PITIFUL CONDITIONS IN NORTHERN SYRIA

The people are demoralised, dazed and weakened by famine and disease. They are in rags, and bare-foot. A soldier, just returned, says of them :

"THEY LOOK JUST ALIVE, THAT'S ALL."

They need :	They need :	They need :
FOOD	LOVE	HOSPITALS
CLOTHING	AND	ORPHANAGES
DOCTORING	CARE	SCHOOLS

GIVE THEM HELP THIS CHRISTMAS!

Cheques payable to the Secretary,

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916)

NOTES OF THE WEEK.

A justifiable anxiety arising out of the absence of news from the Balkans has reference to the general attitude of the Governments of Great Britain, France, and the United States towards Near Eastern affairs. The British public can hardly fail to be reminded of the condition of things in 1915, when the Peninsula was divided, as it were, into so many water-tight compartments. No attempt was made by the Allies to correlate their diplomatic efforts, and as far as Great Britain was concerned, there was for some time no collaboration between her representatives at the different capitals, and little enough between them individually and the Home Government. Neither nations nor their affairs stand still these days, even during an armistice. It would be a mistake, therefore, to adopt the attitude that nothing matters in the Balkans until the Allied Conference has fixed the new boundaries. The Allies cannot with impunity divest themselves of their responsibilities for a single day. Indifference on their part, or relaxation of their authority, as the case may be, will provide others with the opportunity for mischief. There may be no call for a policy of actual interference; but every country ought to feel that the eyes of the Associated Governments are upon it and regulate its political affairs accordingly.

The constitution of the new Yugoslav State is still an enigma to the outside world, and even *The Times* falls into the error of giving the heading of "New Serbian Ministers" to the appointment of two more Ministers, neither of whom is a Serbian, to the Southern Slav Cabinet. According to the official phraseology the new State comprises Serbs, Croats, and Slovenes, and the three peoples have hitherto been represented by the Serbian Government, the Agram National Council, and the London Yugoslav Committee. A joint Government has now been set up, as noted above, but while the Serbian Government figures prominently in connection with developments in Serbia, little is heard of the authorities in control of Croatian and Slovene affairs. It can hardly be the intention of the northern partners of the Federation to dispense with separate Governments, if Serbia retains hers; but, so far, no official light has been thrown on this point beyond the statement that the Serbian Legation and Consulates in France have received instructions to replace the arms and name of the kingdom of Serbia by the arms and name of the kingdom of Serbs, Croats, and Slovenes.

A welcome corrective to the propagandist tendency of certain organs has been supplied this week in an unexpected quarter. The Rome correspondent of *The Times* takes exception, at considerable length, to the statements of a Paris correspondent who, for some time past, has been the mouthpiece of the Serbian Opposition element of the Yugoslav propagandists. The Rome correspondent declares that he deprecates exaggerated Italian claims as much as he does those of the Yugoslav extremists, and, echoing a sentiment that has repeatedly been expressed in these columns, adds:—"I believe that the problem can and must be settled by compromise, but I am quite convinced that only harm is done—and serious harm—by those who contend that only Italy is to blame. In conclusion, I would say that, while many Italians have worked for a moderate programme and for an agreement, the Yugoslavs have made a very inadequate response—in public."

The fatal lack of vision and knowledge which has dogged the Allies' handling of the Balkan question is responsible for much of the present *impasse*. Steps ought to have been taken to avoid the possibility of collision between Italian and Yugoslav troops, and similarly no Serbian soldiers ought to have been allowed to enter Montenegro. The summoning of a so-called Montenegrin Skupshtina at Podgoritza under Serbian bayonets, for the purpose of proclaiming the deposition of the King and the annexation of Montengro by Serbia is a disgrace to the whole Allied cause, as it is entirely on a par with Germany's action in Lithuania and elsewhere. It would be a useful warning, if the Allied Conference were to insist upon the punishment of those responsible for the *mot d'ordre* that gave rise to the Podgoritza meeting. As already pointed out in these pages, the destiny of Montenegro may be complete incorporation in the kingdom of Serbia, but the Allies cannot be too particular in requiring that the union should be carried through with due regard to the principle of self-determination. But until the Associated Governments, to use a homely phrase, put their foot down, there can hardly fail to be friction between the rival interests in the Balkans.

It is not only between the Italians and the Yugoslavs that the Governments of Great Britain, France, and the United States will have to act as arbiters, while requiring absolute acquiescence in their verdict. The rival claims of Serbians and Roumanians to the Banat have not loomed so prominently on the Allied horizon, but they constitute nevertheless a further problem awaiting solution. In common with Montenegro this contested territory was overrun by Serbian troops, and collisions with Roumanian forces have only been avoided by the creation with the help of French troops of a neutral zone between the Serbians and Roumanians. General Franchet d'Esperey intervened late in

418927

Digitized by Google

the day, and is understood to have drawn the dividing line at a point which leaves the Serbians in possession of more territory than they can expect to retain. The silence of the Roumanians on the subject—which is entirely to their credit—may be attributed to their preoccupations in other directions, or may be due to a superior confidence in the justice of their case and in the judgment of the Allied Governments. The population of the Banat is admittedly mixed, and comprises Roumanians, 41 per cent.; Germans, 26 per cent.; Serbs, 20 per cent.; and Magyars, 13 per cent. In any allocation of the country it may be impossible to prevent entirely the retention of a number of communities under foreign jurisdiction; for a strict delimitation of nationality would result in unpractical frontiers. The consensus of impartial opinion favours the incorporation of the greater part of the Banat in Roumania, with a portion in the south-west corner allotted to Serbia for the strategical defence of Belgrade and the north-western section going to the Magyars.

There are signs that M. Bratiano's Cabinet, which, as was pointed out last week, represents the National Liberal Party alone, is intended like its predecessor to be short-lived. The need is felt for a Coalition Cabinet at this stage of Roumania's history in order that the nation may grapple with the vital problems confronting it in a national and not a party spirit. It is evident that both Transylvania and Bessarabia will contribute to Greater Roumania a strong democratic bias, expecting to find the old kingdom entirely in line with them. In these circumstances the composition of the temporary Cabinet is of minor importance, provided the new Government that is to speak in the name of Greater Roumania is representative of all the best elements in the reunited nation.

Interesting developments appear to have taken place towards the end of the year in Turkey. In spite of the presence of Allied forces in Constantinople, and the flight of Talaat and Enver Pashas, the Committee of Union and Progress had remained in being and contrived to make its power felt in the daily life and political affairs of the capital. The Chamber proved to be almost entirely under its thumb, and Tewfik Pasha's Government ruled only in name. Emboldened by its success, the Committee is said to have been planning its own return to power; but presumably this prospect at last roused the Allies to action. On the day when the trial of strength in the Chamber was to take place, an irade of the Sultan was read dissolving Parliament. It is clear that the Allied Governments must now make up their minds whether Turkey is to be helped along the constitutional road to better things or is to be left to be the prey of intrigue and Committee rule. If they decide that some semblance of Turkish administration must be maintained, they must select the most likely officials or political party and give them the necessary support to enable them to eliminate the Committee, which is now described as more a secret society than a political organisation.

The demarkation of boundaries in Hither Asia promises to be almost as intricate as the problem presented by the Balkans. Unless it is decided that existing treaties are to be cancelled by mutual agreement, the larger Powers will not be in a position to preach moderation to the smaller States. We are, of course, dealing with the East, where bargaining is not only a fine art, but also the breath of life. Accordingly, the only people to whom the claims of the Armenians to territory stretching from the Mediterranean to the Caucasus can come as a surprise will be the simple-minded authors of the famous Sykes-Picot agreement. By this document, which it is only fair to suppose was drawn up by enthusiasts rather than by either the British Foreign Office or the Quai d'Orsay, France stipulated for, and Great Britain consented to, a sphere of influence stretching from Beyrout to the Persian frontier and including Damascus, Aleppo, Sivas, Diarbekr, and Mosul. In spite of M. Pichon's contention that such an agreement must be regarded as binding on the two countries concerned, it is evident that it will not be compatible either with Armenia's claims or with Arab rights, to say nothing of a common-sense development of the territories in question. In these circumstances, it would seem better for France and Great Britain to tear up the treaty before entering the Conference, rather than to watch its being formally consigned to the wastepaper basket.

An "Egyptian correspondent" in the *Star* would have his readers believe that "all is not well" in Egypt, and the verdict is endorsed editorially by the sub-heading: "Her Deplorable Administration." The burden of the complaint is to the effect that, as the staple product, cotton, has diminished in output and the nominal increase in the value of her exports and imports conceals the fact that the pound has "more than halved in value," Egypt's prosperity is a misnomer, "a dangerous misnomer, for the resultant satisfaction has already led to a slackening of national exertion, and Egypt, capable of producing cereals enough for twice her population, finds herself short of bread in the towns." Criticism of this nature is always easy, and can always rely upon a medium of publicity that is ignorant of the facts of the case. It is quite true that Egypt is capable of producing a prodigious amount of cereals, but it is equally true that she has not done so for a good many centuries. The country relied almost entirely on imported foodstuffs, and the shortage of bread was due to the lack of transport from which the whole world has been suffering. As soon as the situation was appreciated the Egyptian Government took steps to promote the cultivation of cereals, with the result that Egypt has grown more than at any other period within recent times. The benefits that she has derived from good government are almost incalculable. If lean times are ahead, they will be shared in good company; but it is to Egypt's credit that she has weathered the war period so successfully. The conclusion of the article betrays the nigger in the pile. Egypt, we are told, like India, "has earned her claim to a measure of self-determination," and the new British Parliament is to see that she gets it.

The Yugoslav Cabinet has now been reconstructed under the presidency of M. Protitch, who had previously been given the portfolio of Finance. M. Koroshetz and Dr. Trumbitch remain Vice-President and Minister for Foreign Affairs respectively, while M. Pashitch is to be at the head of the Yugoslav Mission at the Allies' Preliminary Conference in Paris. This compromise is probably the best arrangement that could be made in the interests of the new State. There will be too much to be done in Yugoslavia in the immediate future to render it advisable that the chief members of the Government should absent themselves indefinitely from the country. On the other hand, no one could represent the Southern Slavs with more authority at the Allied councils than M. Pashitch. A Serbian remains at the head of the joint administration; but the capital of Yugoslavia is likely to be Serajevo and not Belgrade.

The outstanding feature of the Indian Honours List is the appointment of Sir Satyendra Sinha to the Privy Council, a rare distinction in India, but one which is thoroughly appropriate in the circumstances. The Honours conferred on the Maharajas of Bikanir, Baroda, and Alwar will be generally welcomed, while the promotion of Sir Oswald Bosanquet to K.C.S.I. will be thoroughly popular in the Central Indian States, where he has worked for so many years. The K.C.I.E. awarded to Sir William Marris is a not too generous recognition of his outstanding services in connection with the scheme of constitutional reform. In other respects the List is of the usual type, but it is distinguished by the tardy recognition of the work done by Mr. William Crooke and Mr. Vincent Smith, who left India twenty years or so ago, but have in their retirement made such valuable contributions to Indian scholarship, and who will add a new lustre to the Order of the Indian Empire.

At first sight it is not easy to discover even the nucleus of an "Indian" party in the new House of Commons. Mr. Chamberlain and Mr. Montagu are

Digitized by Google

there on the official side, Colonel Yate and Sir J. D. Rees will doubtles ask as many questions as hitherto, and in addition to them the House contains a few Members, like Sir Henry Craik and Colonel Wedgwood, who have occasionally displayed some knowledge of, or at least some interest in, Indian affairs. Among the new members, we notice the name of only one who can speak with authority on such topics, but Mr. T. J. Bennett, C.I.E., will be a most valuable acquisition if he expounds in the House that sane, middle view of Indian problems which has of late characterised the utterances of the *Times of India*.

Among the casualties of the election, the most prominent, from this point of view, is Mr. Charles Roberts, who will be greatly missed by Mr. Montagu—or his successor—when the Reform proposals come before the House. Mr. H. E. A. Cotton failed to secure a seat at Finsbury, while in Nottinghamshire Dr. Tara Chand, the only Indian name we noticed in the whole list of candidates, was unable to save his stake, and the various members with Socialistic leanings who occasionally spoke on Indian affairs have without exception disappeared in the *débâcle*. The way is thus left open for the appearance of new "friends of India," and we are prepared to welcome their appearance so long as they take the trouble to master the essential facts; the days when India wanted nothing but sentiment have passed away, and she now claims hard work and clear thinking from anyone who wishes to speak on her behalf.

Perhaps one of the new members may be able to elicit an official statement regarding the object of Lord Jellicoe's approaching visit to India. The announcement made recently by the Admiralty gives ample reasons for his journey to the Dominions, where naval questions have for years been prominent, but offers no explanation of the inclusion of India in his tour, and people are asking whether the idea is merely to tinker with the organisation of the Royal Indian Marine, or whether the ancient glories of the Indian Navy are to be revived. The latter course would be popular in India, where national aspirations claim a self-contained defensive force: we doubt whether the cost of a navy has yet been counted by its eager advocates; but that is another story, and, apart from the question of finance, the sentiment is one with which we have no quarrel.

Another project which raises awkward practical questions is that of holding a meeting of the Indian National Congress in London next spring. London would doubtless enjoy the spectacle, especially if Indian costume was worn, as we presume would be arranged, but we foresee very great difficulty in transporting a sufficient number of delegates. The passage question is of real importance just now: leave is some years overdue, most Englishmen in India are thoroughly stale, and Mr. Fremantle, the Controller of Passages, has already perhaps the most delicate and thankless task that has ever been assigned to an Indian official. A demand for a few hundred additional berths, just at the time when the press of applications is likely to be greatest, is one which probably could not be met, and, unless the Royal Air Force will oblige, it looks as if a new grievance would be the only result of the proposal.

Of more serious political interest is the news that Sir Reginald Craddock's scheme of reforms for Burma contemplates separation from India as the ultimate goal. This question has for long been debated from a more or less academical standpoint, but of late there have been signs of its transfer to the market-place, and it will be interesting to see whether the vision of Indian nationalism will insist on the comprehension of the Irrawaddy and the Salween. For ourselves, we have never been able to form a clear idea of Burma as part of a self-governing India: the Burmese outlook on life is so distinctive that there would be grave risks of bringing a new Ireland into being, and the Indian problem is so difficult as it stands that any reasonable simplification is to be welcomed. There is room in Asia for a great Dominion of Burma, if the people will set to work to develop the varied resources of their country.

EDUCATION IN EGYPT.

THE SECONDARY CERTIFICATE EXAMINATION.—Part I.*

(From Our Cairo Correspondent.)

The following are extracts from the summaries of the examiners' reports on Part I. given by Mr. Boyd Carpenter:—

Arabic.

The general results were bad, more than 16 per cent. of the candidates failing. The subjects for composition were well chosen, and considerable difference of ability was shown in the writing. There were fewer long-winded introductions and less exaggerations. The chief faults lay in the reproduction of sentences learnt by heart without understanding and their unintelligent insertion in irrelevant places. The same evil was noticed in the grammar, but there was a steady improvement in handwriting. The real causes of the large increase in failures are, in the examiners' opinion, "the fact that so many inexperienced and ill-prepared candidates are allowed to present themselves, and that the majority of these had not passed or attempted to pass any examination for admission to a secondary school." While the pronunciation in the Oral was fair, the vocabulary of many students was very insufficient. The rules of grammar had been well memorised, but their application was often forgotten in reading and speaking. Whilst considerable difference of opinion was expressed over the results in translation, there was general agreement that they were hardly as satisfactory as the previous year. The standard of work differed greatly, but there were distinct signs of an improvement in oral teaching. The results of the translation from Arabic into English were on the whole good, though marred by the use of elaborate words instead of simple ones. The piece for translation from English into Arabic was somewhat harder, and, owing to the fact that many candidates did not understand the original phrases, it resulted in mere stringing together of isolated words. Apart from careless grammar and false concord, the main error was a tendency to excessive paraphrase or excessive literalness. One of the recommendations of the examiners in this connection is that the teaching of Arabic-English translation should be placed as soon as possible in the charge of competent Englishmen.

History and Geography.

The answers in history were not as satisfactory as they might have been, the standard of work varied greatly, and there was a distinct increase in the number of bad answers. There still persists the fundamental error of learning by heart without intelligence or interest. Petty incidents, pretty stories, apochryphal anecdotes, are accepted under the name of history. There are no signs of any conception of development of the growth and change of civilisation affecting modern life. To the majority, history is still a collection of dates and facts, all dead, all remote, only relieved from complete tedium by a sprinkling of fables. In geography, on the other hand, the examiners considered this year's work as much more satisfactory than that of last year. Many state that the standard of Part I. was relatively higher than that of Part II., and that in many cases far more intelligence and general knowledge were shown. The commonest faults were lack of arrangement, inaccuracy, and reliance on memory rather than on observation. One very serious fault is the evident divorce between history and geography, with the result that sketch maps are few in number and inferior in quality.

Science and Mathematics.

The most striking feature of this year's examination in mathematics was the very large number of candidates who entered unprepared. In geometry above one-fifth obtained zero. These gave no evidence that they had been through an adequate course of instruction, and had not reached the standard for admission to the Secondary School; in consequence they should never have found their way to this examination. In geometry the book-work was fairly successful, but failures were common where some degree of independent thought was required. There was a great deal of careless confusion of signs and figures. The papers in algebra were better than those in geometry; weakness was noticeable in factorisation, quadratic equations, the use of brackets, etc. Many candidates seemed to rely on their memory of their First Year Syllabus and to have forgotten or neglected the study of the Second Year Syllabus. In arithmetic exactly the opposite fault was seen, but the results were better than in either geometry or algebra, although there were flagrant cases of careless reading of questions. The questions in science were easy, and the fact that half the candidates failed to obtain 40

* An article dealing with Part II. appeared in The Near East, December 13.

Digitized by Google

per cent. of the total marks and 16 per cent. to obtain four marks shows that the standard of scientific knowledge is not improving among the second-year students.

English and French.

The work displayed this year in English was deplorably bad. The list of faults again includes want of intelligence, carelessness, ignorance of common rules of grammar, syntax and idiom, poverty of ideas, and complete absence of individuality. Dictation was moderately satisfactory, but the punctuation was very careless. In many cases the grammar questions were well answered, but it was obvious that the candidates considered grammar as of no practical value. In composition, although the tests were easy, the results were very disappointing. In very few cases was there any attempt at rough notes, at a skeleton outline, or proper proportion for the subject matter, whilst in at least two cases a complete composition in Arabic had been written on one page and meticulously translated on the other. In scores of cases the supposed essays were in reality compositions on "Thrift," or "The Uses of Money," or even on "Appearances Are Deceptive," pointing to the old habit of learning model essays off by heart, with the inevitable result that they are often inserted where they are totally irrelevant. In this connection the examiners are unanimously of opinion that more time should be devoted to oral composition, but they recognise that this cannot be done so long as the classes are so large. Indeed, they consider that overcrowding is one of the chief reasons for the unsatisfactory results of the examination, and, adds Mr. Boyd Carpenter, so long as the present system exists, the percentage of failures must necessarily remain high. In the Oral a general indifference in the manner and matter of the work was noticeable. In most cases the syllabus had been quietly ignored as far as concerned reading books and recitation. One of the books had not been opened at all by most students. The reading was on the whole good, but conversation was very unsatisfactory. The simplest questions were often misunderstood, and the lack of general knowledge made it very hard to get the students to talk.

Whilst the French results were relatively satisfactory as a whole, the grammar and composition left much to be desired. The composition of a large number was rendered completely incomprehensible because the actual wording of the subject had been ignored. Thus on the second composition subject, "Decrivez le depart d'un train," one candidate wrote a biography of George Stephenson! The dictation was distinctly good, and carefulness was shown in the handwriting.

In reviewing these reports Mr. Boyd Carpenter remarks that there are three important points to be noticed in this year's Part I. examination. There has been an enormous increase in the number of candidates, there has been a corresponding increase in failures, and there has been an alarming reduction in the percentage of marks obtained in most subjects, particularly in English. As regards the second feature, he points out that the questions were well selected and adapted to test the knowledge of any adequately prepared student, that there was no ambiguity of phraseology or of wording, and that leniency rather than severity was displayed in the marking. The unwelcome explanation remains, says he, that the work of this year's candidates was inferior to that of previous years, and that on the whole the standard of attainment has declined. A contributory cause of this deterioration, he considers, has undoubtedly been the serious derangement of school routine and the emergency measures forced upon the authorities of certain schools by the circumstances of the past year. The real cause, he thinks, is to be found in the overwhelming increase in the number of candidates for Part I. This increase has not been evenly distributed among good, moderate, and bad students; it has been an increase of the least eligible. This influx of ill-prepared candidates has inevitably reduced the percentage of successes and has had a vitiating effect upon the general standard.

Mr. Boyd Carpenter, whilst considering that it is a cause for congratulation that Egyptian parents should show themselves anxious to provide their sons with a training having for its object the formation of good citizens, points out that a sound education cannot invariably be obtained. Many so-called teachers are without any practical or theoretical qualification for the cause they profess to serve, and their schools are only a means of making money quickly without undue sensitiveness about the methods employed. A school is often opened with much rhetorical advertisement and with a staff insufficient in numbers, experience, and capacity, grossly underpaid and housed in insanitary and overcrowded buildings. The eagerness of both parents and students to obtain some education approved by a certificate is systematically exploited, although at the same time many parents in their desire to save a few pounds do not hesitate to send their sons to schools which they know to be ill-equipped and badly directed. It would, says he, undoubtedly tend to the general welfare, physical, mental and moral, if such speculative schools could disappear, or at least be so discouraged that the profits would hardly repay the risks. He thinks that the time has come for the Ministry of Education to consider seriously the advisability of establishing some form of control over the candidates who present themselves for examination.

Turning to the more particular causes of this year's catastrophe, Mr. Boyd Carpenter says that the first thing to notice is that the examiners' reports show that the decline in standard is not confined to any one subject. Whilst the results in English cause the greatest uneasiness, geography and French alone show any relative improvement. The root of the evil lies in the lack of common sense, in the absence of any reasoning power, in the dull mechanical repetition of memorised facts, in the want of interest and practical intelligence. Leniency of judgment, he adds, to those who fail to take any interest in their own language is neither to be expected nor desired, and the absence of any number of papers of outstanding merit in any subject is disheartening evidence that the candidates are not atoning for their general mediocrity or weakness by a display of any specialised interest in particular subjects.

The position of the English language in secondary schools is, as he points out, of more than academic interest. At present a land of many spoken languages, there is a special reason for the development of the English language in Egypt. The cordial co-operation of Englishmen and Egyptians, the co-ordination of Western and Eastern methods depend very largely upon a practical knowledge of English and Arabic. During the past three years this has already been generally seen, and in many cases the war has succeeded in doing what painstaking scholastic efforts had failed to achieve, awakening an interest among Egyptians in the English language. The causes of this are eminently practical, but they will not cease with the war. The impetus to Egyptian trade and industry which has already begun will increase immeasurably in the near future, and in order to seize his business opportunities the young Egyptian will need a working knowledge of English. And not only in private enterprise is this necessary, but also in law, medicine, agriculture, engineering, which attract the greater part of the successful candidates in Government examinations, and where the medium for the transmission of much Western knowledge must be English. The present position of the language in the schools, adds Mr. Boyd Carpenter, is deplored by the authorities of the higher colleges as deeply as by the actual teachers of English themselves. A commission has been sitting for some months studying suggested improvements in the teaching of English, and its considered recommendations will doubtless form the basis of reform in the near future. But, he points out, one reform is clearly desirable. In almost all cases candidates from small private schools have secured better marks than those from large ones. The practice in conversation which is so necessary becomes very exiguous in overcrowded classes, if not impossible, and restriction of the number of students in a class in the schools generally, both Government and non-Government, is greatly to be desired.

Mr. Boyd Carpenter then proceeds to make some valuable suggestions for the rectification of the present unsatisfactory state of affairs. A commission should be appointed to review the Secondary Course, to indicate any change thought desirable in the light of recent experience, and to adumbrate modifications likely to prove advisable in connection with other educational developments now pending. Steps are also necessary to restrict indiscriminate entries to the examinations. Mr. Boyd Carpenter suggests that it shall be laid down that candidates who have failed in three or more subjects or whose total marks represent less than 30 per cent of the maximum shall not be allowed to present themselves again until after a lapse of two years.

With modifications such as these he does not see why the results of future examinations should not show absolute as well as relative improvement. But to ensure this there must also be greater co-operation between student and teacher. It is easy to blame the latter for the shortcomings of the former, but until it is recognised that theory and practice must be united, and not divorced, there will always remain a certain unreality in examinations.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The High Commissioner's Illness.

The High Commissioner, Sir John Clauson, whose health has, unhappily, not improved, has been granted six weeks' leave from November 21. The Chief Secretary, Mr. Malcolm Stevenson, has taken over the administration of the island; Mr. J. C. Fenn acts as Chief Secretary; Mr. E. H. Heidenstam is appointed Private Secretary to the Acting Governor.

A message is published from the Secretary of State for the Colonies, expressing, on behalf of H.M. Government their appreciation of the share which the people of Cyprus have borne in the common effort during the great struggle. The High Commissioner, on behalf of the people, has expressed their thanks for this gratifying assurance of appreciation.

Permits to travel overseas from Cyprus are now happily to be obtained. The restrictions on the issue of passports, and on the embarkation of women and children are removed; but those regarding journeys from the United Kingdom to Cyprus remain in force.

The Question of Village Headmen.

Village authorities in Cyprus consist of a *Mukhtar*, or headman, and a commission of four *Azas*, or elders. The old Turkish law which regulated their status has been amended and supplemented in many respects since the British occupation; and in 1906 a law was passed making better provision for their election and duties. The authority and privileges of these headmen have been very largely increased, and they possess the power and protection which belong to constables, in the lands of their villages. Their duties are very numerous, and it is most desirable that the most honest and competent men should be in office. The election is in the hands of the villagers. But, although many villages have made excellent progress in the management of local affairs, rural Cyprus in general has not yet so far progressed that villagers can, as a rule, be relied on to exercise their powers with the discretion that the times demand, or except under Government supervision. A step in the right direction has now been taken by means of regulations, which have recently been published, for the proper conduct of elections, and which should lead to a distinct improvement. The voting for *Mukhtars*, both Christian and Moslem, will now be under a presiding officer, to be appointed by the District Commissioner. When the poll is closed, returns will be made in duplicate, one being posted on the door of the village church or mosque, and the other forwarded to the Commissioner, who may, if he deems necessary, order a fresh election. If any complaints are received as to irregularity, he will hold an inquiry, and his decision will be final.

An Order in Council directs that the Currency Commissioner may issue notes not exceeding in maximum value £600,000.

CENTRAL ISLAMIC SOCIETY.

On December 21, at 21, Cromwell Road, London, the Central Islamic Society commemorated the birth of Mohammed, by a conversazione. Among those who were present were Major-General Dickson, Sir Ameer Ali, P.C., Sir S. P. Sinha (Indian delegate to the Peace Conference), the Honourable Mr. Basu, of the India Council, Syed el-Ehsan el-Bakry, Sheikh Kidwai, Dr. Miller Maguire, and Messrs. N. C. Sen and M. H. Isaphani. The rooms presented a very animated scene. A variety of races and religions were represented, Indians predominating, but there were also Egyptians, Persians, and Arabs present.

Mr. Dudley Wright gave a short address entitled "The Life and the Work of the Holy Prophet." He said that as a religious reformer Mohammed had come into the world at a time peculiarly ripe for instituting and prosecuting successfully such radical and blessed reforms as he had undertaken, and that the disinterestedness of his mission was now beginning to be recognised. Time had been when his maligners and misrepresenters had dominated religious thought and opinion, but within the last two or three decades a more liberal spirit had prevailed. Slowly but surely the world was beginning to judge Mohammed in the right perspective, and the nobility of his character, the purity of his aims, and the sincerity of the mission he undertook at Divine command were being generally acknowledged and appreciated.

Mr. Basu said that no religion in the world had brought about such unity and equality among peoples differing in race and colour as had that first taught by Mohammed.

MONTENEGRO AND SERBIA.

Colonel Sir Roper Parkington, Consul-General for Montenegro, is instructed to contradict the various statements that the Montenegrin Skuptshina has voted the annexation of Montenegro with Serbia. The Government is about to leave Paris for Montenegro, where the Montenegrin Skuptshina can only be convoked in accordance with the rules of the Constitution.

ROUMANIAN NOTES.

(From a Correspondent.)

The New Government.

The change of Government in Roumania has not the slightest political importance, the former Cabinet having been composed of occult Liberal elements backed by the supporters of M. Bratianu. They used this kind of political make-believe because of the internal situation, which was troubled, and because they feared that the other political groups would strongly oppose the formation of a Bratianu Cabinet. Now the Liberals, who were in power during the neutrality of Roumania and who joined in the war on the side of the Allies, again take responsibility at a time of the most extraordinary interest in the history of the Roumanian people. They are not willing to share power with the other parties, because they hold that the union of the whole Roumanian race is mostly due to their courageous pro-Allied action, and that no other political party is therefore entitled to share the honour with them. They consider, also, that such social reforms as the universal suffrage and the land question were already initiated by them as far back as 1913. Events are so important, so overwhelming that, at last, the representatives of all the political groups in the country must unite so as to be able to face such a situation. The King desires a coalition Government, and M. Take Jonescu, who is now in Paris, was asked to join the new Cabinet, but he declined.

The Famine.

Roumania has always been one of the most important granaries of Europe, but now her population is seriously menaced by famine. The Germans took the cereals from the country without any regard to the needs of the people. not sparing even the quantities required for sowing; so that the next harvest is also threatened. Now the Roumanian Government is compelled to ask the Allies for wheat and flour to stave off the threatened danger. The cost of living is terribly high, and the lack of food in the villages causes the rapid spread of diseases. Influenza, in particular, is making ravages. Thus far it is nearly impossible to know exactly what is the real situation in the villages that were under the German occupation, because the means of communication were completely destroyed. The invaders took over all the telephone apparatus, cut the wires of the telegraph, blew up the bridges, and destroyed the railways. All this damage cannot be repaired yet, because it is impossible to obtain materials.

When the Germans were compelled to retire from Roumania they took all the money from the banks, without any regard for private property. All the savings of the people and the money needed to run the various businesses and industries were taken. It is impossible to reckon yet what the sums carried off in this fashion amounted to.

In Transylvania.

The Roumanians of Transylvania had an admirable political organization; therefore, when the Dual Monarchy was dismembered, their administrative and political machinery came into action automatically. Their political programme satisfied both the Saxon and the Magyar minorities living amongst the Roumanians, so that these elected to join up in the new political formation of Transylvania. The Magyar Minister of Nationalities, the well-known sociologist M. Oskar Jaszi, tried to persuade the Saxon and Magyar minorities to remain faithful to the idea of a Magyar State, but without any success. *Nepsava*, the Socialist organ in Hungary, recalled the statements made by M. Jaszi some years ago regarding the decision of minorities in Transylvania. "The pressure on the Magyar State," wrote Oskar Jaszi, "is due to an Asiatic administration, unfair taxation, bad schools, and all sorts of economic knavery. As for the non-Magyar nationalities, the situation reaches the climax. When has a Magyar been heard to complain of the following persecutions:—That he was fired on by a policeman for wearing his national emblem; that he was thrown out of a public building by an official of the Government because he could not speak Magyar; that he was unjustly sentenced because a bribed interpreter had badly translated his complaint; that his children can neither read nor write because the time they spend at school is employed in being crammed with poems and recitations in Hungarian, which they do not understand; that his musical and literary associations have not been tolerated because the language employed is not the State language; that he cannot elect his brethren of the same race as members of Parliament, judges or clerks, their mother tongue not being Magyar; that every summons, notice, or official notification is a State secret to him, because he does not understand the language in which they are printed?" This is really one of the most important human documents, and throws much light on the internal situation in Hungary, explaining why the nationalities hate the National Magyar State.

TO THE WOMEN OF INDIA.

The Queen's Message.

The Queen has sent the following message to the women of India:—

Buckingham Palace, January 1.

A short time ago I sent a message of thankfulness and hope to the women of the Empire. I wish now to add to it a special message to the women of India. If my words are brief and simple, they are from the heart.

I know that by the custom of their country and the time-honoured traditions by which they are reverently bound the women of India are for the most part prevented from undertaking those public and industrial tasks which their sisters in other parts of the Empire, when the man-power of the country went forth in its defence, were able to discharge. In the seclusion and solitude of their homes the women of India have had to bear the bitterness of partings, to suffer bereavement and privation, to live through days and months of doubt and anxiety, in ignorance of the fortunes of the war and without tidings of their absent ones. Reports have reached me from many sources of their fortitude and endurance during the strain of the war, which have filled me with admiration and gratitude. Many have done more than this. I have heard of letters from Indian women to husbands, sons, and brothers with the forces abroad, exhorting them to be brave in battle, stout-hearted in adversity, faithful to their country and the Throne to the point of death. The history of India is full of the heroism and courage of its women in the past. The war has shown that their spirit is unabated.

The women of India are equally noted for their charity and compassion. I know how deeply they have been moved by the desolation which the war has brought into many households, and how ready they have been to provide relief for the sick and wounded, and to lighten the privations of their poorer neighbours.

I rejoice to think that many influences are at work which make for the greater well-being and advancement of the women of India. I watch with the deepest interest and sympathy every step that is taken to bring the means of education and knowledge more within their reach, to provide greater facilities for their obtaining proper medical relief through the agency of their own sex in women's hospitals, or in the privacy of their own homes, to widen their interests and activities, and to secure to them the adequate protection of the law.

I wish with all my heart that every success may crown these efforts.

PRE-DYNASTIC EGYPT.

The Relations of Ancient Egypt with Foreign Countries is the subject of a course of four lectures being delivered before the Egypt Exploration Fund by Dr. A. M. Blackman at Burlington House, London. In the first of these, delivered on December 20, the lecturer claimed that the records he had referred to showed that from the Proto-Dynastic Period onwards, if not earlier, the Egyptians were in constant communication with the inhabitants of Palestine, Syria, the Sinaitic Peninsular, Libya, and the Sudan. Trade was carried on by sea with the Ægean islands and the Syrian coast towns, and, according to Professor Edward Meyer, the latter were early Egyptianised. The same authority stigmatised as a "fond imagination of modern visionaries" the theory that the entire Egyptian civilisation was derived from Babylonia; but the inhabitants of the two countries must have met in the markets of Syria and the tents of Bedawi chiefs; and there were signs of cultural contact. For example, both Egyptians and Babylonians brewed beer by breaking up barley bread and allowing it to ferment in water. With Punt (the Somali coast) the intercourse of Egypt in the earliest times was probably by land, but, later, trade with that region was conducted by ships starting from an Egyptian port in the Red Sea.

The lecturer mentioned two cases of pigmies, such as those now found in Central Africa, being brought to Egypt. The first of these came from Punt, the second was brought from the territory between the second and third Nile cataracts, but had come originally from "the land of the Horizon-dwellers." This curiosity was brought by Harkhup, ruler of Elephantine, a tributary prince of Pharaoh, who was so delighted with the idea of receiving the present that he wrote Harkhup a letter giving him elaborate instructions how the pigmy was to be protected. "Come northward," he wrote, "to the Court immediately. Thou shalt bring this pigmy with thee. . . . When he sleeps at night appoint excellent people who shall sleep beside him in his kennel. Inspect ten times a night. My majesty desires to see this pigmy more than the produce of Sinai and Punt."

NEAR EAST BOOKSHELF.

THE STRUCTURE OF THE INDIAN EMPIRE*

This is a most interesting and suggestive little book, which should certainly be read by everyone who is concerned in the problems of Indian administration. We do not mean that it contains a completely satisfactory solution of those problems, but it states them in perfectly clear terms, and indicates principles of action which are at least relevant, and which have been too little in evidence of late years. It is pleasant reading, too, well written, neatly printed, with that almost forgotten boon of a wide margin, and illustrated with a map and diagrams which can be grasped by anyone.

Major Tandy's main thesis is that the central administrative machine has become inadequate to handle the growing volume of work with the increasing efficiency demanded by the times. Multiplication of departments only adds to the congestion, while attempts at decentralisation have hitherto had little result. He finds the explanation of this position in neglect of the principle that no one man can co-ordinate effectively more than, say, half a dozen units. The Government of India attempts to co-ordinate about twenty-two units (Provinces, States, and Agencies taken together), and congestion is the inevitable result. He devotes some space to justifying this principle, which lies at the root of all military organisation, and which, as he points out, was adumbrated by Jethro when he told Moses that "this thing is too heavy for thee; thou art not able to perform it by thyself alone." The principle being established to his satisfaction, he applies it to India by proposing an intermediate grouping of units, Provinces and States being formed into five Presidencies, each under a Governor-General, and the five being ruled by a Viceroy, if possible, belonging to the Reigning House. The great seaports determine the lines of the grouping, Calcutta, Madras, Bombay, and Karachi giving outlets to four, but the unfortunate Central Presidency being left without a doorway to the sea. Inside each Presidency Provinces, and States would remain precisely as at present, but they would be effectively co-ordinated by the Governor-General, and the Viceroy's central administration would perform the same function for the five intermediate units.

Such is the author's remedy for existing congestion. It presents many advantages, and is open to sundry criticisms, which it would take us too long to detail. We may just hint, however, that insufficient weight is occasionally allowed to the element of human perversity; mechanically, the scheme is thoroughly sound, or could be made so with comparatively small changes, but sentiment develops in strange directions, and union may arouse as violent hostility as partition. Notwithstanding such difficulties, the author's concrete scheme deserves serious attention, but in any case the book is worth reading as an example of clear thinking in the administrative sphere. Like everyone who writes from India, Major Tandy has hard things to say about the India Office, and his suggestion of reform by high explosives may be commended, in its metaphorical sense, to the committee recently appointed to consider the future of the institution.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

From time to time readers have pointed out that the title "Tangier to Teheran," although alliterative, fails to convey any clear meaning to many people, and that it does not fully cover the field dealt with. Therefore, with the Editor's approval, these weekly Gems of Philosophy and Truth will henceforth appear under a new title. "The Caravanserai," taken in the sense of Omar Khayyam's quatrain quoted above, seems to meet the views expressed by my kindly critics; and the New Year, with its new volume, is surely the time to make the change.

***

A caravanserai, or *khan*—the rest-house for caravan travellers, man and beast, in the Orient—is a good place in which to gather the gossip of city, camp, and desert. Superior travellers may keep themselves to themselves in their upper chambers, but the zaptiehs, servants, and muleteers who accompany them usually let their tongues wag when they gather round the fire in the courtyard below. Thus, the *khanchi*—who "looks after" the khan and supplies travellers with water, firewood, eggs, and so forth, and the muleteers with fodder—has good opportunities to hear many versions of many stories. The ordinary traveller has not quite such good opportunities, perhaps; but I hope that if I keep my ears open something good may occasionally come my way.

***

I read a few days ago the account of an interview which the representative of a certain journal had with the Emir Feisul. The Prince is represented by his interviewer as expressing surprise at the "inferior position" of the European woman as compared with that of her Arab sister. "Here," he is reported to have said, "the women slave at all sorts of professions; but in our country they work only in the home, while many women, having plenty of money, do no work even there." But was the gentleman from Fleet Street impressed—or depressed—for one instant? Not a bit of it. "Neither do they vote," he sapiently remarked. And he adds: "'No,' gravely acquiesced the Prince. 'The Eastern women are not yet sufficiently advanced to take part in national affairs.'" It would afford me exquisite satisfaction to know what thoughts passed through the dignified Arab's mind as he gave his grave reply to the ineffably wise remark of the pressman.

***

That remark, by the way, reminded me of an Egyptian proverb about a lady of a certain profession, who, repenting for one night, enquired virtuously whether there were no police officers to arrest those of her sisters who had not yet seen the error of their ways. I dare not put the saying quite literally in English, but it is transliterated thus in a little Arabic book that I possess. "*Tàbot el qahh'bah lêilah qàlat wala walee yëmssik elqohh'ab.*" After all, a thousand years have not yet elapsed since our women were granted the vote—as the virtuous pressman might have remembered, to his own advantage.

***

The Emir, I am glad to see, spoke out plainly as to his views regarding the future of Syria and Palestine, and he declared that the Arabs had not risen in revolt against the Turk in order to substitute any European control. "The desire is," he said, "to set up a form of government under the guarantee of a Power that is big enough (and I am not referring merely to material size) to ensure fair play to the three great religions of the world, and to the Arabs of Palestine and to the Zionist Jews." Having regard to all the circumstances of the case, that is a courageous statement, and one that the Powers will do well to bear in mind. If the Arab point of view is ignored, it will inevitably mean trouble for Europe; and enough mistakes have been made already.

***

The pacifists and cranks have received a nasty knock in the Election. But they are a thick-skinned, obstinate lot, and are kicking against the pricks. We may, therefore, expect ere long to find the pro-Germans hard at work with their tongues and pens. So there can be no harm in quoting a few sentences from a letter recently received from an American. It is worth while adding that he is a clergyman, and is now engaged on an errand of mercy; but he does not confuse "mercy" and "justice." He writes: "Port Said is crowded with shipping, and the world moving again—transports carrying troops homeward to New Zealand, Australia, etc., relief ships along the Syrian coast, and signs of life everywhere. . . . Let no German criminal escape, and the U.S.A. will back you to its last man and dollar while we help rebuild this half-ruined earth." Will pro-Germans please note?

CORSAIR.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. January	1918. December.		1337. Rabia II.	5679. Shebat
3	21	Friday	2	2
4	22	Saturday.....	3	3
5	23	Sunday	4	4
6	24	Monday	5	5
7	25	Tuesday	6	6
8	26	Wednesday	7	7
9	27	Thursday	8	8

It is stated by the Greek Press that King Alexander will visit Paris, London, and Rome at the end of this month.

The King has given orders for General Sir Charles Monro to be promoted G.C.B. for services in connection with the war.

Prince Nicolas of Roumania dined with the Roumanian Minister and Mme. Misu at the Legation on Christmas night. It is reported that he is to enter as a pupil at Eton.

The marriage arranged between Major G. V. Comyn, M.C., Indian Army, and Miss Lazarus-Barlow will take place on Saturday, January 4, at All Souls Church, Langham Place, at 1.15.

Sir George Lloyd, Governor of Bombay, arrived there on December 16. Lord and Lady Willingdon are coming to England before Lord Willingdon takes up the Governorship of Madras.

In recognition of his eminent services to the Greek Army, the Greek Government have conferred the Croix de Guerre on General Milne, Commander-in-Chief of the British Forces in Macedonia.

A memorial service for the late Lord Edward Cecil was held in All Saints Church, Cairo, on December 23, and was conducted by the Bishop in Jerusalem, assisted by the Rev. C. T. Horan, British chaplain.

General Paraskevopoulos, Commander-in-Chief of the Greek Army, has awarded the Croix de Guerre of the Second Class to General Briggs and General Wilson, commanding the 16th and 12th British Army Corps.

The engagement is announced of Lieutenant Charles J. Houssemayne du Boulay, R.N., son of Colonel and Mrs. du Boulay, of Marchmont, Cheltenham, and Veronica, younger daughter of William Morgan, of Karenza, Cheltenham.

The engagement is announced between Miss Gertrude Jacob, daughter of Mrs. H. F. D. Jacob, of Culford, Coonoor, South India, and Mr. Frederick Hutchison, son of Mrs. W. T. Hutchison, of Buenos Aires, Argentine Republic.

On December 26, at the Parish Church, Brighouse, Lieutenant W. R. Hanson, R.A.S.C., of Ceylon, younger son of Mr. and Mrs. Hanson, Smith House, Lightcliffe, was married to Dulce, younger daughter of Dr. and Mrs. Farrer, Brighouse. The Rev. Canon Hone officiated.

On December 21, at All Saints Church, Margaret Street, W., Captain P. J. K. Warren, R.G.A., son of Mr. and Mrs. W. A. Warren, of Southsea, was married to Joan, youngest daughter of the late Colonel C. T. Jessop, C.I.E., Assam Light Horse, and Mrs. Jessop, of Westbury, Wilts.

Reuter's Paris correspondent reports (December 31):—The newspapers publish telegrams from Rome stating that the King and Queen of Roumania will embark after Christmas (Old Style) for Western Europe. After visiting Constantinople and Athens they will travel to Rome, Paris, and London.

Kwaja Kamal-ud-Din, the Imam of the Mosque at Woking, is suffering from a nervous breakdown. Recently his condition was made much worse by the sad news that his eldest son, the son's wife and their child, had all died in one day at Lahore, it is supposed from influenza. Kwaja Kamal-ud-Din is now recuperating at Margate, and it is hoped he will be fit to return to his ordinary occupations by the end of the present month.

The marriage took place on Tuesday at St. Columba's, Pont Street, of Mr. Hugh Le Geyt Kensington, the Rifle Brigade (retired), eldest son of the late Sir Alfred Kensington and Lady Kensington, and Miss Agnes Manson Macfarlane Adamson, youngest daughter of Mr. Richard Whitecross Adamson. The bride was given away by her uncle, Mr. Robert Hay Adamson, and her brother, the Rev. J. Adamson, M.C., Chaplain to the Forces, performed the ceremony. Mr. F. L. Durnford, R.F.A., was best man.

The Times of December 28 contained the announcement of the golden wedding of Mr. J. H. Rivett-Carnac, Bengal Civil Service, second son of Admiral J. Rivett-Carnac, R.N., and Mrs. Marion Rivett-Carnac, eldest daughter of Major-General Sir Henry Durand, member of the Supreme Council of India. The marriage took place at St. John's, Simla, India.

The Rev. H. Gordon Peile, formerly assistant chaplain of Singapore Cathedral, who will take up the appointment of vicar of South Acton on leaving the Army, went through the Singapore Mutiny with the local Volunteers, and was mentioned in despatches. Having served as chaplain to the Singapore garrison, he has, since 1916, been senior chaplain at Wimbledon Camp.

Mrs. H. C. Lukach, the wife of Lieut.-Commander H. C. Lukach, R.N.V.R., Commissioner of Famagusta and author of "The Fringe of the East," "The City of Dancing Dervishes," and other works on the Near East, has received the King's unrestricted permission to wear the "Samaritan Cross" conferred on her by the King of Serbia for services in Macedonia with the Serbian Relief Fund.

Prince Feisul took luncheon on Monday with the Lord Mayor and the Lady Mayoress at the Mansion House. Among the other guests were:—Lord Robert Cecil, Lord Winterton, M. de Fleuriau, C.V.O., Prince Livio Borghese, Colonel Sir Henry and Lady McMahon, Sir Eyre Crowe, Sir J. D. Rees, M.P., and Lady Stonhouse, Sir William and Miss Treloar, Sir David Burnett, Sir Vansittart Bowater, Sir Denison Ross, C.I.E. (Director of the School of Oriental Studies), Mr. R. F. Synge, C.M.G., and Mrs. Synge, Major-General Radcliffe, C.I.E., Mr. J. E. Shuckburgh, and the Sheriffs. Brigadier-General Nuri Said and Colonel Lawrence were in atendance on the Prince. On Tuesday Prince Feisul visited Lord Robert Cecil.

Sir Frederick Robert Upcott, of St. James's Court, Buckingham Gate, formerly Chairman of the Indian Railway Board, left £27,009.

M. S. Flandin made his official entry into Tunis on Monday as Resident-General of the French Government, succeeding M. Alapetite, appointed French Ambassador at Madrid.

Surgeon-General Charles Planck, who served for thirty-two years in the Bengal Medical Service, and marched with General Outram's force to the relief of Cawnpore and Lucknow, left £14,858.

Colonel Sir Henry McMahon will preside at a lecture on "Egypt, Mesopotamia, and Palestine in Relation to the War," which will be given by Mr. W. Herbert Garrison at the Central Hall, Westminster, this afternoon at three o'clock. The lecture is intended for children, and is given under the auspices of the Royal Colonial Institute.

Under the patronage of Queen Alexandra, Princess Christian, Princess Royal, Princess Patricia, the Grand Duchess George of Russia, and Prince George of Serbia will be given, on Sunday, January 19 a matinée at the London Coliseum in aid of the Serbian Red Cross Reconstruction and the Russian Relief Fund. The Duchess of Somerset and Lady Egerton are organising the matinée.

The General Officer Commanding-in-Chief, Mesopotamia Expeditionary Force, has sent a Christmas and New Year message to the Director-General of Voluntary Organisations (Sir Edward Ward) and the Hon. Organiser of the Camps Library (Dame Eva Anstruther), in the course of which he says: "We shall ever remember and be grateful for all you have done for us, and we extend our appreciation in no less degree to those who have so generously contributed to the funds."

The following message has been received by Sir Robert Hudson, G.B.E., chairman of the Joint Finance Committee of the British Red Cross Society and the Order of St. John from General Marshall, in command of British Forces in Mesopotamia at Baghdad:—"Army in Mesopotamia send heartiest Christmas greetings and every bright wish for the New Year. We again desire to thank you most warmly for your many kindnesses in the past and the devoted interest you have always taken in us."

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO,

The Smallest and Poorest of our Allies.

Thousands of Starving Women and Children need Food and Medicaments.

9,000 FAMISHED MONTENEGRINS FROM CAMPS OF CENTRAL EMPIRES MUST BE FED.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

APPOINTMENTS, PROMOTIONS, &c.

Our Cyprus Correspondent writes:—Mr. Herbert Dunk is appointed Acting Registrar-General from November 21.

Dr. B. Puritch, the newly-appointed Secretary to the Serbian Legation at Washington, arrived in London from Paris on Sunday.

A correspondent writes:—Count Curivobene Gonzago, Italian Minister in Persia, died suddenly in Teheran on October 17 last. Sig. G. Catolani, the new Italian Minister to Persia, left Italy for Teheran on December 15.

M. Paul Terka, a Christian Albanian from Durazzo and a prominent supporter of the Entente, has been appointed Albanian Minister of Foreign Affairs. His appointment has produced an excellent impression in Allied and Albanian circles.

NEW YEAR HONOURS.

The list of "New Year" Honours is not yet complete. Amongst the names already published are many of interest to our readers. Sir S. P. Sinha becomes a Privy Councillor and the Maharajah of Bikanir a G.C.V.O. General Sir Julian Byng is promoted G.C.B. Vice-Admiral Sir Somerset Gough-Calthorpe and Vice-Admiral Sir John de Robeck receive the G.C.M.G. Mr. Harry Lamb, C.M.G., is promoted K.C.M.G., and Mr. Alexander Telford Waugh, Commercial Attaché at Athens, and Mr. William Charles Fleming Robertson, Colonial Secretary, Gibraltar, and Acting Lieutenant-Governor and Chief Secretary to the Government, Malta, both receive the C.M.G. Mr. Cecil Hermann Kisch, Private Secretary to the Secretary of State, India Office, is given the C.B. (Civil Division).

OBITUARY.

Lord Stratheden and Campbell died on December 26 at 17, Bruton Street, aged 89. He was formerly in the Bengal Civil Service, which he entered in 1849, and was employed as Associate to the Lord Chief Justice as Secretary of Commissions in the Court of Chancery (1860-73), and as Master of the Supreme Court of Judicature.

The Rev. Frederick Roberts Elliot, M.V.O., who has died at his residence at Paignton at the age of seventy-eight, was formerly chaplain at Kadikeui, Asia Minor, and from 1889 to 1908 he was chaplain to the British Legation at Athens, when he acted as English tutor to the sons and grandson of the King of the Hellenes. Mr. Elliot was made a member of the Royal Victorian Order in 1905.

The death is announced, at the age of sixty-eight, of Captain Duke Arthur Crofton. He served with the Naval Brigade during the Abyssinian War, for which he had the medal, and was lieutenant of the Teméraire during the bombardment of Alexandria and during the Egyptian War. For his services there he was promoted commander for Alexandria, and given the Egyptian medal with clasp and the Khedive's bronze star. He retired in 1900.

Sir Richard Charles Oldfield, who has died at Deddington Place, Kent, suddenly, of pneumonia, aged 90 years, was the eldest son of Henry Swann Oldfield and Letitia, daughter of Colonel Scott. He was educated at Eton and Haileybury, and entered the Bengal Civil Service in 1848, serving during the Mutiny, and being wounded near Agra. He was a Judge of the High Court of Judicature, Allahabad, from 1873 to 1887. Sir Richard married, in 1854, Maria, daughter of Major Frederick Angelo. There were two children of the marriage.

NEWS IN BRIEF.

A decree has been issued notifying the partial raising of the blockade of the coasts of Asia Minor and Syria.

One thousand British troops, the majority of whom are pivotal men, have left Malta on their way home to be demobilised.

General Franchet d'Esperey, according to the *Echo de Paris*, has been summoned to confer with the French Government in view of the new Near Eastern problems.

The Greek Government, says Reuter's correspondent in Athens, has decided to employ 2,000 Bulgarian prisoners on various public works. They will be paid the usual rate of wages.

Mr. H. V. Lanchester, F.R.I.B.A., whose name is well known in connection with town planning, leaves for India this week to join a commission dealing with the improvement and development of Cawnpore.

The German military authorities at Görlitz have refused to allow the Greek soldiers interned there to quit Germany. These are the Greek troops who surrendered to the Bulgarians at Kavala in 1916.

Reuter's Paris correspondent reports:—A message from Jassy states that the Bessarabia National Assembly, which had already voted in favour of the union of Bessarabia with Roumania conditional upon the granting of a large measure of autonomy, has now voted for the country's definite union without any reservation, in the firm conviction, it declares, that in a great Roumania a purely democratic regime is assured for the future.

According to information from the Caucasus, conflicts have occurred between the Armenians and the Georgians, the latter having occupied Armenian territory on the retreat of the Turkish troops.

According to news received in Athens from Constantinople, three hundred localities of Turkey have addressed appeals to the Allied representatives in Constantinople for their union with Greece.

A telegram to Paris from Constantinople states that Enver Pasha and Talaat Pasha are about to try, with false passports and disguised, to get to Spanish Morocco, where Raisuli is said to have promised them assistance and support.

A telegram to the Greek papers from Constantinople states that in consequence of the situation in the Turkish capital the British High Commissioner has ordered a detachment of marines to be landed from the British squadron.

According to news received by the Armenian Bureau, sanguinary disturbances have broken out at Erivan, the capital of the Armenian Republic, as a result of the shortage of food, and the Armenian Minister Kardshikian is reported to have been killed.

A battalion of French troops has been detailed to occupy Stamboul, the Turkish quarter of Constantinople, and a British battalion will be quartered in Pera, the European part of the city, while it is expected that an Italian force will occupy yet another district.

A message from the Cape British Indian Council to the Indian National Congress at Delhi conveys its congratulations on the part India has played in the world-war, and requests the Congress to insist on the granting of full responsible Government to India and full British citizenship to Indians in South Africa.

According to information from Sofia, Dr. Maximoff, the Bulgarian Socialist leader, admitted in a recent lecture at Pyrgos that superior Bulgarian officers committed unspeakably indecent outrages upon the inhabitants of Seres and Kavala, and that the richest Greeks had to resort to begging. He was ordered by his superiors to leave Greeks to die.

Owing to the preoccupations of the Government of India with regard to post-war problems and Indian reforms, the activities of the Imperial Legislative Council during the cold weather session are being confined to important legislation and to the Budget of 1919-20. Lord Chelmsford has assured the Council that full opportunities to deal with other matters will be afforded during the autumn session at Simla.

A new Indian weekly, the *Deccan Ryot*, is published at Poona as the organ of the agricultural classes, and especially of the "depressed castes" in Western India. The editor, Mr. A. B. Latthe, M.A., makes a strong appeal to the Indian Moderates of the school of the late Mr. Gokhale, as well as to English readers interested in the cause of democratic progress in India on reasonable lines, and with adequate safeguards for the well-being of the Indian masses.

The Karachi correspondent of *The Times* in a message dated December 19, says:—"Intending cold weather visitors to India may experience considerable difficulty in obtaining passages back to England next year. The demand for accommodation is far in excess of what steamer companies can at present offer, and the Government have now appointed a Controller of Passages, who will ration available berths among those most deserving.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner P.T.25.

THE NEAR EAST.

Editorial and Publishing Offices:

1, DEVONSHIRE SQUARE, LONDON, E.C. 2.

Telegrams: "EASTAPROX, AVE, LONDON." Telephone No.: 618 London Wall

FRIDAY, JANUARY 3, 1919.

NEW BOUNDARIES.

Within a few days the formal business of the Paris Conference will begin. No part of the problem with which the Associated Governments are confronted is more intricate than the settlement of the Near East. According to the President of the Czecho-Slovak Republic, "the real object of the war and peace is the reorganisation of Eastern Europe and the solution of the Eastern question." With the freeing of the small nations from the menace of Germany, who was resolved to give effect to her theory that there could be no future for them, as history aimed at the fashioning of large States, War's negative task, as Dr. Masaryk declared, has been fulfilled; but a positive task awaits Europe—to organise East Europe, with the eighteen nations that the geographical term covers. In a settlement in which every item will represent a separate and vital contribution to the avoidance of future wars it is unnecessary to attempt to apportion degrees of importance; but the Near Eastern Problem stands in a category by itself owing to the exceptional knowledge of the geography and ethnology of the countries concerned, as well as to the political insight required for its solution. The statesmen on whom the responsibility for a decision rests will do well not to trust merely to a judicious weighing of the conflicting claims that will be submitted to them at the Conference. For a clear judgment they will probably need to turn away at times from the perfervid and *ex parte* statements of the different delegates to a consideration of the views of those who have had the advantage of studying the self-same problems under less agitated conditions. It is right, therefore, that every aspect of the question should be canvassed as widely as possible in the public Press, and all those who are anxious to see adopted a permanent settlement of the Near Eastern question, as far as one is possible, will welcome the more serious contributions that have recently been made to the literature on the subject.

It is significant of the extent of the problem that no writer attempts within the compass of a single article to cover the whole of the ground. Apart from the actual demarkation of boundaries, nearly every mile of which will present its own particular problems, there are four major questions of policy which have to be decided—the rival claims of Italy and Yugoslavia to Dalmatia, the boundaries of Bulgaria, the status of Constantinople, and the future of Asia Minor. With regard to the first, we can state without fear of contradiction that it is the earnest wish of the British public that the disputants should be able to arrive at a settlement between themselves without carrying the matter to arbitration. The principles that should govern the solution are agreed upon—nationality and self-determination; and a free plebiscite under impartial supervision should supply the verdict. In regard to the more detailed delimitation of frontiers in the Balkans it seems hardly necessary to insist at this stage that the greatest care must be exercised to avoid occasion for irredentism on any considerable scale. We are tempted to go further, and to recommend that compulsory repatriation under adequate safeguards and with due compensation should be introduced in preference to any conspicuous violation of the rule that no Balkan community is to be left under alien jurisdiction. Thus, if for considerations of military or political strategy it were decided that violence must be done to the principle of nationality in the case of Bulgaria, it were far better that the Allies should make themselves responsible for the withdrawal of every Bulgarian from the territory handed over than that an incentive for intrigue and unrest should be provided by the presence of a single Bulgarian family in a neighbouring State. To the average European mind any such precaution may seem excessive; but no one with knowledge of the history of the Balkans will question the wisdom of the suggestion at a time when a superior power is on the spot to carry it into effect without risk of challenge. If this principle be strictly adhered to, the details of delimitation become less significant. We cannot deprecate too strongly the shortsightedness which ignores the fact that the future of the Balkan Peninsula as a whole, and consequently of each of the States composing it, depends on the faculty of the different peoples for co-operation, political and economic. No settlement, therefore, can be regarded as satisfactory which is not based on a deliberate effort to bring and to keep the countries together in the future, however bitter their present relations may be as the result of events during the last five or six years. It must be a further axiom of any settlement that no point shall be allowed to be considered as prejudged as the result of action taken during the last few months; in particular that the future of Albania and of Montenegro shall be decided on the merits of each case in its general setting, and not as the fortuitous presence of this or that body of troops may cause it to be staged for the edification of the Allied Conference.

It is the desire for a permanent settlement that is mainly responsible for the proposal that Constantinople should forthwith be handed over to Greece. Its history is Greek, and few people will maintain with any conviction that in no circumstances can the future hold out the prospect of the city becoming Greek again. But the Allies cannot afford to ignore the exigencies of the present time in order to anticipate the years ahead. As far as is known Constantinople has fallen to the Allies with the bulk of its population Turkish. To make it at once a Greek city would have the effect of creating a new centre of that irredentism which it has been one of the purposes of the war to eliminate. Moreover, gratifying as such a solution might be to the *amour propre* of Greece, she could only approach the additional burden of empire with misgivings at heart at a time when the affairs of the old country and the certainty of territorial expansion in Asia Minor are likely to tax her administrative capacity to the utmost. She is not likely to forget, for the moment at least, that the only alternatives for the Premiership of M. Venizelos that presented themselves recently were men of the stamp of Gounaris, Lambros, or the ineffective Zaimis. The services of her best administrators are needed on the mainland, and they will be the first to utter a warning against commitments that must sooner or later saddle the country with the upkeep of a large army and a considerable navy. Greece will have a better chance of achieving her destiny, if Constantinople is held for the time being in trust, until the bitternesses that have been engendered have subsided and the guardians of others need no guardians themselves. The Allies have pledged themselves to free the city from Turkish jurisdiction, and if they have to supply a substitute, there can be no question that the United States is the most suitable Power. It does not necessarily follow, however, as a writer in *The Round Table* has urged, that America should also assume administrative responsibility for nearly all the territory lying between the Sea of Marmora and Afghanistan. The guardianship of Constantinople and the position of adviser in a new and limited Turkey would be a fair contribution for the United States to make towards meeting the Allies' responsibilities. But we do not believe that the Americans would contemplate with any satisfaction an indefinite extension of this rôle or would wish to see Great Britain abdicate the peculiar position she has gained for herself among the peoples of the Near and Middle East.

ESDRAELON.

(From a Correspondent.)

Making from Haifa to Nablus (which is Neapolis and Shechem, but not Sychar), we left for our journey the main road through Nazareth and followed a track down the plain Esdraelon, passing with the Kishon near Tel-el-Kassis, where the Priests of Baal met their doom, through the narrow strip left between Carmel and a spur of the Galilean Hills. For all the humanity and diligence of a modern British Army, the ground within a few days of the fighting was of necessity with things less comely than "gold and scattered coinage strewn." Here and there were dead unburied, and the ground in places was encumbered with horses, carts, vehicles of every description, and scores of lorries, ruined by our air attack. All this was nothing to the immense amount of transport by Nebi Balan, north-east of Nablus. Six or seven miles of crowded lorries were there destroyed or taken. This time in Esdraelon it was not the state of the ground that determined the enemy's ruin, as when the stars in their courses fought against Sisera. This time the surface was as dusty as when the clouds about his wheels showed miles away Jehu's furious driving from Bethshan up to Jezreel. What a battle here must be in rain, with Kishon in spate and the hills pouring torrents on the flats, one can imagine from the state of a single car, the Commander-in-Chief's, whose driving wheels could get no grip of the mud after a short shower. It was because of the impassable mud, and not to avoid a wet cloak, that Ahab was warned to make fast for home, "for the rain cometh."

The ground was dry enough when I saw it. Wherever there had been a post or a rally it was littered, almost covered, with every kind of contrivance, weapon, tool; telephone machines, chemical arrangements, smiths' and joiners' benches; but above all with papers. There was paper by the half-acre. I wonder does every camp and outpost of ours hide treasures of stout literature under its bookless appearance. "Se sub serenis vultibus, austera virtus occulit," and very likely the travelling boxes of our mess are stuffed with books of reference. At any rate, many of our soldiers read in the great Book of the Land; to the profit—mayn't we say?—not only of our piety but of our historical perspective.

But is it so certainly for the advantage of our judgment? One has reactions against the influence of the Bible on our measure of present facts. If the Bible events and the Bible histories stood alone, we might think that what happens before our eyes in this land only seemed uniquely important because the places we move in have been celebrated in language of unmatched beauty and fervour. Would a Highlander's raid on Stirling seem as momentous as Barak's descent from Tabor in the flank of Sisera's extended line, if only it had been sung by an artist like Deborah? Are we deluding ourselves when we experience a touch of awe in watching General Allenby's operations? When his cavalry reversed that old success of light infantry against chariots and horsemen, is it really sensible in us to remember that the engagement took place where Sisera's long line was cut and dispersed East and West, in Esdraelon, called in the Hebrew tongue "Har Megeddon"?

Is it more than a sentimental trick to recall the Canaanites' defeat, the defeat of Midian by Gideon, of the Philistines by David, of Holofernes, a new Sisera matched with a new Jael? It would be a relief to answer once for all, yes. For no one going on paper over the ground covered by a great literature but must from time to time suspect himself of affectations best unnamed, the horrible trick of going to Scripture for purple patches. Should we think of this country as we think of South Africa, if it were not for the great words? Deborah was a very great and a contemporary poet, and Esdraelon found a greater poet still when David or some other sang that Dirge over Saul and Jonathan which is written in "The Book of the Brave." Deborah's thunder and the music of "How are the Mighty fallen" are enough to dignify—the critic says—the smallest tribal fight. Would Wales be as great as Palestine if only someone there—and it is the likeliest place—had sung "Lord, when Thou wentest out of Seir . . . O, my Soul, march on in strength." Is a little country made great only because great words have been conceived on its hilltops and carried through ages in the great Book of the world? One hears a voice like Celia Brooke's saying in a cool staccato of commonsense that things are just what they are, and that we are slaves of a literary illusion when we give a special dignity to the operations between the coast country and Nablus because of the names of places; that when Indian Lancers put every man of a Turkish Force out of action they were riding for Nazareth, and when our light cars rushed an aerodrome at Afuleh they were possibly on the exact ground of the Philistines' assembly against Gilboa; that the whole force that turned East from the sea swept from Sharon, round the flanks of Carmel, and across the "Valley of Decision." The names have a magic. Do they bewitch us?

The answer suggests itself. First, a small area and the doings of small forces do not inspire great history or become a text of great prophecy unless the issues at stake are really great. Those little battles were real decisions leaving results still discernible.

When Barak made North and South one land, when Gideon pushed out the trans-Jordan people and David checked the Philistines, they made Israel safe; they gave room for a national sovereignty, and for a state life that was matrix for the greatest books in the world and gave Europe an instruction, a law, and a hope not yet explored, still to be lived out. The old engagements, with arms simpler than any that shocked Dalgetty in the Highlands, were great in the real political sense, that is in the sense of principles defined, aims directed, and human co-operation raised to higher moral issues.

Jesreel and Jenin are great as Chalons is great, great for the development of human order, greater for creative ideas. For what changed current of language or thought did Jena determine that is at all comparable to the difference between our world—bad as it is—and a world without the Bible? That is the first reason for believing the land to be legitimately wedded to the tremendous old words; and the second reason is that those old conflicts are only the earliest known of a long list.

It was not for fashion or religion that Egyptian kings campaigned in Esdraelon, and Antiochus, and Pompey, and Mark Anthony. Napoleon no doubt missed nothing of the Bible interest when he came. But he did not come into the valley by Megiddo for the Bible's sake, but because he knew it was the only proper road for victory in the Near East. In retreat he passed between Carmel and the sea. Esdraelon is the broad pass from the sea to the Jordan. If you hold it you get the Phœnician ports and Damascus and Lebanon. It is much more. It is the road from Greece and from Egypt alike to Assyria, a road from Africa to Asia.

This is why there is hardly a hill or a stream in all that little country but has, not one or two, but ten records in written history. For example, that short and most moving chapter the history of the Crusades in success and failure, illustrates almost like Scripture the fact that our broad plain, with narrow entrances and threatening heights, is an arena of judgments. The Crusaders found decisions, judgments there, as Saul and Josiah did. You see a condemnation of the best natural means when led by a fainting conscience in a half-deserted cause; you see a condemnation by battle of the warmest piety and the most excited confidence when combined with the rejection of warnings and the neglect of preparation. On this ground it is the cold fact that the good cause—as, looking back, we can't but call it—has again and again triumphed when it was faithfully served. Here it held on against tremendous odds when the Knights of St. John kept the Red Cross flying at Belvoir (north of Beth Shan) for eighteen months in the face of Saracen conquerors; and on the same ground Crusaders failed, as Bible kings failed before, when good intentions were left to do the work of prudence, or sagacity was trusted to redeem a selfish aim and the methods of deceit. Our modern trial is as critical as any, as full of judgments. It is not, of course, to be measured by the gigantic scale of the operations it forms a part of, but by the importance of the principles at stake. On this scale Barak's doings were as great as Vespasian's or Napoleon's. For us here, always in the glow of a greater interest, the thing has united Palestine, freed Arabia, opened a road to Armenia. But it is important not as a deliverance of Syria and a great stroke for the Near East. It is only rightly considered as a moment in the age-long struggle upwards of freedom and truth.

One need not then be shy to remember the place-names of an old glory, to remember that Lejjun is Roman Legio and old Megiddo, that Carmel on the left is the old place of prayer to God "that answereth by fire, the fire of sacrifice," that the long plain with its broad triangular centre is still Armageddon, stained now by the complicated relics of a modern defeat, the ruined machinery of a modern enemy.

We are really following not a fancy, but a clue of history when we see a unique significance in the mere scenes of the late operations, operations as momentous for the future of the world as any of the old battles. They may perhaps one day be seen as among the most important in a struggle for principles as old as the world and hopes that will outlive it.

PRESS ON THE NEAR EAST.

Armenia at the Conference.

On Monday *The Times* published an "Outline of Armenia's claims to be brought forward at the Peace Conference," which was "given on the authority of Boghos Nubar Pasha . . . the recognised leader of the Armenian people." The special correspondent who contributes the article points out that "Armenia's interests clash with nobody's save the Turk's, and he has forfeited the right and lost the power to resist her aspirations to a new birth. The adjustment of frontiers with other new States —Georgian, Tartar, and Arab—to the north and east and south is a matter of minor importance. The lines of nationality are fairly clear, and are not likely to involve serious dispute. The existence of a compact, autonomous Armenia is the main thing, and I gather that the delegates will not prove unaccommodating in respect to the interests of their neighbours." The settlement in this part of the Near East has certainly been simplified by the fact that the young Armenian Republic of Ararat has agreed to throw in its lot with the Armenians of Turkey. The Armenians' moral claim to independence is declared to be indisputable. "The only argument against an independent State that could be used by the friends of Turkey is that the Ottoman policy of extermination has been so thorough that there are not enough Armenians left to form the nucleus of a population—an argument for non-intervention that would establish the principle of the murder of small civilised nations to admit the survival of barbarism." As to the government of the new State, we read:—

Armenia will not be strong enough for a long time to stand on her own feet, and experience has shown that a divided international control is too cumbrous, slow, and complicated to admit of smooth and uninterrupted progress. Armenia asks for a mandatory—one of the Entente Powers, England, France, or America, to stand sponsor for her while she is developing strength. This Power would organise a Government, lay down the main lines of administration, and provide troops for the protection of life and property during the period of transition. A large force would not be necessary, as an Armenian gendarmerie could be enrolled almost at once. The 25,000 Armenian troops in the Caucasus could be called in, and the 8,000 with Allenby, as well as drafts from America and elsewhere. Under the provisional Government the principle of self-administration will be developed, perhaps with a nominated council in the first place, to be succeeded by an elected one. The delegation believe that in a few years the new Armenia would be capable of self-government and self-defence. Nubar Pasha reckons on a population of something like two and a half millions so soon as there is confidence that no shadow or vestige of Turkish suzerainty will darken the prospect of the future.

To many readers the question of boundaries will be of extraordinary interest, in view of the many proposals that have been put forward at one time and another. This is dealt with as follows:—

The new Armenia, including Russian Armenia, the six Turkish vilayets, and Cilicia, or Armenia Minor, will, if the proposal of the delegation is accepted, extend from the Black Sea to the Mediterranean. On the Black Sea Samsun, with its interior communications with Anatolia, will naturally be Turkish. A stretch of coast east of this port to a point east of Trebizond will be the Armenian littoral. Between Trebizond, the port of Erzerum, and Batum, which will be the outlet of Georgia, the Armenian-Georgian boundary will be fixed. The Armenians lay no claim to Trebizond on historical grounds, but a thin strip of land on their northern border, interposed between them and the sea, would form an economic barrier which no unprejudiced commission could accept. From the Black Sea coast the northern frontier of the proposed Armenian State will run eastwards, including Ardahan, Kars, Alexandropol, to the present boundary of Erivan, beyond which the Tartar element predominates. South of this the eastern limits of Armenia will extend to the Persian frontier down to the Kurdish country. A line of demarcation will be drawn east and west, separating, as far as possible, on a national basis, the territory of the Kurds and Armenians. This line would pass through the Bitlis and Van provinces to Diarbekr, where the Arab frontier remains to be settled, and from Diarbekr south-west to Alexandretta, on the Mediterranean. Westwards the boundary on the Mediterranean coast would include Mersina, where a line drawn north to a point between Samsun and Ordu, on the Black Sea, would form the western frontier of the new State.

The article concludes with a warning and a reminder—the latter, presumably, not from an Armenian source:—

We are sure to hear a great deal about the liberalism of the Turk in the near future, but centuries have proved that he is incapable of reform. He is mere appetite, destroying what he cannot consume. Apart from its iniquity, his policy of extirpation has been a species of economic suicide, for it has killed the seeds of productivity. Fertile lands lie sterile under the dead hand of the Turk, whereas the Armenians are among the most practical, intelligent, industrious, and prolific races of the East. Each one of these qualities has been a count in the Turk's indictment of them; but whether in the character of civilising agents or as the seed of material regeneration they are the only possible inheritors of the soil which is historically their own.

In a few months the New Armenia should be a reality. The lifting of the dreadful shadow in which the country has been shrouded is the greatest service that the war has done for civilisation in the East. Full reparation is impossible, but the liberation of a people whose name has become synonymous with martyrdom, and who have long been threatened with extinction, will have been achieved. The extraordinary endurance of the Armenians under persecution, their faithfulness to their nationality and religion, is a certain pledge of the future solidarity of the race.

Articles to Note.

"Islam and the Future of Constantinople," by Sir Valentine Chirol; and "Old and New at the Foreign Office," by T. H. S. Escott, in the *Fortnightly Review* (January).

"In the Persian Oilfields," by Edmund Candler, in the *Cornhill* (January).

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB, J.P.
Vice-Chairman Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

INDIAN HONOURS.

The King has been pleased to approve that the Hon. Sir S. P. Sinha be sworn a member of his Majesty's Most Honourable Privy Council.

The following are other New Year Honours:—

STAR OF INDIA.

K.C.S.I.

Oswald Vivian Bosanquet, Esq., C.S.I., C.I.E., I.C.S.
Agent to the Governor-General in Central India.

C.S.I.

Hugh McPherson, Esq., I.C.S.
Chief Secretary to the Government of Bihar and Orissa.

C.S.I. (ADDITIONAL).

Henry Fraser Howard, Esq., C.I.E., I.C.S.
Secretary to the Government of India, Finance Department.
Henry Hubert Hayden, Esq., C.I.E., D.Sc.
Director, Geological Survey of India.
Lieut.-Col. Herbert Des Vœux.
Inspector-General of Police, Burma.

KNIGHTS.

Mr. Justice Ernest Edward Fletcher.
A Puisne Judge of the High Court of Calcutta.
Chimanlal Harilal Setalvad, Esq.
Vice-Chancellor, Bombay University.
Joseph Henry Stone, Esq., C.I.E.
Director of Public Instruction, Madras.
William Arthur Beardsell, Esq.
Sheriff of Madras.
Lucas White King, Esq., C.S.I., LL.D.
Prafullya Chunder Roy, Esq., C.I.E., D.Sc.
Indian Educational Service, Bengal.
Robert Herriot Henderson, Esq., C.I.E.
Assam.
George Cochrane Godfrey, Esq.
Coal Controller.

ORDER OF THE INDIAN EMPIRE.

G.C.I.E.

His Highness Farzand-i-Khas-i-Daulat-i-Inglishm Maharaja Sir Sayaji Rao Gaekwar Sena Khas Khel Shamsher Bahadur, G.C.S.I., Maharaja of Baroda.

Lieut.-Col. His Highness Sawai Maharaja Sir Jai Singh, Bahadur, K.C.S.I., K.C.I.E., Maharaja of Alwar, Rajputana.

K.C.I.E.

Nicholas Dodd Beatson-Bell, Esq., C.S.I., C.I.E., I.C.S.
Chief Commissioner of Assam.

William Sinclair Marris, Esq., C.I.E., I.C.S.
Joint Secretary to the Government of India, Home Department (on deputation).

C.I.E.

Lewis Sydney Steward O'Malley, Esq., I.C.S.
Secretary to the Government of Bengal.

Provash Chandra Mitter, Esq.
Calcutta.

James George Jennings, Esq.
Director of Public Instruction, Bihar and Orissa.

Samuel Perry O'Donnell, Esq., I.C.S.
Chief Secretary, Government of U.P.

Edward Mitchener Cook, Esq., I.C.S.
Controller of Currency, Bombay.

Christian Tindall, Esq., I.C.S.
Secretary to Government of Bengal.

Arthur Innes Mayhew, Esq.
Director of Public Instruction, Central Provinces.

William Crooke, Esq., I.C.S.
(Retired).

Vincent Arthur Smith, Esq., I.C.S.
(Retired).

Austin Low, Esq., J.P.
Chairman of Northbrook Society.

Lieut.-Col. Andrew Alexander Irvine.
Indian Army, Punjab Commission, District Judge, Montgomery, Punjab.

Hubert Digby Watson, Esq., I.C.S.
Deputy Commissioner, Jullunder, Punjab.

George Ernle Chatfield, Esq., I.C.S.
Collector and Magistrate, Ahmedabad, Bombay.

Lieut.-Col. John Telfer Calvert, M.B., I.M.S.
Principal, Medical College, Calcutta.

Charles Gilbert Rogers, Esq.
Chief Conservator of Forests, Burma.

Bernard D'Olier Darley, Esq.
Executive Engineer, Tarai, U.P.

Thomas Reed Davy Bell, Esq.
Chief Conservator of Forests, Bombay.

Walter Francis Perree, Esq.
Conservator of Forests, Kumaon, U.P.

Bertram Beresford Osmaston, Esq.
President, Forest Research Institute and College, Dehra Dun, U.P.

Major John Hanna Murray, M.D., I.M.S.
Andaman Islands.

The Rev. Dr. William Skinner.
Principal, Madras Christian College, Madras.

The King has made the following promotions in and appointments to the Most Eminent Order of the Indian Empire in recognition of meritorious services during the war:—

K.C.I.E. (ADDITIONAL).

Mehtar Shuja-ul-Mulk, C.I.E.
Of Chitral, N.W. Frontier Province.

Khan Bahadur Maulvi Rahim Bakhsh, C.I.E.
President, Council of Regency, Bahawalpur.

James Herbert Seabrooke, Esq., C.I.E.
Joint Secretary, Military Department, India Office.

C.I.E. (ADDITIONAL).

Col. (Temp. Brig.-Gen.) Herbert Augustus Iggulden.
Commanding Bangalore Brigade.

Maj. and Bt. Lieut.-Col. (Temp. Brig.-Gen.) Richard Stukeley St. John, D.S.O.
Indian Army, Embarcation Commandant, Bombay.

Maj. (Temp. Lieut.-Col.) Stanley Somerset Wreford Paddon.
Staff Officer, attached to Military Department, India Office.

Maj. Walter Mason, V.D.
Chairman, Surma Valley Branch of Indian Tea Association, Assam.

William Alfred Rae Wood, Esq.
H.B.M. Consul, Chiengmai, Siam.

John Carlos Kennedy Peterson, Esq., I.C.S.
Controller of Munitions, Bengal.

Lieut.-Col. Andrew Louis Charles McCormick, R.E.
Senior Mint Master, Calcutta.

Lieut.-Col. Francis Edward Swinton, I.M.S.
Medical Storekeeper, Bombay.

Lieut.-Col. John Charles Lamont, M.B., I.M.S.
(Retired) Professor of Anatomy, Medical College, Lahore, Punjab.

Capt. Charles James Cope Kendall, D.S.O.
Royal Indian Marine.

Sardar Bahadur Lieut.-Col. Muhammad Afzal Khan.
Commandant, Bahawalpur Imperial Service Camel Corps.

Ernest Albert Seymour Bell, Esq.
Agent, Eastern Bengal State Railway.

Maj. Francis Richard Soutter Gervers, R.E.
Officiating Assistant Commanding R.E., Nowshera, N.-W. Frontier Province.

Colin John Davidson, Esq.
H.B.M. Vice-Consul, Yokohoma.

Francis John Preston, Esq.
Chief Engineer, Great Indian Peninsula Railway, Bombay.

Albert Harlow Silver, Esq.
Indian Munitions Board.

Frederick William Hanson, Esq.
Late General Traffic Manager, Bombay, Baroda, and Central India Railway.

Nawab Malik Khuda Bakhsh Khan Tiwana, O.B.E.
Revenue Member, Bahawalpur, Punjab.

Khan Bahadur Maula Bakhsh.
Attaché, Foreign and Political Department.

Col. Vindeshri Prasad Singh.
Chief Secretary, Benares State.

Sardar Lakhamgouda Basava Prabhu Sir Desai.
Vantmuri, Bombay.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I see that the newspaper *Hestia* states that important negotiations have been conducted in Paris by an influential group of French capitalists with a view to the construction of new railway lines in Greece. It is reported that representatives of the firms interested will shortly go to Athens to undertake the preliminary investigations, and that the proposed Drama-Kavalla line will first occupy their attention. This news is particularly interesting, because France was greatly interested in certain Balkan developments before the war, and now she evidently realises the needs of the situation and means to lose no time in taking advantage of possible openings there. In this respect she is setting an example to British traders, who, for one reason or another, are still far too apathetic, and must bestir themselves if this country is to obtain any of the numerous concessions that will be available in the Near East in the next few months.

***

Apropos of French commercial relations with the Near East, I noticed an article in a French contemporary recently strongly urging the traders of our Ally to pay special attention to the markets of the Red Sea and the Persian Gulf. The writer emphasised the open character of these markets, and advocated the formation of a special company with ships of its own as the best means of cultivating them. The markets in question have great possibilities of expansion, and there is, therefore, ample scope for French enterprise, and I am sure that we shall welcome a friendly commercial rivalry there with our Allies, just as they have lent encouragement to the development of our trade relations with Morocco.

***

The position with regard to the claim of the Roumanian Consolidated for compensation was discussed at some length by Sir Watson Rutherford at the general meeting this week. He referred to the memorandum signed by Sir J. Norton Griffiths on December 1, 1916, and pointed out that the valuation of their claim was £1,270,724 13s. 7d., which had been certified by Messrs. Harmood-Banner and Son, after making up the books, as the fair value of the property destroyed. "In the proceedings which we have instituted against the British Government," he went on, "the Government admits that Colonel Sir John Norton Griffiths executed this memorandum and had authority to do so, and the Government's defence may fairly be summarised as follows: First, that the amount of actual damage and loss can only be ascertained by inspection on the ground. Secondly, that the Roumanian Government is primarily liable, and that the British Government are only responsible as guarantors in concert with the French and Russian Governments. Thirdly, they also deny that, according to the true construction of the memorandum, they are bound by Messrs. Harmood-Banner and Son's valuation." Sir Watson added that in his view there was no reason to doubt that eventually the full value of the destroyed property ought to be recovered.

Reference was also made by Sir Watson to the prospects for the resumption of operations, and what he said makes it clear that the outlook for the moment is none too promising. "It is not possible," he declared, "to ascertain the exact position in Roumania, but, according to our information, the bridges have been broken down and the railways cut, and there are little or no means of transport; the hotels have been stripped and dismantled; and the Huns have stolen all the transportable food, so that the people are on the verge of starvation, and the child mortality has been appalling. It will clearly take some time before the state of affairs can be sufficiently improved to admit of the entry of civilians. In the meantime, British and other Allied troops are on the Roumanian frontiers, and three of the engineers formerly in this company's service are there as British officers, and will undoubtedly do as much as they are permitted in the direction of safeguarding the company's interests."

***

The new steamship service inaugurated between Japan and London by the Osaka Shosen Kaisha is the third line serving the Mediterranean to be established by that progressive company during the past twelve months. The previous lines were started in April between Japan and Marseilles and between Bombay (connecting with a service with Japan) and Naples and Genoa. The steamers in the new line, which will be quite distinct from the other two, will call at Colombo and Port Said, and will then proceed direct to London. It is stated that the management of the company is of the opinion that the recent increase in commerce between Europe and the Far East will be further developed, and that the carrying trade will provide room for all. This shipping enterprise, it may be noted, follows on Japan's successful attempts during the past three years to get a footing in the trade of the Red Sea district, of Egypt, and elsewhere, and it suggests very forcibly that Japanese competition has come to stay and must henceforth be taken into consideration by British exporters.

***

The balance-sheet of Messrs. Cox and Co., the Army bankers, for the year ended October 5 shows a further substantial advance in the business done by this institution. During the war Messrs. Cox and Co. have had an unprecedented increase in their activities, and the growth of their deposits, etc., since 1914 has aptly reflected the rising strength of the Army. They now meet the requirements of the Army on the Continent, in conjunction with Barclays, by the undertaking of Cox and Co., France, and have recently established a fresh offshoot, Cox's Shipping Agency, which deals with general shipping business, insurance, and chartering. Turning to the latest figures, it may be noted that the capital of the bank has been increased by £200,000 in the past year, that the deposits have expanded by £2,350,000 to £19,265,000, as against a total of a little over £4,000,000 in 1914, that the reserve is now £425,000 against £80,000, and that cash in hand and at call is £2,330,000 higher at £9,967,500.

***

Judging by inquiries in quarters most likely to know, it seems that there is insufficient information at the moment for it to be possible to obtain anything like an exact estimate of the requirements of Serbia and Roumania in the way of reconstruction. But it may be said that the published accounts do not give the slightest cause for thinking that the work to be done has in any way been overestimated. Indeed, it is only too probable that if there has been any error it has been on the side of moderation In this connection I see that M. Milosh Savoitch, a former Serbian Minister, basing his views on provisional estimates, puts the economic damage suffered by Serbia at £400,000,000. This includes three harvests seized by the enemy, damage done to flocks and herds, damage done to roads, railways, buildings, and property in general, and the confiscation or destruction of manufactured goods to the value of £30,000,000.

***

Further details of the position in Serbia are contained in a recent letter from Dr. Clemow, administrator in that country of the Serbian Relief Fund. "The material damage is on a colossal scale," he writes; "stations, barracks, factories, mills, public buildings burnt to the ground. All machinery that could be removed from factories and mills was removed or destroyed, and it will take years to restore the industries of the country. Every iron bridge on roads or railways has been blown up, and even the very rails destroyed."

***

Contrary to expectation in some quarters, the report of the Gold Production Committee does not advocate any assistance for the Empire's low-grade gold producers. The conclusions arrived at by the members of the committee are as follows:—"That up to the date of our appointment the treatment of low-grade ore in the Transvaal has not to any extent which can be determined been reduced by the war. That from the point of view solely of gold production the abandonment of the treatment of low-grade ore in favour of higher-grade ore will not within any measurable period reduce the total output of the Empire, and that the continuance of the working of low-grade mines which are unable to work at a profit to themselves is not therefore a matter of any great importance to national interests. We are not prepared to recommend any bounty or subsidy for the purpose of stimulating the gold output of the Empire; gold being the standard of value, no more can properly be paid for it than its value in currency."

***

Incidentally it may be stated that in the view of experts it will be possible, now that fighting has ended, to bring about a steady decrease in working costs on the Rand, and that will solve the problem, as it has been in connection with the Rand mines that the chief difficulty has arisen.

THE DEVELOPMENT OF ABYSSINIA.

An American Consul's Views.

The formation of the Abyssinian Corporation, Limited, with its substantial capital, has had the effect of attracting a good deal of attention in business circles to what may justly be described as one of the few lands of promise still open to the business community. Naturally, at a time when it is possible to look forward to a stern struggle for trade in a not too far distant future, when the general shortage of commodities caused by the war has been made good, a country whose possibilities are as yet quite unreained possesses quite unusual attractions. And as we showed in a previous article, while so little is known about the resources of Abyssinia, the available information suggests that, given satisfactory conditions, there is a rich future in store for the country. But though the outlook for traders is so inviting, seeing that Abyssinia's commerce is yet in its infancy, the fact must not be overlooked that the expansion of trade and the development of the country generally depend on the mitigation of a number of factors which at present prevent the march of progress. For instance, the purchasing power of Abyssinians remains at a comparatively low level, because of their neglect to take advantage of the natural resources of their country, Then the people dislike foreign aid in any shape or form; and, lastly, there is the difficulty of communications. But too much might be made of these factors, for the growing taste of the Abyssinian for a higher standard of life will automatically solve the first two difficulties, and perhaps, after all, the third may prove the greatest handicap.

On these questions and others connected with the present commercial position of Abyssinia our readers may be interested to learn the views of the American Consul at Aden, Mr. Addison E. Southard, who has written a long and very able report on the subject, and in doing so has probably covered the field more thoroughly than any previous writer. It is only necessary to point out that as Aden has always been the main distributing centre for the trade of the Red Sea district, Mr. Southard was in a peculiarly favourable position to describe the outlook in Abyssinia, and special importance is, therefore, attached to what he says. Dealing with affairs at the present time, he explains that Abyssinia's backward development has been due "mainly to its former almost complete isolation and inaccessibility; to the almost total lack of adequate transportation facilities, banks, and other similar aids to trade; to the apparent disinclination of the Government to encourage foreign trade; and to the consequent lack of business stability and confidence. There is a noticeable improvement in these conditions, but trade development is still in its infancy." He goes on to point out that the purchasing power of the Abyssinian is only limited by the desires of the people, and that they have only to plant larger crops and raise more animals to secure an increase in their supply of dollars, and he expresses the view that this is now happening. "The more influential classes of Abyssinians," he adds, "have never been interested in commerce. . . . This order, in the opinion of resident merchants, is changing. Some of the wealthier Abyssinians have been investing in commercial undertakings, and are showing an inclination to make systematic and business-like arrangements to market the products of the districts that they control."

Scope for Agricultural Industries.

The most important place in the list of exports of agricultural products is taken by coffee, of which, as is well known, Abyssinia produces two kinds, one known as Harrari, which comes from cultivated trees, while the other is Abyssinian coffee, and is the fruit of wild trees. Of the latter Mr. Southard says that it "lacks the richer aroma and flavour of the Harrari, although it is appreciated and liked by many coffee drinkers. The possible supply of Abyssinian coffee is practically unlimited. There are immense forests of it in South-western Abyssinia which have never been touched. The writer has not seen these forests, but has met and talked with many people who have." As regards Harrari coffee, he points out that there are no large plantations, but that, owing to the excellent prices and ready market for this commodity, foreigners are becoming interested in its production, and it is reported that at some places in Harrar Province plantations of some size, operated by modern methods, have been started. "Raising coffee according to modern ideas and methods," he states, "may be said, however, to be yet in its infancy, and the bulk of the considerable amount of coffee exported from the province is the yield of the small plots of the native Galla farmers, cultivated by rudimentary methods."

As a cotton-growing country, Mr. Southard thinks that Abyssinia possesses possibilities. At present the cotton grows wild, but is cultivated to a small extent to provide material for use in the home-weaving industries. The Abyssinian cotton, he says, is somewhat coarse, and usually has a short staple, but where Egyptian seed has been used a fairly long staple is secured. "So far as is known," he continues, "the most serious attempt to raise cotton on a commercial scale in Abyssinia has been made by a Frenchman near Dire Dawa. He has a plantation of several acres, and thinks that the results promised will be sufficient to warrant planting on a much larger scale."

As an agricultural country, Mr. Southard says that in general Abyssinia is regarded as unequalled in Africa. Agricultural methods are, of course, of the most primitive character, and on this point the writer's remarks may be quoted, as they should be of considerable interest to British manufacturers of agricultural machinery. "Most of the work," he says, "is done with three implements—a plough made with a forked stick; a one, two, or three-pronged soil fork made in a similar way; and a mallet with a stone head to break the clods of earth. Sometimes the points of the first two implements are shod with iron. Oxen are used to draw the plough, but all other labour is performed by man-power. The possibility of introducing simple agricultural implements was discussed with merchants in Abyssinia, but most of them felt that the people were yet too conservative. They did admit, however, that the suggestion had possibilities if time and patience were considered. In parts of the country in touch with foreign trade it was observed that hoes and shovels were being used with evident satisfaction, but the import figures do not show any appreciable purchases of goods of this sort. There is undoubtedly a potential market for agricultural implements and tools."

Another opening for trade suggested by the writer is in connection with the production of ghee (clarified butter), which is a fairly important export. The Abyssinians usually use a skin for churning, and he is of the opinion that the introduction of a small and cheap mechanical churn is a matter that might be worth considering, as if the natives were once interested there would be a good sale for it owing to the large numbers of milch animals kept in the country.

Mineral Resources.

Only brief reference is made to the mining industry of Abyssinia. Mr. Southard states that samples from the coal outcroppings in Western Abyssinia are said to have been taken and tested by French engineers, but there is no available record of the results. The coal, he points out, is undoubtedly good, and present in commercial quantities, but immediate development of the deposits is unlikely on account of their inaccessibility and the possible insecurity of concessions that might be secured from the Government. The potash deposits in North-East Abyssinia, which are said to resemble the Stassfurt deposits in Germany, are being worked by an Italian company, which obtained the concession in 1911. Mr. Southard says that the work has not gone very far, and at the time he wrote it was understood that operations were about to recommence after a year's inactivity. Then, as regards gold, workable quartz deposits are said to be known to certain foreigners in the country, who are naturally keeping the location to themselves until they obtain permission from the Government to work them.

Of forest products other than coffee special mention is made of rubber. Wild rubber vines grow in the forests of Southern and Western Abyssinia, and about ten years ago these forests first received attention, when a concession was granted to the Kordofan Trading Company. The monopoly, which later passed to the Bank of Abyssinia, who, according to Mr. Southard, would be willing to transfer it, "carries with it the exclusive right to gather wild rubber in the country and the privilege of planting trees on land that the Government will furnish. The former holders are said to have planted about 100,000 Ceara trees near Gore, which have grown well, and promise excellent returns."

Manufactures.

The manufactures of Abyssinia practically consist of a few sawmills near Adis Abeba, two or three flour mills, soap-making establishments, and small tanneries. Of all possible manufacturing industries, in Mr. Southard's view those for making soap and flour offer the best openings. The Abyssinians are great bread eaters, and there is an excellent market for wheat flour in Jibuti. A flour mill is to be constructed between Adis Abeba and Hawash, designed to produce 120 barrels a day, and it is reported that American machinery will be used if obtainable. Of the small soap-making establishments, one of which is capable of turning out ten tons of laundry soap per month, Mr. Southard says that they have not yet begun to supply the Abyssinian demand for soap, and that there is opportunity for a considerable expansion of this industry. Clearly in this and other directions Abyssinia already offers possibilities to British manufacturers, and it is to be hoped that there will be no lack of enterprise in trying to take advantage of them. America, Italy, and France have all found excellent openings in Abyssinia either for machinery or other commodities, and where they have succeeded there is no reason why we should fail.

In this brief review of Mr. Southard's notable report we have been able to touch on only a few of the matters with which he deals, all of which are of undoubted interest to British traders, and we must perforce leave to a subsequent article his detailed description of the market for manufactured goods in Abyssinia, and his discussion of the factors influencing commerce with the country.

MALTA TRADE NOTES.

(From Our Own Correspondent.)

Malta, December 23.

Arising out of a published report of the general meeting of the Anglo-Egyptian Bank, the following, which was added locally, should prove of interest to the many people in the Near East who have had occasion to transact business at or through the Malta branch:—"The opportunity is a favourable one for giving expression to the general satisfaction afforded in the working of the Malta branch under the experienced management of Mr. W. L. Hare, who, during his long and faithful service, has greatly extended the business of the bank and carried out extensive improvements in the premises, which are an ornament to the city. With the assistance of a capable staff, the requirements of the Navy and Army and the public generally—which have been extraordinarily heavy during the war—are carried out in a prompt, efficient, and courteous manner, highly praiseworthy to all concerned and correspondingly creditable to the directors and shareholders of the Anglo-Egyptian Bank."

CEYLON PIECE GOODS IMPORTS.

The Board of Trade have received a letter from the Principal Collector of Customs at Colombo in which he suggests that the attention of manufacturers and exporters in the United Kingdom should be drawn to the provisions of the Merchandise Marks Act of Ceylon (Ordinance No. 13 of 1898) with regard to the stamping of piece-goods intended for importation into the colony. He states in the letter referred to that many consignments of piece-goods imported into the colony have been found to contravene the provisions of the above-mentioned Act in not having the yardage *stamped* on each piece. Not only is the yardage often entirely omitted, but the requirements of the Act are insufficiently observed in other cases, either by the omission of the word "yards" or by the use of labels gummed or pinned to the piece-goods. The collector states that where goods do not comply with the provisions of the law, the goods may be confiscated or penalties imposed.

ENGINEERING NOTES.

Demand for Agricultural Machinery.

The suggestion that British manufacturers of agricultural machinery ought to give preference to the wants of agriculturists in France and Belgium, before those of any other country, has created considerable disappointment among agriculturists and importers of machinery in the Near and Middle East. It would mean that the latter might have to depend on supplies of machinery from America alone, and failing her might even be driven to importing from Germany and Austria. If the opportunity should unfortunately arise we may be quite sure that Germany and Austria will be equal to taking full advantage of it to renew commercial relations with those markets. The important advantages that will be derived by an immediate re-opening of trade relations between this country and the countries in the Near and Middle East, in which German and Austrian trade predominated before the war, have often been pointed out in these columns. Any delay or indifference, on the part of traders in the United Kingdom in supplying urgently-needed agricultural machinery in the East, will simply give other competing countries their opening in those markets, where agricultural produce is the foundation of trade and industry.

"Tanks" Instead of Tractors.

The report that the attention of the French authorities is being occupied with the question of the disposal of the thousands of small tanks that have been constructed by French makers, and have not yet been delivered, is of much interest in the above connection. It is stated that the authorities propose to use these tanks for tillage purposes, for which they would seem to be particularly adapted. Now that the whole of French territory has been liberated, it is certain that far more machines will be required for ploughing than are at present available, and, the deficiency can be remedied by the use of light tanks, which can be easily transformed for carrying out agricultural operations. These vehicles would appear capable of doing good work in the cultivation of beet-fields, and may also be particularly suitable for the large estates in North Africa, where a great deal of agricultural development will be carried out during the next few years. In the meantime, with the utilisation of these small tanks the demand for agricultural tractors in France will be considerably smaller than would otherwise have been the case, and British manufacturers may thus be able to supply buyers in the East with the tractors which are needed there more than any other agricultural machines, owing to the great dearth of draught-animals.

Austrian Trade Plans.

The Austrian agricultural implement makers have been contemplating a considerable extension of their trade in all classes of machinery and implements on the conclusion of peace, but the recent political troubles in their country have disappointed their hopes. In Bohemia, however, they are determined, in spite of the unsettled state of affairs, to produce agricultural machinery on a large scale for export to the East. How they can carry out such plans under the existing great scarcity of iron and coal is not known, but the determination displayed shows the Bohemian's views on the value of the Eastern markets.

An Italian Importers' Association

An Association of Machinery Importers and Merchants, says the *Sole*, has been formed in Milan, of which the most important Italian firms, and those belonging to Allied nationalities, have become members,

Roumanian Milling Industry.

The milling industry of Roumania is very important, and British manufacturers of milling machinery, as well as enterprising investors, should pay special attention to it. Up to recently German manufacturers and capitalists found this industry a source of profit, and they will undoubtedly try to renew their connections with it if ever they can find the opportunity. At present there are in the country 4,902 flour mills, of which 4,749 are in rural districts, 153 being in towns. Of the latter ninety-seven can grind one to six wagons (a wagon of ten tons) in twenty-four hours. They are all fitted with machinery for producing different grades of flour and meal; three of them can produce 200 tons in the twenty-four hours. The combined horse-power developed by 2,577 motor and steam mills is 87,000, and 2,325 mills are worked by water or wind.

New Form of Steam Motor.

A new form of steam motor has recently been invented, which is expected to supersede the internal combustion motor. The new motor is mobile, and the steam is supplied by pumping water intermittently into a spiral where it is vaporised by a blowpipe flame. The water circulates and is used over again, as in a motor cooler, and in much the same quantity. The motor has three cylinders, but has, it is said, the same effectiveness as a six-cylinder internal combustion motor. It does not weigh or occupy more space than an ordinary benzine motor, and is capable of using the most inferior crude oils as fuel. It is simple in working, can be easily controlled, and is said to be specially suitable for use in fishing boats.

British Exports of Machinery, etc.

In view of the fact that all the resources of the country were harnessed for war purposes, and that engineering firms have been busier this past year than in any previous period in the manufacture of munitions, the returns in the export trade in machinery and implements during the ten months from January 1 to October 31 may be considered as very satisfactory. Agricultural engines, rail locomotives, road locomotives and road rollers, pumping engines, winding engines, steam reciprocating engines, steam turbine engines, internal-combustion engines, and other kinds of engines (except for aeroplanes, motor-cars, and motor-cycles) were exported to the value of £3,130,260, against £3,238,777 for the same period in 1917. Agricultural and electrical machinery, boilers, machine tools, mining machinery, textile machinery, sewing machines, typewriters, and other descriptions of machinery were exported to the value of £10,546,423, against £13,495,461. Exports of implements and tools came to £1,325,158; against £1,627,566; motor-cars, complete and parts, to £3,133,000, against £2,467,859; whilst iron and steel were exported to the value of £30,658,037, against £39,229,117.

Navigation on Mountain Rivers.

In previous notes we have pointed out the great possibilities for the utilisation of the rivers in Serbia, Albania, and Macedonia for the production of motive power and for navigation. Obviously, the carrying out of this project will present natural, as well as technical, difficulties, which generally occur in dealing with mountain rivers such as the Balkan rivers. Hitherto it has been thought that where the hydraulic gradient is small, and the volume of water passing is great, navigation is the only use, and where, on the contrary, the fall is rapid, that power development is the only use. These conditions, which occur on certain points in the Balkan rivers, have been a problem to engineers who have to study their utilisation. Similar conditions occur also on certain points on the Bavarian Danube and on the Rhine in South Germany, where the use of these two rivers for navigation purposes and for power development, is receiving special attention. In dealing with this question a well-known German expert recently asserted that both objects—viz., power development and navigation—can be obtained on the same stretch of river. If a river be canalised, then the falls at the weirs should be used to develop power, and so pay for the canalisation. This condition, he points out, is present on the Bavarian Danube above Passau and on the Rhine between Basle and Lake Constance. He suggests that in cases where the bed of the river is unsuitable special canals parallel to the river should be formed. The subject has evidently been well studied by this expert, for he treats it in detail, quoting depths, volumes, and tonnage to illustrate his argument. In comparing these with the conditions that present themselves on the Rivers Vardar, Morava, Ibar, and Drin, it can be seen that the utilisation of these rivers for power development and navigation, as suggested in previous notes in these columns, may be achieved without special difficulties and with good results.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated December 27:—

Light rains have fallen in parts of Sind, North-West Provinces, and Madras.

Reaping of winter rice in Burma is progressing. The third cotton forecast of all India shows a decrease of 17 per cent. in acreage and yield as compared with that of last year at the same time.

Bombay Cotton Market continues irregular. Fully good broach for April-May delivery is quoted at Rs.651 a candy. Piece Goods Market is depressed.

Messrs. Andrew Yule and Co. have floated a company called the "Chemical Products, Ltd.," for converting sea-water into salt by evaporation. The capital is Rs.7 lakhs.

The Diex Aye Rubber Factory, Ltd., is being floated in Calcutta for the regeneration of old rubber.

THE MONTAGU-CHELMSFORD REPORT.

London Chamber of Commerce Resolution.

The following resolution was adopted at a recent meeting of the East India Section of the London Chamber of Commerce:—

While not dissenting from the view expressed in the Montagu-Chelmsford Report on Indian Constitutional Reform that substantial State-aid may be necessary for the evolution and progress of Indian commerce and industry, this Chamber is of opinion that the report (a) accords insufficient recognition to other considerations—social, religious, and ethical—which clog or prevent the growth of purely Indian enterprise; (b) that it dismisses with perfunctory and half-hearted acknowledgments the achievements of British merchants, who, by their own exertions and frequently in the absence of encouragement from the Indian Government, have built up India's external trade and internal prosperity; (c) that while dilating upon the views and policy of Indian politicians who publicly confess their hostility to British rule and British commerce, the report fails to remark the excellent relations subsisting between British merchants and the hereditary trading classes in India, who take little or no part in politics; and, finally (d), that by the character of the constitutional machinery which it is proposed to introduce as well as by its express opposition to the just and adequate representation of the British non-official community in India, the report provides no safeguards for the defence of important commercial interests against the theories of doctrinaire economists and the attacks of irresponsible antagonists of British enterprise.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

The market has not yet recovered from holiday influences, and throughout the week buyers and sellers have not been in the mood to tackle business seriously. A feature of interest has been the visit of President Wilson to the Exchange, and last Monday he was most enthusiastically received by the members. It is believed that at no distant date the operatives will demand a reduction in the working hours in the mills. Nothing new can be said with regard to the Egyptian cotton crop. Prices being controlled remain steady. Fluctuations have occurred in American cotton rates, but the outlook for supplies shows no change. Egyptian yarns have been purchased sparingly. Fine counts remain stronger than coarse numbers. Very little business has been offering in piece-goods for Egypt. The slump in values appears to be checked. Some inquiry has been dealt with in cloth for India, but very little has been done. There are hopes of increased activity for certain Near Eastern markets before very long. American yarns have moved off slowly at irregular rates. In export yarns the best market continues to be France.

