city being only eighty miles distant from New Chaman, in Baluchistan, which is the terminus of the British Indian railway systems; the Bokhara Railway, with its extensions south to the Oxus River, and eastward along the north bank of this stream to the present terminus at Termez.

Termez to India.

"Termez is only 550 miles from Peshawar, on the Indian side of the famous Khyber Pass," says Mr. Baker, "and has been considered, both in a commercial and military sense, the gateway of India.

"The Bokhara Railway in a few months will have reached Sarai to the east, near the junction of the Kundus and the Oxus Rivers, and then the great task of bridging, or, more accurately expressed, tunnelling, the Hindu Kush will have to be undertaken. The distance from Sarai to the terminus of the Indian railways is only about 400 miles. But this 400 miles will call for some wonderful engineering, incidentally entailing the boring of a 15-mile tunnel beneath the Hindu Kush, famed in story as 'the roof of the world.'

An $8,000,000 Gap.

"Careful surveys have been made by Russian engineers, and they have reported that, but for this tunnel, the problem is comparatively easy, costing an average of £20,000 per mile, or £8,000,000 for the gap. When this is done, then the distance from the Hook of Holland, which could be reached by fast steamer from England in record time to the Indian capital at Delhi, will be as follows:—Hook of Holland, Berlin, Warsaw, Moscow, 1,836 miles; Moscow, Orenburg, Tashkend, 2,082 miles; Tashkend, Kagan, estuary of Kundus River, 750 miles; estuary of Kundus River to Peshawar, 400 miles; Peshawar, Delhi, 627 miles; total, 5,695 miles.

"A new railway in Russian Turkestan is now under consideration viâ Alexandrof, in south-eastern Russia, which will skirt the north-eastern coast of the Caspian to Khiva and Bokhara. This railway, if constructed, would make a saving in distance of over 800 miles in the proposed route between Russia and India viâ the Hindu Kush

"The Hindu Kush route from the Hook of Holland to Delhi, after the proposed shortening of the present route through Turkestan, would be about 4,918 miles; the Trans-Persian route viâ Trans-Caucasia would be about 5,500 miles, and viâ Constantinople and Baghdad about 5,745 miles, and the Afghanistan route from Kusha by way of Herat and Kandahar to New Chaman, in Baluchistan, would be about 5,295 miles. The cost of the Northern Trans-Persian Railway would be about £34,000,000, and the southern probably somewhat more."

COMPANY MEETING.

IONIAN BANK.

The annual general meeting of the Ionian Bank, Ltd., was held on May 22, at 25, Abchurch Lane, E.C., Mr. Falconer Larkworthy, C.O.R., the Chairman, presiding.

The Chairman, in the course of a comprehensive review, said: You are aware how closely your bank is associated with the Near East, how for many years until now it has been the only official economic connecting link between this country and Greece, how it existed before the consolidation of the Greek kingdom, and how it derives its authority to issue notes and transact business in Greece by treaty between and under the protection of the Great Powers and Greece. The principles and policy which have guided your directors in the past have stood the strain of the untoward political events which have occurred there, and have resulted in an almost absolute clean sheet as far as known losses there are concerned, and against the serious shrinkage of business at most branches in Greece we are able to place a healthy increase of business and profit at the head office and throughout the branches and agencies in Egypt. We cannot see into the future, but we have every expectation that not only will no serious loss have occurred, but that the position of the bank in Greece will be strengthened and its prestige indefinitely extended by the manner in which it has been able to meet and pass through the unhappy events which have transpired. That its position has been strengthened, that the liquid character of its assets has been maintained and the safety of its ever-multiplying depositors increased by the revision of its advances, and the reserves that have been made, there can be no question. To these depositors we give the assurance that the bank of their choice was never in a sounder condition.

Speaking of War Loans and bills and the part played by the banks, the Chairman said: It is a fallacy to suppose that wealth consists only in the accumulated surplus profit of labour as expressed in £ s. d., multiplied in some mysterious fashion by the creation of what is called "banking credit," and a mistake to ignore its existence in the energy, enterprise, industry, powers, capacities, services, and invented and manufactured machinery of man, which, if there were no banks at all, would still constitute the major part of the liquid wealth of mankind, and could be pledged for the purposes of war or any other rational purpose. Bankers are not creators of credit when they take up portions of Government loans or make loans to others. They create nothing. The only created things, as far as this world is concerned, are the organic and inorganic systems, and the higher of these reacts upon the lower for the multiplication of life and sustenance, and the surplus, after sustentation, is liquid wealth, until it is placed artificially in the more permanent category of invested wealth. The banks are the storekeepers of a part of the liquid wealth of the country, and the medium of helping their customers to exchange one kind of liquid wealth for another, or to transfer liquid wealth into invested wealth. In fact, every banking transaction is either a transfer or hypothecation of wealth. If this is correct, when the banks lend to the Government, and the Government pays out for goods supplied, there is neither duplication nor creation of credit. The suppliers return to their credit at the banks not new deposits, but their own capital, which they had withdrawn previously from the banks to enable them to fulfil their contracts with the Government, plus their profit, which may happen to be, in some cases, 30, 60, or even 100-fold. When that profit proves to be excessive it excites over-speculation, and, as a result, over-production and reaction, and should be stopped by the banks in its early beginning. Official England has financed herself mainly by means of the contributions of private character out of her citizens' huge liquid fund, through the banks, of which deposits are only a part, by the process of profits always overtaking the expenditure, and this explains the almost "fantastic" success of the great Victory Loan.

Last year for the second time I brought before you and the financial world the reformed currency system of Greece, as embodied in the Dragoumis Act of 1910.

Digitized by Google

I demonstrated that 25 millions per annum were lost through guaranteeing, indirectly, the dividends of the world's gold companies by the maintenance of the fixed price for gold. Also that at least 25 millions per annum, on average, represented the loss of interest on the world's commercial movements when the Bank Rate is placed above normal level for the purpose of maintaining the gold reserve quite irrespective of the loss in the value of securities. I now add—the untold millions which are lost in times of crisis and panic, when, in order to get gold to make provision for possible requirements, securities are thrown on the markets of the world, simply through fear. And, finally, our latest experience—the loss of interest on borrowings by the richest nation of the world from our own people in the time of war at enormous rates, and at still higher rates from foreign nations, with the humiliating condition of depositing collaterals for such loans with a margin of 20 per cent. These terms are a bar on the escutcheon of financial England. Is there not something weird about the continuance of such futilities and waste when a currency system is worked by another nation which has been demonstrated over a period of several years to be highly protective to economic interests, which steadies the value of capital, does not lend itself to panic, fixes the exchanges, balances trade, maintains an undepreciated paper currency, borrows millions from its own people upon simple notes of hand without paying any interest upon them, and maintains a gold fund of equal proportion to its paper currency, from which it derives a profit? The three facts—first, that Greece possesses an absolutely fixed exchange; second, the highest gold reserve 100 per cent.—in proportion to its circulation of any country; and, third, that out of a circulation of nine millions sterling odd it makes about £208,000 profit per annum—are sufficient of themselves to stamp the Greek reformed currency system as extraordinarily suggestive.

In referring to the 1844 Bank Act I have used the term "discredited." Why? Because the authorities who are bound to try to keep the law have, in their emergency expedients, discredited it by doing in detail, with no fault on their part, that which, if the various parts were pieced together, with certain additions, into a well-considered whole, by legislative enactment, would be done economically and perfectly—perfectly in the sense that it would suit existing conditions. For example, the authorities, to provide against the dangers of shipping gold on a great scale to Egypt under war conditions for the purpose of gathering the cotton crop—that is, for exchanging the wealth of Egypt for the wealth of Great Britain and of other countries—established after the Greek model, but imperfect in some details, a forced currency system of paper notes. The system, according to the Peel Act, ought to provide £E100 in coined Egyptian gold, or nearly so, for every £E100 issued in paper: and it did this, but how? On April 24 last, according to the National Bank of Egypt return, the circulation amounted to £E21,200,000. The securities deposited against this amount of notes were: Gold in London £E5,930,710,445. Treasury bills in lieu of gold £E4,669,289,555—£E10,600,000, equal to 50 per cent. Other securities held for like purpose: Egyptian Treasury bills £E2,876,250. Egyptian Government securities and securities guaranteed by Egyptian Government £E555,788,555. British Treasury bills £E7,167,990,445 - £E10,600,000, equal to 50 per cent. The distinctions between the two systems are that the Greek system provides 100 per cent. of liquid wealth for 100 in notes; they admit the principle of the cover being held abroad, but the Greek system does not admit of Greek Government securities being held as part cover. Therefore, to the extent of more than 50 per cent. the Greek system is more advantageous, and has more liquid reproductive wealth behind it than the Egyptian system. Further, the Egyptian system does not admit of the gold fund being temporarily employing for other purposes, such as the import of necessaries, where the security of the fund is maintained, or for the maintenance of the balance of trade, in which case the security is not parted with, but is transferred to another centre. At first certain facilities were afforded to banking interests in Egypt for obtaining bank notes on the deposit of cotton with the Government agents there, but this system proved objectionable and unworkable. The principle now adopted in the case of banks requiring to transfer their funds to Egypt is that they can do so by depositing gold with the Bank of England against notes to be handed to them by the National Bank in Egypt.

As a concrete case, showing the weakness of the system, your bank had to transfer to Egypt for the purposes of harvesting the cotton crop a very large sum. It held interest-bearing securities of the very highest class in London which it was ready to deposit in London against an equivalent in currency in Alexandria; but no—nothing but gold coins would be received, which meant that your bank must sell its securities or borrow on them in London to get gold and deposit the coin, and thus lose interest in London. But if the Greek system had been adopted in its entirety in Egypt, and the whole of the Egyptian gold fund had been held in London in a liquid condition—in short, interest bearing securities—the question of a gold coin deposit in London would not have arisen, and there would have been no legal difficulty in the way of carrying out our original proposal. At the same time, under the existing Egyptian system, which considers that the law is satisfied by depositing in London only about 25 per cent. in gold coin, the principle of which is admitted in the practice of the British Government, and the remainder in interest-bearing securities in London should not have satisfied the law, and have been considered otherwise sufficient. The only use of this Egyptian coined gold fund in London is that it maintains a modicum of the principle of a gold coin basis for notes, supposed to be secured by the Bank Act of 1844, without any real compliance with the principle of the Act itself; and, indirectly, recognises that first-class interest-bearing securities are not only equivalent to gold, as they can be immediately converted into that metal, and are better than gold, as they are interest-bearing. This system of forced paper currency has been in existence since the war began with perfect success, and apart from the actual saving of transporting gold to and from Egypt, it has had the effect of preventing the hoarding of gold coin by the natives and forcing their wealth into productive channels. If applied to India it would have the same beneficial effect on the countless hidden millions of gold in the hands of the natives of that country.

The principle of fixing by law the rate of exchange has been conceded by the authorities in fixing the exchange value of the rupee in India at 1s. 4d., and by creating a gold reserve in the Currency Department of £25,000,000 held in London in coin. And also, lately, in accordance with the policy adopted in Egypt, of holding a portion of the reserve in British Treasury bills. That portion now amounts to £16,000,000. How would the principle of a fixed exchange be prejudiced if the whole of the reserve were kept liquid in London in first-class interest-bearing securities, convertible at any moment into currency or other liquid wealth? It is absolutely unanswerable that a system which provides a gold fund, or a fund of liquid wealth, to the full value of every paper obligation on demand issued by any Government using it, and that requires its gold fund to be so placed as to balance, where necessary, the foreign trade of the country; and that scrupulously provides for the soundness of that fund; and that the note issues which provide the fund shall never exceed the country's natural requirements of currency, must be preferable to the discredited and haphazard system of the so-called "sound finance" of the 1844 Act. Another precedent has also been conceded, the British pooling venture has anticipated the economic union of the States, and has been confined to the pooling of a part only of the four great banks' coined gold reserves, of England, France, Russia, and Italy. This pooling of the gold reserves of the respective States, in liquid form, after adopting the Greek system, would be one of the greatest and most beneficent economic changes the world has ever seen, for each federal gold reserve would be at the services of all the States. Further, if the system were adopted by Great Britain, France, Russia, and Italy, and their respective gold funds were internationalised, there would be available at all the great centres of finance and commerce an aggregate capital of £1,470,000,000 for regulating the respective currencies, equalising the value of money, maintaining the balance of trade and steadying the exchanges of the world, at merely the cost of administration, and with the probability of a considerable profit being realised on working.

Again, the principle, which is a part of the Greek system, has been conceded of holding the gold reserve in various parts of the world other than in the centres where the notes are issued, not for meeting the payment of the notes, but for the purpose of balancing the exchanges or for other purposes in different localities. There are certain of the world's great banking institutions—notably Russia and France—that show the proportions of their gold holdings abroad, exclusive of those at home, but the practice has not yet been adopted in England. The fact is that the proportion of coined gold held in England under the 1844 Act to the aggregate note circulation of the country is so small, even when the British Treasury gold reserve against its notes and also the holdings abroad are included, and the liabilities that are based on that aggregate reserve are so disturbing, that it is courting disaster to allow things to remain as they are, and a more protective system is absolutely necessary. Seeing that war is abnormal and that its vicissitudes disorganise, if they do not destroy, all economic systems, the suspension of pacific relations with Greece, the blockade, and the embargo placed on all monetary relations of the Allies with her, necessarily suspended the working of the Valaoritis scheme; but this liability to temporary disturbance in no way affects its value in times of peace or its benefits to Allies in times of war. When the secret military and financial history of Greece during the 1916-17 period shall be authoritatively written it will be found that the key to the sudden change of attitude of the King and his Ministers to the Entente Powers, their acceptance of the Allied demands, and their readiness to afford reparation for the events of December 2 did not lie only in their realisation that the assistance of the Central Powers was yet a long way off, nor in the pressure of the food blockade, but in the punitive terrors of the financial blockade, which was instituted officially on December 13, 1916, and rigorously applied by the Allies. The opposition of the King and Government and Press collapsed in a few hours, and peace reigned in letter if not in spirit. Surely this is proof enough that the existence of the Greek gold fund had a beneficent influence in the direction of peace; and if other countries adopted the Valaoritis system and pooled their gold funds, then the universal international gold fund would be a powerful bond of union, and its safety during the time of war and its productiveness during peace would be guaranteed by the terms of union and by its international corporate management.

The following steps should be taken if it be decided to adopt in Great Britain the Valaoritis currency reform scheme of 1910:—(1) Pass a short Act repealing the Peel Act of 1844 and making Treasury notes (outstanding and to be issued) "legal tender" throughout the realm. This will at once turn into inconvertible permanent indebtedness the existing Treasury and Bank of England issues and free all existing gold reserves to be used for the purposes of the Act. (2) Create a gold fund out of all existing gold and bullion reserves, the net amount of the Empire's visible stock being £222,293,109, and out of any further liquid wealth, including coined gold, which will accumulate by means of fresh issues of Treasury notes, to be applied as follows:—(3) Maintain, if thought desirable (but not necessary, as the gold market as a commodity will be free to all), a store of bullion to be dispensed at the market price of the day, on proof that it is required for foreign export or for art purposes. (4) Compete in the market for bullion that may be required for Government purposes, for payment of foreign indebtedness or to equalise exchanges. (5) Invest in foreign neutral securities of first-class character. This would enable the Treasury to redeem the collaterals for loans at present pledged in the United States, and should the amount of the new gold fund admit of it, to increase its holding of such securities in

Digitized by Google

foreign neutral countries to provide for contingencies connected with international trade. (6) Fix the exchanges between England and neutrals at an estimated margin representing the cost of the shipment of bullion—that is, fix the maximum exchange for selling on foreign centres by the Controllers of the Currency—and leave bullion and foreign bills to be competed for by them in the respective markets within reasonable limits. (7) Supply all banking and financial institutions with currency on the deposit of adequate collaterals on the basis of legitimate and non-speculative trade. (8) Authorise the pooling of the British fund with the gold funds of all friendly countries adopting the system. The main principle of the Act should be that the gold fund or liquid fund of the country should be maintained intact, and not be applied to perishable and non-productive investments, and should be regarded as an indirect basis of security for the non-convertible circulation of the country, in excess of the estimated amount of its natural requirements. To the State adopting the scheme it would be found an important source of revenue. If under the existing conditions in Greece, Paris, and London, £208,000 can be earned from an average circulation of £9,200,000, what under similar conditions could be earned out of an Empire circulation of 2,170 millions, not in the hands of an ordinary bank, but in the hands of an independent Board of Control, or in the hands of a National Gold Reserve Bank constituted for the purpose, where the State would secure the whole of the profits less the cost of administration? The income from such a fund would be £49,000,000; but if it had been invested here at, say, 4 per cent. on average, the gross income would have been £86,800,000. To this would have to be added the economies, amounting to at least £50,000,000 per annum from demonetising gold, and from the saving of interest, or a gross total of £136,800,000. If currency reform on the system suggested were adopted throughout the Empire, the general commercial interests would at once benefit to a minimum of £50,000,000 sterling, and probably to a very much greater extent, and the Exchequers of Great Britain and the Dominions and Dependencies, in proportion to their respective circulations, to a total of at least 86 millions sterling odd. And if its operations were confined to Great Britain alone, whilst the general commercial interests would profit, as in the former case, by 50 millions sterling, the British Exchequer would benefit by 16 or 17 millions sterling. That latter sum in itself would make a respectable sinking fund for the repayment of the National Debt. I ask for fair consideration of the evidence given in these remarks as to the comparative value of the Valaoritis system. The Chairman concluded by moving the adoption of the report and accounts.

The motion was seconded by Mr. C. S. S. Guthrie and unanimously adopted.

The retiring directors, Messrs. Nicolo Marchetti and John J. Stavridi, and the auditors (Messrs. Cooper Brothers and Co.) were re-elected, and a vote of thanks to the Chairman concluded the proceedings.

THE GHARBIEH LAND COMPANY.—The Ordinary General Meeting of the above Company will be held in Cairo on May 31, 1917. Shareholders wishing to be represented at that Meeting should lodge their share warrants with the Anglo-Egyptian Bank, Limited, 27, Clements Lane, E.C., not later than May 16.

THE ANGLO-EGYPTIAN BANK, LIMITED. Notice is hereby given that the TRANSFER BOOKS of this Company will be CLOSED from the 18th to the 31st May, both days inclusive.

By Order of the Board,
GEO. H. SOUL, Secretary.
27, Clements Lane, London, E.C.4, 24th April, 1917.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)
Throgmorton Street, E.C.,
Thursday.

There has been a good deal of activity in our market for Egyptian securities this week, and general interest continues to grow, not only in Egypt, but also on this side. The very satisfactory reports that are constantly coming forward fully justify the revival which is taking place, and which promises to make steady progress.

In Government stocks City of Alexandria 4 per cents. have changed hands in a small way at 77, Unifieds have been done up to 83¾, but are rather quieter at the finish round 83¼, and Egypt 3½ per cents. continue strong at 71, but the lack of sellers checks business. Turkish 4 per cents. (1891) and 3½ per cents. (1894), both secured on the Egyptian Tribute, continue to be favoured by English buyers round 79 for the former and in the neighbourhood of 70, an advance of 1½, for the latter. A fair number of transactions have taken place in National Banks round 13 9/16, and the close is firm again at 13⅝, as all the shares on offer have been absorbed. Agricultural Banks have also been fairly extensively dealt in, and, after some liquidation by local holders, which brought them down at one time to 5 1-32, are again closing firmer at 5⅛, with a very few sellers on the market. The report is an exceedingly satisfactory one, and shows that, although the bank's dividend was restricted to 7s. per share, its profits were equal to over 13s. In the circumstances the shares appear to be a very attractive purchase at anything near their par value of £5.

Anglo-Egyptians are ⅛ firmer at 12⅜, and Land Banks are wanted at 5⅜ without finding sellers. Among land shares the feature has been a sharp rise of 1 in Behéras to 9 on an insistent demand from Egypt, but sellers even at the present advanced level are very scarce, as most holdings on this side were effected at considerably higher prices. The present improvement is a rather belated recognition of the immense improvement in this company's position during the past year. Delta Lands have recovered on the dividend, and it would not require very much buying to cause a sharp advance in the price. Some transactions have taken place in Gharbiehs round 20s., while New Egyptians are unchanged round 10s. 9d., a price altogether inexplicable in view of the fact that this company's land is practically all in a fully developed condition and ripe for sale. United Egyptian Lands have been done in the neighbourhood of 9d. to 10d.

Alexandria Water shares, after business at 12⅜, continue in demand without sellers. Salts and Sodas have been done at 23s., and Khedivial Mails have jumped up 1s. 6d. to 31s. 6d. on Egyptian buying.

In Greek securities, Monopolies, Rentes, and Fundings are one point down—rather nominally. On the other hand, 1881, 1884, and Larissa are all wanted at about 54, an advance of one point since last week. Ionian Banks are also a firm spot round 4½ (cum.-div.).

Oil Shares.

Dealings in oil shares have been on restricted lines, generally speaking. Yesterday Roumanian Consols were dull at 9s. 9d., and Anglo-Egyptian "B's" eased to 15s.

Paris Bourse.

Near Eastern Securities were quoted on the Paris Bourse on Wednesday as follows:—Egyptian Unified, 91.30 (against 91.10); Serbian (1895), 58 (unchanged); Turkish Unified, 63.60 (against 63.25); Credit Foncier Egyptien, 690 (against 689); Ottoman Bank, 430 (against 429); Suez Canal, 4,350 (against 4,354).

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

BOOKS on the NEAR EAST.

WITH SERBIA INTO EXILE.
By PAUL FORTIER JONES. 6s. net.
The author, who was with the retreating Serbian Army all the way from the Danube to the Adriatic, tells in this book a story of facts which is at once incredibly hideous and incredibly heroic. It is one of the most profoundly moving books of the war.

ACROSS ASIA MINOR ON FOOT.
By W. J. CHILDS. 15s. With Outline Map and Illustrations.
A most interesting book of travel, which is particularly timely because it gives us a more detailed story than has hitherto been published of what Germany has been doing for years past in pursuit of her ambition for world-power east of the Dardanelles, and through Baghdad to India.

VENIZELOS AND THE WAR.
By CRAWFURD PRICE. 2s. net.
A sketch of personalities and politics.

ENGLAND IN THE MEDITERRANEAN.
By JULIAN S. CORBETT. 16s. net.
A study of the rise and influence of British Power within the Straits, 1603—1713. Two volumes.

WITH KITCHENER IN CAIRO.
By SYDNEY A. MOSELEY. 5s. net.
"Mr. Moseley has the courage of his convictions—he writes frankly, and his book is full of illuminating information."—*Liverpool Courier.*

DAY AND NIGHT STORIES.
By ALGERNON BLACKWOOD. 6s. net.
The keynote of this book is struck in the first episode, "The Tryst," which presents the very real but elusive, inexplicable, psychical connection that exists between the living and the non-living. There are fifteen enthralling psychic dramas in the book, including a number of Egyptian stories.

MODERN MOVEMENTS AMONG MOSLEMS.
By SAMUEL GRAHAM WILSON, D.D. 6s. 6d. net.
An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from
THE NEAR EAST (Book Dept.), 1, DEVONSHIRE SQUARE, LONDON, E.C. 2.

BOOKS ON INDIA.

THE WAY TO NIRVANA.
Six Hibbert Lectures delivered in 1916. By Professor L. de la VALLEE POUSSIN. 4s. 6d net.
In these lectures Professor Poussin has attempted to give a short and clear exposition of his views on a single aspect of Buddhism, the old monastic theory of salvation.

EARLY ENGLISH ADVENTURES IN THE EAST.
By ARNOLD WRIGHT. 10s. 6d. net.
The volume covers the period between Drake's famous voyage and the founding of Calcutta at the end of the seventeenth century, and describes the early efforts of the English to establish themselves in the East as traders. The author is principally concerned with the personalities of those who built up our position there.

SHANTINIKETAN: The Bolpur School of Rabindranath Tagore.
By W. W. PEARSON. With an Introduction by Sir RABINDRANATH TAGORE. 4s. 6d. net.
The chief feature of this book is a translation by the author of a story by Satish Chandra Roy, a young Bengali teacher at the school, whose promising career was cut short by death at the age of twenty.

AN INTRODUCTION TO POLITICAL PHILOSOPHY.
By H. B. FARRELL, formerly Principal and Professor of History at the Dayarem Jethnal Sind College, Karachi. 3s. 6d. net.
The book, which is arranged in the form of a concise text-book, is suitable for students engaged on a course of politics.

THE FOLK-ELEMENT IN HINDU CULTURE:
A Contribution to Socio-Religious Studies in Hindu-Folk Institutions. By BENOY KUMAR SARKAR, M.A. 15s. net.

BOMBAY. (The Gate of India.)
By Major H. A. NEWELL, I.A. 1s. 4d. net, or one rupee.
A most excellent guide-book to places of interest, with map. It can be highly recommended.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

NOTES OF THE WEEK.

Not the least cause for a more optimistic feeling in regard to Russia is the vigorous stand taken by the higher command of the army under the leadership of the Minister for War and the outspoken denunciation by popular generals of the disintegrating tendencies which have temporarily demoralized the troops. It is fair to the latter to say that over the greater part of the battle-front climatic conditions have for a long time imposed a truce on hostilities. As a result of their enforced idleness the soldiers became a more easy prey to intrigues which battened as much on ignorance as on any lack of patriotism. When all allowances were made, however, the situation could only be regarded as critical; and in this connection it may be well to insist that the anxiety felt in the other countries of the Alliance was not based on the statements of possibly ill-informed or nervous newspaper correspondents, but on the public utterances of prominent Russians. The Admiral of the Black Sea Fleet spoke of the armistice existing along virtually the whole front; military commanders deplored the fraternization with German troops, and the Russian Commander on the Roumanian front was not alone in warning his men that the country was in danger. Throughout the crisis, however, the faith of the Allies in the Russian people as a whole has not wavered.

A significant commentary on the improvement in the situation is the enemy announcement that fighting activity has increased during the last few days along the whole front and that Russo-Roumanian attacks are expected. If they take place, we shall hope to find them bearing out the statement of General Shtcherbatcheff, the Commander-in-Chief in Roumania, that Russia was never so strong, and the enemy before her never so weak, as at the present time. General Russky has also announced that there is no deficiency of shells, and he felt confident that, if the moral of the troops continued to improve at the same rate and the armies fulfilled their duty to their own country and their Allies, the enemy could be beaten by the autumn. We are thus led to infer that, while the extremists of the Committee of Workmen's and Soldiers' Delegates have been monopolising the arena, the Provisional Government has been making good headway towards repairing the shortcomings of the old régime in regard to the organization of military supplies and transport. There was no lack of munitions in Russia as a whole before the Revolution; but the trouble was that owing to incompetence and corruption only a small proportion of it ever reached the army in the field. It remains to be seen whether the vast stores that have "gone astray" between Vladivostok and Riga can be found and utilized by the new authorities.

President Wilson is understood to have addressed a message to the Russian Government on the subject of the Allies' peace terms, and it is hoped that, in view of the natural regard paid by the new Republic of the Old World to the old Republic of the New World, his definitions will help to clear away finally any existing misapprehensions. If the published synopsis of the document is accurate, it is to be feared that Mr. Wilson will still try to accept the unfortunate phrase chosen by the Russian Internationalists and seek to fit it into practical politics. He is credited with having declared that "peace will have to be signed without any annexations or indemnity, but with such restitutions as the return of Alsace-Lorraine to France and Trieste and the Trentino to Italy, while as regards Belgium the United States will impose due reparation." We shall be well advised, perhaps, not to place too much reliance on the abbreviated anticipation of the President's message. What are restitutions in the eyes of some people will doubtless be annexations in the opinions of others; the dividing line between an indemnity and reparation is still harder to fix. Nor will it do for President Wilson to limit the war horizon to France, Italy and Belgium. Reparation is called for in the case of Serbia as well as for Belgium; it is needed also from one end of Turkey to the other, and is applicable to the natives of East Africa and South-West Africa, to the people who have had ships—their temporary homes—sunk under their feet as well as to those who have had their more permanent homes destroyed over their heads.

The war has raised such complex questions and complicated issues that there is always a danger in any single-handed attempt, whether on the part of a President or a people, to embody the whole problem in a single document. Still less can it be disposed of by a few apophthegms. This was the burden of Lord Robert Cecil's masterful speech in the recent debate on the "No Annexation" question in the House of Commons, and it is to be hoped that the points he then made have been taken to heart by President Wilson and the rest of our Allies. General Smuts has also had something to say on the subject: "You may talk about peace without annexation or indemnity; but you must re-

Digitized by Google

member that you are talking to a people who will swallow every formula, and everything besides, and will swallow you in the end, if you are not careful." The United States Government may feel tempted to think that after dealing with France, Belgium, Italy, and perhaps Poland, they can leave the rest of the problems raised by the war to be settled by formulæ. But what of the Ottoman Empire? It seems as if the fighting Boer General were going to prove more solicitous than President Wilson of the fate of the hapless populations over which the Turks have tyrannised for so many a long year. "One of the results of the war," General Smuts insisted, "will be the freeing and liberation of all the peoples who have groaned for hundreds of years under Turkish power." It matters not whether the change be called restitution or annexation so long as it takes place and is not thwarted by failure to remember the weak as well as the strong who have suffered through this war.

If both Russia and the United States are going to forget the existence of Armenia in the settlement after the war, it is to be hoped that the British Government will not do so. The reference to peace without annexations or indemnities had not unnaturally aroused the misgivings of the Armenians, and it is not surprising that the Union Intellectuelle Arménienne de Paris has felt compelled to thank Lord Robert Cecil for his championship of those who have survived the disasters of their unhappy country. They welcomed the Russian Revolution as being calculated to reinforce their expectation of being able to win salvation for Armenia; but they urge that a peace which entails no punishment for the executioners of the Armenians or reparation for their victims will be opposed to all justice. The Ottoman Empire, the signatories point out, has been merely a vast Bastille where old nations have been lying in chains for centuries. Armenia, it is added, counts on autonomy under the protection of the Allies. Here is only one of many modifications which will have to be made, if the unfortunate catchword evolved in the streets of Petrograd during the early days of the Revolution is to displace as the leading principle in the Allies' peace terms the sounder policy of aiming at a permanent settlement based on nationality.

A fresh turn has been given to the Greek kaleidoscope by the emphatic declaration of the National Government at Salonika against King Constantine and his dynasty. For a long time M. Venizelos tried to prevent the movement from being labelled anti-dynastic. He clung to the hope that King Constantine would eventually bow to the inevitable, recognising that the weight of public opinion was against a pro-German policy. But month after month has elapsed and the breach between the two Greek camps has widened. A little while ago M. Venizelos indicated that he despaired of seeing the King fall into line with the national will. Now at last, in formal statements to a correspondent of *The Times*, the members of the Provisional Government have declared that there is no room left for a *rapprochement* with the dynasty. M. Venizelos announced that he rejected all idea of reconciliation "firmly, flatly and finally." "The King," he continued, "who is in constant secret relations with Germany, has trodden underfoot the Constitution, turned traitor to our treaty obligations with Serbia, brought Greece to the verge of ruin, and, having once been a King, has become no more than a party leader." M. Politis, the Foreign Minister, insisted that no compromise was possible between Liberal Greece and the reigning dynasty. The Minister of Education was more explicit. "The one and most important thing," he said, "is that the dynasty of Constantine should, like the Turks, be turned bag and baggage out of Greece. Later, at the war's end, we can hold a constituent assembly, at which the people will be able to decide whether they desire a Republican or a monarchical Government, and in the latter case the crown can be offered to a suitable monarch."

One of two factors will have prompted the Provisional Government to choose this moment for their declaration of war on King Constantine. Either they feel strong enough to bring matters to a head themselves or, fearing that the King is on the point of consolidating his position, they are anxious to force a decision on the Entente Powers, before the difficulty of bringing King Constantine to book is enhanced. Both theories find support in the recent course of events. M. Venizelos has just concluded a tour of the islands, and has probably been able to gauge the actual and potential strength of the movement. There can be little doubt that even in Royalist Greece the people are becoming increasingly dissatisfied with a state of affairs which brings them much suffering and inconvenience, without even the moral advantage of being able to wax enthusiastic over the cause to which they are nominally attached. The visit of King Constantine's brother, Prince George, to Denmark at this juncture has naturally given rise to some speculation. It is true that his other brothers have been generally used by the King as his emissaries; but the fact that Prince George has hitherto held aloof from the Athens policy makes him, perhaps, a more effective agent in the closing stages of the drama.

The chief force that may be said to be in King Constantine's favour at the present moment is the approach of the harvest season in Thessaly. This province in ordinary years supplies not only the mainland of Greece, but the islands as well, with grain It is supposed that King Constantine intends to requisition the whole of the harvest, in order to make himself independent of the Allies' blockade, and at the same time to reinstate himself in the public esteem. As the blockade has been responsible for the small measure of amenability that the King has shown towards the Allies, it would inevitably follow that the replenishing of the Athens granaries would result in a fresh display of recalcitrancy or something worse. A severe blow would be struck at the prestige of the Entente; a solution of the Greek *impasse* might be postponed for some months, and in the meantime the Germans would be working to change the situation in the Balkans. The islands, moreover, which have thrown in their lot with the National movement would be left without grain. The Provisional Government cannot fail to be seriously exercised by the outlook. Even if it is not able to bring off a trial of strength with the King, it has called the attention of the Entente Powers to a condition of things which is equally prejudicial to them, and they will hardly allow King Constantine to make himself once more master of the situation, with every prospect of a new regime of terror similar to that which followed the attack on the Allied landing detachments in December, 1916.

Plenty of activity, with no definite results, continues to characterize the military situation in Macedonia. For the troops actually engaged on each side, however, the position is exacting enough. The summer finds the Allied forces virtually in the same places as those which they occupied last year, when sickness took such a heavy toll of them. Improvements in sanitation have been made in the interval, but there has not been time to eliminate malaria. At most we can hope that the adequate equipment of the Allied Army this year will render the troops more immune from disease. It is unfortunate that the great hopes formed of the Macedonian campaign have not been realized; but the unforeseen development of the submarine menace in the Mediterranean has rendered a task at no time easy almost impossible. Nevertheless, General Sarrail's force has served a useful purpose; it has interposed a barrier to the rounding-off of German designs in the Near East, and it has kept the Bulgarians occupied to an extent which may yet exercise an important influence on the course of the war. Whether the expenditure of men and treasure is disproportionate to the results obtained, we have not the data to determine. But there can be no question that the decision to send a force to Salonika

Digitized by Google

was sound and that it has been the means of preventing even worse developments than those which have taken place in the Balkans.

A stimulus to the discussion of the future of Palestine has been given by a letter in *The Times* from the Conjoint Foreign Committee of the Board of Deputies of British Jews and the Anglo-Jewish Association. The signatories felt constrained to dissociate themselves from any large Zionist scheme "of an essentially political character," and they were led into a disquisition on the claims of Jewry to be regarded as a nationality and on Judaism as a religious system, which should be kept distinct from questions of political status. From the storm that the letter has raised it is evident that Zionism is in no lack of powerful support; but at first sight there would seem to be much ground common to the two sets of disputants. The Conjoint Committee claims to take its stand on the following proposal to the British Government:—"The formal recognition of the high historic interest Palestine possesses for the Jewish community, and a public declaration that at the close of the war the Jewish population will be secured in the enjoyment of civil and religious liberty, equal political rights with the rest of the population, reasonable facilities for immigration and colonization, and such municipal privileges in the towns and colonies inhabited by them as may be shown to be necessary." Mr. C. Weizmann, President of the English Zionist Federation, writes:—"The Zionists are not demanding in Palestine monopolies or exclusive privileges. . . . It always was and remains a cardinal principle of Zionism as a democratic movement that all races and sects in Palestine should enjoy full justice and liberty, and Zionists are confident that the new suzerain whom they hope Palestine will acquire as a result of the war will, in its administration of the country, be guided by the same principle."

Both schools of thought in Jewry seem to welcome the prospect of British suzerainty over Palestine. The organ of the British Palestine Committee takes the position so much for granted that it discusses the relative advantages which might be expected to accrue to Palestine as a Crown Colony or as an Egyptian province, and unhesitatingly pronounces in favour of the former. In such circumstances there might not be in practice any wide gulf to bridge between the municipal privileges anticipated by the Conjoint Committee and the "national autonomous life in the Holy Land, publicly recognized and legally secured," which the vice-president of the Zionist Congresses states is the Zionist programme. The tendency of the Jewish population would be to occupy contiguous stretches of territory, and municipal rights would be merged without difficulty into a measure of political autonomy. The bogey raised by the Conjoint Committee of a Jewish nation in Palestine intolerant of the presence of non-Jews in its midst, and thereby calling down upon their co-religionists in other countries the disabilities from which they have struggled so long to emancipate themselves, would hardly seem to enter the picture—not, in any case, at this stage. It is certain that Jewish aspirations will be taken into consideration in connection with the settlement of Palestine, and for this reason it is to be hoped that an exchange of views at this stage will enable a moderate and practical plan to be put forward with something like the unanimous approval of Jewry.

Satisfactory news reaches this country from Southern Persia, where the effects of the régime inaugurated by Sir Percy Sykes are now beginning to be felt. British influence, we are told, has been restored throughout Southern and Central Persia, the Austro-German agents have been eliminated, and the mutinous gendarmerie have been transformed into efficient and obedient troops. With the establishment of law and order the first great need is adequate communications, and projects for railways, or at least serviceable roads, between Bunder Abbas and Kerman on the one hand and Bushire and Shiraz on the other are being considered.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 6.

The 1917 Census.

Since March 6, when the enumeration work was carried out, the Statistical Staff has been occupied with the sorting and verification of the papers in connection with the census. Work has so far advanced that it is now possible to give some figures, and the Controller of the Census, Mr. J. I. Craig, has just published, with a short explanatory note, the following provisional statement:—

Administrative Divisions.	Census 1907.	Census 1917.	+ %
GOVERNORATES—			
Cairo	646,000	785,000	21·5
Alexandria	352,000	435,000	23·6
Canal	61,000	90,000	47·5
Suez	18,000	34,000	88·8
Damietta	51,000	31,000	—
Total Governorates	1,128,000	1,375,000	21·9
Lower Egypt—			
Beheira	775,000	884,000	14·1
Sharqiya	880,000	947,000	7·6
Daqahliya	861,000	977,000	13·5
Gharbiya	1,485,000	1,649,000	11·0
Qalyubiya	435,000	527,000	21·1
Menuffya	970,000	1,068,000	10·1
Total—Lower Egypt	5,406,000	6,052,000	11·9
Upper Egypt—			
Asyût	877,000	969,000	10·5
Aswân	233,000	251,000	7·7
Beni Suef	372,000	449,000	20·7
Fayûm	442,000	507,000	14·7
Girga	793,000	854,000	7·7
Giza	468,000	523,000	11·8
Qena	771,000	829,000	7·5
Minya	653,000	757,000	16·0
Total—Upper Egypt	4,609,000	5,139,000	11·5
Grand total (provisional)	11,143,000	12,566,000	12·7

The grand total is, it must be admitted, considerably lower than that which had been generally expected, but the Controller is of opinion that the "popular" estimates have all along been too high, and have been proved so by known factors. To begin with, the figure of fifteen millions mentioned by some was obviously an impossibility, seeing that the consumption of food in Egypt and a comparison with other countries show that there is not nearly enough food annually produced and imported into Egypt to support a population of this size. The records of births and deaths, which, although admittedly defective, suffice to give some idea of the increase of population, likewise conduce to prove that the "popular" estimates have been exaggerated. Between May 1, 1907, and March 6, 1917, there were registered 4,977,000 births and 3,149,000 deaths; so that the apparent natural increase was

1,828,000. Added to the total for the 1907 census, this leaves us far from the fifteen million mark. At the same time it gives a figure somewhat in excess of the provisional grand total for 1917.

There is reason, however, to believe that the figure given for the deaths does not represent all those taking place in the period. Registration of births and deaths is compulsory, but, whilst in the first instance there is no incentive not to register, in the second there are at times obvious reasons why evasions of the law should be attempted. During the latter half of the past decennial period a steady and considerable rise in the number of deaths registered has taken place, amounting to as much as 81,000, or 28 per cent. per annum, between 1912 and 1916. Whilst, of course, some of this rise is due to a real increase in the number of deaths, the Controller is of opinion that a considerable portion, probably one-third, is due to better registration. This would mean that about 27,000 deaths have passed unrecorded each year. If allowance is made for this source of error, the population, gauged from the addition of excess during the intercensal period of births over deaths to the figures of the last census, should to-day be 12,840,000. This figure is still somewhat in excess of the provisional grand total given for the whole country; but the figures in the table do not include the desert Bedouin, the inhabitants of the Western Directorate recently formed to cover the territory on the Tripoli frontier, or civilians in other military zones. The figures for these are being worked out, and will be published later. They will, of course, substantially increase the above provisional grand total; but when it is mentioned that at the last census the estimated Bedouin population was 97,381, it will be seen that the provisional grand total is not so very far short of the figure which the vital statistics of the country during the past decade give us.

Migration to the Towns.

Some interesting facts emerge even at this early date from the census figures. The report on the census for 1907 expressly mentioned that at that date there was no marked evidence of the migration towards the towns which had already made itself so felt in Western countries. In the comparative figures given in the above table it will be noticed that the percentages of increase are greatest in the governorates where the principal large towns are situated. This leads to the natural and quite correct inference that the growth of the towns at the expense of the country has now started in real earnest in Egypt. Although the eventual spreading of this social phenomenon to Egypt was quite to be expected, and its extent is at the present moment not alarming, it is a feature which will have to be very carefully dealt with by the authorities from now onwards. Another point is the rapid growth of population in districts where irrigation has been most extended during the past ten years. Beni Suef province is a striking instance of this phenomenon, which, it appears, is not unknown in other Oriental countries. Thirdly, it is interesting to note that Cairo by its increase in population has now become equal to Glasgow, and shares with the latter the honour of being the fifth city in the British Empire in regard to population.

The Controller points out that, whilst census operations in Western countries are generally regarded as being errorless, in Oriental countries it is perhaps too much to hope for the same degree of precision as in the West. Especially is this so in Egypt, where popular suspicion and the unavoidable employment of native enumerators combine with other factors to introduce errors, mostly those of omission. Tests have therefore been carried out, with a view to ascertaining where and to what extent errors exist in the results. The conclusion is that in Cairo and Alexandria the figures are on the whole within one per cent. of the truth, and that in the provinces they are well within that figure. All things considered, this must be regarded as very satisfactory indeed. Meanwhile a staff is proceeding with the counting and tabulation of the figures, work which is being done by machinery. This will take yet another year to complete. After that must come the analysis of the figures, and the whole work will, it is hoped, be finished by October, 1918.

Union Jack Club in Alexandria.

On Friday last, a Union Jack Club was opened in Alexandria in the Rue Nebi Daniel. There was a large representative gathering present, and the opening was performed by the G.O.C. of Alexandria, Brigadier-General Boyle, C.B., who read messages of good wishes from the High Commissioner and General Murray. The club, which owes its creation to the generosity and the co-operation of Alexandria residents and officials, should prove of the utmost value to the sister Services, for the use of whose members it is, of course, intended.

CYPRUS NOTES.

(From a Correspondent.)

Local comment on the High Commissioner's speech to the Legislative Council by the Greeks is mainly unfavourable, disappointment being expressed that attention is not given to matters which they regard as of chief importance for the island. The revision of the law relating to education is a matter upon which Greeks insist as one of the most urgent needs. The High Commissioner expressed his regret that "in present war circumstances" it was impossible to meet the general desire. The Greek community has long desired that the people should be relieved of all direct financial responsibility for the maintenance of schools, but that they should retain direct control and management of elementary education in the appointment and dismissal of teachers and as regards the curriculum and the books.

State of Education.

The state of education has been admittedly unsatisfactory, in spite of very great reforms introduced under British administration; and the need of "an independent inquiry" was long recognised both in the island and by Secretaries of State. The latter have always refused to sanction any great increases in grants to elementary schools without such inquiry, and would not consent to it except on the clear understanding that increased government did not involve some increase of control. Expenses for the inquiry were, however, finally voted; it was carried out by Messrs. J. E. Talbot and F. W. Cape, whose excellent and comprehensive report was published in 1913. The report dealt primarily with questions of administration and finance, and in a lesser degree with the teaching given in schools. To those interested in Cyprus the report gives much useful information. One thing was clear—that more money is required for public elementary education, and that Government should contribute a larger proportion. But, as the High Commissioner points out, in England "there has never been any difference of opinion as to the principle that the expenditure of any of the proceeds of any kind of general taxation (whether direct or indirect) must necessarily be controlled by the Government which raises and collects the money." Sir John Clauson expressed the hope that in the course of debates "members might furnish materials towards the solution of the education question, as soon as circumstances permit."

The Position of Teachers.

Greek Cypriots are extremely anxious that teachers, as a body, should receive better salaries, and that provision should be made for adequate pensions. In connection with their influence in the island, the following remarks made by M. Theodótou, M.L.C., one of the ablest Greeks, "with uncompromising candour," to Messrs. Talbot and Cape, may be quoted. "We cannot deny," he said, "that school teachers are factors in the country, socially and politically. No one could deny this, or that the teachers have helped us in our controversies with the Government. They have, for instance, helped to bring about the reduction of the Tribute to Turkey, and there are other subjects in which we are still at variance with the Government. They have in this way educated the people in fighting for their political rights. The teachers in our hands are a weapon difficult to fight against, and we don't want to hand them over to the Government. If they were under the sway of the Government, some would resign, while others would feel timid, and would not work for the support of the country." This is plain speaking, and shows plainly how village teachers are employed for political propaganda throughout the rural districts.

Drought and Wheat Shortage.

Drought has continued to cause gloomy forebodings. In many quarters control by Government of all available wheat and barley supplies is advocated, in order that the people may not become dependent on merchants in any coming crisis. A Government monopoly alone could provide grain at reasonable prices for the poor.

THE TURKS IN MEDINA.

(From a Correspondent.)

In view of the official announcement lately made in Parliament with regard to the isolation of the Turkish force in Medina, and the ignorance of the Turkish Government as to its fate, the following description of the state of that town, which appeared in *El Qibla*, the Grand Shereef's organ, is singularly interesting. The value of the information is enhanced by the fact of its having been imparted officially to the King of the Hejaz by a deputation of fugitive Ulema and Medina. It was on a Friday morning when this deputation was granted audience by his Highness, and the vast hall of the Hashimite Palace was filled to overflowing with the notables of the land, according to immemorial custom.

"We have heard," said his Highness, "many reports of the flagrant injustices committed by these autocrats in the town of the Prophet, but we could hardly believe that the situation was as grave as you have described it to the supreme Kadi. We desire, therefore, to hear the story direct from you."

One of the deputation then stood up and delivered an eloquent speech, of which the following is an extract:—

"One of the many injustices of the Turks is the withholding of all food from man and beast, and, finally, the rationing of people with 30 drams of bread per head every twenty-four hours. Even this rationing degenerated into irregular doles, which finally were stopped altogether, and it was then that we had no other alternative than to leave the town. No food was to be seen in the bazaars, save dates, and even these they finally laid their hands upon in order to give them to the troops, and thus the inhabitants were threatened with death from hunger. Not content with all this, they dispossessed the notables of their mansions and turned these into barracks or hospitals for their sick or wounded soldiers. But the climax of their wrong-doing was reached when they started actually demolishing houses and cutting down date and other trees for no religious or worldly benefit, but out of mere love of destruction, and this culminated in their demolishing the grand buildings surrounding the Prophet's Mosque. The last act of this horrible tragedy was their turning out of the sacred town the entire civil population, both high and low, men, women, and children, and this spectacle, unprecedented in the history of Islamic Arabia, was such as to make the hardest-hearted shudder. Their impiety was such that they would sometimes take away Ulema in the act of prayer in the Prophet's Mosque.

Some of the neighbouring tribes used to come into the town with loads of rice, tobacco, dhurra, and the like, which relieved, in a way, the distress of the population, but soon the Turanian tyrants began to maltreat these Bedouin, rob them of their goods, and sometimes put them to death. Consequently, the Bedouin stopped altogether coming into the town, and all sources of revictualling were thus cut off. Then, to re-entice the Bedouin, the deceitful Turks sent out criers into the town to proclaim, "Oh, Arabs of the desert, whoever of you shall enter the town, even unjustly, shall be allowed to leave it free and safe. You can bring in with you whatever you like without let or hindrance." Some Bedouin, whose greed blinded them to the oft-proved treachery of the Turks, ventured into the town with some loads of rice and wheat, which they started selling at exorbitant prices. The authorities maintained an encouraging silence until the inhabitants had bought over all the stuff with their money, and then they laid hands on it."

A previous issue of *El Qibla* says:—

"In spite of the efforts of *Tanin* and *Tasvir Efkar* and other Unionist organs to misrepresent facts and distort the truth in connection with the ransacking by the Turanians of the Prophet's Tomb, and the robbing therefrom of 'Kaukab el Durri' (a famous jewel stone said to be the gift of one of the queens of Egypt, Shajaret el Durr) and other jewels, it is now ascertained, beyond any shadow of doubt, that the Minister of Wakfs came himself from Constantinople to Medina and took away all the jewels of the Prophet's Tomb, together with all moneys found in the Prophet's coffers. These moneys alone amount to 13 million piastres. It is known that these moneys and jewels are contributions of the devout from all parts of the Moslem world, accumulated throughout the centuries, since the rise of Islam. They have been guarded with scrupulous care and sacred respect all these hundreds of years, until the desecrating hand of the Turanian robber was insolently laid on these holy treasures."

Lieut.-Colonel Gregory stated recently at a meeting in the Holborn Restaurant that since the Armenian Relief Fund had been started £75,000 had been raised. A report had been received from Mr. Backhouse, their agent in the Caucasus, that the work of repatriation had already begun. The committee immediately sent him £5,000, and another similar amount would be sent. Armenian Flag Day is to be celebrated in London on June 13.

LETTERS TO THE EDITOR.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"THE MAN IS MINE ENEMY, THEREFORE A ROGUE."—Q. E. D.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of May 25 "Corsair" tells a funny story of some Serb who left his rubbers outside a door, and how somebody "pinched" them. The loser laid it to a Bulgarian. Why? The thief may have been a Greek, or a brother Serb, a Jew, gipsy, Turk, Vlach, or German—all abound in Sofia. Why, upon such slender evidence, ground a charge that all Bulgars are rogues? The present writer has left his gum-shoes outside many a Bulgarian door—worse, he once left several tons of salt in bag and 3,000 sacks of flour beside the railway line twenty miles north of Adrianople. The stuff was intended to revictual the city on its surrender, but it held out, and the trucks having to be released, it was piled in a public-house shed and actually in the open air beside the rails, under tarpaulins. There it lay for months in (nominal) charge of an elderly *chef de gare* and an aged porter. Observe, the place was a 'rail-head; there were about twenty sidings, where hungry troops were detrained at all hours under small supervision. A village of 2,000 souls lay handy; flour and salt are merchantable commodities. Yet when Odren fell and my property was taken over by the Government of King Ferdinand, it weighed out intact; not a sack was broken or missing, and I was paid in full. I had not seen my stuff for eleven weeks nor been able to exercise the least supervision. Observe, too, that a loosely-corded hamper of canned foods and delicacies, lemons and so forth, had been left behind with the flour, and was also intact. (Two cheap glass tumblers had disappeared, *c'est tout.*)

This was no solitary experience. One learned to expect such treatment. Between December, 1912, and May, 1913, my comrade and I carried no arms. We travelled across Bulgaria safely and quite unmolested from Bourgas to Kustendil, and from the Danube to Odren, penetrating the loneliest gorges of the Rhodopes, and sleeping rough and in wild company. Neither of us were ever robbed of a *lev*, nor was the smallest imposition practised upon elderly and helpless strangers.

The Bulgar may be a very truculent fellow; the Turk saw that side of him—I did not. But he is no rogue, as anybody who has had commercial or financial transactions with him is aware. Despite the military disasters of 1913, he kept his word to his creditors, and lifted the moratorium *on the date fixed before the first war*, and long before Greece or Serbia lifted theirs. He kept up the service of his external debt until the outbreak of Armageddon upset everything. Let us fight the Bulgar if we must, but stop abusing him.

Yours, etc.,

H. M. Wallis.

Reading, May 28, 1917.

The Wounded Allies Relief Committee has removed from Grosvenor Gardens, and the headquarters of the organisation are now at Bank Chambers, 329, High Holborn, W.C.1.

The Postmaster-General announces that in future mails will be despatched to India and the East fortnightly instead of weekly. The first mail under the new arrangement will be despatched next week.

Count Czernin, the Austro-Hungarian Minister for Foreign Affairs, is going to Constantinople to return the Grand Vizier's visit to Vienna.

A Constantinople communiqué dated May 25 reports that two Turkish airmen landed with their machine near Salmore, ninety miles south-west of Gaza, and destroyed the telegraph lines and the British Army's water supply pipes.

In recent encounters with the Bulgarians the Venizelist troops had nine officers and 125 men killed and 22 officers and 400 men wounded.

A memorandum addressed to the Greek Government from shipowners states that the Greek steamers torpedoed by the Germans number 102, with an aggregate tonnage of 400,000.

According to the Athens newspapers, the Greek cruiser "Helli" has been placed by the Allies at the disposal of the Venizelist Government.

Drunken soldiers of the garrison at Corinth fired recently at some houses, including one belonging to a prominent Venizelist. Order was maintained by the troops and the offenders were arrested.

It is reported that locusts have appeared in Upper Egypt. However, it is not thought that the invasion will be serious, and there is no danger, as the food crops have already been harvested.

TANGIER TO TEHERAN.

A few days ago I heard again a story that was first told me in Baghdad in those bad days when the Vali Pasha and his Turkish underlings spent their time in extorting the uttermost *girsh* from the hapless citizens. It was told then about a native Christian, while the more recent version made the hero a Jew. But the story was practically the same, and it ran thus:—A certain *Tel Kaifi* of Baghdad, who was desperately hard up and badly wanted to give an entertainment of some kind in honour of his daughter's betrothal, got written a letter addressed to God, setting forth his desires in explicit terms. This epistle he took up to the roof of his house, and there solemnly launched it upon the winds. The winds, it so happened, bore the petition to a good Catholic priest, who, after reading it, decided to play the part of Providence in a small way, and proceeded to call upon the *Tel Kaifi* and present him with a certain sum. The recipient was profuse in his thanks, but when the visitor had taken his departure he remarked to his family: "Only three *mejideh*. No doubt the priest kept the rest that God sent for us."

***

Lecturing in Oxford recently, the Rev. Khodadad Keith, of the Society for Promoting Christianity Among the Jews, quoted a great Moslem writer as saying: "Woman is a calamity, but no house ought to be without her." This would hardly do for a woman's suffrage society's motto; but another quotation made by the lecturer might do very nicely, with certain emendations—in fact, it might well be used by any £400-a-year M.P. who is anxious to rush the vote for women through under that "to-win-the-war" pretext to which I referred a short time ago. The quotation referred to runs:—"If you are going to do any particular work, and do not know how to set about it, go and ask your wife. It is the safest course." Unfortunately, the splendid effect of this is somewhat marred by the final sentence: "But do exactly the opposite to what she tells you."

***

The German threat to sink all hospital ships in the Mediterranean can hardly have surprised anyone. It is so thoroughly German. And I suppose we ought not to be surprised by the "reasons" given: the alleged misuse of the hospital ships by our Government. But how even the highest-paid and most be-decorated of German official liars can have talked such sheer rubbish *does* nevertheless surprise me. And if you have ever talked with anyone who held a responsible position on any of our hospital ships you will know how strictly we had observed all the rules and regulations. The German pretence that we have failed to do so *may* conceivably deceive a few neutrals; but I doubt it. And it is the most nauseating cant I have come across for a long time.

***

Egypt is evidently bent upon progress along artistic lines at least. I have already referred to certain bold excursions into the realm of Drama and of Opera which have been witnessed on the banks of the Nile. Now I see that a Syrian gentleman, Maître Negib Nahas, a lawyer of Cairo, and an amateur in Arabic music, has "succeeded, after long and minute experiments, in introducing certain additions to the piano," which have rendered it "adaptable to the notes of Arabic music which do not come out very clearly on the ordinary piano." A sample piano was made before the war broke out; but the clash of arms checked further progress, and it was only recently that Maître Nahas was able to introduce his invention to the Oriental Club of Cairo.

***

Unfortunately, the account of the entertainment to which I am indebted for my information does not say whether the new piano was hailed as a triumph or not. Nor does my own knowledge of music enable me to estimate the chances of effecting any marked improvement along the lines indicated. It has been well said, however, that music was made in Heaven, and that Man cannot add to it; and I am at present somewhat sceptical about "improvements" to a piano when they take the form of additions. Yet, I admit, the new piano may have a great future before it. It may be used for supplying the "slow music" to the Arabic and much-emended version of "Hamlet" that was lately produced in the Sudan; and, again, it might even tackle the new music (Arabic) of the Arabic version of "Carmen."

CORSAIR.

THE FUTURE OF MESOPOTAMIA AND SYRIA.

At the meeting of the Central Asian Society last Wednesday Mr. Demetrius C. Boulger gave an account of the various endeavours made to have a railway constructed across Syria and Mesopotamia from the Levant to the Persian Gulf. The lecturer said that eighty years ago General Chesney returned from his first expedition to Mesopotamia, and the main conclusions he had then come to were as sound to-day as when first uttered. Chesney had reported in favour of the valley of the Euphrates as against that of the Tigris, he had selected Iskanderun as the port for the Levant and Koweit as that for the Persian Gulf, and no later explorer had shown these conclusions to be unwise. Chesney met with no success with the British Government of his day, and subsequent endeavours all alike failed for one reason or another. In 1878, when the Anglo-Turkish convention was signed, it was thought that the last barrier had been removed; but the endeavour then made failed, and so did that of Mr. Edward Cazalet in 1883. On this last occasion the failure was due to the death of the concessionaire almost immediately after obtaining his firman from the Porte. After that date British influence in Constantinople declined, while that of Germany increased. In 1906 the Germans got control of the little foothold that British investors had in the Messina, Tarsus, and Edina Railway, and the whole idea of the Syria-Mesopotamia Railway as a British enterprise was abandoned. Of the future the lecturer said that a railway from the Levant to the Persian Gulf—not from the Bosphorus—was to be our lever and master-key of the position in the Near and Middle East. But it was not a matter of a railway alone. The task was to restore their lost prosperity to those famous lands which had so long remained derelict, and not only our own interests, but the needs of the world demanded this. The region of the Euphrates and Tigris was the greatest granary of the world known to the ancients, and there was no reason why, with the aid of the engineer and the chemist, it should not be so again. Good government was the cure for the evils from which Western Asia had so long suffered.

In the course of a discussion that followed, Sir Edwin Pears said that Cazalet's scheme had not gone through because of the tremendous baksheesh demanded by an intermediary. In the case of the Messina Railway, the Germans had acquired their rights by purchasing the whole of the block of shares (55 per cent.) owned by the French and part of the 45 per cent. owned by the British. It was a fair commercial transaction. The coldness with which the idea of the Syria-Mesopotamia railway had been received by the British Government was because most of the country it would serve was desert, and the railway could not be expected ever to pay in face of steamship competition.

Other speakers followed.

SOCIETE INTERNATIONALE DE PHILOLOGIE.

The annual conference of the Société Internationale de Philologie, Sciences et Beaux Arts is taking place this week at the society's headquarters, 39, Upper Bedford Place, W.C. The conference was inaugurated by a reception of members and friends on Tuesday evening last, when short addresses were given by the President-elect, Sir John A. Cockburn, K.C.M.G., by the retiring President, Mr. Jaakoff Prelooker, Phil.B., and by the General Secretary, Dr. H. M. Léon. Among those connected with the East who were present were Dr. S. H. Abdul-Majid, Dr. P. S. G. Dubash, Syed Ehsan El Bakry, and Messrs. Kwaja Ismail, M. W. Hassanally, and M. D. Sulieman, who acted as the stewards. Others were Mr. and Mrs. Pickthall, Miss Claridge, Sheikh and Mrs. S. H. Ahmad, Syed Erfan Ali, and Messrs. Mufti Muhammad Sadif, K. S. Sauhta, R. M. Dhawan, and Kristaporan Ahmad. Mr. and Mrs. Duse Mahomed performed a scene from "Othello," and a musical programme was contributed by Mr. M. Ali Khan, Mr. Max Cherninski and Madame Cherninski. There was on view an interesting collection of early lithographs and other works of art.

Among the lectures announced to be given in the course of the conference to occupy the following days was one on Wednesday by Dr. L. Belléli on the "Contribution of Byzantine Scholars to the Renaissance," while on Thursday Dr. H. M. Léon was to read a paper on "Some Curious Palestinian Fishes," and Mr. Marmaduke Pickthall was to lecture on "Some Syrian Legends."

It is reported from Switzerland (says a Rome telegram) that revolts have broken out in Poland, Serbia, and Montenegro.

Empire Day was observed almost as a general holiday in Malta. Flags waved from every flagstaff, and Boy Scouts saluted the Union Jack in the Palace Square in the presence of a large and enthusiastic gathering, which included the Governor.

NEAR EAST BOOKSHELF.

DIPLOMACY IN THE NEAR EAST.*

Mr. Marriott entitles his book "An Historical Study in European Diplomacy," and begins with the arrival of the Turk in Europe. The Turk did not create the Eastern Question, for Bulgar and Greek hated each other before Mohammed II.; and on the origin of that other, but still essential, side of the problem, the secular and religious rivalry between Greek and Roman, which is certainly not less strong to-day than in the time of Belisarius, the author has also nothing to say. When, or if, the Turk is cleared out of Europe "bag and baggage," we shall be confronted with a different Eastern Question, but an Eastern Question will still exist, unless, as Mr. Marriott points out, the Christians can be induced to tolerate each other. He does not say whether, in his opinion, the present war has given any indication that they can be persuaded to do so.

The author suggests—not, perhaps, with any great amount of conviction—that a Balkan Confederation may some day issue from a general recognition of the Balkan peoples that as they have got to live in the same country, they may as well live at peace. The Balkan League he regards as perhaps the most extraordinary political miracle that ever happened—Sir Edward Grey appears to have thought, or at least hoped, that it would repeat itself—but even the genius of M. Venizelos would scarcely have achieved that brief but marvellous success had his then allies not been whetted by the certainty of fighting and the hope of profit.

The prospect of even the loosest form of political association—Mr. Marriott wisely puts it no higher than that—has not, perhaps, advanced very greatly since 1914, except in so far as it has been recognised outside the Balkans as the necessary solution.

The alternatives seemed at one time limited to a hegemony under domestic rule, or outside control. The former may be dismissed almost at once as an impossible solution. Bulgaria is at the moment the most powerful Balkan State. But if the problem could be isolated from outside intervention, which in practice it never can, it at once becomes clear that Bulgaria could not permanently maintain control over the whole of the Balkans; nor could Serbia or Roumania, still less Greece. Even with the powerful backing of Germany, Bulgaria does not put forward so large a claim; Germany's latest peace manœuvres, apochryphal or not, provide indeed for a Greater Bulgaria, but not for a Bulgaria in command of the Balkans. And what Germany does not design Bulgaria cannot get. Each of the other States also desire expansion. But none has ever formulated a programme that envisages the whole. Each bases itself on nationalism or irredentism, and it is the very essence of that title that it rejects the larger programme of conquest and domination over alien races.

There remains the possibility of outside control, which would involve a readjustment of boundaries—not necessarily in the sole interest of the Balkans—and some measure of internal autonomy, a series of vassal kingdoms, partially financed by the Great Power in control, and consequently under the commercial as well as political rule in the last resort of an outside sovereign. (Something of the kind has recently occurred in Turkey, where Germany, in return for a loan, has obtained an agreement for tariff preference for a series of years. Since Germany has also lent money to Bulgaria, we may assume that it has been done on the same security.) There are, or were, two claimants to this sovereign control of the Balkans—Germany and Russia. If the Entente failed to win the war, or were even compelled to adopt the "peace by negotiation" or the "peace without victory," Germany would be left in possession. The control would in that case have to be shared with Austria, since Germany could scarcely repudiate her ally's claim to Salonika; but this would be relatively a small matter, since not only would Austria herself be largely dependent on Germany, but a window on the Ægean would be nothing in comparison with the possession of the Berlin-Byzantium-Baghdad route, which would make Germany the ruling power not only in the Balkans but in Asia Minor as well. Mr. Marriott does well to bring out this point effectively. It has not been until lately adequately realised in England, and to judge by the indignation of Cabinet Ministers at the celebrated *Daily Mail* map, which only illustrated the fact, it was not realised even in Downing Street eighteen months ago.

The other claimant is, or was, Russia. But the Russian revolution appears to have made a profound alteration, at any rate for the time being, on the Russian outlook in that respect. For the moment the ambition to possess Constantinople and to protect the Balkans seems to have vanished in the domestic strife and the newly-expressed doctrine of non-intervention in foreign affairs. But genuine national ambitions and ideals have a way of surviving revolutions. Napoleon's policy was largely that of the old *régime* on a larger scale, and unless Russia sinks into anarchy, which we cannot for a moment contemplate, Constantinople will still remain a magnet of her policy. If, as we expect, a second edition of this careful study of the whole Eastern Question is called for in a few months' time, we hope the author will add a chapter on the Russian revolution and its inevitable reaction on Balkan politics.

There is only one point of criticism to add. Mr. Marriott, as is natural, treats the war exclusively from its Eastern standpoint, and minimises the German desire to beat France to her knees. Now, the German apologist to the British Ambassador in Berlin himself repudiated any such desire, but he proceeded to add that he could not give any such guarantee with regard to the French colonies. The conclusion seems clear that while Germany's ambition was mainly Oriental, that did not exhaust her aims. She desired not merely the Near and Middle East, in accordance with the Kaiser's policy, but an expansion of her overseas empire as well. In the original programme Hamburg was to be profited as well as Berlin, but subsequent events have somewhat obscured that intention.

A. W. T.

* "The Eastern Question." By J. A. R. Marriott, M.A. (Clarendon Press. 12s. 6d. net.)

BOOK NOTES.

Messrs. Constable and Co. announce among their forthcoming books "The Rise of Nationality in the Balkans," by Dr. Seton-Watson. The price of the volume is fixed at half a guinea.

The Ahmadia Movement (41, Great Russell Street, W.C.) has published recently "Islam as Interpreted by a Muslim," a lecture on Islam by Quazi Abdullah, and "A Word to Every English Man and Woman."

Messrs. Hodder and Stoughton have just published (at 1s. net) "Roumania and Great Britain," by A. Herscovici Hurst. Sir Thomas Dunlop contributes a preface, and this little book contains a great deal of valuable information. The profits from its sale will, we understand, be devoted to the National Roumanian Relief Fund.

The author of "Soldier Men," which will shortly be published by Mr. John Lane, is Major Grove, who served in the Gallipoli and Senussi campaigns, and is now in Egypt.

BOOKS RECEIVED.

In Mesopotamia. By Martin Swayne. Illustrated (in colour) by the author. (Hodder and Stoughton. 5s. net.)

Russia in Revolution: Being the Experiences of an Englishman in Petrograd During the Upheaval. Illustrated. By Stinton Jones. (Herbert Jenkins. 5s. net.)

Under date of May 23, Reuter's Corfu correspondent reports:—M. Terestchenko, Russian Minister for Foreign Affairs, has sent the following telegram to M. Pashitch, the Serbian Prime Minister:—"On assuming control of the Ministry for Foreign Affairs in the reconstituted Russian Provisional Government, I beg to assure your Excellency of the warm feelings of sympathy which Russian democracy, now mistress of its destinies, unalterably feels for the cause of your noble country, whose spirit of self-sacrifice and heroism will always remain worthy of admiration. Confident in the ultimate triumph of justice and liberty, emancipated Russia will continue to pursue this war, not with the object of conquest or greed, but in order to ensure for all nations the right freely to dispose of their own fate and to assure for them a peace guaranteed against every fresh aggression."

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),
1, Devonshire Square, London, E.C. 2

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. June.	1917. May.		1335. Shaaban	5677. Sivan
1	19	Friday	10	11
2	20	Saturday.....	11	12
3	21	Sunday	12	13
4	22	Monday	13	14
5	23	Tuesday	14	15
6	24	Wednesday	15	16
7	25	Thursday	16	17

Sunday is the birthday of H.M. the King.

The Sultan of Egypt has arrived at Alexandria from Cairo. He was met at the station by an Anglo-Egyptian guard of honour and the notable personages of all the foreign colonies.

The French Government has conferred the gold medal "des epidémies" on the Queen of Roumania, Reuter's correspondent telegraphs from Jassy. Her Majesty has always taken the greatest interest in all philanthropic works, but since Roumania's entry into the war she has devoted herself entirely to the hospitals and has given proof of the most whole-hearted self-sacrifice by the way in which she has daily visited the hospitals for contagious diseases, notably the establishments for cases of eruptive typhus.

Crown Prince Carol of Roumania has received the Grand Cordon of the Legion of Honour from the French Government.

The Acting Sirdar and Governor-General of the Sudan and Mrs. Stack have left Khartoum for Erkowit, where they will pass the summer months. His Excellency is accompanied by his entire personal staff, including Mr. Howell (Assistant Private Secretary), Shaheen Bey George (Arabic Secretary), Mr. Lang, Mr. Martin, and Ahmed Effendi el Sayid, of his Excellency's private office.

The Serbian Minister and Madame Yovanovitch visited Glasgow on Monday and inspected the Serbian Hospital, where a number of refugees are being trained and educated. Subsequently the visitors were entertained at luncheon by the Lord Provost and Lady Dunlop. M. Yovanovitch thanked Glasgow and Scotland for their great help to the Serbs, and referred to the magnificent work carried out in Serbia by Scottish nurses and doctors.

The Roumanian and the Serbian Ministers were among the guests at luncheon at the Carlton Hotel last Friday of the Portuguese Minister, in honour of the visit of Major Norton de Matos, the Portuguese Minister for War.

Field-Marshal Lord Grenfell has disposed of 18, Portman Square, and taken 34, Wimpole Street for the season.

General Sir John Maxwell, accompanied by Prince Alexander of Battenberg as A.D.C., last week opened a bazaar at Leicester for raising £25,000 towards a local fund for disabled sailors and soldiers.

Contrary to earlier reports, Petrograd messages now state that M. Isvolsky, who is leaving Paris, is not being appointed to the Russian Embassy in London.

General Georgescu, the Chief of the Roumanian Military Commission, has left London for the North of England.

Lady Neave, Lady Lowther, Lady O'Conor, and Mrs. Frank Barker, the ladies of the British Refugees from Turkey Fund Committee, will be At Home at the Alpine Club, Mill Street, Conduit Street, next Wednesday afternoon between four o'clock and half-past six to meet British residents from Turkey now in England. Former British residents in Turkey who may not have received an invitation should communicate with the Hon. Secretary, Lowndes House, Lowndes Place, S.W.

Lieutenant-Colonel James Halifax Western, R.E., C.M.G., of Hurstpierpoint, Sussex, who was the engineer responsible to the Egyptian Government for the reconstruction of the Delta barrage, left estate valued at £15,065.

Many readers in Egypt and the Sudan will be interested in the following announcements. They are taken from the *London Gazette*, are dated from the War Office, May 19, and fall under the heading General Staff :—

Brig.-Gen.—Bt. Maj. (temp. Lt.-Col.) G. F. Clayton, C.M.G., ret. pay, Res. of Off., and to be temp. Brig.-Gen. whilst so empld. January 16, 1917.

G.S.O., 1st Grade (Unpaid).—Maj. G. S. Symes, D.S.O., h-p. list, and to be temp. Lt.-Col. whilst so empld. December 28, 1916. (Substituted for the notification regarding this Officer, under "Special Appointments," in the *Gazette* of December 27, 1916.)

Dr. d'Erf Wheeler, R.A.M.C., formerly of the English Hospital, Jerusalem, has been promoted to the rank of Captain after eight months' service, and is under orders for a front, where his long experience of the East will be very useful. Dr. Wheeler was for some months in charge of one of the military hospitals at Canterbury, and is at present attached to a Field Ambulance in Nottinghamshire, pending his embarkation orders. His eldest son, Captain P. d'E. Wheeler, Dorsetshire Regiment, after service in France and Mesopotamia, is now attached to the Royal Flying Corps. Second-Lieutenant Gerald d'E. Wheeler, the youngest son, having completed his course at the Cadet College, Quetta, is now in France, in a regiment of Indian Cavalry.

Mr. Stephen Paget is collecting material for a biography of Sir Victor Horsley, who died in Mesopotamia last year. In a letter to *The Times*, Mr. Paget writes (from 21, Ladbroke Square, W.11) :—"I ask for help in this venture from his friends and colleagues, and from the many patients, in hospital practice or in private practice, who have reason to be thankful for his skill and his kindness. I want all that they can tell me of him, and any letters of his which they will let me use. Without their help nothing that I can write of him will be of much service to anybody. Great care will be taken to return all letters."

Miss Emily J. Robinson, hon. secretary of the Armenian Red Cross and Refugee Fund, points out that the flag day announced to be held in June on behalf of this stricken people will not be the first popular appeal to be made for them. Since October last about twenty flag days have been held for the Armenian Red Cross and Refugee Fund at Manchester, Liverpool, and other influential towns of the United Kingdom, and hundreds of ladies and gentlemen have given their services at each place to make these efforts a success.

We would remind our readers that Miss Robinson will read a paper on "Armenia and the Armenians" next Tuesday afternoon. The lecture is to be given at the Imperial Institute, under the auspices of the Anglo-Russian Literary Society, and the Rt. Hon. G. W. E. Russell, LL.D., will preside.

The day has an additional interest from the fact of the large number of Armenians who live and flourish under the British Flag, mainly in India, writes the *Daily Express*. The Apcars of Calcutta are a famous family of millionaires who have frequently been represented on the Legislative Council. The late Sir Charles Paul, another Armenian, was for years Advocate-General of Bengal, and Sir Paul Chater is a well-known Hongkong financier. The Armenians in India originally migrated there from Persia, where there is still a large Armenian population. There is a considerable and wealthy Armenian colony in London.

A correspondent sends to *The Times* the following extract from a letter received from his son, who is a prisoner of war at Fürstenberg :—"We have six Roumanian officers here now. I don't know whether there is a Roumanian Prisoner of War Help Committee in England, but these officers get nothing in the way of parcels. I think they have no communication with their homes either. If there is any kind-hearted person who would like to send them parcels, I am sure they would be most gratefully received."

Next Saturday afternoon, at 4.30, at Caxton Hall, Westminster, Mr. Marmaduke Pickthall will lecture on "Moslem Interests in Palestine." The lecture is to be given under the auspices of the Central Islamic Society, and Mr. M. H. Ispahani will preside.

Dr. Trumbitch, President of the Jugo-Slav Committee, has arrived in London.

Colonel M. Dorisavlevitch, president of the Serbian Red Cross, has arrived in London from Corfu

Mrs. A. van Millingen has left Overbrook, Witley, for Eastbourne, where she expects to be joined next month by her husband, from Alexandria.

Mr. Ralph van Millingen, London Scottish, has been gazetted 2nd Lieutenant and is leaving again shortly for the Front.

Mr. H. A. Cumberbatch, lately Consul-General in Syria, was among those present at the funeral of Commander Lord Abinger, R.N.V.R., on Saturday last.

The Rev. J. J. Drummond, Scottish chaplain during the past winter months at St. Andrew's, Cairo, was recently presented with a beautifully engraved Egyptian box by the members of Kirk Session and Committee of Church Management of St. Andrew's on the occasion of his return to his parish (Jedburgh) in Scotland. The presentation was made by Mr. Williamson, "The Grove," Maadi.

It has been decided in principle (says the *Egyptian Gazette*) to appoint Dr. Alexander Granville, Director-General of the Alexandria Municipality, as President of the Quarantine Board in succession to the late Sir Armand Ruffer. The successor of Dr.

Digitized by Google

Granville at the Municipality has not yet been nominated. Two officials of Cairo are said to have already declined to accept the post, which is generally considered the most difficult official position in Egypt.

Dr. Granville has received from the Italian Government the silver medal of the Italian Red Cross

Lord Radstock, who is well known for his philanthropy in connection with the work of the Y.M.C.A., has been paying a visit to Assuan and Upper Egypt lately. Owing to his time being fully occupied with the Army in Egypt, he was unable to pay a visit to Upper Egypt until last month. The Coptic community in all towns received him with open arms. Their churches were thrown open to him to preach, and large congregations attended. In several churches he preached at morning and evening services.

At the last meeting of the Central Asian Society it was announced that Sir Henry Trotter had been elected by the council to be chairman for the ensuing year. Sir Henry took the chair accordingly, the occasion being the lecture by Mr. Boulger, reported elsewhere. Sir Henry recalled that he had taken part in the mission to Yakoob Beg of Kashgar in 1873 and 1874, and that one of the first books of Mr. Boulger was "The Life of Yakoob Beg of Kashgar," published in 1878.

OBITUARY.

Lieutenant-Colonel Richard Stanley Worsley, D.S.O., A.S.C., who was drowned on May 4, while returning to duty, was the eldest son of the late Major-General Richard Worsley, Indian Army, and of Mrs. R. Worsley, of 7, St. George's Court, Gloucester Road. Born at Harrington Hall, Spilsby, Lincolnshire, in 1879, he was educated at Wellington College and Sandhurst, and obtained a commission in the A.S.C. He served in the South African War from 1900 to 1902, and received both the Queen's and the King's Medals, with five clasps. He was Adjutant to the East Lancashire Territorial Division for four years. In 1913 he was attached to the Egyptian Army, and on April 25, 1915, went with the Expeditionary Force to Gallipoli, remaining there until September 13. He was mentioned three times in dispatches, and was awarded the D.S.O. In 1915 he was sent with Colonel Kelly's expedition to Darfur, and while there was twice mentioned in dispatches, was given brevet rank, and also received a letter from the Sirdar thanking him for his excellent services.

The death is announced of Captain and Quartermaster George Payne, late of the 1st Scots Guards. He entered the Scots Fusilier Guards in 1875 and served in the Egyptian Campaign of 1882, receiving the medal and Khedive's bronze star. He also served in South Africa in 1899-1902, and was mentioned in Lord Roberts's despatches, and received the Queen's medal with four clasps and the King's medal with two clasps.

Lieutenant William Maurice Armstrong, M.C., Hussars—news of whose death on May 23, from a wound received the same day, has been received unofficially—was the only son of Captain and Mrs. Marcus Beresford Armstrong, of Moyaliffe, Ireland, and Clodagh, Folkestone, and was a cousin of General Sir Stanley Maude. Educated at Eton and Sandhurst, he was gazetted in 1910, and saw Service with his regiment in India and South Africa. When war broke out he was in England on leave, and left for the front with the Expeditionary Force in August, 1914, and had served on the Staff all through the war. In June, 1915, he went to Gallipoli, and served with the famous 29th Division, being present at the evacuation of the peninsula, and after a short period in Egypt he returned to France early in 1916. At the time of his death he was serving as a brigade-major. Lieutenant Armstrong was four times mentioned in despatches, and was awarded the Military Cross early in 1916.

On Thursday of last week the Rev. George Wisely, D.D., who was for many years officiating Presbyterian Chaplain to the Forces in Malta, died at Orpington, Kent, in his ninety-second year. He took his degree of M.A. at Marischal College in 1846, and was licensed by the Free Presbytery of Edinburgh in 1850. He was ordained by the Presbytery of Italy in 1854 as minister of the Scotch Free Church at Malta, and he and Mrs. Wisely were constant in promoting the welfare of soldiers and sailors. During the Crimean War their devotion to the wounded received the recognition of the military authorities. In 1855 they started a Soldiers' and Sailors' Home, the first outside the United Kingdom. Quite recently it was very much through Dr. Wisely's instrumentality that the British and Foreign Sailors' Society were enabled to erect the King Edward VII. Merchant Sailors' Rest in Malta, which has proved of such benefit to the crews of torpedoed merchant vessels in the Mediterranean.

The *Egyptian Gazette* announces the sudden death, at Helmia, Cairo, of Mrs. Brewster, wife of Brewster Bey, former English secretary to the ex-Khedive.

The Acting Sirdar, in an Army Order, regrets to announce to the Army the death of El Bimbashi A. Wyllie, Eastern Arab Corps (late 11th Sudanese), which occurred near Dilling on April 18, 1917.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

BENTLEY.—On May 25, at 38, Cheniston Gardens, W., Marjory (*née* Hankinson), the wife of W. B. Bentley, Maadi, Cairo—a son.

COBB.—On May 20, at Hurstlyn, Frinton-on-Sea, the wife of F. H. Cobb, of Port Sudan, Red Sea Province—a son.

HASTINGS.—On May 21 at Gezira, Cairo, the wife of Temporary Major William Hastings, of a son.

DEATH.

WISELY.—On May 24, at Orpington, Kent, the Rev. George Wisely, D.D., of Malta, in his ninety-second year. The funeral service took place at the Cathedral of St. Machar, Old Aberdeen, on Tuesday, the 29th inst., at twelve noon.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.

OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.

FRIDAY, JUNE 1, 1917.

INTERNATIONAL HOMŒOPATHY

This is an age of experiments. Time was when a British Prime Minister, having had occasion to make simultaneously a high diplomatic and a high literary appointment, was asked why he had not reversed his nominations, on the ground that the diplomatist might have shown himself to be a poet and the man of letters might have displayed high diplomatic attainments, whereas neither had the least chance of distinguishing himself in the actual appointment assigned to him. Great Britain's destinies are to-day in the hands of a bolder Government; not only is advantage taken of probabilities, but even remote possibilities are also considered. So long, however, as the experiments conform with some recognised principle of the scientific or metaphysical world the country lives in no fear of a revival of the unfortunate era of "legitimate gambles." It is the basis of the homœopathic treatment in medicine that "like cures like," and the British Government, wishing to leave no stone unturned for the benefit of the Grand Alliance, is enabling Mr. Ramsay Macdonald and three of his fellow-Socialists to accept an invitation to visit Petrograd. Russia is suffering from an excess of Socialism, which bears to the Revolution the same relationship that leaves do to the rhubarb plant. These are an essential part of the plant, more conspicuous, perhaps, than the rest of it; but if allowed of themselves to usurp the functions of rhubarb, which is to be eaten, they are apt to have poisonous results. No greater mistake could be made than to attribute to Russia as a whole all the well-meant but unpractical doctrines which Russian Socialism has blazoned on its standard. They are familiar to people in Great Britain from the tenets of their own Socialists, among whom Mr. Ramsay Macdonald is one of the most conspicuous. He has consistently opposed the war, has held his country responsible for it, has declared that "never did we arm our people and ask them to give us their lives for less good cause than this," and is, it is understood, particularly anxious to hasten on a peace "which will not humiliate Germany." In Great Britain no one pays much attention to Mr. Ramsay Macdonald and his political associates; in Russia, however, the brilliant success of the Revolution has made the extreme Socialists a very important body. Their views, in their present undigested state, are an embarrassment to the Russian Provisional Government, and consequently to the Alliance as well. It can, therefore, be only on the homœopathic principle that the British Government should empower anyone with Mr. Macdonald's record to exchange even for a short time his Socialist wilderness in this country for the rank undergrowth which obscures the outlook in Russia.

If the object of Mr. Rudyard Kipling's visit to Italy had not been so demonstrably clear, there might have been room for the suspicion that the same principle was being applied elsewhere. For the moment Italy is associated in the minds of her Allies with the splendid achievements that she has to her credit on the Carso front. When opportunity occurs for consideration of the future, it cannot be overlooked that the excessive aspirations of the Italian Nationalists on the eastern shore of the Adriatic are apt to be another embarrassment to the Grand Alliance. It would be in keeping with the policy that looks for good from Mr. Ramsay Macdonald's visit to Russia to enlist the services of a great and popular Imperialist in order to check the Imperialistic tendencies of our Italian Allies. The policy, indeed, is capable of the widest extension. If Mr. Lloyd George, in spite of his weightier preoccupations, still maintains his interest in the Dartmoor shepherd, he has to hand a suitable envoy to Talaat Pasha and his colleague Enver; King Ferdinand of Bulgaria might be equally influenced by an ex-convict; and to King Constantine could be allotted the Vicar of Bray or an ex-First Lord of the Admiralty. Apart, however, from the personality of the missioners, when the Government feels obliged to make its selection outside its own ranks, the indication that the future relations of the Alliance are not being overlooked in the urgency of bringing the war to a successful conclusion is most welcome. The fainter Germany's hopes of ultimate victory become, the more ardently will she seek to benefit by what she may consider signs of disruption among her enemies. She may even now be deriving much comfort from the symptoms she will claim to have detected. It would be idle to ignore the fact that, after the Allies had formally embodied their war aims in a Note to President Wilson, the Russian Socialists rendered a dis-service to their own country and to the Alliance as a whole in issuing without any official consultation a statement of what purported to be Russia's new war aims. Reflection has shown that, although the Socialists' wording seemed to embody a finer sentiment, it entailed as a practical policy no departure from the intentions previously enunciated by the Allies. It has, however, taken many speeches, and, it cannot be doubted, a wide exchange of views between the different Governments to establish the point.

Homœopathic treatment within the domestic circle of the Alliance may be perfectly sound; but it is well to recognize that some illnesses can only be cured by the prompt and unfaltering use of the surgeon's knife. In the problem of the Near East both Allies and enemies are so closely concerned that the milder form of treatment stands no chance of yielding successful results. The longer a definite solution is postponed the greater the danger that peace may find the problem not only unsolved, but rendered more acute by effluxion of time and the exigencies of war. In regard to the Italian claims on Dalmatia, for instance, there can be little doubt that the Imperialistic appetite has grown from the mere contemplation of the prospective feast. Even the so-called Socialists of Bulgaria now advance demands which are indistinguishable from the extreme views of Bulgarian militarism. Their spokesmen can be left to play Germany's game in Stockholm; but the Allied Governments should lose no time in arriving at an understanding among themselves in regard to the settlement of the Near East after the war. So long as there remains a loophole for friction they may be confident that they are contributing to the prolongation of the struggle. From the nature of the case the settlement must be unpalatable to those concerned, because their interests clash, and at best a compromise must entail an abatement of claims all round. There is a better chance of the disappointments being borne with equanimity, if the various peoples are familiarized with them while the stress of war or the glamour of the Alliance is upon them. In the absence of a final solution, extravagant hopes are raised and passions are fanned. A definite understanding among the Allies in regard to the delimitation of the territories claimed by both the Italians and the Southern Slavs would facilitate the co-operation of the two peoples, and would pave the way, perhaps, for Bulgaria's acceptance of the inevitable. Without such an understanding the latter will find it difficult to believe that her future position in the Balkan scheme is fixed in accordance with a constant principle, and is not to be determined by successful bargaining.

THE BAHARIA OASES.

(From a Correspondent.)

II.—CULTIVATION AND PRODUCTS.*

The springs of the oases are the private property of various owners, who sell them and dispose of them in the same way as the inhabitants of the Nile Valley dispose of their wells and canal water supply. It is therefore evident that possession of the agricultural lands implies possession of the springs that water them, without which they fall into immediate ruin. The standard measure used by the Baharia people in their deeds of water sale is 1 tarf, which is the amount of water supplied by the spring during twelve hours—*i.e.*, from morning till evening, or *vice-versâ*. Springs of feeble yield have pits dug at their source, to serve as reservoirs, which when filled are emptied into the canals.

The orchards are left to grow in wild luxuriance, and their deep shade and wealth of green present to the visitor a picture all the more pleasing by reason of the striking contrast it offers to the arid waste around. Each orchard is fenced off with date branches. The paths leading down from the dwelling-houses through these orchards are between a metre and a metre and a-half wide, and are bounded on either side by an interminable row of these fences; minor paths cross the principal ones leading from the village, and through many of these pass the canals connected with their respective springs. To reduce the disintegrating action of the rushing water, especially at points of sharp declivity, the people place bundles of branches across the waterways, and the soft murmur of the running water acquires a charm which is intensified by the thought of the surrounding burning desert. Canals of different springs intersect each other; but any intermingling of the waters is prevented by means of a primitive pipe contrivance placed above or under the canal at the intersection.

In these orchards are grown the following kinds of fruit trees:—Olive, apricot, fig, pomegranate, apple, peach, carob, mulberry, orange, bitter orange, citron, lemon and sweet lemon, also the vine and the glue tree. Strange as it may seem, the luxuriance of vegetation in these oases surpasses that of the valley of the Nile, the trees growing to a size that may not be seen there; and this in spite of the fact that the oases people lack arboricultural knowledge and leave different kinds of trees to grow in close proximity. Carob trees of gigantic size are to be seen, with the vine climbing right up to their topmost branches. In the summer time the sight of huge bunches of grapes dangling through the carob branches, coupled with the music of the murmuring water, the cooing of the doves and the twittering of the smaller birds, suggests a veritable Eden.

Date trees form the predominant feature of these gardens. Indeed, dates are the chief source of revenue of the oases, and the vast date groves occupy by far the largest part of the cultivated areas. Almost all the varieties known in the valley of the Nile are grown here, and the Baharia people, through long experience and specialized work, have become experts in the cultivation of the date tree.

In almost all the orchards the liquorice plant grows wild, and the roots are picked up and sent for sale to Egypt. The price covers hardly more than the wages of the pickers, the landowners being interested in the matter only in so far as it affords them a means for the free weeding of their orchards.

The lower lands, lying at the opposite end of the springs, are sown with rice, which constitutes the chief item of the inhabitants' provisions. The rice fields receive the surplus water of the orchards, and, for a certain time, are constantly flooded with it. The lands that cannot receive a free supply of water are sown with wheat and berseem. There are other cultivable lands which, however, cannot be irrigated by the spring waters, owing to their lying on a higher level. These are cultivated by the poor, who dig wells, from which they draw their water supply by means of the primitive *Shaduf*. Vegetables, chiefly cucumbers, watermelons, and occasionally fruit trees, are cultivated in these outlying plots.

Apricots are gathered in May and June, and the ripe fruit is spread out on the flat roofs, and left there exposed night and day. When sufficiently dry the fruit is put in baskets and sold to the Arabs, who dispose of it in the nearest markets in the valley of the Nile. Then follows the rice harvest. The rice is put in troughs and trampled down by cattle, and the grain thus decorticated is stored away in baskets. The rice straw is used partly as food for the cattle and partly as fuel.

As soon as the rice harvest ends, that of the dates begins; and as the different varieties ripen at different times the gathering and preparation continue till the end of November. The dates are spread out on the flat roofs, and, like the apricots, are left exposed to the alternate action of moisture at night and of heat by day, for fifteen days, the fruit being occasionally turned, so that all parts receive the full effect of this exposure. A selection is then made of the good dates, which are packed and pressed prior to sale. The dates that are sold dry in the market here are treated in the same fashion, except that the time of exposure is longer. For this kind rain is especially dreaded, as a shower is enough to ruin the fruit. The date harvest is followed by the olive harvest. The olives are gathered, when fully ripe, by the shaking of the trees, and, like the apricots and dates, are spread out on the roof, exposed to the alternate action of damp and heat until they soften somewhat, when they are taken to the presses, which are of a rather primitive type. The oil extracted is sold to the Arabs for their own consumption, and not for trade, as well as to some fellaheen of the Nile Valley, as a cheap substitute for butter.

During the interval between the principal harvests the people roam about in the neighbouring hillocks and waste lands to gather wood and twigs for their winter provision of fuel. In course of time each family has acquired a sort of right, established by long usage, to a special plot of such waste land for its yearly provision of fuel.

Those kinds of fruits, which are not susceptible of practical transport to the valley of the Nile, such as bitter oranges, lemons, and citrons, are consumed by the inhabitants, and are considered of too little value to be paid for. Indeed, some of these fruits and the surplus oranges are left to dry upon the tree, then drop and go to waste, and the only use that is then made of the tree is its wood for roofing purposes.

Such are the principal agricultural products of the Baharia oases. The land is cultivated by tenant farmers of the poor class, who own no land of their own, and who are called servants, not fellaheen, as they not only work in the fields but also contribute to the outside work of the landowner's house, such as the bringing in of wood fuel, during the slack season. In the majority of cases these are fed in the landowner's house, and the fact that the latter is addressed by them as "uncle" is reminiscent of patriarchal times. They share in the produce of the land worked by them; thus a man who furnishes a whole year's work is entitled to a part of the yield of each date tree, and the whole of the yield, if it is poor and does not exceed a certain recognised quantity; also the fifth part of the oil, apricot and rice crops. Under these conditions the lot of these servant-farmers may be thought to be a happy one, and such it might have been were it not for their excessive indulgence in tea drinking, which seems to have an influence almost as bad as the drug habit. In the majority of cases these servant-farmers sell their share of the crop in advance. Of course, it is only the landowners who can safely make these advances, as they alone possess the necessary guarantees; and they exploit the farmers' weakness in a most heartless manner, reducing them practically to slaves.

* *Part I. of this article appeared in* The Near East *of May 25.*

TO OUR READERS.

The Near East is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post The Near East for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS. £1; 6 MONTHS. 11s.; 3 MONTHS. 6s.

Abroad The Near East is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Naeambi and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Book Store.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

JEWISH CAPTIVES IN BABYLONIA

NEWLY FOUND RECORDS.

(From a Correspondent.)

It has sometimes been remarked as a curious fact that, whilst the Assyrian Royal annals describe the conquests of Palestine, no definite records of, nor even distant allusions to, the captive Hebrews have yet been recovered among the thousands of cuneiform records that have been found, and deciphered, in the form of Babylonian and Assyrian tablets and of stone inscriptions.

Whilst this idea of the case is to a certain extent correct, it overlooks the fact that a very considerable quantity of incidental evidence of the presence of Jewish inhabitants in Mesopotamia subsequent to the date of the exile has recently been brought to light. For instance, the hitherto unknown sites of several places in Mesopotamia mentioned in the Old Testament have been revealed by cuneiform records. Such as the Tel Abib, near the Chebar, of Ezekiel, which turns out to be the Assyrian "Tel Abub," or "mound of the flood," also the Tellassar, or Thallessar, of Kings, which is evidently a place called "Tel-Asshuri in the tablets. Most of the villages and towns were situated upon a Tel, or hill, because of the periodical floods. Further Biblical sites found are Halah, the Halahi, or Halaha, of these contracts, and Gezan, which is connected with the Assyrian "Gozanu," near to Nisibis.

The most direct newly-found evidence of the planting of Hebrew captives in colonies along the Euphrates and Tigris has been derived from the Jewish and Aramaic names transliterated by the scribes into their Babylonian cuneiform counterparts and occurring in some hundreds of commercial, legal and business tablets, chiefly recorded upon a series of such documents discovered upon the site of the ancient city of Nippur, or Niffer, by American explorers some years ago, and now first translated. Then, also, there is often the indisputable evidence of the presence of Jews in connection with these transactions provided by the Hebrew, or Aramaic, inscribed dockets, or signatures, of such persons themselves frequently appended to the literary legal formalities of the cuneiform contract. Thirdly, there are often persons who, though bearing Babylonian names, are proved by the texts to have been children of Jewish parents, or parents of offspring to whom they have given Hebrew names, or to have had Hebrew relatives, showing that although they personally had Babylonian titles, in reality they were Jews. Directly confirmatory of this is the occurrence of numerous Babylonian names among the exiles returning to Palestine enumerated by Ezra and Nehemiah.

The number of the Jewish names derived from these three categories is so great, and their identity, in many cases, with Biblical names is so absolute that there cannot be any doubt that we have in these persons descendants of the Assyrian captives of some century anterior to their era.

The majority of the clay documents concerning the Jews in Mesopotamia are preserved in the University of Pennsylvania, and have been published by Professors Clay and Hilprecht under the title of "Business Documents of Murashu Sons of Nippur"; for most of them are connected with the concerns of a great mercantile firm of that name. These, naturally, are not the only commercial cuneiform tablets bearing Hebrew and Aramaic names and signatures when Jewish or Syrian parties to their arrangements were concerned, or present, as witnesses to the final signature to the deed, because there are many thousands of this class of tablets in European and American museums. But the Nippur tablets are a consecutive series of memoranda, and, being archives from a part of the country where large numbers of Jews were settled, display an unusually large proportion of Hebrew names in the transaction they record.

Nippur, the town wherein the Murashu Brothers flourished, was the Calneh of the Bible, and was situated upon the great artificial waterway of Babylon called "The Euphrates of Nippur," a canal now dried up and known as the Shatt el-Nil. Another familiar cuneiform name for it was the Nar Kabari, or "grand canal," and near to it Ezekiel saw some of his visions; for it is the Chebar of his first chapter.

It is noticeable that, although some 4,000 contract tablets from the time of Nebuchadnezzar to that of Darius I. (circa 560 to 485 B.C.) have been deciphered, the Hebrew names occurring in them are but few. Yet the Jews had been carried away captive by Assyrian monarchs, such as Sargon and Sennacherib, long before Nebuchadnezzar's reign. The reasons for the disclosure of the Jewish element in matters mercantile in Assyria and Babylonia only transpiring in later times are doubtless twofold. In the first place, the exiles had been transported practically as paupers, despoiled of their possessions, and so forced almost into servitude to their wealthier neighbours. Thus it was some generations before they could acquire property and capital to form the subject of these business documents. Moreover, as a conquered race of Monotheists, so long as they were dwelling among people universally worshipping the most populous Pantheon ever invented, they probably were not permitted to enjoy equality of possession or of mercantile status with their captors. At the advent of Cyrus and the Persian dynasty all this was altered; and by the time of his successors, Darius and Artaxerxes, Jewish names figure frequently upon the tablets. Immediately it was afforded fair opportunity, the acquisitiveness and business aptitude of the race asserted itself.

This state of affairs is quite in accord with the accounts of the exiles indirectly furnished by Ezra, who speaks of them as having horses and camels, servants and singers; and the fact of Nehemiah holding the high position of cupbearer to Artaxerxes shows that the new Persian worshippers of the one God looked upon the Jews with favour. Again, one of the Jews, a tablet tells us, was custodian of the aviary of Darius.

One result of these discoveries is to show that a considerable number of Jews remained resident in the land of their exile instead of returning to Palestine, doubtless because of their mercantile position or property in Babylonia, and perhaps because of family connections with the people of the country.

The entire number of genuinely Jewish names in the Murashu tablets is thirty-eight, representing about seventy people. Of Jews with Babylonian or other foreign names there are about twenty-six persons more.

It is curious in reading these old memoranda to come across familiar names such as Benaiah, Haggai, Tobiah, Jonathan, Matthaniah, and Menahem. But many of the names are new ones, created during the exile; and some of them embody the hope of one day returning to their native land. All entitle their God as Jehovah, and some names such as "God has built" probably refer to the re-erection of the temple.

Herr Shiffer has translated about fifty contract tablets belonging to Professor Peiser, many of which have names that are compounds of Au, the title Professor Sayce considers to be the cuneiform counterpart of Yahveh, so they were probably Hebrews. The owners of these records dwelt in two towns, Kar-Au and Kannu (probably the City of Ezekiel, xxvii. 23) that were upon the Harran-Tel-Barsip road, i.e., Edessa to Nisibis. It was to this region that Shalmaneser IV. took the captured people of Samaria; and these tablet-owners, who revered the deity Au, may have been their descendants.

The ruins of Nippur thus, though abandoned for much more than 1,000 years, yet preserve records confirmatory of the history of the Jews as set forth in the Old Testament and Josephus, and although the evidence is not of a directly historical character, it is none the less valuable and conclusive.

GERMANY AND HOSPITAL SHIPS.

Under date of May 26, Reuter's Amsterdam correspondent reports as follows:—A Berlin semi-official telegram, referring to the German Government's memorandum, dated January 29, 1917, concerning the alleged misuse of British hospital ships in the English Channel and southern portion of the North Sea, and the British denial of the allegation, quotes several cases which are regarded by the Germans as proving the incorrectness of the British denial. The telegram, in conclusion, says:—"As this practice (the misuse of hospital ships) is contrary to regulations and is prejudicial to important military interests of Germany and her allies, the German Government will in future prevent all traffic by hospital ships in the entire barred zone and in the Mediterranean, including the route left open for Greece, and will regard enemy hospital ships appearing there as vessels of war, and attack them immediately."

Germany, the semi-official statement proceeds, will allow the transport of sick and wounded from Salonika on Greek railways to Kalamata Harbour, and from there by hospital ships to Gibraltar on the following conditions:—

(1) That such hospital ships on the route left open for Greek shipping travel at a speed previously indicated to the German Government.

(2) That the name, with the time of departure and arrival, of the vessel be notified to the German Government six weeks in advance.

(3) That a representative of a neutral Government, representing German interests in the particular enemy country concerned, makes a declaration previous to the departure of the vessel that it is a hospital ship and only carries sick and wounded and nurses, and no cargo other than material for the use and treatment of sick and wounded.

THE PRESS ON THE NEAR EAST.

"A Real Devil."

Sir Thomas Holdich begins an article upon "The Future Frontiers of Turkey," which he contributes to the *Fortnightly Review* (May) with a reference to the opinion of "a distinguished traveller . . . that the Turk was the only real gentleman left in the Continent of Europe." After touching on the Turk's qualities as a fighting man, he continues:—

And many who have met him away from the battlefield within the limits of his own administrative province will admit that in the higher grades of his social life he can be a dignified, hospitable, and kindly individual, well educated yet without self-assertion, and in all outward respects wearing the social insignia which we connect with the word "gentleman." And yet, in writing this of the Turk, one is unhappily constrained to admit that it is but giving a real devil his due, for beneath these superficial attractions there undoubtedly lies the devil of lust and cruelty, the traditional Oriental disregard of all the conventional requirements of humanity, a systematic cold-blooded sacrifice to the god of murder and destruction which has finally outclassed him from the ranks of civilised communities and decreed that, with "bag and baggage," he must leave Europe for good. It is, perhaps, as hopeless to expect that the Englishman can understand the psychology of the Turk as that the German can understand the Englishman. We cannot comprehend the mental attitude of the man who will weep for the loss of a friend and at the same time will tie up his wife in a sack and drop her into the Bosphorus if she is naughty, or regard with approbation the sacrifice of hundreds of thousands of human beings with all the accompaniment of horrible cruelty, because he looks on them as an inferior race or hopeless infidels.

A little later Sir Thomas declares:—

It is, perhaps, not remarkable that the Turkish officer of the administrative staff whom you may meet in the cities of Syria or Mesopotamia will speak of Central Asia as the true home of his race, maintaining that the Turki language of the Steppe Turkman is the classical language of his people, and that the vulgar tongue of Constantinople is no more than a corrupt cosmopolitan dialect. He has every reason to be proud of his mediæval progenitors so long as he deals with their love of culture and research, their knowledge of astronomy and gifts of literary expression and attention to the gentle art of poetry, although, at heart, he may be prouder still of their fierce uncompromising and sweeping conquests which spared nothing of the horrors of war in their devastating course. The same characteristics which distinguish the Turk of to-day are to be found in the history of his race from the beginning. Even that remarkable record of a Turkish gentleman, the diary of the Emperor Baber, allows strange glimpses here and there of barbaric passion and determination, although its author stands for all time as the most princely figure in Indian history.