REMOVAL OF EXPORT RESTRICTIONS

The Minister of Blockade announces that a notice is being sent to bankers relieving them of the formalities required before financing exports from this country to neutral European countries. All restrictions and returns rendered necessary by the war are being reviewed by the finance section of the Ministry of Blockade with a view to further simplification.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the week ended December 19 were:—Cattle markets, £836; general markets, £509; total, £1,345; total for year, £52,565. The figures for the corresponding week in 1917 ended December 20 were:—Cattle markets, £338; general markets, £465; total, £853; total for year, £53,651.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—December 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, and 25, 4,110,000 francs, against 2,200,000 francs; December 26, 27, and 28, 370,000 francs, against 850,000 francs.

NEAR EAST MARKETS.

Cyprus Carob Crop.

(From a Correspondent.)

The carob crop has been a good one, and, all things considered, there is little cause for grumbling on the part of producers and merchants; although it is probable that a large part of the yield will be requisitioned for military purposes. In that case, the beans must be delivered at such places, and at such times as may be specified. Payment will be at prices to be agreed upon between the Provost Marshal, Major Bolton, and the owners; or, in default of agreement, at prices to be fixed by a Board appointed by the officer administering the Government. The members of the Board, as at present constituted, are the President of the District Court of Limassol, Major Sisman, and Mr. Spyros Araouses, Mayor of Limassol.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in November:—

Rice (*Nili*).—The weather has been on the whole favourable, though occasional storms of wind and rain did some damage to the crop in Daqahliya Province. Water supply ample. No enemies are reported. Harvesting is well forward. Much difficulty is experienced in finding adequate labour for carrying on the harvest.

Rice (*Nili*).—Harvesting is in progress and the yield is generally satisfactory.

Maize (*Nili*).—The wind and rainstorms at the beginning of the month laid down stalks of maize in most provinces, but the prevailing warm weather helped the crop to recover rapidly from this set-back and hastened the ripening of late maize. Water supply plentiful. Slight attacks of stalk borer and rust are reported in some provinces. Harvesting of early-sown maize is general, while late maize is still being watered. Notwithstanding the shortage of manures, the yield is generally satisfactory.

Millet (*Nili*).—Weather favourable and water supply ample. The crop is free from pests and is progressing well. Harvesting of early crop has begun in Faiyûm.

Sugar Cane.—Weather favourable but rather too hot. Water supply sufficient. The attack from stalk borer is general but no serious damage is reported. The crop is in good condition.

Earth Nuts.—Harvesting is proceeding. The early crop has been somewhat damaged by the rainstorms in the early part of the month, but a satisfactory yield is expected.

Wheat, Barley and Beans.—A general endeavour among farmers to prepare the land for early sowing was noticeable, but the heavy rains which have fallen at intervals during the month have considerably impeded the progress of this preparation, with the consequence that sowing generally is rather late. The bulk of the seed in the perennially-irrigated lands is now however in the ground, and in Upper Egypt, where the discharging of basins has just taken place, sowing on a small scale has directly followed. Germination appears to be very satisfactory and the plants look healthy, but the wheat continues to be much too thickly sown.

Onions.—The weather has been congenial for the growth of the crop, but water supply insufficient owing to this year's low flood. Large areas in Sahels and Geziras, where this crop is usually grown, have had to be artificially watered. Transplanting is being carried on and planting is timed to begin soon. The general impression in all onion-growing districts is that the area under the crop this year will be a good deal smaller than last year.

Bersim.—Weather on the whole favourable, but the occasional rains which occurred during the month did some damage to the crop in the northern parts of the Delta. Water supply adequate. Sowing under the standing crops is almost completed. Cutworm is reported in some provinces but no damage is recorded. Cotton-worm is also prevalent, and has necessitated some considerable resowing in certain districts of Sharqiya and Qalyûbiya. The crop is in good condition. The first cutting of the early sown *bersim* has been taken in all provinces and the second is in progress in Beheira Province. An average crop is expected.

COMPANY NOTES & REPORTS

Piccadilly Rubber and Tea.

The report of the Piccadilly (Kelani Valley, Ceylon) Rubber and Tea Estate for the year ended June 30 shows a net profit of £967, which, added to the amount brought forward, £1,859, makes £2,726, which the directors propose to allocate as follows:—Dividend at the rate of 5 per cent., £1,294; balance to be carried forward, £1,432.

Eastern Telegraph.

Dividend at the rate of 3½ per cent. per annum, less income-tax, on the preference stock for the quarter to December 31, and the third quarterly interim dividend of 1½ per cent. on the ordinary stock, free of income-tax, in respect of profits for the year to December 31, payable on January 15.

Dividends, Payments, etc.

Brahmapootra Tea.—Interim of 5 per cent. (5s. per share), less tax, paid 18th inst. Last year, dividend same.

Isa Bheel Tea.—Interim of 10 per cent. (2s. per share), less tax, on Ordinary shares, payable 31st ult. Last year there were no interim dividends.

Badulipar Tea.—Interim of 5s. per cent. (1s. per share), less tax, on ordinary shares, payable 31st ult. Last year, dividend same.

Khedivial Mail Steamship and Graving Dock. On January 6 a final dividend of 15 per cent. on the ordinary shares (namely, 3s. per share), less income-tax at the rate of 5s. 3d. in the £, in respect of the year ended June 30, 1918, will be paid by Messrs. Glyn, Mills, Currie, and Co. and the Imperial Ottoman Bank, Alexandria. Holders of ordinary share warrants to bearer should present coupon No. 13. Ordinary transfer books will be closed until January 6.

Assam Dooars Tea.—Interim dividend of 5 per cent., less tax, same as a year ago.

During the three months ended September 30 the imports of the United States from Algeria amounted to £40,381, more than half of which was made up of crude argols and more than one-fourth of cork waste, the remainder being briar wood and sausage casings.

Bulgaria's production of dairy products, such as butter, white and yellow cheese, etc., amounted in 1917 to 14,250,800 lb. There was a marked decrease last year, the total being estimated at little more than half the previous figures.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Tuesday.

The holidays have again interfered very much with business this week. The undertone has remained good, but transactions have been on a rather restricted scale.

In Government stocks a fair amount has been done in Unifieds round 88⅜, and there have been persistent buyers of 3½ prefs. at the current level. The sellers of the latter security are exceedingly scarce. City of Alexandria bonds are unchanged at their ex. div. price of 83.

In Bank shares Nationals have come again into demand, and have improved ⅜ to 21¼; whilst Agriculturals, after dipping to 6 9-16, close unchanged at 6 11-16. There has been a constant demand for the pref. shares at 7⅝, but there have been no sellers. Anglo-Egyptian Banks have remained a firm spot at 17.

In Railways there is no change to report.

Amongst Land descriptions Allotments have improved ⅛ to 4½, but there have been no sellers. A fair amount of business has been going on in New Egyptians, with the result that the price has stiffened 3d. to 22s. Sudan Plantations are unchanged at 3⅝ x.d.

In Miscellaneous shares there has been some business in Alexandria Waters, which are closing ⅛ up at 12. Salt and Sodas are about unaltered at their ex. div. price of 5⅜. Khedivial Mails have further appreciated to 91s. 6d.

In Greek securities there has been nothing doing, and there are no changes in prices to report.

Oil Shares.

There is little of note to record in the oil market. British Burmahs at 14s. and Anglo-Persian Prefs. at 20s. 6d. are unchanged, but Anglo-Egyptians (B) are 1-32 weaker at 2 21-32. Roumanian Consols have been steady at 15s. 6d. In Russians, Ural Caspians are slightly lower at 1 9-16, but North Caucasians are 6d. up at 24s. 6d. Bakus are 5s., and Russian Generals and Russian Petroleums are unchanged at 1⅛ and 2s. respectively.

TURKEY'S FINANCIAL POSITION.

A Reuter message from Vienna states that Markgraf von Pallavicini, former Austro-Hungarian Ambassador in Constantinople, in the course of an interview, said: "The Turkish finances are in a state of utmost confusion. I think the Western Powers will have to intervene, as the restoration of Turkish credit is highly necessary to their interests, the greater part of Turkey's pre-war loans having been raised in England and France."

According to the *Norddeutsche Allgemeine Zeitung*, the Allgemeine Depositenbank, in Vienna, has been granted permission to establish an Austrian Export and Industrial Bank with a share capital of 12 million kronen.

Reuter's Amsterdam correspondent says that, speaking in Berlin, the Prussian Minister of Finance, Herr Simon, stated that the circulation of German bank-notes increased during the war from 1,500,000,000 marks to 30,000,000,000 marks.

With a view to uniformity and the reasonable increase of revenues the Greek Government has submitted to the Chamber a system aiming at the abolition of existing inequities and introducing an income-tax.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The meeting of the Allies' Preliminary Conference in Paris to discuss the terms of peace to be imposed on the enemy countries and to arrive at a general settlement of all questions arising out of the war, promises to revive some of the tense anxiety that the world has felt during the last four years. It would be idle to deny that the attitude recently adopted by some at least of the countries participating in the Conference has been signally at variance with the spirit that has actuated the close and harmonious co-operation of the Allies throughout the latter stages of the war. Much of what has been taking place, however, may be regarded as the inevitable reaction after the enforced restraint of the war period. There is a natural desire on the part of each nation, in the face of what is expected to be a permanent settlement, to establish as large a claim as possible to whatever may come up for division, not so much, perhaps, in the expectation of securing all that is claimed, but under the conviction that the final adjudication must be largely a matter of bargaining.

This belief will be held so tenaciously by the Southern nations of Europe that it would be a waste of time to combat it. We may hope, however, that in the more judicial atmosphere of the Conference the extravagant pleadings which have been uttered from the housetops during the last few weeks will be silenced. Certainly, any attempt to repeat them within the Conference chamber should be sternly discountenanced. If the procedure be adopted of having the more controversial subjects discussed first in small committees, the occasion for suppressing impassioned appeals will hardly arise. No good, however, can come of any attempt to ignore the fact that the Allies are by no means at one in regard to the details of the final settlement. It is better that the rival claims should be known and understood, so that every nation will have in some measure the opportunity of examining for itself the reasons that prompted the decisions of the Conference. The Treaty of Portsmouth was followed by serious riots in Tokio, owing to the Japanese public, necessarily, perhaps, in all the circumstances, being kept in ignorance regarding the true situation. It saw the Japanese Army victorious all along the line, but knew nothing of the extent of Japan's exhaustion and of Russia's capacity for a fresh effort, if peace were not immediately concluded.

There can hardly fail to be some bitter disappointments when the Allied Conference makes known its awards. In order that the various peoples may have something to set against the extravagant hopes of their own extremists, the reverse side of the shield should be known, and the different Governments will be well advised to give betimes the fullest publicity to the rival claims. The best that could happen would be that each country should produce its own Bissolati. The Italian Minister has given as his reasons for resigning from the Cabinet his failure "to move Baron Sonnino away from the three clauses of the Secret Treaty of London." There is always a tendency in such cases to suspect other reasons than those publicly given for the step, but in this instance—from whatever cause his action sprang—Signor Bissolati has done a service to his countrymen in calling attention to certain Italian claims which it is inconceivable that the Conference should confirm in their entirety. The claims that he fastens upon are: (1) the annexation of a large part of Dalmatia; (2) the permanent retention of the islands of the Dodecanese, with their almost exclusively Greek population; and (3) the inclusion within Italian territory of the German population of the Northern Tyrol as far as the Brenner. *Per contra*, Signor Bissolati is opposed to the allocation of Fiume to the Yugoslavs. The only point, however, that we are concerned to make here is that, in the event of the award of the Conference being largely against Italy on the three points, the Italians cannot allege partiality or prejudice, when the verdict has secured in advance the approval of a thoughtful and patriotic section of the population.

The movement in favour of as much publicity as possible for the proceedings of the Conference should win the support of the Governments which anticipate a comparatively wide margin between their claims and the eventual award. The Conference will fail in part of its purpose, if its decisions are not so worded as to command general acceptance, and, where necessary, a summary of the arguments on which a decision is based should be added. For this reason all attempts to influence the Conference by the elaborate staging of claims cannot be too strongly deprecated. As is well known, this staging has been practised in a variety of ways. In some parts of the Near East it has taken the form of presenting, or trying to present, the Conference with the *fait accompli* in regard to the occupation of territory. As a milder form of the same tendency may be cited the French-Syrian Congress at Marseilles, which seems to have been convened for the purpose of convincing the world of the closeness of

Digitized by Google

the bonds attaching Syria to France. The world at large, it so happens, for the moment does not count in this matter, and the Paris Conference, we venture to think, will be more impressed by impartial accounts of the opinion of the people of Syria on this subject than by the views of a number of enthusiasts at Marseilles. It is derogatory to the intelligence of the Peace Conference to suppose that it will require nothing more profound than the generalisations which serve the purpose of mass propaganda.

If France fears that her claims upon Syria are to be challenged, she has the satisfaction of knowing that she will not be alone in having to justify her stewardships. There is a disposition in many parts of the world to regard the Paris Conference as Tom Tiddler's ground, and innumerable Adullamites are hastily leaving their caves for the French capital in the hope of being able to obtain grants of self-determination or even independence, which can subsequently be converted into the gold and silver emoluments of office in their own countries. It is inevitable that the majority of these self-appointed delegates should hail from British territory. Whether the Conference will open its doors to every caller remains to be seen; if it does, it will have to listen to Sinn Feiners from Ireland, to extremists from India, Herzogites from South Africa, Greeks from Cyprus, and Nationalists from Egypt. For our own part, if the Conference had the time to spare—an unlikely eventuality—we should welcome the formal submission of all the claims involved, as we believe that Great Britain has nothing to fear from a full and candid *exposé* before an enlightened tribunal of the grounds on which she feels constrained to reject the demands put forward. Home truths would be uttered on both sides, and it would be an advantage if the fullest publicity were given to them. But if the basis of the Conference's decision is to be the present and ultimate good of the bulk of the people involved, together with the safeguarding of the world's peace, there cannot be any question that the claimants would leave Paris sadder and wiser men.

No excuse should be needed for dwelling at length on this point, as it is linked up with the future peace of the world. It serves no good purpose, therefore, that discussion should be burked. Too often the claimants have been allowed to have "all the say" themselves, and have not been required to face practical considerations. As an instance we may refer to the Greek movement in Cyprus in favour of union with Greece, in connection with which a fresh mission has arrived in London. The arguments advanced are familiar to all students of Near Eastern affairs; but the difficulty of the Turkish minority on the island has never been satisfactorily met by the Greek advocates of union, and it is evident that at this particular juncture there ought to be no suggestion of leaving a body of Turkish subjects of Great Britain under the jurisdiction of local Greeks with whom they have often been in conflict in the past. On the other hand, the Greek movement does reinforce the contention of practically all those who are acquainted with Cyprus affairs that Great Britain has neglected her responsibilities in the past in regard to the economic development of Cyprus. Now that the island has been formally annexed, the subject will, doubtless, receive more sympathetic attention. A vacancy has occurred in the High Commissionership owing to the death of Sir John Clauson, and the opportunity offers of inaugurating a new era for the island with the appointment of his successor.

A stirring reception awaits the King and Queen of Roumania on their arrival in England. The British public has been moved by the tragedy of Roumania, and has a lively sense of the loyalty of King Ferdinand to his people, of the devotion of Queen Marie and of the brave and dignified bearing that both have maintained during the country's period of disaster. Moreover, Roumania has not felt obliged to indulge in imperialistic tendencies since the signing of the armistice, with a view to pegging out claims which are to be urged at the Peace Conference. The suggestions for a Greater Roumania have been advanced from the "unredeemed" territories, and there has been a statesmanlike silence on the part of the Roumanians in regard to matters that will have to be decided in Paris. If any protest was made against the presence of Serbian troops in parts of the Banat which are practically certain to become Roumanian, it was lodged with the Allied Governments without being published to the world. More recently, however, a Transylvanian official has handed a Note to the Allied Powers calling attention to the vexations to which Roumanians in the Banat are being subjected.

Another visitor who may shortly be expected in England is the Prince Regent of Yugoslavia. He will be welcome, both for his own sake—for he has played a gallant part in the war—and for the opportunity that his visit will afford for clearing up a number of misunderstandings in regard to the new State of the Serbs, Croats and Slovenes. In the first place, there is his attitude to the Montenegrin question. He has accepted the post of Prince Regent of the Serbs, Croats and Slovenes; but it is not to be supposed for a moment that he has been party to the intrigue that brought about the meeting of a bogus Skupshtina and the alleged deposition of his grandfather, King Nicholas of Montenegro. The three branches of the Yugoslav people have probably much work ahead of them before they evolve a State machinery which runs perfectly true in every detail, and they will have to rely to no small extent on the guiding hand of their Sovereign, and the unifying influence of the Throne. It would be of the worst possible augury if Prince Alexander at the outset of his rule had appeared to condone a piece of sharp practice of which his grandfather was the victim.

These visits of the Sovereigns or heads of the Allied countries will not be complete until the King of Italy and Queen Margherita have been seen in London. No pending visit will be more popular. The British public can be relied upon to take note of the essential, and it will welcome in the person of King Victor Emmanuel the crowned Head of the Italian nation, which after many vicissitudes in the field triumphed splendidly over its hereditary foe. No special attention has been paid by the bulk of the British nation to the details of the controversy between Italians and Yugoslavs; but the ground for the rivalry is recognised, and confidence is felt in the good sense of both parties to compose their differences before they entail any real trouble. It would, however, add additional zest to the welcome accorded in this country to the King and Queen of Italy, if it were known beforehand that the statesmanship of Italy in her rôle as a Great Power had led to a satisfactory adjustment of her difficulty with the new Balkan State.

It is a matter for regret to find that the Serbian Government has formally associated itself with the recent incidents in Montenegro. Hitherto a Serbian Minister has been attached to the Montenegrin Court (at Neuilly); but it is now reported that this official has been withdrawn in virtue of "the union of Montenegro and Serbia," as determined by the meeting at Podgoritza. Whether this gratuitous affront to an Allied Sovereign has at last caused the British and French Governments to insist upon fairplay between the two countries remains to be seen; but according to the French Press the Serbian troops in Montenegro are now to be replaced by British, French, and Italian contingents. The unedifying quarrel between two kindred States can easily be terminated by a genuine plebiscite of the people; but in order that a free vote may be obtained it will be necessary to remove from Montenegro not only the Serbian troops but also the personal enemies of the dynasty whom the French Government has allowed to return to the country, while placing obstacles in the way of King Nicholas and his Government.

We have no doubt that our readers in India will join us in welcoming the announcement that the weekly mail service is to be restored immediately, and that the time

Digitized by Google

of transit is to be reduced to twenty-one days. It is true that five years ago that period would have been regarded as intolerably long, but we have learned in the interval to moderate our demands, and seeing that we are only now receiving letters which were posted in India in the first week of November, the immediate improvement will be so great that we may be content to wait a little longer for the old fortnightly service, pending those developments of alternative methods of transport which are still perhaps a little in the air.

A less attractive incident of the gradual return to normal conditions is the warning given by a correspondent of *The Times* that by-and-by rifles and ammunition are likely to be cheap, and that the tribes on the Indian frontiers will be only too ready to re-enter a market from which they have recently been almost entirely excluded. Even the most sanguine advocates of a League of Nations cannot expect that the Borderlands will adhere to their principles from the outset, and the Indian Government will doubtless be on the alert to prevent any renewal of the trade. What is wanted, however, is action nearer the source, and we trust that the Peace Conference may be able to take effective measures to prevent the unloading of surplus war material in the danger areas of both Africa and Asia.

The meeting of the National Congress cannot, of course, be classed among the renewals of peace activities, for Indian politicians have carried on throughout the war, but the first reports of the proceedings indicate that some at least of the Extremists would not be unwilling to conclude an armistice. The choice of the President was of itself significant from this point of view, for Pandit Madan Mohan Malaviya is *par excellence* the peace-maker of India, and in the glamour of his eloquence fundamental contradictions take on the appearance of trifling differences in matters of detail. We must await the full text of the address in order to see if it indicates a real change of attitude; we hope it does, and certainly some of the passages which have been cabled are in favour of this view, but the Extremists as a body are less flexible than their President, and the reports are consistent with the theory that manœuvring for position is still in progress.

One recent development of Indian political activity appears to us to be decidedly disquieting. We refer to the tendency to urge the British Government towards a policy of interference in the internal affairs of Indian States; it is being suggested that the States are hanging back in the matter of constitutional reform, and that the Paramount Power should make "recommendations" to them on the subject, and should encourage action by the offer of special "privileges." Such proposals can do nothing but harm. Indian Princes are quite rightly jealous of the position secured to them by treaty, and even the suggestion of interference in their affairs may prejudice the continuation of those cordial relations which have recently been brought into existence.

We are not urging that the subjects of the States should abstain from politics. They are, of course, perfectly justified in agitating for reform so long as they do not contravene the laws to which they are subject, and it is matter of common knowledge that in constitutional matters the great majority of the Princes are prepared to move with the times. What we object to is the attempt to drag the British Government into the arena; the modern principle of self-determination, to which the politicians so frequently appeal, is of itself decisive against any interference of the kind, and politicians who claim the benefit of that principle for themselves should be the first to recognise its application to their neighbours. The British Government has quite enough to do in remodelling its own constitution, and the States and their subjects can be safely left to settle their own internal affairs.

LETTERS FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 9.

Egypt and the War.

Among all the comments on the respective parts played by the various arms of the Services in the war considerable stress is laid, and quite rightly, too, on the remarkable manner in which the Navy has kept the seas open and the Mercantile Marine has collaborated in maintaining communications between the various outposts of the Empire. We in Egypt, technically speaking in the war zone, have seen comparatively little of the actual fighting, and we have certainly suffered far, far less from its effects than any other country in the war area. Nevertheless, looking back on the long period which has elapsed since the war was first declared, we are able to appreciate at something approaching its proper value the naval work done. There has in reality been little shortage of imported goods—be it remembered, Egypt by no means herself suffices for the needs of her population, even in cereals—and we have never had to complain of serious dearth of supply owing to the cutting off of imports except in the case, perhaps, of coal, which would, in fact, have been imported in larger quantities had the controlling authority not considered that Egypt could well reduce her requirements without injury to herself, and even meet part of those requirements from her own wood and vegetable refuse resources. Perhaps, however, the most striking proof of the efficiency of the control of the seas maintained by the Navy and of the plucky persistence of the Mercantile Marine is the manner in which our postal communications with the Home country have been kept up. We have repeatedly complained and grumbled at the long intervals which sometimes elapsed between the arrival of mails, and you at your end may also have had occasion to feel impatience at the delay. But when we examine the question closely and realise that, as far as I can remember, with but one exception the mails have reached their destination at either end in safety—in the case of this correspondence only one of your correspondent's weekly letters has failed to reach you during the four years and three months which have elapsed—then our grumblings fade into thin air. Considering how specially favoured we have been in every respect, we ought instead to join whole-heartedly with our fellow-countrymen throughout the Empire in paying our tribute of gratitude and admiration to the Navy and Mercantile Marine for the wonderful achievement executed in the face of continued danger and privations during the whole of the war period.

An Extraordinary Land Case.

A most extraordinary case is at present before the criminal courts, involving an amount of no less than fifteen million pounds. The facts are as follows:—Some time ago a certain doctor, a Tunisian, put in a claim to the Government for some land situated in Alexandria, which, he asserted, he had inherited, as the sole surviving heir of a certain princess who had died some fifty years ago in the Hejaz. This land, which is situated close to the Ramleh railway station at Alexandria, and includes some of the quay, had never been claimed by the doctor, for the reason that he only recently became aware that he was the heir. He claimed either the restitution of those lands, which are now Government property, or payment of their value, which he estimated at fifteen million pounds; and he proceeded to bring an action against the Alexandria municipality. The deeds he put in in support of his claim were duly examined by the Government experts. They were very numerous, and were drawn up in French, Arabic, and Tunisian; but the experts affirm that they are either forgeries or are documents which have been altered to support the claim. In either case the work has been done with great skill and ability. The Government at once opened a criminal inquiry, and found that the falsified documents had been given to the claimant by one of the officials in charge of land transactions; and he and the doctor and another man have been brought before the criminal courts. The former, being a French subject, has been handed over to his Consul to be dealt

Digitized by Google

with, but the other two are about to appear before the Alexandria Assize Court, to which they have been committed. There appears no doubt whatever that this is a case of most audacious fraud; and the marvel is that there should be found men daring and ready enough to bring an action for such an important sum based on falsified documents. How they could ever have expected that the Government would allow itself to be condemned to pay the enormous amount involved without discovering the fraud it is difficult to conceive. It will be interesting to watch the development of the two cases, the one before the Egyptian and the other before the French Consular Courts, and to compare the results arrived at.

Education.

With regard to the recent report on the secondary certificate examination and the suggestions made therein for preventing a repetition of the state of affairs recorded this year, I understand that one of the difficulties in the way of any more extensive control of education in Egypt is the Capitulations. The abolition of these obstacles to reform, which is now under consideration, will enable the authorities to impose conditions on all schools in the country irrespective of nationality; and the introduction of any scheme having this object must wait for the result of the deliberations now being made by the competent authorities.

As regards the much vexed question of the linguistic medium of instruction, there would appear no doubt whatever that for scientific subjects Arabic is quite unsuitable, and that in the circumstances the instruction must be given in English. Apart from the fact that Arabic is poor in scientific terms—and no efforts can alter it in this respect—there is the very important consideration that men of science require to keep themselves abreast of the times even after they have finished their scientific education, and that all the works on research are written in a European language, more particularly English. Consequently, if an Egyptian wishes to compete with Europeans, and to extend his knowledge as much as possible, he must not only have a very good knowledge of the English language, but also be able to understand its technical terms. There would appear, therefore, to be every argument in favour of a speedy reversion to the old system of teaching science in the English language, and of giving greater opportunities in the primary and secondary schools to the learning of that language, so as to enable the students more easily to follow the courses in the higher schools.

Whilst on the subject it might be suggested to the authorities that some competitive examination might usefully be set up for admission to Government service. At present Egyptians can only enter if they hold the secondary certificate, and they cannot receive more than £E6 per month to start with. It matters little if the candidate for a Government post possesses other qualifications that are not technical but which fit him better for the post, such as a knowledge of book-keeping or of typing; under no circumstances can he obtain any higher salary than those of his comrades who have not bestirred themselves to acquire any further knowledge and equipment than that afforded by the secondary schools. I am not referring to the graduates from the higher schools, who are all treated under special conditions, but to the ordinary run of Egyptian who seeks clerical employment under Government. There is, indeed, no reason why every year a list of vacancies other than most junior clerkships should not be drawn up and a special examination held for competition between any who care to enter, and the successful men would then be entitled to the higher salaries carried by the special posts vacant. This would act as an incentive to men to work on their own account in order to obtain a better start, and would at the same time relieve Government departments which at present are hard put to it to find properly qualified staff for many of their posts.

December 15.

A Ministerial Crisis.

For the past ten days we have been going through a ministerial crisis, caused by the Premier, Sir Hussein Rushdi Pasha, and one of his colleagues, Sir Adly Yeghen Pasha, Minister for Education, tendering their resignations. Divers reasons are assigned for this unexpected action on the part of the two leading members of the Cabinet, but at the present juncture it would serve no useful purpose to recapitulate the various "authoritative" versions that are in circulation. Neither of the Ministers in question has visited his Ministry since Wednesday week, but all the other Ministers have continued to attend their offices, as the Cabinet is technically still in power so long as the resignation of the President has not been definitely accepted.

As a result of this crisis there has been much activity in Palace and Ministerial circles. The Ministers have been in constant conference with one another and with the Acting Financial Adviser, who has been in close contact with the Residency. They have paid several visits to Yeghen Pasha; and the latter, as well as Rushdi Pasha, has been received in frequent audience by the Sultan. In addition the Premier has called at the Residency, and has been visited at his private residence by several high British officials. At the moment of writing there is no indication of any solution; and for the time being, although technically speaking we have a Cabinet of Ministers, all State business that requires the sanction of the Council is held up.

The Sultan.

H.H. the Sultan was entertained at dinner at the American Agency the other evening by the American Diplomatic Agent and Mrs. Gary. The guests included members of the Palace Household, the American Agency Staff, and leading American residents. At the reception after the dinner the visitors included Sir Milne and Lady Cheetham, the members of the Diplomatic Corps, and Sir Alexander Baird.

Retiring Egyptian Officials.

It has been decided to grant three months' leave to H.E. Ahmed Zaki Pasha, who at the conclusion of that period will retire on pension from the post of Secretary to the Council of Ministers, which he has held for so long. Zaki Pasha is well known as an Oriental scholar and an authority on Arab art and literature, and he has contributed much by his studies and his publications to the renaissance of both those branches of Arab intellectual activity. He has collected a very fine library of rare manuscripts and works, which will make a valuable addition to the Sultania Library, to which he has generously presented it.

Another high Egyptian official has retired this week, H.E. Neguib Ghali Pasha, who has resigned from the post of Under-Secretary of State for Foreign Affairs. It is quite possible that this post will now be suppressed. Since the declaration of a British Protectorate over Egypt there has been no Minister for Foreign Affairs, as, under the altered regime, the relations of Egypt with Foreign Powers come directly under the High Commissioner. The post of Under-Secretary was in fact only retained, and Neguib Pasha left in it, for personal reasons and out of respect for the memory of his father, Boutros Ghali Pasha, who was Minister for Foreign Affairs as well as Prime Minister when he was assassinated eight years ago.

Charity Bazaar.

A very successful bazaar was held at the Continental this week in aid of the funds of the Young Women's Christian Association. The opening ceremony was performed by Lady Wingate, who in a short address announced that more than half of the debt on account of the hostel had been cleared off, and that there now remained only £T.3,200 to be repaid. On the second day, when the venue was transferred to Connaught

Digitized by Google

House, the bazaar was opened by Mrs. Hampson Gary. Very good business was done on both days at the stalls, which were held by leading ladies of the Anglo-Egyptian community, and the Association must have derived much financial benefit from the bazaar. Certainly, it does such splendid work in Egypt that it is deserving of every assistance.

The Cotton Area.

The announcement has been made that the restrictions imposed on the cotton area have been removed, but owing to the Ministerial crisis, which renders it impossible to hold a Council of Ministers, the decree rescinding the previous order has not been signed yet. The cotton area was restricted in order to provide the cereal requirements of Egypt and of the British forces based on the country; and the reason of the present removal of the prohibition is, of course, the change in the war situation and the possibility of getting cereals from India and Australia, to which countries Egypt will look henceforward, as she did in pre-war times, for the supply of that portion of her foodstuff requirements which she does not normally meet from her own production. Already a shipment of flour has arrived at Alexandria from Australia. Whether the cotton area will return next summer to its normal size cannot yet be said; for the raising of the embargo has been pronounced somewhat late in the season, and a certain number of cultivators will already have prepared their land for and sown it with winter cereals. In any case, the area will certainly be larger than this year.

The Influenza Epidemic.

The influenza epidemic is still raging in the country, and the Government has found it necessary to suspend the sittings of the Cantonal Courts in order to reduce the danger of the spread of infection. The extension of this malady is imposing a great strain on the local medical profession, who have been much reduced in number during the war, and who are barely able to deal with the cases now falling to them. The last day or so it is reported that in certain districts the epidemic has begun to show signs of abating.

ARTS AND INDUSTRIES IN INDIA.

A meeting of the Education Section of the Board of Industries was held at Lucknow on Thursday, October 31, 1918.

In response to a suggestion of the local Government, the Board approved of the establishment of an experimental class for training in carpentry at Allahabad. An estimate of cost is under preparation. The Board considered the prize scheme formulated for the School of Arts and Crafts, Lucknow, and suggested that a few silver medals should annually be awarded to students who stood first in the subjects taught there; and also recommended that passed students might be allowed an advance for the purchase of requisite tools required by them when entering trade after completing their school career. It was also suggested that the peripatetic weaving school at Maw might now be made permanent, as recommended by the Principal, Mr. Ormerod.

The Board noted with appreciation a letter from Messrs. Martin and Co., of Calcutta, offering to accept two young Indian students annually for practical training in their factory in the manufacture of light railway equipment such as is used in collieries, quarries, and Public Works Departments, etc.

Consideration of the proposals for starting a School of Brassware at Benares was postponed, owing to the difficulty in procuring sheet metal.

Proposals are being matured for the establishment in Cawnpore of a class for the training of electric wiremen; and plans for a suitable building are already in preparation.

The Indian mail is again being sent overland, beginning on the 9th inst. The mail will close at the G.P.O. at 6 p.m. each Thursday, and will be due at Bombay in 21 days. In the homeward direction there will be regular weekly arrivals beginning about January 24.

It is reported from Deirout, Egypt, that the Omdeh, hearing that a notable of Deirout was cultivating hashish in his garden, informed the Markaz of the matter, and the Parquet substitute, accompanied by a policeman, went to the garden, where they found two kirats of land planted with hashish. The plantation was seized and the cultivator referred for trial.

A Delhi telegram says that at the second day's sitting of the Indian National Congress, which took place on December 29 in a disturbed atmosphere owing to the suggested nomination of Mr. Tilak as delegate to the Peace Conference to claim the right of self-determination for India and full provincial autonomy, a motion in favour of full provincial autonomy and against special European electorates was carried by acclamation.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, December 7.

H.E. the Acting Governor-General entertained a number of N.C.O.s and men of the Northumberland Fusiliers at the Palace on December 5.

The Sudan Club has started fortnightly dinners and dances for members with their feminine friends. The first was held on the 6th instant, and they will be continued till further notice.

A movement is on foot to celebrate the armistice by entertaining the N.C.O.s and men of the Northumberland Fusiliers and the R.G.A. stationed at Khartoum, and also by means of a more general entertainment for the British community of Khartoum. It is understood that the latter function will take the form of a dance, but it is difficult to know where so large a number can be accommodated with dancing room.

A meeting of the Racing Club was held at the Sudan Club, and the dates of the first two meetings were fixed and the officers of the club elected. The first meeting is to be on December 20, and the second on January 24.

Mr. Hewins, the Director of Commercial Intelligence, returned to Khartoum on the 6th, after a prolonged stay in England.

Mr. C. E. Lyall, the Governor of Kassala Province, is visiting Khartoum on his way back from leave before returning to his province. He spent his leave in Alexandria.

Colonel Bernard, the Financial Secretary, is expected shortly from the North, where he has divided his time between Cairo and Alexandria.

It is rumoured that there is a large party of ladies coming to the Sudan to rejoin their husbands, numbering about fifty in all. They are expected to arrive in the course of January. The question of their accommodation in Khartoum has brought into prominence the shortage of suitable houses in the city. Apart from those built and maintained by the Government, there are very few houses of a size and plan suitable for an English family. Where the houses exist, the other amenities are indifferent, *e.g.*, the servants' quarters are too small or non-existent, and the stabling poor. Few, too, have any garden worthy of the name, and notwithstanding these drawbacks rents are very high. Naturally, during the war there has been little or no new building done, owing to the shortage of materials, and this is likely to continue for some little time. In the past nearly all woodwork for houses, such as doors and windows, was imported, whilst the bulk of the cement and similar materials were also brought in from outside. The force of circumstances has, however, demonstrated that there is a quantity of excellent wood in the country if it can be obtained at reasonable rates in a sufficient amount. Cement, too, can be made, and there is a scheme to open up the making of cement on a large scale.

December 23.

A Tennis Tournament was held at the Sudan Club, which terminated on Tuesday, when Mr. and Mrs. King secured the Doubles (Mixed), and Dr. Bousfield and Mr. Winter won from Mr. Davidson and Mr. Corbyn in the Men's Doubles.

The first race meeting of the season was held on Friday, the 20th, and was very successful. There were six events, and a large number of people attended.

On Monday, the 24th, the Sudan Club entertains the British community to celebrate the Armistice. A very large gathering is expected.

Lord Kitchener left Khartoum on the 21st with the Hon. E. Napier for Rejaf, whence he goes on foot to Nimule, and so on to British East Africa. The object of his journey is said to be the establishment of farms for British officers who have been wounded in the war. During his visit Lord Kitchener inspected the Gordon College and made a speech to the students.

The influenza appears to have largely passed away, and its effect in the Sudan seems to have been milder than in many places. It is possible that this is due to the hot spell that occurred in the first half of December. A certain number of cases continue to appear, but the mortality is not high, and the natives regard the epidemic as over.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, December 26.

One of the most obvious reminders that the war is over is that the ships passing through are now resuming their natural colours, and do not look like a private view day at an impressionist academy. Passengers once more wander aimlessly round the streets, and Port Said is rapidly returning to normal. Even the price of coal seems inclined to come down somewhat, as well as the cost of sugar, eggs, and other commodities in the eating line.

News is coming through from Constantinople as to the conditions there, and the distress prevailing amongst practically all classes; a new suit of clothes costing from seventy to eighty pounds, and even a cabbage cannot be obtained for less than ten shillings. I was informed that the tariff price of bread was a shilling a pound, but that only a soldier with a bayonet in one hand and the shilling in the other could obtain it at that price, anyone else having to pay at least three times as much. Germans are, as might be expected, not in favour, and it is said that they have had orders not to appear in uniform; the more inconspicuous they are, the more it conduces to public tranquillity and their own longevity.

Travellers are now coming from Beyrout and Damascus, and bringing back reports as to things there It is a very curious situation, but it may be broadly summed up, that the rich have become richer and the poor poorer, though large numbers of the latter are in a place where this world's goods do not matter. I am not far out in saying that in the villages of the Lebanon district and including Damascus, fully a third of the population is gone, carried off by starvation and disease. In Beyrout itself things were not so bad; for while the rich food producers have made large fortunes, it has gone hard with others who had to begin to sell their goods to buy food. A few days before our occupation a large and valuable house was offered for sale for three hundred Turkish pounds, and found no buyers; to-day it is worth at least £5,000. One anomalous thing is that ironmongery, lamps, stoves, electrical gear, etc., are cheaper now in Beyrout than they are in Egypt! The Germans attempted to flood the country with their own trade ware, no doubt thinking they were going to have a big hold there when the Kaiser came to drop another wreath on Saladin's grave.

Christmas festivities in Port Said were more or less confined to the various canteens, and as in previous years, everything was done to bring a touch of home to the men who are longing to get there.

THE ELSIE INGLIS UNIT.

The Elsie Inglis Unit of the Scottish Women's Hospitals has once more gone forward, this time in the wake of the victorious Serbian Army. The Serbians have placed a large building at the disposal of the unit at Serajevo, where there are large numbers of sick soldiers to be tended.

The large transport column attached to the unit followed the offensive of last autumn as far as cars could go, and did almost incredible work in conveying wounded from the front to the hospitals, up and down the appalling mountainous roads. Miss Geraldine Hedges, the Chief Transport Officer, and some of her intrepid drivers have been invalided home, owing to malaria.

ASSYRIAN REFUGEES.

In a letter to the Press, the Archbishop of Canterbury writes:—"On Wednesday, December 4, a public meeting was held at the Central Hall, Westminster, on behalf of Assyrian refugees from Persia and Asiatic Turkey, the victims of Turkish cruelty and brutality, who, having survived the horrors of massacre ruthlessly carried on during the last three years, have appealed for British protection. The remnants of this ancient Christian nation are now being collected at various centres in Mesopotamia, where they must remain until the Peace Conference has provided for their return and for their settlement, once again, in their old homes in North-West Persia and Kurdistan.

"General Marshall telegraphed on November 16 that he had collected 40,000 Assyrians at Baqubah. A large number are at Hamadan; others have reached Baghdad. Probably not less than one-half of the people have been massacred or done to death, and the fate of others, especially the young women and girls, is beyond description. It is said that some 60,000 have survived, but this number will be greatly diminished by sickness and starvation, unless help is forthcoming without delay. Relief will be administered by our British Consuls and other responsible officers. In the name of humanity and of Christian duty, we appeal to the generosity of the British people. Contributions may be sent to Mr. F. W. Pittman, Armenian Refugees (Lord Mayor's) Fund (Special Appeal for Persia), 96, Victoria Street, S.W.1, by whom they will be acknowledged."

MALTA NOTES.

(From Our Own Correspondent.)

Malta, Dec. 23.

The Island and the Armistice.

Malta has suffered little during the past four years of war, but the departure of fighting craft is bringing home to the people that the Hun is well beaten. The fleet of trawlers which was sent here immediately after the U-pirates made their undesired appearance in the Mediterranean has just left Malta *en route* for England. As the smart-looking vessels steamed out of the harbours from their bases they were accorded the heartiest send-off by the warhips, merchantmen, and other craft lying at anchor. The blowing of the sirens, accompanied by the hooting of the "puffers," drew large crowds to the bastions overlooking the harbour mouth, who joined in the farewell demonstrations. For three long years these small craft, which were improvised for war duty, assisted by destroyers, and later by motor launches, have kept the seas in all weather and maintained the closest vigilance, patrolling, mine-sweeping, mine-laying, and hunting down the sea pests unrelentingly.

It is astonishing how quickly the island has assumed an air approaching the normal. There is now a blaze of light on the Strada Reale and the revolving lighthouses at the entrance to the Grand Harbour are again in full swing. The armistice celebrations passed off splendidly, notably some which were impromptu. These were followed by a solemn Memorial Service; and those who know of the fervently religious nature of the inhabitants of the island will appreciate what that means.

Despite the many calls which have been made on the purses of the people here, no time has been lost in setting afoot a scheme to raise a war memorial, and a very influential and efficient committee has been formed comprised as follows:—Patron, Mrs. Hunter-Blair; president, Lady Frendo Azopardi; members, Mrs. W. C. F. Robertson, Lady Micallef, Marchesa Apap Testaferrata, Mrs. Bonavia, M.B.E., Mrs. Young, Mrs. Barwell, Mr. G. Ashfield, Mr. V. Rizzo, hon. treasurer, and Dr. A. Bartolo, hon. secretary.

Return of the Governor.

His Excellency the Governor and Commander-in-Chief, Field Marshal Lord Methuen, G.C.B., G.C.V.O., C.M.G., has returned to the island after a month's absence.

With her customary and kindly interest in everything appertaining to the welfare of Malta and its inhabitants, Lady Methuen has kindly extended her patronage to the Badge Day to be held on January 6 in aid of the Malta War Memorial Fund.

Death of Lady Strickland.

The deepest regret has been awakened throughout the community by the announcement of the death of Lady Edeline Strickland, Lady of Justice of the Sovereign Order of Malta, wife of Count Sir Gerald Strickland, G.C.M.G., LL.B., and eldest daughter of the seventh Earl de la Warr, and of Constance Cochrane Baillie, daughter of the first Baron of Lamington, who passed peacefully away at her residence in Villa Bologna, Casal Attard.

The deceased lady, who had been in failing health for a long time, was in her forty-ninth year. Lady Edeline was well known and widely respected in this island, where her husband was Chief Secretary to the Government from 1889 to 1902, as well as in the Leeward Islands, Tasmania, Western Australia, and New South Wales, where Sir Gerald successfully held Governorships.

The Athens correspondent of *The Times* says that the islands of the Dodecanese are suffering much from a great scarcity of foodstuffs. Wheat has been lacking in the islands for months.

Many pieces of stolen Greek furniture have been found in the houses of Bulgarian State officials at Varna. A number of pianos were also discovered in the Bulgarian arsenal there.

Reuter's Agency learns that on New Year's Eve Turkish police invaded the offices of the journal *Neologos*, the oldest Greek newspaper in Constantinople, turned out the staff, seized the printing press, and stopped the further publication of the paper.

Greek comment on the General Election results congratulates the British people on their correct judgment and their fairplay towards the Government which was responsible for the victorious conduct of the war, and which has repeatedly urged the just claims of the smaller nations.

Under date of November 16, the Simla correspondent of the *Pioneer* reports:—"It has been decided to allow officials and ex-officials who have rendered exceptional services in connection with the war to participate to a limited extent in the distribution of waste colony land in the Punjab. Eight Indian names are published of persons to whom the Punjab Government have awarded from 100 to 150 acres apiece under these orders on certain conditions. Similar grants are to be made next year and the year after.

RELIEF IN SYRIA.

(From an Occasional Correspondent.)

Cairo, December 6.

The rapidity of General Allenby's victorious advance in Northern Palestine and Syria not only gave no time to the enemy to destroy the land and deport the population, as he was wont to do in an orderly retreat, but, after entirely crushing his military power, the conquerors were free to employ their vast military organisation for the relief of the people on such a scale and with such rapidity as no relief society, however powerful and well organised, could do. An officer who was with the first troops to enter Damascus and Homs told me that famine in its true sense ceased forty-eight hours after the arrival of the troops. Even now in Beyrout and the Lebanon the native relief organisations are working under the control and with the help of the military authorities, who alone possess the means of supply and sea and land transport. With the raising of the blockade, which is said to be imminent, the repair of railroads and bridges, and the release of large numbers of camels, horses, donkeys, and cattle by the military authorities for distribution, where needed, among the people, all traces of distress should soon disappear.

French Relief Work.

The French authorities, in their appointed sphere on the coast and in the Lebanon, are not lagging behind in the race of philanthropic endeavour. On October 24 a Messageries steamer arrived at Beyrout with 550 tons of foodstuffs and 1,500 tons of coal, and another steamer was expected to arrive a fortnight later with a large quantity of foodstuffs. To the destitute the foodstuffs are given free; to the impoverished middle class they are sold at half-price; while to the remainder of the population they are sold at cost price. According to a report presented by the Lebanese Supplies Committee, it is estimated that there are 100,000 destitute, who need daily 45,000 kilog. of corn; and 25,000 persons of limited means, whose daily needs amount to about 12,000 kilog. It is now proposed to form two Supplies Committees: one for the immediate relief of the destitute, under the presidency of the Rector of the Jesuit University and of the Principal of the Lazarist College of Antoura, and the other, under the presidency of a high Lebanese official, for the general control of supplies in the country until the present crisis is tided over. Both committees are under the patronage of the military governor. There is already an orphanage in Beyrout, where about 3,000 children, mostly from the deserted villages of the Lebanon, are cared for by a committee of ladies. This orphanage is under the patronage of M. Picot, the French High Commissioner.

Reconstruction in the Lebanon.

With the help of the military authorities, the Administrative Council of the Lebanon hopes to be able soon to get large quantities of grain from the Hauran and Homs and Hama, and to sell it at cost price to the inhabitants. The Lebanon Government is also arranging for the purchase of 30,000 boxes of silkworm eggs from France, for sale to the proprietors of mulberry plantations at cost price, with the facilities for payment at the gathering of the cocoon crop. It is further proposed to exempt the people for the first year after the war from the payment of the capital tax. The Council has lately decided to contract a loan of £100,000 for works of public utility, and to ask the French Government to advance this amount. The Administrative Council has also under consideration the question of raising another loan for distribution, in the shape of advances, among agriculturists for the purchase of seed corn.

One of the great and vital problems that are expected to challenge the serious attention of the Lebanese Government is the enormous number of sales of property at iniquitously low prices to which the owners were forced by famine. What made these transactions more iniquitous was payment in paper money, which at the time of the occupation stood at one-tenth of its par value. The validity of these deeds of sale could well be questioned on many legal and moral grounds, and it can hardly be supposed that the Lebanon Government will not seek to invalidate these sales, especially when it is known that a good part of Lebanese property has been taken over during the war by a few profiteers from Beyrout and Damascus.

Improved Communications.

It has just been announced that telegraphic communication between Egypt and Palestine and Syria is re-established, and that offices are already established in various towns of Palestine, including Jaffa and Caiffa. This is the forerunner of free commercial intercourse, without which Syria will continue to suffer economically.

All new measures and imposts imposed by the Turkish Government in the Lebanon have been abolished, while in both Syria and the Lebanon the staffs of the different Ottoman Government departments—as constituted before the war—have been recognised—temporarily no doubt—by the occupation authorities. Those who have been dismissed during the war have, as a rule, been reinstated. This explains the fact of the composition of these staffs in the vilayets being almost entirely Moslem, according to official lists recently published.

THE EMIR FEISUL.

The Emir Feisul left London on Tuesday for France, accompanied by General Nuri Faieh and his suite. Mr. R. F. Synge, of the Foreign Office, travelled with him to Folkestone, his port of embarkation.

The Prince expressed his gratification at his visit to this country and his reception by the King and the Government, and added that he hoped to return to England ere long.

During his visit—on December 20—the Emir received deputations from the London and Manchester Syrian communities, who presented addresses of welcome and congratulation. His Royal Highness received his visitors cordially; and in his reply laid stress on the necessity of Syria being granted independence, and at the same time receiving assistance from the Allies in the way of men of science and skilled administrators.

NEWS IN BRIEF.

A Senussi mission, headed by Saied el Mahdi, brother of the chief, has arrived in Italy to pay homage to King Victor Emmanuel.

Reuter's Paris correspondent reports an announcement made by the *Temps* regarding the forthcoming inauguration of an express train service placing Paris and London in direct communication with Athens, via Milan, Venice, Trieste, Agram, Nish, Uskub, and Larissa. "It is," remarks the *Temps*, "important from the political point of view to note that this new line will be able to link up the west with a point in South-Eastern Europe without traversing an inch of Germanic or germanophil territory."

A French vessel has just returned 350 Jewish exiles to Palestine. It sailed under the Jewish flag.

Members of the Greek Military Mission in Bulgaria are engaged in tracing the Greek girls who were outraged and kidnapped during the invasion of Eastern Macedonia. These young girls are now kept as slaves in Bulgarian houses.

All Zionist organisations in the Allied and neutral countries, including the newly-created States of the former Austro-Hungarian Empire, have been invited to send delegates to a conference in London on February 11, 12, and 13, to determine the Zionist policy at the Peace Conference.

It is officially computed that 41,000 people have died in Egypt as a result of the influenza epidemic, exclusive of deaths in Cairo and Alexandria.

The *Morning Post's* Paris correspondent reports (January 5):—Stephan Bey, the Roumanian Minister for National Defence, Transylvania, has handed a Note to the Great Allied Powers in which he draws attention to the conduct of the Serbians towards Roumanians in the country occupied by Serb troops. These people, he states, are subjected to all sorts of vexations. The Note specially protests against the detention and deportation to Belgrade of several Roumanian notables.

A minesweeper struck a mine and sank off Smyrna on December 19. There were eleven survivors, twenty-seven of the crew being missing.

On the occasion of the New Year a number of Greek ladies belonging to the "Soldiers' Sisters' League" visited the British and French military hospitals at Salonika and distributed gifts in the name of their Greek comrades.

As the result of a "war-talk" given by Lieutenant-Colonel J. T. Woolrych Perowne in Philadelphia last November (the Bishop of Philadelphia presiding), a cheque for £147 11s. 1d. in aid of the fund for rebuilding the British Ophthalmic Hospital in Jerusalem, belonging to the Order of St. John of Jerusalem in England, has been handed to the Right Hon. Evelyn Cecil, M.P., Chairman of the Hospital Committee. Miss K. Robertson, of the British Relief Emergency Aid, was responsible for organising the meeting, which was under the auspices of a committee of leading citizens of Philadelphia.

King Alexander of Greece received on Sunday Commander Canzantian, Armenian ex-officer of the Turkish Navy, who conveyed the gratitude of the Armenian people for the warm sympathy displayed by the Greek Chamber, Government, and Army for Armenia's independence.

It is reported that the Turkish Government has decided to exile members of the Committee of Union and Progress.

The French steamer Evangeline, which was requisitioned for the Navy, and which ran aground near Salonika, has been refloated by the British.

The Sultan of Egypt has appointed M. George Foucard, Director of the French Oriental Archæological Institute, as President to the Sultania Geographical Society, in succession to Ismail Sidky Pasha.

The Municipality of Athens has conferred the Freedom of the City on Mr. Lloyd George and President Wilson.

A Salonika message announces that the neutral region of Koritza and Northern Epirus which has been occupied by the French for the past two years has now been handed over to the Greek authorities.

The Conference of Indian Princes and Ruling Chiefs which was postponed on account of the influenza epidemic will be held at Delhi from January 20 to 25.

NEAR EAST BOOKSHELF.

AN ASIATIC CONQUEROR.*

We welcome these lectures on the life of the Emperor Babur, partly for their own interest and partly as evidence that the spirit of historical inquiry is at last abroad in India, where the universities for so long did little to foster the extension of knowledge in this or any other branch of study. The Professor of Modern Indian History at Allahabad is setting an example which will, we trust, be widely followed by Indian scholars, and the lectures before us are a sound and scholarly piece of work. They are not likely to supersede Babur's classical "Memoirs," but on the contrary they will probably send many readers to that delightful book, equipped with just that knowledge of the environment which is necessary for its full appreciation. The author has succeeded in giving a clear and readable sketch of the intricate politics of Central Asia, and of the course of events which ultimately drove Babur to seek an Empire in the plains of India; he brings out the advances in strategy, tactics and munitions which rendered possible the conquests of an army which in numbers was almost ridiculously inadequate to the task, and he enables his readers to form an idea of the Emperor's commanding personality as well as of the social aptitudes which made him such a delightful companion.

We have noticed very few inaccuracies in the book. The Chambal flows into the Jumna, not into the Ganges, as suggested on page 163, and Etawah does not lie on the route from Kabul to Agra (page 172); but such slips are of slight importance. The interest of the book is increased by the illustrations reproduced, on the whole successfully, from the Alwar and Agra manuscripts of the "Memoirs."

A TRAGEDY OF TALK.

It is the accepted theory of philosophers that speech is the faculty which marks most clearly the acknowledged superiority of man above the animal creation. An intelligent cat which happened to listen to some of the endless debates of the Russian Soviets might reasonably have inquired during the last eighteen months whether the alleged inferiority of the dumb animals was in reality incontestable. The specimens of talk which M. Claude Anet, the brilliant journalist, who now describes from personal experience in the second volume of "La Revolution Russe" (Payot et Cie, Paris, 4 frs. 50 c.) has preserved in these pages, can only be described as pathetic. At one of the innumerable congresses, for instance, a delegate mounted the tribune and made the following speech:—

"The unanimous decision of the Congress of Nationalities assembled at Kieff, which has appointed me as their representative, is that it is impossible for Russia to continue the war." (Applause from the Extremists.) "The unanimous decision of the Congress of Nationalities assembled at Kieff, which I have the honour to represent, is that it is impossible for Russia to make peace." (General laughter.) "I do not understand your laughter, citizens and comrades; it is the unanimous decision of the Congress of Nationalities assembled at Kieff which I have reported to you."

That was the kind of political debate, with its contradictory and impotent conclusions, of which Russia never tired. M. Anet enumerates thirty-seven committees of the Northern Army, which talked endlessly; the very patients in the hospitals formed a committee to discuss whether the surgeons should operate or prescribe. Truly, democracy was a tragi-comedy in Russia during the first six months of the revolution; if Aristophanes, that old and pitiless enemy of democracy, had ever put such a caricature on the stage as the actual Soviet rule in Russia, it would have been laughed off the boards.

Kerenski was the greatest of all the debaters. Whenever the situation became troubled, he made a great speech; when things became serious, he made a wonderful speech; when they became desperate, he surpassed himself by the brilliance of his speeches. Unfortunately, when they became critical and oratory no longer availed, he merely fled like a coward, flinging a proclamation at the enemies he had attempted to placate. It was probably a wonderful proclamation, full of resounding phrases and nobility of appeal—but the Bolsheviks, who had no taste for oratory, unkindly suppressed it. Perhaps the world has not lost very much.

The democratic revolution clearly failed because its leaders thought oratory was sufficient to rule the world. The Bolsheviks succeeded because they had no use for talk, and while Kerenski was orating, they were preparing. They have stayed in power because they have not troubled to talk, but have preferred action. Their programme was simplicity itself—bread, peace, land; it will be noticed that they ousted the one small item of liberty, which most revolutionaries have put in the forefront. But the Bolshevik has no more use for liberty than for oratory; and Russia was so captivated by the promise of peace—which was achieved at the cost of war within her own frontiers—that she accepted the programme without noticing the significant omission. One of the first acts of the Bolsheviks was to suppress the liberty of the press, as "a capitalist organisation."

M. Claude Anet watched these things, and the ruin of Russia, with a sore heart as a Frenchman, but with a detached and occasionally amused air as a chronicler, for which we cannot be sufficiently thankful. He promises a third volume on the Russian Revolution, bringing the history down to date; if he maintains as excellent a quality and as vivid a style in the sequel, he will have produced the classic contemporary record of the great experiment in class warfare for the sake of universal brotherhood.

A. W. T.

* "An Empire Builder of the Sixteenth Century." By Professor Rushbrook Williams. (Published for the Allahabad University by Longmans, Green and Co. Price, 7s. 6d. net.)

A PRINCESS OF PEACE.*

"If I forget thee, O Jerusalem, let my right hand forget her cunning."

A masterpiece; in the form of an autobiography of the heroine up to the age of fifteen, flowered and scented with a rare imagination and French philosophic irony. In a critical preface M. Jules Lemaître tells us something of "Siona" (Myriam Harry) which she does not tell us, and says she reminds him of another wonderful Eastern damsel, the friend of Lord Bolingbroke—"Aissé"—"who (purchased by the French Ambassador in Constantinople) became so thoroughly French that she wrote some of the prettiest letters that were ever penned in that language in the eighteenth century." It is a very wonderful "Siona," this little daughter of Jerusalem! Out of her mastery of languages, extensive travel, analytic and observant mind, and amazing memory, having abandoned the writing of tales, in German, for the *Berliner Tageblatt*, she acquires, with intensive industry, the very soul of French literary culture, produces many notable tales and poems, and here using the skeleton framework of her babyhood and girlhood in Jerusalem, as her *raison d'être*, sets out to jangle all religions by the ears, to ridicule the prejudices of nations and races, to paint the Judea of the fourth quarter of the last century with intimate, undressed fidelity, and to turn defiantly to scoffer and to sceptic, in a carnival of passion, asseverating, "If I forget thee, O Jerusalem, let my right hand forget her cunning."

Surely "Siona" has been dowered with the cunning of the master Psalmist! Surely she has a message to kings and peoples, priests, presidents, and philosophers, her fellow-man and fellow-woman! But, to the *οἱ πολλοί*, to whom messages are dull things, let us hasten to say that "Siona's" story (although terminating, in this volume, at fifteen) is full of the spices and pomegranate-juices of the East; and that this *capo d'opera*, so happily translated into English, shows a knowledge of the virtues and vanities of British Levant-born and touring folk which, if possible, increases our admiration for "Siona." We now wonder what she thinks of the British conquest of the Holy Land; whether she is regretting the "civilization" and the sanitation that must now intrude; whether she is itching to write the apocalyptic punishment of General Allenby for venturing to disturb the filth-focus of Omar's "seventy thousand jarring sects;" or will she lend her delicate hand, bring her inimitable broom, and help to keep the pretty colours, and mercilessly sweep away the shoddy and the shabby?

15	2	Wednesday	14	14
16	3	Thursday	15	15

M. E. N. Lahovary, Roumanian Senator, arrived in London from Bucharest last week.

Colonel Sir Roper and Lady Parkington have returned to Claridge's Hotel from Bath.

Dr. Mishitch, Deputy President of the Jugo-Slav Committee, left London for Paris last Friday.

H.H. the Maharana of Udaipur has generously contributed three lakhs towards the expenses of the war.

Captain Sophocles Venizelos, the son of the Greek Prime Minister, arrived in London last Friday from Paris.

Cardinal Bourne is at present in Cairo on a short visit. He will proceed thence to Palestine and Constantinople.

M. Polychroniades, formerly Chargé d'Affaires of the Greek Legation at The Hague, arrived in London on Friday from the Continent.

H.H. the Nawab of Palanpur, on the occasion of his succession, generously offered Rs.25,000 for war purposes. The offer was gratefully accepted.

Major-General the Maharaja of Bikanir and Maharaj-Kumar Lieutenant Sadul Singhji were received by Queen Alexandra on Monday afternoon at Marlborough House.

Sir Reginald Wingate held an investiture at the Residency, Cairo, on December 30, when he presented the insignia of the recent British decorations to British and Egyptian officials.

December 28, St. Eleutherio's Day and M. Venizelos' name-day, was celebrated enthusiastically in Athens. Hundreds of people of all classes called upon the Prime Minister at his house.

The Hon. Sir John Wood, Secretary in the Political Department of the Government of India, will probably proceed on furlough in February. Mr. R. E. Holland, I.C.S., will again officiate.

The engagement is announced of Lieutenant Eustace J. Guinness, R.N., elder son of Lieutenant-Colonel E. W. Guinness, Dar-es-Salaam, East Africa, late of Allahabad, India, and Alison, eldest daughter of Mr. Ian MacIntyre, 36, Murrayfield Road, Edinburgh.

Admiral Sir Arthur Limpus, K.C.M.G., C.B., has just been placed on the retired list at his own request. He was Naval Adviser to the Turkish Government from 1912 to 1914. During the recent war he was in charge at Malta, where he was very popular.

The engagement is announced of Second Lieutenant Richard Henry Dalbiac, 52nd Light Infantry, son of Colonel Dalbiac, C.B., and Mrs. Dalbiac, of The Elms, Seal, Kent, and Kathleen René, younger daughter of the late Mr. F. M. Simpson and Mrs. Simpson, of Colombo, Ceylon.

Colonel Boyle, of the Canadian Army, in charge of Roumanian relief since the spring of 1917, has arrived in London from Bucharest. He has received an offer from Sir Robert Borden on behalf of Canada to advance £5,000,000 to be expended on Canadian products for relief in Roumania.

The engagement is announced between Captain Arthur Miller-Stirling, Indian Army, only surviving son of Captain Miller-Stirling (R.N., retired) and Mrs. Miller-Stirling, of Craigbarnet, Campsie Glen, Stirlingshire, and Elizabeth Gordon, only daughter of Sir John Fleetwood Cumming, The Dowans, Aberlour, Banffshire.

Major-General Sir A. W. Money, K.C.B., C.S.I., Chief Administrator of the Occupied Territory of Palestine, has left Jerusalem on short leave. Colonel R. Storrs, C.M.G., is officiating for him in his absence.

A marriage has been arranged, and will shortly take place, between Humphrey William Codrington, lieutenant, R.A.O.C., Ceylon Civil Service, eldest son of the late Rear-Admiral W. Codrington, C.B., and the Hon. Mrs. Codrington, of Ilmington, Shipston-on-Stour, and Joyce Mary, third daughter of the late Rev. W. H. Bleaden, and Mrs. Bleaden, of 41, Brunswick Gardens, Kensington, W.

A marriage has been arranged, and will take place on February 12, between Mr. A. J. Mavrogordato, fourth son of the late John Mavrogordato, Letton Lodge, Broughton Park, Manchester, and of Mrs. Mavrogordato, 6, Palmeira Court, Hove, and Mrs. Rowan-Robinson, widow of Major W. J. Rowan-Robinson, King's Shropshire Light Infantry, and elder daughter of the late Mr. W. E. M. Hulton-Harrop, Lythwood Hall, Shrewsbury, and of Mrs. Hulton-Harrop, Mayfield, Shrewsbury.

Lord and Lady Willingdon arrived in London on Monday for a short holiday in this country before Lord Willingdon goes to Madras as Governor. Among those present to meet them at Victoria Station were Mr. Montagu, M.P., Sir S. P. Sinha, Major Hanson (representing the Maharaja of Bikanir), Lord Brassey, Sir William Duke, Sir Charles Bayley, Mr. W. D. Sheppard, Sir Malcolm Seton, Mr. and Mrs. W. R. Gourlay, Mr. C. H. Kisch, Mr. Parsons, and Mr. L. Robertson, of the Bombay Civil Service.

Mr. H. Charles Woods, who went to America in November, 1917, to lecture upon the Near East and the war before the Lowell Institute, Boston, and who since then has been lecturing in the United States and Canada, has returned to 171, Victoria Street, S.W.1. We understand that, in addition to the fulfilling his numerous lecture engagements, during his absence from England Mr. Woods completed his new book, "The Cradle of the War: The Near East and Pan-Germanism." The English edition of this volume, which has a foreword by Mr. A. Lawrence Lowell, president of Harvard University, will be published by Mr. John Murray during the present month.

Excellent work is being done by the American Red Cross in the island of Mytilene, where there are 52,000 Greek refugees from various places.

A lecture entitled "Mohammed's Way to Allah" will be given this evening at 6.30, by Mr. M. A. Ismail, at the Anjuman Islam, 86, Ladbroke Road.

At a meeting of the Royal Asiatic Society, to be held at 22, Albemarle Street, next Tuesday afternoon at 4 o'clock, Mr. F. E. Pargiter will read a paper on "The Haihayas and King Sagara." Lord Reay will preside.

The Secretary of the War Office announces that the recommendations of the General Officers Commanding-in-Chief in Mesopotamia in connection with the New Year *Gazette* did not reach the War Office in time for inclusion in the lists which have been published. The recommendations for rewards for services rendered in that theatre of operations are now under consideration, and such rewards as may be approved by the King will be notified in due course.

The Emir Feisul entertained to luncheon at the Carlton Hotel a deputation from the Arab Horse Society, represented by Messrs. S. G. Hough (vice-president), G. R. Calthrop, R. A. Willis, and Rev. D. B. Montefiore. The Emir graciously consented to be a patron of the society. Brig.-General Nuri Said and Colonel T. E. Lawrence also accepted the invitation to become honorary members of the society.

MONTENEGRIN RED CROSS AND RELIEF FUND.

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO.

The Smallest and Poorest of our Allies.

Donations will be much appreciated. Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

APPOINTMENTS, PROMOTIONS, &c.

Mr. P. Ball, 2nd Inspector, Dongola Province, Sudan, has been transferred to Kassala Province.

Bimbashi S. E. Gregory, transferred to the Sudan Government, has been appointed 2nd Inspector, Kordofan Province.

M. Milissar Raitchevitch, a member of the Directory of Montenegro, has been appointed Minister without portfolio in the Cabinet of the newly-established kingdom of the Serbs, Croats, and Slovenes.

At Jaffa, on December 20, Mr. Nahum Sokolow and Dr. Weismann were unanimously chosen as the Jewish representatives at the Peace Conference.

The promotion of Lewa Shehata Kamel Pasha, C.M.G., Chief A.D.C. to the Sultan of Egypt, to the rank of Ferik (General) is officially announced.

Bimbashi R. F. B. Knox, 2nd Inspector, Sennar Province, Sudan, has been made Magistrate of the First Class under the Code of Criminal Procedure, temporarily.

Captain W. E. G. Ord-Statter, Royal Lancaster Regiment, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi, and attached to the 10th Sudanese for duty.

According to a Kieff telegram, the principal members of the new Ukrainian Cabinet are :—Premier and Minister for Foreign Affairs, M. Tchechavsky; Minister of the Interior, M. Misijuk; and Minister of War, M. Grekoff.

The King has been pleased to approve the appointment of Mr. William Strachan Coutts, C.I.E., Indian Civil Service, to be a Puisne Judge of the High Court of Judicature at Patna, in succession to Mr. Edmund Pelly Chapman, I.C.S., who retired in October last.

OBITUARY.

SIR JOHN CLAUSON,

Sir John Clauson, K.C.M.G., High Commissioner and Commander-in-Chief, Cyprus, died on December 31, at Nicosia, aged 52.

The eldest son of the late Charles Clauson, of Naples and London, and of Mrs. Clauson, of 8, Essex Villas, Kensington, W., he was educated at Merchant Taylors' School, Clifton College, and the R.M.A., Woolwich, and entered the Royal Engineers in 1885. Four years later he designed an Army pontoon that is still in use, and in 1893 he passed the Staff College (first place). In 1897 he was admitted to the Inner Temple. In that year he was secretary to the Army Railway Council; in 1898 secretary to the Mobilisation Committee; and from 1900 to 1906 secretary to the Colonial Defence Committee. From 1906 to 1911 he was Chief Secretary to the Government of Cyprus, and from 1911 to 1914 was Lieutenant-Governor of Malta. In August of 1914 he returned to Cyprus as High Commissioner; and, though his health was very bad, he administered the island successfully through the difficult period of the war. He married, in 1890, a daughter of the late Sir William Makins, and leaves three sons.

GENERAL HILL-JOHNES, V.C.

We regret to announce that Lieut.-General Sir James Hills-Johnes, V.C., died on January 3, at his home in Carmarthenshire, from the effects of influenza. He was born in 1833, and entered the Bengal Artillery twenty years later; and from then onward he may be said to have taken part in most of the fighting that was going in India, until in 1881 he returned to England. In 1888 he retired. He served through the Indian Mutiny, the Abyssinian campaign, and the Afghan War, to mention but a few of his experiences; and among other important positions held by him at one time or another were A.D.C. to Lord Canning, the Viceroy (1859-62); Assistant Adjutant General (1875); and Military Governor of Kabul. He was an old and close friend of Lord Roberts. He won the V.C. in the Mutiny for saving his guns by a single-handed charge against a body of cavalry that surprised them.

Brigadier-General Hamilton, who has died at Weymouth, aged fifty-eight, was for five years D.A.A.G. in Egypt, and served in the Nile Expedition of 1898.

The Rev. William Edward Scott, formerly Archdeacon of Bombay, died at Vevey on December 29, aged 67. He first went to India, in 1885, as chaplain at Nasirabad. Afterwards he was at Deolali, Byculla, and other places, until in 1894 he was appointed chaplain to the Bishop of Bombay, and three years later Archdeacon of Bombay. In 1907 he resigned the appointment, and returned to England, and in 1915 he was appointed chaplain at Geneva.

Mrs. Sophie Hicks, widow of Hicks Pasha, the famous soldier, died suddenly on January 3 at Bath. Hicks Pasha was a British officer who, after serving with distinction throughout the Indian Mutiny and in the Abyssinian war, entered the Khedive's army, and was killed in the Sudan.

Mr. George Francis Mytton Grant, late of the Indian Civil Service, died at Vevey last week in his seventy-fifth year. In 1885 he became Junior Collector and Magistrate and Political Agent, Thana, and in 1886 Senior Collector. He was appointed Commissioner, Northern Division, in April, 1890, and retired in the following November.

Lieutenant-Colonel Frederick Meredith Mangin, R.A.M.C., died at Meerut, India, on New Year's Day, aged fifty-one. He served on the North-West Frontier of India in 1897-8, and received the medal and clasp for Malakand, and later took part in the South African War, in 1902, and for his services received the Queen's medal with two clasps.

Dr. Thomas Buzzard, the distinguished physician, who has died in London in his eighty-ninth year, served in the Crimea and in Asia Minor. He was at the siege of Sebastopol and other affairs, and after the fall of Sebastopol he accompanied the Turkish Army to the Caucasus and helped to organise and conduct a base hospital at Trebizond. For these services he had the Crimean medal (with the bar for Sebastopol), the Order of the Medjidieh, and the Turkish War Medal.

General Charles Terrington Aitchison died on Sunday at Redcliffe Gardens, Kensington. He entered the Indian Army in 1842. In 1844-5 he served in the South Mahratta country as field engineer, and for his services obtained a "mention." In 1856-7 he was brigade major with the Persian Expeditionary Force, and was again mentioned in despatches, being thanked by the Government of India, and awarded the medal with clasp and the brevet of major. During the suppression of the Indian Mutiny he was employed in the Southern Mahratta country. He was created a C.B. in 1875, and from 1877 till 1884 was in command of the Bombay District, being placed on the Unemployed Supernumerary List in 1887, and advanced to the full rank of general in 1889.

Dr. Alfred George Lefroy, Bishop of Calcutta and Metropolitan of India, died in Calcutta on New Year's Day in his sixty-fifth year. He was a son of the Very Rev. Jeffrey Lefroy, Dean of Dromore, and was educated at Marlborough and Trinity College, Cambridge. He spent the whole of his ministerial life in India, going out in the year of his ordination to work with the Cambridge University Mission in Delhi. He was appointed head of the United S.P.G. and Cambridge Mission in Delhi in 1891, and after some eight years' strenuous work in charge of that mission he was consecrated Bishop of Lahore, and in 1913 he went to Calcutta. Two years ago he visited the troops in Lower Mesopotamia, and was warmly welcomed by them. He was a great linguist, and had a wide knowledge of the religions of India, and the Moslems of that country especially held him in regard.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

FRIDAY, JANUARY 10, 1919.

EGYPT AFTER THE WAR.

Several weeks have passed since the report that the Prime Minister of Egypt had resigned reached this country. In the letter which we publish in this issue our Cairo Correspondent, writing ten days after Rushdi Pasha had tendered his resignation, refers to the Ministerial crisis as still unsolved, and in the absence of further news on the subject it has to be inferred that the Sultan remains unwilling to agree to any change in the Presidency of the Council of Ministers. His reluctance is not unnatural. Sir Hussein Rushdi Pasha has been Prime Minister throughout the war, and as he has combined with that office the portfolio of the Interior, he has added to his major responsibility the burden of a difficult administrative post. Writing in the latter part of 1917 our Cairo Correspondent bore witness to the fact that he had acquitted himself of his task in a manner which evoked on all hands the liveliest admiration. "The past three years," our correspondent added, "have been years of acute stress and anxiety. It cannot always have been easy to conciliate the various interests concerned, meet the requirements of the military regime and content all parties, yet under the able direction of its President the Cabinet has always contrived with dignity to strike the happy medium, and at no time has there been any friction or any trouble of any description. Rushdi Pasha has served Egypt and Great Britain so well, and has displayed such unique qualities, that it is sincerely to be hoped that some means will speedily be found of lightening his task, which under existing conditions is stupendous for one man, so that he may be enabled as long as possible to devote to the service of the State the unflagging energy, courageous initiative, and sound judgment of which he has given proof." It will be easily understood that neither the Sultan nor the British Government desire a change in the premiership at this particular stage. Egypt has had a wonderful record during the war, and just at a time when notable developments are pending, in the economic as well as in the political sphere, it is most desirable that the country should have at the head of its affairs a man of the calibre and prestige of Rushdi Pasha.

No official statement of the reasons which have prompted the resignation appears to have been issued in Egypt. Rushdi Pasha's loyalty and the courage with which he has faced all the problems with which he has been confronted during his tenure of office are guarantees that he has taken the step under the genuine conviction that he is doing the right thing. From the frequent consultations that have been held since the resignation and from the delay on the part of the Sultan to accept it we may infer that neither side despaired at once of being able to adjust what must have been at worst a misunderstanding. The war has not only imposed a great physical strain upon statesmen and administrators: it has also raised expectations in the hearts of most people who, now that peace is within sight, are impatient to see them realised at once. The British Government can hardly have failed to appreciate Egypt's peculiar position. Two forces have been at work to determine her attitude during the last four years—the phenomenal prosperity of the country and the efficient manner in which the two Sultans and Rushdi Pasha's Cabinet have played their parts, loyal to the British connection, and recognising that the interests of Egypt were being defended alike in France and in Palestine. At the same time, it would be idle to suppose that the spirit that has stirred the nations of Europe had not also permeated to the banks of the Nile. Hopes have, no doubt, been formed in Egypt, and have even battened on a silence that was fortuitous, but which may have been regarded as giving consent. In the midst of a sudden crop of small States to which no one seems to dream of denying the fullest autonomy, some of the wisest heads among the Egyptians may have been attracted by the idea that with this general lowering, as it were, of the standard of constitutional development of independent nations there must be a proportionate change in the constitutional history of Egypt. To what extent such opinions have taken hold of individual Ministers has not been revealed, but we can imagine that in the absence of a perfectly frank exchange of views between the Cabinet and the British authorities—the "heart-to-heart talks" that President Wilson is finding so useful—the ground will have been prepared for misunderstandings. It was not to be expected that the British point of view should be perfectly understood in Egypt without any explanation. The necessity for bringing to England the Prime Ministers of the self-governing Dominions in order that both the Home and the Overseas Governments might have the advantage of frank discussion has been appreciated, and on all sides testimony has been borne to the valuable results. It would have been a graceful tribute to the services rendered by Rushdi Pasha if an invitation had been issued to him to come to England, in order that the British Government might take him into its confidence with regard to the proposed constitutional development of Egypt.

From India, from Ireland, and, perhaps, from Egypt, the attempt may be made to suggest to the Allied Conference some incongruity between the principles to which the Allies stand committed and Great Britain's attitude towards the three countries. But Britons have nothing to fear from the challenge when it is submitted to an informed and impartial tribunal. For rhetorical purposes it is the fashion in some quarters to point to Egypt as enjoying in the past complete autonomy under the suzerainty of Turkey, and to adduce as a retrograde step the tutelage in which she is now held by Great Britain. The false analogy ignores the servitude of the people that masqueraded under the name of autonomy and the personal liberty that they now enjoy, thanks to the presence of the British in Egypt. The very form of government in regard to which the critics claim the right to determine the exact gradation under which the country shall come is a British institution unknown to the Egyptians in the days of their so-called autonomy. They ignore, too, the evidence of history, which has proved how disastrous to the people have been the efforts of Egypt at self-government, however lucrative the process may have been to the governing classes. If the war has taught the nations anything, it should be to distrust shibboleths. Self-government is a worthy goal, but it loses all its merit, if it is to be synonymous with reaction, disorder, and economic retrogression. As the term is understood by some Egyptians, it means complete freedom to legislate without responsibility for the results, and without bearing any of the burdens that fall on self-governing States. Their whole political horizon is bounded by the Legislature; they give no thought to all the other things that are required to bring a country self-respect and prosperity, and have little patience with the conscientious efforts of Great Britain to pilot them along the road of real statecraft. Rushdi Pasha, we may feel confident, has no thought of associating himself with these extremists. But he may realise what expectations have been formed in the country, and may be disappointed at the pace at which Great Britain is setting out to meet them. If this should be the case, there can be little doubt that the misunderstanding can be satisfactorily adjusted, if sufficient care is exercised in explaining the British point of view, which is, after all, the one to which the judgment of the Allied Conference must subscribe.

LABOURS OF HERCULES.

"Progress of Education in India, 1912-1917." By H. Sharp, C.S.I., C.I.E., Educational Commissioner with the Government of India. (Calcutta: Superintendent of Government Printing. Price Rs. 3-10, or 5s. 6d.)

In this volume Mr. Sharp summarises the results and the experience gained during five years in what is probably the most arduous task ever consciously undertaken in the history of the world, the development of an educational system which shall give the Indian millions a reasonable prospect of realising their latent capacities. The organisation he describes is vast and complex: it does not move swiftly or easily towards the goal; it rumbles, and creaks, and groans, and every now and then it seems to be hopelessly jammed, but when the experience of even so short a period as five years is studied as a whole the verdict must be that it moves. Such a study is made almost easy as the result of Mr. Sharp's labours; he handles the mass of repulsive, and sometimes sordid, detail in a workmanlike manner; his summary is eminently sane and fair, and his treatment of each successive topic inspires confidence in the reader. We have not the space to follow him through all the branches of the subject, and we shall confine our remarks to what appear to us to be the central problems of secondary and primary education.

The Indian Government began by providing the kind of education which was in demand, not the kind of which the country stood most in need. The demand was for a literary education, equipping the youth of the upper and middle classes for the law and for Government service, and as everyone knows it has been met with very fair success; the best of the Indian graduates are very good indeed, the rank and file are by no means to be despised, and the result is seen in the great improvement which has been effected in the work of the law courts and throughout the upper ranks of the administration. But this initial success has brought its Nemesis. The universities, moulded originally on a bad model, are not yet what the country needs: the colleges are clogged with hopeless aspirants for a degree, and the secondary schools are cramped and blighted by the excessive domination of the university courses. Despotism could cut the knot by restricting matriculation, but despotism has long been dead in India, and the practicable lines of improvement consist of university reform, development of vocational education, and establishment of the independence of the schools. In each of these lines Mr. Sharp is able to record an advance. During the last five years new types of universities have been worked out, and two of them have actually come into existence; they are certainly more promising than the old, but they are still experiments. The remaining universities are marking time pending the report of the Commission which is sitting in Calcutta, and from which so much is expected. As to vocational education the outlook is definitely hopeful: agricultural colleges are still in the stage of trial and error, but many mistakes have been rectified, and they are beginning to win their way; commercial education has made real progress, and in regard to some technical and industrial institutions Mr. Sharp's language is almost enthusiastic, while further progress may be looked for in this branch as the result of the labours of the Industrial Commission. The great hope for the schools is the substitution of a leaving examination for the ordinary university test; this reform still meets with strenuous opposition, but it is definitely if slowly gaining ground, and while there are difficulties at every step we may now look forward to a gradual approach to the ideal—secondary schools giving a sound education complete in itself, but also opening a door to further effort, whether at the universities or at institutions providing the much-needed training for industrial, agricultural, and commercial life.

In regard, then, to secondary education, the machine is moving, though slowly, on the right lines. The position of primary education is less satisfactory. At first there was no demand for anything of the kind, and the courses were shaped as introductions to the higher classes; the country is now beginning to feel the need for courses which shall be complete in themselves, and shall produce better peasants in the next generation, but of such courses there is as yet very little sign. Mr. Sharp says definitely that no solution is yet in sight; the curriculum depends on the quality of the teachers, the staff can barely cope with the present courses, inadequate though they are, and so primary education resolves itself largely into a system of day-nurseries, where young children are sent to school to be kept out of mischief, and from which they are taken away before they can learn anything worth learning. Most of the effort is undoubtedly wasted, and while political pressure may cause much money to be spent on large programmes of "expansion" the country is not getting appreciably nearer to the goal. As Mr. Sharp says, "it is impossible to rest content with an expansion of mass education on present lines, or with a system under which a large proportion of the pupils are infants stagnating in a crêche; the remainder glean only an acquaintance with the three R's, and only a small residue continue to the stages where some of the fruits of this labour can be reaped." That diagnosis may be accepted as accurate, and the only speedy remedy would be expenditure on improving the quality of the teaching on a scale which India is simply unable to afford. To quote Mr. Sharp again: "It is on economic progress that the future rests" India is poor because she is uneducated: she is uneducated because she is poor; and until adequate teaching is available the talk of compulsion is mere fustian. Here we stand on the solid ground of fact, and here we may fitly take leave of the subject, for neither statesmen nor politicians will do any good until they have learned that lesson and realised all that it implies.

THE KHALIFS DURING FOUR CENTURIES.

(From a Correspondent.)

Discussing certain developments that are likely to take place in the Near East in the immediate future, an Englishman recently expressed some interesting views regarding the Khalifate and the attitude towards its retention by Turkey assumed by certain Moslems. He spoke from a long experience of Turkey and the Turks, and as his opinions will probably be of interest to not a few readers of The Near East, they are here reproduced.

It will be remembered that, after the conquest of Egypt, Sultan Selim induced Mohammed, the twelfth Khalif of the family of Abbas, solemnly to transfer the Khalifate to the Ottoman Sultan and his successors. With the transfer, the insignia of that high office, the Sacred Standard, the Sword and Mantle of the Prophet, were taken possession of by Selim, who by right of conquest alone became Khalif, Vicar of the Prophet of God, Commander of the Faithful, and Supreme Imam of Islam. But from that time no less than sixteen of his successors in the Khalifate have been strangled or otherwise done to death. Within the last fifty years one Khalif has been murdered and two have been deposed, and quite recently, the Heir Apparent, Yussuf Izzedin, was murdered. One report says that he was strangled—and that would be quite in keeping with the old tradition: Amurath had no less than nineteen of his sons thus killed!

In all cases these Khalifs have been deposed or murdered by rabble mobs of Janissaries or discontented, rebellious Ottoman Turks. Had they been deposed by Christians, Moslems everywhere would have been up in arms. But when the Turks see fit to act thus Moslems in India, or elsewhere, have no objection; there is not a single instance of any protest. Onlookers may at least feel surprise at this quiescence.

The selection of the Khalif, the supreme Imam, Commander of the Faithful, has, in practice, ever been in the hands of a discontented people. Even the late Sultan was practically the nominee of the C.U.P. There is no evidence of the Moslems of India—or elsewhere—ever being consulted; no evidence that they have ever united to protest against the cruelties of a Khalif, or the irregularities of his ministers; no evidence of a protest on their part against the murder of the Vicar of God; no evidence of a protest against the domination of the Turk at Mecca or Medina; no protest against the attempts to suppress the Shereefs

of Mecca, the descendants of the Prophet. All this cannot appear otherwise than strange to the outsider.

Has not the time come for Indian and other Moslems to have some voice in the selection of the Commander of the Faithful? Would it not be in the best interest of the Sultan of Turkey that he should be relieved of the responsibility of a lordship over people who, though they may possibly have some sympathy with him personally, have none at all with his race? It would certainly be to the interest of Islam.

These questions are admittedly for Moslems alone to answer. But if the Moslem world should decide that the Khalifate must still continue at Stamboul it might bear in mind the excellent example provided by the case of the Vatican as the supreme head of the Roman Church. As to temporal rule at Constantinople, although that city may continue to be the City of Islam, its rule and government must be in the hands of some Power that can—and will—afford protection to the unfortunate peoples of Turkey, Christians and Moslems alike. For it is those people who will, in all probability, be called upon to protect not only the insignia of the Khalifate, but the Khalif himself.

CHAOS IN THE INDIAN MAIL SERVICE.

To the Editor of THE NEAR EAST.

Sir,—Is it not high time that postal communications with India should return to normal conditions? Our last mails, posted in Calcutta November 25, reached London January 3, after a hiatus of three weeks. An Indian correspondent of mine quotes a Reuter's cable to the effect that "the resumption of a weekly service was under discussion"; but no decision has yet been arrived at. The official list of sailings, which appeared on January 3, gives the dates of outward mails to most of our Colonies, while those of India were "not fixed"; and the P. and O. sailings are conspicuous by their absence. Apart from the huge volume of commercial transactions between Great Britain and India, there is scarcely a family in this country which is not inconvenienced or kept in suspense by the chaotic communication with India and the Far East.—I am, etc.,

January 5. SIGMA.

[An announcement regarding the Indian mails—made since our correspondent wrote—will be found on page 25.—ED.]

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I ask your indulgence for the following few words, written in answer to Miss M. E. Durham's letter in your issue of November 8? Miss Durham evidently is misinformed when she makes such statements regarding the population of Northern Epirus (Miss Durham calls it Southern Albania), their character, and the representation of Mehmed Bey.

First, Miss Durham ought to know the Turkish statistics of 1908 (See "La Questione Rumeliote," by Amadori Virgili, 1908), which gives the following numbers for the population of Northern Epirus: Greeks, 125,000; Mussulmans, 100,000. If we subtract the many thousands of Turks that are naturally included with the Mussulmans, we readily see that the Greeks form two-thirds of the population of Northern Epirus.

Secondly, Miss Durham does not take into consideration the very latest developments in the history of the Epirotic question—namely, the fact that 1,800 pupils have been registered in the Greek schools of Koritza within two days of their opening. Is not such a fact a true sign of the purely Hellenic aspirations of the Koritzans? And how about the statement of an Italian official, published in the *Tribuna*, of Rome? He says, from experience, that "the Greeks despise the Albanian language, while the Albanians do not care for it." Does Miss Durham want any more proof of the national sentiments of Northern Epirotes?

Thirdly, Miss Durham tries to evade the whole argument by calling the Northern Epirotes renegades. There cannot be the least doubt in the mind of any disinterested person that the Northern Epirotes who support one Greek college and 270 Greek schools, with 386 teachers and 13,982 pupils, of whom many are the sons of the Albanian beys and aghas, are the purest part of the Hellenic race, when, furthermore, we take into account their sacrifices for the Hellenic ideals and institutions during, especially, the last centuries.

As to the 60,000 Albanians being in America, Miss Durham is again misinformed. There is an Albanian Anoristion here in America, with about 1,000 members, while, on the other hand, there is also a Pan-Epirotic Union, with about forty branches, and representing 30,000 Epirotes in America, most of whom come from that disputed territory—namely, Northern Epirus.—I remain, etc.,

EVANGELOS C. DESPOTES,
Secretary of the Pan-Epirotic Union.

7, Water Street, Boston, Mass., U.S.A., December 16.

[The correspondence on this subject was closed to correspondents in this country two months ago, but we feel constrained to admit the above letter, from the United States, as time had not been allowed to the Pan-Epirotic Union to express its views.—ED.]

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

One evening last week at a London terminus I ran across a party of soldiers who were obviously in the best of spirits. They had Union Jacks in their caps, and they were all beaming with happiness, so that it did one good to look at them. And presently I found myself in conversation with a couple of them, and learned that they were just home from Turkey. They had been captured in the south of Palestine, and had been held prisoners at Aleppo; and when they found that I knew the country they spoke out freely about it. Soon I learned that out of a batch of over 120 of them only 22 had survived the imprisonment. Naturally I seized the opportunity to ask whether they had been treated badly by the Turks. "No," one replied. "They didn't treat us badly—not from ill-will. They treated us just as they treated their own men. But they are an ignorant lot, and didn't know how to treat men at all." Then another man struck in. "That is so," he said. "And malarial fever killed us off and gave us a right down bad time. But the Turks had it, too." That struck me as a decent, manly way to speak of one's enemies—which, of course, is just what one would expect of our own men of the right type, such as these men were. I don't wish to whitewash the Turk. To tell the truth, I am pretty well disgusted with him. But I do want to get at the truth about him—if that be possible! And such evidence seems to me valuable.

***

This reminds me of some remarks made by another ex-prisoner of the Turk, an officer this time. He was in durance vile at one of the "best" camps in Asia Minor, and seems to have had comparatively good luck in most ways; so that he was able to see the humorous side of his captivity. And, he assured me, it was "quite reminiscent of comic opera at times." The guards were typical of the country in its old days: venerable gentlemen in still more venerable garments and carrying "rifles" of a positively astonishing antiquity. My informant described the changing of sentries as an intensely funny ceremony. One old Pistol would slouch up to the post of observation, and the other, whom he was about to relieve, would detach a ragged belt from his middle, and draw from some obscure pocket, or fold, of his nether garments a cotton bag containing one or two cartridges, and hand them over to the "relief." These things constituted his badges of office, as it were; and, having made them over, Pistol Number Two would then withdraw, presumably to the sanctity of his harem. The old gentlemen appear to have inspired a feeling of humorous liking in some of their "prisoners." My friend told me with great enjoyment of seeing one of the veterans calmly tilt his rifle upside down and shake from the barrel the tobacco which he kept stored there. It all sounded so like the *old* Turkey that I found myself cursing the Envers, Talaats, and the rest of the "Young Turks" who have done the country to death.

***

An officer writing from Persia complains bitterly of the heartless and revolting cruelty shown by natives of that country and of Mesopotamia to animals. "I have often," he writes, "had to shoot donkeys and camels left on the roadside in a pitiable condition, their flesh ripped open.

the bones bare to the light." Most travellers in the East could bear witness that this statement is no exaggeration of what one may see along any much-used caravan route; and most of us have felt our blood boil at the sight of the poor dumb brutes' sufferings. Yet it would be unfair to condemn the owners of these poor animals for failing to put them out of their misery. For, as I was told by an experienced traveller when I protested indignantly against leaving a wretched donkey to die in the mud—my first sight of the kind—the Moslem regards it as sinful to take life in such circumstances; so that in declining to do so he is only acting up to his lights. My friend told me that on one occasion, soon after his arrival in the East, he shot a mule that had been left to die by the roadside and was being tortured by vultures. The result was that he was mobbed and very nearly killed himself as a "wicked" man. And never again, he assured me, would he care to risk such an experience.

***

The callousness of the Oriental in the matter of his hard-working beasts is, however, an ugly feature in his character. Probably by reason of the rough time that he himself has, the muleteer is the worst offender; and he is at his very worst, I think, in his apprentice stage. The ship's boy, we are told, lets off his temper on the ship's cat, being himself the recipient of all the ship's company's kicks and abuse. Similarly, the muleteer's boy behaves like a little fiend to the poor mules and donkeys in his caravan; and if any particular donkey is unfortunate enough to be told off as his particular property, words fail me to describe his treatment of the wretched little beast. To see the youthful *munkari* sitting far back on the diminutive animal, prodding it incessantly—literally incessantly, mark you!—with a stout needle, or else with a piece of sharpened wood, is a sight to make your gorge rise. The animal's rump always shows raw and bleeding patches from such treatment. I still remember with satisfaction certain transactions in which young muleteers and an English riding whip made acquaintance, on my introduction. This cruelty to the animals robs caravan travel of much of its pleasure, and it is hard to save the dumb creatures, try how one may. The muleteers seem to be constitutionally incapable of realising that a mule, let alone a donkey, has any feelings at all.

***

A football headline in the "Sudan Times" reads:—

ARTILLERY 0, CAMELS 4.

All I can say is that if camels have taken to playing football, I trust I may never form one of the opposing team. Imagine camels in a "scrum." I am not surprised to read that the "camels asserted their superiority." It was plucky of the Artillery to face them!

CORSAIR.

PRESS ON THE NEAR EAST.

The "Problem" of Syria—

Writing in the *Observer* (January 5) on the subject of "Syria: A Problem of the Near East," M. Philippe Millet declares that there is little doubt that the provisional arrangement made between France and England in 1916 "would be unsatisfactory to all the parties concerned, not excepting the inhabitants of Syria, were they carried out without some important alterations." He continues:—

Take Syria first. According to what is known of the 1916 arrangement, Syria was to be divided into two parts, one (the Lebanon and the coast) to be placed under a sort of French control, the other (Damascus, Aleppo) to be made an entirely different State attached to the Hedjaz Confederacy, and still under some remote French influence the nature of which remained undefined. A somewhat artificial boundary had been traced in the south in order to divide the French from the British zone. Now Syria consists, of course, of very heterogeneous peoples, as the Maronites have disagreed for centuries with the Mohammedans of Damascus, with the Druses of the Hauran, or with the Ansahries, not to mention other sects of an even more curious nature. These peoples are plainly quite unable to give up murdering each other unless some civilised Power acts as an umpire between them and undertakes to train them until they are ripe for self-government. Still, there is an unmistakable desire among them to preserve the unity of Syria. History, geographical conditions, community of language and of civilisation, have created a link between them of which they will grow more and more conscious as time will pass. It would be a fatal mistake to treat Syria as a territory of Central Africa and divide it in such a way that its future political unity became impossible.

The cutting up of Syria would be equally unsatisfactory from a purely French standpoint, says M. Millet. He proceeds to cite France's interests in that region, including the "moral protectorate . . . . over the Maronites," and continues:—

But it is only too obvious that if Damascus and Aleppo were made a sort of dependency of the Hedjaz instead of remaining politically a part of Syria, France might find herself shut out from the very part of Syria where French railways were the most important before the war, and where French is the most commonly spoken of all European languages. She would remain at the door instead of being allowed to enter the building. Suppose she were to send some technical advisers to the Syrian Government: these would be unable to frame a general programme of public works for the whole country. The task of developing Syria would become an impossible one.

M. Millet is of opinion that "the arrangements in question" do not appear any better from a British standpoint.

If France has a vital interest in not being expelled from the Eastern Mediterranean, the interests of the British Empire in the Near East are perhaps even more vital, as Egypt and Arabia are now more and more the very bulwark of India. No other influence than the British must therefore be allowed to penetrate the Hedjaz, which is the kernel of the Arabic world. Moreover, Britain must be in a position safely to connect Egypt with Mesopotamia by means of a strategic railway, over which she must exert a complete control. Finally, it is doubtful whether Mosul, which under the 1916 arrangement was to be attached to the French zone, ought to be separated from Baghdad. For all these reasons it seems that the strategical defence of the British Empire makes it necessary to come to some more definite understanding concerning the Hedjaz, Palestine, and Mosul, instead of leaving these points in the dark, as appears to have been done in 1916.

Fortunately, it is not too late to correct past mistakes.

In the first place, the borders of Syria must be traced according to history and geography, so that at no future moment the Syrians may complain that France and Britain have disregarded their true interests. Then a clear delimitation must be made between what is to be under French influence and what is to be in the British zone. Though neither France nor Britain contemplate establishing colonies or protectorates in that part of the world, it is clearly vital to both of them that their local agents should have no opportunity of fighting each other, as local agents are so fond of doing. This would certainly happen if Damascus, for instance, while being included in a so-called French zone, should at the same time keep certain links with the Hedjaz, a kingdom placed under British influence. It would be much the same if the future British strategical railway going from Egypt to Baghdad were to cross a territory placed under French influence. Grievances would have no end. Apart from empty diplomatic formulas, nothing is certainly more menacing to the future of Franco-British happiness than the existence throughout the world of worthy local agents of both countries who try to be zealous.

M. Millet concludes:—"On the contrary, a fair and clear settlement of the Near Eastern question would conduce more than anything else to bring both countries closer to each other. It is in the Near East that the local Franco-British co-operation which ought to take place in all parts of the world could best be started."

—And the Future of Palestine.

The future of Palestine is dealt with in a couple of notes in the *Zionist Review*. The first refers in complimentary terms to the visit of Prince Feisul, and goes on to say:—

In the course of an interview given to a Reuter correspondent the Prince explained his attitude and that of the Arab kingdom to the question of Palestine. He emphasised the complete solidarity of Arab and Jewish interests, and made it clear that from the point of view of the new Arab kingdom a Jewish Palestine will be very welcome. It is in the highest degree satisfactory to know that a Judæo-Arab entente has been established. The two national claims will strengthen each other at the Peace Conference. Both are equally threatened by the iniquities of the secret treaties of 1915 and by any attempt to solve Near Eastern problems on lines which take no account of the rights of renascent nationalities. A Jewish Palestine assured of the friendship of its Arab neighbours will have the best guarantee of the possibility of peaceful development; and the new Arabia will stand to gain much from the assistance that Jewish energy and resource can afford it. Nor is a Judæo-Arab entente a purely mechanical or material arrangement, for there are great spiritual possibilities in the closer contact of two civilisations of kindred origin which have in the past contributed jointly to human progress.

The second note deals with the highly important subject of the boundaries of Palestine. It runs:—

One question which demands adjustment between Jews and Arabs is that of the boundaries of Palestine. There is here no inherent divergence of interests, and on the basis of the satisfactory general agreement which has been established a proper settlement of this particular question should present no difficulty. The interests which stand in the way of such a delimitation of the frontiers of Palestine as will afford adequate room and security for Jewish development are precisely those which are inimical to legitimate Arab demands. In this matter, as in others, Jews and Arabs must agree among themselves and stand together against the common foe. From the Jewish point of view the aim must be to secure those boundaries which are dictated by history and by economic considerations. We note that this demand was put forward at a recent Jewish meeting in Rome, at which the American Ambassador was present and the British Ambassador was represented.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

News from India regarding the condition of the various piece goods markets has been much more reassuring during the past few weeks. Private advices received by telegram intimate that the sensational slump which took place on the cessation of hostilities has been followed by a reaction. In many lines of regular imports a recovery has been recorded of 15 to 20 per cent., and this, it should be noted, has taken place in the middle of the slack season. Prices are still far below Manchester levels, and it is not likely, therefore, that fresh contracts will be made until a readjustment of values comes in sight. Reports indicate that the fall in prices may squeeze out weak holders, but the stronger houses are holding on for an upward movement.

***

Should the winter rainfall be satisfactory there is every reason to expect a considerable improvement, because stocks are not excessive. Distribution has been slow, and this is, no doubt, due chiefly to the disinclination on the part of consumers to accept the higher level of prices which has been established. The sudden fall was largely due to sentiment aroused by the end of the war, but it was also the natural result of reckless speculation in all kinds of piece goods. Markets should gradually become steadier, and, while the outlook for the moment is not without anxiety, there is no reason to anticipate a state of panic.

***

The suggestion was made when the members of the Greek Commercial Mission were in this country that it would be an excellent thing for the development of Anglo-Greek trade relations if a British Manufacturers' Exhibition were to be held in Athens in the spring or autumn of the present year. This plan has been approved by the Overseas Trade Committee of the Federation of British Industries, and steps are now being taken to organise the exhibition. I understand that M. Venizelos has offered the Federation the free use of the Zappeion Exhibition building, and as much land at Phaleron as may be required. It is suggested that the exhibits of British finished articles should be shown in the Zappeion building, and that the land at Phaleron should be utilised for showing machinery at work, agricultural tractors, for instance. The probable date of the exhibition will be some time in the autumn.

***

I need scarcely say that I am in entire agreement with the idea of an exhibition. There is nothing like seeing things for oneself, and, provided the exhibition contains as good a selection of British manufactures as we may reasonably expect, its influence on Anglo-Greek trade relations should be very great. Thanks to the Mission, many of the most important Greek business men are quite well aware of the wide field covered by British manufacturers, and also, let us hope, of the superiority of British articles over similar products from other countries; and the good work done by the visit of the Greek delegates should be completed by the exhibition, through which British manufacturers will be able to come into contact with practically every Greek importer.

***

The arranging of such an exhibition is naturally a long and expensive business, and it would be more than a pity, once a really representative collection of British goods was in the Near East, if the occasion were not seized to exhibit it in other countries in that part of the world. I understand that there is no intention of letting the opportunity pass, and that, after the exhibition has been on view at Athens, it may be moved to another important centre in the Near East. Bucharest would seem to suggest itself in this connection. I am sure, at any rate, that the Federation could select no centre in the Near East where their enterprise would be more likely to be pre-eminently successful.

***

It is greatly to be hoped that the Government in relaxing its control of commerce will avoid pitfalls similar to those which have caused difficulties in connection with military demobilisation. There is very little doubt that feeling in business circles is as pronounced as it seems to be among some of the soldiers, though it naturally would not show itself in the same way. What the Government must bear in mind is that expert advice, while admirable for war purposes, carries with it disadvantages, if only that it may breed the suspicion that those who are called in to advise cannot help bearing their own businesses in mind.

***

By way of illustration, let us suppose there was a Controller of Peg Tops, a business in which he himself was interested, and that in due course he took control of all peg tops in the country. After State requirements have been satisfied, there must always be the danger that the surplus will be dealt with in a way that may be more advantageous, say, to a single business than to the community as a whole. At least, the undue retention of Peg Top Control will cause some people to think so.

***

I am glad to hear that Mr. Robert Naville, Director-General of the Banque Franco-Serbe, has arrived safely at Salonika with the staffs of the Serbian offices, en route for Belgrade, where it is hoped to reopen the Bank in the very near future.

Another welcome item of news is that Mr. Arthur Nias and Mr. Steeg have arrived safely in Constantinople.

***

The interesting announcement is made that the International Sleeping Car Company propose to re-establish the Orient express from Paris to Constantinople immediately conditions render it possible. It is hoped that the service will be started by the summer—if not earlier. Before the war the route from Paris lay through Strassburg, Munich, Vienna, Budapest, and Sofia; but when the service is resumed it will not touch German territory. The Orient express will run to Milan from Paris by the Mont Cenis or Simplon route, and then through Venice, Trieste, Agram, Nish, and Sofia to Constantinople. From Nish a section will run to Uskub, Salonika, and Larissa, to Athens.

***

The re-establishment of the Orient express to Constantinople will be only the first step in the development of communications with the East. It is proposed to extend the service to permit of direct connection between France and the Holy Land, and it is thought that by the end of this year there will be a direct service between Paris and Jerusalem. The final stage will, of course, be reached when the Baghdad Railway has been completed, and if and when London, by a Channel tunnel is in direct communication with Paris. It will then be practicable to travel direct from London to the terminus of the Baghdad line near the Persian Gulf. In this connection it may be noted that while the general manager of the Baghdad Railway Company recently stated that the line might possibly be completed within less than two years, the view has been expressed elsewhere that it will be finished much earlier, so that the day may not be far distant when it will only be necessary to proceed to Paris to travel straight to Baghdad without a change.

***

While on the subject of a route to the East, it may be pointed out that the war has been responsible for interesting developments in another direction, for, owing to the submarine campaign, it was found desirable to shorten our lines of communication along the Mediterranean, and a new way overland to the Near East was adopted from Cherbourg to Taranto, where a new port was constructed.

***

I learn that while Greece is short of most commodities, there are exceptions, notably inferior cotton shirtings, imported from Spain, and glass. These commodities are held to such an extent that attempts are being made to re-export them. It is said that there is enough glass in Greece for glazing purposes to supply the requirements of the country for over a year, but despite this there is such a shortage of glass on the market that people have had to take glass from picture-frames to repair their windows. Rather a piquant situation, is it not?

SUDAN TRADE NOTES.

The Gum Market.

(From Our Own Correspondent.)

Khartoum, December 7.

There are only two main sources of the supply of gum, the Anglo-Egyptian Sudan, and Senegal. The qualities of gum found in the two colonies are slightly different, and they are used for different purposes. The French colony exports almost entirely to France alone, and it is believed that the gum is largely used for the preparation of silk. It has no doubt uses similar to the Sudan gum, as for instance for sweets and medicines, but the two gums find on the whole distinct markets. The greater part of the Sudan gum was before the war exported to Hamburg, whence it was sent all over the world. The reason why it went to Hamburg was that the trade in the Sudan was chiefly in the hands of German and Austrian merchants who paid off their debts to the banks in Germany by consignments of gum, or found that they could obtain advantageous shipping terms from their compatriots at Hamburg under the subsidy system. The result was that the trade which had previously gone to Hull was transferred to Hamburg, and the control of the market was in German hands. A recent note by the Sudan Chamber of Commerce draws attention to the methods of the German agents, and the inference is that the so-called agent was frequently a principal acting on his own behalf as against his client whose money he used to enable him to "rig" the market. For instance it is alleged that it was the custom for such and such an agent to quote a "price of the day" to his clients, when as a matter of fact no such price existed, and the price was an arbitrary one fixed by the agent for the purpose of doing business, and that he would then sell to his clients at a price that he had himself fixed.

The outbreak of war compelled the firms who deal in this commodity to find new agents, and the result has been that two firms have established their own agents at Khartoum to buy for them. These two, Messrs. Laing and Sons and Messrs. A. G. Kingston and Co., take about 25 per cent. and 20 per cent. respectively of the crop, and there is a Greek firm, Messrs. Caraponyoti, which has an office in London and deals largely with London that has perhaps another quarter of the total crop. This leaves but a small amount for the few other merchants who deal in gum.