Bag and Baggage.

Sir Thomas Holdich is convinced that the Turk must go out of Europe; but, he asks, what is to become of Turkey? Where, so to say, is the real Ottoman Turk to find a resting place? How many real Ottoman Turks are there to be provided for? The question is answered thus:—

The pre-war population of the Turkish Empire might, perhaps, be reckoned as about 20,000,000. It is improbable that any exact estimate exists, but 20,000,000 cannot be very far wrong. Of this 20,000,000 at least 8,000,000 (or nearly half) are Arabs, including Kurds; at least 2,000,000 (some authorities say 2,500,000) are Greeks; another 2,000,000 are Levantines, and there were about 2,000,000 Armenians before the phase of diabolical massacre set in. Some of the 6,000,000 Ottoman Turks who make up the rest of the population are scattered far and wide in military centres and Asiatic administrative posts, but only so far as is necessary to secure the permanence of Turkish domination; the majority are to be found in the Anatolian province of Asia Minor, with about half a million in Constantinople. Armenians, Greeks, Jews, Levantines, and Europeans together outnumber the Turks in their own capital, where there is no one group with the power to guarantee a permanent Ottoman Government. Under such conditions it is clear that to shift Turkey definitely out of Europe is not such a drastic proceeding as might have been anticipated. It practically amounts to the removal of the governing powers (whatever those powers may be at the end of the war) from Constantinople to some position in Asia where they would be less capable of those Oriental devilments which have rendered them impossible in Europe. There would not necessarily be any great emigration of the Turkish population. With his belief in Kismet, the educated Turk of the town would accept the new position as the decree of Allah and probably stand by his European heritage. As for the uneducated Turk, the exigencies of the war must have so diminished his numbers that he would rapidly be submerged in the very mixed population around him and speedily become an unconsidered factor in the human element of what is now European Turkey. There would be no great disruption and very little "complaining in the streets," and the "sick man" would die an almost natural death.

After considering the case in all its bearings, Sir Thomas concludes that "the Ottoman must return to the land of his earliest occupation after he left the steppes of Central Asia—*i.e.*, to Anatolia." This, says the writer, is "a fine country"; but on the next page he remarks that "it is not to be expected that Turks who have secured an interest in the countries of their adoption will necessarily leave those interests to settle in an unattractive land like Anatolia." Which view the Turks will take of the question remains to be seen.

The Break-up of Turkey.

In an article entitled "Turkey To-morrow," which he contributes to the *Pall Mall Gazette*, Baron E. Mayor des Planches, a former Italian Ambassador to Turkey, indulges in speculation regarding the subject named, while recognising the danger of attempting to prophesy. All the Allied Powers, he observes, "ought to concur in civilizing Turkey," and he proceeds:—

It seems that, before the war, the Ottoman Government had already arranged to make certain concessions to the Allied Powers. The Italian sphere of influence was generally considered to include the vilayets of Aidin, Konia, and Adana. That of France may have included Syria. The Italian people believe to-day that Italy must have her share, some sphere of action, in Asia Minor. Will Constantinople become a Russian city? It depends on what will be the Russia of to-morrow. It may be that Constantinople will become a free city, under international administration. The Bosphorus and the Dardanelles may also be freed, and new shores of the Black Sea Russianised. Looking further afield, Great Britain might acquire Mesopotamia, Greece the islands which are still Turkish, while Arabia would become independent, since it has been in constant, if unsuccessful, rebellion against the Ottoman yoke.

In these reflections—or suggestions?—there is very little that is new; though the "Italian sphere of influence" seems to be of the expanding order. As to the Turks, his Excellency writes:—

In the division of Turkey, generous treatment for the Turks would be to leave to them Anatolia, with Brussa, a much venerated and very religious Mahommedan centre, as their capital. Konia was once the capital of Turkey, then Brussa, then Adrianople, before the fall of Constantinople, the last stronghold of the Byzantines. Anatolia would supply a refuge for Mahommedans, who might, perhaps, be allowed to retain the Asiatic shore of the Bosphorus, of the Sea of Marmora, and possibly of the Black Sea. There are not more than twelve or fifteen million true Turks, although many races not ethnically Turkish pass as such.

After all, one is reduced to the profound reflection that "those who live longest will see most."

"The Future of the Jews."

In a leading article, entitled as above, *The Times* on Tuesday dealt with a subject round which an interesting correspondence had centred for some days previously. "The war," said the writer, "has given prominence to many questions that seemed formerly to lie outside the range of practical politics. None of them is more interesting than that of the bearing of Zionism—that is to say, of the re-settlement of a Jewish nationality in Palestine—upon the future of the Jewish people." And most readers will probably agree with the statement. After discussing certain points that were argued by various correspondents, the article concludes:—

Authoritative declarations such as these dispose of the contention that Zionism is not representative of Jewish aspirations. We believe it, in fact, to embody the feelings of the great bulk of Jewry everywhere. The interest of the world outside Jewry is that these aspirations, in so far as they may be susceptible of realisation, should be fairly faced on their merits. It is too often imagined that the Jewish question can be solved by the mere removal of all artificial restrictions upon Jewish activities. Even a superficial acquaintance with the conditions of life in the congested Jewish communities of Galicia and Russia suggests the inadequacy of that solution. The truth is that the Jewish question cannot be exhaustively defined either in terms of religion or of race. It has important social, economic, financial and political sides. The importance of the Zionist movement—apart from its territorial aspect—is that it has fired with a new ideal millions of poverty-stricken Jews cooped up in the ghettos of the Old World and the New. It has tended to make Jews proud of their race and to claim recognition as Jews, in virtue of the eminent services rendered by Jewry to the religious development and civilisation of mankind. Only an imaginary nervousness suggests that the realisation of territorial Zionism, in some form, would cause Christendom to round on the Jews and say, "Now you have a land of your own, go to it!" The Jews who feel themselves to be British, French, or American would, doubtless, tend to identify themselves more than ever with the lands of their political allegiance and to become more and more a solely religious community. The rapid changes of nationality that have been so noticeable among Jews in the past would become increasingly discredited. The international solidarity of Jews would undoubtedly persist—though, with a lessening of the danger of religious persecution, the leading Jews of all countries might feel freer to make a public stand against tendencies which sometimes bring the Jewish name into disrepute.

Austria and the Allies.

In a leading article, "The Aims of the Allies," the *Manchester Guardian* last Friday suggested that the recent change in Russia makes it necessary for us to overhaul our declarations. It proceeded to argue that the published

Digitized by Google

terms of the Allies press much more hardly on Austria than on Germany, "who is the head and front of all the world's trouble."

The terms speak of the "liberation" of this and that people of the Austrian Empire. Follow the map of Austria-Hungary round as you name the peoples one by one, and you will find that all the outer rind of the Empire is stripped away, and it is a very thick rind, so that when it is gone the core of Magyars and Germans that remain is not more than half of the original territory and population. "Liberation" in such a sense and on such a scale cannot be brought within the limits defining restitution. It is, however, possible to construe the term in a more lenient sense as meaning that the Allies would in most instances be contented with a plan which should secure political freedom for the peoples in question within the Austrian Empire.

The *Manchester Guardian* thinks that, if this be the intention of the Allies, it is high time that they made it plain, and urges that Austria is at this moment setting her house in order:—

She is getting rid of her Jingoes and autocrats and groping after a new system of racial freedom and equality. This is the moment for the Allies to say that on such terms she can have peace. There would no doubt remain the difficulty of the Italian claims. But Austria has never made a real difficulty of the Trentino, and it would probably be found, if the Allies were to make the explanations suggested, that the entire controversy with Austria might be reducible to the single point of the future of Trieste. If this point could be adjusted, Austria would either become an energetic advocate of peace in the Councils of the Central Empires or would even break off from them, a breach which would once and for all defeat the main German scheme of "Middle Europe."

At Gaza.

A correspondent in Palestine sends to the *Manchester Guardian* a description of "The First Attack on Gaza," which makes interesting reading. Here are some extracts from the opening paragraphs:—

From the high ground over the beach at Deir-el-Belah we can see the tall white minaret of the mosque of Gaza, and with a good glass a few of the white houses among their groves of olive and fig and orange, and high dusty hedges of prickly pear and tamarisk. A few tall palm trees break the sky-line. A little nearer is the grey mass of Ali-el-Muntar, rising abruptly from the plain, crowned with a few trees. Here, and in front of the hill, and to our left of it are the strongest of the Turkish positions. . . .

Eastwards the trenches link up with another powerful labyrinth a little south of a line running from Gaza to the coast. As I look towards Gaza the sea is on my left, breaking softly on a sandy beach beneath steep marly cliffs. On the top of the cliffs there is rough flower-spangled grass. It reminds one curiously of the Yorkshire coast, only for the azure and purple of the Mediterranean and the blaze of the Syrian sun. The beach is very busy. A small cargo-boat is lying on the five-fathom line, and a string of surf-boats passes to and fro, taking off stores and ammunition to the huge dump on the beach. Outside are mine-sweepers on the watch. The sea is margined with the pink bodies of soldiers revelling in their bathe and the black heads of swimmers. A convoy of camels is being driven in to bathe by yelling natives. Some of the camels seem to like it. Others resist with the immovable obstinacy of which only a camel is capable. Half a dozen natives drag on his headrope, half a dozen belabour him behind without effect. He remains unmoved, only protesting in his guttural, threatening camel language. At last he sees a camel that he knows go in, and quietly follows him.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Greek shipowners have gained little through the adherence of King Constantine to the German cause. In a recent memorandum addressed by them to the Hellenic Government it was shown that they have lost 102 vessels of an aggregate tonnage of 400,000 by the action of the submarines. I look with interest for the official reply to the Note. Greek shipowners have made a lot of money out of the war, one way and the other, and the taxation of their profits has been a godsend to the harassed Minister of Finance; but the loss of so large a fleet can scarcely be compensated for. The owners point out that only 149 vessels (of a tonnage of 500,000) remain to the Greek mercantile marine, and of these, six of 15,000 tons are under repair. Insurance is all very well, but money is only one of the factors in shipbuilding: labour and materials are equally important. Neither is available in much quantity at present, and when the war is over and trade demands more vessels than can be provided, the Greeks will realise the disservice which the friends of their King have rendered.

***

The trade between the Near East and Spanish ports is not large, but it is of interest to learn that in 1916, despite the general dislocation, relations were fairly well sustained. Thus, of the 340 foreign vessels that entered the port of Malaga during the year ten were of Greek nationality, one Roumanian, and one Moroccan. Eleven Greek vessels entered the port of Almeria. It was inevitable that the war should benefit the Spanish olive oil industry, owing to the fact that Turkey and Greece exports were suspended and that Italy only had a poor crop. The increase in the exports amounted to more than £155,000.

***

Another interesting fact in connection with the Near East is that as soon as Roumania came into the war—August 28, 1916—the price of Austrian hops dropped. Before the war Austria was a large exporter of malt, but since 1914 there has been a constantly decreasing supply of barley and malt for brewing purposes, and Roumania had been counted on to supply them, thus helping to maintain a fair production of beer, on which the hop market entirely depends, of course; and when the beer business slumped it took hops with it.

***

Manufacturers of cigarettes in Aden had a good year in 1916, when, although business with India suffered owing to the new duty imposed in March of 50 per cent. on all imported cigarettes, increased demand led to renewed prosperity. Next to India, Aden's best market before the war was East Africa, but trade fell off until last year, when a recovery began, and it has continued. An interesting fact is that there is a tendency to import machinery. Hitherto, the Aden smokes have been hand-made, but last year a second-hand machine, capable of turning out 10,000 cigarettes a day, was imported from Egypt by the leading manufacturer, and the result is said to have impressed those in the trade. The machine is British-made, it may be recorded for once!

British makers of cigarette machinery will do well to watch developments in this market—their American rivals are doing so already, it may be observed; and the following facts may interest them:—The nine principal factories which make up the better-grade article produce nearly 3,000,000 cigarettes a month; there are dozens of smaller establishments which make up the scraps and refuse purchased from the others, and these turn out about 10,000,000 a year. Machinery, to be successful in Aden, must be able to withstand gritty dust and sand, which are carried into everything by the strong winds which blow. Metal parts will be susceptible to rust, and electrical facilities are not available.

***

Bulgarian farmers have recently been urged to utilise their fields for wheat and other cereals, and for what the Minister of Agriculture describes as industrial plants—cotton, tobacco, etc. So difficult is the food situation that nearly all the waste land in the vicinity of Sofia is being devoted to the cultivation of vegetables, and students will watch the crops without pay. Cultivation work was impossible in January and February owing to the heavy snowfall, and seed was scarce and dear. It is reported, however, that tobacco, onions, lentils, and poppy, sown at Xanthi, are doing well, and that wheat prospects are good.

***

It is a matter for regret that the cable companies were unable to meet the Government of India in regard to amending the rates charged for messages between India and Egypt. The companies, I understand, intimated that they are unable at present to make any reduction in the tariff because, owing to the abnormal conditions in which telegraphic traffic is carried on, it is impossible to arrive at a suitable basis of calculation on which a satisfactory alteration could be secured. As I have pointed out in these Notes previously, the trade between India and Egypt is expanding with pleasing regularity; reduced telegraphic charges would be an additional trade facility of the greatest importance, and I hope the British Chamber in Egypt will combine with their brethren in India in an attempt to show the cable companies that cheaper rates would mean increased traffic and profits. After the war, perhaps!

***

My readers will recall that some time ago I noted that the Government of India had sent two Trade Commissioners to Mesopotamia to conduct an investigation into the conditions which prevail there and to report on trade openings in the Persian Gulf. I now learn that the Commissioners have completed their inquiries and have returned to India. Their report may be expected shortly.

***

The official return of shipping movements and losses by submarines and mines, compiled up to last Sunday afternoon, shows an improvement. Thirty-eight vessels of all sorts were attacked, of which twenty-one were sunk and seventeen escaped, the figures for the previous week being thirty-nine—thirty and nine, respectively. Unfortunately, the great majority of our losses continues to be in ships of more than 1,600 tons. The number of arrivals and sailings from United Kingdom ports was also larger, so that, taken all round, the improvement which was first noted in the week ended on May 13 has been more than maintained.

***

The famous P. and O. is to add another string to its bow; the company has concluded a provisional agreement with the Union Steamship Company of New Zealand for a fusion of interests. Particulars (for which *The Times* is quoted) of this important transaction are printed elsewhere in THE NEAR EAST to-day, and all that remains to me is to wish the great combination, of which the companies I have mentioned are members, all the success which capable management and up-to-date methods cannot fail to secure.

***

The complaint is made that "the opponents of the British Trade Bank are working tooth and nail behind the scenes to persuade merchants and others that its constitution and the support given it by the Government are detrimental to their interests." If this is true, it is to be regretted. Nevertheless, I cannot help thinking that the directors and management of the corporation which has organised the bank have themselves unwittingly assisted "the opponents" of the scheme in their campaign. After making due allowance for the necessity for secrecy in some respects, there has been, and still is, a great deal of unnecessary mystery regarding the scope of the bank's operations, and if merchants and others whose interests are open to prejudice allow themselves, in the absence of fuller information, to listen to "the opponents" of the scheme they are not exactly to be blamed. Lord Faringdon has made certain explanations, and his good faith may be relied on implicitly; but it is a pity that more frankness has not been employed. Meanwhile not much is to be gained now by a refusal to wait for the debate in the House of Commons, when, it may be presumed, light will be thrown on the dark corners.

***

To Baghdad in thirty-six hours, to Constantinople or Moscow in twenty-four! That is the forecast made by Mr. G. Holt-Thomas, who lectured in London on "Commercial Aeronautics." He made no claim that commercial aeronautics were going to beat out of existence railways and other forms of transport, but rather that they would act as an adjunct to present methods. It was the business point of view which Mr. Holt-Thomas emphasised particularly, and speed, speed, speed, and again speed is the all-in-all to successful commerce; but cost is also a factor, and since the twenty-four hour journey from Constantinople to Moscow would mean something like £25, I doubt if the Aerial Navigation Company, or whatever else it may be called, would obtain sufficient passengers to secure a dividend for its shareholders. We may come to it, of course; but I doubt if the development is now practicable; and, above all, we must avoid the risk of becoming unpractical.

***

I was much interested on Empire Day (May 24) in the fine window display at the Charing Cross office of the Canadian Pacific Railway Company. The resources of the Empire were attractively illustrated in pictorial form, making an impressive demonstration of our little Empire. It was a happy thought, and those who are interested—and who is not?—should apply to the office for a booklet in which the designs have been reproduced.

COMMENTATOR.

The Sudan and its Economic Advance.

No. 8.—The Province of Khartoum.

By Percy F. Martin, F.R.G.S.

There are people who have never heard of the Sudan, strange as it may appear; but assuredly there can be none who have failed to learn something of Khartoum, for have not the names of two of the greatest of Englishmen been intimately associated therewith, both great soldiers and statesmen—Gordon and Kitchener—whose lives were given to their country?

Khartoum is a name given alike to a province, a district, and a town, the first being the smallest province as the last is the largest town of the several political divisions of the Sudan. The meaning of the word, which—like so many native names—is spelled variously "Khartoum," "Kartoum," and "Kartum," means "elephant's trunk." A rather far-fetched explanation of its adoption is the fancied resemblance of that small point of land jutting out between the two Niles to the proboscis of the largest of quadrupeds. The superficial area of the province does not exceed 5,740 square miles, and politically it is divided into four *mamurias*—Khartoum City, Khartoum North, Omdurman, and Geili.

Topographically the country is absolutely flat and very sandy, the one compensation being the incomparable Nile—

". . . forever new and old.
Among the living and the dead,
Whose mighty, mystic stream has rolled."

Amended Boundaries.

Some three years ago the boundaries of the province underwent considerable alteration. From the Stabluka northwards territory was handed over to the Berber Province, thus rounding off the Shendi district. The Gebel Auli district, on both sides of the White Nile, was taken over from the White Nile Province, a highly important change, which has since proved of great advantage to both the Government and the people. The Gimoia tribe is now united under the Omdurman district, and a marked improvement in the native situation has since become noticeable. Khartoum City is the seat of the central Government as well as the headquarters of the Provincial Administration; Khartoum North—formerly known as Halfaya—is the seat of the industrial element (mostly official) and a principal trade centre; Omdurman is a teeming native city of busy merchants and dealers; while the village of Geili, situated some eight and twenty miles north of Khartoum, is just the habitat of the Gemaab tribe, a branch of the Jaalin, and contained at one time the residence of the notorious slave-dealer, Zubeir Pasha.

Formerly, as now, Khartoum City was the seat of a dual administration. In 1847, following on the visit to the Sudan of the Viceroy Ismail Pasha, each provincial governor of the Sudan was instructed to communicate directly with the Egyptian Minister of the Interior at Cairo. Then, also as now, a Grand Kadi combined the joint duties of high priest and religious judge holding court at Khartoum, the tribunal being composed of himself, a mufti, and a considerable staff of ulemas and scribes.

Population.

The population of the city in the early fifties was said to have been under 61,000, while to-day it amounts to barely 48,000, Khartoum claiming 28,924 and Khartoum North 19,495. Sir Samuel Baker, who visited the town in 1862 and again in 1870, described it as "a miserable, filthy and unhealthy spot," and no doubt it was all that. In 1885 the whole place was destroyed by the Dervishes, and it remained an unpicturesque ruin until the late Lord Kitchener, with his victorious troops in 1898, came and practically rebuilt it. The city of to-day is the monument that he himself projected, for his plans were recognised as the most suitable, and since have proved to have been admirably devised and as admirably carried out.

Modern Khartoum.

It is interesting to recall that the task of rebuilding was entrusted by the then Sirdar to one of his youngest but most capable officers—Captain Gorringe, who in these latter days has become the distinguished Sir George Gorringe, the gallant officer who was in charge of the Kut relief army in the Mesopotamia Campaign of last year. Modern Khartoum is a well-planned town of broad avenues, wide streets, many handsome buildings—and, as yet, *no* drainage. The general plan of the town is that of a series of main avenues running parallel to the Nile, intersecting others running at right angles and forming rectangles approximately 500 yards square. These rectangles are subdivided by three streets running each way parallel to the main avenues, and by the diagonal streets connecting the intersections of the main avenues. The limits of the original plan have long been reached, and the future development of the town will be almost wholly upon a similar footing. By these arrangements a girdle avenue will eventually surround the city and the continuation of the diagonal streets will provide convenient radial communication with the central area.

As the headquarters of the Administration, Khartoum City naturally has become the centre of a great trade—both land and water borne. Even in the early days, the commerce of Khartoum was considered of some importance, for, with the exception of Kordofan—which drew the greater part of its supplies direct from Cairo, via Dongola—Khartoum served as the principal depôt of the Sudan for the whole of the European and Indian merchandise which entered the country via Suakin, Berber, and the Nile. The imports, for the most part, were composed of Manchester goods, hardly any cotton from Egypt being then found in the Sudan; while the exports consisted principally of ivory from the White Nile, gum-arabic, ostrich feathers, beeswax from Abyssinia, and hides. The trade to-day is such as may be found in any large and well-regulated foreign city wherein a certain European settlement is located, and a large number of natives who have learned to enjoy, and even to expect, a proportion of luxuries for which they are quite capable of paying cash, the rates of labour being generous and the amount of its demand in normal times almost unlimited. Just now, however, it is a drug in the market, since enterprises such as building, the loading and unloading of ships, etc., etc., are at the lowest ebb in consequence of the European War. Nevertheless, there is little or no actual poverty in Khartoum, the arrangements made, and well maintained, by the authorities preventing anything of the kind from occurring.

The Administration.

The local administration of the Province is represented by Mr. R. E. More, the Governor, who has given fifteen valuable years of his life to the State; one Senior Inspector (Mr. J. D. Craig), one Second Inspector (Mr. C. G. Dupuis), and one Third Inspector (Mr. E. Slater). In normal times, two additional Second Inspectors are employed; but the posts are at present unfilled.

After the war it is probable that, as men look around them for fresh opportunities of investment, some may be found in the province of Khartoum. It is understood that the policy of the Administration is to encourage and support private enterprise of a legitimate nature, and at the same time to relieve themselves of some of the municipal and other enterprises which, rather mistakenly, they have from time to time taken on their own shoulders. To succeed in attracting not alone foreign capital, but capitalists, who by their co-operation in the development of the Sudan would lend distinction to that country, the Government may feel called upon not only to offer inviting terms, but also to safeguard investors against any kind of injurious or unfair competition originating with themselves.

Future of the Province.

As the administered portions of the country expand and the population increases in material welfare, there will be many opportunities, not in Khartoum only, but throughout the provinces, for the enlistment of private enterprise, such as additional transportation in the form of tramways, light railways, electric lighting and power plants, financial trusts, insurance offices, irrigation canals and waterworks, shipping, and land investment. It is neither possible nor desirable that a Government should itself enter upon any undertakings of this character; its functions are to administer the country rather than to exploit it. It has been generally laid down that the primary duty of a government, as of a governing body, is to "govern," and not to trade, a conception altogether put aside by our Administration to-day, which we see transferred into a co-operative association carrying on every conceivable enterprise and trade that the country follows. But, then, we are "at war," and all preconceived methods are by common consent revoked or indefinitely suspended. This is not necessarily the case, however, in the Sudan, nor need it be so construed in the future. Governments, like local bodies, are the more efficient *ceteris paribus*, the more they confine themselves to their legitimate functions and do not overburden themselves.

I have referred to land investment as a sound kind of enterprise, but naturally I have in mind nothing of that sort of business that flourished in Khartoum during the evil days of 1906-7, when land reached an altogether fictitious value and was the direct cause of bringing about wholesale financial ruin and economic disaster. In 1901, before there had been any settlement of the land question, good building ground in Khartoum could have been purchased at prices ranging from 1d. to 2d. per square yard; then, five years afterwards, came the land "boom," when prices rose steadily until the figure reached £E2 and £E3 per square yard. Some of the plots upon which banks and other buildings are erected cost as much as £E6 per metre. The fiercest competition had long existed among the leading merchants for the choicest plots suitable for shops, while many of the transactions were mere gambles of the most reckless character.

No Land Speculation.

Following the experiences of 1906-7, the Government adopted for Khartoum a plan that had long been under consideration, and by which all future speculation in land in or around Khartoum was finally arrested; while in 1914 the Administration proceeded with a scheme which had been tentatively introduced the previous year, and under which plots of land were sold to junior officials, the Government advancing the necessary funds to enable them to build their own houses, both purchase price and loan being repayable by easy instalments. The plan proved eminently successful, and, indeed, it might have been materially and advantageously extended had more money been at the disposal of the authorities for the purpose. A sound financial institution, having for its object the erection of easily-lettable buildings, of a business and residential character, would, in all likelihood, be found a highly profitable enterprise, and, as most of us know, *in pretio pretium nunc est*.

EGYPTIAN REVENUE.

CAIRO, May 6.

The State accounts for the month of February published to-day show continued good progress in the matter of revenue. The amount collected up to the end of February was £E17,811,972 as against £E15,815,106 a year ago, while expenditure came to £E15,441,682 against £E13,693,841. During the eleven months there has therefore been an increase of £E1,996,866 in revenue, and of £E1,747,841 in expenditure, with a resultant surplus of £E2,370,290, or £E249,025 more than at the same date in 1916. It is to be noted that this surplus is slightly less than it was at the end of January, the reason being that during February the expenditure was correspondingly higher than the rereceipts.

The chief revenue increases during the eleven months are Customs, £E870,404; Tobacco, £E177,397; Legal Fees, £E100,234; Railway Receipts, £E754,325; Domains, £E59,902; Sale of Land, £E28,668. The main decreases have been Port Dues, £E30,957; and Telegraph Receipts, £E26,879. It is interesting to note that the total revenue collections are £E1,181,972 above the estimate for the whole year, and that whilst most of the heads have already exceeded expectations, only Port Dues and Investment of Funds will in the end show results less than the original estimates.

POSTAL CHANGES.

As firms sending important documents in duplicate to places abroad find much difficulty in arranging so to post the duplicates that they shall not be conveyed on the same ship with the originals, the Postmaster-General gives notice that on and after June 1 he will be prepared to accept the duplicates at the same time as the originals and to retain the duplicates for despatch by a ship other than that conveying the originals, under the conditions described below.

The following countries and places are included in this arrangement:—Ceylon, Egypt, India, South Africa, Aden, British East Africa, British Somaliland, Mauritius, Seychelles, Sudan, Tonga, and Zanzibar.

Any person desiring to take advantage of the arrangement must proceed as follows:—He must put the original and the duplicate into covers addressed in the ordinary way, and affix to each cover stamps sufficient for the postage and for the usual registration fee of 2d. (or the insurance fee if he desires to insure the letter). In addition he must mark the duplicate "duplicate," and affix to it stamps to the value of 6d. as a special fee.

Both letters must then be put in an outer envelope addressed as follows:—"Urgent—Duplicate Letters. The Superintendent on Duty, Registered Letter Section, King Edward Building, G.P.O., London, E.C.1.

Postage stamps sufficient for the inland postage and for the registration fee of 2d. must be put on this envelope, which must then be posted in the ordinary way as a registered letter at any Post Office.

TORPEDOED SHIPS.

The Secretary of the Admiralty on Wednesday issued the following weekly returns of arrivals, sailings, war losses, and unsuccessful attacks: Week ended Sunday, May 27, 1917, three p.m. Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft): Arrivals, 2,719; Sailings, 2,768. Merchant vessels sunk by mine or submarine: 1,600 tons (gross) or over, 18; Under 1,600 tons (gross) 1. Merchant vessels unsuccessfully attacked by submarines, 16; Fishing vessels sunk, 2.

The Admiralty appends the following note: This return invariably includes all mercantile tonnage known to have been sunk by mine or submarine, whether employed on Government service or otherwise.

The cotton seed market at Alexandria was described as firm on May 29. June was then quoted 137.5 p.

We have received from the Egyptian Government the usual return of traffic through the Suez Canal in 1916.

LANCASHIRE COTTON.

Continued "Struggle" Against Adverse Conditions.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

This has been the principal holiday week of the year in the Manchester district and apart from Tuesday last business has been practically at a standstill throughout the week. No particular development in the general situation can be recorded. Most producers are still struggling against adverse conditions.

The outlook is very uncertain and although there seems to be little likelihood of a slump in values just at present it is realised that to purchase freely at current rates means taking some risk.

Favourable advices have again been received relating to the progress of the Egyptian cotton crop. The undercurrent of demand in cloth for Egypt remains healthy. Some of the offers in sized materials are rather poor, but there has again been plenty of activity in fancies and miscellaneous styles. Many producers of Egyptian yarns find it most difficult to obtain relief, and to buy cotton to-day and sell 60's twist means a definite loss.

The turnover in standard goods for India and China continues unimportant, but a fair business has been done in light fabrics and fancy descriptions. Operations for South America have been rather irregular. There continues much variation in the engagements of manufacturers.

American yarns for home consumption have moved off quietly. Spinners of the lower numbers are in a stronger position than for some time back, the recent buying being of larger dimensions. Relief is still badly wanted by sellers of medium counts, especially wefts.

A little more activity has been reported in shipping yarns.

EGYPTIAN COTTON STATISTICS.

The British Consul at Cairo (Mr. A. D. Alban) reports, under date April 27, that the total output of ginned cotton in Egypt during the season from September 1, 1915, to August 31, 1916, was estimated at 6,020,403 cantars, as compared with an actual output of 4,774,770 cantars in the previous season, while in the calendar year 1916, 5,416,936 cantars of ginned cotton were exported from Egypt, as compared with 6,899,132 cantars in the previous year.

The following table shows the quantity of ginned cotton produced in Egypt during the past six seasons, and the amounts exported during the last six calendar years:—

—	Output in Season from 1st Sept. to 31st Aug.	Exports in Calendar Year.
	Cantars.	Cantars.
1911	7,383,740	6,638,210
1912	7,497,859	8,306,948
1913	7,663,801	6,972,686
1914	6,450,573	5,909,788
1915	4,774,770	6,899,132
1916 estimated	6,020,403	5,416,936

TRADE MARKS IN CYPRUS.

In the official *Cyprus Gazette* of March 23, the Registrar of Trade Marks gives notice that from and after April 1, 1917, he will require (1) every authorisation to an agent to act for a firm to state in full the names of all the partners in the firm; and (2) every application for registration to state in full the names of all the partners in any firm mentioned in the application. If the application is in a firm's name, it should be made in the name of A and B (as the case may be), trading in co-partnership as D. and Co. (as the case may be).

Mr. Simon Weintraub, of Braila, now residing in London, has given notice that he has changed his name to Wintrop.

The importation into the United Kingdom has been prohibited of wild animals, gum copal, gum kauri, and manufactures of rubber, except under license by the Board of Trade.

SHIPPING FUSION.

P. and O. and the Union Co. of New Zealand.

It was reported yesterday that the P. and O. Company and the Union Steamship Company of New Zealand have concluded a provisional agreement for a fusion of interests.

The New Zealand Company owns a fleet of seventy-six steamers, many of them of very high class, of 243,278 tons gross. It maintains the regular mail, passenger, and cargo steamship services between the ports of the North and South Islands of New Zealand, between New Zealand, Tasmania, and Australia, and between Australia and New Zealand and the South Sea Islands and Vancouver and San Francisco. The various services are probably capable of still greater development in the future, and should give opportunities for the marked enterprise now being shown by the P. and O. Company.

Financial Arrangements.

The arrangement (writes *The Times*), provides that the P. and O. Company shall issue 10s. of its Deferred stock to each shareholder of the Union Company, and, in addition, pay 30s. in cash for each Union Company's Ordinary share. At the current market prices of P. and O. stock, this offer represents more than 60s. for each Union Company's share, while the dividend return per share will be considerably improved. A few days ago the Union shares were quoted at 45s. and yesterday (May 30) closed at 52s. Circulars are being issued at once to the shareholders of the Union Company for a reply before June 12 next, setting out the terms of the arrangement.

The authorised capital of the Union Company is £3,000,000, of which £2,000,000 is issued in £1,000,000 Ordinary and £1,000,000 Preference shares of £1 each fully paid. There is issued an outstanding 4½ per cent. Debenture stock to the amount of £128,873. About half the shares are held in this country, of which, in addition to holdings in London, substantial amounts are held in the North of England and Scotland. An interim dividend of 4 per cent. on the Ordinary shares was declared a few days ago, as compared with 3 per cent. last year.

Fleet of 1,726,475 Tons.

A little more than a year ago an amalgamation was arranged between the P. and O. Company and the New Zealand Shipping and Federal Steam Navigation Companies, 31 fine passenger and cargo vessels, representing 244,334 tons, being added to the P. and O. fleet by that transaction. At one time the New Zealand Shipping and Union companies worked in close conjunction, but latterly there has been close connection between the Federal and Union Companies, so that it is not difficult to trace how the present proposed amalgamation has come about. The chairman of the P. and O. Com is Lord Inchcape, and the chairman of the Union Company Sir James Mills. The head office of the latter company is in Dunedin, New Zealand, but there is also a London board.

By the present scheme the combined fleets of the P. and O., British India, New Zealand, Federal, and Union Companies will consist of 306 steamers, with an aggregate tonnage of 1,726,475 tons gross. Under the arrangement of last year the P. and O. Company secured a firm footing in the New Zealand trade, which should now be greatly strengthend There will be general agreement in shipping circles that no company is better fitted to absorb the Union Company and develop its passenger and cargo facilities than the P. and O.

GREEK MAGNESITE.

Romantic Trade Development Caused by the War.

Australia threatens to come in the market as a rival to Greece in the supply of magnesite. It was announced recently that an Australian exporter desired to get in communication with importers of the crude ore, and that he was prepared to furnish quantities of from 100 tons to 1,000 tons for single shipments. He guaranteed that the ore would contain 97 per cent. of magnesium carbonate. Greece has little cause for fear. Before the war broke out Austria was, perhaps, the leading merchant in the magnesite business; that fact is not to be attributed to superiority in quality, but to the low price at which she was able to place her wares on the world's markets. Austrian mines are state-owned, they have been worked for years up to a high pitch of development, labour is cheap and transport facilities are in a condition of fine organisation.

When peace was broken and Austrian ports were practically sealed, the demand transferred itself to the Greek mineral, and a great export trade soon developed. The United States took a large proportion of the Greek supplies, the figures for three years being: 1914, 18,433 tons; valued at £21,636; 1915, 43,217 tons; valued at £58,738; 1916, 69,837 tons; valued at £232,220.

It will be seen that, notwithstanding the apparent ability of the supply to accommodate itself to the demand, the price hardened from a little more than 10s. a ton in the first year of the boom to 66s. 6d. last year.

Reasoned Optimism.

The Greeks have been looking forward to retaining the valuable trade brought to them by the war. Since magnesite began to develop so magnificently the mining companies have improved their plants, extended their ropeways, provided their labour with house accommodation, constructed wharves and improved transport facilities.

Their optimism has been built on reasonable grounds even apart from the important fact that the Austrian mineral is inferior to the Greek, and that in Asia Minor there was a potential rival. The latter contingency, however, is remote because the mineral has not been developed, there are no organised companies to work it, and there are no immediate means of bridging the gulf between the beds and the ship. Asia Minor will not count for years to come. There are other producing countries of course—the Transvaal, India, California, and now, Australia—but it is doubtful if either of these can injure the Greek trade.

We gather from recent reports on the subject that the Greek mining companies are able almost to dictate terms to their customers at present. That happy condition may not always prevail because, after the war has ended, the Austrian producers may be reckoned on to make the most strenuous attempts to regain the trade they have lost; they will sell cheaply, and although the Greek article is superior the resumed activity of the old producers is bound to reduce prices. At the same time the Greeks will retain the bulk of their new trade.

A Permanent Demand.

Superior magnesite will always be in demand for the manufacture of colours, chemicals and mosaic tiles. This was the case even before the war broke out. One of the mining companies had entered into a contract with a firm in Switzerland to supply 6,000 tons of ore a year and eight per cent. of the company's output of calcined magnesite for paint-making. It was calculated also that Germany had been importing something like 50,000 tons a year for the same purpose.

Naturally enough the immense potentialities of the mineral have attracted the attention of investors from outside. Magnesite of commercial value is found in the island of Eubœa and in Yerakini, Macedonia. In the former alone there are seven companies at work. These include British, Dutch, Greek, and American, the principal concern being the Anglo-Greek Magnesite Company Limited, whose head offices are in London.

The question of the exhaustion of the beds has been raised, and more than one expert has declared that another ten years will see the end of certain of them. This need not be read as the gospel, however. In many parts of Eubœa, for example, there is a good deal of unexploited mineral. Concessions granted by the Greek Government have not been worked, either because of the distance of their sites from the sea, the scarcity of trained miners, or because developed and richer concessions are more profitably worked. But there is no lack of the mineral.

A LIVE-STOCK "CENSUS."

Where 66,000,000 Head of Cattle, Goats, and Sheep May be Found.

Reference has frequently been made in THE NEAR EAST to the hide and skin trade that centres in Aden; but, hitherto, it has not been possible to arrive at a satisfactory estimate of the number of cattle, goats, and sheep in what our enterprising American friends have labelled for trade purposes the Aden commercial district. A "census" has now been made, however, and it is possible to say that the "population" is as follows:

District.	Goats.	Sheep.	Cattle.
Abyssinia	8,000,000	—	10,000,000
Aden Hinterland and Arabian Red Sea Provinces	8,000,000	7,000,000	2,000,000
British Somaliland ..	6,000,000	9,000,000	1,000,000
Eritrea	3,000,000	1,000,000	5,000,000
French and Italian Somalilands	3,000,000	1,000,000	2,000,000
	28,000,000	18,000,000	20,000,000

Aden's normal exports are 6,000,000 goat and sheep-skins, and 500,000 hides, besides, roughly, a million of skins of non-domestic animals, mainly gazelles.

The figures given in the above table are approximate, of course. The owners of the flocks and herds are principally Arabs, Somalis, and Abyssinians who wander perpetually with their animals from one pasture to another, and in many cases they are rarely able to fix accurately the number of beasts they possess. The "census" is based on very conservative lines, and is probably an under-statement rather than the reverse.

Experts in the Aden market regard the animals owned in British Somaliland as being of the greatest importance to their market. The territory is little more than one hundred miles distant, it contains the greatest number of sheep—principally of the peculiar Somali type with fat tails and black heads—and is more in touch with the Aden dealers. As is well known, the Somali sheep are commercially important. They are generally fat, and their skins—known in the market as "black-heads"—are superior; their hair is short, and their only drawback is that the wool is scanty.

Aden receives the bulk of its hides from Abyssinia.

MALTA PRIZE COURT.

The Department of Commercial Intelligence of the Board of Trade has received copies of the official transcripts of the proceedings and of the judgments given in the Prize Court of Malta in respect of the s.s. Cleopatra; of part cargoes ex the steamers Maleas, Themistocles, and Ernest Simon; and of goods ex the sailing caique Taxiarchi. The copies may be consulted by British firms at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C. 2.

The steamer Nicolaos has been sunk after collision with a steamer. She had previously been in collision with a sailing vessel. The crew were saved.

The Austrian Petroleum Company of Galicia, in its report for 1916, states that the production of the fields has not yet become normal, and that there is no prospect of there doing so this year.

ENGINEERING NOTES.

Lime Concrete in Aden.

Construction work in Aden, both public and private, has been very much curtailed on account of the abnormally high prices for all sorts of building materials, U.S. Consul Addison E. Southerd reported to Washington recently. An interesting though not entirely new practice has developed in the execution of small but necessary pieces of work which would ordinarily involve the use of cement. In place of cement concrete, a mixture called lime concrete is being used. It is composed of equal parts of lime, sand, and pumice. The pumice is ground fine, and is obtained in unlimited quantities from the volcanic deposits that form the peninsula of Aden. Lime concrete takes much longer to set than cement, but the results have so far been quite satisfactory. This material also is comparatively inexpensive. The chief engineer of the Aden Port Trust is now using it in a small and experimental way for construction which is covered by and consequently exposed to the action of sea water.

Ford Motor Tractors.

After the announcement had been made that Messrs. Henry Ford and Son have been permitted to build works in Cork to make low-priced farm tractors at the rate of 50,000 a year, nothing was heard of the matter until recently, when it was said that Mr. Ford had offered the free use of his tractor designs and of the services of his experts to the British Government. At the same time, the Ministry of Munitions invited British engineering firms to tender for the manufacture of many thousands of motor tractors, and the presumption is that the Ford tractor is about to be made in great numbers in this country. The Government requested the Royal Agricultural Society to carry out tests on typical British farm land, and these took place in Cheshire at the end of last month. Two Ford tractors, rated at 25 h.p., were seen at work ploughing, first cross-ploughing a fallow of strong, dirty land, and subsequently in a field of lighter land.

The First Trial.

In the first trial a two-breast Oliver plough was used, ploughing on an average five inches deep, with sixteen inches width of furrow, and subsequently with a three-furrow Cockshutt plough, at the same depth, with breast pitched ten inches; and in the second trial the three-furrow plough was used, ploughing an average of six inches deep. In both these cases the motor did its work with ease, and on a measured acre the time occupied was an hour and a half, with a consumption of two and one-third gallons of paraffin per acre. The ploughs were not quite suitable to the land, and the tractors consequently worked at some disadvantage. The total weight of the tractor, fully loaded with fuel and water, is 23¼ cwts. It is light for its power, and consequently light on the land, is easily handled, turns in a small circle, and leaves a very narrow headland. The motor is quickly started up from cold on a small supply of petrol. After the trials the examining committee proceeded to Messrs. Ford's works at Trafford Park, Manchester, where one of the motors was dismantled and examined in details. They have found, according to their report, the design of ample strength and the work of first-rate quality, and with some slight alterations about the wheels on certain points, they recommended that steps be taken to construct immediately as many of these tractors as possible.

New Hosiery Machine.

A new hosiery machine has recently been put on the market, and interested factories are giving it a very careful test. It is really a sewing machine intended to replace the present method of seaming; while the prevailing system is to take the two edges

to be seamed and place them side by side on the points of the machine, the new system provides for the two edges to run into feed-wheels, where the needles penetrate to form the seam. There is the advantage of greatly increased production, and the machine is suitable for many varied classes of work in the hosiery trade. The individual stitches are not attached separately and do not receive individual treament on point. A guide is added which uncurls edges of pirling material and the resulting seam is flat and very elastic in stitch. The machine can be run as fast as the operative can handle the goods up to a maximum of 3,000 stitches a minute. There is a very large number of hosiery factories in the Near East, in which the new machine would be a great work improvement, as regards quantity and quality of production.

Convertible Horse Hoe or Seed Drill.

A useful agricultural machine has recently been patented: it should appeal particularly to small holders in the East. The machine is a convertible implement which can be changed from a horse hoe to a seed drill, and can be used for either purpose at will. It is specially adaptable for use on farms or holdings where the amount of labour does not warrant the purchase of a separate implement for each class of work. When used as a horse hoe, a frame or bar for carrying the hoes is provided with coupling arms, and the fore ends of these arms, which are preferably forked, are connected to the vertical coupling bars by means of coupling pins. The coupling bars are provided with a series of holes disposed at different heights, so that the ends of the coupling arms can be raised or lowered to adjust the frame or bar in the desired position. When used as a seed drill, the coupling arms or the frame or bar which carries the hoes are uncoupled from the coupling bars; all the parts are bodily removed, and a seed drilling attachment is substituted in their place. The seed barrel in the seed box is geared to one of the road wheels so that it is rotated at the proper speed.

Parcels are now accepted by the Post Office "for transmission to Salonika" and the islands of Amorgo, Andros, Cephalonia, Cerigo, Chios (Scio), Crete, Fourni, Hydra, Lemnos, Milos, Mitylene, Mykoni, Naxosnio (Ios), Paros, Samos, Santorin, Serpho, Skopelos, Syra, Thasos, Thermia (Kythnos), Tino, Zante, and Zea.

COMPANY REPORTS.

New Egyptian Co.

The report for 1916 shows a profit of £15,021. Deducting £5,413 for the service of the debentures, there remains a balance of £9,608. Adding £7,023 brought forward from last year, the balance at the credit of the account amounts to £16,630, which the directors recommend should be carried forward. The net income derived from the estate shows an increase of over £8,000 as compared with the previous year, notwithstanding the increased cost of coal, oil, and other material, and the reduction of the rental area consequent on the sales of land. The average price obtained by sales of land during the last seven years has been £94 15s. 9d. per feddan. The capital expenditure during the year was £366, as compared with £1,498 in 1915. During the year the company's indebtedness has been reduced by £18,000.

Royal Mail Steam Packet Co.

The report for 1916 states that during the period under review insulated space in the company's refrigerated steamers was, as in the previous year, under requisition by the Board of Trade, thereby preventing the company from reaping the benefit of the increased rates of freight prevailing in many directions, while the passenger traffic on all the company's routes continued to be very small. The expenses of working the steamers have been further increased, and there has again been serious delay at some of the ports, causing extra expenditure. Considering the circumstances, the court of directors feel that the results may be regarded as satisfactory. The rates of premium for war risks insurance have since the closing of the accounts materially advanced, thus adding to an already heavy item of expenditure. A large proportion of the company's fleet continues under charter to the Admiralty, and practically the whole of the remainder of the tonnage has recently been requisitioned by the Shipping Controller. The court of directors have acquired an interest in the Moss Steamship Co., Limited, Robert McAndrew and Co., Limited, and the Coast Line of steamers. A list of the fleet at this date shows a tonnage 297,681 tons. The fleets of the other companies closely affiliated with the R.M.S.P. Company represent 1,226,873 tons, which together make up a total of 1,524,554 tons, exclusive of steamers building. After making provision for depreciation and all taxation and transferring £200,000 to the reserve fund and £25,000 to the superannuation fund, the court recommended a dividend of 5 per cent., less income-tax, on the ordinary stock, making 7 per cent. for the year, leaving £52,502 to be carried forward.

Behera.

The report of the Société Anonyme du Béhéra for the past year shows the net profits to be £E38,300, as compared with £E22,600 for the previous year. The directors have adopted the policy of not paying the preference coupons until the bank overdraft has been eliminated, so that while the position has been strengthened nothing is this year paid off the arrears.

Upper Egypt Hotels.

The twelfth annual general meeting of the Upper Egypt Hotels Company was to have been held at Cairo on May 16. The directors' report on the working and finances of the company for the fiscal year, which ended on March 31 last shows a large falling off in the earnings of the company. This is explained by the fact that while in the financial year 1915-1916 the company was entrusted with the lodging and maintenance of a very large number of convalescent soldiers at the hotels at Luxor, the company's properties were not used during the period under review. The only hotel which has been open for the reception of guests is the "Luxor."

To meet the debenture interest due on May 1, 1917, the directors, after very careful consideration, decided to call up the £E 1 per share on the twenty-two thousand short paid issue. This resulted in the collection of £E13,935, up to April 23, 1917.

The profit and loss account for the year ended March 31, 1917, shows the net trading loss on hotels, £E1,529.

COMPANY NOTES.

Meetings.

The sixteenth ordinary general meeting of the New Egyptian Company, Ltd., will be held at Winchester House, Old Broad Street, London, E.C., on June 5, at 12.30 p.m.

The eleventh ordinary general meeting of the Egypt and Levant Steamship Co., Ltd., was held at the temporary head offices of the company, Chios, on Wednesday, May 30. The following business was on the agenda:—1. To receive and consider the adoption of the directors' report and accounts for the year ending January 31, 1917. 2. To elect auditors. 3. To declare a dividend. 4. General business.

Oil Outputs.

Anglo-Egyptian.—Gemsah 21 tons against 24 tons. Hurgada, 1,924 tons against 2,000 tons.

BATTLE OF THE WEIGHTS.

Messrs. Scott, Armstrong and Co., 57, Moorgate Street, London, E.C.2., write to THE NEAR EAST on the subject, "British Standards Weights and Measures versus Metric or Decimal System." They point out that there is a large body of responsible opinion which is strongly opposed to change in the existing British coinage and weights and measures. They admit that difficulties have arisen in working the two systems in combination, but claim that they have been greatly exaggerated, and are for the most part of a purely arithmetical character. Our correspondents continue :—

"Those who are in favour of such a change argue that the only possible course to adopt is to abolish by legislation the existing British standards weights and measures, and to substitute the metric or decimal system, which, as should be well known, has its own inherent defects and limitations, even when compared with our own. The difficulties involved in such a course are admitted to be great, even by those who advocate the change. The cost to the nation would be enormous, and, while involving all businesses, would benefit mainly the largest and those engaged in foreign trade. The time necessary to bring into operation so far-reaching a revolution would be considerable. On the conclusion of peace, trade, and especially foreign trade, will call for the highest energies of this country, and the nation which is most ready to resume foreign commerce will stand to gain proportionately. To select such a time as this for inaugurating so far-reaching a change, with its inevitable scrapping of our existing system of book-keeping, weights and measures, would be an act of doubtful wisdom, even if the ultimate necessity could be proved up to the hilt, and there were no alternative course to adopt.

"Fortunately for the interests of this country, this is not the case, and it is possible at the same time to maintain our existing system, while bringing its use into harmony with the requirements of foreign trade, and at last enabling commercial men in this country to compete on equal terms with their Continental concurrents. The adoption of such an alternative has been rendered possible by a simple and ingenious method, which enables anyone, in buying, selling, or cataloguing, to calculate British prices in any foreign currency, weight, or measure, or *vice versâ*, by the simple multiplication of the price by one factor. The principle applies to every calculation, no refernce to or knowledge of the difference in weights, measures, and currency being required. Moreover, it is equally applicable to every country in the world, so that foreigners can adopt it with equal facility. The necessary tables are being revised and checked for publication, and will be ready shortly."

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned :—

	1916. Francs.	1917. Francs.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

Throgmorton Street,
London, E.C.

Business has been interfered with this week by the Whitsuntide holidays, but during the few days that our market has been open there has been a continuation of fairly general activity amongst Egyptian shares, and only the scarcity of sellers has prevented the transaction of a large business. Egypt is still buying, and local interest here is also growing.

In Government stocks, Unifieds, after some very temporary offering at 83, firmed up again to 83¼. Prefs. 3½ per cent. have continued to be wanted without business taking place in the absence of sellers. National Banks have been a strong market, and are ½ higher at 14⅛, but very little business has been done because hardly any shares are offering. Agriculturals have remained a firm spot, and look an improving market, and Agricultural Prefs. are also again slightly higher at 7 5-16. Agricultural Deferred shares have now recovered the dividend of £40 recently deducted, and are again in demand at something near £400. Land Banks are again higher at 5¾, but here again there are no sellers.

In Land shares, Aboukirs have been done at 16s. 3d., and, for the moment, this transaction has absorbed the cheap shares which were offering. A feature has been the continuous rise in Behéras, which have risen another point this week to 10; but transactions have been few and very difficult to effect, because holders here have been very favourably impressed with the marked improvement in this company's position, as shown in the annual report for 1916.

A fairly large business has been done in Delta Lands and New Egyptians round the improved prices of 10s. and 11s. respectively. As regards New Egyptians the annual report for 1916 just issued is a very satisfactory document, and the shares appear to be one of the most attractive purchases in the whole market.

Some few hundred Union Foncière shares floating about were taken round 25s., and now buyers are bidding 26s. 6d., whilst sellers are asking much higher prices. United Egyptian Lands are also rather firmer round 10½d.

Salts and Sodas have changed hands at 23s., and Khedivial Mails, on further buying from Egypt, have risen 1s. to 32s. 6d.

In Greek bonds there has been practically nothing doing beyond a few minor transactions. Rentes, however, are a rather weaker market, whilst Currant Bonds have been done at 90.

Oil Shares.

This market has been generally dull. Anglo-Egyptian "B" fell 6d. to 13s. 9d.

Paris Bourse.

Quotations on Wednesday included the following:—Egyptian Unified, 91.80 (against 92); Turkish Unified, 64 (unchanged); Credit Foncier Egyptien, 692 (against 693); Ottoman Bank, 435 (against 431); Suez Canal shares, 4,350 (against 4,340).

THE MONEY MARKET.

(FROM OUR CITY CORRESPONDENT.)

LONDON, Thursday.

No disturbance was caused in the short loan market yesterday by the final call of the War Loan, a fact for which we must thank the arrangement by which the joint stock banks are permitted to retain the money for a fortnight before handing it over to the Bank of England. The range of business yesterday was 4 to 4¾ per cent., most transactions going through at from 4¼ to 4½ per cent. Weekly loans 4¼ to 4½ per cent.

Exchange on Alexandria last night was from 98 to 98⅝.

DIVIDENDS, PAYMENTS, Etc.

The Bank of England announces that 414 Four per Cent. Egyptian Government Irrigation Trust Certificates, amounting to £41,400, have been drawn for redemption on July 1, 1917.

The directors of the Imperial Bank of Persia announce an interim dividend for the half-year to March 20 of 3s. a share, free of tax. Payable June 18.

IT COSTS A SMALL PIASTRE

Famine in the HOLY LAND

(Reproduced by permission of "The Times.")

The recent victory near Gaza means that we shall be able almost immediately to follow up the Allied advance with FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the inhabitants. The demand for adequate funds to provide all these necessaries has now become one of the *utmost urgency*.

To relieve the starving peoples in SYRIA and PALESTINE £50,000 is needed at once.

In the land where Christ walked and taught and died, thousands of people—not Turks, but Christians, Jews, and Arabs—are in the last stage of destitution through the cruelties which they have suffered. Unless supplies can be sent immediately it will be too late to save the lives of many of these poor people.

MISSIONARY SOCIETIES of ALL denominations have united to carry out this great work.

A strong administrative Committee is now at work, plans for relief are already made, and goods stored in Egypt ready to be poured into the country, by sea or rail, as soon as access is obtained. The Fund will be economically administered by those who know the country and people best, and relief will be given to all, irrespective of race or creed.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110, Victoria Street, Westminster, S.W. 1.

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: the Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

The above-mentioned books, or any other publications, may be obtained, at the published price, post free in the United Kingdom, or on remitting 6d. for postage abroad, from

The Near East, Ltd. (Book Dept.) **1, Devonshire Sq., London, E.C.2.**

NOTES OF THE WEEK.

The news from Russia has been more definite, but hardly more favourable, during the week. Along the front it has again been reported that fraternising with the enemy has ceased, or is about to cease, but there are no signs of movement, and Professor Masaryk, who has been for some weeks past in Petrograd, telegraphs to *The Times* that, as regards the Russian Army, "it is my opinion that the Allies will do best, if they prepare for the worst, or at least for a minimum, which would be that the Russians would merely hold their positions and detain a portion of the enemy armies on their front." It would appear from this that all hope of a Russian offensive must be abandoned in the immediate future, and, indeed, the reports and remonstrances and resignations of Russian generals during the past few weeks have led to the same conclusion. That the fighting spirit still survives, however, at least in some quarters, is shown by the plea of the Cossacks that a part of the front shall be definitely handed over to them, and there have been other signs that the work of reorganisation continues side by side with disorganisation, but at a slower pace.

The actual offensive operations on the Eastern front have been confined to the south-east section and the Black Sea. A successful naval raid has been carried out near the Anatolian coast, in which munition dumps, barracks, and factories were destroyed, and 147 enemy sailing vessels, laden with supplies, were sunk. It would appear from this that the Turks presumed too far on the inactivity of the Russian Fleet, and that the internal difficulties under which that squadron has laboured have been overcome. At the same time, it is announced that the Roumanian Army has been reorganised, and is now ready for action. Seeing these troops now, writes a correspondent, it would be almost impossible to guess that they were the same men as those one saw last autumn. The drill and discipline were perfect, a spirit of confidence once more prevails, and it is said that the Army is now adequately munitioned. Clearly, no time has been wasted during the winter. A section of the Army has made a thrust forward in the Putna Valley, and it is evident from remarks in the German Press that the enemy are under no illusions as to the possibility of withdrawing troops from the Moldavian front. It may be noted that M. Albert Thomas, the French Minister, has been at Jassy, on a visit of inspection, and has expressed his appreciation of Roumanian military efficiency in high terms of praise.

The key to the position on the Russian front is, of course, to be sought in the internal condition of Russia. The Republic has by no means settled down after its convulsion, and a certain feeling of disappointment is apparent in many quarters at the time taken to set its house in order. M. Kerensky, in a notable phrase, has announced that "after touring the whole of Russia and the front, I can affirm that what has hitherto been regarded as the dying agony of our Army was nothing else than the laborious travail of the new Russian State." Unfortunately, it was announced almost contemporaneously that an agitation has been set on foot against this Minister, presumably on account of his determined desire for an active prosecution of the war, and a remarkable article has appeared in the organ of the Council of Workmen's and Soldiers' Delegates, again affirming that no offensive will take place until all the Allies have accepted the formula of "No annexations and no indemnities."

It is plainly impossible for a belligerent to prosecute a war effectively while it possesses two Governments with divergent aims, and it may be suspected that in the long run the historic Russian attitude towards the Balkans and the Caucasus will oust this high-sounding phrase, since the old national aspiration was founded on past history and present economic necessity. When the "no annexations and no indemnities" theory of peace is critically examined indeed, it crumbles to pieces, from whatever side it is discussed. The enemy Governments will have none of the *status quo*, whatever their Socialists may pretend; our own attitude has been exposed by Lord Robert Cecil and Mr. Asquith (and even Mr. Philip Snowden does not deny that Belgium must have reparation); the French Government, through M. Ribot's energetic declaration this week, has repudiated it; and the United States, which may, perhaps, be considered the most disinterested of the Powers, insists on restoration and reparation in Belgium and France. In these circumstances the Russian theory can hardly be seriously maintained as a permanent aim. Possibly Mr. Henderson's presence in Petrograd will help to clear up this difficulty.

A statement has been made by the Petrograd correspondent of the *Daily Telegraph* as to the actual aims of the Russian Council of Workmen's and Soldiers' Dele-

Digitized by Google

gates. Their desire is, of course, to reconstruct international socialism in order to bring about an immediate peace, it being hoped that the proceedings at Stockholm will carry sufficient moral weight with the various belligerent Governments to compel them to come to terms. After that, we presume, the millennium is to be immediately proclaimed. The idea is ingenuous, but the Petrograd Socialists do not seem to have realized that the programme is in flat contradiction to the promised offensive after the Entente have agreed with the Russian demand for no annexation. Nor do they appear to have realized the difficulty of getting the German Majority Socialists to carry out the part assigned to them in the programme. Probably the conference at Stockholm, which is being written down in advance as a failure in the German Press, will let in some light on that matter.

Meanwhile the Russian Minister of Commerce has resigned, on the ground that no Minister can avert an economic catastrophe, and has stated openly that the whole industrial life of Russia is collapsing. The diagnosis may be dismissed as an exaggerated pessimism, but there are, for the moment at least, disquieting symptoms. Unskilled workmen are demanding wages of five hundred pounds a year for four or five, or at most eight hours' work, and skilled workmen a thousand a year. In such circumstances the owners of factories are naturally faced with the alternative, either of shutting down work or of handing over their business to the workmen to run themselves; in either event production will not be helped. There are accounts, too, of anarchist processions in the streets, and of citizens taking the law into their own hands. Conditions like these can hardly persist for long, if order is to be evolved out of chaos.

An ingenious Bulgar overture has been made to Russia. M. Rizoff, the Bulgarian Minister in Berlin, has written to Maxim Gorky advocating a separate peace, announcing that Germany is willing to evacuate Russian territory—it is not stated whether the offer includes Poland—and desiring an immediate armistice pending the convening, as soon as possible, of the Russian Constituent Assembly. The point of historical interest in this document is that it mentions that in the middle of February, a month before the revolution, a similar letter was written by the same Minister to the Russian representatives in Christiania and Stockholm, and again, immediately after the revolution, to the same effect. The reply to the former epistle is not given, but in the latter case a reference was made to M. Miliukoff's declaration that there could be no question of Russia concluding a separate peace. Immediately after M. Miliukoff's resignation, however, the pertinacious diplomatist apparently thought that the omens were more favourable, and made a third attempt. The only comment necessary is that given by Maxim Gorky himself, who characterises the proposal as "abominable, insolent, and stupid." It would be unwise to argue from this little intrigue that Bulgaria is suffering from war-weariness; the place of origin suggests that it is another attempt on the part of the German Government to divide the Allies. It may be noticed that the letter makes no mention of any evacuation of Serbia, nor does it hint at a restoration of Roumanian territory. Possibly M. Rizoff, with clumsy tact, thought those subjects best avoided.

The Austrian Reichsrath has met, after an interregnum of three years. Apart from the young Emperor's plea for an agreement with the "great friendly nation" of Russia, which may be taken for what it is worth, the proceedings were chiefly remarkable for the immediate claims put forward by the Southern Slavs. M. Stanek announced that he and his colleagues desire "the union of all the branches of the Czecho-Slav peoples into a democratic State; and the leader of the Southern Slavs, M. Konosetch, insisted on the union of Croat, Slovene, and Serb territories, with an autonomous free State of democratic type, constitutionally free from all foreign domination, but under the Hapsburg dynasty. It may be suspected that the last qualification was put in as an afterthought, to gild the pill for Austro-German taste. The gilding was not, however, successful. The German newspapers and their Vienna correspondents have made wry mouths at the unpleasant dose, which was not the less nauseous because it was anticipated. Three years of war have done nothing to crush the nationalist sentiment of the Southern Slavs, and they are not more reconciled to the Bismarckian theory, that Austria is a house built of bad Slav bricks and good German mortar, than in 1914. The mortar, indeed, appears increasingly friable.

The minority Socialists of Germany have put forward a Balkan programme. They demand for Serbia a free approach to the sea (presumably in the Adriatic) and a guarantee from Austria for a friendly commercial policy in the future. Who is to guarantee the guarantor is not stated. There is no direct reference to the Southern Slav question, but, as it is stated that the division of the Dual Monarchy is unnecessary—although extensive reform is required—it may be taken that the most advanced section of German opinion cannot stomach a Southern Slav State. Poland is to become independent—its limits are undefined; and there is, of course, to be peace without annexation or indemnities. But the minority wing appear to have found that phrase crumble in their hands, since they add that the cost of economic reconstruction, in the case at least of Belgium and Serbia, is to be defrayed by all the belligerents in proportion to their economic strength. In other words, the bitten is to help the biter; and, since German newspapers are already discussing the repudiation of the national debt as a possibility of the post-war period, it does not require an inspired prophet to perceive that the cost of economic reconstruction would fall on to the Entente. The minority wing should try again before Mr. Ramsay Macdonald happens to pass through Stockholm, or he will come back with Dead Sea fruit.

Of recent weeks, when it has been possible to locate the losses to shipping caused by mines or submarines, the Mediterranean appears to have claimed the majority of the victims. If this be the case, it is evident that the situation would have been much worse had Salonika remained in Greek hands, at the disposal of the Germans and Bulgarians. The marked diminution in the shipping losses during May strengthens the British Prime Minister's suggestion that the reason is to be found in part in the unexpectedly early improvement which has taken place in dealing with the submarine menace. It is natural that this improvement should apply first to British home waters; but in course of time it should be possible to extend the methods now found to be successful to the Mediterranean. When a similar improvement can be shown there as well, we may hope that the great Army of the Orient, whose activities have been so circumscribed in the past, will be in a position to render a better account of itself.

The appointment of a Government Commission in Egypt to examine a scheme for the provision within thirty years of efficient schools for the use of the whole of the juvenile population of both sexes is rightly characterized as an important step in the educational history of the country. It is a natural outcome of the new status enjoyed by Egypt. At this stage we would express the hope that the Commission will divest itself of preconceived notions regarding elementary education that may be based exclusively on the experience of Western lands. No doubt the young Egyptian must learn to read and to write; but his future, as his past, is linked up with the soil, and care should be taken that the learning which is to be instilled into him does not weaken, but rather strengthens his attachment to agriculture. In other words, an agricultural or technical tinge ought to be given to the education that the youth of Egypt is to receive.

M. Venizelos, who has emphatically declared that he is not a republican, in an interview with Signor Chiesa, which is published in the *Morning Post*, remarked on the same occasion, "I do not understand why Italy's foreign policy should be so distrustful towards us. The proclamation of a protectorate over Albania by Italy during the week will hardly diminish the distrust on either side. Italy formally guarantees the unity and 'independence' of Albania under her protection, invites the Albanians to take the oath of loyalty to her, and promises the usual benefits of civilisation—free institutions, gendarmerie, tribunals, and schools, which may or may not be valued across the Adriatic."

It would appear that the protectorate includes Northern Epirus—according to Signor Chiesa the Italian occupation now extends well into that region, besides including not only Valona and the immediate hinterland, but the country as far as the Kalamas and Vojusa Rivers. The Italian statesman does not believe in the need or the advantage of a permanent occupation of the whole of this territory, but he insists that Valona, Janina, Old Arta, etc., must remain Italian for strategic and sanitary reasons, among the latter being mentioned the necessity for draining the pestilential marshes which affect the health of Valona. He holds, however, that Corfu, which is now occupied by French colonial troops from Senegal and Madagascar, must eventually be handed over to Greece—any other course, in his opinion, leading to irredentism, the seed of future wars, or to an international occupation of the island, which he utterly condemns. These statements perhaps do not carry us very far on the road to an Italo-Greek accommodation, which seems as remote as ever. In the meantime, as a mere matter of practical politics, it must be recognised that while Greece remains divided under two Governments and Italy is united under one, the advantage of the game is all with Italy—and the worst enemies of the statesmen of Rome have never accused them of stupidity.

King Constantine continues to play for time and the harvest. If he can hold out till the crops are in, and is allowed by Allied diplomacy to gather the fruits of the earth in due season as a result of their easy-going ways, he may hold out through the winter, and in a year many things may happen. It has been rumoured again that he is thinking of abdicating, but creaking monarchs hang long on their hinges, if they are not too roughly used, and nobody can contend that King Constantine has been roughly handled. It would probably be wise to disregard such rumours until the event proves them well founded. The King will not go until he can stay no longer.

Military news has been lacking from Mesopotamia, but a medical bulletin which has been issued this week is highly satisfactory. The number of sick has dropped in May by 60 per cent. in comparison with a year ago—a very gratifying result of the improved medical service, which will, we hope, be as successful during the hot weather ahead. A year ago, as is now admitted, the conditions of service on the Tigris were scandalous; the medical equipment and the staff were utterly inadequate, and in the end the position became so evident that it could only be half-heartedly defended even by those who were responsible. It may be expected that some additional light will be thrown on this neglect, which has cost many valuable lives, when the report of the Mesopotamia Royal Commission is issued. We do not gather that even now the conditions are any better than they should be, but with the best facilities in the world, medical science is necessarily somewhat handicapped in such a country. All that one asks is that it should not be needlessly handicapped by the parsimony or neglect of the authorities, and that somewhat obvious consideration seems at last to have obtained rather belated recognition.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 14.

The King's Accession Day.

The anniversary of the accession of King George was celebrated quietly in Cairo. Telegrams of congratulation were addressed by the Sultan and the Prime Minister to his Majesty, who sent a gracious reply in each case. All Government offices were shut on this occasion, in accordance with the order in force since the declaration of a Protectorate over Egypt that the King's accession and birthdays should in future be kept as public holidays.

H.H. the Sultan.

H.H. the Sultan has left Cairo for his estates at Gabares, where he will spend about ten days. His Highness will then return to Abdin Palace for a few days; afterwards, accompanied by the Ministers, he will proceed to Alexandria for the summer. Owing to the lighting restrictions, the Sultan will not be able to take up his residence, as usual, at Ras-el-Tin Palace. He will only use it for official receptions, etc., during the day. H.H. the Sultana, who has happily made a complete recovery from her attack of measles, has also gone to Gabares. Before his departure the Sultan called on the High Commissioner and Lady Wingate at the Residency. According to present arrangements, Government will move officially to Alexandria on the 25th inst., and the Residency will follow a few days later.

The Greek Colony.

The British authorities have at last authorised the creation of special courts, to be administered under the auspices of the Provisional Government representatives. The authority has taken the form of a notice, signed by General Sir Archibald Murray, published this week in the official journal, to the effect that commissions had been issued to M. Antoine Sachtouris, Diplomatic Agent in Egypt of the Salonika Provisional Government, and other legal and consular officials to form courts and otherwise administer justice in respect of Greek subjects who have adhered to that Government and accepted the protection of the G.O.C. the British Forces in Egypt. As all Venizelist adherents must prove, when they come before the new Courts, that they previously depended from the Royalist Consulates, and, as it was feared that the latter might create difficulties by refusing or delaying the issue of the requisite documents, the British authorities have intervened and it has been arranged that the Royalist Consulates will hand them over their archives. This arrangement has afforded much satisfaction to the colony, and it is expected that matters will henceforward proceed quite smoothly.

The Capitulations Commission.

The Capitulations Commission is hard at work, and continues to hold its bi-weekly meetings. It has written to the Native Bar to ask for its observations on various points of the Civil Law, and has circularised the various Government departments to inquire as to the effect which the Capitulations have on the execution of the duties falling to those departments and on the enforcement of the administrative regulations at present in force. As one might be led to expect from the nature of its constitution, the Commission is going very thoroughly into all matters upon which the Capitulations or their abolition may have an effect. The annual report of the Judicial Adviser will shortly appear. I understand that it will contain several chapters of topical interest.

The University Question.

At a meeting held this week the Administrative Council of the Egyptian University decided that admittance to the ordinary courses should henceforward be free, that the fees for special courses should be reduced by half, that evening lectures on general useful subjects should be given, that regular courses of economics and science should be instituted, and that the study of Semitic literature and languages should be re-established. It is perfectly obvious to everyone that these decisions are a final effort on the part of the Administrative Council to attract students to the Egyptian Univer-

Digitized by Google

sity before the recently proposed State University comes into being and deprives the older institution of its *raison d'être*. It is, however, a foregone conclusion that the latest facilities will prove no more successful in increasing the number of would-be graduates than were those offered in the past, for the simple reason that the Egyptian University is neither constituted nor run as a proper university, and consequently holds out no more —if indeed as much—attraction to students than a series of night classes on special subjects might afford them. Certainly this last desperate effort to swell the numbers on its books, even if successful in its immediate object, will not save the Egyptian University from the doom which the creation of the State University holds in store for it, and the sooner the Administrative Council recognises that it has failed in its mission and submits to the inevitable, instead of wasting time and money on a forlorn hope, the better it will be for all concerned.

The Late Sir Armand Ruffer.

There have been several public tributes to the memory of Sir Armand Ruffer. A memorial service was held at St. Mark's Church, Alexandria, where the attendance was unprecedentedly large, and included Mahmoud Fakhry Bey, First Chamberlain, representing H.H. the Sultan; Mr. D. A. Cameron, C.M.G., British Consul-General, representing the High Commissioner; the members of the Quarantine Board and of the Municipal Council, representatives of the naval and military authorities, and practically every prominent European and Egyptian resident. At meetings of the Quarantine Board and Municipal Council eloquent speeches to the memory of, in the first instance, their president and, in the second, their vice-president were delivered by various members. It was decided to give the name of the eminent doctor to one of the principal streets and to a park in the city, and both bodies, after deciding to convey to the family an expression of their lively sympathy, suspended their deliberations as a sign of respect for their late colleague.

Our Convalescents.

A monster fête was given to the convalescent soldiers in Cairo by the Y.M.C.A. in the Esbekia Gardens on Saturday last. Over 3,000 men were entertained at tea, which was served by lady residents, and thoroughly enjoyed the sporting competitions and side-shows which had been provided for them. In addition to these latter, the Lena Ashwell Concert Party and the Fra Bentos gave several entertainments, whilst the band of the Welsh Fusiliers contributed the musical part of the programme. The fête ended with a most picturesque torchlight tattoo. The High Commissioner and Lady Wingate visited the gardens during the afternoon, and remained a long time watching the scene. Before he left Sir Reginald Wingate addressed the men, congratulating all concerned on the success of the fête and calling for three cheers for Mr. Jessop, the secretary of the Y.M.C.A., to whose organisation that success was entirely due.

THE SUN OF CIVILISATION.

At a meeting of the Société Internationale de Philologie, last week, Mr. M. A. Ghani read a highly original, if somewhat fanciful, paper on the rise and fall of civilisations. By his theory, there is a zone of civilisation lying between the Tropic of Cancer and about the latitude of London, and it is within this zone that all the great civilisations of the world have arisen. Pekin and New York are on or near the equator of this zone, which is at 38½° north latitude. There is an ecliptic along which travels the sun of civilisation. This ecliptic crosses the equator of civilisation at Mecca, which thus becomes the Greenwich of the zone of civilisation. The centres of civilisation arise along this ecliptic, consequently east of Mecca they have arisen to the south of the equator of civilisation, and west of Mecca they have arisen to the north of it. The sun of civilisation moves westward along its ecliptic, and as each nation comes under its rays so it arises and develops. At midnight the nation is enslaved and dominated by another nation; then comes daybreak, morning, noon, when the nation is at the height of its power, and dominates other nations; afternoon, evening, and again night. The fact that civilisation has not always moved regularly from east to west, Mr. Ghani explained by saying that when the sun of civilisation was directly over a nation, the sun might be covered by clouds of ignorance for a time, or it might be eclipsed. But those clouds would be dispelled and the eclipse would pass, and at such times we saw civilisation moving from the west to the east, instead of following its normal course from east to west.

ARCHÆOLOGICAL NOTES.

BY JOSEPH OFFORD.

The Ancient Egyptians.

The view that the people, or race, generally known as the "Ancient Egyptians,"—by which is meant the descendants of the conquerors who, on their entering Egypt, were known as "The Followers of Horus,"—were closely connected with the inhabitants of Elam, or Lower Babylonia, has frequently been advocated in recent years. The chief ground for this idea was that the early dynasty kings adopted for their signets cylinder seals precisely similar in shape and usage to those common then in Susa and Mesopotamia. Such cylinders were made for impressing the reliefs which they bore by rolling them upon soft clay, such as that of which Elamite and Babylonian tablets were made, a special substance not procurable in the Nile Valley. This led to this type of signet being gradually abandoned in Egypt and the scarab form taking its place. If, however, the Horus tribes were really possessors of a culture emanating from West Asiatic sources, there should be further evidence of this than the cylinder seals. The earliest art workmanship we have from the primitive Egyptians shortly subsequent to Menes is that depicted in reliefs upon the so-called Slate Palettes. One of these out of the six or seven yet known bore an ornamental design derived from the excessive prolongation of two animals' necks. This concept was directly similar to that upon an Asiatic cylinder.

The question has now been more decisively illustrated by the carvings upon an extremely early ivory knife or dagger handle purchased for the Louvre at Nag Hamadi, in Egypt, and published by M. Bénédite in the "Monuments et Memoires" of the French Academy. The similarity of its craftsmanship to that of the Slate Palette designs is self evident, especially in the forms of two dead warriors, and of the boats depicted, which agree with those shown upon Egyptian prehistoric pottery. But one scene, which may be termed heraldic, shown upon this Egypto-African relic, is of absolutely Elamite or Babylonian—that is to say, Asiatic—type. It displays a king, or hero, dressed in a long tunic, and so probably an inhabitant of a colder country than Babylonia, such as Elam or Persia. He stands between two rampant lions, not of any African species, which seem to have dense hair and manes. He wears an Asiatic style of head-dress, and his long hair appears to rest upon his shoulders. Had this single one of the six or seven reliefs upon this ivory carving been found by itself, it would certainly have never been considered to be ancient Egyptian work, so undeniable are its Asiatic affinities; yet its other scenes are quite as undoubtedly Egyptian in character. This relic is, therefore, a convincing proof of the connection of the primitive Pharaonic invaders who succeeded the earliest Nile Valley inhabitants with the peoples upon the Persian Gulf.

Nadir Shah's Invasion of India.

In these terrible times, when the very flower of mankind in Europe and the Near East is being destroyed because of the lust of conquest of only a few individuals, the story of a great war of aggression, the particulars of which are not very completely known, is of great interest. Such a recital may be found in the translation by Yakoub Artin Pasha, of Cairo, of the journal of a certain Tambouri Aroutine, who accompanied the Persian, Nadir Shah, during his conquest of India.

Aroutine (or Haroutioun) is an Armenian title, and he was an Armenian Turkish subject who was a member of the suite of Mustapha Pasha, the Turkish Ambassador sent by the Sultan Mahmoud I. to Nadir Shah in A.D. 1735. Aroutine, upon the Ambassador's return to Constantinople, remained in personal service upon Nadir Shah as a musician and "professor" of some kind for five years, and during that time accompanied the royal invader of India throughout all his progress.

The manuscript of Aroutine's journal is now at Venice, and is written in the Turkish language, but in Armenian characters, and was copied from an older text in 1794 for the library of the St. Lazarus Convent at that city.

The story begins with the siege of Kandahar, and goes on to describe the march of the Persian Army through Afghanistan and the Punjab to Lahore and the invasion of Sind. The translation occupies more than sixty closely-printed pages of the *Bulletin* of the "Institut Egyptien" of Cairo. Aroutine, whilst describing Asiatic warfare, gives no incidents of horror similar to those resulting from German frightfulness to-day. But, being in the victor's retinue, he would probably not have mentioned much of the bloodshed and misery if he had witnessed any.

TANGIER TO TEHERAN.

We have had reports of many strange happenings in Russia during the past week, and the cranks and riders of hobbies in that great country seem to be getting out of hand. Of the political aspect of these things it would be unbecoming for a frivolous individual like myself to write. But there is another side to them, and one which seems to fall well within my province. The humour may be of a grim, a dangerous, kind, but it is there. For instance, the mention of Kronstadt, of which place Mr. Max Pemberton and other writers of fiction had accustomed us to think with a kind of awe, will in future call up smiles rather than shudders. Just now the smiles are likely to be of a rather twisted kind, no doubt. But when we read M. Lamanoff's phenomenally grave statement that since he "became President Kronstadt's policy towards the war remains unchanged," we must smile, must we not? Let us be thankful that we are in a position to do so.

***

But Kronstadt is not alone in its determination to set things in order at home while holding itself ready to give the enemy "a warm reception." Did you read the Reuter's message describing the relations between the "commander" of the Black Sea Fleet and his sailors? In case you may have missed it, I reproduce it below; for it is a gem beyond price, and nothing more delicious could have been produced by the late lamented W. S. Gilbert himself:—

> PETROGRAD, May 31.—Following a Press report that a quarrel had broken out between Admiral Koltchak, Commander of the Black Sea Fleet, and the Sebastopol Council of Workmen's and Soldiers' Delegates, and that the Admiral had resigned, the president of the Delegates of the Black Sea Fleet, a sailor named Batkin, declares that there has been no question of a quarrel, but only of an unimportant difference of opinion, due to a misunderstanding. Batkin adds that the Admiral enjoys, as hitherto, the full confidence of the whole squadron, and that consequently he will remain at his post.—*Reuter.*

It is so very satisfactory to find that, after all, there has been no real *quarrel*—nothing but "an unimportant difference of opinion due to a misunderstanding." But infinitely more satisfactory is it to be assured by M. Batkin, A.B. (?), that the Admiral still enjoys the confidence of his jolly boys in blue, and that "consequently" he will remain at his post. That "consequently" is worthy of Pooh Bah himself.

***

His Excellency the Serbian Minister has, I see, been telling a Dundee journalist that the Serbian boys now being educated in that town "are clamouring for the kilt." He went on to remark that this was a remarkable tribute to what Scotland has done for Serbia, because "Serbians are very individual, and seldom copy other people." This, no doubt, is perfectly true, but I should not be surprised if the liking for colour had something to do with the craving for kilts. Passing up Regent Street the other day, I saw in one of the shop windows a tartan that was about the most colourful thing I have set eyes on for a long time; and I could almost "fancy myself" in a kilt of such a pattern. That, however, is a digression. All I wish to indicate is that the colour sense may have as much to do with the desire for kilts as the feeling of gratitude. The Minister, by the way, pointed out that the Scots and the Serbs are much alike in many ways. "Serbia has been well described as the Scotland of the Balkans, and there is a remarkable temperamental affinity between the two peoples. Even in their national music there is a similarity. The violin, to the sound of which Scotsmen delight to dance, is beloved by every Serbian; while the bagpipe is one of their national instruments." But if this be so, what about the Serbians being the "Irish of the Balkans," as they have so often been called? If I might venture an opinion, I should say that their likeness to the Irish is much greater than to the Scots.

***

As an illustration of the gentle art of how not to do it, a paragraph, headed "The Traitor King," published in the *Daily Express* of May 31 is of interest. The Royal Greek Legation in London, it appears, sent the *Express* a communication beginning: "A telegram from Salonika, which appeared in the *Daily Express* of May 8, raises the question of the hostile intentions of the King of Greece towards the Allied Powers." Personally, I should not have thought there could be any "question" to raise on the point at this time. However, the Royal Greek Legation proceeded to inform the *Express* that it was authorised to declare that King Constantine and his Government "have never had any hostile intentions towards the Entente." Now, in so doing, the Royal Greek Legation acted unwisely. For the Editor of the *Express* politely indicated that no such telegram had appeared in his paper; but added: "But we have repeatedly called attention to the treacherous attitude of King Tino towards the Allies, the notorious and numerous instances of which place beyond question his support of German aims." Which must strike the Royal Greek Legation as painfully plain speaking.

***

A certain amount of amusement can easily be obtained by reading the impressions of Baghdad that have been written by so many of our soldiers, and published in so many of our papers. One of these brave fellows writes thus (in a letter to his parents, which is published in the *Yorkshire Observer*) of his first impressions of Baghdad:—

> "When at last the city 'swims into your ken' you catch your breath at the sight. Each side of the stream is lined with buildings of surpassing beauty. Minaret after minaret and dome after dome loomed into sight as we turned the bend, each one appearing more beautiful than the last. Graceful towers—all leaning slightly towards the sun, as is usual in the East—glorious in shimmering tilework of turquoise, yellow and brown, with here and there a low dome just distinguishable through the noonday haze, brought to mind fairy-book pictures of one's childhood. Large and beautiful residences, schools, colleges, and official buildings surrounded by gardens, lovely as only Oriental gardens can be, lined each bank."

I wonder whether the writer suffered disillusionment so bitter as that of another soldier, who, in a letter reproduced in the *Western Morning News*, declares:—

> "Yesterday I made an exhaustive perambulation of the town, and have come to the conclusion that if one wants to have happy impressions of Baghdad one should be content with a survey of the river front. The palatial residences along the Tigris are but a veneer hiding from sight a smelly cesspit of diseased, ill-clothed, and ill-housed humanity. Such a description would fit most Eastern places, but Baghdad had a glamour about its name which led one to expect better things. A Suddar bazaar in India would give points to Baghdad bazaars for cleanliness."

Alas! for the City of the Khalifs!

***

Of course, both these writers are giving their very early impressions, and I suspect that, after a longer stay in Baghdad, both will revise their views considerably. The optimist will become somewhat less enthusiastic, the pessimist a good deal less ready to condemn. After a long acquaintance with the city, I should hesitate to endorse either of the views of it given above. Baghdad never struck me as possessing any buildings of surpassing beauty, though the mosque of Abd el Kader is fine, and some bits of the old walls, gates, and mosques are attractive, while several of the minarets are really graceful. But, on the other hand, the bazaars have a charm which not all their dirt and all their thousand and one evil odours can rob them of; and the people of the city are not quite so "ill clothed" or "ill housed" as our second soldier scribe appears to think. Their garments are adapted to the climate, and their houses are as much so as they can afford to make them. And not a few of the private residences in the lanes far from the river bank are distinctly pleasant buildings, as, I hope, the disenchanted soldier may soon discover.

CORSAIR.

PARCELS FOR PRISONERS IN TURKEY.

The Secretary to the General Post Office states that, according to information furnished by the Swiss Post Office, the transmission of parcels addressed to prisoners of war in Turkey (including civilians) is again suspended, and until further notice such parcels cannot be accepted at post-offices. The parcels on hand will be returned to the senders. Letters for prisoners of war in Turkey are still being forwarded.

The Jewish question in Roumania is not to be among those to be brought before the coming Constituent Assembly, although the Premier (M. Bratiano) declares that the Government are considering it, and Lord Robert Cecil made a similar statement in Parliament last week (says the *Jewish World*). We observe that the Roumanian Jews themselves announce that they do not desire to add to the national difficulties by bringing forward their grievances during the war; but M. Bratiano himself states that the time for this is "opportune." Frankly, we imagine that the modesty of our Roumanian coreligionists does little service to the country, for it would be a source of strength to Roumania (as well as to her companions in arms) if she brought herself into line with Russia and the Allies in general on the question of Jewish freedom.

NEAR EAST BOOKSHELF.

A STANDARD WORK ON SERBIA.*

The people of Great Britain have paid dearly for their lack of interest in the Balkans and for their failure to appreciate the importance of the position which the Near East holds on the flank of one of the main arteries of the British Empire. By the time when events in that part of the world arrested public attention those who were able to impart knowledge of Balkan affairs had for the most part fallen under the spell of one or other of the rival nationalities, and their views were coloured accordingly. "In the Balkans," our author states in his preface, "history is a sort of pacific warfare in which every native scholar is a general." He might have added, continuing the metaphor, that nearly every foreigner is a military attaché, who sees the campaign solely through the eyes of the general to whom he has been attached. Captain Temperley has achieved a notable success in giving his readers a strictly impartial history. The book, he tells us, is the fruit of some years of travel and study in the Near East. He has been fortunate enough to approach his subject without prejudices; he envisages the Balkans as a whole, and his sympathies, springing from personal acquaintance with the land, are wide enough to embrace the entire Peninsula, without being tinged by the miasma of racial antipathies. Captain Temperley is not merely an interested traveller, he has established his position among our younger historians, and in this volume he gives a complete and scholarly record of the Serbian nation. It is an axiom to say that the modern history of the Balkans is unintelligible without reference to that past in which Serbian, Bulgarian, and Greek still move and live and have their inmost being. But we are glad to see that our author also gives prominence to the influence of geography on the evolution of these peoples, whose fortunes have, after all, only been as tangled and uneven as the physical features of the lands they occupy. In this connection he makes the interesting point that the unity of the Jugo-Slav race, which has recently gained so much prominence, was an impracticable dream until man, who "is at the mercy of geography," could tunnel mountains, dry up marshes, and render rivers navigable. Apart, however, from the broken surface of their country, the Serbians have occupied an unenviable position between upper and lower millstones. In this respect their position has been reproduced among other peoples, both mediæval and modern; but the Balkans have been particularly unfortunate in being the narrow passage through which so many warring streams have sought to force their way.

Serbian troubles, however, have not come entirely from without. The statement that the Slavs as a race are devoid of political ability our author considers to be putting the case "with too great strength"; but he does admit that the social institutions of the Slavs hindered political unity and military efficiency. The subject leads to an interesting discussion of Serbian mediæval society, and the influence of the Zadruga on the nation's development. It is to be feared that the tradition of political unwisdom has been perpetuated in Serbia unto a late day; for there can be few Serbians who, in the light of all that has happened, would not gladly have the opportunity of rewriting much of their history even of the last fifteen years. But the ordeal can hardly fail to bear its predestined fruit:—

Powerful neighbours made it clear to Serbia that if she did not obey them they would compass her destruction, and thus offered her the choice between dependence and extinction. There was no doubt about the choice or about the decision. If Serbian statesmen retained any illusions in 1906, they could not have preserved them after 1909. Yet with the consent of the nation they then made a choice which they knew to be irrevocable, and pursued a path which they saw to be full of peril. Serbia was bound by a chain to the heroic memories of Kara George and of Kossovo, and prized national independence above every material gain. Sooner than forget the past she preferred to endure the present and to risk the future, and by this final decision asserted her right to be a nation.

A history of Serbia is not complete without a discussion on the Macedonian question; and it is here that Captain Temperley contrives to hold the balance so fairly between the warring nationalities. His summing up of the problem is as follows:—

Bulgarian claims to Macedonia rest on some centuries of rule and on two empires; Serbian claims rest on one short-lived empire and upon two centuries of confusion, during which Serb princelets ruled Macedonia. Yet Serbian architecture has left deeper traces on fortress, convent, and church than Bulgarian ever did, thus proving that an influence may be more enduring than a domination. It is certain that the bulk of the Macedonian population is Slav; it is by no means certain that it is Bulgar. There is much, therefore, to be said for the view that the real population is neither Bulgarian nor Serbian, but halfway between the two. . . . There is a Macedonian language and a Macedonian race, which can understand the tongue and adapt itself to the customs of either Bulgarian or Serbian, but which is in itself independent of either. Given the necessary time, money, intimidation, inducement, and educational pressure, the Macedonian can probably be assimilated to one or other competing race. But if the history of past ages is really to have weight, Slavonic Macedonia should be autonomous and independent. On the other hand, if history is to be disregarded and expediency advanced as the principle, then the settlement depends not only on existing conditions in Macedonia, but upon the balance of power outside it.

The latter, it is to be hoped, will ultimately be eliminated by the circumstance of the Balkan States realising where their real interests lie and, having adjusted their differences, coming together for the purposes of a Balkan Federation, which will be strong enough to secure complete freedom from all outside interference.

Not the least valuable part of the book is the careful record of the course of events which preceded the present war. The gradual evolution in Austria-Hungary of the conviction that Serbia must be broken in order that an Austro-German path might be cleared to the Ægean and Asia Minor, and the sudden realization by Serbia of the danger confronting her are well brought out. Captain Temperley writes freshly, and is to be congratulated on a valuable contribution to the literature of the Near East.

* "History of Serbia." By Captain H. W. V. Temperly, M.A., F.R.H.S. (London: G. Bell and Sons, Ltd. 10s. 6d. net.).

BOOK NOTES.

Mr. Humphrey Milford is publishing a new edition of "Observations on the Mussalmans of India," a book which was originally published nearly ninety years ago. It was written by Mrs. Mir Hassan Ali, an Englishwoman married to an Indian Moslem; and the new edition is edited by W. Crooke.

Messrs Melrose will publish shortly "In Salonika with Our Army," by Second Lieutenant Harold Lake, Middlesex Regiment.

Messrs. Nelson have just issued a new and cheaper edition (9d.) of Mr. Marmaduke Pickthall's "The Children of the Nile."

Messrs. Chatto and Windus have now issued the new edition of Lord Lytton's "Serbski Pesme" to which reference was made in these notes a few weeks ago.

Sir James Frazer's "Pausanias and Other Greek Sketches" has now been added to the Eversley Series with the title "Studies in Greek Scenery, Legend, and History."

BOOK RECEIVED.

The Scene of War. By V. C. Scott O'Connor ("Odysseus"). (Blackwood and Sons. 5s. net.)

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

June 5.

The Position in Mesopotamia.

Sir A. Williamson asked whether the Leader of the House could give any information as to the military position in Mesopotamia.

The Chancellor of the Exchequer: I have not received the notice of the question, but in any case there is no fresh information that I can give the House.

M. Venizelos and Thessaly.

Mr. Lynch asked the Under Secretary for Foreign Affairs whether, in view of the reports that Thessaly was a place where pro-German intrigues and pro-German plots and plans were actively fomented, he would advise that the area of authority of M. Venizelos might be extended.

Lord R. Cecil's written reply states: No, sir; I could not pledge myself to the particular solution of the Thessalian question recommended.

It is stated by the *Temps* that, as a sequel to a telegram of congratulation on the successes of the Italian Army addressed by the King of Montenegro to the King of Italy, the Montenegrin Ministry has resigned.

King Ferdinand of Bulgaria, accompanied by M. Radoslavoff, the Bulgarian Prime Minister, is expected shortly in Vienna on a visit to the Emperor Charles.

General Sarrail has decorated a dozen of the higher officers of the British Army, including two generals, with the Legion of Honour. He himself wore the star of the K.C.M.G.

The Dardanelles Commissioners met at the House of Lords on Tuesday, and further considered their report.

President Irigoyen has given a favourable reply to a Jewish delegation which waited upon him to request the intervention of the Argentine Government in order to bring about the cessation of massacres in Palestine.

Under date of June 6, Reuter's Teheran correspondent reports:—Brigadier-General Sir Percy Sykes and staff have arrived here, and he has been received in audience by the Shah. Sir Percy Sykes will enter into a contract with the Persian Government with regard to his taking up the duties of Instructor to the new gendarmerie force, in accordance with the Anglo-Persian agreement of April last.

BIRTHDAY HONOURS.

The following are among the honours granted by the King on the occasion of the celebration of his Majesty's Birthday :—

BARON.

MAJOR-GENERAL SIR IVOR HERBERT, BART., M.P.

Sir Ivor Herbert was created a baronet in 1907. He has been Liberal member for Monmouth since 1906, and is Lord Lieutenant of the county. He served in the Egyptian campaign in 1882 and in the Nile Expedition of 1884-5. He was Military Attaché at St. Petersburg from 1886 to 1900. He commanded all the Colonial troops in England at the Queen's Jubilee in 1897. He was Assistant Adjutant-General of the South African Field Force, 1899-1900.

IRISH PRIVY COUNCILLOR.

MAJOR THE EARL OF ARRAN, K.P.

The Earl of Arran has served with the Egyptian Cavalry, and commanded the R.N.G. Squadron Household Cavalry in the South African War.

KNIGHTS.

FRANCIS H. BARKER.

Sir Francis H. Barker is a son of the late Alfred Barker, of Constantinople, and Elmfield, Esher. He was very actively interested in the development of the Parsons turbine, for both land and marine, in Europe, and is a director of Vickers, Limited, and chairman of the Russo-British Chamber of Commerce. He married Aimé de Vere Vere, eldest daughter of the late Arthur de Vere Vere.

GRIMWOOD MEARS.

Sir Grimwood Mears is Secretary of the Dardanelles Commission.

THOMAS ERSKINE HOLLAND, K.C., LL.D.

Sir Erskine Holland is an authority on International Law, and the author of "The European Concert in the Eastern Question" and many other works.

WILLIAM WATSON.

Sir William Watson is a well-known poet, author of "The Purple East," etc.

G.C.M.G.

SIR FRANCIS EDMUND HUGH ELLIOT, G.C.V.O., K.C.M.G.

Sir Francis Elliot has been his Majesty's Minister Plenipotentiary at Athens since November, 1903. He entered the Diplomatic Service in 1874, and was at once appointed to Constantinople, where two years later he became Third Secretary. In 1878 he was transferred to Vienna, and his next move (1879) was to Rio de Janeiro. After serving at Stockholm and Lisbon he returned to the East, going to Cairo in 1884. Thence he was transferred to Paris, where he acted as Chargé de Affaires in 1888 and 1889. In 1890 he was promoted to Secretary of Legation at Athens, where he acted as Chargé d'Affaires on several occasions. And in 1895 he was sent to Sofia as Agent and Consul-General in Bulgaria.

K.C.M.G.

HERBERT GUY DERING, M.V.O.

Sir Herbert Dering, who is now H.M. Minister Plenipotentiary at Bangkok, served, when a Third Secretary, at Constantinople (1896), and was (in 1897) granted an allowance for knowledge of Turkish.

HERBERT EDWARD WHITE, C.M.G.

Sir Herbert White has been H.B.M. Agent in Morocco since 1914. He has a close acquaintanceship with that country, dating back to 1880, when he accompanied Sir J. Drummond Hay on his Mission to the Sultan of Morocco.

GEORGE RUSSEL CLERK, C.B., C.M.G.

Sir George Clerk, who is now serving in the Foreign Office, was formerly in the Diplomatic Service, and was attached to the Embassy at Constantinople up to the eve of the declaration of war.

HONORARY K.C.M.G.

MONSIEUR LE COMTE DE SERIONNE.

Agent Supérieur of the Suez Canal Company.

C.M.G.

NEVILLE TRAVERS BORTON PASHA.

Borton Pasha is Postmaster-General in Egypt, a post he has held since 1907; and he has done much to make the Egyptian postal service one of the best in the world. Born in 1870, he joined the Egyptian Army in 1897, and took part in the operations on the Nile the same year, receiving the medal and clasp; and subsequently took part in the operations that ended in the Battle of Omdurman (1898), and those south of Khartoum (1899). Entering the Sudan Civil Service in its earliest days, he held various important appointments—Inspector of Dongola Province, Director of Prisons and Police, Director of Customs. In 1905 he retired from the Egyptian Army and became Assistant Postmaster-General. He is a Pasha of Egypt, and holds the Osmanieh and the Mejidieh decorations.

LIEUT.-COLONEL GEORGE STEWART SYMES, D.S.O.

Colonel Symes was formerly Private Secretary to the Governor-General of the Sudan and Assistant Director of Intelligence, Sudan Government. He is the eldest son of Lieutenant-Colonel W. A. Symes, 71st Highland Light Infantry, and entered the Army in 1900. He has seen service in South Africa, 1902, where he secured the Queen's Medal with two clasps; in the Aden Hinterland, 1903-4, he won mention in despatches and the D.S.O.; and in the Blue Nile Expedition of 1908 he won the medal. He holds also the Osmanieh (4th Class) and the Order of the Nile (3rd Class).

LANCELOT OLIPHANT.

Mr. Oliphant, who is now in the Foreign Office, was Acting Third Secretary at Constantinople in 1905-06, and in Teheran in 1911.

JOHN OLIVER WARDROP.

Mr. Wardrop, who is now H.M. Consul at Bergen, has served as Acting Consul-General at Galatz and at Tunis, and in Bucharest from 1906 to 1910.

CAPTAIN G. A. LLOYD, M.P.

Captain George Ambrose Lloyd, M.P., who is in the Warwickshire Yeomanry, was about twelve years ago an Honorary Attaché to the British Embassy at Constantinople. Later he undertook a mission into Mesopotamia to investigate trade conditions and report upon various subjects to the Government. Last year it was understood that he had left for the Near East upon another mission of a somewhat similar character.

MAJOR D. L. R. LORIMER, I.A.

Major Lorimer is British Consul for Kerman and Baluchistan, and ex-officio Assistant to the Political Resident, Persian Gulf. He served as Vice-Consul, and later as Consul, at Ahwaz, and as Political Agent at Bahrein before going to Kerman.

MAJOR T. H. KEYES.

Major Keyes belongs to the Political Department, Indian Government, and was for some time Consul for Seistan and Kain.

CAPTAIN H. H. THORBURN.

Captain Thorburn, who belongs to the Indian Medical Service, is serving with the South Persia Rifles, Shiraz.

CURIOUS FISHES OF PALESTINE.

At a meeting of the Société Internationale de Philologie last Thursday, Dr. Henri Léon described some of the fishes of Palestine. He said that about fifty different species of freshwater fish were known to exist in the country. One of these was the silurus, spoken of by Josephus, who called it the coracinus, and described it as inhabiting the fountain of Capernaum, and as coming thither by a subterranean communication from the Nile. To-day, said Dr. Léon, the Arabs called the fish the barbour. It squeaked and shrieked with a hissing sound like an angry cat at bay. The cyprinodon was a fish that swarmed by myriads in the little thermal and saline springs fringing the shores of the Dead Sea. The temperature of some of these was 91 deg. F., and the water in which the fish lived was almost as dense and salt as that of the Dead Sea; which, in many cases, during gales, overflowed the lagoons. Yet the fish that throve and multiplied in the lagoons died in the sea. Another curious fish was the chromis simonis. The eggs of this species were carried by the male in his mouth for several days until they hatched. Another fish, called by the Arabs umyan-samak (the blind fish), was described as inhabiting a pond in the cavern in the cliffs of the Lake of Gennesarat. The cliffs, said Dr. Léon, are about 1,200 feet high, and the cavern, known as the Kal'at-Ibn-Ma'an, is an almost inaccessible labyrinth, connected by passages and protected by walls. The pond is fed by a secret spring, and empties itself into some undiscovered subterranean tunnel. Its water is of a tepid heat, and the fish, which are about ten or twelve inches long, present no appearance of possessing any visual organs. Concerning this fish there is told the following legend.—Three Christian maidens, Eusebia, Hissteria, and Ermelinda resolved to concentrate their virginity to religion. However, their parents resolved they must marry; so they fled to this cavern and remained hidden there. It was on their nuptial day, and they were followed by their sweethearts and others into the cavern. But these pursuers, on entering the cavern, were immediately struck blind. When they came out again their sight was restored to them, but there were some more venturesome than the rest who followed the maidens into the interior of the cavern. These were changed into the blind fish and for ever incarcerated in the cavern.

The lecture was illustrated by the exhibition of several specimens of Palestinian fishes, and by small marl and shells gathered by the Lake of Gennesarat.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars apply to E. DENISON ROSS, Director.

Digitized by Google

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. June.	1917. May.		1335. Shaaban	5677. Sivan
8	26	Friday	17	18
9	27	Saturday.....	18	19
10	28	Sunday	19	20
11	29	Monday	20	21
12	30	Tuesday	21	22
13	31	Wednesday	22	23
14	June 1	Thursday	23	24

Sunday is the birthday of little Prince Emmanuel of Montenegro, the third son of Prince Miko, who was born at Cettinje in 1912.

Monday is the birthday of Princess Olga of Greece, eldest of the three daughters of Prince Nicholas, who was born at Taloi in 1903.

Next Thursday is the birthday of the Queen of Greece.

The King of Greece and the rest of the family will reside at Tatoi from June 10, but will visit the Villa Castella, between New Phaleron and the Piræus, for the sea-bathing.

The *Gazette* of last Friday contained the announcement :—His Majesty the King has been graciously pleased to appoint General Sir F. R. Wingate, G.C.B., G.C.V.O., K.C.M.G., D.S.O., to be a Colonel Commandant, Royal Artillery. Dated May 17, 1917."

General Georgescu, of the Roumanian Military Commission, returned to London on Friday evening from the North of England.

The Norwegian Minister on Wednesday visited M. Gennadius, Diplomatic Agent of the Greek Provisional Government.

The Egyptian Government has nominated Sir Henry McMahon as their representative on the board of the Anglo-Egyptian Oilfields, in place of the Hon. Hugo Baring, who is serving in the British Army.

The Dean of Rochester, who, at the request of the Archbishop, has been to Egypt and Cyprus in connection with the National Mission, returned to Rochester last week.

Prince Soutzo, formerly Military Attaché to the Roumanian Legation in Paris, has been appointed to a military command on the Roumanian front.

The Pope has received the cordial thanks of the British prisoners interned at Castamouni, in Asia, for the gifts of clothing and musical instruments sent through Mgr. Dolci, Apostolic Delegate at Constantinople.

Colonel Borisavitch, Chief of the Serbian Red Cross, is leaving England after a short stay, which he has spent visiting Red Cross institutions here. He will go first to France, and afterwards to Serbia.

Dr. L. Lyoubishitch, Chargé d'Affaires of the Serbian Diplomatic Agency in Cairo, died suddenly a short time ago.

M. Deligeorgis, an Attaché to the Greek Legation in Paris, left London on Sunday for France.

Commander Papalexopoulos, Commander Yarmikosta, and Captain Zavos, Greek naval officers, have arrived in London.

M. Cafendaris, formerly Greek Minister of the Interior, has arrived in London.

M. Spyro Saltaferas, Secretary to the Royal Greek Legation, is leaving London this week for the Legation at The Hague, to which he has been transferred.

The engagement is announced between Beryl, the youngest daughter of the late Mr. George Armstrong, who was with Lord Kitchener in the exploration of Palestine, 1877-8, and Lieutenant G. Alan Morris, of the Intelligence Corps.

A marriage has been arranged, and will take place shortly at Port Said, between Major Henry Beaumont, Lancashire Fusiliers, youngest son of Mrs. Beaumont, Rhoscolyn, and the late Henry Beaumont, Grantham, and Dorice, youngest daughter of the late Alfred Hoole, of Hallam Gate, Sheffield, and of Mrs. Feilding, Port Said.

The marriage arranged between Captain Basil Hamilton Hebden Spence, M.B., Royal Army Medical Corps, attached Egyptian Army, eldest son of Mr. T. W. L. Spence, C.B., of Uyea, Uyeasound, Shetland, and Margaret Alice, only daughter of the late George Hunter Mackenzie, M.D., and Mrs. Mackenzie, 44, Inverleith Row, Edinburgh, took place quietly at St. Saviour's Church, Paddington, on May 31.

Reuter's Amsterdam correspondent passes on the following telegram, which has been received there from the Agence Milli of Constantinople, *viâ* Berlin :—"The son of the British Minister, Bonar Law, and Captain Farb Shmorless Selly (*sic*) have not been made prisoners on the Sinai front, either wounded or otherwise."

The *Frankfurter Zeitung* publishes a message from Constantinople stating that Mr. Elkus, the American Ambassador to Turkey, would leave Constantinople on May 29, accompanied by Mrs. Elkus and twenty-six members of the Embassy staff. The party was to travel through Vienna and Switzerland to Berlin, where Mr. Elkus was to stay some time. We are unable at present to state what credence should be attached to this message. It will be remembered that the departure of Mr. Elkus from the Turkish capital was delayed by his being the victim of an attack of typhus.

A Reuter's message from Athens, dated May 31, reports :—The British Legation makes the following announcement :—"Lieutenants Burns and Campbell, members of the Port Control Office, were leaving the Aktaion Hotel at Phaleron in uniform, after dining with General ——. Suddenly a man, who had apparently been lying in wait, came up and stabbed them. Lieutenant Burns was dangerously and Lieutenant Campbell seriously wounded. The man was overpowered by other British officers and handed to the Greek police. Sir Francis Elliot to-day called on M. Zaimis in reference to the affair, and a written statement will be communicated to the Prime Minister as soon as the depositions of the wounded officers have been taken. The motive of the act is at present a complete mystery." An earlier Reuter message, after briefly reporting the incident, stated that although Lieutenant Burns was gravely wounded, his condition was not despaired of. The same message gave the assailant's name as Cavourakos and his calling as that of a tailor.

An Amsterdam telegram states that Jonkheer Dr. C. van Vredenburch, Dutch Minister at Bucharest, has been appointed Minister to Sweden, Denmark, and Norway.

A lieutenant, writing to his parents at Middlesbrough, states that W. R. Applegarth, the champion runner, is now a corporal in the Army Service Corps at Salonika. The champion has evidently lost none of his old form, as he took part in four sprint races in the British Army championship sports, and was an easy winner in each.

A recital of Serbian church music (with English words) is to be given in the Church of St. Augustine, Queen's Gate, S.W., on Saturday, June 9, at 5 p.m. His Excellency, the Serbian Minister, will be present, and a collection will be made for the Serbian Red Cross Funds. Cards of invitation may be obtained from the General Secretary of the Anglican and Eastern Association (27, Finsbury Square, E.C.2).

We are informed that the Orphanage of the Armenian Red Cross and Refugee Fund, which is open at Alexandropol for Armenian refugee children, urgently needs support, and that more regular subscribers would be especially welcome. The establishment costs 1,000 roubles a month to maintain, and is the only orphanage in the Caucasus provided and maintained by a British fund. Contributions in aid should be forwarded to Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W.4.

If you are willing to help

THE SERBIAN ARMY

SEND YOUR DONATION FOR

THE SERBIAN RED CROSS

to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the

RELIEF OF THE DISTRESS OF THE SERBIAN CIVIL POPULATION

at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

Digitized by Google

On May 30, in Cairo, the wife of Mr. Ernst R. Matthaei, of the Khedivial Schools, gave birth to a daughter.

In connection with the Birthday Honours List, the Secretary of the War Office announces that a list of rewards for distinguished services in Mesopotamia will be published in the *London Gazette* about the end of June.

"The news that Ismail Janbolat has been appointed Turkish Minister at Stockholm has created much quiet amusement in certain circles in Egypt, where the true character of this budding diplomatist is only too well known," says the Cairo correspondent of *The Times*. "Of Caucasian origin, Janbolat was a member of the Turkish Parliamentary Delegation which visited England in 1909 and was acclaimed as the herald of the new 'Liberal régime in Turkey.' . . . On the outbreak of war, Janbolat was appointed Chief of the Secret Police in Turkey, and co-operated with the utmost vigour with Talaat Pasha and Bedri Bey in organising and carrying out the hideous Armenian massacres. Here he showed himself worthy of his clan name, Jan-Pulad, that is, 'steely soul.' With Bedri Bey he acquired considerable wealth as the result of those massacres. Both are reported to have had a hand in the murder of Colonel Churchill in 1914. Such is the man selected to represent Turkey in Sweden, where the real object of his mission is to intrigue with certain Russian elements to bring about not a separate peace between Russia and Turkey, but a suspension of hostilities on the Caucasian front, a scheme presenting obvious advantages from the Turkish point of view."

A solemn requiem for Field-Marshal Earl Kitchener of Khartoum and his Personal Military Secretary, Lieutenant-Colonel Oswald FitzGerald, was sung on Tuesday morning (the anniversary of the loss off the Orkneys of his Majesty's ship Hampshire) at the Church of St. Matthew, Great Peter Street, Westminster. Among those who attended were Viscountess Broome, Mr. and Mrs. J. Monins, Mrs. Thornton Kitchener, Captain the Hon. Evelyn FitzGerald, Sir George Arthur (formerly Private Secretary to Earl Kitchener) and Lady Arthur, Mr. Creedy (representing the Earl of Derby, Secretary of State for War), Field-Marshal Lord Grenfell, Lieutenant-General Sir John Cowans, Q.M.G., Adeline Duchess of Bedford, Admiral Lord Beresford, Colonel Lord Ardee (commanding the Irish Guards), Lord Colum Crichton-Stuart, Lady Edward Cecil, the Hon. Sir Sidney Greville, Major-General Sir Percy Girouard, Brigadier-General Hugh Sutton, Colonel Buckley, Major Lancelot Storr, Miss Chenevix-Trench, Dr. Scott, Mr. William Murray, Mrs. Adair, Miss Balfour, Mrs. Stewart Buckle, Mrs. Velasco, Miss Bond, Mr. Marsh, Mr. Kekewich, Canon Woodman, and Lieutenant-Colonel H. R. Lordly.

The invitations to an "At Home" issued by the Committee of Ladies of the British Refugees from Turkey Fund to all those English families who have, owing to the war, been obliged to leave their homes in Constantinople, Smyrna, and other cities in Turkey, and who are now temporarily resident in England, brought together about one hundred and fifty ladies and gentlemen, although we observed that there were many absentees. The happy idea and kind thoughtfulness of Lady Neave, Lady Lowther, Lady O'Conor, and Lady Barker enabled many old friends to meet for a couple of hours' friendly and sympathetic conversation which would not have been possible otherwise; besides which, one noticed many familiar faces of former residents in the Near East, who, by their presence, testified to the pleasant recollections they must still cherish of their residence in that interesting and fascinating part of the world. All those present greatly enjoyed the gathering, and the ladies who organised it earned the heartiest thanks of the company, and are to be warmly congratulated upon the success of their plan.

OBITUARY.

Lord St. Audries died on Monday evening, at St. Audries, Bridgwater. He was, of course, best known as a politician, and one of the most popular Whips the Unionist Party ever had; but in his younger days he was a soldier, and he saw active service in the Egyptian campaign in 1882. For his services he was awarded the medal and clasp, the Bronze Star, and the Order of the Mejidieh (5th Class).

Major Guy Thwaites, D.S.O., of the Egyptian Army, was drowned on May 29 by the capsizing of a small steamer in a hurricane on the White Nile. He was the fifth son of the late Rev. H. G. Thwaites and of Mrs. Clara Thwaites, of 14, Cambridge Park, Durdham, Downs, Bristol. He was educated at Malvern College and St. Paul's School, London, and took his B.Sc. degree at St. John's College, Cambridge. He then took a commission in the A.S.C. in 1901, and served in the South African war. In June, 1914, he was seconded for duty in the Egyptian Army, and took part in the Darfur campaign of 1915, when he was mentioned in despatches and received the D.S.O. He was returning from the Nuer Expedition in the Southern Sudan to Khartoum when he met his death.

It is announced from Cairo that Prince de Airerino-Wiszniewski died in that city on May 12 at the age of fifty-five. He is succeeded by his only son, Prince Alexander. Owing to the war, his elder daughter, Princess Irene, now in London, was unable to travel.

It is announced that Major Arthur Austen Macgregor Layard, Royal Engineers, died on June 5 as the result of a motor accident while on military duty. He was eldest surviving son of the late General Frederick Peter Layard and eldest surviving nephew of the late Sir Henry Austen Layard, K.C.B. He was fifty-nine years of age, and entered the Service in 1877, retiring with the rank of major in July, 1895; he was re-employed for service in the present war. Major Layard was with the Sudan Expedition from Suakin in 1885, and took part in the actions of Hasheen and Tamai; he had the Egyptian medal with clasp and the bronze star.

It is announced that Brigadier-General Lewin Barlow Walton, Indian Army, has died on service. He was born in September, 1866, and had his commission in the Royal Irish Regiment in August, 1886; he transferred to the Cheshires in September of the same year, and in 1887 entered the Indian Army, reaching the rank of lieutenant-colonel in 1912, and he had his brevet of colonel in June, 1916. Before the present war he had seen a good deal of service. In the second Miranzai Expedition (1891) he received the medal and clasp; he had the two medals for the Dongola Expedition (1896); and he was awarded the medal with clasp for the North-West Frontier operations in the Mohmand country (1897-8).

DOMESTIC ANNOUNCEMENTS.

DEATHS.

AIRERINO-WISZNIEWSKI.—On May 12, in Cairo, Prince de Airerino-Wiszniewski, beloved father of Princess Irene Airerino-Wiszniewski, at the age of 55. Deeply mourned.

HAMSON.—On the 3rd inst., at 10, Linden Gardens, Annie, beloved mother of Hortense Hamson and Charles E. Hamson, H.M. Vice-Consul, of Constantinople, aged 80.

STEVENSON.—On May 28, at Nicosia, Cyprus, Robert Patrick Chalmers, the infant son of Malcolm and Mabel Stevenson, aged two months and eleven days.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, JUNE 8, 1917.

ITALY AND ALBANIA.

The proclamation at this stage of the independence of Albania under the protection of Italy is likely to be received with mixed feelings. That Italian aspirations ran in this direction was well known; and it was equally certain that the Allies would raise no objections whenever the Rome Government chose to take the step. Valid considerations, we must infer, have caused the present moment to be selected, and perhaps they are not far to seek. With the gradual extension of the Italian sphere of influence radiating from Valona the indeterminate relationship between the Italians and the Albanians became more and more anomalous. A definite attempt was made to introduce a settled form of government. The territory occupied by the Italian army had been divided into three districts, in two of which the administration was in Albanian hands under Italian supervision. A court of law had been established in Valona, and five other towns had local tribunals; schools had been opened at various centres. Then came the announcement that "a free and independent republic" had been inaugurated at Koritza under French auspices. When due allowance is made for local enthusiasm and journalistic hyperbole it is possible that the French meant to do little more than encourage the inhabitants of the town to look after their own municipal affairs. It may have been thought that an object lesson in the disinterestedness of the Allies would lead the Albanians to recognize where their real interests lay; but the immediate result seems to have been the elimination of Greek intrigue from the neighbourhood of Koritza without any military effort on the part of the French. From the Italian point of view, however, it might well be considered embarrassing to have one part of Albania under Italy's protection and another part under the ægis of France. Again the unsettled condition of northern Epirus into which the Italian occupation had gradually been extended, partly as the outcome of the friction between the Greek Royalist army and the Allies, may have prompted the Italian Government to regularize its position in Albania in order that it might be the better able to deal with any developments in Greece. Yet another explanation of the proclamation suggests itself in the success which the Italian régime is held to have achieved in Southern Albania. However much the Austrians have contrived to propitiate the Northern Albanians, they will not have offered them either independence or free institutions, and the knowledge that these had been granted in the south could hardly fail to give rise among the northerners to comparisons between Austria and Italy, much in favour of the latter.

The wording of the Italian proclamation, it is to be hoped, will allay all misgivings in the minds of those who worship at the shrine of anti-annexation. Selecting for the auspicious event the anniversary of the establishment of Italy's own constitutional liberties, the Italian Government proclaimed at Argyrocastro on June 3 "the unity and independence of all Albania under the ægis and protection of the kingdom of Italy." By this act, the message went on to declare to the Albanians, "you will have free institutions, troops, law courts and schools directed by Albanian citizens; you will be able to manage your properties and the product of your labour to your own advantage, and for the ever-increasing well-being of your country." It is unfortunate that at this time the Italian occupation should only cover about one-third of Albania. The remainder of the country is in enemy hands, and the inhabitants, whether under coercion or from an instinctive love of fighting it is difficult to say, are offering strong resistance to any advance of the Allied troops. But the intention of the Proclamation is clear. Under an Italian Protectorate the Albanians are to be given full opportunity to work out their political salvation. They will have all the material advantages that the Italian occupation will bring, in the opening up of the country by means of roads and railways, and in its pacification. The past history of Albania has shown that there was little prospect of the people achieving ordered government, if left entirely to themselves. Tribal divisions and religious differences are too marked to allow the policy of "Albania for the Albanians" to be applied in its entirety, until the country has passed through a better administrative school than either Turkey or Prince Wied's Government provided for it. Under the peaceful and settled conditions which, it is hoped, will be established throughout Europe as a result of this war, and encouraged by the good example of their neighbours, the Albanians with Italian help should be able to compose their former rivalries and realize the advantages that they stand to derive from a united nationality.

As the only alternative to a protectorate seemed to be the disintegration of Albania and its partition into more manageable portions, the consensus of public opinion in the Allied countries ought to favour the step taken by Italy. On the other hand, it will be felt in many quarters that the Italian Government has been greatly daring. The Albanians have never proved docile subjects, and although some allowance must be made for the shortcomings of the governments that hitherto have been imposed upon them, there is little in their record to justify the expectation that they will take kindly to any administration which does not represent their own choice or secure their immediate approval. Italy's experiment, therefore, will be watched with the closest interest. It confirms the opinion already formed from the recent course of events in the Balkans that Italy alone among the Allies is not going to lose anything from inability to make up her own mind. She has shown herself to be the one Power committed to a definite policy in regard to the Near East, and so far she appears to have counted upon her Allies falling in with her wishes rather than to have displayed any special readiness to adjust her own views to the vacillations of the Entente. The establishment of a protectorate over Albania is to be welcomed, if it marks a definite stage in a comprehensive settlement of the Balkan question. Italy's claims upon the country were originally based upon the necessity of countering Austro-Hungarian aggression; but if, as may be expected, the break-up of the Dual Monarchy follows the war, the menace from this direction will no longer exist. With Valona as her Gibraltar on the eastern side of the Straits of Otranto and the whole of the Albanian coast under her protection, Italy's position in the Adriatic will be unchallengeable. She can afford, therefore, to adopt a more generous attitude towards the disposal of the Dalmatian coast, a subject which tended for a long time to be a bone of contention between Italians and Jugoslavs. With Trieste, a free port, and the western half of Istria in Italian hands, it is unthinkable that the new Southern Slav State should be shut off from a long stretch of the Adriatic by the presence of a small number of Italians along the Dalmatian coast. In the interests of all concerned we may hope that the British and French Governments have seen to it that an agreement was reached between Italy and the Southern Slavs on this subject, before their consent was given to the proclamation of a protectorate over Albania.

SERBIAN MEMORIES.

By ELBRIDGE COLBY.

I.—By Railway from Salonika to Nish.

Picture to yourself a train—not an ordinary sane and sensible sort of a train, but a train of the Balkans; a train without the ordinary intuition of a jackass; a train with one first-class carriage and—*mirabile dictu!*—a dining coach, which fed us as far as Skoplje and left us to starve for the next twelve hours. Into the one first-class coach try to put a few ordinary passengers, a Russian party of twelve, a Danish mission of twenty-one, and an American relief expedition of fifty-three; then what do you think the result will be? The Danes will overflow into the second-class compartments, and the Yankees will overflow still further into the third-class compartments. When, just short of Ghevgeli, it becomes necessary to change cars, there will be a general stampede, and the very corridors of the new carriages will be unbearably crowded, so that many have to take refuge from the congestion and the heat by riding on the very roofs. At each station the officials will approach and threaten not to leave till every one is off the roofs, and after every station is passed the crowds will clamber up again.

Such was the train in which we made the journey from Salonika to Nish.

The sights were as strange as the train. The land was very bare—not only bare and flat, but all dried and scorched by the hot summer sun. A bridge built on shaky piles led us over a river without water. Among the wheat fields some peasants were to be seen working, while others tramped the long, white roads into Salonika. And there were strange animals: a camel train plodded slowly along, some storks flew overhead, a turtle raised his head as we went by, and at Nilghan we saw water buffalo hitched to a cart, curious beasts. A few large houses far apart, with many disreputable huts, reminded us of old manorial days, and told of big landowners and enormous estates. Hay ricks, bamboo fields, incipient orchards, scattered tents in the open meadows for workers, well-baled hay at Kara-Oglou, freight cars adopted—rather than adapted—for military transportation. These were temporarily objects of interest.

Then we travelled through the narrow canyon defile of Demir-Kapou, and on up the valley of the Vardar towards Skoplje. Up the waterway of one river and down the waterway of the next we journeyed all afternoon and evening, winding between beautiful wooded hills, through the moonlight of summer time. It was a sight I shall never forget, that which I saw from the top of that railway carriage.

A rattling conversation on a train roof among the rocky turnings of the Balkan mountains passed the time pleasantly. The guards along the line of the rails who presented arms as we passed were our first acquaintances among the Serb soldiery, old men called to the colours. "Stravo brachu," we shouted at them in glee ("Hail, brother"). For we and all our fellow passengers had come a long, long distance to work in Serbia as brothers to these natives, to aid them in their severe struggles against disease and desolation. Their uniforms were quite different from the smart costumes of the Greeks we had seen in Salonika. A musket held over the shoulder by a piece of rope in place of a leather strap, nondescript clothes of all sorts, though usually a rough brown peasant suit, leather sandals, and above the greyish brown kepi which marked them as *militaires*. For, in Serbia, with the reserve forces used for this police duty, a kepi makes the soldier. Since the beginning of the war practically nothing in the way of uniforms had come into the country, save for a few British overcoats. "Nema," that word meaning "there is none," is characteristic. You meet it on every hand. And the number of things in that country of which there is absolutely none is positively appalling. A train like ours, crowded with relief expeditions, typified the need of the nation.

Thus we rolled on towards Nish.

II.—Nish in the Summer of 1915.

Crowded with hospitals, teeming with soldiers, beset by relief units, dirty, flat, dusty, hot, overcrowded, primitive—these are some of the epithets which come to the mind when we start to describe Nish. It is an imposingly monotonous town with great glaring open spaces, ill-paved streets, disreputable-looking houses, and—chiefly—the glare of a summer sun. Temporarily the capital of Serbia, it presents, for all that, a cosmopolitan appearance. Greek priests out of Macedonia on their way to Bulgaria, young troopers marching off to the front with a song on their lips and a flower in the muzzle of their rifles, dashing uniforms of Serbian officers, shuffling Turks with greasy turbans, and the foreign missions, English, French, Russian, Czech, Bohemian, Montenegrin, American—mission folk of many nationalities parade in the hot sunshine and gaze in amazement at the coffee-drinkers in the cafés, at the innumerable black flags which hang from the houses in sign of mourning, at the plodding ox-carts, and at the fresh peasant folk who have come in to market.

Several of the large open squares are crowded to overflowing one morning a week with the country people, and the grounds of the old church and monastery of St. Panthalay across the river present a colourful scene on each of the numerous Saints' *fête* days. In the improvised market places there are laid out on the stone cobbles eggs, apples, plums, prunes, huge heaps of the popular *paprika*, and chickens and geese tied together in pairs. There, in the dust and heat, the chief business of the town is transacted, to the cooling—or heating if you will—draughts of Shlivervitz and Komenovitsa from a hogshead in a near-by cart or a bottle in a neighbouring café. At times the roll of a drum is heard, an institution for official proclamations and public auctions.

On a Saint's day, take a walk along the popular promenade beside the river, hear a dozen languages spoken in a few minutes, glance at the old Turkish citadel across the water—older than Turkish perhaps, for Constantine was said to have been born there—pass over a shaky wooden bridge, whence you catch a glimpse of the muddy waters of the Nishava and of the surrounding high hills, traverse a winding road to the old monastic church, and see the Serbs in holiday attire. Quaint embroidered jackets, fancy shirts, plaid aprons or plain brown trousers, a necklace of gold coins which constitute the maiden's dowry, a white or yellow scarf over the head, a flower in the hair—such are the principal features of the "national costume," varying slightly in details for each district. Here, to the solemn beat of a drum and the monotonous shriek of a fiddle, the holiday makers dance an uninteresting and very fatiguing national dance—all in a long line with joined hands and beating feet.

Then, go to the railway shipping office or to some of the many, many Government warehouses and see cases and cases, hundreds of thousands of them, of clothes, cooking utensils, farming tools, blankets, overcoats, and all the other million and one odds and ends sent over for Serbian relief by various "Committees" and "Funds" in the cities of the outside world. Projects of free kitchens, baby hospitals, automobile transportation, Red Cross work, and relief expeditions of every sort and description are flying about from ear to ear. To listen to Dame Rumour one would think Serbia was

to be "relieved" so thoroughly as not to need even to breathe for herself for a thousand years. But go into a Serbian hospital, run by doctors educated in Paris or Berlin, and see how the Serbs seem never to learn anything, how they do not know how to keep either themselves, their wards, or their patients properly clean, how the word "care" does not seem to be in their vocabulary.

I did all these things. I saw the clean fine people from the country and the degenerate people of the town. I thought that Serbia ought really to be educated as well as scrubbed. For, if you must know, Nish, with all its interesting and varied panorama, is an epitome of Serbia. Skoplje and Belgrade are not. Belgrade is so close to Austria that "the little Paris," as they fondly call it, is more civilised in a Western way; and Skoplje has had only two years to be transformed from Turkish into Serbian, and so, to the eye of the traveller, to become worse. The glory of the fine Serbian countryside and the unendurable slackness of the Serbian towns are things which I cannot forget.

(To be continued.)

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"JEWISH CAPTIVES IN BABYLONIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read with much interest your correspondent's article in this week's issue of THE NEAR EAST entitled "Jewish Captives in Babylonia—Newly-found Records."

It is true that we do not know at what periods men of Hebrew race lived as citizens of Babylonia. Abraham, who dwelt at Ur of the Chaldees, was the first who bore the name of Hebrew, but in all probability men of his kith and kin visited, from time to time (and may, indeed, have settled in), that old homeland which, even to the Palestinian, appealed as a land of romance and of wonders dating from the remotest ages of Semitic history.

As your correspondent points out, however, it is especially during the period of the Captivity that really Jewish names occur—those seemingly Jewish names with which we meet at an earlier date may have been borne by other western Semites, indistinguishable (to us) from those of genuine Jewish nationality.

It must not be supposed, however, that Assyriologists—and especially British Assyriologists—have been neglectful of the occurrence of Hebrew names in the wedge-written records, or have left this field of research (apart from the brilliant work of our renowned savant, Prof. Sayce) entirely open to German scholars. This is not the case, and it may even be claimed that we have been pioneers in this branch of the study.

According to Gen. iv. 26, men began to call upon the name of the Lord—that is, Yahwah (Jehovah)—in the time of Enosh, son of Seth, seven or eight generations before Noah. It is therefore not surprising that both Yaum (Jah) and Yawaum (Yahwah or Jehovah) should have been well known in the ancient Mesopotamian world.

From time to time these divine appellations are found, generally as components in the names of men, and much has been written about them. The most noteworthy thing, perhaps, is the revival of the long form of Yah or Jah, as *Yaawa* or *Yâwa* (apparently equivalent to Jehovah) during the time of the Captivity. Prof. Clay, of Yale, found a number of these names, undoubtedly Jewish, on tablets of the Persian period found at Niffer (identified with the Calneh of Gen. x. 10), but previous to that, in 1892 (see the *Proceedings of the Society of Biblical Archæology* for November of that year), I had come across several names of this class on tablets sent from Abu-habbah (Sippar) to the British Museum. Among these names were *Gamar-yâwa* or Gemariah, *Nathanu-yâwa* or Nethaniah, *Banâwa* or Beniah, and *Aqabi-yâwa* or *Akabiah*. This was supplemented, in 1894, by a paper published in the Journal of the Victoria Institute (completed in August, 1895) upon "The Religious Ideas of the Babylonians," in which the additional names *Abi'yâwa*, a woman, *Azzi-yâwa*, *Hul-yâwa*, *Malaki-yâwa* or Melechiah, father of a man named Nerigal-êtir, and *Yase'-yâwa*, father of a woman named Tâbat-Issar, were given. Another noteworthy name was *Subunu-yâwa* or Shebaniah.

The number of the Jewish captives who had succeeded in life so far as to get their names recorded on the tablets (mostly business documents) is naturally small. Nevertheless, it is probable that the Jews had attained considerable influence in the land of their captivity, and this, in fact, they claim, not only in the Book of Daniel, but also in that of Esther, where, by the way, we meet with the well-known name Mordechai (better *Mardechai*), the Marodachite (worshipper of Merodach), and we shall probably not err very much if we see therein an identification of the Babylonian Merodach with the Hebrew Jah, or, possibly, Jehovah—Yah and Yahwah.—I am, etc.,

THEOPHILUS G. PINCHES.

June 4, 1917.

GREEKS AND BULGARIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. H. M. Wallis is determined to win for the Bulgarians the love, the admiration, and the gratitude of the Allied Powers, and of England in particular. That the Bulgarians have betrayed the Allied Powers and treated shamefully their former Allies, Serbia and Greece; that they were negotiating with them and at the same time signing treaties with their enemies; that for two years now Bulgarians have been killing English, French, Russians, Italians, Serbians, and Greeks, has no influence with Mr. Wallis. Bulgaria must be supported in her greed for lands inhabited by Serbians and Greeks. She may even claim Constantinople, now that the Russians do not want it, because the Serbians failed to beat Germany, Austria, Turkey, and Bulgaria, and because the Greeks, according to his estimate, are "*worthless*" (NEAR EAST, May 4, 1917). Who can dispute these arguments? A nation that has survived the vicissitudes and world changes of twenty-five centuries cannot but be a collection of worthless people, which must give way to the Bulgarian civilization. Why should not, not only Salonika, but Athens as well, become Bulgarian instead of being left to a worthless people?

I have just read Gardiner's "Outline of English History," B.C. 55 to A.D. 1902. On page 3 the author writes: "The first visitor who could write down an account of what he saw (in Britain) was a Greek." Mr. Wallis cannot have known it.—I am, etc.,

THEODORE A. BURLUMI.

June 4, 1917.

ARMENIAN ATROCITIES.

Last Tuesday, at a meeting of the Anglo-Russian Literary Society, held at the Imperial Institute, Miss Emily J. Robinson told the sad story of Armenia. She said the Armenians were a people of high character and great ability; to their race belonged some of the ablest generals in the Russian Army, as well as some of the leading lights in Russian literature. They were not an aggressive people, they had never attacked, but had always been the victims of others. After the Treaty of Berlin they had recognised that the best way to combat Turkish persecution was to stand up against their tyrants, and Russia and England might have helped Armenia more effectually had they assisted her in this effort. There had often been terrible massacre and suffering in Armenia, but never had the country gone through what it had suffered under the régime of the Young Turks.

In the course of a discussion that followed, Sir Edwin Pears said that the Young Turks were not to blame for recent massacres. They had done their best to act on high and noble principles, but they were hopelessly outnumbered in the Government. At the present moment the Turkish Government was two-thirds German, and the atrocities were of German organisation. The Young Turks had been struggling hard against it all.

Dr. Miller Maguire said that the Armenians were oases of prosperity in the desert of Turkish poverty and misrule. They fell victims on account of their wealth more than because of their religion or nationality.

Dr. Pollen said that the domination of one race over another was the root of the evil. We could never hope for a permanent peace throughout the world until we recognised that every man was entitled to live freely, following his own religion, and worshipping God in any way he chose without let or hindrance in the land in which he happened to have been born.

M. Albert Thomas, the French special envoy to Russia, has been visiting Jassy. He has been heartily welcomed by the whole Roumanian nation. He was most favourably impressed by one of the reorganised divisions which he saw at manœuvres, and spoke in the highest terms about the efficiency of these troops.

THE PRESS ON THE NEAR EAST.

The Albanians' Hope.

Miss M. E. Durham contributes to the *Saturday Review* (June 2) an article "Albania and the Albanians." She sketches the past history of the people in whom she is so interested with that sympathy that one always finds in her writings on the subject; and though she paints the past in dark colours—because she has to—she is hopeful of the future. She has just referred to the Prince von Wied's pitiful failure as the Mpret of Albania, and she continues:

But it is darkest before dawn. Albania hopes that the day for which she has struggled so long is coming at last. Sixty thousand refugees who have found shelter in America are awaiting the day when peace is proclaimed, and they may take up the work—with new-found knowledge—of reorganising their fatherland.

No one who knows the Albanian, his quick intelligence, his industry and energy, can doubt his ultimate success if given a fair chance. He is the artist of the Balkans, and his aptitude for trade is greater than that of any Balkan race, except, perhaps, the Greeks, while as a skilled craftsman he excels all other Balkan peoples. His silverwork, wood carving, and gold embroideries are to be found in the museums of Europe. But to do himself justice he must be able to call his soul his own. Each of the other Balkan peoples, on being given independence, has been given also the help and protection of some strong Power till able to stand alone. Let us hope that this time Albania will not be left to the mercies of an "International Control," which means that each nation concerned plays for its own hand, and the wretched protégé suffers. But may there be one strong protector to whose interest it will be to warn off all trespassers and see that Albania shall belong to the Albanians.

Her vital interests in the Adriatic point to Italy as best fitted to be that protector.

Autonomy under a European Prince as a protectorate would be gladly accepted by the Albanians, who, of all things, dread to see their country dismembered and themselves subjected to the rule of races whom they regard only as foes.

Miss Durham's hint seems to have been taken already! Many people in this country will echo her good wishes for the Albanians.

An Italian View.

On Tuesday the *Morning Post* published an article on the subject, by its Rome correspondent, who is very well informed regarding Greek affairs as well as Italian. He reports that Signor Chiesa, a Republican Deputy, "who recently defended Great Britain against the calumnies of the Germanophils in a debate in the Italian Chamber," has just returned from a journey across Northern Epirus and Albania to Salonika. "Knowing Signor Chiesa" (he goes on to say) "to be a careful observer from my experience with him during the Malissori insurrection in Albania in 1911, I have asked him to make a statement of what he saw during his recent tour of inspection."

The Italian occupation in Albania and Northern Epirus, he tells me, extends well into the Greek kingdom. Not only have the Italians occupied Valona and its hinterland, but they have passed a long way to the south of the boundary between Greece proper and Northern Epirus at Cape Stylos, and have extended in that direction as far as the River Kalamàs (opposite the south end of Corfu), which was intended by the 13th protocol of the Berlin Congress of 1878 and by the Berlin Conference of 1880 to have been the north-western frontier of Greece, but which, since the last Balkan wars, has been well within the enlarged north-western boundary. . . . To the north of Valona the Italian occupation goes as far as the River Vojusa, while inland the Italian outposts are at the Han of Kalibaki, on the road from Joannina to Premeti.

"I am opposed," said Signor Chiesa, "to the permanent occupation of these places, nor do I believe that the Italian Government intends to retain them. . . . But Valona, Kanina, Old Arta (north of Valona), the surrounding districts, and the islet of Saseno must remain Italian, not only for strategic, but for sanitary reasons, owing to the necessity of draining the pestilential marshes which affect the health of Valona. . . . M. Venizelos, with whom I spoke at Salonika, frankly recognised this occupation of Valona, Saseno, and the territory of Valona. The Italians have already constructed over 400 kilometres of roads and opened over 125 schools, where both Italian and Albanian are taught. . . ."

At Corfu Signor Chiesa found French Colonial troops from Senegal and Madagascar quartered in the former villa of the Kaiser, the famous "Achilleion," where is also a hospital for the French wounded. Corfu has an Italian post office; but Signor Chiesa does not think probable the permanent occupation of the island. "As Corfu," he said, "cannot be Italian, it ought to remain Greek. For, if this world-war has national justice as its object, no one ought to create for to-morrow Irredentisms, whether formal or substantial. Of course, we Italians could not consent to an international occupation of the island."

With regard to Albania proper, however, Signor Chiesa favours the retention of the Italian protectorate in such a manner that the representation of Albania abroad, and the direction of its foreign policy, should be in the hands of Italy, just as a guardian manages the affairs of a minor. This would, he thinks, avoid the competition of rival nations in that country. Similarly, France directs the foreign affairs of the Regency of Tunisia.

Miss Durham and Signor Chiesa thus advise the same solution of the Albanian difficulty.

Greece's Future?

The statement made by M. Venizelos regarding the impossibility of King Constantine keeping his throne led to some hopeful writing in our Press. As typical of the comments in the provincial journals, as well as the London Press, we quote this from the *Liverpool Daily Courier*:

Now, say various messages from the Near East, there are strong indications of coming big changes in Greece. Remembering that radical and salutary alterations have been threatened times almost without number, we find it impossible to expect very early what we could wish, except on the broad principle that the patience of the Allied peoples must sooner or later be so completely exhausted that drastic action will be forced on the Governments which, for reasons not yet even partially explained, have allowed the Greek monarch to befool them. At the same time, the omens are fairly favourable. The Venezelist soldiers fighting under Sarrail have proved their splendid worth in recent fighting, and this in no small measure has stimulated and stiffened the "national" feeling which is predominant in the greater part of Greece. The Russian revolution, too, despite the assurances that the changed conditions in Muscovy had rendered Constantine more amenable to the suggestions of the Allied Powers, has strengthened the movement in favour of a Greek republic.

The *Manchester Guardian*, too, welcomes the refusal of the National Government at Salonika to have Constantine for King:

We doubt whether there could be found a voice in this country which would not applaud them and would not demand that the Allies should withdraw their embargo, hand over the Greek fleet to M. Venizelos, and give him all other possible assistance by land and sea. The struggle of the Venizelist Greeks against the King is the cause of justice and freedom at its clearest, and these principles are such that honourable men cannot fight for them in France and treat them with a chill neutrality in Greece. The official attitude of the Allies towards the two parties in Greece has been a long disgrace which will only be wiped out when we aid the revolution to overthrow the King and all he stands for. If it will help to that end that we should occupy Thessaly, and so prevent him from appropriating the crops, by all means let us do it. But that is only a point of detail. What matters is that we should withdraw our tacit support from this petty tyrant, who hates the Allies, and aid M. Venizelos, our staunchest friend, to oust him?

"A Greek Republic?"

Under the above heading, the *Independent* (New York) of May 19 discusses certain questions which must possess a quite exceptional interest for King Constantine of Athens. Will Greece, our contemporary wonders, return to that state of republicanism the possibility of which she was the first to demonstrate twenty-five centuries ago? Or will Constantine be allowed to place on his son's head that crown that is getting too heavy for himself? These questions may be decided in the next few weeks:—

The deciding factor is apparently the United States. The exiled Greeks of the United States, France and Egypt, the inhabitants of the Ægean Isles and northern provinces, even a considerable proportion of the people of Greece proper, are republican by preference, and have appealed to us for support in their efforts to overthrow the King. This is said to be one of the questions on which Mr. Balfour is to sound Washington, and he ought not to be left in any doubt as to American opinion on this issue. It is the pride of our history that the American people have always favoured and often assisted republican movements in every part of the world.

The shortcomings—or some of them—of King Constantine are briefly recounted, and the *Independent* proceeds to ask, very naturally, why "this tyrannical monarch and enemy of the Entente has been allowed to retain his throne when the Entente forces occupy and control his kingdom?" It answers the question on the basis of the statement made by M. Venizelos in the interview published in the *New Europe* of March 29 ("The answer is very simple. It was because the Entente had been good enough to promise me their indispensable aid under the express stipulation that the movement should *not* be antidynastic"). The *Independent* continues:—

But why should the Entente Powers have intervened to protect a King who was their dangerous enemy from a just punishment by his own people? There is only one conceivable explanation—that is, they feared lest the movement headed by Venizelos, though he disclaimed that intention, would result in the overthrow of the monarchy in Greece, and so endanger monarchies throughout the world. The Powers in control of Greece were France, England, Russia, and Italy. Now we may be sure that France and England were not primarily interested in the maintenance of Greek royalty, for France is a republic, and the English Throne would not be imperilled by the fall of Constantine. But the rulers of Russia and Italy were deeply concerned, for there was a strong and growing republican movement in both these countries. So we may safely assume that it was the influ-

Digitized by Google

ence of the Russian, and perhaps also the Italian, Court that shielded the King of the Hellenes.

The elimination of the Tsar and the establishment of a republic in Russia have brought about a sudden change in the situation, and the United States will now have something to say on the subject:—

At least, Chancellor of the Exchequer Bonar Law, in reply to the question whether the United States was being consulted in regard to Greece, said to the Commons on April 19:—"Up to the present the United States have not taken any part in the discussion, but I have no doubt that as soon as arrangements are completed they will be consulted in every matter in which their interests are concerned."

It should be made plain to the delegation at Washington that our interests are concerned in every republican movement, and especially in one where men from America have taken so active a part. As the matter stands, the foreign Powers most concerned with Greece are three republics—France, Russia, and United States—and two monarchies—England and Italy—instead of three monarchies and one republic, as formerly. But the British Cabinet has for a year past been subjected to sharp criticism in Parliament for its protection of the Greek King, and it has been much embarrassed to defend itself without betraying, what probably was the truth, that this policy was not its own, but imposed upon it by the Czar. Now this difficulty is out of the way, King Constantine will have to depend solely upon his brother-in-law for protection.

The article concludes with the statement:—"But now matters have come to a crisis, for Greece is starving under a blockade from both parties. The British have seized the Greek ships, and the Germans are sinking them. Zaimis, the pro-Ally Premier, is again in power. King Constantine must take sides or abdicate."

"The Allies' War Aims."

In a leading article, entitled as above, the *Manchester Guardian* (May 31) asks, with admirable common sense: "To whom does the formula of 'No annexation and no conquest' apply here and now?" After supplying the obvious answer, the article continues:

In Asia and Africa, it is true, it is the Allies who threaten the existing political state, but in the name of liberty, not of conquest. There will never be peace in the world until the tyranny of the Turkish oligarchy over peoples who were once foremost in the world's civilisation is overthrown. What sort of a reception is the formula of "No annexation" likely to get from the Turks, who have won, kept, and ruined their Empire by the sword? They will not fall in love with the beauty of the phrase, nor, however vehemently we disown annexation in Asia, will they disown it. The elementary conditions of freedom in Asia have still to be founded, and no one can do it but Russia, England, and their Allies. An extremist Socialist paper in Russia asks about liberty in India and Egypt. When the advocate in the French play begins his speech for the defence with a purple passage about the creation of the world, the judge pulls him up with a request to skip the Creation and begin at the Deluge. Our Deluge is this war and the causes that led to it, and we shall find that the task of dealing with them is big enough without enlarging it.

At the end the article touches upon the very difficult question of the future of Turkey:

Any power that annexes any part of Turkey should administer not in its own interest but in the general interest and as a mandatory of a new and revivified Concert of the Powers. Its policy might well be subject to the censorship of some international Aeropagus. If some such arrangements as these would meet the criticisms of free Russia, there is no reason whatever why they should be kept at the back of our minds and many reasons why they should be discussed. But whatever arrangements were made they would not affect the immediate practical duty. For except we win (and we can only win by fighting and with the help of Russia) no arrangements, however ideal, have the remotest chance of realisation.

Gross Effrontery.

In an editorial the *Daily Graphic* last Friday called attention to Austrian effrontery as typified in some remarks made by the President of the Austrian Reichsrath:

From German publicists and Press we expect, bearing in mind the machines they are, the incessant repetition of the parrot-cry about the war having been "forced upon" the peace-loving Teutons. But for Dr. Gross, the President of the Austrian Reichsrath, to speak of the war as having been "forced upon" Austria touches a sublimer height of impudence than even Germans have reached. Does Dr. Gross imagine that the memory of civilisation has been submerged in the waters of Lethe? Does he think that oblivion has swallowed those diplomatic records which establish beyond any quibble how Austria suddenly sprung her brutal ultimatum upon Serbia, and insisted upon putting the matter to the sword even when Serbia had humbled herself as no nation had done before? Such an assertion as that made by Dr. Gross is an insult to the intelligence of the world. But it is matched in effrontery by his companion declaration that nothing is further from the purpose of the Dual Monarchy than "the suppression of other nations"! When the case of Ireland is charged to the account of Great Britain, how seldom is it recalled that Austria consists of all Irelands. That patch-work quilt of an Empire has ground down and persecuted all the small nationalities of which it consists, solely in the interests of the dominant German and Magyar minority.

"The Greek Church and Venizelism."

Under the above title Professor Ronald Burrows contributes to the *Church Times* a short but interesting article. The following extracts are from the first portion of the article:—

The Church in Greece has never stood aloof from popular national movements, and has thrown itself heart and soul into all the wars of independence, from the beginning of the nineteenth century to the final rising of Crete against the Turks. This, indeed, has been one of the chief reasons why it has retained such a strong hold on the affection of the race, a hold which is more universal, perhaps, than that possessed by any Church in Christendom. For the first time in modern Greek history the race is divided into two bitterly hostile camps, and it is interesting to observe how the Church has met the new situation.

An English Churchman would probably imagine that, in view of such sharp cleavage of opinion, the Church would have withdrawn itself from active politics and fallen back on the spiritual character of its mission. The Greek Church, however, true to the tradition of generations, has not done anything of the kind. It has taken sides vehemently. Indeed, anyone who is familiar with a Greek community, whether in the kingdom of Greece, or in Greece unredeemed, or in the Greek colonies in Western Europe and America, will realise that the services of the Church are too integral a part of the life of the race for any such detachment of view. . . . It is unthinkable for a Greek to solve the problem by heresy or schism. The clergy themselves, therefore, must take sides and fight out the battle on the same lines as the laity.

This point of view being once granted, it is significant that the latest news from Greece shows that the Venizelist movement, in spite of the fact that it has gone full length and demanded the dethronement of King Constantine, is receiving extraordinarily strong support from the Greek Church.

ALBANIA'S INDEPENDENCE.

The following is the proclamation made public at Argyrocastro by General Ferrero, who commands the Italian army of occupation in Albania. Reuter's agent in Rome, who forwards the Proclamation, adds:—"The Proclamation was read before a great gathering of Albanians, and aroused sincere enthusiasm. Loud cheers were raised for the Motherland, and expressions of gratitude to Italy and to King Victor Emmanuel were heard on all sides. The Proclamation was also published in other localities now under Italian administration, and aviators dropped copies of the document in the country beyond the Vojusa. The new order of things has been received everywhere in Albania with the greatest enthusiasm."

To all the people of Albania.

To-day, June 3, 1917, the happy anniversary of the establishment of Italian constitutional liberties, we, Lieutenant-General Giacinto Ferrero, commanding the Italian corps of occupation in Albania by order of the Government of King Victor Emmanuel III., solemnly proclaim the unity and independence of all Albania under the ægis and protection of the Kingdom of Italy.

By this act, Albanians, you will have free institutions, troops, law courts, and schools, directed by Albanian citizens; you will be able to manage your properties and the product of your labour to your own advantage, and for the ever-increasing well-being of your country.

Albanians, whatever you may be, whether already free in your country, or fugitives through the world, or still subjected to foreign domination (generous in promises, but in reality practising violence and pillage), you, who belong to an ancient and noble race, who are bound by centuries-old memories and traditions to the civilisation of Rome and Venice, you who are aware of the community of interests of Italians and Albanians on the seas which separate and at the same time unite us, you, who are men of goodwill and have faith in the destinies of your beloved country, stand beneath the shadow of the flags of Italy and Albania and swear eternal fealty to that which has been proclaimed to-day in the name of the Italian Government for an independent Albania enjoying the friendship and protection of Italy.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Foreign Samples Section of the Department of Commercial Intelligence of the Board of Trade are to be congratulated on the excellent index of Foreign Trade catalogues and firms which they have issued recently. Unfortunately, the index does not give a special key to the nationality of the firms, beyond the actual names, and as some of these have a distinctly British sound in the mouth, I should be glad to pillory some of them by way of warning for future reference; but lest there be neutral friends in the collection I will refrain from doing so, because it would be unjust to confuse them with Germans and Austrians. They might be respectable. I would suggest to the editors of the list, however, that if a second edition is issued, the nationality of each firm be mentioned, provided it can be ascertained. The index, I may add, is of particular interest to the Near East.

***

I have frequently drawn attention to the earnest efforts made by American consular officers to push the sales of American manufactures, and to the comprehensive commerce reports which are issued by the Washington Bureau of Foreign and Domestic Commerce. Recently it was reported that American firms, owing to the co-operation of the United States Consulate-General in Copenhagen, were able to secure orders for motor-cars of the value of £60,000, to establish profitable agencies in Denmark for the sale of cars, and to secure orders for £19,000 worth of motor-trucks, £280 worth of fine book cloth, £50,000 worth of submarine cable, £51,000 worth of raw materials for the use of a cable company, and £2,000 worth of laundry machinery. The Commerce Reports keep American manufacturers continually informed of trade openings and market conditions, and as the reports are issued practically daily their great value can easily be estimated.

***

So far as I know, the only British equivalent to these reports at present is the *Board of Trade Journal*, which is edited at the Department of Commercial Intelligence, and I am glad to testify that recently there has been a considerable improvement in this weekly publication. It is not large enough in its scope, however. It does not cover anything like the same ground as the American reports, and, therefore, is not nearly so useful. It will not be possible, perhaps, to make any change during the war, but it is time that preparations for an extensive trade campaign were undertaken. When peace is declared there will be all the markets in the Balkans and the Eastern Mediterranean countries clamouring for commodities of all sorts, and, whatever may be doubtful, it is certain that British shippers and manufacturers are not ready to bid for them.

***

The inauguration of a Roumanian Chamber of Commerce was a move in the right direction, and as the list of its members includes some important and go-ahead firms, British trade interests in Roumania will probably be well looked after when the time comes. But Roumania is not the only country to be watched. There are Serbia, Greece, Turkey, and Palestine, to mention a few which are non-British; while, so I understand, the work of filling the trade gaps caused by the elimination of Germans and Austrians in Egypt has not nearly been completed. Are the holes being kept open for the re-entry of our enemies? Surely not, after all the brave threats we have made against them and the promises we have made to each other. We may be sure that unless the gaps are filled before the war ends, our enemies will return to occupy them. All the indications point to great activity in Germany in the matter of trade reconstruction and reorganisation, and our own people must guard against being caught napping. There is published in THE NEAR EAST to-day an excellent account of existing opportunities for British trade in Morocco, extracted from the *Board of Trade Journal*; the editors would do well to regard that as one of a long series, and prepare to deal similarly with other countries in that and other parts of the world.

***

If a statement made recently by the United States Consul-General (Mr. D. J. Murphy) at Sofia may be relied on, the Bulgarian National Bank made a profit in 1916 of about £733,122, compared with £200,000 in the previous year. It is stated also that 2½ per cent. of the profits was placed to the credit of the employees of the bank—which meant an increase of 23 per cent. on their salaries—and the Government share of the gain was £162,657.

***

An interesting case is before the British Courts in which is involved the sum of £46,000, alleged to be due from the London branch of the Credit Lyonnais to the National Bank of Bulgaria, and the question to be decided is whether it should be forfeited to the Crown. The National Bank of Bulgaria is so closely identified with the Sofia Government that all its assets in this country are claimed by the Crown as the property of an enemy state. The case came to a hearing before a Commissioner on Saturday, and was adjourned for fourteen days; it is therefore *sub judice*. Counsel for the French bank made the interesting statement that the Credit Lyonnais had subscribed for Bulgarian Treasury Bills before the outbreak of war, that the Sofia Government dishonoured the Bills on due date, and that the bank had a claim against Bulgaria for a much larger sum than that claimed by the Crown in the present action.

***

Turkish opium, long famed for its contents of morphia hydrochloride, will have a serious competitor when, after the war, its producers attempt to regain the old ascendancy for their drug. The stoppage of exports from India to China led the Government of India to try to find how to make the poppy a source of blessing instead of evil, and the factories were set the task of producing opium with the necessary properties. In the bad old days a certain quantity of medicinal opium was sent to this country from India—last year, indeed, the shipments amounted to about 300,000 pounds—but it was inferior for medicinal purposes to the Turkish. I am glad to learn now that the factories are working hard to produce an equally good drug, and that there is good reason to believe that they will be successful. Already they have produced opium which contains more than 9 per cent. of morphine.

A summary table has been prepared showing the total imports and exports of merchandise of the principal countries for which the particulars can be given for the two months ended in February, 1917. Egypt's imports, including bullion, amounted to £4,547,000 and exports to £9,314,000—in both cases a substantial advance on the results for the corresponding period in 1916.

***

A curious result, first of the war, and secondly of the situation in Greece, is to be seen in the statistics of ginned cotton exported from Cyprus in the year 1916, as compared with the previous year. As will be observed from the statement published in THE NEAR EAST to-day, the position of the United Kingdom and Greece has been exactly reversed. In 1915 Greece took 6,223 cwt., and the United Kingdom 24; last year Greece bought 395 cwt. and the United Kingdom 7,578! The great advance in the price will also be remarked.

***

Owing to the large demand for cattle food in this country, all kinds of oil-cakes have become marketable, and recent conditions have sent prices up to a very high level. Egyptian cotton-seed cakes in the Hull market stood in the neighbourhood of £9 15s. 3d. early in January, 1916; the price dropped by 12s. 6d. on April 3, rose again to £11 4s. on November 3 and to £15 1s. 10d. on December 30. As with cotton-seed cakes so with other sorts, and when the Food Controller came to consider the price of milk he was informed by the farmers that cheap milk and dear cattle food were an impossible combination. Lord Devonport then tackled the cake-makers, who had no difficulty in showing that, unless they could buy oil-seeds at the old price, they could not make cattle cake as cheaply as they had done in normal times. The result was that the Food Controller set out to endeavour to secure more tonnage for the oil-seed trade at lower freights. It does not seem that he has succeeded. What do our Alexandria friends say?

***

Discussion of, or reference to, the merits and defects of the British Consular and Diplomatic Services is of frequent occurrence. The latest to come to my notice was in the speech delivered to the shareholders of the Investment Trust Corporation by the chairman, Mr. Robert Fleming, on Wednesday. "The need of some new machinery for extending and stimulating our (British) trade, better than exists through our present Consular and Diplomatic Service, is acknowledged," he said, and there will be little disagreement expressed with that view.

A British Trade Centre without a Railway.

The Commercial Importance of Communications with the Port of Aden.

The war and the slow progress which we seem to make towards the end of it are not sufficient to divert attention from the future. Indeed, "after the war" has passed into a platitude, and there is not a department of life in which it is not used in and out of season. It is more particularly the case in respect to trade; reconstruction schemes, the opening up of new markets and trade banks, are in course of being organised with a zeal and keenness scarcely paralleled in the trade history of the Empire.

Aden, the centre of one of the most important British trade districts in the East calls for the attention of the reformers. The port wants a railway and waterworks, it wants a newspaper and an up-to-date printing works, it wants docks and modern equipment. When these have been provided Aden will rank, as it deserves, with the other great trade emporiums of the British Empire.

Value of Trade.

Because it has no producing capacity and its industries are confined to the manufacture of salt and cigarettes, Aden is regarded by many people as merely a port of call for vessels in the Eastern trade. "A barren rock" was a popular description of the place, and it will be a surprise to the multitude to learn that in the year 1915-16 the import and export trade of the port reached the respectable value of more than £6,360,000.

It must be remembered that Aden is the trade distributing centre for the Red Sea all Somaliland, Abyssinian and many of the East African ports, the Arabian Gulf, and the whole of Southern Arabia and a part of the Yemen. Its great importance is thus easily demonstrated, and there is little cause to wonder why the conditions in the port are receiving more and more attention from those who have trade interests in the East.

Wanted—A Railway.

One of the most serious defects in the equipment of Aden is the lack of railway communications with the interior. The construction of a narrow-gauge line was begun last year, but there is very small hope that it can be advanced materially during the war; that, perhaps, is nobody's fault, but there is blame due somewhere in that the line was not laid down years before the mad dog broke loose. Some years ago an attempt was made to build a line from Hodeida to Sanaa, in the Yemen; a large sum of money was expended on the project, great quantities of equipment and material were dumped near the site of the line, and four or five miles of track were actually laid. Then bright genius discovered that there was something wrong, work was stopped, and to-day quantities of valuable railway material are rusting and deteriorating in the sand, where they were landed from the ships—reminiscent of the fine British dredger which was treated similarly in an obscure backwater of the Shatt-el-Arab, near Busreh.

It is said that there is a chance of this project being revived after the war. We hope it will be revived. The Yemen is an extremely rich district, and after the war it may be taken for granted that the political and economic conditions will be greatly improved and more conducive to trade generally.

Camel Transport.

For the benefit of those who do not realise the importance of railway communication for Aden, it may be stated that in the year 1915-16 the total number of camel-loads of merchandise that entered the town was 92,285; that total was far below the normal, however. In the year before the war the total was 166,603 and in 1914-15 it was 151,958. There is, therefore, a promising groundwork for a goods traffic for a railway, the establishment of which would doubtless operate as a spur to trade development. The attention of the British Trade Corporation might be drawn to this subject.

The French have recently completed a line from Jibuti in their section of Somaliland to within ten miles of Adis-Abeba, the capital of Abyssinia, and when certain difficulties regarding the site of the terminal station have been adjusted the line will run right into the town. This railway is about five hundred miles long and has already benefited the trade of the countryside through which it runs. The Italians, too, have recognised the importance of railway communication, and have established a well-equipped and managed line, which runs from Massowa to Asmara, the capital of their colony of Eritrea, the mileage being about seventy-eight: the line is in course of extension.

From Suez to Bombay.

When it is realised that Aden distributes merchandise throughout an area which extends from Suez to Bombay on one side, and from Muscat, at the southern point of the Persian Gulf, to Madagascar on the other, its importance and potentialities for further development will be understood.

Other needs felt in Aden include a modern printing works. At present three mercantile establishments and the jail press do a certain amount of printing work, but these arrangements are inadequate. There is a profitable demand for an establishment which would undertake and execute work on up-to-date lines. Then, too, a good general daily newspaper ought to be successful. There is scope for advertising, and if its news side were properly developed there would be a certain circulation in Aden itself, in the Red Sea ports and down the East African coast. At present there is a small weekly paper, but it is totally inadequate for the needs of the district.

The inauguration of public waterworks is another urgent need of the port. At present practically all the water used by Europeans is condensed sea-water, and this is sold to them at about 2s. 11d. a hundred gallons! When the climate of Aden is considered—hot and dry, with hot, sandy winds at certain seasons, and with an average rainfall of three inches a year—the importance of this matter will be apparent.

Cargo and Shipping.

In normal times forty-two shipping lines are represented in the port, and to their large fleets of vessels must be added the tramps of the ocean. The Port Trust has constructed wharves for landing and shipping, but vessels are loaded and discharged in the harbour, and the handling of cargo is a more or less expensive matter. A small charge is levied on each package.

Whether wharf berths for ships is one of the good things which await the port remains to be seen; it is certain, however, that facilities of the sort would be a boon to the shipping people. The harbour of Aden is excellent in every way; it is approximately four miles by eight miles in size, and vessels drawing as much as 32 feet can be accommodated close in shore. The Port Trust wharves and warehouses are very extensive, and the charges are reasonable; but there is room for further facilities, the provision of which would raise the port to a position more in keeping with its dignity and importance than is the case at present.

ADEN'S GUM TRADE.

Excellent All-round Recovery in 1915-16.

According to the report of the United States Consul at Aden, the gum trade of the port made an excellent recovery in the year 1915-16. Two years earlier the total of the imports was 61,675 cwt., valued at £58,770; in the following year imports decreased to 26,823 cwt. of the value of £22,300. Last year the figures were as follows:—

	Cwt.		£
Olibanum	28,999	....	17,520
Arabic	11,576	....	16,989
Benjamin	296	....	1,249
All other kinds	22,659	....	16,342
Total	63,530	....	52,100

Exports show a similar decline and recovery. In the year 1913-14 the total was 64,701 cwt., valued at £77,163; in 1914-15 the figures were 29,123 cwt., and the value £33,664. Last year the returns were as follows:—

	Cwt.		£
Olibanum	29,590	....	22,782
Arabic	11,718	....	23,176
Benjamin	342	....	752
All other kinds	16,308	....	18,506
Total	57,958	....	65,176

Sources of Supply.

"The principal shipments of the gum come from British Somaliland, Suakin, independent Somali ports, Massowa, and Mocha. Large supplies of gum arabic are said to be shipped from Sudan to America, but the export figures do not show any shipments from Aden to that country. Much of the gum sold in Aden is said to be of as good quality as that from the Sudan. The principal exports of gum arabic are to France and India, where the better grades are said to be used in candy-making.

"The small quantities of gum benjamin (benzoin) handled in the Aden market are from India and the Straits Settlements, and are of little commercial importance. Exports are to the Turkish Yemen, Italian East Africa, and Egypt.

Cause of Prosperity.

"Gums and resins figure among the more important products of this district entering into the trade of Aden. The year under review was prosperous as a result of the heavy crops and steady demand with good prices.

"Gum olibanum, or frankincense, ranked first in quantity and value. Independent Somali ports, Arabian Gulf ports, and British Somaliland supply the greatest amounts of this aromatic gum to the Aden market. The amount handled in 1915-16 was double that handled in the previous year. The prices ranged from 14s. 7d. upward per hundredweight of 112 lbs. This gum is sent principally to India, Abyssinia, and Egypt, where it is used largely in religious ceremonies and for disinfection. France buys considerable quantities and, in normal times, Austria and Germany take fair amounts."

CYPRUS COTTON INDUSTRY.

The Chief Collector of Customs at Larnaca has furnished to the Board of Trade the following table, showing the quantity and value of ginned cotton exported from Cyprus during 1916, as compared with 1915:—

To	1915.		1916.	
	Quantity.	Value.	Quantity.	Value.
	Cwt.	£	Cwt.	£
United Kingdom	24	81	7,578	21,325
Egypt	4	15	158	400
Greece	6,223	16,210	395	1,850
Total	6,251	16,306	8,131	23,575

An official bulletin issued in Cairo estimates that barley is five per cent., wheat four per cent., and sugar cane one per cent. above the average.

LANCASHIRE COTTON.

Continued Disorganisation in Trade Circles.

(From Our Own Correspondent.)
Manchester, June 7.

Business in the market has been resumed rather slowly after the Whitsuntide holidays and trade has been disorganised by the recent developments in the raw cotton situation, the rise in American and Egyptian qualities since a week ago being about a penny a pound.

It has been necessary to adjust prices in yarn and cloth, but it has been extremely difficult to establish the higher basis of values. Some necessary buying has occurred where our customers have been compelled to cover, but in most quarters there has been a disposition to hold aloof pending more settled conditions.

Lancashire is undoubtedly faced with a distinct shortage of supplies in the raw material during the next twelve months. It is understood that the growth in Egypt is making good progress

Spinners of Egyptian yarn continue to do rather badly so far as fresh business is concerned. Some producers of the finer numbers end of specialities have still fairly substantial engagements.

Some mills in the Bolton district are closing down and it is said that the number is now about twenty. It has been reported that another boat has been sunk with considerable supplies of cotton piece goods, and some buying of a replacement nature has had to take place at much higher figures.

Advices from Cairo as to clearances remain promising. The Monsoon in India has now broken and further reports relating to the rains will be watched with considerable interest. Very little fresh business has been about for our Dependency in cloth.

The China market has also been quiet. Only retail sales have been mentioned.

The position of manufacturers at the moment is not to be envied, and difficulties are met with at every turn. American yarns are decidedly dearer on the week, but where sales have occurred the prices secured have shown a narrower margin of profit than for a long time back, and users have purchased sparingly. The bids mentioned in bundle varns for India have been a long way out.

PROPOSED NEW DANUBE PORT.

The *Neue Wiener Journal*, as quoted by the *Berliner Tageblatt*, learns from a well-informed source that the Danube Shipping Company proposes to build a large clearing port on the right bank of the Danube, near Vienna, for the transhipment of coal from Upper Germany and Upper Silesia to the Near East, with the object of displacing, if possible, British coal in that market. The Vienna municipality intends to build another port on the left bank of the Danube.—Reuter (Amsterdam).

PRIVY COUNCIL APPEALS.

The Judicial Committee of the Privy Council resumed their sittings on Tuesday. The Board was composed of Lord Dunedin, Sir John Edge, Mr. Ameer Ali, and Sir Walter Phillimore. The list of business includes thirty-four appeals—from Australia, 3; Canada, 6; Egypt and the Gold Coast, 1 each; India, 19; and the Prize Courts, 4. The Egyptian appeal concerns the development of an estate in the Sudan.

TRADE OPENINGS.

Great Opportunities to British Merchants in Morocco.

The British Consul at Casablanca (Mr. H. L. Rabino) has (writes the Board of Trade "Journal") forwarded the following information concerning the commercial situation in the French zone of Morocco, which has been furnished to him by a member of a British firm established in that town :—

Economic development on an unprecedented scale has taken place in the French zone of Morocco during the last two years and a half. Splendid roads have been made between all the principal towns, and where formerly only tracks existed real roads are being, and in many cases have already been, laid down to connect the principal centres of trade in the interior. Railway routes have been agreed upon, and a Commission is at present mapping out the actual tracks. The ports have also come in for their share of attention; lighthouses have been erected, and others are in course of erection, all along the coast.

Public Works.

The Government has bestowed special attention upon improving the town of Casablanca. The improvements effected, or about to be effected, consist of a water supply for the inhabitants; the installation of electric light in the streets and in most of the dwelling houses in the European quarter; the formation of a really fine square named the Place de France.

A fifty years' concession for the exploitation of a tramway system has been granted to a French company; it is expected that work will shortly be commenced on the main route, and that in five years' time the town and suburbs will be connected by a complete network of lines. Sanitary questions have also received careful consideration.

Great Opportunities.

The opportunities that exist for British trade in the French zone of Morocco have never been greater than they are at present. British trade has not only held its own, but, in spite of the many handicaps occasioned by a state of war, has increased in volume since the outbreak of hostilities. Two main factors make for a better outlook for the future: First, a British Chamber of Commerce has come into being; and second, and still more important, the Bank of British West Africa, realising the possibilities for British trade, has opened branches at Tangier, Casablanca and Mazagan.

While it is not possible to draw up an exhaustive list of British goods for which openings exist in the French Zone of Morocco, it may be said that certain United Kingdom goods are always in demand, such as cottons, candles, better-class hardware, furniture, jewellery, stationery, certain makes of preserves, sweets, biscuits, etc. In addition, the following may be mentioned :—

Coal and briquettes, cheap hardware (a line for which the Germans used to cater with no small degree of success), glassware, cotton-seed oil, cement (N.B., British cement is preferred, but it must be able to compete as regards price), and woollen goods. After the war there will, it is anticipated, be a demand for various kinds of machinery and motor-cars.

Agents can be appointed on the spot to push certain lines, but the difficulty of finding agents fulfilling at one and the same time the desirable qualities of being suitable and willing is almost insurmountable, and it is suggested that British firms wishing to do business in the markets of the French Zone of Morocco should be directly represented there; that is to say, they ought to send out their own representatives. Until this is realised and put into practice British trade is unlikely to make much further headway in the country.

Malta Wants Provisions.

The Collector of Customs at Valetta reports that a firm in that town desires to obtain the representation of United Kingdom manufacturers and exporters of provisions. In the case of such goods as manufacturers and exporters may not be able to deliver at present, it is suggested that negotiations might be entered into now with a view to business being done directly circumstances permit.

United Kingdom manufacturers and exporters of provisions desirous of being represented in Malta, may obtain the name and address of the firm referred to on application to the Department of Commercial Intelligence, as above. In making application the reference number (208) should be quoted.

LARGE OIL "DEAL."

The Near East is informed that the Anglo-Persian Oil Company has concluded the purchase from the Public Trustee of the undertakings of the British Petroleum Company, the Homelight Oil Company, Ltd., and the Petroleum Steamship Company, Ltd., which concerns have since the outbreak of war been the subject of a good deal of criticism owing to their enemy character, the whole of the shares having been held by the Europaische Petroleum Union, a German company in which the Deutsche Bank holds a controlling interest.

The purchase of these valuable distributing organisations by a company possessing such large sources of supply of crude petroleum, and by one, moreover, of such an undoubted British character and high standing as the Anglo-Persian Oil Company, Ltd., will be welcomed by all consumers of petroleum products in the United Kingdom, as it will ensure more abundant supplies in future of these very important essentials of modern industry, and the retention by the nation of large sums of money which would otherwise be paid away to foreign producers and distributors.

The magnitude of the properties acquired may be gathered from the fact that they include a large fleet of tankers, 15 large ocean landing and storage installations with tankage of a capacity of 185,000 tons, 520 smaller inland depots, 535 railway tank wagons, over 1,100 motor and other road vehicles, and land, houses, etc., in various parts of the United Kingdom.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned :—

	1916. Francs.	1917. Francs.
May 28 } May 29 }	620,000	480,000
May 30	220,000	110,000
May 31 June 1 June 2 June 3	700,000	720,000
June 4 June 5 June 6	130,000	160,000

ENGINEERING NOTES.

New Paraffin Vaporiser.

With the high prices and restricted supply of petrol, users of motor-cycles and motor-vehicles generally are in search of an efficient substitute, and are always glad to hear of any advancement in that direction. Various other distillates have been tried with but little apparent success, and there seems now to be a consensus of opinion that the most practical way out of the difficulty is to revert to vaporised paraffin, as being in many places less than half the cost of petrol, and when used with a suitable vaporiser fully as efficient. A vaporiser of this description is now being manufactured in England, and as the subject is of universal interest, abroad as well as at home, a few particulars of the new invention are given here. With this paraffin vaporiser, which is fully patented, the paraffin is heated before entering the float chamber, and also diffused, and the mixture is thoroughly heated before entering the cylinder. This is carried out by passing the paraffin through a tube surrounded by exhaust gas, so that on leaving to enter the float chamber it is thoroughly heated. The mixture from the carburettor is spread over a large perforated plate, which thoroughly diffuses it, and it then strikes again and passes round a hot pipe, and thence into the engine. The exhaust gas passes through a large tube, entering at one end, and through a copper pipe connected to the exhaust, and leaves at the other end through a perforated end plate. The paraffin heating pipe is surrounded by the exhaust gas passing through the pipe, which forms the heating chamber in the body of the vaporiser, and has an annular space of jacket all round. Thus the mixture, on leaving the carburettor, passes through the perforated plate directly on to the hot chamber, then right round this and into the engine. A small tap fixed on the top of the vaporiser admits a small quantity of petrol to enable the engine to be started. As soon as this is done the tap can be turned off, and then on opening the throttle the engine will at once begin to run on paraffin.

British Manufacturers.

In spite of the great military and naval preparations of America, and her actual entry into the war, the American manufacturers are adopting the famous motto "Business as usual," and are sending out representatives to try by all possible means to keep in touch with their customers abroad. Notices and advertisements are already appearing in journals circulating in the Near East, in which buyers are assured that whatever they cannot have now, owing to the war, they can have soon after peace comes. On this side of the Atlantic we have apparently different views, and it is not out of place to repeat here the words of a great authority on modern business methods: "It is," he said, "a suicidal policy for manufacturers to suspend intercourse with their overseas customers simply because they are for the time being precluded from supplying the needs of these customers. If a trade that has been established through long and patient effort is to be renewed after the war, it is essential that traders should keep their names before their old clients, both through the medium of business letters and journals with substantial circulation.

Electric Heating and Cooking.

Like all other inventions in electricity, electric heating and cooking is making rapid progress. One of the newest inventions is an American device employing electric induction for water-heating, which consists of a cast-iron core, through which the liquid passes, laminated U-shaped sections surrounding the core on both sides, and a primary coil passing the exciting current. As the outside coil is wound with heavy-gauge wire, insulated with asbestos, the heater is not readily damaged. The new plan of cooking by electrically generated steam is claimed to combine efficiency and economy. The cooking is effected by the heat of the steam instead of by boiling in the usual way, and the very small quantity of water necessary tends to keep the current to a minimum whilst giving also a means of regulation by automatically switching off the current when the measured supply of water has all been converted into steam. For cooking four eggs, for instance, by this new method, only a teaspoonful and a-half of water is needed. The special cooker for eggs includes a nickelled base, a porcelain bowl, with a little well in the centre to contain the water, and two carbon electrodes, a perforated metal plate to support the eggs, and a dome-shaped cover. It is evident that cooking by electricity will soon be as cheap, if not cheaper, as by gas.

Openings in Morocco.

We have had occasion in previous notes to call the attention of British engineer-manufacturers and public works contractors to the rising importance of Morocco as a desirable field for trade and enterprise; and it is very satisfactory now to hear that agricultural engineers have already recognised the value of that market for machinery of that class, and are preparing to enter the market in the near future. It must be mentioned, however, that up to the present all that has been done has been amongst European settlers, who have acquired large areas, which they are turning to good account in the cultivation of all kinds of produce. Native growers have so far been little inclined to avail themselves of the facilities offered by modern engineering, with the result that the yield of cereals is very much less than what it should be. The example set by European colonists, however, will do more than anything else to bring native growers to an appreciation of modern appliances, and it is fully expected that in the very near future Morocco will follow the lead of Algeria, which is now taking considerable quantities of cultivating and harvesting machinery. In Algeria, French makers supply deep ploughing tackle, ordinary cultivating implements, wine presses, and the like, but as regards volume of business they occupy only third position, after English and American firms.

Public Works.

Apart from the disinclination of the native grower to adopt modern mechanical methods, another, and more serious, impediment in the development of Morocco's resources is the want of roads and consequent means of communication. This impediment is to be removed now, for a recent presidental decree (already referred to in THE NEAR EAST) authorises the expenditure of £3,600,000 in executing certain public works in the French zone of Morocco. Of this amount £2,668,400 is for the improvement and construction of roads, and other large sums are provided for telegraph systems, irrigation works, experimental farms, buildings, etc., and for the establishments of public services in the country.

The total length of roads, exclusive of municipal roads, provided for by this (and a previous) decree is 1,900 miles, including the following main roads:—A coast road from Mogador viâ Saffi, Mazagan, Casablanca, Rabat, and Kenitra, to the frontier of the Spanish zone near Alcazar, where junction will be made with the road to Laraiche and Tangier; another road from this point to Fez direct; another from Rabat to Mequinez and Fez; from Fez to Oujda, viâ Taza; and from Marrakesh to Casablanca, and from the latter place to Tadla. Of these roads over 500 miles have already been made, and work is being actively carried on in the more important sections of the others. These roads will enormously increase the development of vast lands hitherto idle or inadequately cultivated, and aid mining enterprises, for it must be remembered that the Atlas Mountains abound in minerals, unworked for the most part.

COMPANY MEETING.

THE NEW EGYPTIAN COMPANY

The 16th ordinary general meeting of the New Egyptian Co., Ltd., was held on Tuesday at Winchester House, Old Broad Street, E.C., Mr. A. A. Baumann (Chairman of the company) presiding.

The Secretary (Mr. Thos. Day) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—Although we have decided not to recommend the payment of a dividend to the shareholders, I think I am justified in congratulating you upon the substantial improvement in the financial position of the company since our last meeting. Our revenue has gone up, our debts have gone down, and I do not know that anything better than that can happen either to a corporation or to an individual. Taking first of all the balance-sheet. In a company of this kind, which buys and sells land, the relation of assets to liabilities is an important fact. As you will see from the right-hand side of the balance-sheet, our assets, taken at cost, amount to £680,042, and our liabilities to £607,665, showing an excess of assets over liabilities of £72,376. That excess of assets is represented by Nashart reserve, £2,390; profits reserve, £12,957; capital reserve, £40,398; and profit and loss account, £16,630. To turn to the profit and loss account, before charging debenture interest the profits amount to £15,021, as compared with £12,514 last year. The net profit for the year, after charging debenture interest, amounts to £9,607, as compared with £2,626 in the previous year, and with the carry forward of £7,022 the balance to the credit of profit and loss account amounts to £16,630, which we now propose to carry forward. The revenue from the company's lands appears at £16,660, as compared with £8,443 for the previous year, or an increase of £8,216. That is a substantial increase, and is made up as follows:—Our gross rentals received have risen from £23,155 in 1915 to £32,634 in 1916. The expenditure, including the irrigation drainage and taxes, maintenance, depreciation, salaries and general expenses, is slightly higher in 1916 than it was in 1915, and for the past year it amounts to £15,974, as compared with £14,712 in the preceding year. It is not a large increase in expenditure, more particularly when you consider the increase in the cost of coal, labour, oil, and everything else in consequence of the war. In Upper Egypt the estates are practically fully reclaimed, and owing to the higher prices of cereals, satisfactory rentals are being obtained. The estimated rental for 1917 shows an increase of 14 per cent. over the 1916 figures.

With regard to the sales of land, during the year we sold 181 feddans at an average of £91 19s. 1d., and a further 108 feddans at an equally satisfactory price, but as the deeds were not signed at December 31, when we made up our accounts, the profit on this area has not been taken into the accounts. Since January 1 we have disposed of a further 144 feddans at satisfactory prices, so that altogether, since the beginning of the year, we have 252 feddans that have been sold and that will come into the accounts in the current year. We anticipate that with the improved position of Egypt we shall continue to make satisfactory progress. One of the most important features of the financial position of this company is, of course, its indebtedness. With regard to our loans, as stated in the report, the loans and debentures have been reduced by over £18,000 since the previous year, and since January 1 last a further £8,000 has been paid off the loans. In addition to that, it will be seen on the credit side of the balance-sheet that the debenture trustees have over £8,000 in hand, which has since January 1 been increased to £11,304 for the purpose of the purchase and cancellation of debentures. This amount

will increase from time to time, as by an arrangement with the debenture holders we have agreed to pay the trustees 60 per cent. of the capital receipts received from our sales in Upper Egypt. Arrangements have also been made with the mortgage banks, who have granted loans secured on our Lower Egypt properties for the release of areas sold from time to time on repayment on a *pro rata* amount of the loans. In the case of Samatay and Kahwakia this *pro rata* is equal to 60 per cent. of the mortgagees' valuation of these estates, and in the case of Docmera and Nas hart is equal to £50 per feddan. Provided the demand for land continues, we shall in this way reduce our loans automatically within a comparatively short period, as compared with the period for which the loans were contracted. Our average cost per feddan is slightly over £50, and there is little or no further capital expenditure necessary beyond routine work. The cash at bankers' shows the satisfactory increase of nearly £15,000, from £9,240 to £24,130. The company has bought during the year £20,000 of Five per Cent. War Loan.

With regard to the general outlook for the company in Egypt, I can only say that it seems to me to have passed the most dangerous period. We can see now that Egypt was made a focus, long before the war broke out, for German and Austrian intrigue in the East. Luckily we were able to get rid of the Khedive, Abbas, as it subsequently transpired that he was merely an Austrian agent. He was educated in Vienna, and the Austrians supplied him with his favourite wife. We have got rid of him, and we have now got rid of all or most of the German and Austrian banks. As people are discussing what is going to happen after the war, I am always astonished that they do not pay more attention to Egypt as an avenue for the investment of capital, because I believe that the Valley of the Nile in a sub-tropical climate—in parts of it in a temperate climate—is one of the most fertile and profitable places for the growth of most cereals and of sugar, cotton, and, very probably in the future, tobacco. I should like to acknowledge, on behalf of the company, the very energetic assistance which we, as well as all other landowners in Egypt, have received from the Egyptian Government in the matter of irrigation, which has contributed very materially to increase the value of our lands. I am sure that we all of us appreciate the energy and devotion of our staff in Egypt, from Mr. Suares and Mr. Dempster down to all our managers, cashiers and assistants. I now beg, gentlemen, to move:—"That the directors' report, together with the annexed statement of account duly audited, be received and adopted," and I will ask Sir Ernest Spencer to second the motion.

Sir Ernest Spencer (Deputy Chairman) seconded the resolution.

Mr. Vere Herbert Smith said that on the debit side of the profit and loss account he noticed an item, "To expenses of altering trust deed, £233 6s." That secured to him to be a somewhat heavy item, and he would be glad to have some particulars regarding it. He had nothing further to say except that he was glad to learn from the directors' report and from the Chairman's remarks that day that the company had been doing better, and he would like to express the hope that the company might continue to go forward and prosper.

Mr. Abraham remarked that he understood the company's land cost £50 per feddan, and as the sales realised about £91 per feddan there was a margin of about £41. Might he take it that only the most valuable land was being sold? The company possessed a very large acreage, and he took it that the demand was only for the most fertile land.

The Chairman, in reply, said that the directors only sold the best land first, or buyers would not come forward, but they were all the time spending money on the improvement of their lands, and were endeavouring to bring them up to a high state of cultivation. Of course, the value of their lands depended very much upon their situation—whether they were in this neighbourhood or that; and all the directors could do was to give the shareholders an average of the prices they obtained and the average cost. With regard to the item of £223 6s. expenses in connection with altering the trust deed, he would point out that they had had two meetings. The matter was very complicated and had entailed legal expenses, in addition to which there was the expense of

the Debenture holders were represented at those meetings, for which a charge for expenses had been made. He did not consider that the amount was at all excessive.

The resolution was then put to the meeting and carried unanimously.

The Chairman then proposed, "That Sir Westby Brooke Perceval, K.C.M.G., be re-elected a director of the company pursuant to article 71 of the company's articles of association." In the course of the year Mr. Gilmour resigned his seat on the Board owing to the fact that he was at present engaged on Government work, and the directors elected Sir Westby Perceval in his place, and, therefore, he had much pleasure in asking the shareholders to ratify his co-option as a director.

Mr. E. Nathan seconded the motion, which was unanimously agreed to.

The Chairman also moved, "That Mr. Edward Nathan be and is hereby re-elected a director of this company.

Mr. T. F. Dalglish seconded the proposition, which was unanimously approved.

On the motion of Mr. Foat, seconded by Mr. Vere Herbert-Smith, the auditors (Messrs. Cooper Brothers and Co.) were unanimously appointed, and a vote of thanks to the Chairman, the directors and the staff brought the proceedings to a close.

COMPANY REPORT.

ANGLO-PORTUGUESE TELEPHONE CO.

The report of the Anglo-Portuguese Telephone Company for 1916 states that the floating assets and liabilities in Portugal have been valued at 31 9-16d. per escudo. The capital expenditure amounted to £15,319, in comparison with £11,946. for 1915 and £27,229 for 1914. The profit and loss account shows a gross income of £93,578, against £81,924, of which operating, management, and general charges absorbed £59,253 (against £51,578), and royalties to the Portuguese Government £2,727 (against £2,460), leaving a gross profit of £31,599 (against £27,886). After payment of income-tax and other expenses, including the addition of £10,000 to renewals fund, the amount available for disposal is £15,839. The directors recommend a further dividend of 3 per cent., less income-tax, making 6 per cent. for the year 1916, which will leave a balance of £6,839 to be carried forward. The reserve fund now stands at £25,000, the renewals fund at £30,000, and the exchange fluctuation account at £10,000. The profit was adversely affected by a further fall in the value of the Portuguese currency, the average rate of exchange being 34 1-32d., as compared with 35½d. for 1915. The actual loss on remittances amounted approximately to £16,000, an increase of £6,000. In view of the continued expansion of the company's business and in anticipation of the time when Treasury sanction may be obtained for a new issue, it is considered desirable to authorise an increase in the capital to £200,000.

SUBMARINED SHIPS.

There has been a marked improvement in the situation at sea. In the week ended last Sunday German submarines (or mines) sunk :

Vessels (1,600 tons or over)..... 14
Vessels (1,600 tons or under) 3
Fishing vessels 5

Fourteen vessels were unsuccessfully attacked. The figures are net, after deducting all large vessels sunk and three vessels attacked in a previous week.

Arrivals and sailings in British ports were 2,693 and 2,642, respectively.

The return (writes *The Times*) shows a slight decrease both on the previous return and on the average for the last five weeks. The decrease is probably merely temporary, as on the whole the totals show an increase. During the first five weeks the total number of ships passing through the zone was 23,318; in the second five weeks it was 24,775; and in the third five weeks it was 26,238. It should not be forgotten that the latest time limit set by the Germans for the success of the submarine campaign is September, and therefore during the weeks to come further efforts of greater intensity may be expected. On the other hand, as Mr. Lloyd George has said, it is easier to take protective measures for the mercantile marine now that America has come into the war on our side.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton St., E.C., Thursday.

There has again been a good deal of activity in the Egyptian market. Egypt has continued buying various shares, and here in London also there has been a fair amount doing.

Unifieds have been done to a fair extent round 83, and 3½ per cent. prefs. have been constantly in demand; they closed at the higher level of 72; but there is practically no stock offering.

National Banks have further improved sharply to about 14½, some few hundred shares being done in the neighbourhood of 14⅜. Agricultural Banks have changed hands to the extent of several hundred shares round 5 3-16, while Anglo-Egyptian Banks have been rather quieter at 12.

Delta Light prefs. have changed hands to a small extent at 5¾, and are still wanted, but sellers are scarce. Allotments are better, and some shares have been done round 2 9-16, with further buyers. In Behéras the tone has been a little quieter after the recent big advance, and some small transactions have taken place at the slightly lower level of 9⅞, but there are not many shares about, and a resumption of the upward movement is probable. Delta Lands have been in strong demand, and several thousand shares have been done between 10s. and 11s.

Foreign Trusts are slightly firmer, and should now participate in the general rise which is taking place in view of the appreciation of many of their holdings. Gharbieh Lands have again been done round 20s., and New Egyptians have continued an active spot in the neighbourhood of 11s.

In United Egyptian Lands some thousands of shares have been done round the improved price of 1s. Alexandria Waters are still wanted without finding sellers.

Markets have been very quiet round 27s. but some steady business has been doing in Salt and Sodas round 23s. A feature has been the further advance in Khedivial Mails, which have jumped from 32s. 6d. to 36s. 3d.

In Greek stocks the market is firm, but lifeless.

Oil Shares.

Anglo-Persian prefs. rose 6d., to 23s. 6d., on the announcement that the company had purchased various undertakings (referred to in our news columns to-day). Other Near Eastern lines did not come into prominence.

Paris Bourse.

Quotations on Wednesday included : Serbian (1895), 58 (unchanged); Turkish Unified, 64 (against 64.10); Ottoman Bank, 460 (against 450); Suez Canal, 4,360 (against 4,350).

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Offices, 19, Paton Street, Piccadilly, Manchester.*

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: The Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

Modern Movements Among Moslems. By SAMUEL GRAHAM WILSON, D.D. **6s. 6d. net.**
An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

"Self-Taught" Series. Paper **2s.**, Cloth **2s. 6d.**
These books contain classified Vocabularies and useful Phrases and Conversations, with the English Phonetic Pronunciation of every word, so arranged that they may be Learned at a Glance, and a simplified Grammar which will prepare the way for more advanced study.
Arabic (Syrian); **Egyptian** (Arabic), with Naval and Military Terms; **Greek** (Modern), with Photographic and Archæological Terms; **Persian**; **Turkish**, with Dictionary.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.) **1, Devonshire Sq., London, E.C.2.**

NOTES OF THE WEEK.

King Constantine has abdicated, and his second son, Alexander, succeeds him. It is anticipated that the first act of the new Monarch will be to recall M. Venizelos, whose support, had his father retained it, would have secured King Constantine's throne. The wording of the *communiqué* announcing the change at Athens seems purposely obscure in some details—possibly with a view to sparing the late King's feelings—but the main current of events is easily followed. M. Jonnart, the French High Commissioner, on Monday morning, interviewed M. Zaimis, when he demanded, in the name of the Protecting Powers, the abdication of King Constantine and the designation of his successor. It is not stated what, if any, obstacles were put forward by the King when the announcement was made to him by his Prime Minister, but on Tuesday morning the reply of the Crown was made.

It announced that the King had decided to leave the country with the Crown Prince—his destination is understood to be Switzerland, which is conveniently contiguous to Germany, his spiritual home—and that he "designated as his successor Prince Alexander." From this statement, taken as it stands, it would appear that the Protecting Powers did not insist on a change of dynasty, and that the retiring Monarch was allowed to choose his successor, the choice of the Crown Prince, who is known to favour his father's policy, being vetoed. It was further stated that the King had been induced to take this step being "solicitous, as always, solely for the interests of Greece." Clearly, therefore, he was not aware of what the interests of Greece demanded until the Protecting Powers indicated the proper course to him; or, if he was aware of it before, he did not act upon it. The dilemma is absolute.

The late King sacrificed his throne to his brother-in-law, the Kaiser, and that must be his only consolation in exile. He served Germany better than Greece, since his neutrality was a farce which involved the practical abrogation of the constitution, the sacrifice of an Ally whom he had sworn to assist, the loss of territory to Bulgaria, and the surrender of an army corps to Germany. There is no reason to question the sincerity of the King's almost canine devotion to Germany—an admiration which he showed before the war, and which the events of the war and, it must be added, the course both of military and political events, could hardly tend to dissipate. But the admiration of another and stronger country by a Monarch whose dynasty is not too secure is apt to become dangerous, and in the end King Constantine allowed the fact that his consort was a Hohenzollern somewhat to obscure the not less important fact that he was himself the constitutional Sovereign of Greece. He has had a longer reign than many observers of events expected, for the Allies might reasonably have requested him to leave Athens eighteen months ago; he seemed to learn daring from his apparent security, and even the disgraceful events in the capital last December failed to bring him to book. Apparently, it was only the danger of his securing the Thessalian harvest and consequently another year of security that persuaded the Allies at last to act with proper firmness.

Of his successor little is known. He is a young man of twenty-three, unmarried, and a captain in the artillery. Presumably, he will profit by the unhappy consequences of his father's policy and recall M. Venizelos, under whom Greece may regain the unity it should never have lost. There appears no immediate difficulty in the path; the new King has taken the oath to the constitution, which, in itself, seems tantamount to the recall of M. Venizelos as constitutional Prime Minister, and M. Venizelos himself has always denied republican sentiments, proclaiming that he was not anti-dynastic, but merely anti-Constantine, on grounds which could not be disputed.

King Constantine's farewell message needs little comment. "Obeying necessity and fulfilling my duty towards Greece, I am departing from my beloved country with the heir to the throne, and I am leaving my son Alexander on the throne. I beg you to accept my decision with calm, as the slightest incident may lead to a great catastrophe." The only chance of any such incident occurring would be if the factions which the ex-King has encouraged were to presume upon their past immunity, and to challenge the decision of the Protecting Powers.

The Italian protectorate over Albania has naturally been received with a storm of protest in Royalist Greece, and it has not been welcomed in Venizelist Greece, although M. Venizelos now has the satisfaction of saying "I told you so" to ex-King Constantine. But the Athens newspapers, which have hitherto distinguished Italy from the rest of the Allies as several degrees less black in character than France,

Digitized by Google

now suddenly discover that Italy is almost as bad as, let us say, England. Italy is not likely to trouble herself very much about the vapourings of the supporters of the incredible Tino, but there have been disagreements in the Italian Cabinet concerning the Albanian problem, one party apparently being against "a policy of Balkan adventure," the other seeing more clearly that the extra-peninsular interests of Italy demand action, and that action at this moment, after so prolonged a delay is opportune. Italy is now definitely committed to a trans-Adriatic territorial policy. It is not likely to be reversed, but it is impossible to see how far it will carry her. But in Rome they have clearly no belief in the "No annexations" theory.

If the correspondents in Petrograd would send us fewer impressions and more facts it would be easier to gauge the situation in Russia. They assure us that the patient is suffering from an internal trouble, but they fail to describe the symptoms, and while one day he is described as being *in extremis* and so far despairing of his recovery as to be preparing to make his peace with the world (and particularly with the Germans), the next we are told that his magnificent constitution has rallied under the strong tonics of the last three months, and that the only thing necessary to complete the cure is a little violent exercise, preferably at the front. It is not really doing our Allies, or the Alliance, any particular service to talk round the situation in this way; the Germans know the facts, and it is only their unrivalled faculty for adding two and two together and making six that prevents them profiting politically more than they do from the difficulties in Russia. Militarily they have profited sufficiently, as the removal of troops from the eastern to western fronts attests.

The Council of Workmen's and Soldiers' Delegates has issued a statement which announces that the Socialist Ministers "were sent into the Provisional Government with a definite mandate to secure a general peace by agreement of the nations, and not to prolong an imperialist war in the name of the liberation of nations by bayonets." The worst of adjectives is that they are so indiscriminate; the Council does not say whom it thinks imperialist, whether friend or enemy or both. Substantives are more docile, and the Council, which has repudiated a peace attained by separation from the Allies, advocates a general peace in association with France and Britain. That at least is comprehensible, but many things are comprehensible which are not attainable, and at the present moment an agreement of the nations is clearly one of them. We are rather dubious whether all the missionaries who have gone from England to Russia will achieve very much—Mrs. Pankhurst is the latest departure, and there is really no reason why Mr. H. G. Wells should not follow, except that he is now engaged in reconstructing our theology—but the Notes from America and Britain to Petrograd will probably do more to make things clearer.

President Wilson has slightly changed his formula from "Peace without victory" to something indistinguishable, to our rough island ears, from "Peace with victory," and we thank our Ally for the emendation; thus does war educate us all. Washington holds that there must be effective readjustments, which "must follow a principle, and that principle is plain. No people must be forced under a sovereignty under which it does not wish to live. No territory must change hands except for the purpose of securing those who inhabit a fair chance of life and liberty. No indemnities must be insisted on except those that constitute payment for manifest wrongs done." These definitions are the politest negation of the "No annexations and no indemnities" formula conceivable, but they are none the less direct negations, and their effect is not minimised by a reference earlier in the American Note to the "private projects of power all the way from Berlin to Baghdad and beyond. . . . The meshes of that net must be broken, but they cannot be broken unless wrongs already done are undone, and adequate measures must be taken to prevent it from ever again being rewrapped or repaired."

The short British Note to Russia, which was published a day after the American Note, is both a shorter and a less noteworthy document, and it reads, no doubt unintentionally, as though the Government had got rather tired of all this talk and preferred to get on with the war and discuss its objects when the battles have been won—an attitude which is not essentially dissimilar from that of the average Englishman. The one point which needs remark in this document is its announcement that, if the Russian Government so desire, the British Government are quite ready "to examine, and, if need be, to revise," the agreements which have been made with the Allies. If Russia, for instance, quite definitely makes up her mind that she does not desire Constantinople, then it is quite obvious that we cannot compel her, and that particular agreement, with all that depends thereon, would necessarily undergo revision. It would appear that both the British and the American Notes have been received with a certain lack of cordiality in Petrograd.

It is to be noted that the Roumanian Premier, M. Bratiano, has made a statement to the correspondent of the *Petit Parisien* in Petrograd to the effect that the Roumanian people accept the Russian formula of no annexations with the proviso that "her sole aim in entering the war was the liberation of Roumanian territory from Hungarian subjugation, to emancipate Roumanians, and to restore them to their country." This is not annexation, but restoration, and we hope the Russians will see it in that light. He continues that "Roumania, who has kept her engagements to her Allies, has a right to expect that the Allies will observe the terms of the treaty which binds them to her, and will respect the engagements they have made." This view should find endorsement in Petrograd.

How far the German Socialists are from the standpoint which the Russian idealists wish them to adopt may be gathered from Deputy David's remark at a discussion with the Dutch-Scandinavian Committee. He threw the blame for the origin of the war entirely upon England, declaring that it lay in England's hand at the last hour to prevent all harm to Belgium and France. It is quite natural for a German to blame England for participating in the war, since our entry upset their calculations, as was admitted in the agitated interviews with the Dutch Ambassador at Berlin on the eve of the conflict; but to suggest that had we not come in, France and Belgium wauld have escaped is a clumsy lie. Belgium was already invaded before Britain declared war, and the German Chancellor himself admitted that France was to be despoiled of her colonies. The ingenuous David should try again before he attempts to inveigle the Russian Bathsheba.

The Mesopotamia Report is expected within the next few days. It is to be published immediately, without abridgment, and it is understood that it will contain a strong criticism of the responsibility of the Indian Government for the blunders and omission of the early part of the campaign, which led to the surrender at Kut. Mr. Wedgwood, following the fashion set by Mr. Roch in the Dardanelles Report, has submitted a minority memorandum.

Complaint has so often been made, and justly made, as to the paucity of honours given for distant expeditionary services, that the issue of a British Indian list for Mesopotamia is welcome. The distinguished services which have been noted in the list issued this week were given in the action in which the Turks were routed near Basra in April, 1915, so that it cannot be contended that the awards have been made with undue haste.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 21.

New Appointments.

It has been definitely decided to appoint Dr. Alexander Granville, C.M.G., to the Presidency of the International Quarantine Board, which was held up to his death by the late Sir Armand Ruffer. Lewa Hopkinson Pasha, Commandant of the Alexandria City Police, will succeed to the Director-Generalship of the Alexandria Municipality, left vacant by Dr. Granville's promotion. General regret is felt at the latter's departure from the municipality, where his administration has been marked with conspicuous success; but his appointment to the Quarantine Board is regarded as a well-merited recognition of the good work he has achieved. Hopkinson Pasha, who is most popular in Alexandria, has been for many years in the Egyptian Police, and is a most efficient and capable officer. His selection for such an essentially civil position as the Director-Generalship of the Alexandria Municipality has, however, come as a great surprise; and one cannot help admiring his pluck and public spirit in accepting a post which, it is no secret, had been offered to other senior Government officials and promptly declined by them, and which, next to the Adviserships to the Interior, is perhaps the most difficult in the country to fill with success and dignity.

It is announced that Mr. G. M. Dickson, sub-Governor of the National Bank of Egypt in Alexandria, has been offered and has accepted the managership of the British Trade Corporation recently formed in London. Mr. Dickson's departure is a serious loss to Egypt, where he was regarded as one of the shrewdest, most level-headed bankers and men of business in the country, and where his advice and opinion have been continually sought by the Government authorities in connection with the various economic and financial crises that have supervened during the past three years, and with the reorganisation and protection of British trade interests. The National Bank of Egypt will also feel his departure very much. That institution has already lost the services of one of its ablest officials, Mr. B. Hornsby, who was recently nominated Public Custodian in Egypt, and who, together with Mr. Dickson, is admitted to have been in a great measure responsible for the satisfactory manner in which the local financial situation was handled and all panic averted during the early days of the war. Mr. Dickson's departure now will throw an additional strain on the already depleted senior staff of the bank.

The New Greek Courts.

On Thursday last the new Consular Court of the Salonika Provisional Government, the creation of which was recently authorised by General Murray, was inaugurated in Alexandria. The President is Judge Lambros, and the Procurator-General is M. Sachtouris, the Venizelist Consul-General and Diplomatic Agent in Egypt. Speeches were made by both these officials, condemning the Athens Government and expressing admiration for Great Britain. Mr. Mercinier, the leader of the Mixed Bar, who was accompanied by several of his colleagues, also spoke, and offered the congratulations of the body which he represented to the new Court. There are signs that the republican movement is finding favour with the local Hellenic colony; but as yet there has been no decided public expression of opinion on this question.

Sudan Public Works.

Mr. Bonham-Carter, Legal Secretary to the Sudan Government, who has been in Cairo for the past month with Colonel Bernard, the Financial Secretary, has left for London. His journey is understood to be in connection with the question of the £3,000,000 Sudan Loan and the resumption of work on the Blue and White Niles. He will be shortly followed by Colonel Bernard.

Trial of Famous Coiners.

The Cairo Assize Court is at present occupied with the trial of the famous gang of false coiners, who have been laid by the heels during the past year, and one of whose more prominent members was the Cashier of the Native Court of Appeal. There are an unprecedented number of accused and witnesses, and the trial is expected to last some considerable time.

Meanwhile, an inquiry has been conducted into charges of corruption and dishonesty brought against certain members of the staff of the Mixed Courts in Alexandria. Quite a number of officials are implicated, and the revelations made have created somewhat of a sensation. A Council of Discipline will examine the charges and decide what is to be done with the officials concerned.

The State Railways.

The Egyptian State Railways have decided further to curtail the train service, and, in addition, to increase fares by 50 per cent. over the pre-war rates. The reason for this is the difficulty in obtaining coal and material, and the greater call which is being, and will, in the near future, be made on the existing rolling-stock by the military authorities. This decision has aroused considerable comment and opposition on the part of the public, first, because it is proposed to apply the higher rates to suburban season-ticket holders, and secondly because, as it is, since the war, the accommodation on the trains has been quite inadequate. No one objects to the curtailment of the train service; for it is generally agreed that the present conditions and future prospects fully justify this measure; but strong exception is taken to the accompanying general raising of the fares, which is considered to be uncalled for —at any rate to the extent and on the scale decided upon. As a matter of fact, it is a moot question whether any raising of the fares will itself bring about any material reduction in traffic; for in Egypt there is, especially at present, very little of that indiscriminate travelling which existed in England and had to be stopped, and the bulk of local railway passengers merely travel because and when they are forced to do so. There are, indeed, many ways besides curtailment of service by which whatever indiscriminate travelling does exist could be checked, and a reduction in passenger traffic could be brought about without inflicting unnecessary hardships on sections of the community which, by their very circumstances, are compelled to travel by train, and which can ill afford the extra expense now put upon them. Whilst one sympathises very much with the railway authorities in the difficult task that confronts them, one cannot help feeling that the general raising of the fares has been decided upon without sufficient consideration being given to the effect such a decision might have on certain sections of the population.

EGYPTIAN MAIL LOST.

The Postmaster-General announces that a small mail for the United Kingdom from Egypt and the Egyptian Expeditionary Force, despatched on May 27, was lost on the French mail steamer Yarra It is probable that mails from East Africa also were lost.

Under date of June 1, the Cairo correspondent of *The Times* telegraphs:—I understand that Japan has decided to appoint a Consul in Egypt. Japan has not hitherto been represented here, as she had no political relations with Turkey. The decision is due to the increase in Japan's commercial interests in Egypt, and may be regarded as a recognition of Egypt's new status.

A letter has been addressed by the Japanese Consul at Cairo to the diplomatic agent of the Greek Provisional Government. This is the first act whereby Japan has recognised the Provisional Government at Salonika.

PALESTINE EXPLORATION FUND.

THE ANNUAL GENERAL MEETING will be held (for business purposes only) at the Office of the Society, 2, Hinde Street, Manchester Square, W.1., on THURSDAY, JUNE 21, at 3.30 p.m. There will be no Special Address.

CYPRUS NOTES.

(From Our Correspondent.)

Legislative Council—Greek "Propaganda."

On the assembling of the Legislative Council the draft reply of the members, which merely records their thanks to the High Commissioner for his Address, was passed. Various additional paragraphs were then proposed by Greek elected members. They were opposed by the Turkish representatives, and in the voting were all negatived. The votes of the six official and three Ottoman members being equal to those of the nine Greek members, the Chairman gave the casting vote. The rejected paragraphs related to matters which could be brought forward during debates, and were quite inappropriate for insertion in the Reply. They practically led up to the main object of expressing the hope that Cyprus might be handed over to Greece. The argument advanced at present is pretty much as follows:—Cyprus remained under British administration, by virtue of the Anglo-Turkish Convention, until November 5, 1914, when it fell through. The basis of the Convention was that Great Britain should help Turkey against Russia. As Britain and Russia are now allied against Turkey, the agreement is no longer valid. Which of the Powers, then, has a right to the island? By what right does England hold it? Our hopes are based on the principles which England has always professed, and has emphasised in late years.

The Turkish members opposed the arguments. Irfan Bey said that the proposal gave him the impression that the Greeks desired either autonomy or a Kingship. They did not require a King who was unworthy of confidence, or a kingdom of that character. The ideas expressed by Greek members were diametrically opposed to the interests of Cyprus. Hami Bey observed that the fate of Cyprus would be decided when peace terms were considered after the war. Irfan Bey had previously expressed the hope that the Government would take suitable measures to stop the agitation and propaganda of the Greek element. "What," asked an hon. member, "do you mean by 'propaganda?'" The reply was that facts known to all fully explained the term.

A "Regrettable Incident."

The debate was continued during the first days of May. On the 3rd an expression of a Turkish member led to a request that he should be called to order. The President—the High Commissioner—ruled that the hon. member was not out of order. The first reading of the Appropriation Bill was then voted by a majority, consisting of the official members, the three Ottoman, and three Greek members, who supported it "in order not to impede the working of the administrative machine." Later in the debate one of the "regrettable incidents" took place of which the history of the Council has furnished several examples. One of the Greek members having alluded to an occasion on which they voted against the construction of a new Council Chamber on the ground that they could well continue to use the present one until the day when they would be called to sit as representatives of the people in another House, Irfan Bey remarked that the site of such a new Chamber would no doubt be found in the Ayia Pareskevás region of Nicosia. The locality referred to contains the lunatic wards—the only asylum in the island. The Greek members were roused to exasperation by this harmless piece of sarcasm. The President was asked to call the hon. member to order; but he ruled that there was no reason, and that he did not consider the words, which were, of course, used jocosely, to constitute an attack on the *amour propre* of any members. Moreover, the Turkish member offered to withdraw his words if the hon. member would withdraw those which had given occasion for them. The Greek members, however, persisted in regarding the words as a dire insult, and to show their view of the matter they marched out of the Chamber in a body. The incident calls to mind some other occasions on which the Greek representatives have behaved in a very similar manner. The whole proceeding was very petty and improper, as showing disregard for the ruling of the Chair. After their departure the British and Turkish members voted the Estimates without further delay.

The Sensitive Members.

Next day, after deliberation, the Greeks despatched a letter, signed by all nine members, in which they explained their feelings, stating that, since they could not by the rules of the Council protest in that place, the step they had taken was a protest against the attack which had been made upon them, and also against the decision of the Chair, which, they plainly said, had astounded them. A reply was received the same day from the Acting Chief Secretary, Mr. Fenn, in which the attention of the Greek members was called to the fact that the decision on a point of order was entirely in the hands of the President. Nothing that had taken place was an attack on anybody, and the Greek members have adopted an entirely wrong course in the matter.