The new season has barely begun and it is too early to venture to say how the gum market may run. It is said that the stocks in Great Britain are considerable, but as trade opens up with greater shipping facilities it is not unreasonable to suppose that the stocks will be taken up by countries that have been unable to obtain their requirements recently. Certainly the demand from America seems to indicate that the supply of chewing gum can be augmented. It will be to a great degree the question of shipping that will affect the future of this commodity, and if the conditions of subsidised shipping be continued by the Germans as before there is still some risk that this trade, a small one, no doubt, but at present one that can be kept entirely in British hands, may lapse to the Germans again. It is to be hoped that the efforts of British firms, and the conditions of shipping after the war, will combine to keep the business in British hands.

The Millet Harvest.

The price of millet during the end of October and in November rose very considerably, so much so indeed that the poor were beginning to suffer, and it seemed possible that measures might have to be taken to control the price with greater precision than had hitherto been necessary. Gradually, however, when it became known that there would be no great demand for export, as the army in Palestine would not require any supply, prices fell, but still remained much higher than the circumstances seem to justify. There is said to be a very large quantity stored in the villages where the millet is grown, but it is not being put upon the market. As the new crop is gathered, and confidence increases, the price will be further reduced, and it is hoped that it will have a favourable effect on the cost of labour, which is at present very high, and disproportionately so to the value of it.

It is said that there is still a considerable dearth in Eretria, and if this is repeated in Abyssinia or in the northern parts of it, some local discontent may arise. In any case the population in the latter country is so great that assistance would be required on a scale far larger than the Sudan could meet, and the import would no doubt be controlled from the sea. Recent reports from the south give the impression that the local supply may suffice to feed the people though it may be necessary to distribute in some districts. The rain has fallen in some parts and the resultant harvest, if the rain continues long enough, will be of the greatest assistance, as without it the relief may extend to a considerable area, and the difficulty of transport in "fly" areas makes carriage of any large quantities extremely serious.

On the whole, as far as the Northern Sudan is concerned, there is little to apprehend, provided that the market is limited to the supply of local needs only. In the south it remains to be seen what the situation will be, but with care there should be no serious famine.

Trade Improving.

Khartoum, December 23.

After a considerable slump in trade the position has improved, and although there is not a brisk movement in the market, there is a great improvement on the stagnation of the last few weeks. It appears that the natives are beginning to understand that it will be impossible for pre-war conditions to return at once and they are resuming business.

Some apprehension has been felt over the supply of wheat flour in the larger towns of the Sudan. The price of the loaf in Khartoum has advanced very considerably, but the quality is better, and it is to be supposed that this will limit the consumption of wheat bread to those to whom it is a necessity as opposed to the natives who prefer to eat bread mixed with a very large quantity of millet. The prices of other locally grown comestibles have gone down, and meat is a great deal cheaper. This is due to a smaller demand from Egypt.

The price of millet continues to rule very high although it is not so excessive as it was. The new crop will be soon on the market and that should tend to reduce the price, but there seems to be a strong tendency on the part of the natives to store their crop against eventualities.

The London Chamber of Commerce has sent the following reply to a telegram from the Salonika Chamber of Commerce, which asked for its support with a view to the realisation of Greek ideals in Thrace and Asia Minor: "The London Chamber of Commerce sympathises with the tenor of your despatch, and has already come to an understanding on this subject with competent authorities."

ECONOMIC OUTLOOK FOR YUGOSLAVIA.

(From a Correspondent.)

An interesting series of articles appeared recently in *L'Esplorazione Commerciale*, of Milan, over the signature of Signor A. M. Annoni, entitled "Economic Yugoslavia." One fact appears prominently from this able review, namely the vast potential wealth of the prospective Yugoslavia. Bosnia and Herzegovina alone had a population in 1912 of 1,898,000 inhabitants, of which 85 per cent. were engaged in agriculture. Forty-six per cent. of the area of the two provinces is forest land, and yet they reared the following live-stock: horses, 222,000; cattle, 1,309,000; goats, 1,393,000; sheep, 2,500,000; pigs, 527,000—that is a greater number per head and per acre than any other country in Europe. Four-fifths of the rich forest lands was the property of the Austro-Hungarian Crown, and automatically comes as a legacy to the Southern Slav exchequer. Tre following are the chief towns of Bosnia and Herzegovina with their population in 1910:—Serajevo, 51,919; Mostar, 16,392; Banjaluka, 14,800; Tuzla, 11,333; Bijelina, 10,061; Senica, 7,315; Bihac, 6,200; Travnik, 6,200; Breko, 6,047; Dervent, 5,365; and Prijedor, 5184. Croatia-Slovenia had in 1913 an estimated population of 2,622,000, and Agram, the capital of Croatia, 79,000 inhabitants. Economic statistics are difficult to obtain, as they are all lumped under the rubric "Kingdom of Hungary." Esseg, the capital of Slovenia, had a population of 31,000.

To the foregoing must be added Dalmatia, a bone of contention between Italy and Yugoslavia. It had in 1913 a population of 667,648, or 52 persons per square kilometre, compared with Austria's 97, Hungary's 66, and Bosnia-Herzegovina's 37. Spalato (31,449), Zara (35,000), Obrovazzo (14,000), Sebenico (9,000), Ragusa (7,140), and Cattaro (5,450) are the chief centres of population. According to Signor Annoni, 90 per cent. of the people of Dalmatia are Serbo-Croats, and the remainder Italian.

TRADE WITH PALESTINE AND SYRIA

The Board of Trade have issued a general licence authorising the resumption of trade with Palestine and Syria as far north as a line from Alexandretta to Aleppo inclusive, and as far east as the Hejaz Railway inclusive.

An Order in Council has also been made the effect of which will be to allow the exportation to these territories without a War Trade Department licence of all articles other than those on lists "A" and "B" of prohibited exports, *i.e.*, of all articles except those the exportation of which to all foreign destinations requires a licence. It will still be necessary for an import licence to be obtained from the Department of Import Restrictions before arrangements are made to import from the territories any goods covered by the Prohibition of Import Proclamations.

The general licence, while permitting the resumption of trade, does not remove certain existing restrictions in respect of the payment of pre-war debts and the remittance of money for the purpose of subscriptions to a loan or capital issue or for the purchase of securities.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic receipts of the Egyptian Delta Light Railways, Limited, for the ten days ended December 10 amounted to £E12,991, making the total for the year £E245,412. The corresponding figures for 1917 were £E,10,866 and £E179,920.

Messrs. Lionda and Co., Ltd., have opened a branch office at Liverpool.

INDIA'S INDUSTRIAL DEVELOPMENT.

Effects of the War.

When the history of this war comes to be written at a time when it is possible to view the events of the past four and a half years from an unbiassed standpoint, it is certain that the remarkable stimulus given to India's industries by the exigencies of the struggle will be given high rank among the economic results of the war. Not to mince words, the past four and a half years have been to India on a small scale what the industrial revolution was to this country In 1914 she was in the main an agricultural community, with here and there important industries which mostly owed their origin to the initiative of British business men. Few people would have ventured then to predict a great future for India away from the land, for conditions in the widest sense of the word seemed unfitted for industrialism. Then the war broke out, and the circumstances that followed in its train changed everything for India, with the result that to-day the country, while only on the threshold of her development, has at any rate a firm foundation on which to build industrial progress. And it is this fact which makes it possible to look forward with something akin to optimism to the working out of the plans of the Industrial Commission. Had a similar attempt been made to develop the country before the war it is difficult to see how anything but failure could have attended it. At the best success would have been achieved only after a long period of waiting. It needed the spur of a great emergency to bring forth India's latent powers, and as it is, in consequence of the developments caused by the war, it may be anticipated that the adoption of the recommendations of the Commission will not be long in bearing results in the form of a rapid economic advance.

Causes of Progress.

Of the factors responsible for the progress made by Indian industries during the war one was, of course, the shortage of shipping, which necessitated strict economy in tonnage, and led the Indian Government to take steps to prevent the importation of commodities which were being, or could be, manufactured in the country by the diversion by means of the priority system and its control over home indents of all orders for articles from the United Kingdom and elsewhere to manufacturers in India and by the giving of assistance to individuals and firms desiring to import plant or to engage experts and skilled labour from home or elsewhere to establish new industries or develop old ones. Another was India's growing share in the war in the Eastern theatres which rendered desirable a great increase in India's output of war supplies in order to conserve the resources of the Allies. The work of co-ordination thus entailed imposed a heavy additional burden on the administration, and, eventually, early in 1917, it was felt necessary to set up a separate control with a view to the full development of India's war activities, and the Indian Munitions Board was accordingly established "to control and develop Indian resources with special reference to the needs created by the war." The success of the Board has been very remarkable, and when it is borne in mind that the Board's power to further the industrial development of the country has been limited to directions which would support war activities, a phase which, of course, covers encouragement to manufacturers by the diversion of orders from the United Kingdom and elsewhere to manufacturers in India, it must be admitted that the outlook is most promising.

In surveying India's war time progress it is necessary to divide what has been done under two heads—namely, the development of existing industries and the creation of new industries. As regards the former the position may aptly be illustrated by a few comparisons of purchases of certain manufactures with the figures for the year before the war. In 1918, for instance, 21,000,000 yards of Indian made khaki drill was purchased by the Government, against the small total of 260,000 yards taken for Army purposes in 1913-14. Purchases of grey and bleached cloths amounted to 9,000,000 yards, against 350,000 yards; of webbing and tapes, which were formerly mainly imported, to 49,000,000 yards; of flannel to 850,000 yards, against 32,000 yards; and of puttees to 1,500,000 pairs, against 37,000 pairs. Then the manufacture of boots for Government has increased to 2,000,000 pairs a year, against a total of less than 100,000 in 1913-14. This list might be greatly extended, but the examples given will suffice to show what has been achieved in the direction of utilising India's raw materials in India. In one case in particular this development has been specially gratifying, and that is in connection with Indian hides, which, as our readers know well, were mainly exported before the war to the enemy countries. In 1913 the exports of raw hides amounted to 1,132,384 cwt. while the exports of tanned hides only totalled 194,763 cwt. The military requirements for boots, referred to above, for harness, saddlery, and other things naturally led to a great increase in tanning in India, with the result that while the export of raw hides in 1917-18 was about a third of the 1913 level, the exports of tanned hides had risen to 361,674 cwt.

New Industries.

The policy that has been pursued with regard to new industries was explained at length by Sir George Barnes in a recent statement submitted to the Imperial Legislative Council in the course of which he said that the Board had paid special attention to the development of chemical industries in India, on the existence of which depended the possibility of the sound growth of indigenous industries, and to the development of what might be called "key" industries. Thus among the new industries are the manufacture of caustic soda, magnesium chloride, thymol, sandalwood oil, copperas, zinc chloride, and refined nitre. Ferro-manganese is now being produced in large quantities; micanite is being manufactured by two companies, and great progress has been made in the production of accessories for the textile and tea industries, and of silicate bricks for lining furnaces. Finally, every encouragement has been given to the building of wooden ships.

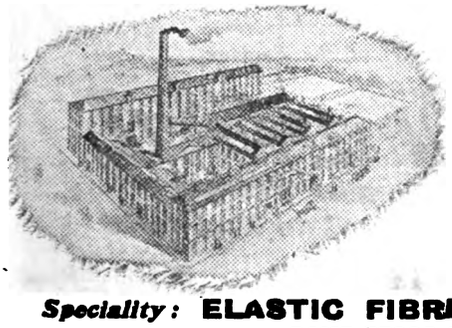
This brief sketch of Indian development under the stern necessities of war may fitly be closed by a reference to a notable speech made by Lord Ronaldshay recently in which he reviewed the industrial position in Bengal, and pointed out how the great demands for certain commodities had reacted in the direction of furthering the growth of other enterprises. A case in point is provided by the jute industry. Calcutta's export of bags increased from 367 million bags in 1913-14 to 803 million in 1916-17, and the industry's growth, he pointed out, had led to the establishment of subsidiary industries for the manufacture of articles required in the jute mills such as machinery, bobbins, plane tree rollers, etc., which were imported before the war. This process has been going on in connection with many other industries such as the tea trade, for instance, whose requirements of a million to a million and a half of tea chests will, it is hoped, henceforth be forthcoming from Bengal and Assam instead of being imported from Russia and Japan. For this production of tea chests it is necessary to have various subsidiary industries such as lead mills, and nail and rivet factories, and the progress in this direction may be gathered from Lord Ronaldshay's statement that the last gap in this chain is being filled in so that everything necessary for the construction of a tea chest will be produced in the country. It may be added that a feature of the progress in Bengal has been the encouragement given to cottage industries. Possibly this is a passing phase; it is to be hoped not, since its continuance would help to safeguard India from the industrial troubles that have been the lot of more advanced countries.

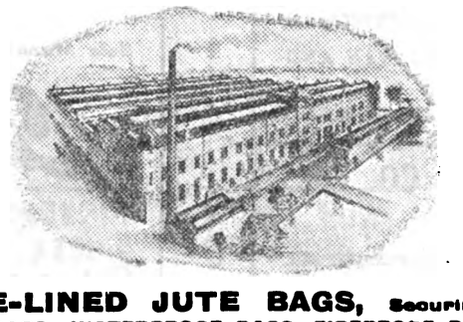
INDIAN INTELLIGENCE.

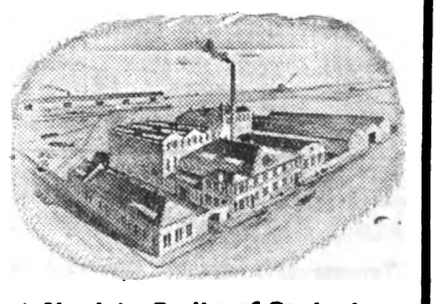
The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, dated January 2, 1919.

Slight beneficial rains in parts of Bombay. Local rain in parts Punjab, North-West Frontier Province, Sind and Rajputana. Light rains also in South-East of Madras.

Bombay Cotton Market continues irregular. Fully good Broach April-May delivery quoted 638 Rupees a candy.







Railway reconnaissance surveys have been sanctioned. Parbatipur Bonarpara Chord 50 miles (East Bengal Railway); Nowgong to Chhatarpur 17 miles and branches thence to Rajgarh 24 miles and to Bijwar 20 miles. This is probably the Great Indian Peninsular Railway.

Government of Bombay has sanctioned the formation of Pioneer Magnesia Company for making trial on large commercial scale for manufacture of magnesium chloride and sulphate from bitterns found at the Pritchard Salt Works, Kharaghoda.

A telegram has been received from the Government of India stating that a notification was issued on December 28, transferring to Indian prohibition list "D" capsicum, pepper, corundum including rubies and sapphires, carbonado, carborundum, garnets, casings, diamonds, hemp, rubber and silk noils and waste.

"Cable Address: "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** Codes used: A.B.C., 4th & 5th edns. A 1., Lieber, and Bentley's.

Manufacturers of SACKS and BAGS of LINEN, COTTON and JUTE, for all purposes.
Also of WATERPROOF CANVAS and TARPAULINS, Specially prepared for tropical climates.

Speciality: **ELASTIC FIBRE-LINED JUTE BAGS,** Securing Absolute Purity of Contents
DAMP-PROOF BAGS, WATERPROOF BAGS, FIREPROOF BAGS, Etc.
Shippers of all classes of JUTE, LINEN and COTTON FABRICS.

ENGINEERING NOTES.

Montenegro's Natural Wealth.

From the aspect of the country and the habits of the people Montenegro has often been called the Switzerland of the East. As in that country the surface forms a series of elevated ridges with lofty mountain peaks, many of which are covered with excellent forests; whilst considerable areas of arable land adjacent to streams and rivers occur in the lower regions. However, notwithstanding these natural resources, Montenegro hitherto, like other States in the Balkan Peninsula, has been doomed to industrial stagnation. The prevailing political conditions in the past discouraged any attempt in the direction of industrial development or the exploitation of the country's natural resources. Hence, with a population greatly diminished by emigration, Montenegro was confined to ordinary agricultural pursuits, the chief products of the land being maize, potatoes, sumac, cattle, castradina (smoked mutton), hides, and tobacco (the latter on a small scale); whilst the country's exports were on the average about one-fifth of the total imports. Yet if the country was properly developed it might be for its size one of the most productive states in the Balkan Peninsula.

Land Reclamation.

In previous engineering notes we pointed out the great economic advantages that would accrue to Montenegro by the diversion of the Drin River to its original bed and by the dredging of the Boyana River. By the first operation some 150,000 acres of very fertile land would be reclaimed, half of which, in the vicinity of the Boyana and Lake Scutari, is within the present Montenegrin territory; whilst by the second operation the Boyana River would be navigable for coasting vessels right up to Scutari from Palai, a small town at the mouth of the Boyana, which, as we suggested, might become the little Liverpool of Montenegro in the Adriatic. Thus the State would become an important commercial country.

Mineral Resources.

Apart from the benefits to be derived from the development of the above scheme, it is evident that Montenegro possesses considerable mineral wealth; for according to recent observations it seems likely, that an examination by experts will also disclose large mineral deposits in the country. A prolific vein of iron, which may well contain millions of tons, it is asserted, runs from Southern Dalmatia via the Sutorman Pass, into Montenegrin territory. Coal has also been found at Berane, mineral oil at Virpazar, and quicksilver near Ulcinj. It is said that during the war the prospects of this mineral wealth have much improved owing to the development of the roads.

Openings for Machinery.

In dealing with the trade prospects in the Near East, a leading technical contemporary stated that "all authorities on after-war trade are agreed that the Near East is a field of operations that must be cultivated by British manufacturers." This has repeatedly been emphasised in these columns before as well as during the war. But unfortunately there is an apparent apathy on the part of manufacturers which evidently no arguments can alter. In the meantime French, Italian, American, Indian and even Japanese engineering firms are doing their best to introduce their products, and establish business in those markets, especially in Syria, Palestine and Mesopotamia, where modern agriculture is being developed at a rapid rate and agricultural machinery is much wanted. What has often been stated in these columns our contemporary reiterates by asserting that "the extensive agricultural plains of the Aleppo, Damascus Hama, and Hausan district, as far afield as Gaza, offer immense possibilities for development," but in the absence of adequate energy on the part of British manufacturers to secure these markets it is obvious that the buyers will accept what is offered to them by others; and once business is established it will be very difficult for late comers to enter the market.

The Germans, with their singular capacity for trade development, gauged the prospects of these markets before the war, and any trade in implements that was done was nearly all theirs. There is no fear, of course, of the Germans reappearing there at present, but there are other countries with a marked capacity for trade development who will certainly not allow these markets to be neglected.

NATIONAL BANK OF INDIA

An extraordinary meeting of the National Bank of India will be held on Jan. 21 for the purpose of passing resolutions increasing the capital from £2,000,000 to £4,000,000 by the creation of 80,000 shares of £25 each, and authorising the directors to offer 40,000 of these shares to existing members in proportion to their respective holdings at a premium of £7 10s. per share, on the terms that the premium and £2 10s. per share be made payable on application, and £10 per share on May 31, 1919. the new shares to participate pari passu with the existing shares in the final (but not the interim) dividend to be declared in respect of operations for the twelve months ending December 31, 1919.

British India trade returns for November show that imports decreased by £3,540,000, and exports decreased by £2,234,000, compared with the figures for the same month in 1917.

The Madras Pencil Company was the successful tenderer for the Madras Government's pencil factory at Washermanpet.

The *Syren and Shipping* has just published a mercantile "War Loss Book," containing an alphabetical list of steamships destroyed during the war, together with a list of the losses of the world's principal steamship companies. The publication is priced at 2s. 6d.

PROMINENT INDIAN INDUSTRIES.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds,

NEAR EAST MARKETS.

Sudan Products.

The C.E.B. report for October states that during the month 126 tons of talk gum were exported from Sennar Province. 6,144 kantars were sold in El Obeid market, as against 4,767 kantars last year. The average price was £E1.470 per kantar of 100 rottles (45 kilos). 1,283 kantars arrived from Nahud, as against 6,073 kantars last year.

Cotton.

As regards the cotton outlook in Berber Province it is stated that at Gendetu (Shendi) on October 20, cotton (270 feddans) could hardly have looked better at this stage, except for a limited area where it had been flooded by rain-water, and occasional patches of high ground.

In Kassala Province the cotton crop on the Gash Delta was progressing well in September.

Dura and Dukhn.

The price of dura rose to PT247 per ardeb in Berber Province in October. Fifteen ardebs of dukhn were sold in El Obeid market during the month, the average price being PT220 per ardeb of 420 rottles (189 kilos).

Four hundred and fifteen tons of dura were exported by rail from Sennar Province during September, and 474 tons during October.

Eleven ardebs of dura were exported from Kassala to Eritrea in September, and 4 ardebs of dura were exported from Gedaref to Wad Medani.

Wheat, Barley, &c.

In Berber Province wheat again rose to PT400 per ardeb. Barley remained at PT150 per ardeb. Maize continued its upward course to PT220 per ardeb.

Twenty-two tons of sesame were exported from Sennar Province. Sesame shows a marked tendency to fall. The market opened at about £E4.5 per ardeb, but rapidly fell to £E3.

The Halfa Province report on the date market states that prices are reported high and rising. Merchants have bought at PT320 to PT345 per sack barakawi, with corresponding prices for other varieties.

The tobacco crop of Nuba Mountains Province, which looks well, is in process of being harvested.

Cattle.

Cattle are very dear in Dongola Province. A calf averages £6, and an ox £15. Riding camels are almost unobtainable; an ordinary riding camel costs from £20 and upwards. Sheep average from PT150 to PT200, and a goat from PT100 to PT120.

From Berber Province it is reported that 437 cattle and 9,309 sheep and goats were sold in Damer market during the month. Prices are falling owing to the general shortage of grazing, which is forcing sales and renders it difficult to take animals away if unsold, but one bunch of fat sheep in the last market fetched an average of PT305.

Greek Tobacco Crop.

Information at hand supplementing the advance report relative to the Greek tobacco crop for 1918 shows production (says an American Consular report) to be from 49 to 50 per cent. less this year than in 1917, dry weather causing the actual crop to fall short of early predictions based upon an average yield for the area planted. There are left in Old Greece from former crops 31,036,560 lb. of tobacco, of which 11,551,825 lb. are in the hands of manufacturers and about the same amount still in the open market. Added to this there are 50,787,000 lb. from the new crop. So that there are in all in Old Greece 82,000,000 lb. of tobacco. Advices from Asia Minor, Russia, and European Turkey place the stocks in these three sections together at 87,466,500 lb. So that the sum total of Near Eastern tobacco available for foreign trade comes to about 169,290,000 lb.

Greek Olive Oil Production.

Estimates of the olive oil production in Greece for the past season place the quantity at 31,702,800 gallons, or about 30 per cent. more than the output last year. The yield from the Ionian Islands is 1,675,500 gallons; from Crete, 12,495,500 gallons; from Mitylene and Sporades Islands, 7,833,000 gallons; from Epirus, 1,305,500 gallons; from the Peloponnesus and Pelion, 6,714,800 gallons; and from the mainland of Greece, 1,678,500 gallons.

ALEXANDRIA'S MERCHANT SEAMEN'S HOME.

The Imperial Ottoman Bank, 26, Throgmorton Street, E.C.2, announces that it has been authorised to receive donations for the Alexandria Merchant Seamen's Home, which as readers of THE NEAR EAST know is a most deserving institution. The committee of the home have recently made an urgent appeal for financial support for their "Extensions and Improvements Fund." Additional accommodation is required for seamen, apprentices, under-stewards, and cooks, as well as for officers. The home started in a small way as a "Sailors' Rest" in 1881, and the existing home was opened in 1900. The claims of merchant seamen on the kindly and generous help of the public in view of the hardships and perils of their life are well-known. It is also hoped that all ship-owners will come forward generously in view of the fine part played by all ranks of the British merchant service during the war.

The Banque Générale de Roumanie, established at Bucharest by the Berlin Disconto Gesellschaft and the Banque de Crédit Roumain, which is a branch of the Länderbank of Vienna, have, according to a report published in the *Frankfurter Zeitung*, been closed and sealed up by the Roumanian authorities, says the Berne correspondent of the *Morning Post*.

FOOD PRICES IN SYRIA.

(FROM A CORRESPONDENT.)

CAIRO, December 12.

Reverting to the question of foodstuffs, the figures in the attached list represent present prices in Syria in Egyptian piastres, official quotations being now made in Egyptian currency:—Flour, first quality, 6 piastres an oke, second quality, 5½ piastres; bread, 6 piastres; barley, 3½ piastres; lentils, first quality, 5 piastres; second quality, 4 piastres; chickpeas, first quality, 4 piastres; second quality, 3 piastres; beans, 4 piastres; haricot beans, first quality, 6 piastres; second quality, 5 piastres; rice, 7½ piastres; salt, 2 piastres; mutton, 18 piastres; veal, 15 piastres; fish, first quality, 20 piastres; second quality, 15 piastres; third quality, 10 piastres; coffee, 20 piastres; sugar, 25 piastres; milk, 2½ piastres; butter (melted), 26½ piastres. Petroleum costs 25 piastres an oke, and charcoal (oak), 1½ piastres.

Since the publication of the above list measures have been taken for the reduction of the prices of sugar, coffee, and rice to 10, 14, and 6 piastres respectively per oke, and it was decided to open forty shops for the sale of these commodities. The ration of sugar has been fixed at 1 oke per head per month, and that of coffee at half an oke, which, in the circumstances, is not unsatisfactory. A commission of notables has been formed for the control of the supplies of these foodstuffs and their sales at the above-mentioned shops.

AN ITALIAN TRANS-BALKAN RAILWAY

(FROM A CORRESPONDENT.)

The Italian newspaper *La Perseveranza* revives an old project, in the shape of a Valona-Monastir-Constantinople railway, and advocates the advantages of its early construction. There is already a line connecting Constantinople with Monastir, 230 miles in length; the additional link with Valona, a further 516 miles, would give through transit. By linking the Italian port of Otranto by train-ferry with Valona (a distance of sixty miles) through traffic might be had with Rome from Constantinople (1,210 miles) without breaking bulk, and in forty-eight hours. At present the journey from Rome to Constantinople, via Vienna, occupies four days. The project would bring within easy distance of Italian markets the live stock of Serbia, Roumanian petroleum, and Bulgarian timber and coal, besides facilitating the export of Italian manufactures. The war on the Western front has shown the world the incalculable value of the trans-channel train-ferry where the nations on either side were allies, and it is to be hoped that this Italo-Albano-Serb railway may obtain the blessing of the coming Peace Conference.

During the past year fifteen factories in Bulgaria have been occupied in turning out pickled vegetables.

(Over 80 Branches in the Near East).

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

LANCASHIRE COTTON.

Business Still Restricted.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

Although a rather improved tone has shown itself in the market no particular increase can be recorded in the amount of actual business done. The inquiry in several quarters, however, has been more encouraging than for some time back. Egyptian cotton merchants continue to be hampered by the difficulties in getting hold of certain types, and it is hoped that Government control will be abandoned as quickly as possible. It is thought in some quarters that the crop will be rather larger than was at one time expected. In Egyptian yarns prices have tended to favour buyers and business has been at a low ebb. A few more requests have been made for prices of piece goods for Egypt, but advices from Cairo remain disappointing. It is feared it will be some time before the situation is of such a character that trade of weight can be done for that part of the world. There are signs of increased activity for certain Near Eastern outlets such as Greece. India has sent a larger inquiry in a variety of goods, but only small transactions have been arranged. Some special sales have taken place for China in a well known make of grey shirtings and sheetings. Printing cloths have been offered at low figures. Burnley manufacturers are in urgent need of fresh orders. Rather more business has been offering in home American yarns, but prices have given way in sympathy with the decline in the raw material. Very little has been done in export numbers.

BRITISH FILMS AND THE GREEK MARKET.

An agent at Athens for certain well-known British film producers states that British films have not yet reached the high standard of the artistic films manufactured in Italy, France and even Denmark, says the *Board of Trade Journal*. British manufacturers, he adds, do not seem keen to secure the exclusive services of well-known stage actresses and beauties in order to make films that can compete with those made by the Continental manufacturers. The one exception is the British comic film, photographed in England, with a really good comic man as chief actor. In dramas the British are behind the Italian and French films—in scenic effects, in the acting and dress of the actors, and also as regards the plots of their dramas. British manufacturers, if they produced well-mounted films out of the exceedingly rich British literature, with good actors and actresses, would have captivated the world. All the lettering and explanations of the films, or rather of the copies that are to go to the Continent, should be made in the French language.

For the above-stated reasons British films are not at all in demand in the Greek cinema business, and can only be placed at small provincial cinemas where high rates of hiring demanded by the people importing the Italian and French artistic films cannot be paid. Another question which hinders the hiring of British films in the Greek markets is the British tendency to manufacture one or two reel dramas. In these it is not possible to put the finish and the plot necessary for a four or five reel drama. The opinion of this agent is that British cinema manufacturers have every opportunity and everything necessary to compete with the films of the whole world, but they require much more scenic and artistic effect in order to produce films to compete with those of Italian and French producers.

OUR TRADE AMBASSADORS.

Now is the time, says the British Empire Producers' Organisation, to arm our "commercial ambassadors" with that extra knowledge which would give them greater confidence in themselves and render them capable of defeating any rival methods. With this object in view the organisation is arranging a number of meetings, at which business talks will be given by leading men of ripe business experience and full knowledge of certain foreign countries. When arrangements are completed invitation will be extended to representatives of large firms throughout the country—young men in particular.

NEW COMPANIES.

Anglo-Czecho-Slovak Trading Co

The Anglo-Czecho-Slovak Trading Company, Ltd., has been registered as a private company, with a capital of £100,000, in 95,000 ordinary shares of £1 each and 100,000 deferred shares of 1s. each, to create and foster mutual trading between Great Britain and her Colonies and Dependencies and the Czecho-Slovak Republic and their respective commercial houses and traders, etc., and to carry on the business of carriers by land, sea and air, general store keepers, motor and flying-machine manufacturers, suppliers of couriers, agents and interpreters, food producers, boot dealers, clothiers, wine and spirit merchants, tobacconists, mineral water manufacturers, timber merchants, corn, flour, rye and maize importers and exporters, newspaper proprietors, etc. The subscribers (each with one ordinary share) are:—F. P. Woodcock, 5, Holborn, E.C.1, solicitor; A. H. Freeman, 5, Holborn E.C.1, secretary. The first directors are not named.

Mediterranean Co. for General Trade.

The Mediterranean Company for General Trade, Ltd., was registered as a private company on January 1, with a capital of £200,000, in £5 shares, to carry on the business of merchants, shipowners, importers, exporters, shipbuilders, and charterers, owners of mines, forests, factories, winners and transporters of oil, etc. The subscribers (each with one share) are Captain W. O'Brien, 16, Charing Cross, S.W.1; H. S. Salter, 16, Charing Cross, S.W.1, company secretary. The subscribers are to appoint the directors.

Paper Pulp Company in Algiers.

Further information with regard to the formation of a new paper pulp company in Algiers is given in the *Board of Trade Journal*. The company is called the "Société des Celluloses de l'Afrique du Nord," with a capital of three million francs, and it has been formed by the Société Nord Africain d'Etudes, 23bis, Boulevard Carnot. The object of the company is to manufacture paper pulp, paper, cardboard, etc., from esparto grass and other raw materials obtainable in the colony.

COMPANY NOTES & REPORTS

Ellerman Lines.

The report of the Ellerman Lines for the year 1917 states that £550,000 has been placed to reserve, making the total of all reserve and guarantee funds £5.729,887. A final dividend of 150 per cent. has been paid on the deferred shares. The destroyed steamers' replacement reserve now totals £3,280,000. The company has suffered very severely by the loss of steamers due to enemy action, and the number of steamers available for the carrying on of the various services has been materially reduced. It will not be possible with the money received for compensation or insurance to replace the whole of the tonnage which has been lost, nor will it be possible over a long period of years to earn a fair return on the present abnormal cost of building; but, in order to maintain the various services, and believing it in the national interest to replace the British mercantile marine as speedily as possible, contracts have been entered into to replace a large proportion of the steamers.

Bank of Bombay.

The directors of the Bank of Bombay announce a dividend for the past half-year of 15 per cent. per annum and a bonus of 4 per cent. They have transferred to reserve fund Rs4,00,000, to pension fund Rs50,000, and carried forward Rs3,220,606.

Anglo-Persian Oil.

The directors of the Anglo-Persian Oil Company have declared a participating dividend at the rate of 2 per cent per annum on the Cumulative 6 per cent. participating preference shares in respect of the year ended March 31 last, payable 31st instant, together with the usual half-yearly dividend of 3 per cent. for the period ended September 30 last. The issue of 1909-1911 will therefore receive a dividend of 5 per cent. and the new issue of 1918 a dividend of 4 per cent.

Dividends, Payments, etc.

National Bank of India.—Transfer books will be closed from January 14 to January 21 inclusive. An extraordinary meeting will be held at the Wesleyan Centenary Hall, Bishopsgate, E.C. (next door to the bank), on Tuesday, 21st inst., at noon, for the purpose of passing resolutions increasing the capital.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week 36 tons, previous week 23 tons; Hurgada 3,700 tons, against 2,797.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Limited, for the week ended December 26 were:—Cattle markets, £990; general markets, £523; total, £1,513; total for year, £54,078. The figures for the corresponding week in 1917, ended December 27, were:—Cattle markets, £488; general markets, £440; total, £928; total for year, £54,579.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Tuesday.

The market has remained, on the whole, firm this week, but there has not been much business.

In Government stocks some transactions have taken place in Egyptian Unifieds round 88¼, a decline of ¼ since last week. A small transaction took place in City of Alexandria bonds round the current level. In the 3½ per cent. Prefs. there still continues to be a scarcity of sellers.

Amongst Bank shares, some business has been done in Nationals without altering the price; and a local demand here for Agriculturals has led to a fractional improvement of 1-32 to 6 23-32. In Agricultural Prefs. there are still only buyers.

Amongst Railways, Delta Lights are ⅛ lower at 8⅜.

In Land shares there has been some business in Aboukirs and Béhéras round the current level. Allotments have improved 1-16 to 4 9-16, and Béhéra Prefs. are ⅛ up at 4⅜; at which price, however, there are only buyers. Some fairly large transactions took place in Delta Lands at 15s. 7½d., a decline of 1½d. since last week. Egyptian and Foreign Trusts, on the other hand, are 9d. up at 16s. 6d. A few Gharbiehs were done at 2⅜. In New Egyptians there has been a fair amount of business, and all the shares offering round the current level have found willing buyers. The price closes fractionally harder at 22s. 1½d. In Sudan Plantations there has again been some business doing at the current level, and United Egyptian Lands are fractionally firmer at 3s. 6d.

In Miscellaneous shares, Alexandria Waters are a firm spot with buyers at 12; but there are no shares offering at present. Egyptian Markets have improved 3d. to 27s. 9d., but, on the other hand, Salts and Sodas are again ¼ lower at 3½. Khedivial Mails, after dropping to 90s., are closing unchanged at 91s. 6d. There is some demand for Khedivial Prefs. at 4⅛.

In Greek stocks there has been a certain amount of business, but there is not much change to record in prices. Monopolies are 60½ xd., a decline of about ½. The 1881 Loan has recovered the full dividend at 75 xd. The 1884 Loan is somewhat lower at 74 xd., and the 1890 Loan has dropped one point to 74. Greek Rails have changed hands at 66 xd., which represents a rise of half a point. In the other Greek loans there is no change to report. Bank of Athens shares are still in demand at 81s.

Oil Shares.

There has been a somewhat better tendency in the market. British Burmahs are 1s. 6d. up at 15s. 6d. Anglo-Persian Prefs. are 1s. better at 26s. 6d., and Anglo-Egyptians "B" are 3-16 up at 2 27-32. Burmahs are fairly firm at 8 9-16.

Roumanians are in better demand. Roumanian Consols are 6d. better at 16s. Anglo-Roumanians are 8s. 10½d., and Premier Roumanians are 10s.

In Russians, Ural Caspians are weaker at 1 17-32. Bakus are 3d. down at 4s. 9d., and Russian Generals are slightly lower at 1 1-16.

Paris Bourse.

Suez Canal shares are weak at 5,364 frs. Other prices are:—Egyptian Unifieds 93.25, Serbian 1895's 60.75, Turkish Unifieds 70.75, Banque d'Athenes 106, Crédit Foncier Egyptiens 784, Land Bank of Egypts 188, and Ottoman Banks 550.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 75,000

HEAD OFFICE—

BASILDON HOUSE, MOORGATE STREET, LONDON, E.C.2

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Pirœus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Fasohen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Baghdad, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz an Yezd. Agency at Busreh

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samoth, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes. Tachometers, Balances, &c.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principa towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

NOTES OF THE WEEK.

The past week has been devoted in Paris to the preliminaries to the Inter-Allied Conference, which is to begin its formal session on Saturday. Every stage of the proceedings is the subject of much Press annotation, and from this, as well as from other indications, it may be inferred that most of the fears which the violence of propagandist campaigns has evoked will be dissipated by the actual course of events. In other words, the emphasis laid at the last moment on the various treaties which set out to anticipate the settlement after the war represented a despairing effort to bolster up a cause that was known to be lost. Thus the Conference is not likely to be greatly handicapped by the pact with Italy, by the Sykes-Picot agreement, or by the Roumanian Convention of 1916. These documents have served their purpose, contributed their quota of mischief among the Allies, and may now be relegated to the museum of diplomatic horrors. But from the scrapping of these instruments of secret diplomacy to a conscientious effort to approach the subjects with which they dealt from a new angle and in the spirit of the declared ideals of the Allies may not prove an easy step, unless the deliberations of the Conference are guided by a strong hand and a master mind.

It is now essential that the tacit abandonment by the Governments concerned of the rights assigned to them by the treaties should be followed by the effective muzzling of the propagandists who have been in the forefront of the war of words. The curtain can at last be rung down on their activities and the stage prepared for the final act in its Paris setting. A continuance of the controversy might easily provoke serious trouble in the present state of affairs in Europe. The peoples concerned require time to realise that their case has been properly presented and powerfully supported, and that nothing further remains than to await the verdict, against which there is to be no appeal. Especially is this course to be recommended in regard to the Italian-Yugoslav dispute, which has been fanned to a dangerous heat during the last few weeks. For far too long a time the extremists on both sides have had their innings, not only on paper, but also in the disputed territory. It is now the duty of the Inter-Allied Conference to introduce the judicial atmosphere and to secure fair play and no favour in the Adriatic. It will have to decide to what extent, if any, a footing in Dalmatia is indispensable to the completion of Italian national unity; it will also give due heed to the value of the Austrian statistics of population so freely quoted by one side, and to the practical significance as a political or national factor of the evidences supplied by civilisation, customs, and possibly language in the debated regions.

It is clearly no exaggeration to say, as President Wilson has declared in a recent message to Congress, that food relief is now the key to the whole European situation and to the solution of peace. Bolshevism, he points out, is steadily advancing westward, poisoning Germany; it cannot be stopped by force, but it can be stopped by food. This point requires to be burnt into the minds of those who are only concerned with establishing territorial claims; for any agitation which tends to hinder the revictualling of the countries of Central Europe and the Balkans is facilitating the spread of Bolshevism. No nation, least of all one that is racially allied to the Russians, can be sure of immunity, if it fails to provide food for the people. In these circumstances the five Great Powers have done well to insist upon the urgency of food relief. No Allied money is to be spent on food for Germany, as the latter is in a position to buy its own food, although, possibly, facilities of supply may have to be granted; but the food for the collection of which the Allies are making themselves responsible is intended primarily for distribution in Poland, among the people of the liberated units of the Austro-Hungarian Empire, and to our associates in the Balkans.

No less important than the provision of food is the safeguarding of its proper distribution. In this matter the Allies cannot afford to run any risks, and they must be prepared to keep the whole machinery of distribution, if not entirely in their hands, at least well under their supervision throughout all the different stages. The war does not appear to have brought the Near East any relief from its old curse of politics, and it need not surprise the Allied Governments if attempts are made to gain political capital out of the measures taken for the relief of the people. This proceeding cannot be countenanced. To prevent it the most elaborate precautions may have to be adopted. Already it has been found necessary to draft troops of disinterested countries into disputed localities to prevent disturbances of the peace, and this principle might with advantage be extended to tide over the period until the different districts or countries become self-supporting.

M. Venizelos has made a full statement to a correspondent of *The Times* of the claims that Greece will

Digitized by Google

submit to the Paris Conference. As might be expected, the Greek statesman avoids the sledge-hammer "must have" and "insists upon" that so often disfigure similar declarations, and elaborates his views in a characteristically persuasive manner. The most interesting point in the statement is the abandonment of the attitude that prompted M. Venizelos in 1915 to consider the cession of Kavalla to Bulgaria. He was subjected at the time, he points out, to "great pressure from pro-Bulgar opinion in Europe and America," and he made the offer with the hope of bringing Bulgaria into the war on the side of the Allies. Now, however, "Bulgaria had shown herself to be a greedy and dangerous neighbour, and he could not for a moment sacrifice the interests of the Greek populations in Thrace to mawkish sentiment."

Considerable sympathy will be felt in wide circles with this point of view. On the other hand, it is certain that the Conference will be reminded that it has to legislate not so much in relation to the unregenerate past as for a hopeful future. M. Venizelos would be the last to admit that in 1915 he proposed to do violence to Greece's unassailable rights; in other words, that for an adequate *quid pro quo* he would have offered Thessaly or Crete with as much readiness as he entertained the cession of Kavalla. The thing is unthinkable. It may probably be assumed that four years ago he recognized that there was enough justification in the Bulgarian aspiration for Kavalla to make it politic for Greece to negotiate upon the subject. Now, however, Bulgaria is considered to have put herself entirely out of court. The Allied Conference will, no doubt, have before it the necessary information to enable it to decide whether the joint interests of the two countries as units in the group of Balkan States will be better served by allowing Bulgaria access to the Ægean Sea or by relegating her exclusively to the Black Sea. M. Venizelos realized the need for anticipating criticism on this point, and added that to deprive Bulgaria of any outlet on the Ægean "is by no means so serious now as it would have been in the past, inasmuch as new rules of international law will have to provide for cases of that sort, and Greece is disposed to grant Bulgaria her commercial outlet on the Ægean on the same conditions as will prevail in favour of, say, the Czecho-Slovaks."

A British force is once more in the Caucasus. The withdrawal of General Dunsterville's troops from Baku after the unsuccessful attempt to hold that town left the Turks masters of the situation, and the Turkish troops in this region have shown some reluctance to withdraw in conformity with the terms of the armistice. The object of the present mission is twofold: to compel the evacuation of the country by the Turkish armies, and to stop the fighting between the Georgians, Armenians, and others which has followed the withdrawal of the Turks from various districts. In the Caucasus, as in the Balkans, the different nationalities have attempted to forestall the decisions of the Peace Conference by the time-honoured method of seizing the territory to which they lay claim. In the case of the Armenians and Georgians the fighting is reported to have assumed the proportions of pitched battles, in which victory has rested with the Georgians. The arrival of the British Mission, it is to be hoped, will not only have put a stop to these hostilities, but will also have been the means of bringing home to both sides an appreciation of the folly, or, rather, criminality, of their action. The fact that Georgians and Armenians, after having been subjected to the worst excesses during the Turkish occupation, should on the withdrawal of the Ottoman troops at once turn and rend one another is not likely to impress the Allied Governments with their capacity for regulating their own affairs in the immediate future. The two peoples have to remain neighbours and have a common interest in presenting a strong front to Bolshevism on the one hand and Turkish aggression on the other; but their first step is to engender such bad blood between them that co-operation may be rendered impossible.

In the Caucasus, as elsewhere, the Allies are responsible for a solution that affords the best possible guarantee for future peace. Clearly it will not be a solution on these lines to give complete independence to two countries which are liable at once to abuse their freedom of action by turning their arms against one another. The history of Georgia since the disintegration of Russia has not been entirely straightforward. Some allowance had to be made at the time for the readiness to throw in the country's lot with Germany on the one hand and to "kow-tow" to Turkey on the other. German and Turkish influence may now be regarded as eliminated from these regions, and the Allies are interested to learn what prospect there is of the Georgians being able to establish a State which will act as a beacon light of order and progress in a backward part of the world. No progress is likely if militarist doctrines are to be the order of the day. Universal disarmament is impossible at this stage; but the Allies will be losing a great opportunity if they do not insist upon disarmament for all minor States, and elaborate a drastic penal code for any resort to arms before the points at issue have been submitted to arbitration. It is impossible with the inadequate knowledge at our disposal to apportion blame for the occurrences in the Caucasus between Georgians and Armenians, but it is obvious that an equal responsibility rests with both to keep the peace between themselves.

It is now announced that one of the objects in view in sending a British force to Transcaspia in the early summer of 1918 was to prevent the cotton crop from falling into the hands of the Germans. The troops have since been kept there for the purpose of saving the population in rear of our lines from massacre and spoliation, and it is impossible to challenge the contention that we are bound in honour to hold our position there for the present, so that the people who have trusted in us may not be exposed to instant destruction. In view of the situation in Russia no time limit, unfortunately, can be set to this occupation. If there is no restraining power in this region, local wars may occur at any moment, and local wars are liable to spread until they endanger a world conflagration. This aspect of the situation can hardly be lost on the Paris Conference. One reason given for the presence of the British Mission in the Caucasus is the necessity of keeping open communication across the Caspian with General Malleson's forces in Transcaspia. The latter, it is stated, have been drawing their supplies from the South, by way of Herat, and have only been able to get such reinforcements from Mesopotamia as could be despatched and supplied by the very inferior Baghdad—Hamadan—Enzeli road. Their position is materially improved by the opening up of the Black Sea—Baku—Krasnovodsk route, but the situation in Transcaspia can only be put permanently on a satisfactory basis by a very marked improvement in our communications with the territory.

India, at least, has nothing to complain of in the rearrangement of the Ministry announced last week. It is obviously right that Mr. Montagu should remain at the India Office until the fate of his proposals is decided. The appointment of Sir Satyendra Sinha as Under-Secretary of State deserves approval on other grounds. It is an experiment, of course, but Sir Satyendra is accustomed to making experiments with success, and his record in the Governor-General's Council and in the Imperial Cabinet justifies the hope that he will quickly accommodate himself to administrative conditions in this country.

As far as we are aware, there has been no confirmation of the report from Greek sources that the French authorities have handed over Koritza to the Greeks. The reason for such a transfer at this stage is not apparent, as the destiny of Koritza is a matter for the Allied Conference to decide. For the French Government to seek to anticipate its verdict just now would be tantamount to an affront to the Conference, or at least would be on a par with the action of minor States that are endeavouring to present the Conference with a *fait accompli*. France is not likely to lend herself to such action with her eyes open.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 23.

Armistice Celebrations.

However regrettable it may have been that Cairo should have delayed so long celebrating the Armistice, he would be hard to satisfy who found any fault with the nature of those celebrations when they actually took place, as they did this week. For four days Cairo has been en fête, and there could be no mistake about the whole-heartedness and completeness of the rejoicing. To be quite correct, we kept holiday for five days, for Monday was the Muled En Nabi, and although that event had nothing to do with the Armistice, nevertheless custom had it that it should be celebrated as a holiday, and so that day added itself to the Tuesday and Friday decreed by General Allenby as public holidays.

An Impressive Thanksgiving Service.

The celebrations began fittingly with a thanksgiving service in the grounds of the Sporting Club at Gezira. One of the polo grounds was requisitioned for the occasion, and in its centre was erected a large daïs for the officiating clergy and the choir. In front a space was roped off for the band—the famous Welsh band—and the buglers, with seats round the edge for the more important members of the British community and distinguished guests. Beyond, another, very much larger square was roped off for the congregation, for whom chairs were provided. The whole place was gay with flags, the Union Jack being conspicuous over the centre of the daïs. The service was appointed to start at eleven o'clock, but long before that time all the seating accommodation had been taken up, and late comers had to stand wherever they could find room. Punctually at the fixed hour the High Commissioner and Lady Wingate made their way to their seats, amid the strains of the National Anthem, and then the procession of clergy came down the gangway and proceeded to take up its position on the daïs. In addition to the clergy of the local Anglican community, there were military representatives of the Anglican, Wesleyan and United Board Churches, including the Chaplain to the Forces in Egypt, Bishop Price, and at the end came the Bishop in Jerusalem, Dr. Rennie MacInnes, in full canonicals.

When the service commenced the scene presented a remarkable appearance. The congregation included the whole of the British community, the Diplomatic Corps, representatives of the Sultan, the Ministers and Egyptian Under-Secretaries, many of the foreign residents, the G.O.C. the troops in Egypt with his staff, practically all the officers in the garrison, and hundreds of soldiers who lined the outside in dense ranks; whilst, fittingly, a naval contingent flanked the daïs on either side. It was, as I have said, a remarkable scene, and everyone present felt the impressiveness of the occasion. The service opened with a hymn, after which the Rev. W. Allen, of the United Board, read sentences from the Psalms, which were followed by the Psalm of Thanksgiving. The first lesson was read by the senior Church of England Chaplain, and the second by the senior Wesleyan Chaplain. Next came the hymn, "All People that on Earth do Dwell," and then the Rev. C. T. Horan, Chaplain of All Saints', read the special prayers. At the end of the second prayer "The Last Post" was sounded by the buglers stationed just in front of the daïs, and at the conclusion of the sixth the National Anthem was sung, after which Bishop MacInnes pronounced the blessing. The service was brought to a conclusion by a salute of 101 guns fired by a battery stationed close at hand. I have been present at several memorial and similar services in Cairo, but never have I attended one which was more impressive and at which the whole congregation gave such unmistakable evidence of its reverence and of its recognition of the significance of the occasion.

Entertainment to the Troops.

The service over, the festivities began. The day was given up to the entertainment of the troops, and a gigantic programme had been arranged. The proceedings started off with a lunch to the men, to which they did full justice. Every conceivable form of amusement had been provided. There were cocoanut shies, concerts, bands, dancing, sports, displays of physical drill, cinematographs, the whole ending up with a grand military tattoo and fireworks. In between, tea and other refreshments were served, and nothing that could add to the enjoyment of Tommy and Jack—the senior service was also provided for—was omitted. In every respect it was a most successful day, and the men had, as one of them said, "a right top-hole time." That everything went with such a swing, and that everyone was so satisfied spoke volumes for the efficiency of those responsible for the organisation.

Simultaneously out at Luna Park another celebration took place, where thousands of Tommies spent the afternoon at the various shows which are to be found there, and where the efforts to entertain them were equally successful.

The British Community and General Allenby.

On Wednesday the British community entertained General Allenby. A tea and reception were given in the afternoon at the Semiramis Hotel, which was specially opened for the occasion. General and Lady Allenby were received by Sir Alexander Baird, Dr. MacInnes, Sir William Brunyate, and Dr. Keatinge. Sir Alexander made an amusing speech of welcome, in which, after expressing his own and the British community's admiration of the Commander-in-Chief's achievements, he paid a warm tribute to Lady Allenby for the admirable work she had done in providing entertainment and comforts for the troops of the E.E.F. General Allenby made a short and suitable reply, and then proceeded to walk through the rooms and chat to his hosts, who numbered several hundred. The arrival of the High Commissioner and Lady Wingate was the signal for a move to the tea tables, and the party broke up at about five o'clock.

In the evening General Allenby and his staff were entertained to dinner at Shepheard's Hotel. Covers were laid for 140, and the chair was taken by Sir Alexander Baird, who had Sir Edmund Allenby on his right and Sir H. G. Chauvel on his left. After the toasts of H.H. the Sultan and of H.M. the King had been drunk, Sir Alexander rose to propose the health of their guest of honour. He made, as usual, a most amusing speech, in the course of which he drew attention to the fact that whereas the Kaiser had driven into the Holy City and had a hole made in the walls to permit him to enter, General Allenby had entered on foot, as became a great leader, and added that three names will be handed down to posterity in connection with the Holy Land—Richard Cœur de Lion, Edward I., and General Allenby. He gave one interesting piece of information—viz., that one of the maps in daily use in the recent campaign had been made quite fifty years ago by the late Lord Kitchener when he (Sir Alexander) had been with him in Palestine.

General Allenby, in his reply, gave a short account of the difficulties with which he had had to contend when he first took over the command eighteen months ago, and how he had managed to deceive the Turks. He again paid a tribute to his staff and his troops, and concluded with an expression of appreciation of the unflagging encouragement and the generous and unstinted help he had received from the civilian community in Egypt and the Egyptian Civil Service, with the latter of whom he coupled the name of Sir William Brunyate. General Allenby, who declared that "this is the proudest moment of my life; I have gained the appreciation of my fellow countrymen, and I have heard it expressed in the warmest terms," then sat down, amid loud cheers.

Sir William Brunyate, in his response, made what I may perhaps be permitted to call the speech of the evening. He replied on behalf of the official and non-official civilian community, and referred most feelingly to the late Lord Edward Cecil, the news of whose death had only reached Egypt the day before. He said that if Egypt had been able to assist General Allenby in his victorious advance, it was mainly due to Lord Edward Cecil and to the measures he took during the

Digitized by Google

time he was Financial Adviser. It was remarkable how often he had shown flashes of real statesmanship, and there was no doubt that, had he been spared, he would have been destined to take no small part in the work of reorganisation which awaits Egypt. Sir William declared that the Anglo-Egyptian officials had been proud to help in General Allenby's great work, and added that he had never had to appeal for help on his behalf to any member of the official or non-official community without receiving a ready response and every assistance and encouragement. An informal reception was afterwards held, during which General Allenby chatted to those present, and shortly before midnight the Commander-in-Chief took his leave amid hearty cheers from his hosts.

Brilliant Review and Parade.

By contrast, Thursday and Friday were given up to military ceremonial. On the first-named day there took place a review of the 10th Division on the race-course at Gezira. The troops were extended all over the club grounds as far as the eye could reach from the Grand Stand, and were first inspected by General Allenby. The latter then took up his position at the saluting point next to the small enclosure, and the division marched past. The men were in splendid condition and bore themselves admirably. Time and time again roars of cheering and rounds of applause from the spectators, who crowded every coign of vantage, greeted the passing battalions, the Indians coming in for a specially warm welcome.

Everyone agreed that the review had been one of the most brilliant seen in Cairo for many years past. The next day, Friday, the 54th Division, together with the Worcestershire Yeomanry, paraded through the city. The troops entered by way of the Mousky and the native quarters at the foot of the Citadel; they then passed on to the Opera Square, where General Allenby took the salute, and continued their route past Shepheard's out to Abbassia. In the native quarters all the shops were shut and there were very few people about owing to the narrowness of the streets, but on the Opera Square and along the rest of the route there were very large crowds, who, with the spectators up above on the balconies, cheered the troops to the echo. The parade was another fine display, quite equalling the one of the previous day. On both occasions the R.A.F. sent a "Formation of Honour," which performed the most daring evolutions overhead during the proceedings.

Thus ended a memorable four days in the war history of Cairo. Who can now say that the capital has not fittingly celebrated the armistice and shown honour to the gallant conqueror of the Turks and liberator of the Holy Land, and to his equally gallant men?

WOMEN OF INDIA TO THE QUEEN.

On behalf of the women of India, Lady Chelmsford has addressed the following reply to the message from the Queen to the women of India, which was published in THE NEAR EAST of January 3:—

In name of the women of India I beg to thank your Majesty for your gracious and sympathetic message. It has been received by them with heartfelt thanks and a profound admiration for the personal knowledge and solicitude shown by your Majesty in the particular circumstances of their lives.

The women of India are ever grateful to your Majesty for the deep interest which you take in all that concerns their welfare in matters of education and medical relief, and wish to offer you their humble congratulations on successful termination of the war in which they are proud to have had a share.

FOR INSURANCES OF ALL KINDS.

ROUMANIAN NOTES.

(FROM A CORRESPONDENT.)

Bolshevism.

The Roumanian Government has announced officially that a Bolshevist movement has been organised in Roumania, being directed from Russia and from Hungary. In Bucharest measures of repression were taken, and "six people have been killed and fifteen wounded," says the *communiqué*.

When the Russian army in Roumania collapsed because of the Bolshevist revolt, the Roumanians fought against their former brothers-in-arms, who were provoking the disorder. Now, the conditions in Roumania being terribly bad, Bolshevism has been able to find a foothold. In Bucharest a loaf costs from four to six shillings—and this in a country which was one of the most important granaries of Europe!—and other prices are proportionately high. This means that the poor people are dying like flies. The peasants, who used to wear a kind of sandal (*opinca*) instead of boots, are now going barefooted during the terrible winter because it is absolutely impossible to get a scrap of leather. Some of them, better off, are covering their feet with pieces of old blankets or quilts. These facts are confirmed by the Allied Commission now in Roumania. Such conditions are most favourable to the spread of Bolshevism, which can be successfully met only by prompt and proper organisation and by friendly co-operation between all the States in improving the conditions of a starved and ravaged Europe.

Roumanian Intervention in Russia.

Some days ago M. Pichon declared in the French Chamber that "the Allies had sent their troops to Odessa only until the Roumanian army was completely organised," and a London paper learned, from an official source, that Roumania will send an army to the South of Russia. As announced some time ago in THE NEAR EAST, the intervention of Roumania was decided upon at a conference held at Jassy (November 19) between MM. Sazonoff, Denikin, General Berthelot and the Roumanians. The question now is whether such intervention will be effective, the Bolshevik forces being powerful and well organised.

Roumania and the Peace Conference.

The Roumanian delegates to the Peace conference announced up to the time of writing are M. Misu, the Roumanian Minister in London, and M. Salomon Rosenthal. The latter is a very prominent Roumanian Jew and an eminent lawyer. His appointment as the legal adviser to the Roumanian delegates is a sign of the democratic spirit animating the new Roumania. It is announced that M. Bratiano, the Premier, is on his way to Paris.

The most difficult question concerning Roumania to be settled by the Peace Conference is that of the Banat. The utmost good feeling always existed between Roumania and Serbia, and they offered the unique example in history of being neighbours and yet not having any war or misunderstanding; and therefore it is hoped that the dispute will be settled. The Banat is the country situated between the Danube on the south, the river Tissa on the west, the river Muresh on the north, and the Carpathian Mountains to the east. It has an area of 27,000 square kilometres, and is one of the richest countries in Europe. Its population is, ethnographically speaking, composed of 615,000 Roumanians, 357,500 Germans, 284,000 Serbs and 182,000 Magyars. The "Magyar" population in the Banat is half Jewish. A serious blunder committed by the Allies was in allowing Serbian troops to occupy the disputed territory, and thus provoke public discussions. The Roumanians have shown more reserve on the subject. They claim the Banat, saying that it is a geographical division and constitutes a unit in which the Roumanian element is in the proportion of sixty-one against twenty-eight. They put forward, also, economic arguments which, from their point of view, ought to prevent the division of the country. They offer guarantees for the minorities represented by the nationalities living in Banat, pointing out that there are more than 400,000 Roumanians in Serbia (in Macedonia and in the Timok valley), and that the Serbians could thus compel the Roumanians to respect their engagements regarding the treatment of the Serbians. The Serbs, on the other hand, insist that the Roumanians are in a majority only in the mountainous part of the Banat. They also state that Belgrade, their capital, is within 800 yards of the disputed region, so that they must have the southern part of the Banat for its protection.

The *Morning Post's* correspondent in Paris reports that despatches received there from Roumania state that, subject to ratification by Parliament, the King has signed a decree authorising a general increase in the salaries of public officials. Monthly salaries of 80 lei will be increased to 170, of 100 to 300, of 260 to 560, of 300 to 720, of 400 to 800, while those of more than 400 will be increased by 400 lei per month.

CYPRUS NOTES.

(From a Correspondent.)

The Deputation to England.

The deputation of members of the Legislative Council who are proceeding to England to urge their request for the incorporation of Cyprus in the Greek kingdom consist of eight out of the nine elected representatives of that body. The member who has denied himself the privilege of the trip is M. Evgenios Zeno, of the Limassol-Papho division, an advocate, and one of the ablest of the Greeks in the Council. The deputation is headed by the Archbishop of Cyprus. They have been fortunate enough to obtain passages as far as Port Said in a Government transport, which left Famagusta on December 5. The original intention was that three members only should go, but it was not easy to reach an agreement as to who the three should be. It is, of course, hoped that more is likely to be effected by means of personal interviews than through memorials; but as regards those whom the deputies seek to represent, there is probably little belief that their views and aspirations can be made more clear than they have been by the numerous previous deputations and petitions, especially as the members cannot speak English.

Officials' Bonus.

A further war bonus has been granted to all Government officials. Those who receive the lowest salaries of only £3 a month will be given an addition of half their pay, or £1 10s. a month. Those who receive £400 and upwards will have £72 a year. All intermediate salaries are similarly treated, different rates being given to unmarried officials and widowers with children over sixteen years.

Some of the restrictions which the war has imposed have now been removed, including that which affects lights in the towns. The limitations on fishing beyond a certain radius near coast towns are also withdrawn.

The New Metropolitan.

The visit of the Metropolitan of Athens, Méletios, to America and England has been followed with considerable interest in Cyprus, owing to his late connection with the island as Bishop of Kition, where he rendered such good service. His successor in that see is Nicodemus Mylonas, who was vicar of the Archbishop at Famagusta, and is, perhaps, the youngest prelate in the Eastern Orthodox Church; but he was regarded as well qualified by education character to hold the post. He has not been long enough in his position as successor to so able a member of the Church to make any mark, but he has already created a good impression.

THE RECONSTRUCTION OF SYRIA.

(From an Occasional Correspondent.)

Cairo, December 28.

It is satisfactory to learn from the Beyrout papers that the authorities there have formed a committee to secure the return of stolen and misappropriated articles to their rightful owners, and that this committee has already succeeded in restoring much property to such owners. It is still more satisfactory to learn that another committee has been formed, of financial and judicial experts, to deal with the more important question of debts, and to devise an equitable and easy means for their liquidation. In the meantime, a moratorium has been declared, expiring at the end of January, 1919, with a view to averting a financial crisis which would be likely to affect the smaller merchants seriously. The extraordinary fluctuations of the Turkish paper currency have subverted the whole economic fabric.

An "Echo" of the War.

A disastrous accident, caused by the explosion of a dump of hand grenades and munitions hidden by the Turks, occurred lately at Aley, leading to the loss of sixty lives. The violence of the explosion was such that all the window-glass in Aley is said to have been shattered. Thus put on the alert, the authorities have discovered in the next station, of Baabda, a similar hidden store of such explosives, which the Turks had meant to use for blowing up the culverts, bridges, and tunnels on the Beyrout-Damascus line, but which they had to leave behind in their hurried retreat.

General Allenby at Beyrout College.

The visit of General Sir Edmund Allenby to the American College at Beyrout, on the 11th instant, was the occasion of an enthusiastic reception given in his honour by the President and the teaching staff. After the singing of the college song by the students, the President delivered a stirring speech of welcome and congratulation, to which the distinguished General replied, making an appropriate allusion to the great number of former students of the college who have been doing such useful work in Egypt.

Can you offer us

consignments of the . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, December 28.

There has always been a political grievance in Malta as regards the constitution of the government in the island, and, following the talk about the self-government of small nations, the present moment has been seized upon to ventilate the local grievances again. A movement, initiated and headed by Dr. Fillippo Sceberras, has been afoot for some time with the object of convening a popular assembly, for the purpose of memorialising his Majesty's Government on the necessity of a reform in the Constitution of the Government of the island. Dr. Sceberras' appeal has met with general response from practically all the constituted bodies in both islands, including the clergy, the nobility, the professions, the Press, and the commercial community.

Dr. Sceberras has given notice of the resolution which he intends to submit, and which runs as follows:—"That the Maltese people, taking note of the principles of liberty and justice for which the British Empire has so heroically fought, and of the tribute of the King and of his Government to the people of this island, feel entitled to claim a Constitution which would ensure 'full administrative liberty' in matters of local interest, without prejudice to those rights which may eventually be granted to the colonies."

A very interesting ceremony recently took place in the Red State Room of the Palace. This was the presentation by the Governor and Commander-in-Chief, Lord Methuen, of the Insignia of the Most Excellent Order of the British Empire, in the presence of the heads of the Civil, Naval, and Military Departments and several ladies.

Before proceeding with the investiture his Excellency made a short speech, in the course of which he said:—"It is true that Malta has been 'a side show,' but nothing has pleased me more than to know, by the letters I have received and from what I have heard from others coming from England, of the good name Malta has earned for itself at home. We have been one large hospital, and it has been a matter for congratulation as to the state of the cases on reaching England. To Colonel Sir Charles Ballance, Colonel Tooth, Colonel Thorburn, Colonel Gulland, Colonel Charters Symonds we are indebted, and, let me add, to Colonel Sir Archibald Garrod, who is here to-day. I hardly like to say much in the presence of Lady Methuen, but I must mention the debt of gratitude we owe to the ladies in Malta, English and Maltese alike, for the splendid help they have given from first to last. For my part I congratulate myself that during the time I have been here I believe and hope we may have a happy family in Malta."

Captain Ingham, A.D.C, then read out the names of the recipients as follows:—

To be Commanders of the Order: The Lady Methuen: Lieut.-Colonel F. Ashley, British Red Cross and Order of St. John; and Captain F. A. L. Andrews, R.N. To be Officers, Mr. Justice Alvarez, I.S.O., and Lieut. Charles H. Carpenter, R.N.V.R.

His Excellency the Governor, Lord Methuen, has had the degree of LL.D. (*honoris causa*) conferred on him by the Malta University.

The Archbishop's Bread Fund, which was established to relieve the increased cost of foodstuffs, and which closed on the 31st ult., has resulted in no less a sum than £4,828 14s. 4d. having been subscribed by all sections of the public.

Quite a gloom has been cast over the Command here by the deaths of two prominent naval officers. The death of Engineer-Captain Arthur Philip L. Dupen, R.N., took place on Wednesday at the Royal Naval Hospital, Bighi, resulting from fracture of the skull, occasioned by his being thrown from a horse at the Marsa; Lieut. William H. Hardy, R.N., died at the same hospital on the 24th inst. from the effects of pneumonia.

NEAR EASTERN WAR TROPHIES.

Major Beckles Willson, the British officer dispatched a year ago by the War Office to Palestine and Mesopotamia to collect and preserve trophies of war and battle relics for the Imperial War Museum and the various Colonial war museums, has returned to England.

The whole collection, destined for the Imperial War Museum, has been transported to Alexandria, and is temporarily housed in the Art Gallery there, where it has been viewed by over 30,000 persons. Steps are, it is understood, being taken to bring the collection to London.

A telegram from Belgrade says that the newspaper *Pravda* reports that the National Assembly of the first Jugoslav Parliament is summoned for February 15.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Omar Khayyam.

The war has taught a great many people to revise their estimates of the value both of other people and of most things. For instance, before the war would any bank manager have tolerated "back answering" on the part of a clerk, let alone a clerk of the female persuasion? Yet I am credibly informed that a young woman who flatly refused to do something she was told to do by an assistant manager, and who added to the enormity of her offence by using a big D, was actually upheld by the A.M.'s overlord—who, however, apologised privately to him. Then, again, before August, 1914, did any of us ever dream that the butcher would ever assume the importance—and the airs—of a "Bashaw" of the old type? I wot not. Yet such has been the case, and the humble customer has had to cringe and fawn, to beg on bended knees (almost!) for his (or her) bit of rump steak, or what not—and, even so, has very often been able to secure nothing better than a bit of scraggy, gristly, unappetising-looking stuff, that could only be regarded as fit for human consumption by the most persistent of optimists. And so it has been in a thousand and one other ways as well!

***

But if our ideas of values in this country have needed modification, they have not required such radical readjustment as was the case in Kut during the siege. There, I learn from an officer who went through the experience, a donkey—and a good donkey, too—was actually exchanged for a hen; and the donkey's first owner was regarded by most people as having got the best of the bargain! For one thing, the quadruped required a good deal of food, which was difficult to get and, of course, very dear; for another, the hen was actually laying two or three eggs a week. And in those days, in Kut, an egg, even a skimpy Oriental egg, was well-nigh priceless.

***

This reminds me that the gourmets of Kut made a discovery that was not uninteresting. Their investigations proved—to them, at least—that donkey meat was preferable to mule, and that mule was better than horse. This strikes me as very strange; in fact, the very reverse of what I should have expected. The only explanation of the mystery that I can offer is that beatings serve to improve the quality of an animal—for table purposes. Another discovery made by the besieged garrison was that the Mule has strongly-developed cannibal instincts. I always thought better than *that* of the Asiatic Mule; though I was prepared to believe anything bad about his American cousin.

***

I am beholden to a correspondent in Cairo for a copy of a news agency's telegram, which contains a really gorgeous "bloomer"—appropriately enough in connection with flowers! The telegram, which is printed, describes Sir Douglas Haig's reception in London last month; and having taken him safely through the cheering crowds in "Dun Cannon" Street, on "the Constitutional Hill," and elsewhere, it continues:—

> "Passing into the Palace, the party was received by the King, the Queen, and other members of the Royal Family, decorated in red, yellow and red-copper chrysanthemums," etc.

The London Press was surely remiss in failing to notice this adoption of a pretty Oriental custom by our Royal Family.

***

Women's rights have evidently one ardent supporter in Burma. A Rangoon paper of November 1 contained an advertisement inserted by a Burmese lady, who declared that she would not be responsible for any debts or transactions contracted by her husband, a paddy trader of Pyinbongigi. I expect the lady thinks that husbands have had the monopoly of that kind of advertisement long enough. Now, with her English sisters exercising the Franchise, she has struck.

***

No doubt you have already heard—or read—the story, told by Mr. Garrison the other day, when lecturing on Egypt, Mesopotamia, and Palestine in relation to the war, regarding the shipment to Egypt of a cargo of sand for filling sandbags for the trenches. No wonder that every newspaper in England seems to have got hold of the tale, and to have used it as a fresh excuse for belabouring the W.O. My only object in mentioning it now is to suggest that it offers us a pleasing variety on the "coals to Newcastle" expression, which is well-nigh worn out. We have long known "corn in Egypt." "Sand for Egypt" is a new aquaintance, but I should not be surprised if it developed into an old friend.

Corsair.

NEAR EAST BOOKSHELF.

IN BURTON'S FOOTSTEPS.*

One closes this book with the feeling that after all it is no such difficult matter to get into Mecca and Medina in disguise, and that the dangers of the undertaking must have been very much exaggerated. At least, that is probably the impression that would be left on the mind of one who knew nothing more of the subject than he is told by Major Wavell—and. surely, there could be no higher tribute to his modesty? The very real danger he passed through is made light of throughout the book, and we are afforded only a glimpse of those careful preparations for the journey which made it a brilliant success. But the story of the pilgrimage is excellently told, and he would be a dull dog indeed who could not enjoy it. The author is able to inspire us with much of the interest that he himself felt in the enterprise; and his sense of humour and his descriptions of his travelling companions, and of the acquaintances they made on the road, lend the narrative real charm. It will never supersede Burton's great work, but, if only because it is more up to date, it may usefully supplement it; and that puzzling person "the general reader" will probably prefer it to Sir Richard. It was certainly a happy thought to publish this popular edition at the present time, and we commend the book to all who wish to gain some knowledge of the Arab view of life and Moslem thought. It will help them towards both these ends. If it does not also make them feel that in the death of Major Wavell England suffered a very real loss we shall be surprised.

TWO SURGEONS IN THE WAR.†

A week or two ago we commented on the deeds of the Royal Naval Division, of immortal gallantry, as seen by a padre; here we introduce another view-point by two medicos. This book, like its predecessor, will have a large public. It covers Antwerp, Gallipoli, Salonika, and France; it is gay and pathetic; whimsically and cleverly illustrated with black-and-white drawings; wise and clear-sighted, as might be expected from a combination of five professions — medicine, literature, art, soldiering, and sailoring—and intensely graphic page by page. Which author is scribbler and which sketcher we have not discovered. We are told, what is not generally known, that the celebrated landings in Gallipoli of April 25, 1915, were not the first. "In February, parties of Royal Marines had disembarked and marched through Krithia to Achi-Baba (the fateful Achi-Baba), and other detachments had landed at Kum Kale without opposition." We have not space to quote, but are anxious to recommend a very fine apostrophe (p. 221-2) to the British soldier, especially grateful from fighting surgeons. Also the ordinary reader will find the medical facts and comments, acquired from fierce experience, of equal interest with the battle pictures. Major-General Sir Archibald Paris, K.C.B., R.M.A., writes a preface to a charming and valuable contribution to the story of the Great War, and the grand part played by the "Army and Navy, rolled into one."

A record of the advance of the Egyptian Expeditionary Force between July, 1917, and October 31, 1918, compiled from official sources, will be published shortly by the *Palestine News*, edited by Lieut.-Colonel H. Pirie-Gordon. The record will be issued at a moderate price, and will contain: (1) A portrait of General Allenby and full lists of all general officers and units serving under his command and (2) General Allenby's despatches covering the whole advance, illustrated by fifty coloured maps. Copies will be obtainable from Messrs. Sifton, Praed and Co., Limited, 67, St. James's Street, S.W.

INDIA'S OPPORTUNITY

Considered Apart from Its Political Aspects

By Major E. A. TANDY, R.E. (*Survey of India*).

—— *Price 2s. 6d.* ——

"THE NEAR EAST" BOOK DEPT., 1, Devonshire Square, E.C

A NATURALIST'S DIARY.*

Readers of the *Daily Mail* are already familiar with those charming daily paragraphs on Nature which appeared over the signature of P. W.D. I., each well worth reading. Three hundred and sixty-five of these sketches, corresponding to the days of the year, have now been published in book form, the author's identity being divulged as Percy W. D. Izzard. Mr. Izzard is a true nature lover, and an accomplished writer—two essential qualities in the man who wishes faithfully to portray animal and plant life along our country lanes. Mr. Izzard certainly possesses both in a marked degree, and hence the popularity of his writings. In book form, illustrated by Florence Izzard and W. Gordon Mein, these essays lose none of their charm.

LONDON SCHOOL OF ORIENTAL STUDIES

The School of Oriental Studies in Finsbury Circus began the second term of its third session last week with every prospect of substantial growth of the classes as demobilization proceeds.

The young men discharged from the Army and Navy to be selected for Civil Service appointments for India and the Colonies will be required to undergo a period of study probation, and as recruitment has dwindled to very small proportions in the last four years, there is certain to be a great reinforcement of the number of probationers taking courses at the school.

Sir Denison Ross and his staff have prepared many young Army officers in languages for Eastern service, and this work will still go on under the changed conditions. It has just been announced that the Civil Service Commissioners will hold an examination both in European and Oriental languages on April 1 next for Regular Army officers in London as a special case. A further development of peace conditions will be the preparation of mercantile assistants for careers in the East.

The recently instituted classes for Armenians and Georgians have a special interest in view of the impending reconstruction in the Near and Middle East.

A MONTENEGRIN PROTEST.

Sir Roper Parkington, Consul-General for Montenegro, has received an official communication stating:—

"The presence of Serbian troops in Montenegro has encouraged the Serbian authorities to organize, under the name of "the Great Skupshtina,' an illegal meeting, in no way justified by the constitution of the country. This meeting presumes to proclaim the re-union of Montenegro with Serbia and the downfall of the national dynasty. Far from being the expression of the will of the Montenegrin people, it is simply the ambition of certain Serbian officials; and of the five members who comprise the 'Directory' three have already been condemned for having in 1907 participated in a plot, inspired at Belgrade, against the security of the Montenegrin State.

"The Montenegrin Government has issued a Note of protestation to all the Allies, and also to neutral countries, against the various actions of the Serbian officials. The Montenegrin Government firmly believes that such an audacious attempt at annexation will meet with universal disapprobation; and, confident in the promise of the Allies, Montenegro awaits the hour when it will be in a position to discuss the great question of its union with the other countries of the Yugoslavs."

TRANSYLVANIA AND ROUMANIA.

Under date of January 11, Reuter's Berne correspondent reports:—The official Roumanian *Gazette* publishes a decree definitely attaching the territory of Transylvania to Roumania.

The decree stipulates that the attached territory shall be represented for the present in the Royal Government of Roumania by Ministers without portfolio, who will be able to propose special councillors for the different departments.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. January	1919. January.		1337. Rabia II.	5679. Shebat
17	4	Friday	15	16
18	5	Saturday.....	16	17
19	6	Sunday	17	18
20	7	Monday	18	19
21	8	Tuesday.....	19	20
22	9	Wednesday	20	21
23	10	Thursday	21	22

Lady Elcho is proceeding to India in a week's time.

General Franchet d'Esperey left Salonika last week for France, and arrived in Paris on Sunday.

The Maharaja of Bikanir has been elected a Fellow of the Royal Colonial Institute.

M. Misu, the Roumanian Minister, has left London for Paris to attend the Peace Conference.

M. Michel B. Boeresco, Counsellor to the Roumanian Legation, returned to London from Paris on Sunday.

The Albanian Convention *Vatra* has passed a unanimous vote of thanks to Mr. J. D. Bourchier for his services to the cause of Albanian independence.

The Council of the Geological Society has this year awarded the Lyell Medal to Dr. William Fraser Hume, Director of the Geological Survey of Egypt.

Bishop Montgomery, secretary of the Society for the Propagation of the Gospel, will be journeying to Palestine and Syria in the summer to take part in conferences regarding the future of missions in those countries.

Prince Nicolas of Roumania was the guest of honour at a luncheon given at the Ritz Hotel, by Sir Harry Mainwaring last Saturday. Among those present were the Roumanian Minister, Colonel Arion, head of the Roumanian Mission in London, Countess Torby, and Viscountess Curzon.

The engagement is announced of Captain Ian McEwen, 2nd Seaforth Highlanders and R.A.F., only son of John Forrester McEwen, of Villa Razzolini, Florence, and Amethe, daughter of the late Donald Smeaton, C.S.I., M.P., and of Mrs. Smeaton, of Lawbrook, Gomshall, Surrey.

A marriage has been arranged, and will shortly take place, between Captain John George Smyth, V.C., 15th Ludhiana Sikhs, Brigade Major, 43rd Brigade, Lahore, eldest son of W. J. Smyth, I.C.S., and Mrs. Smyth, and Evelyn Monica, daughter of Lionel Robertson, P.W.D., and Mrs. Robertson, Lahore.

The marriage of Major Geoffrey Rawson, R.E., M.C., and Miss Ella Cane will take place at St. Peter's, Cranley Gardens, on Wednesday, January 22, at 2 p.m. No invitations will be issued, and no formal reception held, but relatives and friends will be welcome at the church and afterwards at 66, Elm Park Gardens, S.W.

The engagement is announced between Brevet-Major (temp. lieutenant-colonel) William H. Jelf Thornton, M.C., R.A. and Staff, only son of the late Henry Jelf Thornton and Mrs. Neal, Inglewood, Weston-super-Mare, and Dora, youngest daughter of Mr. and the late Mrs. R. Capozzi, of Alexandria, Egypt, and niece of the late Admiral de Liben, Royal Italian Navy.

General Torcom, leader of the Armenian Military Mission, accompanied by his aide-de-camp, Captain Melek-Shah-Nazar, arrived in England from Archangel last week. He has been received, Reuter's Agency learns, at the Foreign Office, where he presented a copy, duly counter-signed, of the Act of the Proclamation of Armenian Independence made at Garine (Erzeroum) on February 13 (January 31, O.S.), 1918.

Our Malta Correspondent writes (December 28):—Monsignor Canon Dom Giovanni Sarreo celebrated the Golden Jubilee of his ordination to the priesthood at St. John's Co-Cathedral on Christmas Day. The right rev. gentleman, who is a canon of the Cathedral Church of Malta and a dignitary of the Cathedral Church of Oran (Algeria), has accomplished several missions to Tunisia and Algeria, and was for many years Archpriest in the important and populous parish of Musta, which he only relinquished on his appointment to a canonry of the Cathedral. Monsignor Canon Sarreo enjoys the affection and esteem of all classes in Malta, who heartily congratulate him on this auspicious occasion and as heartily wish him "*Ad multos annos.*"

The Society for Promoting Christian Knowledge have voted £500 for the production of Serbian Church literature.

Admiral Sir Albert Hastings Markham, K.C.B., of Queen's [illegible]ce, S.W., who died on October 28, aged 76, has left [illegible]erty of the value of £4,747.

Madame Bessie Také Jonescu, of Launceston Place, Kensington, W., and of Bucharest, Roumania, wife of the Roumanian statesman, who died in St. Mary's Hospital, the result of a riding accident in Hyde Park, left property in the United Kingdom valued at £8,677.

The Belgravia War Hospital Supply Depôt, of which Princess Christian is president, proposes to help in the equipment of civilian hospital centres in Serbia and to make a collection of partly worn clothing, blankets, etc., for Serbian refugees. Voluntary workers are needed. The headquarters of the depôt are at 4, Grosvenor Crescent, S.W.1.

The relief work during the war of the British Red Crescent Society covers an expenditure of £1,631, of which £275 has gone to the Indian Soldiers' Fund, £350 to the Motor Ambulance for Indian Soldiers and its upkeep, £100 to the Syria and Palestine Relief Fund, £450 to Moslem sufferers in Armenia, £200 to Moslem refugees under the Russian Government, and £102 to distressed Moslems at Baghdad.

The will has been proved of Prince Victor Albert Jay Duleep Singh, who left property of the value of £67,192. He gave the sapphire ring presented to him by the Earl of Carnarvon to Lord Porchester, desiring him to treat it as an heirloom and to go with the Carnarvon estates. The Prince left all his property to his wife, absolutely, on condition that she carried out his instructions as to his cremation and wore no mourning herself on his account.

Among the public lectures to be delivered at University College during the second term are a course on "The Institutions of the British Dominions," on Thursdays at 5.30 p.m., beginning February 6; and a second course of Rhodes Lectures on "Indian Institutions," on Mondays, at the same hour, beginning February 10. Copies of the lecture programme can be had by the sending of a stamped addressed envelope to the Publication Secretary, Gower Street, W.C.1.

APPOINTMENTS, PROMOTIONS, &c.

M. de France, French Minister Plenipotentiary to Belgium, has been appointed High Commissioner at Constantinople.

Mr. John Langley, Under-Secretary of State for Agriculture, Egypt, has been appointed a Commander (Civil Division) of the Order of the British Empire.

The delegates for the instruction of Indian Civil Service Probationers, Oxford University, have appointed Mr. R. P. Dewhurst, M.A., I.C.S., to be lecturer in Hindustani.

Captain (temp.) Charles A. Willis, Assistant Director of Intelgence, Sudan Government, has been appointed an Honorary Officer (Civil Division) of the Order of the British Empire.

It is announced in the *London Gazette* that General Sir G. F. Milner, General Officer Commanding-in-Chief, Salonika Force, has been appointed Colonel Commandant Royal Artillery (November 21, 1918).

Colonel E. E. Bernard, C.M.G., Financial Secretary to the Sudan Government, has been appointed a Knight Commander of the Order of the British Empire; and Captain Edward C. Midwinter, C.B., C.M.G., D.S.O., General Manager Sudan Government Railways and Steamers, has been appointed a Commander of the same Order.

MONTENEGRIN RED CROSS AND RELIEF FUND.

11, VICTORIA STREET, S.W.

Regt. Section 1, War Charities, 1916.

A DEVASTATED COUNTRY—MONTENEGRO.

The Smallest and Poorest of our Allies.

Donations will be much appreciated. Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

Digitized by Google

It is announced in the *London Gazette* that the King has approved the following appointments to honorary colonelcies in the Indian Army :—

1/140th Patiala Infantry.—Major-General his Highness Maharajadhiraja Sir Bhupindar Singh Mahindar Bahadur, Maharaja of Patiala, G.C.I.E., G.B.E.

1/141st Bikanir Infantry.—Major-General his Highness Maharaja Sir Ganga Singh Bahadur, Maharaja of Bikanir, G.C.S.I., G.C.I.E., K.C.B.

1/143rd Narsingh (Dholpur) Infantry.—His Highness Maharajadhiraja Sri Sawai Maharaj Rana Sir Udaibhan Singh Lokindar Bahadur, Maharaj Rana of Dholpur, K.C.S.I.

1/144th Bharatpur Infantry.—Lieut. his Highness Maharaja Sri Brajinda Sawai Kishan Singh Bahadur, Maharaja of Bharatpur.

16th (1st Alwar) Lancers and 1/145th Alwar (Jay Paltan) Infantry.—Lieut.-Colonel his Highness Maharaja Sir Jey Singh Bahadur Maharaja of Alwar, K.C.S.I., K.C.I.E.

OBITUARY.

MAHARANI OF BHAVNAGAR.

The death is announced of H.H. Nandkunvarba, C.I., Maharani of Bhavnagar, Kathiawar. She was a daughter of the Chief of Khirasa, and married the Thakur Sahib in 1905. Progressive herself, in the best sense of the expression, she did much for the progress of the Kathiawar principality, especially in regard to improving the medical and sanitary conditions, and the extension of female education. During the war she edited a paper in Gujrati, which did excellent work in spreading the truth among the Indian troops and Indian public, and even more in counteracting German and pro-German reports and propaganda. Her literary talents were of no mean order, and she was author of a fine tribute to Lord Kitchener and another to Lord Hardinge. She also translated several of Mr. Lloyd George's speeches into Gujrati and Urdu.

Lieut.-Colonel Colwyn Vulliamy, late of the Leicestershire Regiment, has died at Cheltenham, aged 73. He saw service in the Afghan War of 1878-9, and had the medal with clasp.

Major Richard Stanley Baker, I.A.R.O., commanding 3rd Burma Company Mechanical Transport Corps, and of the public Works Department, Burma, died at Rawal Pindi on November 13 of influenza. He was 36 years old.

It is officially announced that Captain Henry Gerrard Reed, 114th Mahrattas, Indian Army, was killed in action on October 29, 1918, in the final operations against the Turks. He was the only son of Mr. John Reed, of Pali Hill, Bombay.

Mr. Francis Culling Carr-Gomm died on January 13 at his residence at Farnham Royal. Born in 1834, he was educated at Cheam School and the H.E.I.C.'s College at Haileybury. He joined the Madras Civil Service, and was for many years District Judge of Tinnevelly.

Canon Maurice Cowell, who died last week (January 9), aged 84, was a brother of Professor Edmund Byles Cowell, the Oriental scholar who first introduced Edward Fitzgerald to Persian literature. The Canon had travelled much in the Holy Land and in Greece.

Surgeon-General Sir James Howard Thornton died on January 6, in his eighty-fifth year. He entered the Indian Medical Service in 1856, and served through the Indian military campaigns, the Khasia and Jyntia Hills campaign, in which he was twice wounded, the Bhootan War, the Egyptian and Suakin expeditions, and the Hazara expedition. He was five times mentioned in despatches and received four medals with seven clasps. He also received the Khedive's Star, and (in 1885) the C.B. He was created K.C.B. in 1904.

We regret to announce the death at Ivy Glen, Rothesay, Bute, on January 9, of Mr. Laurence G. Binns, of Constantinople, in his seventieth year. Born in Constantinople in 1849, he spent the greater part of his life in that city. During the Russo-Turkish War and the two Balkan Wars he acted on relief committees, giving much time and thought to organising the distribution of funds, clothing, and food. He took a keen interest in all that affected the welfare of the British community, and gave his support to such enterprises as the Mutual Benefit Building Society, of which he was a director. He leaves a widow, four daughters, and one son.

Sir Donald Mackenzie Wallace, K.C.I.E., K.C.V.O., LL.D., died last Friday at Lymington, aged 77. His work on "Russia" (first published in 1877, and revised in 1905 and 1912) is too well known to require more than passing reference. Later afterwards became *The Times* special correspondent in Russia, at Berlin, Constantinople, and in the Balkan Peninsula. Later he went to Egypt, still for *The Times*; but when Lord Dufferin went to India as Viceroy he took Wallace with him as private secretary—a position which he filled with the utmost success. In 1889 he returned home by the overland route, but in 1890-91 he went to the East again as political officer in attendance on the late Tsar (then Tsarevitch) during his tour in India and Ceylon. Thereafter most of his time was spent in England. He was in 1891 appointed Director of the Foreign Department of *The Times*, and later edited the 10th edition of the "Encyclopædia Britannica."

Lieut.-Colonel John Walter Inge, R.H.A., who has died at Oxford, aged 80, served in the Afghan War of 1878-80, and had the medal with two clasps.

Mr. William Perceval Gore Graham, late Director-General of the Egyptian Public Health Department, died suddenly in London on December 30, in his fifty-eighth year. He was the third son of the late Robert Gore Graham, of Southmead, Westbury, Gloucestershire, and he entered the R.A.M.C. in 1887. Three years later he joined the Egyptian Army, and in 1891 he served in the Sokar campaign (mentioned in despatches). In 1896 he volunteered his services at the time of the serious outbreak of cholera in Egypt, and was later given a permanent post in the Egyptian Civil Service. In 1902 he was selected by the Egyptian Government to reorganise the municipality of Alexandria, and for two years he acted as administrator of that town. He then returned to Cairo, where he occupied the post of Director-General of Public Health in Egypt from 1907 to 1914, during which time he provided the city with its very excellent water supply. In 1914 he retired from the Egyptian service, and was appointed to a post under the Home Office. In 1915 he went to Serbia with Lady Wimborne's Hospital, and later was sent to Egypt by the War Office. A fall from his horse resulted in his being invalided home and his retirement from the Army.

NEWS IN BRIEF.

The Bulgarian Chamber has adjourned until February 20, after adopting a Bill for a general amnesty, proposed by M. Todoroff, the Premier.

A resolution excluding Bulgarians and Turks from corresponding membership has been passed by the Belgian Academie Royale des Beaux Arts.

A Jewish Congress, representing all parts of the Czecho-Slovak State, was held in Prague on the 4th inst., when a resolution was passed demanding a Jewish national home in an undivided Palestine.

Prisons in Bulgaria are said to be crowded with Greeks from Western Thrace, who have been imprisoned for no other cause than because they are Greek. The Greek authorites have made arrangements for the repatriation of these Greeks and those in Eastern Macedonia.

Speaking at a meeting of the East India Association on Monday, Lady Katharine Stuart said that the Oriental idea of education did not take enough count of the practical things of life, but the Western idea placed too much emphasis on moneymaking, and did not take enough stock of the personal question—it took children, as it were, by the dozen.

According to the statement of a young Serbian, who had been recruited by force, the Bulgarians deported 5,000 Greeks of Eastern Macedonia, while 4,000 Serbs succumbed to hunger and torture. Women and children were forced to work under terrible cruelties and violations, and Greek girls who refused to yield to officers' desires were flogged to death.

Reports have been received that a great shortage of bread cereals exists in Roumania, and the Wheat Executive in London, which is the Inter-Allied organisation for the purpose of food distribution in Allied countries, has arranged for the immediate diversion of supplies which were on their way to Europe through the Suez Canal. This wheat will go through the Dardanelles to a Roumanian Black Sea port.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

THE INDIAN SERVICES AND CONSTITUTIONAL REFORM.

The position of the Administrative Service bulks so largely in current discussions on Indian constitutional reform that observers who are unfamiliar with the conditions are almost tempted to conjecture that the word Service has taken on a new meaning under Indian skies, and that the country exists only, or at least mainly, for the sake of the administrators. Such a theory could indeed be largely justified from the contentions put forward by enthusiasts on both sides. The politicians of the Extreme Left desire, beyond everything else, to get the administrative machinery of the country into their own hands, and in pursuit of this object they endeavour persistently to concentrate public attention on the real or imaginary defects of the existing agency; the result is seen in the campaign of mingled criticism and calumny which continues to develop in a section of the Indian Press, and which has already produced a certain amount of effect on public opinion. In furtherance of this campaign it has of late become the fashion to proclaim that the Services have assumed the position of masters, and to appeal to the British public, or an even wider audience, to terminate the usurpation of this oligarchy, and entrust the administration to Indians, meaning, though this is not usually explained, that narrow Indian circle which has behind it the traditions of long centuries of tyranny. The object of the Extreme Left is thus clear, but we must admit some difficulty in understanding why the Extreme Right should put forward a substantially identical view of the situation. The public is being told on this side that the proposals for reform are calculated to destroy the authority, or the prestige, or the traditions, of the great Indian Services, and the conclusion is then suggested, if it is not actually drawn, that they are deserving of rejection on that ground. In the face of such a convergence of opposed factions, the ordinary English voter may well be pardoned if he infers that the position of the Services is the most vital question among those which now call for a decision, and that a position so anomalous and so dangerous ought to be altered with the least possible delay. The inference is, however, wholly at variance with the facts, and the simplest and most direct way of refuting it is to restate the position as it actually exists.

What, then, are the traditions of the Services, concerning which so much is now being said? In our experience they are these: unselfish and unostentatious devotion to the interests of the Indian people as a whole; special regard for the interests of those sections of the people who are unable to make their voices heard; fearless criticism of all proposals affecting the public welfare, no matter from what exalted source they spring; loyal acceptance of all orders when once the stage of discussion has been left behind. These are the principles which have guided Englishmen in India for the last century, and these are the principles by which they will be guided in the years to come. It was in accordance with these principles that the Services accepted without question the declaration of policy made in August, 1917; we believe that, as a matter of fact, the terms of that declaration were welcomed by the great bulk of Service opinion, but, however that may be, opinions were recognized to be irrelevant; the order had been given, and that was enough. The position in regard to the official scheme of reforms is entirely different: the scheme has been published to elicit criticism, and we are glad to know that the Services are expressing their opinions on it without regard to the official dignity of its authors, and that, true to their traditions, they are thinking more of the silent masses, the men at the plough and at the loom, than of the classes who are so well able to take care of their own interests. The position will undergo another change when that scheme, or some other, becomes an order; then the voice of criticism will be hushed, and the Services will devote themselves to making the scheme a practical success. They may accomplish this, or they may not, but they will give their best efforts, and if the new constitution should prove a failure, the result will be due to errors of design and not to the hostility of those who have had to put the design into practice.

Such being the actual position, it seems to us particularly unfortunate that the Secretary of State and the Viceroy should have decided to deal with the recruitment and composition of the Services in their report on constitutional reforms. The reasonable and logical course was first to settle the constitution, and then decide on the staff required for its working, but the authorities found, as they tell us, that they must take account of the attitude of Indian opinion, and accordingly they have resuscitated the policy of boons and doles which, we hoped, had been finally discredited by the experience of the last decade. The Public Services Commission had proposed certain extensions of the existing practice of recruiting Indian candidates, their scheme being designed to meet the needs of India under the present constitution. Lord Chelmsford and Mr. Montagu have taken these proposals as a basis under the new and essentially different constitution, but, at the same time, they suggest increases in the proportion of Indians recommended by the Commission, increases which they say are warranted by the changed conditions, and so we find ourselves suddenly plunged into the atmosphere of the auction mart. The Commission would take one Indian in four; the authorities now offer to take one Indian in three; and it is scarcely necessary to add that politicians have been prompt to meet this offer with a demand for one place in two, the needs of the country being wholly subordinated to the claims of a minute minority. The offer has, however, been made, and it is binding at least on the authorities who made it; all that can now be urged on those authorities is that they should take measures to ensure that within the limits so set India should get men of the type that she requires. They have admitted that a substantial element of Englishmen must remain in the Indian Services "so far in the future as any man can foresee"; they have recognized that there must be no falling off in the quality of the Englishmen recruited; they have committed themselves to the task of recruiting a certain number yearly; and with this object in view they will shortly enter a market where the conditions of supply are at the moment utterly unknown. Our plea now is that they should devote more attention to the conditions of that market, and for the time being think less of the aspirations of Indian politicians. For the moment it appears probable that the real needs of India can be met by drawing on the great reserve of young men who have served in the Army and have learned the principles of administration while still almost in their teens, and we earnestly hope that for the next year or two the recruitment of Englishmen will be limited strictly to that source, and that academical qualifications will be subordinated, if necessary, to the experience gained in a sterner school. Beyond that, the outlook is uncertain; no one can predict whether the schools and universities will offer an adequate supply of suitable recruits on the terms now proposed, and it is with the schools and the universities that the matter rests. The time is, therefore, unsuitable for the promulgation of ambitious and quasi-permanent schemes; the authorities have already committed themselves to an extent which is, in our opinion, undesirable or even dangerous; and they should now be content for a period to wait upon the market, and depend upon temporary and flexible regulations, keeping steadfastly in view the paramount object of securing an adequate supply of young Englishmen of the stamp required to bring to fruition the great experiment on which the Empire is about to enter.

RURAL LIFE IN EASTERN MACEDONIA.

It is thought that some impressions of one who has spent nearly three years in Eastern Macedonia during the war, and has been brought much in contact with the inhabitants and seen something of their life and occupations at close quarters, may be of interest to readers of THE NEAR EAST, and may serve to fill in some details in the rather incomplete pictures of the country which are current in England. The Struma Valley, the Chalcidice, and the coastal regions from the Gulf of Orfano up as far as Kavalla are the districts where the writer spent most of his time, but he travelled also over most of the country east of the Vardar. In spite of the war, life in the villages went on much as usual, especially in 1916, before evacuation began, and we stayed so long in one district that it was possible to get to know the people fairly intimately.

Of course, there are a great many local differences in the different areas, and, above all, there is the difference of race. There are villages purely Greek, purely Turkish, and those in which Greeks and Bulgarians, Greeks and Turks, or Bulgarians and Turks live side by side, with occasional settlements of Vlachs and Tsinganes (gipsies). It should be explained that the term Bulgarian as used in Macedonia means no more than a Christian speaking a Slavonic language. He may be a Serb, or even a Greek, or, since all Christians have mixed freely together in the Balkans, of mixed blood. Language is not a conclusive criterion of race in Macedonia. You would naturally suppose that a certain village in which the vast majority of the inhabitants speak Bulgarian in their families is Bulgarian; the Greek authorities maintain that they are Bulgarophone Hellenes. It is a question almost impossible to decide definitely, and in practice it really makes comparatively little difference. Christian Macedonians all live much in the same way, and under an impartial and strong government would get on very happily together. With the Turks, of course, it is different; they are a race whose religion and customs keep them entirely apart, and who have none but business relations with the other races. The Turks in the valley on the south side of the Pangaeon mountain, where the old Via Egnatia and the new Greek military road run to Kavalla, told us that when the district became Greek, after the Balkan War, many of the families left the country, and that they would have gone too only they were convinced that Turkey would reconquer Macedonia. This was in 1916; in August of that year the Bulgarian army occupied the district, and except for a brief period, when they were relieved by a Turkish division, remained there until the armistice. It is now Greek again, and likely to continue so; but, unless the Greeks make it too uncomfortable for them, I expect the Turkish inhabitants, who are still the predominant race on the south side of the mountain, though the north side is almost entirely Greek, will decide to remain and make the best of it.

Perhaps the best way to give my readers an idea of how life goes in a Macedonian village will be to take them with me on an imaginary visit to a village we will call Platanochori, though that is not its real name. It is a nice village, well situated on the foothills which form the southern boundary of the Struma Valley, with about 300 rather exceptionally well-built houses—that is, with a population of 1,500 to 2,000—all Greek, though many of the names are distinctly "Macedonian," and indicate a mixed origin. When I first knew Platanochori you could only get there on a horse by an unpleasantly stony path, but latterly the village has made a heroic effort and widened the track, though the stones still remain, and I went there last year in a Ford van. The village streets, as always in Macedonia, are steep and narrow, and the rough *paré* is full of holes and ruts; so we will leave the car at the entrance to the village and proceed on foot to the village square, the chief features of which are three large plane-trees and a handsome stone-built spring-head, from which the water gushes into two large stone troughs. Women are washing clothes, and others are drawing water into large earthenware jars of antique shape. If you are thirsty—as you probably will be, for Macedonia is a thirsty country—ask one of the women for a drink. The water is excellent, and is brought a considerable distance from the mountain in pipes. The Macedonians, as a rule, are very particular about their water, and recognise specific qualities in different springs; they will tell you the water of one is light, another heavy. They drink enormous quantities, and when any considerable number of labourers are gathered together, it is quite a business to keep them supplied. There are a good many men about the square, and the café is full of people. You wonder if you have struck one of the innumerable Saints' days, when no work is done; but the people are not in their best clothes, as they would be if it were a holiday, and the truth is that about this time of the morning—between 11 and 12 o'clock—there are always lots of people about, for which there are several reasons. One is that it is in the streets and the cafés that all business is transacted, and, time not being money in Macedonia, business means endless talking. Then the people here start work as soon as it is light, and normally break off for the day when it is time for the midday meal. But, when all is said, plodding daily work as we know it in Western Europe is not the rule in Macedonia. At the busy seasons, such as tobacco planting or the harvest, they and their women will work hard from dawn to dusk of a summer's day, with a sleep during the hottest hours, but at ordinary times there are so many little jobs, involving so much travelling to be done, that anything like routine is scarcely possible, besides being most repugnant to the native temperament. Once a week at least the head of the family must go to the mill with his donkey laden with two sacks of wheat—it may be an hour or more away. He has to wait his turn, and also wait till his wheat is ground; altogether, with one thing and another, it is a day's journey. Then there is a frequent journey to the mountain for fuel, and if the villager is a man of any substance he will have business pretty often in the neighbouring villages, and that generally means a whole day's journey and frequently a night away from home. At present the donkey, or in rare cases the mule, is the only means of getting about. As three miles an hour is all a donkey can do, and distances are enormous, the amount of time they all consume in travelling can hardly be conceived.

We will take a walk down the street and look at the shops. The village tradesmen, the workers in iron and tin, the bootmaker and the saddler, generally work in their own houses, and not in the booths with open fronts such as you see in Salonika and other large towns. A shop is essentially a place where you buy imported articles. If you go inside, you will find it not unlike a general shop in an English village, though, as it is wartime, there is very little to buy. There is a scarcity of everything, especially of the cheap Austrian goods with which the country used to be flooded. Sugar, coffee, rice, olive oil, and paraffin are the chief things which have to be bought in a Macedonian household. Bread is invariably baked at home in the villages by everyone, and is the main article of food. Milk, cheese, and "yaourt"—sour milk; a very popular dish—you get from your own or your neighbours' sheep and goats. Cow's milk is not used, but is kept for the calves. Fish from the lakes and the river they buy from hawkers whenever they can; for the Greeks are passionately fond of it, as they always were. They also like meat occasionally on feast days, and will eat enormous quantities if they get the chance, but they are not habitual meat eaters. Eggs are very plentiful, and used to be very cheap, like everything else, in Turkish times; so in season are vegetables and fruit.

Although the people themselves produce so many of their requirements—for much of their clothing is made at home from home-grown wool and cotton—the shopkeepers seem to do very well. The polite name for the best sort of shopkeeper is "merchant." Besides his retail business he generally buys local produce and sells it wholesale in Salonika to the firm which supplies the goods for his shop. The villagers have the same weakness, which is so common in Ireland, for running up long accounts, and many of them live in complete dependence on the merchant. This does not seem to work out as badly as it sounds, as a Macedonian village is really like one large family, and there is a good deal of give and take between creditor and debtor. Still, it must be rather demoralising; and co-operative village credit banks, if they could be introduced, would be a great boon to the cultivators, as, under existing conditions, they can only borrow at very high rates, but there would be a good deal of opposition on the part of those who profit by the present state of things

PRESS ON THE NEAR EAST.

"Parties" in Turkey.

The following notes on political parties in Turkey are extracted from an article contributed to *The Times* by "A Returned Resident," and entitled "Constantinople Under the Armistice."

As for the party struggle—*plus ça change plus c'est la même chose*. There is no change in the old grouping—Committee and Anti-Committee. True, the Tejeddud (Renaissance) Party has expelled certain too notorious members of the C.U.P. from its ranks, and with a number of recently formed parties and leagues affects to deplore the misdeeds of Talaat and the really remarkable financial operations of Enver and his Quartermaster-General, Ismail Hakki. But it is becoming increasingly clear that all these parties are emanations of the C.U.P., which is unquestionably working hard to recover lost ground, is in possession of ample funds, and is probably still better organised than its opponents. It cannot form a Government, but it can seriously embarrass any other Government, and its past record is such as to make its opponents very nervous of its subterranean activities. Talaat may not be in hiding here, as many affirm, but Talaat's friends, Carasso, Midhat Shukri, and the rest are here, active—and wealthy—and one sometimes wonders whether a new *coup d'Etat* might not already have been attempted had not Allied warships commanded Constantinople.

The Opposition is strong, better organised, and it would seem of higher spirit than in 1912. It has numbers, and the support of some exceptionally honest men, such as Ahmed Riza, who is now the stern critic of the C.U.P. which he founded.

The "Party of the Principles of President Wilson" is simply a propagandist group, which is bidding especially for America's "disinterested" support in the regeneration of Turkey. It is composed of Dönmés (crypto-Jews) and others who till three months ago were either notorious as Germanophils or as Neo-Turanians. To judge from the articles published in its organ, *Vakit*, its chief preoccupation is to maintain Turkish domination in the Armenian vilayets. It ascribes the responsibility for the massacres to the Armenians, and by classing Kurds, Lazes, and Circassians as "Turks" can produce arguments in favour of a Turkish Armenia. A declaration by President Wilson or by the Entente Powers that massacre-made majorities shall not be taken into account at the Peace Conference seems very desirable. The Greek and Armenian political parties are chiefly concerned with their respective national interests.

The "New Spirit" and the Old.