One of the principal subjects referred to related to education and the need of a new law, on which much stress is laid by the Greeks, but the introduction of which the High Commissioner had explained could not be effected during the present Session or in present circumstances.

Honour for a Cypriot Policeman.

The King having been pleased to bestow a medal for an act of conspicuous bravery on a member of the Cyprus police force, Yani Hajji Georgiou, the ceremony took place at Government House at one of the Wednesday afternoon receptions. This policeman some time ago saved the life of a labourer who, while cleaning out a well, fainted and was in imminent danger of death from asphyxia. The High Commissioner himself placed the medal on the breast of the recipient. The Greek Archbishop, several members of the Legislative Council, Government officials, and a large company of leading citizens were present. Officers of the Nicosia Police, and of detachments from Larnaca, Famagusta, Limassol, and Kyrenia attended.

Destruction of Sparrows.

A notice signed by the Chief Inspector of Schools, Canon Newham, and the Director of Agriculture, Mr. W. Bevan, sent to the teachers of elementary schools, calls attention to the need of destroying sparrows, which commit such havoc in ripening crops and garden produce. The best means at this season is the destruction of nests and eggs; and as sparrows build chiefly in and near human habitations, children can easily help in the work, out of school hours. Teachers can give valuable aid, not only by showing villagers why sparrows should be attacked, but why other kinds of small birds should be protected, as not only harmless, but, on the contrary, as very beneficial, since they feed on insects. At the same time they can teach children and villagers the difference between cruelty, such as keeping a bird tied by the leg with string till it dies, and killing one immediately when necessary. To encourage the work Government will pay from 5 to 8 paras (360 paras = 1 shilling) for every sparrow's egg. The eggs will be collected by the teachers and delivered at police stations in the Mesaoria plain—ten in the Nicosia and five in the Famagusta district, up to May 24. The money will be paid through the teachers. The experiment will be on a limited scale, in order to see whether results justify its adoption on a wider scale in future. It is not unlikely that this will lead to the destruction of the nests and eggs of various other birds, which in so comparatively treeless a place as Cyprus would be regrettable. But there is no doubt as to the great damage done by sparrows, as well as by hooded and other crows, and it must be hoped that the results will be satisfactory.

General News.

A Cypriot villager, who has been condemned to twenty years' imprisonment for murder in Egypt, has been transferred to Cyprus, to undergo his sentence in the central prison at Nicosia.

There is but little local news. Various rumours are afloat, as is generally the case in a place not in constant receipt of information from reliable sources. Fortunately the island is fairly well supplied with war telegrams. The Press is much occupied with the proceedings of the Legislative Council. As regards Greece, the "Greek" Cypriots are pretty evenly divided between the Venizelist and Royalist parties, the former perhaps predominating. It is hoped by both that, whatever may be the result of the war, Greek interests will not suffer.

THE TURKS AND GENERAL TOWNSHEND

Under date of June 9, Reuter's Paris correspondent reports:—The newspapers publish an interview with Mr. Elkus, ex-Ambassador of the United States to Turkey, who has arrived in Paris.

Mr. Elkus says that, generally speaking, the Turks behave generously towards their enemies, and that General Townshend in particular assured him on many occasions that he had only appreciation to express of the way in which the Ottoman Government had treated him. General Townshend often obtained permission to come into Constantinople from the island on the Marmora on which he is detained in order to make purchases, and on these occasions he frequently looked in on Mr. Elkus for a talk.

Foreigners, Mr. Elkus said, and many Turks have retained their friendly feeling for France. To his knowledge there have been no disorders in Constantinople, and he never saw any indication of any real loss of confidence on the part of the Turks. The Turks, he says, evinced regret at the entry of the U.S.A. into the war.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Greek Throne. June 13.

Earl CURZON said: I have to inform your Lordships that his Majesty's Government have received information from Athens that King Constantine has abdicated the Throne of Greece in favour of his second son, Alexander, who has taken the oath as King. It is the hope of his Majesty's Government that this event may make for the union of Greece and the restoration of constitutional government in that country.

The Earl of CAMPERDOWN asked whether the Germans who had assisted King Constantine would be required to leave Greece as well as the King.

Earl CURZON: The King of the Hellenes is taking a party of his friends with him, but on the particular point raised I should like to postpone a definite answer till a later day, when I hope to make a statement with regard to the position of Greece.

HOUSE OF COMMONS.

The Future of Austria. June 7.

Lord R. CECIL, replying to Mr. LEES SMITH, who asked whether the correct interpretation of the Allies' Note to President Wilson was that it was proposed to dismember the Austrian Empire into two or more independent States, provided that suitable forms of home rule were granted to the Czecho-Slovaks and the other subject races of the Empire, said:—The words of the Allied Note seem to me perfectly clear. It is the object of the Allies to secure the liberation of the races referred to, but they have not defined the exact method by which such liberation is to be secured.

Bulgaria and a Separate Peace.

Major CHAPPLE asked the Under-Secretary for Foreign Affairs the names of the representative of the United States in Bulgaria and of the representative of Bulgaria in the United States; whether the former had been asked to represent British interests; and whether any overtures had been made by Bulgaria to any of the Allies for a separate peace.

Lord R. CECIL: The United States representative at Sofia is Mr. Warfield, and I understand that the name of the Bulgarian Minister at Washington is Monsieur Panaretoff. The answer to the second part of the question is in the affirmative; that to the last part is, so far as I know, in the negative.

Bulgars' Treatment of Serbians.

Mr. R. M'NEILL asked the Secretary for Foreign Affairs whether his attention had been directed to a report given by Serbian deserters from the Bulgarian Army, in which they had been forced to serve, of the savagery with which a so-called insurrectionary movement in Old Serbia was crushed last winter by the Bulgarians; whether he had official information to the effect that out of 6,000 prisoners captured by the Bulgarians 2,000 were murdered in cold blood by machine-gun fire and the remainder deported to Asia Minor; that the whole rural population of the district were removed to Bulgaria, where the men were reduced to slavery and the women and children handed over to the Turks to be taken to the Turkish Asiatic provinces; and, if so, could he say whether the German officers and troops assisted the Bulgarians in perpetrating these atrocities?

Lord R. CECIL: His Majesty's Government continue to receive confirmation of the brutality with which the recent rising in Old Serbia was suppressed, but the details which have hitherto reached them do not show that any German officers or troops participated in these atrocities.

The Situation in Greece. June 11.

Mr. R. M'NEILL asked the Under-Secretary for Foreign Affairs whether any steps had been taken to prevent the harvest in Thessaly falling into the possession of King Constantine's Government; whether such an event would make it possible for the King to order the return of his troops from the Peloponnese, thus threatening danger to the Venizelists and to the Allied forces operating from Salonika; whether he could give an assurance that such danger had been effectively provided against by ordering the occupation of Thessaly by Allied troops or otherwise; and whether the time had come for the Allies to break decisively with King Constantine in agreement with the policy of M. Venizelos.

Lord R. CECIL.—Steps are being taken to secure the control of the Thessalian harvest. I do not think it would be desirable to make any further statement at present.

Mr. R. M'NEILL.—Can the noble lord give any idea as to when it will be possible to make some disclosure with regard to the policy of his Majesty's Government in this theatre and in the Near East generally?

Lord R. CECIL.—I should not like to pledge myself to a day, but I hope very shortly.

Italy and Albania.

Lord R. CECIL, asked by Mr. LEES SMITH whether the protectorate declared by the Italian Government over Albania included the district of Epirus, said:—I have as yet no more detailed information regarding the extent of the proclamation than that which has appeared in the Press.

Mr. LEES SMITH.—Is it not a fact that this particular district of Epirus is inhabited by a civilised population having Hellenistic sympathies, who have never wished to be handed over to Italy; and before the protectorate is made effective will steps be taken to ascertain their desires?

Lord R. CECIL.—As the hon. member is probably aware, some of the population are Albanians and some Greeks. I do not understand that the proclamation hands over anything or anybody to Italy. I understand that it is a proclamation of the independence of Albania under the protection of Italy.

Mr. LEES SMITH.—Does the noble Lord recollect that when the Italians moved troops into this district the Italian Minister at Athens made a public statement that the international status of Epirus would not be altered, and that the movement of troops was for a merely temporary military purpose?

Lord R. CECIL.—I do not remember the exact wording of the statement, but I feel quite sure that whatever the Italian Government said they will stick to.

Prisoners of War. June 12.

Mr. J. F. HOPE, replying to Mr. G. FABER said:—According to returns made up to the end of May, the number of British combatant prisoners of war of the Regular and Territorial Forces, Royal Navy, Royal Naval Division, and Indian Forces is as follows:—Germany 1,354 officers, 34,304 other ranks; Turkey, 556 officers, 8,355 other ranks, Austria, five officers, 12 other ranks; Bulgaria, 22 officers, 523 other ranks—1,937 officers, 43,194 other ranks. The German figures include a certain number of prisoners taken in East Africa. In reply to a supplementary question, Mr. HOPE added that he thought that he was right in saying that the great majority of prisoners in Turkish camps were native Indians.

The Situation in Greece.

Lord R. CECIL, answering Mr. R. M'NEILL, who asked if any statement could be made regarding the situation in Greece, said: I am afraid I cannot add much at present to what has already appeared in the Press. Hon. members will have gathered that, in order to secure unity of Allied diplomacy in Greece the French and British Governments have appoined M. Jonnart High Commissioner for Allied purposes in Greece. He is entrusted among other things, with the duty of securing control of the Thessalian harvest.

Mr. WHYTE.—Will the new Commissioner exercise the rights of the three treaty Powers, including Russia?

Lord R. CECIL.—No, sir; the three treaty Powers, including the British Government, will still continue to be represented in Greece. The Commissioner is merely entrusted with the duty of representing the British and French Governments at present for Allied purposes when they wish to make Allied representations.

Mr. LYNCH.—If M. Jonnart discovers that King Constantine has exceeded his legal powers as conferred by treaty will he dispossess him?

Lord R. CECIL.—That is a question which should be addressed to M. Jonnart.

The Mesopotamia Report. June 13.

Mr. BONAR LAW, in reply to questions by Mr. King and other hon. members, stated: The report of the Mesopotamia Commission, which includes Sir William Vincent's report, will be published immediately, without alteration.

Italy and Albania.

Lord R. CECIL, replying to a question by Mr. King about the Italian proclamation of a protectorate over Albania, said: I understand that the proclamation was issued for purely military reasons, and it was not therefore thought necessary to consult other Governments. The proclamation does not affect, and indeed could not anticipate, the settlement to be arrived at when peace is made.

King Constantine's Abdication.

Replying to Mr. Asquith, Mr. BONAR LAW said: His Majesty's Government has received information from Athens that King Constantine has abdicated the Throne of Greece in favour of his second son, Alexander, who has taken the oath as King. It is hoped that this will make for the reunion and restoration of constitutional government.

Mr. LYNCH: What does the Government expect to gain by the change? Is it not simply perpetuating the same régime under another name?

The CHANCELLOR of the EXCHEQUER: What the Government hope to gain is that there will be in Greece a constitutional Government representative of Greece.

Mr. LYNCH: Is it not a fact that the weakness of the Government has endangered the whole campaign there?

Mr. SWIFT MACNEILL: Is it not a fact that King Constantine has been given permission to abdicate in favour of a man of his own choice? Having regard to the fact that he has been practically expelled from his throne, should he be allowed to nominate his successor?

The CHANCELLOR of the EXCHEQUER: I do not think that it is in the public interest that I should give more information than I have given, but I think that I may say that the hon. gentleman is wrong in saying that the successor was nominated by the late King.

Mr. LYNCH: The dynasty has been preserved.

TANGIER TO TEHERAN.

The report that "Turkish Asiatic troops have arrived in Europe in large numbers," and that they "will be used for the town garrisons of Austria and Germany," is somewhat startling. In the first place, one would hardly have thought that Turkey could spare troops "in large numbers" from Asia at the present time. And then of what use will these problematical troops be for garrison duty? Are they to be used to cow the good ladies who seem to agitate more or less regularly for an increase of food, or a reduction of prices, in certain parts of Germany and Austria? If so, we may yet have a new edition of the Armenian massacres. Or would the doughty Hausfrau, who stands not in awe of even that fearsome creature the POLICEMAN, rise in her might and give the Turkish Ally "what for"—or its German equivalent? I scent possibilities in the report. Allah send that it be true!

***

Apropos of Germany and of outrages, I read in *The Times* that "the German Stage Union, at its annual meeting, not only adopted the resolution proposed by Count Seebach, of Dresden, which will forbid German singers and actors to make tours in America, but it was announced that the Stage Union and the German Foreign Office have created 'an organization for the centralization of German operatic and theatrical performances in foreign countries.'" The latter part of this announcement leaves me cold; but the first part is horrible indeed. It indicates—or so I gather—that the vengeful German will *not* "forbid German singers and actors to make tours in" this country. And I had fondly hoped that after the war poor old England might be free from the Germs in any shape or form for at least a generation. I can only take the adoption of the resolution referred to as intended to indicate that America may eventually be forgiven, but Britain never will. "Hate" indeed!

***

I have not read Mr. Aaronsohn's "With the Turks in Palestine," but in a notice of it I came across a truly delightful touch. It seems that in forwarding the news of the Turkish defeat at the Suez Canal Jemal Pasha announced it as an overwhelming victory. Our forces, he telegraphed, had been routed, and some British men-of-war had been sunk at the cost of five Turks and two camels—"which," he added, "were afterwards recovered." We are not told whether they were shot as "deserters" or "spies," as was the case with some Turkish soldiers recently referred to in these columns. But, in any case, the Turkish losses were not large for such great results! And, after the glorious victory, it must have been tantalising indeed to have to fall back. The ingenious Jemal reported: "A terrible sandstorm having arisen, the glorious army takes it as the will of Allah not to continue the attack, and has therefore withdrawn in triumph." The Turkish hand has not yet lost its cunning!

***

I heard the other day a quaint little story about the late Lord Kitchener. It was first told by "K." himself to the friend who passed it on to me, and it may therefore be regarded as quite above suspicion. The incident took place in India, soon after Lord Kitchener's arrival there, when, strange as it may seem in regard to such a commanding and striking personality, he was not always recognised. He was walking alone when he happened upon a solitary soldier, a private, to whom he spoke, asking the man what regiment he belonged to. The private was apparently in a somewhat disgruntled state. "I," he answered, sourly, either ignorant or feigning ignorance as to who his questioner might be, "I belong to the Royal B——y Well Fed-ups."

***

There is always a touch of satisfaction in hearing of the horrifying of a really prim and "starchy" person. Of course there was nothing of that kind about "K. of K.," and the fact that he told the story himself shows that his soul rose above pettiness. But not all soldiers are free from the vice; indeed, the "disciplinarian" is a likely victim for it; and of one such, a General, a tale something like the Kitchener story is told by his A.D.C. His name I suppress, but I may say that he is usually regarded as "fussy" and inclined to stand too much upon his own dignity. I have heard other things about him, but these will suffice for the present purpose. Well, this General—being somewhere not far from the Front—came upon a member of a Labour Battalion who appeared to be quite "on his own." The distinguished officer was shocked to find a private wandering over the face of France thus, uncontrolled and looking none too spick and span. "Here, my man," he said, sharply, "what do you belong to?" The horny-handed one in khaki regarded him stonily for a few tense seconds; then spat luxuriously on the ground. "Damned if I know," he replied.

***

In neither of these instances was the private over civil to his superior. But here is another soldier story, in which no charge of incivility is brought against the Tommy. It concerns a Field Marshal who has served in many parts of the world and is particularly well known in Malta—to wit, Lord Methuen. But the incident occurred a good many years ago. The gallant officer referred to was in camp at a place the name of which I have quite forgotten, and, being invited out to dine informally, went unaccompanied by any members of his staff. On his return he was alone, and in the darkness he missed his way for the moment. Just then he ran into—almost literally ran into, for it was a dark night—a solitary soldier. Relieved, he asked this wandering warrior the way to his own quarters. The soldier saluted respectfully and replied: "Very sorry, sir. But, please sir, I'm drunk myself."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"THE MAN IS"—MY FRIEND, ALTHOUGH —"A ROGUE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow space for the following in THE NEAR EAST? I fully agree with Mr. H. M. Wallis that the goloshes of the Serbian professor may have been stolen by a person of different nationality from Bulgarian, but as the affair happened in Sofia it is only natural that a Bulgarian should be suspected, just as, if it had happened in Paris, a Frenchman would be blamed, or in London, an Englishman. But I think the following may be of more interest to Mr. Wallis than the goloshes.

In Serbia it is the custom on Christmas Day to have a sucking pig for dinner, just as in England one would have a turkey. Consequently the Serbian Government, before Christmas of 1912, sent 10,000 freshly killed sucking pigs to the Adrianople front for the Serbian troops who were there fighting to conquer Adrianople for Bulgaria. But not one of them ever reached the soldiers, for they were "pinched" en route in Bulgaria.

During the same winter the Serbian Government sent 20,000 complete new uniforms for the troops at the Adrianople front, but not a single coat arrived safely. Now, I will not accuse the Bulgarians of having stolen the 10,000 sucking pigs, as there is no evidence to prove that they were the culprits, therefore the thieves may have been Greeks, Jews, Turks, Americans, Englishmen, or even brother Serbs, but the uniforms were undoubtedly stolen by Bulgarians. This was definitely proved in 1913 during the time that the Bulgarian friend-rogue treacherously attacked Serbia. Twenty thousand Bulgarians were dressed in those very Serbian uniforms for the purpose of deceiving Serbians; but the ruse failed. Can Mr. Wallis imagine anything more despicable, more dishonest, more utterly contemptible in a foe, much less a friend?

After Bulgaria has deceived Great Britain and her Allies, has sided with our enemy, and is fighting against us, Mr. Wallis (who knows Bulgaria), instead of advising us on how to defeat them, suggests a way of bribing them. Is he aware, I wonder, that the German offer to Bulgaria exceeds tenfold the offer suggested by himself? Does he know that, even after the enemy has been totally defeated, Bulgaria, win or lose, will not separate from Austria-Hungary and Germany? Does he know that the Bulgarians are fighting with all their might to help Germany to defeat us, so as to establish Bulgarian hegemony in the Balkans—a greater Bulgaria that would place the British interests in the East in jeopardy?

Can Mr. Wallis imagine how the heart of every Serbian who read his last and his previous letters ached? Can he imagine in the least what the Serbian nation is suffering at present? Has he forgotten the words of praise of Serbian heroism spoken by the late Lord Kitchener? Has he any conception of the grief of English mothers, wives, and sisters who have lost their sons, husbands, and brothers on the Salonika front? And does he think that Serbia deserves the anguish of discovering that her friends, as well as her enemies, demand a "pound of flesh"? No, Mr. Wallis, that would not be cricket. That is not English.—I am, etc.,

NEAR EAST BOOKSHELF.

THE MECHANISM OF EXCHANGE.*

This book deals with the economic development of the world's trade and the effect of the war on the intricate machinery of modern finance. The author holds that the study of economics has not received in the past the popular attention to which it is entitled. This may have been due to the more or less satisfactory manner in which the prevailing methods have worked; but the war has had such an effect upon international trade, and, as a corollary, on our monetary system, that the subject has developed into one of great practical interest, of significance to every member of the community.

The earlier part of the book deals with the history and origin of the various forms of money or money substitutes, from the primitive exchange or barter of goods between nomadic tribes to the development of a medium of barter by the invention of money and the evolution of the markets of the world.

The author then explains the earlier problems which arose in the establishment of the precious metals as the media of exchange, eventually resulting in the acceptance of a gold standard by all the more important nations of the world. This leads to the consideration of the growth of the modern banking and credit system, which for practical purposes has now replaced the actual employment of money for all business transactions. This credit system is one of profound importance, as upon it rests the whole edifice of trade development.

The functions of money are necessarily of a temporary nature only. Money is employed to represent values between the sale and purchase of commodities; in other words, it is a common measure of values. Now, in order that this common measure may fulfil its functions satisfactorily, it must have a recognised fixed value, and must be universally accepted at that value. Gold has been the accepted medium of exchange, and has more or less fulfilled these requirements, but the quantity of gold available has precluded its actual use as a medium in the vast turnover of modern business.

In consequence of this the modern credit system has arisen, which employs the common measure in terms of gold. By this means the merchant who sells goods receives credit "in terms of gold" for his sale, disposing of that credit by a purchase at a later date. No actual gold passes through his hands. In fact, except in very small transactions, the actual use of gold would be a serious inconvenience to business.

In recent years, owing to the enormous expansion of trade, the current requirements of a medium of exchange have risen out of all proportion to the amount of gold available, and in consequence the credit system in terms of gold may be said to have taken the place of gold, the metal forming an adjunct only to that system in settling a temporary difference in the balance of trade.

Nevertheless the credit system is controlled by gold, as it is based on the recognised though tacit understanding that, if demanded, payment will be made in gold. For this, indeed, in normal times, the available stock of gold was considered sufficient. In critical times, however, when people doubt their neighbours' ability to meet their obligations, there is a general attempt at liquidation, and an effort is made to return to the old method of treating gold as the actual medium of exchange.

The author gives a very clear and useful account of the financial crisis in August, 1914, and its effect on our credit system. Every man of business remembers only too vividly the sudden demand for cash, the four days' suspense, and then the issue of treasury notes; and it is interesting to observe how these notes supplied the want of a mobile medium of exchange to replace the contraction in the credit system. It would be a mistake, however, to say that treasury notes have taken the place of gold as the medium of exchange, as they only form at present a development of the credit system, and are based on the credit of the country in terms of gold. In fact, they may be changed for gold if anyone desires to do so.

Paper money, however, has undoubtedly come to stay in some form or other, and the interesting problem arises as to what its relation to gold will be, and how it will fulfil its functions. As the author points out, the value of gold as a medium of exchange varies according to the output of the world's mines. It is subject to great local fluctuations through sudden demands arising in one or other of the countries using it as a standard, thus causing the world's stock to gravitate in that direction. He thus clearly shows its weakness on the basis of the quantity theory of money.

Properly to fulfil its functions, the supply of money should be controlled by the world's requirements, as shown by the "Index Number of Wholesale Prices." In the case of paper money it would be feasible to do this, and thus average values could be kept constant. On the other hand, the value of paper currency is dependent upon the responsibility and credit of the Government of the country in which it is used; and it is further complicated by its position in relation to international exchange.

The author makes the suggestion that an international note might be issued based on the requirements as shown by the index numbers of the countries concerned, the issue being controlled by an international commission. While the suggestion in this form might appear fantastic, if one bears in mind that a medium of exchange between countries is only required to adjust temporary differences in the balance of trade, it should be feasible by the establishment of temporary credits between the nations concerned to obviate the employment of gold as a medium. Of this method, indeed, our financial relations with the United States for the past two years offer a striking example. Owing to her excessive exports to this country we became heavily in her debt. Gold in payment was not acceptable as the creditor country had ample for her purposes; and the method of settlement adopted was to pledge her securities held in this country.

Apart from such fruitful speculations on economic methods now evolving before our eyes, the author has embodied in this useful volume his long-cherished ideas of how economics should be studied both by the student and the man of business, and he is to be congratulated on the comparatively simple and effective manner in which he presents the "dry science." In this respect the book is good enough to reach a wider circle than the merely professional and technical student.

J. P.

* "The Mechanism of Exchange." By John A. Todd, B.L. Published by Humphrey Milford. 5s. net.

BOOK NOTES.

Mr. Lane has just published "In Greek Seas and Other Poems of Travel," by Oswald H. Hardy. (3s. 6d. net).

Mr. Leonard S. Woolf's "The Future of Constantinople," which is published by Allen and Unwin, advocates the internationalisation of that city.

Part 147 of "*The Times* History of the War" carries the account of the Roumanian campaign of 1916 to completion. The illustrations are numerous, and the maps useful.

Two pamphlets advertised by Messrs. Hodder and Stoughton are "Microbe Culture at Bukarest," describing discoveries at the German Legation, from the Roumanian official documents; and "The Murderous Tyranny of the Turks." The first costs one penny, the second twopence.

Mr. Robert Scott has just published a new book, by Miss Norman Lorimer, "By the Waters of Africa." The book, which is illustrated by many photographs, is priced at 10s. 6d. net.

M. Radoslavoff, the Bulgarian Prime Minister, left Sofia for Berlin last week.

Five hundred delegates were present at the first congress of Zionists of All Russia in Petrograd last week.

Mr. John William Redfern writes (from Petrograd) to the *West Sussex Gazette*: "No doubt it will be of interest to many of your readers who have, or did have, until recently, friends or relatives in Roumania, and especially in Bukharest, that up till January 14 last the English (about 100) who could not get away from that city before its surrender were being treated by the Germans with every consideration, and neither the men nor the women were interned up till that date, but had been allowed to attend to their different vocations as usual."

Colonel the Hon. Guy Wilson, M.P., commanding the battalion to which the late Lieutenant Gresham, of Bridlington, was attached, has written to Lieutenant Gresham's parents regarding their son's death. Colonel Wilson states that Lieutenant Gresham had been in hospital only two days when the Turks carried out an air raid on the hospital, and a bomb exploding in the ward in which Lieutenant Gresham was sleeping he was killed. Colonel Wilson remarks: "This systematic bombing of our hospitals by enemy aeroplanes makes one's blood boil. The Turks say they are only retaliating for what we have done, but if we have bombed their hospitals it has only been by mistake, whereas the Turks have made every effort to bomb ours and have also shelled them."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars apply to E. DENISON ROSS, Director.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. June.	1917. June.		1335. Shaaban	5677. Sivan
15	2	Friday	24	25
16	3	Saturday.....	25	26
17	4	Sunday	26	27
18	5	Monday	27	28
19	6	Tuesday	29	29
20	7	Wednesday	30 Ramadan	30 Tamuz
21	8	Thursday	1	1

In a message dated June 6, Reuter's correspondent at Jassy reports:—Sir George Barclay, the British Minister, was to-day received in audience and handed to King Ferdinand of Roumania, on behalf of King George, the Collar of the Victorian Order.

The Crown Prince of Serbia arrived in Corfu last week.

Prince Soutzo, formerly Military Attaché to the Roumanian Legation in Paris, and Princess Soutzo have arrived in London from France.

Lieutenant N. A. Lahovary, the son of the Roumanian Minister in Paris, arrived in London on Thursday from France, on his way to Jassy to join his regiment.

General Georgescu, the chief of the Roumanian Military Commission, is leaving London very shortly for France.

Major-General Count Gleichen and Countess Gleichen have arrived at 35, Catherine Street, Buckingham Gate, which will be their permanent address.

Mr. L. Einstein, formerly American Minister to Sofia, has arrived in London. Mr. Einstein's splendid work on behalf of the British prisoners in Bulgaria will be recalled by our readers.

Colonel Borisavitch, head of the Serbian Red Cross, left England last Saturday for France.

Mr. Bonar Law has received official confirmation from the Vatican of the fact that his second son, Lieutenant C. J. Law, King's Own Scottish Borderers, is a prisoner with the Turks. A Reuter's message from Rome adds that the Vatican has ascertained that Lieutenant Law is being well treated, and that there appears to be no cause whatever for apprehension in regard to him.

On June 7, at Alexandria, the wife the Rev. C. A. Lea Wilson, C.M.S., Gordon Memorial Mission, gave birth to a daughter.

An engagement is announced between Temporary Major H. A. Wernher, Lancers, second son of the late Sir Julius Wernher, Bt., and Lady Wernher, of Luton Hoo, and Countess Zia de Torby, elder daughter of his Imperial Highness Grand Duke Michael of Russia and Countess de Torby.

The marriage arranged between Captain H. B. Haydon-White, D.S.O., the Queen's Own (Royal West Kent Regiment) (attached Egyptian Army), only child of the late C. Haydon-White, M.R.C.S., and Miriam Olive, youngest daughter of Alfred Barrett, of Lammas, Cowes, I.W., will now take place quietly at Holy Trinity Church, Cowes, on Wednesday, June 20, at 11.30 a.m. There will be no reception, but all friends will be welcome at the church.

The presentation of the Royal Asiatic Society's Public School gold medal and prizes took place on Tuesday. Sir John Hewett, G.C.S.I., C.I.E., made the presentations.

The King's new honorary chaplain, the Rev. E. A. Burroughs, is one of the discoveries of the war, says a writer in the *Daily Chronicle*. A young clergyman, with a brilliant University career, he has suddenly leapt into the first rank of speakers and writers. Just lately he has been in Egypt, addressing military and other audiences. Mr. Burroughs has the gift of putting old truths in a new and fascinating setting—hence the large sales of his books. Other Churches than his own—for instance, the Presbyterian—have lately invited him to address clerical gatherings. He is only thirty-six.

Miss Vivian Edwards, whose delightful lecture recital on "Ballads and Folk Songs of Serbia and the Southern Slavs," illustrated by songs and lantern slides, has given so much pleasure, will be at Pond Farm, Worcester Park, until the middle of July. Miss Edwards has been giving her recital in various parts of England for the benefit of the Serbian Relief and other War Funds.

We regret to learn that Professor Pavlé Popovitch has been indisposed this week. He is now, we understand, making satisfactory progress.

The Serbian Minister, the Roumanian Minister and M. Gennadius were among those present at the recital of Serbian Church music which was given at the Church of St. Augustine, Queen's Gate, last Saturday afternoon. The recital had been arranged by the Anglican and Eastern Association in aid of Serbian Red Cross Funds, and it attracted a large attendance. The music, with English words, was sung by the choir of St. Mary, Boltons, South Kensington, aided by members of the Gregorian Festival Choir, directed by Mr. F. Burgess.

The matinée being organised by Miss Helen Morris for the Royal Flying Corps troops in the Near East (to provide them with comforts, mosquito nets, and the like) will take place at Wyndham's Theatre on the 19th inst.

Sir P. Nairne, chairman of the Seamen's Hospital Society, speaking at a Red Cross meeting at Lee, said that the society he represented had been asked to send out a party of doctors especially skilled in tropical medicine to the Serbian Red Cross Society at Salonika. The London School of Tropical Medicine was one of the off-shoots of the Seamen's Hospital Society, he said. They had a large staff of teachers and doctors working in that school, and in the branch hospital at the Victoria and Albert Docks. As a result they would be able shortly to send a party of doctors to go and work with the Serbian and British Red Cross Societies.

The British Farmers' Red Cross Fund has agreed to send a further sum of £40,000 to the British Red Cross Society, £30,000 of this amount being for general hospital work, stores, etc., in Mesopotamia. The fund now reaches the satisfactory grand total of £613,859. Donations and offers of assistance will be gratefully received by the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.1.

Reuter's message from Madrid announces that the Archduke Salvator of Austria, who died at Palma de Mallorca, left his property in Egypt and practically his entire fortune to his secretary, Antonio Vives, and his sons.

The National Roumanian Relief Fund has sent £25,000 to the Roumanian Minister in London for Roumanian Red Cross purposes. The Hon. Treasurer of the Fund is Mr. John Rae, the Bank of Scotland, Edinburgh.

The assailant of Lieutenants Campbell and Burns—the two British officers who were stabbed at Phaleron, near Athens, last month—has been committed for trial, charged with attempted murder and with unlawfully carrying arms.

M. Pashitch, the Serbian Prime Minister, has telegraphed to M. Ribot, congratulating him on his success in dissipating cleverly circulated but chimerical ideas in favour of a peace without annexations or indemnities, the purport of which is to relieve Germany of her responsibility and re-establish the *status quo ante* in Europe, and thus allow Germany to dispose of 40 million people belonging to other nations.

APPOINTMENTS, PROMOTIONS, ETC.

The Right Honourable Austen Chamberlain, M.P., Secretary of State for India, has appointed Sahibzada Aftab Ahmed Khan, barrister-at-law, to be a Member of the Council of India, in succession to Sir Abbas Ali Baig, K.C.I.E., C.S.I.

Sahibzada Aftab Ahmed Khan belongs to a noble Pathan family. He studied at Christ's College, Cambridge, and was called to the Bar in 1894. He has done very valuable work as a trustee of the Mohammedan Anglo-Oriental College at Aligarh, and has taken an active part in the movement to raise the college to the status of a university. He was President of the Moslem Conference at Calcutta in 1911, and he is an advocate of higher education for Moslems.

Major Nicolas Arion is to be accredited to the Court of St. James as Military Attaché to the Roumanian Legation. He will still remain chief of the Roumanian Government Committee at the Commission Internationale de Ravitaillement in Canada House, Kingsway. Major Arion is the son of the late General Arion, formerly Commander-in-Chief of the Roumanian Army, who was succeeded by Prince Ferdinand, now King of Roumania.

The *Morning Post's* Rome correspondent reports that Mr. G. D. Grahame, Councillor of the British Embassy in Paris, is to represent Great Britain at the Montenegrin Court at Neuilly.

General Berthelot has been promoted Grand Officer of the Legion of Honour for exceptional services rendered in the reorganisation of the Roumanian Army.

M. Popovitch has formed a new Montenegrin Ministry. He will himself act as Minister for Foreign Affairs.

OBITUARY.

DR. CARL ETHE.

Dr. Carl Hermann Ethé, the eminent Oriental scholar died at Clifton, Bristol, on June 7, at the age of 73. For nearly forty years he had been professor of German and of Oriental languages at the University College, Aberystwyth. Early in the seventies he went to Oxford to complete the catalogue of Persian, Turkish, Arabic, and other Oriental manuscripts in the Bodleian Library; and later he worked upon the supplementary catalogue of Arabic in the Bodleian. In 1875 he went to Aberystwyth. Meanwhile in 1872 he was entrusted with the compilation of a catalogue of Persian manuscripts in the India Office Library. He was not a naturalised British subject, and his employment at the India Office led to some discussion in the House of Commons last year. It was stated on behalf of the India Office that Dr. Ethé had been engaged on the work for many years, that he had all the threads of it in his hands, and that he was over seventy years of age; and that the India Office would be sorry to lose the results of his patient and laborious work. Subsequently Professor Herford, of Manchester University, wrote to *The Times* stating that Dr. Ethé left Germany because he was absolutely opposed to Prussian political ideas.

In addition to the catalogues of the Bodleian and India Office libraries, Dr. Ethé was the editor of "Yusuff and Zalikha," by Firdausi of Tus, and of numerous publications in Germany.

Colonel Richard William Charles Winsloe, late of the Royal Scots Fusiliers, died last week at Dover at the age of eighty-two years. The second son of the late Mr. Richard Winsloe, of Taunton, he obtained a commission in the 15th Regiment, from which he transferred to the Royal Scots Fusiliers, and with the latter regiment he took part in the Siege of Sebastopol and in the Expedition to Kinburn, receiving for his services the medal with clasp and the Turkish medal. He also served in the Zulu campaign, the Transvaal campaign of 1880-81, and the Burmese Expedition of 1886-87. He was made a C.B. in 1889, and was an aide-de-camp to Queen Victoria until 1890.

Commander Charles E. F. Cunninghame Graham, R.N., M.V.D., Groom in Waiting to H.M. the King, died last Friday. He entered the Navy in 1867, and he was in command of H.M.S. Ariadne when she conveyed the then Prince and Princess of Wales to Egypt and the Crimea. For some years he was deputy chief-inspector to the Royal National Lifeboat Institution. His brother, Mr. R. B. Cunninghame Graham, is a distinguished author and traveller.

The funeral of Commander Cunninghame Graham took place on Tuesday afternoon at Ashtead Parish Church. The King was represented by Sir Charles Cust, R.N., Equerry to his Majesty. A Memorial Service was held, by special permission, in the Chapel Royal, St. James's Palace. Queen Alexandra was represented by Colonel Sir Henry Streatfield, the King and Queen of Norway by Colonel Sir Henry Knollys, and Princess Beatrice by Mr. Victor Corkran.

It is announced that the Postmaster-General of the Serbian Army, Serbian G.H.Q., Mr Radoye Radoylovitch, died suddenly in Salonika. For many years he was a very well-known member of the Serbian Progressive party and also for some time editor of the party's organ *Videlo*.

The death is announced of Mrs. S. A. Latham, widow of G. R. Latham, M.I.C.E., of Bombay, described as the "projector of the overland route through Turkish Arabia."

Inspector-General Robert Bentham, who has died at Ealing at the age of seventy years, was in charge of Malta Hospital from 1904 till 1907, retiring in the latter year with the honorary rank of Inspector-General of Hospitals and Fleets.

Lieutenant-Colonel William Dickenson, late of the Bombay Staff Corps, whose death in his eighty-sixth year is announced, took part in the Persian Expedition in 1857, and two years later served in the Indian Mutiny. In 1848-9 he had served through the Punjab campaign. He was also in the Abyssinian campaign of 1867-8, and shortly afterwards was made Companion of the Order of the Star of India.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

MARTIN.—On June 4, at Alexandria, Egypt, the wife of Lieut. John Grantley Martin, Army Pay Department, of a son.

MULLINS.—On June 8, at the Anglo-American Hospital, Cairo, Marjory, the wife of Hugh T. Mullins, Khartoum, of a daughter.

DEATH.

ETHE.—On the 7th inst., at 29, Royal York Crescent, Clifton, Carl Hermann Ethé, M.A., Ph.D., late Professor of Oriental Languages, University of Wales.

The portrait of the Sultan Mohammed II., by Gentile Bellini, which formed part of the Layard Bequest, has now been placed on view in the entrance hall of the National Gallery.

According to the *Lokalanzeiger*, the Austrian Aero Club is preparing a Hamburg-Constantinople air service, which, it is estimated, will cost 40 million marks (£2,000,000 at pre-war rates).

News has been received by the Montenegrin Relief Committee, 11, Victoria Street, that there is famine in Montenegro. In the small town of Niksitch 18 died of famine in a single day. The population are reduced to eating horseflesh, grass, herbs, and the roots of trees.

Messrs. Christie sold on Tuesday the Rhodian, Persian, and Damascus faience of Mr. S. E. Kennedy. The highest price was £661 10s. for a Rhodian bottle, with pear-shaped body and bulbous neck, 17 ins. high. A Damascus dish, painted with formal flowers, 14 ins. diameter, brought £546. Other prices were: A Rhodian bottle, 15½ ins. high, £399; a Persian or Damascus jug, £183 15s.; a Rhodian jug 9½ ins. high £136 10s.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to

GREECE: THE NEW PHASE.

History has repeated itself in Greece. Fifty-five years ago the Greeks expelled their first King for his autocratic tendencies, and for failing to establish good government. The first symptoms of a breach between the Court and the people at that time manifested themselves in connection with contemporary events in Italy. The Court took no pains to conceal its attachment to Austria when war broke out in Italy, while the Greeks sympathised strongly with the Italians, moved by the revolutionary traditions of their own war of independence. Of King Otho, Finlay, the historian of Greece, writes that he "had no clear conception of what patriotism really was, and no settled conviction that the Greek people had a better right to good government than a foreign king could have to occupy the Greek throne. . . . He was one of those who hardly believed that a king, who was seeking to increase or defend the Royal power, could go wrong in politics." To-day it is King Constantine's turn. The course of events has varied; but the principles at stake are the same. By the actions of its Sovereign the Greek people has again been deprived of its constitutional right to determine the national policy. King Constantine may have satisfied himself of the honesty of his intentions, but it is entirely a delusion to believe, as he has done, and, indeed, has acted on the belief, that his honesty has rendered him superior to the wisdom of the country as a whole and to that of its ablest statesman in particular. His offence has been directed against Greece and the Greeks. He has contrived to antagonise the protecting Powers, and it is they who have supplied the machinery for his deposition; but they would have had little ground for their drastic step if they had not been confident that the great bulk of Greek opinion supported them and realised that they were acting in the best interests of Greece.

The march of events in Athens has been dramatic in its rapidity, and many parts of the full story are still lacking from the information that has been made public. King Constantine's recalcitrancy has remained the one unchanging factor in the situation. In spite of the appointment of M. Zaimis as Prime Minister, and of a formal acquiescence in the demands of the Entente Powers that nothing should be done to endanger the safety of the Salonika Army, the King continued to show that he regarded himself as absolved from all undertakings in giving effect to his feelings of hostility towards the Allies and his loyalty to the cause of Germany. The ripening of Thessaly's harvest introduced a fresh development. That province is the granary of Greece, including the islands. There was ample ground, it appears, for the suspicion that King Constantine intended to seize the Thessalian crops in order to reserve them for that part of Greece which nominally accepted his government, and thus to leave the rest of the country, which had thrown in its lot with the Nationalist movement, to starve, or, at least, to fend for itself. The fiction of the disarmament of the Greek army and of its removal from Northern to Southern Greece could no longer be maintained. It was evident that the Thessalian harvest could be secured for the benefit of Greece as a whole only by the Allies' assuming control of it and holding it in trust for the Greek people, and not merely for the small following that openly sided with the King. With this end in view, the French and British Governments decided to send a special emissary to Greece. M. Jonnart, formerly Governor-General in Algeria, arrived in Greek waters on June 6 as High Commissioner for Allied purposes. After a brief visit to Salonika, he returned to the Piræus, and last Monday presented a Note to the Prime Minister demanding the abdication of King Constantine and the designation of his successor, the Crown Prince being excluded. A Crown Council was held the same day, and a reply was communicated to M. Jonnart within twenty-four hours. The King, so ran the message, solicitous, as always, solely for the interests of Greece, has decided to leave the country with the Crown Prince, and designates as his successor Prince Alexander. For the first time in a sorry record extending over two years the Allies have taken the one practical step that offered an immediate solution of the Greek problem. The abdication of King Constantine was not called for in 1915. It would have been sufficient then if the Allies had shown themselves as resolved on a definite course of action as they did on June 11, 1917. The Athens Government is no stranger to Allied demands; but so long as these were unsupported either by unmistakable determination or by adequate force, they could be met with prevarication. The difference between M. Jonnart and the numerous emissaries who have preceded him was that he was able to speak with conviction, and King Constantine had the knowledge that Allied troops and Allied ships were at last within reach to support his demands.

The curtain rings down on King Constantine, but it is too early to infer that the Greek drama is at an end. Great Britain and France have done well in restricting their action to a demand for a new Sovereign. Greece, of her own accord, elected to be a constitutional monarchy, and the protecting Powers guaranteed her in the possession of that form of government. Any change in her status must be made by the Greeks themselves, and cannot be suggested from outside. Constitutional monarchy in Greece is not necessarily bankrupt because King Constantine has been a failure. King George succeeded where King Otho courted disaster, and Prince Alexander may be able to avoid the mistakes which have proved the undoing of his father. It would be idle, however, to ignore the fact that the prolonged misrule of King Constantine has directed the public mind to the subject of republicanism. Forces are at work which may, perhaps, be found to have received during the past two years too much encouragement to be denied now. The future of the dynasty founded by King George depends in part on the strength that these forces have acquired, and in part on the action of the members of the Royal house. If King Constantine, Queen Sophie, and the Crown Prince accept their decree of banishment and act as they claim to act—"solely for the interests of Greece"—and if the young King loyally upholds the Constitution and places himself unreservedly in the hands of the man who has saved Greece before and is able to save her again, then all may be well with the dynasty. There has been no vacancy on the throne, and a favourable demeanour on the part of Prince Alexander may disarm some of the hostility to a monarchy which was inevitable in the face of King Constantine's persistent offending. In regard to this point, however, Greece must decide for herself. On the Allies is laid the obligation to see that the work they have taken in hand is done cleanly and effectually. The Court and its immediate entourage have battened for so long on intrigue that it will have become second nature to them. When the King and Queen have been removed there will still be others in a position to carry on the German tradition. Unless, therefore, steps are taken to see that the country is freed completely from the evil influence of the old Court party, the good achieved by the Allies will be largely undone.

SERBIAN MEMORIES.

By ELBRIDGE COLBY.

III.—Among the Country Folk.

Most of my time in Serbia was spent at the little village of Klitchevatz, on the Danube, within very, very close range of the Austrian troops and artillery, who occasionally fired at us or dropped a bomb or so from an aeroplane. What was I doing so near the frontier? Carrying corn to starving Serbians! Sounds well, doesn't it?

I was one of a unit of twenty, and we all loaded our little Ford autos every morning with about eight hundred pounds of corn and carried it twenty odd miles over very bad roads to a small station on the railway, passing through Posharevatz and ending at Osipaonitsa—three trips a day. This corn had been purchased in this, the richest section of the country, by the Minister of the Interior, and was being shipped south for distribution among the poor peasant folk in the Macedonian and Albanian districts. That is how I happened to be "carrying corn to starving Serbians."

But the natives from whose district we took the corn were neither starving nor very poor, and their countryside was very beautiful and very interesting. Klitchevatz was an out-of-the-way place, almost untouched by any civilization except the civilization of war—the whole place teemed with soldiers. Every night there was a stampede of pigs down the hill and along the one and only street; they came from the rich grazing grounds on the plateau above, and each found his own house and supper without help or guidance. Twice a day the strong and healthy peasant girls came to the two wells beside the "town hall" and filled their earthen jars with water. A stick over the shoulders, a few notches on the stick, and the sturdy young creatures marched off with several large pitchers brimming full. So, while the men crowded the army posts, the women did the work in the fields, on the roads with the ox-teams, at the market place, as well as about the house. The old men and boys who had not been called to military service were decked out in a strange costume. A vest and a coat, always of the same brown cloth, an embroidered shirt, large loose white trousers even bigger than pyjamas, and a short affair of the same white stuff much like a petticoat, curious raw leather sandals with long hide lacings, and gaudy decorated woollen socks almost to the knees—queer clothes, which I felt no inclination to adopt.

Whenever we went into a Serbian house, we were received according to the custom of the country. A tray was presented with one large dish of sweet preserves, called *sladko*, and spoons and glasses of water. The proper thing is to dip a spoon into the large dish and just taste the sweets, then to drink a glass of water and leave the soiled spoon in the glass. Each of the visitors is served in turn, and then after a while some thick Turkish coffee is offered, accompanied by the inevitable glass of water. Perhaps, if you are a particular friend or an official person on an official visit, you would be offered some *shlivervitz* or *komenovitsa*, alcoholic beverages made from plums and cherries, and also some fruit. But always there will be the glass of water; and always, except with the coffee and the liquors, the host and hostess will avoid partaking of the refreshments. "It is the custom."

IV.—Belgrade Between Battles.

In Nish we boarded a special railway carriage set apart for the members of foreign missions. There we met French doctors, nurses, and aviators, Russian nurses and sailors, British Red Cross people and Marine Artillerymen, members of a Danish unit, American medical men and relief expeditionaires. All the world had come to the assistance of Serbia.

In such company we travelled from Nish to Belgrade, in a train which left at eight in the evening and arrived the next morning. So slowly did that train wind its way around the turns and up the grades that one of our party jumped off, ran up an embankment, took a snap-shot of an interesting bridge, and climbed again up the same carriage step.

We left the train at a pleasure resort amidst the hills just outside Belgrade, and tramped through an old palace garden and over a temporary bridge, constructed in place of the one we had seen battered into the bed of the small stream, and so on up a high hill. An antique church on the slope was untouched by warfare, even the gilt steeple and the sacred paintings were intact, but a house on the top of the hill was badly shattered by shell-fire. So, among old trenches and shell holes, we marched towards the big military hospital of three thousand beds, kept by Dr. Ryan and the American Red Cross. Here cleanliness, system, order and neatness reigned: on every hand were seen the marks of an organizing Irish genius. All the materials were shipped direct from New York; the work went on with admirable punctuality and precision; and the little automobile in the yard reminded us of American impatience and hurry. A French battery on the hill behind fired sometimes over the hospital, and Austrian shrapnel often broke windows and wounded passers-by. The next excursion was into the very river-front trenches, where excavations lurked behind rows of trees and under railway embankments. A cigarette or so to the soldiers on duty and an offer to "snap-shot" a group were the inevitable passports going in, and it was only when we were coming out of the military zone that anyone asked to examine our papers. We dashed madly across an open exposed place, and gained the wharves beyond, where the houses facing the water were badly damaged by gun- and rifle-fire. The bridge, they told us, was the most dangerous locality; so we sneaked behind brush and buildings and arrived at the long, ruined railway bridge which formerly connected Belgrade with Austria. We were fearful of being "sniped" any minute, but when we arrived at the huge stone pier on the shore, there was a British sailor clambering out of the wet after a swim in the Sava, while two Serb soldiers calmly fished for their midday meal. True, the improvised torpedo raft did look like business; but never an Austrian appeared, never a shot interested us.

In the afternoon we wandered among the shell holes in the garden of the Minister of Finance, and then marched into the old citadel. Here a railway passport and correct replies to a few detailed inquiries as to certain facts about the American hospital served to let us in. Damaged portraits of George Kara-Georgevitch and of Prince George testified to the Austrian occupation, and huge heaps of burned muskets to the systematic Serbian evacuation of a year ago. We were then shown an old chapel, a masked searchlight, and let through the communicating trenches to the French and Russian batteries. Here in the walls of these hidden passages were visible the bones of buried soldiers who had fallen in battle some hundred years ago.

Lieutenant Pavitchevitch, commanding the Russian battery, was very kind. He invited us to eat and drink with him; and we discovered mutual friends, as we consumed cigarettes, beer, coffee, cognac and sandwiches; but he as host, following the Serbian custom, did not partake; for there the host gives of what he has and does not eat or drink himself. It is a habit indicative of true hospitality.

Then we proceeded to the *café* of "The Russian Tsar." The *café* was only partly full, for the town was deserted by nearly two-thirds of its inhabitants; the streets were empty, and the big French auto-lorries came thundering down without hindrance. In the *café* we had our evening meal, interrupted only by an inquisitive detective who came around examining papers, and by the occasional sound of a shell fired by the batteries over the hill. But, within the radius of the few lights, one would scarcely have known that Belgrade was the exposed capital of a country at war. Only about 5 per cent. of the buildings had been at all damaged, some few of the shops did "business as usual," and the varying uniforms of Serb, Briton, Frenchman and Russian served almost to lend a touch of gay colour to the scene.

THE PRESS ON THE NEAR EAST.

King Constantine's Abdication.

The news of the abdication of King Constantine has been received with undiluted satisfaction by the British Press. Here are two extracts from *The Times* leading article of Thursday, "King Constantine's Fall":—

The ease and tranquility with which this necessary step has been carried out show how unfounded were the timid fears which forbade its accomplishment long ago, when its salutary results in the Balkans would have been more certainly assured. Even now we believe that it will have a very wholesome effect, not only in that peninsula, but in Courts elsewhere which have presumed too boldly upon the forbearance and the vacillation of the Allies. . . . King Alexander is understood to be free from the Potsdam conceptions of monarchy, and it has been believed in the past that he would be acceptable to M. Venizelos as a constitutional Sovereign. We earnestly hope that the statesman who saved the dynasty and the country when military anarchy threatened them eight years ago will be summoned at once to assist King Alexander in this new crisis of their people's destinies. It is true that quite recently some prominent members of the Provisional Government at Salonika over which M. Venizelos presides have roundly declared that not only the ex-King but the dynasty has become impossible, and that no compromise is conceivable between it and Liberal Greece. But it is worth noting that, while M. Venizelos vehemently reiterated his refusal of any reconciliation with the then Sovereign not many weeks ago, he does not appear to have extended it to the Royal House.

The *Morning Post*, heading its article "M. Jonnart's Broom," writes:—

King Constantine has abdicated, and a son has been put in his place; but it is necessary to remember that as long as the clique which directed the King's policy remains, so long will there be trouble. The King may or may not have been a figure-head; but it is certain that he would have been impotent for mischief without the men who surrounded him, whereas if they are left no change of kings will make much difference. The names of these pro-German plotters are, no doubt, known to M. Jonnart, and we hope that he has adequate powers to deal with them.

The article concludes:—"As for King Constantine and his advisers they are dangerous men, who should by no means be permitted to join the Central Powers, where they would renew their intrigues from a secure basis, but should be kept as hostages until after the war."

The Occupation of Janina.

The Athens correspondent of the *Morning Post* (June 12) writes that the Italian occupation of Janina "has aroused Greek public opinion, irrespective of party cleavage, as no other occupation of Greek territory has done since the fall of Serres, Drama, and Kavalla into Bulgarian hands." He continues:—

Certainly outside the small Germanophil circle no occupation of Greek territory by British or French forces during the present war has created any such sensation. Had it not been for the blind and unreasoning hatred of the Greek Court against M. Venizelos, Italy would not have set foot in Epirus.

It is perhaps not generally known that shortly after the establishment of the Venizelos Government at Salonika King Constantine was urged by his friends to permit the extension of Venizelist occupation to North Epirus and Janina. Not only was this friendly advice rejected, but North Epirus was used by the Germanophil Court and Government at Athens as a point of contact and communication with the Central Empires.

The Allies' Task in the Balkans.

In a leading article in Tuesday's issue, *The Times* thus defined the main task of the Allies in the Balkans:—

That task is to reinstate the Serbians in possession of their own country, to defeat Bulgaria, and to cut the German road to the East. The liquidation of the Greek Royalist imbroglio being now a pressing necessity, let that liquidation be carried through with all vigour and despatch. Then, perhaps, it will be possible to concentrate attention upon what ought to have been throughout the main business of the Allied Armies based on Salonika, and to fulfil the Allied pledge to Serbia with exclusive regard for the military methods by which it can alone be satisfactorily fulfilled. As we have repeatedly insisted, the Allies owe it to themselves not to allow the military enterprise to which they are committed in the Balkans to be stultified by secondary considerations. That enterprise can be carried through only by defeating the enemy in the field. If, as a preliminary to his defeat, it be necessary to remove the Greek menace from the Allied flank, the menace ought certainly to be removed. But when this has been done—say, even while it is being done—the Allied Governments should prepare to deal with the major problem in such a way as to ensure success.

German Control of Austria.

The *Observer* last Sunday grappled boldly with that thorny question, the future of Austria-Hungary—a problem which, as the *Observer* remarks, is very seldom frankly faced. Unless it is dealt with, however, there can be no lasting peace. "The existing constitution and spirit of Austria-Hungary are," says the writer, "absolutely incompatible with peace, and, on the contrary, make a positive breeding-ground for war. The failure to understand this has been responsible for half the miscalculations and disappointments of the Allies." The writer proceeds to argue that without control over Austria-Hungary, and through that over Bulgaria and Turkey, Germany would have been unable to bring about this war; and points out that "that control is actually exercised against the will of the majority of the population in the Dual Empire. The majority, consisting of nearly 30,000,000 of Slavs, Roumanians, Italians, is fighting the Allies against its will. History hardly records a grosser violation of all human decencies." To break the German ascendancy over the Dual Empire is the central problem of peace.

Austria-Hungary, unlike the other civilised Powers, is neither a national nor a natural State. It is a mass of anomalies and inequalities compacted into an artificial whole by the two minorities, the German and the Magyar. The races held in bond are the Czecho-Slovaks, the Poles, the Ruthenians, the unredeemed Roumanians, the South Slavs, the Italians of the Trentino, Istria, and the Dalmatian coast. Most of these live on intolerable terms of political subjection or of separation from their kindred or both.

Unless this system is wholly changed and replaced by large measures of equality and emancipation, the six subject-races we have mentioned will strive—and as education advances despite all impediments will strive more and more—for freedam and reunion. Restored peace will not endure because still not founded on justice. There will again be agitation, repression, conspiracy, assassination, explosion, and war. Renewed war will only be a question of time. The volcano of racial discontent in Central and South-Eastern Europe will have another of its periodic eruptions, and the upheaval as now will jeopardise nations thousands of miles away on either side. Either the Hapsburg Monarchy must be wholly reconstructed, or its artificial conglomerate must be finally broken up, or else we must expect tardy peace without stability or long rest. A seismic line would continue to stretch underneath the whole world's politics.

As to what is to follow the break-up, "there has yet been no practical answer."

You cannot propose to replace the existing state of things by arrangements still more artificial and precarious. The idea of a Slav corridor or highway driven through non-Slav territory as a link between the Czechs, Slovaks, and the Serbo-Croats will not bear serious examination. If the Hapsburg Monarchy were broken up into fragments there would either have to be a close political and economic connection between these smaller States or there would be chaos come again. Balkan conditions would be introduced into the heart of Europe.

Amongst points on which the writer expresses his views quite positively are these:—

The South Slav stocks ought to have every facility for forming one State, if the Croats and Slovenes are found to be ready for voluntary union with the orthodox Serbs. . . . The claim of the Roumanians to reunion with the unredeemed millions of their countrymen in the highlands will cause more trouble than before unless it is satisfied.

He then declares that:—

The Allies ought to have set up long ago a standing conference for thinking out these subjects. They bristle with thorns. Regarding them from the general standpoint of European interests and the world's, we are strongly inclined to the view that, as a result of subtractions and additions, a new Hapsburg federation can and ought to be created. If it cannot, the more drastic solution will have to be faced. Without an Austrian solution there can be no safe Balkan or Turkish solution. . . .

The need for something in the nature of the conference here suggested has repeatedly been referred to in THE NEAR EAST.

The Albanian Problem.

In an article entitled "The Future of Albania," the *Liverpool Daily Courier* says:—

No foreign State has been able to hold the country in the past. The Turks ruled it nominally, but the Sultan's power and the Sultan's laws were virtually ignored. And it is equally difficult to conceive Albania as one autonomous State. The Powers tried to make it one, but Prince William of Wied was besieged in his capital almost as soon as he was installed on the throne, and it was not long before he gave up a hopeless task. The solution has seemed really to lie in the establishment of a league of two or three autonomous but federated republics, and it is possible that this may have to be accomplished. The proclamation by Italy of a free and independent Albania under her protection may be the beginning of Albanian pacification. It is obvious that until the machinery for self-government is set up the protection of a Great Power is necessary, and since that Power cannot possibly be aggressive and greedy and despotic Austria, and as the other Balkan States could not agree—even if the Albanians agreed—to one of them filling the rôle, the responsibility must fall on one of the nations of the Entente. Italy's neighbouring position across the Adriatic naturally makes her this Power.

The Entente and Bulgaria.

In an article entitled "The New Departure in Balkan Diplomacy," in the *Nineteenth Century*, Mr. Noel Buxton urges strongly the advisability of detaching Bulgaria from the Central Powers and concluding a separate peace with her. Very early he makes a statement of strong interest:—

The public has been under a great delusion in regard to the Balkan question, for it was believed that Sir Edward Grey

Digitized by Google

adopted the so-called "pro-Bulgarian" attitude, and was deceived by Bulgaria to the detriment of Serbia. The trouble, in point of fact, was, that offers worthy of the name were not made to Bulgaria; and it is time now to say that the credit of having urged that they should be made is due to Mr. Lloyd George.

The plan of sending a force to Salonika, again, was originally part of a scheme designed, not only to support Serbia, but for the enlistment of Bulgaria on our side. The subsequent plan of using Salonika to beat Bulgaria was a *pis aller*. Its success as a step in the march to the Danube appears now to be impossible, but the Prime Minister may have the satisfaction of seeing it used in its original form as an assistance to diplomatic action. It would be no more than justice that his policy in regard to Salonika should in this way be vindicated and not discredited, as it otherwise will be.

The desirability of the proposal in a military sense is obvious, as Mr. Buxton remarks. He defines what is suggested as follows:—

The Bulgarians might, when the moment comes, be induced, not indeed to fight for us, but to break with Germany, and as a pledge of good faith to allow the Allies to use their railways, now largely managed by Germans. The inducement offered might be the recognition of the 1912 Treaty between Bulgaria and Serbia (in which Russia was the arbitrator, and which gave part of Macedonia to Bulgaria) and of the old frontier with Roumania in the Dobrudja. We have other inducements to offer, probably adequate in amount.

The author refers, later in his article, to an episode which he rightly describes as of great importance. It took place in March, 1915:—

The Bulgarian plenipotentiary in London was invited by a Minister of the highest authority to telegraph to his Government an attractive proposal, but when the Bulgarian Government replied, making a definite request for a statement of the Entente's intentions, and saying that the Government would then come to a decision, the proposal was not adhered to by the Cabinet, and after long delay a cold answer was returned. Such an experience was enough to discredit and discourage the pro-Entente parties at Sofia, and it is perhaps, even by itself, a sufficent answer to the charge that Bulgaria had no justification for mistrusting the Allies.

As to a charge that has very frequently been brought against Bulgaria—and from a number of different directions—he writes:—

The idea that Bulgaria was treacherous has been sedulously promulgated by the party which has lost its head about Balkan affairs and forgotten British interests. Some members of this party are moved by enthusiasm for Serbia, which we all ought to feel: some by spiteful animosity against Bulgaria, which is a shallow and uninformed sentiment, very unprofitable to us and to each one of our Allies, both great and small. A genuine mania has arisen among them.

Mr. Buxton refers to the Foreign Office and its handling of the Balkan situation several times. Here are some quotations, in the order in which they occur in the article:—

We shall now hear no more of the violent attacks on the War Office and the Foreign Office for their leanings towards a rational policy. These Departments and those who shared their views have been charged with having been deceived by Bulgaria, and till now there has been no public advantage in correcting misapprehensions. . . .

The Foreign Office, though warned repeatedly of the certainty that Bulgaria, if not dealt with by the Allies, would be forced to resort to Germany, so that Serbia would be destroyed, hesitated under the influence of rival pressures, and sought safety in not committing itself to either policy, thus irritating both sides at once. . . .

The charge against the Allies' diplomacy, of which the British Foreign Office must bear its full share, is that it lost the sole opportunity of early and crushing victory. What fundamentally were its defects? (1) It held, as we learnt afterwards, that the Balkan States could be kept out of war altogether. (2) It was untrue to the principle of national rights. (3) It failed to unify itself so as to arrive at decision and action. Further, the Foreign Office must bear a heavy share of blame for "red tape." One of the really important causes of the Entente's failure was the unwillingness to place at Sofia diplomatic machinery capable of carrying out a rational policy.

Roumania and Russia.

In a message sent off from Jassy on June 6, and published on Saturday, the special correspondent of the *Daily Chronicle* writes of the grave anxiety with which Roumania is naturally regarding events in Russia. He says:—

The whole of Roumania is watching with the closest interest and greavest anxiety the varying phases of the political situaion in Russia. Roumania is irrevocably bound to the Allied cause; for her there is no turning back, no pausing by the way.

To-day, more than ever since her participation in the war, her military and pol'cital destinies rest in the hands of the Russian people. Any defection on the part of Russia, any compromise with the common enemy, would probably result in the disappearance of Roumania from the comity of nations.

These are anxious moments for King Ferdinand and his Government, for they fully realise that their country has arrived at the most critical moment in her history.

The Roumanian army, brave though sadly thinned in numbers, but ready and eager, awaits but the signal to demonstrate afresh its fidelity to the Allied cause, but it finds itself in a cleft. stick. The indifference and inertia of its powerful neighbour and ally paralyse its initiative, condemn it to uninterrupted inactivity.

There is no echo of war to be heard along the stretch of the Russo-Roumanian front from the borders of Bukovina to the junction of the Sereth with the Danube. Here, where two vast armies confront each other, the guns are silent and the rifles equally so . . Operations on this front have entered on a new phase. It is a war of propaganda.

The Germans are hurling missiles, but they are "not the old-fashioned high explosive shell which killed or maimed physically, but the moral and no less hurtful mendacious manifesto, printed on stout, red paper, with heavy black type, fresh from the German factory, which is calculated to kill loyalty and honour and engender discord, mistrust and hatred among the Russian soldiers."

Mount Athos in Wartime.

"C. F." contributes to the *Church Times* (June 8) a picturesque account of "An Easter Holiday from Macedonia." This holiday he spent in a flying visit—from Salonika—to Mount Athos, his companion being the Serbian Archimandrite Joachim. Arrived there safely, he found that—

The peninsula is occupied by a detachment of French and Russian troops, who are engaged in keeping an eye on the monks and to restrain any tendencies on their part to take a hand in the war. The ordinary Westerner does not usually connect monks with bellicose activities, but in the Balkans religion is very often the strongest incentive to race-hatred. In the Greek war of independence the massive walls of the Athonite monasteries and their considerable wealth had made them valuable supporters of the insurrection. Hence the occupation by Turkish troops, the confiscation of arms found in the monasteries, and the little permanent Turkish garrison which I had seen on my previous visit. As one of the great Greek houses was suspect of having assisted German submarines, and as the Greek and Russian monks seemed to be at daggers drawn, Allied troops are now supplementing the Greek Nationalist police force.

On Maundy Thursday he went to visit the Bulgarian monastery of Zograph:—

The Bulgar monks, true to their intensely practical national character, keep their road in excellent condition, which was a pleasant change after the other tracks, often more like beds of mountain torrents than paths. . . . I hurried into the church, where the brethren were assembled, and was at once invited to occupy a central stall where I could see all the ceremonies in progress. At the moment all present were passing in a long *queue* before the "Igumen" (superior) and five other monks, who stood, robed, in a semi-circle before the ikonostasis and signed each monk with oil on the forehead. I joined the procession, which seemed endless. We crossed ourselves and kissed the ikons, then passed down the line of senior monks and kissed the hand of each, after he had anointed us, then moved to the north transept and wiped our foreheads with little dabs of cotton-wool.

Of his treatment by the monks he writes:—

The French officers had assured me that, curiously enough, they always received the kindliest welcome at the hands of the Bulgars. They were certainly most hospitable to me. The service finished, they carried me off to their guest-chamber, and, after the usual refreshment, presented me with gifts, photos, a specimen of their wood-carving, and an ikon of their patron, St. George. It was pleasant, too, to be able to make oneself understood. Among the Greeks I am tongue-tied, until a brother is produced who speaks French or American. But Bulgarian is so closely akin to Serbian that my small stock of the latter language, helped on by good will, made conversation possible. My hosts politely regretted that our respective countries were at war, and declared themselves averse to mixing in political questions From what I have heard of politics on Mount Athos and of Bulgarian methods elsewhere, I do not know that I entirely believed them. But, anyhow, they were delightful, and gave the same impression as the Russians of a real monastic life.

Articles to Note

"Salonika and its Weather," by H. C. Owen, in *Land and Water* (May 31).

"Greece and the Entente," by W. Albery, in the *Socialist Review* (June).

"Motor Hospital Ships on the Tigris," in *The Times* (June 12).

"Turkey of To-day," in *The Times* (June 13).

"John Bull in the Garden of Eden," by D.S.O., in the *Saturday Review* (June 9).

"The Future of Mesopotamia," in the *Field* (June 9).

The Rome correspondent of the *Morning Post* reports that Signor Chiesa has given notice of a question in the Italian Parliament on the proclamation of Albanian independence. It will be remembered that last week some extracts from an interview with Signor Chiesa were given in the "Press on the Near East."

Dr. Karl Wolff, a member of the Hungarian Chamber of Magnates and leader of the Transylvanian Saxons, writes in the *Pester Lloyd* that Roumania must be struck off the map of Europe. The guardianship of the Lower Danube must be in safe hands, and the Hungarian frontier, which incursions have proved to be dangerously exposed, must be changed.

ROUMANIA AND HER ALLIES.

The Lord Provost of Edinburgh, as chairman of the National Roumanian Relief Fund, has received the following telegram from M. Také Jonescu, the Roumanian statesman :—

"The large sum of money which Lord Rosebery has given to our Legation in London on behalf of the National Roumanian Relief Fund for Red Cross purposes is a new evidence that the British nation is as generous as she is heroic. For the Roumanian nation the debt of gratitude is most sacred. We shall never forget what we owe to the British nation. This war has been our war, long before we entered into the field. We all know that you were, and that you are, fighting for us. It was our war, this war of civilisation against barbarism, of right against might, of free institutions against Prussian militarism, of nationalities against foreign domination, of freedom for the small States against Austro-German slavery. The British nation has entered into the contest without seeking any material advantage for itself. Like the sister Brito-Saxon Commonwealth beyond the ocean, the British nation has drawn its sword, and from the beginning, moved only by the loftiest motives of a noble conscience, it has spared nothing, its sons, its riches, the treasures of its warm hearts. It is thus writing the most beautiful pages of human history, alas, with so much blood. On a much smaller scale we have done the same. We were not materially attacked. It is by our own will, in perfect freedom and without pressure from anyone, that we have declared war on the mightiest military empire. We well knew all the difficulties. We have taken all the risks with a full conscience. In the unequal struggle of heavy artillery against human breasts we have been defeated. More than two-thirds of our country is under the heel of the hated German. Hundreds of thousands of our youth are lost. What was beaming with abundance and joy is a desolate wilderness. We do not mind. It was our duty to fight, and the price of doing one's duty is never to falter. If we were to choose again our path we would do the same. But our sufferings are appalling. Whatever the great heart of the British nation can do to alleviate them is welcomed and appreciated as a brotherly help. The day of crushing victory, which will be also the day of merciless expiation for the authors of this human catastrophe, will come, and after the victory we shall enjoy the just peace, the only peace which we wish for. Then my nation will prove by her fidelity to her great and noble Allies that she is worthy of their friendship. —TAKE JONESCU."

TURKEY AND THE JEWS.

The following appeal has been addressed through the Swiss Government to the Sultan of Turkey by Jeroham el Yachar, Chief Rabbi of Baghdad :—

The painful news that the youth of Judea, who in this age are the flower of Mosaic culture, have been expelled from their country has alarmed the Jewish world, and has grieved the children of Sion. No, Sire, I could not believe it if I had not had the unhappiness to observe the régime of corruption which obtains among the minor Imperial officials—wicked officials, alas! who, after having long assisted in dishonest operations which have caused the ruin of the country, have finally violated the *lois de la contribution* by strangling poor children, even in the police bureau, and afterwards secretly throwing the bodies in the Tigris, with the object of gaining the sympathy of their superiors. God knows whether this same class of officials are doing the same in Palestine, and in order to cover their deeds are trying to arouse enmity against the sons of Abraham.

Prostrate at the foot of your Throne, I venture to hope that my representations will be interpreted with the same sincerity with which they have been made, in begging your Imperial Majesty, in return for the eminent services I have rendered since the beginning of this terrible war, to ensure the safety of Sion.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co.,Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The exhibition of foreign trade lists and samples, organised by the Department of Commerce and Industry of the Board of Trade, to which I have referred previously, has already produced some results. In the issue of the Board of Trade *Journal* of June 7 British manufacturers and producers of certain classes of goods, formerly obtained from Germany and Austria-Hungary, are invited to apply to the Department for the names of enquirers abroad. The list, at present, is small, but it includes one noteworthy need—small steam turbines of less than one horse-power. I mention this particularly because there is likely to be a demand in the Levant and Balkan countries for small-power plant. In any case, as the Board of Trade "shows willing" to take a hand in a trade campaign, our makers and merchants can do no less than offer to co-operate.

***

Another important invitation issued by the Department is to those British manufacturers who have initiated new industries since the outbreak of the war. Many have been established in the United Kingdom, and goods which formerly had to be obtained from abroad are now being turned out at home. Manufacturers are therefore invited to inform the Department (at 73, Basinghall Street, London, E.C.2) of new, or new developments of existing industries. I am glad to pass the invitation on; but having done so, would like to impress on our friends in the Near and Middle East that they have a certain obligation. Many, before the war, used to secure their stocks from the Continent; these should now send to the Department a list of those articles for which they can find a market. I am assured that the Department would be glad of information on such a subject.

***

I have to welcome a new British trade body in the British Merchants' Morocco Association, which has just been incorporated. It has been established to facilitate the consideration and discussion of matters of interest to our trade in connection with Morocco, and the initiation of measures which may be desirable to promote British trade interests in that country. The secretary is Mr. P. B. Robinson, 17, Leadenhall Street, London, E.C.2. Readers of THE NEAR EAST will recall the Trade and Engineering Notes in the last issue.

***

We publish to-day an interesting account of the system of agricultural education established by the Bulgarian Government for which we are indebted to that excellent reporter, Mr. D. T. Murphy, the United States Consul-General at Sofia. Mr. Murphy makes it clear that although the Sofia Government has a poor conception of honour and gratitude, it has a clear eye for the main chance; its recognition of the advantages of agricultural education is an example to many better-placed and greater peoples. It is more than that, however. When the war has ended, the Allies will have a great work to perform in rehabilitating industries. Agriculture is one of these, and I suggest very earnestly to those who are now pushing various propaganda for Serbian relief to begin to organise a scientific agricultural department which would prove the salvation of the devastated countryside and the impoverished people of the country.

***

It is not now too soon to begin. There may, or may not, be truth in the contention that we are still far from peace; we may take it for granted, however, that peace will come, like death, as a thief in the night, which means that all should be ready to reckon with it. In the case of Serbia, and other war-broken lands in which reconstruction will have to be the first work, too early a start cannot be made, and friends of the stricken Balkan State will serve her best by beginning to prepare now. Mr. Murphy's report, while brief, is fairly comprehensive, and is sufficient to show how a start may be made.

***

Some interesting figures are included in the report of the Suez Canal Co. for 1916 which, presented at the sixty-third general meeting at Paris on June 11, is published in THE NEAR EAST to-day. The total receipts, compared with the previous year, declined by £367,350, notwithstanding the increased rates which came into operation in the year. The traffic account is even more gloomy. The traffic through the Canal—15,266,155 tons in 1915—fell to 12,325,347, a drop of about three million tons, to be added to the losses of four millions in 1915, and of 600,000 tons in 1914. This is war time, however, and the Canal could not possibly avoid being hit badly.

***

Regarding the immediate future—what can be said? The directors decline to pose as prophets, and declare that there still exists an uncertainty. "After the war" is another matter, however. "The position after the war may be regarded with confidence" (the directors state), "for after peace, there is no doubt that as soon as the ocean routes become safe again there will be a notable renewal of shipping passing through the Canal. If the figures of pre-war years are not at once attained the Canal will present, nevertheless, renewed activity. On the other hand, it is to be hoped that the maintenance of higher tariffs over those in force at the outbreak of war will facilitate a quick return to former prosperity. Special mention is made of the death while on active service of the company's distinguished secretary, M. Maxime Bertrand, who has been succeeded by M. Bèret, already long in the service.

***

The honour of K.C.M.G. conferred recently on Mr. Herbert G. White, British Consul-General in Morocco, has caused much pleasure to Britons in that country and others to whom he is so well known. As the correspondent of *The Times* wrote, "Mr. White's long and valuable services in Morocco are justly appreciated not only by the British subjects in this country, but also by the representatives and subjects of our friends and Allies and by the Moors themselves. Mr. White's great knowledge of the country and its people has been invaluable in the maintenance of peace and order, and the honour which his Majesty the King has conferred upon him has been most deservedly bestowed."

***

The shipping returns for the week ended on June 10 are less satisfactory than those of the previous week; indeed, they are the most adverse since May 6. Twenty-one vessels of more than 1,600 gross tonnage each, and nine of less than that tonnage were sunk, an increase of twelve losses on the week. Some time ago, when the enemy's submarine toll began to grow less, I pointed out the unwisdom of over-expectation, and also that in some cases in which the aggregate of lost ships appeared less the actual result might really be worse. It will be as well to bear this in mind, as also the fact that in this submarine "warfare" there are bound to be fluctuations. One satisfactory feature of the latest returns is that the number of vessels which resist attack was maintained, which goes to show that the pirates do not get it all their own way. It would be as interesting to know how many U-boats were lost in the sixteen unsuccessful attacks as it would be to learn the aggregate of the lost tonnage.

***

If, however, this is a "military secret"—and the authorities continue to treat it as such—we have the satisfaction of knowing that, on the whole, British oversea trade proceeds with only slightly varying regularity. Thus, in the Foreign Trade returns for the month of May, 1916, which have just been published—they are summarised elsewhere to-day—it is shown in regard to seventeen items of raw material and other essential commodities that the imports, both as regards quantity and value, showed a slight increase of value as compared with May, 1916. Exports were down slightly, but, so far as value is concerned, the total oversea business only fell by about £4,500,000, not a considerable matter, considering the whole volume of trade and the fact that certain restrictions operate independently of the submarine menace. This is doubtless causing great inconvenience, which may, indeed, increase; but the Germans will not win the war on the under-sea, or any other, ticket.

***

The Engineering Correspondent of THE NEAR EAST discusses in his Notes to-day the German statement which reached this country from Bucharest that the enemy has succeeded in restoring to complete working order the great oilfields of Roumania. Has this actually been accomplished, however? The most recent information available is that the Germans are *endeavouring* to restore the fields, which, it need not be pointed out, is another matter altogether. It would be unsafe, perhaps, to rely on the Germans' inability to repair the damage done during the overrunning of the country, because they are clever engineers, and there is the additional spur to industry and ingenuity in the need to replenish their depleted stocks of oil and lubricants. In the meantime, there is no definite information on the subject, and those in London who might be expected to know what had transpired up to, say, three months ago, do not care to hazard an opinion on the actual situation.

The Sudan and its Economic Condition.

No. 9.—The Kordofan Province.

By Percy F. Martin, F.R.G.S.

Up to the year 1882, Kordofan formed part of the Kingdom of Darfur, the inhabitants of which country had previously lost it to, and again had wrested it from, the Fungs, then one of the most powerful tribes of the Sudan. Mohammed Dey Dafterdar, the brother-in-law of the unfortunate young Egyptian prince, Ismail Pasha, and, consequently, the son-in-law of Mohammed Ali, then came on the scene, and this doughty warrior it was who recovered Kordofan, which became part of the Egyptian Sudan. At that time the superficial area of the province was a little more than 131,560 square miles, and its boundaries remained unaltered for some years after the British occupation; they were modified in 1913 when the province was divided, 100,000 square miles of territory being allotted to Kordofan and 31,560 square miles to the newly-constituted province of Nuba Mountains.

The province notwithstanding its sensible reduction in area, is still large enough to make the administration one of some moment, and, with the exception of the Bahr-el-Ghazal Province, it employs the largest number of inspectors and minor officials. On the other hand, it has but six *mamurias* against fourteen in the Bahr-el-Ghazal and thirteen in the Mongalla Provinces, while in regard to population (336,589) it ranks second among the fifteen political divisions.

The Water Supply.

In the economic welfare of Kordofan the question of water naturally plays an important part. The supply is entirely dependent on the local rains, which yield it in the form of wells; in surface water, in pools or *fulas*, and the lakes; and in the tebeldi trees (*Adansonia digitata*).

The best-watered portions of the province are Dar Hamid, Bara and El Eddaiya, while the wells and basins of El Obeid, Abu Haraz, and Sherkeila are likewise of great importance. In other parts water is continually giving out, and whole tribes, with all their living belongings, are sometimes obliged to migrate to more favoured places until the rains once more fill the *fulas*.

In the district of El Obeid, the capital, there are, or were when I was in the country, between 180 and 200 wells, twenty of these being in the cantonment, twenty in the small khor, 112 in the main khor, and the remainder distributed at various points of the main khor districts. Of this total, forty wells produce undrinkable water. As a fact, only fifty-nine of the wells produce sweet water, the remainder yielding a liquid either moderately-sweet or moderately-bitter. Between El Obeid and Korti, a waterless desert stretch, several wells have been sunk for the use of the railway. At the station of El Obeid there is one well 118 feet deep, giving between 5,000 and 6,000 gallons of water daily, the liquid having been originally found here at a depth of 105 feet. At El Ein station there is a well fifty-two feet in depth, while other wells have been sunk at Nava, Um Ruaba, and in the Rahad depression; these latter yield together about 15,000 gallons of water *per diem*. Boring is continually going on in other directions, although the efforts made to meet the water deficiency are of varying success. The great quest, of course, is for a permanent supply.

Trade.

The trade of Kordofan is perhaps, larger than that of any province, except that of Khartoum, and the province contributes more largely to the revenue of the country than any other, the provinces more nearly approaching it being those of the White and the Blue Nile.

The great native industry, of course, is that of gum, although other activities are devoted to the pursuits of agriculture, horse-breeding, cotton, tobacco, india-rubber, ivory, ostrich feathers, salt, and iron—to some small extent. On the other hand, the imports are of considerable consequence, and comprise cotton-fabrics, sugar, soap, all kinds of ironmongery and small agricultural implements, and such luxuries as tea, coffee, perfumes, and brightly-coloured muslins for the dusky ladies of the country.

A Hint to Manchester.

The many Greeks who keep stores, and who seem to flourish especially well in the larger towns, are well worth cultivating by Manchester houses as potential customers. For many years past they have been in the habit of obtaining supplies of cheap cotton and other dress-goods from Germans, but it may be assumed that it will be many years before the German will be afforded another opportunity of pushing his wares in Kordofan or in any other part of the Anglo-Egyptian Sudan; I doubt, too, whether he will have any greater latitude allowed him in that of the French.

Cattle Markets.

Active markets are held at frequent intervals for the sale of horses, camels, donkeys, sheep, and goats. Among the horses offered are sometimes to be seen some wretched-looking specimens, although Abyssinian ponies and Dogolawi horses are to be obtained at moderate prices. The first-mentioned are extremely handsome little creatures, fast and gifted with great powers of endurance. If they would live in our English climate, which, however, they cannot do, they would fetch almost fancy prices.

Carefully trained, these beautiful little animals will travel sixty miles readily without requiring either food or water. In the Kordofan markets they seldom realise a higher price than £E3 or £E5; on occasions, however, an eager purchaser, attracted by a particularly showy animal—and most of them are distinctly stately in their movements—will bid as much as £E16 and even £E18 for a really good specimen. I heard of one little Abyssinian beast that made the journey between Abu Zabad and Nahud, a distance of about sixty-one miles, in a single day and arrived perfectly fresh and fit at the end of his journey.

El Obeid.

Of the original town of El Obeid, which was besieged and subsequently occupied by the Dervishes under the Khalifa, no traces beyond the fort remain. The whole of the surrounding country—indeed one may say the entire province—was laid waste, all the large towns and most of the villages ceased to exist, and so remained in this ruined condition until the British Occupation in 1899.

Modern El Obeid consists of a number of neatly-constructed and thatched *tukls*, several well-built, single-story, mud-brick houses and shops, and a number of commodious official residences constructed of burnt brick and locally found stone. The bungalows occupied by the Governor and the two or three inspectors who are permanently located here are good specimens of their kind, but they possess no gardens.

The lack of vegetation of any kind is one of the drawbacks which have to be suffered by the inhabitants of El Obeid, consequent upon the sandy nature of the soil and the scarcity of water.

After El Obeid, Nahud probably ranks next in importance from a trade point of view. It is almost a new town, containing about 7,500 inhabitants of a very mixed character—Greeks, Syrians, Arabs, and many pure negroes. The town is 130 miles from El Obeid, and it gradually expanded until it has now become a very considerable trading centre. In fact, all of the commerce from Darfur originally passed through Nahud, and even up to the time of the late troubles with Ali Dinar it remained of much moment.

Now that this once-disquieting province has been settled for all time, the commerce between the two adjoining districts will undoubtedly again exercise widespread influence. Nahud, however, is not a gum centre as yet, although one day it may well become so, because the tendency of the central market is to stray in that direction.

The chief industry is cattle rearing, the animals brought to market being of the small and hump variety. The Baggara tribes around own immense herds of sheep, as well as horned-cattle, and thus drive a very vigorous trade in the local markets. They are likewise camel owners, and live chiefly in Southern Kordofan. They occupy the plains between El Obeid and the Bahr-el-Arab, and were formerly the chief slave-dealers. Their occupations now, however, are more peaceful, mainly hunting for meat and skins and occasionally for ivory; but it would probably be in no way distasteful to them to revert to their former profitable and exciting occupation of man and woman-hunting.

Big Game.

If it were not for the unattractive scenic appearance of the greater part of the province and its lack of water, Kordofan might very well appeal to the hunter of big game, for within its borders are to be found an immense variety of animals of the chase—elephants in the regions of Dar El Homr, Dar El Ahamda, Dar El Tagale, and Dar Jange; rhinoceros, both the black and so-called "white" variety, in Dar El Homr and Dar El Rizeigat; buffalo in the Dar El Homr, Dar El Nuba and the Dar El Ahamda districts; and lion, leopard, and cheetah everywhere from south of Kaja Katul, where they are very numerous.

Then there are giraffe, also extremely plentiful, especially to-day when they are left almost entirely unmolested, there being no "guns" after them; roan antelope, kudu, hartebeeste, tiang, oryx, addra gazelle, ariel, white-eared cob, Mrs. Gray's waterbuck, several other kinds of waterbuck, reedbuck, oribi, duiker, dig-dig, bushbuck, four other kinds of gazelle, harnessed antelope, hares, quail, partridge, jungle-fowl, bustard—of these there are four kinds—and guinea-fowl galore; indeed, it may be said that for the sportsman who does not mind "roughing it" in the truest sense of the word, there exists in Africa no more alluring field for his prowess than that of Kordofan.

The Administration.

The present peaceful and prosperous condition of Kordofan is due in a good measur to the long and painstaking administration of Miralai R. V. Savile Bey, who has seen nearly sixteen years' service in the Sudan Government. At present Major Savile is doing duty in the newly-acquired province of Darfur, and Mr. J. W. Sagar, Senior Inspector, is serving as Acting Governor of Kordofan. The remainder of the provincial staff comprises Mr. R. A. Bence-Pembroke and Captain T. G. N. Bardwell, Second Inspectors of Nahud; Mr. F. T. C. Young, Second Inspector at Bara; Mr. R. Davies, Second Inspector at Dar Kababish; Captain R. S. Gibson, Second Inspector at Uni Ruaba; Mr. E. G. Coryton, Third Inspector at El Obeid; and Mr. J. A. Reid, Third Inspector at Bara. Mr. B. H. Bell retains his long-held position as District Judge of the Kordofan Province, stationed at El Obeid.

MODERN SHIP LOADING.

In the course of a lecture to 200 young mercantile officer cadets training in H.M.S. Worcester, Mr. P. Donald, managing director of Rownson, Drew, and Clydesdale, Limited, described the progress made in transporting cargoes between ships and the shore from early days to the present time. He pointed out that ancient as well as modern methods are still in use. For example, coal is shipped at Port Said in much the same way as the slaves carried the stones when building the Pyramids in Egypt, while lately progress has been made in the introduction of ingenious appliances for the quick loading and unloading of ships. He described, with the aid of lantern slides, how cargo can be put on board ship or discharged into warehouses, railway trucks, or barges without the intervention of man-handling, and explained that not only are labour and time saved, but the risks of damage to cargo are reduced, by the employment of mechanical appliances.

BULGAR FARM SCHOOLS.

Agricultural Science for the Young.

The United States Consul-General at Sofia, Mr. D. I. Murphy, has submitted to his Government an interesting report on agricultural education in Bulgaria, from which the following passages are extracted. "Bulgaria (he writes) established agricultural schools at Roustchouk and Sadovo in 1883. Each had a model farm attached to it. Later a similar school and farm were established at Pleven, with special courses in viticulture and oenology, and a fourth school was provided for girls at Ohanie.

The institutions are now called agricultural gymnasia, ranking as secondary schools with a general course of study for five years, and special courses covering four years. Students are never admitted unless they have successfully passed the pro-gymnasia and are under seventeen years of age. The subjects studied are: Bulgarian history, geography, physics, civics, mathematics chemistry, natural history, psychology, logic, agriculture, cattle breeding, political economy, bookkeeping, agronomic technology, sericulture, apiculture, oenology, viticulture, forestry, gardening, drawing, singing, and the Russian, French, or the German language.

Study and Practical Work.

Study hours per week must not exceed twenty-eight, but there must be eight hours for practical work. Students pay annually 20 leva, which is used to purchase books for the library and school manuals. Poor students who have shown excellence in studies may be admitted without charges of any kind.

In the special schools, as at Pleven, the studies are: Bulgarian, Russian, history, geography, civics, mathematics, physics, chemistry, natural history, oenology, viticulture, fruit growing, vegetation, park building, essentials of agriculture, political and domestic economy, bookkeeping, synopsis of laws, and drawing. Twenty-two hours for study and eighteen hours for practice are required of all pupils in the special schools.

The number of pupils in the agricultural schools is not permitted to exceed forty in any one class. Promotion comes only after a successful year, and no student is permitted to remain in the same class more than two years. At the end of the course all students must appear before a special examining committee, appointed by the Ministry of Agriculture, for oral and written examination. Only those who successfully pass this examination may enjoy the privileges accorded graduates of the national gymnasia—one year's military service, an opportunity to become a teacher, or of entering a university, or obtaining a low-grade Government position, but all graduates must promise to engage in farming for eight years after graduation.

Cost and Entrance Requirements.

In all agricultural secondary schools the students live in pensions which are governed by special rules and regulations. The cost of board and tuition is about 400 leva per annum, payable in two instalments, one at the beginning of the term, the other at the end of the following January. The Ministry has the right to change the charges for board in accordance with the ascertained cost of living, but due notice is given of any change.

The school year begins September 1 and ends June 30. Applications for admission are accepted only if filed between July 1 and 15. After the latter date students may be admitted only when it is shown that their failure to apply was due to causes beyond their control. The Minister of Agriculture, however, has advisory power in regard to admissions. During the ordinary summer vacations the students may work on farms, but in the last year of the course they must remain during the entire period.

The aim of these secondary schools is to give students a solid general and a sufficient special education to fit them for the higher branches of study, either at home or abroad, and make them scientific farmers or skilled farm workers.

Schools of Lower Grades.

In addition to the agricultural schools there are eight schools of the lower grades, located as follows: Tartar-Pazardjik, Haskovo, Boroush, Aitos, Knejia, Shoumen, Kustendil, and Vidin. These are for boys and girls, but are not co-educational. The object is to teach the boys how to manage nurseries by modern methods and to prepare them for every branch of agriculture, and to fit the girls to become good wives for farmers, and drill them in domestic and farm economy.

Each of the lower-grade agricultural schools is managed by a director and a teachers' council, all directors and teachers being obliged to live in the schools, where apartments are provided free for them.

To these schools are admitted only boys and girls whose parents are farmers, who have successfully passed the national primary schools, and are between fourteen and eighteen years of age. The curriculum provides for twenty-two hours of theoretical study per week in winter and fifteen hours in summer, the rest of the time being spent in practical work.

Studies for Boys and Girls.

The studies in the boys' lower-grade schools are: Bulgarian, arithmetic, geometry, elementary civics, natural history as related to agriculture, agriculture, cattle breeding, husbandry viticulture, gardening, sericulture, and apiculture. In the girls' schools, the course is the same, with the addition of home training, housekeeping, hygiene, home remedies, and singing. The time required is two years, and there are general and special courses. In the former all branches of agriculture are studied, and in the special one or several branches according to local conditions. The period of study is fixed by the Ministry of Agriculture, according to the needs of the particular locality in which a school is situated. The male graduates are required to serve only one year in the army, provided they promise to do farm work up to their thirtieth year.

For all the work the students do in the farms attached to these schools they receive regular compensation, which is generally sufficient to cover the cost of board and tuition. Districts, parishes, and individuals are permitted to support pupils.

Temporary agricultural courses are also maintained in the winter season for the farming community.

CATTLE CENSUS.

News from Sofia states that the Bulgarian Government recently framed and put in force regulations which require an exact count of all cattle in the Kingdom to be made for the purpose of arranging for a proper supply of fodder. The rules will also provide a check on the sale and exportation of cattle to foreign countries. Such high prices have been offered by foreign agents for their cattle that the peasants have sold them off.

Each owner of cattle is required to file an exact declaration to the proper authorities setting forth the exact number and kinds of cattle he possesses. The committees appointed to supervise the count in the various districts and establish the records are charged to keep themselves *au courant* with all sales of cattle throughout the Kingdom, reporting to the Central Committee in Sofia. All cattle in Bulgaria are to be considered as the property of the Government, the Central Committee having complete control of them.

SUBMARINE WAR.

The Secretary of the Admiralty has issued the following weekly return of arrivals, sailings, war losses and unsuccessful attacks:—

Week ending 3 p.m., June 10, 1917.

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):

(a) Arrivals	2,767
(b) Sailings	2,822

British merchant vessels sunk by mine or submarine:

(a) 1,600 tons (gross) or over	*22–1=21
(b) Under 1,600 tons (gross)	†10–1= 9
British merchant vessels unsuccessfully attacked by submarine	‡23–7=16
British fishing vessels sunk	6

*Includes one sunk during week ending June 3, 1917; †includes one sunk during week ending May 27, 1917; ‡includes five attacked during week ending May 27, 1917, and two attacked during week ending June 3, 1917.

LANCASHIRE COTTON.

Marked Increase in the Price of Raw Material.

(From Our Own Correspondent.)

Manchester, June 14.

The market, compared with a week ago, is distinctly dearer, and the feature of interest has again been the decided advance in raw cotton rates, the rise in American qualities during the week being more than twopence a pound. Although traders believe that the position is strong, such an important advance in so short a time can scarcely be justified, and at the time of writing the outlook is very unsettled.

There continues keen competition for the supplies available in Liverpool, and offers are scarce and quickly taken up when made. The weather in the American belt rather tends to improve, but there is not much probability of a bumper crop.

The prospects for the Egyptian growth remain fairly healthy, and prices of Egyptian staple have not been very much affected by the big advance in American descriptions. Operations in piece goods for Egypt have been checked during the last day or two by the remarkable rise in prices, buyers not being in a position to follow. The position in Cairo, however, continues encouraging, and it is believed that more business will be done in the near future if prices will steady.

Irregular operations have occurred in Egyptian yarns, and comparatively few spinners have secured business of any importance. There are still many complaints from producers of the lower numbers.

There has been plenty of inquiry about for a variety of cloths for India and China, but light miscellaneous goods have attracted more attention than ordinary grey staples, which remain flat. Some merchants have again done well in the way of selling stocks of goods which were bought several months ago, when prices were on a much lower range. Business in the yarn market has been much disorganised by the violent fluctuations in the raw material. In spite of difficulties, however, some spinners have had a fairly good week.

Production rather tends to be reduced, and the output of the mills is being more fully absorbed than some time ago. Some producers of export bundles have recently sold rather more freely.

THE WORLD'S SILK SUPPLY.

The British Consul at Lyons (Mr. E. R. E. Vicars) has submitted to the Board of Trade a table of statistics published by the Lyons Silk Merchants' Association, showing the estimated world's supply of raw silk in 1916. The provisional estimate for 1916 puts the total for Europe at about 843 1-5 tons more than the total of the previous year. The estimated production in the Levant and Central Asia was about the same as in 1915, while in the Far East it was about 1,155 tons more. Japan was the largest contributor to the increase, but India (Bengal and Kashmir) is well to the fore.

	1916. Tons.

Grand total	21,273

Applications for French import licences in respect of goods of British origin which are included in the list of articles prohibited to be imported into Algeria, must in future be addressed by the proposed importer to the competent authorities in France. The licences will no longer be issued in this country. Exporters in the United Kingdom should apply for advice regarding classification of their goods to the French Customs House, Bank Buildings, Kingsway, London, W.C. 2.

ENGINEERING NOTES.

Roumanian Oil Industry.

According to a telegram received in London this week, a German report from Bucharest states that the Roumanian oil industry, notwithstanding the great destruction of last year, is once more in full swing. The production is increasing weekly, and now provides for the needs of the Central Powers. The report, if true, is of great importance, because, apart from the reinforcement of the enemy's meagre supplies of liquid fuel, it will also provide for another of his urgent and embarrassing needs. As is well known, owing to the British blockade there exists in Germany a severe shortage of lubricants, and as a direct result of the shortage working of trains is much hindered. Eight hundred locomotives were recently reported to be "laid up" at Essen alone through lubrication troubles. Grease used for lubricating railway axles contains a large proportion of palm oil, a tropical product to which Germany now has no access. Though animal fats could be used as lubricants in engineering, they are naturally in demand for feeding purposes. Fatty oils, while generally unsuitable for use in engine cylinders, can be employed in internal combustion engines, but with the Roumanian oil wells in full swing (if the story is true), Germany may be able to obtain supplies of necessary mineral oils for lubricants.

A Big Russian Order.

A considerable Russian order for agricultural implements and machinery has been received by one company alone in America, which, recently, has shipped for the Russian Government 3,000 mowers, 2,000 reapers, and 1,700 boxes of "extras." This consignment is only part of the order, for, it is reported, a second consignment will comprise 3,000 binders, 1,000 reapers and over 500 mowers and rakes.

New Potato Planter.

Any agricultural labour-saving machine is of great interest to farmers at the present time, when the labour problem is seriously embarrassing them. The value of such machines, however, is more noteworthy when simplicity of design and efficiency in working are their principal characteristics; and machines combining these merits are nowhere so much appreciated as in the East. A newly-invented machine, therefore, for planting potatoes will interest many landowners and others there. The new planter opens the drill, plants the potato and covers it up. Potatoes may be planted at distances varying from fourteen to eighteen inches apart, without being damaged, no matter whether cut or uncut sets, with long or short sprouts, and irrespective of their size. Provided the machine is fed regularly, the sets will be planted equi-distant apart; no two sets are planted together, and no sets are missed.

The Machine Described.

The machine consists of a travelling belt passing continually and horizontally from left to right in front of the man or woman who feeds it. Equi-distant apart on this belt are curved plates standing at right angles to the surface of the belt. Between each plate a set is placed by the operator. The belt then passes from the horizontal to a vertical direction. The set is carried downwards on the plates, and is discharged carefully into the drill made by an adjustable plough in the front of the machine, and the drill is closed by adjustable revolving discs placed immediately behind where the potato is planted. Motion is transmitted from the road wheels to the belt by gearing; while the machine is adjustable for twenty-five, twenty-eight, and thirty-inch drills, and can be arranged to plant on the flat, at the top of the drill, or at the bottom of the drill on manure. The machine can be attended by two girls—one to feed the planter and the other to lead or drive the horse.

BRITISH FOREIGN TRADE.

Large Increase in Essential Foodstuffs.

The trade returns for May again show an increase in the value of imports and a reduction in the value of exports, but it must be borne in mind that the month had one working day less than May, 1916. From a financial point of view the returns are not so satisfactory as they have been for some time past.

Bearing in mind the submarine attacks on shipping, it is gratifying to observe that the volume of overseas business is only 4½ millions down on the corresponding month last year, which had one working day more. Compared with the previous month, which had three working days less than the past month, imports advanced by three millions, exports of home produce by 7½ millions, and re-exports fell by two millions.

The revealed balance of trade, leaving out of account movements of coin and bullion and allowing for re-exports, was for the month 37¾ millions, as against 35¾ millions in May, 1916, and 40¼ millions in April, 1917, and for the five months ended May, 1917, 167 millions, as compared with 147¾ millions in the corresponding period of 1916.

As regards imports, grain and flour advanced in value by £6,894,009, meat by £66,621, other food and drink (non-dutiable) by £799,663, and tobacco by £186,943, whilst dutiable articles of food and drink declined by £1,200,663. The total increase in the value of food, drink, and tobacco amounted to £6,746,543. Raw materials show an advance of £2,740,879.

Raw cotton rose in value by £963,589, but was reduced in quantity by 495,000 centals; sheep's wool rose in value by £841,707, but declined in quantity by 18,311,000 lbs.

Oils and fats show an increase of £680,319, petroleum being higher by £861,000, with an increase of upwards of five million gallons in quantity.

Manufactured articles are lower in value by £5,772,280, every section showing decreased values. Iron and steel are lower by £239,000, other metal manufactures by £1,052,000, chemicals by £886,000, leather manufactures by £710,000, textiles by £1,082,000 (cotton manufactures accounting for £602,000, and silk manufactures for £273,000).

BRITISH TRADE BANK.

At a meeting of the Council of the Association of Chambers of Commerce of the United Kingdom, held in London last week, a resolution was passed expressing appreciation of the steps taken by the Government towards the formation of a British Trade Corporation. The Council considered a financial institution of that nature would be in the highest degree calculated to further the interests of the British manufacturer and trader, and they regretted that the criticism to which the scheme was subjected in the House of Commons resulted in the temporary withdrawal of the Board of Trade vote for the purpose. They added that the scheme in its general outline always and still had the support of the Chambers of Commerce of the United Kingdom. The Council, which represents 35,000 manufacturers and trades, adopted the resolution.

ITALIAN SHIPOWNERS' FEDERATION.

The Times is informed that an Italian shipowners' federation has been formed at Rome under the chairmanship of Senator Maggiorino Ferraris, a former Minister and President of the Italian Navy League. The federation has, it is stated, the warm approval of the Italian Government, and is supported by such shipping companies as the Navigazione Generale Italiana and La Veloce. Its inception is due to Professor L. Fontana Russo, a member of the High Council of Trade and President of the Council for Commercial Instruction, and the organisation is intended to promote the common interests of the Italian Mercantile Marine. The war has, it is declared, shown the need for a development of the Mercantile Marine, which will be recognised shortly in new legislation, and it is confidently expected that the Shipping Federation will be able considerably to assist the movement.

COMPANY MEETINGS.

The Suez Canal Co.

The report of the Suez Canal Company for 1916, which was adopted at the annual general meeting of the shareholders, held in Paris on Monday, states that the position did not differ essentially from that of the previous year. The outlook was only slightly more sombre. The war continues. The persistence of the same causes had only intensified the effects produced. While the traffic passing through the Canal amounted to 15,266,155 tons in 1915, this was reduced to 12,325,347 tons in 1916, which was a fresh drop in round figures of 3,000,000 tons, and added to the previous losses of 4,100,000 in 1915 and 600,000 tons in 1914. The receipts, however have not fallen in the same proportion, thanks to the increases of the rates which have been successively adopted. At the last annual meeting the shareholders were informed that an additional surtax of 50 centimes had just been put in force, and it was added that if its effect was inadequate there would be no hesitation in deciding to impose another of a similar character. Not only was this done, beginning from October 5, 1916, but a third increase of the same amount had been put into operation, starting from January 1 this year. Furthermore, the council had resolved that a fourth surtax, which would come to 75 centimes instead of 50, would be applied from July 1 next. That would be an increase of 36 per cent. on the pre-war tariff.

These successive increases had met with no obstacle or opposition. This was a proof of what the directors had advanced last year, namely, that the shareholders would reap the benefit of the wise and liberal policy that had invariably been followed. In days of prosperity they had consented to a considerable reduction of their dues in favour of their clients. Now the company could withdraw those concessions without exciting murmurs or even surprise from anyone. Those increases, however, had not been sufficient to counterbalance the diminution of the traffic of the Canal. The receipts for special navigation dues showed a deficit of some 14,000,000 frs., as compared with those of 1915. The results of the current year, to which much importance was attached in determining the dividend proposed for distribution, showed a new and profound depression. The ruthless submarine war which Germany announced to the world on February 1 was certainly the principal cause of that new decline. The uncertainty of the immediate future required them to be more than ever faithful to their customary rules of prudence. Therefore, the council proposed to distribute a total net dividend of 90 frs., which only very slightly exceeds the actual profit for the year, and will leave to be carried forward an amount very similar to that of the previous year.

The total receipts for 1916 reached the sum of 89,044,276 frs. 83 centimes, showing, as compared with the total receipts for 1915, a decrease of 9,183,822 frs. 04 centimes. The decrease from transit dues alone amounted to 13,473,769 frs. 62 centimes, but there is a compensation to the extent of 4,289,947 frs. 58 centimes due to the increase in the company's revenue from other sources.