From another article in *The Times* (January 13), on "The Old Spirit in Turkey," we take the following passages:—

It cannot honestly be said that there are many signs of the "new spirit" towards racial problems among the Turkish official and professional classes. If the Press is a safe guide, there is a marked tendency to ascribe the worst crimes and abuses of the last few years to a small group of politicians who have taken to flight, and to find extenuating circumstances for the others; to hint that the Armenians themselves are mainly to blame for the "events," though evidence is never adduced in support of this surprising contention; to burke all references to the shocking treatment of British prisoners of war; and to make claims to the retention of Northern Syria, Mesopotamia, Cilicia, and Armenian provinces, and even Macedonia. The writers who make these claims to the Arab and Armenian areas argue on the premises that the Arabs or Kurds, being Moslem, should be included among the Turkish population, and they proceed to demand that the Turks in these areas should be allowed self-determination on the basis of a racial majority secured by massacre. Nor do the Press references to the European situation inspire any confidence in the foresight and judgment of the aforesaid classes. . . .

It is possible that the arrival from Western Europe of the exiled members of the Committee parties may eventually improve matters by teaching many of the Turks what is the real state of affairs. The masses remain apathetic, save where they have profited by the expulsion of the Greeks and Armenians, and fear the necessity of disgorging the plunder.

The task of the Government is, therefore, very difficult, and it will be long before the general confusion and demoralisation now prevailing can be expected to abate.

The Future of Montenegro.

The strained situation as between Serbia and Montenegro is responsible for the following note in the *Saturday Review*:—

The Montenegrins are starving. Their land, which never contained much more than timber and stones, was devastated by the Austrian invaders. Benevolent British and Americans subscribed money for revictualling, but so soon as the work began, the French authorities persuaded our Permit Office to refuse visas to the revictuallers, and relief is accordingly at a standstill. Meanwhile the Jugoslav or Serbian cabal has gathered together a few pundits at Agram and pronounced the annexation of Croatia, Slovenia and Montenegro. The Press of Europe obediently swallows the fable, though it has not been ascertained whether those countries desire to be absorbed by Serbia or subjected to her laws. Their Parliaments have not yet been summoned to decide, for the very good reason that most of their soldiers are not yet home from prison camps. Questioned about this injustice, the Foreign Office replied with brutal frankness: "We agree that Montenegro is being treated unjustly; she has our sympathy, but we are not prepared to quarrel with France for the sake of Montenegro." Can the explanation be that French financiers are floating a big loan for "greater Serbia"?

Whatever the explanation may be, it is certain that real friends of Serbia and of Montenegro alike must deplore the state of affairs that has arisen, and must earnestly hope that it will soon be terminated—by the Great Powers, if necessary.

CORRESPONDENCE.

INDEPENDENT ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I ask for space in your esteemed paper to write a few lines for the righteous cause of my heroic and oppressed fatherland, Armenia, a cause which, I believe, can be surpassed by none for its cruel baptism of blood and fire.

Ere these meagre lines of mine touching the last and crowning phase of the Armenian Question appear the Peace Conference will, perhaps, have opened at Versailles to declare the rights of nations, strong and weak, and to do "strict justice" to them.

We are told by the wise and noble President of the United States in simple and dignified language, that "impartial justice" must reign at the peace table, and "the equal rights of the several peoples concerned must be secured."

The Armenian nation, whose political, legitimate aspirations are quite known to me, demands, in the name of the lofty principles laid down by President Wilson and upheld by all the Allies, that the destructive Turkish rule over our fair lands should cease to exist, and an independent Armenian State, embracing its historical and ethnical frontiers, should be created, helped, and backed by the victorious and chivalrous Allies, in whom we have deep confidence.

The Armenians demand their independence because (1) they have suffered terribly at the hands of the "Unspeakable Turk" for siding with the Entente. My pen cannot dwell on the sorrows of my dear country, for the agonies it has gone through are too heavy, too crushing for any conscious, palpitating Armenian heart to bear. (2) The Armenian nation, groaning under three yokes—the Turkish, Russian, and Persian—like Poland, without an army or state treasury, raised tens of thousands of brave volunteers and fought valiantly for the ideals of the Allies in all the great theatres of the war. (3) The country that stretches from Erivan, at the foot of Mount Ararat, to the port of Ayas, on the Gulf of Alexandretta, is our own fatherland, and is most sacred to us, as every inch of it is soaked with the blood of ancient and modern Armenian heroes.

We have paid an enormously heavy price for our liberty and independence, and "strict justice" should not deprive us of what we consider—and what the civilised nations will consider—to be our sacred right to unmolested, independent political existence.—I am, etc.,

R. TOKVORIAN, B.A., D.D.S.

Nicosia, Cyprus, December 5, 1918.

PALESTINE SUNDAY, FEBRUARY 2, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We should be glad if you would allow us to draw attention to our appeal for help on Palestine Sunday, February 2. Nearly two years ago the Syria and Palestine Relief Fund commenced active relief work south of Gaza. Following the advance of the Allied forces, Gaza, Hebron, Jaffa, Bethlehem, Jerusalem, Nablus, Nazareth and other points were occupied, and our workers have not only started soup kitchens, hospitals, dispensaries, and orphanages, but have administered relief on a large scale to a stricken people. Operations have now been extended into Northern Syria from whence accounts come to hand weekly telling of terrible distress.

The Relief Fund, jointly with the Order of St. John of Jerusalem, are now organising, at the request of General Sir Edmund Allenby, a British Relief Unit for Syria, which it is hoped will leave England in February fully equipped to deal with medical and industrial relief. For the support of this unit, in addition to the present work of the Syria and Palestine Relief Fund, we need increased financial help.

We ask therefore for generous and widespread support on Palestine Sunday, and we are sure the Christian public of Great Britain will see to it that such a work of mercy to the suffering people of Syria and Palestine will not lack for funds.—We are, Sir, yours sincerely,

A. HENRY MCMAHON,
Chairman of London Committee.
RENNIE MACINNES (Bishop),
Chairman of Administrative Committee.

Syria and Palestine Relief Fund,
110, Victoria St., Westminster, S.W.1.
January 8, 1919.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Trade in Morocco is very restricted at the moment, but there is no reason for thinking that the stagnation will be long continued. As regards the export trade, efforts are being made, I understand, to obtain the removal of restrictions on the export of Moroccan produce as speedily as possible. It is absolutely necessary that British merchants should have freedom of trade with respect to Morocco. They have suffered very largely during the war owing to the restrictions imposed by the French authorities. The position in this respect may be gathered from the fact that the restrictions covered wheat, barley, maize, and hides and skins.

***

Endeavours are being made to get the restrictions on exports to Morocco removed, and they are going gradually. The position in Morocco is, however, very difficult, because the armistice was declared very much earlier than was anticipated, and trade has come to a standstill as the local merchants think that there will be a serious fall in prices, and that they will be able to buy all their requirements at pre-war prices. Of course this view is absolutely fallacious, and the sooner they realise it the better for all concerned.

***

In view of the prospective re-establishment at an early date of regular communications with Roumania, the Bank of Roumania has issued a circular drawing attention to the wide field of trade activity that Roumania will present in the future, and offering its assistance to British merchants who desire to take advantage of the opportunity.

***

Before the war Roumania was overrun by the Germans, who by insidious methods had contrived to obtain a remarkable influence over the country's commercial activities. The Roumanians acquiesced in this state of things mainly because they could not help themselves, but owing to the war an entirely new situation has arisen, and in the immediate future the dominating factor in Roumanian commerce is going to be the intense hatred of the people for everything German. The Roumanians will naturally look to the Allies to establish intimate trade relations with them, and to supply their needs so that it will not be necessary again for them to look to Germany or her ally for anything. This prospect opens up wide scope for increased trade for British merchants and manufacturers. France has always been extremely popular in Roumania, and our Ally will no doubt obtain a large share of the available trade; but, provided the individual British trader does his duty, there is no reason why the United Kingdom's trade with Roumania should not be increased to an equal extent.

***

I hear that a deputation from Manchester visted London last week with a view to obtaining licences for the export of goods to Serbia and Roumania. This is, if I am not mistaken, the second deputation of this kind from Manchester, the previous one being in connection with trade with the Levant. Evidently the cotton people are determined to leave no stone unturned to promote the resumption of normal trade relations with the Near East. The enterprise of the Manchester merchants might possibly be followed to advantage in other quarters, as it seems to be the only way to make the machinery move.

***

A position has arisen with regard to Indian imports, which seems to call for immediate official action. At the conclusion of the armistice there was a great accumulation in America of metal goods and other commodities destined for India, and American exporters who have not had to face the difficulties with which British traders have been confronted were able to begin the despatch of these goods in large quantities. They have begun to arrive while orders placed in the United Kingdom very many months ago are still not carried out, owing to shipping difficulties. But, besides that, American exporters are quoting prices for further consignments far below the war level, and these goods they will no doubt be able to deliver when British goods ordered long ago and priced at the war figure reach their destination. This has led to a strong movement among dealers in India to cancel contracts. If this were allowed the situation might become one of great difficulty, and it has been suggested that steps should be taken to institute a system of licences for imports into India by which preference would be given to the oldest contracts, and goods ordered since the armistice would not be released until earlier orders had been completed. That would solve the problem, and it may be hoped that some such device will be speedily adopted.

***

I was glad to notice in the New Year's Honours List the name of Mr. Leslie Couper, general manager of the Bank of British West Africa, who has received the C.M.G. My readers will also be interested to learn that Mr. Clifford B. Edgar, a director of that bank, was among the successful candidates at the General Election.

***

My readers will, I think, be interested to hear the views of a correspondent, who is specially qualified to speak on the subject, on the outlook in Syria. My correspondent was immensely enthusiastic over the prospects for that country, and looked forward to development on a scale that would never have been dreamt of before the war. He laid special stress on the possibilities of power production in the country, and he pointed out that Syria's swift-flowing streams if properly utilised would provide a matchless source of wealth. "There are a remarkable number of these streams," he added, "all of them very rapid, and the country which is so fortunate as to possess them has a limitless supply of free energy."

***

I have always understood that the finest asphalt in the world comes from the West Indies, but, of course, so much depends on what the material is to be used for, and I am assured by a merchant who used to deal in this commodity that as a matter of fact asphalt from the Dead Sea is the finest for all purposes. The merchant used to sell Syrian asphalt at 30s a cwt., but the Dead Sea product brought him 65s. a cwt. The special feature about this particular asphalt is, he stated, its complete freedom from grit, a characteristic which it shared with no other variety.

***

There will be an excellent opening for British traders in Egypt and the Sudan as soon as trade conditions approximate to the normal for building materials of all kinds, as, of course, there will be throughout the Near East, where new construction, whether of houses, factories, or public works has been simply in abeyance in the past four years. Probably there is greater scope in this direction for enterprise on the part of British merchants than in any other line, and this is particularly the case as regards housing accommodation. My readers are quite familiar with the comprehensive plan for new houses at Salonika, and while the shortage there is obviously mainly artificial, there is in many parts of the Near East, and notably in Egypt and the Sudan, a very real lack of houses, and obviously in these places there will be an immense demand for building materials.

***

Unfortunately there is one very real obstacle which may prevent this country obtaining its proper share of this trade, and that is, needless to say, the vast demand for builders' materials in this country, to say nothing of the needs of Belgium and Northern France. No one, of course, would suggest that home requirements of an urgent nature should be shelved for ulterior considerations, but while I fully recognise the difficulty of meeting these needs and at the same time of catering for foreign markets, I strongly urge our merchants to do their best to take advantage of the openings that exist in the Near East, because it is not merely a question of satisfying a temporary need, and the country which obtains the business now may depend upon a permanent market for these commodities.

***

I see that Professor Raitt, consulting cellulose expert to the Government of India, takes a very optimistic view as to the development of paper pulp manufacture in India. In a recent lecture, after pointing out that the world's annual consumption of paper was ten million tons and that the demand was growing at the rate of 25 per cent. every ten years, he expressed the opinion that India could do a very great deal to fill the gap. Bamboo and some Savannah grasses, he said, could be used to produce twenty million tons annually for India, Burma, and Ceylon, so that the country could produce pulp for the whole world.

***

It is reported that the Government of Ceylon intends to take steps to promote the manufacture of salt in the Island on a much larger scale in the future. This news is very welcome, because the salt industry there is generally recognised as affording scope for considerable expansion, and its development would not only add to the Island's wealth but would also enlarge the sources of revenue, a factor which is of special importance at the present time.

COMMERCE WITH SYRIA.

Britain's Leading Position.

Next to Mesopotamia, Syria is commonly regarded as one of the most promising fields for British trade enterprise in the widest sense in the near future, and it is interesting to note that from the commercial point of view Syria has much in common with the potential granary of the East. Thus Syria also offers vast scope for agricultural expansion, and there too one of the great openings will be for agricultural machinery, pumps, and other appliances which can assist the soil to yield its produce, and there are other similar comparisons that could be drawn. But there is the vital difference between the two regions that the pioneer work which must be done in Mesopotamia before there can be any great development is not required in Syria, at any rate in many parts of the country. The ground work has been accomplished there to the extent that the value of modern methods and machinery for agriculture and other industries is in process of being realised, and it is possible to look forward to a time in a not too distant future when Syria will be a great machinery market. The present position in this direction may be gathered from the fact that there has been a steady demand for such things as oil presses, looms, ice making machinery and pumps. Apart from machinery the Syrian market presents openings of a most varied description, and the impression could certainly not be derived from the pre-war list of imports that the country is entirely undeveloped. Caution is needed, however, in drawing any deductions in this respect, since it is the coast towns and the towns a little inland that are responsible for the range of imports, and the hinterland for the most part has still to be stirred by the finger of progress. But there need be no saving clause as regards Syria's prospects as a market, and the fact that her commerce grew as it did before the war in unfavourable circumstances is the best indication of what is likely to take place under happier auspices. Unquestionably British merchants will find in Syria a rare opportunity for enlarging their trade, and they will have themselves to blame if, through lack of enterprise, initiative, or any of the failings that handicapped British commerce in many countries before the war, they do not avail themselves of the market. It will probably be a source of encouragement to them to be reminded of a fact that is not generally realised, but which certainly should be widely known, namely, that before the war the United Kingdom was in the front rank of the countries from which Syria drew her imports. It is often assumed that France has had a large share of the Syrian trade, presumably for the reason that our Ally has always taken such a keen interest in the country, but this is not the case as regards imports, though France has been one of the chief purchasers of Syrian produce.

British and French Trade.

The pre-war position may be illustrated by the statistics for the vilayet of Aleppo. The imports of this district, through Alexandretta, were valued in 1911 at £1,145,135, in 1912 at £1,209,646, and in 1913 at £930,478. For these three years the totals for the United Kingdom were respectively £445,445, £572,777, and £364,430, in each case a very respectable proportion of the total trade. France's figures were much smaller, and were also in a descending ratio. In 1911 Syria took goods from France to the value of £120,626, in the following year the total was £87,636, and in 1913 it had fallen to £61,600. The second place in the list of imports in each of the years in question was taken by Turkey, whose figures in 1913 were £198,978. The only other point of interest is that the Central Powers took a prominent part in the trade, Austria-Hungary with £90,451 in 1913, a total which was near her average for the three years, and Germany with £76,606 in the same year, which was twice her total in 1911, and represented a substantial advance on the 1912 figures. In the list of exports valued in 1913 at £931,813 the United Kingdom's figures were only £12,645 against £235,057 for Turkey, £323,700 for Egypt, £140,855 for France, and £110,272 for the United States.

The main reason for the prominent place taken by the United Kingdom in the imports through Alexandretta was the demand for cotton yarns and cloths in the Aleppo district, the bulk of which material was supplied by this country. One of the industries of the district is the production of cotton tissues, which were exported on a considerable scale before the war to Smyrna for sale there to agents of merchants in the Balkans; hence the growing demand for cotton yarns. India and Italy took a share of this trade, and, while neither was a serious competitor, it is evident that our great Dependency will have to be taken into consideration in this market in the future. In addition the United Kingdom supplied most of the imports of woollen goods, and also found a small opening for trade in silk goods, drugs and chemicals, soda and coffee. Silk goods formed France's chief export to Syria, while in 1912 and 1913, when progress was being made with the Baghdad Railway scheme, it need scarcely be added that Germany found an excellent opening for building materials, principally for railway construction, imports of which amounted to about £40,000 in 1912 and to £56,000 in 1913.

Position at Beyrout.

In the trade of Beyrout the relative positions of the United Kingdom and France as regards imports were even more pronounced, for while the United Kingdom's share of the imports through Alexandretta was a little more than a third, or something like four times France's imports, this country supplied half the imports into Beyrout, or between six and seven times the imports from our Ally. As regards exports, however, the difference between the figures for the United Kingdom and France was greater than in the previous instance. Turning to the figures, the total imports into Beyrout in 1912 were valued at £1,497,500, and in 1913 at £2,175,500. For these years the United Kingdom's totals were respectively £748,500 and £1,014,500, against France's figures of £121,000 in 1912 and £175,000 in 1913. Turkey's exports to Beyrout were insignificant, a fact which is no doubt to be attributed to the situation prevailing at that time, but both Germany and Austria-Hungary were finding an excellent market for their products through Beyrout. The imports from Austria rose in 1913 from £134,500 to £210,000, while those from Germany increased in the same year from £121,000 to £180,000. As regards exports from Beyrout, France took goods valued at £423,800 in 1912, out of a total trade of £525,600, and the corresponding figures for 1913 were £517,000 and £630,850.

As in the case of the trade of the Aleppo district, the United Kingdom's place in the countries importing into Beyrout was due to the demand for textiles. There was competition from India and Italy, but not of a serious nature. In other lines in which this country might have been expected to take a leading place it failed to do so mainly because no adequate effort was made to cultivate the market. Thus the United Kingdom's share of the imports of iron and steel, which were on a considerable scale, was very small. Beyrout's imports of 350 tons of galvanised sheets came from this country, and the United Kingdom also had the principal share in the trade in bottomed sheets and tin plates, and further exported iron pipes and tiles to a moderate extent, but the iron and steel trade was mainly in the hands of Germany and Belgium. There was a growing demand in the Beyrout district before the war for all kinds of preserved meats, and in this trade the United Kingdom was first as regards tinned meats, fish, jam, and pickles, while France also found a good opening for sardines, tinned vegetables, and meats.

Sufficient has been said to illustrate the leading place of the United Kingdom in the trade of Syria before the war, which, as we have seen, was due almost entirely to a line of goods which has always been the speciality of this country. This trade will no doubt be maintained in the future, though not in the same easy conditions as before, but the task before British traders is not to rest content with maintaining their position. To do that would be to ignore the wonderful opportunities that will shortly be presented in Syria, and would mean giving our trade rivals an opening for which we may be sure they are looking; for it is not in this country alone that the prospects in Syria have been recognised.

TENDERS INVITED.

Egyptian State Railways.

Inquiry is being made by the Administration of the Egyptian State Railways from British firms for prices and delivery for the supply of 500,000, say 30,000 tons, pressed steel sleepers and fastenings—4 ft. 8½ in. gauge track.

Plans and specifications can be obtained on application to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W.1, by whom proposals will be received up to midday January 24. Firms should state any special condition they wish to put forward.

ENGINEERING NOTES.

Water Power in the Balkans.

In previous engineering notes reference has been made to the industrial and agricultural possibilities in the Balkan States by the utilisation of the water power that could be obtained from the rivers that run in all directions in the Balkan Peninsula. In particular we suggested, as expedient for the reconstruction and future development of Serbia's agriculture and other industries, the development of hydro-electric power by means of the rivers Morava, Vardar, Ibar, and Drin. From an engineer who has recently arrived from the Balkans, and who describes Serbia's condition, especially in the rural districts, as "very pitiful," we learn that the suggestion has created considerable interest there, and the technical points of the question have been favourably considered in certain quarters. The development of all possible water power is an important matter, which at present occupies the attention of the authorities in all progressive countries. In this country, where coal is cheap and plentiful, there is a Water Power Committee which has been appointed by the Conjoint Board of Scientific Societies "to report on what is at present being done to ascertain the amount and distribution of water power in the British Empire." The demand for electric power is rapidly increasing. Old and new industries are in want of it; whilst agriculture is gradually becoming one of the greatest consumers of electric current. Where it can be produced cheaply it represents a great asset, and is well termed the life-blood of industrial progess. Cheap electric power can be obtained by the utilisation of water power for its production. Much of the industrial progress of America, Germany, Italy, and some of the British Dominions and Dependencies has been due to the utilisation of water power in this way. Similarly Serbia and the other Balkan States could further their reconstruction and progress by utilising their available water power.

Generators of Energy.

The utilisation of water power for industrial and other purposes is by no means unknown in the East, but in this case it is held that engineers of great experience should be employed from the very beginning. Probably different types of turbines as well as water-wheels will be used, since there is no generator of energy which is more efficient than the water-turbine properly designed; and it is likely that turbines for low falls would be required in the Balkan rivers. With regard to water-wheels, there are four types in use—the overshot wheel, the breast wheel, the undershot wheel, and the Poncelet wheel. All types consist of a large wheel, with a number of paddles or buckets attached to the periphery in such a way as to intercept the water in falling or flowing by. Water, like any other body when in motion, requires a force to stop it, or, conversely, exerts a force on any body which impedes it. It is this force which acts on the edge of the wheel and causes it to turn, driving the attached machinery. The overshot wheel is the oldest and most extensively used. The water is led to the top of the wheel through a shute. The buckets become filled, and are carried down by the weight of water. The diameter of the wheel is only a few feet less than the height through which the water falls.

African Silk.

In view of the changed position in the region hitherto known as German East Africa, special attention is being given by British manufacturers and merchants to the industrial possibilities of that colony. In particular, the president of the Silk Association has directed attention to the wild silk of the anaphe silkworm, and has suggested that when German East Africa changes hands this raw silk will afford a good opportunity for British silk manufacturers.

The anaphe silkworm occurs, as a matter of fact, in many parts of East, West, and South Africa, also in some parts of lower Syria and Southern Persia, where, in the latter regions, the natives, by a simple process in which a home-made mechanical device is employed, produce silk which compares favourably with the ordinary silk. Samples of the silk from Uganda were examined some years ago at the Imperial Institute, which introduced the product to the notice of leading silk manufacturers in this country. It is generally admitted that a new and cheap raw material for the spun silk industry would be of great importance, and it is to be hoped that energy and capital will be forthcoming for the development of this industry in Uganda, whence a certain amount of the silk is already being exported, and also in other British African colonies and certain regions in the Middle East. We believe that specimens of Uganda raw silk and of yarns and fabrics manufactured from it can be seen in the public exhibition galleries of the Imperial Institute.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated January 9:—

Rain is still generally needed.

Bombay Cotton Market conditions irregular. Fully good Broach April—May quoted at 667 Rupees a candy.

Piece Goods market is becoming steady.

The survey of railways has been sanctioned in the South Karanpura Coalfield. (This is at the head of the Damodar River Valley, west of the Bokara and Ramgark Field and is in rather broken country.)

The International Sleeping Car Company announces that an early resumption of the weekly Bombay Express, to carry overland Indian mail passengers to and from Marseilles, is contemplated.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

There has been no increased activity in the market during the past week, and the tone remains very dull. Spinners and manufacturers have again lost ground, and there is increasing pressure for fresh orders, as the reduced output of the machinery has not been sold for many weeks. No particular change can be recorded relating to Egyptian cotton either as regards prices or the prospects for supplies. In Egyptian yarns users have purchased from hand to mouth. Rates in carded qualities are getting somewhat easier, but fine combed descriptions are still deeply sold, and sellers are independent. In piece goods for Egypt demand still drags. Perhaps, on the whole, advices from the other side are no worse, but there are still large quantities of dear goods to be consumed. There have been hopes of a revival of buying for India, but, owing to the easier tendency in raw cotton rates, shippers have been very cautious. Workable offers in standard makes have been practically unknown. Some small lots have been put through in bleaching cloths for China. Numerous complaints have been met with from Burnley manufacturers, and in that town there are about two looms stopped to every one running. A further fall has occurred in American yarn prices.

CYPRUS TRADE NOTES.

(From a Correspondent.)

Fishing in Cyprus is unfortunately, at the best of times, one of the most backward of industries. There is no enterprise whatever. The business in most parts is in the hands of a ring, which owns boats and nets and fixes prices. Trawling is unknown. The supply, which might be abundant and cheap, is consequently poor in quantity, and sold at absurdly high rates. The apathy of the fishermen is discreditable in an island where fish should form an important part of the food of the people. The whole trade requires a thorough change and waking up.

Martial law still remains in force, and carob merchants, who have chafed under present regulations, are amongst those who would welcome its removal. The military authorities require all the locust beans they can obtain, and those who hold stocks can only obtain the necessary licence to export one-third of their carobs after satisfying the Government that they have delivered two-thirds to the military. The price offered by the Provost-Marshal, who negotiates with merchants, is £5 a ton on delivery at town stores, and £4 16s. a ton at other "ports": i.e., more than the highest price ever reached in pre-war days. But most merchants who have not delivered the requisitioned quantity see no reason why profiteering should be confined to other branches of trade, and hold out for higher prices; and rates in all these cases will have to be determined by the recently created Board.

COMPANY MEETINGS.

Associated Cotton Ginners of Egypt.

The following is the report of the directors, with statement of accounts as at August 31, 1918, submitted to the shareholders at the thirteenth ordinary general meeting held at Alexandria on December 27 :

We have pleasure in placing before the shareholders, for their approval, our thirteenth annual report, together with the audited accounts to August 31, 1918. In our preceding report, for the year ending August 31, 1917, we called your attention to the fact that the outlook for the crop 1917-18 was encouraging, and that we were therefore justified in anticipating better results for the working of our company this year. We are pleased to say that, as the figures of our balance-sheet show, our expectations have been in a very great measure realised. The British Army employed during the year some of our factories, as they did for the two years previous.

The quantity of cotton ginned in our factories during the year 1917-18 was cantars 910.994,52, against cantars 787.981.11 in 1916-17, and steam pressed cantars 53.027,45, against cantars 19.608.89 in 1916-17. The following are the results to August 31 :—

	£E	£E
Factory profits		81.540.—
Less—War bonus to staff		5.492.—
		76.048.—
Less—Sundry repairs made in the factories		268.—
		75.780.—
Less—Expenses and management at head Office, Alexandria	3.071.—	
Interest on debentures £E5.778.—		
Less—Interest earned .. 1.675.—		
	4.103.—	
Sundry expenses	1.459.—	
Insurance premiums	2.397.—	11.030.—
		64.750.—
Less—Depreciation on buildings and machinery	20.531.—	
Debentures redeemed	3.900.—	
Expenses on debentures (balance)	4.023.—	28 453.—
		36.297.—
Less—Statutory reserve 10 %	3.610.—	
Dividend, as per statutes, of 6% to shareholders	21.060.—	24.690.—
		11.607.—
Less—10 % to the board of directors		1.161.—
Leaving a balance over of		10.446.—

We have, therefore, to deal with the following amounts :—Statutory dividend of 6 per cent., £E21.060; above-mentioned balance over of £E10,446; amount brought forward last year, £E9.036—£E40.542; of which your board proposes to distribute as dividend to the shareholders one shilling and threepence per share, making £21.938, and to carry forward £18.604. You will notice that over and above the depreciation written off buildings and machinery, we have thought fit to completely wipe out the balance of the expenses incurred for the issue of debentures, and which in last year's report figured for £E4.557,117. Besides, having found a favourable opportunity of disposing of the building materials of the ex-Zervudachi factory at Aboukir, and of some plots of land at Mansourah, these were sold. We regret to have to inform you that at the beginning of this year we were deprived of the further useful collaboration of Mr. W. R. Carruthers, he having left Egypt to fill another post in London. The remaining number of directors being sufficient for all statutory purposes, we have not proceeded to fill the vacancy caused by Mr. Carruthers' resignation. You are now asked to approve and adopt the report, balance-sheet, and profit and loss account, as presented for the year ending August 31, 1918. You have also to appoint auditors for the ensuing year, and to fix their fees. Messrs. Russell, Harris and Co. are eligible for re-election.

Egyptian Salt and Soda.

The annual meeting of the shareholders of this company was held on Friday, December 20, at Alexandria, and was presided over by Mr. C. J. Choremi, the chairman of the company. About fifty shareholders were present, representing one-quarter of the capital of the company.

After the copy of the *Egyptian Gazette* dated December 2, containing the notice calling the meeting, had been placed on the table, the Chairman submitted the accounts, and called upon Mr. F. H. Russell to read

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Digitized by Google

the auditors' certificate. The Chairman thereafter moved the adoption of the accounts, and the motion, having been seconded by Mr. Jules Klat, was carried unanimously.

The Chairman then stated that the board considered that a dividend of 12s. per share, or 60 per cent., should be paid, leaving a sufficiently large carry-over, and he moved accordingly. The shareholders present being of the same opinion, the motion, on being seconded by Mr. Moise Hazan, was unanimously approved.

Messrs. Choremi and Debourg were the directors retiring this year, and their re-election was moved and seconded by Messrs. Lascaris and Hazan respectively, and approved by the meeting.

Messrs. Russell, Harris and Co. were re-elected the auditors of the company for the current year, at a fee of £275.

After the shareholders had been given the opportunity of expressing their views on various matters affecting the company, Mr. Hazan, on behalf of the shareholders, conveyed to the chairman and the board their thanks for the manner in which their interests had been attended to during the past year, and assured them that they had their complete confidence. Mr. Debourg, in replying on behalf of the board, stated that in very great measure the very satisfactory results shown by the accounts were brought about through the hard work of the commercial manager, Mr. A. Baerlocher. This statement was loudly applauded.

The meeting then terminated.

COMPANY NOTES & REPORTS

Russian Petroleum.

The Russian Petroleum Company has received a cable from Mr. D. A. Veramienke, the general manager in Baku, stating that the properties are only slightly damaged. "Documents intact. Work at Bibi Eibat resumed November 1, baling only three wells with correspondingly decreased staff. November production, 22,000 poods. Present stocks, 71,000 poods. Fixed price of 5 roubles will cover current expenses. Financial position difficult. During nationalisation delivered 150,000 poods for 770,000 roubles. C. D. M. Ball returned month after occupation."

Bengal and N.-W. Railway.

The directors of the Bengal and North-Western Railway Company recommend a final dividend for the year ended September 30 last of 3 per cent., together with a bonus of 3 per cent., on the ordinary stock, making with the ad interim dividend and bonus of 4 per cent. paid in July a total of 10 per cent. per annum. The dividend and bonus will be paid, less income-tax at 4s. 9d. in £, on February 10.

Delhi-Umballa-Kalka Railway.

The directors of the Delhi-Umballa-Kalka Railway, subject to the receipt of final accounts from India, recommend a final dividend for the year ended September 30 last of 5 per cent., together with a bonus of 2 per cent., on the ordinary stock, making with the ad interim dividend and bonus of 6 per cent. paid in July a total of 13 per cent. per annum. The dividend and bonus will be paid, less income-tax at 4s. 9d. in £, about the end of February.

Dividends, Payments, &c.

East Indian Railway.—Deferred Annuity holders and holders of Annuity Class "D" are notified that the seventy-first half-yearly meeting will be held at the Cannon Street Hotel, Cannon Street, E.C.4, on 29th instant, at 12.30 p.m.

Anglo-Persian Oil.—The transfer books of the preference shares will be closed from January 17 to January 30 inclusive.

NEW COMPANIES.

The Burma Company, Ltd. (capital 45 lakhs), has been registered in Rangoon to carry on the business now or formerly carried on by Messrs. Steel Brothers, Ltd., on the premises of the Burma Rice and Trading Co., Ltd., Kruger and Co., Ltd., and Reis und Handels Aktien Gessellschaft, Bremen. They will also act and deal as general merchants.

RISE IN PRICES IN MALTA.

(From Our Own Correspondent.)

Malta, December 28.

The increase in the cost of living in Malta has been extraordinarily severe. The following tabular statement shows the retail price of foodstuffs, etc., in 1914, the price in 1918 and the increase in price per cent. on each item. The price of coal is not shewn in retail, and a ratio is given in cases of clothes and house rent.

Price in 1914.	Price in 1918.	Increase per cent.
Bread, 3d. rotolo	6¾d. rotolo	125
Potatoes, 1d. rotolo	2½d. ,,	150
Vegetables, 1d. rotolo	3d. ,,	200
Rice, 4d. rotolo	7d. ,,	75
Paste, 4d. rotolo	13d. ,,	205
Tea, 20d. rotolo	40d. ,,	100
Sugar, 3d. rotolo	13½d. ,,	350
Oil, 8d. pint	32d. pint	300
Petroleum, 8d. gallon	33d. gallon	312
Clothes, 4	9	125
Fish, 12d. rotolo	48d. rotolo	300
Meat, 12d. rotolo	42d. ,,	250
Ham, 18d. rotolo	96d. ,,	443
Cheese, 12d. rotolo	72d. ,,	500
Butter, 32d. rotolo	82d. ,,	156
Eggs, 12d. dozen	36d. dozen	200
Milk, 5d. tin	15d. tin	200
Coffee, 12d. rotolo	24d. rotolo	100
Lard, 12d. rotolo	48d. ,,	300
Boots, 12s. pair	36s. pair	200
Coal, £1	£9	800
House rent, 1	1	Nil

Thus it will be seen that the average increase in the price of all these commodities amounts to 244 per cent. But as it is necessary to assign a certain relative importance to each article in accordance with the quantities consumed in order to obtain the combined effect of the increases in all the articles dealt with, and taking the first ten items as indispensable for consumption by the poor, the average increase may be roughly estimated at 200 per cent., or, in other words, the spending power of £1 has been reduced to 6s. 8d.

INDIAN RAILWAYS' APPOINTMENT.

Sir Henry P. Hurt, K.C.I.E., C.I.E., C.B.E., has joined the board of the Bengal and North-Western Railway Company, vice Mr. T. Stoker, C.S.I., resigned; the board of the Rohilkund and Kumaon Railway Company, vice Mr. E. A. Neville, resigned; and also the board of the Delhi, Umballa, Kalka Railway Company, vice the late Sir F. R. Upcott, K.C.V.O., C.S.I.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Tuesday.

There has been a distinctly better feeling in our market this week, and business has been more active, with quite a lot doing in certain directions. Telegraphic communication with Egypt, which was exceedingly bad a few days ago, has since improved considerably, and it would appear that the market over there is now in a much better mood, and a good many buying orders are being sent over.

In Government stocks there has been a strong Egyptian demand, with a very fair amount of business doing, and as a result Egyptian Unifieds have jumped up 2¼ to 90½, whilst the 3½ per cent. Pref. are a full point up at 78. City of Alexandria bonds are also a point higher at 84.

In Bank shares, there has been a fairly large business in Nationals, which have risen ⅜ to 21⅝. Agriculturals are 1-32 firmer at 6¾. There are buyers for the preference shares at 7½, but there have been no sellers at all lately of this latter share. Anglo-Egyptians have remained firm at 17 and Land Banks at 7. For the latter share there are buyers about somewhere near the current price, but there is an absolute lack of sellers.

In Railways there is no change to mention.

As regards Land shares, Aboukirs have been a firm spot at 24s. 6d., and there is every indication that the company will re-enter the dividend-paying stage in respect of the past year's operations. Allotments are 1-16 firmer at 4⅝, but sellers have been absent, and no business has been possible. Delta Lands are fractionally easier at 15s. 6d., after a fair turnover. Gharbieh Lands are also somewhat weaker at 2 11-16. There has been a fairly considerable business in New Egyptians, which have been quietly picked up all through the week, and which are closing 6d. higher at 22s. 7½d. A feature has been a further rise of ⅜ in Sudan Plantations to 4. Union Foncières have been in demand, and are 1s. 6d. up at 71s. 6d., around which price there have been persistent buyers for all the shares offering.

In Miscellaneous descriptions, a very fair amount of business has been done in Alexandria Waters, which are 1-16 firmer at 12 1-16. Salts and Sodas have been rather a dull spot, and are closing 1-16 lower at 3 1-16. In Khedivial Mails, the rise has made further progress, and the shares, after changing hands at the record price of 101s. 3d., are closing 7s. higher at 98s. 6d. The Preference shares are also in demand around the current level, but there are no sellers.

In Greek securities, apart from a drop of one point in the 5 per Cent. 1881 Loan to 74, there is no change to record.

Oil Shares.

There has been a variable tendency in the market. British Burmahs are 6d. lower at 15s., but Anglo-Persian Prefs. and British Burmahs are unchanged at 26s. 6d. and 8 9-16 respectively. Anglo-Egyptians (B) are a fraction lower at 2 13-16.

Roumanians are a shade stronger. Roumanian Consols are 6d. up at 16s. 6d., and Traian Roumanians are also 6d. up at 10s. 6d.

In Russians Ural Caspians are 5-32 up at 1 11-16, and Bakus at 4½d. up at 5s. 1½d. Russian Generals are unchanged.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

NOTES OF THE WEEK.

The Paris Conference held its inaugural sitting on January 18, the forty-eighth anniversary of the proclamation of the German Empire in the Château at Versailles, and the eve of the first elections of the German Republic. Some discussion had been evoked by the original decision to allot Belgium and Serbia two representatives apiece, in common with a number of other belligerent Powers "with particular interests," while Brazil was allowed three delegates, and the protests of the Belgians and Serbians were met by placing their missions on a par numerically with that of Brazil. The five Great Powers—"with general interests"—have each five plenipotentiary delegates, and take part in all sittings and commissions; the other States, including the British Dominions and India, who have nine delegates between them (the single representative belonging to New Zealand, while Newfoundland has no separate representative) take part only in the sittings at which questions concerning them are discussed.

It will be noticed that Serbia and not Yugoslavia figures among the twenty-nine countries represented at the Conference. The distinction was inevitable, as there has been no formal recognition on the part of the five Great Powers of the Southern Slav State. For the Yugoslavs themselves, however, it is a distinction without a difference, as the allocation of three delegates enables the three peoples to be represented. There has been little enough time for the new State to "find itself," and it will be the general wish of all those who are interested in the future of the Near East that the Yugoslav delegation, which includes M. Pashitch, should acquit itself in a manner to gain the approval and admiration of the Conference. It will not have been overlooked by the Great Powers that "Serbia" enters the council chamber with quarrels with most of her neighbours on her hands. We are far from saying that the fault is solely hers; but the fact remains that she is involved in a feud with Italy over Dalmatia; that her relations with Roumania are strained over the Banat; and she is gravely compromised in annexationist designs upon her sister State, Montenegro; while in regard to Bulgaria it will evidently be necessary for one or other of the Allied Powers to police the border between these two countries for some years to come. From the Conference, we hope and believe, will emerge a Yugoslav State at peace with its neighbours, and already displaying a political capacity that will prove the best of auguries for the future of the Balkan Peninsula.

In the official statement of the regulations governing the work of the Paris Conference there is a reference to Montenegro which is not likely to be lost on the Southern Slav delegates. Montenegro, runs the statement, shall be represented by one delegate, but the rules concerning the designation of this delegate shall not be fixed until the moment when the political situation of this country shall have been cleared up. It is to be hoped that the Southern Slav Government will feel the rebuke in these words no less than the Montenegrins themselves, for it is certainly a reflection on the federal State as a whole, of which Montenegro is a part, that there should be such an anomalous position in the latter country at the time of the meeting of the Conference. The allusion in the official document is too well known to need further comment. But in justification of the Great Powers' decision in regard to Montenegro we may quote from the statement which it is understood is circulated with the authority of the delegate of the Montenegrin Government in London. "Montenegrin territory," a Montenegrin official declares, "has been occupied solely by Serbian troops, who have supported with all their power the action of the elements imported from Serbia, in order to obtain the appearance of a vote from the Montenegrins in the sense of the policy of the Serbian Government. . . . I have escaped from my country in order to communicate to the public opinion of the Allied nations the violence made use of against the Montenegrin people, and to plead for the intervention of impartial troops from the Entente to occupy Montenegro, and to guarantee to its people their sacred liberty."

We are not here concerned with the accuracy or inaccuracy of this picture. It is enough that this conflict should exist between Montenegrins and Serbians on the very morrow of their liberation from the Austro-German yoke. If the allegations of the Montenegrin Government, which protests that it is still detained in France against its will by the action of the French authorities, are even partly true, the Serbian Government has much to answer for; even the fact that the allegations should have been made must seriously invalidate the reputation of that Government for statesmanship. It is only right, however, to point out that the incident in its inception concerned the Montenegrins and Serbians alone, as distinct from the Yugoslav State as a whole. The Great Powers are inclined to set special store on the advantages that the Yugoslav State stands to derive from the Croat and Slovene elements. In no direction can they make their influence more opportunely felt than in eliminating any suspicion of aggressive tendencies from the policy of the new State.

Digitized by Google

Somebody, we may hope, will feel moved in the Conference to point out the incongruity of any general discussion on a League of Nations if certain of the States that are likely to claim admission are to be ready at any moment to adopt a provocative attitude towards their neighbours, or to acquiesce in an injustice that promises them an advantage. Certainly, the Allies would seem to have made little headway in exorcising the spirit of quarrelling from the Balkans, and far more drastic measures are called for in that part of the world if the settlement after the war is to introduce a lasting peace. Attention may be directed to the reports now appearing in the Press on Bulgarian outrages. According to these, the Bulgarians are still engaged in pillaging Greek houses and shops at one place, while Bulgarian authorities are terrorising the Greek inhabitants of others. From another source come disquieting accounts of the proceedings of Greek courts-martial in Thrace. Again it is not a question of the accuracy or inaccuracy of the individual report; the point is that the Allied or Associated Governments cannot pretend that the ideals for which they have borne such sacrifices in achieving victory have been established while the present state of affairs continues in the Balkans. There should be no opportunity for "Bulgarian outrages" at this stage, and there should equally be no opportunity for Bulgarians to allege that their countrymen are being exterminated under the guise of judicial procedure. The allegations, if not the acts, are familiar to all students of Balkan affairs; and if the Allies wish to see a new era dawn for the Near East as well as for Europe and the world at large, they must recognise Balkan weaknesses, and arrange that there shall be a truce to the old practices.

A correspondent in this issue, under the heading "A Plea for Sanity," makes the very pertinent point that the time has now come when Balkan disputes have to be regarded as under the judgment of the Allied Conference. Consequently, he urges, there ought to be a truce to all wrangling and a resolve on the part of the audience to keep the ring clear. The appeal is by no means belated, even after the Conference has been sitting for a week, for the great majority of those who have first-hand knowledge of the Balkans find it exceedingly difficult, if not impossible, to adopt an impartial view towards the rivalries and animosities of the different peoples. Nevertheless, the policy of fanning the flames of Balkan hatreds leads the whole of the Continent away from peace rather than towards it. For this reason, it seems wiser to refrain from all reference to the unregenerate past. On the lines followed by Miss Durham, in a letter in this issue, it would be quite easy for the Bulgarians to flood the Allied Press with statements of the provocation that they may have received for the outrages which they have committed during this war. But the *tu quoque* argument might take us back a whole century and more, without achieving finality, and the only hope for the future lies in the Conference recognising this fact and insisting upon a fresh start being made now, under new conditions. There is, or ought to be, at last an authority capable of saying: "Henceforth there shall be peace among you, and we are here to enforce it, if need be. But we prefer to think that you yourselves are equally aware of the necessity for peace, and are prepared to help us to maintain it."

Some concern is being expressed in India, and by certain distinguished Indian Mohammedans outside India, regarding the fate of Constantinople and the position of the Sultan as Khalif. The two questions are, of course, quite distinct. Neither Great Britain nor the Allied Governments have it in their power, nor have they the desire, to determine the validity of the Ottoman claim to the Khalifate. That is entirely a matter for Mohammedans to settle amongst themselves. There are, however, a number of people in India who are interested in trying to connect the two questions for their own political ends, and for this reason Great Britain is concerned to know that, if either subject is discussed among Mohammedans, it should be in the light of ascertainable facts, and not on the strength of misleading information. With regard to the Khalifate, for instance, those who have now raised the subject in India will, no doubt, explain how it is that hitherto Indian Moslems have ventured no protest against Constantinople's record in the history of individual Khalifs. As a correspondent pointed out in these pages a fortnight ago, since the transfer of the high office to Sultan Selim by the twelfth Khalif of the family of Abbas in 1567, no fewer than sixteen Khalifs have been violently done to death. Within the last fifty years one Khalif has been murdered and two have been deposed, and a Khalif-Elect, the Heir-Apparent to the Sultanate, Yussulf Izzedin, was also murdered quite recently. In the case of the deposition of Abdul Hamid it cannot even be said that the step was carried out by genuine Moslems, for the Committee of Union and Progress has been specifically denounced as renegades by the Shereef of Mecca, a descendant of the Prophet, whose verdict will hardly be challenged by Moslem India. A further difficulty in this connection will be the Ottoman Khalif's title as Protector of the two Holy Places, in view of the fact that he no longer plays this rôle.

Great Britain sets too much store on the loyalty of Indian Moslems, and the latter are too well aware of the Government's readiness to respect their religious scruples, for room to be left for any misunderstanding over the future of Constantinople. It is perfectly clear to any one acquainted with the facts that it will be altogether in the interests of the Turks as a people if their Government is removed from Constantinople and is left with jurisdiction over Turks only. It would be almost as rational to insist upon immunity for the ex-Emperor William, because he once proclaimed himself "the protector of the 300,000,000 Mohammedans who throughout the world serve the Sultan Abdul Hamid as their spiritual ruler," as it would be to deny the Allies the right of determining the future of Constantinople, after the misuse to which it has been put as a base for machinations against the peace of the world, and in particular for war against the very Power that has protected Turkey in the past and has a special claim on Turkish friendship in virtue of the security and freedom, within its own borders, that it guarantees a large section of the Mohammedan world. In these circumstances it will be well if immediate attention is given to Moslem protests in India regarding the expulsion of the Turkish Government from Constantinople. Representative Moslems should be invited to discuss the subject, and the reasons which prompt the Allies' action should be made clear to them, and their acknowledgment of its justice should be secured. It would not be difficult to show that a considerable body of Turkish opinion in Asia Minor would welcome the evacuation of Constantinople by the Khalif and the Ottoman Government.

True to their resolve to respect the sanctity of Medina, the Arabs of the Hejaz made no attempt to force the surrender of the city. Fakhri Pasha, the commander of the garrison, traded, with or without the connivance of Constantinople, on this reluctance, and it required a threat that the Dardanelles forts would be destroyed if Turkey did not at once comply with the terms of the Armistice to induce the Ottoman Government to order Medina to be given up. On January 10 the surrender was effected, and three days later the Emir Abdulla, the second son of the King of the Hejaz, entered Medina and offered the mid-day prayer at the Tomb of the Prophet. Thus the last step in the liberation of the Arabs from the Turkish yoke has been completed.

The apprehensions we expressed last month regarding the centralising tendency observable in the Report of the Indian Industries Commission are evidently shared by some authorities in that country. The last mail has brought various indications of what may develop into a regular outburst of hostility, and in particular we notice that Sir Harcourt Butler spoke rather strongly on the subject at a dinner given by the Chamber of Commerce at Cawnpore. Centralisation, he recognised,

Digitized by Google

might be a temporary necessity for military purposes, but it is not the best basis for a permanent industrial advance in an Empire so large and so diversified as India; and the speaker evidently had the support of his audience when he declared that in view of the anticipated constitutional developments it is necessary to build on the "provincial patriotism," which has grown up so rapidly in recent years.

The recognition of this new and potent force in Indian affairs gains increased significance from the fact that when Sir Harcourt Butler was at Simla, he was occasionally accused of the very centralising tendency which he is now prompt to deprecate, but in any case there is no doubt about its existence, and the interplay of "national" and "provincial" sentiment bids fair to be one of the most interesting features of the development of India in the next few years. We wish some historian with the requisite gifts, and also the requisite impartiality, would take the trouble to set out clearly the story of the rise of these sentiments during the last half-century; both of them are quite new, and we confess that we feel great difficulty in estimating their future possibilities. They may harmonise, they may even coalesce, but it is also possible that they may prove to be hopelessly antagonistic, and that the unity of India may be realised only in a steady progress towards diversity.

One curious fact regarding this provincial sentiment is the extent to which its expression has been stimulated by men whose connection with a province has only been temporary. The best testimony to the worth of Indians as a whole is the way in which Englishmen stand up for the particular section of the people with which they have been most closely in contact; the military officer maintains that his own men, be they Jats, or Sikhs or Pathans, are the best material in the world, and the civilian is not less ready to extol the superiority of Oudh, or the Punjab, or the Central or any other provinces. So the Punjab has been told from the time of John Lawrence downwards that it is the bravest and wisest province in the whole of India, and the Punjab believes what it has been told, and is getting ready to act on the belief. That result is quite satisfactory so far as it goes, but other provinces are becoming equally convinced of their own superiority, and the clash of such convictions may be awkward when it comes.

An instance of this vicarious patriotism appeared last week, when a well-known Bengal civilian wrote to *The Times*, apropos of Sir Satyendra Sinha's admission to the Government, to point out that Bengalis had pioneered the road for India first to the Civil Service, then to the Privy Council, and now, amidst universal approval, to the House of Lords. A jealous neighbour might be tempted to point out in reply that Bengal has pioneered in other directions also, such as the dissemination of cholera and of anarchical ideas, activities which are decidedly inconvenient for the rest of India, but it would be ungracious to insist on such matters at the present juncture; Bengal has every right to be proud of the distinction won by her leading citizens, and the rest of the Empire can forget its envy while it tenders its congratulations.

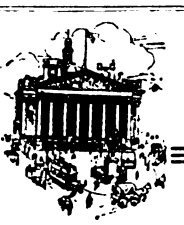
No announcement has yet been made in this country regarding the reduction of the present abnormal rates for passages from India, a question which has been agitating the official community ever since the conclusion of the armistice opened a prospect of long-deferred leave. According to the mail papers the effect of the present scale of charges is practically to confine the enjoyment of a holiday to bachelors and highly-paid officers, whereas the married man needs leave as much as the bachelor, and the rank and file need it even more than the men at the top. An equitable distribution is urgently needed in the interests of the Indian administration, which, as we have urged before now, has been strained almost to breaking-point during the last four years; and we trust that Mr. Montagu is taking up the matter from this point of view.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 30.

Christmas Festivities.



Christmas has passed off right joyously, and Cairo has celebrated the festive season with something approaching pre-war enthusiasm. The feast started off according to tradition, on Christmas Eve, with a children's party and Christmas tree at Shepheard's. On that and the following evening there were great doings at the various hotels, where the management were hard put to it to cope with the demands for dinner, whilst very elaborate and successful arrangements had been made for the entertainment of the troops in barracks, hospitals, and convalescent homes.

One of the most remarkable features this year has been the large attendances at the services of all the churches, no matter of what denomination. At all Saints', the parish church of the Anglican community, there were record congregations at each of the early services on Christmas Day, and accommodation could not be found for all who wanted to attend the morning service. At evensong it was the same story. In this connection it is interesting to note that in response to the general request the Chaplain has decided to depart from precedent and hold two services every Sunday evening—one from 6 to 7 and the other from 7.15 to 8.15, it having been found that so many have lately had to be turned away from the church owing to the lack of accommodation.

The Late Lord Edward Cecil.

A special service was held at All Saints' on Monday last in memory of the late Lord Edward Cecil, who was a regular worshipper in that church and an active member of the committee. The service was conducted by the Right Rev. R. MacInnes, Bishop in Jerusalem, assisted by the Rev. C. T. Horan. The congregation included the High Commissioner and Lady Wingate, Mahmud Fakhri Pasha, representing H.H. the Sultan, the Ministers, Major-General H. D. Watson representing the Commander-in-Chief, and Mrs. Watson, Lewa E. S. Herbert Pasha, representing the Sirdar, and Mrs. Herbert, Sir William and Lady Brunyate, Mr. A. P. Bolland, representing the Governor-General of the Sudan, Sir Alexander Baird, Sir Milne and Lady Cheetham, Messrs. H. Farnall, D. Dunlop, and J. Haines. At the conclusion of the service the "Last Post" was sounded outside the church by military buglers.

Wherever I go I hear the same expressions of sincere regret at the death of the late Financial Adviser. In all circles and communities his ability and statesmanlike qualities are recognised, and tribute is freely paid

to his affability, his extreme accessibility, and his readiness to listen to new ideas. Egypt owes a great deal to the foresight and courageous initiative he displayed during his tenure of office, especially since the outbreak of war, and it is generally felt that his collaboration would have been invaluable during the period of reconstruction on the threshold of which the country now stands.

The English School.

Pressure on my space prevented me from dealing last week with the prize-giving celebrations held on the 20th inst. at the English School. The Rev. C. T. Horan was in the chair, and the gathering on the platform included the High Commissioner and Lady Wingate, the Hon. Hampson Gary, the new American Diplomatic Agent, and the Bishop in Jerusalem. The proceedings opened with a short prayer and a few words of welcome from the chairman; after which Sir Reginald Wingate delivered an address. In the course of his speech his Excellency stated that the school had filled a great want, and despite the difficulties inseparable from the war had been carried on with conspicuous success. After paying a feeling tribute to the late Lord Edward Cecil, to whom the school owed its existence, his Excellency proceeded to give some words of sound advice to the boys and girls, and he concluded by enjoining them to remember and follow the watchword of the King: "Be Thorough." The Hon. Hampson Gary followed the High Commissioner in a short speech, in which he expressed his satisfaction with all he had seen in connection with the school The prizes were then distributed by Lady Wingate; the High Commissioner's prizes for general efficiency being awarded to Corrie Somers-Summers and Mary Madden.

The English School was founded in 1916 with a view to meeting the requirements of those Anglo-Egyptian families who could not afford to send their children home to be educated. It has since not only met that want, but has proved of great utility to those parents who would in the ordinary way have sent their boys and girls to England, but who were prevented from so doing by the war and the submarine menace. That the school is popular is proved by the fact that starting with 111 boys and girls, it now has 158 pupils, including 38 boarders. Great difficulty has, of course, been found in staffing the institution; and to a great extent recourse has been had to lady teachers. In time a proper staff of masters will have to be obtained, but it is satisfactory to note that the authorities consider that the progress made has been every bit as rapid as it was reasonable to expect.

To meet all the requirements of a growing community like the Anglo-Egyptian, the school will have to undergo considerable development in the near future; a new site will in all probability have to be found very shortly, as its present premises are those of the German School, which it holds on a lease expiring one year after peace is signed, whilst proper playing fields will have to be provided. All this requires money; and as the school is intended to provide for families who are not well enough off to send their children home, it follows that the fees must be kept within reasonable limits, and so cannot be expected to supply the funds necessary for the above-mentioned developments and extensions. The money required may to some extent be forthcoming from some of the more prosperous and generous members of the community; but, as Mr. Horan said in his opening remarks, there is a general desire that the British Government should subsidise this school, so that it may be able to carry out to the fullest extent the work it has embarked upon.

In this connection it might be as well to point out that for years all the other important foreign communities in Egypt have had their national schools, which have been and still are, in receipt of substantial subsidies from their Governments, and there would therefore appear to be every argument in favour of the British Government making a contribution to the upkeep of the English School in Cairo to enable it to hold its own against those of other nationalities long since established in Egypt.

The Anglo-American Hospital.

The annual meeting of the General Committee of the Anglo-American Hospital took place last week at the Residency, Sir Reginald Wingate being in the chair. Considering the difficulties under which it has had to work during the war the financial position of this institution is on the whole as satisfactory as can be expected. The subscriptions have increased, thanks to the efforts of the Ladies' Association, but there has been a slight falling off in fees owing to the fact that in 1917 the hospital was still taking in military patients There is a deficit on the year's working of £E.139, which would have been considerably less if it had not been necessary to make allowances on bills which certain patients were unable to pay in full. The hospital caters for all classes of the Anglo-American community, and special provision has been made for women earning their own living in Egypt. It is in receipt of no official subvention, and is entirely dependent on subscriptions; and the fact that in a difficult year like the past one it has been able to show such a small deficit reflects great credit on those responsible for its administration. There is a long list of subscribers, but a glance through it shows that whilst many residents are most generous in their donations, there are quite a number of British establishments who do not contribute one penny to the funds. This is an omission which ought to be remedied without delay; for the Anglo-American Hospital fills such a want and responds so to the needs of all classes that every member of the Anglo-Saxon community should make a point of annually contributing to its funds.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, January 3.

We learn with pleasure that, on the recommendation of Sir Arthur Stanley and the Earl of Donoughmore, the Chapter of the Order of St. John of Jerusalem has elected Lieut.-Colonel Frank Ashley an Honorary Associate of that Order, and that the King has graciously approved of the appointment. This is a well-merited honour, for during the whole period of the war Colonel Ashley has worked most assiduously and wholeheartedly in the cause of the Red Cross.

Very gratifying evidence is daily forthcoming of practical sympathy with the Malta War Memorial Fund. By the last mail a donation of £5 was received, "with good wishes," from General Sir Ian Hamilton, who still evidently takes a kindly interest in this island, where he was so deservedly popular and esteemed during the time he was High Commissioner and Commander-in-Chief in the Mediterranean.

A highly fashionable naval wedding was solemnised at St. Paul's Cathedral, Valletta, on Wednesday, December 18, 1918, when Lieut.-Commander Colin Alexander Hutchison, R.N., was united in marriage to Gwendoline Mary Leslie Sayers, only daughter of Major Sayers, Commandant of the Detention Barracks.

For the past few days Malta has been quite "Yankee," a kind of Atlantic City of the Mediterranean, as thirty submarine chasers belonging to the Navy of the United States of America, which have done such excellent work in combating the sea pests, are at present with us. They have just returned from Corfu, having been on duty in connection with the barrage in the Adriatic. They are now undergoing refit prior to leaving Malta for America. The crews of the chasers will be given the opportunity of seeing the various points of interest in Italy and France on their way home.

Another change consequent upon the declaration of the armistice is the departure of the Naval Representative of France in Malta, Admiral Ratyé, together with his staff, on board the yacht Eros. The gallant Admiral, who has made many friends during his stay here, is eminent as a Professor of Naval Tactics in the Superior School of the French Navy.

Much interest has been aroused here by the announcement of the engagement of Princess Victoria Patricia, who was well known and exceedingly popular in Malta when she sojourned amongst us whilst her father was occupying the position of High Commissioner and Commander-in-Chief in the Mediterranean. Commander the Hon. A.R. M. Ramsey is also well known in Malta, especially at the Marsa, where he has ridden many victorious ponies. When the war broke out he was serving as gunnery and first lieutenant of the battle cruiser Indefatigable in the Mediterranean, and took part on that ship in the naval operations of the Dardanelles, being awarded the Distinguished Service Order.

ROUMANIAN NOTES.

(From a Correspondent.)

The Losses of Roumania.

An official *communiqué* says that Roumania has lost 9,539 officers and 325,117 men killed in action, while 275,000 civilians have died of disease or through accidents caused by the war. The population of the kingdom of Roumania being nearly seven and a-half millions, the toll of lives she paid for the common cause of the Allied nations represents 8 per cent. of the total of her inhabitants. It is impossible, however, to take these figures as representing the real losses of the Roumanians, because, Wallachia being occupied by the Germans until last month, it was not possible to ascertain the number of people who died in the villages, and even in some towns, owing to the complete disorganisation and lack of means of communication. Moreover, Roumania has lost a great number of the prisoners taken by the Austro-Germans and Turco-Bulgars. The total number of the Roumanian soldiers taken prisoners was 117,000, 18,000 being taken by the Bulgarians. When the Allied Armies entered Bulgaria there were found only 7,200 Roumanian prisoners. Of the other 10,800 some had died from disease and bad treatment, and some had been killed by the Bulgarians, as was established by a mixed Commission. The situation of the Roumanian prisoners in Germany is far worse. There are still over 40,000 Roumanians in Germany suffering starvation and working like slaves. Of the total of 98,000 prisoners in Germany and Austria-Hungary, 15,000 have returned, and 43,000 have died. The prisoners who have returned from the camps of Stralsund-Denholm and Bresen declare that more than half their comrades died of hunger. To the losses of the kingdom of Roumania must be added the losses of the Transylvanians, who had an army of about 300,000, and those of the Bessarabians, whose fighting forces with the Russians were nearly 100,000 men. The Bukovinians in the Austrian Army also numbered over 35,000. The Roumanians thus paid dearly for the realisation of their national ideal, and they are still losing heavily because of the terrible conditions prevailing in their country.

A New Government.

It is expected that a National Government will be formed as soon as M. Bratianu returns to Bucharest from Paris, and that M. Také Jonescu and some of his political followers will enter the new Government. The Transylvanians will have their own Government, as will the Bessarabians and the Bukovinians, and they will keep contact with the Bucharest Government, each of them being represented by a Minister without portfolio.

Starting to Organise.

The *Monitorul Oficial* publishes a decree by which the Ministry of Industry and Commerce is to be divided into two departments. One will be the Ministry of National Economy and Commerce, and the other the Ministry of Industry and Labour. The Ministry of Labour has already been authorised by a decree issued by the Council of Ministers in Bucharest to take possession over the coal mines of Petroshani, in Transylvania, and will work them in agreement with the National Council of the Roumanians of Transylvania. At the same time the Post, Telegraph, and Customs services are to be organised all over united Roumania.

The Land Question.

The King has signed a decree by which all landed estates of more than 500 hectares are to be shared among the peasants. According to this decree the domains of the Crown, the State, the Roumanian Academy, the Hospitals, the Church, as well as those owned by other public institutions, are to be distributed among the peasants. It is supposed that the distribution of the land will be complete by March next, when the land cultivation begins.

The Mobilisation.

The Government has declared a general mobilisation of industry, and has put the people under martial law. Several contingents have been also mobilised.

THE CARAVANSERAI.

We hear a great deal in these days about the necessity of meting out justice to those who ill-treated our fellow-countrymen who were prisoners in their hands; and, though we are probably not a little tired of the nauseating nonsense poured out on the subject by the cheap and nasty Press, we still hope that, as far as possible, this will be done. But there is another, and much pleasanter, duty to be performed: the acknowledgment and, where possible, the suitable rewarding, of kindness shown to our men in their hour of misfortune. The exercise of such kindness often exposed those who displayed it to considerable inconvenience, and not infrequently to real risk; and it is as much our national duty to trace out these Good Samaritans and thank them suitably as it is to run to earth those brutes whose barbarous treatment of the helpless prisoners in their charge—or at their mercy—has moved us all so deeply.

***

Often it will be extremely difficult to trace the "friends in need"; very often it will be impossible. But we are bound to try. Here is an example. Among a large party of soldiers who arrived home recently were several who had been prisoners in Turkey for some time. In conversation with a padre, who afterwards passed the tale on to me, these men said that during their captivity the only people who showed them any kindness at all were—"Germans"! They were employed on work on the roads; and they said that occasionally Germans who passed along the road in motor-cars or lorries would stop, cook them a hot meal, and give it to them; and that was the only chance they ever had of a decent meal. Now, those "Germans" may have been Austrians, or they may have been full-blooded Prussians; but one thing is certain, as Englishmen we ought to feel kindly towards them, though we may still keep our opinion of the majority of their breed.

***

Of course, it was not only Germans or Austrians who showed kindness to British prisoners of war in Turkey. Occasionally Turkish officials—even very highly-placed, and therefore closely watched, officials—risked behaving decently, and more than decently; and I know of one or two instances of Arabs holding official positions who showed extraordinary moral courage in their attempts to alleviate the lot of British prisoners. Some day I hope to publish their names, with some particulars of their truly charitable conduct. At present it might do them harm rather than good; for, one of them, at least, was actually "exiled" for his good deeds. But it is certain that the British men, women, and children who owe them so much will never forget the kindness shown them by these gentlemen. For my own part, I regard their conduct as altogether beyond praise.

***

Apropos of the subject of prisoners in Turkey, it is interesting to know that towards the end of the war they were comparatively well posted in regard to what was going on outside their prison walls. This was due to the fact that many of them had arranged ingenious codes with their friends at home for use in case they were unfortunate enough to be captured. But other items of news were "smuggled through" in letters which were guiltless of any coding, and yet contrived to outwit the postal censor. Thus, for example, soon after Jerusalem fell, an officer prisoner in Asia Minor received a letter from Home saying: "We have just taken a fresh lease of that farm on which the artichokes grow so well." Another prisoner wrote to a friend, a journalist, expressing the wish that it were possible to get hold of "some of the goods in which you deal." This gave the opportunity for an assurance that though it was impossible to send such goods to prisoners, as they were forbidden, the writer was glad to say that the quality of his wares was now much better than it had been a little while ago, and that they were therefore in much demand. And the prisoner was happy.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

A PLEA FOR SANITY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I write as one who strives to take an intelligent interest in the tasks which confront the great Peace Conference now in session. Like most observers, I have no specialist knowledge on any of the numerous points which are there to be discussed, but, unlike some of them, I am deeply convinced that pronouncements made by me or such as me must quite necessarily be of no value, while they may do great harm. It is the aim of a certain school of propagandists to stimulate action of this pernicious nature, and they have recently had far too great a sucess in the English Press. No doubt many of these propagandists are perfectly honest men, but it is difficult to believe that there is not some influence behind some of them which uses the opportunity, not to help this or the other of our Allies, but merely as a means of setting our Allies by the ears. We have heard much from time to time of "The Hidden Hand," and it has been suspected ever since the beginning of the war in all sorts of quarters, usually absurdly impossible. Yet, when it works under our very noses we seem to be blind to it, and are simple enough to give it the very assistance which it wants. We rush into the affairs of our Allies, in spite of our more or less complete ignorance of the matters under dispute, and are ready to deliver decisions on the most polemical questions with a judicial air which is apt to vary in inverse ratio to our knowledge of the subject. It never seems to occur to us that such action is the merest impertinence on our part, that the parties attacked resent our attempts at interference very keenly, or that the parties supported pray to be delivered from their friends. Nor does it occur to us that there is only one party that can benefit by this kind of chatter; and that this party is that of our enemies.

It is probably futile to hope to stop the writing or publication of this mischievous stuff, and it is probably useless to ask the writers to try to imagine how they would like voluminous and vicious articles in the better-class of American, French, Italian, or Greek papers, telling us what they think of our policy in Ireland, and doing their utmost to work up hatred against us for such policy. Such articles would rightly arouse the deepest indignation in England, and it ought to require but little imagination to realise that our scribblers are doing the same disservice to our Allies and the same service to Germany.

Just at present too many of our papers are occupying themselves in doing this very disservice to our friends the Italians and the Yugoslavs. The Adriatic settlement is clearly going to be a matter of very grave difficulty. It is perhaps not too much to say that the future peace of the world depends very largely on that settlement. In order to arrive at it, the very clearest thinking and the very deepest study are essential. No clear thinking or study are possible in an atmosphere of unseemly brawling. In a boxing match the ring is kept and spectators do not throw themselves into the dispute. Why, then, do some of our newspapers insistently interfere between the disputants and the referees and do their best to make the referees' task an impossible one?

Interference of this kind is relished by neither side in the long run. Have we not the classical case of the fate of the man who intervened in order to protect a wife who was being severely handled by her husband? And the side attacked by an outsider resents it at once, and feels keenly that such an attack is both unfriendly and uncalled-for. The remembrance rankles and makes friendship in the future impossible.

Do we really desire that England shall be estranged from Italy? If we do, some of us are taking the best possible measures to make this certain. The same remark applies to our relation with Yugoslavia. Some of us are doing our best to uproot the lively feelings of gratitude and friendship which this young nation has shown to us, by writing and printing articles which are inspired either by prejudice caused by ignorance or by exaggerations supplied by interested propagandists. Many of us are getting tired of statistics of exceedingly doubtful value, of history past and present manipulated to suit the writer's object, and of geography treated in the same way. We are not only tired but alarmed to see the effect of this constant pin-pricking on our Allies. We think of the future and are appalled at the reckless way in which the fruits of our joint victory, friendship, and friendly co-operation are being thrown away.

The referees have been appointed and have begun their work. They are the nominees of the world's democracy, and it must be presumed that the world's democracy trusts them to arrive at just decisions. Is it too much to ask our public not to make their task an impossible one? The object of their decision is to make the world a place where war shall be made impossible. Is it too much to ask that our public shall refrain from sowing seeds which must inevitably grow into weeds among which the flowers of peace must wither? Can we not trust them to find a way through the tangled jungle of rival claims, and, above all, can we not credit the disputants with goodwill to assist and avoid spurring them on to obstruct?—I am, etc.,

GOLDEN SILENCE.

MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Several protests have appeared in your columns against Montenegro being incorporated into Serbia.

All who are acquainted with the laws made by Serbia in 1913 for the districts she then forcibly annexed must sympathise with any population threatened with similar annexation. The laws in question were signed on September 21, 1913, and put into force. I enclose a copy. You will note the extreme severity of the measures; the tremendous penalties. A person who unintentionally damages a road is liable to five years' hard labour (Art. 12). A person who is acquainted with a malefactor and does not denounce him to the police—five years' hard labour. A rebel summoned by the police to give himself up, and who fails after ten days to do so, may be put to death by any official, civil or military (Art. 3). The authorities have the right to deport wholesale the families of rebels and the inhabitants of houses in which armed individuals may have been concealed (Art. 4). The authorities can force the population to work on roads and other communal work. Should any strike, or refuse to work at all, or wish to work in another place or manner, they may be punished with from three months' to two years' imprisonment (Art. 16). A curious crime is that of inducing Serbian subjects to join a foreign army, which is punishable by ten years' hard labour; and which practically admits that the annexed were in great part not Serbs, or why should they wish to join foreign armies? Every resistance to the police, either *by word* or force, is punishable by at least six months' imprisonment, *however insignificant the crime*, and may have ten years' hard labour. The rest of the thirty-one laws are nearly all as severe. Montenegro, it is true, did not treat her annexed subjects any better. But she is certainly not to be blamed for wishing to escape annexation herself.—I am., &c.,

M. EDITH DURHAM.

January 18.

P.S.—I take these laws from the report of the Carnegie Commission.

[Miss Durham is in error in supposing that we have protested "against Montenegro being incorporated into Serbia." We have protested against the *method* that has been adopted of trying to bring about incorporation. The question whether Montenegro shall or shall not be incorporated with Serbia is one for the Montenegrins alone to decide (provided Serbia is willing to assume the responsibility), and we have been concerned merely to insure that the Montenegrins as a people shall be given an opportunity to make their decision without compulsion.—ED.]

DISTRESS IN DAMASCUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The following cable was received yesterday in London by the "Syrian and Palestine Relief Fund," from its officials in Damascus:—

"Relief party cordially welcomed by officials in Damascus, where there are urgent calls for help. There is practically no medical relief in the whole city. The Fund's resources are quite inadequate for the varied relief work needed in Damascus alone. Appeal for at least ten thousand a month for Syria."

The "Manchester Syrian Relief Fund" is working in collaboration with the above Fund. Any donation will be thankfully received by the Hon. Treasurer, E. E. Rigby, Esq., the Lancashire and Yorkshire Bank, Mosley Street Branch.—I am, &c., K. JEBARA (Hon. Secretary).

January 16.

[We are asked to remind our readers that the London address of the Syrian and Palestine Relief Fund is 110, Victoria Street, London, S.W. 1. Subscriptions may be sent to the Organising Secretary at that address.—ED.]

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the white man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on Church and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

NEAR EAST BOOKSHELF.

A POET PHILOSOPHER.*

The vehicles for expressing thought styled Poetry and Prose are the result of the dualism of human nature. Poetry appeals to our emotional capacity; it is indefinite and suggestive. Prose concerns itself with our intellect; it is definite and expressive. The fact that prose is often poetic and *vice versâ* serves only to prove that the writer has used an inappropriate medium. There is a gulf between the two which nothing can bridge. Sir Rabindranath Tagore has given the world a body of mystical hymns, rhapsodies, and meditations which are essentially poetic in form and substance; and for that very reason it is impossible to give any clear idea of their content in prose. Professor S. Radhakrishnan's work is a very creditable attempt to extract a system of philosophy from the nebulous utterances of the master. Despite shortcomings, it has absorbing interest for Westerners who wish to grasp the trend of modern Indian thought. His first three chapters deal with certain metaphysical ideas which are hinted at rather than expressed by Rabindra's poetry. He eschews the quietism of Vedanta philosophy, which regards the Absolute as something quite apart from material Nature; the world of our senses as an illusion; extinction the aim and object of man. Rabindra's God is very human; life in his eyes is a stern reality, and action for the common good the duty of every religious soul. His writings are a signal proof of the reciprocal influence exercised by Christian doctrine and Vedantism. But seekers after truth will search Professor Radhakrishnan's book in vain for a solution of the problem offered by the Universe, which has perplexed far mightier intellects for 3,000 years. Of greater practical value are the poet's views on the world's political and economic evolution. He has no patience with the Moderate wing of the Congress party. Like British Liberals, they cling to such Victorian catchwords as Liberty, Rationalism, Enlightenment, and the like. They hope to secure India's salvation by dint of argument, persuasion, and political action; "they have raised mendicancy in politics to the level of a fine art." In theory at least Rabindra belongs to the Extremist wing, which "demands the sacrifice of all that men hold in esteem for their country's sake." Certain excerpts from his writings give me to a strong suspicion that Rabindra has a militant side to his character which inclines him to sympathise with the basic dogmas of anarchism. It is only fair to add that sound common sense precludes him from urging their application to India at the present stage of its social and political evolution. "What should we do," he asks, "if for any reason England were driven away? We should simply be the victims of other nations." India's ironbound caste system makes her people a house divided against itself; it must be destroyed as the first step towards emancipation. Equally disastrous in Rabindra's eyes is the disintegrating effect of Nationalism, which has deluged the world with blood and tears. With some lack of consistency, he admits that "peoples" are living things, having a soul and genius of their own, which should be allowed to develop in freedom. Here is surely distinction without difference. A nation, a "people" if you will, is a multicellular organism, bound together by a tissue of law, custom, prejudice, and tradition. It has organs for aliment, defence, and the extrusion of waste products. It develops a collective soul, reflecting the ideals of a cultured minority. No scheme of social betterment can be regarded as sound which ignores an incontrovertible fact; and nations will live in perfect harmony when they have learnt that the Law of Mutual Help is a higher phase in evolution than the Law of Struggle. Sir Rabindranath Tagore stands on firmer ground in holding that the democratic principle, which forbids the exploitation of the weak by the strong, applies to races as well as to individuals. That principle is the watchword of our government of India, although many generations must pass away ere its peoples become fitted to guide their own destinies.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. January 24	1919. January. 11	Friday	1337. Rabbi II. 22	5679. Shebat 23
25	12	Saturday.....	23	24
26	13	Sunday	24	25
27	14	Monday	25	26
28	15	Tuesday	26	27
29	16	Wednesday	27	28
30	17	Thursday	28	29

Vice-Admiral E. C. T. Troubridge, C.B., C.M.G., has been promoted Admiral

Mr. and Mrs. Raoul Foà have left Egypt and the Sudan and will be away for four months.

We understand that Lady Chelmsford will shortly be coming to England on a three months' visit.

Mr. F. Rattigan, First Secretary to the British Legation in Bucharest, left London last week on his return to Roumania.

Lord Willingdon, Governor-designate of Madras, and Lady Willingdon have left Claridge's Hotel, and are staying at 24, Park Lane.

On January 17, at the Tweeddale Nursing Home, Tunbridge Wells, the wife of Mr. W. D. L. Roberts, Egyptian Irrigation Service, gave birth to a son.

The Rev. P. S. Waddy, M.A., T.C.F., formerly Head Master of King's School, Parramatta, has been appointed Canon Residentiary at St. George's, Jerusalem.

Prince Nicholas of Roumania, attended by Colonel N. Arion, Military Attaché to the Roumanian Legation, visited Poole on January 16 and christened a concrete ship.

The engagement is announced between Lieutenant A. S. Barnes, son of Major W. G. Barnes, M.C., A.V.C., and Dorothy Mary, younger daughter of Mr. and Mrs. A. W. Shallow, of Pahar, Loughton, and Calcutta.

At a meeting of the Central Asian Society, to be held at 22, Albemarle Street, on January 29, at 4.30 p.m., Professor Sir William Ramsay, D.C.L., will lecture on "The Past History of Anatolia: A Mirror of the Future."

Our Malta Correspondent writes that the news of the death of Sir John Clauson, Governor of Cyprus, who was formerly Lieutenant-Governor and Chief Secretary of Malta, has caused sincere regret in the latter island.

The engagement is announced between Lieutenant F. Hartley Postlethwaite, R.A.F., son of the late G. F. Postlethwaite, of Pelham Manor, New York, and Elisabeth Julia (Betty), elder daughter of Mr. and Mrs. A. W Shallow, of Pahar, Loughton, and Calcutta.

The marriage of Lieutenant Samuel David Kennedy, second son of the late Dr. David L. Kennedy, of British Guiana, and Miss Winifred Wederell, elder daughter of Mr. Thomas S. Wederell, of "Redgrove," Epping, Essex, took place on January 16, at Epping Parish Church.

The marriage arranged between Captain A. J. Shakeshaft, the Norfolk Regiment, and Molly McEwen Clarke, widow of Mr. W. M. F. Clarke, Indian Police, and daughter of the late Mr. A. J. Brown and of Mrs. A. J. Brown, Cheviots, Eltham, will take place on Tuesday, February 4, at Eltham Parish Church.

The marriage of Major E. F. Vereker Ventris, Royal Artillery, attached Headquarters Staff, Simla, eldest son of Major-General F. Ventris, Commanding British Force, Hong Kong, and Mrs. Ventris, 136, Thurlow Park Road, Dulwich, and Miss Dorothea Janasz, only daughter of Mr. and Mrs. J. A. Janasz, of Salford House, Welford, near Rugby, took place in Bombay on January 12.

The bestowal of a C.M.G. upon Mr. W. C. F. Robertson, Lieutenant-Governor of Malta, has given much pleasure in the island, writes our own Correspondent. Mr. Robertson took up the onerous duties of his high office in times of exceptional difficulty, but his administrative ability and tact have enabled him to steer safely through all difficulties; while his sterling qualities have commanded the respect and esteem of all who have been brought into contact with him, whether officially or in a private capacity.

The marriage of Eustace Leigh, son of the late Rev. William Trafford, of St. Lawrence Rectory, Southminster, and Mrs. Trafford, of Croydon, to Ruby Beresford, only daughter of the late Colonel William Loch, C.I.E., and Mrs. Loch, of Eastbourne, took place on January 18, at St. Peter's Church, Kirkley, Lowestoft.

The engagement is announced between James Gordon Danielson, R.F.A., of the Hong Kong and Shanghai Banking Corporation only son of the Rev. A. G. Danielson, D.D., Aberdeen, and Chindwara, India, and Kitty, elder daughter of the late Colonel W. C. Dawson and Mrs. Dawson, Weston Hall, near Otley, Yorks.

An engagement is announced at Rawal Pindi, India, between Major E. C. Boutflower, the Duke of Wellington's Regiment, son of Mr. Edward Boutflower, of Hale, Cheshire, and Violet Eleanor Dunlop, only daughter of the late Mr. Arthur Percival Hinde, late of Beaumont Hall, near Lancaster, and of Mrs. Hinde, of Eastbourne, Sussex.

The engagement is announced between John Seymour Eyton, Indian Civil Service, Lieutenant 6th King Edward's Own Cavalry, Indian Army, eldest son of the late Colonel Philip Eyton, Border Regiment, and of Mrs. Eyton, of Overton, Ellesmere, Shropshire, and Phyllis A. Tyser, elder daughter of Captain and Mrs. Hugh Tyser, of Marden, Kent.

A very graceful compliment has been paid to Sir Mark Sykes, who for some time past has been on a Government Mission in Palestine, says the *Egyptian Gazette*. The Armenians, at Aleppo, to the number of fifty thousand or more, have presented him with an address expressing their gratitude to him, and through him to the British Government, for all the efforts that have been put forward on their behalf.

Sir S. P. Sinha's appointment as Under-Secretary for India and his elevation to the peerage are to be celebrated by a luncheon to be given by Indian and English friends on his return from Paris, the Maharaja of Bikaner presiding. His place as member of the Bengal Government is being temporarily filled for the third time by the Maharaja of Burdwan, and it is expected that he will now be appointed to fill the vacancy.

General Milne's dispatch describing the operations of the British Force at Salonika in the final battles is now published.

The British military authorities have taken over the control of the Baghdad Railway, and the French have taken charge of the Oriental Railways in European Turkey.

The Nizam of Hyderabad has forwarded to the committee of the proposed Willingdon memorial fund a sum of Rs. 25,000 in token of his great regard and friendship for Lord and Lady Willingdon.

A Delhi message states that a special *Gazette*, announcing the death of Dr. Lefroy, Bishop of Calcutta and Metropolitan Bishop in India and Ceylon, pays a very high tribute to his work, extending over forty years, and says his loss is a personal calamity to many in India.

Dr. Chaim Weizmann, President of the English Zionist Federation, has returned from Paris, where he had long interviews with, among others, President Wilson and Mr. Balfour. Dr. Weizmann has issued a statement in which he declares his interview with President Wilson to have been most satisfactory. The President promised his entire support for "a Jewish Palestine, full and unhampered."

APPOINTMENTS, PROMOTIONS, &c.

Dr. H. P. Muller, the economist and historian, has been appointed Dutch Minister at Bucharest.

M. Vladimir Nosek, Secretary to the Czech-Slovak Legation in London, is now acting as Chargé d'Affaires.

The Roumanian Chargé d'Affaires, M. Michel B. Boeresco, has returned from Paris and resumed his duties at the Legation.

Captain Victor Gamble is to succeed Mr. T. Lister as Private Secretary to the Lieutenant-Governor of the United Provinces.

Prince Livio Borghese, Counsellor of the Italian Embassy, who has been appointed Italian Minister at Belgrade, left London last week for Paris and Italy.

General Sherif Pasha has been appointed by the Liberal Turkish Congress at Geneva a delegate to the Paris Peace Conference.

It is understood that Mr. C. E. Low, Secretary to the Government of India, will be placed on special duty in connection with the report of the Industries Commission. Mr. A. H. Lee will officiate for him.

The Viceroy has appointed Sir Alfred Hamilton Grant, at present Foreign Secretary to the Government of India, to be Chief Commissioner of the North-West Frontier Province in succession to Sir George Roos-Keppel.

Digitized by Google

Mr. D. R. Lyle, Remembrancer to the United Provinces Government, and Mr. A. W. E. Standley, Secretary to Government, P.W.D., Irrigation Branch, have been appointed members of the United Provinces Legislative Council.

Mr. Cecil Harmsworth, M.P., Parliamentary Under-Secretary of State for Foreign Affairs, has appointed the Hon. A. Cadogan, of the Foreign Office, to be his private secretary, and Mr. Arthur Earle to be his personal private secretary.

Mr C. M. Collett, I.C.S., whose services were lent to the Army Department, has now returned to civil employment. He has been posted as Deputy Commissioner of Unao, and replaces Mr. J. F. Sale, who is posted to Moradabad as Joint Magistrate.

The following clerical appointments in India are announced :—The Rev. W. Light, Chaplain of Trivandrum, Travancore, to be Chaplain of Jhelum, Punjab; the Rev. W. A. H. Parker, M.A., to be Chaplain at Kasauli, Punjab; and the Rev. T. A. Thomson, to be Chaplain of St. John's, Calcutta.

It is officially announced that Mr. Montagu, Secretary of State for India, has appointed Lieutenant-Colonel Sir George Roos-Keppel to be a member of the Council of India. Sir George will enter upon his new office in the spring, when he retires from his present appointment of Chief Commissioner of the North-West Frontier Province.

OBITUARY.

Mr. Alfred Dudley Kennard, Medical Officer to the Turkish Embassy, has died at his residence in Bedford Square in his forty-first year.

Major Sir Bryan Leighton, who has died at Wellington Court, Knightsbridge, acted as correspondent for the *Illustrated London News* in the last Balkan war. He then accompanied the Turkish Army in Thrace.

Lieutenant Colonel John R. B. G. Carter, died on January 14 at Denmark Hill, in his fifty-second year. He received his commission in the Indian Army in 1887. After ten years' service he was appointed Superintendent of Police at Mahi Kantha, and was afterwards Assistant Political Resident and Assistant Political Agent, being appointed to Kathiawar in 1909.

Major-General Alexander Kinloch, who has died at Bray Lodge, Bray, Berks, aged 80 years, was D.A.A.G. for Musketry in India from 1870 to 1877. Throughout the Afghan War he was D.A.Q.M.G., and held the same post later in India. He commanded the 2nd and 4th Battalions, King's Royal Rifles, and afterwards three second class districts in India, and the 1st Brigade of the Chitral Relief Force, receiving the medal and clasp. He retired under the age clause in 1895, with the hon. rank of Major-General. He had written on big game shooting in Northern India.

The death has taken place in London from heart failure, at the age of 52, of Lieutenant-Colonel Charles Brooke Rawlinson, C.I.E., son of the late Canon Rawlinson, of Canterbury. He was educated at Marlborough, and received his first commission in 1885. Later he entered the Indian Political Department, in which he did much valuable work on the North-West Frontier. In 1899 he was appointed an Assistant Commissioner in the Punjab; he became Deputy Commissioner ten years later, and Political Agent in 1906. After holding the appointment of Revenue Commissioner, NorthWest Frontier Province, Colonel Rawlinson retired in May, 1917, after thirty-two years' service.

Colonel F. H. A. Disney-Roebuck, died suddenly last week, aged 73. He was the only son of the late Captain H. Disney-Roebuck, 23rd R.W.F. He served in the Nile Expedition, 1887-89, and took part in the operations of the advance column under Major-General Earle, receiving the medal with clasp and the Khedive's Star. After his return from India he commanded his battalion at home for several years. He is survived by his two sons, Major Wyndham Disney-Roebuck, R.G.A., and Lieutenant-Colonel Claude Disney-Roebuck, late Northamptonshire Regiment, and until recently in command of the 4th Royal West Kent Regiment.

NEWS IN BRIEF.

About two hundred members of the Church of England Men's Society, who are serving with the Army in Egypt, took part in a pilgrimage to Jerusalem.

According to the *Matin*, the Serbian Government estimates the damage caused in Serbia by the Austro-German and Bulgarian invasion at £320,000,000.

At a meeting in New York on Sunday the first Jewish Labour Congress opposed a Jewish Republic in Palestine, and favoured equal rights for all in Palestine.

Commander Aristide Moraininis, the Greek airman, who left Salonika to fly to Athens three weeks ago, has not reached his destination, and is now officially declared to be lost.

A telegram from the President of the Indian Association at Nairobi says :—"Indian community in East Africa express their profound gratitude for the appointment of Sir S. P. Sinha as a member of the British Ministry."

According to a telegram from Constantinople, the Turkish Government has postponed the Parliamentary elections *sine die*. In a proclamation the Government states that the elections will be held after the signature of peace.

Major-General Sir Lee Stack, Acting Sirdar and Governor-General of the Sudan, left Khartoum on December 27 on a tour of inspection in Dongola Province. The first places visited were Kareima, Nuri Dueim, and Merowi.

A telegram sent to Mr. Lloyd George, President Wilson, and Sir Robert Borden by the Ukrainian Canadian Citizens' League, representing over 300,000 British subjects of Ukrainian descent, expresses regret that the Allies have not granted representation at the Peace Conference to the Ukraine.

The British Committee of the Indian National Congress expresses its grateful appreciation of the recognition by the Prime Minister of the principle of the closer association and participation of India in the affairs of the Empire by the appointment of an Indian to be a member of the British Government as Under-Secretary for India.

The American Senate has adopted an amendment to the Bill to provide $100,000,000 for the feeding of the hungry peoples of Europe, prohibiting Turkey, Bulgaria, and Austria, as well as Germany, from being allowed to share in the distribution of the funds, but permitting relief to be accorded to the peoples of Armenia, Syria, and Greece, and the Christian and Jewish peoples under the yoke of enemy Governments.

In a message, dated January 8, and delayed in transmission, Reuter's Bombay correspondent reports :—Following on the outbreak of influenza, Bombay is now suffering from a most severe epidemic of cholera. The spread of the disease is largely attributable to the heavy influx of the population from the country districts, where famine conditions prevail. The figures for the past two days, however, show a considerable improvement.

A reception will be held on Monday, January 27 (St. Sava's Day), in the Lower Hall of the Grafton Galleries, Grafton Street, W., at 8.30, to celebrate the emancipation of Serbia and the union of the Serbo-Croat-Slovene people. The Serbian Minister and Mme. Jovanovitch have promised to be present. The Bishop of London and Lieut.-Commander Hilton Young, M.P., will speak. Tickets may be obtained from the Hon. Secretary, Mr. G. Lingner, 65, Longridge Road, S.W.5.

A special correspondent of the *Morning Post* reports from Geneva :—It is rumoured that there has been an exchange of views between Belgrade and Budapest on the subject of a rapprochement between Serbia and Hungary. As the old Dual Monarchy has disappeared, a friendly understanding between the Serbs and Magyars is not improbable, provided the former do not show a tendency to impose severe conditions and, above all, do not claim territories in which there is a majority of Magyars in the population.

The Ceylon National Conference, held at Colombo on December 13 and 14, passed an enthusiastic resolution tendering loyal homage to the King and congratulations on the success of the British and Allied arms. Other resolutions were passed asserting that Crown Colony administration was unsuited to Ceylon's conditions and inconsistent with British ideals, and demanding constitutional reforms and the vigorous development of self-governing institutions with a view to the realisation of responsible government under the ægis of the British Throne. Steps were taken for the appointment of delegates to England.

THE PARIS CONFERENCE.

The eyes of an expectant world are centred on the Allied Conference in Paris. In his opening address the French President declared that the Allies sought nothing but justice, and he rightly insisted that justice demands, first, restitution and reparation for the peoples and individuals who have been despoiled or maltreated, and, further, punishment of the guilty, and effective guarantees against an active return of the spirit by which they were tempted. These are indeed among the grave questions that the Conference will have to decide, but it is not this part of its mission that makes the gathering without a parallel in history and fastens upon it the rapt attention of every civilised nation. The name of Germany, with all the crimes that it conjures up, is justly execrated at this time throughout the length and breadth of the earth, and there is a general interest in seeing her punished, in order that crime may not be encouraged by being left unpunished. It is, however, the other aspect of the Conference that differentiates it from all similar conferences that have preceded it. The map, not only of Europe, but of a large part of the world, is to be redrawn, not by a handful of diplomatists "on the corner of a table," but, as M. Poincaré said, addressing the assembled delegates, "in the name of the peoples, and on condition that you shall faithfully interpret their thoughts and respect the right of nations, small and great, to dispose of themselves, and to reconcile it with the right, equally sacred, of ethnical and religious minorities." This task, moreover, carries with it the need "to secure the material and moral means of subsistence for all those people who are constituted or reconstituted into States; for those who wish to unite themselves to their neighbours; for those who divide themselves into separate units; for those who reorganise themselves according to their regained traditions, and, lastly, for all those whose freedom has already been or is about to be sanctioned." Here, then, is the major significance of the Conference—its chief interest for the majority, perhaps, of the peoples whose representatives have met at the Quai d'Orsay, and for whom its decisions regarding the means to be devised for safeguarding the peace won at such a great price have a vital concern.

The League of Nations is intended not only to prevent or punish war in the future, but also to win respect for the peace that has been established by proving that this peace implies "greater realities of justice and safer guarantees of stability" than have been known before. With this end in view the League cannot afford to be inert. It must have both a corporate existence and a definite mission to fulfil. Born of a war of ideals, it must see to it that the ideals for which the Allies have fought suffer no dilution when victory has been won. A League that closed its doors for the time being on the enemy countries and admitted all the other nations of the world without further question would quickly find that the resultant of the ideals contributed by its different members fell far short of the high principles enumerated by Allied spokesmen during the war. A standard must be set, and it must be made plain to all nations who claim admission to the League that they must be prepared to conform to that standard. The Allied Conference, therefore, cannot regard itself as the League of Nations, but can only supply the nucleus from among its members. Apart from certain undertakings in regard to arbitration, there must be two preliminaries at least to admission to the League—a certain stage of constitutional development on democratic lines, and a declaration that the State, being content with its existing boundaries, is prepared to live at peace and amity with its neighbours. But as the goal of the League must be to embrace all the peoples of the world, it cannot avoid interesting itself in the moral and political advancement of the more backward nations. In this connection a particular obligation will have been laid upon it with regard to some of the peoples liberated by the disintegration of Turkey and Russia. To leave them without a guiding hand is to invite a repetition of the circumstances which favoured the aggrandisement of Germany and the outbreak of the Great War. How, then, is this responsibility to be met? The most practical suggestion that has yet been put forward is, we believe, the one elaborated by General Smuts. He would make the five Great Powers represented at Paris the nucleus of a permanent Executive Council of the League of Nations, with four representatives of other nations chosen by rotation from two panels. The future of the more backward peoples should be one of the responsibilities of this Council. Very wisely General Smuts rules out of court any attempt at international jurisdiction. It has never proved successful in the past, and there is no reason why it should in the future. Where direct tutelage has to be provided he would hand the work over to a single nation as the mandatory of the League, under special safeguards, and it would be the duty of the Executive Council to exercise some measure of supervision over its mandatory, or at least to call for a periodical account of its stewardship.

There can be little doubt that this scheme, in one form or another, will have to be applied very widely in the Near and Middle East. A concrete proposal to this effect is to be submitted to the Paris Conference on behalf of the King of the Hejaz. It is suggested that there should be a federation of a number of Arab States from the Mediterranean and the Red Sea on the West to the Persian Gulf, and that they should be placed under the protection of the United States. This latter suggestion is a testimony to Arab shrewdness. The natural protector of the Arabs, and the one to whom they would most readily turn, is Great Britain. But the Arabs are not novices in statecraft. They recognise the advantage of keeping the Arab world as far as possible a single unit, and they have no desire to see themselves split up under separate foreign jurisdictions. A foreign protectorate is essential, and will, moreover, serve to keep the Arab States together, provided it is a single protectorate. But as the Arab claims include both Aleppo and Damascus, and as the Arabs have but little hope of persuading Great Britain to run counter to French aspirations in that region, they have tried to cut the Gordian knot by appealing to the United States. These motives will not be lost on the Conference, and it will be of interest to see to what heights of genuine disinterestedness for the world's benefit that body will attain. Will the American Government take over work to which she will be entirely new—admittedly as a *pis aller*—or will France acquiesce in the self-determination of the Arabs and leave them to work out their own salvation under the protection of their own choice—that of Great Britain? The Conference, it is to be hoped, will realise that the future Turkey will need "protection" just as much as the other nationalities now liberated from the Ottoman yoke, and in this direction we may expect the United States to find their mission. It might give rise to misunderstanding between the two peoples, if one and the same Power undertook to look after both Arabs and Turks. The renunciation which the French would be called upon to make would be a severe test of French statesmanship; but if the Paris Conference or the League of Nations makes it clear that these trusteeships are not to be used for self-interest in any way, there may be less anxiety among the Powers to retain or accept those that can conscientiously be refused.

RURAL LIFE IN EASTERN MACEDONIA.—II.

The rich man of a village lives much the same sort of life as the other villagers. Merchants generally affect European clothes, instead of the baggy breeches, sleeveless jacket and waistband of many folds of the peasant, but their wives always wear native dress and do all the housework. They spend their money chiefly on the education of their children, sending them to Salonika, Athens, or, before the war, to Robert College, Constantinople, not infrequently even to French, Swiss, and German universities or medical and technical schools. In due course the boys become lawyers, doctors, Government officials, or journalists, though latterly engineering had been coming into fashion. When they have once tasted the sweets of town life a post in one of the larger towns is always the goal of their ambition, and, except as summer visitors, their native villages generally know them no more. But the mass of the people go on, from father to son, in the same village doing the same things. There is a certain amount of emigration to America from Western rather than from Eastern Macedonia, but less than from old Greece or the Islands. Those who go remit money home with praiseworthy regularity, and return when they have made their pile and open a café or a shop. Practically everyone in a village owns or rents a piece of land, and those who practise a trade do so in combination with farming. There are a few large chifliks (farms), especially in the Struma valley, mostly the property of Turkish Beys, many of whom left the country after its conquest by Greece. In such cases the farms passed to the Greek Government, and have been leased to lawyers or merchants who, like the Beys, farm them on shares with the villagers; and there are some large properties owned by the Community of Mt. Athos. But the bulk of the holdings are small, from three or four up to thirty acres, and are cultivated by the villagers and their families. The women do a great deal of the work and take part in all operations except ploughing.

Some very disparaging remarks have been made by our Army about the Macedonian system of farming, and it is literally true to say that the implements and methods in use are identical with those described by Hesiod, writing about the eighth century B.C. The plough is still a wooden beam tipped with iron, corresponding in every detail with his specification. The sickle is still chiefly used for reaping the crop, though there is a class of hired labourer called "scythesmen," who can use a scythe and command very high wages at the hay or grain harvest. The crops are still piled on the threshing floor and threshed by oxen or mules drawing wooden boards round and round it. On the bottom of the boards are set sharp pieces of iron which, besides separating the grain from the ear, convert the straw into chaff. Winnowing still consists in pitching the contents of the threshing floor into the air with large wooden shovels, so that the wind may carry away the straw from the grain. These picturesque survivals are, of course, not business, but, after all, people can only use what they have and understand, and make the best of it; and it should be remembered that there was not much encouragement in Turkish times to strike out new paths. Still, even before the war new methods were beginning to make their way. We found in some of the large chifliks on the left bank of the Struma iron ploughs manufactured in Old Greece which were a great improvement on the Hesiodic pattern, as well as toothed harrows and a Clayton and Shuttleworth threshing machine.

It will be easily understood that with such implements as I have described production on a large scale is impossible. All the processes take too long and need too much labour. So we find each family growing only enough grain for their own consumption and that of their animals. In a good year there is a surplus for sale; in a bad year there is scarcity. Cereals are winter crops harvested in June. The summer crops are maize, planted from St. George's Day, April 23 (O.S.), until the end of May, and harvested about the end of August, and tobacco, the cultivation of which, stimulated by extraordinary war prices, is greatly extending. It is an invaluable crop to the small cultivator, as his whole family can be turned on to planting, hoeing, picking and drying the leaves, and a small acreage gives a big return. The tobacco buyers of the large American and English combines come round the villages, and give cash advances on the crop while it is still standing, and the inferior qualities always find a ready sale locally. The Macedonian smokes nothing but cigarettes; the nargileh is as extinct as the dodo. Besides tobacco, there are subsidiary but very paying summer crops—cotton, sesame (of which the oil is much prized locally for cooking), the opium poppy, as well as the vine and the silk mulberry—most of the families in Platanochori and the neighbouring villages rear silkworms—also melons, pumpkins, and runner beans, which are generally planted among the maize. Other vegetables are only grown extensively in a few areas where irrigation is possible. Although running water is scarce in Macedonia, there is abundant underground water in most parts, which might be made available comparatively cheaply by windmill pumps. Nothing could do more to develop the country than irrigation, whether by this means or by the more costly schemes for conserving the surface water which, it is said, are contemplated. Without irrigation you are completely at the mercy of the uncertain rainfall. If the latter or spring rains fail, your cereal crops may be hardly worth harvesting, and if God does not send the three thunderstorms which are essential to the maize, that will disappoint you too. With water, if it be only for a couple of acres, you can always depend on bread for your family, as the natives say.

In every village there are flocks of sheep and goats which are herded by shepherds hired by the owners in combination. Besides these there are large flocks owned by Vlachs—nomad shepherds, that curious race whose language is almost identical with Roumanian and whose chief settlement south of the Danube is in the Pindus range. They move about the country according to the season, spending the winter in the plains and the summer in the mountains, and are regarded with a certain amount of suspicion by the permanent inhabitants.

Village affairs are managed by a committee presided over by a mayor or deputy mayor, who is the local representative of the Government, and has a good deal to do, especially in these times when the Government is always bothering. He is paid a small salary by the village, who also pay the field watchman, who sees that the shepherds keep off the crops, and the priest. Village priests are commonly of the same class and of little more education than the other villagers. They marry, and work in the fields like everyone else. If the priest is a man of any character he has considerable influence, and more than one had to be temporarily removed from his village during the military occupation for taking too much interest in politics.

The schoolmaster and, in the larger villages, from two to six policemen complete the village community. They are both Government officials and rather inclined to give themselves airs on that account. I have only met schoolmasters socially, but it always struck me that they were discontented with their lot and felt that their talents were wasted in a village. The police have been much improved since the Venizelist regime by the infusion of a large number of Cretans, particularly as officers and N.C.O.'s. These country police have large areas to patrol, and, I think, do their work rather well and more honestly than one would expect in a country where baksheesh has for so long played such a large part in justice. The Macedonians have an immense respect for constituted authority and are easily governed. There has always been a floating population of bad characters, which has largely increased during the war, but a few years of firm administration would soon undo the effects of centuries of lawlessness.

Altogether, it really looks as if better times were in store for the Macedonian. The war has, of course, caused great suffering and heavy material loss—many villages are in ruins—orchards and vineyards destroyed. But the effects have been much mitigated by the flow of British gold throughout the country, which has not only saved thousands of people from starvation but actually put many of them in a better position than they ever were in before. Perhaps they may have gained other advantages from the close association so many of them have had with the British Army. Thousands of muleteers enrolled in the Army have had to conform to British standards of cleanliness, sanitation, care of animals, and discipline, and have been treated according to British ideas of what is fair. If one may judge from conversations and the letters they write, it was a revelation to many of them; but with characteristic adaptiveness they

quickly caught on to the idea, and the clean but swarthy driver of that well turned-out limber who brought his whip hand so smartly away in the salute just now, is quite a creditable imitation of a British soldier. Of course, they think us mad in many ways, but for all that they have an unbounded admiration for us as a nation, and what it is hardly too strong to call a feeling of genuine affection for the British soldier.

Given fifty years of peace, an impartial and strong Government, and capital for the development of the country by improved communications, irrigation, and the gradual introduction of better agricultural methods, and I believe the future of Macedonia is full of promise.

W. S. Cohen.

PRESS ON THE NEAR EAST.

The Capture of Medina.

In a leading article, the *Times* last Friday expressed the satisfaction that must be felt by all the Allies at the final surrender of Medina by the Turks and the entry of the Arabs into the city. After sketching briefly some of the early history of Medina, the article continues:—

In the present war the Turks were well aware of the veneration in which the Arabs held Medina, and traded without scruple upon the piety of their brethren in the Faith. They did not hesitate to shell the holiest of all Moslem shrines—the Kaaba of Mecca, into the wall of which, when it was rebuilt, Mahomet with his own hands built the still more sacred Black Stone—but they protected Medina by using the great mosque as their chief ammunition store, with the result that not a shell could be thrown into the place without endangering the Prophet's tomb. The Arabs would not even distress the Holy City by cutting off the water supply. The Turks had brought large forces from Syria to hold the railhead of the Hedjaz railway and to use it as a base for operations farther south. They never got farther south, but after some fine fighting, in which the tribesmen had to face artillery for the first time, Sherif Feisul wisely perceived that, in the circumstances, a storm, or even a siege, was hopeless, and that the bulk of his men would be better employed elsewhere. The siege was converted into a not very strenuous blockade, and Sherif Feisul took his warriors across the waterless desert to Wejh, where, however, the Navy had already done the work, and afterwards employed them in desperate and successful raids upon the railway, well to the north of Medina. The Turks have doubtless made free with the rich offerings at the Prophet's tomb from all parts of the world of Islam, but the shrine itself, and the neighbouring sanctuaries, such as the Mount of Ohod, the scene of a signal victory of Mahomet's, and, therefore, one day to be translated into Paradise, and the Mount of Aïra, where he nearly died of thirst, and which will accordingly be hurled into hell, have passed out of their hands. So have all the rest of the chiefest among the holy places of Islam, whether revered by Sunnis, or by Shias, or by both. These things still have influence over the minds of millions.

Prisoners in Turkey.

The January *Blackwood* contains the first part of an article entitled "450 Miles to Freedom," by Captain M. A. B. Johnston and Captain K. D. Yearsley, which gives a racy account of life in the Turkish internment camps, and of escapes and attempts to escape. It is certainly worthy of note that, in spite of their own misfortunes, the British prisoners were able to, and did, help others who were nominally free. Thus we read that when the authors and their companions were to be removed from Kastamouni to Changri:—

The poor Greeks of the town were very sad to see us go. The Rev. Harold Spooner, through the Greek priests, had been able from time to time to distribute to these destitute people fair sums of money, supplied by voluntary subscription among the prisoners. In addition to this, families of little children used to be fed daily by some messes, and so we were able, in a small way, to relieve the want of a few unhappy Christians. Before we left Kastamoni the Padre showed us a letter which he had received from the head Greek Priest, thanking us for having helped the poor. We had, he said, kept families together, and young girls from going on the streets, and he assured us that it would be a privilege of the Greek community to look after the small graveyard we had made for the six officers and men who had died while we were there.

Regarding the treatment of prisoners and the Turks' responsibility in the matter, the authors write very plainly:—

It may, perhaps, be said with truth that it was no studied cruelty on the part of the Turkish authorities that was the cause of the death of so many brave men who had given themselves to the work of their country; yet with equal truth it may be said that it was the vilest form of apathy and of wanton neglect. Where the taking of a little trouble by the high officials at Constantinople would have saved the lives of thousands of British and Indian soldiers, that trouble was never taken. Weak with starvation and sick with fever and dysentery (we speak of the men of Kut), they were made to march 500 miles in the burning heat across waterless deserts without regular or sufficient rations and without transport—in many cases without boots, which had been exchanged for a few mouthfuls of food or a drink of water.

We officers, who had not such a long march as the men, and who were given a little money and some transport, thought ourselves in a bad way—what of the men who had none? There were no medical arrangements, and those who could not march fell by the desert paths and died. The official White Book gives the number 65 as the percentage of deaths amongst British soldier prisoners taken at Kut, a figure which speaks for itself.