The total expenses of the year amounted to 34,565,714 frs. 23 centimes, showing an increase of 2,535,745 frs. 87 centimes as compared with those of the previous year. This increase is due partly to the increase in establishment charges, to which is added a sum of 3,252,500 frs., representing the interest and sinking fund of the five per cent. bonds issued in 1915. On the other hand, the increase in the price of materials has been such that, despite all efforts at economy, there is an increase of 1,151,615 frs. 19 centimes in the working expenses. But for a strong compression of expenses in all branches this increase would have been still more considerable. A diminution of 2,000,000 frs. in the amount set aside for depreciations, the almost com-

plete absence of heavy contingencies in the current year, and the good condition of the company's material amply justify this reduction in the allocation.

The excess of receipts over expenditure, including the amount brought forward from 1915, amounts to 54,051,351 frs. 70 centimes. It is proposed to fix the amount of profits for distribution at 43,707,842 frs. 26 centimes, and to carry forward to the current year the remaining surplus of 10,344,309 frs. 44 centimes. This distribution represents a dividend of 77 frs. 58 centimes per share, and, with the addition of 25 frs. interest, gives a gross revenue of 102 frs. 58 centimes and a net revenue of 90 frs.

The general maritime movement of 1916 was represented by the passing through the Canal of 3,110 ships, of altogether 12,325,347 tons net. This, in comparison with 1915, is a decrease of 598 ships and 2,940,808 tons (*i.e.*, 19.26 per cent.), and as compared with 1913, the last normal year, a decrease of 1,975 ships and 7,708,537 tons (*i.e.*, 38.48 per cent.). But there are other interesting comparisons. If one separates the purely commercial traffic of 1916 by deducting from the general movement the proportion of State transports, the figures are 2,240 ships and 8,631,584 tons, as against the corresponding results of 1913, when the figures were 4,980 ships and 19,732,739 tons—a decrease of 56.26 per cent. This comparison requires explanation, as the 870 ships and the 3,683,763 tons of State transports in 1916 include important commercial elements which it is impossible to separate from the others. In a great number of cases, in fact—and this tendency appears to be on the increase—State commerce is substituted for private commerce. The decrease of the commercial traffic in 1916 is not then in reality so great as the above figures would lead one to suppose. The average net tonnage of the ships passing through the Canal was 3,963 in 1916, almost equal to that of 1913, which was 3,940 tons. The number of passages made by ships of over 10,000 tons remains practically stationary. Among such vessels there were the "Franconia," of the Cunard Steamship Company, and the "Ceramic," of the White Star Line, the largest ships which have passed through the Canal.

The increases in the transit dues already mentioned produced altogether an additional revenue of 5,923,000 frs., which reduced to 14,162,000 frs. the diminution in the receipts from those dues.

The immediate future of the traffic of the Canal still remains uncertain. All prognostications on that subject would be futile. But the prospects for the period after the war can be regarded with confidence. The directors are persuaded that when peace comes and the ocean routes again become safe traffic through the Canal will increase, and if it does not immediately attain the pre-war figures it will show, nevertheless, a notable resumption of activity. It is possible to hope, on the other hand, that the maintenance of higher rates than those which were in operation when hostilities began will bring the company a return of its former prosperity. The report deals at some length with the military operations in the Isthmus of Suez, and points out that the military situation there has improved considerably. The directors offer no comments on the submarine war; none, they say, are needed. They had only to note the facts, and among the most recent is the unrestricted submarine warfare, which, in the zones established by the Central Powers, threatens, indiscriminately, neutral as well as Allied traffic.

The outlet for traffic in the Mediterranean is in one of the zones where the Austro-Germans hope to prohibit navigation of all kinds. Hence the submarine warfare is a sort of declaration of war directed specially against the Canal.

The report closes with a tribute to those officials of the company who had enlisted, some of whom had fallen, special mention being made of the late general secretary, M. Maxime Bertrand.

Anglo-Portuguese Telephone Co.

Mr. Herbert Allen, presiding at the annual general meeting held on Tuesday last, said that in 1916 they did a record business; they added a larger number of subscribers to their several exchanges than in any previous year; they passed a record number of messages, and they had a record income and a record profit. The gross income in 1916 was £93,578, an increase of £11,655 on that of the previous year; their gross profit was £31,598, an increase of £3,713, and their net profit was £25,430, an increase of £2,493. The increased profit was scarcely proportionate to the increased revenue, but that was partly explained by the universal rise in the cost of materials and labour, and in a still greater degree by the loss on remittances. Of the net profit they accounted for £10,000 by a further appropriation to the renewals fund, which now stood at £30,000; they had written down their investments by £2,500; they had placed a further £1,500 to the exchange fluctuation fund, rounding it off to £10,000; the general reserve they had left undisturbed at £25,000; they were applying £9,000 to the payment of a 6 per cent. dividend; and they carried forward £2,430 more than on the previous occasion.

Their three reserve funds now amounted to £65,000, and they had all been built up in the last seven years, whilst at the same time they had reduced the debenture debt by nearly £10,000 and given other evidence of their prosperity which he need not particularise. The exchange question was for the moment a disturbing feature in their affairs, and it was one over which the company had no control. Eight or ten years ago the escudo or milreis was within a fraction of its par value—that is 53¼d.—and their loss on remittances was only about £300 a year.

Since then the exchange had steadily gone against them, until last year it averaged only 34 1-32d., and they lost over £16,000 on their remittances. The present quotation of 31d. was the lowest for the last twenty years. So, perhaps, it would not be long before the pendulum swung the other way; they still must be prepared for its going worse before it went better. Then there was the question of capital requirements. In the last 15 years their capital expenditure had been £225,000, or an average of £15,000 a year, and he saw no reason to suppose it would be less in the future; at all events, he hoped not. The business of a telephone company never stood still, and they were continually incurring fresh capital outlay, but it was just now difficult to obtain the Treasury sanction to new issues, and for some time to come they would probably have to rely more upon surplus revenues for capital requirements.

These were the considerations which had influenced the directors in curtailing the dividend until they could see their way ahead a little more clearly, and, after all, a dividend of 6 per cent. in these times, in a business which the war affected adversely in almost every particular, was not so bad. It was not that they had *earned* only 6 per cent., as a glance at the accounts and the handsome appropriations made to the various reserves out of the year's profits would speedily show. The continuous expansion in their business was sufficient testimony to the efficiency of the service given by the company and the steady reduction in their average charge per message showed that their prosperity had not been earned regardless of the interests of the public.

Apart from the automatic element, he believed there was no more up-to-date telephone system in the world than theirs at Lisbon, and but for the temporary obstacles to the raising of new capital they would now be bringing Oporto equally up-to-date. The building of a new exchange in that city was the next important capital work to be taken in hand, and this would no doubt be followed by a third exchange in Lisbon, although it was only three years since they opened the second one there, with an ultimate capacity of 6,000 lines.

The company started business about 30 years ago with a revenue of £4,934 and a profit of £1,695 derived from 1,423 subscribers. Coming to more recent times, the last twenty years had been a period of uninterrupted progress, and between 1896 and 1916 the gross income had increased from £17,004 to £93,578, the gross profit from £8,310 to £31,599, and the net profit from £4,030 to £25,430. By 1904 they had increased the dividend to 7½ per cent.: then for nine years running they paid 8 per cent., and the directors saw no reason why the near future should compare unfavourably with the recent past. The present reduction was more in the nature of a precautionary measure than an actual necessity.

Anglo-American Nile.

The accounts for the year ended March 31 show a profit, after providing £E3,118 for maintenance, writing £E3,062 off for depreciation and including £E4,666 brought forward of £E28,876. A further dividend of five per cent. has been declared, together with a bonus of three per cent, making a total distribution of eleven per cent. for the year, and £E3,562 has been transferred to reserve, leaving £E9,558 to be carried forward. No dividend was paid for the previous year, the last distribution being five per cent. in respect of 1913-14.

COMPANY REPORT.

Land and Mortgage Co. of Egypt.

The report of the Land and Mortgage Company of Egypt for the year ended March 31 last, states that the gross earnings amount to £35,509, against £32,690, and the net earnings to £7,313, against £4,896. With the balance of £11,446 brought forward, the amount to the credit of profit and loss account is £18,759. The directors recommend a dividend of 5 per cent. for the year, less tax, leaving £11,259 to be carried forward.

THE METRIC SYSTEM.

At the annual meeting at Spring Gardens of the Incorporated Society of Inspectors of Weights and Measures, Lord Crewe presiding, Mr. C. MacDonald (Glasgow), in a paper on "The Compulsory Adoption of the Metric System," said that at the beginning of the year the metric system was obligatory in trade in thirty-eight countries, having a total population of 476,890,000. Its use was optional in eleven countries having a total population of 727,233,000. The metric system might be described as the standard system of the world, and the development of foreign trade after the war would be facilitated by its adoption.

Mr. H. Cunliffe replied in a paper opposed to the change. He did not think compulsion should come except at the demand of the users of weights and measures. British weights and measures effectively satisfied the needs of international trade, and it was a matter for doubt whether the adoption of the metric system in this country would not assist Continental countries to enter the British market more than it would assist British merchants in entering theirs.

Mr. A. Granger (Birmingham) submitted as a compromise that the pound weight should be made equal to the half-kilo and the gallon equal to the half-decalitre. In each case it meant practically an increase of 10 per cent.—the new cwt. to be 100 and the new ton 2,000 of these lbs. The new lb. might have decimal divisions for scientific purposes, but it might be advisable for several reasons to divide it into sixteen parts. The ounce so obtained would approximate very closely to the troy ounce. Measures of length should be left alone.

A set of the new weights placed upon a shop counter would allow business to go on as usual simply by increasing prices 10 per cent. The retailers, a numerous class, desired no change. It would be comparatively easy to require that all goods sold by weight or measure should be sold in terms of weight and measure and no other. Thus at one stroke we should get rid of our sacks and sieves, our tods and trusses, our pots and pockets, and so on and so on. Further, corn would no longer be sold by a bushel, of which there are some 200 variations.

COMPANY NOTES.

Flower Motor Ship Co.

An interim dividend of 5 per cent. has been declared for the half-year ended June 30, and will be payable on July 5.

Alexandria Water Co.

A dividend of 9s. 9d. per £5 share on coupon No. 57 will be payable on and after to-day at Messrs. Barclay and Co.'s, Ltd., 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Ltd., Alexandria.

Piræus-Larissa Railway.

The coupons falling due on June 15, 1917, on bonds of the Greek Five per Cent. Loan of 1890 should be presented for payment at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, London, E.C..

Land and Mortgage Co. of Egypt.

The thirty-seventh annual general meeting will be held at the Cannon Street Station Hotel on June 22, at noon.

Oil Outputs.

Anglo-Egyptian.—Gemsah production for week, 286 tons (previous week 21 tons); Hurgada, 1,724 tons (against 1,924 tons).

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
June 5	150,000	90,000
June 6	170,000	210,000
June 7 / June 8 / June 9	790,000	360,000
June 10	170,000	170,000
June 11	230,000	70,000

PRIZE COURTS.

It was notified in the *London Gazette* of June 4, that proceedings are in progress before the prize court at Zanzibar against the following vessels and goods laden therein:—Koenig, Tabora, Kaiser Wilhelm II., Praesident, the gunboat Moowe, three small steamboats (un-named), three small motor boats, ten small yachts, forty-nine dhows, twenty-three lighters, sixteen lighter boats, one mooring lighter, fifty-seven pulling boats, and twenty pontoons. Appearances should be entered by all persons claiming an interest as soon as possible.

The Times correspondent, writing on May 17, says:—"Mr. E. Bonham Carter, Legal Secretary to the Sudan Government, has left for England in order to make arrangements for taking up some more of the loan which was arranged for the Sudan just before war broke out."

NOTICES.

THE ALEXANDRIA WATER COMPANY, LIMITED

Payment of Dividend.

NOTICE IS HEREBY GIVEN that a DIVIDEND OF NINE SHILLINGS AND NINEPENCE per £5 Share on Coupon No. 57 is PAYABLE on and after June 15, 1917, at Messrs. Barclay and Company, Ltd., 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Ltd., Alexandria, Egypt, upon the making of a declaration as to ownership in the form required by the above Banks, forms of which will be supplied upon application.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

Alexandria, Egypt,
June 8, 1917.

THE LAND AND MORTGAGE COMPANY OF EGYPT, LTD.

NOTICE IS HEREBY GIVEN that the THIRTY SEVENTH ANNUAL GENERAL MEETING of the Shareholders of the Land and Mortgage Company of Egypt, Limited, will be held at the Cannon Street Station Hotel, Cannon Street, London, E.C., on Friday, the 22nd day of June, 1917, at 12 o'clock precisely, for the purpose of considering the Statement of Accounts and the Directors' and Auditors' Report thereon for year ended 31st March, 1917, sanctioning the declaration of a dividend, electing Directors and Auditors, and transacting any other competent business.

NOTICE IS ALSO GIVEN that the Transfer Books of the Company will be closed from the 12th inst. to the 25th inst., both days inclusive.

Dated this 12th day of June, 1917.

By order of the Board,
T. H. MARSDEN, Secretary.

ON 'CHANGE.

(From Our City Correspondent.)
Throgmorton Street, E.C.
Thursday Evening.

Our market has continued on the whole very strong, but business has been less active. The crop reports from Egypt continue to be of a satisfactory character, and the prices of all produce remain very high; so that it is not likely that the present inactivity will last long.

Unifieds are somewhat firmer at 83¼, after business as low as 82¾. The 3½ prefs. continue strong at 72 without sellers.

National Banks have again been a feature, advancing ¼ to 14¾ on small transactions. Agriculturals are, if anything, rather quieter at 5 3-32, while some small transactions have taken place in prefs. round 7½.

Delta Lights are again ⅛ higher at 6, at which they are an attractive lock-up purchase. Some Aboukirs have been done round 3/32, and Allotments have been in demand at about 2⅝, but sellers are asking 3. Some business has been done in Behéra round 9/32.

New Egyptians and Delta Lands have been changing hands round 11s. and Uniteds round 1s. Gharbieh have improved over 1-16 to 1 3-32 bid. Some transaction have taken place in Alexandria Waters at 12⅜ to 12 7-16. Salts and Sodas have been fairly active at about 23s. 3d., and Khedivial Mails are rather quieter at 35s. 9d

Greek securities are firm, with the exception of Monopoly and Rente, which are lower at 48 and 40 respectively.

Oil Shares.

Anglo-Egyptian "B" marked from 14s. to 15s.., and Anglo-Persian prefs. from 23s. 6d. to 24s. 6d. Roumanian Consolidateds were in the neighbourhood of 9s. 3d.

Paris Bourse.

Quotations on Wednesday included:—Egyptian- Unifieds, 92.95 (against 93.25); Serbian (1895), 58 (unchanged); Turkish Unified, 63.50 (against 64); and Suez Canal, 4400 (unchanged).

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to March 31, 1917 (New Style: January 14 to April 13, 1917):—

—	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross Receipts, Mar., 1917	2,086,926	1,379,000
Do. do. do 1916	2,656,893	3,664,000
Estimated Receipts for 3 months (Law of Control)	7,225,000	2,675,000
Actual do. do., 1917	7,162,913	3,602,000
Do. do. do., 1916	9,299,840	7,486,000
Difference between estimated and actual receipts for 3 months 1917	— 62,086	+ 927,000
Difference between estimated and actual receipts for 3 months 1916	+ 2,074,840	+ 4,811,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange of the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

The Egyptian Mail

(Published in Cairo) is a well-informed and well-written daily paper with a rapidly increasing circulation.

IT COSTS A SMALL PIASTRE

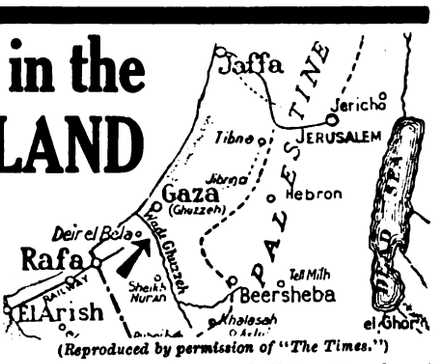
Famine in the HOLY LAND



(Reproduced by permission of "The Times.")

The recent victory near Gaza means that we shall be able almost immediately to follow up the Allied advance with FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the inhabitants. The demand for adequate funds to provide all these necessaries has now become one of the *utmost urgency*.

To relieve the starving peoples in SYRIA and PALESTINE £50,000 is needed at once.

In the land where Christ walked and taught and died, thousands of people—not Turks, but Christians, Jews, and Arabs—are in the last stage of destitution through the cruelties which they have suffered. Unless supplies can be sent immediately it will be too late to save the lives of many of these poor people.

MISSIONARY SOCIETIES of ALL denominations have united to carry out this great work.

A strong administrative Committee is now at work, plans for relief are already made, and goods stored in Egypt ready to be poured into the country, by sea or rail, as soon as access is obtained. The Fund will be economically administered by those who know the country and people best, and relief will be given to all, irrespective of race or creed.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110, Victoria Street, Westminster, S.W. 1.

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: The Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 5d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.) 1, Devonshire Sq., London, E.C.2.

NOTES OF THE WEEK.

The first proclamation of the young King of Greece made an unfavourable impression. He stated that "in my sorrow at being separated, in critical circumstances, from my dearly loved father, I have the sole consolation of carrying out his sacred mandate. I shall endeavour with all my power to realize it, following the lines of his brilliant reign, and with the help of the people, upon whose love the Greek dynasty rests. I am convinced that, obeying the will of my father, the people will contribute by their submission to our common object—the extrication of our dear country from the terrible situation in which she now finds herself." There was also an allusion to "my august father," who has made "the supreme sacrifice." It may be pointed out that Constantine's brief and troubled reign could hardly be called brilliant by any stretch of the imagination, and that, however admirable filial piety may be in ordinary circumstances, it cannot be regarded as a substitute for constitutional rule in a constitutional country. Where there is a Constitution, as in Greece, the "sacred mandate" is derived from the people, and not from the monarch; and King Constantine would have been spared the necessity of abdication had he recognized this fact—his dismissal, indeed, was the logical but belated consequence of his own dismissal of M. Venizelos. The whole message smacks somewhat of the divine right of kings, a doctrine still taught in Prussia, but hardly suitable to the historic soil of Greece. It must be admitted, however, that a later message from the King has somewhat undone the effect of the first proclamation. He now speaks of "the Government's efforts for the restoration of the unity of the country," and states that he "remains the faithful guardian of the constitutional charter," and is "convinced of the good intentions of the protecting Powers." In this case second thoughts are certainly best.

The German Emperor, by the familiar telegram, has declared his "righteous wrath at the infamous outrage" on Constantine, and assures him that his deprivation can only be temporary; he is to be restored by "the mailed fist of Germany, with the additional aid of Almighty God." It is pleasant to hear once more of this famous alliance, in which the Kaiser is now apparently the senior partner. The exiled monarch has also the condolences of Count Reventlow to cheer his exile. The noble journalist invites the late King to believe that when he remounts his throne "under German protection" he will be "compensated for his sufferings by the addition of a slice of Italian territory, the southern part of Albania, and Cyprus." The exiled monarch might have preferred a bird in the hand to three in the Entente bush.

With the expulsion of the pro-German politicians and the German agents from Athens the ground should be more clear for M. Venizelos to return. M. Gounaris, Colonel Metaxas, M. Mercouris, M. Saghias, the head of the reservists, and others who have made themselves notorious during the past two years will now have the opportunity to reflect on the results of their policy from the safe distance of Spain or a convenient Mediterranean island; Corsica is spoken of as a healthy and not unlikely residence. Meantime, at a Cabinet Council the Government has decided to form a committee of four to consider the proper method of reorganising and reuniting Greece. The committee will consist of two members of the Athens Government and two of the Provisional Government at Salonika, and should they disagree a representative of the Allies' High Commissioner will have a casting vote. Among the matters to be considered are the grant of an amnesty to political offenders, the summoning of the Greek Chamber and the inclusion of Venizelists in the Greek Ministry.

M. Venizelos, who has hitherto made no public statement regarding the changes in Athens, has now expressed the opinion that M. Zaimis is responsible for the wording of King Alexander's manifesto. He looks forward hopefully to the time when Greece will be reconstituted as a united kingdom which will pursue the path of democratic ideas. It is more than ever clear that the only way to carry out this policy is for M. Venizelos himself to return to power.

It is in anticipation of that eventual return, which can hardly be long delayed, that the news of King Constantine's abdication has produced such tremendous enthusiasm in Salonika. On the other hand, the action of the Royalist party in resisting the French occupation in Thessaly—which resulted in the death of several French soldiers—appears to have revolted public opinion, and the people of Larissa are everywhere showing their gratitude to the French army. It may be hoped rather than expected that this outburst of fanaticism is the last expiring effort of the Royalist faction; but they are now putting about a legend that the French intend to occupy Greece permanently and to

Digitized by Google

turn the kingdom into a French colony. The absurdity of this report, which can hardly deceive the most ignorant, is sufficient evidence of the straits to which the defeated party are reduced.

The Roumanian Parliament, which has been entertaining M. Vandervelde, the distinguished Belgian Minister, is now engaged in discussing the questions of agrarian reform and the Jewish problem. The settlement of both problems is somewhat overdue; in particular, the Jewish population have urged with effect the recent liberation of their co-religionists in Russia, and the fact that they possess greater privileges in Hungary, which is not precisely a model democratic state, than in Roumania. The agrarian question is more complicated, but the grievances of the peasantry are real, and recent misfortunes have induced the governing classes to recognise their reality.

While Roumania is setting its house in order and reorganising its army to resume the campaign, Bulgaria is intent upon the fruits of victory. M. Radoslavoff, the Prime Minister, has stated to the *Fremdenblatt* the intentions of his Government. "We want," he said, "that part of Macedonia which is already occupied by our troops. We want to keep in touch with Austria-Hungary through the Morava Valley, and we further want for all time security. Finally, we demand the Dobrudja." Without regarding the demand for security "for all time"—a quest which all recorded history shows to be hopeless—it may be noticed that (a) there is no hint here of "no annexations," which will annoy the Russians, and (b) the desire to "keep in touch" with Austria does not show any signs of a response to the theory that Bulgaria is ready to desert the Central Powers if the Entente make a sufficiently tempting offer.

A terrible statement has been made regarding the conditions in Armenia. The women and children who have survived the wholesale massacre are now being gathered into homes at Baghdad, which are financed by the British Government, and they are receiving succour from others of their own community. But those who survived will never forget their awful experience: one child of ten recounted that the Turks issued a proclamation that the Armenians were to be sent away to a colony that was being prepared for them, where they would be given new land to cultivate; and that the journey would not be long. The first promise was too good to be true; the second was fulfilled. On the third day of the journey the men were separated from the women and killed, being either shot or cut down with a sword. After that came the turn of the women: some were pushed into rivers, others thrown over precipices. Of twelve hundred who left the Erzeroum district, only four hundred reached Ras-el-Ain. There was not a man among them, or a male child over the age of nine. Other accounts are to the same effect; there can be no doubt whatever that the Turks intended to exterminate the Armenian people, that they nearly succeeded in doing so, and that in any case it must take more than a generation for the Armenian race to lift its head again. As more details of the massacre are received month by month, it becomes clear that no comparison with anything short of the devastation of Ghenghis Khan or Tamerlane can describe its ferocity.

Very grave disquiet will be caused by the steadily increasing volume of evidence of Turkish neglect of the British prisoners of war. It is believed, from the account given by one who was near the camp in the Taurus, that more than half the prisoners who surrendered at Kut have succumbed to neglect or ill-treatment. Fifty prisoners who were sent to a hospital at Aleppo could hardly stand owing to physical weakness, and in any case the medical resources of Aleppo are primitive. That perhaps can hardly be imputed to active ill-will on the part of the enemy, but another instance quoted can only be ascribed to active and cowardly hostility. Thirty-seven British prisoners were sent to a hospital under European management; the doctor in charge was of opinion that with proper care he could save thirty-five of these, but he and his assistants were driven away from their own hospital, with the result that during the next fortnight twenty-two of the men died from sheer neglect. That kind of barbarism must be taught a lesson.

Sir Percy Sykes is now settled in Teheran and is entering into a contract with the Persian Government regarding the instruction of the new force of gendarmerie. At the beginning this force was discontented, hostile and almost mutinous, and apparently plots were afoot to assassinate Sir Percy and his assistants. These efforts have been so far frustrated, and it is to be earnestly hoped that he will succeed in his task of disciplining the 2,500 gendarmes who are supposed to maintain order in Persia. He has completed the scheme for the South Persia Rifles, but the actual work of restoring order in the distracted country must be a task of months, if not years. Fortunately the British advance in Mesopotamia—where again we are glad to notice that sickness is diminishing—has tended somewhat to ease the work of the pioneers.

President Wilson's latest speech contains a significant message to Russia. He comments on the eagerness for peace manifested by Berlin, and remarks that "a little of the talk has been public, but most of it has been private, through all sorts of channels. It has come to me in all sorts of guises, but never with the terms disclosed which the German Government would be willing to accept." It appears that the German Socialists and a representative of the Swiss Government are both being used to seduce the Russian people—fortunately, without success. The Swiss agent in Petrograd was ignominiously expelled—he was acting without the knowledge or authority of his Government, which has repudiated him, and M. Hoffmann, of the Swiss Council, who acted with him, has resigned. The episode was disquieting, but it is hardly likely to occur again, after the manner in which it has been received by the Entente. Certain Austrian agents, whose presence in Russia was denied by the Austrian Government, have been sent to Siberia, where they can meditate on their repudiation by Vienna at leisure. The German Socialists' manifesto deserves more notice.

These tame elephants from Berlin will hear nothing of the restoration of Alsace-Lorraine; at most a rectification of frontiers might be agreed to. They admit the independence of Belgium, but will not agree to any compensation for damage done by Germany. The German colonies are to be restored; Poland is to be granted independence, but only the Poland of the Congress of Vienna—Posen is still to remain German and Galicia Austrian, but the Polish language is to be permitted in Posen in order that the Poles of that province may "develop their cultural idiosyncrasies." There is also to be limitation of armaments, arbitration, and other agreements which Germany could break at the first convenient opportunity—these are the shop-window dressings. The territorial readjustments are apparently meant seriously, and for that reason they may be at once put in the waste-paper basket, since neither England nor France will agree to them, and Russia, while admittedly desirous of peace, has made it quite clear that she will not tolerate a separate peace. The treaties and agreements between the Allies are to be looked into by the desire of the Russian Government, with the exception of the Pact of London, which provides that none of the belligerents shall make a separate peace. The exception will be noted with disappointment in Berlin, where hopes of detaching Russia from the Alliance had run high.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 28.

The Sultan at Alexandria.

H.H. the Sultan has now definitely taken up his residence for the summer at Alexandria. He proceeded there on Thursday last direct from his estates at Gabares instead of, as originally arranged, returning first to Cairo, and then going down in State to Alexandria, as it was considered unnecessary for him to undergo the extra fatigue of the double journey. The Ministers, accompanied by the Acting Financial Adviser (Mr. Lindsay), General Sir George Macaulay, the senior railway staff, and the members of the Sultania Household, proceeded early in the morning by special train to Tel el Baroud, where his Highness and his personal Staff joined the train. The Sultan had an official reception on his arrival at Alexandria, and as he drove to Ras-el-Tin Palace received an ovation from the crowds which had assembled in the streets. Owing to the coincidence of the Sultan's arrival with Empire Day, Alexandria was profusely beflagged. From a purely private source I learn that a marked improvement has been noticeable in his Highness' health since his stay on his estates at Gabares.

Empire Day.

Empire Day was fittingly celebrated in Cairo by the entertainment of convalescent soldiers at the Residency, and in Alexandria by a children's fête at the Sporting Club. Their Excellencies the High Commissioner and Lady Wingate had made most elaborate arrangements for the thousand soldiers from the various hospitals whom they had invited as their guests. The Residency grounds were looking their very best, and the men thoroughly enjoyed their tea under the shadow of an ingeniously contrived sun-protector made of Egyptian tenting, which sheltered them from the glare the while it did not shut them off from the fresh air or from the interesting spectacle which the grounds presented. Music was provided by an Egyptian infantry band, and a series of cinematograph shows was given in the pavilion. At the conclusion of the entertainment Sir Reginald Wingate gave a stirring address to the men, who went back to their hospitals after singing the National Anthem and giving three cheers for their generous hosts and for those who had assisted them.

The children's fête at the Sporting Club at Alexandria was a great success. A very good programme of sports had been arranged, and the children spent a thoroughly enjoyable afternoon. An admirable speech was made by Brigadier-General R. C. Boyle, and Mr. D. Cameron, who distributed the prizes, read a letter from the High Commissioner especially addressed to the children.

The Cairo Cathedral.

Bishop MacInnes, in a letter to the local English Press, announces that, thanks to the intervention of the High Commissioner and to the generosity of the Sultan and the Council of Ministers, a site for the new Cathedral has been secured for the Anglican community. The site is that of the old Ismailia Palace, which was for many years the residence of the Ottoman High Commissioner, and which was pulled down some little time before the war. It covers about eight acres, and, being situated at the corner of the road leading to the Kasr-el-Nil Bridge, is a very valuable site. Indeed it is one of the finest in the city, and is ideally situated for the erection of an important edifice such as the Anglican Cathedral is intended to be. The thanks of the community are certainly due to Sir Reginald Wingate, who since his arrival in Cairo has taken the deepest and most active interest in the discussion of the project; and also to the Sultan and the Egyptian Government for the generous gift, which will substantially reduce the amount required for the erection and endowment of the Cathedral.

The Behera Torture Case.

In this correspondence reference was recently made to a murder which had taken place in the Behera, and for which certain men had been condemned to penal servitude. It was subsequently reported that, owing to facts which had come to light in the course of an inquiry carried out in the district, and which showed that the local police had resorted to torture in order to obtain evidence, a retrial had been ordered by the Court of Cassation. The new trial took place last week, and has resulted in the acquittal of all the accused men. This case constitutes yet another illustration of the great necessity for the re-institution of a Court of Criminal Appeal, for, under present conditions, where appeals from Assize Court decisions can only be made on points of procedure and law, if the authorities had not considered the information which subsequently came to their knowledge as justifying an administrative inquiry, these men would have gone to prison for an offence which they had not committed.

The Carrying of Arms.

A new law has just been promulgated prohibiting the carriage of firearms, side-arms, and other analogous weapons. All local subjects possessing such arms must hand in their weapons within thirty days, and owners of old and decorative arms must make a declaration to this effect. In certain cases permits will be granted for the carrying of arms; but these cases will be very limited, for the new law is intended to be a disarmament law, and not a licensing one. Very heavy penalties will be inflicted for any contraventions, and domiciliary search will be resorted to whenever there is reason to suspect that anyone is concealing arms or carrying them without proper permission. This new law is an excellent one, and if properly carried out it should in the long run lead to a diminution of serious crime in the country. It is a pity that for the present it cannot be made applicable to foreigners.

Liquidation of Enemy Firms.

The Public Custodian of Enemy Property has been appointed receiver of the Egyptische Hypotheken Bank, with instructions to proceed with its liquidation. This establishment was founded in 1911 as an offshoot of the Deutsche Orient Bank, from which it took over various properties that the latter had acquired, or, rather, had been forced to accept in settlement of some of the unsecured advances it had granted to Nationalists and others in pursuance of the policy dictated to it by the Wilhelmstrasse. Both these institutions constituted important factors in the organisation for fastening the tentacles of the Teuton octopus on Egypt and for furthering the political ends of the German Government in the Valley of the Nile; and although commercially they could not be considered as successful, they certainly were on the road to realising the political hopes reposed in them by Berlin. Now that the daughter concern has been put into the hands of the Public Custodian, it is to be hoped that it will not be long before the same fate befalls its parent, though, of course, the business done by the D.O.B. was far too extended and involved for it to be made ready so quickly for final liquidation.

Anti-German Feeling.

In an account of the annual general meeting of the Upper Egypt Hotels Company, Limited, held here recently the chairman is reported to have said, in reply to a question with regard to the German influence in the company's management before the war and the necessity for eliminating Germans and German trade in Egypt, that "it would be in the interest of the company not to employ Germans more than would be strictly necessary." This reply has not passed without comment, and, in a letter addressed to the *Egyptian Mail*, Mr. E. J. Lovegrove points out that it has been possible successfully to carry out the management of one of the hotels by a reduced non-German staff, and very rightly asks why, if during the war perfectly satisfactory arrangements can be made with a non-German staff, the British chairman of a British hotel company should talk about the Germans it may be strictly necessary to employ after the war. It will, I think, be conceded that in the circumstances the above is an astounding statement for a British director to make, and one's first impression was that he had been incorrectly reported. So far, however, he has not seen fit to contradict it.

CYPRUS NOTES.

(From a Correspondent.)

The Locust Campaign.

That locusts would make their appearance was, of course, certain. Swarms which have hatched out in the lands of Avgora, a village between Larnaca and Famagusta, are said to have caused damage to crops and gardens; and others have injured properties in another group of villages. One of the Greek members of Council has presented a petition, asking that active measures may be taken. Again this year Government is being urged by villagers and some of the papers to adopt the system of purchasing locusts during the summer months, instead of employing other methods, such as spraying the insects at an early stage with a poisonous solution, which is considered by the authorities, after full trial, the most potent means of destruction.

The Legislative Council.

Sittings of the Council have been continued. A motion regarding the annual contribution towards the Ottoman Debt, which has so often been the occasion of orations by Greek members, was introduced by the Hon. M. Zannetos, a member for the Larnaca-Famagusta division. It was argued by him, by the Hon. M. Theodotou, and others, that since the Anglo-Turkish Convention had ceased to exist, so, too, had the obligation to pay this burdensome sum. In any case, Great Britain, it was urged, should pay the whole amount to be levied, and Cyprus should be released from an obligation which was a most unjust one. Towards this payment of £92,800 the British Government now contributes £50,000 a year. There is no prospect of any change in the existing arrangement, and the reply to the Greek arguments is the same as has been given in recent years, when similar objections have been raised. The Turkish member for Nicosia, Irfan Bey, remarked that if Greeks were not satisfied that the island should pay the stipulated contribution for the protection it enjoyed, the Mussulman community at all events gratefully recognised the benefits received, and he begged that the President would convey to the British Government the warm acknowledgment of the Turkish community. The votes of the Greek members being again equal to those of the British and Turkish members, the High Commissioner, Sir John Clauson, gave his casting vote against the resolution. A draft law to prevent the destruction of rural properties by fire was rejected. The Council was adjourned till May 29.

The Summer and Mt. Troodos.

Again the season is likely to be a very dull one, and the number of civilian camps is likely to be a diminished one. Only a few invalids, in charge of a single officer, will probably represent the military element. Native families, however, go in increasing numbers to the highest villages lying short of the camp, and many of the monasteries, situated in the most picturesque parts of the forests, have greatly increased their accommodation with a view to occupation by summer visitors.

Cypriots in Egypt.

Cypriot Greeks of the well-to-do classes, who are fond of coming over during the summer, hope that some arrangement may be made between the authorities in Egypt and Cyprus which will enable them to visit the island and return. Some families have been accustomed for many years to spend the summer in the hills, and have built or engaged houses on and near Troodos. They would greatly regret being cut off from this place of refuge. These visits also bring some small benefit to the island.

Greek Cypriots were invited recently to a meeting at the Continental Hotel, Cairo, and were addressed by Gen. Lapathiotes, who urged the need of help to Greece in her present crisis. A committee was formed, with M. Kyros Pilavaki as president, for the purpose of raising subscriptions and enrolling Volunteers. In spite of repeated warnings, a considerable number of Cyprus villagers, from Papho district have found their way to Egypt in hope of finding work. In this they have been mostly disappointed; and they are in a miserable condition, being reduced to begging. Their lot would not have been worse if they had remained in the island. There should apparently be an opening for many of them by enlisting as Volunteers.

Another Murder.

Yet another has been added to the long list of crimes that have been so common in the island. On a recent Sunday night a villager, Hajji Andreas Mezes, sold his flock at another village for over £40. He had also with him £100 besides. He was entertained by one Lukas Konstantes at the latter place, and towards night, left for his own village, being accompanied for a short distance by Lukas. A few minutes after they had parted company the latter heard, he says, cries for help, and on returning found his friend covered with blood, dying, and unable to speak. At the same time he saw, as he alleges, a man running away. Returning to his village, he informed the Mukhtar, and notice was given to the police, who with Lukas went to the spot. No money was found on the body. Lukas has been arrested, while police investigation proceeds.

Agricultural Prospects.

The cereal harvest promises to be better than was expected. The yield of barley should be abundant, and that of wheat fairly good. A moderate return of carobs (locust beans) is anticipated, though inferior to that of last year; but the critical midsummer period, during which hot, parching winds may blow, has still to be passed. Reports from vinelands indicate that the yield of grapes should be decidedly good, although the mildew (*oïdium Tuckeri*) in many areas has not been checked, as it should have been, by sulphuring. The supply of sulphur is now left to merchants, and complaints are made that they charge excessive prices, and so discourage villagers. In many places cultivators are consequently very anxious, either that Government should revert to the system of importing sulphur and selling at minimum prices from village depots, as was done for many years, or that prices should be controlled.

The olive crop, so important for Cyprus, should be a moderate one. There has been some rain and hailstorms, the former in time to do some good in places. The latter fortunately has done but little damage. May has been exceptionally cool.

A proclamation of the High Commissioner prohibits the sale, or exposure for sale, of bread or other articles of food containing more than 75 per cent. of wheaten flour. Any person contravening the order is liable, under martial law, to fine and imprisonment; and part of the fine may be paid to informants.

THE POWERS AND GREECE.

The following is the text of the proclamation issued by M. Jonnart last Saturday in Athens:—

"To the Hellenes:—France, Great Britain, and Russia desired the independence, the greatness, and the prosperity of Greece. They intend to defend the brave little land which they have liberated against the united efforts of the Turks, the Bulgarians, and the Germans. They are here to checkmate the manœuvres of the hereditary enemies of the kingdom. They will put an end to the repeated violations of the Constitution and of treaties, and to the deplorable intrigues which led up to the massacre of the soldiers of the Allies.

"Berlin gave the orders, and Athens gradually brought the people under the Bulgar-German yoke. We are resolved to re-establish the constitutional truce and unity of Greece. The protecting Powers, therefore, demanded the abdication of the King. They have no intention of tampering with the constitutional prerogative; they have other aims, namely, to assure the regular and constitutional progress of the country, to which the late King George, of glorious memory, had always been scrupulously faithful, but which King Constantine had ceased to respect.

"Hellenes, the hour of reconciliation has arrived. Your destinies are closely associated with those of the protecting Powers. Your ideal is the same as theirs. Your hopes are identical. We appeal to your good sense and your patriotism. To-day the blockade is raised. Any reprisals against Greeks, to whatever party they may belong, will be pitilessly repressed. No breach of the peace will be tolerated. The liberty and property of everyone will be safeguarded. This is the new era of peace and labour which is opening before you. Know that, respectful of the national sovereignty, the protecting Powers have no intention of forcing upon the Greek people a general mobilisation. Long live Greece, united, great, and free.

"In the name of France, Great Britain, and Russia, the High Commissioner of the Protecting Powers.—Jonnart."

A Greek café keeper, of Old Cairo, who recently accused two natives of having stolen fifty pounds from him, has proved to have done so from motives of revenge.

The Postmaster-General announces that a parcel mail for the Salonika Force containing parcels which reached the Army Parcel Office, London, for despatch between the morning of the 15th and the evening of the 18th of May has been lost at sea through enemy action.

PALESTINE EXPLORATION FUND.

THE ANNUAL GENERAL MEETING will be held (for business purposes only) at the Office of the Society, 2, Hinde Street, Manchester Square, W.1., on THURSDAY, JUNE 21, at 3.30 p.m. There will be no Special Address.

Digitized by Google

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Our Captures of Guns and Men. June 14.

Mr. MACPHERSON, in reply to General PAGE CROFT, said that since the beginning of the war till the end of May the British armies have captured altogether 76,067 prisoners on the Western front, to which must be added at least 8,000 for the month of June. In Mesopotamia approximately 10,900 prisoners have been taken since July 1, 1916; 132 guns have been captured since the beginning of the war, exclusive of the guns lost at Kut and recaptured by us. The captures reported by the General Officer Commanding in Egypt since July 1, 1916, were approximately 8,739 prisoners and 18 guns. In a fortnight's time he hoped to give the exact figure up till the middle of June. About 600 square miles have been regained on the Western front since July 1, 1916, by British troops. This figure must be taken as approximate only, as the boundary between the French and British armies had varied constantly.

The Situation in Greece.

Lord R. CECIL informed Commander BELLAIRS that Russia was still one of the Powers which guaranteed the constitutional position and independence of Greece.

Mr. LEES SMITH asked whether, on October 5 last, the Italian Minister at Athens informed the Director-General of the Greek Foreign Office that the occupation of various towns in Northern Epirus by Italian troops had one exclusive object—namely, to secure the military safety of the Italian army of Valona, and that it was not in any way to be regarded as modifying the international status of North Epirus as laid down in official declarations; and whether the Italian Government still adhered to this policy.

Lord ROBERT CECIL: I understand that the assurance of the note referred to was given by the Italian Minister to the Greek Government on or about the date mentioned, and I feel sure the Italian Government have no intention of disregarding their undertaking in the matter.

The Greek "Royalists." June 18.

Lord R. CECIL, replying to Mr. R. M'Neill, said it was not the intention of the Protecting Powers to allow ex-King Constantine and his family to remain on Greek soil, and he believed steps were being taken to remove from Greece Herr Streit, M. Gounaris, Colonel Metaxas, General Dousmanis, and other notoriously pro-German intriguers.

Mr. WATT asked whether the ex-King and Queen had a free choice to go where they liked.

Lord R. CECIL: I think I had better explain that the actual arrangements were left very much in the hands of the High Commissioner whom we agreed with the French Government should be appointed. I have not yet received a full report from him as to exactly what took place.

A Suggested Plebiscite.

Mr. R. M'NEILL asked the Foreign Secretary whether His Majesty's Government was now prepared to invite the Governments of the French and Russian Republics to consent to the abrogation of that part of the treaty of 1832 which guarantees a monarchical constitution to Greece; and whether, in accordance with the spirit of the preamble to the treaty of 1863, which stated that the arrangement establishing the present dynasty on the Throne of Greece was made in order to give effect to the wish of the Greek nation as declared by a plebiscite of all Greeks at home and abroad taken in the preceding year, it would be left to the Greek nation to determine by a similar plebiscite what form of Government should now be established in Greece.

Lord R. CECIL: The treaty of July, 1863, was concluded not only with the French and Russian Governments, but also with the Danish Government, whose consent will be necessary before any modification can be introduced. I am unable to trace the words in the preamble of the treaty to which my hon. friend refers, but as regards the general principle involved I can only say that at present it would be impracticable to hold a plebiscite of the Greek people, and in my judgment any such questions as are here raised should be postponed for the present and perhaps till the end of the war.

Mr. R. M'NEILL: Can the noble Lord say that no steps will be taken which will preclude the Greek people from eventually being consulted?

Lord R. CECIL: I cannot imagine what steps we could take to do so. Personally I cannot imagine the British Government, with all the traditions of the British Constitution behind them, desiring to take any steps to prevent a free expression of the opinion of the Greek people on any domestic affair.

Replying to a further question by Mr. Outhwaite, Lord R. CECIL said it was common knowledge that the appointment of M. Jonnart as High Commissioner of the two Allies was to enable him to act with decision and rapidity and without having to consult at every stage and on every detail the Home Governments.

Mr. LYNCH asked the Under-Secretary for Foreign Affairs whether the Allies would oppose any movement which expressed the general will of the Greek people to establish a Republic; and, if so, upon what grounds.

Lord R. CECIL: I do not think that anything would be gained by discussing a hypothetical question of this kind.

Mr. LYNCH: Is it necessarily hypothetical that we should set up a Republic? Why should not Greece march in the way of progress?

Lord R. CECIL: There is nothing abusive in the epithet "hypothetical." Grammatically it is a statement of the effect of the hon. gentleman's question.

M. Venizelos's Influence.

Mr. LYNCH asked the Under-Secretary of State for Foreign Affairs whether, in the event of M. Venizelos desiring to extend his influence over the whole of Greece, obstacles would be placed in his way.

Lord R. CECIL: If, as we hope, Greek unity is re-established by recent events in Greece this question will not arise.

Greek Irregular Troops.

Mr. LYNCH asked the Under-Secretary of State for Foreign Affairs whether any diplomatic correspondence had revealed any encouragement given at any time by the Greek Government to irregular Greek troops engaged in unfriendly acts towards the troops of the Allies.

Lord R. CECIL: No, sir. I cannot go as far as that, though a certain number of Greek officers of the Regular Army were concerned with the operations of irregular bands in Thessaly.

The British Killed in Athens.

Lord R. CECIL informed Mr. Lynch that the bodies of the British sailors and marines who lost their lives in Athens in December last were handed over to the British naval authorities for burial. The Greek Government tendered official apologies for the attack upon the Allied detachments, and representative Greek regiments were publicly paraded for the object of saluting the Allied flags.

America and Greece. June 19.

Mr. BALFOUR informed Mr. Lynch that the United States was not consulted as to the solution of the Balkan problem by the deposition of King Constantine and the nomination of his son as King.

Mr. LYNCH: Would it not be well to associate America in these acts, because it might have an influence on the course of the war itself?

No answer was given.

Mr. LYNCH asked whether the Secretary of State for Foreign Affairs had had his attention called to the statement of the Prime Minister to Greece, in his letter to M. Jonnart, that King Constantine, in abdicating, nominated his son Alexander as his successor; and, if the facts were as stated, whether he could indicate the constitutional authority under which King Constantine acted in his bestowal of the Throne.

Mr. BALFOUR: The answer to the first part of the question is in the affirmative. In the absence of full official accounts of these events, which we are still awaiting, any further answer on the subject would be necessarily speculative, and might be misleading.

Sir F. Elliot's Withdrawal. June 20.

Mr. BALFOUR informed Mr. King that the British Minister at Athens had been withdrawn. British and French diplomacy in Greece having been entrusted to a High Commissioner of the two Powers, it was undesirable for a Minister of Sir Francis Elliot's seniority to remain in a subordinate position.

Mr. KING: Has he not been there many years, and would not the vast experience he has accumulated be of great assistance to a stranger comparatively new to the duties?

Mr. BALFOUR: There is no reason why he should be kept in a subordinate position.

Mr. S. MACNEILL: Is there any precedent for the withdrawal of a British Minister in such a crisis as this? There is none so far as I know.

Mr. BALFOUR: I should think there are endless precedents.

The Changes in Greece.

Mr. LYNCH asked the Foreign Secretary whether the decision of the Allies to remove King Constantine from Greece involved any other persons, and whether any of the agents of King Constantine, now ascertained to be pro-German, would be allowed to remain in the entourage of King Alexander.

Mr. BALFOUR: This matter is now under discussion with the Greek Government.

Mr. LYNCH also asked whether the Government of Russia stipulated in regard to a solution of the Balkan question that no Republic should be set up in Greece.

Mr. BALFOUR: The answer is in the negative.

The aim of Zionism is to create for the Jewish people a home in Palestine secured by public law.

TANGIER TO TEHERAN.

Among the ardent supporters of ex-King Constantine who have been placed under restraint by the Entente authorities is "the naturalised Greek Deputy Schlieman." Unless I am greatly mistaken, this person is a son of the excavator of Troy, though he appears to have dropped the final "n" in his name in the process of becoming naturalised. That he should be a Germanophile is, of course, perfectly natural—indeed, he would be a poor sort of creature if he were anything else, in the circumstances. But I hope that no exaggerated respect for his papa's memory will induce his captors to relax his bonds. For, as a matter of fact, Schliemann the elder was by way of being a bit of a humbug. I have no intention of opening up the old arguments that were set going by his theories about Troy and Mycenæ. Anyone is entitled to his own theories in the world of archæology, as far as I can make out. But Schliemann was a clumsy excavator. He cut clean through a magnificent bit of flooring in one place at least; and that is what even the youngest digger ought not to do. In fact, if he had not been a millionaire, it is doubtful whether he would ever have achieved such fame as he was actually able to secure.

***

When I was a small boy, a very small boy, Warwick the King-maker was for a long time one of my heroes. Looking backward, I suspect that the title had more to do with my hero worship than anything else; for it is indeed a title to appeal to a small boy—a very small boy. But what will the small boys of the future think of the title that our recaster of the universe will doubtless receive—"Wells (H. G.), the God-maker"? There is a title to tickle the fancy of the small boy, or the small-minded man, the very small-minded man. It is, perhaps, less heroic than Warwick's, but it is much more "modern" in sound, and, therefore, doubtless, after Mr. H. G. Wells's own heart. The worst of it is, of course, that the people who make gods for themselves—as certain uncivilised peoples still do—are apt to be regarded with some scorn by other folk; while those who make gods for other people, and sell them for their own profit, are not usually regarded as admirable types of humanity. But in all probability these people do not care, as long as they get their profit on each copy—of the god—they turn out.

***

With Mr. Wells's views on God, gods, kings, and princes I am not greatly concerned. But I do wish he would refrain from writing high-sounding "tosh" that may make harder the work of the men who are *doing* things instead of airing their views about them. Here, for instance, are a few sentences from a letter signed by him and published in the *Daily Chronicle*:—

> Finally, the time is drawing near when the Egyptian and the nations of India will ask us, "Are things going on for ever here as they go on now, or are we to look for the time when we, too, like the Africander, the Canadian and the Australian, will be your confessed and equal partners?" Would it not be wise to answer that question in the affirmative before the voice in which it is asked grows thick with anger?

Does it not strike Mr. H. G. Wells that quite a number of specialists know almost as much about Egypt and the nations of India as he does? And, if so, would it not be better to leave the specialists to put forward the suggestions at the right time *and in the right place?* The columns of a newspaper hardly offer the best place to ventilate such views, if the object is to do real good. If it is merely to show the writer's liberality of thought, of course, that is another matter. In any case, I doubt whether anyone who really knows Egypt and the Egyptians *would* "answer" Mr. Wells's "question in the affirmative." Of India I do not feel qualified to speak. The Egyptians have made progress no doubt; but before they can become the "confessed and equal partners" of the Africander, the Canadian, the Australian, and the Briton, they have still some distance to go.

***

There is—or was, for by now it has probably subsided—a storm in a teacup over the suppression by the Egyptian authorities of a certain book which is allowed to be sold quite freely in this country. One ha'penny evening paper concludes quite a long note on the subject with the remark: "The book can be purchased in England, but not in Egypt; what is immoral to the Anglo-Egyptian becomes wholesome in England." Well, well! I wonder whether the sapient author of this profound sentence paused to think before writing. I can hardly believe that he did. For, after all, is it not a plan fact that the expression of some views may do great harm in Egypt, while it would do little or no harm in England? And, that being so, are not the Egyptian authorities acting wisely in keeping their immature charges from tackling meat that is too strong for them?

CORSAIR.

NEAR EAST BOOKSHELF.

"THE GLORY THAT WAS GREECE."*

During the mid-Victorian era Professor Seely told his fellow-countrymen that all the elements of civilization—apart from Nature's blind forces—had come down to them from ancient Greece. His dictum was received with amused scepticism in a generation intoxicated by its apparent conquest of those forces, but its truth is now admitted on all sides. Thinking men are eager to learn more of that wondrous fifth century, so fertile in epoch-making thought and in works of art which are the admiration of posterity. Mr. Delisle Burns has done much to satisfy this laudable curiosity. In 272 pages he gives us a vivid picture of ancient Hellas—its political and religious ideals, its ceremonies, its philosophy and drama—in fact, all the data for a clear comprehension of its elusive atmosphere are outlined in masterly fashion.

The first point that strikes the reader is the extreme sociableness of the contemporaries of Plato and Socrates. They solved a problem which puzzles sociologists in this century of ours—how to reconcile complete scope for the individual's development with complete devotion to the common weal? Mr. Burns explains that religion was then the bond of union between man and man:—

> The leading characteristics of the social life of Athens were rather what we may call religious, for it was concerned chiefly with the relations of the group with certain human or superhuman realities within or behind the world of sense. This is the original influence which formed the Athenian ideals of life and character, and in this religious sphere the highest embodiment of social life was always found.

The immense power developed by authoritative religion has often been exemplified since the age of Pericles. It enabled a handful of Arabs to conquer half the civilized world, and endowed Europe with cathedrals. Religion was the life-blood of those mediœval guilds whose handiwork is still inimitable; it is perhaps destined to evolve order from the mad chaos in which the world is plunged to-day. But the creeds of ancient Greece were too nebulous and devoid of sanction to withstand the disruptive influence of animal instincts. Little City-States overspread the peninsula, each about the size of an average English county, and inhabited by, say, 100,000 human beings, nine-tenths of whom were slaves. They had indeed a common culture, a literature prized by all; periodical festivals in which every State took part kept alive a vague sentiment of unity; danger from without leagued them for a moment in efforts to repel the foe. Unlike the cantons of Switzerland, those groupings of ancient Hellas never reached the stage of federation, in which local autonomy co-exists with centralisation in all that concerns the nation as a whole. If the brilliant Athenians had grasped the life-giving truth that unity is strength, their city would have become the hub of an empire far finer and more enduring than that of Rome. *Dis aliter visum est.* A race which fails to obey the law of mutual help is governed by the archaic law of struggle. Greece fell a prey to civil war, which left her people too completely exhausted to withstand the impact of Roman might.

Political experience ranks first among the legacies which the short-lived efflorescence of her genius has bequeathed to mankind. Every problem that can arise from the interaction of human intelligence and environment was threshed out in those quarrelsome little City-States 2,500 years ago. The German Emperor has debauched the soul of a mighty race by compelling his subjects to absorb the lessons of perfidy, bloodthirstiness, and ovine submission to tyranny which are taught by the annals of Prussia. How different would be the plight of our war-distracted world had they acquired *σωφροσύνη*—sweet reasonableness—from Plato, and learnt from Thucydides the inevitable punishment that awaits *ὕβρις*—overweening pride!

THE LATE MR. G. B. ALLEN.

By L. J.

It is with deep regret that we have to announce the death of Mr. George Berney Allen, at a nursing home, in London, on June 19. Mr. Allen sailed for India on his customary winter visit in the autumn of last year, and he has usually returned from these periodical visits to the East with a renewed store of health. He loved travel, he was not sorry to exchange the trying English winter for the glorious cold weather of Northern India, and, in addition to his business interests, the East had always a fascination for him. But on this occasion his health broke down, he had several severe attacks of asthma, which led to heart trouble and other complications, and on the return voyage his condition became so serious that by the time he reached England it was felt that there was very little hope.

Throughout Northern India there is no better-known name than that of "George Allen." Mr. Allen's father —the late Sir George Allen, K.C.I.E.—went to India before the Mutiny of 1857, and the main feature of his life's work may be said to have been the *Pioneer* of Allahabad, which he founded and raised to a position in India which might be compared to that of *The Times* in England in the days of Delane. But the *Pioneer* was not Sir George Allen's only enterprise. About the year 1880 Sir George, in conjunction with Sir William Cooper, founded the firm of Cooper, Allen and Co. at Cawnpore, which to-day is said to be supplying more boots to the Army than any factory in the world. These are instances of Sir George Allen's many activities, and when he died in 1900 he left behind him a tale of work and a name of which any man might well have been proud.

Mr. G. B. Allen, always called "G. B." by his familiar friends, was Sir George's eldest son. He was born at Addiscombe in 1862, educated at Clifton, and after a short training in the firm of Allen Brothers and Co., London, left for India in 1882 to take part in the management of the factory at Cawnpore. It is interesting to record that he travelled to India on the same ship as Mr. Rudyard Kipling, who was then on his way to join the staff of the *Civil and Military Gazette* at Lahore, another of Sir George Allen's papers, and the friendship which commenced with that meeting endured for life. Mr. Allen devoted himself for some years to the work of Cooper, Allen and Co., and to the last he was always keenly interested in the development of Indian commerce and manufactures. At the time of his death he was a director of the Rohilkhund and Kumaon Railway and a member of a Standing Committee of the Imperial Institute.

In many respects the resemblance of Mr. Allen to his father was very strong. They both had the same nervous energy; they were full of ideas and big conceptions; they were the stamp of men who think things and give their thoughts active shape; and they both possessed a shrewd working knowledge of the men with whom they had to deal and skill in dealing with them. In addition, they were men eminently to be trusted; in the course of their careers they were the recipients of many confidences, and people freely confided in them because they knew that their confidences would never be betrayed.

Like Sir George, too, Mr. Allen had a strong natural bent for the literary and business side of journalism. They both appreciated good literature, although they did not write much themselves, and in the supervision and guidance of papers, without caring for the show of power, and even avoiding it, they both enjoyed the consciousness of it. In 1911 Mr. Allen started THE NEAR EAST as a weekly paper. There had previously been a monthly paper of that name, dealing mainly with Turkey, and he bought its name and greatly extended its influence. He had always felt that there was a want for such an organ, dealing from the point of view of the Imperial interests of England with the affairs of the countries from Egypt and Eastern Europe to the Persian Gulf. But that was not enough, and in May, 1914, he floated, also as a weekly paper, the *Indiaman*, devoted entirely to the interests of India from the same political aspect. He had always a very genuine love for India, and was imbued by an earnest desire to work the paper in the best interests of her welfare.

In private life Mr. Allen's family affections were particularly close and tender, and very few men have ever possessed so many friends in the truest sense of the term. A friend once made was a friend always, for "G. B." was singularly free from prejudices and any narrowness of outlook. He was never brusque nor intolerant, he had no touch of the partisan or the doctrinaire in his composition, and he never resented opinions when they were contrary to his own. "He that hath friends must show himself friendly," and "G. B." was always friendly. His conversation was free from bitterness, criticism and dispraise, he hated scandal, and he never spoke a word that was not full of charity for the absent. It was one of his axioms of conduct that knowledge leads to sympathy, and the want of it to misunderstandings. He, therefore, always tried to get very near his friends. He liked to drop in upon them without formalities or conventions, and always ready to do things for others he was frank in asking them to do things for him, as if between friends there could be no sense of obligations.

His tastes were very catholic. He was happy in town with his wide range of friends and interests, and he loved the country, open air, and gardens, and the far-away places in the East that he visited with such unfailing regularity. In landscape gardening he took an intense delight, and the Allen *Bágh* at Cawnpore, once a forbidding spot, which is now a garden with a lake, is an example of his labours in this direction. But at all times he was very gregarious, and fond of the fellowship of men and women on a footing of friendly intimacy and quick give and take. He enjoyed big functions and crowds, seeing new people, and making new friends wherever he went; but there is no doubt that he was at his happiest and his best at dinners *en petit comité*, and the little house parties at his country residence, Free Chase, in Sussex, when for the time being life was free and untrammelled, a joke, a holiday, were invariably delightful. It is impossible to think of Free Chase without him; it seems as if he must still be there to welcome us when we come.

In spite of indifferent health, he was always occupied. His business and social interests, his gardening and farm at Free Chase, his immense correspondence, kept him always busy, and no man worked harder to keep his friendships undimmed by rust by constant use. If he could not see his friends frequently, he wrote to them. But though the sustaining power of a strong and restless energy kept him going every day and long hours, he was never what could be called physically robust. People used to say that he looked worried, as if the burden upon his shoulders was almost more than he could bear. But he was not really worried; on the contrary, few men have been so cheerful in discouraging circumstances and disappointments, or so optimistic and buoyant in breasting difficulties. If he looked worried, it was from the forest of his thoughts. His mind was of great fecundity, and to that fertility of ideas he added a practical grip of affairs, but he did not always see his way very clearly at first. He had to work it out like a foxhound on a lost scent, making casts here and there till he found himself on the sure track, and his face reflected the perplexities of his thoughts.

His friends who saw him leave England in October last little thought that they would never see him again. They had no reason for any misgivings; he was then in his usual health, and during the last twenty years he had only once missed his annual trip to India and the East. Nor had they any suspicion that his illness abroad was so serious from the letters they received. Mr. Allen, ill as he was, wrote his old chatty letters home, making light of what appeared to be only a temporary indisposition in his bright and cheerful way. And in that way, unchanged to the end, he died, one of the most kindly and companionable of men, and who, until the time he became unconscious in his last struggle with suffering, was warm and alert to all the varied interests of his full and active life.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. June.	1917. June.		1335. Ramadan	5677. Tamuz
22	9	Friday	2	2
23	10	Saturday.....	3	3
24	11	Sunday	4	4
25	12	Monday	5	5
26	13	Tuesday	6	6
27	14	Wednesday	7	7
28	15	Thursday	8	8

To-morrow is the birthday of H.R.H. the Prince of Wales.

Monday is the birthday of Prince George of Greece—the brother, not the son, of ex-King Constantine—who was born in Corfu in 1869.

Saturday is the birthday of the little Princess Cecilia of Greece, third daughter of Prince Andrew, who was born in 1911.

Monday was the birthday of the Shah of Persia, and, by command of the King, the Hon. Sir Arthur Walsh, his Majesty's Master of the Ceremonies, called on the Persian Minister and conveyed his Majesty's good wishes.

Lady Wingate, wife of the High Commissioner for Egypt, has received the Royal authority to wear the Grand Cordon of the Order of El Kemal, conferred upon her by the Sultan of Egypt.

The Earl of Bessborough, who left London for Edinburgh last week, returned to town on Tuesday.

The *Morning Post's* Rome correspondent announces, in a message despatched on Tuesday, that Sir Francis Elliot has arrived in that city.

Reuter's Jassy correspondent reports, under date of May 25:—The Roumanian Minister in London has informed the Roumanian Government that Lord Rosebery has placed £5,000 at the disposal of the Queen of Roumania to be distributed among the population of Roumania who have suffered by the war.

Mr. James Brunyate, Secretary to the Foreign Department of India, who had been the guest of his brother, Sir William Brunyate, left Egypt for England at the beginning of this week.

Mme. Yovanovitch held a reception at the Serbian Legation on the 14th inst., which was attended by the members of the Diplomatic Corps and their wives.

Prince Soutzo, formerly Military Attaché to the Roumanian Legation in Paris, has left London for Jassy, to join his regiment.

Princess Soutzo has left London for France.

Captain Liteanu, of the Roumanian Military Commission, left London for France last week.

The Rev. H. G. Roberts, M.A., has settled in Alexandria after a term of several months in Cairo.

Mr. A. G. M. Dickson has reached London from Egypt to take up his duties as manager of the British Trade Corporation.

Referring to the departure from Egypt of the sub-Governor of the National Bank of Egypt, the *Egyptian Gazette* understands that Mrs. Dickson and family are remaining in Egypt until the return of more normal times.

M. Guillemin, French Minister at Athens, arrived in Paris on Tuesday.

A Reuter's message from Cairo, received in London last Friday, but dated the previous Wednesday, reported:—"It is unofficially stated that General Sir E. H. Allenby is replacing General Sir Archibald Murray in the Egyptian command."

General Allenby, it will be remembered, was one of the officers promoted for distinguished service in the field, on the occasion of the King's birthday. He has been serving on the Western front with conspicuous success, and has been made a Grand Officer of the Legion of Honour as well as a K.C.B.

The following Reuter's message, despatched from Ottawa on June 19, will be read with much interest and pleasure by General Sir Julian Byng's many friends and admirers in Egypt:—The Governor-General has addressed the following telegram to General Sir Julian Byng, hitherto in command of the Canadian Expeditionary Force in France:—

"On behalf of the Government and people of Canada I desire to express my deep regret that your association with the Canadian Corps has come to a termination. During the year you have been in command you have gained the confidence and earned the gratitude of all, and I trust that the memories of this eventful period will be as gratifying to you as they are to Canada. I hope we shall have the pleasure of welcoming you at no distant date."

Sir Julian Byng replied:—

"Your kind cablegram just received is most sincerely appreciated. It was with the deepest feelings of regret that I severed my connection with that splendid corps whose record during the last year fills me with pride and admiration."

Lieutenant N. G. Paspati, of the Greek Navy, and attached to the Greek Provisional Government, returned to London last week from Washington, where he has been on a special mission.

The engagement is announced of Avola Denniss, daughter of the late General A. D. Denniss, R.A., of Arreton, Donnybrook, and Captain H. Veale, R.N., Chief of Staff, Malta.

The *Gazette* announces:—The King has been pleased to give and grant unto Archibald McCorquodale, Esq., formerly Director-General of the Central Gharbia Drainage Projects; Frank Ford Peregrin Walsh, Esq., formerly Inspector in the Irrigation Department of the Egyptian Ministry of Public Works; and Arthur James Knowles, Esq., formerly Engineer in the Bridges Department of the Egyptian Ministry of Public Works, his Majesty's Royal licence and authority to wear the Insignia of the Third Class of the Order of the Nile, which decoration has been conferred upon them by his Highness the Sultan of Egypt in recognition of valuable services rendered by them.

The *Gazette* also announces:—The King has been pleased to give and grant unto Reginald Humphrey Lee Pennell, Esq., of the Egyptian Ministry of Public Works, his Majesty's Royal licence and authority to wear the Insignia of the Fourth Class of the Order of the Nile, which decoration has been conferred upon him by his Highness the Sultan of Egypt in recognition of valuable services rendered by him in connection with the drainage works at Port Said

The King has been pleased to give and grant unto Arthur Torrens McKillop, Esq., Inspector-General, Egyptian Ministry of Agriculture, his Majesty's Royal licence and authority to wear the Insignia of the Second Class of the Order of the Nile, which decoration has been conferred upon him by his Highness the Sultan of Egypt in recognition of valuable services rendered by him.

A correspondent of *The Times* announces "the sale of the entire crop of yearlings from the famous Sledmere stud to an American buyer." After recalling the pride which the late Sir Tatton Sykes took in this stud, the writer adds: "Doubtless Mr. Cholmondeley would not have advised Sir Mark Sykes, the present owner of the stud, to dispose of these seventeen thoroughbred yearlings to a buyer from abroad had not the stoppage of racing forced him to accept the inevitable."

Next Wednesday afternoon (June 27), at a meeting of the Central Asian Society, Mr. A. Boddam Taylor, F.R.G.S., will read a paper on "The River Tigris from the Sea to Baghdad." Colonel Sir Henry Trotter will preside. At the same meeting the report of the council for 1916-17 will be presented, and the election of officers and members of council for the ensuing session will take place.

The London units of the Scottish Women's Hospitals and the Serbian Society of Great Britain will hold a meeting at King's College on June 28, at which the Hon. Mrs. Haverfield will speak of her experiences in the Dobruja and during the Roumanian Retreat. Professor Gilbert Murray will be in the chair, and Mr. A. H. E. Taylor will speak on "The Present Situation in the Balkans."

The Serbian Relief Fund appeals for old flannel suits, other summer clothing, and shoes for the homeless Serbian boys in its charge. Old portmanteaus and Gladstone bags are also asked for. Address: Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W.7.

APPOINTMENTS, PROMOTIONS, ETC.

M. Grégoire J. Michaesco has been appointed Assistant Commercial Agent to the Roumanian Legation in London.

The War Office has sent out an Army Chaplain from England, Rev. Mr. Semple, for the work among the British Garrison in the Sudan, says the *Egyptian Gazette*. He arrived on May 7 at Khartoum.

The following appointments and transfers are announced in the Sudan Government Gazette :—

Mr. C. E. Lyall, Governor, Halfa Province, to be Governor, Kassala Province.

Mr. S. A. Tippetts, 1st Inspector, Red Sea Province, to be Governor, Halfa Province.

Mr. H. Fraser, Assistant Director of Lands, to be Director of Lands.

Dr. V. S. Hodson, M.V.O., Senior Medical Inspector, to be Assistant Director, Medical Department.

Mr. J. G. Matthew, 1st Inspector, Sennar Province, transferred to Red Sea Province, and appointed Senior Inspector, Red Sea Province.

Mr. R. Wedd, Deputy Assistant Director of Lands, to be Assistant Director of Lands.

El Kaimakam C. S. Northcote Bey, 2nd Inspector, to be 1st Inspector, Bahr el Ghazal Province.

Mr. W. Nicholls, 2nd Inspector, Darfur Province, to be 1st Inspector, Sennar Province.

Mr. W. Nicholls, 1st Inspector, Sennar Province, to be Senior Inspector, Sennar Province.

El Bimbashi E. F. N. Burton transferred to the Sudan Government, appointed 2nd Inspector, Bahr el Ghazal Province.

The following appointments are announced in the Egyptian and Sudan papers to hand by the last mail :—

Bimbashi C. W. W. Sandes, Deputy Assistant Adjutant General, has been promoted to the rank of Kaimakam.

Captain Robert C. Carlyle, M.B., Royal Army Medical Corps, is seconded for service with the Egyptian Army.

Bimbashi W. St. J. F. MacCartney, Veterinary Department, has been transferred to Sudan Government.

Bimbashi P. E. Wylie, of the Egyptian Camel Corps, has been granted the temporary rank of Kaimakam.

Bimbashi R. K. B. Walker, M.C., of the 13th Sudanese, has been transferred to the Camel Corps.

Lewa C. H. Townsend Pasha, Governor, Kassala Province, has been placed on pension.

Major M. J. Wheatley, Private Secretary to His Excellency the Governor-General of the Sudan, has been appointed Secretary to the Governor-General's Council.

The reversion to the British Army of Miralai R.J. Rees-Mogg Bey, Military Secretary to the Sirdar and Governor-General of the Sudan, has been officially announced. He will be succeeded by Kaimakam C. A. Barker Bey.

Kaimakam Russel Bey, Vice-Commandant of the Cairo police, has been appointed Commandant of the Alexandria police.

A circular has been sent to all the officials of the Egyptian Ministry of Education to the effect that nobody will be allowed to go on leave this year except on medical grounds.

OBITUARY.

MR. W. G. ABBOTT.

Mr. William George Abbott, formerly Consul-General at Tabriz, died last week at the age of eighty years. Mr. Abbott had served forty years in the Consular service, for he was first employed in the Consulate in the Dardanelles in 1853. Thence he went on to Erzeroum, where, in 1856-57, he was Acting Consul. Subsequently he was appointed Secretary-Interpreter to the Commission for the settlement of the Turco-Russian boundary in Asia Minor, and during this time he served principally as interpreter to General Gordon, who was then a lieutenant in the Royal Engineers. After a year and a half as Acting-Consul at the Dardanelles, he was, in 1862, employed at the Constantinople Embassy as private secretary to Sir Henry Bulwer. Subsequently he was employed on special service on the shores of the Caspian and at the headquarters of the Persian army at Astrabad operating against the Turcoman tribes. In 1865 he was appointed Consul for the provinces of Ghilan, Mazanderan, and Astrabad, with residence at Resht; and ten years later was promoted to be Consul-General at Tabriz. In 1880 he was sent to Armenia to inquire into the condition of the Nestorian Christians, and he was present when the town was invested by Kurds. In 1889 he was transferred to Rio de Janeiro, and in 1895 he retired on a pension.

The death is announced as taking place on Monday at her residence, White Heather, Sunningdale, of Baroness Wentworth, granddaughter of the poet Lord Byron. A peeress in her own right, she was the only child of the second Earl of Lovelace and thirteenth Baron Wentworth, to which Barony she succeeded on the death of her father in 1906. The title devolves on her aunt, Lady Anne Isabella (daughter of the first Earl of Lovelace), who married in 1869 Mr. Wilfrid Scawen Blunt, and she has a daughter, Judith Anne Dorothea, who married in 1899 Major the Hon. Neville Stephen Bulwer-Lytton, brother of the Earl of Lytton.

Captain Cecil Aubrey Bradford, Yorkshire Regiment, attached Nigeria Regiment, who was lost at sea on April 24, was the second son of Colonel Bradford, of Welparke, Lustleigh, and was born in 1886. Educated at Wellington College, he passed into Sandhurst in June, 1905, was gazetted in November, 1906, to the Yorkshire Regiment, and joined the 2nd Battalion in South Africa in January, 1907. On the return of that battalion to England he joined another battalion in Egypt, where he was attached to the Camel Corps, and later went on with the same battalion to India. In October, 1913, he was attached to the Nigeria Regiment, and saw service in Cameroon in 1914-15. He was gazetted captain in 1915, and when home on sick leave that year he married the second daughter of the Rev. A. Hillyard, of Upton Pyne, Exeter, and leaves an infant daughter. Captain Bradford was a good athlete and keen at sport. He did some big-game shooting on the White and Blue Nile, procuring a quantity of good heads.

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

NISBET GRANT—MCKINLAY.—On the 12th inst., at St. Martin's, Herne, by the Military Chaplain, Second Lieut. W. S. Nisbet Grant, the Buffs, youngest son of the late Major-General Charles Grant, Political Agent, Muscat, Persian Gulf, and grandson of the late Captain Edward Parry Nisbet, of Hollywood, South Kensington, to Elizabeth (Betty), daughter of the late Mr. and Mrs. William McKinlay, of Elm View, Strabane, Ireland, and Shedon Park, Kelso-on-Tweed.

DEATH.

ABBOTT.—On June 12, at 57, Chepstow Place, Pembridge Square, W., William George Abbott, late H.B.M. Consul at Resht, and Consul-General at Tabreez, Persia, and Rio de Janeiro, Brazil, aged 80.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

GRECIA REDIVIVA.

There has been a tendency to imagine that the British and French Governments have been remiss in not securing from King Constantine a definite statement of abdication and from the Crown Prince a formal renunciation of his rights to the Greek throne. This criticism seems to be beside the point. The object of the Allied Powers was twofold: to put an end to the intrigues which menaced the safety of the Salonika Army and to restore to the Greek people constitutional control over their own destinies. With the expulsion of ex-King Constantine, his German consort and the Crown Prince, followed, as it has been, by the removal of the more conspicuous of Germany's henchmen among the Greeks, there is reason to suppose that any military movement contemplated against the Allies will collapse of its own accord in the absence of the motive power previously supplied by the Court party. In order, however, to eliminate all risks, Allied troops have occupied Thessaly, and General Sarrail now controls a substantial belt of territory in the rear as a protection for the Salonika position. The new King Alexander has taken the oath, and must be credited with the intention of respecting the Constitution until he chooses to break it. His first proclamation, it is true, cannot be regarded as happily worded. He would appear to have laid too much stress on the sacred mandate received from his august father, and on his own resolve to follow the lines of the latter's "brilliant reign." But this mild indiscretion on the part of the youthful sovereign entails no real embarrassment for the Allies or for the Greeks, even though it may be established that M. Zaimis, the Premier, who is essentially of an easy-going uncritical temperament, refrained from exercising his right to edit the text. Nor is it necessary to examine too meticulously the wording of the ex-King's farewell proclamation. He was allowed to be the author of it, and would naturally avoid the painful word—abdication. "Yielding to necessity, accomplishing my duty towards Greece, and having in view only the interests of the country, I am quitting my dear land with the Crown Prince, leaving my son Alexander on the throne." So ran the message. Fifty-five years previously Otho had sought to "save his face" in precisely the same way. He announced that he left Greece for a time in order to avoid plunging the country in civil war; he in no way abdicated his pretensions to the throne. But the decision in regard to that matter, as he soon found, did not rest with him; and to-day it does not rest with ex-King Constantine. Otho died five years later without revisiting Greece, and it will only be with the consent of the Greeks themselves that either the late Monarch or his eldest son George will be found in the future in occupation of the Greek throne.

What the Allies have endeavoured to do is to restore the sovereignty of the Greek people under the Constitution of 1865, which states that all power has its source in the nation. King Constantine violated the Constitution by usurping autocratic power, and his control over the army prevented the Greeks from reasserting their authority. The intervention of Great Britain and France has readjusted the balance between the King and the people, so that the direction of the national policy reverts once more into the latter's hands. The future of the country depends upon the use to which they put their present opportunities. There is much to be said in favour of hastening slowly. M. Zaimis can be under no illusion in regard to popular feeling; but he will be well advised to avoid any violent transitions. The ex-King's punishment may revive in some quarters just enough of the popularity which he had sacrificed by his more recent acts to harden opinion momentarily against M. Venizelos, the protagonist in the defence of the rights which the King assailed. The steps to be taken to restore unity to Greece should, therefore, be gradual and strictly in conformity with constitutional practice. It is to be supposed that M. Zaimis will do justice to the Liberal party by offering some of them portfolios in his Ministry. The summoning of the Chamber illegally dissolved by King Constantine in November, 1915, will re-establish the machinery of government, and will pave the way for the return of M. Venizelos to Athens. Before that can happen, however, delicate negotiations will have to be set on foot between the capital and Salonika. M. Venizelos, although occupying a unique position, no longer stands alone. Ranged with him is the Provisional Government which has been directing the national movement, and it is unlikely that he will seek to re-establish his own position in the country without arranging for adequate representation of the policy for which the national movement stands. In the course that these negotiations may take much will depend on the statesmanship of M. Zaimis and the good will of King Alexander. Greece will not have long to wait to be able to make up her mind regarding the new occupant of the throne. If he is really going to follow in the footsteps of his father and allow his personal sympathies and antipathies to overstep the limits of his constitutional authority, then he may find that those footsteps lead him also to Switzerland. If, on the other hand, he allows himself to be guided by M. Zaimis and by the representative of the two Powers who are anxious to restore the unity and prosperity of Greece, there is no outstanding reason why the dynasty should not endure.

The immediate steps taken by the British and French Governments to relieve the economic situation will, it is to be hoped, convince the Greeks that only the ex-King's hostility compelled the former measures of coercion. To the more thoughtful section of the people the critical position of affairs both for Greece and for the Near East as a whole ought to bring home the necessity for closing up the nation's ranks and ensuring for it the most capable leadership that it can command. The redrafting of the map of Eastern Europe and Asia Minor has still to take place. If Greece had to rely upon her case being presented by King Constantine or by any of those Greeks who have placed Germany's interests before those of their own country, she would be in a parlous plight indeed. There is only one man who can plead her cause with any authority, whether in regard to Macedonia, Epirus or the coast of Asia Minor; and if the Greeks set any great store on their future, they will see to it that at the earliest possible opportunity the direction of their affairs is placed once more in the hands of M. Venizelos. At one time some of them affected great disdain for him, because he was willing to surrender Kavalla and a strip of land in Macedonia in exchange for a wide extent of territory in Asia Minor. They pinned their faith on a Sovereign who not only bartered away Macedonian territory for nothing, but was at the last in danger of sacrificing a portion of Epirus as well. Greece, if she could discern the signs of the times, has much lost ground to make up. This fact alone should have a steadying effect on King and people alike, and make for unity and wisdom in their counsels.

THE RED CROSS IN MESOPOTAMIA.

We are indebted to the Red Cross for permission to publish the following report, written by Major Moens. It covers the period from April, 1916, to January, 1917.

On April 13, 1916, the advance guard of the British Red Cross unit arrived in Mesopotamia, to be followed three days later by Mr. E. A. Ridsdale, British Red Cross Commissioner. On April 23 a further detachment landed, by which time large consignments of stores from London and Bombay were arriving and the work had begun in earnest.

Prior to this date Lieut.-Colonel Jay Gould, I.M.S., had for about a month been acting as Commissioner for the Indian branch of the St. John Ambulance Association and distributing comforts to the Hospital units, while three motor launches, sent out by the British Red Cross Society in 1915—the Wessex, Alouette and Olinda—had been doing most valuable work on the Shatt-el-Arab. With these exceptions no Red Cross work had previously been attempted in this country. So that it may fairly be said that May, 1916, was the real beginning of Red Cross activities in Mesopotamia.

The staff at the Busreh or Base Depot consisted of Lieut.-Colonel Jay Gould, I.M.S., Commissioner for the Indian St. John Ambulance Association; Mr. E. A. Ridsdale, British Red Cross Commissioner; Captain H. Gordon Holmes, financial adviser; and Lieuts. Salcombe, Weaver and, some time later, Lieut. Stone.

An advance depot had already been started under Major Moens at Amarah—about 150 miles up the Tigris from Busreh.

Mr. A. E. Ridsdale, after a very busy six weeks in Mesopotamia, had to leave for India, as he had been appointed a member of the Vincent Commission, and was obliged to sever his connection with Red Cross work in Mesopotamia. Shortly after Mr. Ridsdale's departure Colonel Jay Gould was made Red Cross Commissioner, representing the Joint War Committee of the Order of St. John and British Red Cross Society.

The total strength of the Red Cross unit in Mesopotamia is now eight officers and sixty-four men—not including nine soldiers temporarily attached for duty and a considerable number of native followers and coolies. The total number of men sent out is 104; so that 32, or 30 per cent. of the whole represents our "casualties," practically all of which were invalided home. But if the men who have arrived since the end of the last hot weather are eliminated the percentage of casualties is 57.

In spite of the difficulties experienced in the early stages on account of lack of accommodation and other facilities, it is worthy of note that on April 27 several large indents from hospitals were complied with, so that no time was lost in getting to work. Orders were at once given to a local contractor for the erection of huts for quarters and stores on a portion of the ground occupied by the barracks, about half a mile down a tidal creek known as Khandak Creek. These huts were not, however, completed until early in June, and the largo Stores hut not until the beginning of August. In the meantime Colonel Jay Gould provided quarters for the officers, and the officer commanding one of the Indian hospitals placed some huts at the disposal of the Red Cross for men's quarters. The stores had to be stacked in the open in their original cases—thus throwing an enormous amount of extra work on the staff, as every case had to be opened and re-secured for every requisition dealt with.

The area dealt with by the Base Depot extends down river to Mohammerah, where there are two large Convalescent Depots of 1,000 beds each, and thence 160 miles up the Karun river to Ahwaz, near to the Anglo-Persian Oil Fields. Up-river, at a distance of about forty miles, is Kurnah. Here there is a combined Stationary Hospital of 250 beds situated at the junction of the Euphrates and the Tigris—while some 200 miles up the main stream of the Euphrates is Nasiriyah—where are a Field Ambulance, a Stationary Hospital and a Casualty Clearing Station.

Not only has the base depot to comply with the requisitions made upon it by the hospital units in this large area—units with accommodation for over 14,000 patients—but it has also to keep the advanced depot at Amarah supplied with stores sufficient to cope with a still larger medical area. These stores are sent up to Amarah in large shallow-draught sailing boats or *mehalas*, which take from ten to eighteen days for the 150 miles journey, according to whether the winds are favourable or the reverse. A slow and cumbersome method of transport, but it has two distinct advantages:—(1) It throws no additional strain upon the now highly organised river steamer transport system; (2) these *mehalas*, with their Arab crews and their extremely shallow draught, can negotiate without much difficulty the numerous sand-banks and shallows of the Tigris in its low-water season.

A most regrettable incident connected with the Stores Department was the fire which took place on June 23, 1916. The cause has never been ascertained, though there seems to be some likelihood that it was due to spontaneous combustion under an intense sun heat. As a result of the fire, over £11,000 worth of stores were destroyed—a loss which would undoubtedly have been far greater had not the men stationed at the time in the barracks coped with the situation so promptly and efficiently. Another fire took place on the night of October 1-2, 1916, at the building occupied by the Base Medical Stores Depot, where the Red Cross officers had their quarters and offices. Although considerable office material was burnt, the loss was mainly one of personal kit and property, and all the really essential books and papers were saved.

The following figures taken at random from the list of Red Cross gifts issued from the base depot may prove of interest:—

Quantities issued.	Goods.	Quantities issued.	Goods.
1,756	Blankets	261	Primus stoves
203 Cases	Books	34,356	Pyjamas
8,270	Cardigans	3,699	Razors
2,159 lbs.	Chocolate	6,178	Sheets
3,225,150	Cigarettes	33,034	Shirts
1,039 lge. bots.	Calves' foot jelly	12,048	Slippers
8,788 lbs.	Ext. of meat	34,591	Tablets soap
49,234	Fans	32,985 pairs	Socks
9,263	Goggles	22,106 lbs.	Sweets
24,569 bots.	Horlick's milk	5,130 lbs.	Tobacco, Ind.
70,548 tins	Milk	1,214 lbs.	,, British
12,761	Mosquito nets	11,021	Tooth brushes
8,112 yards	,, netting	75 cases	Tooth sticks
3,478	Pillows	10,596	Towels
10,006	Pipes	20,172	Vests
		8,193 yards	Wat'rpf. sh'tng

The Wounded and Missing Inquiry Bureau has been conducted by Lieut. E. V. Salcombe, who had carried out the same work for some time in Malta, and had therefore the necessary experience to help him in this branch of Red Cross work in Mesopotamia. During the last two months Viscount Tamworth has also assisted in this department, thus allowing Lieut. Salcombe to devote a considerable part of his time to other Red Cross work.

The Amarah Depot was started in the beginning of May, 1916. Amarah is a town of 20,000 inhabitants, composed of Arabs, Jews, Christians, Chaldæans, Kurds and Sabbæans, of whom Arabs are in the vast majority. It is situated at the junction of the Tigris and the Chehala Canal, about 150 miles above Busreh, and has hospital accommodation for 7,800 beds. The Red Cross secured for its Depot a large house on the left bank of the Tigris, with a river frontage—admirably situated for the loading, unloading and distribution of its goods. As the demands on the Depot increased, additional storing room had to be found which—owing to the ready assistance given by the Military Commandant on every occasion asked for—was obtained close at hand.

The Depot soon had to cope with very large demands upon its resources. It had to supply the many wants not only of the hospitals in Amarah itself—both British and Indian—but of all the hospital units along the long lines of communication from Amarah to the front—a distance of about 200 miles by river. First, there are the three permanent defence posts, with post hospitals, of Mudelil. Filai Filah and Ali Gherbi; and, in addition, six other smaller marching posts with medical detention tents and personnel. These are all between Amarah and Sheikh Saad. At Sheikh Saad—140 miles above Amarah and the river head of the "P" boats—there are two Stationary Hospitals, four Casualty Clearing Stations, and one large Convalescent Camp—4,000 beds in all—not inclusive of

WHITE HORSE WHISKY.
HEART TONIC.
DIGESTIVE AND NON-GOUTY.
By Appointment to

KING GEORGE.

KING OF SPAIN.

Digitized by Google

smaller units, such as Sanitary Sections, etc. Between Sheikh Saad and the Sanna-i-yat position on the left bank and the Es Sinn position on the right bank there are nineteen Field Ambulances—British, Indian, and combined—each one of which has 400 beds. The medical area thus covered by the work of the Amarah Depot has accommodation in all for 20,920 patients.

Lastly, and on the whole the unit most in need of Red Cross comforts, is the River Sick Convoy Unit, which, exclusive of the H.S. Sikkim presented, staffed and provided for by the Madras Presidency, has twenty "P" boats under its control. All the evacuation of sick or wounded is by river in these "P" boats, or paddle steamers.

The medical officers in charge can obtain their Red Cross comforts of clothing or of food from the Red Cross "dump" at river head or from the Amarah and Busreh Depots. They seldom fail to make a call at one or more of these sources of supply for the increased comfort and well-being of their patients during the long river journey.

The staff at Amarah consisted of Major Moens, Assistant Commissioner; Lieuts. Reed and Crewe and Sergeant Brittain, with two sergeants and four privates classed as "P.B." men—that is, medically unfit for field service and attached for duty to the Red Cross.

During the hot weather from June to September the staff was much reduced by sickness, and at one time it looked as if it would vanish altogether. Brittain was the first to go. He died of cholera after a few hours only of illness. He was an indefatigable worker whose loss was irreparable. Lieut. Reed stayed long enough with the Red Cross to make his transference to the Intelligence Staff very keenly felt. He had an intimate knowledge of the country, its customs and its languages, and Intelligence gained where Red Cross lost. Both sergeants of the Regular Army were invalided to India at about this time, and the four "P.B." men spent more time in hospital than out. The timely arrival of Mr. Vigo in early September was most welcome; but after six weeks' valuable work at Amarah he too was invalided to India after a long sojourn in hospital. Towards the end of October, 1916, the Red Cross lost another valuable worker in Engineer Travers, who was accidentally drowned.

But all requisitions made upon the Red Cross were complied with, and as soon as the hot weather became a memory only the staff was considerably strengthened, and is now as strong, or stronger, than ever it was.

(To be continued.)

THE IMPERIAL OTTOMAN BANK AND THE WAR.

The roll of honour of the Imperial Ottoman Bank shows that no less than sixty-two members of the staff in London and Manchester have joined for active service, besides five of the British staff in Egypt, and another five of the British staff in Turkey. Chief of all is, of course, Lieut.-Gen. the Hon. Sir H. A. Lawrence, K.C.B. Viscount Goschen was colonel of the Buffs (East Kent Regiment) T.F., but relinquished his commission because of ill-health in April of this year. Among the others are one major, one captain and adjutant, two captains, five lieutenants, twenty-two second lieutenants, one sub-lieutenant of the R.N.V.R., and four temporary assistant paymasters. Two members of the English staff have joined the French infantry, one having the rank of *aspirant* and the other that of lance-corporal; but this, of course, is not the total contribution that the I.O.B. has made to the French army. Many others have gone from the branches in Paris, Constantinople, and elsewhere.

If we turn to the list to see what losses the staff of the I.O.B. has sustained we see that the toll has been a very heavy one—much worse than decimation. Besides Viscount Goschen, two others have left the service because of ill health. Nine have been killed in action, one has died of injuries, and another, missing since May, 1915, is presumed also to be dead. Nine others have been wounded. The most recent case is that of Capt. and Adjutant Frank Fisher, M.C., K.R.R. Corps. The *Gazette* of the 18th inst. contains the official announcement that his Majesty has been pleased to award the bar of the Military Cross to this gallant officer. It says, "As Adjutant he ably carried out his duties under exceptionally arduous conditions. Later he went forward and took command of two companies at a critical period, and led them until he was wounded. He displayed great courage and leadership throughout."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.
For particulars apply to E. DENISON ROSS, Director.

FLIGHT OF JEWS FROM JAFFA.

The *Bulletin Juif* (Lausanne) has received from a trustworthy source a message concerning the expulsion of the civil population from Jaffa, which was effected upon the pretext of military necessity early in April.

The order for the evacuation, published on March 28, bore chiefly (says the message referred to) on the Jewish population; even German, Austrian, Hungarian, and Bulgarian Jews were forced to go. Moslems and Christians might remain on individual permission, but such permission was systematically denied to Jews. On April 1 an order was issued for all Jews to leave Jaffa within forty-eight hours, without any means of transport being provided for them, and such transport being unobtainable. Carriage hire went up to fabulous rates; one had to pay between 100 and 200 francs for a carriage from Jaffa to Petash Tikvah—the ordinary charge being from 15 to 25 francs. Native drivers refused all money except gold, or would only accept Turkish 100-piastre notes at the value of 17 piastres.

Already, by the end of March, 300 Jews had been deported from Jerusalem in the cruellest possible way. At Jaffa Jemal Pasha explained cynically to the Jews that they were being driven out for their own good. Those who were unable to get away by April 1 were authorised to stay in Jaffa until April 9, on account of the Passover.

Eight thousand Jews were driven from their homes without permission to take any baggage or provisions; their houses were pillaged even before they left them; bands of plunderers, especially Bedouin women, with donkeys, camels, and so forth, flocked to the scene like birds of prey, carrying off valuables and furniture. The Jewish quarters were utterly pillaged under the paternal eye of the authorities. Two Jews of the Yemen were hanged at the entrance to the Tel Aviv suburb, as a warning of the fate that awaited any Jew who might oppose the looters.

The roads leading towards the Jewish colonies in the north (the message continues) are black with famished Jewish refugees. Trustworthy eyewitnesses report scenes of incredible cruelty and plundering. Dozens of rich Jews have been found dead in the dunes around Tel Aviv. To keep off bands of robbers who attacked the refugees on the road, the youths of the Jewish villages organized guards to patrol the roads; but these guards were arrested and maltreated by the authorities.

Recently the Moslem population has also left Jaffa, but permission has been granted to them to camp in the gardens and suburbs of the town, and to visit the town daily to look after their property. Not a single Jew, however, is allowed to return to Jaffa.

Jemal Pasha is too wary to order massacres. His *modus operandi* is to decimate the population by hunger, thirst, and disease. Those who know his methods would not be at all surprised if, after some little time, he should punish those who have sacked and plundered by his orders, or at least with his consent.

RUSSIANS IN ROUMANIA.

An undated Reuter's message from Jassy reports that a committee of the soldiers of the 9th Russian Army on the Roumanian front has issued an appeal, saying:—

"Comrades, soldiers. Our liberty is threatened. We betray our duty towards our country by fraternising with the soldiers of the Emperor William, the great enemy of liberty. From the West will come disciplined enemy troops, not to fraternise, but to fight us.

"Any man who enters into relations with the enemy is a traitor to the Fatherland and the Allies. Any man who refuses to obey a war order is a traitor. If our enemy sincerely desires our welfare he must liberate our territory and that of Roumania. Then we will help to overthrow his Government, the enemy of all liberty. Then only shall we have a durable peace.

The Sultan of Egypt recently authorised a European cinematographer to take the scenes of Abdin Palace, in Cairo, including the Harem gardens and a parade of the Sultan's bodyguard, under the command of Hassan Bey Tewfik Badr.

A *Reuter's* message from Buenos Ayres, dated June 8, reports:—It is announced from Colon, in the Argentine province of Entre Rios, that an enormous quantity of preserved meat has been destroyed at the Liebig establishment by a criminal plot. The damage is estimated at two million pesos. The authors of the outrage are Turks.

The anniversary of the death of El Idrisi, the founder of the Mohamedan sect which bears his name, and the ancestor of the Imam of Assir, was celebrated on May 20 at Omdurman by Seyid Idris el Shereef El Idrissi, another descendant of the great teacher. The celebration was attended by an immense crowd of people of all ranks and classes of the population of Omdurman.

News has reached the Red Cross headquarters that the river hospital ship Nabha has reached Busreh ready for service with the British forces during the hot weather. She made the passage from Bombay under her own power. This shallow draught vessel was specially built for service on the Tigris by the Joint War Committee of the British Red Cross Societies, the cost of building and fitting being met from a donation sent to the United Provinces India Fund by the Maharajah of Nabha, whose name she bears. The fleet of Red Cross motor launches is now working right up the 550 miles of the Tigris as far as Baghdad, where the advance Red Cross Stores Depot was established within a few days of the British occupation.

THE PRESS ON THE NEAR EAST.

The Turco-German "Friends."

In the tenth of the deeply interesting series of articles, "Berlin To-day," that is now appearing in *The Times*, the writer, Mr. F. Sefton Delmer, refers to the relations between Turks and Germans in the latter's capital. First he records an incident that serves to show the Germans' window-dressing methods:—

I was greatly astonished at the beginning of last month suddenly to find the guard again on duty at the Brandenburger Tor. For the past year and a half no guard had stood there; spiders were the only denizens of the deserted guard-room, and the rifle-stands outside were rusty. But, all at once, at the beginning of spring, soldiers, like new-born flowers, were there again, and the usual two sentries, looking right and left, ready to turn out the guard to salute, should any high officer heave in sight. On the farther side of the Pariser Platz one saw the reason why. Above the Hotel Adlon a red flag with a white crescent was floating. A Turkish mission on its way to the Kaiser was staying there for a day or two, and for the special benefit of these gentlemen this little comedy had been staged. . . . A sentry-box, with a sentry in front of it, had also been placed at the entrance to the hotel. . . . In spite of this official outward show of respect for Turkey, the Germans in conversation do not scruple to express their contempt for their Turkish ally. "Die Türkei würden wir billig abgeben!" ("We'd let Turkey go cheap!" is the opinion even in Government circles).

That Turkey will be allowed to "go cheap"—very cheap—is not to be doubted. But Mr. Delmer tells us of a different state of affairs earlier in the war:—

Anyone who has lived in Berlin for the past two years could not but be vastly entertained to see the eager advances Germany at first made to Turkey. At the Oriental Seminary and at the Humboldt Academy, which is a sort of institute for university extension lectures, and has branches in all parts of the town, the courses for Turkish were simply thronged with students, and in the bookshops Turkish grammars were sold in thousands. . . . . So ardent, indeed, was this sudden affection that the Turk grew a little alarmed. He felt it to be uncomfortably like the love of the gourmand for the oyster, and quite recently he has passed various laws making it very plain to the Germans that Turkey is for the Turks. Nobody is to be allowed, for example, to open a place of business in Turkey who cannot read, *write*, and speak the Turkish language. I remember the inclination the German newspapers showed to shriek when they felt the shock of this cold douche, but they shiveringly smiled instead, determined to reach their goal notwithstanding.

In about ten Berlin schools groups of twenty or thirty Turkish youths of about 15 or 16 years of age have, at the instance of the Government, been admitted to study German. The Government have given instructions that they are to be treated with the utmost consideration, but schoolmasters have told me that these Orientals, many of whom are already married, are a nuisance, and that their presence amongst much younger boys is undesirable, both for pedagogic and other reasons. Much the same is said of the large number of Turkish youths introduced as apprentices in various trades in Berlin and other towns. The alliance, it seems, is not without its drawbacks!

Greece's Opportunity.

In the course of a short article entitled "Greece and Serbia," the *Observer* expresses the wish that King Constantine's entire dynasty could have been expelled with him, but assumes that his successor understands the risk of interfering with the Constitution and its working. It believes that parliamentary government under M. Venizelos will be restored; and it continues:—

The question of the future attitude of Greece towards the war must then be seriously raised. With high admiration for M. Venizelos and solicitude for the Greek people as a whole, the Allies, after three years' war, cannot be guided by sentiment alone. The disatser of King Constantine's policy cannot be wholly repaired, but, as we read the situation, there is still a plain issue to be decided in one sense or another. The present struggle, arising directly out of the previous Balkan war, has destroyed the whole reason and basis of the settlement of 1913. Unless Greece is prepared with her whole force to take up arms in defence of her share in that settlement she could have no claim to retain a considerable part of the territorial advantages it conferred. But if the Greeks, with M. Venizelos at their head, should resolve to fulfil their original obligations to Serbia, the effect on the Salonica enterprise and the whole Balkan situation may yet be large enough to deserve equal recognition. We heartily hope that this may now be the solution.

Greece and its Future.

The departure of King Constantine and the future of Greece still continue to exercise public interest very strongly; and some further extracts may be added to those we published last week on these topics. The first is from the *Daily Graphic* (June 14):—

A fool is ever the worst occupant of a throne. To spare the susceptibilities of the living, we will go to the remote past for an example. King Ahab was an excellent soldier, who trembled before his wife She, being a strong-willed and meddlesome shrew, pushed him along the path which led to destruction. That the Ahab of to-day is named Constantine makes no matter. The type is exactly the same. And there is Michaiah, whose modern name is Venizelos, and Zedekiah the son of Chenaanah, horns of iron and all, known as Gounaris. Only for Ahab-Constantine is reserved a more ignoble fate than to fall in battle at Ramoth-Gilead. It has taken the Allies a very long time to make up their minds to a step for which there has been ample justification for nearly two years past. Now that they have taken drastic action, we hope that their method will be thorough. The besom must sweep out the nest of sycophants and plotters Gounaris, Streit, Dousmanis and the rest of them must follow their master if there is to be salvation for modern Hellas. . . . He has nominated his successor; but the word is with the Greek Chamber, illegally dismissed in the autumn of 1915, and with M. Venizelos, its lawful leader. The Greeks may decide that they have had enough of the House of Ahab and of foreign-born kinglets generally. That is their affair. What concerns us is that the Salonica army is at last free from the menace in its rear, and that the prestige of the Kaiser in the Balkans has received a shock which will have consequences both in Turkey and Bulgaria.

The *Birmingham Post* thinks that in the humiliation of Constantine, "Tsar" Ferdinand of Bulgaria and the rulers of Turkey should be able to discern the beginning of the end of their own hopes. It adds:—

Meanwhile, his successor, Prince Alexander, commands our sympathy, for the task which awaits him is heavy. He has to re-establish, if he can, the unity of a divided country; he has to rule constitutionally through Ministers responsible to a Chamber which, at present, is thoroughly unrepresentative of national sentiment; and he has to reconcile the fact that Ministers and Chamber may declare for honest neutrality with the fact that at least 40,000 of his subjects are already actively at war. He is not to be envied.

Last Futile Kicks.

The Athens correspondent of *The Times* begins a picturesque message (published last Saturday) describing the closing scenes of Constantine's sojourn in Athens, by saying:—"M. Jonnart was perfectly courteous but perfectly plain and unswerving in the course of all the negotiations—if they can be called negotiations—which have taken place. He knew his mission was a military one, and he took it like a cavalry charge." The message continues:—

M. Jonnart encountered great obstacles. A perfervid flood of frightened telegrams poured into the Allied capitals from well-intentioned but ill-informed sources, declaring that if an attempt was made to remove King Constantine war and civil war would begin side by side, and Athens be irrigated with blood. Efforts were made to restrict our action to the occupation of Thessaly; a suggestion was made to offer us merely M. Gounaris, General Dousmanis, and Colonel John Metaxas, who would have been handed over to us in a group—a sort of evil parody of the Burghers of Calais. Everything was tried in one way or another to persuade us to agree again to one of the usual compromises which have all along restricted M. Venizelos—one does not know why—in order to uphold the King—one knows why still less.

"The Modern Crusade."

Under the above title the *Westminster Gazette* (June 13) prints an article forwarded by a correspondent who describes himself as being "now on the threshold of the Holy Land." "The ever-blue skies of Egypt are behind us," he writes. "Here there are always masses of white fleecy clouds, the same in the middle of the day when the sun scorches us as before. On our left, just a few miles away, the deep blue Mediterranean is still with us. . . . Every inch of the country is brimful of interest to any thinker, and fascinatingly so to a Christian." After referring to the capture of "a village, where, it is said, Delilah was born," and the imminent capture of a town "which it is said was never captured," he continues:—

I cannot help but marvel at all I see around me, a mixture of wonders and desolation. It is so strange there should be such things, here in this of all lands, and that the earliest known battlefields should once again become soaked with the blood of human sacrifices. There is every modern weapon of warfare here—aeroplanes, tanks, enormous guns, gas, etc.—and just off the coast warships. There is plenty of mechanical and horse transport, yet the far greater part of the carrying is done as it was by the ancients, with long strings of silent-footed camels led by almost naked, dusky-faced natives.

But in spite of all its interesting associations the region does not fire the writer's enthusiasm. Says he:—

Life here is far from a joy, and a Kampsin has been blowing in from off the Syrian desert, and made things almost unbearable. It is a hot, scorching wind, that nearly stifles you. The whole atmosphere is filled with sand dust. You can see nothing but it whichever way you turn, and even the heavens are veiled in it. In the ordinary way sand dust and flies are two awful scourges here, and are further aggravated by the heavy military traffic, but during the Kampsin no words can describe what a pest they are.

The worst trouble of all, and especially during the time I have just described, is the great scarcity of water. I don't think people at home, who have only to turn on a tap, could ever realise the value of water. All the water we get, as well as the men in the trenches, is brought up on camels in zinc tanks called "Fantasses." The average Londoner, if he saw it, would turn up his nose and not even think of giving it to a dog. It is horrid green slimy stuff, with a thick sediment of brown mud. During the day it is always tepid, and if brought up during the heat of the day is steaming hot, sufficiently so to be able to make tea without any additional heat.

The Patchwork Empire.