It is a law of the world's civilisation that if a man take the life of another, except in actual warfare, he must pay forfeit with his own life. Take away bribery and corruption, and that law holds good in Turkey. Now, when a soldier is taken prisoner he ceases to be an active enemy, and the country of his captors is as responsible for his welfare as for that of her own citizens. What if that country so fails to grasp the responsibility, that its prisoners are allowed to die by neglect? Should not its rulers be taught such a lesson that it will be impossible for the rulers of its future generations to forget that lesson?

It is no real use to obtain evidence of a cruel corporal at that prisoners' camp or bestial commandant at this and to think that by punishing them we have avenged our dead. These men are underlings. The men we must punish first are those few in high authority who by an inattention to their obvious duty have made it possible for their menials to be guilty of worse than murder.

We pride ourselves on the fact that we are citizens of the most just country of the earth. Let us see to it that justice is not starved.

Articles to Note.

"The Report on Indian Constitutional Reform," by Sir F. S. P. Lely; "India in France," by J. D. Anderson; "India: A Democracy?" by S. S. Thorburn; and "The Settlement of Turkey," by "Polybius," in the *Asiatic Review* (January).

"Dacoity in Bengal," in *The Times* (January 21 and 23).

ARABIA AND THE U.S.A.

Under date of January 19, Reuter's Paris correspondent reports:—The Emir Feisul, son of the King of the Hejaz, who is now in Paris, is awaiting instructions from his father as to the two delegates who are to represent his kingdom at the Peace Conference. Colonel Lawrence, who accompanies the Emir as aide-de-camp, expects that Emir Feisul himself will be chosen as first delegate of the kingdom of the Hejaz, in order to give greater weight to an important proposal which is to be submitted to the Conference. The proposal will suggest the formation of a great federation of all the Arab States from the Red Sea to the Persian Gulf, free from any Turkish domination and under the protection of the United States. "The Arabs of this most ancient race," said Prince Feisul to-day, Colonel Lawrence acting as his interpreter, "desire to become the youngest independent State in Asia, and they appeal to America as the most powerful protector of the freedom of man."

THE EX-KHEDIVE'S ESTATES.

The Cairo correspondent of *The Times* reports, in a message despatched on January 12, but delayed in transmission, that the estates in Egypt of the ex-Khedive, Abbas Hilmi, which have been sequestrated since December, 1914, have now been vested by proclamation in the Public Custodian. The report continues:—The preamble gives as the reason for the change the request of the previous sequestrator to be relieved, and the necessity to provide for the future administration of the estates, since Abbas Hilmi is excluded from Egypt, and he and his descendants, by the decision of the British Government, are definitely excluded from all rights of succession to the Sultanate. The ex-Khedive's estates are all heavily mortgaged, and the annuities were much in arrear before the sequestration.

POSTAL SERVICE TO TURKEY.

The Postmaster-General announces that letters and postcards may now be posted to any part of Turkey-in-Europe or Turkey-in-Asia. Only correspondence of a purely personal and domestic character may be sent; it will be subject to censorship; and no guarantee can be given of delivery even if it is forwarded. The correspondence cannot be registered.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I see that it was stated in a lecture on carpets the other day that the carpet supplies of Turkey and Persia were running out, and that the reserves of these countries, as well as the carpets that were being made, had been bought up by this country. The statement is very interesting, but I cannot accept it as correct for a moment, for the carpet supplies of these countries are almost inexhaustible, and it is unthinkable that the demand for the carpets, great though it is, should have brought about such a result. I suggest that the view expressed may be based on the fact that in recent months these carpets have been bought in England at high prices for re-export to meet the British demand for them in Mesopotamia. But while this obviously points to the demand exceeding the supply, it does not follow in the least that there is a real shortage out there. It merely means that possessors of the carpets are unwilling to part with them or are holding them in the hope of higher prices.

***

I am assured by a correspondent who knows the position thoroughly that there is not likely to be any difficulty, now or in the future, in securing one of these carpets in Mesopotamia or Persia provided the would-be purchaser is willing to pay the price. That is, of course, the real explanation of the shortage, for the possessors of these carpets are fully aware of the demand for them, and they also know that the demand is a growing one, and the deduction from that fact that in due course better terms may be secured is not particularly difficult.

***

The death of Mr. John Rodgers, chairman and managing director of the famous cutlery firm of Joseph Rodgers and Sons, Limited, which took place at Sheffield on Sunday, deprives the British business world, and especially the export section of it, of one of its most prominent and enterprising figures. The firm of which Mr. Rodgers was the head has always played a leading part in the export trade, and in the Near East in general it found a large and satisfactory market. Its success in that region was so pronounced, indeed, that I am told the trade-mark of the firm was forged to a greater extent than any other in the Near East. Could there be a more magnificent tribute to the cutlery of Messrs. Rodgers? Of course, the Germans were the offenders. Baghdad, in particular, being full of their imitations of the firm's wares before the war.

***

News regarding financial and economic reconstruction in Roumania is slow in coming through, but we are now beginning to get a few items, and this week our correspondent on Roumanian affairs reports that the Ministry of Industry and Commerce there has been divided into a Ministry of National Economy and Commerce and a Ministry of Industry and Labour. The latter body, he states, has been authorised to take over the coal mines. Comment on the precise significance of these changes must be withheld pending the receipt of fuller information. It would appear, however, that one reason for the alteration is the advisability of the creation of a separate body to deal with problems concerned with the labour question, in which respect Roumania would be merely following the example of almost every other country.

***

The mail papers just received from India show that great anxiety is felt among those who hope to go on leave during the present year on account of the high rates charged for passages home. It is a question which affects not only members of the various Services, and of the non-official community, who have had to forgo leave on account of the war, but also in a number of cases wives and children, who have had no option but to stay in India. The *Pioneer*, discussing the question, says that "it appears that the companies have just decided to reduce homeward shipping freights from 400 shillings to 250 shillings per ton, and there is no valid reason why passenger rates also should not be placed on a more moderate basis."

***

My readers will be interested to learn that among recent recipients of foreign decorations is Mr. G. L. Bailey, director of the Lake Copais Company, Kribba, Greece, who has received the Cross of Chevalier of the Royal Order of the Redeemer, in recognition of valuable services rendered by him towards the development of agriculture in Greece.

***

I see that the Indian Budget is to be presented at the Imperial Legislative Council on March 21.

***

I am interested to learn that the question of the organisation of an international industrial exhibition in Calcutta during the cold weather of 1920-21 is under consideration. If it is decided to hold the event, as it probably will be, I hope that British manufacturers here will take the fullest advantage of what should be an excellent opportunity for the extension of their trade in India.

***

In the absence of complete details there is little that can profitably be said with regard to the Bombay cotton strike. It seems that some eighty factories have been affected, and that the workers on strike number about a hundred thousand. The messages so far received leave the origins of the strike obscure, but it is stated that the men's demands include a 25 per cent. increase and one month's pay for Armistice Day. The most unfortunate feature of the strike has been the riots which have developed, and have apparently led to minor conflicts with the authorities.

***

As an isolated example in India of the unrest now prevailing throughout the world this strike may be regarded as of small importance, but in relation to the future the occurrence is not devoid of significance. It is, so far as I know, the largest strike that has ever taken place in the East, and its spontaneity in a country where trade unions are unknown gives food for thought, for one of the chief weaknesses of Indians is their readiness to respond to the voice of the agitator, and one can well imagine the consequences if organised labour agitations were allowed free play in the country. If the present strike should prove the forerunner of a situation similar to that with which all the most advanced countries are now confronted, then the prospects for India's industrial development will be gravely discounted.

***

Mr. Robert Campbell, presiding at the extraordinary general meeting of the National Bank of India this week, held for the purpose of considering resolutions to increase the capital, explained that the purpose of the increase was to strengthen the bank's position in view of the great expansion of business expected as soon as peace was finally assured. They had also another good reason for the development in the rapid and important growth of their business in recent years. He demonstrated this by saying that while the paid up capital of the bank was raised in 1911 to £1,000,000, the figure at which it now stands, the deposits, which on June 30, 1911, amounted to £13,031,000, were more than doubled at the same date last year at £26,719,000, while bills of exchange and advances had increased from £11,180,000 to £22,990,000, and investments from £1,006,000 to £2,440,000.

***

Dealing with the question whether the new shares might not have been priced at £25 instead of £20, thus adding a substantial amount to the reserve, while still providing a handsome bonus for the shareholders, Mr. Campbell said that he thought he might say that the only reason why that was not done was that they were fortunately able to accomplish the same thing in another way. "As you will have seen from our half-yearly report to June 30 last," he added, "after providing for the interim dividend we carried forward £217,000 of undivided profits. The cabled advices we have received from our branches of the results for the past half-year are such as to assure us that when the accounts are made up to December 31, after providing for dividend and other usual appropriations, this carry forward will be largely added to. We propose then to transfer £200,000 of the amount to the reserve fund, making a total addition to the fund of £500,000, as well as £500,000 to the capital."

***

Figures are now available regarding the quantities of cotton goods woven in India in August and in the four months preceding that period. The total for the five months is less than that for the same period in either 1917 or 1916, but the August figures are well in advance of those for 1917. The chief increases during that month compared with the same period in 1917 were in dhooties, which showed an increase from 27 to 40 million yards; in shirtings and longcloths, where the increase was from 34 to 36 million yards; and in tent cloth, where the advance was from two million to five million yards. In the year ended August 31 the woven goods amounted to 376,000,000 lb., against 380,000,000 lb. in 1917, and the quantity of yarn spun was 642,000,000 lb., against 677,000,000 lb. in the previous year.

EGYPTIAN STATE FINANCES IN OCTOBER.

(From Our Own Correspondent.)

Cairo, December 26.

Further substantial progress is recorded in the statement of accounts for the month of October issued by the Ministry of Finance. During that month revenue amounted to £E3,654,143 as compared with £E3,219,583 in October, 1917. The chief items of revenue were direct taxes £E1,605,770, customs £E362,742, tobacco dues £E224,942, judicial fees £E138,537, railways £E706,871, state domains £E178,796, ghaffir cess £E147,303, miscellaneous receipts £E124,837. Compared with October, 1917, customs have increased by £E148,000, and railways by £E206,000. For the seven months ending October 31, receipts are £E16,054,101 or £E3,749,190 better than a year ago.

Expenditure during October comes to £E2,350,598 as against £E1,789,986 in the same month in 1917. The principal items were public health £E43,933, irrigation £E104,970, railways £E287,744, police £E47,104, ghaffirs £E66,788, ministry of war £E171,698, pensions and indemnities £E57,414, public debt £E596,795, war gratuities £E373,712, and extraordinary war expenditure £E63,643. Compared with October, 1917, the main differences are increases of £E93,000 in railways, of £E88,000 in ministry of war, and £E328,000 in war gratuities, and decreases of £E22,000 in irrigation and £E113,000 in the public debt. For the seven months ending October 31, the total expenditure amounted to £E12,606,376 as against £E10,371,149 at the same date a year ago.

As a result of the working of these seven months there is a surplus of revenue over expenditure of £E3,447,725, as compared with one of £E1,933,762 during the same period of 1917. It is to be noted also that whereas extraordinary war expenditure was not accounted until the March statement last financial year, £E361,857 has been included in the year's expenditure so far, so that in reality the surplus is nearly two millions better than at the end of October, 1917. Even at this early date it is possible to foresee that the revenue for 1918-19 will be far above the estimates which were set at £E22,900,000, and that the surplus will be in the neighbourhood of £E5,000,000.

EGYPT'S COMMERCE.

Improvement in October.

(From Our Own Correspondent.)

Cairo, December 14.

The customs returns for October show a further increase in Egypt's foreign trade. During the month imports came to £E3,223,234 and exports to £E2,980,858, as compared with £E2,711,844 and £E2,198,618, in October 1917. The total imports so far are £E41,036,208 and exports £E38,942,967, showing an increase of £E16,011,798 in the former and of £E9,106,818 in the latter compared with the figures for the same period of last year.

The principal imports during the month were sugar £E124,571, coffee £E78,799, tea £E59,150, vegetable oils £E67,590, mineral oils £E61,142, stationery £E168,253, coal £E229,285, cotton thread £E169,435, cotton piece goods, £E633,795, woollen textiles £E54,589, raw silk and silks £E120,407, ready made underclothing £E138,982, manufactured iron and steel £E149,987, and tobacco £E338,142.

The main exports were cotton seed £E184,847, sugar £E149,853, gum £E87,420, cotton £E2,305,001, and cigarettes £E79,492.

Trade with the Empire.

Great Britain's share of imports increased by one third to £E1,246,210, but that of India fell by nearly half to £E320,140. The former sent 80 per cent. of the coal (the rest came from South Africa), and of the cotton piece goods, half the mineral oils, and 60 per cent. of the iron and steel. The United States sent half the mineral oils and the balance of the iron and steel. France quadrupled her sales to £E204,241 (spirits, silks and chemical products), Japan more than doubled hers (matches, underclothing, silks and smallware), as also did China (raw silk and silken goods).

Under exports Great Britain took 25 per cent. more, viz., £E1,305,701 (all cotton seed and half the cotton), the United States from nothing rose to £E757,409 (half the gum and one third of the cotton), Spain took £E126,070, Italy £E167,236, and Switzerland £E222,610 (practically all cotton), whilst French Mediterranean Possessions took £E139,372.

Trade with the Sudan continues to be brisk. Imports thence came to £E266,170 during the month, and exports to that country to £E253,427. Among the imports into Egypt were livestock £E168,396, gum £E25,182, cereals £E28,239, and hides and skins £E21,808. The chief exports to the Sudan were sugar £E34,108, textiles £116,672, and tobacco £E14,767.

IRRIGATION IN MESOPOTAMIA.

Opening of New Canal.

The announcement is made that on January 10 an important new irrigation canal was opened at Mansurieh, on the Diala River, some 70 miles north-east of Baghdad. The canal is six miles long, and it is stated that without further work upon it water can be supplied to irrigate 300,000 acres, rendering cultivation possible as far as the neighbourhood of Baghdad. The opening of the Hindieh barrage, and the construction of subsidiary canals, rendered possible the cultivation of 500,000 acres on the Euphrates, and with this new development a further great stride has been taken in the direction of restoring to Mesopotamia the prosperity which she once enjoyed. Not the least interesting feature of the construction of this canal, which forms a small part of a vast scheme projected before the war, lies in the fact that the policy embodied in it has its roots in past history, for in the days of the ancient Chaldeans the region bounded by the rivers Adheim, Tigris, and Diala, was irrigated by an extensive series of canals.

The despatch announcing the opening of the canal gives the following description:—Until the fall of the Abbasid Khalif the whole tract of country enclosed by the Diala, Adheim, and Tigris rivers was watered by a series of canals drawing from the Diala. Most of these canals have long been dry, and the greater part of the land has fallen out of cultivation. The Khalis Canal, which at present supplies water to about 50,000 acres, was also, owing to the erosion of the right bank of the Diala, in danger of falling. Six months ago our Irrigation Department began the widening of an old channel known as the Mansurieh cut and the erecting of a regulator at its head, which has been built of solid concrete. In addition to a locally raised Arab corps three Indian labour corps have been employed on the work,—the 5th Madras Corps and the 11th and 18th Labour Corps. The canal leaves the river by a rocky gorge, in which the gradient is 4ft. in the mile. Below the gorge the gradient flattens to 1ft. in a mile, and this change had entailed the construction of five masonry falls. The width here increases from 25ft. to 50ft.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director General of Commercial Intelligence, Calcutta, dated January 16:—

Light to moderate rain in Punjab, Chota Nagpur, Sind and Jubbulpore Division. Otherwise no change.

Cotton Market weak and irregular. Good Broach April-May delivery quoted Rs.639 As.10. Gunny Market in Calcutta opened firm but closed quieter in consequence of mills resuming work for five days a week till June 30. Jute Market firm. Jat fours Rs.13 As.8. The demand in Calcutta for Burma rice has been accentuated by freight difficulties. The price advanced is Rs.5 As.9 old crop.

The Share market in Bombay is dull and in Calcutta the chief interest is in the industrial section.

The Bombay Cotton Mills closed in consequence of strike.

A Press communiqué has been issued giving statistics of production of sugar by factories in India. The maximum capacity of the output of the factories which reported was 533 tons a day and the actual output about 280 tons a day.

The Kamrup Experimental Farm in Assam had a difficult year owing largely to seasonal conditions and delays in procuring machinery.

The gross receipts for eight months (April-November) of Customs Revenue—excluding salt revenue—in 1918 amounted to Rs.11,96 lakhs against Rs.10,49 in same period of 1917. Import duties Rs.8,20; export duties Rs.2,57; excise on cotton manufactures Rs.79 lakhs, on motor spirit Rs.26 lakhs.

The imports of raw cotton from April to August showed a large increase as compared with similar periods in 1916, 1917, viz., 57,171 cwt. against 14,849 cwt. and 7,289 cwt. respectively.

COTTON GROWING IN BENGAL

The Director of Agriculture in Bengal has issued a report on the measures which have been taken to encourage cotton growing in the Presidency. The question of cotton cultivation in Bengal was discussed at the summer meeting of the Provincial Agricultural Association, held in Calcutta last July, when the general conclusion arrived at was that, although cotton was not to be recommended as a field crop in the plains of Bengal, and although the general situation as regards the price of raw cotton or manufactured cotton goods could not be affected by any possible extension of cotton growing in the Presidency, yet as a special war-time measure, and in view of the efforts which were being made to reintroduce home-spinning in certain localities owing to the high price and scarcity of cotton goods, a local supply of raw cotton might be organised through the growing of cotton plants amongst other crops on small areas of the higher homestead lands near village sites. Cotton-growing would thus be a subsidiary industry to home-spinning, and its extension would depend largely on the extent to which local efforts to revive the *charka* proved successful.

The director points out that it requires to be borne in mind that no part of Bengal is suited for cotton gorwing; much the greater part of it is absolutely unsuitable, and the crop is confined to a comparatively small and highly specialised area on the eastern borders of the Presidency.

Estimates of cereal crops in Lower Egypt give wheat at 8 per cent., barley at 4 per cent., and maize at 3 per cent. below normal. In Mid-Egypt crops are slightly above normal, while in Upper Egypt they are normal.

ENGINEERING NOTES.

Condensation Reservoirs.

As is well known, one of the chief problems in the Near East is the provision of water. Whole towns and villages are dependent upon the rain water which is collected during the winter from the roofs of the houses, and stored in underground built-up cisterns, or upon wells, averaging from 40 to 200 feet deep, from which the water is drawn up in the old patriarchal manner with hemp cords and wooden buckets. In most cases the remedy is not difficult, but want of means often prevents the execution of works for a water supply. A new method for obtaining water by condensation reservoirs should, therefore, be of much interest to people generally in the Near East, and especially to many local authorities there. The effect of the method is to accelerate and intensify by artificial means the forces of nature.

Dew ponds are familiar to those acquainted with the chalk downs. Many of these dew ponds are of great antiquity, and are the handiwork of Neolithic man. In some remote districts, during long droughts, the extraordinary spectacle may be witnessed of villagers and farmers sending carts from the valley to the top of the downs in order to fetch water from dew ponds for domestic and farm purposes. The reason that these dew ponds do not dry up is that the radiation of heat from the earth at night is checked by a layer of non-conducting medium. The surface of the pond is thus chilled to the dew point, and a condensation of the water vapour contained in the atmosphere takes place in the form of dew. In a normal tropical climate this condensation is more copious than in a temperate climate. The water thus obtained is naturally distilled, and is therefore, chemically pure. It is impossible that it can be contaminated, as is so frequently the case with spring or surface water. It is lifted by natural forces to such a height that it can be distributed by gravitation without recourse to pumping.

The new method is based upon the principle relied upon by the contrivers of the dew ponds, and may be applied in a variety of ways. The requirements of every proposed installation have to be specially considered before the precise type of design and the method and apparatus best suited to the purpose can be determined. In most cases storage tanks at a lower level are desirable, and the water from the condensation reservoir is syphoned to these tanks. As an instance of the utility of this system of water supply, it may be mentioned that a condensation reservoir measuring 100 by 100 feet, would, it is estimated, yield an effective volume of about 200,000 gallons of water per annum, equivalent to the domestic water supply necessary for a population of thirty or forty people. The first cost of an installation of this character is extremely low, and its maintenance involves only small expense.

Greek Industries.

The industrial census which has recently taken place in Greece, compared with previous statistics, shows remarkable progress in all branches of industry during the last ten or fifteen years. According to the details given, there are in Greece 2,213 large or small factories, employing a total of 36,124 hands. Of these factories, 1,188 are small concerns employing a total of 3,579 hands, 743 are moderate concerns employing 8,845 hands, and 282 are large concerns employing a total of 23,700 hands. Among the 282 businesses, which represent principally the large industries, spinning and weaving factories, which number 28 in all with 10,004 hands, are most prominent. Next come 72 factories or mills for the preparation of various kinds of provisions, with 3,655 hands; 28 engineering works, with 2,003 hands; 23 chemical works, with 1.890 hands; 16 tanneries and leather-working factories, with 776 hands, and other smaller factories engaged in various industries.

Of the 282 large factories, 222 with 17,841 hands belong to old Greece, and the other 60 with 5,859 hands, belong to the New Provinces (which were acquired after the Balkan War, viz., Eastern Macedonia, Epirus, Crete, Mytilene, Chios, etc.).

The total value of the 2,213 factories amounts to 260,363,647 drachmæ (£10,414,546), and their total annual returns are estimated at 372,294,308 drachmæ (£14.891,772). Of the latter total the small factories are responsible for 106,550,025 drachmæ (£4,262,000; larger factories for 250,794,810 drachmæ (£10,031,792); and the large factories for 314,940,473 drachmæ (£12,597,619). Almost one-half of the value of the annual products of the 282 large factories is derived from the twelve large flour-mills. With regard to the motive power, of the factories 570 are driven by steam power, 583 by electricity, 326 by hydraulic power 308 by gas, and 235 by petroleum (oil engines).

Ploughs for Asia Minor.

It is evident that the great agricultural activity in Mesopotamia has had a stimulating effect on all agriculturists and farmers throughout Asia Minor, as there are indications on all sides of a desire to cultivate land according to modern methods. But there are no implements or machinery available, and what is offered is often unsuitable. Hence the great opening for all kinds of agricultural implements in all the regions that were liberated from the Turks. Ploughs are mostly needed, and manufacturers or merchants who can export them now for the Syrian and Palestine markets may be sure of very satisfactory results. Tractors, power ploughs, and sowing machines can also be easily disposed of at any time, but care should be taken in regard to the type of machines and implements that are sent to those regions. In Asia Minor rain is unknown, or at least phenomenal, during the period of the year between April and October, so that it is easy to form an idea of how a plough, for instance, will have to be built in order to be able to turn up the soil of the sun-hardened surface.

Although the hand plough is still much used, the traction, or mechanical, plough is greatly preferred by those who happen to see it at work, and especially by landowners. The great dearth of draft animals in Asia Minor will make machine traction absolutely necessary for scientific farming, and the lack of labourers is supplying a further strong reason for the change to machinery. This is already noticeable among the ordinary farmers and smallholders. The difficulties in dealing with the soil begin with the ploughing. The ploughs really serviceable in Anatolia and the rest of Asia Minor must be fitted with special devices for the purposes of disposing of the weeds which grow very quickly and in great abundance, and cutting devices are necessary which can be used on level ground. In certain parts of the hinterland in Anatolia the indolence of the rural population, as well as the stony surface, undergrown with roots, must be taken into consideration, and it is easy to conceive that there only very strong and solid machines can hold their own in the market. The Germans studied the conditions of that region very thoroughly, and offered local agriculturists what they wanted, and what was suitable for their purposes. Hence their commercial and engineering successes there, but if they had made the attempt, British manufacturers could have succeeded with far less effort. Now they have once again a unique opportunity, of which, it is hoped, they will avail themselves before other countries come into the field.

INDIAN EXCESS PROFITS TAX.

The text of a Bill imposing an excess profits tax from April 1 next has been published, says a Reuter message from Delhi dated January 6. The Government can give no guarantee as to its duration, but it is possible that the sum realised from the duty will be such that the imposition will be required for one year only. The standard profit in the case of new business is reckoned at 10 per cent., while in other cases the duty is 50 per cent. over the average profits of the four previous years.

Sir Arthur Anderson succeeds Sir R. W. Gillan as President of the Indian Railway Board.

American restrictions on the importation of Egyptian cotton have been removed.

An arrangement for the diversion of certain Australian wheat shipments to India has been made, to free the Indian crop for districts where scarcity prevails.

The Indian gold output for December amounted to 40,150 ozs., an increase of 3,160 ozs. on the reduced total for the preceding month. The year's total amounted to 485.240 ozs., a decrease of 35.130 ozs. on the figures for 1917.

NEAR EAST MARKETS.

Sudan Produce.

The C.E.B. report for November gives the following particulars regarding the cotton crop :—

The report from Tokar, in the Red Sea Province, states that there seems every prospect of a good average crop. A very late flood on the 5th and 6th, though doing slight damage in some areas, on the whole proved beneficial. There were local rains during the first half of the month, but were not sufficiently general to do much good. Locusts appeared in considerable numbers during the first two weeks of the month, and again large swarms on the 22nd. The latter were immature, and reports show that the cotton only suffered to a minor degree. Energetic steps were taken by the Inspector of Agriculture and Merkaz staff to drive the swarms away, and by the 27th only stragglers were left in the Delta.

In Berber Province, at Gendetu, to the end of November, 200 feddans (not 270 as stated last month) have been sown with cotton. Cotton picking has commenced, and about 150 kantars have been picked from 100 feddans. At Mikeilab, the cotton is fair but late for this district. On the Timerab extension there are 170 feddans of cotton, and that on the island, having got the better of the grass, is now (November 9) superior to that on the "Karu." The cotton is patchy in places, there is much grass, and it is a bit late (sown August), but given favourable weather the yield should be very fair. Under 3 per cent. of bollworm is reported, and even less at Zeidab, where the crop is much above the average. 3,745 kantars were sold in El Obeid market, as against 1,800 kantars in the same month last year. The average price was £E1.224 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 2,395 kantars, as against 439 kantars last year. At Um Ruaba 773 kantars were sold at an average price of £E1.200 per kantar. None were sold during November last year. At Rahad 813 kantars were sold during the month (the average price being £E0.975), as against 600 kantars last year.

Indian Indigo Crop.

The first forecast of the indigo crop estimates the total area sown in British India at 280,500 acres, being 55 per cent. below the revised estimate at the corresponding date of last year. As compared with the final estimate of last year (690,600 acres), the present estimate shows a decrease of 59 per cent. The total yield of dye is now roughly estimated at 32,100 cwt., as against 70,300 cwt. estimated at this time last year, or a decrease of 54 per cent. As compared with the final estimate of last year (87,800 cwt.), the present estimate shows a decrease of 63 per cent. Weather conditions at sowing time were unfavourable owing to deficient rainfall, and the condition of the crop, on the whole, is only fair.

TENDERS INVITED.

Egyptian State Railways.

With reference to the inquiry by the Administration of the Egyptian State Railways for the supply of steel sleepers, Sir A. L. Webb states that he will accept proposals up to mid-day on January 30 instead of the 24th, as announced last week. His address is Queen Anne's Chambers, Broadway, Westminster, S.W.1.

The Civil Commissioner at Baghdad reports that a firm of merchants in that town wish to get into touch with United Kingdom manufacturers and brokers of piece-goods and general merchandise, with a view to obtaining agencies therefor. Particulars may be obtained from the Board of Overseas Trade (Development and Intelligence), quoting reference number 48.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

It has been a very slack market throughout the week, and owing to falling prices operators as a body have held aloof, as it is believed that values have not yet touched the bottom. Some discussion is now taking place as to the position of the Government with regard to their purchases of the Egyptian crop. In view of the recent slump in American cotton rates it is expected that the authorities will have to break prices for Egyptian qualities. Somebody will undoubtedly have to lose money. Favourable reports continue to be received relating to the Egyptian crop. In Egyptian yarns demand has again dragged. More spinners have been prepared to give way in price. Fine numbers are still deeply engaged, but producers of coarse counts are now losing ground more rapidly. In cloth for Egypt some business has been done in a well-known make of grey shirtings, but the total sales remain very small. More particulars are awaited with regard to the reported damage in Egypt from the big rainstorm. A few more cloth offers have been about for India, but only occasional sales have been arranged. Bleaching descriptions have moved off a little more freely for China. Complaints from manufacturers have increased. Looms are stopping in all weaving centres. American yarns are distinctly lower on the week, and sales of any importance have been difficult to negotiate, as users are determined to purchase from hand to mouth.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates :—January 5, 6, 7, 8, 940,000 francs, against 1,050,000 francs; January 9, 10, 11, 12, 830,000 francs, against 950,000 francs; January 13, 14, 700,000 francs, against 290,000 francs; January 15, 16, 17, 700,000 francs, against 570,000 francs.

TRADING WITH SYRIA.

(From a Correspondent).

Cairo, December 23.

The blockade against Syria was raised as from yesterday, and the news was the best Christmas gift for the Syrians here who, ever since the liberation, have been tortured by the knowledge that their fellow-countrymen lay only a night's journey across, beyond the reach of the enemy, and at the same time beyond the reach of their help.

A British military administration has just been set up in Cairo for issuing permits to trade with Syria on lines similar to those adopted by the O.E.T.A. for Palestine, with the difference that in the former case the consignees have to be approved by the French authorities at Beyrout. An American steamer of about 3,000 tons d.w. is expected to sail in a few days from Alexandria for Beyrout, and probably also Haifa, with a varied cargo of clothing material and foodstuffs, and the Italian Steam Navigation Co. has just announced the sailing of one of its steamers on the 30th instant for Beyrout. What would help further to relieve the situation in Syria would be the establishment of a parcel post service between Egypt and Syria, and no doubt the authorities will arrange it as soon as they can do so.

CONSTANTINOPLE TELEPHONE.

A circular has been issued by the United Kingdom representative of the Constantinople Telephone Company stating that on May 7, 1915, it was intimated that the Turkish Government had forcibly taken possession of the company's system in Constantinople; that the general manager and the British staff had returned to England; and that a letter had been received from Mr. Salem, chief legal adviser in Constantinople, with a copy of the protest addressed by the Constantinople directors to the Turkish Government. Through the active assistance of the Foreign Office and the War Office, whose promptitude and courtesy the directors gratefully acknowledge, arrangements were made, immediately after the armistice with Turkey, for the general manager, Mr. Douglas Watson, with five expert assistants, to proceed to Constantinople to place their experience at the disposal of the British authorities and to be available to take over the plant at such time as its restoration to the company could be effected. Mr. Watson, with his party, arrived at Constantinople on December 2, and information has now been received from him that the plant has continued in operation throughout the period of the war, and still continues in operation, though with an imperfect service arising from deficiency of certain plant and lack of efficient management and organisation. Mr. Salem is now on his way from Paris to Constantinople and on arrival will confer with the general manager as to the steps which should be taken for the recovery of the property and to obtain reparation for the losses which the company has sustained at the hands of the Turkish Government. The address of the London representative and transfer agent is now 7, Sergeant's Inn, E.C.4, and shareholders are reminded that as the company is incorporated under Turkish law no registration of transfers in London can be effected until the restrictions resulting from the war conditions are removed.

MANGANESE ORE FROM EGYPT.

The Sinai Mining Company commenced the export of manganese ore in October with the shipment of 4,000 tons to the United Kingdom. The company's mines are in the south-west of the Sinai Peninsula, about 15 miles from the coast of the Gulf of Suez, and the ore is exported through the harbour of Abu Zenima.

The export of chillies from Madras to any destination outside India has been prohibited.

The War Trade Department will now consider applications for re-export of certain classes of East Indian tanned kips and of myrobalans, cutch, etc.

Speaking before the Royal Society of Arts on the carriage of coal by rail in India, Mr. H. Kelway-Bamber said that at the present coal-carrying capacity of the Indian railways the coal traffic of India would require in 1930 three times the number of vehicles necessary in 1910, and in 1950 five times the number.

COTTON TRADE IN 1918.

A Prosperous Period.

Reviewing the cotton trade in 1918, Mr. Frederick W. Tattersall points out that the Lancashire cotton industry during the past year has experienced the most prosperous period in its history, and although numerous difficulties have been encountered, more money has been made, especially in spinning, than in any previous twelve months. Owing to the scarcity of raw cotton a large amount of machinery has had to stand idle under the curtailment of production scheme of the Control Board. Prices in yarn and cloth have been inflated as a result of the abnormal conditions arising out of the war. A very active trade was done during the summer, and in certain sections demand considerably exceeded supplies. The collapse of the Central Powers and the signing of the armistice brought a distinct change in the situation in the autumn, and since then business has been at a standstill, and a definite slump in the value of manufactured articles has occurred.

As regards the outlook, Mr. Tattersall says that traders have not yet recovered from the effects of the sudden ending of the war a couple of months ago, and the industry, as a whole, remains in a very uncertain state. The outlook, therefore, is unsettled, and much difference of opinion prevails as to the future basis of values and the course of business. It is held in many quarters that operations on a free scale will not take place until prices are on a lower level. On the other hand, there are many people who believe that we are within reasonable distance of a larger turnover in both yarn and cloth. Undoubtedly since the turn of the year the general inquiry has been distinctly more encouraging. It is all a question of establishing confidence in current rates. It is of interest to point out that during the four years ending 1918 our average shipments of piece goods per year amounted to 4,669,814,375 yards as compared with 6,594,410,700 yards per year in the period of four years ending 1914. This statement indicates that many of our outlets abroad are bare of supplies. India took distinctly less cloth during 1918 than in the previous year. The monsoon rains last season were not altogether satisfactory, but there is no anticipation of serious distress. China has been a disappointing market for a very long time, but with more settled domestic conditions in the Far East there should develop a big demand for cotton fabrics. There is every expectation of an extensive demand for Lancashire goods in European and Near Eastern countries. Manufacturers are now prepared to accept much cheaper prices than three months ago. There is, of course, the competition of Japan and India to be faced, but Lancashire can still produce the best goods in the world at relatively low prices. The prospects for spinners of yarn are largely dependent upon the trade done in cloth. It is hoped that our export business in yarn will soon be freed from the restrictions which are now in force. The year 1919 is not likely to be so prosperous as the twelve months which have just closed, but there is no reason why business of a remunerative character should not be done. It should, of course, be remembered that when the regulations of the Control Board relating to the running of machinery are abandoned there will be increased competition amongst spinners and manufacturers for orders.

COMPANY NOTES & REPORTS

G.I.P. Railway.

The report of the Great Indian Peninsula Railway Company for the half-year ended September 30 last states that, including State lines, gross receipts amounted to Rs.6,33,47,323, an increase of Rs.1,02,90,634, or 19.40 per cent., and expenditure Rs.3,48,89,130, an increase of Rs.68,11,627, or 24.26 per cent., net revenue being Rs.2,84,58,193, an increase of Rs.34,79,006, or 13,93 per cent. Gross receipts for the six months (including State line) amounted to Rs.5,87,20,054, increase Rs.91,65,969; expenditure, Rs.2,23,81,992, increase Rs.61,37,944; net revenue being Rs.2,63,38,062, increase Rs.30,28,025. Interest charges were Rs. 1,48,58,751, increase Rs.1,72,276, leaving a surplus net revenue of Rs.1,14,79,310, increase Rs.28,55,750. In coaching there was an increase of Rs.34,33,857, equal to 17.92 per cent., and in goods an increase of Rs.65,69,217, equal to 19.78 per cent. The ratio of expenditure to gross earnings was 55.08 per cent., compared with 52.92 per cent., but these low figures are due to the fact that the company was unable to spend freely on repairs and renewals. Capital expenditure during the half-year amounted to Rs.18,24,209. Over a lakh has been spent on additional oil tank wagons, and it is expected that in the near future a considerable number of engines will be converted to oil burning. The railway have made arrangements with the Anglo-Persian Oil Company for a regular supply of oil, and are now erecting tanks for the storage of this fuel. Meeting, 48, Copthall Avenue, E.C., to-day, at 12.30 p.m.

Dividends, Payments, &c.

The directors of the Bank of Bengal have declared a dividend of 12 per cent. and a bonus of 4 per cent. for the second half of 1918, together with a further special bonus of 1 per cent. per annum. Rs. 5,50,000 have been transferred to the reserve and Rs. 5,60,167 carried forward.

The directors of the Bank of Madras have declared a dividend of 10 per cent. for the last half-year and a bonus of 2 per cent. Rs. 2.57,550 are carried forward and 2 lakhs of rupees are transferred to the reserve.

NEW COMPANIES.

Overseas Exporters.

The Overseas Exporters (1919), Ltd., has been registered at Somerset House with a nominal capital of £500,000 in 497,000 ordinary shares of £1 each and 60,000 deferred shares of 1s. each. The company is to take over the business of Overseas Exporters, Ltd., incorporated May 7, 1917; to acquire all or any of the assets and liabilities of the business of an export merchant carried on at Sheffield by Percy A. Reuss as Reuss and Co.; to carry on the business of general traders and merchants, exporters to and importers from all parts of the world; to promote the sale of British made goods in all parts of the world, particularly by means of travellers, agencies, catalogues, advertisements and literature, etc.

Indian Companies.

Recent formations in India include Indian Tanneries, Calcutta, with an authorised capital of Rs10 lakhs, and Orissa Cement, Calcutta, with an authorised capital of Rs5 lakhs.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Tuesday.

There has been a good deal of activity this week in certain Egyptian land descriptions, and there has been a general advance in prices in the securities affected. The buying has been chiefly of a local character, based upon the very satisfactory reports regarding the general conditions in Egypt; but the Egyptian markets also have shown a much improved tendency. Telegraphic communication, however, is again very bad; and this is undoubtedly hampering business.

In Government loans Egyptian Unifieds are ¼ up at 90¾. There has been a good demand for the loan, as also for the three and a-half per cent. 1890 loan, all through the week; but business has been restricted owing to the scarcity of sellers.

In Bank shares Nationals and Agriculturals are both a shade off at 21 9-16 and 6 23-32 respectively; while Anglo-Egyptian Banks have receded ¼ to 16¾.

Amongst Railways, Delta Light preference are 1-16 firmer at 8 7-16.

In Land shares, Aboukirs have improved 6d. to 25s., and Delta Lands are 10½d. higher at 16s. 4½d. The feature has been the demand for New Egyptian shares which, after rising on large transactions to 25s. 3d., finish 2s. up at 24s. 7½d. Sidi Salems are 1-32 firmer at 2 11-16, and Sudan Plantations, after rising to 4⅜, finish ⅛ up at 4⅛. Union Foncières have been in demand at current quotations, but no shares have been offering. Some business has been done in Uniteds round 3s. 6d.

In Miscellaneous shares, Khedivial Mails are 2s. 3d. lower at 96s. 3d.; but, on the other hand, the preference has risen ⅛ to 4¼. Salts and Sodas have been a dull spot, and have dropped 5-16 to 2¾.

In Greek securities the 1881, 1884 and 1890 loans are all one point down at 73, but, in a general way, there are only buyers at the reduced level. The Monopoly and Rente loans are both half a point down at 60 and 56 respectively. Fundings are nominally lower by two points, and the 1902 loan by one point, both being at 65. The 1910 and 1914 loans are both small sellers at about the quoted prices. In "Greek Currants" there is still a demand at 95.

Oil Shares.

The market has shown signs of improvement. British Burmahs are 3d. stronger at 15s. 3d., and Anglo-Persian Preferences are also 3d. up at 26s. 9d. Burmahs are 1-16 lower at 8½, but Anglo-Egyptians B are higher at 2 31-32, a rise of 5-32 on the week.

Roumanians have been a brighter feature, though Roumanian Consols are 6d. lower at 16s. Traian Roumanians have been in considerable demand, and close at 12s. 2½d., and Anglo-Roumanians have also been the subject of many transactions, the closing price being 9s. 9d.

In Russians, Ural Caspians are a shade weaker at 1⅝, but Bakus are again 4½d. up at 5s. 6d. Russian Generals and Russian Petroleums are unchanged.

Paris Bourse.

Suez Canals closed at 5390 francs. Other prices were:—Egyptian Unifieds 93.25. Serbian Fours 61, Turkish Unified 70.40. Banque d'Athenes 104. Credit-Foncier Egyptiens 787, Land Banks of Egypt 185.50. Ottoman Banks 549.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

A golden rule for the individual prescribes that, when there is any doubt as to which of two courses ought to be adopted, the wise plan is to choose the harder. The Paris Conference, it is to be feared, has ignored the advice. It was confronted with three possible methods of dealing with the Russian question—isolation, intervention, and compromise. The first offered no permanent solution. The second presented the greatest difficulties; a considerable force of troops might be required, the operation might last a long time, and there would inevitably be a heavy bill to pay. Accordingly, the Conference, or rather the five Great Powers, decided to adopt the third course. A *communiqué* was issued placing on record the attitude of the Associated Powers towards the Russian Revolution and their desire to serve Russia "as generously, as unselfishly, as thoughtfully and ungrudgingly as they would serve every other friend and ally," and closing with an invitation to every organised group that is now exercising or attempting to exercise political authority or military control in Russia to send representatives to Prinkipo, in the Sea of Marmora, to confer with representatives of the Associated Powers regarding the future of Russia.

The invitation stipulated, as an indispensable preliminary, that there should be a truce of arms amongst the parties invited, and that all aggressive military action should cease. In this way it was hoped that there would at least be peace in Russia for a period. Moreover, it was felt that, after this invitation, whatever might happen, the Allies would have the satisfaction of knowing that they had done all that was possible for a peaceful solution Theoretically, in every controversy a round-table conference is an excellent proceeding. In the present instance unfortunately the proposal of the Allies does not seem to have paid any heed to certain practical considerations. Russia is at present divided into two main camps, Bolshevists and anti-Bolshevists. The latter are split up into a number of distinct organisations, most of which are defending themselves with arms against the assaults of the former. The Bolshevists are merely an association of terrorists, who have waded through murder and rapine to power, and amid a general shortage of food maintain their authority by withholding supplies from all who do not join their army or otherwise support them. Their record includes, in addition to the deaths without trial of thousands of their fellow-countrymen, a crime that will stand out for all time in the world's history of cold-blooded outrages, the murder *en bloc* of the Russian Imperial Family.

The Allies' proposal, if accepted by the parties concerned, would bring Bolshevist and anti-Bolshevist together ostensibly to decide in common upon a future system of government for Russia in which both would co-operate. That such a meeting should take place would be tantamount to an admission on the part of the anti-Bolshevists that they were prepared to waive their quarrel with the Bolshevists. It is hardly to be wondered at that a chorus of refusals should have greeted the invitation to Prinkipo. The Bolshevists alone, if we except a handful of Revolutionary Socialists who have been ejected from the Bolshevist fold, seem ready to consider the proposal. The rest of the world is frankly amazed. On behalf of the Allied Governments it may be urged that criticism will best be deferred until this particular chapter has been closed. Diplomacy has ever been associated with devious methods, and it may have been necessary to clear certain ground by a suggestion which exposes its authors to the charge that they have taken the measure neither of the Bolshevists nor of the Russia for which they express such solicitude.

Whatever opinion may be held regarding the proposed meeting at Prinkipo, there can be no doubt as to the wisdom of the warning issued—none too soon—by the Supreme War Council against the forcible claim-pegging that is now taking place in certain parts of Europe. The Governments now associated in Conference to effect a lasting peace among the nations, ran the message, "are deeply disturbed by the news which comes to them of the many instances in which armed force is being made use of in many parts of Europe and the East to gain possession of territory the rightful claim to which the Peace Conference is to be asked to determine. They deem it their duty to utter a solemn warning that possession gained by force will seriously prejudice the claims of those that use such means. It will create the presumption that those who employ force doubt the justice and validity of their claim and purpose to substitute possession for proof of right and set up sovereignty by coercion rather than by racial or national preference and natural historical association." Until this notice was issued it was to be feared, in view of the notorious happenings in a variety of countries, that the Conference had neither ears nor eyes outside Paris, and proposed to concern itself solely with archives and memoranda. The warning holds out the promise that the settlement of the Near Eastern Question may in the end follow sound practical lines.

A start appears to have been made in regard to Montenegro. This small country was supposed to have determined its future for all time at a meeting grandiosely termed the Great Skupshtina held at Podgoritza under no authority beyond the summons of Serbian military authorities in occupation. Every effort was made to represent, for the benefit of the Allied Conference, the union of Montenegro and Serbia as a *fait accompli*. The position of the Montenegrins was admittedly difficult; the King and his Government continued to keep away from the country, while the advocates of union had returned to Montenegro and claimed to speak for the whole nation. But the Conference has admitted the justice of the claim that a union of this nature to be valid must be effected constitutionally and by the people as a whole, and it has sanctioned the transmission of a message to the Montenegrins from King Nicholas. The wording of this message, which is said to have been approved by the Peace Conference, is significant. "I beg of you to remain quietly in your homes and not to oppose by force of arms the troops which are now endeavouring to take possession of the government of our country. I have received the highest assurances from the Great Allied Powers that very shortly an opportunity will be offered to the Montenegrin people to determine freely the political form of its future government. For my part I will with pleasure accept this decision."

According to messages from Budapest—a suspect quarter—a peasant revolution has broken out all over Roumania. The news requires to be confirmed before credence can be given to it. The report, however, is circumstantial. It speaks of a simultaneous rising that occurred "in all the villages" at a fixed hour on January 25. The insurgents are said to have made their way to the towns, where fighting took place with regular troops. In Bucharest especially the conflict is stated to have been of a sanguinary nature. The Roumanian Government has undertaken to meet the grievances of the peasantry by the compulsory expropriation of land. When it is learnt that Roumania is practically without communications owing to the depletion of the railway stock and the damage to telegraphs, roads and bridges done by the retreating Germans, it will be readily understood that some delay must take place in carrying into effect the Government's plans. If, therefore, the report of the insurgent movement be confirmed, it is probable that the trouble has arisen from the exasperation of the peasants at the failure of the measures for their relief and from a suspicion, wholly unwarranted, that the delay suggests a change of mind on the part of the Government.

At a recent meeting of the Imperial War Graves Commission it was reported that the grave of Sir Stanley Maude was in the centre of the British Cemetery at Baghdad, and that it was the desire of the Army that a memorial should be placed over the grave, which should serve as a memorial to the whole Mesopotamian Expeditionary Force. The Commission, we are told, were strongly in favour of the idea being carried out, and resolved that an architect should be sent out to Mesopotamia at an early date to report on the whole question of the architectural treatment of cemeteries in that country. Sir Stanley Maude's grave is at present marked by a tall stone cross, with truncated arms, and surrounded by a low brick parapet. Other graves are close to it, but it should be possible to make room for a really fine memorial. We can but express the hope that those who are responsible for carrying out the Army's suggestion will be guided by two principles: first, that the memorial shall be essentially "Western" in design: and, secondly, that it shall be conceived in no parsimonious spirit, but shall be worthy of the nation erecting it and of the deeds which it is intended to commemorate.

How does India stand with regard to the proposed international regulation of labour questions, the preliminaries of which are now being talked over in Paris? Mr. Barnes, who, as a member of the Cabinet, presumably speaks with authority, has indicated his hope that "a real practical effort will be made to raise and maintain higher standards of labour throughout the world by eliminating the international competition of low-wage countries," and since India has about as low a standard of wages as any country in the world, it appears to follow that Europe will presently refuse to receive her wheat and hides and linseed, and such other exports as come into competition with the produce of more highly paid workers. Mr. Montagu is presumably cognisant of the attitude of the Cabinet on this question, and we think he should lose no time in making the position clear.

It may, of course, be said that Europe will continue to receive with gratitude the cheap food and raw materials which constitute the bulk of India's exports, but that contention is now a little out of date. Modern Labour has high ideals, and we can find no sign in Mr. Barnes' statement of an intention to divide the workers of the world into the Helots who produce material and the Greeks who work it up, while if that be the design, we must remember that India means to change her habits. The Industrial Commission contemplates an early advance in such directions as the export of oils instead of oilseeds, and of leather instead of hides; India is entitled to know at once whether such projects as these are worthy of immediate effort, or are to be postponed to that distant day when Indian labour will no longer be justly described as low-paid.

We yield to no one in our desire to see a great advance in the whole standard of Indian life, and we should be delighted to see the Raniganj miner getting his guinea a day along with the various perquisites and advantages which his Western brethren enjoy. India, however, needs time—the Commission would apparently allow a generation or two—for such changes as these to be brought about. Labour on the other hand is in a desperate hurry, and somebody should see to it that in the clash of ideals the weaker party does not go to the wall. The representatives of India in Paris just now comprise a politician, a lawyer, and a prince; they are all able men, but when these economic questions come up for decision, we confess that we should like to see them supported by someone possessed of first-hand knowledge of the situation.

We hope the educational authorities in India will keep their eyes upon the modification of the examination system recently announced by the Columbia University. Apart from occasional successful competitors, everyone now agrees that examinations are imperfect tests, and that a youth's fitness for further study or for intellectual work depends on many factors besides his ability to absorb, and regurgitate on demand, a certain quantity of mental nourishment. Columbia has now decided to supplement such ordeals by a process quaintly termed "the selective draft," which consists in the application to individuals of tests designed in the psychological laboratory, and which have already been employed with satisfactory results in the Army of the United States. These tests indicate capacities rather than acquirements, and their anticipated effect is to keep out those students who can at present manage to matriculate but are fit for nothing more.

What such a system would mean in India can be readily understood by anyone who has studied Mr. Sharp's last Quinquennial Report. The colleges are clogged with youths who should never have been admitted, and who serve only to wear out the staff and obstruct the progress of the minority of suitable students, and there is something fascinating in the idea of eliminating the unfit through the agency of a trained observer, armed, we suppose, with self-recording apparatus, which cannot be anticipated, still less "squared." Whether the idea is practicable for India is quite another question; we do not doubt the efficacy of the tests, but we are uncertain whether the ordinary Indian Senate could so far harden its collective heart as to authorise their application. Perhaps the best plan would be to test the Senates first.

DEATH OF MR. H. D. ALLEN.

With deep regret we have to announce the death of Mr. Henry Deacon Allen, the second son of the late Sir George William Allen, the founder of the *Pioneer*, who died suddenly at Cawnpore on January 25.

A striking feature in Mr. Allen's character was his intense love of children. In his later years, when relieved from business cares, he and his wife devoted themselves to Anglo-Indian schools and medical missions, and spared neither time nor money in extending the usefulness of these institutions. Of a somewhat retiring disposition, Mr. Allen took little part in public affairs, nor did money appear to attract him, except as an instrument in helping others. Very strictly honourable, kindly and hospitable, his home, aptly named "Retreat," near Cawnpore, was to many a man and woman a place of rest and consolation. His death will be mourned by a wide circle of relatives and friends and many poor children whose lives he had helped to brighten.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 6.

New Year Festivities.

New Year's Day was fittingly celebrated in Cairo, but the Watch Night festivities were somewhat curtailed owing to the time-limit restrictions, which are still in operation. On New Year's morning the customary reception was held at the French Agency, where eloquent speeches lauding the part played by France in the defeat of the Germans were made by the Premier Député de la Nation, Me. Guilhamou and the new French Agent, M. Lefèvre Pontalis. In the afternoon a military race meeting was held out at Heliopolis, and was exceedingly well attended. His Highness the Sultan was present in his pavilion, as also were Sir Reginald and Lady Wingate.

In the very near future, as the situation becomes more normal, we may expect the gradual repeal of most, if not all, of the orders issued under the military regime. Some of these have already been rescinded, the latest being the two orders dealing with the extinction of all lights on the coast and the shutting out of all persons from that area between sunset and sunrise.

Investiture at the Residency.

An interesting ceremony took place at the Residency last Monday, when Sir Reginald Wingate handed to the recipients the insignia of the Order of the British Empire, which had been bestowed on them in the Birthday Honours last June. The investiture took place in the gardens, a guard of honour being provided by the Irish Guards, and a military band being also in attendance. The High Commissioner made a short speech of congratulation to the officials, and after reading the letter of patent, he proceeded to hand to each in turn the insignia of the grade to which he had been appointed. The ceremony was watched by Lady Wingate, Sir Milne and Lady Cheetham, and several members of the Residency staff, also by relatives of the recipients, who had received special invitations.

The Ministerial Crisis.

The Ministerial crisis continues, but it is rumoured that a compromise may at any moment be arrived at. Colour is given to this report by the fact that during the week both the resigning Ministers, Rushdi Pasha and Adly Pasha, have had interviews with the Sultan, and that Rushdi Pasha in addition to calling at the Residency has again received the visit of Sir William Brunyate, who made a prolonged stay at his villa at Heliopolis. On the other hand, it is understood that Rushdi Pasha insists on his resignation being accepted without any further delay, as he is tired of politics and wants to obtain a thorough rest. Whichever version is the correct one, it is hoped that a settlement will soon be arrived at, as there are very many decisions and laws awaiting the approval of the Council of Ministers, which cannot come into operation until that body meets again.

The General Election.

Considerable interest has been taken out here in the General Election, and the telegrams received by the *Mokattam* and other special services have been eagerly scanned for the latest returns. There is no doubt that the result has made a very deep and salutary impression, and has shown the Egyptian public the solidarity which exists in the United Kingdom with regard to the determination to carry the results of the war to their logical conclusion, and to ensure that the Central Empires can never again menace the world as they did four years ago.

The Flight from England.

The Handley Page aeroplane with General MacEwen on board, which left London on December 13, arrived at Heliopolis on Friday. It has met with considerable delay on the way owing to the bad weather. At Mersa Matruh, where it had to land to carry out repairs on December 22, it was overtaken by a terrific downpour of torrential rain, which inundated the aerodrome, and it was only this week that the conditions were favourable enough for the flight to Cairo to be continued. The Sultan drove out on Friday afternoon in State to inspect the Handley Page machines at Heliopolis, where he was received by Brigadier-Generals Herbert and MacEwen.

Official Appointments.

With regard to the passage in my letter of December 15, in which I announced the resignation of Ahmed Zeki Pasha from the post of Secretary to the Council of Ministers, it is now announced that he has withdrawn his resignation at the request of Rushdi Pasha. It appears that Zeki Pasha has not yet completed the period entitling him to the maximum pension; and so he has decided to remain in his post, and has, in fact, resumed his duties at the Ministry of Interior.

It is announced that Colonel Ronald Storrs, C.M.G., until a year ago Oriental Secretary at the Residency, has been appointed to act as Administrator of the Occupied Enemy Territories in Palestine during the absence on leave of Major-General Sir Arthur Money. Colonel Storrs, as recently stated in these columns, has done excellent work as Military Governor of Jerusalem, and it was in consequence of the administrative ability shown by him that the Commander-in-Chief delegated him to organise the administraion of Haifa when that area was occupied by us. General Allenby's selection of the Governor of Jerusalem to act for the senior official in the occupied territories is yet another tribute to the ability shown by him in handling the divers delicate questions which, owing to the diversity of interests involved from time to time, come up for decision in Palestine.

Catholic "Primate's" Visit.

Amongst the latest arrivals in Cairo is Cardinal Bourne, Archbishop of Westminster. His Eminence, who is staying at the Convent of the Sacred Heart, visited the British Fleet in the Mediterranean on his way out from England. Cardinal Bourne had an audience of the Sultan yesterday, and was the guest of the High Commissioner and Lady Wingate at dinner at the Residency. He preached to the Catholic soldiers at the Catholic Cathedral at Heliopolis yesterday, and this morning in the Chapel at the Citadel.

THE BRITISH ADMINISTRATION IN PALESTINE.

The Budget statement of the Occupied Enemy Territory Administration (South) for the year 1918-1919, which has just been made public, gives the outside world a glimpse of the work that has been done in Palestine since we first drove out the Turks in October, 1917, and the following *résumé* of the more important paragraphs may be of interest:—

The whole of Palestine and Syria are under the supreme control of General Sir Edmund Allenby as Commander-in-Chief of the Egyptian Expeditionary Force. This territory has been divided into three areas. One is administered by our French Allies, one by the Arab Government, and the third, known as O.E.T. (South), is under direct British administration. This latter area consists of the Turkish *sanjaks* of Jerusalem, Nablus, and Acre, bounded on the south by the Egyptian frontier districts from near Rafa to the south of the Dead Sea, on the west by the Mediterranean Sea, and on the north by a curved line from the coast, some twelve miles above Acre, to the River Jordan, a few miles above Lake Huleh. On the east the line follows the River Jordan to the eastern side of Lake Huleh, then the Jordan again to Lake Tiberias, from the eastern coast of which it runs to a point east-south-east of Beisan, whence it again follows the River Jordan and the Dead Sea to the southern end of the latter.

This area measures about 8,700 square miles, of which only about 1,000 are at present under cultivation. The population is estimated approximately at 639,000, of whom 61,000 are Christians and 66,000 Jews, the remainder being Moslems. The administration of this territory was at first placed under an Acting Administrator, Lieut.-Colonel A. C. Parker, with headquarters at Jaffa, and later under the Chief Political Officer at G.H.Q., Brigadier-General G. F. Clayton, C.B., C.M.G. In April, 1918, a complete administration, since known as O.E.T.A., was created under the direction of Major-General Sir A. W. Money, K.C.M.G., C.S.I., as Chief Administrator, and during his absence on leave Brigadier-General R. H. Storrs, C.M.G., Military Governor of Jerusalem, has been appointed to act for him.

The headquarters are now at Jerusalem, and the Chief Administrator is assisted by five principal officers—viz., Lieut.-Colonel V. Gabriel, C.S.I., C.M.G., charged with finance (including revenue, agriculture, forest and veterinary departments, wakfs and municipalities), Lieut.-Colonel E. S. Jackson, C.M.G., D.S.O., charged with political and general administration (including police, prisons, education, and appointments), Lieut.-Colonel G. K. Crichton, M.C., charged with commerce (including supplies, communications, relief, public works, and archæology), Major O. B. Clarke, charged with law, including land registration, and Colonel C. Garner, charged with public health. There are twelve military governors, each in charge of a district, which in every case is the same as the previous Turkish *kaza*, and which in some instances is divided into sub-districts, each under a Deputy Military Governor.

The Budget for the financial year 1918-1919 is set down at:—Revenue, £E661,813; expenditure, £E738,649; thus leaving an estimated deficit of £E76,836. The preparation of a Budget has been rendered exceedingly difficult owing to the fact that the Turks took with them all the agricultural stock and produce of the country, as well as the records, cash balances, and principal officials; whilst the constant additions of fresh territory and the influx of refugees have not made matters any easier.

The chief heads of revenue at present are: Direct Taxation, Customs and Excise, Legal Fees and Post Office. There were many sources from which the Turks derived revenue, but the British administrators have only maintained the more important and the least onerous. Thus military exemption dues, the professional and road taxes, the census fees, the tax on land transfers, and the schools tax have been remitted, at any rate, until the country is economically in a more satisfactory state.

Under direct taxation come tithes, house and land tax and animal tax. The tithes, which amounted to 12½ per cent. of the crop, were usually farmed out by the Turks, who, as a matter of fact, had collected them in the *sanjaks* of Acre and Nablus before the occupation. The military administration decided to collect in money in the present year, the crops being estimated under British supervision by commissions in the manner prescribed by Ottoman law. A comparison of the figures for the *sanjak* of Jerusalem for the winter tithe collection under the Turks in 1917 and under British direction in 1918 shows an increase of 5 per cent. in favour of the latter. Considering that, apart from the area having been subject to military operations, there has been a shortage of seed and labour, it is considered that this indicates that in normal years a large increase over Turkish collections may be expected.

Customs are actually the largest single item of revenue. They continue to be levied at the Turkish rate of 11 per cent. *ad valorem* on all imports except those of Egyptian origin, which only pay 8 per cent. Owing to the opening of through railway connection with Egypt, the Turkish Customs organisation has had to be modified. Custom-houses have been opened at Gaza, Beersheba, Ludd, Jerusalem, and Tul Keram, in addition to Jaffa and Haifa. The revenue depends on the amount of truckage allowed for goods traffic on the Palestine Military Railway and on the trade restrictions in force. It is thought that, although the troops have passed beyond the limits of the territory, the volume of imports will be maintained, owing to the increase in the population due to the inclusion of the new districts. At the same time it is pointed out that as there is no Customs line between the three zones, future results must depend largely on the efficiency and co-operation of the separate Customs services in those areas, and that a unification of the service throughout the three territories subject to the Commander-in-Chief is the only satisfactory alternative to a Customs line between them.

Judicial receipts show a great improvement compared with what they were under the previous regime. The revenue derived from court and notary public fees for the few months that the Courts have been open are more than the Turks obtained during the whole year. This, the report remarks, is due to more regular procedure and greater confidence on the part of the public.

The administration is considerably hampered by the assignments which have been made to the Ottoman Public Debt. Thus, the tithes of eight of the districts are assigned to special loans under a kilometric guarantee for railways in other parts of Turkey, and about £E150,000 will annually be lost from the revenues which should ordinarily go towards the cost of government. Collections of the Customs of over 8 per cent. are due to the Public Debt, whilst the taxes on salt, tobacco, tombac, fisheries, and explosives are all assigned to the same object. The report points out that the withdrawal of the whole of the assigned revenues deprives the administration of much of its rightful income, and that before the war the debt returned to the Ottoman Government 75 per cent. of the surplus over the requirements of the bondholders. In 1914 this surplus amounted to about one-third of the total collection, and it has been proposed that an apportionment on that basis should be made to the O.E.T.A. It is added that if the future of that administration were assured, it would be possible to capitalise these revenues by means of a loan, just as the Tripoli assignments were capitalised by the Italian Government.

(To be continued.)

OLD INDIAN LEGENDS.

On January 14, before the Royal Asiatic Society, Mr. F. E. Pargiter lectured on the Haihayas and King Sagara. The Haihayas, he said, were a branch of the Aryan race that entered India in very early times. One branch of this race occupied the territory which later became the country of the Mahrattas, of whom the Haihayas were in many ways the predecessors. They were very warlike, and overthrew the whole of the kingdoms in the Ganges and Jumna region, pushed their conquests as far as Benares, and attacked the kingdom of Oude. The Haihayas, aided by five other tribes, attacked Bahu, the King of that country, and wrested it from him. Bahu thereupon abandoned his capital, entered the forest with his Queen, Yadava, and followed an austere life. One day he set out to fetch water and died on the way through old age. Yadava followed him, but her co-wife gave her poison, in order to destroy her future child. She made Bahu's funeral pyre and placed his body thereon. Then Auwa Bharangava took pity on her and brought her to his hermitage, where she gave birth to a son, bearing marks of the poison, and named Sagara. The son grew up, slew the Haihayas, and attacked the tribes who had assisted them. These tribes fled to Vasishta for protection, who prevailed on Sagara to spare their lives. Though Sagara spared their lives, he destroyed their laws of religion and changed their mode of dress, making one tribe shave half the head, another grow beards, and so on.

Mr. Pargiter told this and other old-world legends showing how, through the lack of the historical sense and a love of the marvellous in ancient India, stories originally simple developed into the most impossible myths.

The Alexandria Municipal Horse Butchery is now finding more favour in Alexandria, says the *Egyptian Gazette*. When it first started two horses were killed daily, but now five or six are killed every day.

Friends of Armenia in Melbourne have given a further sum of £1,000 (making in all £7,750) to the Armenian Refugees Fund, and the Melbourne Syrian Relief Fund has given £3,750 to the Syrian and Palestine Relief Fund.

Father Francis Lamb, of Gerrard's Cross, Buckinghamshire, Vicar-Provincial of the Barefooted Carmelites, has arrived at Malta on his way to Palestine to take up his ecclesiastical duties at Mount Carmel. The position which Father Lamb is to occupy was last held by a German.

Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

The publication of General Milne's dispatch covering the final operations on the Macedonian front—or the British share in them—must have afforded considerable satisfaction to those who held that our force in that theatre of the war had been neglected, so to say. For one thing, it is satisfactory to find that the existence of malaria is at last fully acknowledged; and the General's remark that the majority of his officers and men "will return to their homes with constitutions shattered by a prolonged stay in this malarious and inhospitable country should finally dispose of the idea that the "Salonika show" was "a picnic." A picnic! Talk to some of the men who went through it all; see them when the malaria bowls them over again here in England! Then talk about "a picnic" if you can find the face to do it. But it will require a face of brass.

***

As a matter of fact, if many people at home held the "picnic" theory, they were hardly to blame. We heard next to nothing of what our men were doing in that part of the world, and what we did hear seemed to be passed on to us by someone filled with concentrated Mark Tapleyism. The Bulgarians and our men apparently spent their time in playing schoolboy pranks on one another; and as to the climate—it was delightful. I am told that, officially, malaria was never recognised, and that any medico who had ventured to diagnose it would have been promptly "downed." So there were thousands of cases with symptoms "n.d." Some day we may learn why it was thought necessary to follow this Machiavellian course instead of telling the plain truth and letting us know what our men were putting up with. For it is tolerably safe to say that our friend the enemy was not deceived by our Tapleys and their weird optimism; and the men on the spot used up a lot of energy in endeavouring to express their opinion about it.

***

On the whole, the dispatch is written with more sympathy, a more human touch, than might have been expected. But it does not move me as some of the narratives of the fighting out on this front have moved me when told by officers and men who took part in it. Doubtless that is natural enough. But I should like to read in further detail the fine story of the 22nd Division and its doings in these particular operations. It would no doubt leave me unable to speak for a time, as I was left when I first heard part of it; but it is a glorious tale. I am sorry, too, that the wonderful achievement of "King Constantine's Own" has not been made more widely known. Those rather untidy-looking and ominously-named heroes covered themselves with undying glory and won the whole-hearted praise of the British who saw them accomplish "the impossible." Out of some 3,000 of them less than 400 survived; and of 121 officers not a dozen. These figures speak for themselves. I hope that some day we shall have a full account of the K.C.O.'s exploit from one of the British who witnessed it.

***

Lower Mesopotamia is becoming a most frightfully sporting place. On the introduction of the British Army it has taken very kindly to the Race Meeting; while the Cattle Show and the Horse Show have made such favourable first impressions that they look as if they had come to stay. And now, I observe, the Busreh Hounds are in full cry, so to say. Really, the old "Garden of Eden" (Arab style) bids fair to become a suitable refuge for the old type of British Squire when he is driven from home and his favourite Coverts by the advance of the Allotment Holder. In a description of the opening meet of the season, given in the *Busreh Times*, I read: "The Master, Mr. Fenwick, took his hounds to draw the ground round Dead Horse Mounds, and a big jackal was soon seen stealing away in the direction of Zobeir. Hounds soon picked up the line and went away at a great pace. The jack reached the railway line about two miles from Zobeir and held this line to within about a mile of the town, where he found a convenient earth and went to ground. Returning, another jack was put up, and he took us back to the gardens at the back of the Remount Depôt, where he was lost." The Mesopotamian *Wowee* seems to have lost none of his cunning since I knew him well!

CORSAIR.

The motor drivers belonging to the Elsie Inglis Unit have been personally decorated by the Crown Prince of Serbia, who has also issued medals to those invalided home. The staff at the London office of the Scottish Women's Hospitals, at 66, Victoria Street, have received Serbian Red Cross Medals, sent by M. Jovanovitch, the Serbian Minister in London, in recognition of their work of organisation for the London units.

TURKEY'S PRISONERS OF WAR.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to the great hardships suffered by our troops taken at Kut, will you kindly allow me space to point out that the real culprit in the case is undoubtedly General Liman von Sanders?

The rations that a Turkish soldier would consider ample, and even luxurious, would spell almost starvation to a Briton, while the hardships and neglect that the Ottoman rank and file are subjected to when on active service would tend to blind them to the sufferings of their prisoners, as they themselves know no better treatment.

It is perfectly obvious that the whole conduct of the Turkish armies in the field was in the hands of the German Mission; and General Sanders, knowing that Kut was about to fall, culpably failed in his duty in not making adequate preparation for the reception, feeding, and transport of so large a number of European prisoners.—I am, &c.,

ERNEST H. GRIFFIN
(Late Surgeon to the British Red Crescent Mission in Tripolitania).

Royal Automobile Club, S.W., Jan. 23.

PRICES IN CONSTANTINOPLE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have to-day received a letter from an old friend in Constantinople, some extracts from which may, I think, be of interest to your readers. The writer is an entirely reliable non-Turkish Ottoman subject, who has lived for years in this country, and one in whose credibility I place every confidence. Writing on January 4, he says:—

"We have at last been able to survive this terrible war. It was too late when we found ourselves under the sway of brigands. These pirates have inflicted upon us all sorts of misery and slavery. We have been plundered, extorted and robbed, until we were left with neither shirt nor shoes. We even starved, not for want of provisions, which are in abundance, but for the unheard-of rise of their prices. Bread, which was before the war one piastre (2d.) became 77 piastres, macaroni rose from 3 (the oke) up to 100 piastres, sugar from 2½ to 260 piastres, shoes from 60 piastres to 2,200 piastres, and so on. Armenians, Greeks and other Christian subjects have been killed and starved by hundred thousands. We are still suffering from the increase of prices."—I am, etc.,

H. CHARLES WOODS.

Reuter's Agency announces that a Greek-Armenian Committee has been formed in London for joint action for the liberation of the Greek and Armenian populations from the Turkish yoke. A Memorial Service for the Armenians and Greeks massacred during the year by the Turks and a mass meeting have been arranged for February 2.

According to information received from Madrid, the Spanish Government, in pursuance of its policy of true friendship for France in Morocco, is obliging all Moors who have taken part in the recent insurrection in the French zone to recross the border as soon as they seek refuge in the Spanish Protectorate. The other day, Reuter's Agency learns, the Spanish military authorities at Melilla handed over a group of sixty-one rebels to the French authorities at the frontier post of Beni-Hassen.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to

PRESS ON THE NEAR EAST.

Constantinople and the Moslem World.

Sir Valentine Chirol begins an instructive article, "Islam and the Future of Constantinople," which he contributes to the *Fortnightly Review*, by declaring that: "One of the great opportunities created by the war for the betterment of the world will be lost if the Peace Conference fails to put an end to Turkish rule in Constantinople, which has proved as harmful to the general interests and reputation of Islam as it has been disastrous to the subject races of the Ottoman Empire." One of the fundamental considerations that is usually ignored by those who plead for the maintenance of Turkish rule in Constantinople is this fact:—

If Constantinople remains the seat of Turkish government, the new Turkish State that emerges from the Peace Conference will be fatally handicapped by all the old traditions of intrigue and corruption which will inevitably cling, like a robe of Nessus, to its rulers so long as they live and move and have their being in the poisoned atmosphere of Stambul. No worse service could be done to the simple, honest, and industrial Turkish population of Asia Minor who have suffered in the past only less than their Christian fellow-subjects from Constantinople misgovernment, and themselves detest it. In the course of my own travels, I have frequently heard Constantinople denounced almost as fiercely by quiet, law-abiding Turkish Mohammedans as by Armenians or Greeks.

Sir Valentine recalls an incident in a journey he made in 1877-8, soon after the Russo-Turkish War. He was the guest of a well-to-do Turk at Ghediz, "a small and almost entirely Turkish Mohammedan town on the borders of the Brussa and Smyrna vilayets."

My host had bidden four other citizens of Ghediz to meet me, all good Turks and good Mohammedans; one was the mollah of the chief mosque; another the kazi, or religious judge. The fare was excellent, though we ate it mostly with our fingers, squatting on the floor round a common dish, and, as I knew enough Turkish to carry on conversation, we soon got on to communicative terms. The first outburst came when I happened to mention the Commission that was then sitting at Constantinople to reorganise the bankrupt finances of Turkey and create a new administration of the Public Debt. "Yes, the Public Debt!" exclaimed angrily the mollah. "The debt is the only thing that is called 'public' in this country. Everything else is called Humayuni (Imperial). The army is Imperial, the Law Courts are Imperial, the revenue is Imperial, the Palace is Imperial, but the debt is the 'public' debt—the debt which the big folk have contracted and squandered, but which we, the small folk, have to shoulder and pay." Then they all let themselves go, and with many invocations of God and of His Prophet they vied with each other in denouncing the whole system of government and the Padishah, the Sultan, himself.

After recalling how Germany dragged Turkey into the war, in accordance with William II.'s long-prepared plans, the author goes on to say:

Surely neither in our own interests nor in those of the helpless Turkish population whom their Constantinople rulers have plunged into ruin can we afford to forget the costly lesson of the past. For a small Turkish State within its own natural and ethnical boundaries in Asia Minor there should be a peaceable and prosperous future. It will have considerable resources, mineral as well as agricultural, which can be enormously developed if its revenues cease to be squandered on the maintenance of an army and navy that will no longer be required when the ambitious policy for which Constantinople has hitherto stood shall have been finally discarded. Freed from the predatory influence and sinister wirepulling of the Constantinople official, often himself not a Turk, the people will have a chance of showing the many good qualities they possess—industry, honesty, thrift, and endurance, and, when racial and religious passions cease to be periodically inflamed from Constantinople, a kindly and tolerant disposition.

In connection with the attitude lately taken up by certain Moslems in India towards Turkey, we quote as follows:—

In India itself Pan-Islamism aroused only a slight platonic interest amongst the more conservative Mohammedans of the old school, and such sympathy as they had with Turkey was to a great extent alienated by the Turkish Revolution of 1908 and the advent to power of the Committee of Union and Progress, on most of whom religion sat very lightly. But, on the other hand, the aggressive nationalism of the "Young Turks" appealed strongly to the new school of Indian Mohammedans who were gravitating towards the more advanced forms of Indian nationalism. During the Balkan wars some of the "young Mohammedan" leaders raised subscriptions in India and conducted missions to Constantinople, ostensibly for the Turkish sick and wounded, and though the appeal to the Indian public was made on religious grounds, it had a distinctly political and often anti-British flavour. An instructive reference to this movement is made in the report, recently published, of the Committee on Sedition in India, over which Mr. Justice Rowlatt was sent out to preside in Calcutta last winter. . . .

. . . But the loyalty of the vast majority of the Indian Mohammedans, princes and people, never wavered, though many were profoundly grieved to see a Mohammedan Power plunging, at Germany's bidding, into war against Great Britain, who had twice saved it from destruction, and the Indian Mohammedan troops proved their staunchness as well as their gallantry whenever they faced their Turkish co-religionists in the battlefield.

The attempt to turn Pan-Islamism and, later, Pan-Turanianism, to account against the Allies failed ignominously, but—

Because on this occasion the attempt made to prostitute the religious authority of the Ottoman Sultanate to purposes of political aggression has failed, it would be folly to forget that it was made, and that it could only be made, as the culminating effort of a long and active propaganda from Constantinople which had sought to imbue the Mohammedan world with the belief that Turkey was the appointed sword of Islam. There can be no better or more permanent safeguard against any revival of that insidious propaganda than the removal of the seat of Ottoman sovereignty from Constantinople. How insidious it has been is shown sufficiently when Indian Mohammedans, whose own loyalty is above suspicion, are found to argue quite seriously that Constantinople is "the city of Islam"—Islambol—held in trust by the Ottoman Sultans for the world of Islam. The argument is ridiculous, for the Turks themselves do not call it Islambol, but Istambul (a corruption of the old vernacular Greek words *ἐς τὰν βόλιν*), and spell it Istambul on their coins. But if there were anything in it, our reply would lose none of its force. It would be simply that the Ottoman Sultans have proved faithless to their trust by misusing Constantinople as a base for secret machinations and finally for open war against the very Power to whom they have owed their salvation in the last century, and under whose just and tolerant rule a very large proportion of the Mohammedan population of the globe has enjoyed much greater security and prosperity and freedom than the Mohammedans of Turkey have known under their Constantinople rulers.

In the Market of Mosul.

From "Mosul—Niniveh," an article contributed to *Chambers's Journal* (January) by Louise Peralta, we take the following picture of a scene in the markets of Mosul:—

"My soul has borrowed a portion of pain from hell!" In the great Chauk of the town, sitting cross-legged in front of his piles of sacks of gall-nuts, the mouthpiece of a hookah between his lips, a Khorasani thus expresses the anguish with which he is wrung by the ridiculously low price hazarded by a would-be buyer. Surrounded by possible customers, a trader in shawls is appraising and bargaining over his stock, great bales of which take up nearly half a side of the vast, open courtyard, giving on the Chauk, of the Khan-el-Khalili, the largest of Mosul's score of caravanserais. A crisp odour of roasting herbs tells of the *kebaks* [kebobs?] that are being prepared for supper, and the animals are already at their evening meal, the camels kneeling in the centre of the courtyard of each great khan, and eating daintily the durra served them on a clean white cloth. The beasts that carry the merchants and their merchandise are always objects of interest to the people of Mosul. In the markets everywhere in the Middle East the Arab pony of the Persian Gulf always fetches its value. Though not equal to the pure Arab, it is a most serviceable as well as a handsome animal. The big-boned, clumsy-looking Atak horse is bought in great numbers in the *kafilas* because of its marvellous powers of endurance. But the favourite is the Turkoman horse of Khorasan, which is strong, fleet, of an extraordinary intelligence and devotedly attached to its master. The Khorasan camel is also found in large numbers in the *kafilas*. Of great size and strength, it will carry six to seven hundred pounds to the three hundred and fifty or four hundred of the Persian and the Indian camel. At the end of the ten or twelve days of trafficking in the Chauk there will be a sale and exchange of beasts, when the ungainly but strong and docile cross between the two hump-backed Bactrian and the one-humped Arabian camel will be in huge demand.

A PICTURE OF FAMINE.

A story told by a British soldier who visited Beyrout, since its occupation, throws a terrible light upon the condition of the children in Syria. "Some of us were in the town band enclosure on a nice lawn, which was surrounded by high iron railings just six inches apart (measured). Two—well, of those morsels of humanity, passing along the road, walked across to us *between the railings!* One was about twelve and the other perhaps five. The elder had no difficulty in getting between the railings, but the little one's head was so huge it had to be pulled through, making him whimper. Neither had a stitch of clothes on." A high naval officer speaks of finding "little skeleton babies moaning alone under the walls and doorways." An American report mentions that during the third year of Syria's distress under Turkish control, cases of even cannibalism occurred in the awful scarcity and high prices of food.

NEAR EAST BOOKSHELF.

THE CRADLE OF THE WAR.*

In view of the German Minister's statement to the British Ambassador at Berlin on the outbreak of the war that Germany intended to seize the French colonies in Africa, it might be possible to dispute Mr. Charles Woods' thesis that Germany made the war in order to secure the Near East. Presumably, the dominance of the Balkans was to be Austria's share of the spoil, secured under German direction from Berlin; but in the long run no doubt Germany would have secured the bulk of the profit from her "brilliant second." That is perhaps the one fundamental criticism of the record of Balkan politics which Mr. Woods has assembled in "The Cradle of the War."

It is necessarily a long and intricate story which Mr. Charles Woods tells. He follows the politics of the Balkans and Asia Minor from the Treaty of 1878, and carries the record down to July, 1918, giving roughly a chapter to each of the various countries covered by his purview. It would be easy, of course, to point out omissions in so tangled a record; we have failed, for example, to note any reference to the absurd offer of Cyprus to Greece by Sir Edward Grey in October, 1915, and Mr. Woods appears to have missed the minatory telegrams of the ex-Kaiser to the ex-King of Greece on the outbreak of the war, in which "the husband of my sister" was exhorted to do his duty in that state of life unto which it had pleased Prussia to call him. But, on the whole, there is a great deal of information in the historical or main part of this book.

Mr. Woods makes certain suggestions as to the settlement of the Near Eastern problem; but it was unfortunate for the completeness of his argument that he did not delay the writing of this final chapter until after the Armistice, for events have moved fast, and although they may not vitiate his conclusions, they give an air of inconclusiveness to these last pages which the author would no doubt have avoided had he foreseen the sudden collapse of Germany.

As to his general conclusions, it may be said that Mr. Woods does not appear to advocate a Balkan League, such as was advised in certain quarters in England not long ago; possibly he remembers too clearly the failure of the previous League, and knows the Balkans too well to believe that old differences will entirely disappear when the League of Nations is constituted by the peacemakers of Paris. His discussion of the settlement proceeds frankly on a territorial basis. We have not space to follow his review of the new work throughout, but we may note his conclusion that Greece stands to lose most and gain least of all the Balkan States in the re-partition.

On these matters he is clear and definite in his recommendations; but his treatment of the future of Constantinople is a little hesitating. Apparently the reason for the rather disappointing section devoted to this admittedly complex question is the fact that Constantinople transcends Balkan politics and raises questions both of Russian and of extra-European problems. Frankly, we should have liked to see these wider matters discussed in some detail, and they would have fitted in well with the plan of the book, which includes the Armenian massacres (of some of which Mr. Woods was an eye-witness). Probably another fifty pages would have covered the whole of the ground necessary, and it seems a pity that this was not done.

Elsewhere Mr. Woods discusses and approves the suggestion of forming a barrier of anti-German States out of Poland, Yugoslavia, and Bohemia. He betrays, however, a not unnatural fear as to their future stability and readiness to agree with each other—a fear which has already received a certain amount of support from the telegrams of the last few days. On the other hand, he does not appear to rate the quarrel between Italians and both Greeks and Yugoslavs at quite sufficient importance; but at least he preserves a greater appearance of impartiality in that vexed controversy than most of the protagonists on either side. His treatment of the Albanian question will therefore probably displease the zealots.

It should be added that the book contains some good illustrations and more than one excellent map.

TWO BORN LEADERS.*

Brillat-Savarin tells us that cooks are born, not made—a dictum which applies with equal force to the council chamber and the kitchen. No education, however specialised, can implant qualities in a man which are not a part of his "heritage," in biological parlance. This fact is exemplified in the careers of President Wilson and M Georges Clemenceau. Both of them abandoned the calm water of a learned profession for the Maelstrom of party politics. Mr. Wilson began active life as a professor, and became president of Princeton University. On discovering that he possessed the priceless gift of leadership, he entered the political arena, and within a very few years succeeded to the great office once held by Washington and Lincoln. M. Clemenceau practised as a physician for twenty years, and was middle-aged ere he stepped into the limelight. Each of these great men wields a ready pen, and is a master of delicate irony. Each would have gained enduring fame as a man of letters if he had not chosen to be a man of action. Each has idealism, intuitive foresight and perfervid energy inherited from his Celtic forebears. But here the parallel between them ends. Inexhaustive patience is the key of President Wilson's character. He personifies the Horatian *vir justus et tenax propositi*, who yields not an inch to popular clamour, is impervious to obloquy, and defers action until its success is assured. His policy during the world-war is, perhaps, the most striking instance of statecraft on record. M. Clemenceau was for two decades the stormy petrel of French politics. Mayor of Montmartre during the Siege of Paris and the Commune, he brought the same qualities to bear on the Chamber of Deputies as had enabled him to dominate his turbulent fellow-citizens. Five Ministries in succession succumbed to his sledge-hammer blows. But Clemenceau is no Bolshevik. He has always had a clear idea of the measures required to save France from ruin, and the constructive genius required for executing them. So, when the fortunes of his country were at their lowest ebb, when defeatism was rampant, and a general collapse seemed inevitable, France turned instinctively to the *vieux tigre;* and vested him with the authority of a Dictator.

It cannot be said that the most recent biographies of these eminent statesmen are in any sense satisfactory performances. They err by extreme brevity, and convey an indistinct impression of their subjects' careers. Mr. Archer's account of the American President's Mexican policy justifies the current opinion that it was feeble and vacillating. But Mr. Wilson undoubtedly chose the lesser of two evils in withdrawing his hand from the Mexican hornets' nest. Foreseeing that America would be drawn into the vortex of the world-war, he deliberately vetoed an adventure which would paralyse her efforts on behalf of civilisation.

ARMENIAN REFUGEES.

The Armenian Bureau has received a communication from Nubar Pasha, President of the Armenian National Delegation in Paris, in which he writes:—"Heartrending letters and despatches are daily received by the National Delegation from Syria, Palestine, Egypt, Mesopotamia, Persia, and Caucasus, describing the tragic situation created for the Armenian deportees and refugees, who are in need of everything, and are dying by thousands for want of help. Likewise, the Armenians of the Caucasus are threatened with famine and beg immediate succour. General Clayton cables that £25,000 a month is needed for Armenian refugees in Syria alone.

"In view of this critical situation, the National Delegation, considering that we have arrived at a decisive moment when the utmost efforts are imperative, appeals to the whole nation to set on foot fresh funds everywhere, or to give generous support to those already opened."

Sir Alexander McRobert presided at the distribution of certificates of the City of Guilds and London Institute to the successful candidates of the Government School of Dyeing and Printing, Cawnpore, on December 12. He congratulated the students on the profession they had chosen, and eulogised the work and services of the Principal of the School, Mr. G. P. Srivastava, Industrial Chemist to the U.P. Government.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. January 31	1919. January. 18	Friday	1337. Rabia II. 29	5679. Shebat 30
February 1	19	Saturday.....	30	Adari. 1
2	20	Sunday	Jumada I. 1	2
3	21	Monday	2	3
4	22	Tuesday	3	4
5	23	Wednesday	4	5
6	24	Thursday	5	6

Dr. Robert S. Frew has returned to London.

The Rev. H. W. Brett, British Chaplain at Smyrna, has arrived in London.

Mr. Locke, manager of the Bank of Roumania, has returned to England after a brief visit to Roumania.

On January 21, in Cairo, the wife of Mr. A. P. Bolland, of the Sudan Civil Service, gave birth to a son.

Cardinal Bourne arrived at Jerusalem on January 18 and, says Reuter, went on the following day to Bethlehem.

Colonel Boyle and Captain Capsa, who were specially attached to the suite of Prince Nicolas of Roumania, left London on Saturday for Paris.

On January 23, at St. Mary-le-Tower Vicarage, Ipswich, the wife of Captain H. L. R. Watt, attached to the Egyptian Army, gave birth to a daughter.

Sir Reginald Wingate left Cairo on Tuesday of last week for Europe. Sir Milne Cheetham is acting as High Commissioner during Sir Reginald's short absence.

In honour of the visit of the provincial Government to Delhi Lord Chelmsford, the Viceroy, on January 14, gave his first large State party since the outbreak of war.

The engagement is announced of Captain Henry Lewis-Barclay, Indian Army, and Isabel Clare (Lala), daughter of Mr. and Mrs. Layton H. Lucy, Oakleigh Park, Whetstone.

A New Year's gift of £5,000 has been given by the Maharaja of Jaipur to the King, and his Majesty has decided that the sum shall be utilised on behalf of the families of Indian Sepoys.

Colonel Francis D. Boyd, C.M.G., F.R.C.P.Ed., A.M.S., having relinquished his post as Consulting Physician to the Egyptian Expeditionary Force, has returned to 22, Manor Place, Edinburgh.

A Reuter Melbourne message states that the names of General Birdwood and Sir Ian Hamilton have been mentioned in connection with the Governorship of Victoria on the expiration of Sir Arthur Stanley's term of office.

Prince Nicolas of Roumania took up his residence at Eton last Friday in order to complete his studies. He is in his sixteenth year. Lieutenant-Colonel Arion, Military Attaché to the Roumanian Legation, accompanied him to Eton.

The Egypt Exploration Fund is arranging for two lectures to be given by Miss W. S. Blackman on "The Material Culture of Ancient Egypt and Some Comparisons Amongst Present Day Primitive Peoples." The dates will be announced later.

A marriage is arranged, and will shortly take place, between Major Basil Ivor Jones, M.C., Indian Army, only son of Mr. and Mrs. A. E. Jones, of Lahore, India, and Evelyn, elder daughter of Mr. and Mrs. Percy Gates, of 5, Manson Place, Kensington.

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation, and Head of the Roumanian Government Mission, left Hendon on Tuesday morning by aeroplane for Paris. He carried despatches for the Roumanian Delegates attending the Peace Conference.

The University of London has arranged for three lectures to be delivered at King's College on Tuesdays, February 4, 11, and 18, by Monsieur M. Beza, of the Roumanian Legation. The first of the series will be on "English Influences on Roumanian Literature," the second on "National Unity of the Roumanians," and the third on Roumanian Folk Poetry in Relation to the Folk Poetry of the Balkans." Sir Henry Newbolt will preside at the first lecture, the Earl of Beesborough at the second, and Mr. Lawrence Binyon at the third. The lectures will begin at 5.30 p.m., and admission will be free.

Under the auspices of the Société Internationale de Philologie, Sciences et Beaux-Arts, the Rev. J. J. Pool will on February 10 lecture on "Cleopatra of Egypt—Queen and Lover." The lecture will be given at the rooms of the Société, 8, Taviton Street, Gordon Square, at 3.30 p.m.

The engagement is announced between Captain W. Hugh B. R. Kennedy, the King's Own Royal Lancaster Regiment, younger son of Mr. and Mrs. Myles Kennedy, of Stone Cross, Ulverston, and Violet Enid, younger daughter of Mr. and Mrs. Herbert Wilson, of Stainburn, Workington, Cumberland.

The marriage of Claude P. W. Lloyd, M.A., Indian Educational Service (Lieutenant, I.A.R.O.) and Eileen Muriel, widow of Captain P. B. Maxwell, East Yorks Regiment (late 35th Sikhs), and only daughter of General Sir Alexander and Lady Hamilton Gordon, of Lynwood, Farnborough, Hants, took place on January 23 at the Parish Church, Farnborough.

The marriage arranged between Captain Kenneth Freeland, R.A., only son of Commander W. F. E. Freeland, R.N., and Mrs Freeland, Stanway, Camberley, and Violet, elder daughter of Colonel G. J. H. Bell, C.I.E., I.M.S., and Mrs Bell, 84, Lancaster Gate, will take place at Christ Church, Lancaster Gate, on Wednesday, Feruary 12, at 2.30 o'clock.

A marriage has been arranged, and will take place at a later date between Miss Marguerite Alysoun Ramsay Cowie, daughter of Brigadier-General A. H. Cowie, C.M.G., R.E., and of Mrs. K. E. Cowie, of New Hall, Bodenham, Salisbury, and Major Edward Hastings Impey, M.C., 2nd Battalion Lincolnshire Regiment (seconded Machine-Gun Corps), son of Lieutenant-Colonel L. Impey, C.S.I., C.I.E.

A reception took place on Monday evening at the Grafton Galleries in celebration of the emancipation of Serbia and the union of the Serbo-Croat-Slovene peoples. The gathering was arranged by friends of Serbia, and among those present were Lady Grogan, Mrs. Carrington-Wilde, and Mrs. Seton-Watson, representing the Serbian Relief Fund; Mr. F. Hastings, Miss M. Henderson, Lady Swaythling, Mr. James Barry and Dr. May Dickinson Berry, and Miss Hall.

The following has been issued by the Occupied Enemy Territory Administration in Palestine:—The Military Governor, Jerusalem, has the honour to acknowledge with sincere thanks the following donations to the Pro-Jerusalem Society, the aim of which is to preserve the ancient and traditional character, together with the indigenous arts and crafts, of the Holy City:—Messrs. J. Smouha and Co., £E600; Messrs. Btesh Brothers, £E500; the Syrian Community of Egypt, £E400; Morum's Oriental Stores, £E100; Dr. Faris Nimr, £E50; Dr. Sarruf, £E50; the American Colony of Jerusalem, £E25; Messrs. Marache Brothers, £E25; Mr. Solomon Angel, £E20; Mr. Benham (Norton's Pharmacy), £E10.

The *London Gazette* announces that T./Lt. Alfred Edward Holton, No. 3 Gun How. Bde., R.M.A., has been awarded the Military Cross for conspicuous gallantry and devotion to duty. On two consecutive nights he brought his gun into action under heavy fire. During the operations he had worked ceaselessly, co-operating in four mounts and dismounts of a 15-in. howitzer, guiding it over shell-pitted roads with old and inadequate transport. He had in addition kept the battery unusually well supplied with ammunition. His management and keenness helped to keep the gun in close touch with the advance." Lieutenant Holton is the son of Mr. F. C. Holton, assistant to General Manager of the Smyrna-Aidin Railway.

Mr. Chas. Nissim, of Knightsbridge, S.W., and of Bombay, who died on November 3, aged seventy-four, left estate of the gross value of £12,569, with net personalty £12,108. The testator left 5,000 rupees for the poor of Bombay; 10,000 rupees for the payment of ten Jewish men to read prayers for a week at the house where he may die, for the payment of ten Jewish men, to be chosen by the Rabbi at Jerusalem, to say prayers day and night for twelve months, for distribution among the poor of Baghdad and for distribution to persons belonging to the Jewish community of Bombay on the seventh, twenty-first, and thirtieth days after his death, and the eleventh and twelfth months after his death, and for distribution among persons of the Jewish community in Jerusalem.

APPOINTMENTS, PROMOTIONS, &c.

M. Polychroniadis, until recently Chargé d'Affaires of the Greek Legation at The Hague, has been appointed First Secretary to the Legation in London.

Mr. William Strachan Coutts, C.I.E., Indian Civil Service, has been appointed a Judge of the High Court of Judicature at Patna, in the place of Mr. Edmund Pelly Chapman, Indian Civil Service, who has resigned.

The King has approved the appointment of Mr. Lionel Davidson, C.S.I., Indian Civil Service, to be a member of the Executive Council of the Governor of Madras in succession to the late Mr. Herbert Francis Webb Gilman, C.S.I., Indian Civil Service.

Digitized by Google

The Council of Legal Education announce the appointment of Captain Lindesay John Robertson, R.A.F., barrister-at-law, formerly Professor of Hindu Law, and afterwards Principal of the Law School, Bombay University, to be Lecturer in Hindu and Mohammedan Law at the Inns of Court, in place of the late Sir Frederick A. Robertson.

Captain A. F. P. Knapp, North Lancashire Regiment, and Captain P. C. Snatt, Liverpool Regiment, have been attached to the Egyptian Army as Special Service Officers with the temporary rank of Bimbashi. The first has been attached to the 12th Sudanese for duty and the second has been appointed Commandant Signalling School.

OBITUARY.

SIR JOHN WATSON, V.C.

General Sir John Watson, V.C., G.C.B., died at Finchampstead on January 23, in his ninetieth year. He entered the Bombay Army in February, 1848, serving during the Punjab campaign of that and the following year. For this service he received the medal with two clasps, and obtained a second medal for fighting in the Bozdar campaign of 1857. As a lieutenant he took part in the suppression of the Indian Mutiny, and was present at the siege of Delhi, the second relief of Lucknow, and many other engagements, being wounded on three occasions. He was promoted captain in 1861, and the same year had his brevet majority. At the end of 1863 he served during the expedition against hill tribes on the North-West Frontier under General Chamberlain, and afterwards under General Garvock. In 1870 he became a brevet colonel. From 1871 to 1877 he was in command of the two regiments of Central India Horse, and was also Political Agent for Western Malwa. Next he was appointed Resident and Agent to the Governor-General at Gwalior, and acted as Agent for Central India. In April, 1878, he was given command of the cavalry brigade of the Malta Expeditionary Force. During the Afghan War he had political charge of the district of Kuram, and commanded the Kuram Field Force. In 1881 he was promoted to major-general, and in the following January he became Resident and Agent to the Governor-General, Baroda. He retired from the Foreign Department of the Government of India in 1886. He reached the rank of lieutenant-general in 1887 and that of general in 1891. He was promoted G.C.B. in 1902, and since 1904 has been colonel of the 13th Duke of Connaught's Lancers.

Colonel W. P. Davison, who died suddenly at the County Infirmary, Armagh, on January 22, served in the Egyptian Expedition of 1884.

M. Louis Rambert, late member of the Swiss National Council, has died at Constantinople. He had been director of the Ottoman Tobacco Régie since 1900.

Lady Lumsden died on the 21st inst. at Murdan, Murtle, near Aberdeen. She was the widow of General Sir Harry Lumsden, K.C.S.I., who died in 1896.

Artin Pasha, who was Egyptian Under-Secretary of Education from 1884 to 1906, has died at the age of seventy-seven. He was an Armenian, and had held various posts in the Egyptian Government.

Major-General Alan Murray, who, it is announced, died last week at The Grange, Washbrook, saw service in the Indian Mutiny. He took part in the siege and capture of Delhi, and the actions of Bolundshuhur and Agra, and was present at the second relief of Lucknow.

Mr. Robert Carstairs, late of the Indian Civil Service, has died at Edinburgh at the age of sixty-five. He went to India in 1874, became a Commissioner in 1902, and retired in 1903. He was the author of "British Work in India" and "A Plea for the Better Local Government of Bengal."

Mr. James Crawfurd, who died last week at Thornwood, Uddington, Lanark, aged seventy-three, joined the Indian Civil Service in 1868. He was appointed officiating Under Secretary to the Government of India in the Home Department in 1875, and a year later became Under Secretary to the Government of Bengal. Mr. Crawfurd was afterwards first Inspector of Registration Offices, Registrar of the High Court, and from 1885 till his retirement in 1894 District and Sessions Judge.

A Reuter's message from Perugia reports the death in that city, on January 27, of Ismail Kemal Bey, formerly President of the Albanian Provisional Government. He was a native of Valona, and had held office in Tripoli under Abdul Hamid, but he first came into prominence after the Turkish Revolution, when he became leader of the Albanian party in the Ottoman Meiliss. He was President of the Albanian Government until Prince Wilhelm of Wied was chosen as Mpret, when he withdrew to Italy.

A correspondent writes:—The death on January 9 (announced in your columns on January 17) of Mr. Laurence G. Binns, of Constantinople, will cause deep regret amongst former residents of that city. Himself one of the oldest British residents, having been born in Bebek on October 31, 1849, he lived all his life, except for the few years spent in England for the purpose of his education, in that little town on the shores of the Bosphorus, and though so far removed from the homeland, a truer and more enthusiastic Briton in heart and spirit it would have been difficult to find. Genial and charming in manner and sympathetic in character, Mr. Binns was loved and respected by all who knew him. He was very public-spirited, and took an active interest in local charities, notably during the Russo-Turkish War in 1878-80 and during the Balkan War in 1912-13, when he rendered willing and able assistance to British war relief committees—at the earlier date under the late Mr. Wrench, H.M. Consul-General at Constantinople; at the later date under Lady Lowther. It was on the outbreak of hostilities between Turkey and the Allied Powers that Mr. Binns was obliged to quit the home of his boyhood and leave behind him those sunny Eastern skies which he loved so well. His loss will be keenly felt, and to many of those who ultimately return to Constantinople it will create a blank which will not easily be filled.

DOMESTIC ANNOUNCEMENT.

DEATH.

ALLEN.—At Cawnpore, on Saturday, January 25, very suddenly, Henry Deacon Allen, second son of the late Sir George William Allen, K.C.I.E., of "Freechase," Warninglid, Sussex, and dearly loved husband of Petronella Allen. (By telegram.)

NEWS IN BRIEF.

A first instalment of £80,000 has been placed by the Greek Government at the disposal of the Foreign Minister for the help of distressed Greeks in Turkey.

From Constantinople it is reported that Kiamil Mahmud Pasha, commanding the Third Turkish Army, has been arrested on a charge of massacring Greeks and Armenians.

The Athens correspondent of *The Times* states that the Government has refused to renew its contract with the two State executioners, thus tacitly abolishing capital punishment.

The Postmaster-General gives notice that the mail service to Roumania has been resumed for all classes of postal packets, except parcels. The time of transit will be longer than under normal conditions.

The hearing has been begun by Mr. Justice Darling, with a special jury, of a libel action brought by Mr. Bal Gangadhur Tilak, a Hindu, against Sir Valentine Chirol because of passages in his book, "Indian Unrest."

General Allenby has issued a special Order of the Day reminding all ranks of the Expeditionary Force in Egypt during the trying and unavoidably extended period of demobilisation that the good name of the British Army depends on the individual conduct of each member.

Four lectures on malaria will be delivered at noon on January 31, February 7, 14, and 21, 1919, in the lecture theatre of the Medical School at King's College Hospital, Denmark Hill, S.E., by Colonel Sir Ronald Ross, consultant in malaria at the War Office and physician for tropical diseases, King's College Hospital. Officers and men of the R.A.M.C. will be welcome. Microscope specimens and lantern slides will be shown at the third and fourth lectures.

The Roumanian Military Attaché has issued a notice to all Roumanian officers, N.C.O.'s, and privates resident in Great Britain that they must forward their addresses to Lieutenant-Colonel Arion, Roumanian Military Attaché, Canada House, Kingsway, W.C.2. All those not complying with this order will be considered as not having fulfilled their military obligations.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.). ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T 15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner P.T.25.

FRIDAY, JANUARY 31, 1919.

THE CONFERENCE AND MOROCCO

Although the question may not arise directly out of the war, it is possible that the Allied Conference, while engaged in settling international controversies with a view to establishing peace on a sound basis, will be invited to record some decision regarding the future of Morocco. In point of fact, Morocco has played practically the same part as Persia during the last four years, with Spain by virtue of its zone of influence in the rôle of Turkey as the cat's-paw of Germany. Just as German agents stirred up Persian tribes to attack the British, so, thanks to the remissness of the Spanish authorities, they have been able to work upon the tribesmen of Morocco in order to embarrass the French in their protectorate. For the Turks there was the excuse that they were the allies of the Germans, and were merely pooling their resources in aiding German agents to put a spoke in Great Britain's wheel in Persia. Spain, on the other hand, was a neutral State, and was morally bound not to show favour to one group of belligerents to the prejudice of the other. Spanish officials, however, contrived to turn a blind eye to German intrigue as long as the issue of the war seemed to be in the balance, with the result that the French protectorate of Morocco has been in a continual state of ferment, and now calls for an organised campaign against the tribesmen who have been stirred up to revolt by German agency. It is no wonder, therefore, that France should press for a more satisfactory regulation of the Moroccan question than the one which has enabled Spain to lend herself to German machinations. With the final defeat of Germany the Spanish Government has begun to appreciate the seriousness of the position. Negotiations have been opened with France, and as an earnest of its good intentions it is sending General Berenguer, the present Minister of War, on a mission to the Spanish zone for the purpose of dealing on the spot with German activities. France, however, it may be expected, will require a more drastic solution of the problem than a belated attempt to cope with a single phase of a bad system. In these days of "acid tests" Spain will clearly be called upon to submit to a settlement less dependent on the good will of local officials if she wishes to regain the confidence of the Allied Powers, and the Paris Conference will do well to remove Morocco, as far as may be, out of the sphere of international rivalries.

The trouble in Morocco is the familiar one which sooner or later crops up where a progressive and an unprogressive people rub shoulders together. By the Franco-Spanish Treaty of 1912 the greater part of Morocco is now a French protectorate, but a narrow strip of territory along the northern seaboard, which is the Spanish zone, shuts off France from her natural outlet at Tangier. The port itself is internationalised; but the surrounding country depends for its development on the standard set in the Spanish protectorate as a whole, and has no share in the general progress of the French sphere. As the Spanish Government has not been able to establish effective occupation over more than a fraction of the territory entrusted to its protection, and that at an annual cost to the Spanish Exchequer of £8,500,000, the lawless condition of the zone is a menace to the safety of Tangier itself and a source of trouble to the French protectorate. During the war German agents have known how to take full advantage of this state of affairs, and it is not easy to see how satisfactory relations can be established between France and Spain in regard to Morocco until the tribesmen throughout the Spanish zone have been brought under civilising influences. In the event of the question being submitted to the Conference, Spain will, no doubt, be required to show what likelihood there is of her proving equal to her responsibilities in this direction; for even if Tangier should retain its present international status, the Allied Powers have a distinct interest in securing for the immediate neighbourhood a safer and more peaceful existence than it has known during the last four years. But it is common knowledge that the French have other views in regard to the future of Tangier. They desire to see the port restored to the sovereignty of the Sultan of Morocco, and to secure access to it by a route passing, throughout its length, through French Protectorate territory. So keenly is this solution canvassed that in some circles the hope has been entertained that the Powers concerned would agree to a general exchange that would give Gibraltar to Spain, Ceuta, on the African coast, to Great Britain, and the rest of the Spanish zone with Tangier to France. A less radical settlement is more feasible and should prove quite satisfactory. Spain's claim to part at least of the zone is not arbitrary; she has ninety thousand of her citizens there, as compared with less than forty thousand French, and seventy per cent. of the commerce of the zone belongs to her. But her failure in the past to exercise adequate supervision over the territory suggests that she may be more successful with a restricted responsibility.

The Paris Conference could find all the justification it needs for examining the Morocco question in the fact that the French are at present engaged in a campaign against the tribesmen of the interior. France cannot fail to respect the desire to see the world at peace when the Conference ends, and will be prepared to lay her solution of the Moroccan problem before the delegates. The interests of the tribesmen call for a speedy pacification of the whole country, and it would be well within the province of the Conference to point out that this can be attained by transferring some of Spain's responsibilities to France. Tangier, which at present suffers from an international status, has a special concern for the Allied Powers. Much has been talked about internationalisation during the last twelve months, and there was a danger at one time that the Allies might be tempted to experiment further with the system. The prominence recently given to Tangier will, it is to be hoped, save the world from fresh mistakes of this kind. Divided control has never yet been a success, whether in Egypt, Tangier, the New Hebrides, or Crete. In Tangier it has been conspicuously unsuccessful, and the port stands in great need of enlightened government. Great Britain, it so happens, has a double interest in its future. The chief obstacle in the past to France's possession of the town is the traditional policy that would not allow Britons to tolerate the presence of a Great Power on the African mainland immediately opposite Gibraltar. More recently there has been a natural desire on the part of the British Government not to sacrifice prematurely certain pawns that might be useful for the regulation of the British status in Egypt. For this reason the question of abolishing the present regime at Tangier, and with it consular jurisdiction, has been linked with the question of the Egyptian capitulations. Now that the position in Egypt is within sight of being adjusted, one difficulty in regard to Tangier will have been removed. The other can be met by an agreement that Tangier shall remain unfortified as well as a free port. The French could advance no objections to these restrictions; their ambitions in Morocco are essentially commercial, and it would be entirely alien to the spirit which is regarded as actuating the Allied Powers to seek to introduce at this stage new factors into the international position in the Mediterranean.