As its title promises, "Turkey—A Past and a Future," in the *Round Table*, is an article of strong interest. It is not, however, an easy one to quote from in such a way as to give a correct impression of its character. The writer first sets before us a brilliant picture of the various elements that go to make up "Turkey" as it exists to-day. The cities of Turkey, he says truly, "are as various as its climes; and he brings out well a fact that one is apt to forget. He has been giving us, in a few words, the characteristics of some of the chief cities, and he adds:—

These, and besides them almost all the holy cities of mankind: Kerbella, between the Euphrates and the desert, where, under Sunni rule, the Shias of Persia and India have still visited the tombs of their saints and buried their dead; Jerusalem, where Jew and Christian, Orthodox, Catholic and Protestant, Armenian and Abyssinian, have their common shrines and separate quarters; Mekka and Medina, in the heart of the desert, beyond which their fame would never have passed but for a well and a mart and a precinct of idols and the Prophet who overthrew them; and there are the cities on the Pilgrim Road (linked now by railway with Medina, the nearer of the *Haramein*): Beyrout the port, with its electric trains and newspapers, the Smyrna of the Arab lands; and Damascus the oasis, looking out over the desert instead of the sea, and the harbour not of ships but of camel-caravans.

As to the population, we read:—

There were less than twenty million people in Turkey before the war, and during it the Government has caused a million or so to perish by massacre, starvation or disease. Yet in spite of this dœmoniac effort after uniformity, they are still the strangest congeries of racial and social types that has ever been placed at a single Government's mercy.

The Ottoman Empire derives its name from the Osmanli, but the Osmanlis are few and far between to-day.

These Osmanlis are a governing class, indigenous only in Constantinople and a few neighbouring towns, but planted here and there, as officers and officials, over the Ottoman territories. They come of a clan of Turkish nomads, recruited since the thirteenth century by converts, forced or voluntary, from most of Christendom, and crossed with the blood of slave-women from all the world. They are hardly a race. Tradition fortified by inertia makes them what they are, and also their Turkish language, which serves them for business of state and for a literature.

Turkey, the writer says well, "is not a unity, climatic, geographical, racial or economic; it is a pretension, enforced by bloodshed and violence whenever and wherever the Osmanli Government has power."

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Admiralty returns showing the toll exacted by enemy submarines in the week ended on last Sunday afternoon is published elsewhere to-day, and from the point of view of vessels actually lost it was, with twenty-eight, the worst week since that which ended on May 28. The people of this country were prepared for the increase, because during the last few days the losses were indicated in a speech by Captain Bathurst, in a statement by the chairman of the (United States) Federal Shipping Board, and in a reference made in the House of Commons by Sir L. C. Money to "the ever diminishing supply of tonnage." No evil was ever scotched in a day, and the British people, at home and overseas, must be prepared to wait patiently for a solution of this very grave problem. Indeed, it may never be solved thoroughly while the war lasts; it may well be, as I have pointed out before, that the only way of salvation will lie in the direction of providing more ships and growing more food in this country while the fight against the enemy under sea is proceeded with.

***

There is, nevertheless, some comfort to be gained from the returns now under notice. It will be remarked that the number of unsuccessful enemy attacks on ships increased in the week to twenty-nine. That is the best return which has been made this year, and it indicates, I think, that not only are more merchantmen armed for defence, but also that the guns on board of them are used to greater purpose. Equally important is the fact that the movements of British vessels in and out of United Kingdom ports have also increased. The total for the week was 5,890—2,897 arrivals and 2,993 departures—the highest in any week since the returns have been issued. On the whole, therefore, there is a great deal to be grateful for; bad as the submarine situation is, it is not nearly bad enough to justify the faith which the Germans reposed in the efficacy of this phase of the war, nor the fears, which seemed well founded at one time, that our military progress would be hampered. In the meantime, all that remains for the people to do is, by calmness and confidence, to hold up the arms of those on whom rests the grave burden of responsibility and to continue to help to win the war by loyal and faithful service.

***

Investors in Greek securities have not had to wait long for the result of the improved situation consequent on the departure of Constantine. An appreciation of bonds followed the abdication almost immediately, advances of a point being marked at the week-end in respect of several issues. The fact that the blockade has been raised, too, had a strong effect in the City. The rise in value in Greek stocks is the more noteworthy because they have never really been out of demand; if business in them has been restricted in London it was because there were no sellers, so that in the recent advance in value it has not been a question of arresting the tottering fall of discredited securities.

***

The first official result of the improved situation in Greece is to be seen in the announcement made on Tuesday that it is now permissible to remit money there from the United Kingdom without the previous authority of the Finance Section of the Ministry of Blockade. It must be borne in mind, however, that certain restrictions with regard to financial relations with Greece continue in force, and these have been communicated to the banks, which are alone affected. The new order is printed elsewhere in this issue.

***

Last week I remarked on the certainty that the Balkan countries would not lose much time in attempting to reconstruct their agricultural industry. During the past week evidence has reached me that in Roumania the attempt has actually begun, and that the landowners are already in the market in search of agricultural plant and machinery. I cannot say if British manufacturers have been approached, but, according to a report submitted by the United States Legation at Jassy a request has been received for American catalogues and price lists, which, I have no doubt, will be forthcoming.

***

It is pointed out that the great majority of the large landowners of the country will be confronted by the problem of re-equipping their estates when possession of them is resumed after the war. Much of their land lies in the occupied portion of the country, and it is there that the soil is richest. Most of the oxen, formerly used for agricultural purposes, have been removed or killed, and these will have to be replaced mainly by machinery. It may be remembered, too, that buyers will require easy terms of payment. In this connection I would suggest to merchants and manufacturers that the newly-formed London Roumanian Chamber of Commerce would be able to furnish all the necessary information to those of its members who are interested, and that firms in the trade who have not yet joined the Chamber have everything to gain by doing so.

***

The decision of the Government of India to proceed without loss of time with the economic development of Mesopotamia will be welcomed in commercial circles. Transport conditions are to be improved, irrigation is to be extended, a work in which Sir William Willcocks' survey will play a considerable part, and other matters of importance to trade are to be attended to. Shipbuilding for river traffic is already well advanced in Indian yards, and it may be anticipated that, before long, Busreh will become a busy centre for British trade. There is even now great activity in the one-time Turkish port, but when conditions have been levelled this will be multiplied.

***

Considerable feeling appears to have been aroused by the action of the Egyptian State Railways in raising the fares to the level of 50 per cent. above the rates before the war and in reducing further the number of trains. The native Press, in particular, takes exception to the changes, and points out that the people are not in a position to meet the extra demands, and that many of them will have to abandon suburban residences at Cairo, and so on. Two grievances do not make one grain of happiness, of course; but I should like to point out to the Egyptians that in this country the travelling public have endured restrictions on railway travelling and paid largely increased fares for many months. It is not possible to say, perhaps, that the British public have taken the changes uncomplainingly; but they have realised that war means hardship, and they have gradually settled down to wait patiently for better days.

***

In Egypt the causes underlying the changes are different. "It will be remembered," wrote the *Egyptian Gazette* recently, "that when the war broke out a considerable reduction in the railway traffic was at once made, and the passenger rates were increased by 10 per cent. on the grounds that the prices of coal had gone up and that it had become more difficult to import it on account of the shipping difficulties. The prices of coal continued to rise subsequently, though the railway authorities maintained the old rates plus the 10 per cent. increase, and did not raise them again until now. This increase, however, is 40 per cent. above the present rates, though it is 50 per cent. above the pre-war rates. As regards the prices of other railway materials, they have also gone up considerably, and owing to the war great difficulty is being experienced in obtaining them, and the amounts earmarked for them in the Budget are not being generally totally expended. In order to obtain an idea of what the increase in the price of coal represents, it will be sufficient to state that the Budgetary provision for coal in the 1917-18 Budget amounts to £E1,000,000 more than that provided before the war and £E650,000 more than that provided in 1916-17." That seems to me to be a complete answer to the objectors.

***

I wonder whether I may make a brief appeal to readers of THE NEAR EAST on behalf of the British and Foreign Sailors' Society. The secretary wrote recently:—"The civilised world was recently horror-stricken to hear of the loss of the great wonder-ship Britannic in the Mediterranean. News has now come to hand of the loss of a thirty-ton Italian sailing ship (Maria I.), sunk by a German submarine. The Malta home of the British and Foreign Sailors' Society has now had the privilege of receiving into its care the crews of the largest and smallest ships sunk in the Mediterranean." So many of us rely on the brave devotion to duty of our sailormen that an institution designed to help them when trouble overclouds their path deserves all the support that can be given to it. We are so accustomed to regard the services rendered by the mercantile marine as a matter of course that, I fear, seamen do not always receive the consideration which is certainly their due.

COTTON PRICES.

Analysis and Review for Four Years from 1913-14.

(By Professor J. A. Todd.)

In The Near East of November 3 the writer gave some figures showing the comparative movement of the prices of Egyptian and American cotton for the previous three seasons, which brought out the striking fact that for some time previous the price of Egyptian had been, relatively speaking, too low compared with that of American. The course of events since then has shown such a remarkable contrast to that state of affairs that it is worth while to repeat the statistics then given, bringing them down to date, as is done in the larger table printed below :—

It will be seen from this table that the situation began to change sharply from the very month in which that article was written. At the end of November the premium of Egyptian over American jumped from 52 to 85 per cent., and since then it has been as high as 110 per cent., which establishes a new record, for till this year the highest premium recorded was in April, 1910, when it touched 102 per cent. That was under the entirely abnormal conditions of the 1909-10 season, when, though the American crop was short, the Egyptian crop was still shorter, and the very high price of Egyptian was mainly due to the fact that the Alexandria speculators were caught hopelessly oversold and could not deliver when the crop failed.

A Striking Parallel.

The parallel of this year's conditions is very striking, and probably it is not necessary to go much further to seek for causes of the recent movement of Egyptian prices. It may be noticed, however, that recently the tide has apparently turned, and the premium of Egyptian has fallen very markedly again, especially during the past week, when American has once more been monopolising the limelight by another spectacular rise. On Wednesday, June 13, when American Middling created a new record of 17.35d., Egyptian was only 27.85d., which, though the highest price recorded since the sixties, is only 60 per cent. above the price of American Middling. It would be dangerous to assume, however, that this will continue.

The facts of last year's season are now sufficiently well ascertained to make consideration of the results feasible. On June 9, 1916, the writer gave in these columns a statement of the position of the crop as at May 26 in each season since 1907-08, with a view to forecasting the final result of the 1915 crop. As the result is of some importance in its bearing on the prospects of the subsequent season, the attempt may be repeated as follows :—

Egyptian Area, Crop, and Average Yield, 1907-17.

Season	Area.	Crop (adjusted total).	Average Yield per Feddan.	Arrivals to May 26.	Total Arrivals.
	Fed'ns*	Kantars*	Kantars	Kantars*	Kantars*
1907-08	1.603	7.235	4.51	7.038	7.172
1908-09	1.640	6.751	4.12	6.639	6.678
1909-10	1.597	5.001	3.13	4.889	4.912
1910-11	1.643	7.574	4.57	7.518	7.579
1911-12	1.711	7.424	4.33	7.223	7.273
1912-13	1.722	7.533	4.37	7.438	7.474
1913-14	1.723	7.684	4.46	7.567	7.612
1914-15	1.755	6.464	3.69	6.222	6.367
1915-16	1.186	4.727	3.98	4.538	4.616
1916-17	1.656	5.200†	3.14†	4.974	5.100*†

* 000's omitted. † Estimated.

The arrivals up to May 25 this year were 4,974,424 kantars, which indicates a probable crop of not more than 5,200,000 kantars. This, on the official acreage of 1,655,512 feddans, gives an average yield of only 3.14 kantars per feddan, which is within one point of the lowest recorded—namely, that of 1909. How long is this state of affairs in Egypt to go on unchecked, and without raising the outcry against the policy and methods of the Egyptian Government which such a state of affairs would have caused under any other conditions. The Egyptian Government may have some justification for adopting what some of us consider a very doubtful policy in regard to the restriction of the acreage under cotton. But is there any reason why the average yield per acre should be allowed to fall to practically the lowest on record, the record of a year which has been known ever since as the "disastrous failure" of 1909, without an effective protest being raised?

The Future.

In the meantime it remains to apply this result to the prospects for the coming year. There is no information yet available as to the prospects of this year's area, nor would I be inclined to put much faith in advance estimates after the fiasco of last year's forecast of a record acreage of 2,000,000 feddans, which dwindled to a reality of 1,656,000. But assuming that the acreage is *no less* than last year, which, in view of the American parallel, is perhaps the best we can hope for, what crop may we expect? It would, in the writer's opinion, be over sanguine to look for more than the average yield of the last three years, *i.e.*, since the pink boll worm began to do its serious damage. That means 3.60 kantars per feddan, or a crop of only about 6,000,000 kantars. Is this to be recognised for the future as the normal figure of the Egyptian crop? If so, there is very serious trouble ahead for the fine-spinning section of the Lancashire cotton industry when things become anything like normal again. Are we to adopt our usual policy of waiting till the trouble comes before we do anything to meet it? That is a peculiarly dangerous policy to adopt with a crop which takes half the year to grow, and only grows once a year. If the trouble happens to come, say, just after the sowing season in spring, it will be nearly eighteen months before anything can be done to remedy it.

What Will America Do?

And what is America going to do in the meantime to replace the Egyptian cotton which she had recently been importing in very large quantities, and which she is now forbidden to import from England? She can use Sea Island, of course, to a very large extent, but that will not be much consolation for the fine spinners in Lancashire. But there is another thing she can do. She can push on the development of those new areas in the West, Arizona and California, which are already growing considerable quantities of cotton of Egyptian character and quality. It will be rather a shock to Egypt when she wants to come back to cotton after the war if she finds that a new rival has arisen who can produce cotton quite equal to hers in quality, and in quantities which will seriously challenge the virtual monopoly she has enjoyed for so many years of the bulk of the fine cotton supply. Egypt had better wake up if she wishes to maintain her position as the finest cotton-growing country in the world.

TRADE OPENINGS IN PERSIA.

It is satisfactory to learn that, in some parts of Persia, there is a growing tendency in the bazaars to appreciate British goods; the cause of this is that, while the retailers of fancy "sundries" used almost exclusively to stock articles of German and Austrian origin, now out of the running owing to the war, it has been possible in the last year or two to give a fair trial to British goods, and it will not surprise manufacturers to learn that they have come out of the ordeal with success. This is particularly the case in Kazvin, the British Vice-Consul in which town has recently submitted an interesting report on the subject. Mr. Goodwin adds to his report that he feels sure that the fact that British goods have given satisfaction will be proved as soon as the postal service is more certain, and the parcels post service *via* Russia is again available.

He writes :—

"The chief trade of Kazvin and district is the export of raisins and cotton, but a considerable amount of business is also done in general exports and imports. Goods from Russia—sugar, tea, textiles, hardware and sundry goods of every description—are dealt with by commission agents and distributed from Kazvin to other parts of Persia; while raisins, almonds, pistachios and dried fruit, produced locally, cotton from Kashan, Isfahan, and other districts, and opium, henna, etc., from Yezd, are purchased for export to Europe. The bulk of imports are Russian, but when the Baghdad-Kermanshah-Hamadan road is open, a large quantity of Manchester cotton goods and Indian spices come into the town.

"Cotton piece goods come mostly from Russia, but during the last two years supplies from that country have greatly decreased. Whenever possible the bazaars are well stocked with Manchester goods, but this, as stated above, depends upon the condition of the Baghdad-Hamadan road, which is closed at present. Russian cotton piece goods imported into Kazvin usually amount to about £175,400 annually.

"Boots, shoes, sandals, etc., for the natives are made locally and in Teheran from native leather. A great quantity of boots and shoes of European styles are worn by the Persians, the parts being imported from Russia and put together in Persia."

EGYPT'S TRADE.

Recovery in Customs Revenue in April.

CAIRO, May 27.

The Customs statistics for April show that trade has recovered again the slight leeway it had lost the preceding month. Imports amounted to £E2,565,282, as against £E2,348,274 in April, 1916, and exports to £E3,227,617, as compared with £E1,482,860 a year ago. Total imports for the four months come to £E9.170,814, and exports to £E15,536,546, respectively £E402,936 and £E2,792,558 in excess of the figures up to the end of April, 1916.

The principal imports during the month were:—Preserved meat, £E87,652; flour, £E54,221; coffee, £E33,000; liqueurs, £E21,073; petroleum, £E80,420; stationery, £E38,063; coal, £E370,747; chemical manures, £E194,927 (none came in during April, 1916); textiles, £E1,026,750 (of which cotton tissues accounted for £E741,455 and wool tissues for £E68,095); and worked iron and steel, £E77,721.

The chief exports were:—Eggs, £E13,119 (the quantity fell off by thirty-one millions and the value by £E61,700); skins and tanned goods, £E32,680; maize, £E30,072; cotton seed, £E252,172 (137.060 ardebs more); cotton cake, £E67,213; onions £E110,821; sugar, £E49,597; wool, £E40,773; and cotton, £E2,473,179 (137.675 cantars more than last year, when the value of this export was £E1,750,924 less).

Leaf tobacco, valued at £E140,696 and weighing 279 tons—£E76,985 more but 303 tons less than in April, 1916—was imported, whilst cigarettes worth £E31,977 and weighing 22,841 kilos—£E13,035 more and 837 kilos less than a year ago—were exported.

Great Britain greatly improved her position. Her share of both imports and exports rose from 50 per cent. a year ago to 60 per cent. Chief imports from Great Britain were:—Textiles, £E878.519, all the barley and coal, and 90 per cent. of the worked iron and steel. Australia improved owing to the meat imports, which all came from that country; Chili reappeared in the statistics, thanks to the resumption of chemical manure imports; Greece improved slightly on account of tobacco; the United States were again responsible for all the petroleum, and so increased somewhat; but France, Brazil, and Italy all fell off considerably. Under exports, Great Britain, as usual, took all the eggs, cotton seed, cotton cake, and wool, 80 per cent. of the onions, and 56 per cent. of the cotton. India made a great improvement due to sugar, as also did the United States, which took 12 per cent. of the cotton. Russia and Switzerland returned to six figures with £E272,039 and £E222.241 respectively; in each case this was due to cotton, of which the former took 11 per cent. and the latter 9 per cent.

Trade with the Sudan flourished during April. Imports into Egypt rose from £E65,799 to £E224,396, and exports to the Sudan from £E85.872 to £E117,588. The principal imports into Egypt were:—Live-stock, £E22,693; skins, £E4.608; maize, £E61,771; sesame, £E20,120; ground nuts, £E12,121; gum, £E3.485; charcoal, £E7,384; and cotton, £E70.265. The main traffic in the opposite direction was:—Sugar, £E27,515; tobacco, £E16,698; and cotton tissues, £E27,895.

MESOPOTAMIA NEWS.

Government of India and Economic Development.

The following extract from the report of the Federation of Foreign Chambers of Commerce in the United Kingdom bearing on the economical development of Mesopotamia will be read with interest:—

"It is the intention of the Indian Government to proceed promptly and vigorously with the economic development of Mesopotamia, and especially to improve transport conditions. The irrigation of the country, which is essentially an agricultural one, will also be taken in hand. Already a comprehensive survey was made by Sir William Willcocks shortly after the change of régime in 1908 for the irrigation of large tracts of land which have lain waste for centuries, but which bear evidence of having been artificially irrigated in ancient times. Sir William projected a vast scheme, the first portion of which has been in course of execution by the firm of Sir John Jackson, Limited. The realisation of the scheme has been much hampered by lack of fuel, but one section was completed by the inauguration of the Hindie Barrage in December, 1913."

Considerable development is being witnessed in India in the building of small motor craft, particularly launches for commercial use. As an example (writes the *Liverpool Journal of Commerce*) it may be mentioned that Messrs. George Brunton and Sons, Cochin, completed recently for the Asiatic Petroleum Co., Limited, a fine example of the serviceable river launch. She is 32 ft. in length by 6 ft. 6 ins. beam, and has a load draught of 2 ft. 6 ins. The machinery consists of a four-cylinder 14-b.h.p. Kelvin petrol set. On trials a speed of twelve miles per hour was attained.

This launch, it may be mentioned, is now on Government service in Mesopotamia. Five of these boats have of late been built in Cochin and sent to Mesopotamia, also one 40 ft. cabin launch, equipped with a four-cylinder 26-b.h.p heavy type Kelvin paraffin set, and a small 20 ft. tug. The tug is also fitted with a Kelvin paraffin motor of 26 b.h.p. These boats have all proved themselves successful under very severe conditions, and Messrs. Brunton's yard is very busy at the moment on the construction of a number of smaller paraffin and petrol-engined launches.

TOLL OF THE SUBMARINE.

The Admiralty return of arrivals, sailings (of vessels of more than 100 tons net), war losses, and unsuccessful attacks for the week ended at 3 p.m. on June 17 was issued on Wednesday night, and is as follows:—

Arrivals	2,897
Sailings	2,993
Lost (vessels of more than 1,600 tons gross)	24
Less than 1,600 tons gross	4
Fishing vessels	—
Unsuccessfully attacked	29

The above figures are net, after deducting vessels lost in previous weeks and only reported in the week under review.

Mr. H. Blake Thomas has been appointed Agent at the newly established British Consular Agency at Bougie, Algeria.

LANCASHIRE COTTON.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

Business in the market has been more disorganised than ever by the raw cotton situation, and the further advance in prices of 2d. per lb. has brought trade in yarn and cloth on ordinary lines practically to a standstill.

Rates in Egyptian cotton are affected by the rise in American. The advices from Egypt relating to the new crop do not show much change. A good deal depends upon the extent of the damage done to the plant by pests. Egyptian yarns have not been at all active, but rather more inquiry has been forced out as a result of the hardening prices. A large part of the business under consideration in cloth for Egypt has been rendered futile by the higher figures required by sellers. In certain fabrics, however, buyers have shown confidence in the situation and paid very stiff rates especially where quick delivery can be guaranteed.

The outlook for shirtings for India remains very poor, and more makers are turning their attention to other goods. The offers put forward in dhooties and jaconets have been generally too low. Occasional sales have been mentioned in bleaching cloths for China. There are still cheap stocks about and some merchants have again had a fairly busy week in arranging business of this kind. Coarse numbers continue to do much better than medium and fine counts. It has been extremely difficult to arrange transactions in bundle yarns for export purposes. An important feature of the week has been the closing of the Liverpool futures market and further action on the part of the Government is awaited with much interest.

BULGARIA'S DEBT.

On Saturday Mr. Roland Burrows, Special Commissioner appointed under the Great Seal, and a special jury, again sat in the King's Bench Division to determine whether owing to a state of war existing between this country and Bulgaria the sum of £46,061, due by the Crédit Lyonnais, of London and Paris, to the National Bank of Bulgaria, was a debt due to the Kingdom of Bulgaria, and therefore liable to forfeiture to the Crown.

Mr. Douglas Hogg, who appeared for the French Bank, said he had an affidavit in which it was stated that the bank were proprietors and holders of thirty bonds issued on September 5, 1913, at Sofia by the Bulgarian Minister of Finance for 50,000 frs. each of which fell due on December 8, 1913, making a total of 1,500,000 frs. (£60,000). That sum, said counsel, the French bank was entitled to set off against the amount due by it to the National Bank of Bulgaria and as it exceeded that amount there was nothing to be forfeited to the Crown.

The Solicitor-General, in reply to the Commissioner, said he did not intend to urge on behalf of the Crown that there could be no set off by the Crédit Lyonnais. From the outset the Crown had treated the National Bank of Bulgaria as being in fact a State Department of Bulgaria.

The jury found that there was no debt due from the Crédit Lyonnais to the National Bank of Bulgaria, and therefore there was nothing to forfeit to the Crown.

ENGINEERING NOTES.

Gas-propelled Cars.

Some months ago attention was drawn in these notes to the experiments conducted by a Midland firm in the utilisation of town gas for automobile propulsion. It was at the time when restricted supplies, high prices of petrol and the official ruling that all petrol substitutes come under the same category as petrol, were acting as a stimulant to the inventive abilities of automobile engineers and manufacturers. The position with regard to petrol has certainly not improved since, while most of its substitutes and mechanical contrivances are still in an experimental stage; but it is pleasant to learn that the perseverance of the Midland firm has been rewarded with success, and that their cars are now running with ordinary town gas; although the gas reservoir, or gas bag, attached to the roof of the car gives to the latter an appearance which justified, in a way, the objectionable caption placed under a picture of a car in a daily illustrated paper this week, "The 'Zeppelin' Motor 'Bus!"

The Gas Car.

In the new gas-propelled car the gas is stored in a bag which is attached to the roof of the vehicle, and is led to the carburettor air intake by means of a rubber insertion hose about ¾ in. internal diameter. There is a tap in this pipe placed within convenient reach of the driver, who can turn the gas off when it is required to run on petrol. This combination of gas and petrol suggests possibilities that there are means, if necessary, of enriching the gas during its passage to the engine in the event of the gas being of too poor a quality. There are already several such vehicles of seven to eight tons gross weight which travel from ten to fifteen miles on one filling of about 400 cubic feet. The comparatively short distance that can be covered on a single charge would appear to be a serious inconvenience, but as the re-charging only occupies about three minutes this is, after all, a small matter, especially in the case of public service vehicles, for which re-charging facilities can easily be provided. The gas costs, at the place where the cars run, only 1s. 4d. per 1,000 cubic feet, and this allows the vehicle to run thirty miles. To compete with gas under these conditions, petrol would have to be obtainable at fourpence a gallon; and even at the highest prices which have to be paid for gas, petrol, in order to secure the same economy, would have to be less than eightpence per gallon.

Busy Japan.

India and Australia are now taking from Japan various descriptions of hardware which were formerly supplied from Germany. Prominent among these is brass founding, in which the Japanese are establishing for themselves quite a firm footing. It is stated that they turn out extremely cheap brass goods that have a finish, which readily gains them access to the markets mentioned. Machine tools also are ready to be supplied. According to recent reports, as a result of the very heavy demand for machine tools in England, the Indian market is said to be very short at present of lathes. It is therefore, interesting to learn that Japan is making a great effort to make good the deficit.

Farm Tractors in the East.

One of the principal causes of the apparent unwillingness, or hesitation, on the part of landowners in the East to adopt farm tractors for the cultivation of land is the prevailing idea among the more indifferent of them that the machines are too heavy for ploughing, harrowing, etc., especially on heavy land. In fact, some believe that a tractor running over a cultivated field would affect the soil in the same way as a road-roller would do. No efforts were made by manufacturers or local authorities to show the error of this attitude, and the land proprietor thus listens to the farmer's uninformed and prejudiced opinion, with the inevitable result. It must be admitted, however, that even in this country there are farmers who share the prejudices and bias of the Oriental with regard to tractors. Nevertheless, the work being done with tractors in Lincolnshire under the auspices of the Machinery and Implement Section of the Food Production Department has attracted considerable attention among farmers. The results were so striking that, according to reports, the work of the tractors has converted indifferent farmers into the most enthusiastic advocates of the motor system of cultivation, and they have prepared for sowing a large tract of land which, in the present scarcity of agricultural labour, would probably have had to go out of cultivation until the end of the war.

The Tractor's Work.

The Lincolnshire soil is very similar to that of many important agricultural districts in the Near East, and some particulars of the tractor's work in the county may interest Near Eastern landowners. We mention here the work of one tractor of British design and construction. This machine is of 75 horse-power and weighs thirteen tons, but the equitable distribution of the load is so well carried out that nowhere is there a greater pressure on the land than seven pounds to the square inch, which is considerably less than the tread of a horse's hoof. On the occasion re-

ferred to there were four men in charge of the tractor, which drew two four-furrow ploughs over a piece of the strongest land in Lincolnshire. On a lighter soil it can as easily take three four-furrow ploughs or a sixteen-feet drag cultivator. It does the work of twenty-four horses and twelve men, and does it as well, and, of course, much quicker than the most expert ploughman. No wonder, therefore, that despite its weight—thirteen tons—its indisputable efficiency has converted indifferent farmers. It is said that the War Agricultural Committee of the district where the work is being done ordered a considerable number of tractors, and farmers are being urged to give them a trial. According to reports in that district alone some 90,000 acres will have to be ploughed up this summer season in readiness for the harvest of 1918.

Sun Power from Sahara.

In his recent address at Cardiff on the coal resources of the United Kingdom, Professor Arnold Lupton referred to the utilisation of the power of the sun in Africa. He said that, although steam had already been generated by this means at a speed of equivalent to 200 brake horse-power per acre, and although if there were a large demand for sun-power boilers would be greatly improved, he has taken the average power all the year round in the country between Cairo and Khartoum as being, say, 50 brake horse-power per acre. At that rate, 1,000,000,000 brake horse-power could be generated from 20,000,000 acres, or, say, 30,000 square miles. But, he asked, if the sun power is in the Sahara Desert, of what use can it be to the people of the United Kingdom? The answer was that the power could be transmitted electrically at a very moderate cost, say, 0.36d. per kilowatt hour. The cable carrying the power would deliver current in Spain and France on the way, and this would reduce the average length of the circuit. On the question of sun power and the experimental plants now in use in Egypt, we have written previously in these notes.

Aided Purchase.

The Italian Ministry of Agriculture has initiated a scheme under which agricultural bodies and societies may obtain a Government contribution towards the cost of acquiring tractors for mechanical ploughing. The grant will amount to a maximum of 30 per cent. of the total cost. This figure may be increased to 40 per cent. in the event of not fewer than five tractors being employed in any one province. In the case of private persons the grant will not exceed 20 per cent. Agrarian credit institutions are asked to facilitate the acquisition of tractors by means of credit operations.

COMPANY REPORT.

Egyptian Agricultural Co., Ltd.

The report of the Egyptian Agricultural Company for the year ended March 31, 1917, states that the capital outlay on the Atfeh estate was £E1,142, against £E1,271 the previous year, and the estate now stands at a cost of £E104,992, or an average of £E49 per feddan. The capital outlay on the Chaba estate was £E2,028, against £E2,388. This estate now stands at a cost of £E116,369, or an average of £E39 per feddan. The capital outlay on the Dekerness estate was £E2,552, against £E2,677. This estate now stands at a cost of £E81,873, or an average of just over £E20 per feddan. The prospects for the current year are reported to be favourable, and indicate the probability of an appreciable increase in the net revenue. The profit and loss account shows a clear, if small, profit this year (£1,260) in place of continuous deficits in the past. But for the ravages of the insect pests, which seriously injured the cotton crop in the later stages of development, the results would have far exceeded those actually obtained.

COMPANY MEETING.

The Bank of Abyssinia.

The tenth ordinary general meeting of the shareholders of the Bank of Abyssinia was held at Cairo on May 31, the president (F. T. Rowlatt, Esq.) presiding. The directors presented the balance-sheet, which was as follows:—

Balance-sheet at December 31, 1916.

Liabilities.			
Capital subscribed, £500,000 (in 100,000 shares to bearer of £5) £500,000			
Capital paid up, £125,000, viz., £1 5s. per share	£125,000	0	0
Current and deposit accounts	142,250	8	10
Bankers (including the National Bank of Egypt)	121,203	0	3

Balance brought forward from 1915				30,949	18 9
				£33,145	7 9

AUDITORS' REPORT.

We have compared the above balance-sheet with the returns received from the head office at Addis-Abeba and the various agencies in Abyssinia, and are of the opinion that the balance sheet is correctly drawn up and represents the position of the Bank of Abyssinia at December 31, 1916, according to the above-mentioned returns.

RUSSELL, HARRIS, AND CO.,
Chartered Accountants.

Cairo, May 24, 1917.

The Chairman said:—Gentlemen,—In the first place, we beg to tender our respectful greetings to her Majesty the Empress Zaou Ditou and to the Regent his Royal Highness Ras Taffari, offering them our sincere sympathy on the death, announced in 1916, of his Majesty the late Emperor Menelik, under whose gracious patronage the bank was founded and who was its honorary president.

Our ordinary gross profits, as against £13,615 for 1915, amount for 1916 to £15,214 2s. Deducting from this sum for ordinary expenses £12,345 17s. 11d., there remains a balance of £2,868 4s. 1d. We have debited the profit and loss account with the usual depreciation, amounting to £2,195 9s leaving £672 15s. 1d. The valuation of our net assets in dollars and foreign currencies on December 31, 1916, shows an appreciation of £21,494 3s. 11d., making a total profit for 1916 of £22,166 19s.

You will remember that on December 31, 1915, the profit and loss account showed an adverse balance of £30,949 18s. 9d., which is now reduced by the above net profits to a debit balance of £8,782 19s. 9d.

The exchange value in Abyssinia of the silver dollar, which accounts for our abnormal results this year, improved during 1916 by about 15 per cent., in sympathy, to a certain extent, with the bar silver market abroad. For the valuation of our net dollar assets on December 31, 1916, we have adopted the current exchange rate on that date of $10 to the £1 sterling, which is considerably below the intrinsic value of the dollar. This anomaly is due to the embargo on the export of dollars, instituted on the ground that the future supply of dollars was uncertain and the stock limited. It was considered to be necessary in the public interest. This severe measure obliged the bank to keep large sums of dollars, exceeding its local requirements, lying idle, and it has been prevented from realising them abroad at the enhanced value of silver.

We are pleased to say, however, that this burden was partially relieved at the end of the year by the present Government, which has already shown itself favourable to our interests, authorising the bank to export a part of its surplus dollars.

In spite of the present difficulties, it is satisfactory to note that our ordinary working profits have more than covered our expenses this year, and we look forward to a time when an improvement in trade and currency regulation will enable us to make more profits by avoiding the loss entailed in having to hold such large unproductive balances of cash in Abyssinia.

As last year, the amount of notes issued by the bank is $214,765, which is fully secured by a corresponding amount of dollars. Of this sum, $132,250 are circulating in the hands of the public, and the balance—$82,515—forms part of the cash balance.

In 1916 our sale of exchange was $3,152,543, against $3,458,322 in 1915; in 1916 our purchase of exchange was $3,149,774, against $3,335,158 in 1915.

The National Bank of Egypt has continued during 1916 to hold at the disposal of the Bank of Abyssinia £40,000 free of interest, and your directors in Egypt have again decided not to take the £800 of fees due to them under Article No. 25 of the statutes.

The directors retiring this year are Mr. M. C. Salvago and Mr. L. Suares, who, being eligible, offer themselves for re-election.

COMPANY NOTES.

The directors of the Eastern Extension Australasia and China Telegraph Company have declared an interim dividend of 3s. a share, payable on July 14.

Messrs. R. Raphael and Sons announce the numbers of Three per Cent. Bonds of the Piræus, Athens, and Peloponnesus Railway drawn for repayment at par on July 15.

The Bank of England announce the numbers of 686 bonds of the Greek Guaranteed Two and a Half per Cent. Gold Loan of 1898 which have been purchased for the Sinking Fund and cancelled.

The directors of the Khedivial Mail Steamship and Graving Dock Company announce an interim dividend at the rate of 10 per cent. per annum on the ordinary shares, less tax at 5s. in the £, in respect of year ending June 30.

P. AND O. NEW ZEALAND SHIPPING FUSION.

A meeting of stockholders of the Peninsular and Oriental Steam Navigation Company will be held on June 27 for the purpose of passing two resolutions relating to the acquisition of the undertaking of the Union Steamship of New Zealand. The motions are as follows:—

"That the offer made to the ordinary shareholders of the Union Steamship of New Zealand, Ltd., in consideration of 10s. of P. and O. deferred stock, and 30s. cash for each ordinary share, be approved and confirmed.

"That the capital of the P. and O. Company be increased from £2,704,353 deferred stock to £3,204,853 deferred stock by the creation of £500,000 additional deferred stock, this bringing the total capital of the company up to £6,244,853."

In a memorandum to the shareholders it is pointed out that the 10s. of P. and O. deferred stock is worth in the market something over 30s., so that, together with 30s. each, the ordinary shareholders of the New Zealand Company will obtain something over 60s. for each ordinary share. The property of the Union Steamship Company of New Zealand includes a fleet of seventy-six steamers of 252,146 tons gross. The consent of the Treasury is required to the issue of deferred stock.

RICE FOR GREECE.

Some Greek merchants have purchased large quantities of rice and have shipped the same to Greece, writes the *Ahaly*. According to some qualified merchants, the total shipments amounted to about 15,000 ardebs. This has brought about a considerable rise in the price of rice in Alexandria, where the oke is being sold at the rate of P.T. 3.5 instead of P.T. 2, which was the regular price some days ago. It is evident that rice is one of the necessary commodities, and the excessive rise in its price will therefore be felt very keenly.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET, E.C.

THURSDAY EVENING.

There has been rather more business passing this week, and in most cases prices, where altered, are rather better. Both Unified and 3½ per cent. pref. have continued in demand, but business has been restricted owing to the scarcity of sellers. National Banks have again been a feature of strength, improving ¼ to 15. Agricultural Banks, which were at one time somewhat easier at 5 1-16, have since been in strong demand, and are closing 1-16 better at 5 5-32, after business covering about 1,500 shares. Allotments have also been in strong demand for Egypt at a rise of ⅛ to 2⅞, at which price 500 shares were done. Behéras have been somewhat quieter, with some small business round 9⅜, further small buyers at this price, and sellers round 10. A few Behéra prefs. have changed hands at 4. In Delta Land some local buying has been going on round about 10s. 6d. to 11s. New Egyptian have been done at about 11s. for several hundred shares. Union Foncières are wanted at 26s. 6d., and United Lands at about 1s., but there has been scarcely any business doing. In Alexandria Water some small transactions have taken place at about 12⅜, and in Salts and Sodas there has been a fair amount doing in the neighbourhood of 23s. 3d. Khedivial Mails which were looking a weaker market some few days ago at 35s., have firmed up again to 35s. 9d. on the declaration of an interim dividend of 2s.

Greek stocks are higher all along the line, the recent developments in Greece being looked upon very favourably on this side. The 1881 and 1884 loans are two points up round 56. In 1890 a largish business has been done round 54½ and 55 xd. Monopolies are also two points up at 50, and Rentes, after temporarily dropping to 39½, are one point better at 41. The 1902 loan is ½ higher at 63, and the 5 per cent. Currant Bonds have improved to 93. Bank of Athens shares have been done at 2⅝, and look an improving market in view of the much more satisfactory results of last year's working and the fact that this bank, which has all along supported the Venizelist cause, is likely to derive substantial benefit from the re-establishment of the constitutional régime in Greece.

GREEK SECURITIES.

A supplement to the *London Gazette* published on Wednesday contains an Order of the Treasury under Regulation 41c of the Defence of the Realm Regulations preventing the withdrawal, except under the authority of the Minister of Blockade, of any Greek funds or securities in the United Kingdom which the Minister directs are not to be withdrawn.

The Minister of Blockade gives notice that the following restrictions will apply and will remain in force until further notice, notwithstanding the raising of the blockade of Greece:—"In respect of accounts kept in the United Kingdom on behalf of offices in Athens or the Piræus of banking institutions, no payment shall be made, without the authority of the Controller of the Finance Section of the Ministry of Blockade, out of any such account which would reduce the balance on such account to an amount smaller than 75 per cent. of the amount of the balance as on June2, 1917. No overdraft or loan, or increase in existing overdraft or loan, may be granted on any such account, without the authority of the Controller of the Finance Section of the Ministry of Blockade."

ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northwards through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.
¶ THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.
¶ THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.
¶ ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.
¶ For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.
¶ *Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.*

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: The Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

Modern Movements Among Moslems. By SAMUEL GRAHAM WILSON, D.D. **6s. 6d.** net.
An important and exhaustive study of the many modern movements which mark the progress and propaganda of the Islam of to-day.

"Self-Taught" Series. Paper **2s.**, Cloth **2s. 6d.**
These books contain classified Vocabularies and useful Phrases and Conversations, with the English Phonetic Pronunciation of every word, so arranged that they may be Learned at a Glance, and a simplified Grammar which will prepare the way for more advanced study.
Arabic (Syrian); Egyptian (Arabic), with Naval and Military Terms; Greek (Modern), with Photographic and Archæological Terms; Persian; Turkish, with Dictionary.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 5d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.) 1, Devonshire Sq., London, E.C.2.

Mr. BERNARD SHAW says:
"'The New Witness' employs more specific literary talent to the square inch than most of our journals could enlist even if they liked literary talent (which they mostly don't)."

Mr. G. K. CHESTERTON contributes each week an article on current events, under the title: "AT THE SIGN OF THE WORLD'S END."

Mr. HILAIRE BELLOC writes special articles on matters of public import connected with the national crisis.

Mr. ERNEST NEWMAN, our Musical Critic, writes weekly.

M. ERNEST DIMNET, whose articles on French politics have attracted so much attention, will continue his series, entitled "France at War."

Mr. HERBERT VIVIAN, our Special Correspondent on the Italian front, contributes a series of striking articles from Italy.

DRAMA: THE NEW WITNESS follows closely all dramatic performances.

LITERATURE: All books worth reading are reviewed by distinguished literary critics.

Mr. RAYMOND RADCLYFFE, the City Editor of THE NEW WITNESS, replies to any queries accompanied by a coupon.

THE NEW WITNESS.

Every Thursday. Edited by G. K. CHESTERTON. Price Sixpence

NOTES OF THE WEEK.

Events have moved more rapidly in Greece than it seemed possible to anticipate a week ago. The acquiescence of the people in the new order is a measure of the artificial nature of the Constantine régime, which the Allies had so long permitted to continue, in despite of the best interests both of Greece and the Entente. It is now announced that King Alexander has accepted M. Venizelos as Prime Minister, and that that great leader has already formed his Cabinet. After taking the oath, they were acclaimed by large and enthusiastic crowds, and it would therefore appear that the fears expressed in some quarters that M. Venizelos might desire a postponement of the inevitable responsibility which he alone could bear was incorrect. On the whole, it was well that what was done was done quickly.

Allied troops, although not actually in Athens, are now guarding the approaches; and the purge of the Constantine faction continues. The ringleaders in an anti-Venizelist demonstration that took place on Sunday might well be arrested and sent to Salonika; judicial proceedings are to be instituted against those who were responsible for the rising of last December; and other members of the late King's family, including Prince Nicholas, are leaving for Switzerland. These precautions were plainly necessary. Apart from this, it is now anticipated that the Chamber of 1915 will be convoked—the assembly which was unconstitutionally dismissed by King Constantine. It is, in fact, the only practicable course, since the new King has taken the oath as a constitutional sovereign, and it is impossible to hold an election for a new Chamber at this time or for some weeks ahead.

The new Greek Cabinet, whose composition is announced, consists, as was to be expected, of those devoted Venizelists who followed M. Venizelos into exile. The fact that they risked their whole political careers, and possibly their lives, in his cause is a guarantee that they are strong men, whose sincerity to the Prime Minister and his cause has been proved by a test which no other leader in European politics has been able to apply to his subordinates. Those who have suffered together in adversity are likely to pull together when the tide turns in their favour. Among the names of the Ministers are, as was expected, that of Admiral Condouriotis, whose resignation of his post in the Greek Navy last year was a severe shock to King Constantine and the Royalist party; M. Repoulis, Minister of the Interior; M. Politis in charge of Foreign Affairs; and M. Negropontes, the Minister of Finance. It is to be hoped that the new Cabinet will announce their general policy as soon as it is at all possible to do so, since the intriguers are not inactive, and it is true of Greece, as of other countries, that a Cabinet begins to die from the moment it is born. Fortunately, M. Venizelos is not the man to procrastinate, and now that he is fairly in the saddle he will soon show the world that his grip is as firm as ever.

M. Zaimis, the late Greek Prime Minister, has retired into private life. In no circumstances could the step have been long deferred, but it was no doubt hastened when it became known that not only had M. Zaimis acquiesced in the proclamation which made the young King refer to the brilliant reign of his father, but had virtually drafted it. Indeed, it was quite clear that M. Zaimis would have been a drag on the wheel at Athens, and he might, in certain contingencies, have become a focus of Royalist intrigue and a danger. It is evident that the banishment of a few pro-Germans has not altogether eliminated pro-Germanism from the capital, and there are many agents, both paid and voluntary, of Berlin still working in Greece. Probably they will work unobtrusively to create a more favourable atmosphere, by suggesting that King Constantine will soon return, that things will not mend until he is recalled, and that M. Venizelos will endanger the very existence of Greece by his partiality for the Entente.

The world will await with some interest the attitude of M. Venizelos towards Bulgaria. The attitude of Bulgaria towards him has already been defined: M. Radoslavoff has announced that, "whether M. Venizelos becomes Prime Minister of Greece, or even, perhaps, President of a Greek Republic, Bulgaria will hold fast to the Greek territories which she has occupied with the ex-King Constantine's consent." That declaration is so intentionally provocative that the Greek Prime Minister can hardly ignore it when he makes his general policy clear to the reassembled Greek Chamber.

The Italian Press shows a restrained satisfaction over the return of M. Venizelos to power. Italy was not one of the Protecting Powers, and consequently could have no official share in the dethronement of King Constantine, but she has accepted the new régime as an earnest that Greece in future will not work against the Allies. It

Digitized by Google

is probable that some readjustment, if not of Italian policy in the Levant, at any rate of certain recent phases of it which were rendered necessary by the division of authority in Greece, will be required; but it is satisfactory to notice that the principal Italian journals express themselves in friendly fashion to their neighbours, and the *Messaggero* states its conviction that M. Venizelos will lose no opportunity of strengthening Italy's belief in the need for a cordial and lasting rapprochement between the two countries. It may be expected that the feeling will be reciprocal; it would be a gain to both parties if the secular controversies which have so long persisted were removed by a thorough appreciation of the interests of the two monarchies.

The Mesopotamia Report, on which we comment elsewhere, has made a profound sensation on the public, following as it does on the Dardanelles Report a few weeks ago. It is clear that the Government will be compelled to give time for its discussion in the House of Commons, and it is understood that Lord Hardinge will make a statement as to his action in the House of Lords. There is a rule against personal officials who are peers speaking in the Lords, but in this case the rule will probably be suspended. It would be unwise, however, to let the discussion go too far; if Lord Hardinge and Mr. Austen Chamberlain can defend themselves, there is no logical reason why Sir Beauchamp Duff and Sir John Nixon should not put their case before the public, and then the impugned medical officers, and so *ad infinitum*. On the whole it is probable that the statements and exculpations which will be made will do as little to modify the general public view in regard to the fairness of the Report's judgment and condemnation as in the case of the Dardanelles.

The most painful feature of the Report, on the whole, is its medical section. The revelations as to the condition of the wounded in Mesopotamia would be almost incredible were it not that they have been substantiated by a mass of private evidence from those who themselves suffered in this purgatory of neglect. No condemnation could be too strong for those who permitted this state of things to occur, and the fact that it was not merely permitted, but that those who attempted to expose and remedy the evil were bullied into acquiescence by threats, makes the case worse.

While the Roumanian Parliament is considering the question of internal reform in the sense of improving the position of the peasantry—a boon which has been too long delayed, and whose repeated postponement has not tended to strengthen the country—and the removal of the disabilities of the Jews, it is to be noted that recent disastrous events have not dimmed the enthusiasm of the Roumane population of Austria-Hungary for reunion with their co-nationals. Those of the latter who are serving as volunteers in the Roumanian Army have issued a declaration which states that the dismemberment of Austria-Hungary would merely be the "repairing, in a democratic sense, of a cruel historic injustice," and they proclaim that the grant of autonomy to the Roumanes (and presumably other minority nationalities) in the Dual Monarchy would be entirely illusory. This frank declaration, whose truth cannot be denied, needed making once again, since the public mind of Europe has been somewhat clouded by the recent proceedings in the Austrian Parliament.

The past week has shown that the crisis both in Austria and in Hungary, which arises directly out of the question of the position of the non-German nationalities, is not to be resolved so easily as the young Emperor at one time seemed to hope. The Roumane declaration above quoted is but one sign out of many; the Southern Slavs have not been appeased by the appearance of concession, and from the Viennese standpoint things appear to be going from bad to worse in Poland; while the Czechs are openly irreconcilable. The renewed attempt at Trialism, which was always suspect and opposed by the Germans both in Prussia and Austria, appears to have once again failed.

The Bulgarian Prime Minister seems determined to offer a bold front to those who believe that Bulgaria can be detached from the Central Powers. To the statement by M. Radoslavoff, which we quoted a week ago, may now be added his remark to the *Neue Freie Presse* that "he leaves Vienna very satisfied with his visit, and that Bulgaria and Austria-Hungary are firmly bound together by the Morava Valley, a link which is indispensable to them." Clearly there is no intention either in Vienna or in Sofia of restoring Serbian territory, unless and until compulsion is applied by the Entente.

The news from Russia has been as profuse and as contradictory as usual. While there is some evidence to show that desertions from the front are becoming fewer, a mutiny has occurred in part of the Black Sea Fleet, and there has been a serious anarchist outbreak in Petrograd, a kind of Fort Chabrol on a large scale. Politically the position is as tangled as ever, and the dominant note continues to be separatist. Finland has demanded full independence—a demand that was inevitable in view not merely of the present, but of the past ten years; Georgia, of all places in the world, has followed suit in insisting on autonomy, according to a published resolution of a Congress of National Democrats, and the separatist movement in the Ukraine appears to have attained rather serious proportions.

The Ukraine question in its present form dates from the last decade. It is about ten years ago that the Austrian Government realised that it would once again be sound centralist policy to encourage the Ruthenians. (The last time they were of use was when they were called in to suppress the Polish insurrection sixty years since; from that time until recently they had been treated as contemptuously as Croats or Serbs, or any other "inferior" race by Vienna.) But by encouraging Ruthenian Nationalism it became possible not only to lessen the relative importance of the Galician Poles, but also to stir up trouble in Southern Russia from the Black Sea to Rovno. The Austrian Government must have spent considerable sums of money on this propaganda, since they employed a large number of agents at this work, founded a magazine in Vienna to advocate Ruthenian Nationalism and obviously subsidised it, and even branched out with more remote activities, which included hiring persons to write and lecture on the Ukraine in English a year or so before the war.

However little interest England took in the art or the national ideals of the Ukraine, the Austrian activities were successful up to a certain point, and their fruition is seen in the present separatist movement. The Ruthenes in Russia have had their grievances, the most serious of which has been the banning of their language, which is regarded by the Russians as a mere dialect, and by the Ruthenes as a separate tongue—a dispute in which outsiders are best silent; and Austrian agents have made the most of these things, apparently with the idea of eventually extending Austrian influence through from Lemberg, the western centre of Ruthene culture, to Odessa, its extreme eastern limit. In normal times it should be sufficient to point out to the Ruthenes that their interests are more nearly akin to those of Russia than of Germany or German-Austria; that Vienna is never sincere in her favours to Slavonic races, but only grants them in order to depress the activities of another non-German people, and that as soon as that end is sufficiently obtained the policy is reversed and the privileges withdrawn. But times are anything but normal in Southern Russia, and it is unlikely that the present serious situation will be resolved by calm reasoning, since if that had been applied it would never have arisen at all.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 4.

The King's Birthday.

Yesterday was another Government holiday, this time in celebration of the King's Birthday. Cairo was very much *en fête* throughout the day owing to the fact that it was also the anniversary of the Italian Statuto; and in honour of the double occasion the city was profusely beflagged. During the morning there was a continual stream of callers at the Residency, and amongst the more prominent who were personally received by the High Commissioner were H.E. Said Pasha Zulfikar, who had been sent specially from Alexandria by H.H. the Sultan to convey his august master's good wishes, and the Ministers, with H.E. Hussein Rushdi Pasha at their head. Congratulatory telegrams were addressed by the Sultan, the High Commissioner, and General Murray to his Majesty.

H.H. The Sultan.

I find that a slight inaccuracy crept into the paragraph in my last week's letter concerning the Sultan's arrival in Alexandria. His Highness has officially taken up his residence there for the summer, but he will, I understand, spend but a comparatively small portion of the time in that city. He will merely go down there at certain intervals whenever his presence is officially required, and will remain most of the summer on his estates at Gabares, whither he proceeded the day after his arrival at Alexandria.

An Arab Anniversary.

The King of the Hejaz having ordered the 9th of the month of Shaaban to be kept as a national holiday, in commemoration of the Arab revolt against the Turkish rule in the Hejaz, which was declared on that day last year, his Agent in Cairo held a reception on the 30th ult., the Gregorian equivalent to the Arabic date. Major Cornwallis, representing the High Commissioner, the French and Italian Diplomatic Agents, and the leading Arab notables resident here were amongst the callers, and on this occasion the Shereef's flag was hoisted for the first time in Cairo. The flag consists of three parallel horizontal stripes of black, green, and white, representing the Abbasside, the Rashidite, and the Ommayide Caliphs respectively, with a triangular dark red stripe superimposed next to the flagstaff to represent the Shereefian family.

A Japanese Consul in Egypt.

The Japanese Government has just appointed Mr. A. J. Lowe as its Consul at Alexandria, and for the first time in history the Mikado will have a representative in Egypt. The reason this has never taken place before is that no diplomatic relations have ever existed between the Turkish and Japanese Governments, and that as long as this country remained a vassal state of Turkey it could only recognise representatives of the countries having accredited Agents at Constantinople. It is related that Sultan Abdul Hamid endeavoured many years ago to establish diplomatic relations with the Mikado's Government, but the negotiations fell through, and were never resumed. The appointment of a Japanese Consul in the circumstances indicates that Tokio recognises the changed status of this country, and, moreover, may be taken as an indication of the importance which it attaches to its commercial relations with Egypt. There is, indeed, no doubt that the Land of the Rising Sun is steadily pushing its trade with this country. In 1913, the first year when separate statistics were recorded for Japan in the Egyptian Customs Yearbook, that country's imports into Egypt only totalled £E70,704, whereas in 1916 they had increased to the figure of £E332,632, her purchases in the meantime having progressed from £E716,077 to £E929,562. The Egyptian Post Office Report for 1916 calls attention to the remarkable expansion of the parcel post traffic with Japan, whence no less than 27,168 parcels were received during the year, as compared with only 877 in 1915. Borton Pasha, the Postmaster-General, who, one is glad to see, has at last received recognition in the shape of a C.M.G. for the signal services he has rendered during the war, writes as follows anent this feature:—"The packing, addressing, and date stamping of these parcels is done in a model manner, and points to the fact that the Japanese Post Office takes great care of the parcels it sends abroad, and succeeds in impressing its public with the necessity of making up parcels properly. The contents usually replace articles formerly obtainable from enemy countries, and also point to the accuracy and promptitude of the agents employed in this country in communicating its wants to their principals in Japan."

Educational Reforms.

For some time now there has been a demand for more universal education than has been available hitherto, and H.H. the Sultan has on more than one occasion in his public utterances referred to this great need and to the possibility of introducing free compulsory elementary education. The Ministry of Education, under the very able direction of H.E. Adly Pasha Yeghen, the Minister, and Dr. Douglas Dunlop, the Adviser, has been studying the question; and, being of the opinion that the time has come for the initiation of a more systematic and sustained effort for the improvement and extension of the scope of education of the masses, it has elaborated a scheme by which the whole country might be supplied with efficient schools for the whole juvenile population of both sexes within an interval, which is tentatively fixed at thirty years. A Commission, under the presidency of H.E. Ismail Hassanein Pasha, Under-Secretary for Education, has been appointed for the purpose of examining this scheme and submitting a report thereon, either amending it where it considers necessary or substituting a scheme of its own, if it is of opinion that one based on different lines is preferable. It is very satisfactory that the Ministry should have decided to consider, with a view to its early introduction, an educational extension, which many hold should have been carried into effect long ago. Naturally, nothing is known as to the exact nature of the scheme provisionally drafted by the Ministry and submitted to the Commission; but the constitution of the latter is such as to guarantee that whatever is finally decided upon will be a thoroughly practicable proposition. The labours of the Commission are bound to be of fairly long duration, and it is to be hoped that once it has arrived at a definite conclusion as to the lines along which development may proceed with the greatest prospect of success nothing will be permitted to delay putting the scheme into execution.

The cost of the extension will certainly be heavy; for elementary education, if made compulsory, will have to be to a very great extent, if not entirely, free. It should be possible, however, considerably to increase the revenue of the Ministry of Education, and thus to supply

an appreciable portion of the cost of this universal elementary education by raising all the scholastic fees for secondary, professional, and technical education. Some of the fees have recently been increased, but the majority of them are extremely low compared with other countries. There is no reason why, for example, the Bar and the medical profession should be flooded at the expense of the State with graduates, who must find it exceedingly difficult, and as time goes on increasingly so, to earn an honest living. If young Egyptians insist on having higher education and on taking up liberal and other professions, then they should be made to pay the full cost of the training they receive, and not be permitted—in fact, encouraged—to be such a burden to the State that their less happily situated fellow-countrymen, who by their labours contribute more than any other element of the population to the prosperity of the country, have to be stinted of the purely elementary instruction of which it is generally admitted they are lamentably in need. Social considerations, indeed, demand that a readjustment along the lines mentioned should be introduced at the earliest possible moment.

Sir M. Macdonald's Mission.

Sir Murdoch Macdonald and Colonel E. E. Bernard have just proceeded to London, where they will meet Mr. Bonham Carter, who has already arrived there. The object of their journey is to discuss irrigation developments in Egypt and the Sudan with the authorities at home. Mr. P. M. Tottenham will act for Sir Murdoch Macdonald during his absence.

CAIRO, June 11.

The High Commissioner.

The High Commissioner proceeded to Alexandria for the summer on Thursday last. His Excellency, who was accompanied by Lady Wingate and his staff, travelled down from Cairo by special train, and was accorded an official reception at Alexandria station. A large number of guests were assembled on the platform, the distinguished crowd including H.E. Said Zulfikar Pasha (representing H.H. the Sultan), T.H. Princes Kamal ed-Din and Omar Toussoun, the Ministers, the members of the Municipality, the Judges, and the leading British residents and Egyptian notables. A guard of honour was stationed within and one outside the station, and on the arrival of the train a salute was fired from Kom el-Dik fort. Sir Reginald held an informal reception on the platform, shaking hands with everyone, a proceeding which took the best part of an hour, and then drove off in his car to Ramleh, where the Residency has, as last year, rented the palatial residence of Mme. Emmanuel Zervudachi.

On the King's Birthday the High Commissioner handed to Sir Charles de Rocca Serra the insignia of an Honorary Commander of the Order of St. Michael and St. George, and to Mr. L. G. Roussin and Drs. J. Warnock and W A. Betts that of Companion of the same Order, which were recently conferred on them. The ceremony was attended by the Ministers and H.E. Said Zulfikar Pasha, who had called to convey their congratulations to his Majesty's representative.

Sir Reginald Wingate has been asked by the Committee of the French Red Cross in England to ask the people of Egypt to contribute to its funds on the national fête day, and he has addressed to them through the local Press an eloquent appeal to support this most excellent cause. Egypt has ever contributed generously to all charitable objects which have been brought to the attention of her people, both prior to and since the war, and there is every reason to expect that the present call will meet with a ready response.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

Aims of the Greek Community.

Yet another memorial is to be launched on the "ethnic" question. After the close of the session, or perhaps sooner, the Greek members of the Legislative Council, with the Archbishop and the three Bishops, propose to visit the High Commissioner and to request him to transmit to the British Government a memorial putting forward once more the claims of the Greek community. This document will no doubt contain the arguments which the new situation in Cyprus is held to furnish, and on which so much rhetoric has been expended recently. But the situation appears to render its dispatch decidedly inopportune.

The Legislative Council has continued to sit. Mr. Cade, Commissioner of Nicosia, will introduce a draft Bill which is intended to alter in important respects the existing Field Watchman Laws, and would bring into existence a new body of watchmen belonging to the police. The choice and supervision of the men would be under the Chief Commandant, and they would be paid by the Government. There is a very strong desire for such a change in many parts of the island. At present all the guards are chosen by the villagers, and there are endless disputes and abuses. It is proposed that there should be local option, and that the law should only be applied in villages where a majority of the inhabitants petition the High Commissioner that it may be brought into force. To provide for the payment of the guards, inhabitants of the villages affected would pay ½ per cent. on all produce liable to tithe, 1 piastre for every goat, and ½ piastre for every sheep, and 1 per cent. on property tax. One of the Greek members, Hon. M. Severis, will introduce a resolution to the effect that the Agricultural Department should be thoroughly reorganised and strengthened, on a scientific basis, and in such a manner as to satisfy the manifest needs of a country which depends essentially on its agricultural resources. Motions relating to the Forests and Education will also be proposed by Greek members.

Cypriot Volunteers in the Greek Army.

Lists of Cypriot volunteers of the colony in Egypt who have joined the Venizelist Army of Defence are sent by a committee in Alexandria, of which M. Michel Sinadino is president. Funds are remitted regularly by him for the families of the volunteers resident in Cyprus, and are distributed through the Archbishop and Bishops in the different districts. These lists show that about fifty Cypriots are serving.

General News.

By proclamation of the High Commissioner, all mules and carts are to be requisitioned whenever required, and must be delivered to Mr. P. M. McLaughlan either on hire or sale, the terms to be agreed upon by Mr. McLaughlan. Should agreement not be arrived at, the prices will be fixed by a committee presided over by Mr. J. H. Holmes, president of the District Court of Nicosia.

The leaders of the Greek Church continue their activities. The Holy Synod will probably sit for a week at Larnaca early in June, at the residence of the Bishop of Kition. The Festival of St. Barnabas, founder of the Church in Cyprus, will probably be celebrated this year with much greater ceremony than in the past. The Synod in a body will attend. The Festival is kept annually on June 11.

Abundant rain fell in many parts, including Nicosia, on May 25. Some damage was done by the storms of last week, bridges and culverts being swept away on one of the roads in the north-west of the island.

The new Chief Secretary, Mr. Stevenson, with his family, has arrived at Nicosia.

BRITISH JEWS AND PALESTINE.

A conference of Jews, held in Glasgow on Sunday under the auspices of the Federated Zionist Societies of the city, expressed approval of the steps taken by the Zionist organisation to realise Jewish national aspirations with regard to Palestine. It was agreed that a conference of Jews in the United Kingdom should be forthwith convened to urge upon the British Government the Jewish historic and inalienable claim to Palestine, to deal with general Jewish problems which will arise after the war, and to organise the Jewish community in the United Kingdom upon a representative basis. A public meeting was held in the Palace Theatre in the evening, when letters were read from Lord Rothschild and several other prominent Jews, and resolutions were unanimously adopted protesting against the anti-Zionist manifesto issued by the presidents of the Board of Deputies of the Anglo-Jewish Association, repudiating their authority to speak in the name of Anglo-Jewry and expressing confidence in the Zionist leaders.

THE "YOUNG TURKS" AND THE JEWS.

(From a Correspondent.)

Cairo, June 6, 1917.

The Young Turks, as a shrewd observer once remarked, are determined to squeeze the Empire like a lemon, and hand it over to their successors, bitter and dry. Actual facts have proved this. The life of a country consists of its men, money, and property, and the Young Turks have fully exploited these elements. Such of the former as were deemed unfit for loyal service in the ranks, or as a potential source of trouble, were done away with by massacre, exile, or starvation. But the chief desire of the Young Turks was money. Even when they first entered the war, and could rely more or less on German financial aid, they lusted after money, and the writer remembers with what avidity they conducted the collection of the exoneration tax, and how they permitted the most disgraceful abuse in the requisitioning of stuffs supposed to be needed for the Army. Since then, as German aid has become less free and less reliable, their money-making devices have become more impudent. They have collected the exoneration tax from the same person three or even four times, and have seized private property, after involving the owners in trumped-up charges of treason. In the case of the Armenians they finally discarded the mask of civilised procedure, and let loose the soldiery on what remained of these poor people, so as to appease their demands for arrears of pay. This is an old method of the Turkish Ministry of War for settling soldiers' accounts. Armenians, Greeks, and Syrians have had to pay the toll in life and property. And now the turn of the Jew has come.

The Young Turks, ungrateful as they are, could not but have a soft spot for the Jews. They owed a great deal of their initial success to Jewish aid at Salonika, and some of their leaders are commonly reported to have Jewish blood in their veins. But the German law of necessity overruled such qualms at last; and now the last foreign element in the Empire of the Turk has to feed the Turanian Moloch. A correspondent, who appears to be a Jew himself, and to have a long experience of Palestine under the Turk, even after the latter chose to plunge in the vortex of the world-war, endeavoured to prove that the chief motive of the recent persecution of the Jews was the Turks' need of money, as the Jewish colonies were the last unexploited corners of the country—having thus far received, in addition to protection from the capital, the benevolent attentions of Jemal Pasha. This correspondent relates how the Young Turks, after dispossessing the Christians of all their available gold, turned to the Allied subjects, who are mostly Jews from Russia, and called upon them to waive their nationality, and be honoured with the Ottoman nationality. When these had no other alternative but to consent to this "honour," the Government imposed upon each, even old men and children, the payment of £3 Turkish. With some, even threats were of no avail, and to these the authorities said: "Leave our country, since you are our enemies." But they were not allowed to depart until they had been made to pay the tribute threefold; and as a final remembrance, the authorities allowed the boatmen to charge them 10 frcs. per head, when the recognised tariff is only one franc.

To a great extent this correspondent's diagnosis of this fresh outbreak of Turkish savagery is true; but money is certainly not the only consideration; otherwise, how could we account for the fact that the Bedouin Arabs in the neighbourhood were let loose on the deserted houses of the Jews to loot and plunder? This may be part of a plan to satisfy the Bédawi and win him over at the expense of the Jews; for since the consolidation of the Shereef's kingdom, the majority of the Bedouin Arabs of Syria have been going over to him, and they are only waiting for the fall of Medina to give open expression to their adhesion to the King of the Hejaz, and the other great Emirs of Arabia, such as the powerful Ibn Saoud.

In spite of German denials, and the challenge to appoint a neutral committee to verify matters on the spot, private reports, just to hand, reveal a most revolting state of things. The Turks seem to have been vying with their masters the Huns, and, indeed, to have surpassed them in the systematic devastation of the territories they have to evacuate. It is said that they have laid waste the whole country lying south of the river El A'waj, and within a line running three miles north of Jaffa to the Judean Hills, and that they have driven such of the population, as have escaped massacre and famine, to Galilee. All the archives of the districts along the coast have been transferred to Damascus and Nablus.

Jaffa is said to be now absolutely deserted, and as still as the tomb. Some of the public buildings are said to have been destroyed by fire or dynamite, and all the neighbouring hamlets and villages within a radius of about twelve miles have been reduced to mounds of ashes and ruin.

THE RIVER TIGRIS FROM THE SEA TO BAGHDAD.

At a meeting of the Central Asian Society last Wednesday, Mr. A. Boddam Taylor, F.R.G.S., in an interesting paper, described the River Tigris from the sea to Baghdad. He said that twenty miles outside the entrance to the Shatt el-Arab there was a bar the passage across which in old days was marked by a buoy with a pole bearing a cage. This bar was about four miles across, and the channel was marked by other smaller buoys. To-day, he understood, there was a lightship at the outer buoy, and a better channel had been marked out; but in the old days a captain unfamiliar with the navigation might spend several hours searching for the outer buoy. Once across the bar low flats soon became visible on both sides, and these gave place to banks and cultivation where low embankments kept out the tide. Further still, the banks became more definite, and innumerable creeks ran inland on both sides. From these main creeks others branched off, so that the whole ground was a network of ditches. This was the date-growing region, and the Arabs had a proverb that the date palm could only exist with its roots in the water and its head in the fire—*i.e.*, the sun heat. The limit of ocean navigation was at Busreh. Here transhipment must be made into flat-bottomed river steamers and barges. From Busreh to Kurnah, a poor place at the junction with the Euphrates, the river differed little from what it was below Busreh, except that it was narrower and the banks more pronounced. At Kurnah the river was about 300 yards wide and still fairly deep. Beyond Kurnah the date groves ceased and the marsh region was entered. Here the river narrowed considerably, being in many places not more than 100 yards wide. On both sides vast marshes extended for many miles inland. The district was inhabited by Ma'dan Arabs, who lived by fishing and keeping buffaloes. In habits and appearance they were different from the Bedouin Arabs, and were considered somewhat low down in the social scale, but they were an industrious people. Kalat-Saleh was forty miles from Kurnah and twenty miles further still was Amarah. Hereabouts began the region of the Bedouin Arab. In the desert he was not a cultivator, but lived by his herds, but on the river banks he had gone in for cultivation, his women doing most of the work. He seldom fished or used a boat. His character had been greatly overrated, but he had some good points, such as fondness for his children and extreme respect for his parents.

On nearing Kut-el-Amarah the navigation became more difficult, the river being obstructed by sandbanks, which were constantly altering in shape and position, causing a shifting of the channel. In the upper reaches the river was more winding, and passengers could sometimes walk across the neck of a bend in much less time than it took the steamer to get round. The Ctesiphon bend was a good example; on the voyage up European passengers often landed at the bottom of the bend, and, after a three-mile walk across, had an hour to spare to examine the arch built by Chosroes in A.D. 550. The Dialah River, the scene of severe fighting when the British troops took Baghdad, entered the Tigris about eight miles above Ctesiphon, and about seven miles further, at Gerara, the gardens of Baghdad began. A Baghdad garden was rather an orchard than a garden, abounding in fruit trees, among which, of course, the date palms were most plentiful. The gardens were all watered by irrigation. In old days this was done by means of a churd, but nowadays oil engines and pumps were more used. The population of Baghdad was a very mixed one, consisting of Mohammedans, Jews, Christians, Indians, and Europeans. The Mohammedans consisted partly of Arabs, who were mostly landowners, merchants, shopkeepers, artisans, and labourers, with a percentage of desert Arabs from the outlying districts, and a large proportion of moolahs and seyyids. Then there were Persians, who were mostly merchants, shopkeepers, artisans, and labourers; and Kurds, who were all working people. Of the Turks proper there were not a very large number, but they filled all the important Government posts. There were some 5,000 Jews, all engaged in trade as merchants, shopkeepers, and pedlars, or in certain industries, such as metal-working, embroidery, and tailoring. The Christian population was composed of Tel-kaifis from the Mosul district and Syrians. The Tel-kaifis were a very fine sturdy race of men, devoting themselves largely to work on the river steamers and barges; the Syrians were a mixture from many countries. To these were to be added Armenians and Greeks and also British, French, Germans, and Italians; but the Europeans all told did not number more than 100.

Of the Turkish Government's method of ruling, Mr. Taylor said that it consisted in pitting one tribe against another. The method of collecting taxes was itself calculated to bring about trouble. Suppose that a tax of, say, £100 was to be collected from some sheikh, an official would be sent for it with a guard of soldiers. These would billet themselves upon the tribe until the money was paid. The amount to be recovered would not be merely the £100 tax, but that with an additional 20 per cent. for the Government officials, 10 per cent. for the collector, and presents for the soldiers, who must be fed and kept quiet. Meantime, any small article that the collector might fancy, such as a young colt or a rifle, would have to be given to prevent strained relations. Only when everything had been settled to the satisfaction of the official would he depart with his soldiers.

Mr. Taylor thought it was inconceivable that the country should go back to Turkish misgovernment, but it was impossible also to put it under an Arab, whether from the Hejaz or elsewhere. He thought the inhabitants of the country would one and all accept British rule, and he could see no better solution of the difficulty than for us to administer the country much in the same way as we now do with India.

TANGIER TO TEHERAN.

The young kingdom of The Hejaz, having already won the admiration of Englishmen by its plucky and successful fight against the forces of the Turkish oppressor, has more recently interested us in its issue of postage stamps and the design for its new flag. As for the stamps, I observe that "complete sets, postally used," are advertised quite steadily for sale in the papers; which looks as if the Hejaz Post Office would soon become a revenue-earning department. And Egyptian papers to hand by the last mail describe the new Hejaz flag, which was hoisted in Cairo (apparently for the first time) on May 30, the anniversary of the Arab Revolution. It contained four colours: red, green, black and white. Just how these are disposed I find it a little difficult to understand from the descriptions given; but I think the red (symbolising the Shereef of Mecca) is in a perpendicular stripe, next to the flagstaff; while the three others are horizontal, the black being the uppermost and the white the lowest. Presumably the Abbassides and the Ommeyades are both honoured in this colour scheme.

***

Professor Holland Rose writes to *The Times*:—"Among the questions asked me in the Y.M.C.A. huts none is more common than this—'Is our conduct towards Greece any more justifiable than that of Germany towards Belgium?'" He adds that the answer is, of course, "complete for all who know the facts," and he briefly recapitulates those facts. But he concludes his letter by asking whether it is not time that some steps were taken to set forth the Allied case in a simple and cogent way, so as to refute such slanders. It certainly seems to me that there is still a lot for us to do in the way of presenting our case to the world. But I am not quite sure that a "special course" in the History of the Balkans and the Near East is not called for for the benefit of our own countrymen. Professor Holland Rose's questioners are, I take it, mostly British; and the plain fact is that the Balkans have never had much interest for the average Briton. A few faddists and cranks used to busy themselves with particular aspects of the "Balkan Question," but it took the war to wake the typical Briton up to the fact that the Balkans are *not* a negligible quantity in European politics. In future it is to be hoped the lesson will be borne in mind.

***

A little while ago the *Pall Mall Gazette* published the translation of a letter written by a Turkish officer to his wife, but "captured" on the battlefield in Palestine by a British officer, who has sent it home. The poor, diverted epistle makes rather pitiful reading. The writer appears to be a Turk of the "old" school, for he mentions that he prays daily, and he requests his wife to "call in Meher the magician and see from him what my future holds." The "Young" Turks, we have been informed recently, neglect religion entirely, and I am sure they are all far too "modern" to consult any magician even by deputy. But what interested me chiefly in the letter was the captain's—for he was a "captain in the 13th Turkish Infantry" it seems—estimate of our countrymen. He dreads the destruction of "our lovely Constantinople," and anticipates the houses being burned and "our wives and children put to the sword." And apparently it is the English who are to adopt these Turco-German methods of war—and massacre!

***

For the poor soul writes:—"Nothing but some favour from Allah can prevent it. These English are very persistent, and there is no fear of death for them. They are very cruel. They watch us like wolves in the night, and are upon us like the devil in the day. Oh, why did we join this wicked war? England was very partial to us in the past, and we may therefore expect no mercy from one who is so badly injured." Very cruel! The English soldier cruel? What German has been lying to the anxious captain? But he shows sense in asking why his country joined in the war; and in his recognition of the fact—obliquely expressed—that British patience with the Turk is almost used up.

***

Three weeks ago I referred to the Reuter's message from Petrograd about the "unimportant difference of opinion due to a misunderstanding" that had arisen between Admiral Koltchak and his jolly tars. Now I see that the Commander of the Black Sea Fleet has resigned his command, and that his men have "finally decided" not to arrest him, but to be satisfied with his resignation. Apparently that "difference of opinion" was not quite so "unimportant" after all. And meanwhile the Breslau has been out again. What do the sailors of the Black Sea Fleet think about *that?* It almost looks to me as if there were room for a Duty and Discipline movement in Russia just now. I am not surprised that Admiral Koltchak preferred to throw his sword into the sea rather than surrender it to the mutineers.

***

I hope the new Earl of Medina will never get into trouble with the Arabs over his title. But I should not be surprised if the Germans tried to make capital out of it. They are experts at twisting everything, great or small, to suit their own ends; and here they have at least a name to play with. What do they care that the English title is derived—unless I am greatly mistaken—from a stream, the stream which divides the Isle of Wight into two more or less equal portions?

***

Before the War one could quite safely mention the Mosquito even in the presence of ladies, and the Sandfly was not *tabu*, if anybody desired to speak of such a horrible pest. But I doubt whether it will be safe to talk of these small foes after the War, any more than it will be to speak favourably of the Prussians. In the past comparatively few people really knew what the Mosquito and the Sandfly *could* do when they tried. Now several hundreds of thousands of our soldiers, and not a few of our nurses, have a personal knowlege of the facts, so to say; and the mention of the pests will be sure to evoke an outburst. Mr. Ward Price, I observe, reports that "the most troublesome enemies" of our troops in Thessaly are—not the *Komitajis*—but "the gnats and mosquitoes." That is not at all hard to believe!

CORSAIR.

The aim of Zionism is to create for the Jewish people a home in Palestine secured by public law.

THE ZIONIST REVIEW

THE ORGAN OF THE ENGLISH ZIONIST FEDERATION.

A New Review, dealing with Jewish Interests —Political, Literary, Sociological.

SPECIMEN COPY FREE ON APPLICATION.

THE PRESENT CONDITION OF PAL ESTINE

The annual meeting of the Palestine Exploration Fund was held last week at its office, 2, Hinde Street, Manchester Square, W. The chairman, Mr. Leonard W. King, gave an account of the society's activities during the past year, which have naturally continued to be restricted because of the war, and Mr. Walter Morrison, treasurer of the fund, seconded the resolution adopting the report and accounts. Speaking of the present condition of Palestine, he said that reports from that country told us that the distress there was terrible. On three occasions the Turkish Army had marched through the country to attack Egypt, and that army had no commissariat. There was no telling what would be the result of the war, whether the Jews would go back to Palestine or not. The people now in the country would be extremely glad if we would undertake its rule in the same way as we had done that of Egypt.

The report and accounts were adopted. At a later stage of the meeting the chairman read the following extracts from a letter by Mr. T. H. Baxter, the society's organising secretary:—"I am glad we are receiving a warm response to our appeal, and with definite promises and gifts received the amount of our fund is about £18,000. . . . We have a strong administration committee in Cairo, and we have recently appointed Colonel Phillott, a distinguished British Consul and linguist, to be the managing director of relief work in Palestine and Syria, which work he is taking up in an honorary capacity. There are also other relief funds, which it is hoped, sooner or later, will amalgamate with us. We are taking every precaution to avoid overlapping. You will be interested to hear that the first consignment of clothing and medicine has been sent into the country, and relief is now being given to a large camp of refugees behind our own lines. We realise that when we get into the country there is an enormous work to be faced, the whole population of Syria and Palestine is practically destitute. The latest news reveals an appalling condition of things."

NEW GREEK CABINET.

Under date of June 27, Reuter's Athens correspondent reports that M. Venizelos has formed the following Cabinet:—

M. VENIZELOS.—Prime Minister and Minister of War.
M. REPOULIS.—Interior.
M. TSIRITMOKOS.—Justice.
M. POLITIS.—Foreign Affairs.
ADMIRAL CONDOURIOTIS.—Marine.
M. MICHALACOPOULOS.—Finance.
M. NEGROPONTES.—Agriculture.
M. PAPANASTASIOU.—Communications.
M. DINGAS.—Education.
M. EMBIRKOS.—Food Supplies.
M. SIMOS.—Relief of Refugees.

This list is not yet officially confirmed.

NEAR EAST BOOKSHELF.

GREEK PAPYRI FROM EGYPT.*

Notwithstanding the difficulty in war-time of producing a volume containing some 300 pages of Greek text, the Director of the British Museum has succeeded in publishing Volume V. of the Catalogue of the Greek Papyri in that institution. The editor is Mr. H. J. Bell, M.A., assistant in the Manuscript Department, and it is solely owing to his time being much occupied with Government work that this part of the catalogue is smaller than was Volume IV., for which also he was responsible. The latter volume contained only manuscripts relating to the Early Arabic *régime* in Egypt; the new one gives us a number of documents dating during the Byzantine era. These form part of the great find of papyri at the Mound of Kom-Ishgau. Most of these documents were claimed for the Cairo Museum, but a few may now be found at Florence. All the papers of this series are of the sixth century, and belonged to a resident at Aphrodito named Dioscorus. A full account of his career, as set forth by his family papers, was given by the late M. Jean Maspero in his series of the Byzantine papyri at Cairo. Dioscorus was for a time a notary public at Antinöopolis, and consequently some of the records preserved in the ruins of his house at Kom-Ishgau are of administrative and public character relating to fiscal affairs, especially the collection of the vast variety of taxes which crushed the people under the rule of Constantinople.

When at his home at Aphrodito, also, Dioscorus' documents often concern the revenue officials; for he was continually appealing on behalf of his neighbours, and sometimes of himself, against the unjust demands of the collectors, and of the Pagarchs, the Praeses, and sundry officials who supervised the revenue of the district. The papyri in this volume give valuable information on this subject; but readers who are interested in it must turn to the book itself. Dioscorus appears to have been also a lawyer, and he was selected as arbitrator in several cases of litigation. One of his decisions, and that a lengthy one, is preserved in full, and is interesting for the light it throws upon the legal mind as limited by rules and enactments of Roman law. Leases and deeds, marriage settlements, and contracts, especially the collection of dues, and petitions to the authorities, form the bulk of Dioscorus's *dossier*, which throws a clear light upon the state of civilisation and manners in the Nile Valley at that period.

The catalogue contains another series of papyri, also all derived from the contents of a single muniment room, at Syene or Assouan, in Upper Egypt. This collection is only about a moiety of the manuscripts, the other half having been acquired for Munich. They concern a certain Patermuthuis and his wife Kako. The papyri are fairly well preserved and lengthy, and give us a good idea of affairs within this town upon the Nubian frontier during the latter part of the sixth century. Patermuthuis was an owner of house property, and many of his papers reproduce contracts for sale, or leases, mortgages, and loans. Many of the personages concerned are Jews, and it is probable that Patermuthuis was partly of Hebrew extraction, because many of his countrymen, for family reasons, adopted Egyptian or Greco-Egyptian names. Some of the tenants, or owners, referred to in the papers were also, although Jews, soldiers of the garrison.

Mr. Bell adds to this volume other papyri, from various parts of Egypt, of the Byzantine era. These are mostly of what may be termed the domestic type: letters, receipts, acknowledgment of debt, contracts of partnership, and apprenticing, and accounts of all kinds. These possess no literary interest, but for any future historian or student of the manners, customs and morals of the people of Egypt shortly before the Mohammedan conquest, they will be a mine of wealth.

J. O.

BOOK NOTES.

Mr. T. P. O'Connor, M.P., has written an introduction to M. Bogumil Vosniak's forthcoming work, "A Dying Empire." In this book the author sets out the case for the partitioning of the Austro-Hungarian Empire.

"The Immortal Gamble, and the Part Played in it by H.M.S. Cornwallis" is announced for immediate publication by Messrs. F. and C. Black. The authors are A. T. Stewart, Acting Commander, and C. J. E. Peshall, Chaplain of the gallant ship that fired the first shot in the Dardanelles bombardment.

*"Greek Papyri in the British Museum. Catalogue with Texts. Vol. V." (Price 42s. Sold at the British Museum, and by Longmans, Green, and Co., 39, Paternoster Row, and the Oxford University Press.)

GEORGE ALLEN.

IN MEMORIAM.

By a Friend.

The untimely removal of this thinker and man of affairs from his tireless activities will create a noticeable void. Few men can have been endowed with human interest in greater variety, and probably he has not left a single enemy.

The purpose of the writer is to inquire what were the inborn influences which moulded George Allen's life to the form in which it appeared to the friends of his youth rather than to attempt a study of his achievements or any survey of his influence as a publicist or captain of industry.

It is early yet to form a true appraisement, but to certain characteristic traits it is easy to refer with confidence. In the forefront might perhaps be placed the tenacity he evinced in the maintenance of friendships once established, his finished taste in literature (readily attested by his bookshelves and his exceptional power of quotation), his love of the Poets, his complete detachment from any share in the artificial contentions known as "politics," the almost uncanny spell which lake and landscape in every clime cast over his being; and his habitual breadth of contemplation. A yearning for distance and again more distance seemed to be in his bones, and it dominated not only his treatment of Imperial or national subjects, but even the common exigencies of domestic policy. Everywhere one could detect the influence of this "first cause." The things that were near at hand were faithfully dealt with, but the horizon was the magnet that always drew him on in the increasing quest for a clear view, on a wide perimeter, of final Truth in every form. This typical quality gave both strength and weakness, as may be realised, but, on the whole, it served him well as traveller, student and journalist. Yet, looking back as one may do now, perhaps it is permissible to say that it was apparent—as always in the case of men so endowed—that many ideals thus formed would be incapable of realisation by reason of the passing years; and that as time went on the Soul unconsciously and pathetically pined more and more for a twin-brother with whom all the inevitable ambitions of the life-scheme could be shared and consummated.

When in somewhat failing health George Allen left for India last autumn, the débâcle in Roumania was at hand, for she had just entered the War. Fortunately he lived to witness the turn of the war-tide and our striking successes in the Far and Central East. But he did not live to see his beautiful home again, because by the inscrutable decree of Providence he was pre-destined, just at the time of travail preceding the birth of a new world, to join the great band of those, beloved of the gods, whose deaths in full intellectual prime may perhaps be said to constitute the outstanding civilian tragedy of these dark days.

Friends who would embalm the memory of a lost comrade and fain write the epitaph which best recalls his presence as they knew it, freed from the shackles of environment, are necessarily guided by their own varying estimates of type, character and Soul—the three inter-connected trunk lines of social understanding. And no fair judgment is possible without sympathy, the ripened fruit of knowledge. But with this qualification in view, the writer humbly selects as the epitaph which embodies his own conception, just the one poignant word "Alastor!" If the prototype were supposed to have died young, what after all is fifty-four in these times, and is it necessary to conclude that disillusionment arrives at the same age with all such mortals?

During the last enjoyable ramble amidst sunlit cascades and dancing water-meadows alive with the tumultuous greetings of feathered friends, past "Wild Flowers Dell," then by "Winter Pool" margin and leafy banks, through "Fairy Ring" and beyond to a glade which at a stroke of the diviner's rod was presently to become a new lagoon, the conversation as usual turned upon plans past, plans in being and future projects; and some foreboding that "the night cometh" may well have prompted the sudden inquiry: "I often wonder," he said, "whether I shall live to see these things grow up?" Perhaps at that instant,

> "When on the threshold of the green recess
> The wanderer's footsteps fell, he knew that Death
> Was on him. Yet a little, ere it fled,
> Did he resign his high and holy Soul
> To images of the majestic past
> That paused within his passive being now
> Like winds that bear sweet music, when they breathe
> Through some dim latticed chamber."

Everywhere in those enchanted dells, now in their glory, his Spirit will seem to linger, smiling upon Nature in her constant, changing loveliness, fresh and green for all the winds that blow; until in the fulness of time they with whom he lived and moved pass also to the Great Beyond.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. June.	1917. June.		1335. Ramadan	5677. Tamuz
29	16	Friday	9	9
30	17	Saturday.....	10	10
July.				
1	18	Sunday	11	11
2	19	Monday	12	12
3	20	Tuesday	13	13
4	21	Wednesday	14	14
5	22	Thursday	15	15

To-morrow is the birthday of Prince Danilo of Montenegro, who was born in 1871 at Cettinge. The Prince is the third child of King Nicholas, Princess Militza and Princess Anastasia having been born before him.

Monday is the birthday of Princess George of Greece, who before her marriage was Princess Marie of the Bonaparte family, and who was born at St. Cloud in 1882.

Monday is also the birthday of Prince Olaf of Norway.

Mr. Abram I. Elkus, formerly United States Ambassador in Constantinople, left London for Paris last week.

Colonel Sir Murdoch Macdonald, K.C.M.G., C.B., Adviser of Public Works to the Egyptian and Sudan Governments, was entertained to a complimentary dinner in the Hotel Russell, London, on Wednesday night, by a gathering of gentlemen from his native county, Inverness-shire. Mr. Ian Macpherson, Under-Secretary for War, presided, and the company included also Sir Arthur Webb, K.C.M.G., Sir Maurice Fitzmaurice, C.M.G., Mr. D. P. Macgillivray, Mr. T. O. Belshaw, and others with whom the guest of the evening has been associated in Egypt.

Sir William Lindley, M.Inst.C.E., is to be presented with the Freedom of the City of Baku, in recognition of his work in designing and carrying out the city's water supply. Recently finished, these works bring water to Baku from a place in the mountains of the Caucasus about 112 miles distant.

Colonel A. Mola, who has been appointed Italian Military Attaché in London, has been through the Italian campaign in the Trentino and in Albania.

A marriage has been arranged, and will shortly take place, between Major Cecil Hunter Little, D.S.O., the Somerset Light Infantry, attached Egyptian Army, only son of Colonel W. Hunter Little, of Harestock Lodge, Winchester, and Mrs. Hunter Little, and Dorothea Katharine, second daughter of Samuel Henry Romilly, of Huntington Park, Herefordshire, and 56, Eccleston Square, and the late Lady Arabella Romilly.

Our Cairo Correspondent writes (June 4): Cable advices have been received to the effect that Major C. E. G. Blunt, D.S.O., retired pay, Reserve of Officers, known to Anglo-Egyptians as Lewa E. G. Blunt Pasha, has been promoted Colonel in the British Army. Blunt Pasha has been for many years Director of Supplies to the Egyptian Army, and since the war he has assumed also the duties of Acting Director of Stores; in addition, he was, first, member, and subsequently became—and is still—President of the Egyptian Government Supplies Commission, which has been looking after the supplies of the country during the war. In each of these capacities he has rendered yeoman service to the British and Egyptian Governments, and his promotion, following his recent decoration with the D.S.O., has given real pleasure to his many friends, who regard it as richly merited.

The Countess of Bessborough spoke at a meeting at Bath Guildhall on Monday afternoon in support of the war work of the Y.M.C.A.

Crown Prince Alexander of Serbia has been presented by the Jugo-Slav Committee with a shield designed by M. Joam Mestrovitch. In reporting the presentation, Reuter's Corfu correspondent states that Dr. Trumlitch, president of the committee, said:—"We earnestly beg your Royal Highness to accept our modest gift and keep it as a testimony of the inflexible will of the whole Jugo-Slav people to be liberated during this war from all foreign domination so as to be able to greet your Royal Highness one day as Constitutional King of all the Serbs, Croats, and Slovenes."

"Sir Henry McMahon, K.C.I.E., who until recently held the post of High Commissioner for Egypt, has already paid several visits to the Foreign Office since his return to London," says a writer in the *Pall Mall Gazette*. "I believe that he is destined to become the Permanent Under-Secretary at the Foreign Office if and when Lord Hardinge succeeds Lord Bertie at the Paris Embassy. Practically the whole of Sir Henry's career has been spent in India, where his last public appointment was as British Plenipotentiary for the Treaty regarding Tibet between England, China, and the Hermit Country."

In a message despatched from Jassy on May 28 *The Times* correspondent with the Roumanian Army reports:—General Ballard, the new representative of the British Army in Roumania, arrived last night to take the place of Brigadier-General Thomson. The departure of General Thomson is unanimously regretted, as he had won the sympathy of all circles during the two years in which he acted as military attaché. General Pool, who has been on a special mission to the Roumanian front, has received from King Ferdinand the Order of the Star of Roumania.

A Reuter's message from Tunis reports that on June 20, at the Beylical Palace at La Marsa, near Tunis, the British Consul-General, Mr. Berkeley, on behalf of the King, invested the Bey, Mohammed en Nasir Pasha, with the Insignia of the Grand Cross of the Order of St. Michael and St. George. The ceremony, which was a brilliant affair, took place in the presence of the whole Beylical Family, the French Plenipotentiary, and many native dignitaries. The British representative and the Vice-Consul, Mr. Charles Goodwin, who carried the Insignia, were conveyed in State from the Consulate to the Palace in a Beylical coach, accompanied by a guard of native troops. The Bey expressed his intense appreciation of the solidarity of those bonds of friendship and union existing between France and England to which the Order bestowed on him testified significantly, and he desired his profound gratitude to be conveyed to King George.

The following Army Order has been published, says the *Egyptian Gazette*:—On the reversion of El Lewa P. J. V. Kelly Pasha, D.S.O., Officer Commanding District, and Governor of Darfur, to the British Army, his Excellency the Sirdar wishes to place on record his sincere appreciation of the excellent services rendered by him during his ten years in the Egyptian Army.

Kelly Pasha took part in the Jebel Nyima operations in 1908, the operations in Southern Kordofan in 1910, and has held the important post of Officer Commanding Cavalry and Mounted Infantry since April, 1913, with conspicuous success.

In 1916 Kelly Pasha commanded with complete success the Sudan Western Frontier Force operating against the late Sultan Ali Dinar of Darfur, and his capable leadership resulted in the re-occupation of that province. On behalf of all ranks, his Excellency wishes El Lewa Kelly Pasha every success in his future career.

The King has been pleased to grant permission to Temporary Sec. Lieutenant David Halyburton Low, General List, to wear the Insignia of the Fourth Class of the Order of Saint Sava, conferred upon him by the King of Serbia, in recognition of services rendered by him as Lecturer in English Language and Literature at the University of Belgrade.

It is announced that H.M. the King of Roumania has conferred the following decorations. The King has given unrestricted permission in all cases to wear the decorations mentioned:—

ORDER OF THE STAR OF ROUMANIA (WITH SWORDS).

COMMANDER.

Bt. Col. B. R. James, Genl. Stff., War Office.
Bt. Col. B. T. Buckley, Genl. Stff., War Office.
Temp. Lt.-Col. Sir M. Sykes, Bt., M.P., Genl. Stff., War Office.
Bt. Lt.-Col. A. H. H. Wilson, D.S.O., Genl. Hdqrs., France.

OFFICER.

Maj. R. G. T. Baker-Carr, M.V.O., Genl. Stff., War Office.
Bt. Maj. G. P. Tharp, Genl. Stff., War Office.
Maj. J. K. N. Versturme-Bunbury, Genl. Stff., War Office.

ORDER OF THE CROWN OF ROUMANIA (WITH SWORDS).

OFFICER.

Capt. H. G. Comber, Unattd. List (T.F.).
Lt. (temp. Capt.) H. W. V. Temperley, Genl. Stff., War Office.
Capt. W. Ll. Jones, D.S.O., Genl. Stff., War Office.
Lt. (temp. Capt.) B. H. Robertson, Genl. Stff., War Office.

KNIGHT.

Temp. Capt. C. E. Montague, Spec. List.
Temp. Lt. R. E. de Trafford, Spec. List.

The following decorations have been conferred by the King of Serbia:—

ORDER OF SAINT SAVA.

OFFICER.

Capt. Hubert Stansbury, R.N.

ORDER OF KARA GEORGE.

4TH CLASS (WITH SWORDS).

Lieut. Edward H. Young, M.P., R.N.V.R.

The King has given unrestricted permission to the officers concerned to wear the decorations in question.

Before a meeting of the Royal Asiatic Society, to be held on Tuesday, July 3, at four o'clock, Mr. F. Legge, F.S.A., will read a paper on "The Most Ancient Goddess Cybele." Lord Reay will preside.

Owing to the difficulty of getting parcels and goods to the Indian prisoners of war interned in Asia Minor, the Indian Soldiers' Fund in the course of the last month has sent £2,200 through the Comité International de la Croix Rouge at Geneva and the Netherlands Minister at Constantinople for distribution amongst the Indian prisoners in the different camps in Asia Minor.

APPOINTMENTS, PROMOTIONS, ETC.

Lieutenant-Colonel Sir Percy Z. Cox, Indian Army, has been granted the rank of Hon. Major-General while specially employed.

Miralai A. W. Jennings Bramly Bey, D.S.O., of the Intelligence Staff, has been struck off the strength of the Egyptian Army and transferred to the Ministry of the Interior. Bramly Bey, it will be recalled, has been appointed as Director of the Egyptian School of Police in succession to Miralai A. C. Parker Bey, who has been appointed as Governor of the Eastern Frontier Province.

Bimbashi C. W. W. Sandes, Deputy Assistant Adjutant General, Egyptian Army, has been promoted to the rank of Kaimakam.

Bimbashi W. St. J. F. McCartenay, of the Veterinary Corps, has been transferred to the Sudan Veterinary Department. Bimbashi McCartenay recently passed the Intermediate Examination in Arabic successfully.

Captain Robert C. Carlyle, M.B., of the Royal Army Medical Corps, has been seconded for service with the Egyptian Army Medical Corps and granted the rank of Bimbashi.

OBITUARY.

GENERAL R. G. BROADWOOD.

Lieutenant-General Robert George Broadwood, C.B., died on June 21 of wounds received in action. He was youngest son of the late Thomas Broadwood, of Holmbush, Sussex, and was fifty-five years of age. He retired in 1913, but on the outbreak of war was re-employed, and in September, 1914, was gazetted to the command of a division. He was colonel of the 12th Lancers (1909) and a graduate of the Staff College, and was in the special list of cavalry officers selected for reward for distinguished and meritorious service. He entered the 12th Lancers in January, 1881, and his rank of lieutenant-general was gazetted in March, 1912. General Broadwood saw service with the Expedition to Dongola in 1896 (mention in despatches, brevet of lieutenant-colonel, and the two medals with clasps), and with the Nile Expeditions of 1897 and 1898. In 1897 he fought in the action of Abu Hamed and took part in the occupation of Berber, and in 1898 he was present at the battle of the Atbara and Omdurman. For his services on those occasions he had four clasps to the Egyptian medal, the British medal, and the 4th Class Osmanieh, and in addition was twice mentioned in despatches. He also received the brevet of colonel. In the South African War he commanded the 2nd Regiment, South African Light Horse, and took part in all the earlier operations, including the affair at Sanna's Post, where he was held, perhaps unduly, responsible for an unfortunate surprise. He was twice mentioned in despatches, and in 1900 was made a Commander of the Bath. Later, he commanded troops in Natal and in South China, and for two years was Brigadier-General Commanding the Orange River Colony District.

The Imperial Ottoman Bank has received notice of the death in action, on June 7, of Private W. J. Kick, attached to the Royal Fusiliers. He was a messenger in the London office.

The funeral of the late Mr. George B. Allen took place on Friday, June 22. The first part of the service, which was marked by impressive simplicity, was held at St. Peter's Church, Eaton Square. Psalm xc. ("Lord, Thou hast been our refuge") was chanted, and after the lesson from the fifteenth chapter of the First Epistle to the Corinthians had been read, the hymn, "There is a land of pure delight," was sung. The service concluded with the singing of the hymn, "On the Resurrection Morning."

Among those who were present at the church were Lady Allen, Mr. and Mrs. C. J. Sturdy, Mrs. Mervyn Williams, Mr. and the Hon. Mrs. Edward Sturdy, Mr. W. A. Sturdy, Miss Kate Allen, Mr. H. Allen, Mr. and Mrs. Archibald Allen, Sir Montagu and Lady Turner, Mrs. Arthur Turner, Mr. and Mrs. Alweyne Turner, Colonel F. Cooper-Turner, Mrs. Fordham, Mr. George Berney, Mr. and Mrs. Douglas Jones, Mrs. Probst, Miss L. Deacon, Colonel Sir James Dunlop-Smith (representing the Secretary of State for India), Sir Thomas Holderness, Sir Sidney and Lady Colvin, Sir George Sutherland, Sir Hugh Barnes, Major-General Bond, Sir John O. Miller, Colonel Sir John Ottley, General Sir Alfred Gaselee, Sir James and Lady Walker, Sir Lionel and Lady Jacob, Sir Henry and Lady Ledgard, Sir William Cooper, Sir Alexander McRobert, Sir Arthur Hirtzel, Sir Stephen and Lady Finney and Captain Finney, the Hon. Mrs. Holland-Hibbert, Sir Lionel Abrahams, Lady Newmarch, Lady Grogan, Mr. and Mrs. Rudyard Kipling, Mr. and Mrs. George Chesney, Mr. and Mrs. George Ross, Mr. and Mrs. F. H. Skrine, Mr. and Mrs. H. V. Geere, Mrs. John Campbell, Mrs. Henry Rattigan, Mrs. Leonard Messel, Messrs. Lindsey Eric Smith, Herbert Baker, E. R. Davson, C. W. Dawson, G. E. Cockell, E. A. Neville, J. M. Bee, Montague Bell, O. G. Herford, J. Peters, A. Brown, C. S. Corfield, R. Gray, A. Parkyn, G. H. Ebbs, C. Gill, W. Coldstream, P. S. Taylor, F. E. Roe, and C. P. Roberts. Sir Henry Burt and Sir Charles Stewart-Wilson were unavoidably prevented from being present at the service. After the service, the relatives and many friends and the Free Chase household were present at the burial in Shirley Cemetery.

DOMESTIC ANNOUNCEMENTS.

MARRIAGES.

ROSKILL—ZAMFTOVA.—On the 21st inst., at the Mairie, Marseilles, Wilfrid, son of Mr. and Mrs. Charles Roskill, of Alderley Edge, Cheshire, to Vera, youngest daughter of the late Dr. Zamftova, of Nish, Serbia, and of Mme. Zamftova.

MONTAGU—SANDERSON.—On June 24, at Mustapha Garrison Church, Alexandria, Captain Cuthbert Montagu, Topographical Section, G.H.Q., Egypt, third son of Robert Cromie Montagu, J.P., of Cromore, Co. Londonderry, to Rosa Benedicta Sanderson, V.A.D., youngest daughter of the late Rev. John Sanderson, rector of Winchfield, Hants.

DEATH.

STRETCH.—On May 26, at Corfu, after a short illness, John Henry Stretch, aged fifty years.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

GLYMENOPOULO, RAMLEH.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

MESOPOTAMIA.

When, after the initial successes, disaster overtook the Mesopotamia Expedition, it was evident that there had been culpable mismanagement of the campaign, and the lifting of the veil to a slight extent on the complete inadequacy of the medical arrangements suggested that the responsibility reached back to the initial conception as well as to the conduct of the operations. In the face, therefore, of the actual course of events the Commission appointed to inquire into the campaign was bound to have a distressing task to fulfil. It has performed it impartially and thoroughly, with the result that its report in some respects provides even sadder reading than the first report of the Dardanelles Commission. As in the case of the latter document, the public learns that the real cause of failure was the existence in the Government of the country of a state of affairs more radically unsound than would have been credited without the damning evidence of the Commissioners' findings. It was not so much the shortcomings of this or that military officer as the ineptitude of those in charge of the destinies of the nation at the time, who were unable to rise to the level of their responsibilities or even to recognize that the system to which they clung so tenaciously was inadequate to the demands made upon it. With small men it is impossible to achieve great things, and the nation has gradually been forced to the conclusion that the men who kept in their hands the conduct of the war in its earlier stages were wholly unequal to the task of directing the affairs of the British Empire in a time of stress. It calls for no high qualities of statesmanship to realize that unity of direction is essential for the successful waging of war; but the Prime Minister of the day and those immediately associated with him in the War Committee of the Cabinet were content to initiate a campaign for which they made the India Government responsible against its will, while reserving to themselves the right to dictate political considerations as a determining factor for the military authorities on the spot; at the same time they took no steps to inquire whether the India Government had so far overcome its reluctance as to throw itself whole-heartedly into the conduct of the campaign. The Commission enters minutely into the degrees of responsibility attaching to the various authorities; but in the opinion of the public at large the crime of which all those named were collectively and individually guilty was undisguisable ignorance and undisguised indifference where the lives of British troops were at stake. It is a crime for which none of them ought to be forgiven. Disciplinary measures can be and have been enforced against military offenders; and the people of Great Britain ought to see to it that equal punishment is meted out to offending politicians by the termination not only of their Ministerial but also of their Parliamentary careers.

As with the Gallipoli Expedition, the initial blunder of the British Government was the policy of leaving the war to run itself or to be run by any individual Minister or official who took sufficient interest in it to make a suggestion. A War Cabinet worthy of the name would have envisaged the struggle as a whole, and would not have had to wait for proposals to be sprung upon it. In this instance the idea of a Mesopotamia campaign originated with Sir Edmund Barrow, Military Secretary of the India Office, who was clear-sighted enough to see the striking advantages that would accrue from the occupation of Busreh. The Commission holds that "the expedition to Mesopotamia was a justifiable military enterprise," and if we were tempted to cavil with any of its findings it would be with the prominence given to General Barrow's name in the enumeration setting forth the order and sequence of responsibility. He is cited as making the eminently sound recommendation that the expedition should "sit tight" at Kut and consolidate its control of the Busreh Vilayet—a piece of advice which if followed would have obviated the horrors that accompanied its rejection—and it is not apparent from the evidence adduced that his position at the India Office enabled him to exercise any practical influence over the details of the campaign. He was, however, part of a system in which no one was expected to have the courage of his convictions, and an official's value was assessed according to his readiness to follow the line of least resistance. Mr. Austen Chamberlain, Lord Hardinge, even Sir Beauchamp Duff showed at one time or another an instinctive appreciation of the right course to adopt; but in turn they allowed themselves to be overruled by a man who seems to have subordinated his military judgment to the glamour of being hailed the conqueror of Baghdad.

If the Commissioners are held to have done their work well, it is for the people of Great Britain to endorse their findings by practical measures. Fortunately the condition of things which they describe no longer obtains in Mesopotamia. "No more substantial results or more solid victories have been achieved than those won by the gallantry of the British and Indian armies on the stricken plains of Mesopotamia." In the military sphere past mistakes have been corrected, and particularly in regard to the medical service, for which the severest strictures of the Commission were justly reserved. We have indicated how the political errors can be atoned for, and the people must remember that due punishment can only be inflicted at their hands. There remains, however, one section of the Report which is likely to be overlooked, but which is of considerable value for the future of Mesopotamia. When war broke out in 1914, the Commissioners point out, Asia was divided between the Imperial and Indian War Departments. "It is inadvisable to give the details of this delimitation; it will be sufficient for our immediate purpose to state that a line was drawn through Arabia from Akaba to Busreh, all north of that line belonging to Whitehall, all south to Simla. Busreh was thus given to India, Mesopotamia to Great Britain—a somewhat confused division of responsibility, inasmuch as Busreh must inevitably become the base of any operations in Mesopotamia from the Persian Gulf." This confusion of control is likely to be perpetuated after the war, unless definite steps are taken under the stimulus of the Commission's findings to put an end to it. We may expect to find the Foreign Office, the Government of India and, it may be, the Colonial Office all claiming "interests" in Mesopotamia. It matters little under whose ægis the Middle East falls, provided there is no clashing between two Government departments, no overlapping, and no falling between two stools. If jurisdiction be given to the Foreign Office, there will, no doubt, be occasion for the Government of India to concern itself with certain particulars of the administration; but there need be no conflict of authority. What is required is that a final decision should be reached without delay, so that arrangements can be made for the future, and officials in Mesopotamia as well as Consuls and other representatives in Persia may know from the outset the system under which they will be expected to work.

THE RED CROSS IN MESOPOTAMIA.

The following is the second portion of Major Moens' report, which we are permitted to publish by the kindness of the Red Cross. The first portion of the report appeared in THE NEAR EAST *of June 22.*

Stores.

The method of acquainting the medical authorities with a source of supply hitherto unobtainable was as follows:—A revised list of available Red Cross comforts—comprising at the time of writing this report over 200 items, from a toothpick to a hospital ship—was sent every month to the Surgeon-General, to the D.D.M.S. and to the A.D.M.S. of each division, and on the lines of communication. Copies of the list were sent by these medical officers to the O.C. of every medical unit in their sphere of control. The same method was employed at Busreh as at Amarah, with the result that every officer commanding a medical unit in Mesopotamia is kept continuously in touch with the possibilities of the Red Cross as a universal provider of comforts for the sick and wounded under his charge.

As soon as a requisition is received at the depot, if it is a local one, the goods are loosely packed and taken away by the hospital staff. If it is an up-river requisition, it is carefully packed and forwarded on the first available "P" boat bound for Sheikh Saad. At Sheikh Saad it is unloaded and put into the Red Cross "dump," and thence forwarded by the Embarkation Medical Officer to its destination, formerly by A.T. carts, but now by light railway for units on the right bank and by "T" boat, or small tug, for units on the left bank.

In all 1,478 requisitions on the Amarah depot have been complied with.

On several occasions the Red Cross, by keeping a fair reserve stock both at Busreh and at Amarah of goods most in demand, has been able to bridge over a deficiency in Government medical comforts—a deficiency in most cases temporary and local only—owing, perhaps, to the stranding of a "P" boat in the shallows of the Tigris, with the consequent blocking of the only available passage for other boats.

Red Cross Motor Launches.

Of all work done in Mesopotamia by the Order of St. John and Red Cross that of the river launches has been unique, inasmuch as they alone have occupied this field of activity; and it is no exaggeration to say that without this organisation the medical service would have been seriously handicapped.

The supply of motor launches for carrying sick and wounded, hospital personnel, and Red Cross stores represents the first phase of Red Cross work in Mesopotamia. In the autumn of 1915 two launches, the Alouette and the Olinda, were sent out; and in September of the same year, in response to a cable from General Nixon, a larger boat, the Wessex, capable of carrying as many as sixty sitting patients, was purchased. Owing to delays in shipment she did not arrive at Busreh until the end of December, and was put into commission immediately after arrival. At that time there were no other motor launches available in the country for the purpose, and for weeks on end the Wessex was running almost continuously day and night. She has carried more than 15,000 sick and wounded, and is still in service carrying Red Cross stores, of which she has already transported more than 200 tons, sometimes over long distances, such as from Busreh to Amarah (150 miles) and from Amarah to Arab Village (145 miles).

After the Wessex had been despatched and further launches had been asked for by the Army Commander I.E.F. "D," special launches were constructed, designed for the specific purpose of carrying sick and wounded, whether sitting or stretcher cases. In all there are at present in Mesopotamia thirty-four launches provided by the British Red Cross Society; and it may fairly be said that all transport of sick and wounded that can be effected by motor launches is done by these thirty-four boats, supplemented by the additional launches provided by the Indian branch of the Order of St. John.

The boats have been in service at various points along the line of river communications from the base at Busreh up to the front—a distance of about 300 miles at the end of the period covered by the report. The work varies according to the locality. At Busreh, Amarah, and Sheikh Saad the launches are employed for the discharging of the sick and wounded from the River Sick Convoy steamers to hospitals, the distributing of them from hospital to hospital according to circumstances, the visiting of marching posts and Post Hospital up and down river and for the evacuation of patients, involving sometimes journeys of over 100 miles. At the front the launches have been utilised for carrying the sick and wounded from the advanced dressing stations just behind the trenches to the nearest field ambulances.

In addition to this work, certain small launches have been detailed for the conveyance of medical officers who sometimes have to cover long distances in the course of their duties in districts where the only means of conveyance is by water. Besides this, Red Cross stores are transported from the depots to their destination by motor launches, and in this connection mention should be made of the Silver Thimble 7, located at Busreh, which up to the end of January, 1917, had carried over 120 tons of stores.

The total number of sick and wounded carried by British Red Cross launches since the first boat arrived, up to January 31, 1917, was approximately 80,000, and the general utility of the boats can be gauged from the fact that the transport of sick and wounded, both main and subsidiary, is almost entirely by water. It should be added that in no part of the river is navigation easy, owing to the strong current, the narrow channels, and the shifting sandbanks; whilst in some parts it is exceptionally difficult. Moreover, the launches make very long trips—up to 250 miles under their own power, being almost the only vessels of their size to do so; and in view of these circumstances the proportion of casualties must be considered low.

All repairs to the boats have been effected by our own repairing engineers, and the erection of a repair shop and slipway in Khandak Creek is now a *fait accompli*. All the launches are manned by Red Cross drivers and engineers, and are attached for duty to the medical authorities.

Two or three different types of launch are in service, according to the work for which they are intended; but the majority are 40-ft. launches, with a speed of 8 to 10 knots, and one engine of from 20 to 40 h.p. fitted right forward in a cabin just large enough to provide sleeping berths for the two drivers, who, as a rule, sleep in their boats. The rest of the launch is open. Ordinarily the accommodation is for 36 sitting cases or 8 stretcher and 16 sitting cases; though as many as 56 sitting cases have actually been carried in one trip. Substantial double awnings and side curtains protect the patients from the terrific heat of the sun's rays in the summer months.

On many occasions the Red Cross launches have been instrumental in preventing what would otherwise have resulted in serious breakdowns in transport. In July and August of 1916 the Florence Nightingale—a Scottish Red Cross boat—was evacuating the sick from a certain area in Amarah, starting at 6 a.m. and often not finishing work until long after midnight.

A British Red Cross river hospital ship for service on the Tigris is now nearing completion in Bombay, and is expected to be in commission next May. She will carry on board an exceptionally large ice-making machine plant, which alone will entitle her to her place in the sun, where ice is worth its weight in gold.

The Indian Order of St. John has also readily responded to the great demand for launches on the Tigris for the evacuation of sick and wounded, and has actually nine launches and one hospital ship in commission—doing yeoman service for the Red Cross in Mesopotamia.

To the British Red Cross Society and Order of St. John will always accrue the honour of having contributed in measure incalculable to the rescue and relief of the sick and wounded during the Mesopotamian Campaign.

(Signed) S.M. MOENS (Major),
Acting Red Cross Commissioner, Mesopotamia.

SERBIAN TREASON TRIAL.

Reuter's Salonika correspondent reports (June 22):—The Serbian Superior Military Tribunal, acting as a Court of Cassation, to-day pronounced final judgment in the case in which members of a Serbian secret society, known as the "Black Hand," were charged with conspiracy to overthrow the present political *régime* of Serbia by the substitution of an oligarchic form of Government on the ground that the Serbian people are as yet unripe for the liberties which they at present enjoy. The Court confirmed the sentence of death passed upon Colonels Dragutin, Dimitrievitch, Milan, Milovanovitch, Radaych, Lasitch, and Vladimir Tutsovitch, and Lieutenant-Colonel Vemitch, Major Vulovitch, and the Austro-Hungarian Volunteer Malobabitch, while it commuted to twenty years' imprisonment the death sentence on Colonel Cheda Popovitch and the Vice-Consul M. Radencovitch.

The sentence of fifteen years' imprisonment imposed on the retired General Damian Popovitch has been increased to twenty years, whilst a similar sentence of fifteen years' imprisonment, given in the case of the Bosnian "Austro-Hungarian" subject named Mohammed Mehmed Rashitch, was confirmed by the Court.

The Rumanian Mission to the United States arrived at a Pacific Coast port last Friday.

According to a telegram from Vienna, the *Neues Wiener Tageblatt* announces that Count Clam-Martinitz is returning to military service and has been appointed a colonel. It is understood that he will be made Governor-General of Montenegro and will reside at Cettinge.

THE MESOPOTAMIA REPORT.

The report of the Commission appointed by Parliament in August, 1916, to inquire into the operations in Mesopotamia was published on Tuesday. The members of the Commission were:—Lord George Hamilton (chairman), the Earl of Donoughmore, Lord Hugh Cecil, M.P., Sir Archibald Williamson, M.P., Mr. John Hodge, M.P., Commander J. C. Wedgwood, M.P., Admiral Sir Cyprian Bridge, and General Sir Neville Lyttelton.

The history of the expedition is fully considered in the Blue Book, which consists of 200 pages. We give below the findings and conclusions of the Commission. Commander Wedgwood makes a separate report, in which he attributes the blame almost entirely to Lord Hardinge and Sir Beauchamp Duff.

The Commissioners say:—

The expedition to Mesopotamia was a justifiable military enterprise, but one of such a character that it required during its inception and development the most careful watching and preparation.

The division of responsibility between the India Office and the Indian Government, the former undertaking policy and the latter the management of the expedition, was in the circumstances unworkable. The Secretary of State, who controlled the policy, did not have cognisance of the capacity of the expedition to carry out the policy. The Indian Government, who managed the expedition, did not accompany developments of policy with the necessary preparations, even when they themselves proposed those developments.

The scope of the objective of the expedition was never sufficiently defined in advance so as to make each successive move part of a well-thought-out and matured plan.

The attempt in India entirely to control and regulate the wants of the expedition from Simla was an administrative mistake, and representatives of the Headquarters Staff with wide powers should from the first have been stationed at Bombay, the port of embarkation and disembarkation to and from Mesopotamia.

The Commander-in-Chief himself or his representatives should from time to time have visited Mesopotamia with a view to keeping the Headquarters Staff in touch with the needs of the expedition. In consequence of such want of touch the military authorities at Simla did not appreciate or realise the difficulties of campaigning in Mesopotamia, and from such lack of knowledge failed to make sufficient provision for surmounting the difficulties and drawbacks.

Military Errors.

The advance to Baghdad under the conditions existing in October, 1915, was an offensive movement based upon political and military miscalculations, and attempted with tired and insufficient forces and inadequate preparation. It resulted in the surrender of more than a division of our finest fighting troops, and the casualties incurred in the ineffective attempts to relieve Kut amounted to some 23,000 men.

The loss of prestige associated with these military failures was less than might have been anticipated owing to the deep impression made throughout and beyond the localities where the combats occurred by the splendid fighting power of the British and Indian forces engaged.

Various authorities and high officials are connected with the sanction given to this untoward advance. Each and all in our judgment, according to their relative and respective positions, must be made responsible for the errors in judgment to which they were parties and which formed the basis of their advice or orders.

Sir John Nixon.

The weightiest share of responsibility lies with Sir John Nixon, whose confident optimism was the main cause of the decision to advance.

The other persons responsible were:—

In India.—The Viceroy, Lord Hardinge, and the Commander-in-Chief, Sir Beauchamp Duff.

In England.—The Military Secretary of the India Office, Sir Edmund Barrow, the Secretary of State for India, Mr. Austen Chamberlain, and the War Committee of the Cabinet.

We put these names in the order and sequence of responsibility. The expert advisers of the Government who were consulted also approved the advance and are responsible for their advice, but the papers submitted to us suggest that the approval of the naval and military experts was reluctant. It is, however, notable that the experts unanimously anticipated no difficulty in the advance on Baghdad, but only in holding it.

We do not attach any share in the responsibility for the decision to advance to Baghdad to the Councils of the Secretary of State for India and the Viceroy. The Secretary of State for India only gave his assent to the advance after he had received an assurance from the General on the spot that he had an available force for his purpose.

Inadequate Supplies.

Dealing with the subject of supplies, equipment, reinforcements, etc., the Commission say:—The general armament and equipment were on a scale intended for an Indian frontier expedition, were not up to the standard of modern European warfare, and were quite insufficient to meet the needs of the Mesopotamia Expedition.

These shortcomings were the natural result of the policy of indiscriminate retrenchment pursued for some years before the war by the Indian Government under instructions from the Home Government by which the Army was to be prepared and maintained for frontier and internal use. The whole system of supply was on too low a standard, and was badly organised.

As regards reinforcements, we find that up to the occupation of Kut in September, 1915, the Mesopotamian Expedition was, in fact, numerically strong enough to cope with the Turkish forces brought against it. The arrangements for drafts and reinforcements had, however, from the first been lacking in co-ordination as between the Indian and the home authorities, and this want of co-ordination led to the failure to supply effective reinforcements in connection with the advance on Baghdad and the operations for the relief of Kut.

Deficient Transport.

On the question of transport, the Commission say that from the first the paramount importance, both of river and railway transport in Mesopotamia, was insufficiently realised by the military authorities in India. Up to the end of 1915 the efforts made to rectify the deficiency of river transport were wholly inadequate. For want of comprehensive grasp of the transport situation and insufficiency of river steamers we find the military authorities in India are responsible. The responsibility is a grave one. River hospital steamers were an urgent requirement for the proper equipment of the expedition and were not ordered until much too late.

With Sir John Nixon rests the responsibility for recommending the advances in 1915 with insufficient transport and equipment. For what ensued from shortage of steamers General Sir John Nixon must be held to blame.

During the first four months of 1916 the shortage of transport was fatal to the operations undertaken for the relief of Kut.

Looking at the facts which from the first must have been apparent to any administrator, military or civilian, who gave a few minutes' consideration to the map and to the conditions in Mesopotamia, the want of foresight and provision for the most fundamental needs of the expedition reflects discredit upon the organising aptitude of all the authorities concerned.

General Sir Wm. Robertson, in a document, states:—In general the operations were allowed in 1915 to develop without proper regard to the vital questions of supply and maintenance, in which opinion our investigations lead us unreservedly to concur.

Medical Defects.

The Commission further state that the medical provision for the campaign was from the beginning insufficient. The suffering to the sick and wounded owing to the defects of medical provision was most lamentably severe.

To Lord Hardinge of Penshurst, as Viceroy, belongs the general responsibility attaching to his position as the head of the Indian Government. In regard to the actual medical administration he appears to have shown throughout the utmost goodwill, but considering the paramount authority of his office his action was not sufficiently strenuous and peremptory.

A more severe censure must be passed upon the Commander-in-Chief, for not only did he, as Commander-in-Chief of the Army in India, fail closely to superintend the adequacy of medical provision in Mesopotamia, but he declined for a considerable time, until ultimately forced by the superior authority of the Viceroy, to give credence to rumours which proved to be true and failed to take the measures which a subsequent experience shows would have saved the wounded from avoidable suffering.

A Brighter Picture.

Reviewing the general results of the expedition, the Commission say that it may now be truly asserted that in the many parts of the world in which the Allied forces have been engaged, no more substantial results or more solid victories have been achieved than those won by the gallantry of the British and Indian armies on the stricken plains of Mesopotamia. Rarely if ever have greater courage or pertinacity been shown by British and Indian troops than is recorded in the operations of the Expeditionary Force both during their successes and reverses.

The Commissioners recommend that the Director of Medical Services in India, in war-time especially, should have far greater powers to authorise expenditure and buy needed stores. There should be an immediate and general improvement in the whole standard of comfort and accommodation in the hospitals for British troops in India. For Indian troops no time should be lost in substituting a station hospital system for the present regimental treatment. Base depots of medical stores should be reintroduced into the Indian Field Service organisation, and kept ready for mobilisation. At the outset of every campaign there should be provided a separate superior sanitary organisation and staff to look after the health of the fighting troops.

The field service ration should receive very careful reconsideration and alteration in the light of experience in Mesopotamia. This especially applies to the rations of Indian troops.

The Postmaster-General announces that the letter mails for India, the Mesopotamian Expeditionary Force, Ceylon, the Straits Settlements, Federated Malay States and beyond, and also for Australasia, which were dispatched from London on May 31 last, have been lost at sea, also the parcel mails for the same destination which were dispatched on May 23.

The British, French, Russian, and Italian Ministers at The Hague have asked that the Netherlands Minister at Constantinople be instructed to request the Turkish Government, in the name of humanity, to put a stop to the persecution of Jews in Palestine.

THE PRESS ON THE NEAR EAST.

Thessaly and Its People.

An old military correspondent of *The Times* contributed to that paper last Friday an article entitled "Wanderings in Thessaly," in which he recalled some incidents of bygone days. Thessaly, he writes, is very backward in its agricultural methods, and its people do not take kindly to field work, finding employment more to their liking elsewhere. Thus—

During the Macedonian Revolution Volo and Karditza were the jumping-off grounds for the Cretan bands, who carried fire and the sword into Bulgarian, Serbian, and Turkish villages indiscriminately. It is idle to turn back to that page of Thessalian history. The Thessalians themselves took but little part in those disturbances; they were too busy making money in Egypt to look further afield; village children sang patriotic songs about the re-conquest of Macedonia, and all subscribed generously to the Ethnike Hetæria, and all firmly believed in the day when the Greek Empire should stretch to the eastern shores of the Black Sea, and far away into Persia. A new Constantine and a new Sofia were to reign in Constantinople.

The twenty-four villages on Mount Pelion cared for none of these things, and Volo itself, while willing to welcome the Macedonian bands, was far too much occupied with local politics to busy itself with Macedonia. Early in the autumn all the able-bodied men on Mount Pelion migrated *en masse* to Cairo, returning in the spring with their pockets full of English gold, earned by taking up one or more of the many contracts for public works in connection with the drainage projects in the land of the Pharaohs. Far too much money was to be made in this way for the inhabitants to trouble themselves with agriculture. Some few of the richer people on the mountain, foreseeing that the boom in Egypt would not last for ever, purchased blocks of land in the plains of Thessaly, and sent their sons to England or to France to study agriculture.

"The Independence of Albania."

Under the above title, the *Outlook* (June 23) publishes an article which reviews the recent history of Albania, and gives the views of Ismail Kemal Bey, now a refugee in Paris, upon the future of his country. We quote from the latter portion of the article, merely adding that "the news" referred to is that of the Italian declaration regarding Albanian independence—

"The news is good—excellent," said his Excellency, when I called on him to find out what he thought of recent events, "because it shows that Albania is to take her rightful place when justice is done to the small nationalities. I have never doubted that Albania would benefit from this war if the Great Allied Powers are to be taken at their word, and if they win—neither of which hypotheses is to be doubted. At the same time, many things may happen before we finally get our liberty and independence, and this is a step in the right direction."

"You approve, then, of Italy's act, Excellency?"

"Yes. Italy of course wants a friend and not an enemy on the other side of the Straits of Otranto."

I gathered, however, that the Albanians will not be too grateful to the Powers for the present of their independence if the territory torn from them to avoid bloodshed and trouble is not restored and full justice done to Albania.

The Greek Premier—and Others.

On Monday the *Morning Post* published a long dispatch from its Athens correspondent, sent off on June 22. The correspondent refers to the difficulties in the way of securing a really united Greece, and he considers that the question of amnesty is, perhaps, the most pressing and most thorny—

The Venizelists declare that they are willing to agree that full amnesty should be granted to all persons under arrest or being prosecuted in New Greece for resistance to the authority of the Provisional Government, but they demand the legal prosecution and punishment of the chief persons concerned in the acts of lawlessness and violence last December and in the violations of the Greek law which have been committed since then against the Liberals in Old Greece.

In proof of the pernicious effect which the prospect of a general amnesty is already having upon the guilty Court, the Staff and other pro-German centres, Venizelists point to various symptoms which cannot be overlooked. First and foremost, the remaining members of the Royal Family, with Prince Nicholas at their head, are thus early openly vowing revenge upon all Liberals, and declaring that King Constantine's triumphant return is merely a matter of a few weeks or months. Such is the atmosphere in which the new King passes his days, and it is, therefore, not surprising that in his accession proclamation he declared that he would follow "the lines which his father's reign so gloriously traced."

One aide-de-camp, the correspondent reports, "openly declares that he will shoot M. Venizelos as soon as he shows his face in Athens."

Turkey, Bulgaria, and their Allies.

Writing in the *Sunday Times*, Mr. Ashmead Bartlett declares that "the muddle in the Near East can never be bettered by force of arms alone"—the time for negotiations is near at hand. And those negotiations Mr. Ashmead Bartlett would have carried on with Turkey and Bulgaria—

The time has come,, or is rapidly coming, when both Turkey and Bulgaria will realise they have backed the wrong horse, and will be anxious to save anything they can out of the general wreck. Both countries are faced with absolute ruin and bankruptcy after the war, and yet it is not in our interests to allow either to go under. Both must retain their place on the map with boundaries properly defined.

Therefore it would seem as if a favourable moment had arrived for President Wilson, in the name of all the Allies, to restate our war aims, and to invite Turkey, Bulgaria, Serbia, Greece, and Roumania to send delegates to meet at a Round Table Conference in neutral territory—let us say Switzerland. It will be the task of Allied Diplomacy to harmonise the conflicting claims and to re-adjust boundaries on a basis of nationalities as far as such a course is practical, and, where it is not, there is always the alternative of an exchange of nationals. The Allies would, of course, agree to guarantee the settlement arrived at.

The writer thinks that such a conference need not fail. "Every fresh blow we give the Hun on the Western Front shatters still further the weakening faith of Turkey and Bulgaria in their masters, and will make them more than ever anxious to come to terms before it is too late." And certainly the terms that he suggests are liberal enough to make the Turks and the Bulgarians think twice. Whether they would be approved by the Entente remains to be seen.

The Salonika Front.

Reviewing the situation (under the title "The Lull in Flanders") on the various fronts, the *Observer* (June 24) rejoices at the thought that, Thessaly being in French hands and Epirus and Janina in Italian, "the left flank and rear of the Allied armies in Macedonia are now secure from attack. So, also, is the right flank—

There is no better military barrier than the line of the Struma river, with the right bank dominating the left, and the wonder is why General Milne ever crossed the river into the unhealthy zone beyond it unless he had sufficient force, which he had not, to cut the railway at Serres. His retreat is a wise move from every point of view. General Sarrail is not going to throw his army against the impenetrable wall of the Rhodope Mountains or invade Thrace. Serbia is his objective, and Serbian territory lies west, not east, of the Struma.

The writer proceeds to praise the good work done by Italy in this theatre of the war. But he insists that Serbian territory must be recaptured from the enemy, whatever else be done—

The Italians have done good spade work during the past year in opening up communications from the Adriatic into Macedonia. They have established etappen posts along the excellent coach road from Sauti Guaranta to Koritza, and cleared the Albanian brigands out of the two roads which lead from Valona through Tepelini into Northern Epirus, one up the Voyussa, the other up the Argyrocastro valley. It remains to open up the subsidiary route, which is still in Austrian possession, from Durazzo through Elbasan to Lake Ochrida. The congestion at Salonika has now been removed. We must on no account lose sight of this theatre of war. Still less must we talk about wasting strength in "secondary" operations. A decision in the West will not mean a decision in the Balkans. *Beati possidentes.* Serbia is in occupation of the enemy, and the Allies have got to reconquer it.

The Change at Athens.

Writing in the *Daily Telegraph* (June 23) of King Constantine's fall, Dr. E. J. Dillon asks why the Entente Powers' policy of super-tolerance should suddenly have been revised. Whose influence brought about the change?—

One can but guess. To me, at any rate, it seems clear that it is in the development of Italian policy rather than in any new light that has dawned on the Entente Governments that we should look for the motive that determined their belated intervention on behalf of the violated Greek Constitution and also of their own maltreated armies. With this clue we can understand how it came to pass that after Constantine's relatives and the Russian Government had ceased to be obstacles in the paths of the Entente, the Kaiser and his brother-in-law were still able to impose their policy on the Allies and prevent the bulk of the Greek nation from rallying round Venizelos. One of the basic principles underlying all our dealings with our principal Allies is never to run counter to any of their desires if expressed with sufficient firmness. . . . King Constantine, while Entente statesmanship was humouring him and recompensing him for his fidelity to the Kaiser, was dispatching armed bands of komitadjis against our sorely-tried forces around Salonika. Sarrail uttered protest after protest, but the Entente Governments shrank from intermeddling in these domestic affairs of the Hellenic kingdom. At last the General, in sheer self-defence, abandoned protests and took to shooting the brigands.

Articles to Note.

"Russia and Roumania," in the *Manchester Guardian* (June 23).

"The New Situation in the Balkans," in the *Army and Navy Gazette* (June 23).

"Tropical Disease in the Balkans" (a paper read before the Royal Society by Major Aldo Castellani). in the *British Medical Journal* (June 16).

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Situation in Greece.

June 25.

Mr. LYNCH asked the Secretary for Foreign Affairs whether, in view of the terms of the Treaty of 1863, concerning the Government of Greece, having been violated repeatedly by ex-King Constantine, it was beyond the powers of the Allies to draw up a new Treaty, having regard to the circumstances of the hour being not less important than those of 1863; and whether it was beyond their powers to exclude from the succession, even temporarily, any close relative of the German Kaiser.

Mr. BALFOUR: Our object is to establish unity and freedom in Greece under a form of Government which will make unity and freedom permanent. There are evidently many difficulties to be surmounted before these ends are attained, but they will only be aggravated by endeavouring to deal with the problem piecemeal in answer to such inquiries as those contained in the hon. gentleman's question.

Mr. LYNCH asked whether it was by freedom of choice or from inevitable necessity that the Allies had taken action.

Mr. BALFOUR: The questions of free will and necessity have perplexed mankind for centuries. Answering another question, Mr. BALFOUR said he would prefer to await the official text of the documents before committing himself to any public statement as to the interpretation to be given to them.

Mr. R. M'NEILL asked whether recent events in Greece had in any way affected the official recognition by the Government of the Provisional Government of M. Venizelos, and whether the diplomatic representative of M. Venizelos in London was still in official relations with the Foreign Office.

Mr. BALFOUR: The answer to the first question is in the negative, and to the second in the affirmative. Affairs in Greece are at present in a state of rapid transition.

Mr. BALFOUR, replying further to Mr. M'Neill, said: M. Jonnart was given a general mandate by the French and British Governments to secure a radical solution of the Greek question. It was decided that full discretion should be left to the High Commissioner to secure this object, and it was considered that explicit instructions would merely hamper him in the exercise of a mandate requiring rapid and decisive action. His Majesty's Government were not consulted, for the reason given above, as to the exact form of communication to be made to King Constantine, although they had previously informed the French Government and M. Jonnart that no solution would, in their opinion, be effective which did not entail the abdication and withdrawal of the King.

Mr. PEMBERTON BILLING: Is the Government paying this Monarch a pension, and have they undertaken to do so in the future?

Mr. BALFOUR: I rather apprehend the answer is in the negative, but if the hon. member is so anxious I wish he would put down a question.

Mr. R. M'NEILL: Is it intended to make the report referred to public?

Mr. BALFOUR: I could not promise to make a document public until I have seen it, but I am sure it will contain material which will enable me to answer many of the questions which have been put to me to-day and on previous occasions.

King Constantine's Future.

June 26.

Mr. LYNCH asked whether an invitation would be given to King Constantine to take up his residence in this country.

Mr. BONAR LAW: The answer is in the negative.

June 27.

Mr. BALFOUR, replying to Mr. GILBERT, said he was not yet aware what arrangement the High Commissioner had come to with Monsieur Zaimis in regard to King Constantine's future pension. Presumably it would be paid from Greek revenues.

The Mesopotamia Report.

Sir R. JARDINE asked the Prime Minister whether he intended to give a day for the discussion of the Report of the Royal Commission on the Mesopotamian Expedition.

Mr. BONAR LAW, who replied, said: I shall be glad if my hon. friend will put down this question for next week after the House has had time to study the Report.

Mr. DEVLIN: Is it intended to continue Lord Hardinge in the position he occupies?

Mr. BONAR LAW: The answer I have given covers that, I think.

Mr. DEVLIN: What will be done with Lord Hardinge's Report in connection with the recent trouble in Ireland?

Mr. BONAR LAW: I had hoped to avoid saying anything about this at all to-day, but it is obvious that the Government could not allow a Report of this kind to reach them without immediately taking steps to see what action should be taken in regard to it.

Mr. DEVLIN: Is it the principle of the Government in appointing these Commissions to set a thief to catch a thief?

Sir R. JARDINE: Will the right hon. gentleman deal with the cases of officials censured in the Report during the interval?

Mr. BONAR LAW: It must obviously be the duty of the Government to take immediate action in regard to those who are especially accused of culpability in the matter.

Mr. KING: Is Lord Hardinge still in a position of great authority and eminence at the Foreign Office?

Mr. BONAR LAW: These questions assume that Lord Hardinge has been guilty. I do not wish to make any such assumption at present.

The Air Service in Mesopotamia.

Major BAIRD, replying to Mr. PEMBERTON BILLING, who asked whether any complaint had been received regarding the type of machine supplied to the air pilots on service with the British troops in Mesopotamia, said: I am not aware of the receipt of any communication on this matter which could with correctness be described as a complaint. The Commander-in-Chief in Mesopotamia has stated that he would like certain additions to the aeronautical equipment of his forces, and his wishes in this respect are being met.

Mr. PEMBERTON BILLING: Is the hon. gentleman aware that the German Government have discovered our *ruses de guerre*, and are we making this a dumping-ground for our worst "dud" machines?

Colonel C. LOWTHER: Will an opportunity be given for the discussion of the Mesopotamia scandal?

The SPEAKER intervened, and no further answer was given.

"MEN OF DARKNESS."

In a message despatched from Volo, on June 14, Mr. G. Ward Price tells the following amusing story of the discomfiture of certain Greek "Royalist" orators:—

Volo, with its large admixture of Royalists and German-paid roughs, had been for three days on the verge of trouble. That those days passed quietly was probably due to the arrival in port of an English ship, a merchantman, which the Navy had converted into an auxiliary cruiser. As a fighting unit her modest gun equipment hardly made her formidable, but the moral effect of her arrival was immense. As a British resident told me, she proved "a powerful sedative." And the means she took to impress the hostile Royalists were characteristic of the resourcefulness which is traditional in the British Navy. She used what I can only call naval hypnotic treatment. Until she came the Royalists were holding meetings every night on the sea front, where are the cafés. In gatherings several hundred strong they would inflame one another with raki and bloodthirsty oratory. The evening after H.M.S. Robin (that is not her real name) arrived one of these meetings was in full swing. "Down with the dogs of Allies!" cried the stubbly-chinned Royalists. "Curse Venizelos!" "Long live King Constantine!" The meeting had reached the zenith of enthusiasm, when suddenly every Royalist started as if he had been shot. Through the sultry blackness of the June night had struck a brilliant beam. It came from the searchlight of the English ship, and it had fallen and rested full upon them. It never wavered. It seemed to be looking into the face of every man among them as if to see who would speak next. Words died away on their lips. The unprecedented spectacle was witnessed of a crowd of Greeks without half a dozen people talking at once. The Diehards, who had been most vociferous against the Allies the moment before, found a strange difficulty in enunciating any more curses. The worst desperado of a Last Ditcher ceased abruptly to advocate fighting. The searchlight simply stared them into silence Then individually and inconspicuously they slipped away into the grateful obscurity of the surrounding darkness. After that the searchlight was simply master of the situation.

NEW SERBIAN MINISTRY.

A Reuter's message from Corfu, dated June 24:—As a result of the resignation of three of its members, the entire Ministry presented its resignation to the Crown Prince Alexander. M. Nikola P. Pashitch has formed a new Government, which is constituted as follows:—

M. NIKOLA PASHITCH.—Prime Minister and Minister for Foreign Affairs.

M. STOYAN PROTITCH.—Finance and Vice-President of the Council.

M. LJUBOMIR YOVANOVITCH.—Interior.

M. MARKO DJURITCHITCH.—Justice, and (temporarily) Agriculture.

DR. MOMTCHILE NINTCHITCH.—Public Works, and (temporarily) Public Instruction.

GENERAL BOZIDAR TERZITCH.—War.

News was received in Egypt lately that Herr Otto Lindemann, a well-known cotton merchant of Alexandria, who was expelled from the country early in the war, was in America when war was declared between the United States and Germany. The American authorities arrested him. It is said that Herr Lindemann travelled to America from Germany on board the mercantile submarine Deutschland.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.
ORIENTAL LANGUAGES AND RELIGIONS.
Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I have pointed out previously in these Notes that the losses caused to shipping by enemy submarines and other war risks will continue to be of a fluctuating character, and the returns issued by the Admiralty last week and this bear out my statement. The figures published on Wednesday show that, as compared with those of June 19, the number of ships, of the more-than-1,600-tons category, sunk were six fewer; an interesting and unusual feature of the official report is that in the week under review fewer vessels moved in the danger area, fewer were attacked, fewer were sunk, and fewer escaped after attack. This is satisfactory, and the satisfaction is the more justified when the returns for the whole of June are considered. In that month the movements of vessels were 22,613, as compared with 18,777 in March, 24,775 in April, and 20,903 in May. The losses were 119, as compared with 133 in March, 223 in April, and 136 in May.

***

The expression "satisfactory," however, must be taken in a certain limited sense. There is not a single detail to show the actual tonnage involved in these losses. The Admiralty persistently refuses to make any disclosure in this respect, and since they are solely responsible to the nation for the "running of the show" afloat it would be unpatriotic to press them unduly to provide details. But, as I have said before, no very important secret would be given away to the enemy if to the number of vessels lost were added a statement that the tonnage concerned was so much less or more as the case might be, and it seems a pity that this is not done.

***

Soon after he took charge of the Admiralty Sir Edward Carson made a great speech in which he described the wide activities of the Royal Navy, outlined the vast sea area its ships had to patrol and sketched the extent and character of the risks they undertook. He mentioned, it may be remembered, that mines had been found adrift so far away as off the Cape of Good Hope and in the Gulf of Aden. The loss of the P. and O. steamer Mongolia off Bombay on Saturday of last week will recall that speech in a somewhat unpleasant manner. On the previous day the Postmaster-General had announced that the mails of May 31 had been lost owing to enemy action, but there was nothing to indicate where, when and how the loss had occurred. The official statement regarding the Mongolia makes those points clear, and will serve to emphasise how widespread are the risks which the Mercantile Marine has to undertake. Losses in Eastern waters—since the Emden was disposed of—have been so insignificant that this risk has been lost sight of; while there is no ground for panic, there is certainly cause for caution, a lesson which, I have no doubt, those in authority have already taken to heart and mind.

Mention of the P. and O. reminds me that the stock-holders of the company have decided unanimously in favour of the scheme to acquire the ordinary shares of the Union Steam Ship Company of New Zealand, "in consideration of 10s. of P. and O. deferred stock and 30s. cash for each share." By this arrangement the premier shipping concern assumes control of a fleet of seventy-four high-class steamers with a tonnage of 237,860; and, as Lord Inchcape remarked at the meeting on Wednesday, "if you reckon the value of the £500,000 of P. and O. deferred stock as £1,500,000, this, together with the £1,500,000 of cash, makes the purchase price of the Union Steamship Company's shares £3,000,000"—the most important maritime deal since the fusion of the P. and O. and the British India.

***

The terrible story of the operations in the Mesopotamia campaign, as told in the report of the Commissioners who were appointed to conduct an investigation, does not call for any special comment in these Notes; but I may be permitted once more to call attention to the excellent work done at Busreh in the way of port development. The port has been provided with improved equipment, cargo is more easily handled, and shipowners have been granted facilities which were unknown under the Turkish *régime*. That is not to say, of course, that the work has been completed. Few people are aware of the vast possibilities for trade and commerce that exist there. Some years have elapsed now since I visited the Shatt-el-Arab, but I have lively recollections of the great trade activities of the region. Standing on the deck of a British India steamer, I was able to judge of the variety of the produce exported: corn, fruit, skins, horses, and a hundred other "lines," all of which had already become famous in oversea markets. As I mentioned last week, the Government of India have initiated a considerable programme of commercial and industrial development, and when the present war has become a chapter in the great book of history the trade of Busreh and its hinterland will be a living—and still growing—Imperial force.

***

Sir John H. Biles, the famous naval architect, writes to *The Times* to point out that the Commissioners did not accord full justice to the river craft employed on the rivers in Mesopotamia in the transport of troops and material. "The river craft condemned by the Commission" (he writes) "are the swim-ended barges and the paddlers. The former were condemned before they were built by some persons in Mesopotamia. The Commission adopted this condemnation. The Commissioners did not ask whether the vessels had been completed and tried. They did not ask what is the result. Since these vessels have been condemned in Mesopotamia last summer Baghdad and beyond have been reached by our river craft. . . . Their statement is, 'they have been tried and condemned.' The facts are that they were first condemned and afterwards tried. They are now in constant use, and are very useful, and particularly useful for work above Amara. . . . The condemnation of the paddlers is of a similar negligent order. All these paddlers are doing most useful work, and have fully justified the money spent on them and the care exercised in their construction by their designers and builders, and the anxiety shared by all who have been responsible for getting these frail craft successfully across thousands of miles of ocean."

***

The action of the German Government in "levying a contribution" of £10,000,000 on the occupied districts of Roumania is in full keeping with its policy of high-handed robbery which it has adopted throughout the war. At the moment, unfortunately, there is no remedy; to "kick against the pricks" would, in all probability, only provoke further oppressive acts, and it must be assumed that the unfortunate people now living under the iron heel of the Hun militarists must submit to more impoverishment to satisfy the rapacity of the invaders. The sufferings of the Roumanians have been borne with much fortitude; they have made great sacrifices for principle, and all their friends outside (who long to get inside) can offer in the way of comfort is a promise of relief—some day. Somewhat intangible and bordering on platitude, perhaps, but the relief will be afforded, and it will be none the less welcome because it will be belated. In the meantime, I am informed, practical schemes are already afoot in this country, and not a moment will be lost in beginning the work of rehabilitating Roumanian industry and commerce when the first opportunity presents itself.

***

One of the more curious results of the shortage of wood used by the Lancashire mills in preparing piece-goods for the markets is an appeal made to customers to return what is called in the trade "rolling boards." There is no obligation to return them, of course, but if retailers desire to have their cloth packed in the way necessary to preservation in proper condition they will do well to respond to the appeal. It is a matter of doubt, all the same, whether, in view of the shortage of timber, it will be possible for long to pack piece-goods for oversea markets in the old manner. It has been pointed out that pieces of cloth can be rolled without boards by the use of a skeleton frame, which is withdrawn later; this has the advantage of reducing the gross weight of packages, not an unimportant matter in these days; but retailers do not like the arrangement, because it deprives the goods of their centre stiffening. Before the war is over I am afraid a good many dislikes will have to be made the best of, however.

COMMENTATOR.

A WELL-KNOWN AND HIGHLY-SPECIALISED COLLECTION OF THE

STAMPS OF GREECE

is Offered for Sale.

The collection is contained in four large volumes, and comprises nearly

4,000 STAMPS.

The offer provides an excellent opportunity to obtain a representative lot of the printings of the first type of these fascinating stamps.

THE SUDAN AND ITS ECONOMIC ADVANCE.

No. 10.—The Mongalla Province.

BY PERCY F. MARTIN, F.R.G.S.

Anterior to 1906 that large semi-tropical tract of country, the most remote and perhaps the most backward, and now known as the Province of Mongalla, formed part of the Upper Nile Province. In that year a separate administration was formed, with the parallel of 7 deg. 30 min. north latitude as its northern limit. From a picturesque point of view the country may be regarded as ranking among the more attractive in the Sudan, while its climate, although at certain seasons decidedly trying to the European, is not found always unpleasant for the African.

The hot weather commences towards the middle of November, and lasts until the end of March. The seasonal rains are exceptionally heavy, enduring from ten to twelve hours at a time. From Gondokoro south to the Equator the rainy periods increase in length, until at the Equator itself rain and sunshine succeed each other in rapid succession all the year round.

Thirteen districts, or *mamurias*, now form the political division of Mongalla, which has a more or less superficial area of 90,000 miles, and a population estimated at 207,400. Within its administrative limits is also now included the Lado Enclave, an immense area extending to 15,000 square miles, with a population put at 250,000. This new territory was taken over from Belgium; on January 1, 1914, the southern Lado Enclave was exchanged with the Uganda Government for the Gondokoro and Minnute districts, situated upon the southern frontier, and this latter now proceeds along the 4 deg. N. parallel up to the Sandeman Gulf of Lake Rudolf.

One of the main drawbacks to the economic advancement of this huge province has been the large number of tribes—many very troublesome—which go to form its very mixed population. It would be impossible to enumerate the whole of the different clans—probably in excess of seventy—referred to, but the principal among them are the Baris, Dinkas, Berris, Niambaras, Fajeulas, Kukus, Kakuas, Kalikus, Mondus, Makarakas, Mandoris, Latsukas, Lafites, Lokoias, Morus, Dodingas, Dabosas, Oboyas, etc., etc. The most numerous are the Dinkas, the Baris and the Kakuas. The last of the tribes to submit to the rule of Government were the Dodingas, Dabosas, Lafites, and the Oboyas. Naturally, the control and supervision of so many different, and, in some cases, contending elements is no easy task, but one calling for continual watchfulness and the exercise of much patience and no little discernment.

That some marked improvement in the social condition of the heterogeneous people of Mongalla has been effected within the past decade may be inferred from the difference in the official accounts of the situation given in 1906 and again in 1916. Writing in the first-named year, the then Governor of the new Province, Captain (now Major) Angus Cameron (the present Governor of the Sennar Province) said:—"The Baris appear to be in a chronic state of semi-starvation," while ten years later Colonel R. C. R. Owen, C.M.G., who succeeded Major Cameron as Governor, is found writing:—"The people are decidedly prosperous; poverty is unknown." Thus are the benefits of good and wise government in the Sudan manifested, realising in a thoroughly practical form Henry Clay's famous dictum, "Government is a trust, and the officers of the Government are trustees; and both the trust and the trustees are created for the benefit of the people."

The complete history of the Mongalla Province has yet to be written, for, notwithstanding the amount of progress that has been mentioned as applying to the actual welfare of the inhabitants, there has been no time to take in hand the serious economic development of the rich and productive country which is comprised within its wide borders. Sufficient is known, however, from careful exploration and diligent observation to enable one to say that in time to come this Province may be brought to yield a substantial revenue to the Administration of the Sudan. Already the people have learned to realise the advantages of raising grain crops, and many—but, of course, not all—of them have shown themselves to be amenable to management in other directions. They now prefer to pay their tribute to Government in the form of grain and even in money, instead of, as formerly, in goats and sheep. Very few of the tribes refuse to pay in any form, and those who do are soon called to account by the long arm of the authorities, who cannot afford to allow any default in this respect for fear of the bad effect produced upon those of the people who are inclined to be more regular and honest.

The trade of the Province, if not as yet very considerable, at least shows signs of advancing. Ten years ago hardly any revenue was derived from it, while it cost the Gerverment some £E6,000 or £E7,000 "to run the show." To-day the revenue approaches to something between £E25,000 and £E27,000, with a continual tendency to improve. The natural products of the country include dura, rubber, coffee, and a little Nyassaland cotton, as well as sugar-cane. The local authorities are confident that in due time the growing of cotton can be made profitable. Experimental crops have been started at Mongalla and Rejaf, while attempts to cultivate the coffee plant are also said to have been encouraging. The districts of Moru, Yei and Loka are very similar in soil and climate to those of the Uganda, where this form of agriculture has attained the highest success. Fortunately labour is abundant, if not, perhaps, very efficient; the average pay is at the rate of 2 piastres (=5d.) per diem. In some parts of the country it can be obtained for even less.

Ivory is a source of handsome revenue for the Government, since a substantial tax is levied upon all found. In this province roam some of the finest specimens of the African elephant, for whose tusks there is at all times a good market both in England and the United States. Some of the largest tusks ever found have come from Mongalla. The Governor (Colonel Owen) once shot a beast at Loka which yielded a pair of ivories weighing 136 lbs. and 131 lbs., and measuring 10 ft. 3 ins. and 9 ft. 11 ins. respectively. The age of the animal was estimated at between 150 and 200 years. When offered for sale these tusks realised the sum of £225 net, a sum which ranked as an almost record price.

Mongalla town, the capital of the province, is situated about 1,200 miles distant from Khartoum, and to get there by steamer the journey occupies three weeks—that is to say, if the state of the Nile be favourable. It is a well-arranged and very clean town, very different, one would say, from that condition in which it was found when taken over from the Belgians, who, like the Germans, prove themselves very indifferent colonists. The main idea has been to lay-out the place after the pattern of an Indian cantonment; consequently the streets are perfectly straight and rectangular, the native quarter being segregated from the official and European section, while several lengthy avenues, composed of brightly flowering trees (which some day will become tall and shady), lend an attractive appearance, an effect still further enhanced by the brilliant red shale roofs of the Government buildings. An abundance of pure water, in addition to that available from the river Nile, enables the inhabitants to practise cleanliness among themselves.

The native houses, or *tukls*, are built of thatched grass and palm leaves; they are domed-shaped, the married men's quarters being surrounded, for greater privacy, by high palisades made of the palm leaves and branches, or of tall rushes gathered from the river. The single men's huts are not quite so zealously screened from public view.

Reinforced concrete, with strong corrugated iron roofs, wood-lined, play an important part in the construction of official residences and offices. Well-tended gardens, filled with variegated-coloured flowers and many brilliantly green trees and shrubs, give a tropical appearance to the whole place. At the times of the rains the country around is carpeted richly with countless beautiful flowers, which would make of the place a small paradise were it not that at the same time there are myriads of stinging insects let loose upon the suffering inhabitants, who are driven almost mad by the persistent and pitiless persecutors. Life in Mongalla under these circumstances is not to be recommended.

BOSNIA PRUNES.

Effect of the War on an Ancient Industry.

Before the war the prune trade of Bosnia was flourishing, the production being exceeded only by that of Serbia. During the past two years, however, the United States Consul at Trieste wrote in a recent report, the trade has suffered on account of the war. The plum crop of 1916 is estimated at 1,200 car loads of ten metric tons each, 550 car loads of which were produced in the Brcka district. This crop was small compared with previous years, especially for 1908 and 1909, when the annual production amounted to about 4,000 car loads.

In normal times the transportation of prunes from Bosnia to Trieste and other points of distribution is by sea as well as by rail. Part of the crop is packed and shipped in baskets immediately after being picked, but the greater part is kiln-dried and then packed in sacks and boxes for shipping. The plums of inferior quality are made into marmalade, for which there is a great demand in Austria and Germany. On account of the scarcity of field labour during the war, the prunes are not sorted or selected as in normal times, so that those now offered for sale are often mixed in size and quality. After being dried, the prunes are examined by experts, and those not thoroughly dried or otherwise unfit for table use as "compote" are sold to the brandy distilleries.

The marketing of prunes and plum marmalade has for a long time been controlled by a banking organisation, at the head of which is the Landesbank for Bosnia and Herzegovina. During the war the sale and distribution has been regulated by Government measures, and the Purchasing Commission fixes the wholesale and retail selling prices. At present the official wholesale price of prunes is about 13½d. per Austrian lb. of 1.1 lb. avoirdupois, and the retail price about 1s. 4d. per lb. The latter price is paid for the ration quantities which consumers are allotted from time to time in each community by the Provisioning Commission thereof. For the prunes purchased in shops, however, one must pay about twice the commission price—about 2s. 8d. per lb. at present in Trieste.

WAR LOSSES AT SEA.

The Secretary of the Admiralty on Wednesday issued the following return of arrivals, sailings, war losses and unsuccessful attacks for the week ended 3 p.m., June 24:—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):—

Arrivals	2,876
Sailings	2,923

British merchant vessels sunk by mine or submarine:—

1,600 tons (gross) or over	20
Under 1,600 tons (gross)	6
British merchant vessels unsuccessfully attacked by submarines	20
British fishing vessels sunk	0

The figures are net for the actual week under report.

P. AND O. LINER SUNK.

The Government of India announces that the P. and O. liner Mongolia was sunk by a mine off Bombay at noon on Saturday last. Boats containing the passengers and crew have arrived at Bombay. The London mails the liner was carrying were lost.

COTTON GROWING IN THE EMPIRE.

In the House of Commons recently Mr. Needham asked the President of the Board of Trade whether he could announce the names of the committee to deal with the question of cotton-growing in the Empire and the terms of reference.

Mr. Roberts, who replied, said:—I am at the present moment in communication with representative associations in the cotton trade in regard to the membership of this committee, and hope very shortly to be in a position to announce the names of the gentlemen who have consented to serve. The object of the committee is to investigate in all its bearings the question of increasing the supply of raw cotton within the British Empire.

LANCASHIRE COTTON.

Disorganised Conditions in the Trade.

(From Our Own Correspondent.)

Manchester, Wednesday.

The conditions in the market have been vitally affected by the intervention of the Government with regard to the raw cotton situation, and business in yarn and cloth has been thoroughly disorganised. At the time of writing the scheme of the Government has not been made public, but it was expected that trading in futures in the Liverpool market would be resumed on Friday under new conditions. The outlook remains very uncertain, and in spite of many rumours as to the intentions of the Government traders have been very much in the dark as to the conditions under which business will be carried on during the next few months.

It is now reported that the Alexandria cotton market has been closed until Saturday, and it is quite evident trading in futures throughout the world is disorganised for the time being.

Mail advices from Cairo relating to the demand for cotton piece goods remain encouraging, and merchants there are experiencing a healthy trade. Buying here has been rather irregular. Fancies and specialities have moved off rather more freely than sized materials.

Operations for India have been rather limited, although a rather increased inquiry has come through during the last day or two in light fabrics such as dhooties and jaconets. Some fair offers have been mentioned in finishing cloths for China. Many buyers and sellers, however, have had a nervous feeling, and the conditions have not been favourable to a large turnover.

American yarns have been slow of sale and prices have hardened, there being a tendency for "points on" to advance in Liverpool. Most producers of coarse counts have healthy engagements. Comparatively little has been done in shipping bundles.

Prices in Egyptian yarns have tended to go against buyers, especially in the finer numbers. There is considerable irregularity in the engagements of producers.

Since the above was written the Board of Trade issued the following statement:—

"A meeting was held at the Board of Trade to-day (Wednesday) at which representatives of the various cotton interests were present with a view to a further discussion of the situation.

"It was agreed that the Liverpool Cotton Exchange should reopen on Friday morning under the conditions framed by the directors of the Liverpool Cotton Association, with a view to avoiding all further cotton speculation. The detailed conditions will be made public by the association previous to the opening of the Exchange.

"It was also decided to set up at once a Board of Control for the Cotton Trade, which will include representatives of spinners, manufacturers, importers, and distributors and of the principal associations of Cotton Operatives, together with representatives of the Board of Trade.

"The names of the members and of the chairman will be announced shortly."

The conference was a continuation of the consultation which took place last week, when Mr. A. K. Barnes (president of the Liverpool Cotton Association) and Mr. W. R. Glazebrook were summoned to Whitehall after the partial closing of the Liverpool futures market, through the intervention of the Government. It was then decided that, pending further consideration, there should be no opening of the Liverpool market until after yesterday's conference, an opportunity in the meantime being afforded both millowners and operatives to consider the position.

According to a report, a suggestion was pressed at the conference that supplies to the mills should be rationed in order to prevent stoppage. The fixing of prices, it is understood, was also discussed, while a further proposal was submitted for the Government control of cotton on similar lines to that which has already been adopted in the case of supplies of wool.

The President (Sir Albert Stanley) was accompanied at the conference by Sir H. Llewellyn Smith, first secretary to the Board of Trade, Mr. G. H. Roberts, M.P., Parliamentary Secretary, and Sir David Shackleton, Permanent Secretary to the Ministry of Labour.

The Cotton Bourse at Alexandria, which was closed by Ministerial order, will be reopened to-morrow.

FREIGHT ON OIL AND COTTON SEED

Addressing the shareholders of the British Oil and Cake Mills, Ltd., in London, last week, Mr. John W. Pearson, the Chairman and Managing Director said:—

During the course of the year the price of feeding cake of all sorts has had to be advanced considerably, and the present level is now rather more than double the average level of pre-war days. The most important factor in causing this advance is the influence of freight rates, which have possibly affected this industry more than any other. Whereas before the war, a fair average rate of freight on cotton-seed from Egypt was about 7s. 6d. per ton, and on oilseeds from India about 25s. per ton, the freights demanded to-day range from about 120s. per ton from Egypt and 300s. per ton from India, which is in many cases more than the f.o.b. cost of the goods. The greater portion of this increased cost has been borne by the advance in the price of oil, and cakes generally have not carried an advance equivalent to the extra cost of freight. A notable exception to the general practice is the rate of freight charged by the Elder, Dempster Line serving our West African colonies, the present rates being very little higher than those ruling before the war. The result of this has been that West African produce from our own colonies has been brought to this country and distributed under more favourable conditions than can apply to any other oilseed dealt with.

TRADE OPENINGS.

The Stores Department of the Egyptian Ministry of the Interior has called for tenders for the supply of Ghafir clothing required by the Stores Department during 1917, including blue drill belts, drawers, and gamis.

Sealed samples of the articles required may be inspected at the Bulaq Stores, Cairo, or at the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.1, between the hours of 9 a.m. and noon, and 2 p.m. and 4 p.m. Representatives calling at Sir A. L. Webb's office must produce a written request from their firm to do so.

Sealed tenders, on the proper forms, will be received, up to noon on July 15, by the Director, Personnel and Equipment Department, Ministry of the Interior, Cairo.

A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him.

Copies of the conditions and form of tender, together with lists of the articles required, may be obtained by British manufacturers on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.2.

ENGINEERING NOTES.

Competition in the East.

We had occasion, recently, to allude in these columns to the remarkable progress of Japan in all branches of industry, especially in shipbuilding and in the manufacture of engines, machinery of all kinds, and machine-tools. We also alluded to the thoroughness of their energy in pushing their productions in the Australian and Indian markets. Our present difficulty in the supply of such goods to those markets is of considerable advantage to the Japanese, but at the same time it is a matter of great consequence which ought not to be overlooked. The Japanese manufacturers can produce at a much cheaper rate than British; they are nearer to the markets in question, have fewer shipping restrictions to contend against, and are, perhaps, more persuasive sellers to Oriental buyers than are our own people. The possibilities are obvious.

The Manufacture of Steel.

The cost of steel is, of course, a matter of considerable importance to Far Eastern manufacturers, but according to authoritative reports there is now a prospect of the establishment in China of a steel manufacturing industry on modern lines, and on a large scale. Subject to the sanction of the Chinese Government being obtained, a company is prepared with the necessary capital required for the purpose, and as it is unlikely that this sanction will be withheld, the company will extend its operations without delay to South China in order to handle the valuable iron deposits there, only scrap steel and pig-iron having hitherto been treated.

A Promising Outlook.

If the project is realised, it is stated, it promises to be one of the most revolutionary industrial developments undertaken in China since the Republic was inaugurated, for, it is believed, that present industrial progress in that country largely depends on the realisation of such a scheme. The Chinese, and we may say the Japanese, demand for iron and steel has increased in recent years by leaps and bounds; but owing principally to the war it has been virtually impossible to obtain delivery, not only from Europe, but also from the United States. The company meditating this development is, it is said, already operating two double sets of four furnaces, and have obtained an option on several hundred acres of land where a complete plant of an up-to-date character will be installed, and railway and other transport communication will be provided.

As the production of iron and steel leads to the establishment of other industries, this development should be all to the good of commerce. German influence in China has finally been eliminated owing to the breach between the two countries, and there is all probability that Great Britain will benefit by the establishment of the new industry.

Water-Power in South Russia.

Since we alluded to the Russian Bill which proposed to organise and develop the water-power resources of Russia—a matter of some importance to commercial and shipping interests in the Near East—it has been reported that agents and representatives of American electrical engineering firms have visited various districts in the region to study those waterfalls or stretches of water which they think capable of being used as a source of water-power, with a view, apparently, to obtain concessions. It has been admitted that Russia will afford a profitable field for electrical development at the conclusion of hostilities; and of this American firms, always well-informed by their Consuls, were not slow to take notice. It is hoped now that their activity will stir the energy of British concerns.

NEWS FROM ALL SOURCES.

Trade has been opened with Siwa by way of Dabaa and Marsa Matruh.

Mohamed Effendi Sharara has been appointed Secretary to the Egyptian Chamber of Commerce.

Owing to the war and the presence of British troops there has been an expansion in the trade in American chewing gum in Greece and Egypt.

By the decision of the Egyptian Government to remove restrictions by which certain areas are usually deprived of water until late in the summer, an improvement in the yield from 1,800,000 maize-bearing acres is expected.

A Reuter message from Ottawa of June 18 stated that the Canadian Pacific Railway Company has lent the Imperial Munitions Board $10,000,000 to assist in meeting the financial requirements for the purchase of munitions in Canada during next year.

Representatives of the Central Powers are sitting in conference in Berlin "for the purpose of distributing the Roumanian agricultural produce and harvest." The *Lokalanzeiger* claims that the quantity of wheat to be given to Germany is so great that she will not have to limit the bread ration.

The exportation from the French zone in Morocco of beans and lentils is prohibited.

The Venezilist Consular Court at Alexandria gave judgment in twelve cases since its establishment in May.

It is announced that the direct mail service between Egypt and Italy has been suspended until further notice. All parcels for Italy will be despatched viâ France.

The Sultanieh Agricultural Society has approved the purchase of 15,000 additional tons of chemical manure and its import to Egypt on two ships carrying 9,000 and 6,000 tons each.

Several small coasting vessels have been sunk in Tunisian waters with bombs by German submarines carrying sail. The submarines were attacked by French aeroplanes, and disappeared after firing two shells which caused no damage.

A recent report by the British Consul-General at Tangier shows that the concession for the ports of Mehedya, Kenitra, and Rabat-Salée, granted to a consortium of three companies, previously mentioned in THE NEAR EAST, has been transferred to "La Société des Ports Marocains de Mehedya, Kenitra et Rabat-Salée." The new company has a capital of £100,000, and its headquarters are in Paris.

Mr. George Hazlehurst has been appointed Dock Traffic Superintendent of the Manchester Ship Canal in place of the late Mr. F. G. H. Morton.

In a paper read before the Egyptian Institute, Mr. Victor Mosseri expressed the view that Egypt could not produce pure tobacco, but it could provide a medium or light leaf.

GERMAN MORTGAGE BANK.

The General Officer Commanding-in-Chief H.B.M. Forces in Egypt has appointed the Public Custodian of Enemy Property to be receiver of all the property and assets in Egypt of the Egyptische Hypotheken Bank A.G., with instructions to liquidate the business of the said bank with all the powers conferred upon liquidators by the Proclamation of July 31, 1916.

This bank was founded by the Deutsche Orientbank, and the Chairman of the board of directors was Mr. Herbert Gutmann, the Vice-Chairman being Mr. Leon von Heller. The board of directors consisted of Dr. Erich Alexander, Joseph Aslan Cattaoui Pasha, Armand Dreyfus, Mohamed Talaat Bey Harb, Karl Hasselbach, Hugo Lindemann, Walter Merton, Samuel Ritscher, Ludwig Schneider, Paul Thomas, Richard Witting. The managers were Messrs. Albert Najar and Consul Wilhelm Padel. It was founded at Cairo in 1911 with a capital of £500,000, in 20,000 shares of £25 each.

Prominent Industries of India

COMPANY MEETING.

UNION FONCIERE D'EGYPTE.

At the annual general meeting of this company, held in Cairo, after having heard the reports of the directors and the auditor, the shareholders approved the balance-sheet and profit and loss account, and decided to carry forward the debit balance of the latter. Messrs. Isaac Aghion, René Ismalun, and J. Charles-Roux were re-elected directors, and the election of M. Marius Lascaris as a director for a period of three years was ratified. The directors' fees were fixed at £3 per sitting. M. S. Pappo, Sub-Manager of the Land Bank of Egypt, was re-elected auditor for the financial year 1917-1918, with the remuneration of £80 for that period.

The Report.

The report was as follows :—

The cotton crop of Egypt has again been decidedly below normal in yield, as was also the case the previous year. In spite of an increased area under cultivation, the result will scarcely exceed by half a million cantars the 1915 crop, which was already quite insufficient.

The most conservative and authoritative forecasts fell wide of the mark, both those supplied by the Ministry of Agriculture and the Alexandria General Produce Association proving considerably in excess of the reality. It was not till the last weeks of the cotton picking season that the destruction by the pink boll worm became very acute, and diminished by a disquieting proportion a crop which up till then had promised very favourably.

As a result of this, we failed to deliver the whole quantity of cotton which we had sold early in the season at P.T.482 per cantar at a moment when this action appeared prudent. On the other hand, those of our purchasers of land who held over the sale of their crop to the end of the year realised such excellent prices that they were able to reduce their arrears to an appreciable extent.

In spite of the small cotton crop and the restrictions on rice cultivation, the economic situation of the country greatly improved towards the end of the year. The high prices realised and maintained till now for all agricultural produce have enabled the fellaheen very largely to clear themselves financially, which is reflected in our affairs by a satisfactory recrudescence of land sales.

We deplore the loss from the board of directors of Monsieur G. Yver de la Bruchollerie, Manager of the Alexandria Branch of the Bank of Athens. He fell gloriously fighting for his country at Verdun in June last. In honour of his memory your board has decided to hang his portrait in the board-room.

Rural Estates.

Land Sales.—Sales this year amount to feddans 266-02-04, against 49 feddans last year. There appears, however, in the balance-sheet only feddans 190-15-12 for a value of £E13,942,503/000 representing those sales which had been transcribed at the moment of closing the accounts. These are distributed amongst the properties as follows :—

	Feddans.
Dar el Bakar Estate	63-01-16
Teda Estate	35-14-02
Kom El Hassel Estate	26-04-18
Santa Estate	75-19-00
Total Feddans	190-15-12

The mean book value of this land was £E68.941/000 per feddan, and the mean sale price was £E73.133/000.

The balance of the sales ready for registration amounting to feddans 175-10-16 (feddans 100 dating from before the war and feddans 75 from 1916) will figure in the next balance-sheet.

Purchases.—The estates have been increased by feddans 23-03-16, of which feddans 13-23-08 acquired by expropriation of, and feddans 8-06-00 by arrangement with defaulting purchasers, and a further feddans 0-20-08 acquired for general utility.

The movement in the property therefore is as follows :—

	Feddans.
Area on December 31, 1916	9755-16-13
Sales registered during the year	190-15-12
	9565-01-01
Land acquired during the year..	23-03-16
Total area on 31st March, 1917 ..	9588-04-17

Development and Cultivation.

The lack of water prevented the cultivation of rice except in our Teda, Kafr El Charki, Wazirieh, and Hessas estates, and on an area of only 830 feddans as against 2,217 in the previous year. Consequently, development was only possible on a relatively restrained area.

On the other hand, the drainage system of our Dogmera, Santa and Kafr El Charki estates has been very appreciably improved.

For the current year, water being abundant, and there being no restrictions against cultivation of rice, we hope to extend rice cultivation over more than 2,000 feddans, which should sensibly increase the revenues.

The area under cotton was 2,422 feddans, as against 1,936 the previous year, giving yields respectively of 3,471 and 2,590 cantars. For the current year the area sown in cotton exceeds 2,750 feddans.

Balance Sheet.

Rural Estates.—This item represents the net area belonging to the company multiplied by the cost price per feddan, £E63.660/000, as against £E63.117/000 the previous year.

Vendor Rights Ceded to the Land Bank.—The amount figuring under this heading is £E25.239,214/000, against £E23.732,485/000 last year.

Debtors for Land Sales.—Assets under this heading amount to £E75.047,016/000, of which £E25.239,214/000 have been ceded to the Land Bank, as above mentioned. On the other hand, the land sales annuities discounted by the Land Bank, and for the complete encashment of which we remain mutual guarantors, have been reduced from the original figure of £E77.960 to £E42.572,899/000, as against £E46.770,047/000 last year.

Annuities in Arrears.—The year began with a total arrear of £E22,316,272/000, since reduced to £E8,966,407/000.

1916-17 Annuities.—Of the annuities of the year under review, amounting to £E18.373,462/000, we have encashed £E8.217,753/000. Total encashments against annuities during the year amount to £E21.567,618/000.

Annuities in Suspense.—This item shows the amounts paid to the Land Bank on account of annuities due and under settlement.

Provision for Interest in Arrears.—This account has been drawn on for a sum of £E436,579/000 for writing off irrecoverable arrears of interest. The account has, however, been credited with a like amount to the debit of profit and loss in order to maintain the provision at its original figure of £E3.000.

Provision for Defaulting Tenants.—We have thought it well to bring this provision up to £E7,000.

Profit and Loss Account.

In addition to the usual depreciation, a sum of £E436,579/000, as above mentioned, has been set aside in order to maintain at its original figure the provision for interest in arrears, and the provision for arrears of rents has been increased by a further sum of £E1,500.

The Court of Appeal having confirmed the judgment of the Court of First Instance in the affair of the 250 shares of our company deposited with us by the late Ambroise G. Zervudachi as director's guarantee, the receivers of the firm C. G. Zervudachi and Fils have ceded the shares at £E7/8. The necessary entries have been made in the investments and profit and loss accounts.

Fees for the management of estates amount this year to £E1,250, as against £E860 last year, and there is hope that they will increase still further in the near future.

The financial year closes with a loss of £E4.830,412/000, to which must be added the amount brought forward to the debit of the profit and loss account, namely, £E15,070,130/000.

Board of Directors.

As a result of the death of Monsieur G. Yver de la Bruchollerie, the absence on military service of Monsieur Léopold Jullien, the company's managing director, and the departure of Monsieur Isaac Aghion for France, the number of resident members of your board is reduced to four.

Monsieur Marius Lascaris, director delegate of the Bank of Athens, has consented to associate himself with the company and lend his valuable collaboration on the board. You are requested to ratify the decision of the board in the matter of his election.

The retiring directors are Messrs. J. Charles Roux, Isaac Aghion and René Ismalun, who offer themselves for re-election.

Auditor.

The directors propose that Monsieur S. Pappo, sub-manager of the Land Bank of Egypt, be re-elected for the coming year with the same annual remuneration of £E80.

Auditor's Report.

The auditor's report was as follows :—

In conformity with the mandate which you have conferred on me, I have the honour to inform you that I have examined the balance-sheet and profit and loss account, and that I have found them to agree with the books of your company. Your profit and loss account, after making sundry provisions amounting to £3,812,331, closes with a loss of £4,830,412, to which must be added the losses carried over from former years, making a total of £19,900,542 to the debit of this account on March 31, 1917.

The action against the late A. Zervudachi, one time a director, having ended in your favour, the company has, on arrangement with the receivers of the firm C. G. Zervudachi and Sons, entered into possession of the 250 shares forming his director's deposit at market value. The company thus possesses 500 of its own shares.

(Signed) S. PAPPO, Auditor.

COMPANY NOTES.

Dividends, Payments, etc.

The directors of the Eastern Telegraph Company, Limited, announce a first quarterly interim dividend of 1½ per cent. on the ordinary stock, free of income-tax, in respect of profits for the current year.

Bebera Company's debentures, coupon number 46, due July 1, will be paid at the National Bank of Egypt Offices, Alexandria, Cairo and London.

The National Bank of Egypt announces that Coupon No. 31 of the City of Alexandria Four per Cent. Loan, due July 1, will be paid at 6 and 7, King William Street, E.C.

The National Bank of Egypt announces that Coupon No. 26 of the Agricultural Bank of Egypt Four per Cent. cumulative preferred shares, due July 1, will be paid at its offices in Cairo, Alexandria, and London (6 and 7, King William Street, E.C.).

Oil Outputs.

European :—Week. June 10, 82,500 poods; June 17, 84,200 poods.

Meetings.

The ordinary annual general meeting of the shareholders of the Bank of Roumania, Limited, will be held at Winchester House, Old Broad Street, London, E.C., on July 11, 1917, at 12.30 p.m. :—To receive the report of the directors, to elect directors in the place of those who retire, to elect auditors for the ensuing year, and to fix their remuneration.

ROUMANIAN BONDS.

The Minister of Finance, according to a Reuter telegram from Jassy, dated June 23, is framing a scheme for the issue of short-term Treasury bonds, called "National Defence" bonds, for periods ranging from three to twelve months, and bearing interest at 4 per cent., to replace the three-month Five per Cent. bonds already issued. All the Roumanian banks have promised their active co-operation, and the Press and public are receiving the scheme favourably.

The success of the British offensive in France and of the Italian offensive, the new declarations of the Russian Provisional Government and the vigorous speech of M. Kerensky have combined to create an excellent impression on Roumanians, who are confident in their hope of final victory. The scheme of agrarian and social reform put forward by the Government and the energy that is being displayed by the various committees which are considering how best to carry out the reforms have also had an inspiriting effect upon the people, whose confidence in the Government is increasing.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned :—

	1916. Francs.	1917. Francs.
June 21-24 (inclusive)	520,000	500,000

EGYPTIAN MARKETS.

Total for year.....	28,124 ..	33,330

Lord Sheffield writes to *The Times* that the statement quoted by the paper from the *Münchener Neueste Nachrichten* that the cultivated area of the occupied districts of Roumania is 266,000,000 hectares, and that 1,100,000 acres are sown with wheat is incorrect. He wrote : "The whole area of Wallachia is only about 30,000 square miles, or not quite 7,700,000 hectares. I fail to see how the enormous figure of 266,000,000 hectares has been arrived at, which is equal to about 660,000,000 acres, or more than a million square miles."

NOTICES.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Street, E.C.

Thursday Evening.

A very firm tone has again characterised our market this week, with a fair amount of activity in certain directions. Egypt has not been a very active factor, probably in consequence of the temporary disorganisation of the cotton market. In spite of that various buying orders have been received from over there; but, generally speaking, the prices bid have been below those at which there are sellers here, and in many cases the local buyers here have been paying higher prices for several of the shares that have been in demand.

The Government stocks have been lifeless but very firm, Unified being rather better again at 83½; sellers have been very scarce.

Among Bank shares Nationals have been done to the extent of about 300 shares round 15. Agricultural Banks have been in constant demand, about 1,500 shares having been done for the most part round 5 5-32 and 5 3-16, the close being 1-32 firmer at the latter price. Anglo-Egyptians have hardened ⅛ to 12⅛, and Land Banks are a like fraction higher at 5⅞.

Delta Light Railway prefs. have been bought on local account at the slightly higher level of 6 1-16. Aboukirs have continued somewhat depressed and are 1-32 easier at ¾, at which price they should prove a good lock-up purchase. The scarcity of water which occurred at a critical moment last year, and which materially affected their profit, should not recur this year. In fact, a cable is understood to have been received in London recently stating that the water supply is adequate and that the prospects are good.

Behéras remain firm, but there has been no business doing this week. Dairas are wanted, but there are no sellers. In Delta Lands some small business has been done round 10s. 9d. Gharbiehs have again been inquired for, and the price has improved from 22s. 6d. to 25s. 6d. bid; but no business has been done in the absence of sellers. The scarcity of sellers at the present depreciated level is easy to understand, because most holders of these £E4 shares paid over £3 for their holding.

New Egyptians have been active, about four thousand shares having changed hands round 11s. Union Foncières are wanted at 26s. 6d., but here again for the time being there are no sellers. In United Egyptian Lands a few thousand shares have again been done at about 1s. Salts and Sodas have been active and strong, some four thousand shares having changed hands round 23s. 6d. early in the week and later up to about 24s. 6d., showing a rise of 1s. 3d. since last week. Khedivial Mails have also been a strong market, persistent buying carrying the price up a further 2s. 9d. to 38s. 6d.

In Greek securities the market has kept very firm, but business has been at a standstill in the absence of sellers.

Oil Shares.

Oil shares have been quiet throughout the market, and prices have not changed much. Anglo-Egyptians ("B") closed at 14s. 6d., and Anglo-Persian Prefs. at 24s. Roumanian Consols were unchanged at 10s. 6d.

Paris Bourse.

Closing prices on Wednesday included the following:—Egyptian Unified, 95 (against 94.50); Turkish Unified, 61 (against 62); Crédit Foncier Egyptien, 690 (unchanged); Suez Canal, 4,390 (against 4,375).

THE MONEY MARKET.

(From Our City Correspondent.)

London, Thursday.

There has been a good demand for money into July on the basis of 4¼ to 4½ per cent., but cash has been in ample supply, and day-to-day advances were to be obtained at from 3½ to 4¼ per cent.

There was a better demand for the limited bills on offer, fine paper being taken in cases at 4 9-16 per cent.

In the fiscal year 1915-16 the export of cumin seed from Malta was 1,115,719 lb., valued at about £29,200.

IT COSTS A SMALL PIASTRE

TERRIBLE REPORTS from Syria—

1.—From an American Missionary:

"Your friend, Rev.———, fasted twenty days that he might give his portion to others, and then died himself of hunger. His family is still living with us. The contagious diseases, hunger, and more work than we can possibly do, threaten the lives of all Missionaries here. We expect to die, and then this unfortunate people will be left with no one to help or serve them.

"I visited Junieh recently (Junieh is a town of some 10,000 inhabitants near Beirut), and sought from the officials permission to help as I was able in relief work: THEY TOLD ME IN THE TOWN AND JUST OUTSIDE THERE WERE 5,000 DEAD. A village two miles distant did not have one inhabitant left alive. As I visited among the Lebanon villages, I found the want greater than anywhere else in Syria. The Wali of the Lebanon sent for me and thanked me for what I had tried to do. He asserted that 200,000 had died of hunger."

FAMINE IN THE HOLY LAND

The demand for adequate funds to provide FOOD, MEDICINE and CLOTHING to relieve the terrible distress of the people of the Holy Land is one of the UTMOST URGENCY.

(Reproduced by permission of "The Times."

£300,000 WANTED

of which £50,000 is needed at once.

A strong administrative committee is at work. CONSIGNMENTS OF FOOD, MEDICINE & CLOTHING ARE NOW ENTERING PALESTINE, and goods stored in Egypt will continue to be poured into the country as further access is obtained. Relief will be given to all—Christian, Jew and Arab alike—according to their need.

Please send your DONATION to-day to the Secretary, Syria and Palestine Relief Fund, 110 Victoria Street, Westminster, S.W.1.

BOOKS on the NEAR EAST

Turkey and the War. By VLADIMIR JABOTINSKY. **6s.** net.
In this book the author compresses into a small compass a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

Kitchener in His Own Words. By J. B. RYE, M.A., and HORACE G. GROSER. **10s. 6d.** net.
Here we have Kitchener speaking to us in his own words—from Palestine, from Egypt, from South Africa, from Australia, and from India; closing with his fine, measured utterances as Secretary of State for War.

A Bulwark against Germany. By BOGUMIL VOSNJAK. Translated by FANNY S. COPELAND. **4s. 6d.** net.
A useful endeavour to enlighten the British public as to the origin and history of the Slovene people who form the bulk of the inhabitants of Styria, Carniola, Carinthia, Gorica-Gradiska, Istria and Trieste. These, being the most westerly of the Jugo-Slavs, have been specially exposed to German aggression.

The Straits Impregnable: The Epic of the Gallipoli Heights. By S. de LOGHE. **5s.** net.
A personal narrative of the Gallipoli Campaign.

Songs on Service. BY ELIOT CRAWSHAY-WILLIAMS. **2s. 6d.** net.
These verses are in two parts—In War Time (mostly in Egypt) and In Peace Time (almost all in Simla). The war pieces have the impact of reality and give some of the reverberation of battle.

A History of the Eastern Question. By J. A. R. MARRIOTT. **12s. 6d.** net.
A study in European Diplomacy from the advent of the Ottomans to the outbreak of the European War.

The Mechanism of Exchange. By Professor JOHN A. TODD. **5s.** net.
A handbook of currency, banking, and trade in peace and war. The author has drawn freely on Egyptian and Indian conditions—personally studied on the spot—as well as European and American.

In the Wilderness. By ROBERT HICHENS. **6s.** net.
This powerful story tells of the use and meaning of sorrow in human life. The scenes are laid in Greece, England, and Turkey, and the theme of the book is the egoism of the religious mystic.

The above-mentioned books, or any other publications, may be obtained, at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from

The Near East, Ltd. (Book Dept.) 1, Devonshire Sq., London, E.C.2.

NOTES OF THE WEEK.

The German-Austrian flirtation with Russia has proved an unprofitable and in some respects a ridiculous enterprise. Petrograd seemed at one moment inclined to listen to this martial lover, who was arrayed in the white robes of the pacifist for the occasion—disguises have ever been an integral part of the stage comedies of love—but after a little pleasant dalliance the heavy Teuton wooer was repulsed, and his foot has been heavily trodden on this week in Galicia. The Russians are now once again threatening Lemberg in a country which at this season of the year is well suited to military operations; but the importance of that capital is sufficiently well understood by the enemy to make it certain that its capture will not be an easy matter.

But while Berlin and Vienna have been thus rudely repulsed, their advances have been observed and resented by Sofia with proper feminine jealousy. Bulgaria is understood to have protested sharply against the "no annexations" doctrine, which, if literally carried out, would deprive her of her expected spoil; and she is said to have cited pledges, given her by the Central Powers, that she should be allowed to annex half Serbia, the Dobruja, and a part of Greece—territories of which she is already in possession. Bulgaria appears to believe in the sincerity of the Central Powers, while Russia continues to distrust them—the very reverse of the result desired in Berlin, where it was desired to hoodwink Russia and possibly to persuade Bulgaria of the cynicism of these plausible transactions which have proved in vain.

Bulgaria cannot pretend to be surprised at the offer of a separate peace to Russia, as not a month has gone by since the Bulgarian Minister at Berlin was himself doing his utmost, as Maxim Gorki revealed, to persuade Russia to a separate peace. He would certainly not have so acted without the knowledge both of his own and the German Government. But his offer was rejected with contumely, and the German Government apparently saw that it would therefore be necessary to bait the trap with a more attractive morsel; hence, presumably, the "no annexation" talk which emanated from Austria. This must have appeared a quite harmless lie politically, since Austria can hardly expect at this time of the day to annex any Russian territory, and Russia, by resigning all claim to Constantinople, appeared to have lost interest in the Balkans, and Bulgaria's desires might therefore have been expected to be overlooked by the philosophers of Petrograd; but the cards did not quite fall on the table as the players had planned, and Bulgaria is now reproaching her partner. Whether Germany led the wrong suit or not, that particular trick has been lost by Germany.

It may not be entirely without significance that the Russian blow has fallen on Austria in a district which can claim to be part of the Ukraine, for the borderline between Poles and Ruthenes lies close to the Army frontiers in Galicia, and the Ruthenes are a strong element of the population up to the very walls of Lemberg; not being city-dwellers, they are a small proportion of the citizens of Lemberg itself. But the Ukraine question has developed this week, the National Assembly at Kief having appointed its own Cabinet, with Departments of War and Foreign Affairs. The progress side by side of a renewed offensive in the field and of political separation is a curious combination, upon which it would be idle to comment until further information is available, but the movement is important for its possible reaction in Balkan politics. The Ruthenian sphere of influence extends as far east as Odessa, and the Ukraine, besides being the granary of Southern Russia, is also its outlet to the south. Unless Russia were to split up altogether—a prospect which may be at once dismissed—she could not afford to let the Ukraine set up for itself without losing her status as a great Power and all weight in the Near East; while if the Ukraine were to start in political business for itself, it would immediately introduce a new factor into Balkan politics.

It is certain that neither Germany nor Austria has neglected the study of these proceedings at Kief. As was pointed out in these notes last week, Austria has for some time past encouraged Ruthene nationalism by those devious methods of which Vienna is a master, and it would be her object to attract the Ukraine within her orbit—the prize, indeed, would be no less valuable than Salonika. Moreover, since the Ruthenes alone would carry less weight than Russia, and the political instincts of the Ruthene are recent and not very strongly developed, their interest in the Balkans would certainly be less than that of Russia, and the weight of the Austrian influence in the Near East would consequently increase. One of the obstacles to the absorption of Serbia by Austria and Bulgaria would disappear, or at least diminish; the possibility of Slav influence reappearing at Constantinople would become remote, and both the

Digitized by Google

Black Sea and Dardanelles questions would be revolutionized. It would not be very surprising to hear that Austrian agents had been at Kief, and that Vienna had agreed to recognize the independence of the Ukraine. But the Ruthenian is not likely to be deceived by so transparent a manœuvre.

The new Ministry of M. Venizelos is steadily making its way in Greece. Relations have been severed with the Central Powers, but no actual declaration of war has been made, although this is expected daily in Berlin. No great surprise has been expressed by the Germans at this development, which was, indeed, a foregone conclusion; they have, however, interned at Gorlitz, in Silesia, the Greek corps which King Constantine thoughtfully surrendered to Prussia some months ago.

So far as the internal affairs of Greece are concerned, the Chamber of 1915 is to be summoned in due course, when M. Venizelos—who has maintained silence as to his policy since his return to Athens, save for a guarantee to Serbia of faithfulness to the treaty which King Constantine ignored—will no doubt make a general statement as to both the domestic and foreign policy of the kingdom. Many of the Government officials whose past would not bear examination have been summarily dismissed, the new Ministers stating that they had no wish to meet them; some of those who took the most prominent part in the late outrages are to be prosecuted with the utmost rigour, while the minor personages will be allowed merely to disappear—unless they show any disposition to put their idle hands to the proverbial uses, and embarrass the new régime. Unfortunately this is a factor that will have to be reckoned with. They would be a danger, if they were left in their present positions; but the retrenched bureaucrat is not usually grateful to the Government which dismisses him, and the easiest way of revenge is to intrigue against it. Nobody need expect that these intrigues will succeed, but they will be attempted, and they will possibly give some little trouble, particularly in the event of any events occurring which could be interpreted as a check to the Allied cause.

German efforts will not be stopped in Athens merely because the Allies have taken strong action in restoring M. Venizelos to his rightful position. The methods will change, but there will be a constant attempt to undermine his position, to encourage sporadic outbreaks, to minimise the efforts of the Allies, and particularly their prospects in the Balkans; it is unlikely that the sum total of these efforts will amount to anything more than a nuisance, but they will be in evidence nevertheless.

The *New York Herald* has published a story containing details of the death of Prince Mircea, the youngest child of King Ferdinand of Roumania, last autumn; it is vouched for by Miss Loie Fuller, the dancer, who has been doing Red Cross work in Bucharest. The Prince died of typhoid last November; the Roumanian poetess Helen Vacarescu told her that the little Prince was a victim of the German airmen who dropped sweets on the capital. "Some of those sweets fell into the garden of the palace; the Prince ate as many as he could find. He fell sick almost immediately; a search was instituted, and more of the bonbons were found. An analysis showed that they were filled with typhoid germs." So does Kultur fight.

An interesting article in the *Sunday Times* discusses the Adriatic problem, from the aspect that the command of the Adriatic belongs to the Power that holds possession of the eastern coast, and that the command of the Adriatic being necessary to Italy, she must therefore obtain control in Dalmatia. The Jugo-Slavs are exhorted to compromise on the claims they are putting forward, in order not to alienate sympathy from themselves, and the final suggestion is made that the strip of coast from the present Italian frontier to the Narenta should belong to Italy, running inland also as far as the Velebit mountains; from the Narenta to the Bocche de Cattaro should be Serbian, thus giving her an outlet to the sea, the possession of the railway through the Narenta Valley to Ragusa, with the port of Gravosa. From the Bocche de Cattaro to Albania would fall to Montenegro. Should the Slavs claim more than this, it is suggested that their ambition will overleap itself.

Some time ago, in the case of Christian subjects of the Ottoman Empire, a British Order in Council was made (under the Aliens Restriction Act of 1914) which relieved them of those provisions of the Aliens Restriction Order which applied to alien enemies. This relaxation has now been extended in the case of natives of Baghdad or any other place in Mesopotamia who are by race Jews or Arabs. If a Turkish subject presents himself to the Registration Officer of his district and satisfies him that he is either a Jew or an Arab by race—race and not religion being the test—the Registration Officer may exempt him from any or all of the provisions of the Aliens Restriction Order. There can be no doubt that this wise concession will be very generally appreciated in the Middle East.

Elsewhere in this issue extended reference is made to the Mesopotamia Report. Lord Hardinge's statement in the House of Lords has somewhat cleared the ground for the forthcoming debate in the Commons, which will possibly take place next week. Discussion is, however, looked forward to with somewhat mixed feelings, owing to the fact that the cranks and the extremists have already fastened on the subject for question-time as an agreeable exercise for their peculiar faculties. Mr. Austen Chamberlain's explanation will be listened to with respect, possibly with conviction; Mr. Asquith can hardly avoid some statement in justification of his Government; the few Anglo-Indians in the House will probably contribute something of value; but beyond these it is rather unlikely that the debate will serve any very useful purpose. The Government so far does not seem prepared to give way to the cry for a scapegoat, the announcement having been made that the opinion of the legal officers of the Crown has not been sought upon the strictures in the Report.

Mr. Lloyd George dealt firmly with the destinies of Mesopotamia and Armenia in his Glasgow speech last Friday. "Mesopotamia is not Turkish, never has been Turkish. What will happen to Mesopotamia must be left to the Peace Congress when it meets, but there is one thing that will never happen to it—it will never be restored to the blasting tyranny of the Turks. . . . The same observation applies to Armenia, a land soaked with the blood of innocents massacred by the people who were bound to protect them." This had been stated before, partly directly, partly by inference, officially in the House of Commons, but it had not been definitely stated by the head of the Government. The German newspapers have taken prompt notice of the declaration, which cannot, however, have surprised them greatly. They have attempted to argue that England is continuing the war for the sake of plunder—a contention which does not harmonise very well with the view expressed in the same article, that the Entente statesmen are well aware that in a few weeks, or months at the outside, they will be brought to their knees.

General Allenby, whose loss is sincerely regretted by the Army in France, is now in Palestine, where the British and Turks are entrenched opposite each other by Gaza. The war has been confined to trench and air raids, and the Turks have accused us of bombing Jerusalem. The lie is a clever attempt to prejudice us in the eyes of both Christians and Mohammedans; but the Turkish statements are not believed even in Constantinople, and certainly not elsewhere. The facts were that the Turkish headquarters, a mile from Jerusalem, were bombed by the British Air Service.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 11.

The False Coining Case.

The false coining case, which has created such a sensation out here, came to an end on Wednesday last. The number of the accused was fifty-seven, and owing to the long list of witnesses the case lasted no less than twelve days. Eighteen of the men were acquitted; the rest received sentences varying from six months' simple imprisonment to six years' penal servitude, with two years' police supervision. Among the convicted men were the cashier of the Native Court of Appeal, a retired engineer of the Public Works, the headmaster of a primary school at Mellawi, a member of a very wealthy Coptic family, and a Sheikh-el-Balad. Many people are of opinion that, considering the enormous amount of false coining that has been going on in Egypt and the fact that the maximum penalty under the Penal Code is fifteen years' penal servitude, the sentences inflicted are by no means severe enough. I understand, however, that the men who received the higher sentences gave considerable assistance to the authorities in the course of the inquiry, and that this was taken into account in fixing the penalties.

At the conclusion of the trial the Court publicly congratulated the Parquet representative on the very able manner in which he had conducted the inquiry and the subsequent prosecution. This official is Mohammed Zaky el Ibrachi, to whose ability I have had previous occasion to refer in this correspondence, notably in the Wakfs Scandals case last year, when his work called for similar comment from the Court. He is certainly one of the most promising of the younger Egyptian lawyers, and if he continues to display in the future the same moral and mental qualities as have distinguished his work in the past he should have a brilliant career in store for him.

The authorities are to be congratulated on having so successfully laid by the heels this large band of false-coiners. They were greatly assisted in their work of investigation by Mr. A. Lucas, the well-known and popular Director of Laboratories, who has long played a prominent part in the detection of crime in Egypt, and who gave most interesting evidence in the course of the trial.

The Water Supply.

There seems little doubt that Egypt will have an abundant water supply throughout this year. The levels on the White Nile are at present two metres above normal; and the Blue Nile at Roseires, after rising a metre above normal, is now at the same level as at this time last year. The Aswan Reservoir is a metre above the normal, while the main river is at present one and a-half metres above its usual height at this period of the year. There should, therefore, be no complaint as to the volume of water available for cultivation, though, as Sir Murdoch Macdonald pointed out in his last report, until the entire canal system in the Delta is remodelled there is bound to be shortage at the lower ends of the canals, and certain areas at those points will continue to complain of lack of water even at the time when the levels are abnormally high.

It is interesting to note that, although very large numbers of labourers have been drawn away from their ordinary occupation by the Egyptian Labour Corps and other similar formations, the agricultural requirements of the country have not suffered at all. This destroys once and for all the great argument that has always been opposed in the past to any question of extending the cultivable area, viz., that there is already insufficient labour in the country. It is a well-known fact that in certain parts of the Delta the population is very congested, while in other districts it is very sparse compared with the area under cultivation. Whatever complaints as to lack of labour may have been raised in the past are due rather to bad distribution than to actual scarcity in the country, and as soon as the figures from the recent census are available one of the tasks before the authorities would appear to be to devise some scheme whereby the Fellah's inherent disinclination to leave his district may be overcome and the labour supply available may be organised so as to bring about a proper distribution to meet the periodical demands of the agricultural districts where at certain periods of the year there is a greater demand, and to provide the labour required by the lands which will be available for cultivation when the drainage and reclamation work in the Delta is resumed. The war has shown that there is more than ample labour for the present cultivable area, and it only requires organising to be made to go a good deal farther than it does to-day.

June 18.

The Command of the British Forces in Egypt.

The news that General Sir Archibald Murray is to relinquish the command of the Egyptian Expeditionary Force has come as no surprise out here, for there had been persistent rumours during the past two months that he was about to go home. It was not known who his successor would be, but it is interesting to note that the name of General Smuts was most mentioned. Considerable satisfaction is expressed at General Allenby having been selected to succeed him; for, although he is personally unknown to us, his good work in France has not passed without notice in Egypt.

It would be idle to contend that General Murray's relinquishment of the command of the Egyptian Expeditionary Force is regarded with regret out here. Indeed, it is a remarkable fact that, although he has never come much into personal contact with the local population, the news of his impending departure has been received in both Egyptian and European circles with a feeling of distinct relief. It must be remembered that the command of the Egyptian Expeditionary Force carries with it the military control, and that, as a result, the Commander-in-Chief has the final decision in, and is responsible for the civil government of the country. It is in respect of his administration of Egypt, and not of his work as a soldier—as to which comment must be left to the military experts—that the public is now expressing its opinion. Since he succeeded General Sir John Maxwell in March, 1916, the state of Egypt has, it is true, remained eminently satisfactory; but in the course of his direction of affairs General Murray has contrived to obtain in a most pronounced degree what our Gallic friends call "une mauvaise presse," and from what one knows and hears it is not altogether undeserved. That his administration has been as smooth and successful as it has been is, indeed, due rather to the tact of his subordinates and of the civil authorities, whose task has been by no means an easy one, than to his own personal efforts.

The Sharaki Lands.

Last week I reported that there were signs that Egypt would not suffer from any lack of water this year, and now, in proof of that fact, the Irrigation Service has issued an order removing the "Sharaki Prohibition." It should be explained that every year it is forbidden to water land which is lying fallow, after the reaping of the winter crops, until such time as the cotton crop has obtained all its requirements. The land thus deprived of water is called Sharaki, but it must not be confused with other areas also called Sharaki—lands which do not receive any water throughout any given year, and are for that reason exempted from land taxation. The "Sharaki" referred to now merely has its water supply delayed, but obtains thereby no exemption of taxation. Usually, the prohibition is not removed until late in the summer—in 1915 it was removed on July 15, and in 1914 on July 27, but this year it has been found possible to allow watering of these lands to take place as from the 19th inst. in most parts of Lower Egypt, as from June 25 in other parts of that area, and as from July 1 in Middle Egypt. Great benefits are expected from this unusually early removal of the prohibition. The condition of the maize crop depends entirely on how soon water can be put on the land given up to it, and as the area affected is almost all maize-growing land it is highly probable that the coming crop will show a marked improvement in yield and quality, and that the

Digitized by Google

foodstuffs stringency during next winter will be materially relieved thereby.

There is, at the same time, an unfavourable side to the water-supply question. Abundance of water may quite possibly bring about an increase in the severity of the annual cotton-worm attack. There are, indeed, signs already of early activity on the part of that pest. Circulars have accordingly been sent to all the provincial authorities drawing their attention to this eventuality and calling upon them to take all the necessary steps to search for the egg masses and destroy them without delay. The latest reports show that the authorities are on the alert, and have made the requisite arrangements to deal with the scourge as soon as its appearance is reported in their districts. An interesting innovation has been started in this connection in the province of Dakahlia. On the initiative of Colonel Harvey Pasha, Commandant of the Cairo City Police, a number of vagabond children have been taken from the city and sent down to that province for employment in the work of picking the egg masses, and if the experiment is successful, further contingents will follow. The children receive a small sum per day to cover their food, etc. It is to be hoped that this experiment will prove sufficiently successful for similar action to be taken in other directions. If such an extension can be made, it will in a measure provide a solution to the serious problem confronting the authorities as to how they can satisfactorily deal with the increasingly large numbers of vagabond children in the streets of the capital.

The Paper Shortage.

Owing to the shortage of paper and the difficulty in obtaining further supplies, the military authorities have issued regulations with regard to the publication of newspapers. No paper is to appear on more than six days in the week, or to have more than eight pages; no supplements or special editions are to appear; no newspaper is to be sold at less that five milliemes, and those which have more than four pages are not to be sold at less than one piastre; papers, the price of which is five milliemes are to limit their size to two pages on four days of the week; and the maximum size of a page is fixed at 52 x 67 centimetres. Most of the local papers have announced their intention of increasing their price. These regulations should, in the ordinary way, result in a diminution in the consumption of paper, but the weak point about them would appear to be that the obligatory alteration of the price is not to extend to subscriptions. The natural effect of this will certainly be to add to the list of subscribers and correspondingly decrease the daily sales; but, whilst it may reduce the wastage, such as it is, on returns, it will not, it is to be feared, have the effect on consumption that the authorities undoubtedly expect. It would have been much sounder if the concession as to price had been explicitly extended to existing subscriptions only.

The Philippides Case.

The case in which Philippides Bey, late head of the Secret Police at the Cairo Governorate, is accused of having accepted bribes from police officials to secure their promotion, and his wife and orderly are accused of acting as intermediaries, came before the Cairo Assize Court on Saturday. It aroused very great public interest, and the Appeal Court and hall were crowded from an early hour. As I write the case is still proceeding, and nothing of a sensational character has occurred.*

The Abdication of King Constantine.

The news of the abdication of King Constantine, —which, by the way, reached here from Paris long before any message on the subject arrived from London— was received with wild enthusiasm by the Venizelists both here and in Alexandria. In the latter city a Te Deum was sung in the Orthodox Church, where the service was most impressive. After the ceremony the congregation proceeded to the French and British Consulates to thank the Protecting Powers for their intervention at Athens. Telegrams of congratulation were sent to M. Venizelos by the various communities.

I gather from conversations which I have had, that, although the liveliest satisfaction is felt at the abdication of King Constantine, the accession of his son Alexander by no means meets with general approval. It is felt that by far the best solution would be the complete exclusion of the whole Royal family from the Greek throne, and the substitution of whatever head the Hellenic nation may decide to choose. There is an impression among leading Hellenes that their country is as yet unfitted for a republic, and that it must still content itself with the monarchical system; and I find a decided inclination towards the nomination of a British prince as King. Whilst it is recognised that no hasty measures must be taken, there is, nevertheless, a general feeling that a clean sweep must be made at once of the element which has betrayed Greece and lowered her position among the nations of the world; and hopes are in this respect reposed in M. Jonnart, news of whose appointment as Commissioner, representing all the Entente Powers, has just been reported here.

As regards the situation in the Greek colony in Egypt everything has been done with exemplary orderliness, despite the efforts of the Royalists to create trouble. Leading members of the community agree that it is time that the Royalist Diplomatic Agent left the country. He has moved heaven and earth to sow dissension in their midst, and in this he has received marked assistance from the Patriarch. The removal of the latter is a matter which will, from the very nature of his position, require delicate handling, and so will take some time; but the same does not apply to M. Xydakis, whose departure could easily be brought about by the Anglo-Egyptian authorities declaring him to be unacceptable to them as the representative of the new King. His past behaviour certainly does not recommend him for the post of representative of what is hoped is a new order of things at Athens.

NILE POST BOAT LOST.

Egyptian and Sudan papers received by the last mail give details of a sad accident on the Nile, in the vicinity of Renk, Upper Nile Province, on May 29. The north-bound post boat Amara, when steaming north, ran into an haboob twenty-five miles south of Renk. She was quickly driven against the east bank of the river, but before she could be securely made fast the wind changed and blew her out into mid-stream, where she capsized in a few seconds.

There were ten passengers, and of these Major Thwaites, D.S.O., Department of Supplies; Captain Smith, 12th Sudanese; and Sergt. Williams, of the Sudan Service, were drowned. Sir A. Sharpe, late Governor of Nyassaland, who was also a passenger, sank with the ship, but, after clinging for some time to a piece of wreckage, was rescued. All his belongings were lost. Specially noteworthy was the pluck displayed by the wife of Colonel Moir, Postmaster-General of the Sudan, who, with her husband, was among the passengers. Other passengers were Bimbashi Heriot-Hill, of the Transport Department, E.A.; Captain Critchley-Salmon; Mr. Gillman, engineer, Steamers Department; and Sergeant Summerfield.

THE NEW GREEK CABINET.

Reuter's Athens Correspondent reports:—Alterations have been made in the Ministry, which is now constituted as follows:—

M. VENIZELOS	Prime Minister and Minister of War
M. REPOULIS	Interior
M. TSIRITMOKOS	Justice
M. POLITIS	Foreign Affairs
ADMIRAL CONDOURIOTIS	Marine
M. NEGROPONTES	Finance
M. PAPANASTASIOU	National Economy
M. DINGAS	Education
M. EMBIRIKOS	Food Supplies
M. SPIRIDES	Communications

Salvationists in India have subscribed towards the cost of a motor ambulance for service among the British troops in Mesopotamia.

General Papoulas, Commanding the Fifth Army Corps in Peloponnesus, has asked to be placed on the retired list, says Reuter's Athens correspondent. He has addressed an order of the day to his troops calling on them to remain fraternally united and to maintain discipline and order.

* A Reuter's message from Cairo, dated June 30, reports:—The trial of the Chief of the Secret Police, Philippides Bey, and his wife for bribery and corruption, which has been occupying public attention for fifteen days, closed to-day, when both prisoners were found guilty on eight out of thirteen counts. Philippides was sentenced to five years' confinement, and his wife to one year's hard labour, both, in addition, being fined £800. They were subjected to a hostile demonstration on leaving the court.

THE SITUATION IN PALESTINE.

(From a Correspondent.)

Cairo, June 11, 1917.

Since I forwarded my previous notes on the persecution of the Jews in Palestine, reports have come to hand giving further particulars of the atrocities committed by the Turks there, especially in Gaza.

Jemal Pasha is said to have ordered the inhabitants to quit that town at short notice, when they had to leave behind all their furniture and belongings, which the soldiers freely looted. The latter are said to have been selling rugs and carpets worth from £20 to £30 apiece for as many piastres. What is more reminiscent still of old Bashi Bozuk methods is that the fugitive women have been stripped by the soldiers of their gold and silver ornaments.

After the first rude shock given by the British Army in Palestine, Jemal Pasha thought of evacuating Jerusalem also; and he convened the notables of the city to that end. They, however, unanimously replied: "The case of the inhabitants of Gaza is a sufficient warning to us. We prefer to remain in our homes and bear the risks of invasion rather than quit them, as the people of Gaza have done." This so incensed the autocrat that he forthwith constituted a court martial, which condemned these recalcitrant notables to exile to Anatolia. Among the notables similarly exiled from Gaza are the Mufti and the heads of the leading families there.

To complete the ruin of the poor inhabitants of Southern Palestine the cavalry force let loose their horses to graze in the green fields of corn. Of the eagerly expected harvest nothing but the stubble remained.

A curious and noteworthy fact is that in Kerek gold and silver abound. The explanation is that the Arabs there, who have always defied Turkish authority, refused to sell supplies to Jemal Pasha unless the payment were made in gold. Necessity compelled Jemal to comply, more especially as the Kerek Arabs threaten to join the Hejaz troops at any moment.