A TURKISH PICNIC.

One would hardly choose a cemetery for a picnic in the suburbs of London; but at Cairo nothing can surpass in picturesqueness the group of tomb-mosques outside the eastern city walls, and the Pyramids, so often the scene of gay meetings, are but glorified mausolea. One of the best Turkish lunch parties at which I have ever assisted—not excepting several on the Bosphorus—was at the so-called "Tombs of the Khalifs," which, travellers soon learn from their guide books, are not tombs of Khalifs at all, but those of turbulent Circassian Mamelukes who reigned as Sultans in the 14th-16th centuries, who fought, and squandered, and spoiled the Egyptians, but left the most beautiful burial ground in the world.

Our host was Ibrahim Bey Tewfik. Two fair Americans visiting Cairo had casually expressed a wish that they could see what a Turkish dinner was like, and Ibrahim at once responded with a courteous invitation. The question was where the entertainment should take place; and, after some deliberation, it was decided that it should be on this border of the eastern desert.

Our host, Ibrahim Bey, had been among a batch of Egyptians sent to France and England for education. One of the most polished and Europeanized of Cairenes, he was as much at home on the boulevards of Paris as in the Ismailieh quarter of Cairo: a favourite in European society, and a favoured *protégé* of the Khedive Ismail. When, in 1869, the Empress Eugenie, a guest of Ismaïl at the opening of the Suez Canal, expressed a desire to witness an Egyptian wedding, the Khedive lost no time in gratifying her wish. Ibrahim was selected as the bridegroom, the choice of a bride being easily arranged within the Viceregal harem. The marriage was carried out on a lavish scale. The fact that the bridegroom did not at all appreciate the selection was of little account; though perhaps it tended to increase the Khedive's partiality towards him. Ibrahim was a man of rather extravagant habits. The Viceroy paid his debts several times, but at length intimated that the limit had been reached. During a visit to Egypt some years later I found Ibrahim a full-blown Pasha, and Governor of Port Said.

Our road took us through the great rubbish heaps east of Cairo upon which the bones of Fatemite Khalifs are said to have been thrown by their Sunni successors. On reaching the group of mosques, we found that an admirable nook had been chosen near the great edifice of Sultan Barkouk, which is one of the handsomest of the series, with its two striking domes, adorned with chevron mouldings, and its two minarets. This Barkouk was a typical adventurer of the period. A slave, he rose to importance by his ability, conspired and seized sovereign power in due course, ruled with a rod of iron, was driven out, imprisoned, and just escaped being strangled, returned with a powerful force to Cairo, "bathed the city in blood," became a model ruler, and died in A.D. 1388, beloved and regretted, it is said, by all his people. We had much beside this mosque to admire. At a short distance from it stands that gem of Moslem architecture the mosque of Kaït Bey, a structure which, according to Fergusson, is "perhaps unrivalled by anything in Egypt, and far surpasses the Alhambra or any Western buildings of its age." It well repays very careful study of details, both within and without. The guardian was an old man of over 80, with a venerable beard, who remembered Napoleon. He described him as "a small and sallow man," with an alert manner and a stoop, who stamped his foot, in a manner which the old man imitated. Time has given a splendid tint to the lacework of varied tracery on domes and minarets, which glowed in the winter sun.

The heat was now tempered by a cool breeze. Groups of small Arab children followed us, many of them in the garb of nature. Trains of camels passed noiselessly. The silence was only broken by occasional booming from the Mokattam hill, where limestone was being blasted in quarries that have supplied building stone from the days of remote Pharaohs.

Our host had, we found, taken great pains in his hospitable arrangements, and his cook was quite equal to the occasion. Lunch was admirably served by the Bey's Egyptian and Nubian servants, and the menu was about as follows:—

Ekshili shurba	Slightly acid soup
Sussuz kufté	Minced meat croquettes
Imam bayaldi	"The Imam (prayer leader) fainted." Egg-plant stew
Orman kebábe	Stuffed sheep roasted whole
Tavak piláf	Chicken piláf (rice)
Serai lokmasi	Palace morsels (sweet cakes)
Baklevé	Sweet flake pastry
Yusuf Effendi oranges.	Hejaz dates
Rahát lokum	"Turkish delight" (from Hajji Bekir, of Constantinople)

Turkish coffee
Turkish Cigarettes

Rose water was poured over the hands.

An Ottoman dinner is now often a very good, but comparatively uninteresting, combination of Eastern and Western cookery. In Cairo there is, I believe, no place where you can go and order a Turkish or Arab meal. Mark Twain's experiences were not, if I remember rightly, favourable. At Constantinople you may make a very good choice of Oriental dishes at some of the well-stocked cookshops; e.g., at Scutari, across the Bosphorus. Many Turks, by the way, still prefer to drink water at meals; and at a Turkish dinner party you may still hear a Pasha discuss the qualities of different springs in the Ottoman Empire, just as a French connoisseur may discourse on the different virtues of different choice vintages.

Our return ride brought us through the "Gate of Victory," or *Bab en-Nasr* (eleventh century), one of the most interesting points in the city walls, near the great ruined mosque of Sultan Hakin. You can ascend its staircase, and then traverse the walls to the great "Gate of Conquests," or *Bab-el-Futoúh*. This part of the old walls is seldom visited, but it well repays inspection. When Napoleon occupied Cairo, French troops held it for defence, and French names are cut in the different towers and at other points.

R. M.

THE PRINCE'S ISLANDS.

A correspondent sends us the following extracts from "Constantinople and the Seven Churches of Asia Minor," by the Rev. Robert Walsh, LL.D., Chaplain to the British Embassy. They are of interest at the present time in view of the conference with Russian representatives which it is proposed to hold at the Prince's Islands:—

"The Cyclades of the Propontis was anciently called Demonesca, or the 'Islands of the Spirits,' but under the Lower Empire they assumed another denomination. Irene, the widow of Flavius Leo, had put out the eyes of her son in order that she herself might reign in his place; for this she was banished by his successor to these islands, and, having built a monastry on one of them to atone for her guilt, and erected edifices where females of the Imperial family were educated, the group was called, therefore, after her, the 'Princess' Islands.' The largest island is Prinkipo, meaning the residence of a princess. The next in importance is Halki, or Chalki, from its copper mines.

"The enterprising Queen Elizabeth, among other explorers, sent Harebone to open a communication with the East. She wrote a Latin letter addressed 'Augustissimo invictissmoque principi Sultan Murad Can,' in which she seems not only to prize highly the incipient reformation in England, but also to recommend herself to the Turk by a principle common to Islamism, 'an unconquerable opposition to idolatry.' Her letter was well received, and Sir E. Barton was appointed her first resident Ambassador. He accompanied Amurath in his Hungarian wars, and died on his return to Constantinople. He was buried in the Island of Halki, and his monument still exists in a Greek convent. Hence originated an English resident at Constantinople."

Our correspondent adds that the tomb referred to, which stands just outside the monastery gates, is in a very bad state of repair. The British authorities, he suggests, should put it in a better condition, having the marble repolished and the lettering of the inscription restored.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In the interesting particulars of Roumania's present position which are given on another page there is one passage to which I wish to draw special attention, and that is the reference to the prospects for British trade with that country. Even now, despite the influence of the Serbian and Greek missions, the impression still obtains in some quarters that the Balkan market is too difficult to enter, and that it is impossible to develop our trade there to a satisfactory extent. Perhaps those who are of this opinion—and they are happily decreasing in number—will change their minds when they learn that in Roumania a most attractive opening awaits British traders, and that business people there "are simply asking for us to come in." Whether we take advantage of this opening or not depends entirely on the enterprise of merchants and manufacturers. In the circumstances it is, of course, unthinkable that they should not throw themselves whole-heartedly into the task of developing their trade with Roumania, and I am confident they will do their best to meet the situation.

***

In this connection I must lay stress on the point that the growing desire for trade with Great Britain is not confined to Roumania. The case is precisely the same with regard to Greece and Serbia, who are only too anxious to increase their trade relations with us provided they are afforded the requisite facilities; and altogether the outlook for the British trader in the Balkans is exceptionally satisfactory at the present time.

***

I drew attention in these columns recently to the unfortunate position that had arisen in regard to trade with India owing to the fact that traders there are in a position to obtain their requirements at low prices from other countries, and wish, therefore, to cancel contracts for goods ordered here during the war, very possibly many months ago, and not delivered owing to war-time conditions. The question has been taken up by the London Chamber of Commerce, which, at the request of various indent merchants interested in the Indian trade, arranged a meeting for January 30 with a view to discussing the possibility of joint action. I shall be interested to learn whether the meeting favoured the suggestion I referred to—that a system of licences should be instituted for imports into India by which preference would be given to the oldest contracts, and goods ordered subsequent to the armistice would not be released until all former orders had been carried out. It seems the best way out of the difficulty.

***

The latest news of the Bombay cotton strike is that while work has not yet been fully resumed the strike shows signs of terminating. We are still left to imagine the causes of the strike, but we now know something of its development through the publication of a letter by the Millowners' Association, which points out that the workpeople made no statement of their alleged grievances before leaving their work, and, further, gave no notice that they intended to strike. Presumably their demands, which I mentioned last week, for an increase in pay and a bonus for the Armistice, were in the nature of a second thought. There is nothing essentially peculiar in this process, for we on this side the "Black Water" are quite familiar with the spectacle of strikers trying very hard to find some reason for their action.

***

The view is held here that while no doubt various factors have contributed to the strike the main cause has probably been the economic position. India has been forced to depend more and more upon her own resources for the supply of lower-grade cotton goods, and the shortage, combined with a movement on the part of dealers to get control of supplies, sent prices up to a high level. This has undoubtedly been a source of hardship to the Bombay workpeople. Another matter which has had an increasing incidence has been the gradual rise in food prices. On the top of this came the bad monsoon, which affected Bombay in particular. Conditions in that Presidency, it is pointed out, have not been particularly favourable to the workers, so that there is no reason whatever for drawing any conclusions as to labour developments in India from this strike. It is rather to be looked upon as an isolated occurrence due to local factors.

***

Some valuable details regarding the Taurus section of the Baghdad Railway have been given by the Cairo correspondent of *The Times*. The railway between Bozanti, in the Taurus, and Aleppo is on the whole in first-class condition, he says, and trains can run all the way, but the tunnels need lining with masonry, otherwise they will fall in after heavy rains. The tunnel work has been finished on the Amanus range, and the track is laid and well ballasted for heavy trains to run at forty-five miles per hour, while there is ample rolling stock and material to meet present needs.

***

An interesting point emphasised by the correspondent is that the original estimate for the Taurus tunnel has been largely exceeded owing to the urgency of the work due to the war. "How this huge capital outlay is to be paid," he adds "is a matter for settlement between the Ottoman and German Governments and the railway company, which, though nominally an international corporation registered in Switzerland, is actually backed by the Deutsche Bank. Future traffic through the Taurus cannot hope to pay the enormous outlay, which was only justified on strategic grounds. The commercial price will therefore have to be based on the economic value, without taking into account the original cost."

***

The correspondent also briefly touches on the rich economic possibilities of the region touched by that part of the railway, and says that in the Adana vilayet it is probable that, other things being equal, more progress could be made than in Palestine and Syria. Besides the rich soil, which is capable of yielding two or three crops a year, he points out that there are many mines in the area. "Coal is also found in the vicinity, but the quality has not yet been proved. Forests are plentiful and magnificent, and all the requirements of Egypt could be supplied if cutting were organised and the necessary shipping could be provided. . . . Irrigation possibilities should prove interesting to engineers as well as to financiers. Much cotton is grown, and there are cotton factories in Adana; indeed, if aeroplanes had dropped bombs on a certain factory in that town most of the Turkish Army would have been without clothing. There are over three hundred steam ploughs in the country, and there is room for more; but what is wanted is some firm for organising repair shops."

***

The first report of the British Trade Corporation covering a full year's operations, which has just been issued, makes a good showing, the profit being £71,600, against a profit of £9,700 for the period from April 21 to December 21, 1917. During the year commercial conditions remained unfavourable to the development of its activities in connection with the financing of overseas trade, but it is pointed out that arrangements have been made in various directions which, it is anticipated, will bear fruit in the near future. As regards the balance-sheet, it may be noted that the assets total £3,950,000, of which cash and money at call amount to £685,300, British Treasury bills £1,000,000, and investments £572,900. The item bills discounted, loans and advances, amounts to £1,090,000, and this and also the amount of £367,200 invested in subsidiary companies may be expected to increase rapidly with the war out of the way.

Conditions in Roumania.

Eagerness for British Goods.

The following particulars of the present situation in Roumania have been received from a valued correspondent:—

With regard to the oil industry, it appears that the machinery is in fairly satisfactory condition. The Germans did everything in their power to put the fields in working order, and they succeeded in raising the production of oil to three-quarters of the pre-war standard. The result is that now there is an abundant surplus of oil. All available receptacles are full; and some oil is going to waste.

The immediate outlook for the resumption of other exports from Roumania is not good. The potential position, however, is excellent. Next year there should be a little maize and wheat for export. But there is, of course, the possibility that the position may improve in this respect.

At present communications simply do not exist. There is no railway material, or very little. In the absence of communications towns fifty miles apart are completely cut off from one another.

There is some food in the country, but little of it reaches the towns. Prices have risen enormously, and what can be procured is very expensive. The purchasing value of a lei (franc) is about 1d.

There is now a total lack of organisation, or rather complete disorganisation. In such circumstances it is inevitable that unrest should manifest itself, arising mainly from the shortcomings in regard to distribution. If this unrest should come to a head, there is little fear of its being tinged with Bolshevism.

During their occupation of Roumanian territory the Germans took all they could, but paid high prices (in paper money) for everything. They had a printing press in the country, which turned out notes freely, the amount put into circulation being estimated at 2½ milliards of francs. They turned the fruit of the country into jam, of which they obtained enough to feed the entire German Army, with the result that little jam is to be had now.

Measures are being taken against all German interests in Roumania. Returns have been called for for all German property, which it is the intention of the country to sequestrate or put under control.

As to the opening for British trade in Roumania, if merchants and manufacturers here care to avail themselves of their opportunities, a most attractive market awaits them. Nothing can better describe the position than the statement that business people in Roumania are simply asking for us to come in. There is no need to hold an exhibition of British goods in the country in order to develop trade. It is simply a question of taking steps to find out what are the Roumanians' wants, and supplying the goods at the earliest possible moment. The apparent difficulty in connection with the resumption of trade, that of financing imports until the export trade reaches its former level, will doubtless be met by the money that will have to be made available for the work of reconstruction.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 23:—

Widespread general rain in Central India, Central Provinces, United Provinces, East Punjab, and East Rajputana. Also general rain in Madras, Baluchistan, Assam, and Bengal. Local rain in Bihar and Orissa.

Fully good Broach, April-May, quoted 605 rupees a candy. Piece goods quiet. Calcutta gunny market quiet; sellers optimistic. No change in raw jute market since last week.

Work not yet fully resumed in Bombay mills, though strike shows signs of terminating.

A new saw-mills company has been floated in Calcutta (capital 250,000 rupees). Managing agents, Messrs. Linton, Molesworth and Co.

Messrs. Marshall, Sons and Co. is under conversion into a limited company with a factory near Calcutta for manufacturing tea machinery. Capital, 40 lakhs; 2½ lakhs over subscribed.

The detailed survey instead of the original reconnaissance survey has been sanctioned of the Chord line from Perbatipur to Bonarpara (metre gauge), Eastern Bengal Railway, Dinajpur and Rangpur districts.

BENGAL-NAGPUR RAILWAY DEBENTURES.

The Bengal-Nagpur Railway Co. has informed holders of debenture bonds to bearer falling due on February 2 that the directors, with the sanction of the Secretary of State for India, are prepared to renew such debentures at £99 10s. per £100 (10s. per cent. discount) for a further period of two years, at the rate of 4½ per cent. per annum interest.

A branch of the Eastern Bank, Limited, has been opened at Hillah (Mesopotamia).

The Chancellor of the Exchequer has consented to receive a deputation from the Federation of British Industries on the question of the excess profits tax and other matters.

EGYPT'S COMMERCE.

Decreased Exports in November.

(From Our Own Correspondent.)

Cairo, January 1.

The trade returns for November just published by the Egyptian Customs Administration show a large falling off in exports, whilst imports are comparatively stationary. During the month imports totalled £E3,279,261 and exports £E2,269,454, as against £E3,272,514 and £E4,720,099 respectively a year ago. The total for the eleven months is, imports £E44,315,469, and exports £E41,212,421, compared with £E28,296,924 and £E34,56,248 at the end of November, 1917.

The principal imports during the month were: Cheese £E65,135, meat £E501,951, hides and skins £E42,49, vegetable oils £E93,162, stationery £E57,357, coal £E667,129, medicinal products and preparations £E45,829, cotton piece goods £E338,467, silks and ribbons £E46,539, sacks £E156,397, ready-made underclothing etc. £E105,760, manufactured iron and steel £E125,411, and tobacco £E278,356. The chief diminution was in "textiles," which in the aggregate fell off by one third, or £E570,993 (practically all in cotton piece goods) and manufactured iron and steel, which fell by one half. Coal imports increased by £E391,795, in value and 36,393 tons in quantity.

The main exports were: Hides and skins, etc. £E74,900, rice £E35,098, cotton seed £E159,267, sugar £E93,418, liquid fuel £E28,294, cotton £E1,659,330, and cigarettes £E94,151. Cotton exports fell off by £E2,549,201 and thus were mainly responsible for the diminution in the month's total. Liquid fuel, rice, sugar, and cigarettes all showed slight increases.

Great Britain's share of the imports fell off by 15 per cent. to £E1,318,512, that of France diminished by 50 per cent. and that of Italy by 20 per cent. On the other hand Japan increased by 50 per cent. to £E151,244 (matches, silks and ribbons, ready-made underclothing and tobacco), America more than doubled (manufactured iron and steel and hides and skins, etc.), and Australia rose from £E153,113 to £E572,495 (cheese and meat). Under exports the share of the United Kingdom fell by 50 per cent. to £E1,741,584 and that of the United States dwindled from over three quarters of a million to nothing. France doubled her purchases to £E165,605 (cotton seed and cotton), Greece to £E99,574 (hides and skins and cotton), but Italy fel from £E286,058 to practically nil. The main cause of these decreases was cotton, of which the United Kingdom took £E1,553,352, or 94 per cent.

Trade with the Sudan during the month came to £E399,825, of which £E216,988 were imports into Egypt and £E182,837 exports to the Sudan. In both cases there was a considerable increase in the values as compared with the same month in 1918. The chief imports into Egypt were livestock £E142,025 (29,912 head), cereals £E22,480, and gums £E14,218, whilst the principal exports to the Sudan were sugar £E42,069, and cotton piece goods £E48,349.

THE MOROCCO MARKET.

Post-War Requirements.

An interesting report has just been published from the acting British Consul at Casablanca, in which he says that the manufacture locally of agricultural implements, such as light iron ploughs and motor tractors, which in normal times are imported from France and the United States, was remarked upon at the last "Concours Agricole," held last October at Casablanca. Several of these were on exhibition, and it was noticed that the tractors were copied from the American tractors of a well-known type.

A factory of tallow candles has been started at Marrakesh and the product put on this market. Soap factories have also sprung into existence in several of the towns, and small foundry shops are also producing articles which it is difficult to procure from Europe at present. It is not expected, however, that these small concerns can, even if permanent, affect the importation from foreign countries.

Great Shortage of Stocks.

Stocks of most manufactured articles, excepting cotton goods, are very short as compared with normal pre-war periods, and the future demand will not be immediately affected through increase of price.

Exports have increased generally during the war owing to intensified production of cereals and other grains. Exports to the United Kingdom are greatly reduced owing to shortage of tonnage and war restrictions, falling from 12¼ million francs in 1915 to 6¼ million francs in 1916, whereas exports to France rose from 32½ million francs in 1915 to 56 million francs in 1916.

Imports from countries other than the United Kingdom increased from 149 million francs in 1913 to 172 million francs in 1916. This general increase is mainly in the French imports. Other foreign countries whose imports increased were the United States, Portugal, and Italy.

Sugar, flour, wine, woollen cloths, copper and brass wire and sheets, cement, gasoline, machinery, candles, and soap come from France; flour, gasoline, machinery, motor-cars from the United States; wines, alcohol, cottons, silks, woollen cloth, cotton thread, and soaps from Italy.

At the same time, it may be observed that although the total imports from Great Britain show a decrease as compared with the normal pre-war period, yet on the other hand certain British manufactures, such as cotton goods, silks, woollen cloths, cotton thread, brass plates, cement, machinery, candles and soaps show a considerable increase in 1916 over pre-war importation. Imports of tea and coals from the United Kingdom also show a marked increase.

Future Competition.

With regard to machinery and motor-cars, the competition of the United States is likely to be permanent. The cotton and woollen goods from Italy are an unusual line of imports from the latter country, and the competition is not serious and will probably disappear after the war. The manufactured silks from the United Kingdom are also an exotic import, and it is only the high prices obtainable on this market which has made the United Kingdom figure as an importer of this class of goods.

The demand for manufactured articles after the war will be in the first instance for those articles which are looked upon as staple articles of importation, such as cotton goods, sugar, candles, soaps, building materials, woollen cloths, hardware, iron and ironware, boots and shoes, clothing, dyes and glassware.

In the machinery line there will be demands for agricultural machinery, such as threshing machines, winnowing machines, harvesters, and sickles and tractors. The motor machinery will also require supplies of petrol and gasoline and lubricating oils.

The railways in Morocco are so far State-owned, and such as exist are of the narrow gauge and have received most of their engines and rails from the United States. Manufacturers in the United Kingdom should be on the look-out for tenders, and send in their offers to the Protectorate authorities.

THE IMPERIAL INSTITUTE AND EMPIRE TRADE.

Burma's Undeveloped Resources.

In a recent number of the *Bulletin of the Imperial Institute* a former Governor of Burma—Sir Harvey Adamson, K.C.S.I.—gave an account of this interesting but somewhat neglected dependency of the Empire. In the current number of the Journal Mr. A. S. Judge, lately chief collector of Customs, Burma, completes the story of the great and still largely undeveloped resources of this territory, in an article entitled "The Development of the Trade of Burma." Burma is of importance not only as an actual and potential source of supply of many industrial raw materials, but also as a market for British-made goods, and Mr. Judge points out that the total trade of the country already amounts to about £3 13s. 4d. per head of the population, which puts it almost on a level with Spain and Portugal, countries with a trade of £4 and £4 3s. per head of the population respectively.

Burma is the world's largest producer of rice, and occupies an important position as an exporter of timber, especially teak, oil-seeds, grain and pulse, cotton, tobacco, rubber, hides and skins. With regard to minerals, the most important product of Burma is petroleum, the exports of which have risen in value from £1,500,000 in 1903-4 to nearly £4,503,000 in 1916-17.

On all these and other subjects much information is given in this article, and attention is also directed to the nature of the chief imports into Burma, and there are many useful hints to the British manufacturer, which are the outcome of Mr. Judge's long residence in the country and the special facilities he enjoyed for acquiring a knowledge of its trade.

Cinchona Bark.

In the same number is an important article on "The Future of the Trade in Cinchona Bark." Everyone is familiar with the story of the introduction of cinchona trees from South America into India and Ceylon, and the development of a large export trade in cinchona bark from these British territories to Europe, a trade that also benefited London, which in those days was the world's cinchona market. Only those in the trade know, however, that India and Ceylon have long ceased to take anything but a very minor part in the production of cinchona bark, of which Java, and therefore Holland, has now a virtual monopoly, whilst Amsterdam has supplanted London as a market. The matter is of importance because quinine, which can only be got from cinchona bark, is the recognised remedy for malaria, and with its vast expanses of tropical territory the British Empire is probably the largest consumer of quinine in the world.

The article gives a full description of the position of the trade in cinchona bark and quinine, and shows the predominant position occupied by Holland and Java. The Germans were apparently making efforts to grow their own cinchona bark before the war, and there is appended to this article a report by the institute on bark grown in the conquered German territory in East Africa, as well as a report on bark from St. Helena, which proved to be of good quality, but, of course, is not available in large quantity.

Included in the contents of this issue is a note by Mr. G. C. Dudgeon dealing with the results of recent Egyptian researches on the "Pink Boll Worm Pest of Cotton."

SUDAN LETTER POST.

The Sudan Post Office calls attention to the delay and inconvenience which arise from sending articles liable to Customs duty to the Sudan by letter post. Under Sudan regulations articles liable to Customs duty (and these include almost all articles likely to be sent by post, except correspondence, printed matter, and bona-fide samples) may only be imported by parcel post. Such articles arriving by letter post are detained at Khartoum and are not released until certain formalities are complied with, which may include the attendance of the addressee to witness the opening of the packets.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal in 1918 amounted to 81,070,000 francs, against 63,120,000 francs in 1917, 89,044,276 francs in 1916, 93,957,468 francs in 1915, 122,139,714 francs in 1914, and 129,925,000 francs in 1913.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—January 21, 22, 23, 1,100,000 francs, against 830,000 francs.

ENGINEERING NOTES.

Morava-Vardar Waterway.

In an interview with one of Reuter's correspondents in Paris last week, M. Paschitch, the Serbian Premier, discussed the question of a canal from the Danube to Salonika. The Serbs, he said, suggested that by rendering the Morava River navigable, which could easily be done, and by constructing a canal from the Morava to the Vardar, a splendid channel of communication with Central Europe would be provided, which would be much shorter than the present route through the Black Sea and the Bosphorus.

The great benefits which Serbia would derive by the utilisation of her rivers, and the technical possibilities for joining the Morava River to the Vardar River have been frequently discussed in these notes during the last two or three years. The statement of M. Paschitch, and the interest that is being shown in the subject, according to recent information, in certain quarters in Serbia, shows that the question is now receiving serious attention.

With regard to the union of the Morava and the Vardar reference has been made to the construction of a canal from Ristowal, via Kumanovo, to Uskub. This would effect the junction, and give Serbia a most valuable waterway running through the whole country from the Danube to the Gulf of Salonika. It has been suggested, we understand, that there are difficulties in the way of utilising the Morava and the Vardar waters. Of course, there are difficulties in everything. First, it is said that Serbia is now a poor country, and cannot afford great expenditure. But the enterprise is such a sound business undertaking that it is more than probable that friends of Serbia would be glad to undertake the carrying out of the scheme.

Greece's Agriculture.

The General Bank of Greece has recently established a new company, "The Agricultural Industries Company, Limited," with a capital of 3,000,000 frs. (£120,000), for the production and preparation of wines, cognac, liqueurs, alcohols, olive oils, etc., of the best qualities. The names of the directors of the company are those of prominent business men, financiers, merchants, and manufacturers who are well known throughout the Near East. The new company has already established two factories—one at Piræus, the port of Athens, and one at Calamata, the port for the vine, fig, and olive districts of the Peloponnesus. They are both equipped with the latest type of machinery and distilling apparatus for their purpose, all of which has been provided from France and Italy. Apropos of the latter fact, it is remarkable that British manufacturers have not yet been able to introduce their distilling apparatus to the Near East, where the demand for it is steadily increasing, and French and Italian manufacturers have the monopoly in those markets.

Technical Difficulties.

Another difficulty put forward is that many locks will be required, which would be a big item in the cost. Weirs and locks are, of course, necessary for the improvement of the navigation of a river, but it is not always understood that its cost should be considered as being the whole cost of many miles of navigable water. For instance, if there is a fall in a river in which six inches to the mile has to be corrected, a weir having a fall of ten feet would affect twenty miles of navigation and be the actual cost of all those miles, affording a means of communication the cheapest to make, the cheapest to use, and the least expensive to keep in repair of any ever suggested. Apart from this, there is the available water power from the falls, which is of great value owing to its capability of being carried by an electric wire to almost any distance.

Another suggested difficulty is, in the case of irrigation, that the lie of the land will prevent much of it from being watered. Of course, that is unavoidable, for water cannot be led to the whole surface of the country, but how much of the land has the benefit of the water will depend in a great measure upon the skill of the engineer.

The value of water power is greater now than it ever was before, from the convenient way in which it can be carried to a distance by the electric wire; while the water itself as a means of transport is fully admitted to be the cheapest means yet suggested.

Caspian-Black Sea Waterway.

We had referred to the plans for the construction of a canal to connect the Volga with the Don. The war and the consequent political troubles in Russia, it was supposed, prevented the carrying out of the scheme, but according to recent reports it appears that, in spite of the political troubles, a start has been made with the Volga-Don Canal. The project is of considerable interest, as it concerns the union of the Caspian Sea with the Black Sea, a question of great commercial importance in the Near East. The Volga is one of the chief routes for the carriage of the petroleum obtained on the Caspian Sea. The Volga-Don Canal establishes communication between the Caspian Sea and its adjacent regions and the Black Sea. The Don, which flows into the Sea of Azov below Rostow, makes a great bend with its centre stream, and approaches the Volga Canal at Zamzyn, and the canal will be cut at that point. The large Volga tank-ships, which carry oil to Petrograd, can sail to the Sea of Azov, whence the oil can be brought on sea-going ships to the Danube. The canal will also help the transport of the Donetz coal. From the engineering point of view the Volga-Don Canal is interesting, as there are very high gradients to surmount, and the depth must be sufficient for 1,000 ton vessels. The canal will be about 95 versts long, and contain thirteen locks of 100 metres length. The cost of construction is estimated at Rls. 328 million. Whether the work can be finished, as it is expected, in three years, must depend on political conditions in Russia.

COMPANY MEETINGS.

Great Indian Peninsula Railway.

The one hundred and thirty-eighth half-yearly general meeting of the stockholders of the Great Indian Peninsula Railway Company was held on January 24, at the offices, 48, Copthall-avenue, London Wall, Sir Charles H. Armstrong, the chairman, presiding.

The Secretary (Mr. R. H. Walpole) having read the notice convening the meeting,

The chairman referred with great regret to the resignation from the Board of Mr. H. C. E. Wenden, owing to advancing years. They had offered the vacant seat to Mr. A. Muirhead, from whom they received a telegram of acceptance a few days ago. Mr. Muirhead was General Traffic Manager of the railway for many years, and was now Agent in India of the South Indian Railway, which appointment he was very shortly vacating. During the half-year the gross receipts were over 6¼ crores of rupees, which was a record figure, and, compared with the corresponding six months in 1917, the increase in gross receipts was just over one crore. Their expenditure, on the other hand, increased by 68 lakhs of rupees, and amounted to very nearly 3½ crores as compared with a little over 2¾ crores in the corresponding half-year. The net revenue was 2 crores 85 lakhs, against 2 crores 50 lakhs, an increase of 34.79 lakhs, or 13.94 per cent. The passenger traffic during the six months, notwithstanding the increased fares which were introduced from June 1, 1917, was heavy, and they also carried a very large number of troops. The excess on the corresponding half-year was half a million passengers and the additional revenue on the whole traffic was just over 25 lakhs of rupees. The goods traffic was heavier in public merchandise by 524,000 tons, and the increase in revenue under this head was 68½ lakhs of rupees. In coaching they increased 17.92 per cent., and in goods 19.78 per cent. So far as goods were concerned, they gained a good deal by conditions brought about by the war, which resulted in a considerable amount of traffic having been sent to Bombay for shipment instead of to Calcutta and Madras, where it would have gone if times had been normal. It was hardly likely that they would retain all this additional traffic, but they hoped, nevertheless, that some of it would continue to come to Bombay.

In the year which preceded the war their earnings from coaching were 2¾ crores of rupees, against 4¼ crores in the 12 months ending last September, and from goods 6 crores against 7.90 crores. Their total earnings had increased from 8.93 crores to 12.39 crores, the percentage increases being 56.21 in coaching, 30.11 in goods, and 38.59 per cent. in the total earnings. These figures were illustrative of the effort made by the G.I.P. Railway to cope with the new conditions brought about by the war, and he thought they might fairly congratulate themselves on the satisfactory results. In the carriage of coal and coke their receipts increased by a little over 3 lakhs of rupees. In the year before the war they carried for the public 810,000 tons coal, and their receipts were 29 lakhs of rupees. In the year which ended on September 30, they carried 1,822,000 tons, and their receipts were just over a crore of rupees. They carried also in addition for themselves 1½ million tons of coal, as against 982,000 tons in the year ending September 30, 1914. Coal now gave the highest receipts of any commodity carried, but it filled a very large number of wagons which could often be more profitably employed in other ways. This, so far as their own consumption is concerned, was a matter they kept very carefully before them, and now the war was over he hoped it might not be long before they were able to import oil in some quantity from the Anglo-Persian Oilfield. For this fuel they were making storage arrangements in Bombay and elsewhere, and when more tank steamers were available they hoped to be able to lay in a good supply. The question of electrification was still also before us, and they were hoping to receive before very long the report of their expert advisers on the whole subject. Their receipts from cotton were 4½ lakhs less than in the corresponding six months, and this was due to the crop having turned out much smaller than at one time seemed likely, owing to late rains which fell in October and November, 1917. He was sorry to have to report that the cotton prospects for the present year were also unsatisfactory. So far as could be estimated at present the crop was not likely to be more than 50 per cent. of a normal outturn, although in the Berars, which was an important district for them, it might be rather better than this.

Now that the war was over they were placing large orders for necessary supplies, but the cost of these would be far in excess of the prices current in pre-war days. These purchases, however, were urgently necessary, as so little had been done during the four years of the war. Other railways, not only in India, but elsewhere, were in a similar position, and early purchases must, therefore, be made if quick deliveries were to be obtained. There were still, however, considerable restrictions in connection with the output of steel and other materials required by railways, and he agreed with Lord Inchcape that the sooner the bulk of these restrictions were withdrawn the better for all concerned. Their expenditure on capital account had been only 18¼ lakhs of rupees, but some useful work had been done nevertheless, and they were now hoping that it would not be long before they were able to complete the doubling to Nagpur, as until this important work was finished, they would not be in a position to accept at all times all the traffic offered to them at Nagpur by the Bengal-Nagpur Railway. They had been urging the completion of this doubling for some time, as they looked upon this work as very urgent and necessary as the Railway Board had recently sanctioned expenditure for dealing with increased traffic on the Bengal-Nagpur Railway. In their workshops they had manufactured large supplies for the forces in Mesopotamia, East Africa, Egypt and Palestine. According to their latest information 148 men from their Indian staff had been fighting in the different theatres of the war. Of these he much regretted to say five had been killed in action, and three had been wounded; seven had also died on active service and fifteen were taken prisoners. The Military Cross and Distinguished Service Order had been awarded to three of the survivors and honours had also been conferred upon several of their officers who have remained in India in recognition of the good work they had done upon the line. He concluded by moving the adoption of the report and accounts.

The Managing Director (Mr. J. E. Dallas) seconded the resolution, which was carried unanimously.

On the motion of the Chairman a cordial vote of thanks was passed to Major Sir Lawless Hepper (the agent), the heads of departments and members of the staff in India, and to the home staff; and a similar compliment to the chairman and the directors terminated the proceedings.

Land Bank of Egypt.

The report of the directors for the year ended September 30, read at the general meeting held in Alexandria on December 3, states:—

Continuing to enjoy, under the British Protectorate, favourable conditions such as no other belligerent country has known, Egypt's economic position has been maintained and improved. A succession of favourable Niles has enabled the land to yield varied crops, the price of which has reached a level hitherto unknown. The wise measures taken by the Government have reduced the cultivable area reserved to cotton, the principal export, but have had the truly gratifying result of developing specially the production of the cereals necessary for feeding the people and of inducing the cultivator to redouble his efforts to produce commodities of prime importance, avoiding also, as far as possible, the dangers of an undue concentration upon one crop. The cotton crop exceeded 6,300,000 quintals (Kantars), and the price obtained gave the produce an excellent return, despite the increased cost of labour and of certain indispensable materials, such as fuel. The total value of that crop was considerably more than £E50,000,000. The position of the Land Bank of Egypt, closely connected with that of the landed proprietors, has naturally been affected by the prosperity of the country. Receipts in cash have been exceptionally high; in view of the state of our finances, we have thought advisable to repay to the Crédit Foncier Egyptien the advance which that establishment had granted us in 1913 until the circumstances permitted an issue of shares. In using certain of its powers of disposal for the transfer of funds to Europe, by the advantageous state of the exchange or for investment in Government loans, easily realisable, the company has not been unmindful of its chief purpose. It has closely followed the resumption of transactions in mortgages, already begun last year, and has concluded a certain number of loans, observing, notwithstanding the marked rise in land values, the prudence necessary in the valuations of the securities offered. These loans number 91, for a sum of £E431,135.099, which, added to the existing loans and to our realisations by sales, brings the total of our transactions guaranteed by mortgage on vendor's privilege, to £E3,455,675.675. Our annuities in arrears have been reduced from £E378.501.032 to £E216,184.950, of which £E90.775.853 are arrears correctly so called, and £E125,409.105 are loans maturing during the year. The settlement of our property continues in satisfactory conditions, and, thanks to favourable circumstances, our account "real property expropriated" has fallen from £E222,974.330 to £E143,100.024. While continuing to set aside interest of which the recovery appears uncertain, the profits of the year are increased to £E326,997.576, against £E323,062.263 for the last year. Our general expenses are increased in consequence of the necessity for improving the position of our staff, who have shown great devotion to our interests, in granting them supplementary allowances. Various charges, such as general expenses, sundry taxes, etc., give a surplus of receipts on expenses of £E148,573,020. Your board proposes to strengthen the bank's position in the following manner:—(1) Provision for the amortisation of debentures, premiums, and charges, £E13,528.681; (2) amortisation of real property, movables, and brokerage on mortgages, £E5,409.578; (3) provision for risks on loans and the amortisation of the property, £E21,000, or a total of £E39.938.259. The net profit of £E108.634.761, to which is added the balance from the previous year, will allow of the distribution of a dividend of 8s. 6d. per ordinary share, and of £3 on the founders' shares. In expressing to those members of the staff in the Allied Armies our wishes for their happy return after the victory, definitely obtained to-day, we take the opportunity of thanking their colleagues who have assisted us with the greatest devotion. In the course of the past year we have had the sorrow of losing our president, M. Jules Charles Roux. You know the very important place he held in business circles. President or director of leading financial houses, he applied to his varied interests his unrivalled intelligence, his experience of men and affairs, and his energies. At the same time his kindness and courtesy made him one of the most notable and most appreciated personalities of our time. Director of our company from its foundation, he became its president in 1912, and since that time he followed more and more closely the development of our business. In honour of his memory your Board has set aside a sum for the award of 300 francs each year to the children of a sailor of the French mercantile marine who has died in the pursuit of his duty. We are confident that this meeting will decide to give us its support in this act of remembrance. To the family of our president we express our heartfelt regret and condolences. Associated with him since the opening of our business was our auditor, Mr. A. Gorra, whose loss we also have to deplore. He fulfilled perfectly the duties with which we entrusted him, and he leaves behind him the memory of a good man. We take this opportunity of

COMPANY NOTES & REPORTS

Societe Industrielle et Commerciale de Salonique.

At an extraordinary meeting of the Société Industrielle et Commerciale de Salonique, held on December 28 at Salonika, it was decided to ratify the proposals of the Council for the exchange of shares for 4,000 new shares issued out of a total of 10,000 new shares, the balance of 6,000 shares being distributed to the shareholders as a bonus. The new shares will have the right to dividends from 1918.

British Trade Corporation.

The report of the British Trade Corporation for the year ended December 31, the first complete year of the corporation's operations, states that owing to the war the commercial conditions existing during the greater part of the year have not been favourable to the development of the corporation's activities in connection with the finance of overseas trade. Arrangements have, however, been made in various directions which, it is anticipated, will bear fruit in the near future. Profit amounts to £71,589, which with £9,671 brought forward makes £81,260. After the payment of income-tax for 1917, writing off preliminary expenses, expenditure on premises, and depreciation on furniture, there remains £64,252. The directors recommend a dividend of 5s. per share (subject to income-tax), leaving £14,252 to be carried forward. Meeting, Institute of Chartered Accountants, Moorgate Place, E.C., 6th proximo, 3 p.m.

London County Westminster and Parr's Bank.

The report of the London County Westminster and Parr's Bank for the year ended December 31 states that, after paying interest to customers and all charges, making provision for bad debts and contingencies, allowing £272,106 for rebate on bills not due and £361,123 for war bonuses and payment to members of staff on active service, the net profit amounts to £2,206,202; £184,599 was brought forward, making £2,390,801. This the directors have appropriated as follows:—Interim dividend of 10 per cent. paid in August (less income-tax), £495,071; a further dividend of 10 per cent., making 20 per cent. for the year (less income-tax), £478,169; to bank premises account, £300,000; to reserve, £600,000; to provision for bonus to staff to be paid in new shares, £140,000; balance carried forward, £377,560.

Bengal and North Western Railway.

The report of the Bengal and North-Western Railway Co. for the year ended September 30 last states that the net earnings of the joint undertaking amount to Rs.1,40,94,088, against Rs.1,29,87,327. The company's share is Rs.80,44,214 brought to account at the rate of 1s. 4d., against Rs.72,15,705 at the same rate in 1917. An ad interim dividend for the half-year ended March 31 of 3 per cent., plus a bonus of 1 per cent., was paid on the ordinary stock on July 29. After bringing forward the balance of £113,131, providing for interest on debenture and preference stocks, interim dividend and bonus, £35,000

for the sinking fund for redemption of capital in 1982, transferring £50,000 due to gain by exchange to reserve, and making other adjustments, there is left £237,681. The directors recommend a final dividend of £3 per cent., together with a bonus of 3 per cent., on the ordinary stock, subject to income-tax at 4s. 9d. in £, absorbing £137,250, and to carry forward £100,431. The figures given are net after deducting income-tax, and the dividend with bonus recommended for the year is at the rate of 10 per cent. per annum.

Dividends, Payments, &c.

The directors of the Bambrakelly (Ceylon) Tea and Rubber Co. have declared an interim dividend of 5 per cent. (actual) in respect of the year ending March 31 next, payable on 5th proximo. This is equivalent to 1s. per share. Warrants will be posted on 4th proximo to holders registered on that date.

The ordinary stock transfer books of the Delhi, Umballa, Kalka Railway Co., Ltd., will be closed from February 8 to 22, inclusive, for the purpose of preparing dividend warrants for the six months to September 30, 1918, payable to those shareholders whose names are on the register at the time of closing the books.

East India Distilleries and Sugar Factories.—Transfer books of debenture stock and preference shares will be closed from February 1 to February 11, inclusive.

NEW COMPANIES.

Oriental Bank of Commerce.

The Oriental Bank of Commerce, Limited, has been registered with a capital of £100, in £10 shares, to carry on business as bankers, financiers, concessionnaires, merchants, agents, and underwriters. Power is also taken to carry on business as shipowners, etc.

EGYPTIAN MARKETS.

The returns of the Egyptian Markets, Ltd., for the nine days ended January 9, were:—Cattle markets £1,673, general markets £823, total per year £2,496. The corresponding figures for the ten days ended January 10, were:—Cattle markets £1,054, general markets £727, total for year £1,781.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 31, 1918. (New Style January 14 to November 13, 1918):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piraeus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Oct., 1918		3,557,633	2,5?2,000
Do. do. do 1917		3,648,269	1,060.000
Estimated receipts for 10 months (Law of Control)		24,083,333	8,916,666
Actual do. do. 1918		31,679,475	26,573,000
" " " 1917		28,009,521	10,5?9,000
Difference between estimated and actual receipts for 10 months	1918	+ 7,596,142	+ 17,656,333
	1917	+ 3,926,188	+ 1,642,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

An uncertain feeling has continued to prevail in all quarters of the market, but it is believed in some directions that prices, after showing a considerable fall during the last few months, are now likely to steady somewhat. There is plenty of business waiting to be done when buyers arrive at the opinion that it is safe to operate. American cotton rates have hardened on the reduction of freights. The Government has not made any reduction in Egyptian cotton prices. Various rumours have been about as to the intention of the authorities. It is said, however, that there is not likely to be any restriction of acreage next season. There has been a more pronounced fall in Egyptian yarn quotations. The price of 60's twist is distinctly lower than a month ago. Users have purchased from hand to mouth. Some advices relating to piece goods in Egypt have been rather better. A few more bids have been mentioned, chiefly in sized shirtings. A considerable cloth inquiry has been met with for India, but only here and there have workable offers been met with. Moderate buying has occurred in bleaching goods and dyed materials for China. More manufacturers have been compelled to stop looms or force sales. American yarns are now rather firmer, but prices are distinctly lower on the week. There are indications of a larger turnover, but so far business has been confined to retail lots. Rather more testing of prices has transpired in export yarns.

The Government and Egyptian Cotton.

The decision of the British and Egyptian Governments to purchase the whole of the Egyptian cotton grown this season seems likely to result in a serious loss for the authorities. The scheme was announced last March, and it was then arranged that the whole of the crop for the season beginning August 1 should be taken over at a price based on 42 dollars per cantar and sold at 48 dollars per cantar. In a free market the article is in competition with American cotton, which has declined in price to a considerable extent during the last few months. The lower grades of Egyptian cotton are now practically unsaleable, as the finer qualities of American can be purchased much more cheaply. It remains to be seen what will be done by the authorities, but sooner or later there will have to be a break in prices. Nothing has yet been decided as to whether the control will come to an end next July, but owing to the turn of events, it seems very likely that free buying and selling at prices according to the state of supply and demand will not be allowed for some time to come. The action of the Government, although wise at the time, now seems to have been unfortunate, and it is feared that before matters could be adjusted a serious loss of money will have to be entailed by somebody or other. In the meantime growers in Egypt are very well satisfied with the position of affairs, as they are getting much higher prices than would have prevailed had there been a free market.

The sudden death, from heart failure, took place on January 23, of Mr. W. Hebberdine, O.B.E., secretary-accountant of the Eastern Telegraph Company, Electra House, E.C. He had done much to promote telegraphic and cable communication all over the world.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been an active market in Egyptian descriptions this week, and in most cases there is a further rise in prices to be recorded.

In Government stocks, however, there has been nothing doing owing to the lack of sellers. But the price of the 3½ Pref. Loan has improved ½, to 78½.

In Bank shares the feature has been a rise in National Banks of 15-16, to 22⅜, and Agricultural Banks are closing 9-32 up at 7. There is also an improvement of 1-16 in Agricultural Prefs., to 7 9-16.

In Railways there is no change to be recorded.

Amongst Land shares Aboukirs are fractionally harder at 25s. 3d. Béhéras are ¼ higher at 14, and Delta Lands have improved 1-32, to 17s. There has been a considerable business in these shares, as also in New Egyptians, which are again 9d. higher at 25s. 4½d. In Gharbieh Lands some few hundred shares have changed hands round the current price. Sidi Salems have improved 1-16, to 2⅜. at which price there is some further demand, but sellers are scarce. Sudan Plantations have again been a feature, and after rising to nearly 4½ close 3-16 up at 4 5-16. Crédit Union Foncières have had persistent buyers round the current level, but no shares have been offering. United Egyptian Lands are slightly lower at 3s. 4½d.

In Miscellaneous shares a fair amount of business has been done in Alex. Waters round the current level. Egyptian Markets have improved 3d., to 28s., and Salts and Sodas are 5-32 higher at 2 29-32. In Khedivial Mails the reactionary tendency of the Ordinary shares has continued, the price dropping ⅛, to 29s. 9d., but Prefs. are ⅛ better at 4⅜.

In Greek securities the only changes to record are a drop of 1 point in Monopolies, to 59 in 1902 and 1910 to 64, and in 1914 to 79.

Oil Shares.

The market has been much stronger. Anglo-Egyptians B have risen 11-32 to 3 5-16, and Burmahs are up to 8 15-16. British Burmahs have improved 1s. 3d. to 16s. 6d., but Anglo-Persian Preferences are unchanged at 26s. 9d.

Roumanians have been quiet. Roumanian Consols are 6d. better at 16s. 6d. Anglo-Roumanians remain at 9s. 9d., and Traians at 12s. 3d. are also about the same.

In Russians Ural Caspians are a shade stronger at 1 27-32. Bakus at 5s. 6d. are unchanged, as are Russian Generals. Russian Petroleums are 2s. 9d.

Paris Bourse.

Suez Canal shares are considerably lower at 5,295 francs. Other prices are: Egyptian Unified 93.50 (against 93.25), Serbian 1895s 61 (unchanged), Turkish Unifieds 70 (against 70.40), Banque d'Athenes 105 (against 104), Credit Foncier Egyptiens 785 (against 787), Land Bank of Egypt 189 (against 185.50), and Ottoman Banks 546 (against 549).

The December shipments of the Phosphates Tunisiens amounted to 18,863 tons, against 10,085 in 1917, making the total shipments in 1918 146,034 tons, against 101,254 tons for the preceding year.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanjue, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 75,000

HEAD OFFICE—

BASILDON HOUSE, MOORGATE STREET, LONDON, E.C.2

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Baghdad, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANQUE FRANCO-SERBE.

Head Office—
14, RUE LE PELETIER, PARIS.

Paid Capital - Frs. 12,000,000

Central Office—Belgrade.
Branches—Skoplye (Uskub), Bitolj (Monastir).
London Office—
27, THROGMORTON ST., E.C.2.

Correspondence is invited from all those having Serbian interests or contemplating business with Serbia when communication is restored.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer.*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000

NOTES OF THE WEEK.

The Near East, as was inevitable, has begun to figure prominently in the deliberations of the Paris Conference. During the past week a provisional arrangement, in the wording of the *communiqué*, was reached for dealing with the occupied territory of Turkey in Asia. M. Bratiano, the Roumanian Prime Minister, made a detailed statement of Roumanian claims, and M. Venizelos expounded the claims of Greece. The nature of the decisions regarding Turkey has not been divulged, but the Conference or the Council of the Great Powers has announced that the Military Representatives of the Allied and Associated Powers at Versailles are to be asked to meet at once and present a report as to the most equitable and economical distribution among those Powers of the burden of supplying military forces for the purpose of maintaining order in the Turkish Empire pending the decisions of the Peace Conference regarding the Government of Turkish territory.

These precautions in regard to Turkey are eminently sound, although they expose the Conference to the retort that Allied troops are required quite as urgently in other regions awaiting the decisions of the Peace Conference. The work, however, in these other places can be done, for the most part effectually, by military missions in contradistinction to bodies of troops. Turkey would seem to have suffered from the failure of the British to reach Constantinople on the heels of the armistice. Too long an interval was allowed to lapse between the signing of the armistice and the ocular demonstration of the completeness of the British victory. The Germans and their tools of the Committee of Union and Progress had time to discount their own discomfiture; and even when the Allied authorities reached Constantinople their omission to provide a spectacular display of strength and their general moderation only served to confirm in the mind of the ignorant Turk the pretensions of his rulers to having secured a peace "by agreement." But the experience of the Caucasus has shown that there is a pressing need for the presence of Allied forces in districts where the Turkish soldiery is called upon to abandon its war conduct for behaviour more consonant with peace conditions. Particularly is this the case in Armenia.

It is of good augury for the future that the Balkan delegates are winning golden opinions at the Conference for the conciliatory attitude that they are displaying in presenting statements of their claims. There has been no abatement in the sum total of the demands, but it is understood that they are urged without heat, and the spokesmen have been at pains to conciliate the opposite point of view. This was only to be expected, inasmuch as the delegates are responsible statesmen and are in the presence of a tribunal which necessarily commands their respect. To submit to the Conference some of the statements that have done duty for arguments in propagandist utterances and literature would have been too cynical a proceeding. It was, perhaps, not to be expected in the circumstances that any attempt would be made to claim only the irreducible minimum. The Conference had already shown a partiality for compromise, and the temptation to leave a margin for reduction in the statement of claims would be too strong to resist.

Thus Roumania has asked for the whole of the Banat, and Greece for unbroken land communication with Constantinople. But in making these claims much would depend on the spokesman's whole manner of address, and it is this, we gather, that has so favourably impressed the Conference. The belief expressed in these columns in the statesmanship, and, consequently, reasonableness, of the Balkan Premiers has not been belied; and it may be taken for granted that if the final decisions of the Conference are in accord with strict justice, based upon the principles of nationality, and are carefully explained, the same men will give them their loyal and wholehearted support.

Cyprus, as was not unexpected, is included in the Greek claims. On the strength of the conciliatory spirit in which the discussions in Paris are being carried on, it is permissible here to indicate part, at least, of the other side of the question. Great Britain is not likely to claim the retention of Cyprus merely for the lust of possession. The Conference, therefore, should require to be convinced that a change of ownership will be in the interests of the island and of the whole population. It is perfectly true that the majority of the inhabitants are Greek. The Greeks are a colonising nation, and from the earliest times have settled in Cyprus; but at no time in its history since the time of Alexander the Great has the island been connected politically with Greece proper. Consequently, the Archbishop of Cyprus, in speaking on a deputation to the Secretary of State to the Colonies, of the "return of Cyprus to the

Digitized by Google

maternal bosom of Hellas," provided an instance of that propagandist hyperbole which, it is to be hoped, the Paris Conference has been spared. The Cypriot prelate, of course, knows better, but his record goes to prove that he would with equal assurance have agitated for the return of India or part of London to the maternal bosom of Hellas, if by chance either of these places had happened to be within his see.

If history is to be invoked, the claims of Egypt upon Cyprus are decisive. As far as Greece is concerned, the different city-states of the island were altogether independent of Hellas, both at the time of Alexander's conquest and when Cyprus became a Roman province. With all the neighbouring countries it was incorporated in the Byzantine Empire, but it was already completely separated from that empire when it was conquered by Richard I., from whom the island passed by sale to the Knights Templars and subsequently to a dynasty of Frank kings. It then became a dependency of Venice, until it was conquered by the Turks in 1571. Ancient history is not likely to carry weight with the Paris Conference, but it seems necessary to controvert the mistaken idea that the history of Cyprus is on all fours with that of Serbia or Greece herself, with the exception that it has not yet been restored to its former "owners."

The present-day problem in connection with the island turns on the fate of the Turkish minority among the islanders. They have proved themselves loyal British subjects, and have made up their minds that they will not pass under the jurisdiction of their Greek fellow-citizens. It is idle to suppose that there would be peace in Cyprus for a week, if the British administration were withdrawn. From the Greek point of view this fact is unfortunate, but it has to be faced. Is it, therefore, better to continue the existing regime, which at least secures peace on the island, or to run the risk of arousing afresh the fierce antagonism between Greek and Turk, and so perpetuating unrest in the Near East? President Wilson has himself set a precedent in these matters. He has expressed his regret to the Italian nation that he is unable to hand over New York to it, and Great Britain might with equal force adopt the same line of argument to the Greeks in respect of Cyprus and Alexandria.

There has been no unseemly haste in publishing the names of the Committee on the reform of the India Office, for it was on October 23 that Lord Islington stated that a Committee "had now been appointed," and it was on January 31 that its constitution was announced. On the whole we should describe the list as adequate, but not inspiring; there is undoubtedly some force in the objection which has already been taken to the appointment as chairman of the Marquess of Crewe, who not long ago made an unsuccessful attempt at reform in precisely the opposite direction to what is now required, but the incident should not seriously embarrass so versatile a politician, and we have no doubt that the Committee will settle down to its task unhampered by the old ideal of highly centralised efficiency.

The terms of reference are sufficiently wide to enable the Committee to recommend a complete transformation, and the only inferences that can be drawn from them in advance are that the Council of India is not to disappear entirely, and that the new office will obtain a proportion of its staff from India. We should have liked to see some definite instructions to consider the complete separation of business from administration, but this particular point was not noticed in the Chelmsford-Montagu Report, on which the terms of reference are based, and it will doubtless be raised in the course of the inquiry. The duty of advising "what changes should be made in the existing system of Home administration of Indian affairs" obviously involves examination of the present arrangements, which are explicable only as survivals from the distant past.

The announcement which has just been made regarding the selection of candidates for the Indian Civil Service shows that the authorities intend to carry out thoroughly the undertaking given on this matter when the war was still young. Taking this year and next, the Service will be replenished by 200 or more officers who have fought on land or sea or in the air, and when to this number is added the large proportion of junior civilians who have been lent to the Army in India, it will be seen that something like a quarter of the entire cadre will have passed through Life's sternest school. India will thus be enabled to draw on that "reservoir of young but tested worth" of which we wrote three years ago, just at the time when the new problems of the day will make the highest demands on the character and abilities of those who must contribute towards their solution.

Hitherto England has done much, perhaps too much, for India: the task now to be undertaken is to enable Indians to perform these functions for themselves. England has given the country peace; Indians have now to learn how that peace may be maintained. England has created new industries and developed new lines of commerce; Indians have now to work for the material prosperity of their country. England has cared for the silent masses; the masses have now to be induced to speak out. Such are the new problems to which we have referred; their solution will be a delicate and difficult business, but it should not prove to be impossible, if the new generation will bring to the attempt that supreme quality of leadership, which has seldom been found wanting among Englishmen, and which has been displayed so abundantly in these last strenuous years.

Probably no country is more keenly interested than Roumania in seeing an early termination of the Paris Conference. Until that Conference is over she is forced to mark time at a period when she ought to be making every effort to recover from the trying ordeal through which she has passed. Politically, Roumania is at a standstill, for the Government represents only one party, and the one leader of that party is away in Paris. Her immediate development in the economic sphere is of the utmost importance, but so little appears to be done that suspicion is being aroused that there are interests to be served by the perpetuation of the existing state of affairs, with its shortage of transport and of foodstuffs. Roumania has to await the decision of the Paris Conference because it will determine the boundaries of Greater Roumania and will enable the Roumanians to enter upon the new stage in their history. Throughout the old kingdom great store is being set on the incorporation of Transylvania. In the past that region has produced some of the foremost figures among Roumania's men of action or of letters, and now it is hoped that Transylvania will help to lift the old kingdom out of the rut of various evils from which it has suffered and will be the means of setting it on a new and higher path.

It is significant of the almost complete lack of information in this country regarding conditions in Bulgaria since the signing of the Armistice that the author of an exceedingly well-informed book on Bulgaria published last week should have taken it for granted that the country is now a Republic. According to a despatch from Sofia, however, King Boris, as recently as January 24, signed a decree appointing M. Alexander Stambolisky Minister of Public Works and Roads. M. Stambolisky is President of the Agrarian movement, and was imprisoned by order of King Ferdinand for the strong stand that he took on September 17, 1915, against Bulgaria's participation in the war. Shortly after the Armistice it was reported that he had placed himself at the head of a peasant army and intended to proclaim a Republic. M. Stambolisky now appears as a Minister in M. Todoroff's Cabinet, and as the Agrarians announce that, in spite of the existing division of Parliamentary groups (Tsanko Bakaloff, the head of the rival group, is also a Minister), the party remains solid, there may yet be interesting constitutional developments in Bulgaria.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 13.

The past week has been a quiet one in Palace and Residency circles. His Excellency the High Commissioner had an interview with his Highness the Sultan, to whom he presented Admiral Sir Lewis Bayley, Commander-in-Chief of the Mediterranean Fleet, who has been paying a short visit to Cairo.

Cardinal Bourne in Egypt.

Cardinal Bourne, whose arrival in Egypt was chronicled last week, is having a very busy time. He has come to this part of the world in his capacity of Ecclesiastical Superior of the Catholic Navy Chaplains, in order to inspect the chaplains and visit the Catholic men of the Mediterranean Fleet, and he will eventually perform the same duty to the British Fleet in the Black Sea. He is also taking the opportunity of his visit to Egypt and Palestine to see the British troops.

It is not unnatural while in Egypt that his Eminence should seek to get into contact with his co-religionists of other nationalities. He has devoted a great deal of time to visiting the various religious institutions which have been long established here, especially those directed by the French and Italians; and has officiated at ordinary and special services held in the various Catholic churches. Indeed, there is every reason to believe that the visit will have far-reaching effects on the local Catholic communities in so far as it will dispel doubts with regard to their future and remove grounds for any misunderstanding that may exist at present or that may henceforward arise.

As an instance of this, I would cite the visit he paid on Friday last to the Collège des Frères, where 3,000 of the pupils of this excellent and very important institution were assembled to greet him. The speech of welcome, after referring to the history of the Collège in Egypt, mentioned that they had certain fears as to their future resulting from the declaration of a Protectorate over Egypt by Great Britain, "a Protestant State." Cardinal Bourne, in his reply to their welcome, took the opportunity to point out that, whatever the policy of the British Government might be in Great Britain and Scotland, where there were Established Churches, elsewhere in the British Empire that Government was simply a "Christian" Government, which, being obliged to recognise the unfortunate divisions that exist in the Christian churches, is prepared sincerely to accord the greatest liberty to all beliefs; consequently there should be no fears as to the liberty which will be accorded to every religion and as to the advancement of education throughout the Empire in general and in Egypt in particular. This statement has, I understand, had an excellent effect on the foreign Catholic communities, and there is every reason to believe that his Eminence, who, apart from his other gifts, speaks French and Italian fluently, is being successful in smoothing over whatever difficulties may exist among the local Catholic communities.

The Late Mr. Roosevelt.

Ex-President Roosevelt, whose sudden death has just been announced, was no stranger to Egypt, where his visit, about nine years ago, on his way back from his East African big-game shooting expedition, is still remembered by members of the Press who were here at the time and by the Nationalist element. The former had an exacting though interesting time; for the energetic ex-President was on the go from early morning until late at night during the fortnight he spent in Cairo, and they went through a period of hustling such as few of them had ever experienced. As for the Nationalist party, they persuaded Mr. Roosevelt to make a speech at the Egyptian University, which had just been inaugurated, confidently looking forward to a pæan of congratulation and of encouragement; but to their consternation, he did the opposite of what he was expected to do, and, having gathered during his stay what the true state of affairs was, he proceeded to deliver to them a homily with regard to their claims for self-government and the unfortunate unrest in terms which left no mistake as to what he thought of them. The portion of Mr. Roosevelt's speech dealing with self-government, etc., might well be re-read and taken to heart to-day by the element which has been at work since last summer trying to stir up a popular agitation for the political autonomy of Egypt.

The Indian Troops in Egypt.

The cessation of hostilities, no longer requiring a concentration of troops in Palestine, has been followed by the return of a large number of the units to Egypt, where they are now stationed at such points as Mena-House, Heliopolis, Sidi Bish, Mex, and Kantara. The Indian troops, who constituted a large proportion of the force with which General Allenby gained his victories, have been concentrated for the most part in the Alexandria district; and the presence of such a large number of Indians has led the authorities to cast about for some means of providing for their amusement and recreation apart from the ordinary facilities obtainable in camp and in the city. As a result of consultation between the military authorities and the Y.M.C.A., it was decided to establish a club especially devoted to the requirements of the Indian Forces; and thanks to the co-operation of the municipality the premises of the old Italian School were secured. The building has been furnished with everything which could be required by officers and other ranks of the Indian Forces. All castes have been provided for; there are separate cook-houses; and every facility will be afforded those who use the club to amuse themselves in their own traditional fashion. The club was formally opened on the 4th inst. by Brigadier-General Boyle, G.O.C. Alexandria district, in the presence of a large gathering of British and Indian officers and men; a silver key designed by Lieutenant Shawe, Royal Scots (attached 153rd Rifles), and suitably inscribed, being presented to him for the purpose by the committee. The club will be under the direction of the Y.M.C.A., Mr. J. H. Rawat, a secretary of the Indian Y.M.C.A., having been appointed manager.

THE BRITISH ADMINISTRATION IN PALESTINE.

The municipal taxes and the Wakfs' revenues are not included in the Budget. The former are in the hands of the local bodies, which number twenty-two, and, subject to the general control of the Chief Administrator, are self-governing. The system of municipal taxation is regulated by the Turkish Municipal Law, and it has been thought best to allow the municipalities to work and develop as far as possible on indigenous lines, with merely general control by the administration. The municipalities are under the supervision of the local military governors, who act as their intermediary and report on their activities. They are responsible for their own finances, and submit their annual budget to the Chief Administrator, without whose consent they cannot make any new levies.

The Wakfs' revenues are derived from tithes and rent, the greater part of which come from the Gaza and Hebron districts. Certain payments which were made by the Turks have been continued by the British administration. Under the Turks the revenues were administered from Constantinople, which received the collections and doled out through the Director of Wakfs at Jerusalem and Beyrout whatever the Minister of Evkafs considered suitable for the local Moslem charities. Under the O.E.T.A. it has been thought best to leave the Wakfs as far as possible under Moslem management, and a local Wakf Committee has been constituted in each district, with a Central Committee at Jerusalem, composed of representatives of the local committees and a British representative.

Other possible sources of revenue are the railways, the telegraphs, and the postal services, which are entirely, or to a great extent, worked by the Army, and so do not benefit the administration. However, as the postal service has been opened to the public, a proportional division of the income has been made between the British Postal Service and the O.E.T.A. The net revenue resulting is estimated at £E10,650, but with the opening of additional post offices in the new territories a higher figure may confidently be expected.

A source of revenue which might have been considerable is that from woods and forests. The Turks, however, cut down 50 per cent. of the forest and fruit trees in the southern area, and it will be some years before the country recovers. Forest nurseries have now been established at convenient centres, and considerable tracts of hill country unsuited for cultivation have been enclosed as forest areas. Forest laws have been promulgated, and tree-planting is

Digitized by Google

being given every encouragement. The two most important timber areas are those of Hebron and Mount Carmel, and large tracts of hills in other parts now bare were undoubtedly once well-wooded. A special effort is being made to reafforest the area round Jerusalem, and thousands of seedlings have been laid down for plantation next year. Certain forests in the Jericho and Haifa districts are already being profitably worked for fuel. As the report says, the country is capable of great development by afforestation, and a large revenue may ultimately be expected under this head. No mines have as yet been prospected or worked, but a considerable revenue in royalties should be obtainable in the next few years.

As regards expenditure, it is pointed out that, compared with the Turkish, the present figure is high; but this is explained by the facts first, that the destruction or withdrawal by the Turks of much of the essential material has necessitated a considerable amount of non-recurring capital expenditure; secondly, that the Turkish officials were underpaid and expenditure on public health was insufficient; and thirdly, that, owing to the military character of the administration, it has been necessary to have a much larger establishment than would have been the case under a civil government, and if it had been possible to organise from the start with trained expert officials. Every effort has, however, been made to keep the expenditure down to the minimum.

Taking the different heads very briefly, we find that the estimates are by no means extravagant. Thus, the legal expenditure for the whole territory is only slightly in excess of the last Turkish estimate for the sanjak of Jerusalem alone, which comprises only five out of the twelve present districts. All the Turkish civil and religious Courts have been continued, as a note recently published in your Cairo letter showed, but the numbers of the establishments have been reduced and salaries raised; while efficient supervision by British officers has been provided.

As regards the police, an entirely new force had to be created, and the system of local recruitment was decided on, the force being divided into foot police and mounted and dismounted gendarmerie. Owing to the Turks having taken most of the able-bodied men for service, difficulty was experienced in raising the whole force at once, and so an arrangement had to be come to with the Egyptian military authorities for the loan of a battalion of 300 men and officers to undertake the police duties until a local force could be raised. This arrangement proved costly, but it served its purpose, and the Egyptian unit was able to train the local police.

Relief expenditure bulks largely in the estimates. The administration had to assist the people whose grain stocks had been depleted and who were without current money. Arrangements had also to be made for refugees from the enemy side of the line and from the occupied areas. In addition to direct relief, loans in money and kind to dispossessed landowners and cultivators have been granted, fuel and water have been supplied to the orange-growers, and plough animals have been provided on the deferred payment system.

Public health was never very generously looked after by the Turks, and owing to the damage done by them before leaving and to their withdrawal of all hospital material and stores, the estimates include a relatively high proportion of non-recurring expenditure. The urgency of first measures, such as those called for by the serious outbreak of cholera at Tiberias, has necessitated an increase in expenditure. As regards education, provision has been made for primary education for Moslems at the principal centres of population, and a trade school has been opened at Hebron, while village schools have been reopened and improved. To a great extent education was provided for by charitable and religious institutions, and the administration has concentrated its efforts on assisting the Moslem primary schools as much as possible. Under agriculture, as the report says, a great deal of leeway has to be made up owing to the discouragement which the Turkish system created amongst the rural population and to the depletion of the country's stocks of seed and animals caused by the retreating enemy. An official has been obtained from the Egyptian Government to supervise the reorganisation, and a native agricultural officer has been appointed to each district. It is hoped that with the agricultural institutions established by the various religious bodies and the Jewish colonies it will be possible to make headway in the near future.

The foregoing review shows some idea of the difficulties with which the O.E.T.A. has had to contend in reorganising the territory placed under its control, and of the manner in which it has tackled its task. Those who have visited the country and who know something of its previous condition agree in expressing astonishment at the progress already made in the short time that it has been in the hands of the O.E.T.A., and they are well satisfied that, given a continuation of the present policy, the future welfare of these territories is assured.

CONDITIONS IN SMYRNA.

We are indebted to a correspondent for the following letter written from Smyrna in the first week of January:—

My dear——,—It is glorious to be writing to each other again with the certainty of the letters reaching you. We have seen your last letters to S—— and D——, written before Christmas and sent on here by A——. She sends letters by hand in the transport that comes here for the Prisoners of War. So far we have only been able to get letters that way, but we hope the posts will soon be established. It is easier for us to send out letters, for we send them through Naval officers.

How wonderful the end of the war has been! Who would have believed it six months ago? We were, of course, under the thumb of the Germans, and they kept us ignorant of any successes the English may have had. How we have longed to see you sitting with us! Now I suppose we shall have to wait till the summer, before it can be possible for anyone to come here. It would not be wise to come as long as prices are so high, and your home will have to be done up from top to bottom. We could have sold it for you some time ago, as people were paying splendid prices. The only thing I did was to sell your old piano for £200 (paper), with which I bought a cheque on London for £90 (gold). There is little else left of your furniture—it has all been ruined by the Turks who occupied your house. For a long time the cost of building and repairs will be enormous, for there are no materials and labour is very high. Wages are more than a pound a day, and one cannot get anyone to do the least thing under a dollar. We pay our washerwoman now half a pound a day. Soap is a fearful price. It has been up to £1½ per oke. Fortunately, we had bought four sacks two years ago, for which we paid £54, and that saved us from despair. We will write to you about everything, but do not be in too great a hurry to come back yourself even if R—— has to come for business. The girls must not be under any delusion about Boudja. It is aperfect "hole." There are no trains running, and will not be any for some time, as there is no coal, and the engines and carriages are broken down and ruined. It will take at least six months before order can be restored. We have had the armistice for two months and are worse off now in some respects than we were during war-time. For the last two months we have had no gas, and. in consequence, petroleum has gone up, and is now £4 per oke. We have some in the house, but when it is done we shall be obliged to use oil lamps, and they are horrid. Buy yourselves everything before you come. I will write again and give you prices of commodities here, so that you may compare them with Rome prices.

We are fortunately having a warm winter so far, and have not suffered from want of fires, but then we are some of the lucky ones, for we can afford to buy charcoal, which is more than half-a-medjidieh the oke, and we can keep comfortable with the "Tandour." Other poor families are suffering terribly. I hope R. will be able to get the Red Cross to send some things at once, for the poor people are very, very hard up and suffering. After the second year of the war most of the very poor died, and for a short time there were no beggars in the streets—now they are full again.

They are those who had their little store of food and money, which is all gone, and they have come down to beggary. If they could only get relief and a little seed to plant their fields, their spirits would rise, for now they feel that they will reap what they sow, and will be encouraged. It has been so disheartening for them to have all their crops taken from them every year without payment. Our old gardener of Boudja has been doing his military service—that is, working for the Army. During his spare moments, and on Sundays and holidays, he worked his own vineyard, but never a bunch of grapes did he get from it—the soldiers took all!—year after year the same thing happened to him and many others. I do earnestly hope that this year he will be able to reap the fruits of his labours. His case is one of thousands. Some few tried to resist the soldiers robbing them, with the sad result that they were murdered.

I very much fear the coming summer for the health of Smyrna. The drains have not been touched for four years, nor have the roads been mended. One can see the sewerage and the smell from it is awful, and what will it be in a few months, when the heat comes on!!

Rahmi Pasha had grand ideas of making boulevards! The result is that he has pulled down a thousand houses which remain as dust heaps and dirt collectors in the middle of the town. The Germans also, who made very sure of having the place, built "Kasernen" (Barracks), and made beginnings of big roads from Caravan Bridge to the Point, but they are not finished, and the dirt of the town is being thrown there now. Most of the fine cyprus trees near Caravan Bridge have been cut down. You will

Digitized by Google

see many changes for the worse, but we hope the day will soon come when the country will fall into better hands. The one Dutch steamer that lay in port these four years of war has been loaded and sent to America. As yet the blockade has not been raised. The British Seamen's Hospital will require entirely refitting before it can be used again. What a lot of work there is for everyone to do to put things straight once more.

We are having lovely weather. The quay is so gay with the warships lying in the bay. When the Greek ship came in the Greeks went in thousands in boats to meet it. For days after thousands visited the ship and gave hundreds of pounds for the war fund. Our Commander, who is a sort of king here now, ordered the flags on the houses to be pulled down, for he was afraid of the excitement they were causing. However, he also ordered the Turks to take down their flags when they started one day to put them up for a feast of theirs.

If R—— can get us some medicines and surgical dressings what a blessing they would be. I could do a great deal of real charity amongst the poor women who have babies and who need help. A—— and I could be of real help to the Relief Committee when it comes here, for we know so many deserving cases. The English poor men-folk have got clothing this Christmas from the Prisoners of War Fund. A lot of suits were sent here for the British prisoners, but as most of them had already left, there were a good many suits left over, and Mr. —— got permission to distribute them amongst the civilian poor prisoners.

ANATOLIA.

Speaking before the Central Asian Society on January 29, Professor Sir W. M. Ramsay said that the two names Anatolia and Asia Minor were not in the strict sense equivalent, but essentially both meant the peninsula projecting from Asia towards Europe. In ancient times this had been the wealthiest country in the world, but for a long time now it had been practically the poorest. When Europe was still a barbarous land Anatolia was the centre of the Hittite empire, later it became, and has continued ever since, the bridge between the Mediterranean and Asiatic civilisations. The route across it divided to pass round the salt lake that lay in the centre of the country; the more northerly line led most directly to Central Asia, the other led by Adana, Aleppo, and Baghdad to the Persian Gulf. In Roman times, although trade went by sea, the line of communication across Anatolia was important, because it was used by travelers, messengers, couriers, and officers going to command distant provinces. The route continued in use during the middle ages, and was determinative of European civilisation in a great degree. It was the axial line of the world, but the discovery of America and the development of that continent had hidden its importance during the past several centuries, and it was the merit of the Germans, in political history, to have detected its importance, and to have based upon it their scheme for the conquest of the world. If, as the result of the Peace Conference, Anatolia was divided between various claimants, that division would produce as great and dangerous a scandal as the partitioning of Poland, for, however bad the Turk might be, he was a human being, and had his part in the scheme of the world. The maintaining in proper condition of the great bridge between Asia and Europe was apparently to be left to him, because it was impossible to turn out ten millions of people and distribute them over the face of the earth. Anatolia was essentially peopled by Turks; the only other people with any claims there were the Greeks—except so far as some other Power might be required to direct the Turkish Government. That Government from beginning to end had been an outrage, and the people who had suffered most from it had been the Turkish peasantry. The way in which the people of Anatolia had been degraded and ruined by the centralisation of Government in incapable and corrupt hands in Constantinople, was one of the most hideous facts in history. Somebody would have to guide Turkey to prevent the officials from ruining the country in the future, as they had done in the past, and to insist that the path across the bridge between Europe and Asia must be kept clean.

A short discussion followed, to which Professor Ramsay replied. Referring to a point which had been raised as to the Greeks in the west of Asia Minor, he said the Greeks had definite good claims to bring forward, but there must be a good deal of allowance on both sides. For one thing, he would like to see the Greek claims based on trustworthy maps. So far as he had seen or heard, all maps submitted by the Greeks to show the distribution of population on the western edge of Anatolia and the eastern coast of the Ægean had been falsified to a very marked degree.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

A friend who went through the siege of Kut tells of a humorous incident that came his way. He was just leaving the building in which he had his quarters when, suddenly, there was a most appalling crash; the place shook beneath his feet; and as he rushed outside he found a cloud of dust, smoke, and débris, hanging over the alley. One glance showed him that the house next to his had been severely *strafed*, and he felt at once that there was very little hope for anyone who had been inside it when the bomb fell. But even as the thought passed through his mind, and before he had taken a couple of steps towards the ruined house, an old woman appeared at the door, moaning, weeping, and crying aloud. And the burden of her complaint was: "Oh, the crockery!" Subsequently it transpired that she had friends in the building; but her thoughts were not of them, but of her precious crockery. Possibly the humour of the story may not appear very great to those who do not know the Arabs of these parts and their household arrangements. But anyone acquainted with the beautiful simplicity of their housekeeping arrangements, and the very inexpensive character of the "crockery" usually used, will not fail to enjoy the tale.

***

Mention of domestic arrangements in the Orient reminds me of another tale that I heard recently. Two sailors, one home from Turkish waters, were in a public-house, discussing their drinks and the personal habits of foreigners; and the man from the East was holding forth on the superior cleanliness of Europeans, and especially of Britons, over Orientals. His companion was slightly sceptical. Suddenly, from over the partition that separated them from the neighbouring bar, came the sound of feminine voices:—"Oh, yes, me dear, they're nice little 'ouses; but I must say I should like to 'ave a bath-room," said one. The sailor glanced triumphantly at his pal. Here was an illustration of the British love for cleanliness. But before he could enlarge on the point the second lady had exclaimed: "What! Ain't ye got no bathroom! Then, what *do* you do with the coals?" And number one sighed: "That's just the bother, me dear." Which is an absolutely true story.

***

I am sorry that Ismail Kemal Bey is dead, for he was a man of quite exceptional ability; and his knowledge and influence would doubtless have been useful to the world in the wonderful resettlement of the Near East which we all expect—or hope—to see. A friend, an Englishman who has resided for very many years in Constantinople, and who knows what he is talking about, said to me, a few days ago, that Ismail Kemal might fairly be called "the Venizelos of Turkey"—which was surely a very pretty compliment. Another good point about the Bey was that he was no lover of the Teuton. In fact, I have always understood that he left Albania when the Wied princeling went there, chiefly because of his Germanophobe feelings.

***

I had quite a shock the other day when an English officer home from Macedonia made casual reference to the "magnificent horses" of the Serbian cavalry. The Balkan "horse" has always struck me as a sorry looking beast, beside which even the *Kadeesh* of Busreh and Baghdad would appear attractive. As I saw him, he was undersized, shaggy, and generally meagre, not to say starved-looking. Placed in the midst of a herd of New Forest ponies he would have attracted no attention at all, but placed among European cavalry horses he certainly would have called forth comment—of an uncomplimentary character. So, naturally, when I heard the present-day Serbian cavalry mounts so highly praised, I was puzzled. Unfortunately, my informant could not enlighten me on the point. He had been puzzled by it himself. But he was quite clear that the Serbian cavalrymen he saw all had "hunters under them," as he expressed it. Could the Austrians explain the mystery? Or must we look to France—or Great Britain?

All genuine, in pots like this.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

"THE CRADLE OF THE WAR."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Having regard to the importance of the review of my book—"The Cradle of the War: The Near East and Pan-Germanism"—published in THE NEAR EAST for Jan. 31, I hope that you will allow me the hospitality of your columns not to complain of, but to comment upon, some of the points there raised.

(1). Your reviewer appears to throw doubt upon the correctness of my suggestion that Germany really made the war for the purpose of developing and consolidating her position in the East. Surely, whatever may have been said by a German Minister to the British Ambassador in Berlin, my contention is proved up to the hilt. Ignoring altogether the policy pursued by the enemy throughout the war, we now have the memorandum of Prince Lichnowsky, which in its entirety demonstrates the correctness of such an argument, and which in particular goes so far as to state that even before the war Germany "carried out a Triple Alliance policy in the East," and that the goal of her political ambition was to dominate in the Bosphorus."

(2). Whilst I do not wish to lay stress upon details, I would point out that although reference to the telegrams of the ex-Kaiser to the ex-King of Greece, and to the proposed cession of Cyprus by Great Britain to Greece in 1915 was not, in my opinion, necessary in a book of this kind, as a fact the latter question is mentioned and not omitted, as suggested by your reviewer.

(3). It may be unfortunate that all or part of the volume was not writen after the conclusion of the Armistice, though, in that case, considering the conditions at present prevailing, it is doubtful whether it could now have been available to the public. As a matter of fact, the book actually appeared in the United States nearly two months before the signing of the armistice, and therefore before the collapse of Bulgaria and prior to the beginning of the peace negotiations between Germany and America.

(4). I was and am certainly in favour of the existence of a Balkan League, and of a good understanding between the Balkan States, and I consider that this is indicated by many passages contained in my book. On the other hand, I do not think that this highly desirable state of things can be attained until the Near East has been partitioned upon a fair national basis—a basis which would probably have to be imposed upon rather than accepted by the chauvinistic elements of the various populations.

(5). Undoubtedly, from certain standpoints, it might have been desirable to discuss at greater length the futures of Constantinople and, I may add, of Asiatic Turkey. Unfortunately, however, both in this country and in the United States, there are certain fairly well-defined limitations which govern the lengths of volumes of various kinds. This may be a pity for the reader, and it is certainly a disappointment to an author, who none the less is generally compelled to follow not so much his own wishes upon the subject as those of others who know better the conditions of book making than he does himself.—I am, &c.,

Feb. 1, 1919. H. CHARLES WOODS.

AUTONOMY FOR MACEDONIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I see in your paper many ideas about the future of Macedonia, which is designated as a thorny problem. Now, I have lived over thirty years in this country, and to me it seems all so simple. What the Macedonians want is autonomy, governed by one or more strong Powers. Let the frontiers of this autonomous State be carefully drawn, so that nowhere the frontiers of the Balkan States touch each other, and the strong buffer Macedonia is there to stop all brigands. Then we shall have peace, and not till then. If the Macedonians are not filling the newspapers with cries for autonomy, it is only because under present circumstances they dare not speak. Fear is the great ruler here.—I am, &c.,

X. Y. Z.

Salonika, Jan. 23, 1919.

It is announced that the chief of the Greek Military Mission in Sofia, Colonel Mazarakis, last week visited the Prime Minister, M. Todoroff, and demanded better treatment for the Greek element in Bulgaria and reparation for damage done.

Loyal congratulations from the women of Ceylon on the glorious conclusion of the war, together with £6,000 and supplies towards the cause, were forwarded to the Queen at a garden party for Queen Mary's Needlework Guild, held by the Governor at Colombo, on Saturday.

SYRIA & PALESTINE RELIEF FUND

AT THE REQUEST OF

GENERAL SIR EDMUND ALLENBY

A NEW

RELIEF UNIT

IS GOING OUT

ORGANISED BY THE SYRIA & PALESTINE RELIEF FUND
AND THE ORDER OF ST. JOHN OF JERUSALEM.

VAST NUMBERS STILL IN DIRE DISTRESS.

CABLE FROM DAMASCUS.
"Urgent calls for help. Practically no medical relief in the whole city. Resources quite inadequate for varied needs of Damascus alone."

CABLE FROM THE LEBANON.
"Desolation everywhere. Parents inconsolable over loss of all their children. Other children left parentless and deserted. Houses in ruins. Survivors at limit of their resources. Clothing situation desperate. Immediate help will save lives."

Cheques to Secretary:

SYRIA & PALESTINE RELIEF FUND

NEAR EAST BOOKSHELF.

THE WAR IN THE EAST.*

War being admittedly a gigantic and complicated game of strategy, we must assume that the rules and moves thereof are as well known to the competent staff officer as chess openings are to the expert player. Given positions and situations have to be treated in a given manner, and due allowance must be made for untoward happenings, combinations, and the use of new instruments of warfare. Even so, however, our list of complications is not complete. There is the personal element to be taken into account, the genius of the commander-in-chief, or his lack of genius. The birth of leaders like Generals Allenby, Maude, Birdwood, and others is not an every-day occurrence, nor can they be expected to emerge from staff colleges like bees from a hive. But when they do appear they have a very laudable habit of making it extremely unpleasant for the foe and pushing an advantage gained with such rapidity, *flaire*, and acumen as to wrest complete victory from a minor operation. Their frontal attacks are not in the nature of desperate charges along the enemy's main avenue of strength (Achi Baba); their feints are not inadequate thrusts at positions which the opponent knows will never be permanently held (Gaza), nor do they lose time and opportunity by sitting tight and allowing the adversary to strengthen his tactical position (Krythia-Maidos Road).

In the course of our campaigns and adventures—the former subsidiary and the latter diverging operations—in the Middle East the value of the personal element played a most important rôle. It was responsible for the heroism and the collapse that made up the Gallipoli tragedy; it led to the first dash for Baghdad and turned the line of the Gaza-Beersheba defences; it conquered Syria and Mesopotamia, scattered the forces of the Senussi in the Western Desert, and wrote the word *finis* to the career of Turkey as the ally of Potsdam and Kaiserism.

Mr. Edmund Dane in his careful study of our operations in the zone alluded to, from the day on which Talaat and Enver sold their country to the fall of Jerusalem in December, 1917, has, either consciously or otherwise, brought out the extreme value of this personal element, and we are grateful to him for emphasising it. His study, divided into chapters following the various operations as far as possible in chronological sequence, is based upon official records.

"No fact has been glossed, and no statement advanced as fact which is doubtful. Some opinions expressed may be open to debate, as most opinions are, but the proofs are there, and the reader may judge for himself. My claim is to have written without bias."

We cannot follow here the opinions of the author, whose reputation as the Military Correspondent of the *Westminster Gazette* gives them a certain weight denied to minor scribes. Nor shall we discuss his sharp criticisms of Government decisions concerning the politico-military policy of Great Britain in the Near East. We are in agreement with many of his contentions, some of which are boldly and logically developed, and recognise fully that no future standard work can be written on the same subject without reference being made to the valuable book under review. But whether posterity will lay the blame of the Gallipoli misadventure on the shoulders of General Hamilton, whether it will agree with the statement that the attack should have been launched in Syria instead of at the Dardanelles, whether it will exculpate General Nixon entirely from the lamentable reverse of British arms at Kut, are moot questions—theories which the author, we presume, classifies among his debatable opinions.

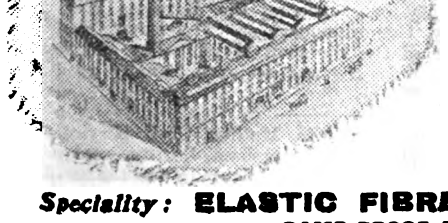
There are one or two statements, however, which we should like to place in relief. The first asserts that the British Government's fears of a massed enemy attack on Egypt were greatly exaggerated, with the result that not only did they create an atmosphere of nervousness, but obliged us to keep tied up in Egypt masses of troops which could have been more usefully employed elsewhere. It is, of course, easy to be wise after the event Nevertheless, the position of Egypt in our Imperial fabric is so vital that excessive caution was preferable to caution without a safe margin to fall back on. No doubt, however, the nervousness" which did exist led to military operations of a risky nature, whilst untoward circumstances placed our forces under the command of a leader who allowed them to be uselessly "frittered away" when they might (possibly) have made good.

The second statement concerns the Allies' attitude of *non possumus* towards King Constantine when that unworthy gentleman imitated in Athens the unscrupulous conduct of the Tsar Ferdinand in Sofia. It is rational to assume that if Great Britain, France, and Russia had from the outset taken up a firm attitude in the capital of Greece we should at least have been spared the Serbian tragedy and the costly Gallipoli fiasco. But could we at the time adopt that desired attitude? It is exceedingly doubtful. In the first place, because the terrible seriousness of the situation—the collapse of Russia, etc.—could not possibly have been foreseen, and in the second, because allowance had, unfortunately, to be made for exterior influences which were adverse to any drastic action. The saving day of the unified command had not dawned, Europe and Britain had to pass through many a sore trial ere that turning point in the history of the world had been reached.

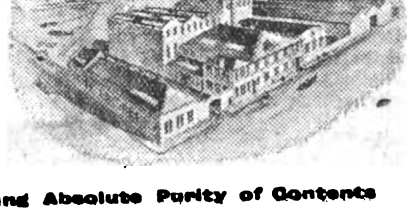
The above remarks are not intended, however, to detract from the value of Mr. Dane's work on our campaigns in the Middle East. The whole subject is treated with thoroughness and care, and the style, though strictly military at times, is on the whole lucid and matter-of-fact, the arguments for or against a measure being simply and logically developed.

C. R.

* "British Campaigning in the Nearer East: (1914-1918) from the outbreak of War into Turkey to the taking of Jerusalem." By Edmund Dane, Military Correspondent of the "Westminster Gazette." With 19 Maps and Plans. (Hodder and Stoughton. 6s. net.).



A "FLIER" IN EGYPT.*



This is a story sufficiently crowded with adventure to satisfy the greatest glutton for such things. Unfortunately, the author makes a bad start by getting us hopelessly fogged in the matter of time. On page 11, Blake vanquishes a German airman on the night of a particular "wartime dinner party"; on page 13, he returns from a flight "about a week after the dinner party"; and yet a day later, on page 19, he has "to relate his experiences of the previous evening," which turn out to be those of page 11! It would be easy to point out a good many other slips in the book, but we are disposed to overlook them because the author is so obviously carried away by his own yarn. And as "a yarn" it might be much worse. The spies are villains of the deepest dye, and the hero and heroine are quite of the old-fashioned type; while the setting, in Cairo, and mostly in the Citadel, is picturesque.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. February	1919. January.		1337. Jumada I.	5679. Adar I.
7	25	Friday	6	7
8	26	Saturday.....	7	8
9	27	Sunday	8	9
10	8	Monday	9	10
11	29	Tuesday	10	11
12	30	Wednesday	11	12
13	31	Thursday	12	13

Sir Robert Gillan, I.C.S., is retiring from the Presidency of the Indian Railway Board.

Prince Paul of Serbia has arrived in Rome, where he is the guest of the King of Italy.

On his elevation to the peerage Sir S. P. Sinha will take the title of Lord Sinha of Raipur.

Prince Alexander of Serbia arrived in Paris on Sunday, accompanied by General Stevanovitch.

On January 28, at Alexandria, the wife of Mr. F. H. Teall, Assistant Commandant of the Alexandria Police, gave birth to a daughter.

On January 29, at Marrakesh, Morocco, the wife of Mr. Harold Patteson, Acting British Vice-Consul at Saffi, Morocco, gave birth to a son.

Colonel C. C. Choyce, A.M.S., having relinquished the post of Consulting Surgeon, Egyptian Expeditionary Force, has returned to 31, Wimpole Street, W.1.

Colonel Robert Watson Sparke, late R.F., of Church Road, Richmond, Surrey, a Crimean and Indian Mutiny veteran, left property valued at £37,082.

The French Republic have awarded the Croix de Guerre with Palms to the Emir Feisul in recognition of his exploits in command of the Army of the Hejaz.

On January 27, at St. Luke's Vicarage, Church End, Finchley, the wife of Commander A. Westmorland Wood, R.N. (Indian Finance Department) gave birth to a daughter.

Sir Alexander Pedler, C.I.E., F.R.S., F.I.C., of Stanhope Gardens, South Kensington, who died at Whitehall Place on May 13, aged 68, left property valued at £71,407.

Lady Beatrice Pretyman and Miss Pretyman have left England for Egypt, and expect to be away for two months. The hospital at Orwell Park, which has been open throughout the war, is now closed.

General Sir Peter Stark Lumsden, G.C.B., C.I.E., of Buckromb House, Dufftown, Banffshire, at one time Quartermaster-General and Adjutant-General of the Indian Army, left property valued at £12,422.

A course of Rhodes public lectures on "Indian Institutions" will be delivered at University College on Mondays, at 5.30 p.m., commencing on February 10. At the third lecture Mr. E. S. Montagu, Secretary for India, will preside.

A marriage has been arranged between Captain Ernest Cecil Dixon, R.E., second son of the late Henry Ernest and Mrs. Dixon, of Palace Road, and Lorna, elder daughter of Mr. and Mrs. Raymond Godfrey, of Palace Road, Surbiton.

The Rev. W. E. S. Holland, Principal of St. Paul's Cathedral College at Calcutta, has come home at the request of the Archbishops to superintend a scheme for obtaining and training men and women workers for religious and social work under the Central Board of Missions.

The Persian Delegation to the Peace Conference has arrived in Paris. It is composed of the Mushaver-el-Mamalek, Persian Minister for Foreign Affairs, the Zoka-el-Mulk, an ex-Minister of Justice, and Mirza Hussein Khan, an ex-Minister of Public Works, accompanied by two secretaries.

Lady Chelmsford, wife of the Viceroy of India, arrived from Delhi, at Victoria Station, on Thursday evening last week (January 30), by the Folkestone express. She was accompanied by her daughter, the Hon. Bridget Thesiger. They were met at the station by Lady Wimborne, Lord Willingdon, Lord Carmichael, Sir William Duke, Sir Charles Bayley, and Mr. Basu (members of the India Council), and Mr. Vernon Dawson, I.C.S., of the India Office.

Miss M. L. Biggs, general secretary of the Serbian Relief Fund, and three of her fellow-workers at the headquarters of the fund, have been awarded the Serbian Red Cross Medal.

Charles Collins, a Crimean veteran, has died at Godalming in his eighty-third year. At Scutari, as hospital orderly, he attended Florence Nightingale and carried the light as she made her last round of the wards.

The engagement is announced of Philip Noel Fernau, lieutenant, R.F.A., son of the late George Fernau, of Casablanca, Morocco, and Mrs. Fernau, of Heathside, North End, Hampstead, to Betty, younger daughter of Mr. and Mrs. F. T. Young, of 55, Gloucester Gardens, Hyde Park, W.2.

The engagement is announced between John Dunamace Heaton-Armstrong, 20th Deccan Horse, second son of the late Mr. Heaton-Armstrong and Mrs. Heaton-Armstrong, of 5, Cornwall Gardens, S.W., and Mrs. Whitehead (*née* Béchet de Balan), widow of John R. G. Whitehead, R.F.C.

A marriage has been arranged, and will take place on Tuesday, February 11, between Captain Oliver F. G. Hogg, Royal Artillery, Royal Small Arms Factory, Enfield Lock, son of the late Colonel A. M. Hogg, Indian Army, and Mrs. Hogg, and Ella, daughter of Mrs. and Mrs. Arthur Hallam, of Shanghai.

The engagement is announced between Captain Geoffrey Palgrave Brown, the Norfolk Regiment, only son of the late C. N. Brown, J.P., and Mrs. Brown, of Great Yarmouth, and Jean Gordon Leask, R.R.C. (V.A.D.), elder daughter of the late James Leask, Bombay, and Mrs. Thomas Fraser, 38, Hanover House, Regent's Park, N.W.8.

A marriage will take place shortly between Captain T. S. Paterson, M.C., 19th Lancers (I.A.), eldest son of the late James Paterson, Esq., J.P., of Whitelee, Roxburghshire, and Ettrick Hall, Selkirkshire, and of Mrs. Paterson, Horndean, Hants, and Marjorie Enid, daughter of R. G. Hardy, Esq., C.S.I., J.P., and Mrs. Hardy, of Esmond, Cheltenham.

At a meeting of Unionists held on Saturday at Oxford to consider the selection of a candidate to fill the vacancy in the representation of the University caused by the elevation of Mr. R. E. Prothero to the peerage, it was decided to invite Mr. David G. Hogarth to become the candidate. Mr. Hogarth, who is a Fellow of Magdalen College, is the well-known archæologist, excavator, and traveller. He has excavated in Greece, Egypt, Cyprus, and Asia Minor; and he is a recognised authority on the Near East, and an author of great charm and solid repute. For three years he was Director of the British School at Athens.

The Most Rev. George Alfred Lefroy, D.D., Bishop of Calcutta and Metropolitan of India, who died in Calcutta on New Year's Day, left estate in England valued at £6,621. By his will he made temporary provision for increasing the income of the Bishopric of Assam in the event of the endowment fund for that see not having reached £25,000 at the time of his death. He also left £1,000 to the council at Delhi of the Joint Mission of the S.P.G. and the Cambridge Mission working at Delhi; £1,333 to the Lahore Diocesan Board of Education for purposes connected with the Auckland House School, at Simla; £500 to the vestry of Lahore Cathedral towards the completion of the Cathedral; and £1,000 to the Cambridge Committee of the Cambridge Mission to North India. The remainder of his estate is left to the Diocesan Council of Calcutta to be applied by them for the benefit of the work of the Church in the diocese of Calcutta.

OBITUARY.

Mr. Frederick Talbot Eades, I.S.O., late of the India Office, has died at Chesham Bois, Bucks, at the age of 63. He entered the India Office in 1875, and was promoted to be a staff clerk in 1896. He had been senior clerk in the Store Department, and in 1916 was awarded the Imperial Service Order.

Mr. Henry Charles Edward Wenden, C.I.E., died on January 31, at Summerhill, Horsell, Surrey, aged 77. He had been connected with railway work in India for nearly half a century. For five or six years before he retired to this country (in 1906) he was Agent of the Great Indian Peninsula and Indian Midland Railways, and on coming to this country he joined the directorate of the G.I.P.

Lieutenant-Colonel Charles A. Cresswell, late R. A. Indian Staff Corps, died suddenly on January 28, at "The Corner," Watford, aged seventy-four. During the Burmese War (1886-87) he was Deputy Commissioner at Thyetmyo, and was afterwards President of the Rangoon Municipality and Sessions Judge of Lower Burma. He was an exceptionally good Burmese linguist.

Mr. John Henry Master, late Madras Civil Service, died on January 29, at his residence, Petersham, Surrey, aged eighty-seven. Mr. Master was trained at Haileybury for the service of the Honourable East India Company, and entered the Madras Civil Service in 1852. He served in the North-West Provinces during the Mutiny. In 1869 he became collector of the Bellary district, and administered it during the anxious period of the Great Famine. He retired in 1879.

Digitized by Google

Mr. Norman Scott Rudolf, M.Sc., died at a nursing home in London on January 29, aged 47. He was head of the department of applied chemistry at the Institute of Science, Bangalore, and was an authority on the chemistry of tropical products, particularly natural indigo, essential oils, and rubber.

Colonel Montagu Clementi, late Judge Advocate General in India, has died at Tiverton, Devon, on January 30, aged 79. He served on the North-West Frontier of India in the campaign of 1863 and was at the forcing of the Umbeyla Pass. He also served with the Egyptian Expedition of '82 and took part in the battle of Tel-el-Kebir. For his first campaign he had the medal with clasp, and for the Egyptian Expedition the medal with clasp, the bronze star, and the Fourth Class of the Osmanieh.

MRS. CHARLES ANDERSON.

A correspondent writes:—The many friends in this country of the Rev. Professor Charles Anderson, D.D., and Mrs. Anderson, of Robert College, Constantinople, will be grieved to hear of the death of Mrs. Anderson at Rumeli Hissar, Constantinople, on January 3, after a few days' illness from pleurisy followed by pneumonia. The funeral was on Sunday morning, January 5, the anniversary of the birth of her distinguished father, Dr. Cyrus Hamlin, the first President of Robert College. The first part of the service was celebrated in the College Chapel, the Rev. Dr. Gates and the Rev. Professor George Huntington being the officiating ministers. The 91st Psalm (the last her daughter had read to her) and parts of St. John xiv. and I. Cor. xv. were the Lessons read by Professor Huntington, and the large congregation of students and friends joined in singing the hymns "Spirit of God, descend upon my soul," and "Father, in Thy mysterious Presence kneeling," and a male quartet sang "Lead, Kindly Light." Dr. Gates delivered a short but impressive and touching address.

As Professor Huntington writes to one who loved her, to whom she was "Cousin Abbie," and for whom the world will be the poorer now that a cherished friend of many years has passed away. . . . "Many of us drove to Ferikeuy, where she lies next to her own mother in the shade of beautiful evergreen trees, which she loved in life. The whole thing seemed to me beautiful and triumphant, just as she would have loved it. The day was one of those lovely sunny, cheerful days which the Bosphorus can give us in mid-winter, as was the day she died, all most appropriate. . . . She was never lugubrious nor sentimental. How can her place be filled? Of course, it cannot. So the old guard drop off one by one, and we pray for new ones to come who are worthy of the heritage. . . ."

Just so, that brave, happy soul was of the very elect. Gifted in no ordinary degree, a lover of music and of all the arts, a sympathetic musician herself, a first-rate linguist and a brilliant conversationalist, with a keen sense of humour and a love of fun, Mrs. Anderson would have been an ornament to the highest circles in any country in the world. Instead, she spent her married life between a country parish in America and a small village on the shores of the Bosphorus, close to the home of her childhood's days. There will not be one family, rich or poor, Christian, Moslem or Jewish, among her neighbours that will not miss her cheery smile and practical loving sympathy. A lover of children (how charming she was to the babies of all ages and sizes!), a lover of animals (how often one met her carrying bits of bread in a capacious bag for the hungry dogs of her own quarter as well as for the strangers she came across!), and a lover of flowers (her garden was a joy to her—never were there such sweet peas as grew in that garden!—her rooms a bower of perfumed delight and gracious hospitality), the thought of dear Mrs. Anderson of Rumeli Hissar will ever be a fragrant memory to all who loved her.

Our hearts go out in loving sympathy to the bereaved husband, Professor Charles Anderson, and their two sons, far away in America, and to the two daughters, Mrs. George Baker and Miss Sarah Anderson, in Constantinople. And we do not forget that other remarkable sister, Mrs. Washburn, in America too, the widow of another distinguished President of Robert College, the late Rev. Dr. George Washburn, whose name will never be forgotten in the land where his great life's work was accomplished amid difficulties and trials known only to those who know and understand the East.

H. v. M.

NEWS IN BRIEF.

The American Red Cross has sent a large food and clothing commission to the Balkans.

The delegation from the Lebanon was received in Paris by M. Pichon on Sunday and by President Poincaré on Monday.

A decree prolonging the mandate of the Mixed Tribunals in Egypt for the nine months ending October 31, 1919, has been signed.

The South African Indian Congress has passed a resolution representing the position of Indians under the Union as worse than before.

The new Provisional Government in Albania have selected their President, Turkhan Pasha, to represent them at the Peace Conference, with three others as councillors.

A German report states that the first group of Bulgarians returning home from Germany, consisting principally of military men and officials, left Berlin last Saturday.

On Tuesday the Judicial Committee of the Privy Council began the hearing of appeals by Mrs. Besant from two judgments of the Madras High Court on questions under the Indian Press Act.

A writ of attachment has been issued against M. Gounaris, ex-Home Minister in the Greek Cabinet of M. Skouloudis.

Means of communication having improved, Greek reserves of the classes from 1906 to 1909 are now getting long leave. The release of the classes up to 1913 is expected shortly.

All the expenses of the Haidarabad Imperial Service troops and the 20th Deccan Horse on active service, amounting to £1,020,000, have been defrayed by the Nizam of Haidarabad.

Greek journals express a desire that the question of the Dodecanese should come before the plenary Peace Conference, and not be decided by separate agreement between Greece and Italy.

King Alexander of the Hellenes, owing to a slight mishap to his right arm, has been temporarily unable to sign decrees. The Cabinet decided that his verbal approval would be sufficient.

The New Syrian National League, which claims to represent 150,000 Syrians in the United States, has petitioned President Wilson to have the principle of self-determination applied to Syria.

Ukrainian newspapers report the arrest at Rostoff of Krylenko, the former Bolshevist Generalissimo, who had enlisted under false pretences in General Denikin's Army in order to push Bolshevist propaganda.

Transport to Transylvania of the Roumanian Legion which was formed in Italy has been begun under the direction of Roumanian officers in Transylvania appointed by the Roumanian Government.

Owing to reports received through Constantinople that the Turks are persecuting Greeks in the district of Pontus, Armenia, British and French officers have been sent to make investigations.

General Allenby has issued a special Order of the Day reminding all ranks of the Expeditionary Force in Egypt during the trying and unavoidably extended period of demobilization that the good name of the British Army depends on the individual conduct of each member.

The Australian Historical Mission, with Mr. C. E. W. Bean at its head, left London recently for Australia, travelling via Gallipoli, in order that the members may study again the old Australian and Turkish positions at Anzac and Helles, and certain historical facts connected with the operations there.

Albanians domiciled at Constantinople have addressed an appeal to the Entente Powers and America disputing the Greek claims to the Epirus, and accusing the Greeks, Bulgarians, and Serbs of atrocities committed against the Albanians. They also urge that the boundaries of Albania should be extended beyond the limits defined by the London Conference of 1913.

A Constantinople message, dated January 26, announces the escape from custody of Reshid Bey, the ex-Vali of Diarbekir, and one of the most prominent members of the Committee of Union and Progress, who was compromised in the Armenian massacres and was about to be tried by court-martial. The police are said to be on his track.

A special service in memory of massacred Greeks and Armenians was held at the Greek Church, Bayswater, and the large congregation included the Greek and Serbian Ministers, the American and Italian Consuls, and a number of Armenian officers. The Great Archimandrite, the Rev. Constantine Pagonis, officiated, and the Archbishop of Cyprus gave an address in Greek from the altar steps.

FRIDAY, FEBRUARY 7, 1919.

ROUMANIA AT THE CONFERENCE

A variety of indications will have convinced the Roumanians that the Associated Governments are inclined to place their country in a special category by itself among the States of South-Eastern Europe. Before the war they were numerically the strongest nation in that part of the Continent, and economically the most important; and at a time when the position carried no stigma they could claim some measure of partnership with the Triple Alliance. There was indeed a danger in those days of Roumania being attracted into the orbit of the Great Powers to the neglect of her own personal destiny and of her responsibilities to the Balkans. The events of 1912-13 recalled her to an appreciation of her political links with the Peninsula, and the selection of Bucharest as the meeting-place for the delegates to the Peace Conference after the Second Balkan War was a tacit admission of her pride of place among the four States. The qualifications for the post were not of an exacting character, a relatively large army and the biggest budget being sufficient to substantiate any claim that might be put forward. From the point of view of the Great Powers, however, Roumania was held to possess other qualifications, and there can be no doubt that, if the war had not broken out, she would have come to be regarded more and more as her brothers' keeper, if not actually responsible for the peace of the Balkans. The League of Nations, we may hope, will relieve her of this particular obligation, but it is hardly to be supposed that the Roumanians will willingly abdicate the position that they have aspired to in the past. Territorial readjustments will still keep them the most numerous of the peoples of South-Eastern Europe, although the Southern Slavs will not be far behind. Other qualities, however, will now have to be brought into play, if Roumania is to retain her leadership, and these will be of necessity moral and cultural. The aspect of the situation should not be lost sight of in the difficult days of reconstruction. It suggests the need for Roumania to set her own house in order with the shortest possible delay, and to establish her prestige among the neighbouring States on an unchallengeable basis.

The Paris Conference affords a favourable opportunity for accomplishing the second of these aims. In no small degree the position which President Wilson has won for himself in the Allies' councils is due to the fact that the United States alone among the Powers have no definite claims to be ratified. It follows, therefore, that the prestige of a State at the Conference is likely to vary inversely with the exercise of eloquence deemed necessary to support the claims advanced. Roumania will be called upon to justify her expansion in the direction of Bessarabia, the Bukovina, Transylvania, the Banat, and possibly the Dobruja. With regard to all these territories she has rights which are tacitly admitted; the point with which the Conference is concerned is to see that she does not exceed those rights and inflict an injustice upon others. The question of Bessarabia may be said to have been settled already on the principle of self-determination. In the case of the Bukovina a fairly clear line can be drawn to separate Roumanians from Ruthenes, and in Transylvania to exclude the Magyars on the north-west. There will remain some substantial enclaves of Magyars and Germans in Roumanian Transylvania, and the Conference will naturally have to decide in consultation with the Roumanians on the degree of autonomy, if any, that these alien communities shall enjoy. For the Banat Roumania and Serbia are both claimants; or it would be more accurate to say that, while the Roumanians claim the whole of this territory, the Serbians are willing to concede to them the eastern portion, but claim the bulk of the remaining two-thirds. The judgment of the Conference, it is to be imagined, will effect a compromise between the two claims, and the fact that Serbians and Roumanians have lived in amity together for close upon a thousand years may be cited as an argument in favour of an irregular boundary line based on the principle of nationality instead of the natural frontiers afforded by the Theiss and the Danube. Behind the wealth of historical data cited in support of the rival claims lies the fact that the territory in dispute is rich agricultural land, and will form a valuable addition to either State. But nationality must decide the question; and if strategic matters have to be considered, it will be possible for the Conference to anticipate the decision of the League of Nations and to devise measures that will hold the balance equal between the Roumanians and Serbians.

In regard both to the Banat and to the Dobruja, Roumania has an opportunity of raising herself above the position of a claimant struggling for any crumb that may fall from the Conference table and of taking her stand virtually with the five Great Powers as an arbiter holding the scales of justice evenly balanced. With the disintegration of Austria-Hungary her interests lie more than ever to the south, and her policy even now ought to be shaping itself along lines that will win the confidence of her neighbours and lay the foundations of the moral leadership of South-Eastern Europe. The need for Roumania, Serbia, and Greece to keep together is recognised, and it is evident that there could be no *entente* between these three States, if Serbia were left with any real grievance on the ground of nationality in regard to the Banat. But we may hope that Roumania will see farther ahead, and realise at once that it will be fatal to the interests of the Balkans to perpetuate the animosities of past generations. There will be many to subscribe to the dictum: "All for those who have been with us: all against those who have been against us." It is as simple as it is shortsighted, and it will require vision and courage for any Balkan statesman deliberately to direct his policy towards a federation which will include a purged Bulgaria. Popular feeling will be against him, and he will be warned of the precautions that the Great Powers have been forced to take in respect of Germany. But the analogy does not hold good, for Bulgaria, cut off from the Central Powers, is ineffectual and harmless, so far as Roumania, Yugoslavia, and Greece are concerned. The part that the Bulgarians have played in the war cannot be overlooked; but as the nation is set in the middle of the Balkans for better or for worse, it should be the province of the statesmen of the other countries to assist it to tread a healthier path and to set their faces against the sowing of the seed of further intrigues and fresh unrest. No less important for Roumania than her foreign relations are her own domestic problems, which will require for their satisfactory solution a prolonged period of freedom from anxiety along her frontiers. The work of consolidating the new territory and of recovering from the cruel sufferings of the war alone will tax Roumanian statesmanship to the utmost and provide a cogent reason for a definite lead to the other States in a policy of mutual concession and peaceful development.

THE DODECANESE AND THE TREATY OF LAUSANNE.

The capitulation of Turkey on October 31, 1918, provided for the unconditional surrender of all the Turkish forces, but the clauses relating to these provisions were three in number. Article 16 stipulated for the surrender of all garrisons in the Hejaz, Assir, Yemen, Syria and Mesopotamia, *i.e.*, all the extensive districts in which the Turks had been offering resistance in the course of that war. Articles 17 and 18 relate exclusively to Cyrenaica: "The surrender of all Turkish officers in Tripolitania and Cyrenaica to the nearest Italian garrison. Turkey guarantees to stop supplies and communication with these officers, if they do not obey the order to surrender. The surrender of all ports occupied in Tripolitania and Cyrenaica, including Misurata [to the east of Tripoli] to the nearest Allied garrison [presumably Italian]." There is an explanation ready to hand for the strange particularity with which in the terms of the Turkish armistice two clauses are devoted to a field of battle comparatively insignificant.

It is a story of seven years ago. The balance of power in the Balkans was very precarious, and had been shaken by Italy's war against Turkey in 1911, which was terminated by the Treaty of Lausanne on November 4, 1911. Italy annexed Tripoli and retained the Dodecanese as a pledge for the proper execution by Turkey of the terms of surrender.

The relations between Italy and her partners of the Triple Alliance were peculiar. Italy waged this war against the wish of Austria-Hungary, and both Italy and Austria-Hungary were bound, under Article VII. of the Treaty of the Triple Alliance, to respect the balance of power in the Balkans, and to forgo any advance, save on terms of mutual and equal concession, after an *accord préalable*. The military operations of Italy were conducted under severe geographical restrictions; she might not attack Turkey on the Adriatic or the Ægean front. Count Berchtold* very much objected to the temporary occupation of the Dodecanese, as tending to the disruption of Turkey; but the imminence of the outbreak of the Balkan War of 1912 (which resulted in the liberation of Macedonia by the Balkan peoples) made him modify his tone. On April 15, 1912, he expressed his readiness "to regard Rhodes, Carpathos and Stampalia as not necessarily part of the isles of the Ægean Sea"; and on May 21 Kiderlen-Wächter from Berlin acknowledged with thanks this conciliatory attitude on the part of Austria-Hungary, and cherished the hope that this Italian occupation of several islands in the Ægean would have no dangerous reaction in the Balkans.

The occupation was always understood to be provisional, and this fact was acknowledged by Italy. Burián, the Austrian Foreign Minister, instructed Macchio, his Ambassador at Rome, in these terms: "Italy has often assured the Austro-Hungarian Government in the most explicit terms that the occupation was only temporary, and would come to an end after the cessation of hostilities between Italy and Turkey. A written declaration was discussed, and this was the text proposed at that time by Italy: "Il est entendu que dans la pensée du Gouvernement Royal italien, l'occupation effectuée jusqu' à ce jour, ou qui pourrait s'effectuer dans la suite des iles de la mer égée a un caractère provisoire et que les dites îles seront resétituees à la Turquie après la cessation des hostilités entre l'Italie et la Turquie, et que, par consequent après l'évacuation de la Tripolitaine et de la Cyrénaïque de la part des troupes et des officiers ottomans, et aussitôt que la réalisation des conditions indiquées dans la note italienne du 15 mars 1912 aux Grandes Puissances aura été obtenue." It follows [Durián continues] "that the conditions on which the Italian Government had made the evacuation contingent no longer subsist, and yet for over three years (*i.e.*, in 1915) Italy had not restored the islands to Turkey."

The Balkan wars were then in progress; and it is worth noting that this secret undertaking continued as follows:— "Il est également entendu que la présente déclaration qui découle des dispositions de l'article VII. du Traité de Triple Alliance sera considérée par le Gouvernement austro-hongrois, ainsi que par le Gouvernement italien comme strictement secrète et confidentielle, car, si elle était connue par la Turquie, elle n'atteindrait pas le but commun aux deux Puissances, qui est de hâter et de faciliter la paix." In other words, Italy might have been bound to restore the islands to Turkey before the settlement of the Balkan wars, in which event Greece might have come into her own.

The Balkan wars resulted in the triumph of the countries whose interests did not accord with those of the Triple Alliance, and in the utter defeat of Turkey, which was becoming a German protectorate, and Bulgaria, the cats-paw of Austria-Hungary; and it is remarkable that apparently to this very day those preliminaries have not been carried out by Turkey, and Italy retained the islands throughout the Balkan Wars and the European War.

Thereby, these islands, and these alone, could not be redeemed by the Greek Navy in the first Balkan War. Whatever the dynastic reasons of State which rendered it undesirable that Turkey should effectively evacuate Cyrenaica, and thus reopen the question of the Dodecanese, they have lapsed utterly, since Italy renounced the Triple Alliance and the pro-Turkish policy of the Germans; and all such considerations are dead, since the negotiations for the peace after the great war are acknowledged to be conducted on national lines of thought, and not of strategic or imperialistic annexationism.

The substance of the Treaty of Lausanne is unassailable; Tripolitania and Cyrenaica can never be returned to Turkish misrule; but it will be another evil precedent if the clause relating to the Dodecanese be regarded as another "scrap of paper." Should there be any Turkish regular forces in the former region there retained ever since 1911—a supposition which needs demonstration—by the decree of the Alliance of the free nations these have to surrender to the Italian army of occupation. If so, the Greek islands revert to Turkey, or since the Turkish Empire is happily dead, to its executors, the Entente, who must, in accordance with the spirit and letter of their bond, assign them to the motherland of Greece.

PRESS ON THE NEAR EAST.

M. Venizelos on Constantinople.

The *Morning Post* on Monday published an interesting interview granted by M. Venizelos to its Special Correspondent in Paris. It is good to read that the great statesman has so well withstood the strain of the war.

No European statesman has come through a more fiery ordeal during the great war than M. Venizelos. At an unhappy moment he found the ideals of his lifetime and the fruits of his statesmanship trampled in the dust, and his country, betrayed by its King, torn by internal strife, and estranged from its friends. There are other statesmen here now in Paris who have also come through bitter experiences, and the story of their troubles is written on their faces. But M. Venizelos has come through it all unchanged. His smile is still the same; his welcome as gracious as ever. Indeed it is difficult to believe that this gentle philosopher is the statesman of adamant will and lofty purpose who brought Greece through three terrible wars, and who, refusing to sell his own honour or that of his country, fought and defeated an ignoble King and his cabal of German and pro-German plotters.

Of the various subjects touched upon in the course of the interview the most interesting was, perhaps, the future of Constantinople. Asked for his views, M. Venizelos replied:

"There are two solutions. The League of Nations could entrust a single nation with the control of Constantinople an dthe Straits which together would be formed into a separate administrative area, or the League itself could administer it, appointing a governor for that purpose who might hold office for five years. But whatever solution be adopted, one thing is certain; the Sultan must go. He can make his capital Konia or Broussa, but he must not stay in Constantinople. Even if he were deprived of the Caliphate—and with the creation of an independent Arab Kingdom that is exceedingly likely—he would still be a source of trouble to all the Powers, like France and England, which have large Mussulman populations, if he were allowed to remain in Constantinople. And, further, it is very important that he should be removed now by the Peace Conference actually sitting in Paris, for it is necessary to make it clear to all the world that Turkey is losing her capital, in which by the way the Turks form a minority, as the direct result of

having entered the war. Turkey chose to be Germany's ally, and must pay the price of Germany's defeat.

Montenegro and Her Future.

Mr. Herbert Vivian writes vigorously in the *Westminster Gazette* of "The Sequestration of Montenegro." That country, he begins, "complains of starvation, oppression, and interference with the rights of self-determination, for which the war was fought." He recalls how, "when Austria issued her ultimatum to Serbia, Montenegro was the first to rush to her rescue," refusing all offers made with a view to turning her from her chivalrous course; and how, at the end of 1915, she "saved Serbia from disaster, facilitating her retreat by holding Mackensen's army for three months." But he adds: "When Montenegro was attacked no one came to her rescue." He then proceeds to describe how "a crowd of Komitajis, or Bolsheviks . . . accompanied by Montenegrin rebels, most of whom had been sentenced for participation in the bomb-plot of 1907 against the Royal Family . . . proceeded to convene a bogus National Assembly, to which they gave the name of Grand Skuptschina, which is unknown to the Montenegrin Constitution." This "packed Assembly" (says M. Vivian) "was informed that the King of Montenegro and his Government were prisoners in France, under an accusation of trying to sell the country to Austria, and now offering to sell it to Italy, and that they would never be allowed to return." And so forth. As to the conduct of the Assembly:—

At the Podgoritsa Assembly no opposition was tolerated. When Jovan Plamenats, an ex-Minister, wished to speak he was assaulted by the Komitajis, and the Metropolitan of Montenegro, the head of the National Church, a venerable man of eighty years, was publicly maltreated. It was then voted "by acclamation," after a sitting of half a day: (1) King Nicholas and the whole Petrovitch dynasty are deposed from the Montenegrin throne; (2) Montenegro is united to Serbia under the Karageorgevitch dynasty, and will form part of the nation which consists of Serbians, Croatians, and Slovenes.

So far, however, Montenegro has had no opportunity of pronouncing on her future. It has been impossible to convene a legal Parliament, because the repatriation of soldiers and statesmen has been impeded. Many are still in Hungarian concentrations camps or detained in Bosnia or Croatia. General Janko Vukovitch was interned in Croatia, and is said to have been killed there. Moreover, a regular cordon has been established round the country, so that the King's partisans can neither enter nor leave freely, nor communicate with foreign countries; indeed, many of them have been deported. Jovan Popovitch, formerly first delegate at the Balkan Peace Conference in London, and now designated to represent Montenegro in Paris, only succeeded in escaping to Rome at the risk of his life.

Later, M. Vivian describes an audience granted to him by King Nicholas recently in Paris:—

I found him little changed since I last saw him, some twelve years ago, at Cettinje—a little balder, perhaps, and growing deaf, but with the same commanding presence and piercing brown eyes. He explained his deafness characteristically, by reminding me that he had spent his whole life amid the roar of guns. And he told me that he had just begun to sleep well again—eight hours the previous night—after years of insomnia. I observed that in this respect he resembled the civilised world after its recent nightmare.

"You remember the treason trial at Cettinje in 1907," he said. "On that occasion a bomb-conspiracy was proved to have been directed against my person. Now a similar treatment is meted out to such of my subjects as dare to express their traditional ideas. Twenty or thirty peasants are discussing their affairs in a coffee-house. All of a sudden a bomb is thrown through the window and half of them are killed. Women and children have been butchered, so as to spread terror among such as remain faithful to the King and country. Believe me, it is not only Montenegro which desires to remain free. Neither the Croatians nor the Slovenes desire to submit to a foreign yoke. And, if it were not so, Montenegro would fight on alone, as she has fought against her foes throughout her history.

"My dynasty," he went on, "has reigned for 240 years without a murmur, for the sovereigns have always been the servants of their people. But if my children"—he used this word repeatedly in referring to his subjects—"desire another ruler or another form of Government, I shall be the first to acquiesce in their choice. Only let it be a free choice. Let them all return from their foreign prisons and elect a Parliament in the constitutional way. Then we shall know where we are, and there will be no further pretext for persecution.

"I count upon justice from England, for she has always been a friend of my people. I shall never forget the debt we owe to your great statesman, Mr. Gladstone, who succoured us in the time of our need."

The article concludes: "Unfortunately, however, a wave of suspicion and ignorance seems to have passed over this country with regard to Montenegro. During the war there was a natural desire to avoid misunderstandings among Allies, and a sort of truce was called, permitting accusations against Montenegro and her King, but no word of defence. Now, however, there is no reason why both sides should not be heard impartially, and liberty be granted to a heroic people to decide their destinies."

A Suggestion.

How difficult it is to understand what is actually going on in Montenegro is emphasized by the Rome correspondent of the *Morning Post*, who has so often shown himself particularly well informed regarding Balkan affairs. He reports that the United States Embassy in the Italian capital has "just sent over to Montenegro two persons to endeavour to find out what is really happening in that country." And he adds:—

The idea is excellent, because it is practically impossible for anyone living outside Montenegro to form any accurate conception of the real wishes and condition of the inhabitants from the mass of "official" and "tendentious" literature and reports disseminated by agents of all the various parties interested in the future of that country.

But this country also should do its part in investigating the mystery. It is a case where first-hand evidence from unbiassed witnesses is absolutely required. The *Post's* correspondent adds:—

It is, however, desirable, in view of the Peace Conference, that Great Britain, which has no axe to grind in the Balkans, and therefore, like the United States, carries special weight with Balkan statesmen and peoples, should, like the United States, send over special emissaries to the Black Mountain to report on the actual position of affairs, and especially on these crucial points: Do the majority of the Montenegrins wish, or do they not, union with Jugo-Slavia under the Karageorgevich dynasty, either in a complete or in a federal form; or do they wish to retain their absolute independence under King Nicholas; or do they wish to form part of a federal State while retaining him on the throne? These are, according to the very imperfect information available outside Montenegro itself, the principal tendencies. The persons sent should, if possible, know the language and have experience of Balkan politics and history, they should not be propagandists or partisans, and, above all, they should, if possible, avoid being "shepherded," or personally conducted, by any of the various parties interested in the fate of Montenegro.

Great Britain has a good record in the Black Mountain, and is trusted there. Should such a mission be sent it should be sent at once, and those acquainted with Balkan affairs would not find it difficult to select the persons best suited for the purpose.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB, J.P.
Vice-Chairman Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I hope that all the British exporters and importers who intend entering the Balkan markets have taken due note of the announcement this week permitting the resumption of trade with Roumania and Serbia. Trade in general at the present time, I know, can only be carried on under considerable difficulty, but the prospect for our trade in those markets is such that a special effort should be made to meet the requirements of these markets. In this connection I may recall the statement of a correspondent last week that in Roumania business men are "simply asking for us to come in."

***

It was stated last week that the immediate outlook for exports from Roumania, other than oil, is not good, and the reason for this is to be found in the decision of the Roumanian Government to put into force the policy of expropriation, and break up the large estates and divide the land among the peasants. The wealthy landowner is naturally in a position to carry on agriculture on a large scale, and the facilities at his disposal are not shared by the peasant proprietor who lacks labour, machinery, and capital, and as a result may be expected to produce only a small surplus over what he himself requires for home consumption, and that surplus will be disposed of locally.

***

The Federation of British Industries has just issued an important memorandum on the methods of obtaining an indemnity from the Central Powers. It is stated that there appears to be no doubt that Germany could pay annually at least £600,000,000 to the Allies towards the cost of the war; part of this could be transferred by taking new products and other valuables which cannot be manufactured to-day. As regards German sources of revenue, while it is admitted that in some cases the same amount of receipts will not be obtained in the future, it is stated that it is known that in certain cases, as, for instance, in regard to revenue from railways, the German figures were far below the actual amount. "The most satisfactory way," says the Federation, "is, perhaps, to make Germany pay off the capital of our debt while we bear the interest and recover as much of it as possible from her other accomplices, who could pay in addition approximately £240,000,000 sterling."

***

There is little to be said at the moment as regards developments in connection with the question of Indian contracts. At the meeting held last week by the London Chamber of Commerce emphasis was laid on the point that "if an indent merchant took a line which would have the effect of forcing the hands of the man on the other side" the result would be that he would be lost to other countries. That is self-evident, and will clearly have to be taken into the fullest consideration in devising means to cope with the position. The immediate outcome of the meeting was the appointment of a committee to confer with the East Indian section of the Chamber, and the meeting also gave its support to a resolution of the General Merchants' Section of the Chamber, to the effect that the Shipping Controller be approached and requested to ante-date reductions in freights since the Armistice in respect of goods held up in the United States and British ports owing to Allied Government action.

***

I see that a company has been formed at New York, under the name of the Persian-American Corporation, for the purpose of trade with Persia. It is stated that the company will export agricultural implements, lamps, chemicals, books, and other commodities likely to find a ready market in the country, and will also take part in the work of developing Persia's railways.

***

Attention has frequently been drawn in these columns to American trade enterprise in the Near East, notably in the Red Sea region, where American traders have been very successful in trading in a variety of commodities, and I have pointed out that this pre-war competition was to be regarded as only the commencement of our Ally's interest in the trade of the Near East. Now it seems that America intends to bring the Middle East within her trading sphere, and as we already know that she is taking a keen interest in the future of commerce with the Balkans, it is evident that American competition must be taken into consideration henceforward in all the Near East markets.

***

The fact simply is that in America the commercial prospects of the Near East are fully recognised, and the astute business men there are determined to spare no pains to avail themselves of the opportunities that will be available in that region for enterprise and initiative in the course of the next few years. It is to be hoped that their attitude will help to convince British merchants and manufacturers that they have no time to waste if they do not wish to find other countries already well established in the Near East markets. At the moment they have everything in their favour, but if they delay taking the necessary steps, instead of obtaining trade almost for the asking they will in all probability encounter severe opposition, and that not only from America but also from other countries equally wide awake to the possibilities of the Near East. A case in point is provided by Italy, which is making strenuous preparations to develop trade relations with the Balkans, and has already apparently obtained some success in this direction, for it is reported from Italy that all the agricultural machinery and implements required in Montenegro—where the Government intends to take in hand the development of agriculture—are to be supplied exclusively from Italy. So our traders have every reason to be on the alert.

***

The Germans, as a number of people had very good reason to know, were familiar with a variety of methods of making carpets, and of imitating those for which there was a popular demand, as for instance, Turkish and Persian. The chief feature of the German carpet was the use of cheap aniline dyes which ran if the owner dared to send his carpet to the cleaners. An even more annoying practice is recalled by the story told by a speaker at a recent meeting of one of the learned societies of a very unfortunate experience over a carpet which he bought as a specimen of a well-known make. It needed cleaning, and was duly sent to the cleaners, and was brought back as a piece of canvas with the remark: "There is your carpet! As soon as we put it in the benzol in the cleaning-bath the whole of the pattern floated off." The speaker did not suggest that the carpet was made in Germany, but knowing what I do of German methods I strongly suspect that its place of origin was the "Fatherland."

***

Apropos of the article in this issue on the position of the Khedivial Mail Steamship and Graving Dock Company, I have had the opportunity of hearing a number of views on the position; and without exception those with whom I have spoken said they would deplore the liquidation of the company. Of the reasons put forward against this action I will only mention two. In the first place there was nothing but praise for the efficient and satisfactory service of the line in meeting a very evident need by catering for trade requirements and passenger traffic in the Levant and between Egypt and the Red Sea. Secondly, strong emphasis was laid on the great field of action now opening out before the company, and it was pointed out that if the career of the Khedivial Mail should come to an end, we may be sure that some other country will speedily take advantage of the opening to introduce a line of their own.

***

An excellent showing is made by the East Indian Railway Company for the half-year ended September 30, when the receipts were Rs.1,06,24,300 in excess of the figures for the corresponding period. Expenses increased by Rs.28,31,600, but, despite this, the net earnings increased by Rs.77,92,700. The company's share of the divisible surplus was Rs.19,59,751, which produced £146,977, and out of this a dividend is declared of £1 5s. per cent. on the deferred annuity capital and the deferred annuity capital (Class "D"), in addition to the guaranteed interest of £2 per cent.

THE KHEDIVIAL MAIL.

Future of Undertaking.

Are British interests in the Mediterranean to be reduced by the disappearance of the Khedivial Mail? This question, which a short time ago might have seemed absurd, has assumed sudden prominence as the result of the trend of the discussion at the general meeting at the end of last year, when strong support was given to a policy of realising the company's assets. The matter, it is understood, will come up for decision at an extraordinary general meeting which will shortly be held, and as it seems quite probable that the shareholders in favour of realisation will get their way, the possibility of liquidation, which was referred to with special favour, has to be faced, with the result that in a short time the Khedivial Mail line may have ceased to exist. This, it need scarcely be said, would be a great misfortune; for if British interests in the Near East are to be maintained and developed as they ought to be, shipping facilities will be required in that part of the world on a much more extensive scale than before the war.

The reasons for the policy advocated by certain shareholders were fully explained at the meeting in question, and need only be briefly summarised. It is maintained that the company failed to make an adequate return to the shareholders before the war, and that now that war conditions have placed the company in a much better position, notably in the possession of a large amount of liquid assets, advantage should be taken of this by realisation rather than that they should embark on further enterprises. Before the war the company was admittedly none too prosperous, and its career, as far as dividends were concerned, was one of vicissitudes. Thus, while in 1905-6 and 1906-7 10 per cent. was paid on the ordinary shares, in 1907-8 only the preference dividend was paid, and in the following year there was no dividend; then in 1909-10 three half-years' preference dividend, and in 1910-11 the distribution was the same. In 1911-12 ill-fortune was again experienced, and only the debenture charges were met, but for 1912-13 the arrears on the preference shares were paid and a dividend of 5 per cent. was declared on the ordinary shares. But despite these ups and downs it cannot be said that up to the present time the shareholders have received a particularly poor return on their money. The Khedivial Mail Company dates from 1898, when it took over a fleet of steamships, graving and floating docks, etc., belonging to the Egyptian Government, and during a period of twenty years the ordinary shareholders have received £113,000 on a capital of £100,000. That gives a dividend of between 5 and 6 per cent. per annum.

But the past history of the company scarcely enters into any consideration of its future prospects, and, in view of the known facts, certainly affords no reason against the continuance of the company. In its early years, and indeed throughout its existence, the company has been handicapped by the absence of adequate working capital. In the old days its operations were carried on with old boats which, the chairman pointed out at the general meeting, were "picked up here and there—anything that could be got at a cheap price, whether it suited the trade for which it was required or whether it did not." Lack of capital was, of course, a grave handicap when the question arose of replacing ships or increasing the company's fleet, and, as a matter of fact, ships had to be bought out of profits. The company has now half a million to its credit, so that this particular difficulty cannot recur. There is another and a more important reason why the past cannot be regarded as any criterion of the future. As a result of the war the position in the Near East has been entirely altered for the better as far as British interests are concerned, and it follows that a shipping line under the British flag will benefit materially from the changed circumstances. In this connection it may be pointed out that shippers made a very considerable use of the line before the war, and there is no doubt that its regular and well-organised services would make a correspondingly greater appeal in the future. The travelling public have always shown a great liking for the Khedivial Mail services, and in this direction, too, the company might legitimately expect to obtain a greatly increased return, as the number of those who wish to visit the Near East for pleasure is likely to be much larger in consequence of the interest aroused in different places as a result of the war operations. It might also be added that the position in the Near East in the future offers a most promising opening for the increase of the Khedivial Mail's somewhat restricted sphere of operations.

But these considerations, whatever their incidence, are, after all, beside the point. The salient factor is that a shipping company is something more in these days than merely a private concern. Shipping is, indeed, as much a part of the public services as railways or lighting, and shareholders in a shipping company have, *ipso facto*, to take a much wider view on that account. The Khedivial Mail, whose ships have served the Levant and the Red Sea, has formed a distinct link in the Imperial chain of shipping—a small link, it may be, though one of great importance and capable of infinite expansion—and it is unthinkable that liquidation should put an end to the company's activities. It should, in short, be regarded as a *sine qua non* that the Company must continue to exist, but under what form must naturally depend on the shareholders. If they are willing to "carry on," and prove conclusively that it is impossible to do so with the prospect of reasonable profits in present circumstances, then it will clearly be the duty of the Government to grant the company a suitable subsidy until such time as conditions improve. Failing that, the Company must be acquired either by an existing shipping corporation—one of the many, perhaps, engaged in serving the Mediterranean—or by a new company established by the financial houses and business men who have realised the opportunities that will be afforded in the Near East and intend to profit by them.

These are the alternatives. There should be no other course.

AMERICAN TRADE WITH SERBIA.

The United States Consul at Salonika is suggesting that there should be organised in America, preferably in New York or some Atlantic coast city, an American-Serbian Association for the importation of American goods into Serbia, with a minimum capital stock of $1,000,000, says *The Board of Trade Journal*. This organisation should be in touch with a similar one in Serbia or at Salonika. (Salonika, he states, will in all probability have a free Customs zone, as provided for by the Greek Government before the war.) This Serbian society should be directly under Government control.

The American-Serbian Association, the consul points out, could, if it chose, carry on business directly at Salonika, and then in Serbia through an agency which could be entrusted to one of the association's representatives. This body would be prepared to provide a substantial sum to guarantee American capitalists against loss. Before the Balkan wars there were annually turned over, within the boundaries of Old Serbia, goods to the amount of 900,000 metric tons. After the addition of New Serbia in 1913 this quantity was doubled in the short space of time between the end of the second Balkan war and the beginning of the world war. If, as a result of the present struggle, a great Yugo-slav confederation, including Serbia, is formed, there will be a vast market opened up.

MOROCCO.

Trade Prospects with Tangier and Spanish Zone.

The British Agent and Consul-General at Tangier gives the following review of the position in the districts served by Tangier with a view to affording guidance to traders wishing to study the future import requirements of the Moroccan market.

The only new industry started in Tangier during the war has been the manufacture of hydraulic lime by a Russian resident, who has for some time been engaged in quarrying and found stone suitable for the purpose. The difficulty in obtaining lime from abroad and the high prices ruling doubtless induced him to start this industry. The works will presumably be maintained as long as the stone lasts. No assistance has been rendered by the Government.

No new industries have been started in the Spanish zone, nor has any local production of goods been developed. The manufacture of vegetable fibre, however, has been undertaken in both Tangier and the Spanish zone, and the industry may assume considerable proportions.

The market, it is understood, is considerably overstocked with cotton goods, and the demand for cottons will be reduced in consequence of existing stocks. On the other hand, the reduction of shipping facilities appears to have led to a diversion of exports rather than to a cessation. There are, therefore, no stocks accumulated. It should be remembered that the enhanced value of the local currency, which is now at par with the franc, and will doubtless be kept so, has increased the purchasing power of the natives.

British Trade with Tangier.

British imports to Tangier have not diminished in value, and the percentage of British trade, as compared with the whole trade of the port, has increased during the war. As was to be expected, there was a falling off in the imports of flour, confectionery and biscuits, oils, hardware, and woollen goods. Otherwise our trade maintained its position. The increase in the total value of British goods is, of course, due in great measure to higher prices rather than increased quantities.

Spain has largely increased her trade with Tangier, as was to be expected from her proximity to this port, and the maintenance of her daily steamer service with Algeciras, besides numerous small sailing vessels and other steamers. The high prices ruling enabled her to place on the market goods which in pre-war times were unsaleable. Except, however, in cottons, the increase in Spanish trade was not in articles formerly brought from the United Kingdom. The only encouragement given by the Spanish Government to this trade was to permit the shipment to Tangier of goods whose export from Spain was prohibited.

The Spanish Zone.

In the Spanish zone United Kingdom trade has shown a steady falling off since 1913. The cause is twofold: first, the general decline of the trade of the port of Laraiche as a point of entry for the trade of Fez and the interior generally, owing to the opening to trade of the Kenitra-Fez railway; and, secondly, Spanish competition and want of facilities in the way of steamship services. The first cause accounts in part for the steady decline in the total value of British imports, but not for its smaller percentage as compared with the whole trade.

The principal falling off has been in the most important item of our trade, cotton piece-goods, which, notwithstanding the great rise in prices, have fallen from 4,729,578 francs in 1913 to 1,771,797 francs in 1917. Spain has only appropriated about 900,000 francs of this 3,000,000. A large increase in the British cotton piece-goods imported into the French zone shows that, in their case, it has been a diversion rather than a loss of trade. The principal classes of these goods brought from Spain have been bleached and dyed goods. In other respects, taking into consideration the decline of trade between Laraiche and the interior of the French zone, British trade with the Spanish zone has been satisfactory, and there would seem to be no reason for any fear of permanent damage from the effects of the war.

Exports from Tangier.

Exports from this port have of late been almost suspended owing to the restrictions imposed in consequence of the war. Such goods as were exported before these restrictions became operative were sent principally to Spain and France owing to the shipping facilities existing in those countries. The most important items exported in 1917 were goat and sheep-skins and ox-hides.

Owing to restrictions imposed by the Spanish authorities in the Spanish zone, the exports from this zone were directed mostly to the Peninsula. With the advent of normal times, the export trade should return to its former channels. No new lines of steamers have been established.

Construction Schemes.

The projected harbour works at Tangier were suspended on the outbreak of the war. The scheme for a concession has, however, been studied, and the matter will doubtless be taken up again as soon as circumstances admit. The study of the Tangier-Fez railway scheme was also suspended at first, but lately the project has been taken up again, the plans, etc., proceeded with, and actual work commenced on some sections in the French zone. The construction of the line will presumably be proceeded with as quickly as possible. The only other public work of any importance contemplated for speedy execution is the water supply. The matter has been under study for some years, and it is understood that the concession has now been granted to a French company

The public works in progress in the Spanish zone on the outbreak of the war were harbour works at Laraiche and a railway between that port and Alcazar, both of them in the hands of a German company. The former has been handed over to the Spanish authorities in an incomplete state, and the work on the railway has been practically at a standstill for some time. This railway, as also the Spanish zone section of the Tangier-Fez railway, with which it will connect, will presumably be pushed on when circumstances admit. A light railway has been built connecting Ceuta with Tetuan, and a line to join up the latter place with the Tangier-Fez railway is contemplated, but is not likely to be taken in hand for some time.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news from the Director-General of Commercial Intelligence, Calcutta, dated January 30 :—

General rain has fallen in Northern India, but more is urgently needed in the Punjab.

Cotton harvest has commenced in Madras, so far giving bumper yields. (This local increase was anticipated in the crop forecasts, but the total yield for India was forecasted at 3¼ million bales, as against 3,900,000 last year.)

The Bombay strikes have ended, but the cholera epidemic is hampering trade.

The cotton market was weak, fully good broach, April-May, quoted 589 rupees. Calcutta jute—Market quiet but firm. Jat fours quoted at 13 rupees 8 annas. Gunnies are very quiet.

There is a strong demand for new rice crop Burma, price in Calcutta being 5 rupees 1 anna, including inspection, freight, and insurance. Bombay share market is quiet.

Cable delays seriously impede business.

Linseed has been transferred to Class "A" on the export list of India—that is, export prohibited to all countries.

Total exports of jute manufactures in 1917-18 was 716,000 tons, as against 784,800 tons in 1916-17, and 603,500 tons in the pre-war year 1913-14. The total value was £28,000,000, as against £27,000,000 in 1916-17 and £19,000,000 in 1913-14.

Mr. Russell, Honorary Minister, states that with the assistance of the Imperial Government 30,000 tons of wheat will be sold to the Indian Government by July 5, f.o.b., says a Reuter message from Melbourne.

ENGINEERING NOTES.

Lignite for Power.

When the consumption of coal in England is restricted it may be easily imagined what the position with regard to coal is abroad, and especially in the Near East. Many factories have had to be closed, and electric light and gas installations have been disorganised or discontinued for want of coal. The shortage is apparently not yet diminished, for according to recent information all kinds of substitutes for coal as fuel are being used.

Lignite, better known as brown coal, occurs in almost every country in the Near East. In Greece, Serbia, Bulgaria, Asia Minor, Egypt, and the Sudan there are lignite mines, some of which are already exploited, while others are quite untouched or neglected. The coal from such mines is used, more or less, for domestic purposes, and in recent years, owing to the scarcity of coal from England, has been used in steam boilers by some special arrangement of the fire-bars. The results in the latter case, it is said, are not quite satisfactory. In Australia, however, where the conditions under which the lignite is found are not dissimilar to those in the Near East, the use of lignite, after test results, is officially recommended as an efficient substitute for coal for the supply of electrical power to various towns, and for producing town gas, tar, and its derivatives, ammonia and coke, and for making briquets for household and other requirements. In America, it has been admitted that where lignite is readily procurable, there is the means for producing power cheaply. In the Near East suction-gas engines are in great use, but, apparently the use of lignite for the production of suction power gas has not been generally satisfactory. Owners of suction-gas plants will be interested to hear that, according to information given by the United States Bureau of Mines, carbonised lignite is prepared for use in suction power-gas producers.

For this use, it is asserted, it is unsurpassed by any other form of fuel. In chemical composition it resembles anthracite. By carbonising the lignite the objectionable tar found in coals containing a substantial quantity of volatile matter is removed, and the gas goes to the cylinder of the gas-engine free of tar and clean. For the production of power in this way it is found that carbonised lignite is fully equal to anthracite, charcoal, or bituminous coke, the standard forms of fuel for the purpose. In the process of carbonisation volatile by-products are obtained in the form of gas, ammonia, oil, and tar. The gas yield is upwards of 10,000 cubic feet per ton of lignite. A little more than one-half of the gas is required to carry on the carbonising process. The balance can be used as a furnace fuel, or for generating power in gas-engines. To come to more exact figures: of the yield of 10,000 cubic feet of gas per ton of lignite carbonised 6,000 cubic feet are required to carry on the process, leaving a surplus costing nothing, of 4,000 cubic feet of 400 B.T.U. per foot, a total of 1,600,000 B.T.U. A good gas-engine uses about 10,000 B.T.U. per horse-power hour. This gives 160 h.p. hours from the surplus gas for each ton of lignite carbonised. This power is comparable in cost with that derived from natural gas. It is quite as cheap as hydro-electric power in the majority of cases.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic receipts for the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E12,883, making the total from April 1 £E285,092. The totals for the corresponding period in the previous year were £E10,873 and £E213,668.

H.M. Trade Commissioner at Calcutta recently commenced a short tour of Rangoon.

TRADE IN ALCOHOLIC LIQUORS IN EGYPT.

The following particulars of the production and consumption of alcoholic liquors in Egypt are given in a report from the Commercial Secretary, Egyptian Ministry of Finance:—Brandy is made in Egypt from imported wines, which before the war were chiefly from Turkey, but which now come from Cyprus and Spain. This brandy is partly consumed locally and partly exported. The amount exported has risen from 12,398 kilogs. of a value of £E407 in 1914, to 30,305 kilogs. of a value of £E1,744 in 1917. The brandy industry is of many years' standing, but has recently increased considerably.

Whisky has also been recently manufactured in Egypt, the malt required being made on the distillery premises. Rum is made locally either from molasses or directly from the sugar cane. Gin has recently been made on a small scale. The value of brandy, whisky, and other potable spirits imported into Egypt has doubled since 1914, the total imports amounting to £E261,558 in 1917.

Plain spirits are made on a very large scale from sugar cane residues. There is no tax or Government control of any sort. The trade is practically in the hands of one man. Recently the distiller, in agreement with the Government, has denatured that part of his production which is sold by retail for domestic purposes. This was done principally in order to prevent the small retailers from diluting the spirit before sale. The amount of plain spirits made in 1916-17 was about 8,500,000 kilogs., of which a large part was a specially refined quality for export.

Beer is made in Egypt in considerable quantities. It is a light beer of the Pilsener type made from malt and hops by the "bottom" method of fermentation. In 1914 the value of the beer imported into Egypt was £E67,709.

NEAR EAST MARKETS.

Egyptian Crops.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in December:—

Maize (*Nili*).—The harvesting of the crop is practically complete. Unsheathing of cobs and storing of grain are in progress. The yield has not come quite up to expectations owing to the bad weather of last month, which affected the late crop.

Rice.—Harvesting is at an end and the yield is good. Threshing is going on everywhere, but is proceeding slowly owing to the scarcity and high cost of labour.

Millet (*Nili*).—Harvesting is in progress and nearing completion. An average crop is expected.

Sugar Cane.—Weather favourable and water supply plentiful. The attack from stalk-borer is general. Cutting of canes for sugar-making has started and the factories have just begun working.

Wheat and Barley.—Cool and damp weather ruled during the month and was on the whole favourable except in Beheira. Sowing is practically over, but in Beheira and El Gharbiya it is still lingering owing to the delay caused by rain. The crops have received their first heavy watering in expectation of the closing of canals for clearances. Owing to the scarcity and high price of chemical manures, *baladi* and *kufri* are being freely applied. The crops are generally looking healthy, and no enemies have so far been noticed, with the exception of the cut-worm in Minya and Asyût. Attempts are being made by farmers to improve their method of cultivation by following this Ministry's recent recommendations in regard to sowing.

Beans.—Weather generally favourable, except in Beheira, and water supply ample. Sowing is completed and germination is regular. The crop is doing well everywhere Early-sown beans are in flower. The area under beans seems to be smaller than last year.

Onions.—Weather favourable and water supply generally adequate, but still insufficient in Beni Suef. Transplanting is going on and will soon be completed. In Beni Suef, however, it is expected to be very late in some localities. Mildew is reported in Asyût Province, but the attack is a slight one. The condition of the crop is on the whole satisfactory.

Greek Olive Oil Stocks.

The Acting Commercial Counsellor at Athens has forwarded the following reports on the olive oil stocks in the various Consular districts:—

H.M. Vice-Consul at Mitylene reports that the stock of olive oil remaining on the island from the 1917 season is 2,187,500 okes; the amount that is expected from the 1918 season's crop is 5,000,000 okes. The wholesale price for delivery on the quay is 4 drachmæ per oke, the minimum price for edible oil being 4.30 drachmæ. The retail price is from 4.60 drachmæ per oke, the cheapest edible oil being 5 drachmæ.

H.M. Vice-Consul at Patras estimates the 1918 yield of oil in Morea at 7,000,000 okes, being sufficient only to meet local consumption (exportation is at present prohibited).

H.M. Vice-Consul at Canea states that the total stock of olive oil in Crete remaining over from 1917 is estimated at 2,500 tons. Of this half would be available for export should the existing prohibition be raised. The quantity of olive oil to be obtained from the 1918 crop is estimated at 30,000 to 35,000 tons. Prices vary considerably. During this month wholesale prices have fluctuated from 3.10 drachmæ per oke on November 4, to 3.32 on November 11, to 2.60 on November 21, to 2.80 later. It is probable that these prices will fall owing to the magnitude of the new crop and the lack of storage accommodation. Retail prices are from 30 to 40 lepta per oke more than the wholesale prices.

H.M. Vice-Consul at Volo reports that practically none of the 1917 olive oil now remains in his district. The new Mount Pelion district olive crop is estimated to yield about three million okes of oil for 1918. The price on the spot where produced is about 4 drachmæ per oke in bulk, but recently at Volo the price, when obtainable and purchased by the barrel, has been about 5 drachmæ per oke.

COMPANY NOTES & REPORTS

Egyptian Agricultural.

A meeting of the first mortgage debenture holders was held on February 3 to consider a proposed supplemental trust deed altering the present conditions of the issue as follows:—To exchange the existing specific charge for a floating charge; to authorise the trustees to be satisfied with registered charges for £250,000 in the aggregate, and to dispense with the renewal of the lapsed charges to any further extent; to give the board discretionary power to raise, by way of prior lien charge, a further £51,000, or, including the unexhausted £9,000, a total of £60,000 in all; and to extend the date up to which interest will be paid from profits only from March 31, 1921, to March 31, 1925. The London Trust Company, who is the trustee for the first mortgage debentures, has been consulted in regard to the above proposals, and sees no objection to them.

Shahdara (Delhi)—Saharanpur Railway.

The report of the Shahdara (Delhi)-Saharanpur Light Railway for the half-year ended September 30 last states that the total expenditure on capital account to September 30 was Rs.43,94,350. Expenditure incurred during the half-year on capital account amounted to Rs.10,904. The earnings of the railway were coaching Rs.2,36,907, goods Rs.1,83,953, sundries Rs.1,076, making a total of Rs.4,21,936, as compared with coaching Rs. 2,02,934, goods Rs.1,09,326, sundries Rs.1,788, total Rs.3,14,048 in the corresponding period. The working expenses of the line were 48.64 per cent. of the gross earnings. Net revenue was Rs.2,21,778, which includes Rs.5,078 interest accrued on the surplus funds of the company. Interest on debentures at the rate of 4½ per cent. per annum amounting to Rs.60,104 and London agency charges Rs.2,003 have been paid, and income-tax Rs.3,824 provided for. The directors recommend a dividend of Rs.3½ per share, equal to 7 per cent. per annum, which will absorb Rs.52,500, and that the balance of Rs.2,55,276 be carried forward, of which Government's moiety of profit is Rs.65,889 and managing agents' commission amount approximately to Rs.16,000.

Rohilkund and Kumaon Railway.

The report of the Rohilkund and Kumaon Railway Company for the year ended September 30 last states that the net earnings amount to Rs.30,62,796, against Rs.25,60,939. The company's share is Rs.13,74,420, brought to account at the rate of 1s. 4d., against Rs.11,21,639. An interim dividend for the half-year ended March 31, 1918, of 3 per cent., plus a bonus of 1 per cent., was declared on the ordinary stock of the company, and paid on July 29, 1918. After bringing forward the balance from last year, £22,799, providing for interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, transferring £10,000 due to gain by exchange to reserve, and making other adjustments, including £6,576 on account of the Secretary of State's share of surplus profits for the year, the amount available for dividend is £51,153. The board recommend a final dividend of £3 per cent., plus a bonus of 3 per cent. on the ordinary capital for the half-year, subject to income-tax at 4s. 9d. in the £, leaving £32,853 to be carried forward. The working expenses amounted to Rs.23,68,608, or 43.61 per cent. of the gross earnings, against Rs.19,28,345, or 42.96 per cent. The total capital expenditure on both the company's original line and extensions has been £1,156,395 to September 30, 1918. Meeting, Gresham House, Old Broad Street, E.C., February 11, noon.

Orient Steam Navigation Company

Up to now Messrs. F. Green and Co. and Messrs. Anderson, Anderson, and Co. have been joint managers of the Orient Company, but distinct from one another. Some of the partners now wish to retire from business, and the two firms propose to unite in a private company, to be called Anderson, Green, and Co., Ltd. This change, which will involve some change of *personnel* and various minor and consequent alterations, will be explained to the Orient shareholders at their meeting on February 10.

Dividends, Payments, &c.

The directors of the British Burmah Petroleum Company recommend a balance dividend for the year ended July 31 last of 8 2-5d. per share, free of income-tax, making 12½ per cent. for the year, free of tax, payable on March 1 to shareholders registered 15th instant.

Oil Outputs.

Anglo-Egyptian Oilfields—Gemsah: Production for week, 23 tons (previous week, 22 tons). Hurgada: 2,802 tons (against 2,558 tons).

TRADE WITH SERBIA AND ROUMANIA.

Removal of Restrictions.

The Board of Trade call attention to the fact that the restrictions imposed by the Trading with the Enemy (Occupied Territory) Proclamation no longer apply to trading with Serbia and Roumania, and that, consequently, commercial transactions with these countries may now be resumed. It will, however, be necessary to obtain export licences from the War Trade Department before shipping to these countries goods of the kinds prohibited to be exported thither, and to obtain import licences from the Department of Import Restrictions before importing goods of kinds covered by the Prohibition of Import Proclamations.

INDIAN TREASURY BILLS.

The Secretary of the India Office issues the following:—Up to January 25 Indian Treasury bills were issued to the following amounts:—October 16, 1917, to March 31, 1918. Rs.43,50,00,000; April 1, 1918, to January 25, 1919, Rs.64,37,60,000; total, Rs.107,87,60,000. Bills discharged or discounted, Rs.72,32,90,000. Bills outstanding at January 25, Rs.35,54,70,000.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—January 24, 130,000 francs, against 240,000 francs; January 25, 26, 27, 1,120,000 francs, against 1,000,000 francs.

A Reuter message from New York dated January 30 states that half-a-million dollars' worth of bar silver has been exported to India.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has not been so much doing this week in Egyptian securities, but on the whole the market has remained firm and the tendency a cheerful one. No doubt the unsettled state of affairs in connection with the strikes has contributed to the lessened activities in Government Stocks, but Egyptian Unifieds have again been in demand and are ⅛ higher at 90⅞, at which price some business has been done, though there are very few sellers.

Amongst Bank shares, a fair amount of business has been conducted in Nationals, which are closing 1-16 higher at 22 9-16. Agricultural Banks, after spurting to 7, finished 5-32 higher at 6⅞.

In Land Shares there has been a moderate amount doing round quoted prices, the only change being a slight improvement in New Egyptians to 25s. 6d., after they had temporarily reacted to 24s. 9d. Sudan Plantations have again been a feature of strength, improving ⅛ to 4 7-16.

In the Miscellaneous group the only change to record is a further rise of 2s. 6d. in Khedivial Mails to 96s. 3d.

In Greek Securities there has been absolutely nothing doing this week, and prices are all unaltered, with the exception of Greek Five per Cent. Current Bonds, which have recovered the whole of the dividend recently deducted, and are quoted at 95 ex dividend.

Oil Shares.

The tone has on the whole been good. Anglo-Egyptians B have made a further rise of 9-16 to 3⅞. Burmahs are unchanged at 8 15-16, but British Burmahs are 1s. 9d. up at 18s. 3d. Anglo-Persian Prefs. are unchanged at 26s. 9d.

Roumanian Consols are unchanged at 16s 6d. In Traians the tendency has been downwards, but at closing the price again reached 12s. 3d.

Ural Caspians are 1-32 higher at 1⅞. Bakus have declined to 5s. 3d. Russian Generals and Russian Petroleums are unchanged at 1 1-16 and 2s. 9d. respectively.

Paris Bourse.

Suez Canal shares show a further decline on the week of 98 francs at 5,197. Other prices are: Egyptian Unifieds 94.25 (against 93.50), Serbian 1895's 61.50 (against 61), Turkish Unifieds 69.75 (against 70), Banque d'Athenes 101.50 (against 105), Credit Foncier Egyptiens 800 (against 785), Land Banks 188 (against 189), and Ottoman Banks 544 (against 546).

Lord Faber has been offered, and has accepted, a seat on the Board of the London County Westminster and Parr's Bank.

The Indian Government is being urged to impose a further tax on Java sugar, which is arriving in India in increasing quantities.

The directors of the Balijan Tea Company have declared an interim dividend of 6 per cent., less income-tax on account of 1918.

The employees of the Mittel Deutsche Credit Bank, one of the largest banks in Germany, have decided to strike for higher salaries.

British India trade returns for December show increases in imports of £1,238,000 and in exports of £561,000, as compared with the corresponding month last year.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 75,000

HEAD OFFICE—

BASILDON HOUSE, MOORGATE STREET, LONDON, E.C.2

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Fasohen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Baghdad, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANQUE FRANCO-SERBE.

Head Office—
14, RUE LE PELETIER, PARIS.

Paid Capital - Frs. 12,000,000

Central Office—Belgrade.
Branches—Skoplye (Uskub), Bitolj (Monastir).
London Office—
27, THROGMORTON ST., E.C.2.

Correspondence is invited from all those having Serbian interests or contemplating business with Serbia when communication is restored.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.52,00,000

Head Office: MADRAS.

Branches.—Alleppey, Bangalore, Bimlipatam (*Outstation*, Vizianagram), Calicut, Cocanada (*Outstations* Narsapur and Rajahmundry), Cochin, Coimbatore (*Outstation*, Erode), Colombo, Guntur (*Outstation*, Bezwada), Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, Trichinopoly, Trivandrum, Tuticorin, and Bellary.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principa towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer.*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000
Reserve Fund Rs.1,84,00,000
Reserve for Depreciation of Investments Rs. 25,00,000

Head Office: CALCUTTA.

Branches: Clive Street, Park Street, and Burra Bazaar, Calcutta, Agra, Akyab, Allahabad, Benares, Cawnpore, Chittagong, Dacca, Delhi, Hyderabad (Deccan), Jalpaiguri, Lahore, Lucknow, Moulmein, Nagpore, Naraingunge, Patna, Rangoon, Secunderabad (Deccan), Serajgunge, Simla.

Agency in Bombay: Elphinstone Circle.

Current Accounts opened free of charge. **Fixed Deposits** received at interest.
Government and other Securities received for safe custody; purchases and sales effected.
Interest collected and **Remittances** made.
Loans and Cash Credits granted. **Discount Accounts** opened and approved. **Mercantile Bills** discounted.
Savings Banks Deposits received and interest allowed
Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

NOTES OF THE WEEK.

During the past week the Paris Conference, or the Inner Council, has listened to statements of the Czecho-Slovak and of the Arab claims. In the meantime the problems presented by the various national demands in the East are being considered by separate commissions, and it is on these bodies that the hard work of reconciling conflicting interests will devolve. No other system, as was pointed out in these columns before the Conference met, was possible. The question of boundaries in the Near East is too intricate to be decided in general conference, or even at a sitting of the Inner Council. It calls for careful and patient sifting of evidence, and will sometimes entail research beyond the testimony afforded by the spokesmen appearing before the Commissions. If the spirit which has actuated the delegates so far prevails to the end, the nations represented will have reason to congratulate themselves. As the King's Speech puts it: "Their discussions have been marked by the utmost cordiality and goodwill and by no disagreement." Already, in the case of the Dalmatian question, a settlement, it is understood, has virtually been reached between the Italians and the Yugoslavs.

Now that the mandate system has been tacitly accepted by the Conference the appointment of the mandatories becomes the all-absorbing question. There is no lack of claimants; but the first point to be settled is whether the United States are prepared to play their part in the system. The British people are naturally anxious to see the Americans take up their share of the white man's burden; and as the British Government has accepted whole-heartedly President Wilson's theory of a League of Nations, the British delegates have been foremost in trying to combat American reluctance to become permanently committed to a definite status in European politics. But to argue from this disinterested attitude that Great Britain has become the world's "Weary Titan," as an American writer does in *The Times*, is an amiable error. Great Britain, we are told, "feels herself not strong enough to add to her burdens, so colossal on the Imperial side before the war, which in itself exhausted such an alarming fraction of her resources in men and money." There could be no greater misreading of the history of the last four years. What has happened is that the British Empire has found itself, and, as far as its Imperial obligations are concerned, is far more ready than it was before the war to respond to any fresh demands that may be made upon it.

The reason is not far to seek. In tightening the bonds of Empire the war has led to the pooling of overseas statesmanship with that of the mother country. Even if—it is far from being the case—Great Britain herself felt unequal to the strain, the Dominions are not likely to shrink from added responsibilities. The American writer in *The Times* would seem to have been prompted in his remarks by the extreme altruism of the British attitude towards Syria. The Empire's needs are met if Palestine, as the buffer State of Egypt, and the country fringing Mesopotamia are in friendly hands; but it would come as a shock to the British public to learn that there was any disposition on the part of the Government to evade its obligations in Mesopotamia itself. The war has added considerable responsibilities to the British Empire as a whole, but practically none to Great Britain herself, with the exception of Mesopotamia. (In whatever form the territory that was German East Africa may come under British jurisdiction, it is probable that its actual administration will be shared with one or more overseas Governments.) The suggestion that Mesopotamia, even with Syria and Palestine added, would become "a burden beyond the Englishman's resources" could only emanate from someone wholly unacquainted with the Empire's work. That it should be made is a warning against allowing disinterestedness to travel beyond a point consistent with Great Britain's position and prestige in the East.

The hold that the Committee of Union and Progress still contrived to keep on the Turkish Parliament or public, in spite of its titular heads being in exile, was gradually reducing the Government of Turkey to a deadlock. With the knowledge, therefore, that a *coup d'état* was being planned, the Grand Vizier adopted the salutary course of arresting forty of the Committee's leaders on the last day of January. Such a step will either make or end Tewfik Pasha's Ministry. With the meagre information at our disposal it is not easy to form a clear idea of the position in Constantinople. At best the present regime would seem to be recognised on all sides as a makeshift, with the result that no one is inclined to worry much, provided that the external appearance of ordered government is maintained. Until the Allied Conference decides the fate of Turkey this state of affairs may be inevitable. The experience of the period that has elapsed since the Armistice proves conclusively that Turkey requires outside help in every department of the administration. The moment may be inopportune to start the system; but it should not be overlooked that the longer the existing indeterminate

Digitized by Google

position is maintained the more difficult will become the work of rehabilitating Turkey, even within the limits of the new boundaries contemplated.

In spite of the meticulous care with which the question of the representation of various minor States at the Paris Conference was handled, no provision, so far as is known, has been made for the attendance of Montenegrin, Albanian and Armenian delegates. An official *communiqué* announced that the selection of the single representative of Montenegro was to be deferred until the situation in that country had been cleared up; but it does not appear that the Associated Powers have taken any steps towards settling the troubles under which Montenegro labours. The Armenians are now represented by a Mission in Paris, and it may be taken for granted that the Inner Council of the Conference will extend to one or more of its members the privilege that was given to the Emir Feisul on behalf of the Arabs. In the same way, it is hardly to be supposed that the Paris deliberations will be terminated before a representative of Montenegro is allowed to state the official case of that country. Albania, on the other hand, is in danger of being left entirely unrepresented, unless an Albanian mission can be created in time. It should not follow, however, that the Albanian point of view will be on that account excluded from the Conference. The Albanians have shown that they are capable of holding their own against the Turks and against Europe's nominee, Prince Wied. It would be folly, therefore, to act upon the assumption that they alone, of all the peoples of the Near and Middle East, have no claim upon the principle of self-determination.

The Rome correspondent of *The Morning Post* recently announced that the United States Embassy of that city had sent over to Montenegro two persons "to endeavour to find out what is really happening in that country," and he added that it was desirable that Great Britain should adopt the same course. The suggestion, albeit late in the day, is worthy of the fullest support. Some reports are now being received from Montenegro, which allow an idea to be formed of what has been happening there. According to one statement vouched for by a Montenegrin officer and an engineer, whose names are given, the blockade of the country since the Austrians evacuated it has been complete. The Montenegrins set their hopes on the visit of the French Commandant from Cattaro. They are said to have been anxious to repudiate the allegation that they had declared the annexation of Montenegro to Serbia. But the Serbian military authorities allowed no one to approach the French officer and he returned satisfied that all was quiet in the country. The Montenegrins, in despair, began to organize demonstrations, with the result, so it is said, that five hundred were killed or wounded, many houses were burnt or destroyed, and numbers of people were rendered homeless, in mid-winter. The visit of the American investigators, it is to be hoped, will not be followed by similar developments.

An appeal to the Paris Conference on behalf of the Persians is made by the Persian community in Egypt in the form of a memorandum setting forth Persia's grievances against Russia, her experiences during the war, and her demands. The latter include a guarantee of political and economic independence, territorial integrity, and evacuation of Persian territory by all foreign troops, complete reparation and restoration, the abolition of treaties and conventions obtained from Persia by force, and the return of the provinces wrested from her by the Treaties of Gulistan (1813) and Turkmanchai (1826), and by others. The provinces in question include the Khanate of Baku and Erivan. Apart from these territorial claims it may be possible to meet Persia's wishes; but in her own interest it is to be hoped that she will appreciate the advantage of foreign guidance until she has been able to train a competent and honest civil service.

The report that a mission from Bokhara, together with representatives of the minor Khans of Russian Turkestan, has reached Kabul for the purpose of creating a league of Moslem rulers of Central Asia tends to crystallise a movement that has been in progress for some time past. The first impulse in this direction came from the Turkish Committee of Union and Progress, which hoped to find in a Pan-Islamic or Pan-Turanian movement adequate compensation for the loss of Arabia, Syria, and Mesopotamia. If, as seems probable, the Ameer Habibullah has now taken charge of the desire among the Moslem rulers of Central Asia for closer co-operation, the resulting league is not likely to follow the lines planned for it in Constantinople. The loyalty of the Ameer stood a severe strain during the war, and British policy should make a point of supporting him in an effort to inspire the Moslem rulers whose territories adjoin Afghanistan on the north with his own level-headed outlook on world affairs.

The deliberations of the recent Conference of Indian Princes and Chiefs may be taken to mark a definite step forward in the constitutional organisation of the Empire, while they afford ample justification for the cautious policy pursued by Lord Chelmsford at a time when enthusiasts thought that everything could be settled by a stroke of the official pen. It is now clear that there is to be a permanent Council, with a standing committee to tide over the intervals between the meetings of the larger body; but it is not yet clear how the Council is to be composed, and the position is thus similar to that which has been reached in regard to the constitution of the provinces directly under British rule. In both cases some progress has been made in designing new institutions, but in neither case has agreement yet been reached as to the foundations on which they shall rest.

The difficulty in regard to the Council lies in the fact that the position of the princes and chiefs is very far from being uniform, some of them having full powers of internal administration, while others are subject to restrictions varying widely in degree. Lord Chelmsford and Mr. Montagu proposed that the Council should be limited to the Rulers with full powers, but this arrangement has not secured general approval, and we gather that the claims of the smaller chiefs to some degree of representation are supported by an influential body of opinion. The truth is that the status of an individual chief is very largely the result of historical accident: the military and political situation a hundred odd years ago enabled some to obtain more favourable treaties than others who, a little earlier or a little later, could have made a stronger case, and there is a great deal to be said on both sides of the question whether the arrangements then made should govern the new developments. The matter is, however, obviously one to be settled by the opinion of the chiefs as a whole, and this will crystallise as time goes on.

The welcome acceleration of the mail service has enabled observers in this part of the world to study the proceedings of the Delhi National Congress before they have become ancient history, and the resulting impression is that it most have been an exceedingly interesting spectacle. One can almost sympathise with the President, who genuinely believes that all the gulfs separating different opinions can be completely filled, if you only throw in sufficient words; he made a valorous effort at the start, and then had to sit and watch the Congress dissolve into its elements, the moderate proposals voted down, and the extreme section marching from triumph to triumph until even Mrs. Besant was left behind. So much at least is clear that those of us who used to think of the Congress in terms of Mr. Gokhale must now associate it with the names of Mr. Das and Mr. Bepin Chandra Pal.

What we have not yet heard is what the peasant-delegates thought about it all. Some hundreds of them were present, and if, as we understand, they were really peasants whipped up for the occasion, their ignorance of English must have prevented them from following the great majority of the speakers. We do not suppose that they were bored, for the peasant has a great capacity for doing nothing when there is nothing urgent to be done, and on such occasions he thinks a good deal.

Digitized by Google

Silent in the Assembly, they must have talked when they got home, and the political situation would be greatly illuminated if we could know exactly what they said about the Panditji, and the Mem Sahib, and the other protagonists on the platform. Reporters are not, however, admitted to such discussions, and we must wait till the results of this experiment in political education have time to manifest themselves.

The scanty news which reaches us as to the economic position in India is somewhat contradictory. On the one side we hear of shortage of food-supplies on the seaboard and of imports of wheat from Australia; on the other, we are told that the northern provinces are showing unexpected "staying power," a phrase which in practice means a large undisclosed reserve of food-grains. It would be too much to ask the overstrained Administration to explain such matters just now, but we hope that when the fragments of the famine are being gathered up in the autumn we shall have a reasoned discussion of the new forces which have complicated the existing situation, the exhaustion of the railways, and the consequent interference with the freedom of internal trade. Has India for the last year or two been eating much more than usual, or have the new conditions operated to send stocks underground?

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 20.

The Ministerial Crisis.

The Ministerial crisis which was created on December 4 by the resignation of the Prime Minister, H.E. Hussein Rushdi Pasha, and of the Minister of Education, H.E. Adly Yeghen Pasha, is still unsettled. Neither of the resignations has so far been accepted, and conversations on the subject are still going on between the British and Egyptian authorities. I understand that it is hoped that an arrangement will be come to within the next week or so. Meanwhile, the other Ministers are attending to the affairs of their respective departments as usual, but no Council of Ministers can be held until the Prime Minister and his colleague either return to office or are replaced.

The Mixed Tribunals.

The time is approaching when the mandate of the Mixed Tribunals will have to be renewed. The last renewal took place in January, 1918, and was for a period of a year expiring on the 31st inst. I understand that negotiations are in progress for an extension of nine months, i.e., until October 31 next, and that provided all the interested Powers consent—and there is no reason to anticipate that they will do otherwise—the decision will be published very shortly. The renewal for a shorter period than has been customary since the outbreak of war has aroused some comment, but it is undoubtedly not unconnected with the judicial and other changes which are under consideration. Although the choice of this shorter term must not be construed into meaning that the reforms under consideration will be introduced at the expiration of the period for which it is now proposed to extend the mandate of the Mixed Tribunals, it is probable that it has been decided upon in the hopes that it may be possible to complete the work in the interval, and from a desire not to bind the hands of the Anglo-Egyptian authorities in the matter of local legislation for any longer period than would be required by international agreements binding on Egypt, such as that regulating the life of the Mixed Courts.

The Estates of the Ex-Khedive.

A Proclamation signed by General Allenby vests the estates of Abbas Hilmy Pasha, ex-Khedive of Egypt, in the Public Custodian of Enemy Property. When in December, 1914, Abbas Hilmy Pasha was deposed from the throne owing to his defection to the enemy, a sequestrator was appointed by the Minister of Finance, at the request of the Commander-in-Chief, for the administration of all the properties held by him in this country, and Mr. F. Bonham Carter was nominated to the post. In March, 1915, that appointment was varied at the request of the Crédit Foncier Egyptien, who were one of the principal creditors of the ex-Khedive, and M. Claud Jonnet was appointed sequestrator. He has now applied to be relieved of his office, and the Commander-in-Chief has issued the order mentioned above in favour of the Public Custodian.

The ex-Khedive owned considerable property in Egypt, including a palace at Kubbeh and one at Montaza, as well as some large agricultural estates. The whole of his property was heavily mortgaged, and the instalments as well as the interest on the loans were considerably in arrears. It is understood that the arrears in both cases have been paid up, and that everything is now in order. The Government is credited with the intention of purchasing the two palaces as residences for the Sultan and the Ministry of Wakfs and the Sultania Wakfs administration with that of buying the other properties. Land values have risen very much since 1914, and it is highly probable that prices will be realised which will enable the mortgages to be paid off in full, and will leave a substantial balance to the credit of the ex-Khedive, who will thus benefit by the protection afforded to Egypt by Great Britain.

In connection with the above-mentioned Proclamation there is one interesting point. It is contained in the preamble. The latter gives as one of the motives that it has become necessary to make provision for the future administration of the estates in question, "as Abbas Hilmy Pasha has been excluded from the country, and he and his descendants have been by decision of his Majesty's Government definitely excluded from all rights of succession to the Sultanate." It should be noted that in his letter to the Prime Minister announcing his acceptance of the offer of the Sultanate the late Sultan Hussein stated that the succession would be hereditary in the family of Mohammed Ali in an order to be determined, and that in his letter offering the throne to the present Sultan Fuad, Sir Reginald Wingate asked him to assume that dignity for himself and his heirs according to such order of succession as might be established by agreement between H.B.M.'s Government and his Highness. The Proclamation now issued by General Allenby is, however, as far as is known, the first occasion where in any official document it has been stated that the ex-Khedive and his heirs are definitely excluded from the succession to the Sultanate of Egypt.

The Visit of Cardinal Bourne.

Cardinal Bourne, accompanied by his secretary, Monsignor Jackman, left last Friday for Palestine and Syria, where he will make a short stay preparatory to proceeding to the Black Sea. His last few days have been exceedingly busy, but he found time to go down to Alexandria, where he visited the troops and the various religious schools, and was entertained at luncheon at the Savoy Palace Hotel. In Cairo he visited the Jesuits' Schools and delivered an address, in which he pointed out that when the Catholic orders were driven out of France one of the countries where they were received with open arms was Great Britain, where the welcome came from Protestants as well as Catholics. He used this fact to emphasise the fact that Catholics have nothing to fear at the hands of Great Britain in Egypt. On Wednesday evening he was the guest of honour at a dinner given by the leading Catholic civilians of Cairo. He leaves behind him a most agreeable impression, and his visit, short though it has been, should have the happiest of results as regards the relations between the Catholic communities and the furtherance of British prestige in Egypt.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

ROUMANIAN NOTES.

(From a Correspondent.)

The Emancipation of the Jews.

The *Monitorul Oficial* published the decree concerning the emancipation of the Roumanian Jews. The most important articles of this decree are:—

(1). The inhabitants of the Kingdom of Roumania, without any religious distinction, including those who could not enjoy full political rights, can acquire those rights by proving that they were born in the country, and that they were never under any foreign protection. All who took part in the campaigns of 1913 and 1916-1918 are exempted from these formalities.

(2). The widows and children left by those who died for the country enjoy complete civic rights.

(3). Sons who had already attained the age of 21 years when their fathers were naturalised become Roumanian citizens on the coming into force of this law. Those who are under the age of 21 years at its coming into force can become Roumanian citizens if, within a year of attaining the age of 21 they sign a declaration that they wish to be Roumanian citizens. The above-mentioned declaration must be addressed to the local tribunal, together with the documents proving that the naturalisation of the parents took place before the voting of the present law, and with the certificate of birth showing that the applicant was born in the country.

(4). The children of those who died before the coming into force of this law shall become Roumanian citizens if they sign a declaration, on attaining the age of 21, stating that they wish to become Roumanian citizens.

(5). Political rights are denied to:—(*a*) All who have been penally condemned, and thus, according to the Constitution of the country, have forfeited their civic rights. (*b*) Those who have been sentenced by the courts martial as deserters, or spies, or for helping the enemy during the war.

The Bolsheviks.

It is evident that the Russian Bolsheviks are very near to becoming masters of the whole of Ukrainia. They are organising a big army, threatening Roumania, and—what is more dangerous—they are concentrating there another army of fanatical propagandists. They are continuously fighting with the Roumanian forces on the Dniester, and their agents are doing their utmost to provoke a revolt of the Roumanian peasants. The report, which came from Vienna some days ago, that the Roumanian peasants were already ravaging the country, reflected rather the desire of the Bolshevik organisations in Austria and Hungary. Unfortunately, the condition of the peasants is most apalling, and despair might easily drive them into revolution. The Government is already apportioning the promised land to the peasants in order to alleviate their misery and gain their confidence. It is stated that at the end of March nearly all the State domains, those of the Crown and of public institutionts, will be distributed to the peasants, so as to enable them to begin the working of their own land. Privately owned estates will be apportioned later on, owing to the great difficulties concerning the delimitations of such domains.

The Saxons of Transylvania.

The Saxons from all the provinces of Transylvania have held a meeting at Mediash, one of their principal centres, in order to discuss the position of the Saxon population after the union of Transylvania with Roumania. There were present the Saxon ex-deputies of the Budapest Chamber, and the Saxon clergy. They unanimously adopted a resolution by which they recognise the decisions taken by the Roumanian Assembly at Alba-Julia, and proclaim themselves as citizens of Great Roumania. It is interesting to recall that in 1864, when the Magyar Government abolished the autonomy of Transylvania, the Saxons ranged themselves with the Roumanians and fought for the maintenance of the autonomy of Transylvania. There have been always very good relations economically and politically between the Saxons and the Roumanians of Transylvania.

A deputation of the Saxon Council, headed by MM. Braush and Schiller, have informed the Roumanian Government of Transylvania of their decision. The same deputation has left for Bucharest to announce the decision to the Government and the King of Roumania.

A demonstration in support of the claims of Greece and Armenia at the Peace Conference was held in Trafalgar Square on Saturday afternoon. M. G. Marchetti, from the Greek Committee in London, presided; M. Vasilakaki made a vigorous speech; and messages of sympathy were read from Queen Alexandra, M. Venizelos, Viscount Bryce, and Viscount Gladstone.

CYPRUS IN 1918.

(From a Correspondent.)

The war has left its mark on Cyprus, and those who re-visit the island after an absence of a few years, find a notable change, which indicates some advance in material progress. War profits have filled the pockets of many; merchants have made fortunes; and villagers have had opportunities such as they never had before. Very high prices have been realised for all kinds of produce; the cereal harvest was an exceptionally good one; wine manufacturers have obtained excellent prices; and carob growers, though less fortunate, have done very well. Many Cypriots have gone abroad, especially to Salonika, as interpreters, muleteers, etc., and have earned high rates of pay. The price of labour has risen all round. The employment of villagers—to a great extent women—in the tobacco-growing industry, caused some shortage of labour for the cereal harvest, and tended to force up wages. The cost of living, especially in the towns, has risen very considerably; but peasants of prudent habits—not too common—have been able in not a few cases to pay off their debts to usurers.

The exportation of carobs, so important a feature of Cyprus trade, is generally to a large extent held over from one year to another. This branch has been considerably disorganised from lack of shipping and other causes. Such quantities of the 1917 crop as could be shipped by the weekly mail steamer and by tramp sailing vessels, were discharged at Port Said, and stacked in heaps till they could be shipped to England. These consignments realised enormous prices, up to £55 (or £25 net) a ton. The commandeering of two-thirds of the 1918 crop by the military has been a blow to merchants.

As regards the new tobacco crop, a large proportion, unfortunately, failed, but high prices have been obtained for all that reached the market. A limit was placed on lands licensed to be planted. The extent was probably over 6,000 *donums* (say, over 2,000 acres), and when restrictions are removed there will probably be an immense extension, if conditions remain favourable. As it is, however, the results of this experiment have not realised the expectations of the very sanguine; and the high prices which the world shortage has allowed will not be maintained. Cypriot growers will have to do much better, and to take all the necessary measures; for there seems no reason why good tobacco should not be grown when suitable seed and more expert knowledge are available.

Taking a wide view, it can be said that the wave of prosperity which the war brought has not yet receded.

Good work has been carried out by the Public Works Department. Village water supplies have been improved, and the work on roads and bridges is of incalculable benefit. Village sanitation has made some progress under the encouragement of the Commissioners. The rural class is now far more ready to make use of hospitals and medical advice.

The Forest Department continues to show a large increase of revenue, due to increasing demands on island timber, in consequence of the lack of foreign supplies, and the consignments to Egypt and Palestine. This is satisfactory from a revenue point of view, provided that felling is not carried too far. That is always the danger; for skilful reafforestation, a very slow process, must be carried on for a long period, in view of the unpardonable destruction of the past.

The Agricultural Department has faced its uphill, but now not altogether thankless, task with unflagging zeal and energy. Its activities are many-sided, and the rural class, as a whole, is still deplorably apathetic. But the report of the Director of Agriculture, which will be looked for, as heretofore, with interest, will, I believe, show that further progress has been achieved in this all-important field of industry.

If progress in education has not been conspicuous, it is not from any lack of zeal on the part of the Department in charge, but because the reforms which are looked for as an outcome of the visit and report of Messrs. Talbot and Cape in 1913 have been inevitably "hung up" during the war, the end of which will now encourage the hopes of the District Committees and of the underpaid and fitfully distributed teachers throughout the island.

The "political situation" is unchanged. Those who claim to represent the community of 230,000 Greeks keep the torch of Hellenic aspirations burning, while 60,000 Turks remain stoutly opposed to any change of government. At the close of the year yet another Greek deputation, headed by the Archbishop Kyrillos, left for England to urge once more their petition for union with Greece. Perhaps the prevailing feeling at present is one of hope that, should Great Britain keep Cyprus, the real needs of the island, which are mainly concerned with agricultural development, will be at last seriously dealt with in a new and liberal spirit.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, January 27.

The Future of Tangier.

There has been considerable excitement here during the last few weeks over the articles which have been appearing in the French and Spanish papers and in *The Times* regarding the future of Tangier, and Dame Rumour has been very positive of the almost immediate assumption of authority by France.

Not only the present international zone of Tangier, but the Spanish zone also, was to become French, the amount to be paid to Spain for the latter, a good round sum, being stated with a great air of official information. The French Tabor (police), French Post Office, etc., had, it was said, received orders to prepare for the change. Land jobbers have been, or have made a great show of being, very busy finding buyers or sellers, and some transactions in low-priced land have taken place.

Naturally, Britons are extremely anxious. They would be false to their blood if they did not hope that somehow or other Tangier would come under the protection of their own flag, and no one can blame them for feeling a very keen regret if Tangier, where England has had such a long connection and has such important interests, with its beautiful country and with a port which has such an immense future before it, should pass to another nation, however friendly. If it is not to be British, they would prefer to see a proper international authority constituted. There are many natives, Jews and Arabs, as well as foreigners, who would welcome British rule, and if a plebiscite of the inhabitants could be taken it would give results which would surprise very many wise people.

Among the nations to whose protection Tangier has been assigned at different times by rumour was the United States, and the present journey to Paris of Mr. Maxwell Blake, U.S. Diplomatic Agent and Consul-General, is exciting some curiosity.

The German Debacle.

The news of the defeat of Germany is gradually spreading amongst the insurgent tribes, and whilst there is still much difficulty with some of the more warlike amongst them, the flight of the German agents and of some of their Arab tools, together with confirmation of the Allied victory, has already had the effect of deciding some tribes to make submission to the French authorities.

Vaccination Regulations.

A decree has just been published obliging everyone arriving in the French zone by sea or overland, unless he can show a certificate that he has been vaccinated within six months, to submit to vaccination on the spot. A certificate from the doctor who performed the operation or the institution where it took place is not sufficient; the document must be legalised! This seems very arbitrary, and one wonders what will be the position of foreigners who may have been vaccinated quite recently enough according to English ideas, or who, having undergone the operation within the required time and, not being aware of the decree, have never thought of obtaining a certificate, let alone of having the signature legalised. We British are not in the habit of carrying a vaccination certificate about with us.

The Tourist Outlook.

We are again enjoying a spell of very beautiful weather. Irises and narcissi are blooming, arum lilies, hibiscus and oleanders are in bud, and mimosa and almond trees flowering. The temperature was rather low at the beginning of the year, and one night especially bananas and the very tender plants suffered. It is still cold at night and in the early morning, but the sun is gaining strength, and for walking or even riding one finds in the middle of the day even the lightest overcoat rather much.

There has not been very much rain, and in the agricultural districts up to a month or so ago people were becoming anxious; luckily, rain fell in time, and there has been a considerable quantity more or less all over the country. Unfortunately, locusts have made their appearance in one or two districts; it is to be hoped that the authorities will lose no time in taking energetic steps to deal with this plague. Although we had one or two days' very heavy rain in Tangier, more is wanted; some people, whose supply usually suffices, still have to buy water, even very good wells having given out.

It is stated that the Cecil Hotel, which has been closed since soon after war broke out, is preparing to reopen. The Cecil was always one of the favourite hotels amongst tourists.

The Bland Line have recommenced their regular service between Tangier and Gibraltar. There are now two sailings a week each way; they have only put on a small steamer, with little or no comfort; but, after the long interruption of regular communications, almost anything is welcome.

It will be seen that in some ways normal conditions are gradually being re-established, and intending tourists should begin to make their arrangements.

There has been another sad accident in the bay; a boat bringing seven liberty men from the French cruiser Cassiopée capsized near the mole, and three of the occupants were drowned. Two of the bodies have been recovered and were buried in the new cemetery. The news of the sad fate of the Pagnet liner Chonia was a great shock, she and her officers and crew were so well known in Tangier and Casablanca.

I must not omit to say, though perhaps rather late in the day, how very pleased the many friends of Mr. Leslie Couper, of the Bank of British West Africa, were to hear of the honour recently conferred upon him.

The series of horse and mule robberies continues. Last week three mules were stolen from the stable of one of the best known and most highly respected British residents here. It is very strange that Britons are the greatest sufferers from these thefts; but there seems absolutely nothing to be done, notwithstanding very vigorous protests.

EGYPTIAN ADMINISTRATION.

On Tuesday, at the Central Hall, Westminster, Sir Malcolm McIlwraith delivered an address on Egyptian Administration.

Sir Charles Lucas, who presided, in introducing the lecturer, said that Egypt had illustrated the constructive genius of the British people; it had shown what could be done by the British soldier, statesman, and engineer. Less than forty years ago we went into Egypt, and less than twenty Lord Kitchener recovered the Sudan for civilisation; but what a record it has been! Great names had been associated with Egypt, and Egypt in large measure had made them great.

Sir Malcolm McIlwraith said that Lord Cromer's great Pro-Consulship from 1883 to 1907 had laid the foundation of all succeeding regimes. Its leading feature had been the concentration of power into his own hands. In the circumstances of the time, the choice lay between the personal government of the Khedive and that of the British representative, and Lord Cromer chose the latter alternative, aiming at, and to a great extent achieving, the liberation of the people from oppression, even-handed justice for all men, and considerable reduction of taxation. Under Sir Eldon Gorst, who succeeded him, an entirely different policy was pursued, British guidance being reduced to a minimum. The experiment proved a disastrous failure, and when, after four years, Lord Kitchener was appointed, there was a considerable swing back of the pendulum. Lord Kitchener firmly resumed the reins of government, and proceeded to direct the course of policy and reforms in the various departments, going, in this respect, much beyond Lord Cromer. During the three years of Lord Kitchener's administration (1911-1914) a large number of innovations were introduced, the source of them all being the desire to ameliorate the lot of the fellaheen. The "Five Feddan" law, which exempts small homesteads from seizure and sale for debt; the Cantonal Courts, establishing an administration of the law modelled on that of the English justice of the peace; a reform of the savings banks; the grant of small holdings to deserving cultivators on advantageous terms; and a revision of the constitutional organisation of the country, were the most notable changes that he introduced. Lord Kitchener left in June, 1914, for a holiday in England, and, of course, never returned to Egypt. Soon afterwards that country was declared a British protectorate, a Sultan replaced the Khedive, and a High Commissioner was sent out in place of the former Agent and Consul-General to represent the protecting Power. This made little difference in the outward aspect of affairs, but it entirely changed the legal situation of the country, and swept away certain irritating anomalies in the position of the British representative, by placing him in a position corresponding to his political importance.

Sir Malcolm concluded his address by briefly sketching some reforms which he anticipated would be introduced into Egypt, these including schemes for drainage and irrigation, the exploration of the Red Sea littoral and the Sinai Peninsula, the extension of education, the improvement of public health, and the abolition of the capitulations.

Sir Francis Younghusband said that one of the greatest problems of our Empire was that of what should be the relationship between the British representative and the native chief and his Ministers. Should he sit still and see the State ruled in an inefficient way? Should he watch every kind of corruption and misgovernment going on around him, or should he, like Lord Cromer and Lord Kitchener, take the reins firmly in hand and practically rule the State himself? Probably it was necessary to do this in order to establish good and firm government in a country previously misgoverned. Nevertheless, it was not desirable that this kind of thing should go on continually over a great number of years, for the eventual result was to emasculate the people and leave them incapable of governing themselves. There was apparently too sudden a change when Lord Cromer was succeeded by Sir Eldon Gorst, but he (the speaker) thought that after the strong and masterful representative had got the country into order, gradually, in the course of time, the British representative should be more a man fitted for social and ceremonial functions, while we should look for the impetus towards improvement to the young British administrators serving under the native Ministers.

THE FUTURE OF CYPRUS.

(From a Correspondent.)

The future of Cyprus is again being discussed, and those who advocate its cession to Greece refer, of course, to the unfortunate offer in 1915, which most Englishmen regard as a grave blunder and one, moreover, which was felt to be derogatory to our national diplomacy.

The prevailing, and rather natural, ignorance regarding the island tends to cause indifference on the part of the general public. Many persons here, in America, and elsewhere, may have an idea that Cyprus has only recently been rescued from a tyrannical Turkish Government, whereas it has been ruled for forty years by the most humane Government in existence. Again, many may imagine that Cyprus was wrenched from Greece some centuries ago, and that it is now only right and proper that it should be restored to its mother land. The fact is that it has never been ruled, or possessed, by Greece for a single hour. At all events, none of these considerations should allow us to close our eyes to the increasing importance, to any Power that may hold or have "mandates" in the Near East, of an island which has always been regarded as a stepping stone to Egypt, and which is in such close proximity to the coasts of Syria and Asia Minor. Indeed, very few Englishmen are aware of the great value of the Famagusta harbour, and of the use which has been made of it during the last few years. Nor is the immense importance of aircraft in the future to be left out of consideration.

The geographical position of Cyprus can hardly be said to afford an argument in favour of its incorporation in the Greek Kingdom. The aspirations of the Greek-speaking Cypriot community are based on sentimental grounds, and no one can blame them for endeavouring to promote the "Hellenic idea," which is jealously fostered wherever Greeks are settled in any considerable numbers. But one of the principal matters for consideration is the fact that there are 60,000 Moslems in the island, who have been consistently loyal during the whole of the forty years of British administration, who strongly oppose and would deeply resent their transfer to Greece, and to whom definite promises have been made that their interests will always be carefully safeguarded.

Then as to British interests: Lord Salisbury, speaking at Manchester in 1879, stated that we had occupied Cyprus because the interests of Europe would probably be centred in Asia Minor or Egypt, and that in bringing about the Anglo-Turkish Convention of 1878 we were only following our traditional policy. Surely, the present moment, while the fate of Syria, Asia Minor, and Mesopotamia, hangs in the balance, is not one for relinquishing a position of great strategic importance, as a naval and aircraft base, as well as a coaling station. It is, of course, possible that at no distant date it might be turned to hostile purposes, and become a serious danger at a vulnerable and all-important point. A correspondent of The Near East (August 20, 1915), over the signature "Philhellene but Pro-Briton," referring to the cession of the Ionian Islands, said:—

"From a naval standpoint the possession of Corfu by Great Britain during the present war would have been of the first importance, and it might well have formed the base for operations against her enemy in the Adriatic. . . . The loss of Corfu by Great Britain has been deplored by the Naval War Staffs of at least three Great Powers, since the end of July, 1914. . . . Greece has already an enormous coast-line, far larger than she can ever hope to police adequately. Are we to give Cyprus into hands already more than occupied elsewhere, and so provide a future enemy with a coast-line for the establishment of secret submarine bases within easy striking distance of the Suez Canal and all that its traffic means to us? A secret submarine base is a very simple affair—it is not necessary to have a natural harbour for the purpose—a thing which has so far not been discovered in Cyprus."

In view of the vast extent of the Empire, there can be no desire on the part of sane politicians that our dominions and responsibilities should be increased by the acquisition of fresh Colonial territories; but recent experience points to the need of the greatest caution in dealing with any question of surrenders. Whatever may be the disposal of countries nearest to Cyprus, the cession of the island would greatly weaken the links of Empire at a most vital point. Whether we have faith in, or are sceptical regarding, the long duration of a League of Nations, scarcely yet in embryo, it is to be hoped that our statesmen will not be induced, in our British spirit of yielding and compromise, to agree to any step which we may have only too much reason to regret.

In a telegram just received through the Foreign Office by the Serbian Relief Fund the Prince Regent of Serbia says:

"I thank them from my heart, and beg them to believe that neither I nor my people will ever forget the immense services rendered by the Fund to my country in the painful moments through which it has passed. Alexander."

Whilst the Serbian people are deeply grateful for all that has been done for them, their needs are still overwhelmingly great, as the following report shows:

With the retreat of the Austrians and Bulgarians, the Serbian Relief Fund, following upon the victorious Serbian troops, pushed forward into the reoccupied parts of the country as far and as energetically as our means allowed.

We have now established a hospital at Nish, another at Uskub, and a third at Prokuplje. These hospitals are staffed by British doctors, matrons and nurses. Besides these existing hospitals, the Serbian Relief Fund proposes to start other hospitals as suitable buildings are found and as transportation facilities (now greatly hindered by the wrecking of the Serbian railways) are bettered. The Serbian Relief Fund is establishing a number of village dispensaries and soup-kitchens near Nish and Uskub.

For all this we must have money. Our staff in Serbia now consists of more than seventy British people, and it is being considerably enlarged, our Administrator (Dr. F. G. Clemow, C.M.G.) asking us continually for "more workers." We must develop our organisation and its assistance to the Serbian people, for as the condition of the country is being revealed, it is found to be far more desperate than the authorities had expected. We are now sending out a tuberculosis specialist (Dr. E. M. Hime), who will have under him a number of health visitors or sanitary inspectors, trained men and women whose duty it will be to aid the Serbian peasantry and townspeople in meeting the scourge of tuberculosis, which many years of lowered vitality have added to their other misfortunes.

The Serbian Relief Fund have just given a sum of £11,000 for the purpose of founding an orphanage in Serbia. This orphanage must be followed by other orphanages, as there are many thousands of destitute children in Serbia, and the future of the country depends in part on their survival and upbringing. For these, again, we must have money, and even more money, and the British Nation and Canada and Australia must show their appreciation of the indomitable patience with which the Serbian people have met such terrible sufferings by giving us the money we need for what we plan to do towards the reconstruction of their country.

We have an "Asile" and workrooms at Bizerta in North Africa the evacuation port for the Serbian Army. The asile, consisting of 200 beds for nervous cases, and the workshops, where mutilated soldiers are being taught simple trades, must now be moved to Serbia.

We must also do what we can towards infant welfare in Serbia, towards giving the women employment, towards reviving ruined peasant industries, such as carpet-weaving, basket-making, etc.

The Allied Governments and America have taken over the feeding of the country, but the Serbian Relief Fund are helping to clothe and keep warm a large number of its inhabitants—men, women and children. Since 1914 we have sent out more than 3,000,000 articles of clothing, and our public appeal for these necessaries is meeting with a most generous response. Every ship which sails for Serbia carries, as a part of its cargo, many things which the Serbian Relief Fund have asked for and obtained from the peoples of the British Empire.

We must now ask for more—for more clothes, above all for more money. In the spring of 1918, before the great Serbian Advance, we were spending £3,500 a month on our work in Serbia (this exclusive of what we were doing for Serbian refugees in Great Britain, Corsica, Corfu, North Africa, and the South of France—responsibilities which we cannot abandon); we are now spending more than £5,000 a month there; we should be spending twice and thrice that amount if we are to do half of what must be done for the country, if it is to take the place in European civilisation which its heroism deserves.

Parcels of Clothing should be addressed to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, S.W.7.

Hospital supplies and material should be sent to 53, Grosvenor Street, W.1, care of the Countess of Bective.

Cheques and donations of money should be sent to the Hon. Treasurer, the Right Hon. the EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

(Registered under the War Charities Act, 1916),

5 CROMWELL ROAD, LONDON, S.W. 7.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.
OMAR KHAYYAM.

Recently I referred briefly to the gallant part taken by "King Constantine's Own" in the final operations against the Bulgarians. Now I am asked to give some details; and as far as a somewhat treacherous memory allows, I gladly comply with the request. To begin, the position which they were expected to capture—on the slopes of the Grand Couronne, I think—but am not quite sure—was one of extraordinary natural strength. The officer who told me of the advance, who was a bit of a mountaineer himself, went over it subsequently; and, he said, it took him over four hours to climb it, and he was fairly exhausted by the effort. The going was bad from the start; so bad that though the officers were shown the ground, the men were not put in the trenches till the previous night. Yet when they did make a move, they reached their goal in less than two hours, and drove the Bulgarians from the coveted position. They were, in fact, rather ahead of their scheduled time; though most people had thought they could never do the job in the time, even if they could do it at all.

***

What made the feat all the more wonderful was that it was carried through in the teeth of "everything going wrong," so to say. The Bulgarians were very nervous, knowing that something was about to happen, but not knowing what; and just before the advance was timed to begin they started shelling our front line trenches and dropping incendiary shells on them with great precision. Then, according to my informant, a strange, and horrible, thing happened: an incendiary shell caught one of the Greeks fairly, and flung him into the air a blazing mass. The Greeks were just ready to "go over the top" at the time; and the glare showed them up clearly to the enemy. Thus discovered, the Colonel promptly decided to advance, instead of waiting the few minutes for the appointed time; and gave the order accordingly. It was obeyed at once, and "King Constantine's Own" advanced in face of the Bulgarian fire, and accompanied by their own creeping barrage. That is not a point to dwell on, but it has to be mentioned in justice to the K.C.O. Yet they went on—and did what they had been asked to do. But out of 3,000 men they had left only 360; and of 121 officers only seven or eight lived through the ordeal. Such are the facts, as well as I can remember them, as given to me by one who watched the advance. The feat seems to me worthy to rank with many of the finest performed by our own troops.

***

During this "cold snap" I expect that a good many ex-prisoners of war from Turkey must be congratulating themselves more heartily than before on their release. For cold in such quarters, with a shortage of fuel, too, must have been pretty hard to bear; and though they did their best to keep warm by such methods as snowball fights and tobogganing, they suffered not a little. It is, by the way, curious to think that the Red Indian toboggan has at last found its way, though in a modified form, no doubt, into Asiatic Turkey. I am told that occasionally the prisoners would give one or two of their guards a free "run," and that the Turks would apparently thoroughly enjoy the experience, roaring with laughter over it. So the pastime may have "come to stay" in those parts; though one suspects that Ahmet and Mustapha will never have the energy to keep it up without their captors to prod them up, so to say.

***

Apropos of the unweatherly condition of some of the buildings in which the British prisoners were housed by the Turks, I was told of a typical incident. In Yezgat some officers were placed in a room which had a positively enormous hole in the roof: not the kind of glorified crack that one gets quite indifferent to in Turkey; but a great gaping wound, that looked as if an aerial torpedo might have caused it. Naturally, the room was far from snug at all times, and when it was at all cold—well, it *was* cold. So when its occupants heard that a bigwig from Constantinople was coming to "inspect" them and their quarters, they rejoiced; and when he arrived they put their case before him in a way which—they flattered themselves—would certainly move his pity. He "inspected" the hole, and then remarked weightily: "Well, gentlemen, you must pray that it may not rain." His name was Zair, but whether he was a Pasha or a mere Bey I cannot remember.

A correspondent of the *Daily Telegraph* reports that "the disorders between the Serbs and Croats" have led the Yugoslav Provisional Government to take measures which certainly smack of mediæval times. To my way of thinking the said measures are admirably adapted to the end in view, and the fact that they appear to be inspired by a certain sense of humour does not detract from their merit in any way. Thus, as far as I can make out, if a Croat and a Serb fall out and create "disorder," they have to undergo two days' imprisonment in the same cell, and are not given any food. But, in lieu of nutriment, "they are bound to kiss and embrace each other three times daily"; and on the expiration of the term of imprisonment they are "obliged to sleep together and eat off the same plate for one month." Could there be a more admirable example of making the punishment fit the crime? *The* Mikado himself would find it hard to beat. After this it comes almost as a shock to find that "offences against the King or the State" entail no worse fate than twenty-five strokes of the rod. But one wonders mildly how the "disorders between the Serbs and Croats" arise, and how far they have spread. We had heard of—or—"disorders" between Serbs and Montenegrins, and Serbia and Italy, not to mention little differences between Serbia and Roumania; but we have always been told that the Serbs and Croats were simply yearning to eat off the same plate, and all the rest of it. Now, it seems, the longed-for state of affairs is to be regarded as a penalty.
CORSAIR.

NATIONAL UNITY OF THE ROUMANIANS

On Tuesday, at King's College, London, M. M. Beza delivered an address on the National Unity of the Roumanians.

Lord Bessborough, who presided, took occasion to make some remarks on the country. He said that Roumania was very little known to English people before the war, and even now, but few understood the great value of our ally in regard to the politics of the Near East. Roumania had an important bearing also on our commerce, and very badly wanted help from England in the way of machinery and other matters. Transylvania was inhabited by a mountaineering and agricultural population, whose incorporation in the kingdom of Roumania must have a very great effect.

M. Beza said that tradition ascribed the foundation of Wallachia and Moldavia to princes who came from Transylvania in the fourteenth century, and united under their sway organised communities such as were to be found on the other side of the Carpathians and elsewhere in South-Eastern Europe. Little was known as to the exact relations between these autonomous tribes, but it would be a fallacy to consider them as having always had their centre in what afterwards became the Danubian principalities. At the dawn of their history the Roumanians were very closely associated with the Slavs, whose language they shared for Church and State purposes. Under Turkish pressure many Slav clergy took refuge in Wallachia, among them Nicodemus, who before the end of the fourteenth century had founded two monasteries. Other monasteries followed, the members of some of which busied themselves compiling brief historical notes. Thus the consciousness of racial unity began. Differences in the Church made their way into Roumania, and the proselytising efforts of Hussites, Lutherans, Calvinists, and others resulted in a number of books being published in the language of the people. Among these were a Roumanian version of Lutheran Catechism published at Sibiu in 1544. About twenty-five years later the printing press at Brassov brought out the Gospels and many more books, and in 1688 the Bible was printed at Bucharest. This, like the preceding publications, was in Slavonic characters, and these continued in use until long afterwards. In the books published in the earlier half of the nineteenth century Slavonic, Greek, and Roman letters were all availed of; only in the later half of the nineteenth century did the Roman alphabet come to be used exclusively. One of the most important incidents in the development of Roumanian nationality, curiously enough, was the annexation of Transylvania to Austria-Hungary and its conversion to the Roman Communion. The Catholics, for their own purposes, founded schools and colleges, and even sent to Rome two Roumanian students, George Shincai and Peter Malor. Both these were remarkable men. The ancient city awoke in them a pride in the glorious past, together with a sense of humiliation, as they thought of the present servile position of their race. They became preachers of Roumanian nationalism. This was towards the end of the eighteenth century. In 1866 Alexandri published a book of folk poems, which constituted, together with the old chronicles, a living volume of the vernacular, and from this beginning a truly national literature had grown up, ignoring political barriers, breathing a genuine magnanimous patriotism, and coloured by a very definite sympathy with the down-trodden people. "The house we build is not ours; the land for which we cry and we suffer only buries us," wrote Cerna, the last of the Roumanian poets, a few years before the war.

After protracted examinations and after having made their pleas, the impeached Greek Ministers of the old regime—General Yanakitsas, M. Rallis, M. Dragoumis, M. Hatzakos, and ex-Prime Minister M. Skouloudis—are being detained in custody pending trial.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We trust that you will allow us to make a few remarks on your notes about Cyprus, which appeared in your issue of yesterday.

You characterise as an instance of "propagandist hyperbole" the fact that the Archbishop of Cyprus has asked for "the return of Cyprus to the maternal bosom of Hellas," and you say that "at no time in its history since the time of Alexander the Great has the Island been connected politically with Greece proper." We are afraid that this phrase of yours is open to a most serious misunderstanding. The City-States of Cyprus were before the time of Alexander independent States even of each other, and this because then such was the constitution of the whole of Hellenism. At Alexander's time all the City-States of Cyprus declared spontaneously, and not by virtue of conquest, in his favour.

The Island became a Roman Province definitely in the year 27 B.C., in the same way as Greece has become one. But as soon as the Christian Hellenic State was constituted at Constantinople. Cyprus, like Greece, became, and for eight centuries (from 395—1911 A.D.) continued to be a province of that State. During all this long period an unbroken line of Archbishops presided over the Hellenic population of the Island. It is true that the Lusignans and the Venetians ignored the Greek Bishops, but the Turks at once recognised them as the head of the Cypriot population.

It is consequently neither right nor just for Englishmen to-day to deny to the Archbishop of Cyprus a right which the Turks undisputably accorded to him, for the simple reason that those conquerors have left behind them descendants who hardly amount to one-fifth of the entire population of Cyprus.

Your anxiety about the Moslems in Cyprus is no doubt chiefly due to the fact that "they have proved themselves loyal British subjects." We cannot help drawing the conclusion that you refer to the loyalty of the Turks in order to give more importance and greater support to the wishes of the Moslem minority. It is not our intention to touch unduly or in any unkind way the feelings of the Turks, but we cannot refrain from reminding you of the significant fact that the Cypriot Government has found it necessary to confine, in the Kyrenia fortress, for a considerable period during the war, certain prominent members of the Moslem community, and this for the safety of the Realm. You will no doubt agree with us that this fact is far from being consistent with any loyalty worth mentioning or worth relying upon. But apart from this the Moslem minority has nothing to suffer under Greek administration and the flourishing condition of their co-religionists in Thessaly, Crete, and Macedonia affords excellent precedents in this respect. As far as we know, no complaints from any of the communtities have been lodged against the Hellenic Government; they enjoy equal privileges with the Greeks; they are used in the public service; they are elected mayors; they are appointed commissioners; and more than once they have sat in the Greek Parliament.

With regard to the ancient history of Cyprus—Hellenic in every respect—we are prepared to agree that it is not necessary to rely on the same for the solution of the Cypriot question. The present national Hellenic character of the Island will be sufficient to enable Great Britain to solve the question by giving practical application to the doctrine of Nationality for which she has nobly fought.—We, are, &c., THE CYPRUS DEPUTATION.

2, Lancaster St., Lancaster Gate, W.2.
Feb. 8, 1919.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Though I have not the honour to be a native of the island where Venus Cypris was born, being only an unredeemed Greek, I was really surprised and pained when I read in your issue of February 7 the sarcastic comments referring to Cyprus and her future. You acknowledge that the Greeks, being a colonising nation from the earliest times, had settled in Cyprus. You are right. Before and after Alexander Cyprus was as Greek as Crete. This island, at first settled on by Phœnician sailors, was by no means a *terra incognita* to those Greek sailors that Homer describes roving in the Mediterranean in their little rowing galleys (Odyssey, Lib. 17, 427). King Agamemnon was proud of his Cyprian breastplate (Iliad XI., 20), and in Cyprus Greek and Phœnician rivalled each other—so much so that in the ninth century B.C. the towns of Amathus and Salamis were no longer known by their barbarian names of Hamad and Sechelmi. Cyprus conquered by Shalmanezer, the Pharaoh Hofra, Nebuchadnezzar, and Pharaoh Amasis lost neither her Hellenic character nor her Grecian manners. Nine small kingdoms, a monarchy, were founded later on, the whole acknowledging the supremacy of the King of Salamis. She was again taken by Cyrus, but after the Persians had been crushed at Marathon and at Salamis (in Greece), Cyprus claimed aid and help from Athens, and refused "earth and water" to the Persian intruder. Cimon, the son of Miltiades, came in person in the island, and during the naval battle of Kitium (the Chittim of the Hebrews) he lost his life, but the victory was won by the Athenians. Cyprus was then made a naval base, and the Athenian Grand Fleet, anchored in the Cypriot ports, was a perpetual danger for Artaxerxes Longimanus. This Athenian force of some two hundred sail rendered good services to the Egyptian rebels against the Persian yoke, under the leadership of Inarus and Amyrtæus. Evagoras, the King of United Cyprus, is not to be blamed if he turned unto Achoris, the Egyptian chieftain, asking for help, instead of applying either to Athens or to Sparta. Achoris was a rebel against Artaxerxes Memnon: Athens was still bleeding from the consequences of the Peloponnesian wars; and Greece had paid heavily for her peace with Susa by the shameful treaty of Antalcidas. You speak of the claims of Egypt in Cyprus. Is it because Ptolemy Soter had conquered the island, or because Euergetes and Alexander were banished there? You know very well, as I do, that Egypt was completely Hellenised under the Ptolemies. Further on you inform us that "the different city states of the island were altogether independent of Hellas." We all are aware that Ancient Greece—unfortunately for her—was divided into small autocephalous and rival states; but the whole acknowledged the Amphictyon system. Allow me now to pass in prudent silence over the sufferings of the Cypriots under the yokes of the Crusaders, the Lusignans, the Venetians, and the Turks, not to mention the gloomy persecution of the Popish See and its Hermandad. The only thing I can assure you is that in Cyprus you will at present hear as pure Greek spoken as in any other Greek country, and the Cypriots have till now a peculiar mania to bestow upon their children, if possible, the ancient name of a Greek mythological hero. The different persecutions encouraged the islanders to stick to their Hellenism. Cyprus, evangelised to the Gospel of Good Cheer by Barnabas and Paul, and delivered from Elymas and other sorcerers, her last links of Egyptian or Asiatic connection, proves herself to be a true daughter of Greece, and Orthodox for over nineteen centuries. When Gregory the 5th, our Ethnarch and Patriarch, was hanged by the Turks in Constantinople at the outbreak of the Hellenic War of Independence, Cyprus offered up gladly her own Primate Cyprian, and other bishops, as burnt offerings on the Altar of Liberty.

At last you argue that "it is idle to suppose there would be peace in Cyprus for a week" if this island were handed over to Greece, and you express fears for the future of the Turkish minority under the . . . . Christian element (as the Greek Cypriots have always been styled by the British officials in the island). Kindly note that the Greeks never molested Moslems or other denominations in their newly-annexed territories, and I refer you to the Jews and Turks of Thessaly, Arta, Epirus, Macedonia, and Crete, especially those of the latter. You certainly remember the hysterical yells and cries of the Young Turks as to Crete's Moslems, who, being, as the Cypriot Turks are, descendants of Christians compelled to embrace Islam, are using to this day in their conversation ninety-five Greek words against five Turkish. Don't forget that in 1915 Great Britain willingly offered Cyprus to that "unworthy gentleman," as you precisely call somewhere in your issue (7/2/19, page 111) ex-King Tino. H.B.M.'s Government was fully aware that no Cypriot vespers were awaiting the Moslems, and had not the pro-German Cabal in Athens been so cowardly afraid of the great Apollyon of Berlin, Cyprus would have been already "returned to the maternal bosom of Hellas," as the Primate, Monsignor Cyril the Third, has so firmly proclaimed.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester,
February 8, 1919.

On Tuesday afternoon a concert was given at the Æolian Hall by the Prisoners of War Choir from Yozgat.

The *Pioneer* reports that a "magnetic crescograph" has been recently invented by Sir J. C. Bose. The high magnification obtained by this super-sensitive apparatus, it is claimed, far surpasses all existing appliances. It has aroused much interest among leaders of science. By this apparatus phenomena hitherto beyond the reach of investigation can now be studied with great certainty and precision. It shows ultra-microscopic changes induced in a growing organism even by a puff of smoke or a gentle breeze, by a passing cloud or fleeting brightness.