It is appropriate to give in this connection a translation of the full text of the warning published by Jemal Pasha in the newspaper *Al Sharq* in April last. It is headed thus: "Last warning from headquarters of the 4th Sultanian Army Corps regarding paper currency":—

The depreciation of paper money in the zone occupied by the 4th Army Corps has been greater than in any other place in the Empire, and, as this region comprises important centres of commercial exchange, this depreciation is causing real disaster to the inhabitants of Syria and Palestine, and to the army as well, not to speak of the repercussion on Irak and Asia Minor. When we find this paper currency *extraordinarily* considered in Germany and Switzerland, and even in France (*sic*), and Ottoman arms and those of our Allies in the most secure position everywhere, the only explanation for this daily depreciation can be that it is the manœuvre of monopolists. Wherefore, I wish—nay, I order—the destruction of this monopoly at its very roots, so that there should remain no difference between the value of paper and gold currency. I had hoped that there would be a spontaneous return to normal conditions, and I refrained consequently from the adoption of severe measures; but the experience of two years has proved to me that severity is a sacred duty incumbent on me for the safety of the troops and the welfare of the poor and of the fatherland. Before, however, I resort to the exercise of this severity I give this last warning in the following manner:—

1. The Vali or Mutessarif will convene all those who, by reason of their social position, may influence the economic situation, such as the managers of the Ottoman and Deutsche Banks, and all the rich people, leading merchants, sarrafs, and notables, and will warn them as to the necessity of exercising, at this juncture, a patriotic spirit, and manifesting a real desire with a view to making the necessary arrangements for securing a permanent equality of value between gold and paper currency, and he will see that such arrangements are properly carried out by them.

2. We hope that this body, that represents the distinguished category of the nation, will be so moved by patriotic ardour as to take actively the steps best calculated to lead to the attainment of this object, and we feel persuaded that they are capable of adequately coping with this situation.

3. If, however, our hopes be frustrated, and the difference of value between gold and paper currency persists till May 15—*i.e.*, if on May 15 the people do not buy food or any other commodity with paper money in exactly the same way as gold, *i.e.*, without any difference of value between the two currencies—I will exile, by drawing lots, ten of the notables aforementioned, together with their families, to Anatolia or Ramelia. Even the managers of the Ottoman and Deutsche Banks will not be exempted from this measure. In other words, their names will be included in those cast in the lots.

4. The vilayets will, in the meantime, present in duplicate lists bearing the names of the notables in question and those of the members of their respective families, all arranged in alphabetical order.

5. Six weeks after the exile of the first lot the deportation of the second lot will be carried out, and this arrangement will be continued on these lines with mathematical precision until the paper currency regains its face value.

6. The disaster that has overtaken Syria and Palestine on account of this depreciation of the paper currency has reached a degree which is unprecedented in its intensity, and I therefore find that the exercise of severity in this case is a real mercy to the poor and the country at large, inasmuch as it will conduce to the uprooting of this disaster.

And the Young Turks, with unconscious humour, are now impudently proposing to treat with the Socialists of Russia!

CYPRUS NOTES.

(From a Correspondent.)

Food Prices.

Great complaints are made regarding the widespread disobedience to orders regulating the prices of most articles of food and other necessaries. The rules are evaded by dealers of all classes. In order to defeat them tradesmen withhold goods from the markets and shops, selling secretly at higher than tariff prices, to the benefit of the well-to-do, and the great detriment of the poor. The punishments inflicted in a few cases that come before the Provost Marshals have not sufficed to stop the evil. In giving voice to these complaints it is pointed out that if the rules are not strictly enforced, it would be better that they should not exist. The abuses could be stopped if there were full co-operation between the Government and the municipal authorities. The police could do more to assist the town employees. Bakers continue to give trouble. To deal with this class the police and municipal inspectors could supervise the actual mixing of the flour. If during the summer, which is the season of abundance in meat, vegetables, and other supplies, the defiance of orders and proclamations is allowed to go unchecked, matters may, it is urged, become worse during the winter months.

Death of the Archimandrite Meletios.

The death of the Archimandrite of the metropolis of Kitium at Larnaca, at the age of seventy-four, deprives the Greek Church and community of a highly respected and much-esteemed member. The office is an important one in the Greek Church. It was filled very worthily by the deceased, who resided for over half a century at Larnaca. During several periods in which the see remained vacant, Melétios administered the office, as *locum tenens*, with ability; being regarded with great affection by his compatriots. The burial was in St. George's Cemetery. The Bishop of Kitium, who was absent at Limassol, hastened to Larnaca on receipt of a telegram. The funeral service was attended by representatives of the Government, the Consular body, the municipality, and large numbers of citizens.

Summer on Mt. Troodos.

The hotels should be well filled in spite of adverse circumstances. At Troödos that of Najem Houri's Hotel Company within the camp lines is much favoured. At Platres the hotel attracts large numbers, being in a convenient spot near a much-frequented village, which has grown into importance since the British occupation. At about an hour's distance from Platres, to the east, at a most picturesque spot in the folds of the mountain range, and deep in the pine forest, is another hotel, close to the old Mesopotamos monastery. It is now advertised as containing forty-five beds, and every comfort, by Messrs. George and Son. It is a favourite place for picnics and excursions from the camp and all neighbouring places. English, Greek, Turkish, and other languages are spoken, and a cosmopolitan company is evidently expected.

Need of an English Paper.

It is to be regretted that no English paper exists in the island. Several have come into existence at different periods since 1878, but none have had a long life. The *Cyprus Herald*, published weekly in the early days, managed to eke out a precarious existence for some years, but collapsed owing to want of funds. The British "colony" is too small to support a paper, and a subsidy is, of course, out of the question. There is an abundance of Greek papers, but there are few among the English who can, or care to, read them. Cypriots are well informed through them. Articles on the treatment of Belgians, Serbians, Roumanians, and of all occupied territories have been read throughout the length and breadth of Cyprus. Good translations of articles from European papers are inserted. There is no delusion anywhere as to the nature of German *Kultur*. In Cyprus, as in all parts of the world, the full meaning of the German menace to civilisation is thoroughly well understood.

According to a Constantinople telegram to the *Frankfürter Zeitung*, the wife of Dr. von Kühlmann, the German Ambassador in Constantinople, died last week of typhoid fever and inflammation of the lungs.

TANGIER TO TEHERAN.

As was inevitable, there have been many rumours regarding the effect that King Constantine's departure from Greece has had upon King Ferdinand of Bulgaria; and certain journals are amusing themselves—at least I hope they are—and pleasing their readers by picturing a kind of wild panic in Bulgaria. That Ferdi the Fox has been rather perturbed, I am prepared to believe; for as long as Constantine was on the throne, there was, at any rate, some reason for believing that the Entente Powers were not in earnest over the Balkan campaign; and as Ferdi is a nervous soul, he must feel distinctly unhappy at the thought of a friendly Balkan monarch being removed. So it is natural enough, perhaps, that he should "get a move on him," and endeavour to stir up his dear friends, the Kaiser and the Emperor Charles, to send reinforcements. But somehow I find it hard to believe that Bulgaria is panic-stricken at what has occurred. The Bulgarians are our enemies; but that is not to say that they have no good qualities at all. And they are cool-headed, unexcitable folk. They will weigh the chances carefully once more, I fancy; but they will *not* do anything sudden, under the impression that all is lost because Constantine has gone and they may have the Greek army against them ere long.

***

Indeed, looking at it from, as near as possible, the Bulgars' point of view, the need for endeavouring to come to terms does not seem very pressing just yet. So far they have not been badly "spanked"; they have got in their harvests all right; they have acquired some useful—and long-coveted—territory; and their position appears to be a strong one—to put it mildly. Things being thus, and the Bulgarian character being what it is, I regard the talk about "general consternation" reigning in the country as being distinctly far-fetched.

***

I have never been a great admirer of the habit of calling the ex-King Constantine "Tino," even though it rested upon the authority of that master of good-taste, the Kaiser! I have occasionally used the abbreviation, no doubt, for it is unquestionably a convenience in its way; but I have not done it more than I could help. A few days ago, however, I saw the expression, "The Tino family," in a note in a provincial paper, and that strikes me as having quite a nice, homely ring about it. If ever the family referred to is very hard hit by the Fates, and forced to take to "the halls," it will, at any rate, have an excellent stage name to begin with.

***

There has lately been some correspondence in the newspapers about the British prisoners in the hands of the Turks. This shows how unhappy many people in this country have been rendered by the reports that the Turks are treating their captives badly. Personally, I hold that the Turk has shown himself unfit to rule any subject race; and that therefore he is probably unfit to hold any prisoners. But, on the other hand, one does hear of prisoners—quite humble individuals, too; so it can hardly be a case of "window-dressing"—being very decently treated, as far as the supplies will permit. It would undoubtedly be a great boon if only *all* the concentration camps in Turkey were open to inspection by neutral visitors. Is it quite impossible?

***

The expression "get-rich-quick" is surely of the West western; but the frame of mind, or state of desire, that it indicates is by no means unknown in the East. I was, therefore, hardly surprised when, a few days ago, in glancing through the *Egyptian Gazette*, I came across the heading. "Get-Rich-Quick Egyptians." Had that been all, I should have "skipped" the paragraph, but when I read the subtitle, "A Tale of Magic," I settled myself comfortably, to enjoy a treat. And I was not entirely disappointed. Here, briefly, is the tale:—

***

In the days when the Sultan Hussein the Good sat on the throne of Egypt—long may he continue to do so—there came to Helouan a Moor, named Hajji Ibrahim Sayyid, who soon let it be known to a chosen few that he was a Magician of the First Water: he had indeed solved a problem that had puzzled the alchemists throughout the Ages; and could, by means of a potent charm, turn lead into gold. This startling information was whispered into the ear of a notable of the place, one Ahmed Effendi Wasfi, who was a rich man, and who, desiring to become yet richer, agreed to help the Moor with his magic. For, it seemed, before the charm could work, certain preliminaries had to be observed. So the Effendi lent the Moor a house; and advanced him more than a hundred pounds for the purchase of woven stuff for curtains for a special room "for the King of the Jann," and for a stock of perfumes and drugs "for the use of the Jann." He supplied also large quantities of lead, zinc, and cement to the Moor; and bound himself not to divulge any secrets he might learn, or to mention the source of the wealth that was to be his.

***

But, alas for the glory of the Jann! Those fickle beings failed the good Hajji, and the wealth was not forthcoming. Then Ahmed Effendi considered himself freed from his oath, and called in the police. The Moor's Familiar failed to warn him of the approach of the Minions of the Law; and as a result he was taken to Cairo under arrest. Then it transpired that he had reaped a rich harvest out of other Egyptians, by similar means. What his fate was the *Egyptian Gazette* does not tell me. But, unless one of the Jann, relenting at the last moment, bore him off in a cloud of smoke, I fancy I can make a fairly good guess.

CORSAIR.

KOSSOVO DAY.

Thursday, June 28, being Kossovo Day, the London units of the Scottish Women's Hospitals and the Serbian Society of Great Britain held a joint meeting at King's College, London, which was addressed by the Hon. Mrs. Haverfield and Mr. A. H. E. Taylor. Professor Gilbert Murray presided.

Mrs. Haverfield described the experiences of a hospital unit in the Dobruja. Among other incidents, she recalled one that occurred when a member of the unit, a young girl who had been studying medicine for two years, had charge of a motor ambulance for cholera patients. She was taking a Serbian colonel, suffering from the complaint, and a Serbian doctor, to Cernavoda. Arrived there, the doctor left, to go in search of the hospital. There was an aeroplane attack in progress, but the girl driver pulled aside the curtain that separated her from the patient, talked to him, and consoled him. It was characteristic of the Serbian spirit, said Mrs. Haverfield, that the patient was so pleased with the young girl's courage that he refused to leave the ambulance until her name had been written down on a piece of paper and handed to him, because, he said, she had been so heroic that if he lived he was determined to get a special decoration for her.

Mr. Taylor's address dealt with the unification of the Jugo-Slav race into a single State. Among the forces that were opposed to this, he said, were, first, the Bulgarophil movement which sought to detach Bulgaria from the Central Alliance by a bribe at the expense of Serbia. There should be no question of requiring the Southern Slavs to give up territories to which they had historical rights, the right of recent possession and at least an equal ethnographical right, unless we could guarantee them a complete national union. A second influence against the unification of the Southern Slav race was an Italian one. He trusted that when the time of reckoning came the Italians would be true to their own past. As the Jugo-Slavs were now, so the Italians had been. The third influence was Austrophil. The creation of the Jugo-Slav state was for us partly a matter of sentiment, partly an obligation of humanity, but there was also a solid British interest in doing so.

On Monday Messrs. Sotheby sold twenty-nine autograph letters and two manuscripts of Lord Byron for close upon one thousand pounds.

The Serbian military authorities are in possession of an official Bulgarian document which shows that all Serbian prisoners and interned civilians and recruits from the Morava region have been notified that they will be shot in the event of their attempting to escape, their homesteads burned, their properties confiscated, and their families deported.

NEAR EAST BOOKSHELF.

AN INTERNATIONAL NON-SEQUITUR.*

Mr. Leonard S. Woolf is a Fabian Internationalist, and he has seized upon Constantinople as the *corpus vile* for what he regards as an experiment, but what is, in fact, a proved failure. "The most striking difference between the imperialist's and the internationalist's ideal," he complains, "is that the world has allowed the former to attempt to put his ideal into practice, while refusing even to give a trial to the ideal of the latter." The statement is not correct, and indeed is contradicted by the author himself earlier in the book, where, apart from instances supplied by Egypt, Crete, and China, which he affects to ignore, he cites a number of successful cases, which incidentally have no bearing on the subject: "International administration has been applied in its most complete form to the control of river traffic and the freedom of navigation of rivers in the European Commission of the Danube, to postal and telegraphic communications in the Universal Postal Union and the Telegraphic and Radio-telegraphic Unions, etc., etc." Mr. Woolf enumerates a very formidable list of instances of successful international co-operation, which might have been still further amplified by reference to chess clubs, bowling alleys, and boating picnics. The latter cases would be quite as much to the point as the analogy chosen for the purposes of the book. No one challenges the success of the European Commission of the Danube, and there is no reason why an international body should not be made responsible for the navigation pure and simple of the waterway connecting the Black Sea and the Mediterranean. But that would not solve "the future of Constantinople." So intent is our author on riding his hobby of internationalism that he has not discovered the weakness of an argument based upon the supposed similarity between a river and a city. To contend that, because an international body can direct the conservancy of a river on sound lines, the handling on similar lines of all the complex problems associated with the government of a large city and a considerable extent of territory must be equally a success, is not a convincing testimonial to the reasoning faculties of those who urge the point.

According to our Internationalist, however, the problem is a simple one. The International Commission in charge of Constantinople is to be given a written constitution. "The powers of the Commission, as an Executive, to make regulations for freedom of communication, law, order, police, sanitation, to appoint and dismiss subordinate officers, would be defined . . . regular criminal and municipal courts would be required for trying cases of breach of regulations and other offences. The establishment of these courts must be provided for in the Treaty, together with the appointment of the judges and magistrates and the scale of their salaries. . . . The Treaty, in providing for the continuance or establishment of civil courts and judges, will lay it down that the existing civil law of the territory internationalised shall continue to govern the decisions of these courts."

The suspicion that Mr. Woolf is more concerned with the future of internationalism than interested in the future of Constantinople is confirmed by the fact that he has never heard of the Capitulations, and suggests that the existing civil law should supply the code of the internationalized city. It is with difficulty that one has the patience to examine such amateur theories. We are to imagine the government of Constantinople vested in a Commission consisting of an American, a Dane, and a Swiss, unless forsooth "one member . . . should . . . represent or even be elected by the native (*sic*) population." Of what nationality are the police to be, and the magistrates and the judges? If they are to be as cosmopolitan as the inhabitants, it requires little imagination to realise that precisely the same conditions as have always wrecked international administration will be repeated. Here it may be mentioned that our author, in the exuberance of his discovery of a book in the French language on the Danube Commission, written by the Secretary-General of the Roumanian Academy, challenges the application by the late Lord Cromer and by Lord Milner of the word Internationalism to the former status of Egypt. It was the mixture of national administration, he assures us, that made international government in Egypt unsatisfactory, and indeed prevented the latter from being given a fair trial. Whether Mr. Woolf speaks with the same exhaustive knowledge of things Egyptian as of things Turkish does not appear, but it is very evident that he has given no thought to the administrative problems of any cosmopolitan city or territory. The fact detracts somewhat from the value of his panacea for Constantinople. A further symptom of shallowness is displayed in several pages of comment on Napoleon's exclamation (detached from its context): "Constantinople! That means the rule of the world." No one but Mr. Woolf has ever imagined that the saying was intended to imply more than that possession of Constantinople would round off the victor's hegemony of the world. We are solemnly assured that "Constantinople has been in existence and in the hands of a single Power for the last 450 years at least. It has never yet given the rule of the world to anyone."

Dispassionate inquiry would convince the wildest enthusiast that international government does not stand the test of practice. It may be introduced in name, but the practical administration must be in the hands of one national authority, who will supply or control the police.

The Millennium has not yet come, and it will be courting disaster if it tries to introduce itself first in Constantinople. It is a kind of town that requires a fairly numerous police force, and police forces have been known to kick over the traces. To guard against such a possibility a military force must be available, and if the line of argument is followed to its logical conclusion we soon come to the nationalism which Mr. Woolf may deprecate in the case of Egypt, but which he would not be able to eliminate.

Constantinople is of great economic importance to Russia, because her economic development depends on free access to the Mediterranean. Similarly the freedom of the waterway is essential to Roumania. To secure this it is necessary that Turkish control should be eliminated, in order to prevent the possibility of the recrudescence of German intrigue in the Near East. When Turkish control has been eliminated, the main concern of Europe—*i.e.*, of the Allies—should be for the good government of Constantinople. That can never be achieved under international supervision for reasons already hinted at. Some thought must be given to the character of the city and its inhabitants. Nationality hardly enters the question, for the reason that there is no one race numerically predominant in the cosmopolitan community. The fetish advanced by Mr. Woolf, it is to be feared, would merely enable us to re-write, as the fate of the people,

"Perturbabantur Constantinopolitani
Innumerabilibus Sollicitudinibus."

* "The Future of Constantinople." By Leonard S. Woolf. London: George Allen and Unwin, Limited. 2s. 6d. net.

BOOK NOTES.

A volume which should be of especial interest at the present moment is "Palestine," by Mr. A. M. Hyamson, which will shortly be published by Messrs. Sidgwick and Jackson, Ltd. In this work the author, after a brief sketch of the history of Palestine in earlier times, describes in detail the remarkable spiritual and material revival which the country has undergone in the past thirty-five years as the result of Jewish immigration. The book includes a history of the Zionist Movement, and is the first in England to deal at any length with the regeneration of Palestine by the Jews.

M. J. de Morgan, who was formerly Director-General of Antiquities in Egypt, has written an interesting and valuable "Essai sur les Nationalites," which is published (Berger-Lerrauls) at three francs.

Mr. Milford has now published the new edition of "Observations of the Mussulmauns of India," to which reference was made in these columns quite recently. The price of the book is six shillings net.

Dr. Berriedale Keith and Dr. Albert Carnoy will be responsible for the next volume of the Mythology of All Races series (Putnam), which will deal with Indian and Iranian myths.

BOOKS RECEIVED.

The Memoirs of a Balkan Diplomatist. By Count Mijatovich. (London: Cassell, 16s. net.)

Political and Social Conditions in Slovene Lands. [Southern Slav Library, VI.] (London: The Near East, Limited.)

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. July.	1917. June.		1335. Ramadan	5677. Tamuz
6	23	Friday	16	16
7	24	Saturday.....	17	17
8	25	Sunday	18	18
9	26	Monday	19	19
10	27	Tuesday	20	20
11	28	Wednesday	21	21
12	29	Thursday	22	22

To-day is the birthday of H.R.H. Princess Victoria.

Next Thursday is the birthday of the King of Serbia.

Thursday will also be the birthday of Prince John, the youngest son of the King and Queen, who was born at Sandringham in 1905.

The Sultan of Egypt has given £1,000 to the fund for the building of an Anglican Cathedral at Cairo, the site for which was given by the Egyptian Government on his initiative. Sir R. Wingate and Bishop MacInnes have both written, warmly thanking the Sultan.

Prince Paul of Serbia, who recently arrived in England for medical treatment, has left the nursing home for Scotland, where he will spend the period of convalescence.

The Serbian Minister and several Staff officers attended the Thanksgiving Mass on Thursday of last week in honour of Kossovo Day at the Russian Church in Welbeck Street.

Sir Francis Elliot, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens, had an audience of the King at Buckingham Palace on Thursday last week. His Majesty invested him with the Insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George. The following day Sir Francis was received by the Foreign Secretary at the Foreign Office.

Colonel Sir Mark Sykes, M.P., had the honour of being received by the King at Buckingham Palace on Thursday last week.

According to the *Daily Mail's* Athens correspondent, it is understood that Prince Christopher intends coming to London, "where he will marry a wealthy American girl."

From the same source comes the report that Prince Nicholas hopes finally to settle in Scotland.

The marriage of Mr. Thomas Lyons, his Majesty's Diplomatic Service, elder son of the late Admiral of the Fleet Sir Algernon Lyons, G.C.B., and Lady Lyons, of Kilvrough, Glamorganshire, with Miss Alexina, youngest daughter of Mr. and Mrs. A. P. MacEwen, of Reedley, Branksome Park, Bournemouth, took place on Wednesday afternoon at St. Aldhelm's Church, Branksome, Bournemouth. Mr. Lyons served some time in Cairo, leaving there for Madrid in 1909, and afterwards being transferred to Peking.

On the list of pensions granted during the year ended March 31, 1917, is one of £150, granted to Lady Blunt, "in consideration of the distinguished services of her late husband, Sir John E. Blunt, C.B., as Consul-General at Salonika and at Boston."

Mrs. Herbert Squiers (*née* Marguérite, daughter of Myles Kennedy, Stone Cross, Ulverston), of Thorne's Beach, Beaulieu, Hants, and of New York, gave birth to a son, Herbert Goldsmith, on June 28.

The Sultan of Egypt has conferred the grade of Officer of the Order of the Nile on Lieutenant Philip L. Neville, Flag Lieutenant to Vice-Admiral Sir Rosslyn Wemyss.

Miralai H. J. Huddleston Bey, D.S.O., M.C., late Officer Commanding the Egyptian Camel Corps, has been awarded the 3rd Class Order of the Nile. Huddleston Bey, it will be remembered, was in command of the column which engaged Ali Dinar, Sultan of Darfur, in the mountains, in which battle he met his death.

Lieutenant-Colonel D. C. Phillott, Lecturer in Hindustani at Cambridge University, has accepted the offer of the Syria and Palestine Relief Fund to be honorary general director of the administration of relief in the Holy Land, and is proceeding shortly to Egypt to make all the preliminary arrangements. Colonel Phillott, who saw active service in India in 1890 and 1891, subsequently had experience in relief work on the North-West Frontier, and later was Consul-General at Kerman, in Persia. He is a most distinguished Arabic scholar, and speaks many of the languages of the East, being a gold medallist in both Persian and Urdu.

Montenegro was represented at the Canadian Confederation Jubilee service at Westminster Abbey by the Consul-General for Montenegro, Sir Roper Parkington.

The idea of establishing a Red Cross hospital on the beautiful Grecian Isle of Syra was recently conceived by M. Venizelos, and Mr. Leon Messinesi, the well-known Anglo-Greek merchant, who is president of the hospital, is now at Syra completing arrangements. The hospital is recognised by the British Government, and donations will be gratefully received at the offices of L. N. Messinesi and Co., Eastcheap Buildings, E.C.3

A correspondent writes:—Mr. Leon Messinesi is a member of an old family which in Greece is very prominent in politics, as well as in commerce. His firm, L. M. Messinesi, of 19, Eastcheap, is well known in the City of London. He has been Consul-General for Greece in London for many years, and during the military revolution in Athens in 1909, when M. Venizelos was called from Crete, and, for the first time, appeared in Greek politics, Mr. Messinesi was asked by his compatriots to represent them in the new Parliament. He was duly elected as Deputy for Achaia and Elis, and continued to represent those large districts until the dissolution of the Parliament by King Constantine in 1915. That Parliament is now to be recalled by M. Venizelos. During the recent troubles in Athens, when Venezelists were persecuted, Mr. Messinesi happened to be in Greece, and, as a supporter of the Entente and a fearless speaker, he had to suffer. In good time he went to the island of Syra, which was under the control of the Provisional Government of M. Venizelos, and while there he apparently formulated the idea of establishing an hospital for the wounded. He instructed the manager of his firm in London, Mr. H. Waller, to procure and despatch the necessary requirements, and also to collect subscriptions for the hospital. These instructions were promptly carried out by Mr. Waller, and a sum of £800 was collected and forwarded to Mr. Messinesi. An appeal has also been made through the Press.

Captain Leonidas Lucas Ralli, A.S.C., of Park Street, W., at one time secretary to Sir Edward Ward, left property valued at £11,973.

Apropos of our reference recently to the good work of the British Farmers' Red Cross Fund, it is interesting to note that it has provided the following amounts for various works of mercy in the Near East:—£10,000 for two British Farmers' Hospitals in Serbia; £1,000 for Dr. Barrie's Serbian Hospital; £20,000 for hospital work in the Dardanelles; £20,000 for the extension and upkeep of a convalescent home (1,000 beds) at Montazah, Alexandria; £103,150 for motor ambulance convoys in Salonika, France, and Belgium; £5,000 for stores for Serbia; £5,000 for motor ambulances and steam launch for Egypt; £20,000 for hospital work in the Persian Gulf; and £2,000 for motor soup kitchens for the Caucasian Red Cross. The address of the Fund is Room 5, Tower Bridge Flour Mills, Shad Thames, London, S.E.1.

Sir Lindsey Smith has resigned his position as hon. secretary to the Wounded Allies Relief Committee in order to take up a Government appointment, and the new hon. secretary is Dr. V. H. Rutherford, who did valuable work in organising the committee's hospitals in France, Serbia, and Montenegro.

An exhibition of wash and pencil drawings done in the Sudan by Dorothy Willis is to be held at 24A, Lower Regent Street, S.W.1 (the Empire Book Room; entrance in Jermyn Street), from July 2 to 22, inclusive. The exhibition will be open from 10.30 to 6 on week days, and on Sundays from 3 to 6.

APPOINTMENTS, PROMOTIONS, ETC.

The Secretary of the War Office last Friday made the following announcement:—General Sir E. H. H. Allenby, K.C.B., has arrived in Egypt, and has taken over the command of the Expeditionary Force.

The Sultan of Egypt has conferred the rank of Bey (second class) on Mohammed Shahin Bey, private physician to His Highness, and on Mohammed Teymour Bey and Mohammed Zulficar Bey, Masters of Ceremonies.

Reuter's Athens correspondent reports that it is announced that M. Gennadius will remain in London as Greek Minister under the new *régime*. The message adds: M. Romanos resumes his duties as Greek Minister in Paris. M. Caclamanos has been named for Petrograd, and M. Alexandris for Berne.

A Berlin message, forwarded on from Amsterdam by Reuter, states that the Greek Minister in Berlin, M. Theotokis, has telegraphed his resignation to the new Government, and has handed over the Legation to the First Secretary.

Bimbashi (temporary) S. M. Castle, 9th Sudanese, has been granted the temporary rank of Kaimakam.

Digitized by Google

Reuter's Athens correspondent reports that Admiral Coundouriotis, the Greek Minister of Marine, has ordered the retirement from active service of Vice-Admirals Dousmanis, Damianos, Ipitis, and Mioulis and various minor officers. Important changes are being made in all departments.

Bimbashi (temporary Kaimakam) G. G. S. Brander, 12th Sudanese, having ceased to be employed with Patrol No. 33, relinquishes the temporary rank of Kaimakam. He has been transferred to the 11th Sudanese.

The King has granted permission to Mr. Mark Charles Carman, of the Egyptian Ministry of Education, to wear the Insignia of the Fourth Class of the Order of the Nile, conferred upon him by the Sultan of Egypt in recognition of valuable services rendered by him as Assistant Master at the Tewfikieh School, Cairo.

OBITUARY.

A Reuter's message from Budapest, received by way of Amsterdam, reports the death of M. Titu Maiorescu, formerly Prime Minister of Roumania, at the age of 77 years, after a short illness. He was born in 1840, and entered politics at the age of 31, being elected a Deputy. Before this he had been appointed Professor of Philosophy in the University of Jassy. In 1911 he was Foreign Minister, and in 1913 he became Prime Minister at the head of a coalition Cabinet.

The Jassy correspondent of *The Times* reports (June 29): The funeral of Dr. Campbell, assistant to the British Hospital at Jassy, who died of blood poisoning, took place to-day in the presence of members of the Legation and a great number of Allied and Roumanian officers. The Queen, who was also present, placed on the body the Order of the Roumanian Crown.

In an appreciation of General Broadwood, published in *The Times* last week, "E. B." writes: "Anyone who has had the privilege of serving under him in strenuous and anxious times in the Sudan and South Africa will not need to be reminded of his fearless courage, tenacity of purpose, and gallant spirit. For many years he worked in the fierce, unceasing heat of the Sudan, unknown and unheard of, during which time he fashioned the efficient native cavalry force that came to the front so well and did such good service on many hard-fought fields, culminating in the Battle of Khartoum. Physically by no means strong, his indomitable spirit carried him through those long years. His great strength lay in the fact, well known to all with whom he came in contact, from Lord Kitchener to the lowest of his troopers, that he was as 'straight' as a gun-barrel, absolutely trusted by his superiors, and loyal to those serving under him. No one ever heard Broadwood lay the blame for any failure on a subordinate."

It is now nearly two months since Captain A. T. Cull was reported missing, and later news is not favourable to the hopes previously entertained that he was a prisoner of war. Captain Cull was manager of the Minieh branch of the Imperial Ottoman Bank. He was in the Seaforth Highlanders, and was attached to the Royal Flying Corps. When last seen he was heavily engaged with enemy aeroplanes. Two British machines were brought down in flames, and it is believed that his machine was one of these. His colleagues are much distressed that more favourable news has not been received.

The death is reported in the Egyptian Press of Lieutenant Arthur H. Vella, who was a nephew of Bernard Pasha, of the Sudan Government, the only son of Mrs. Vella Bernard and of the late Captain A. Vella, Adjutant Royal Malta Artillery, and grandson of the late Colonel Count Bernard, Commanding Royal Malta Artillery. This is the second member of the same family to have given up his life in this war, the first being his first cousin, Lieutenant B. P. Bernard, only son of Bernard Pasha, who was killed in action in France in the first months of the war.

The Egyptian papers report the death in Cairo of Mr. Constantine Meimarachi, one of the most prominent Greek business men in the city. A native of Crete, soon after his arrival in Egypt he founded the Cretan Brotherhood, of which he was President. He also took part in the formation of the first Greek Criminal Court in Egypt. He was elected Treasurer of the Greek Community Council, and possessed many foreign and Egyptian orders, including that of a Commander of the Order of the Osmanieh. He led a most active life throughout, and lately joined the Greek national movement, and was in charge of the Recruiting as well as the Relief Committee.

The death occurred at Henley-on-Thames last week of Colonel William James Holmes Frodsham, of Mettingham, Suffolk, aged sixty-six years. He served with the 31st Regiment in the Sudan Expedition, 1885, receiving the medal with clasp and the bronze star.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

PLANK.—On June 29, at Alexandria, Egypt, to Mr. and Mrs. Howard Plank—a daughter.

At Serajevo, on the spot where the Archduke Francis Ferdinand was murdered, there will be unveiled a memorial with the inscription:—"The Archduke Francis Ferdinand and his consort, the Duchess Sophia, gave up their lives on June 28, 1914, on this spot for King and Fatherland."

Reuter's correspondent at Serbian Headquarters telegraphs that after the outbreak of war the Serbians inhabiting Austria and Hungary were arrested and treated as ordinary criminals, being subjected to all kinds of torture, especially famine. Later they were sent to concentration camps, at two of which 23,000 died of typhoid fever and other contagious illnesses.

A Reuter's message from Jassy, dated June 21, reports:—Despite the present situation, the Roumanian National Fête of May 10 was celebrated with as much ceremony as possible. After service there was a military parade in the presence of the King and Queen, the Crown Prince Carol, the members of the Royal Family, all the Roumanian Ministers, and the foreign military missions. King Ferdinand conferred numerous decorations on officers, and on one soldier a decoration on behalf of the French Republic, while a military band played the Marseillaise. The King and Queen, the Crown Prince, the members of the Royal Family, and the official procession were warmly cheered.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, JULY 6, 1917.

THE REPORT—AND AFTER.

The one feature that emerges from the discussion now raging round the Mesopotamia Report is that public opinion is unanimous in requiring the Government to take definite action in regard to the strictures passed by the Commission. It is natural that indignation should be directed, in the first instance, against the individuals who were primarily responsible for the mismanagement of the campaign, and the Report has been sufficiently explicit in the charges it has brought against some of those upon whom responsibility fell to enable disciplinary measures to be taken at once against them. But the value of the Commission's inquiry and searching criticism would be largely lost to the nation, if public feeling were to exhaust itself in securing that those who have served their country ill should receive their deserts. For this reason it is to be hoped that the personal aspect of the whole matter will be disposed of with the least possible delay. It would be well, indeed, if the more glaring cases, the full details of which, at least in regard to the medical arrangements of the Expedition, have been well known to the British and India Governments since the submission of the Vincent-Bingley Report over a year ago, could be settled before the debate in the House of Commons. The Government can have no desire to obscure the real issue. Behind the culpability of individuals lie the defects of a thoroughly unsatisfactory system, and if the criticism of Parliament is to be helpful, it ought to have mere disciplinary considerations cleared out of its way to enable it to concentrate upon the more important questions affecting methods of administration.

No one will grudge Lord Hardinge his personal statement in the House of Lords. In the circumstances it could hardly have been omitted; but he left the main problem precisely where he found it. The Commission was appointed to inquire into the conduct of certain operations of war in Mesopotamia; it was not called upon to dilate upon the achievements of India or the internal conditions of that country. It observed a just sense of proportion in calling attention briefly to the state of affairs in India at the time, and in stating that the preoccupation caused by the period of grave anxiety through which the Government of India was passing must not be forgotten in blaming it for the inefficiency of the management of the Mesopotamia campaign. Further, it paid due tribute to the fighting capacity and efficiency of the combatant forces of the Indian Army. Neither the record of the troops nor India's splendid contribution to the Empire's cause was in dispute. The gravamen of the charges brought against Lord Hardinge's Government and the military authorities of his time was that they failed persistently and continuously to minister to the wants of the forces employed in Mesopotamia, and tolerated without attempting to improve a thoroughly unsatisfactory military administration. For reasons that were set forth in these columns last week we are far from holding that responsibility attaches to the Viceroy and his advisers alone. Lord Hardinge belonged to a system, the roots of which spread to Whitehall. In peace times its shortcomings might escape public notice, and even be hardly apparent to those who were responsible for it. But under the searching test supplied by war it broke down, and its inherent unsoundness was laid bare. War, unlike peace, cannot do with the second best; it calls for the utmost that men can give, physically and intellectually. For this reason war rarely proves an unmixed evil to a nation, however hardly it may press on the individual; it serves to set a higher standard of attainment for all, for Government as well as for the people. We cannot help thinking, therefore, that Lord Hardinge would have added to the obligation under which his distinguished career has laid the country, if he had frankly recognized the fact that past standards of achievement have been set too low and if he had welcomed the new order which, in the interests of the Empire as a whole, could embrace within its censure Viceroy, Secretary of State, and Cabinet, and point them to more efficient service. It cannot be overlooked that while the Mesopotamia Expedition was registering its early successes it was regarded throughout India, and particularly in the Viceroy's Camp, as essentially "Our Show." Only when the tide turned and inherent defects could no longer be disguised did it become necessary to distribute the share of responsibility. But had the India Government been less content with what it knew to be the second best, disaster would not have overtaken the Mesopotamia Expedition.

When the House of Commons discusses the Report it is to be hoped that it will not adopt the attitude that its duty has been done when it has confirmed the sentence already passed on a handful of officials. Apart from those who have been guilty of deliberate neglect or of individual misdemeanours in misrepresenting facts to their superiors or in grossly overbearing conduct of their subordinates, the shortcomings of those indicted by the Commission implicate the nation as a whole. They are symptomatic of a state of affairs in which the people and Parliament in particular acquiesced. For years now, with the connivance of the House of Commons, the sense of responsibility among those in authority has been allowed to become increasingly dulled. Under a leader who made no attempt to lead, members of the Government indulged their individual temperaments in the matter of action or inaction, and relied on the party loyalty to protect them from the penalty for failure. To round off its task, the Mesopotamia Commission needs to convince the nation that the whole system of administration requires careful overhauling. High office must be distributed according to the administrative fitness of those appointed, and not as a reward for political oratory or political backing. More whole-hearted service in the interests of the State ought to be enacted, in order that departmental jealousies may not be allowed to clog the machinery of government. Only by keeping the wider issues in view can the country hope to make atonement to those who laid down their lives in Mesopotamia or were the victims of gross neglect and incompetence. It should be resolved that in that country at least none of the errors of administration which contributed to the temporary eclipse of the Expedition shall be perpetuated in the settlement after the war; that there shall be no friction, no overlapping, but that a definite goal shall be kept in view and officials be set a high standard of achievement. On foundations liberally sprinkled with British and Indian blood we should at least see to it that the memorial to be raised is a lasting one, intelligently planned, scientifically constructed, and loyally maintained.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.2.

ITALY AND THE BALKANS.

With a view to enabling our readers to see both sides of the controversy between the Southern Slavs and the Italians regarding the future of Dalmatia, we have asked Signor F. Bonavia to state the Italian case. This he has undertaken to do, and we publish below the first of his articles:—

There seems to be a general, if not clearly-defined, impression that the claims of Italy to her unredeemed provinces on the eastern shores of the Adriatic are based more or less on a very recent imperialistic policy, and that their attainment would be a repayment for the help given by Italy in the present war, entailing gross injustice to other races. Fiume is spoken of as a Hungarian town, although the Magyars are at most only a twelfth of the population. One writer, obviously honest and eager to deal fairly with the subject, suggested a little while ago that Trieste should become, at the end of the war, an international city; another, less unbiassed, perhaps, but equally misinformed, suggested that Austria be given a "chance" in the future partition of the Adriatic. Austria has had her chance; and this state of mind, this uncertainty, is the direct result of the policy through which Austria wished to justify her possessions in the Adriatic in face of the democracies of the world. There was never a more ruthless application of the motto "*Divide et impera*" than the history of these unfortunate provinces can show. For half-a-century the most cruel policy of wholesale banishment and persecution was carried out by the Viennese Government; yet the world at large heard little of it, since the Italians, represented by a hopeless minority in the Austrian Parliament, could not make themselves heard while the storm raged between Czechs and Germans. Italy, their natural protector, was gagged and bound by the unnatural treaty of alliance, which was the first cause of that mistrust with which she was in the past sometimes regarded by those very nations whose history, race and sympathies fashioned them to be her friends. The free choice of the people of Italy in the moment of crisis showed where the heart of Italy had always been, but the mischief has not been undone wholly yet.

The Italian claims on Trieste, Istria and Dalmatia (their right to the Trentino does not seem to have been questioned) are neither imperialistic nor recent. Since ever the idea of a united Italy began to take root from the blood-soaked fields of Napoleonic campaigns these provinces, which had been Roman first and then Venetian, in any case Latin for twenty centuries, were claimed for the new Italy. In the little town of Capodistria two pieces of cannon placed in the only square and a gallows equally permanently established, were necessary to stifle the protests of the people when the population was handed over to Austria in payment for her treachery to Venice. The people in the Dalmatian towns wept with grief when they saw the insignia of the Venetian Republic lowered. It was not difficult then to know the political wishes and the nationality of these provinces. In the days of Mazzini and Garibaldi the aim of the Italian patriots was equally known and accepted by all liberal-minded people. "Austria is arming herself to defend Istria and Venice; for Garibaldi, as soon as his army is reinforced, will throw himself on Dalmatia, crossing from Puglia, and shut in the face of the barbarians that always open door, the Italian Alps," wrote Count Prospero Antonini to G. Rinaldi. Cavour's Chargé d'Affaires, in a long interview with Napoleon III., submitted a memorial, which gave as the boundaries of Northern Italy "Piedmont, Lombardy, Venice, Italian Friuli and the coastland of Dalmaltia." There was then no doubt in the minds of statesmen as to the justice of the Italian claims, the only doubts were as to the expediency of a war to realise them. If further proof be wanted, one need only glance at the proclamations of the Dalmato-Istrians calling the people to arm for Italian independence, to the sums of money freely and generously given for the liberation of Venice; to the repeated protests of the municipalities of Istria against its union with Krain; to the requests for national and administrative autonomy. Carlo Cattaneo in January, 1851, in a letter to *The Times* and the *Daily News*, wrote:—

> Many English people are under the erroneous impression that Austria possesses her Italian provinces in virtue of some old hereditary right, and they go so far as to believe that Prussia or any other Germanic Power has not only the right, but the duty, by uninterrupted tradition, to ensure to Austria the domination of these lands. I wish to point out that two-thirds of the Italian subjects of Austria are of quite recent acquisition; almost four million inhabitants belong to the Venetian States and its original dependencies on the Istrian coast of the Adriatic —Istria, Dalmatia, Ragusa, and Cattaro. . . The way in which the Venetian, the oldest autonomous State existing in Europe, passed sixty years ago suddenly from one moment to the next from being the ally of Austria to becoming its prey and victim, marks one of the lowest and meanest transactions to be met with in modern history.

This is the *fons et origo* of all the evil which, let us hope, the present war will rectify, as it certainly will if justice and right are to prevail over violence, and if the remnants of a policy by which nations were traded in and handed about like chattels are no longer to poison the future destinies of the world. The Treaty of Campoformio, which gave Austria these provinces, irrespective of the wishes of the population, prepared the way for the attempt to force a way through to Salonika and to the East, suppressing on the way both the Italians of Dalmatia and the Slavs of Serbia.

As long as the Austrians still hoped to reconquer Venice and their Italian dominion, they did not deny the Italian nationality of the southern provinces. In 1848 the *Osservatore Triestino*, the official organ of the Austrian Government in Trieste, commenting upon a proclamation of the Governor relative to a revolt in favour of Italy ruthlessly suppressed, wrote: "Citizens, he who writes is Italian, and proud of the fact. If he were ordered to renounce his nationality he would be the last to write a line in this paper; but, for the love of Heaven, be not misled by those who play upon your unfounded fear of seeing your nationality adulterated, disturbing your minds by a mere phantom." How well founded was this fear of a murderous attempt upon their nationality is proved by the fact that little more than half a century later an apparently unbiassed writer could seriously suggest the internationalization of Trieste.

As Austria lost first Lombardy and then Venice, she tightened her deadly grip on the remaining provinces. Her dream of an Italian domain lost, with the establishment of a free and united Italian nation, she had no more use for an Italian population. Taking advantage of the fact that Italy was shackled by an alliance and that Germany was drawing to herself the alarmed attention of the rest of Europe, she turned her energies to the ruthless systematic uprooting of the Italian element in her Italian provinces. How this war was waged and with what success will be considered in the next article.

F. BONAVIA.

The report of the West Indian Contingent Committee for the six months ended December 31 states that it had been the intention of the Committee to present a specially designed box of chocolates bearing the regimental badge to each officer, non-commissioned officer, and man of the regiment. But while the boxes sent to France safely reached their destination, those despatched to Egypt failed to do so since they were in a vessel which was mined. These chocolate boxes were, however, salved, and it is hoped that they will eventually reach the battalions for which they were intended.

THE PRESS ON THE NEAR EAST.

Education in Egypt.

In its Educational Supplement *The Times* publishes a note on "Education in Egypt," from its Cairo correspondent. The writer quotes some interesting statistics of the numbers of schools, scholars, etc., and welcomes the appointment of the special commission recently appointed to study the best means for extending elementary education. He concludes:—

Those responsible for public instruction in Egypt are to be congratulated on having decided at last to tackle the question of universal education on a far wider scale than has been done in the past, and one can only hope that financial considerations will not be allowed to intervene and prevent the introduction of a social reform which is certainly among the most urgent, and of which the country has long been in need.

Russia and Constantinople.

Last Friday the *Daily Chronicle* published an article, "Constantinople and Russian Aims," by Professor J. Y. Simpson. The sub-title of the article, "Some Varying Views," gives an excellent idea of the effect it creates upon the reader. First we are given "the typical Ministerial point of view of a year ago":—

For us the possession of Constantinople is not so much a policy of annexation as of necessity. Who is to dominate in the Straits, Germany or Russia?—that is the question. We must have Constantinople, not from the strict point of view of annexation, but simply in order to be able to dominate the Black Sea. In relation to this, Great Britain and France have no fear because they have only economic interests there. But we wish to prevent Germany and Austria coming to the Black Sea; we desire to make for ever impossible a repetition of the Goeben and Breslau affair; we do not wish to have our export commerce imperilled any longer.

Those who hold—or held—this view realise that it is difficult to make it acceptable to the Socialists. The Cadet or Liberal point of view is not very far removed from the first. To the Socialists the questions of Poland and of Armenia do not involve "annexation," but the question of the Straits is another matter; and it is at this point they would break with the old conceptions and the old methods. But the Cadets argue:—

We do not consider it just to speak of such a protective measure as an "Imperial policy." If we do not get possession of Constantinople and the Straits it simply means that we shall need to be a militaristic Power, and build ships and forts for the protection of all our Black Sea Coast, which is our last wish.

As to the point of view of the Ministry of to-day, Professor Simpson says that it may be developed in the words of one of its members:—

Personally, I have always been against our having Constantinople. It is not necessary for us, and it would be a bad thing for our good relations with other nations. That is one reason why I am against the policy. Then, again, after the war Turkey will see that she has lost everything because of Germany. It is a great mistake to think that Turkey will be German after the war. Our good relations with the Balkan Slavs will give us a fair possibility of separating Germany from Turkey, perhaps by the Bulgarians themselves.

The policy of internationalization finds few supporters; though one Duma leader is quoted as suggesting a "Bosphorus Company" on the lines of the Suez Canal Company, but "the bulk of the shares to be equally divided between Russia and Germany." Apparently Westminster has not a monopoly of wiseacres!

Greek "Royalists" and M. Venizelos.

In an article published last Friday the Athens correspondent of the *Morning Post* declares that "the courageous decision of M. Venizelos to undertake the formation of a new Ministry is worthy of his reputation as a statesman." After hinting at certain doubts and misgivings entertained by his friends, and hoping for a successful outcome of his acceptance of the difficult task, the article proceeds:—

While he himself is naturally reticent regarding this undertaking, the cardinal points in the situation are discussed freely among his prominent adherents. For instance, as regards the argument that continuation in power of the Zaimis Ministry would conduce to a better fusion of the two Greek States and to the gradual subsiding of party passions by giving to the ex-King's partisans time for more mature reflection, it is pointed out that, whereas during the first couple of days after King Constantine's dethronement that faction was thrown into utter confusion and discouragement, to-day they have taken a new lease of hope and courage from the declaration of M. Zaimis that King Constantine must return to the Throne later, from the countenance given by the remaining members of the Royal Family to this prospect, and from the rumours of an imminent German drive into Greece.

It is well known that the Zaimis Cabinet expected to remain in power for two or three months longer, apparently at King Constantine's wish. While the personal good faith of M. Zaimis is unquestioned, he is regarded as unconsciously serving the plans of the ex-King's party, who still hope for a German victory within two or three months, and who want a weak and neutral Government in power in Athens in order that there may be as few obstacles as possible to King Constantine's return.

Lord Hardinge and Mesopotamia.

In a leading article on Lord Hardinge's statement in the House of Lords, *The Times* (July 4) declares "it is the importance of remembering India's total effort in the war which justifies Lord Hardinge's statement in circumstances of privilege which are denied to his colleagues. At the same time we cannot agree with him for a moment that the Commission is at fault because it dismisses these considerations in a few lines. Its business was with Mesopotamia." As to the responsibility for the first advance on Baghdad, *The Times* says:—

Lord Hardinge maintains that he and General Duff were at first only willing to go forward if they received another division, and that in any case they left the decision to the Home Government. He implies—and Mr. Austen Chamberlain's telegrams are the proof—that the Cabinet pressed for the capture of Baghdad. No doubt they did, but the verdict remains that neither the Viceroy nor his Commander-in-Chief showed any effective dissent. They seem to have boxed the entire compass. Speaking broadly, the telegrams reveal original reluctance and ultimate alacrity, though it must be recognised that to the end they continued to plead for early reinforcements. Our conclusion is that the mistake of the dash to Baghdad does not lie primarily at their door, but that they participated in it without sufficient reflection or inquiry. We cannot accept Lord Hardinge's plea that if he had vetoed the advance to Baghdad it would have been "civilian interference with military plans," for he had the Commander-in-Chief at his elbow; but, as the problem was primarily military, General Duff's case was far graver than his own.

The article concludes with a passage which may be commended to the particular attention of some of the clamorous critics referred to in it:—

Lord Hardinge's closing words deserve respect, for in effect he claimed to be judged as Viceroy, not only by his own countrymen, but also by the hundreds of millions over whom he ruled with acknowledged success for a period which extended, not by his own desire, beyond the ordinary term of the Viceroyalty. It is common knowledge that he enjoyed the esteem of the people of India to an unusual degree. He governed them during the most critical time we have ever known in India, with one exception. He never lost their good will even in the most trying moments, and on his return home the most favourable verdicts were rightly passed upon his internal administration. These things should not be forgotten. Too many of the critics who are foremost in clamouring for Lord Hardinge's head are either those who are constantly imploring us to "trust the soldiers," which is exactly what he did, with most unfortunate results, or they are those who last year were beslavering him with excessive praise for the sympathy he had shown with Indian aspirations. More consistency and a better memory will be required when the time comes for a final verdict. Our own view is that Lord Hardinge's statement yesterday does not shake the conclusions of the Mesopotamia Commission or dispose of his share in the general condemnation, but that it will restore a sense of perspective to the public judgment of India's effort under his rule.

"King Constantine's Failure."

On Monday the *Morning Post* published an interview granted to its Jassy correspondent by M. Take Jonescu. Perhaps the most interesting part of the interview is the following:—

As a matter of fact, it has long been evident to all candid minds that it was to the interest of Greece to co-operate with the Powers of the Entente. On this subject I should like to call your attention to a step taken by King Carol, which shows the shrewdness and perspicacity of that Monarch. In August, 1914, he read to me a message he had sent to King Constantine advising him, in case he could not maintain neutrality, to form an alliance with France and England. King Carol, who was not at that time prepared to join the Entente himself, recommended that step to Greece.

As to the ex-King's policy, M. Jonescu stated that he had proofs that "King Constantine had a secret understanding with the King of Bulgaria, through German channels, even before Bulgaria abandoned her neutrality. There were, said M. Jonescu, two reasons for King Constantine's criminal conduct towards his country.

One was that, in spite of the fact that King Constantine is a man of good intentions and that he considers himself a true Greek, his mental powers are below the normal. . . . The ex-King of the Hellenes conceived that he could play in Greece the *rôle* of a Prussian monarch, in spite of the fact that well-informed counsellors advised him not to indulge in dreams of this description. Like all men of limited perception who happen to be raised to a position of responsibility, King Constantine was possessed by a fierce, almost ferocious, jealousy, and the popularity of M. Venizelos exasperated him in the highest degree. I do not say that King Constantine was also jealous of the genius of the Greek statesman, for a man of his intellectual equipment is incapable of understanding the distance that separates him from a man of the stamp of M. Venizelos.

Articles to Note.

"Balkan Unity and the 'New Departure': A Reply to Mr. Noel Buxton," by A. F. Whyte, M.P., in the *Nineteenth Century* (July).

"The State of Feeling in Old Greece," by Professor Ronald M. Burrows, in the *Contemporary Review* (July).

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Lord Hardinge on Mesopotamia. July 3.

LORD HARDINGE asked permission to make a personal statement connected with the Mesopotamia Commission Report. "I desire," he continued, "to render full justice to the tone and temper of the majority report, and to deal with it in no spirit of cavil or complaint. I have but two regrets to formulate—first, that the Commission did not comprise amongst its members an eminent lawyer accustomed to sift and weigh evidence with technical knowledge and experience; second, that the whole of the evidence taken before the Commission cannot be published. I believe that had it been possible to do this a different impression in regard to some at least of the points that have attracted public attention would have been created. As it is, the impression must be conveyed to the ordinary reader is that India had practically made no serious effort in the war, and that such effort as she had made had been made grudgingly and under pressure from home. That such is not the case must be well known to your lordships; but I cannot help fearing that the publication of the report in India may create a feeling that the efforts and sacrifices of India have been inadequately appreciated at home. The report scarcely refers to the greatest military effort ever made in the history of India in the despatch of expeditions to France, Egypt, and East Africa before the expedition to Mesopotamia was even under contemplation, nor is any account taken of the fact that, owing to the readiness of India to assist by giving with an open hand all she had in the initial stages of the three expeditions I have already mentioned, her military resources and reserves of equipment and stores of all kinds were already seriously depleted, and, in fact, almost exhausted, before even the inception of the idea of a campaign in Mesopotamia." Lord Hardinge then pointed out that of the five military Budgets for which he and his Government could be held responsible every one exceeded the maximum expenditure fixed by Lord Nicholson's Committee. He would not, he said, go into the question of the proposed railway from Bushreh to Nasiriyeh, since the reasons why it was not built were summed up fully in Lord Chelmsford's telegram of July 24, 1916, on page 59 of the report, showing conclusively that the military necessity of its construction was not recognised by the military authorities as immediate in the first instance. The recapture of Kut by the enemy made it a strategic necessity. Referring to the despatch of troops from India, Lord Hardinge said that approximately 80,000 British officers and men and 210,000 Indian officers and men, all fully trained and equipped, were despatched overseas, while the largest Indian expedition ever previously sent overseas amounted to 18,000 men. At one time the British garrison in India was reduced to about 15,000 men. India also supplied large quantities of small-arm ammunition, rifles, guns of the latest pattern and type, besides enormous quantities of material. India, in fact, was bled absolutely white during the first few weeks of the war.

"At that time there was," said Lord Hardinge, "no question of an expedition to Mesopotamia, and the Government of India's sole preoccupation was to make every possible sacrifice in order to secure a successful prosecution of the war in France. Then came a moment, after the commencement of operations in Mesopotamia, when India's own needs became pressing, and the results of her previous readiness to make sacrifices began to be severely felt. It was then our turn to address repeated and insistent demands to the War Office for troops, drafts, aeroplanes, machine guns, bombs, etc., most of which were either refused or else given with a sparing hand on account of what was held to be the even greater need of our forces in France. It is not my intention in saying this to make any recriminations, for I recognise the difficulty that existed at home, but I only wish that your lordships and the public should understand the difficulties which we in India had to face in meeting the needs and demands of the Mesopotamian force. A further impression created, I think unwittingly, by the report of the Commission is that the Mesopotamian campaign was the sole preoccupation of the Government of India. In a report of 132 closely printed pages the situation on the frontier and in the interior is dealt with in eight lines, and yet this situation had a very close relation to the military resources of India, as is admitted by the Commission, and at times was one of anxiety and danger."

Referring to the first advance on Baghdad, Lord Hardinge maintained that the Government of India's views were clearly expressed in the telegram which stated that unless an Indian division was sent from France an advance could not be carried out. While one of the Government of India's telegrams to the Home Government had dwelt upon the advantages to be gained by the capture of Baghdad, a private telegram sent on the same day to the Secretary of State had made it clear that the responsibility for decision must rest upon his Majesty's Government. The Government of India had no authority to order the advance to Baghdad. They could only make recommendations to the Secretary of State, who had clearly laid down that the control of the scope of operations should rest in the hands of his Majesty's Government. "The decision, therefore, rested with the latter," said Lord Hardinge. "I did, however, convey my own views, after consultation with the Commander-in-Chief to the Secretary of State in a private telegram on October 9, after Sir Beauchamp Duff and I had thoroughly discussed the situation. Having private information that the Gallipoli expedition was not going well, and bearing in mind the views of the Cabinet upon the 'great political and military advantages of the occupation of Baghdad,' the Commander-in-Chief and I came to the conclusion that General Nixon was in the best position to judge as to the number of troops that he would require to attain his objective, and that under the circumstances of the moment the Government of India would have placed themselves in an invidious position and would have exposed themselves to the criticism of having ignored the demands of the Empire, if at a critical moment they had overridden the opinion of the General in command in the field and had vetoed the advance to Baghdad. It would have been a case of civilian interference with military plans. At the same time we emphasised the necessity of the reinforcement of General Nixon by a fully organised division which should reach Baghdad not later than one month after its capture. The question appears to have been threshed out by an Inter-Departmental Committee in London and the combined staffs, and all the military authorities in London, India, and, as far as I then knew, in Mesopotamia were in agreement that General Nixon's force was adequate for the capture of Baghdad, but not sufficient to ensure its retention. In consequence, presumably, of this united opinion, the advance upon Baghdad received the sanction of his Majesty's Government."

Referring to the medical breakdown, Lord Hardinge admitted frankly and regretfully that after the battle of Ctsiphon and during the retirement from Kut, and in later operations, serious shortcomings in the medical services became apparent, and the wounded suffered terrible hardships and privations. The heavy demands made upon India for the provision of ambulances and hospitals and their personnel in England, France, Mesopotamia, Egypt, and East Africa soon exhausted an organisation which had never been intended or prepared for operations out of India, and within three months of the outbreak of war the supply of hospital assistants and of all permanent hospital staff had been already exhausted, but every effort was being made to improvise new personnel. Nevertheless, by making a great effort, many more ambulances, hospitals, and medical personnel were despatched from India to the various theatres of war during the course of 1915. Lord Hardinge had no wish to shirk responsibility, but it was not easy to know what further action he could have taken without exposing himself to the charge of excessive civilian interference in military matters. As to the insufficiency of river transport, Lord Hardinge said: "It was only in June and July of 1915 that the shortage first showed itself, and orders for boats were at once placed at home, but some delay occurred at the Admiralty in placing the orders. The Army Department fully realised the immense importance of the question of river transport, and during the whole of the succeeding months strained every nerve to meet the demand. Ships and barges of shallow draught from every river in India, Burma, Shanghai, Hong Kong, the Nile, and even penny steamers from the Thames were bought or commandeered. A large proportion of these, unfortunately, foundered on their way to the Persian Gulf, owing to unsuitable construction to meet unfavourable weather. All ready-built craft purchased proved defective in some way, while new construction in England was uncertain and subordinate to Admiralty demands. The provision of river craft, therefore, involved much greater delay than at first seemed likely, and, as ships cannot be procured or built in a day, the situation could only have been met by preparation far in advance, which the gradual development of policy in Mesopotamia did not permit."

HOUSE OF COMMONS.

The Mesopotamia Report. June 28.

Mr. H. SAMUEL asked the Leader of the House what would be the business for next week, and whether he was prepared to give a day for the discussion of the Report of the Royal Commission on Mesopotamia.

Mr. BONAR LAW said that on Monday and Tuesday the Finance Bill would be taken; on Wednesday the Representation of the People Pill. He would announce the business for Thursday and Friday on Monday. If, as he was sure was the case, there was a desire that the Mesopotamia Report should be discussed, the Government would, of course, be glad to give a day for it.

King Alexander's Pledge. July 2.

Mr. BALFOUR informed Mr. Lynch that King Alexander had given assurances that he would respect the Hellenic Constitution. He understood that the King's uncles had already left Greece.

The Withdrawal at Salonika.

Mr. MACPHERSON, replying to Mr. Lynch, who asked whether he could give the House any explanation of the retirement of Allied troops over the Struma, and whether he could indicate, even in its general scope, the purpose of the Salonika Expedition, said: Our troops east of the Struma have been withdrawn to the foothills on the western bank, owing to the unsanitary conditions prevailing in the river valley during the malarial season. The last part of the question is one of high policy, and should be addressed to my right hon. friend the Chancellor of the Exchequer.

Mr. LYNCH asked whether the Government had considered that they might be drifting into a disaster comparable to that of Gallipoli or Mesopotamia, and whether it would not be better that questions of this kind should be gone into before rather than afterwards.

The SPEAKER intimated that the question need not be answered, as it was argumentative in character.

Digitized by Google

The Mesopotamia Report.

Mr. McKenna asked what the business would be on Thursday and Friday, and when it was proposed to have the debate on Mesopotamia.

The Chancellor of the Exchequer: On Thursday it is proposed to continue the proceedings on the Finance Bill, and on Friday we shall have the discussion on financial control. As regards the Mesopotamia debate, the Government, of course, would desire to follow the wishes of the House, and if it is its desire, the debate may possibly take place next week. If the right hon. gentleman will repeat his question on Thursday I shall no doubt be able to give a definite answer.

Ex-King Constantine's Correspondence. July 3.

Mr. Macpherson, answering Mr. Lynch, who asked whether the correspondence between ex-King Constantine and persons resident in this country was subject to censorship; and if so, whether any exceptions whatever were permitted, said: The answer to the first part of the question is in the affirmative, except as regards ex-King Constantine's correspondence with persons whose letters are exempt. With regard to the last part, the only letters which are exempted from censorship are those of members of his Majesty's Government, and such other letters as, to the knowledge of the censor, have been despatched by, or will be delivered to, persons who correspond with foreign countries on the public service.

Mesopotamia Again.

Mr. Bonar Law informed Sir J. Jardine that he was not yet in a position to name a day for the discussion of the Mesopotamian Report, but he hoped to be able to do so on Thursday.

Prisoners in Turkey. July 4.

Mr. J F. Hope, replying to Mr. Marriott, said: His Majesty's Government are unfortunately aware that there had been a very high rate of mortality among all the British non-commissioned officers and men prisoners of war in Turkey, and constant representations have been made to the Turkish Government with a view to the improvement of their condition. The Ottoman Government recently consented to the concentration at one or two camps of all invalid prisoners of war, with a view to better medical attention, but his Majesty's Government has yet to learn to what extent this measure has been carried out and what benefit has ensued from it. The prisoners of war in the Taurus and Amanus regions are being attended by British medical officers.

Greek Affairs.

Mr. Palmer asked the Secretary of State for Foreign Affairs whether ex-King Constantine of Greece had entered into any undertaking not to take active part in any military operations against the Allies.

Lord R. Cecil: The answer is in the negative.

Lord R. Cecil, answering Mr. Palmer, said that he understood that after the surrender of Kavalla three regiments of Greek infantry and one of field artillery were taken to Sofia and finally interned at Görlitz. It has since been reported that a certain number of these Greek troops were employed by the enemy in labour battalions on the Macedonian front, but no confirmation of this report has as yet been obtained.

The Mesopotamia Report.

Sir J. Jardine asked the Secretary for India why a large proportion of his orders referring to the advance on Baghdad and quoted in the Mesopotamia Commission Report were marked private; and what became of the private telegram conveying information as to the possible concentration of 60,000 Turkish troops near Baghdad, which was not transmitted to Sir John Nixon in Mesopotamia?

Mr. Chamberlain: It is impossible for me to deal fully with this subject by question and answer. I presume that it will be raised in the debate, and I can then reply, if the House wishes. But I should state at once that no orders for the advance on Baghdad or for any other military operation were sent by me by private telegrams.

Mr. Chamberlain, replying to Sir J. D. Rees, said the evidence taken by the Mesopotamia Commission would not be published; and also replied in the negative to the question whether it was proposed to introduce legislation relating to the Government of India upon the report as presented to the House.

Mr. Chamberlain, replying to questions by Sir J. Jardine and Mr. Houston, said: Major Carter has suffered no injury and will suffer none in his career on account of the efforts which he made to bring to notice and to secure a remedy for the deplorable defects in the medical arrangements in Mesopotamia. I am only waiting till copies of the report of the Commission can reach India to bring his conduct to the notice of the Government of India with a view to his services receiving suitable recognition. Meanwhile I may say that on account of his special knowledge and experience, he was sent home in May, 1916, to advise as to the fitting out of hospital ships, etc., building in this country for Mesopotamia, and he has been engaged on this and similar work at the War Office ever since. Far from desiring to penalise him, the Government of India have more than once applied for his services, but on each occasion the War Office replied that he could not be spared from the valuable work he is now doing. Major Carter was granted the temporary rank of Lieutenant-colonel on August 8, 1916. He held the rank of major for three years previous to that date. He joined the Indian Medical Service from this country in 1902 at the age of twenty-six.

AN ALPHABET FROM MESOPOTAMIA.

A member of our Fighting Forces in Mesopotamia has composed some verses, which he entitles "The Alphabet of Mesopotamia." Through the kindness of a correspondent we are allowed to reproduce here some specimens:—

'A is the Apple, which grew, so they say,
In the Garden of Eden, down Kurna way,
Till Eve came along and ate it one day,
And got thrown out of Mesopotamia.

C is the gallant old Indian Corps
That went out to France and fought hard in the war,
But now it's forgotten, and battles no more
In the land of Mesopotamia.

D were the Diplomats who were so mean
In their efforts to Turkey in autumn, '14.
If they'd not been so stupid we'd never have seen
This unblessed Mesopotamia.

F is for "Fritz," who flies in the sky;
To bring the brute down we've had many a try;
But the shells that *we* shoot with they all pass him by,
And fall back on Mesopotamia.

H are the Harems, which, so it appears,
Have flourished in Baghdad for hundreds of years.
Should you think we'll annex all the destitute dears
When their husbands leave Mesopotamia?

M is the local Mosquito, whose bite
Often keeps us awake all hours of the night,
And makes all our faces a horrible sight
In the trenches of Mesopotamia.

O are the Orders we get from the corps.
Thank goodness! by this time we're perfectly sure
That if issued at three they'll be cancelled by four
By the H.Q. in Mesopotamia.

V is the Victory we had at Dijailah.
I heard of it first from a pal who's a sailor.
He read it in Reuter's aboard his "mahala"
On the Tigris in Mesopotamia.

Y is the Yearning we feel every day
To get back to Blighty, and blooming well stay
Till we're sent out to France, which is heaven, they say,
After fighting in Mesopotamia.

ARMENIAN RED CROSS.

The following telegram, dated June 5, has reached Miss Emily J. Robinson, the Hon. Secretary of the Armenian Red Cross and Refugee fund:—

"The first conference of the Armenian refugees from Turkey, now in session in Erivan, Caucasus, mindful of your loving and sincere attitude towards the Armenian people and the active manner in which you have shown this attitude, expresses to you its deep thanks. We trust that you will always remain a firm friend of our suffering people.—Antranig, Leon Shants."

Owing to the retirement of the Russian forces and the capture of Mush and Oghnut by the Turks, the flanks of Erzeroum and Erzinjan were left exposed. The relief committees at these two centres, alarmed at the prospect of fresh horrors, thought it wisest to remove the children from the orphanages at both these towns, also the women and girls who had been rescued from the Moslems, to a place of safety. The latest account describes these unfortunate people as tramping through the snow and mud of the highlands towards the Caucasus.

The Armenian Red Cross and Refugee Fund is the *only* British fund which has founded and is maintaining an orphanage in the Caucasus. The cost of maintenance of each child is £15 per annum. Regular subscriptio is are earnestly entreated. Contributions should be addressed to the Hon. Secretary at 35A, Elsham Road, London, W.14. Cheques should be made payable to the Hon. Treasurer, Mrs. Lydia Chambers, and crossed "London and South Western Bank, Holland Park Branch."

The Greek troops at Salonika and those occupying positions at the front took the oath of allegiance to King Alexander on Sunday morning.

A Salonika telegram states that the French have occupied the port of Itea, thus completing communication with the Gulf of Corinth, and that more arms and ammunition have been seized in Thessaly.

The first stamps for the new Republic of Albania are seven in number, and bear a crude device of the Albanian eagle, and the native name Shqipenie, says the *Daily Telegraph*. The currency is French. The following are the denominations, with their respective colours:—1 centime, brown and green; 3 centimes, grey-black and green; 5 centimes, black and green; 10 centimes, red and black: 25 centimes, blue and black; 50 centimes, purple and black; 1 franc, brown and black.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Birkenhead or Manchester? That is the question. The Chamber of Commerce of the great cotton city are pressing on the Board of Trade and, of course, the Shipping Controller, the advantages of utilising the port to a greater extent for the shipment of merchandise for Eastern destinations. They point out that the present unavoidable railway congestion emphasises the advantages of the port and Canal, and it is understood that these are fully appreciated. It is pointed out that under existing conditions the primary consideration must be the securing of the maximum yearly carrying power from each sea-going vessel, and it is this consideration which must mainly decide whether it shall be Birkenhead or Manchester.

***

I find lively satisfaction throughout the City of London at the turn affairs have taken in Greece. Even those who viewed the retention of Alexander on the throne —and I write more particularly of Greek friends—with considerable misgiving have modified their pessimism and look forward to the coming of better times. They cannot understand, however, why the "changes" were not effected eighteen months ago, but in view of the thoroughgoing character of the reforms, are not inclined to indulge in recrimination. "Let the dead bury their dead" may not always be a safe gospel to preach; but in the case of Greece it will do little harm. The thing is to "get on," and with that doughty champion of right—M. Venizelos —once more in possession of his own, and the representatives of the Allies unhampered, we bid fair to succeed in doing so. Meanwhile, for the greater results of the transformation we must wait. All that can be said at the moment is that the improved situation is already indicated in commercial circles in this country.

***

The Royal Mail Steam Packet Company has just issued its new calendar for 1917-1918, and has repeated its useful practice of dating the calendar from the middle of the year, by which time the majority of calendars of the usual type have become discoloured. The R.M.S.P. calendar takes the form of pencil sketches by Fred Taylor, R.I., of various capital cities in Europe and America from which a large proportion of the company's business is drawn.

***

An interesting feature in the report of the work of the Imperial Institute, which has just been presented to the new Executive Council, is a reference to the increased attention given in Egypt to flax growing. It is pointed out that the area under cultivation has been extended and new seed has been introduced—facts already set out in THE NEAR EAST. The report states that a sample of Egyptian flax straw examined yielded about 24 per cent. of soft, fairly lustrous fibre, which was valued in March by flax spinners in Belfast at from £200 to £220 per ton. As showing the rise of prices owing to the war, it may be mentioned that in normal times such flax would be worth less than £60 per ton. The war prices will end with the war, of course, but the indications are sufficient to show that the industry is worth developing.

The week's return (up to July 1) of movements to and from United Kingdom ports, and losses of mercantile vessels, shows a slight improvement, as will be observed from the official figures published elsewhere in THE NEAR EAST to-day. Fewer ships of both the larger classes were sunk, and in certain quarters there is, I observe, a tendency to optimism in consequence. Pessimism is to be deprecated as strongly as words can condemn it; on the other hand, there is no real ground to strike off at a tangent in the other direction. Losses from submarines are bound to fluctuate, and as the enemy becomes more desperate owing to the increasing precariousness of his position on shore—the advent of American troops in France, the awakening on the Russian front, and the rebirth of the Greek people will increase his desperation—he will become more strenuous in the air and under the sea. While, therefore, there is every ground for satisfaction because the Navy is doing so well, it would be a fatal mistake to imagine that the worst of the submarine warfare is over, because such is not the case.

***

As a matter of fact, there is more cause for thankfulness to be found in the statistics of arriving and departing vessels than in the fluctuating reduction of losses. The German Naval captain, von Kühlwetter, remarked the other day that if the German achievements are reduced it is because there is less shipping left to sink. His flamboyant boast is not borne out by the figures. More vessels entered and cleared from United Kingdom ports in the month of June than in any other since the official returns have been issued. The total, in and out, was 28,204, as against 18,777 in March, 24,775 in April, and 20,903 in May. These speak for themselves, and, in the meantime, whatever be the cause which keeps the losses down to below a certain point—much below the point which the Admiralty estimated—it is certainly not because there are fewer vessels to provide targets for the U-boats.

***

I must point out once more, however, that in studying these official returns people must not lose sight of the fact that there is no guide as to the tonnage involved, and that, after all, is the important question. The moral is that Britons overseas, as well as those at home, must continue, by exercising economy in the consumption of imported goods, to support the Navy in its fight against the submarine menace. It is true that the losses show no signs of increasing, that more vessels are being built, and that the assistance of countries like the United States and Brazil is of great value, but the need for economy remains, and that is the sermon to be preached with the official returns for a text.

***

People who are interested in the oil industry in Egypt will be disappointed, no doubt, by the report of the Anglo-Egyptian Oilfields for 1916, which is published in the City section of THE NEAR EAST to-day. The showing certainly looks bad at the first glance—a loss of £246,400 raising the total debit balance to £342,200 —but the result is much better than it seems. The apparent loss is due to the writing off of £370,000 for depreciation of the properties extending over the whole period since the formation of the company in 1911, this being a lump sum agreed on by the income-tax authorities. The actual output of oil for 1916 was 54,800 tons, an increase of nearly 20,000 tons, and as since the beginning of the current year a new and prolific well has been struck, with the result that for the first five months the output of the fields has reached 45,300 tons, the present year should be exceedingly prosperous.

***

The Indiaman, I see, has been discussing the question of substituting Indian opium for Turkish, and Mr. J. Thurlbeck Humphrey, in a very readable article which appears in this week's issue of the paper, suggests that Indian "growers might be expected to improve their methods considerably under the guidance of instructors familiar with the cultivation of the poppy in Asia Minor, but all attempts in this direction have been consistently discouraged in the past by officials who were probably more anxious to retain control than to secure better results. Nevertheless, it is worthy of serious consideration whether such instructors ought not to be employed, and it might even be desirable, whenever circumstances permit, to introduce some skilled labour from the Turkish to the Indian poppy fields." The writer had previously pointed out that, apart from its deficiency in morphine and high percentage of narcotine, Indian opium formerly contained excess of moisture and also frequently contained oil, the presence of which was detrimental from the point of view of the maker of medicinal preparations.

***

He explains how this came about. "In order to prevent adhesion of the gelatinous juice, the iron scrapers used by the opium gatherers, as well as the fingers of the latter, were oiled from time to time with linseed oil, and the oil consequently became incorporated with the drug. Oil was also similarly used by some of the Persian opium gatherers, but neither Persian opium nor Indian opium of the quality now imported into England is characterised by the presence of oil. Moreover, the fact that more than two thousand cases of Indian opium have been imported into England since the outbreak of war, despite its low morphine content, would seem to indicate that it is gradually making its way into favour." After the war, Mr. Humphrey thinks, the position will be very different, owing to the inevitable fall in prices if and when the market is reopened for supplies of Turkish opium, unless in the meantime there has been further improvement in the Indian product. As a matter of fact, I believe I am right in saying that the further improvement is taking place.

TRADE OPENINGS IN EGYPT.

1.—Cotton.

(From Our Cairo Correspondent.)

The liquidation of enemy concerns in Egypt is proceeding, but by no means as quickly as one had hoped, neither has British trade appeared to take the interest in the absorption of enemy business or the acquirement of control over raw material and local industries that one would naturally have expected of it. From inquiries made I gather that no blame can be attached to the local Government authorities, who have done all in their power to bring before British trading circles the openings that have from time to time become available, and to persuade likely firms to take them up: nor can the blame be laid entirely at the door of British traders, although the attitude of the Manchester Cotton Association in the matter of the absorption of the cotton business done before the war by enemy firms does not indicate that our people at home have learned much from the lessons of the past.

Problems and Handicaps.

From what one can gather, the Anglo-Egyptian authorities responsible for the winding up of enemy concerns have been confronted by problems arising out of the peculiar complicated situation in this country which have defeated their projects or delayed their actions, while one of the main obstacles to the taking up of local enemy business by any firm at home, or to the financing from home of local industries or resources, appears to have been the difficulty of getting the new issues committee to consent to the requisite capital being invested outside Great Britain.

The handicap under which enterprising British traders and capitalists are labouring in regard to the question of capital, and the general attitude towards the whole question of the capturing of enemy trade in Egypt show only too clearly how urgently we need at home some well organised central organisation to look after our foreign trade interests, and how equally urgently a complete organisation of our Consular service is required.

To take only the question of the enemy cotton business in this country. From the correspondence published some time ago in the London Press, it is abundantly clear that the initiative—in fact, all the action—was taken by the Financial Adviser to the Egyptian Government. Strictly speaking, the latter was not called on to intervene, and in so doing he departed from his usual rôle. The Financial Adviser to the Egyptian Government is not here to look after British trade interests. His duty is to see that the financial administration of Egypt is carried out to the best purpose, and that the country uses its resources advantageously and obtains for them the best markets.

Egypt's Real Concern.

Now, it does not concern Egypt one little bit where her cotton goes nor who handles it. Her main preoccupation is to obtain the best price, so that it was not on behalf of Egypt that the Financial Adviser took up the matter of the British cotton firms working here. He intervened, first, because he saw that a unique opportunity was slipping by for British traders to acquire business, which had been done by enemy traders, which, it was important, should pass to British hands, and, secondly, because there was no one else ready or qualified to bring the matter to the attention of those at home most directly concerned.

Had we, as an Empire, been properly organised for carrying on world trade—that is, had our Consular representatives in this country been qualified men, and had there existed at home a properly organised central organisation, "run" by experienced men, who would have realised at a glance the importance of the question, there would have been no need for him to intervene at this end, and the Manchester Cotton Association would not have been allowed to persevere in an attitude towards the enemy cotton business which was as absurd as it was ill-advised. Between them, the Consular authorities at Alexandria and the central organisation at home would have been able to convince the Manchester people that what they expected the existing British cotton firms could do was a sheer impossibility. Anyone who studies the figures will see at once that for these firms to absorb the extra business left by the elimination of the enemy firms meant that they would have almost to double their usual volume of business, and, with the prices that have ruled during the past year, likewise double their capital turnover.

A Comparison.

A comparison of the export figures for the pre-war year of 1913-1914 and the last complete cotton year 1915-1916 confirms the opinion of the Financial Adviser to the Egyptian Government.

It shows:—

(1) That the total exports of cotton fell off by 241,944 bales, or 25 per cent., and the quantity handled by British firms by 45,347 bales, or 11 per cent.; but that cotton handled by non-British firms increased by 77,842 bales, or 26 per cent.

(2) That the quantity exported to Great Britain fell off by 177,399 bales, or 33 per cent., and the quantity thereof shipped by British firms by 135,171 bales, or 50 per cent.; but that the quantity sent to Great Britain by non-British firms increased by 50,012 bales, or 30 per cent.

(3) That while British exporters sent to Great Britain 135,171 bales less, they actually sent to other countries 89,824 bales more, or an increase of 72 per cent. on the figures for 1913-1914; and non-British exporters, in addition to increasing their shipments to Great Britain by 50,012 bales, also increased their shipments to other countries by 27,830 bales, or 20 per cent. more than in 1913-1914.

(4) That, in 1913-1914, when they handled an aggregate quantity which was equal to 75 per cent. of the total shipments to Great Britain, British shippers sent 51 per cent. of those total shipments, and only 32 per cent. of their purchases went to foreign countries; whereas in 1915-1916, when they handled an aggregate quantity which was practically the same as the total shipments to Great Britain, the British exporters sent under 40 per cent. of those total shipments, and directed the major portion of their purchases to foreign countries.

British Firms Wanted.

These figures tell their own tale. With a general decrease in export a diminution in the quantity handled by British firms might not unnaturally be expected; but considering that the decrease in the total export was less than the quantity formerly handled by the enemy element, the combination of a diminution in the volume passing through local British hands with such a substantial increase in the turn-over of the non-British firms, clearly indicates that the existing British houses have not been able to cope with the business left over by the elimination of the enemy firms, while the fact that in circumstances the British firms so markedly increased the quantity sent by them to other countries, and at the same time reduced to half that sent by them to Great Britain, would appear to show that they found in foreign countries the facilities as to credit and terms which they did not receive from their own country. That again in the circumstances non-British firms should increase the quantity which they sent to Great Britain would seem further to indicate that something is radically wrong. Whether the question of capital is responsible, whether our methods are at fault, or whether the cause is a combination of the two, there is no doubt that something must be done to remedy this state of affairs and that immediate steps must be taken so that matters may be readjusted before the next coton crop comes on the market next September.

Another Point of View.

There is, moreover, another aspect of the question which is very important. Great Britain takes the lion's share of the Egyptian cotton exports. The predominant variety is Sakellaridis—66 per cent. of the total area is put under it—which is used exclusively for making the most important war accessories. It follows, therefore, that the British Government is buying, indirectly, most of the Egyptian cotton exported to Great Britain, and that, consequently, in the cost of its munitions is included the very high price which Egyptian cotton has attained during the past year. Now, it is a well-known fact that the cotton exporters gain considerably out of their cotton dealings; their profit since the outbreak of war must have been pretty substantial owing to the steady rise in the cotton market.

In these circumstances it would obviously have been in Imperial interests if the Treasury had not only allowed but had pressed for the establishment of more British cotton firms, because, inasmuch as the profit on the cotton exported would have gone to British capitalists, the British Exchequer would have been able to recoup itself by means of income and excess war tax for a considerable part of the huge sum paid by it for the cotton which it so urgently required. As it is, the non-creation of more British firms, or, at any rate, the inability of those already working out here to handle the crop has entirely benefited neutrals and others who, as already pointed out, have considerably increased their business and whose profits cannot be touched by either the British or the Egyptian tax collector.

No rice was shipped from Burma to Greece in 1916.

SUBMARINE WAR.

Another Drop in the Number of Vessels Sunk.

The Secretary of the Admiralty has issued the return of arrivals, sailings, war losses and unsuccessful attacks in respect of British merchant vessels for the week ended at 3 p.m. on July 1. The return, with vessels sunk, and attacked in previous weeks deducted, is:—

Arrivals and sailings of merchant vessels of all nationalities (over 100 tons net) at and from United Kingdom ports (exclusive of fishing and local craft):

(a) Arrivals	2,745
(b) Sailings	2,846

British merchant vessels sunk by mine or submarine:

(a) 1,600 tons (gross) or over	15
(b) Under 1.600 tons (gross)	5
British merchant vessels unsuccessfully attacked by submarines	11
British fishing vessels sunk	11

During the week ended at midnight on July 1 (Reuter's correspondent telegraphed from Rome on Wednesday), 610 merchant ships of all nationalities, with a total gross tonnage of 318,367, entered Italian ports, while 540 ships, with a total gross tonnage of 338,504 left. This is exclusive of fishing boats and coasting vessels. The losses of Italian ships on all seas were one steamer, eight small sailing ships, and four fishing boats.

THE PORT OF PIRÆUS.

According to the Statistical Commission of the Port of Piræus, twenty-two steamers of a gross tonnage of 34,437, and seventy-two sailing vessels of a net tonnage of 1,272, entered the port during March, 1917. All these sailing vessels arrived from Greek ports, while seventeen steamers arrived from ports within the blockaded area, the remaining five steamers coming from foreign countries and were flying the Italian flag.

During March, 1916, the number of steamers arriving from Greek ports was 191 and 427 sailing vessels, while forty-three steamers and eleven sailing vessels arrived from foreign ports.

SUDAN IRRIGATION PROJECTS.

THE NEAR EAST has already referred to the fact that Sir Murdoch Macdonald, Adviser to the Ministry of Public Works in Egypt, and Colonel E. E. Bernard, Financial Adviser to the Sudan Government, are visiting London in connection with conferences which are being held here with regard to the future of the irrigation schemes, projected before the war, in Egypt and the Sudan.

"We are inclined to believe," writes *The Times*, "that one of the results of the war may be to make some alteration in the financial basis for these schemes, if not in the schemes themselves. But in any case, it is, no doubt, highly desirable that the Home Government should be in possession of the full facts of the situation, and of the requirements in both countries, in order that there may be as little delay as possible when the moment arrives at which these important works can be proceeded with. It will be remembered that before the war it was arranged that a large loan should be raised by Egypt and the Sudan for the purpose, assisted by a British Government guarantee of the interest at 5 per cent. But in the altered conditions it seems improbable that these terms would hold good, and it may be preferable to consider whether the financing of these particular schemes should not be included in the new programme of Imperial Development which will be pressed on the British Government from different quarters of the Empire after the war."

LANCASHIRE COTTON.

Egyptian Business Thoroughly Disorganised.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

An unsettled feeling has continued to prevail throughout the market, and the regulations which are being issued by the Board of Control are not helping matters. It is now being more fully realised that the interference of the Government will result in legitimate trading being restricted, whatever may be the effect upon the gambling element.

Users of raw cotton have now obtained licences to purchase, but only limited supplies can be obtained, and it seems quite impossible at the moment to sell yarn and cloth for distant delivery, in view of the fact that raw material cannot be purchased to cover such sales.

It was expected that the Board of Control would put forward some scheme for curtailing consumption, but it is said that in this connection nothing is to be done at present. Particulars are now being obtained of supplies of the raw material in the hands of spinners and at warehouses, and it is hoped that the complete statistics will be available some time next week.

An extraordinary position has prevailed in the Alexandria cotton market, a big advance in prices having occurred. Business in Egyptian yarns has been thoroughly disorganised, buyers being unable to follow the upward movement. A fair undercurrent of demand has been dealt with in piece goods for Egypt, but the outlook is very uncertain, and some makers have refused to book orders a long way ahead.

Only a sorting-up trade has been done for India. Some attempts have been made at transactions in finishing and bleaching cloths for China. Further contracts have been placed in materials suitable for the purposes of the war. American yarns have again advanced in price. Most spinners have held very firmly to quotations. A comparatively small trade has been done, there being no initiative on the part of buyers.

LIVERPOOL AND M. VENIZELOS.

The following telegrams from Liverpool have been sent to M. Venizelos:—

The members of the Liverpool Greek Community extend to you their warmest congratulations, and rejoice in the knowledge that their beloved country being once more under your able guidance, will enjoy union and prosperity, and take her place in the ranks of those fighting for honour, justice, and freedom.

(Signed) SPYRIDION ACRATOPULO,
President.

His Excellency Eleutherios Venizelos,
Prime Minister, Athens.

I respectfully beg to tender you my heartiest congratulations on your return to the head of the Government of a united Greece, and pray that you may be granted many years of health to guide our country in the path of honour, prosperity, and freedom.

MALANDRINOS, Consul-General.
—*Liverpool Courier.*

AMERICAN TRA DEIN ADEN.

The total exports invoiced at the American Consulate at Aden, Arabia, for the United States increased in value from £154.675 for the first three months of 1916 to £245.610 for the corresponding period this year. This gain was due to the greater shipments of skins, increasing in value from £99,780 to £242,510. The American purchases of coffee, however, decreased from £51,959 for the first quarter of 1916 to £1,478 for the corresponding period this year.

ENGINEERING NOTES.

Water Power in South Russia.

Reference was made in these Notes last week to the developments in water power in South Russia. It is acknowledged by those who possess local experience that much water power is available in Russia, especially in the South, where industry and agriculture are advanced, and where great advantages can be obtained by utilising the power to instal hydro-electric stations for transmission of power to distant points in busy industrial centres, or for the purpose of fixing atmospheric nitrogen, smelting metallic ores, etc. Moreover, there is a large number of towns and mining districts which anxiously await an adequate power supply. Municipalities, also, have shown great readiness to adopt comprehensive electric tramway schemes. There is a long list of Russian towns which now possess such systems, as well as central stations and a similar list of other municipalities which already are seriously discussing the establishment of electric tramways and lighting systems. It is, therefore, of great importance that British firms interested in electrical enterprises should bestir themselves.

British Electric Vehicles.

It is satisfactory to learn that several British electrical engineering firms are devoting serious consideration to the question of manufacturing electric vehicles and equipment as soon as normal conditions return, thereby placing themselves in a position to meet the already well-developed American competition.

"Magnetic Salvage."

According to news from the United States, steel ships sunk in the course of the present war may be raised with the aid of pontoons clamped firmly to the hulls with big electric magnets. The magnets receive the electric energy from the generators on a ship on the surface.

Tungsten Metal Powder.

A new and important industry has come into existence in England by the establishment of a factory for the manufacture of tungsten metal powder. Tungsten is a vital ingredient in the making of high-speed steel, which is used for metal-cutting tools of all kinds, and before the war the whole supply of pure tungsten powder came from Germany.

Hint to Munition Workers.

Some iron castings, when put on a planer or shaper, are so very hard, having a number of chilled spots on the surface, that it is a difficult and tedious task to keep the tool sharp enough to do good work. Continual trips to the emery wheel are necessary, causing annoyance and waste of time. In cases of this kind, the worried tool-maker should heat a quality of tool steel—not the high speed variety—to a cherry-red; plunge it into salt water until cold; pull out and hold over the fire until a drop of water will evaporate when placed on it. Then plunge it into cold water. This takes the hardening strain off the tool and prevents the edges from breaking out. In practice a tool of this kind will work well on chilled spots and keep a sharp edge.

Metal Exports.

In exporting manufactured metal goods, whether machinery, or iron, steel or brassware do not coat them with animal fat—if they are consigned to places where there are Mussulmans, such as in the Near and Middle East, and in North Africa. German commercial agents tell them the fat used is from pigs and buyers will not touch them. It is one of the latest squibs in German competition since they have been shut out from those markets.

BRITISH INDUSTRIAL DIRECTORY.

The Department of Commercial Intelligence of the Board of Trade is compiling an index or directory of British and Irish manufacturers, which it is proposed to forward to Consular Officers, Trade Commissioners, and other correspondents of the Board of Trade abroad for use in dealing with inquiries which they may receive for British and Irish goods, both now and for delivery after the war. A large number of firms have already supplied information as to their products to the Department, but before transmitting this information abroad it is desired to furnish to all manufacturers in the United Kingdom interested in the export trade an opportunity of applying for the inclusion of their names in this index. The Department is now compiling the sections of the index dealing with the following trades :—

1. Boot and shoe.
2. Leather and leather goods.
3. Wearing apparel.
4. Rope, twine, and net trades.
5. Haberdashery.
6. Fancy goods.
7. Floor cloths and coverings.

Manufacturers in these trades in the United Kingdom are invited to supply a detailed list of the articles which they manufacture, a list of the markets abroad in which they are more particularly interested, particulars of their agents abroad, their terms of business, and, generally, any information which would be of use in dealing adequately with inquiries from persons desirous of purchasing goods from the United Kingdom. Those who desire to apply for the inclusion of their names in this index should forward particulars to the Board of Trade Department of Commercial Intelligence, 73, Basinghall Street, E.C.2. Envelopes should be marked "Index."

ITALIAN TRADE WITH EGYPT.

The Italian colony is somewhat disturbed at the interruption of direct navigation between Egypt and Italy, writes the *Egyptian Gazette*. The Alexandrian section of the Italian Colonial Institute has sent a letter to its parent society at Rome to the effect that if this state of things is prolonged it will have disastrous consequences, and making two suggestions as palliatives. Numbers of boats of the Ellerman, Prince, Papayanni, and Moss Lines enter our ports from Liverpool, London, Glasgow, and Hull, touching at Gibraltar and Malta. Most of them enter the port of Alexandria.

"Could not the Italian and British Governments arrange for one or two boats, even of small tonnage, to call at an Italian port, or a Malta-Genoa, Malta, Leghorn, or Malta-Naples service could be quickly established?"

NEWS FROM ALL SOURCES.

The Alexandria Exchange has been re-opened.

Holland has taken over the protection of Greek interests in Germany.

An Alexandria message (July 2) states that the cottonseed market is firm, with July quoted at 152p.

Lloyd's agent at Tangier telegraphs that he has been informed by the inspector of Cape Spartel Lighthouse that probably, as from July 1, the intensity of Cape Spartel Light will be decreased until further notice.

Proceedings are in progress before the Prize Court at Malta in respect of one case of cottons, seven cases of soap, and 432 bundles of black sheets ex the vessel Jesmore. Appearance should be entered by all persons claiming an interest as soon as possible.

A group formed by a large number of Roumanian University professors has been formed to work for a rapprochement between Roumania and the Allied countries in intellectual, economic, and financial matters. The group in particular approached France in regard to technical agricultural instruction.

COMPANY MEETING.

ALEXANDRIA WATER CO.

The thirty-ninth annual general meeting of the Alexandria Water Company was held at Alexandria on Thursday, June 7, at 4 p.m., the number of shares represented at the meeting being 19,667. The following is the report of the directors to the shareholders :—

The directors, in submitting to the shareholders their annual report and statement of accounts for the last financial year ending March 31, 1917, have much pleasure in stating that in spite of the extremely difficult conditions prevailing, the severe restrictions on all supplies and further increase of price in all commodities, the results obtained are considered very satisfactory. During the past year there has been a steady rise in the price of combustible, the water supply has been entirely maintained by the use of crude oil for the boilers in place of coal, and had this crude oil not been available the cost of combustible would have been considerably greater than was actually the case.

The total quantity of water pumped was 21,933,000 cubic metres, showing an increase of 471,000 cubic metres over the previous year. The water supply to shipping, though still very much in excess of normal times, shows a decrease in revenue of £25,319 over last year, which was phenomenal owing to the exceptional movement of transports.

The extension of mains this year has been very small, the total length laid up to 6 in. only is 4,885 metres, and 274 metres of high pressure mains at Minet el Bassal.

The increase in the number of consumers has been satisfactory, 1,728 new consumers having been added, with an increase of revenue of £6,546.

Owing to the ever increasing demand for filtered water supply in Alexandria, it has been decided to put in hand immediately large extensions of our filtration works at an estimated cost of about £25,000; this is considered an urgent necessity, and already a considerable amount of the work has been done. An entirely new additional filter house will be required containing 10-21 ft. 0 in. Jewell filters, of which four are already on order; these four will give an additional daily output of 7,000 cubic metres. An additional settling basin in reinforced concrete having a capacity of 4,500 cubic metres is also in course of construction. It is anticipated that the new filters will be ready to work about the end of the present year.

A sum of £13,706 has been spent on new works during the course of the year consisting of :—

	£
Machinery, filters and buildings ..	7,711
Water mains, hydrants, etc.	3,463
Water meters	1,969
Port	486
Sundries	77
Total	£13,706

The total receipts amount to £179,298 as against £198,988 realised last year, showing a decrease of £19,690. This decrease is entirely due to the falling off of the receipts in the port, which are £25,319 less than last year. The increase in working expenses amounts to £11,969, due entirely to increased cost of materials, such as combustible, alum and other articles, which is entirely unavoidable.

The board has accorded a supplement of £774 to the gratification to the employees, in consideration of the great increase in the cost of living owing to the war.

In the profit and loss account a sum of £12,000 has been passed to the depreciation of machinery, pipes and other wasting assets in accordance with the various rates fixed by the board to be written off annually, also a small sum of £122 has been written off certain articles in stock which have depreciated in value.

The value of securities based on the market prices at March 31, 1917, is covered by the special reserve made during the last two years.

The balance of the profit and loss after making the above appreciations and the usual allowances, and after deducting the interim dividend paid in December, 1916, is £81,000

	£
From which should first be deducted 6 per cent. to complete with the interim dividend, the 10 per cent. on the capital	36,000
Leaving a balance of	45,000
Of which one half is due to the Municipality according to our convention	22,500
And the other half to the shareholders	22,500

which represents three shillings and ninepence per share, and this, added to the 6 per cent, above mentioned, makes a total of nine shillings and ninepence per share for the dividend of June 15, 1917.

The directors, therefore, recommend the shareholders to fix the dividend payable on June 15, 1917, at nine shillings and ninepence per share, which, with the interim dividend of four shillings paid on December, 1916, makes a total dividend of thirteen shillings and ninepence for the year.

According to article 84 of the articles of association, Messrs. A. L. Gorra and M. C. Salvago are the two directors who retire by rotation, and, being eligible, offer themselves for re-election.

COMPANY REPORTS.

Oriental Carpet Manufacturers.

The directors of the Oriental Carpet Manufacturers, Ltd., find that, owing to the war, they are still unable to submit to the shareholders a balance-sheet for 1916, and, in consequence, will not call an annual general meeting. They are able, however, to inform the shareholders that the business done in Allied and neutral countries has been satisfactory, and that they have every hope on the conclusion of hostilities that the business will resume its former prosperity in all its branches.

Anglo-Egyptian Oilfields.

The directors for 1916 state that the facilities granted by the Egyptian Government mentioned in last year's report have allowed the company to concentrate its efforts principally on the Hurghada field, with the result that a much larger output has already been obtained from those concessions. The total production of crude oil from the Gemsah and Hurghada fields for the year was 54,800 tons, as compared with 34,961 tons in 1915. The oil produced was again treated in the Suez refinery and the products obtained have been readily sold. The prices realised by the Asiatic Petroleum Company (Egypt), Ltd., during 1916 and up to the present date during 1917 continue satisfactory, the demand for local requirements and for Government purposes being fully maintained. As in previous years, the directors have been able to arrange to fill the deficiency of the company's supply of crude oil for the refinery by treating for other parties imported crude oil and distillate, for which work £40,143 was received. The Western anticline at Hurghada may now be regarded as definitely proved. Production has been obtained from ten wells, and the limits of the anticline are not yet determined. While the directors regret to report that the production of the Gemsah wells again proved disappointing, the total production for the year being only a little over 10,000 tons, they are able to advise that at Hurghada several new wells produced oil during the year, and the total production of these fields amounted to 44,000 tons. During 1917 a prolific well, No. 15, was struck in the middle of March, which up to the end of May had already produced 18,610 tons. The total production for 1917, up to the end of May, from the two fields amounted to 45,303 tons. The directors reserve £370,000 for depreciation over the whole period since the formation of the company, in 1911. This figure is based upon an arrangement made with the Income-Tax Authorities regarding depreciation allowed by them in respect of the capital assets of the company. The directors did not consider it necessary to deal with this matter so long as working expenses exceeded proceeds realised for the products. The balance-sheet shows that the total receipts were £225,608 (£220,474 being proceeds of oil and value of oil stock), while the total expenditure was £472,040. This sum, with the balance of £95,724 carried down, gives a total debit balance of £342,156.

COMPANY NOTES.

Meetings.

The tenth ordinary general meeting of the Egyptian Lands, Limited, will be held on July 7 at the company's office, 12, Rue Tewfik, Alexandria.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 20 tons, against 91 tons; Hurghada, 926 tons, against 1,264 tons.

GERMAN INTRIGUES IN AFRICA.

Mr. R. Williams, speaking in Leeds recently, made some interesting revelations as to how the enterprise of the late Cecil Rhodes in Africa was thwarted by the Germans. Mr. Williams, who was associated with Mr. Rhodes, said he was now able to reveal what he had kept to himself for many long years. "Whatever move I made," he said, "whatever step I took, I found Germany placing herself across my path. Whether I was negotiating on behalf of Cecil Rhodes with King Leopold for the Cape to Cairo Railway to pass through the Congo State, or whether I was dealing with the Portuguese about building the Benguella Railway, I met with either the opposition of British subjects of German origin or with the direct opposition of Germany herself."

P. AND O. DEFERRED STOCK.

It is announced that, Treasury sanction having been obtained for the issue of £500,000 P. and O. Deferred stock, to be given in exchange for the Union Steamship Company's shares, the arrangement which was sanctioned at the P. and O. general meeting on June 27 will be at once carried through.

EGYPTIAN COTTON AND WHEAT.

The Government crop report for June shows the condition of cotton in Lower Egypt to be 6 per cent. and in Upper Egypt 2 per cent. below the average. *The Times* correspondent telegraphed from Cairo on July 4:—The condition of wheat in the whole of Egypt was about 3½ per cent. above the average, and the yield above the normal.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916. Francs.	1917. Francs.
June 25	420,000	120,000
June 26	160,000	120,000
June 27	280,000	180,000
June 28	280,000	90,000
June 29, 30	420,000	250,000
July 1	250,000	30,000

At a court of directors held on June 27, Mr. Ernest R. Debenham was appointed a director of the Royal Exchange Assurance Corporation.

ON 'CHANGE.

(From Our City Correspondent.)

Throgmorton Avenue, E.C., Thursday.

Our Stock Exchange has been closed for two days this week, and this fact has rather interfered with business. A very favourable tendency continues to prevail, and prices generally speaking, where altered, are again rather better.

The Government bonds are again somewhat firmer, with a certain amount of business doing, Unified being ½ up at 84, and 3½ per cent. preferences having been done at 73 for a few thousand pounds. Turkish 3½ per cents (Egypt Tribute) have also been in demand round 69, a rise of ½. In the Bank shares some small transactions have been effected in Nationals round 15, and a fairly large turnover has taken place in Agriculturals at about 5¼. Sellers of the latter are now becoming rather scarcer, and any insistent demand is likely to cause an improvement in the price. Allotments are rather quieter at 2⅞ after their recent sharp rise. In Behéra prefs. a parcel of five hundred shares, which has hung over the market for some time past, has now found a home round 4. Gharbieh Lands have continued in demand, but there are still no sellers. Some trifling transactions have been effected in New Egyptians round 11s. Union Foncières have improved to 27s. 6d. bid, at which price one hundred shares were done. In Unitedes some transactions took place at 1s., and a fair number of Egyptian and Foreign Trusts were done round 6s. Egyptian Markets changed hands at 27s. 6d. in a small way; but Salts and Sodas, although firm, have hardly been dealt in this week.

On the other hand, Khedivial Mails have again been a feature, and, after changing hands up to 40s. c.d., were subsequently done at 39s. 6d. xd., closing about 38s. 6d., a net rise of 1s. 6d. since last week. The prefs. are also ⅛ better at 3⅞.

In Greek stocks the market has been a buoyant one, and fairly large business has been transacted at rising prices. The 1881 and 1884 loans are on balance about 3 points up at 57½ xd. Monopolies have improved about 4 to 51. Rentes and 1914 are both a point up at 42 and 73 respectively. The 1902 loan has been done at 62 xd., showing a rise of half a point.

Oil Shares.

Anglo-Egyptian "B" fell 6d. to 14s. 3d. on the report.

Paris Bourse.

Quotations on Tuesday included:—Egyptian Unified, 95.05 (against 95); Turkish Unified, 62.20 (against 62); Credit Foncier Egyptien, 700 (against 695); Suez Canal, 4,399 (against 4,400).

THE MONEY MARKET.

(From Our City Correspondent.)

London, Thursday.

The leading banks have reduced their rates for daily or weekly loans to 4¼ per cent., and money is consequently easier, and brokers have been able to secure balances overnight at 3 to 3½ per cent. Bill rates were, therefore, disposed to be easy, two months' bills being quoted 4⅝ per cent., and three months' 4¾ to 4 13-16 per cent. Longer-dated Treasuries were done at 4¾ per cent., and August and September were at 4 9-16 per cent. Exchange on Alexandria is unchanged. Silver has come in fresh demand, and rose ¾d. to 39⅞d. per ounce.

SOCIETE ANONYME DU BEHERA.—NOTICE IS HEREBY GIVEN to bearers of the Behera Company's Debentures that the DEBENTURES redeemed at the drawing of the 1st June, 1917, will be paid after the 1st July next at the National Bank of Egypt, Alexandria, Cairo, and London, 6 and 7, King William Street, E.C.

M. C. SALVAGO, Chairman.

Alexandria, the 12th June, 1917.