A dance in connection with "Slavo Day, 1919," was given on Monday night at the Piccadilly Hotel in aid of the fund originated by the Hon. Mrs. Evelina Haverfield and Sergeant-Major Flora Sandes for disabled Serbian soldiers. The dance was organised by Miss Erica Beale, and was under the patronage of Princess Louise Duchess of Argyll. The Countess of Carrick, Lady Muir Mackenzie, Lady Macready, Lady Horne, and Lady Moss were the receiving hostesses. The Committee of Hostesses also included the Countess of St. Germans and Lady Newnes. Among the stewards were Captain Y. U. Yovanovitch, Captain J. P. Carrington, and Captain McCubbin. Some of the national dances were given in the intervals.

NEAR EAST BOOKSHELF.

THE LIFE OF SIR CHARLES MOORE WATSON (WATSON PASHA).*

Most readers of THE NEAR EAST are acquainted with the name of Sir Charles Watson. His interests in all matters concerning the Near East were so general, and his activities, especially in regard to the Sudan and Egypt, were so widespread that no one interested in Egypt, Palestine, or the Turkish Empire can be ignorant of his name. It is well, therefore, that a careful biography of him should be published; and the task of writing it could not have been put into abler hands than those of Dr. Stanley Lane-Poole. There is a literary charm due to the editor which greatly enhances the value of a singularly eventful life.

Watson belonged to that class of soldiers who do great things but are not careful to advertise what they have done. He was a Royal Engineer, a sapper, and was always proud of that fact. When he entered Woolwich he was first in the list of cadets, and would have also obtained the Sword of Honour had there not been a regulation to the effect that this should not go to the man who had headed the list. He was the keenest of students, but did not shine on the cricket or football field, though he held his own. He did the work that he was asked to do, and always thoroughly and well. He was precise and methodical, and these habits which marked him as a student, continued to the end of a very full life, and contributed greatly to his success. At an early period he obtained the confidence of some of the most remarkable men in the Service. Gordon Pasha became his friend, and Watson looked up to him with a kind of reverence which is the more remarkable when it is clear that Watson recognised the curious eccentricities of Gordon's mind. He never lost faith in him, and when Gordon came to his unhappy end Watson was always ready to defend his memory. On the much-discussed question as to whether Gordon could have held out longer, his remarks appear as those of a master of the situation who had a unique knowledge of the country and of Gordon himself, and are worth quoting:

"All the evidence available," says he, "proves quite conclusively that Khartum was taken, not for want of soldiers or of ammunition, nor by treachery, but solely through famine. The soldiers stood on the fortifications like pieces of wood . . . . yet Gordon made the place hold out for three weeks longer. It would have made no difference if the steamers had left Gubat three days earlier; Khartum would have fallen three days sooner, that is all."

It is in this judicial spirit that Watson examined many of the difficult questions which arose out of the Egyptian campaigns. Watson had been sent on service which brought him into close contact with Gordon, but his career from first to last was interrupted by new and incongruous tasks assigned to him in the course of his duty. It was especially in Egypt, however, that he had the opportunity of showing his qualities as a great soldier. Readers of middle age will remember that the position of England in Egypt between 1876 and 1890 was of the most critical character. England and France had disagreed in working what was called the Condominium, and when internal troubles arose in Egypt, the two Western nations were far from being in accord.

These troubles centred for awhile around Arabi Pasha, who played fast and loose with the political leaders in Egypt. The Sultan, who might have been expected to be on the side of order, supported Arabi. Watson kept himself well outside the political squabbles in Egypt. Our representatives believed that it was necessary that the authority of the Khedive should be supported by British and French troops, and especially that they should have with them Turkish troops, whose presence would show to the world that they had no designs against the Sultan's authority, but wished indeed to uphold it. But France was opposed to a joint occupation and equally opposed to one by England. Our Government, however, recognised, rightly as we now see, that such an occupation was necessary. France hesitated, and then refused to join us, but the Sultan was urged to send a few troops in order that the Egyptians might be shown that British troops were not attacking the supposed rights of the Khalif. Lord Dufferin was then Ambassador to the Sultan, and found that Abdul Hamid would neither consent nor refuse to send troops, and that France and Russia were supporting him secretly in such refusal. I well remember the week of intense anxiety during which Lord Dufferin left the capital for Prinkipo while he waited for a definite answer one way or the other. He was aware that Sir Garnet Wolseley had received orders to land men in Egypt on a particular day, and to attack Egyptian troops with or without the aid of the Turks. Then, after having been induced to spend the morning at the Palace while the Turks were submitting propositions quite impossible of acceptation, he left late in the evening, and half-way to Therapia met his secretaries, whom he asked with eagerness whether the expected telegram had arrived. As a fact, it had come, and announced that Wolseley had landed British troops. There was consternation at Yildiz. The next day Baker Pasha left Constantinople, and joined the Khedive's service, and the anger of Abdul Hamid became almost unbounded. After this incident the battle of Tel-el-Kebir, on September 9, 1880, was fought, in which Wolseley defeated the Egyptian rebels. Then followed the most dramatic incident of Watson's career. The country was full of rebel soldiers, the prisons of Cairo were crammed with prisoners, innocent or guilty, and the whole country in the immediate neighbourhood of Cairo was in chaos. It was said that the man who held Cairo held Egypt, and that he who held the Citadel held Cairo itself. It fell to the lot of Watson to do his best without specific instructions to overcome the scattered but still numerous forces of the Egyptians. He acted upon his own responsibility although he knew that enemies were around him in considerable numbers, and that his forces were far outnumbered by the Egyptians; that if a check were seriously given to the small army under him the crowd still hostile to the British would take courage and attack his little force. It was midnight when Watson realised the position, and then he took a bold step, which would have made the reputation of any soldier under ordinary circumstances. For the moment he was the guardian of England's honour. Happily, he had prepared himself by his previous study of the country, and knowledge of Arabic and of the topography of Cairo and the Citadel, to take a bold and even desperate step. With the full knowledge of his inferiority in numbers and of the hostility of many of those who were near him, he determined to rush and capture the Citadel. Few bolder strokes have been made by any great soldier, but Watson seems on that occasion to have recognised that he represented the Royal Engineers as the men who were ready to go anywhere and do anything where duty called them. The attack upon the Citadel in the depth of Egyptian darkness is a thrilling story, and is not told here with the completeness which it deserves, nor was its signification at once fully recognised.

For a time there was a curious hostility between various branches of our Service, and in this volume itself there is evidence of a desire in certain quarters to snub the Royal Engineers. When a year afterwards, however, the matter was fairly brought before the Commander-in-Chief and the higher authorities, justice was done to the daring, skilful, and splendid attack which was made by Watson.

My space will not allow me to deal with the excellent work accomplished by Watson in connection with Palestine Exploration. Nearly all the great explorers in this work were Royal Engineers. Conder, Sir Charles Wilson, Kitchener, and half a dozen others working for this important society were all sappers.

The volume before me shows the great interest which Watson took in a variety of subjects not directly connected with his work as an Engineer. His was a full life, and one cannot imagine Watson sitting down in idleness in any period of his career. The internal organisation of Egypt from the southernmost part of the Sudan and the littoral of the Red Sea occupied close attention, and the record goes to show that whatever he undertook he performed well. The quiet, modest Irish boy had risen to be a great figure among the soldiers and engineers of the Empire, and his biography is an inspiring one.

Watson did not know how to idle, and after his marriage Lady Watson's afternoons became the centre of a charming intellectual life in London, appreciated by a large circle of select friends. This book has material for one double the size. It is crammed with statements of facts, and should find a place on the bookshelves of all who are interested in Egypt, Palestine, and the Near East. Watson Pasha died in March, 1916.

EDWIN PEARS.

* (Watson Pasha: A Record of the Life-work of Sir Charles Moore Watson, K.C.M.G., C.B., M.A., Colonel in the Royal Engineers. By Stanley Lane-Poole. John Murray, 7s. 6d. net.)

BOOKS RECEIVED.

"The Romance of the Red Triangle." By Sir Arthur K. Yapp, K.B.E. (London: Hodder and Stoughton, 6s. net.).

"The Upward Flight." By Mrs. Kenneth Combe. (London: Skeffington and Son. 6s. 9d. net.)

The current *Quarterly Statement* of the Palestine Exploration Fund contains some "Notes on Jerusalem Water Supply," which, though of a technical character, are very welcome. Dr. E. W. G. Masterman concludes his articles on "Hygiene and Disease in Palestine in Modern and in Biblical Times" with another most interesting paper: and Mr. Joseph Offord contributes two articles besides his usual "Archæological Notes."

Brigadier-General Lord Montagu of Beaulieu has left for India.

The Maharaja of Bikanir returned to London on Monday from Paris.

Mr. Arthur Nias is expected to arrive in London shortly from Constantinople.

The Hon. Mervyn Herbert has arrived at 32, Charles Street, Berkeley Square, from Egypt.

Mr. Robert Naville, Director-General of the Banque Franco-Serbe, has arrived in Belgrade.

The Crown Prince of Serbia, who is now visiting Paris, has arranged to visit London shortly.

His Highness the Khan of Kelat has very generously presented two aeroplanes to the Government.

Sir Henry Cunningham, K.C.I.E., who has been seriously ill at his residence, 83, Eaton Place, is now better.

Lieutenant-Colonel A. J. Palmer, D.S.O., and Mrs. Palmer have arrived at Brown's Hotel, Dover Street, from Egypt.

M. Christo Vassilakakis, one of the delegates of the Central Committee of the Unredeemed Greeks, left London on Tuesday for Paris.

Prince Bibesco, Secretary to the Roumanian Legation in London, has left Paris for Roumania. He will return to London in two months.

Lord Sinha returned from the Peace Conference last week on a short visit to London, and is carrying on his duties as Under-Secretary for India.

Professor Pavle Popovitch has been appointed Chairman of the Serbian Press Bureau, which is attached to the Serbian Delegation attending the Peace Conference.

The Maharaja Sindhia of Gwalior has given one lakh (£6.666), the Maharaja of Patiala half a lakh, and the Maharaja of Kapurthala a quarter of a lakh of rupees to the Indian Relief Fund.

A marriage is arranged between Prince Antoine Bibesco, First Secretary of the Roumanian Legation, and Miss Elizabeth Asquith, daughter of the Right Hon. H. H. Asquith and Mrs. Asquith.

Father Francis Lamb, Vicar-Provincial of the Carmelites of Great Britain, has left Cairo for Haifa, where he has been appointed to direct the reorganisation of the Carmelite Mission at Mount Carmel.

Mr. Oscar Straus, formerly American Ambassador at Constantinople, arrived in London last week, and left on Saturday for Paris, where he has been attached to the American Delegation attending the Peace Conference.

General Sir Julian Byng has been unanimously elected President of the Tendring Hundred Agricultural Society, and has invited the members to hold their annual show in the grounds of his residence, Thorpe Hall, near Colchester.

Major-General Sir Alfred Edward Turner, K.C.B., of Carlyle House, Chelsea, Colonel Commandant, R.A., D.A.A.G. on the Headquarter Staff in the Nile Campaign, who died on November 20, left estate of the value of £36,375 7s. 1d.

The Sultan of Egypt has sent the Governor of Cairo a sum of £E500 for the relief of the victims of the recent flood at Cairo. Prince Yusef Kemal has arranged for the housing and feeding of thirty families of the victims.

It is understood that Lieutenant-Colonel C. W. Waddington has been selected as tutor and guardian to the young Maharaja of Jodhpur, and will shortly assume his duties.

The engagement is announced of Lieut. Commander J. R. G. Moncreiffe, R.N., nephew of Sir Robert Moncreiffe, to Miss May Ralli, daughter of the late John Ralli and Mrs. Ralli.

The marriage arranged between Lieutenant-Colonel G. R. Maitland, D.S.O., 14th Jat Lancers, and Miss Jean Hamilton Findlay will take place at the Cathedral, Glasgow, at 2 p.m. on Wednesday, February 19.

Captain H. G. Pyne, Royal Engineers, has been attached to the Egyptian Army as a special service officer, with effect from January 3. He is granted the temporary rank of Bimbashi, and attached to the Military Works Department for duty.

The engagement is announced between Major F. R. Cosens, 4th Rajputs, Indian Army, elder son of Mr. and Mrs. William Cosens (formerly of Hertford), to Agnes Mary (Peggy), only daughter of Mr. and Mrs. John Allan, of Crendon Lodge, Feltham, Middlesex.

The engagement is announced of J. Noel Macbeth, younger son of the late J. B. K. Macbeth, of Bombay and Edinburgh, and of Mrs. Macbeth, Hanover Court, W., with Enid Mary, only child of the Rev. W. G. Allen and Mrs. Allen, 4, Rue Roquépine, Paris.

An engagement is announced between A. F. Minchin, I.F.S., youngest son of the late H. P. Minchin, of Bath, and Kathleen, only daughter of Colonel W. Molesworth, C.I.E., I.M.S., and Mrs. Molesworth, of Cruicksfield, Berwickshire, and Holly Oak, Simla.

The engagement is announced between Darell Kilburn Paris, M.C., the Royal Regiment of Artillery, only son of Mr. and Mrs. G. B. Paris, of Elvendon Priory, Goring-on-Thames, and Calcutta, and Evelyn Maud (Cherry), only daughter of Mr. and Mrs. C. A. Mills, of Moulsford Manor, Berkshire.

The engagement is announced of Captain Reginald Onslow Skinner, R.G.A., younger son of Colonel Swinton Skinner, I.S.C. (retired), and Mrs. Skinner, and Gwendolyn, younger daughter of Mr. and Mrs. H. Osborne Baldry, of Rushmere, Leighton Buzzard.

General Allenby has written to Bishop MacInnes pointing out the need of relief work in Syria and Palestine, where the next six months will be a very critical period, and urging public support for the relief fund, which is now also working in the northern districts of Syria.

The engagement is announced between Captain Stanley Brabant-Smith, 39th. Central India Horse, second son of the Rev. H. Brabant-Smith, vicar of Elmdon, Essex, to Helen Irene, fourth daughter of the late David Charles Ballinger Griffith, of Huntworth, Bedford, and Mrs. Nightingale, of Trout Hall, Wenden, Essex.

The marriage took place on January 16, at Patiala, India, of Francis Robert Tomlinson, Indian Educational Service, eldest son of the late Mr. R. W. Tomlinson, of Burton-on-Trent, and of Mrs. Tomlinson, of Seacombe, Cheshire, and Barbara Joan, youngest daughter of the late Ven. Archdeacon and Mrs. Ingham Brooke, of Halifax, Yorkshire.

The marriage of Captain E. J. Shearer, M.C., 31st Lancers and General Staff, First Indian Army Corps, Mesopotamia, younger son of the late Colonel Johnston Shearer, C.B., D.S.O., I.M.S., and Mrs. Shearer, to Phyllis Muriel, elder daughter of H. C. Mules, C.S.I., M.V.O., O.B.E., and Mrs. Mules, will take place at Karachi, India, in May.

A marriage has been arranged, and will take place on February 18, at St. Mary's Church, Poona, India, between Captain T. C. Twining, Grenadier Guards, son of Mr. H. Twining and Mrs. Twining, 48, Ennismore Gardens, and Eileen, only daughter of Major-General Anderson, C.B., D.D.M.S., Southern Command, India, and Mrs. Anderson, 14, Queen's Gardens, Poona.

The marriage between Captain Basil Drewe, M.C., second son of Mr. and Mrs. Julius C. Drewe, of Wadhurst Hall, Sussex, and Drewsteignton, Devon, and Ruth, only daughter of the late Frank Haselden and Mrs. Haselden, of East Lymden, Ticehurst, Sussex, and Alexandria, Egypt, will take place quietly at St. Peter's Church, Stonegate, Sussex, on Tuesday, February 25, at 2 p.m.

Mr. Arthur Baker has left London for Constantinople, and expects to go on to Asia Minor in connection with American relief work there. Mr. Baker has already done much excellent war work, and our readers will have noted with pleasure that in the New Year's Honours he received the C.B.E. He has also received the King's permission to wear the Order of Maria Regina (1st Class), bestowed on him for work in Roumania; and the Russians recognised his labours by awarding him the Order of St. Anne (2nd Class).

APPOINTMENTS, PROMOTIONS, &c.

Major P. G. Loch, lately Political Agent, Koweit, Persian Gulf, has been granted one year's leave on medical certificate.

Mr. T. J. Martin, I.C.S., Central Provinces, becomes an additional member of the Viceroy's Legislative Council, in place of Mr. Slocock, resigned.

Sir George Macartney, British Consul-General at Kashgar, Chinese Turkestan, has been granted two years' leave by the Government of India.

Mr. E. A. Molony, Commissioner of the Agra Division, has been appointed a Member of the United Provinces Legislative Council, in place of Mr. S. H. Fremantle, C.I.E., resigned.

Mr. G. L. Corbett, I.C.S., Central Provinces, has been appointed Deputy-Secretary to the Government of India in the Commerce and Industry Department in place of Mr. Elliot, I.C.S., who reverts to the United Provinces.

A Reuter's message from Delhi, dated January 24, reports:—Mr. H. R. C. Dobbs, Agent to the Governor-General in Baluchistan, has been appointed to succeed Sir A. H. Grant as Foreign Secretary of the Government of India. Colonel Dew becomes Agent to the Governor-General in Baluchistan.

OBITUARY.

Surgeon-General Thomas Francis O'Dwyer died at a nursing home on February 5, at the age of seventy-seven. He served with the Egyptian Expedition in 1882 and the Nile Expedition of 1884.

The death is announced (February 6), at Spexhall, Ealing, of Mr. R. F. St. John, M.A. He was formerly in the 60th Rifles, at one time Deputy Commissioner in Burma, and later Professor of Burmese at Wadham College, Oxford.

Colonel Charles McInroy, C.B., who served in the Indian Mutiny, has died in his eighty-first year. His other military services included the Abyssinian Expedition of 1867, the Egyptian Expedition of 1882, and the Burmese Expedition. He was twice mentioned in despatches.

Colonel Rowland Hill Martin, C.B., C.M.G., C.I.E., late 21st Lancers, has succumbed to heart failure following fever at Mhow, India, in his seventy-first year. He took part in the Bechuanaland Expedition in 1884-5, the Nile Expedition of 1898, including the Battle of Khartoum, and in the South African War. He was twice mentioned in despatches.

A Reuter's message from Delhi reports that Lieutenant Colonel T. W. Irvine, Chief Medical Officer of the North-West Frontier Province, was drowned while crossing the Kabul River. The accident apparently took place on January 26, while Colonel Irvine was on a sporting expedition. He had been C.M.O. of the North-West Frontier Province since 1911.

Lieutenant-Colonel W. Ronaldson Clark, I.M.S., died on February 5, in the Isle of Man, where he was Medical Staff Officer to the General Commanding. Colonel Clark went to India in 1887, and was in military employment until June, 1890, after which he served as civil surgeon in the Punjab. He had been Professor of Forensic Medicine at the Medical College at Lahore, and was a contributor to the "Dictionary of the Economic Products of India."

NEWS IN BRIEF.

General Franchet d'Espérey has arrived in Constantinople.

M. Georges Derussi, former Roumanian Minister in Stockholm, has been again appointed Roumanian Minister to Sweden.

An official statement issued in Belgrade announces that the Kingdom of the Serbs, Croats, and Slovenes has adopted the new (Gregorian) calendar.

Sanction has been given for the expansion and reorganisation of the Calcutta University Infantry, and it is hoped to raise a full battalion, a thousand strong.

Mr. Lloyd George has sent a message (says Reuter's Agency) to the honorary secretary of the Malta War Memorial Fund expressing warm approval of the project.

The International Zionist Conference, which was to have been held in London on Tuesday, has been postponed owing to the inability of the foreign delegates to reach London.

A report drawn up by experts at the request of the Serbian Minister of Public Works has definitely established the fact that the town of Belgrade has suffered material damage to the extent of £20,000,000.

At the invitation of the French authorities in Syria, the Palestine Relief Fund has extended its operations to Syria, where it is co-operating with the American Red Cross.

Six public Rhodes Lectures on "The Struggle for Colonial Power in Further India" will be delivered by Mr. A. P. Newton at University College at half-past five o'clock on Tuesdays, beginning the 18th inst.

Reuter's Paris correspondent reports:—The Trieste correspondent of the *Journal des Débats* says that King Peter of Serbia is only awaiting the signing of the Peace Treaty to abdicate in favour of the Prince Regent.

THE COPTIC COMMITTEE IN LONDON.

The Coptic Committee in London gave a complimentary dinner to Mr. S. H. Leeder, author of "Modern Songs of the Pharaohs," on February 6, at the First Avenue Hotel. The Bishop of London presided, and amongst those present were Lady William Cecil, Baroness Amherst of Hackney, Lady Sydenham, Lady and Sir Frank Newnes, Lady Warmington, Mr. Clement Shorter, Mr. Marmaduke Pickthall, the Rev. A. Taylor, Mr. S. Moseley, Captain Wilkinson, and many others; the party numbering about seventy guests altogether.

In his opening speech, the Bishop of London spoke of Mr. Leeders' work in Egypt, and cited his kind action on an occasion when "as usual I put my foot into it at some public meeting." Bishop Ingram made a speech at the Albert Hall just before he went to Egypt, founded upon Mr. Zangwill's "The Reproach of Israel." It was, he said, a very fair and charitable speech, which he would not be ashamed to repeat in the ear of all the Mohammedans he knew, but, of course, the report was boiled down. Some sentence got out to Egypt and created a rather bad impression before the Bishop arrived there. Mr. Leeder made it his business to remove that bad impression from one end of Egypt to the other. It was a very big task to do—once start a lie and it is very hard to catch it up again; but he did by travelling all the way from Cairo to Khartoum in order to do it.

Mr. H. Basta, in proposing the toast to Mr. Leeder paid a warm tribute to his personal qualities. In seconding the toast, Mr. Kyriakos Mikhail said that Mr. Leeder would be the last man to expect the Copts to endorse all that he wrote about them. In fact, as soon as the book appeared he lodged a friendly protest against some of his statements and he intended to renew this protest in a different fashion when they met him again venturing in their country among Bedouin tents and Fellaheen cottages, where no other European could be seen. In those places he might be more inclined to listen to the coptic point of view. One of the things, he added, that made the Copts appreciate his friendship still more was that he is a friend of the Moslems of Egypt as well as of the Copts. The fact that they disagreed with him on some points did not affect in the least their mutual friendship, which was founded on freedom of thought, frankness and independence on both sides.

Mr. Leeder in response said that what impressed him most was not the honour done him, great as it was; but the fact that his Oriental friends redeemed their praise from any appearance of mere flattery by the candour and faithfulness with which they also told him to his face, and in the presence of his English friends, the points of their disagreement. Mr. Leeder paid a tribute to the Committee for inviting their Moslem friends to the function, and referred to a letter regarding the dinner which he had received from the Earl of Cromer, Secretary to His Majesty the King.

Dr. Fahmy and Mr. Shoukrala proposed and seconded the toast of "Our Other Guests." Mr. W. G. Campbell responded.

The Bishop of London proposed the health of the Coptic Committee, and the Rev. Fynes Clinton seconded. Mr. Youanis Maximos and Mr. Yanni Abdel Messiah responded.

The American Red Cross announces that it has appropriated 250,000 dollars for relief work in Palestine and the Near East during the months of January and February.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

FRIDAY, FEBRUARY 14, 1919.

AN ARAB CONFEDERATION.

The war has been responsible for many unexpected developments, and by no means the least striking has been the appearance before the Paris Conference of the spokesman of the Hejaz to plead the cause of an Arab union. By common consent the Emir Feisul has proved himself a worthy representative of a great and ancient people, and it is a testimony to the reserve of statesmanship which the Arabs can command that King Hussein's delegate should have been his third son. Chance rather than calculating discrimination sent the Emir Feisul on his tour to France and England. He had achieved no special distinction in the field above that of the second son, the Emir Abdullah, when the opportunity for an Arab advance into Syria presented itself. But the Emir Feisul was operating farther north than his brother, and he had the signal advantage of the personal services of Colonel Lawrence. Thus it came about that he led the Arab forces into Damascus and Aleppo, and when the question of an envoy to the Allied countries was raised the choice fell naturally upon him. He claims, however, no pre-eminence in diplomacy over his brothers, and in his mission he seems to have no thought of adding to his own laurels, but merely to submit impersonally the case of the Arab world as interpreted in the Hejaz. That case, it goes without saying, has lost nothing in its presentation by the man who co-operated so successfully with the Allies in the Syrian campaign. His personality, no less than his military record, won for him the attentive interest of the Conference, and when its decision is made known we may expect to find that the Arab claims have had a sympathetic hearing. One of the first things that the Allies have had to do in this connection is to revise their opinion of the Arabs as unsophisticated dwellers in the desert. The Hejaz authorities have shown themselves as well acquainted with the course of European politics as with their own history, and their claims represent a shrewd adaptation of one to the other. They ask for recognition of the fact that the Arabs throughout the vast region stretching from Egypt to Persia are one in blood, in history, in faith, and in speech, but they tactfully admit their present limitations and ask for the assistance of a mandatory Power acting on behalf of the Allies. In the Arab world of this picture they recognise a number of provinces forming a distinct unit—Syria, Irak, the Jezireh, the Hejaz, Nejd, and Yemen. These they wish to see each under its local authority, and all linked together in a confederacy under the supervision of a single mandatory Power. The latter, it is expected, will form the unifying bond which the Arabs of themselves cannot at present supply, until the time when one native Government can speak for the whole confederation.

This suggestion, it need hardly be said, emanates not so much from the Arab world as a whole, as from the Hejaz authorities and from the Arab *intelligentsia*, who are to be met with for the most part outside the regions affected by the scheme. It may not for that reason fail to represent the wishes of all Arabs, but the distinction will compel the Allied Conference to examine the proposal the more carefully. In the other States which the Associated Powers are called upon to recognise there is no tangible intellectual difference between the governing authorities and the governed: a scheme of government put forward on behalf of any one people may be regarded as representing the views of practically the whole nation, which tacitly accepts corporate responsibility for its successful working. In the case of the proposed Arab confederation it has to be established that there is a prospect of the various provinces falling more or less into line in giving effect to the administrative policy adumbrated in the Hejaz claims. In other words, the Emir Feisul may have to satisfy the Conference that the Arab world is prepared to live up to the standard set during the last two years by the Hejaz. There could be no surer way of wrecking the Confederation than to give wide powers of local authority to a community that still held itself free to ignore boundaries, to indulge in raids and brigandage, and to maltreat strangers within its jurisdiction. For the control of the mandatory Power, it may be imagined, is meant to be federative in character, that is to say, to concern itself with such services as railways, telegraphs, and education, which the various units would share, rather than with police matters, which would be in the hands of the local authorities. Possibly, therefore, with a view to ensuring uniformity, which is essential to the attainment of the Arab goal, complete independence, the Conference in its wisdom may suggest modifications of the Emir Feisul's scheme.

For the theory of the proposal there can only be the widest sympathy. The Arabs, recalling the greatness of the Arab Empire of a thousand years ago, hold that the time has come for an attempt to revive something of their former glory as a race. They still occupy practically the same ground, and territorially the new State would be compact, if somewhat sparsely populated. Further, they go a long way towards disarming criticism by voluntarily offering to place themselves under the protection of a mandatory Power. The main difficulty arises from the fact that the Allied Powers had never contemplated a national awakening on this scale on the part of the Arabs. Some provision had to be made in the early days of the war for a reversion of the Turkish inheritance, and, although the Arabs were not overlooked, there was no indication that their tribal antagonisms would yield place to a federal movement. Even now such a movement belongs very largely, if not entirely, to the distant future; but the contention of the Hejaz authorities, that it shall not be prejudiced at this stage by divisions running counter to the tribal and economic interests of the Arabs, cannot fail to carry weight. Unfortunately it was just such divisions that the agreement arrived at between France and Great Britain in 1917 contemplated. The British Government appears to have accepted the French estimate of France's claims upon these regions, and was prepared to leave everything in the hands of its Ally provided that Great Britain's interests in Mesopotamia were safeguarded. This arrangement did not leave room for the scheme of an Arab confederation, nor did it take into consideration the possibility of the Arabs' desiring to exercise the right of self-determination. The very nature of French claims is disconcerting to the Arabs. They note British disinterestedness, in spite of the fact that by far the greater bulk of the trade of Syria is British, and on the other hand they see the French straining their connection with this territory beyond its legitimate limits. Little wonder, therefore, that they argue that British "protection" is likely to prove the more congenial, and, failing that, are ready to invite the unknown protection of the United States. If any attention is to be paid to the Arab point of view, the Conference can hardly deny the Hejaz request that protectorate rights should, in the interests of the Arabs, be exercised by a single Power. In the event of the United States being unwilling to take up the work—and it is almost unthinkable that there should be an American protectorate over Mesopotamia and the Persian Gulf—the mandate of the Conference or of the League of Nations must inevitably devolve upon Great Britain. Whether in these circumstances President Wilson will endorse the suggestion, already made in certain quarters, that France should be the mandatory of the League in Constantinople remains to be seen.

JUDICIAL REFORM IN EGYPT.

(From Our Own Correspondent.)

Cairo, January 12.

The Capitulations Commission, which was constituted in 1917 for the purpose of studying the unification of the various jurisdictions, the elaboration of codes, and the administrative changes which will be rendered necessary by the abolition of the Capitulations, has just placed at the disposal of the public for the purpose of criticism a draft of the penal code, which, under the new *régime*, it proposes to make applicable to foreigners as well as Egyptians. The work of revising the codes was started in 1914, when a special Commission was appointed for the purpose; and the Capitulations Commission has merely carried on in this respect the work then begun.

With the draft code is published a commentary following it article by article, and giving shortly the reasons for, and to a certain extent the effect of, the alterations proposed. Whilst in the case of an article of the original code which has been retained with little or no alteration, no explanation is given as a rule, the reasons for making any important change from that Code or for introducing any novelty, are given in all cases, and reference is also made to the source from which the proposal is taken.

In the introduction to the commentary the Commission briefly surveys its work and the rules which have guided it. It points out that in these days, when almost every civilised country has a penal code based upon those general principles which are common to all, it is undesirable to attempt to strike out an entirely independent line; and in a case like Egypt, where there is already a Code in existence with which the country is familiar, and which has been interpreted by the Courts, it is desirable to follow it as closely as possible. The main object of the Commission has, therefore, been to correct errors, clear up obscurities, and fill up lacunæ.

The Egyptian Penal Code was adapted in 1883 from the French code, which already was far from up-to-date as compared with those of other Continental countries; and, apart from the reforms made in 1904, which were confined to only one part, no comprehensive attempt has hitherto been made to revise the Egyptian Penal Code. It has consequently been necessary to make very considerable alterations as regards certain parts, in order to bring them into harmony with modern ideas. The Commission explains the reason it has taken the Native Code as basis and not the Mixed Code by the fact that the latter is still more antiquated and has never been in general use.

The various modifications made since 1904, and those proposed in 1914 to the Legislative Assembly, but never passed into law, have been taken into consideration, as well as the published decisions of the Native Courts and of the Cassation Court. A large number of the proposed reforms have been taken from the Draft Penal Code prepared by Sir William Brunyate, in order to be submitted to the Commission appointed in 1913 to set up a judicial organisation for the international zone of Tangier. This code, which was to apply in circumstances very analogous to those in Egypt, when the Capitulations are abolished, was specifically recommended as a basis of discussion by the Commission referred to in the opening paragraph.

Other sources of inspiration have been, in the first place, the Indian Penal Code, which, says the Commission, is admittedly one possessing high authority, and was specially drafted for, and has for many years been successfully applied to, races that in character and habits closely resemble those inhabiting Egypt. This code has been adopted in a modified form in the Sudan; and it is considered desirable that the Egyptian and Sudan Codes should present as close a resemblance as possible, at any rate in their spirit, if not in their form. Next come the Tunisian Code of 1913; the Siamese Code of 1908, characterised by the Commission as a very ably drafted work, combining principles taken from French, English and Italian sources, and intended to apply to conditions not dissimilar to those now existing in Egypt; the Indian Penal Code of 1890, the most modern and the most carefully and scientifically drafted of the Continental codes; the Swiss Draft Code of 1918, which was used in its earlier form in the Tangier Draft; the Dutch Code of 1881, and the Belgian Code of 1867.

The Commission has also introduced a limited number of provisions which are almost if not entirely new. These, it explains, are chiefly intended to deal with special conditions existing in Egypt, and with difficulties which have arisen in the practice of the Courts as suggested by the experience of members of the Commission.

The Commission records its opinion that although the proposed draft retains the form and much of the substantive law of the French Code, it should be harmonised as much as possible with the principles and spirit of the English Criminal Law, which is accepted throughout the British Empire. In certain parts, for example, in the chapter on Defamation, it recommends provisions taken directly from the English law, which are new to Egypt. On the other hand, it says that in view of the long-continued French influence in Egypt and the nationality of the majority of the foreigners in the country, it has endeavoured in general to avoid the introduction of English ideas which are in conflict with principles generally admitted on the Continent, as, for example, in such important matters as murder, adultery, offences committed by public servants, etc. A certain number of provisions, especially in relation to offences of a modern character, have been taken from the English Statutes, and the Commission has, in other cases, utilised the well-known Digest of Sir James Stephen.

The chief difficulty arising from this method of compiling a code consists in harmonising ideas and methods of expressing them, collected from different sources and expressed in different languages, and the Commission explains that when retaining an article of the existing code it has avoided mere changes of form where there was no intention of changing the meaning of the article; on the other hand, when borrowing from outside sources, it has frequently not adopted an article in its original form, more especially when the origin was English, but has eneavoured to express it in a manner agreeing with that of the existing Egyptian Code.

With regard to penalties, the Commission draws attention to the fact that where the conditions vary from those of highly civilised to those of extremely primitive life, as they do in Egypt, it is necessary to have wide limits of punishment, and to leave the Courts quite free in the exercise of their discretion, as the same offence will vary greatly in gravity according to the circumstances. The maximum penalties will therefore be found to be in general high; on the other hand, the Commission proposes to follow the English Law and the Indian and Sudan Codes in abolishing minimum penalties. This was the principle adopted in the Tangier draft and the Egyptian legislator has already shown a tendency in the same direction, as evidenced in the alterations made in 1904 and those proposed in 1914. The Commission has, however, tried to give some general guidance to the Courts in estimating the gravity of a normal case, by providing a carefully graduated scale of maximum penalties according to the aggravating or mitigating circumstances accompanying the offences.

Compared with the existing Code, the number of articles is considerably increased. This is explained by the Commission by the fact of the introduction of new provisions, the more extensive graduation of punishments, and chiefly the separation into their component parts of a number of long articles containing two or more ideas or offences. Compared with the Italian, Indian, and Belgian codes, which contain respectively 498, 511, and 550 articles, it is not unduly long. The general arrangement of the draft follows closely the Tangier draft, except that it has retained the existing division into four parts.

The Commission was of opinion that the original text of the Code should be in English, and the drafting has been done in that language. An official French translation is, however, necessary, and the draft is therefore presented in the two languages. The Commission concludes with the hope that the two texts will be considered as mutually complementary, and that the French text will render clearer words or phrases which might appear obscure in the English.

THE REPUBLIC OF ARARAT.

Delegates of the Armenian Republic of Ararat have just arrived in Paris. At their head is Mr. A. Aharonian, and other members are, his secretary, Mr. Simon Mirzaian, and Mr. D. Piralian, who is a civil engineer and scientific agriculturist. The other members of the delegation are now in Constantinople, and are expected in Paris in a few days. Among these members are Mr. Mikael Babajanian, who was formerly a member of the Russian Duma, and one of the Commissioners of the Caucasus, appointed by Kerensky's Government, General Ghorghanian, who is accompanying the delegation as military adviser. For the conveyance of the delegates from Batoum every facility has been given by the English local authorities. The Republic of Ararat has a Parliament consisting of forty-three members, four of whom are Tartars, one a Yezedi-Kurd; the rest are Armenians. The Republic has an army of 30,000 soldiers. It includes not only Erivan, as first announced, but also Alexandropol, Kars, the district of Lori, and other places. The present Cabinet consists of the following Ministers:—Kajaznuni, Prime Minister; Aram Manukian, Home Secretary; Sirakan Tigranian, Secretary for Foreign Affairs; Samson Harutinian, Minister of Justice and Law; Artashes Enfiejian, Chancellor of the Exchequer; General Akhvertian, Minister of War; G. Melik Karagiozian, Minister of Education; M. M. Berberian, State Controller.

PRESS ON THE NEAR EAST.

The Future of the Balkans

The *Westminster Gazette* is publishing a series of "Footnotes to the Peace Conference." In one of these articles, the sixth, "The Balkans: Serbia and Greece," the writer points out that whereas before the war the political settlement of the Balkan peninsula was classed as insoluble, the question to-day "presents itself under a radically changed aspect." He holds, indeed, that "the task before the Powers of the Alliance is *relatively* one of the simplest they have to fulfil." He continues:—

That conclusion, perhaps, may cause surprise, yet the proof may be briefly stated. Take, to begin with, the ambition of imperialistic Russia. It was to dominate the Peninsula. To that end Russian policy favoured the independence of Serbia, but of Serbia as a minor State, useful meanwhile at once to weaken the Turks and obstruct the Austrians; not strong enough to stand alone. At Sofia, on the other hand, Austrian policy encouraged the dream of a Danubian Czardom which would lean upon the Central Powers as against Russia, the eventual object once more being absorption. Thus the greater States set the smaller by the ears. Then came Germany, which, after having in 1879 tricked Austria into an offensive and defensive alliance it was impossible to repudiate, used that Power as a sort of advance guard against Russia, for the purpose, in the first place, of affording Germany greater freedom from attack on the West, and, in the second place, assuming the success of that attack, of reaping its harvest alike in the Balkans and in Asia Minor.

The first event which disconcerted these schemes was the League of the Balkan States, brought about by German intrigue in Turkey; the next their unexpected victory in the first Balkan war. German-Austrian intrigue at once went to work to break up the League. The second Balkan war was the result. The second Balkan war, however, disclosed the Serbo-Greek alliance. Since Greece held the balance in the Balkans it was evident that this compact, conjoined with the defeat of Bulgaria, meant, if it stood, the control of the Peninsula by the victorious States, and a final bar to German-Austrian expansion in that direction. At all costs, therefore, the alliance had to be got rid of. The speediest means was the assassination of King George of Greece. King George of Greece was murdered accordingly. Serbia thus isolated, and German-Austrian preparations for a European war carried to completion, it only remained to discover a pretext for attack upon the Serbians. The pretext turned up—curiously enough at the opportune moment—in the assassinations at Sarajevo.

From these facts it is manifest that the chief difficulties in the Near East were manufactured by those ambitions which made cat's-paws of the lives of men and the fate of nations. Whatever may be the opinions of those whose ideas run in old grooves, the collapse of those ambitions is one of the most profound political revolutions that has yet occurred in Europe. In the Balkans it has altered the whole outlook.

Another passage in the article is certainly worth quoting, because it states a view which cannot be too often put forward, if this country is to take its share of developing the field referred to.

The Balkan Peninsula has been described as a region of vast natural wealth and very little money, and the description is exact. The prevalent Western notion that the Peninsula is comparatively poor and barren is ludicrously wrong. The valleys of the Balkans are among the most fertile spots on the globe; the mineral wealth of the Western Balkans not easy even to compute. Germans and Austrians coveted these territories from no mere caprice. They were well aware that out of the Balkans they could draw a huge and inexhaustible surplus. In Greater Serbia, indeed, openings for commercial and mining enterprise present themselves on every hand. That there has so far been little money has to be set down to political evils and the ravages of war. Given political equality and tranquillity, the economic advancement of the Balkan States will be rapid and sure.

The New Arab Empire.

In connection with the Emir Feisul's statement of Arab desires to the Peace Conference, last Thursday, *The Times* on Friday devoted a leading article to "The Future Arab State." It is remarked very truly that "about few historical subjects is there so much popular ignorance as about the past history of the Arab people and their future possibilities as a nation." We are reminded that "the Arab Empire, which at its greatest extended from Baghdad to Cordova, was the most liberal form of government between the decay of the Roman Empire and modern Europe, and was perhaps the most substantial bridge of civilisation across the Middle Ages." And the differences between Turk and Arab is contrasted with the resemblance between Arab and Jew.

And it all arose from the Hedjaz, for which Feisul spoke in Paris yesterday. Unlike the Turkish Empire, the Arab had a culture of its own; and, again unlike the Turkish Empire, it knew how to get the best out of all the races with which it came into contact. The period of its greatness has often been called the golden age of the Jewish race, and, indeed, between the Jews and the Arabs there is not only a close family relationship, but a strong likeness in their history. The Jews lost their nationhood by coming into violent collision with the Roman Empire, and the Arabs stepped into the shoes of the dead Jews as the leaders of Semitic thought. Similarly, the Arabs fell victims to the great Mongol invasion, and the Turks stepped into the inheritance which the Arabs had received from the Jews. There is no speculation in history more interesting than what might have happened if Mahomet had converted the Jewish colonies of the Yemen, as he hoped to do; and in spite of his failure there has always been a strong affinity between the two peoples. Jewish prophets are also Arab prophets, and the two races have a great deal of folk-lore in common.

The hope is expressed that the disposal of Turkey's derelict territories will be treated as a whole by the Conference. The Arabs, the Jews, and the Armenians, are interested in the fate of one another.

It would be a misfortune if Ottoman rule, which at any rate gave an outward unity to these regions, even though it did nothing to develop their progress, material or moral or intellectual, were merely to be replaced by local rivalries. One looks forward to an Arab Empire extending from Damascus to Baghdad, with commercial rights of exit to both the Mediterranean and the Eastern seas. It can hardly be a single homogeneous Empire, but may well be a federation of States under the supreme authority of the King of the Hedjaz. It will have a mandatory protector, and it will probably borrow freely from the ability of the Jews of Palestine, as the old Arab Empire did from the Jews of Africa and Spain. In this way the Jews will find a territorial outlet for their abilities wider than Palestine, which, after all, is a small country, and the policy of the two peoples will then work in harmony for the revival of the East.

"Claims" and "Adjustments."

That the Arab hopes are likely to be—or, at least, may be—affected by various "claims," is shown by the following passages from an article contributed to the *Daily Telegraph* by Mr. Perceval Landon, writing from Paris on February 6. The extracts speak eloquently for themselves:

Complete sympathy with Arab ambitions is extended both by Great Britain and the United States. It would indeed be difficult now to impose a position of inferiority upon a tract of country more than a million square miles in extent, and peopled by an organised and well-armed race of fighters, absolutely determined to vindicate their claim against any power on earth. The French, however, have the traditional claim of sympathy with Syria, and though in these days no agreement made during the war is held to be exempt from the reconsideration of the Peace Conference, it is felt that a draft signed by Sir Mark Sykes, though never ratified by the British Government, gives our neighbours the right to some compensation. It is an open secret that the rounding-off of Morocco would have been accepted by France as an equivalent. But as this proposition involves certain exchanges between ourselves and the Spanish across the Straits of Gibraltar which the latter refuse to entertain, recourse must be had to some other substitute. It is largely felt upon the Council of Ten that the most important of all the mandates which the Allies can confer has been fairly earned by the French, and, therefore, no surprise will be felt if the Conference invites M. Clemenceau to provide for the administration of the new internationalised territory which borders both sides of the Dardanelles and Bosphorus, and contains that splendid key of the East and West—Constantinople.

Complete independence, or only such nominal control as the lightest of light mandates can exert, will be unanimously conceded to the Arabs. It would stultify the first principle of the Conference—that of self-determination—if an attempt were made in the interests of any Western Power to shackle the complete autonomy of this united and almost fanatically determined race, with its long traditions of literature, science, theology, travel, and enterprise. Whatever small claim we or the French may have upon their gratitude as a race will be freely and even splendidly acknowledged by them as a nation.

The Foreign Office announces that bags containing correspondence addressed to members of his Majesty's Ministries at Constantinople and Bucharest, which left London on Tuesday, January 7, have been lost at sea.

At Chanak, on the Dardanelles, a large building has just been opened as a combined Army Education Centre and Y.M.C.A. Outlying units recently made a route march to the ruins of Troy, when a number of lectures were given to the men on the history of the city.

The Paris correspondent of the *Morning Post* reports that there is good reason to believe that the Orient Express will start running on the 15th inst., going from Paris to Bucharest vid Vienna. It is at present intended that two journeys should be made weekly.

The Provisional Jewish Council of Poland has requested Mr. Nahum Sokolow, the Zionist leader, to act on their behalf at the Peace Conference. He is authorised to urge the establishment of a Jewish Palestine under British trusteeship as a solution to the national Jewish problem.

In reply to a strong protest on the subject from the Liberal Entente Party, the Turkish Grand Vizier has promised to take immediate steps for the arrest of Dr. Reshid Bey, ex-Vali of Diarbekr, who escaped recently from Constantinople while awaiting trial for organising Armenian massacres.

From a Greek official source Reuter's Agency learns that, according to a telegram from Salonika, General Franchet d'Esperey issued an Order of the Day stating that after his departure for Constantinople General Paraskevopoulos, Commander-in-Chief of the Hellenic Army, would be in command of all the Allied troops in Macedonia for everything concerning territorial administration.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Banque Franco-Serbe is now in a position to make remittances for domestic or personal purposes to Belgrade, Uskub, or Monastir.

***

I learn that among the delegates of the Armenian Republic of Ararat who have just arrived in Paris is M. D. Piralian, a civil engineer and scientific agriculturist, who has been sent to Europe to obtain agricultural implements and other materials for the restoration of the agricultural and other industries of the country.

***

According to recent Paris advices, M. Marquent, a French engineer, has submitted a report stating that the Greek soil contains petroleum fields constituting a continuation of the Roumanian oilfields. It is understood that the Greek Government have agreed to his proposals for experiments, with a view to working the deposits, and that operations will be commenced by an Anglo-Hellenic group, in which the Greek Government will be largely interested.

***

Mesopotamia is among the centres of the Near East which should afford particularly promising openings for motor boat manufacturers in the future. During the war motor craft of all descriptions have been sent out there, and the natives have had every opportunity of seeing how convenient the boats are for transport purposes on such rivers as the Tigris, and it is probable that their popularity is henceforth assured in that part of the world. No doubt the immediate demand will be met by the disposal locally of Government motor boats, and the acquisition of some of these by the natives should help to open up a really good market for these craft. Incidentally, many of the boats now in use are likely to be in need of more or less extensive repairs, and there is likely to be, therefore, a considerable demand for the supply of spare parts, etc.

***

It will be noticed that the Levant Company came in for special reference at the general meeting of the British Trade Corporation. Lord Faringdon stated that the company has promises of the agencies of many prominent manufacturing firms, and added that it was believed that the corporation, by the assistance given and promised to the company, had adopted a course that would materially assist in pushing British trade. On that point there will be general agreement. I am glad to see also that Lord Faringdon laid great emphasis on the potentialities of Asia Minor and Mesopotamia, where, he pointed out, there would be fields for the British trader in the future.

***

The prospects of cotton growing in the Sudan were briefly referred to by Sir Malcolm McIlwraith, in his lecture before the Royal Colonial Institute this week. He pointed out that it had been demonstrated that cotton could be grown in the Sudan by reversing the seasons customary in Egypt, and sowing it in the autumn for picking in the spring, thus avoiding the great heat of summer. It was consequently proposed to irrigate for cotton cultivation, he said, an immense tract of territory, part of an irrigable area, by two new dams, one on the Blue and the other on the White Nile. The Government engineers were convinced that there was an ample supply of water in flood time for the requirements of both Egypt and the Sudan, even in a bad year, and that all that was required was to ensure its storage and distribution during the period when the river was naturally low.

***

Events in the most progressive Indian States in the last year or two show that these States do not intend to be left behind in industrial development by British India. The most recent instance comes from Travancore State. Something like two years ago Dr. S. G. Barker was placed on special duty by the Travancore Government to conduct an industrial survey of the State. The submission of his report advocating the promotion of small industries and the introduction of technical education has been followed by the creation of a Department of Industries, with Dr. Barker as director. He will control existing industries, will investigate the possibilities of new ones, and will subsequently inaugurate small industries such as the manufacture of pencils and matches in order to show the people what can be accomplished with the resources of the State.

***

In the light of subsequent information it is now clear that the Bombay strike was a manifestation of an altogether exceptional character. It seems to have been absolutely spontaneous in its origin, and the only vestige of organisation was that the strikers at the first mill were allowed to use intimidation, and thus made an isolated movement general. The sole cause of the strike was apparently the economic position. Food prices in Bombay have reached an extraordinary level, and in the light of that fact it is easy to understand the development of discontent among workers who at the best of times had only a comparatively small margin above the cost of living. Whether or no this strike will prove the forerunner of a series of similar manifestations resulting in the development of conditions in India akin to those at home, with the inevitable effect on industrial development, remains to be seen.

***

Americans, as my readers know, are taking a keen interest in the development of the Persian market, and in this they are being strongly encouraged by their Consular reports from that country, the latest of which says that, "upon the restoration of normal conditions, there should be a fertile field in Persia for the sale of American manufactured goods and other products." The range of commodities suggested as likely to find a ready market is wide, and includes cotton, woollen, and silk goods, sugar, matches, flour, drugs and chemical products, dyes, paper, soap, rubber overshoes, shoes, bicycles, carriages, harness, leather, crockery, glassware, beverages, plate glass and mirrors, groceries, precious metals, candles, lamps, cutlery, clocks, watches, and roofing.

***

I see that efforts are also being made to develop America's trade with Greece. American officials in that country have been discussing ways and means of doing this with prominent local merchants, and the suggestion has been made that one or more American steamship companies should establish lines to Greece. All this goes to show that we must be prepared to meet the most strenuous competition from America throughout the Near East. Unfortunately at the moment circumstances are not favourable for the export trade, but I would urge British exporters to leave nothing undone in the way of preparing for a campaign pending the return of more or less normal conditions.

***

Toy manufacturers should be interested to know that Algeria should be quite a good market for this commodity in the next year or so, as stocks are now extremely low owing to war conditions. Germany formerly had a great hold on the market, but in the last few years before the war French toys were gaining ground in a number of lines over the German goods. Manufacturers here would be well advised to pay special attention to the requirements of the Mohammedan section of the population, which outnumbers the European section by six to one, as the Mohammedan children are almost all fond of toys. The purchasing power of the natives is, however, very low, and the maximum prices for toys should range from 6d. to 10d. Toys in bright colours are preferred, and business may be facilitated by following the German example and quoting prices to the quay including the Customs charges.

EGYPT'S TRADE WITH SYRIA AND PALESTINE.

(From Our Port Said Correspondent.)

Port Said, January 16.

Now that the territories of Syria and Palestine are being opened up, it is high time that trade should be fostered by the Government, for that is the quickest way to do away with the necessity of relief work. The authorities, however, have given the sole charge of all merchandise passing between Egypt and Palestine to a single firm. No doubt it is simpler for the Government to have to do with one shipper only, but for merchants themselves it is anything but satisfactory, for the limitations imposed are worthy of a Continental Custom House at its worst. In the first place, *nine* copies of the invoice must be sent with the goods, which, considering the present paper shortage, seems rather extravagant, to say the least. But that is only a preliminary for the merchant, for he then has to discover, if possible, whether his packages escape all the prohibitions, and what will be the last charge that will be imposed on him.

Supposing the merchant wishes to send some goods to Jerusalem. A package of sixty kilos costs at first sight P.T.79, and he is told that for every additional ten kilos eleven and a-half piastres will be added up to 500 kilos, and above 500 kilos only eleven piastres will be added every ten kilos. (By the way, later on in the instructions he finds that all this about above or below 500 kilos was simply a bit of leg-pulling, for no package is accepted above 120 kilos in weight.)

Next the merchant is told of a supplementary charge of eleven piastres on packages up to 50 kilos, and fifteen piastres for packages over 50 kilos. Further on, the instructions say that bulky goods are to be charged 50 per cent. extra, though what constitutes "bulky goods" when the dimensions of every package are strictly defined and limited it is hard to say.

The next paragraph in the instructions deals with the duty which the merchant will be permitted to pay, and this averages 10 per cent. on the invoice value, plus the cost of carriage to Jerusalem, plus 10 per cent., though what this last 10 per cent. is added for it is hard to tell, unless it is to make quite sure that the charges are on the right side. It might be thought that the Port Said merchant now knows what his expenses will be, but if he thinks that is all he is grievously mistaken, for he has to send the goods that he wishes to go to Jerusalem to a specific depot in Cairo, and for this he has naturally to pay handling and porterage at this end, railway freights to Cairo, and then handling and porterage in Cairo, to get the goods deposited in the depot. However, the most galling part of all this waste and muddle is that the goods may then be sent back by rail to Port Said and shipped from there to Jaffa by steamer, or sent by rail via Kantara, by which they approach within twenty miles of Port Said again.

Should the merchant wish to send a case of foodstuffs to Jerusalem, there is another pitfall, for besides there being an outside limit as to its size, it must weigh exactly 120 kilos; if it weighs more it will not be accepted, if it weighs less it will not be accepted. Was ever such a rule invented by the most procrustean Prussian? To crown all, the Port Said merchant must be prepared, if required, to send a representative to Cairo to open and unpack and re-pack the goods should the forwarding firm wish to verify the contents to see whether they are in accordance with all the nine invoices. Many merchants are now unpacking their goods and dispatching them per parcel post from Port Said, it being in the long run quicker and cheaper.

Surely something can be done to remedy this chaotic state of affairs, which is hindering the very thing which the authorities profess to wish for—namely, the rehabilitation of the country.

Beyrout, which has been freed from the enemy for some months, is still without an adequate postal service, for on inquiries at the French Post Office here one is told that the limit of weight allowed for parcel post is 12 ounces, and that nothing is accepted for registration. At the Egyptian Post Office one is told that a permit from the Enemy Trading Bureau is required before any parcels are accepted for transmission. It seems a pity that the authorities cannot arrange for some small vessels to run between the Syrian coast ports and Egypt for a few weeks so as to start trade, and then native vessels would be encouraged to start, which would do to carry on till regular lines could be established. In Syria the last olive season has been abnormally good, and there are large quantities of olive oil and other merchandise waiting in the Syrian ports for shipment to Egypt. In this country, with the normal supplies from Italy cut off, we are almost having a famine of olive oil, which is such a staple of Eastern cookery. In the orange groves of Palestine and Syria fruit is going rotten for lack of transport to Egypt, where there is still a great demand for oranges and other fruit.

TEHERAN.

Economic Conditions in 1917.

The year 1917 was one of industrial depression and economic disaster for the Teheran consular district, says the United States Consul there, Mr. Ralph H. Baden, in a recent report. This situation was attributable to the closing of the avenues of trade, crop failures, and the presence of foreign troops.

In normal times goods are imported into this district from and through Russia, overland from Trebizond, via Kermanshah from Baghdad, and through the various Gulf ports. Owing to the war, imports from Russia have been greatly restricted, imports from other countries through Russia have ceased, and the Trebizond and Baghdad-Kermanshah routes are closed. It will be seen, therefore, that the only remaining way of access to Central Persia was via the Persian Gulf.

The transportation facilities of these trade routes were overtaxed before the outbreak of the European war, and owing to the fact that large numbers of pack animals have been taken for military purposes, it has become impossible to supply the needs of this district by imports through Southern Persia. Transportation charges per ton on shipments from Mohammerah to Ispahan have increased by four times the pre-war rate (from £21½ to £85½), and the rate from Ispahan to Teheran has doubled (from £12½ to £25). It should also be noted that the activities of predatory tribes near Ispahan have greatly increased the difficulties of importing goods by this route.

Crop Failure.

Owing to scanty rainfall and snowfall during the winter, the harvest of wheat, barley, and rice was not more than 60 per cent. of a normal yield. There was, perhaps, sufficient grain produced to supply the needs of the population, but on account of inadequate transportation facilities and hoarding by large landowners, unheard-of prices resulted, and at times it was impossible for the poor to obtain bread at all. The Government undertook to regulate the price of grain and bread, but without success.

On account of high prices and the scarcity of foodstuffs, famine conditions resulted in Teheran. Reports indicated that similar conditions prevailed in other principal cities of this district. Early in December it was decided to organise a relief committee under the presidency of the American Minister, consisting of prominent Persians and American missionaries. Funds were received from America, and relief work was undertaken in the capital; the activities of the committee were also extended to Hamadan, Kermanshah, Sultanabad, Ispahan, Resht, Kasbin, and Meshed.

Exchange Rates.

In normal times the exchange value of the kran is 4.8d., against the abnormal rate of 8½d. in March, 1918. The rise in the value of the kran is due to conditions resulting from the war, such as rise in the price of silver, presence of much foreign money, and the immense decrease in the volume of business with foreign countries.

The usual interest rate in Teheran of 12 per cent. has been increased to 18 per cent. and 24 per cent. Even at these enormous rates little money is obtainable. Practically no credit is being extended by foreign firms operating here.

Increase in Cost of Living.

Even before the war Teheran was one of the most expensive cities in the world in which to live. The high cost of living was attributable to its remoteness from the principal markets of the world, the absence of industries and manufactures, and the lack of modern transportation facilities. Coal, for instance, was transported by donkeys to Teheran from the nearest mine, a distance of fifty miles. Goods transported through Russia were subject to a heavy transit duty, and had to be transported over the mountains from Enzeli, a distance of 250 miles, by wagons or pack animals. Goods imported through the Persian Gulf had to be transported to Teheran by caravan, requiring at least two months.

The rise in the price of articles of local production has not been so marked as the rise in the price of imported articles. Coal has increased in price from £4 to £10 per ton; apples from 14s. to 30s. per bushel; butter from 2s. to 5s. per lb.; mutton from 5½d. to 1s. per lb.; chickens from 7½d. to 3s. 2½d. each; eggs from 7d. to 2s. 7½d. per doz.; Persian flour from 22s. to £11 per barrel; rice from 2½d. to 1s. 2d. per lb.; and Persian bread from 1d. to 10d. per lb.

Articles of foreign production are, of course, scarce, and many ordinary articles are not to be had at all. Prices are largely governed by the rapacity of the seller and the size of the buyer's pocketbook. The writer recently paid 4s. 5d. for a cake of a certain American soap. He had failed to find soap anywhere else in the city, so the merchant got his price. The price of sugar has increased from 4d. to 4s. per lb.; coffee from 1s. 3d. to 7s. 5d. per lb.; tea from 2s. to 6s. 8½d. per lb.; European flour from £2 16s. to £32 per barrel; and shoes from 22s. to £5 per pair. Cotton goods have increased in price 450 per cent.; silk goods, 300 per cent.; matches, 800 per cent.; petroleum, 400 per cent.; and medicines from 300 to 500 per cent.

EGYPTIAN STATE FINANCES IN NOVEMBER.

(From Our Own Correspondent.)

Cairo, January 27.

Revenue during November amounted to £E2,652,069, and expenditure to £E2,842,898; there is therefore a deficit on the month's working of £E190,829. The total revenue for the seven months amounts to £E18,706,170, and expenditure to £E15,449,274, giving a surplus of £E3,256,896, as compared with one of £E2,431,858 at the same date in 1917.

The principal items of revenue during November were: Land tax, £E813,649; Customs, £E215,262; tobacco dues, £E185,282, Excise, £E51,323; judicial fees, £E126,021; railways, £E709,109; post office, £E30,637; domains receipts, £E160,750; ghaffir cess, £E46,255; interest on funds, £E48,319; miscellaneous receipts, £E112,804.

The heaviest items of expenditure were: Public health, £E47,475; irrigation, £E135,047; public works, £E107,823; railways, £E624,791; police, £E44,121; ghaffirs, £E66,556; ministry of war, £E117,231; pensions, £E53,961; and public debt, £E1,234,340.

It is interesting to note that Customs, telegraphs, domains rents, military exemption dues, miscellaneous receipts, and sale of land have all exceeded the estimate for the full year. This is a further indication of the prosperity of the people, and at the same time foreshadows a substantial increase in the total revenue over the estimates, of which (with still five months to run) the collections are at present within four millions—£E18,706,170 for the seven months, against an anticipated £E22,900,000 for the twelve months.

MOROCCAN TRADE..

Overstocked Market.

The following review of market conditions in Morocco is from the British Commercial Mission at present engaged in investigating the possibilities for the increase of British trade with that country :—

Serious difficulties have arisen in various parts of Morocco during the last few months in consequence of the over-stocking of one or two commodities of native consumption. First and foremost among the goods of which supplies have accumulated are cottons of all kinds, but chiefly the cheaper varieties, shirtings, and fancy cottons. Green tea is also reported to be over-stocked in some localities, but the surplus is not understood to be very extensive.

As regards cottons, this position has arisen in the first instance in consequence of the steady rise in price during the last two years and the universal belief in Morocco that the war would continue for some considerable period, and that, therefore, this rise would go on indefinitely. The extent of the increase is illustrated by the case of white shirtings, formerly valued at 4s. per piece, and subsequently selling at 24s. per piece, and by a rise in the price of cottons per bale of 500 pieces of at least £400.

Such sensational changes in value induced a " boom " in cotton goods, in which not only large and small merchants took part, but also traders altogether without experience in these classes of goods. Even private individuals without trading knowledge of any description took a hand in these operations. As a result of this indiscriminate buying prices naturally soared higher still.

Fall in Prices.

With the coming of the armistice, opinion appears to have veered round to the other extreme, and the belief became general that there would be an immediate extensive fall in price. Apparently, also, in country districts the announcement of the armistice was accompanied by an official statement that there would be an immediate large decrease in the price of cottons, and although this statement was doubtless merely intended to allay popular resentment at the existing high prices, it would nevertheless tend to accentuate the crisis. The effect was twofold—there was a panic rush to sell, and also a universal disinclination to buy, except at a price which involved heavy loss to the seller. It is stated that prices have fallen since last September in cottons by amounts varying from 20 to 60 per cent., and that many kinds of cottons are selling at considerably lower rates in Morocco than in Manchester, in spite of the extremely high freights, insurance rates, and the Customs dues.

A pretty general trade paralysis has consequently set in throughout the country. In Marrakesh one merchant alone has 100,000 pieces of Amburgo cotton in stock, and in certain of the coast towns it is alleged that every upper room is piled high with these unsaleable materials. The stocks in Fez are estimated at upwards of 1,000 bales of 500 pieces each, and it is calculated that stocks in various parts of the country will meet the normal requirements of the next year or two.

Generally speaking, of course, the larger merchants have so far weathered the storm, but the smaller dealer and outside speculator have suffered severely. The purchases of these latter have been very often credit purchases on short-date bills, which they now find themselves quite unable to meet. In the opinion of one large importer, a great deal of the trouble has resulted from the indiscriminate giving of credit in regard to such purchases, and he adds that it is useless to press for payment from clients of this character.

The Outlook.

Various remedies for the existing state of affairs have been suggested. Attempts have been made to export the surplus stocks of cotton to Syria, where it is understood that these goods are in great demand. Export is, however, not at present permitted from Morocco, but it may perhaps be possible to change the destination of goods already manufactured, or undergoing manufacture, in England. At any rate, it seems to be generally agreed that where the manufacture of cottons for Morocco has not actually been started, orders might very well be cancelled; but it is stated that there is a resolute refusal on the part of Manchester houses to cancel any orders.

According to a prominent Fez merchant, a sudden fall in the home prices will result in widespread disaster in Morocco, but a slow decline to the normal would give an opportunity to clear off surplus stocks. It is suggested that steps should be taken to ensure that this process is extended over at least six months.

As regards green tea, the overstocking which has occurred is much smaller, and the restrictions in the sales of this commodity have been due to what is presumably a temporary obstacle, viz., the shortage of sugar, without supplies of which there is no demand for tea. Probably, however, this is a matter which will right itself in due course.

As regards most other commodities, supplies are short, and particularly is this the case in regard to hardware, for which goods an admirable opportunity is presented to capture the market. Candles and soap and woollen cloths are also in large demand, and it would certainly appear advisable for merchants, as far as possible, to turn their attention to these and other goods in preference to making further shipments of the already overstocked cottons.

Egyptian crops estimates show that wheat, barley, and beans in Lower Egypt are all below the average, in Mid-Egypt they are about the average, and they are normal in Upper Egypt.

The Board of Trade are in receipt, through the Foreign Office, of information from H.M. Agent and Consul-General at Tangier to the effect that by an Order of the Resident-General, dated December 26, and published in the *Bulletin Officiel* for January 6, the prohibition on the exportation of vegetable hair (crin végétal) from the French Zone has been withdrawn.

DEVELOPMENT OF MOROCCAN PORTS.

A report from H.M. Minister at Tangier dealing with the ports of Morocco states :—

The port of Casablanca continues to grow in importance, the total value of imported goods landed there in 1917 being 103,013,935 francs, whilst in 1911 it was only 22,163,975 francs. Rabat now ranks next in importance as regards imports, with an advance from 6,555,050 francs in 1911 to 35,775,199 francs.

The new port of Kenitra, which figured for the first time in the statistics in 1913, with 1,573,856 francs worth of imports, received 19,560,084 francs worth of goods in 1917. These two last-named ports have absorbed a considerable amount of the trade of Laraiche and Tangier, both of which were formerly used for the introduction of goods intended for Fez and the interior. The value of imports at Laraiche, notwithstanding the greatly increased consumption of the Spanish zone, fell from 21,099,075 francs in 1913 to 15,255,160 francs in 1917. The value of imports at Tetuan rose from 1,707,050 francs in 1911 to 14,944,730 francs in 1917. This is due to Tetuan being the seat of government of the Spanish Zone, and having a comparatively large Spanish population which has to be supplied with imported goods. The fact that it has little or no hinterland to supply, and its port at Rio Martin being an open roadstead, where a landing can only be effected in fine weather, will, however, prevent it from ever becoming a port of any importance. The value of the import trade of Tangier remained the same in 1917 as it was in 1912 and 1914, but some three million francs less than in 1913.

Casablanca is also advancing in its export trade, though not to the same extent as in imports. Mazagan ranks second and Saffi third, both showing a steady increase. The Laraiche export trade shows an improvement, though outdistanced by Rabat and Kenitra.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General, Commercial Intelligence Department, Calcutta, dated February 6 :—

Light rain in Punjab, Bihar, and Orissa and parts of Bombay. Local rain in Central Provinces, North Madras coast and North-West Frontier. Situation improving, but more rain needed in Punjab.

Cholera epidemic steadily declining.

Bombay Cotton Market steady. Fully good broach April-May delivery quoted at Rs.585. Piece Goods Market steady. Rice Market unchanged, with little selling, owing to freight licences being exhausted. Calcutta Jute Market quiet, with prices unchanged. Gunny Market quiet but steady.

Benzine and petrol, myrabolams, myrabolam extract and other tanning materials have been transferred to Class D for export from India. (Indian Class D corresponds very closely to Class C in this country.)

£20,000 deferred telegraphic transfers on London were allotted to the Alliance Bank, Bombay, on January 30.

ENGINEERING NOTES.

Reducing Coal Consumption.

One of the principal reasons which hamper the employment of steam power for industrial or agricultural purposes in the Near East is the cost of coal. It is an item which appears, with discouraging results, in the calculations of cost of engine work; and this is especially the case when the steam power is wanted in districts where, owing to difficulties of transport, coal costs more than double the price ruling in England. The war, which has caused the existing shortage of coal, has also increased the difficulties of transport; hence it is scarcely necessary to explain why during the last three or four years many factories in the Near East have been temporarily closed or have been compelled to reduce their output. It is said that in Germany the same conditions exist, and steam users, owing to the shortage of coal, are "doctoring" their available supplies in order to effect a reduction of its consumption. Even some of the largest gasworks in Germany, according to recent reports, are resorting to this expedient, and are using chemical mediums with their coal for the same purpose, although it is admitted that by their employment a lower quality of gas is obtained both for lighting and heating purposes. It is said, however, that the difference in quality is hardly noticeable in lighting and heating effects in ordinary practice. However, whatever are the merits of the German mixtures, we prefer to recommend to users of steam power in the East a new and cheap process of extensive application for the treatment of coal, by which considerable economy in consumption may be effected. It has been proved by British experts that if bituminous coal be immersed in water containing gas chlorine in solution, the coal absorbs the gas to the extent of 0.10 per cent. Small though this proportion is, the effect on the bitumen fuel is remarkable, causing it to burn like anthracite coal, that is to say, slowly and without the formation of soot or smoke, or much ash. In boiler tests the evaporation was 25 per cent. better with a "chlorinated" bituminous slack than with similar untreated material. The process is very cheap, and coal so treated will not burn in the present wasteful way, giving considerable economy of fuel and better results.

The Credit Question.

"The unique opportunity which presents itself to British engineer manufacturers for securing a great part, if not all, of the machinery and implement trade in the Near East will soon be lost if they do not act now and at once." In these words a commercial engineer who has recently arrived from those regions sums up the present position. This is the time when agriculturists and landowners are deciding what kind of machinery and implements they require for the forthcoming seasons and the treatment of the next crops. It is probable that some manufacturers are still influenced by the often-repeated statements that long credit is expected by buyers in the Near East, and that it was entirely due to this long credit that the Germans secured their predominance in those markets. The erroneous and misleading nature of this view so far as the engineering trade is concerned has often been pointed out in these columns. The German commercial success in the Near East was due to the systematic energy of the German manufacturers and to the methods of dealing through and with their agents. Where credit was given full security was required and obtained. The Germans selected agents or representatives of good standing and capable of assuring themselves of the trustworthiness of buyers. As a rule, credit was given to these agents, and not directly to the average buyers. Where there were no agents a local banker or merchant, known to some German official in the district, would help to carry out satisfactorily the transaction. British manufacturers were not so careful in the selection of agents, a fact which greatly strengthened the position of their competitors. But wherever British firms were well and substantially represented they had a great advantage. In all cases the engineering trade in the Near East is as safe as in any British colony, provided the ways and means of transacting business in the markets are properly studied. There are many banks and banking agents throughout the Near East, which have business connections with, or are well known to, banks in the United Kingdom, and which would gladly undertake business on commission in the absence of agents or representatives of interested firms.

Hail Destroyers.

The time of the year is approaching when the possibility of a hailstorm is the nightmare of vine-growers, for a hailfall during budding is a catastrophe. Native "weatherwise" agriculturists in the Near East foretell heavy hailstorms and recommend the mediation of the priests and the Governments. For the assistance of vine-growers we may mention that in the months preceding the war a new type of lightning conductor was invented and largely tested in France. The device consists of gilded electrolytic copper, mounted on a crown-shaped support, which is connected to the earth and placed on a suitable column not less than 100 feet in height. According to the theory of the inventor, these instruments, by their effect on the currents of atmospheric electricity, are capable of preventing the formation and fall of hailstones. A conductor of the above dimensions is said to be effective in protecting an area of about three miles to the right and to the left in the direction of the wind, and by about three-quarters of a mile each way at right angles. The tests to determine the efficacy of the new devices were made by a committee of experts and representatives of the French Government, and so far have proved very satisfactory. A chain of "hail destroyers" has been established in some important vine-growing districts, which have suffered heavily from hailstorms. The electricity with which the storm clouds are charged is drawn, it is claimed, by the multiple metal points on these conductors, and, finding an easy path down the wires, is conveyed to the earth, therefore greatly minimising, if not altogether dispersing, hail and lightning storms.

REVIEW OF EGYPTIAN AGRICULTURE.

The following review of recent developments in the Egyptian agricultural industry has been issued by the Egyptian Ministry of Agriculture :—

An exhibition of flowers and fruits was held in Cairo in November. One of its special features was to demonstrate the wide possibilities offered in local fruit production, and the display of fruit was thus very instructive.

An exhibition of home-grown quinces, a fruit so largely imported for jam-making, attracted great interest. The yield from good varieties was 25 kilogs. per tree, or a minimum return of £E40 per acre. This shows that even at pre-war prices the local production of fruit would pay handsomely.

The country has passed through great difficulties to provide for its timber supplies during the war. Foreign imports were entirely cut off after the outbreak of war, and the country had to depend on its own resources. Timber was required for a variety of uses—building purposes, fuel, the making of industrial and agricultural implements, etc.

Building was very considerably restricted, but the other needs were heavy, and it was feared that the local supply might not be sufficient to meet them, as the country is very poor in forests. Fortunately, such has not been the case. The use of home-grown timber has thus enabled woodworkers to appreciate the good quality of certain trees of which they were previously ignorant. As a result of the war many millions of seedlings of quick-growing species have been planted.

The army requirements of vegetables have been considerable, and it was feared at one time that not enough could be grown in view of the difficulties of obtaining vegetable seeds from abroad. Special measures were taken to insure against this contingency, and the supply of vegetables has been adequate for all needs. Marketing is, however, very unsatisfactory, as the returns to the cultivator from his market-garden produce are much below the retail prices.

The prospects of this season's crop are generally good in Upper Egypt, but unsatisfactory in Lower and Middle Egypt.

It is noticed that fumigated plants are bearing more heavily than those not so treated, and it is hoped that the conclusion of the war will lead to the popularising of the practice of fumigation by making it easier and less expensive to obtain the necessary materials. This is the only practicable method of controlling the scale insect, which at present constitutes the chief obstacle to the spread of citrus cultivation in Egypt.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The general position of the market remains unsatisfactory. Demand has not been quite so dull as earlier in the year, but buyers still restrict their purchases to small lots. There continues much discussion with regard to Egyptian cotton problems. It is understood that the Government will not take action until towards the end of this season. It is realised that sooner or later there will have to be a big adjustment of prices, as the fixed rates are now quite artificial. There continues talk of a restriction of acreage in the United States for next season. The whole outlook relating to future raw cotton supplies is very uncertain. In Egyptian yarns demand continues very slow. Users seem determined to adopt a waiting policy. There is the expectation of lower prices sooner or later. In piece goods for Egypt sales of weight have been quite unknown. According to mail advices the position in Cairo is steadily improving, but the process is slow. We are still without activity in cloth for India, and until this comes about there is no probability of manufacturers strengthening their position. China continues to give rather more support, especially in bleaching descriptions. Scarcely anything at all has been done for South America. Trade is now opening out for Beyrout, and an increased inquiry has been met with for the Near East generally. Operations in home trade fabrics have been irregular. A larger trade has been done in home American yarns. Some of the buying has been of a speculative character. Difficulties continue to be met with in arranging transactions in export yarns.

February 5.

Cotton Trade Control Abandoned

Considerable satisfaction has been expressed in Lancashire cotton trade circles at the decision of the Board of Trade to allow the Cotton Control Board to remove all the restrictions upon the running of machinery. Henceforth, all spinners and manufacturers will be permitted to work as many spindles and looms as they wish. The Cotton Control Board was formed in June, 1917, and its work as a whole has given satisfaction in trade circles. Owing to the shortage of supplies of raw cotton, and the critical state of affairs which has existed in the Liverpool market, it has been necessary for the Board to compel firms to run only a percentage of machinery during the past eighteen months. Latterly, mills engaged on American have worked 65 per cent. of the spindles, Egyptian mills 90 per cent. of the spindles, and weaving concerns 75 per cent. of the looms. Owing to the trade depression and the shortage of operatives, it is not anticipated that many spinners and manufacturers will be quick to take advantage of the decision of the authorities, but the removal of the restrictions is very welcome. The work of the Control Board will now be confined to dealing with questions relating to out of work benefits for the operatives. The Government is not yet in a position to cancel the order fixing maximum prices for raw cotton, or the regulations governing operations in the Liverpool market. This week, however, a new futures contract has come into force, trading being allowed in single months from May to September. The emergency contract will expire in April. Although the operatives in Lancashire are not very restless, one or two Labour questions will have to be dealt with during the next few weeks. The workpeople are pressing their demand for a reduction in hours from 55½ to 44 hours per week. It is expected that a joint conference of employers and trade union officials will take place next week to deal with the matter. Negotiations are now taking place between the masters in the manufacturing section and the officials of the weavers for the purpose of considering an application for a minimum wage. It has been arranged that if no agreement is reached by June the matter shall be settled by arbitration.

The King of the Belgians has conferred upon Mr. Frederick W. Emett, head of Reuter's Intelligence Branch in London, the Order of Leopold II. in recognition of "Constant and generous help given to Belgium in the course of the war."

COMPANY MEETINGS.

British Trade Corporation.

The second ordinary general meeting of the shareholders of the British Trade Corporation was held on February 6 at the Institute of Chartered Accountants, the Lord Faringdon, the governor, presiding. The Secretary (Mr. G. de B. Brounlie), having read the notice convening the meeting,

The Governor said: Gentlemen, we submit to you to-day our second report and the accounts for the year ended December 31 last. The report is very simple, and does not call for remarks, but to the accounts I would venture to direct your attention for a few minutes. They disclose a position differing in many respects from that submitted a year since. Taking, in the first instance, our liabilities, it will be seen that our capital remains as before at £2,000,000; our current and deposit accounts have grown from £632,636 to £1,673,440; acceptances on account of customers are £212,181, no corresponding item appearing in 1917. On the assets side it will be seen that we have:—Cash in hand and at the Bank of England, £75,346; money at call and short notice, £610,000; British Treasury Bills, £1,000,000; and investments amounting to £572,890. Our bills discounted, loans, advances, and sundry debtors amount to £1,090,041, while the liability of our customers for acceptances is the amount stated on the other side of the account—namely, £212,181.

The next item, capital in subsidiary companies, calls for some explanation. At our last meeting I stated that to meet the demand for an organisation for the insurance of commercial credits we contemplated the formation of a separate company, the particular object of which would be to deal with this business, and in April last the Trade Indemnity Company came into existence. As I ventured to predict twelve months since, the restriction of exports has not allowed great scope for the company's operations, but, nevertheless, it has fully justified its creation, and there are clear indications that it will be a useful organisation, especially to the small trader.

A subsidiary company to which I desire particularly to draw your attention is the Levant Company, Limited. It will aim at reviving the commercial side of the activities of the old Levant Company, famous during the sixteenth and seventeenth centuries as the representative of British influence in the Near East. It starts with the acquisition of a considerable interest in the Constantinople and Salonika firm of J. W. Whittall and Co., and it is making arrangements to launch out in other parts of the Mediterranean, where hitherto Austrian and German interests have predominated. The capital of the company, which amounts to £1,000,000, is not yet ripe for public issue; in the meantime we have subscribed for £200,000. The company has already promises of the agencies of many prominent manufacturing firms, and we believe that the corporation has, by the assistance given and promised to the Levant Company, adopted a course that will materially assist in pushing British trade. As part of this assistance policy, and to some extent as a corollary to our "fathering" of the Levant Company, we have acquired the whole share capital of the National Bank of Turkey. Constantinople has always played a prominent part in Near Eastern politics, and its importance is not likely to be diminished when settled Governments are established in the Balkan States—countries with great potentialities when peace and good government are assured to them, when the vast wealth of Asia Minor is developed and Mesopotamia irrigated and populated. There will be fields here for the British merchant and manufacturer, and we hope and believe that our acquisition of the National Bank of Turkey will enable us to furnish the financial facilities that will be required. Our manager, Mr. Dickson, is now in Constantinople putting things in shape for the industrial development that we anticipate at an early date. I should, perhaps, mention that the purchase price paid for the National Bank shares does not figure in the accounts before you, as the money was not paid until January 1.

The profit and loss account does not show any brilliant results, but I would point out that that is the result of keeping our assets in a very fluid state, pending their use in channels likely ultimately to be more remunerative. The interest received amounts to less than 4 per cent., while our expenditure, when much spade work is being done, is naturally on the high side. An enterprise such as ours must, of course, have time for development. We suggest that out of the £81,260 0s. 10d., representing the profits for the year, together with the amount brought forward from 1917, there should be written off the whole of the preliminary expenses, amounting to £10,204 9s. 5d., and the whole of the expenditure incurred in the adaptation to our uses of the premises we occupy at No. 13, Austin Friars, which amounts to £4,139 9s. After making these provisions, and paying the income-tax—£2,417 14s. 3d.—in respect of 1917 profits, and depreciating our furniture by £246 4s., there remains a balance of £54,252 4s. 2d. We recommend a payment thereout of a dividend of 5s. per share, leaving £14,252 4s. 2d. to be carried forward.

Leaving the accounts, I should like to mention that during the past year we have been able to render financial facilities to traders in many directions, notwithstanding the fact that the export business of the country has been at a standstill, and I think I can claim that we have done this without poaching upon the preserves of any other financial institution. We have made our first industrial issue, and we look forward to much business of this class in the future. Trade is still harassed by restrictions of various kinds, and until these are removed we are hardly likely to see any considerable revival. One thing is abundantly clear, and that is that the world is very short of many necessaries that this country is able to supply, and the primary difficulty is the provision of the money for the purchase of the goods required. I now beg to move: "That the directors' report and statement of accounts be, and they are hereby, received and adopted."

Mr. F. Dudley Docker, C.B., seconded the motion, which was carried unanimously. The payment of a dividend of 5s. per share on the issued capital of the corporation was also agreed to.—A vote of thanks to the chairman for presiding and to the board of directors was unanimously accorded, on the motion of Mr. F. Walker, seconded by Mr. Agius.

Gharbieh Land.

The report of the Gharbieh Land Company, Ltd., read at the ordinary general meeting held at Cairo last year, states:—

The area of the company's estates at February 28, 1918, was 7783 feddans, 20 kirats, 11½ sahms, the cost price of which amounted to £E436,917.602. This figure comprises purchase price, capital outlay, and the value of the buildings, machinery, cattle, etc., on the property at that date.

Notwithstanding the adverse circumstances which the company had to face since the war and which are explained in the two previous reports, the works of improvement have been continued without interruption. The company's lands at the beginning of the year under review were divisible into four classes, viz., (a) Lands occupied by canals, drains, roads, etc., 338 feddans; (b) Lands uncultivated to be levelled and brought under cultivation, 535 feddans; (c) Lands levelled and under amelioration crops, 1,405 feddans; (d) Lands cultivated (excluding lands sold), 5,854 feddans. During the year nearly 400 feddans were transferred from classes (b) and (c) to class (d). The lands of class (b) still remaining to be levelled were the most difficult to deal with on the whole estate. For the levelling of these lands it will be necessary to employ steam-ploughs, and as coal is now at a prohibitive price, the work will have to be postponed until means are found to adapt the ploughing engines to burn a cheaper kind of fuel, such as crude oil or the wood of the cotton plant.

With the exception of the few scattered plots composing the 500 feddans of class (b), all the company's lands are now cultivable and their gradual development is assured without further care than good management and crop rotation. In the last report mention was made of certain improvements which it was hoped it would be possible to make in the irrigation system on the company's lands. These improvements have since been carried out, the company having last year obtained

Digitized by Google

from the Government a concession for three intakes on the Sahel Canal (the old Sherbin Canal), viz. one 1m. 10 in diameter at Sawalem and two 0m. 85 in diameter at Ras-el-Khalig for the sefi (summer) irrigation of all the lands at Sawalem and Ras-el-Khalig and the entire southern part of the Wastany division, a total area of about 5,300 feddans. These intakes are connected with the company's two main canals at Sawalem and Ras-el-Khalig which had previously been widened and deepened to meet the new requirements. In addition, a new canal 800 metres in length has been excavated (siphoning under the old canal and connected with it) for the 20 inch pump at Ras-el-Khalig, in case it should be necessary to have recourse to both methods of irrigation simultaneously. In future it will, therefore, be possible to irrigate either by free flow or by lift machinery, the latter method being necessary only during rotations and when, as rarely happens, the level of the water in the Sahel Canal is not sufficiently high.

The agricultural results were decidedly satisfactory. Receipts increased by £E14,254.508 and the net profit was £E230,019.387, as compared with £E9,642.209 for the year 1916-17. This progress is, of course, due in a large measure to the rise in the prices of agricultural produce, but is also a consequence of the successive improvements made during the past few years in the working of the estate which, since the retirement of the company's technical adviser, Lieut.-Colonel J. Hicks Paull, and the death of Mr. T. Hood, the company's Inspector, killed in action in France, has been under the control of the managing-director, who, despite the absorbing calls made upon him in the exercise of his official duties, has assumed the difficult task of personally supervising the working and reclamation of the estate.

Although the cotton crop was repeatedly attacked by worm, it amounted to about 6,200 kantars, of which the company sold for its own account and that of tenants nearly 4,500 kantars at an average price of £E8.650 a kantar. The remainder of the crop was disposed of direct by growers after payment to the company of all rents, annual instalments and arrears due by them. In 1917, the company grew cotton for its own account on 440 feddans, but this year there will be only about 100 feddans under direct cultivation, all the other cotton lands having been let or sold. Notwithstanding sales made to date, the estimates for the current year are not lower than the results of the year under review.

Transactions in land in this district were until lately unfavourably influenced by the forced sale at low prices, to which reference was made in the last report, of an extensive estate in the neighbourhood of the company's property. This circumstance prevented the company from taking greater advantage of the improvement in the land market which has taken place in the country. A few sales have, however, been made at profitable prices and there is every reason to believe that, as soon as the next cotton season opens, it will be possible to make more numerous and important realisations. During the year the company disposed of 141 feddans, 23 kirats, 12½ sahms and since February 28 last, more than 100 feddans have been sold. The prices obtained vary between £E85 and £E130 a feddan, the average sale price exceeding £E105 a feddan. The total sale proceeds amounted to £E15,002.049.

The securities held by the company, of a nominal value of £E73,575, are shown in the books at only £E8,232.500.

The balance due to the Egyptian Enterprise and Development Company at February 28, 1917, was £E37,212,507. All the advances made to us by that company in the past financial year have been refunded and the greater part of the interest accrued to February 28 last has also been paid. The balance standing to the credit of the Egyptian Enterprise and Development Company at February 28 last, amounted to £E38,831,120

in principal and interest, and this debt is guaranteed by a deposit of securities and by the Gharbieh Land Company's obligation to give the Egyptian Enterprise and Development Company on demand a second mortgage on the whole of its landed property.

The net profit for the year amounted to £E11,424.852, as compared with a loss of £E4,696.962 for the preceding year; hence a difference in favour of the year under review of £E16,121.814. From this profit is to be deducted the minimum remuneration of the Board of Directors for 1917-18, £E1,000; leaving £E10,424.852. Deducting this sum from the amount of loss brought forward from previous years, £E116,684.376, the debit balance will be £E106,259.524, which it is proposed to carry forward.

The balance sheet and accounts were unanimously approved by the meeting, and resolutions were also passed re-electing M. P. L. van Hemert and M. N. Shakour Pasha as directors, and appointing Messrs. F. H. Russell and J. C. Sidley, of Messrs. Russell, Harris and Co., chartered accountant, as auditors for the current financial year.

COMPANY NOTES & REPORTS

Delhi Umballa Kalka Railway.

The report of the Delhi Umballa Kalka Railway Company states that the company's share of the net earnings during the year was £151,479, compared with £133,704 in the previous year. The balance brought forward was £18,978, and after providing for (1) the ad-interim dividend of 5 per cent., with a bonus of 1 per cent., declared for the half-year ended March 31 and paid on July 29 last, (2) transferring £13,000 due to gain by exchange to reserve, (3) interest on the Debenture and Preference stocks, (4) income-tax, and (5) interest on capital advance, etc., the balance remaining to be dealt with is £69,711. The directors now recommend that a final dividend of £5 per cent., also a bonus of £2 per cent., less income-tax at 4s. 9d. in the £, be paid on the ordinary stock, making 13 per cent. for the year, and that the balance of £27,011 be carried forward.

Dividends, Payments, &c.

The directors of the Southern Punjab Railway recommend a final dividend on the ordinary stock of £7 per cent., together with a bonus of £1 per cent. (less English income-tax at 4s. 9.24d. in £), making, with the interim dividend and bonus paid in September last, a total distribution of £14 per cent. for the year ended September 30 last.

The directors of Monerakelle Rubber Estates recommend a final dividend of 10 per cent., less tax at 5s. 3d. in £ on the ordinary shares, making 14 per cent. for the year ended June 30 last, payable on 24th inst.

The directors of the Pabbojan Tea Company have declared a second interim dividend at the rate of 6½ per cent., less income-tax at 5s. 9d. in £, on account of the year 1918, payable to holders registered 11th instant. Warrants, which will be posted on 27th instant, will be payable on and after 28th inst.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week, 724 tons (previous week, 23 tons. Hurgada, 5,161 tons, against 2,802 tons.)

Import of sugar into Egypt is prohibited until the end of the year except by licence.

NEW COMPANIES.

Societe Generale de Commerce.

A company has been formed in Athens with the above title, for the promotion of British and Swiss trade in the Levant. The paid-up capital of the company is 600,000 drachmae, comprising French, Swiss, American, and Roumanian capital. The company has in view the import and export of general merchandise.

THE ALGERIAN MARKET.

High French tariffs are not considered, in the opinion of the British Vice-Consul at Phillipville, for the disappearance of United Kingdom cotton goods from the Algerian market. German competition, he states, was severe before the war, and was felt more strongly than the competition of French goods.

There is an opportunity at the present time, therefore, to regain and extend our trade with Algeria. United Kingdom firms are advised by the British Vice-Consul at Phillipville to devote special attention to agricultural machinery, pumps, pumping engines (including windmill pumps), mining tools, wire for baling, glass, cutlery, and hardware.

Glass and cutlery were supplied by Germany before the war, and they are now in great demand. Tenders for the construction of electric tramways for the town of Constantine are expected to be called in the near future.

It must be noted that American interests are cultivating this market, commercial propaganda and catalogues in French being much in evidence from this quarter. Catalogues in English and the quotation of prices f.o.b. in sterling are a waste of paper and money in Algeria.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 20 amounted to £E10,230, making the total for the year £E295,322. The corresponding figures for the previous twelve months were £E10,032 and £E223,700.

Mr. Richard Sims Donkin, member of the Chamber of Shipping and a director of the Suez Canal Company, died at his house at Wimbledon last week. From 1895 to 1900 he was M.P. for the Tynemouth Division.

H.M. Consul at Syra states that the stock of olive oil at Syra is 55,000 okes (excluding large quantities of the 1918 crop expected from Crete, Calamata, and Mitylene). There is no local production of olive oil in this district. The wholesale price per oke is 3.90 to 4 drachmæ, and the retail price is 4.20 to 4.30 drachmæ.

The British steamer Castalia, bound from Bombay for England, went ashore on February 7 in a heavy southerly gale thirteen miles from Newport Rock. Information has been received by Lloyd's that the vessel was floated and arrived at Suez on the 8th.

The Aldgate branch of the London County Westminster and Parr's Bank, Limited, was opened on February 10, at 93, Fenchurch Street, E.C., under the management of Mr. H. C. Allen. A branch of the bank was also opened on that day at 7, Bedford Street, Plymouth, under the management of Mr. T. C. Cutler.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

There has been a fair amount of business doing this week without, however, much change in the prices on the whole. The scarcity of sellers continues a feature, and no doubt business would be a good deal more active if this were not the case.

In Government stocks Egyptian Unifieds have been in strong demand and are again fractionally higher at 91, but sellers have been few and far between. In Egyptian 3½ prefs. the market is exceptionally ½ down at 78 with some small sales.

Amongst Bank shares Nationals, after a very fair business, close 1-16 easier at 22½, Agriculturals have remained firm at 6 7-8.

In Land shares there has been a fair amount of transactions in Aboukirs round the quoted price. The company is understood to have had a very good year in 1918, and to have made some excellent sales of land, and it is generally expected that the report shortly to be issued will recommend a satisfactory dividend for the past year. In Beheras the price has receded ¼ to 13¾. Delta Lands are 3d. easier at 16s. 9d., and New Egyptians have lost a like fraction at 25s. 3d. There have been some fairly large transactions in the latter share. Gharbieh Lands are 1-32 higher at 2 23-32, and Sidi Salems after receding to 2 11-16 are closing firm again at 2¾, all the shares on offer having been absorbed. A biggish business has been doing throughout the week in Sudan Plantations, but the price remains unchanged. Union Foncieres have improved 1s. to 72s. 6d. on some demand both from Egypt and locally.

In Miscellaneous descriptions Alexandria Waters are 1-16 higher at 12. Egyptian Markets have improved 3d. to 28s. 3d., and Salts and Sodas 1-32 to 2 15-16 up to date. A feature has been the demand for Khedivial Mail Ordinary shares which have, on persistent buying, jumped up 16s. 3d. to 112s. 6d.

In Greek securities the market continues dull and there has been a drop of 1 point all round except in Greek Currant Bonds, which are exceptionally 1 point higher at 96.

Oil Shares.

There has been considerable activity in the oil market this week, and the tone has been good, though profit taking set in at the close. Burmahs at 8⅞ are 1-16 lower on balance, but British Burmahs at 19s. 6d. are 1s. 3d. up. Anglo-Persian Prefs. are unchanged at 26s. 9d., but Anglo-Egyptians B are ¼ lower at 3⅝.

Roumanians have been favourably affected by the reports regarding the position of the oilfields there, and Roumanian Consols are 1s. 9d. up on the week at 18s. 3d. Anglo-Roumanian and Traians have both shared in the advance, and while the former has reached 12s. 9d. the latter is 3s. up at 15s. 3d.

Ural Caspians are a shade lower at 1 13-16, and Bakus are 3d. lower at 5s. Russian Generals and Russian Petroleums are again unchanged.

Paris Bourse.

Prices have shown an upward tendency. Suez Canal shares at 5,310 francs are 113 francs up on the week. Other prices are Egyptian Unifieds 94.25 (unchanged), Serbian 1895's 61.05 (against 61.50), Turkish Unifieds 72 (against 69.75), Banque d'Athenes 97 (against 101.50), Credit Foncier Egyptiens 800 (unchanged), Land Banks 190 (against 188), and Ottoman Banks 560 (against 544).

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanjue, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The outstanding feature of the past week has been the publication of the Covenant of the League of Nations. It is true that many of the details of the Covenant—some indeed of the most controversial—have yet to be filled in; but a League has definitely been called into existence by the unanimous report of the representatives of fourteen nations. Their purpose has been to devise an organisation for the better government of the world and for the safeguarding of peace as far as it can possibly be achieved. To this end they have pledged themselves: (1) to respect and preserve as against external aggression the territorial integrity and existing political independence of all States members of the League; (2) to reduce national armaments to the lowest point consistent with national safety; and (3) to submit disputes amongst themselves to arbitration and to carry out in full good faith any award that may be rendered. The recommendations embodied in twenty-six articles stand until modifications have been approved by the States whose representatives compose the Executive Council and by three-fourths of the States whose representatives compose the Body of the Delegates.

It is, perhaps, a legitimate criticism to contend that it would have been more logical to settle first the territorial limits of the Contracting Parties than to undertake to respect and preserve boundaries which in some cases the States concerned are making every effort to change or obliterate. Circumstances, however, called for an early draft of the Covenant, with the result that many important points remain to be settled by the Executive Council. The League in any case is not meant to supersede the Allied Conference. It can only come into effect when the latter has completed its labours, and it is essentially an instrument for securing permanency for the Conference's decisions.

Whatever weaknesses may be discovered in the Covenant in regard to its bearing on the Great Powers, including Germany, there can be no doubt that it holds out the prospect of a happier future for the smaller States. It is of interest to examine its application to the Near East. Czecho-Slovakia, Greece, Roumania, and Serbia (representing Yugoslavia) are signatories to the document. The territorial integrity of each State is guaranteed by the whole League which is pledged to exert its authority by means of an economic blockade of the aggressor and, if necessary, by armed action. Bulgaria, an object of suspicion at the present time to the other Balkan States, remains outside the League, but this circumstance does not prevent any of the neighbouring States from appealing to the League in the event of any dispute with the Bulgarians or any threatened act of hostility on their part. In other words, Bulgaria is rendered powerless for any hostile action by her geographical position; and it may be taken for granted that she will seize the earliest opportunity of endeavouring to qualify for admission to the League. Should she be successful in this quest, the whole Balkan Peninsula—Albania, whatever its future destiny, will certainly fall into line—will have entered upon an era of assured peace. The Executive Council of the League will be able to reduce the armaments of the different States to a minimum, and there will be nothing to prevent the inhabitants of every nationality from reaping the full benefits of their industrious habits.

In the economic sphere the signatories agree that provision shall be made through the instrumentality of the League to secure and maintain freedom of transit and equitable treatment for the commerce of all States members of the League. Here will be found, perhaps, an inducement to the League as at present constituted to admit Bulgaria to membership, in order that the Balkan Peninsula may be freed from any artificial trade barriers. On the other hand, Article XX. of the Covenant opens up the prospect of some national heart-searchings. The high contracting parties by this clause undertake to "endeavour to secure and maintain fair and humane conditions of labour for men, women, and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and to that end agree to establish as part of the organisation of the League a permanent Bureau of Labour." If the Bureau, on the strength of the clause, conceives it to be its duty to attempt to equalise the standard of labour conditions in the Far East, the Near East, and the United States of America, it will lead a laborious and possibly acrimonious existence.

The Covenant, naturally, does not usurp the prerogative of the Allied Conference by prescribing the terms of peace to be imposed on Turkey. It does, however, make some provision for the future government of the territories to be detached from what was the Ottoman Empire. "Certain communities formerly belonging to the Turkish Empire," runs a paragraph in Article XIX., "have reached a stage of development where their existence as independent nations can be provisionally recognised, subject to the rendering of administrative advice and assistance by a Mandatory Power until

Digitized by Google

such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory Power." This clause at any rate disposes of the fatal suggestion that some form of international government should be tried. The specific allusion is to the Arabs, Armenians, and Syrians; but it may be taken for granted that wherever the trusteeship of the League has to be exercised, it will be by a single Mandatory and not by an international body.

The reference to Cyprus in these Notes has afforded an opportunity for a wider discussion of the future of the island in our pages, and we gladly pay a tribute to the restrained manner in which the Greek case has been urged by our correspondents. If there is to be a change in the ownership of Cyprus, it will make for its good government hereafter, we may hope, that the misgivings which must inevitably accompany its transfer should be known. The case of Crete is not on all fours. There it was a question of freeing the island from Turkish misrule. Cyprus has had the advantage of British government for forty years. Its economic development may have been neglected; but no one disputes that its actual administration has been conducted on unimpeachable lines. When Crete obtained union with Greece the administration passed at once into the hands of M. Venizelos, and Greece was quick to acknowledge that the union brought benefit to her no less than to Crete. There may be several Venizeloses in Cyprus awaiting union with Greece. If it be so, they have been hiding their lights under a bushel, and Great Britain would be false to her trust of forty years if she did not utter a warning against the possibility of the government of the island passing into the hands of the town politician, who recks far more of the emoluments and privileges of office than of the welfare of the agricultural population that forms the bulk of his fellow-islanders.

The Paris Conference has listened this week to a statement of the Yugoslav territorial claims, and the consideration of them, with the exception of the frontiers in which Italy is directly interested, has been referred to the Commission already charged with the examination of the question of the Banat. Serbia now looks for a rectification of her existing boundaries not only to the north, but also on the east, where the country marches with Bulgaria. The object sought is to guarantee the security of the Vardar, Morava, and Timok valleys, with their railway systems, which experience has proved to be inconveniently exposed to sudden attack. The weakness of the Uskub-Ghevgeli line in its southern section has long been a Serbian grievance; but if we may judge from the official map of Yugoslav territory, issued in September, 1915, by Dr. Niko Zupanitch, the claim for any material alteration of the Serbo-Bulgarian frontier as a whole is an outcome of the Allied victory. The trouble lies in the fact that the two countries are neighbours. Less than a hundred miles separate Nish and Sofia, and the frontier, as far as the railway is concerned, is nearer the latter than the former. There is consequently not much room for rectifying one injustice without creating another. The Serbian demands are only natural, and if they should not be conceded, Serbia will be able to reflect that guarantees against sudden attacks are henceforth to be supplied by the League of Nations, and in all probability they will prove more effective than the mere shifting of a frontier line a few miles.

In the Banat the Yugoslav claim is based on the presence of a considerable number of Serbs in this territory, and it is not disputed that they form a substantial proportion of the population within a fifty-mile radius of Belgrade. The Roumanian contention is to the effect that the Banat is a geographical entity which does not lend itself to partition; that its natural boundaries are the Theiss and Danube; that the quarter of a million Serbs should be set against the fifteen million Roumanians in what is really Roumanian territory; that the distribution of the Serbs in patches in the Banat points not to any natural expansion from Serbia proper, but an artificial settlement encouraged by Austria, and that if these Serbs have acquired any special prominence in these districts it was as a result of Austria's deliberate policy with a view to introducing a check upon the Roumanians. Finally, they point to the three hundred thousand Roumanians in the Timok valley as a complete rejoinder to any qualms that the Serbians may have regarding the incorporation of a Serbian community in Roumania.

Such in brief are the rival claims in the Banat, and if the Commission is unable to persuade one or other of the claimant States to abandon its position on general principles, it will be necessary to attempt to draw a frontier which will thread its way in and out of the small communities and be the least liable to serious challenge. In the case of the controversy between Yugoslavia and Italy the Southern Slav delegation adopted the course of suggesting formally that the matter should be submitted to the arbitration of President Wilson on the ground that, as Italy was represented in the Council of Ten, she would be both judge and litigant. The Italian Government is understood to have refused to support the application, which is held in some quarters to infringe the prerogatives of the Paris Conference. Clearly if one question is to be taken out of the province of the Conference and submitted to private arbitration, there is some danger of an awkward precedent being set. Unnecessary complications are the more likely to be avoided, it is held, if departures from the normal course of procedure in such matters are ruled out of order.

If the territorial settlement of the Balkans presents difficulties, the position in regard to Transcaucasia is still worse, if only for the fact that the country is less familiar to the Conference, and is far less accessible. Feeling between the rival claimants runs no less high, and has probably been indulged more freely in the absence of such restraints as there have been in the Balkan Peninsula. An attempt was made by the Georgians, Armenians, and Tartars of Russian Azerboijan to arrive at a federal arrangement among themselves, but the experiment was quickly abandoned for promiscuous hostilities. Peace has been restored by the arrival of British troops, and, it is to be feared, will only be maintained in the future by the same or a similar agency. The Georgians are understood to resent the suggestion that they will need the assistance of a Mandatory Power of the League of Nations; the Armenians, on the other hand, ask for one. It will probably prove unsatisfactory to split up these near neighbours, whose territories are almost inextricably mixed, among two or more Mandatories, as the suspicion that one people was experiencing more congenial tutelage than another would be a constant incentive to unrest.

For some time past persistent reports of insurrectionary outbreaks in Roumania have been circulated from Austro-German sources. They contain the most circumstantial details, even to the extent of attributing to the Royal Family an attempt to flee to Jassy and representing King Ferdinand as having been wounded as a result of shots being fired at the Palace. The denials of these reports have not been altogether satisfactory, in view of the fact that all the Allies are interested in proving their inaccuracy, and the impression is being formed that some measure of unrest has come to a head in Roumania which is being exaggerated by German or Austrian agencies on principle or in the belief that the reports serve a useful purpose. On the other hand, we are promised a resumption of the Orient Express services, which indicates that the railway authorities have not allowed their plans to be interfered with by the rumours. At the same time a large consignment of foodstuffs has at last reached Roumania, and may materially assist the Bucharest authorities in meeting the main grievances of the population. A very grave picture of conditions in the country has recently been drawn, and the people are said to have been dying of hunger, cold, and disease. Not only are food supplies required, however, but also raw material and machinery to enable industries to restart.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 27.

The High Commissioner.

The High Commissioner and Lady Wingate left Cairo last Monday evening by special train for Port Said, where they embarked on board a transport for England. Sir Reginald, who was accompanied by the Hon. Mervyn Herbert, Second Secretary; Colonel G. S. Symes, C.M.G., Liaison Officer; and Captain Alexander, A.D.C., was seen off at the station by H.E. Said Zulfikar Pasha, representing his Highness the Sultan, and by Sir Milne and Lady Cheetham and the rest of the Residency staff. It is understood that his Excellency has been summoned to London in connection with the various Near Eastern questions which are at present under discussion with the Powers. During his temporary absence Sir Milne Cheetham will be Acting High Commissioner, a position he has twice held before, the first occasion being when the Proclamation was declared until the arrival of Sir Henry McMahon, and the second from the latter's departure to Sir Reginald Wingate's arrival from Khartoum.

Death of a Distinguished Armenian.

The death took place this week of H.E. Yakub Artin Pasha, one of the most distinguished Armenians the East has known since Nubar Pasha and Tigrane Pasha died. Artin Pasha, who was the son of the Minister of Communications under Mohammed Ali Pasha, was seventy-six years of age, having been born in 1842. He had a brilliant scholastic career, and, coming under the notice of Ismail Pasha, became his personal secretary and tutor to his sons. Subsequently he took service under the Egyptian Government, rising to the post of Under-Secretary of State for Education, in which he did yeoman service for this country, and which he held for nearly a quarter of a century. Artin Pasha was more a student than an administrator, but he played a great part in the reorganisation of education in Egypt, and was regarded by the late Lord Cromer as an authority on educational matters. He represented Egypt at the Oriental Congress of Vienna of 1886, and was for many years President of the Egyptian Institute, of which he was at the last Honorary President. Artin Pasha ever displayed a profound and practical interest in science, arts, and folklore, to all of which he greatly contributed by his own studies and personal research work. His reputation as a savant was not confined to Egypt, for he was well known to and *persona grata* with all the leaders of the intellectual world in Great Britain, France, and America, with whom he was in constant correspondence until the illness to which he finally succumbed laid him low, a year ago. In him Armenia loses one of her most loyal and honourable sons and Egypt one of her most sincere friends, who, while always working and hoping for the liberation of his mother-country, never forgot the land of his birth, and devoted to her service all his energy and all his natural gifts. A man of great personal charm, Artin Pasha will be sadly missed in Egypt; and the cosmopolitan nature of the enormous crowd which followed his remains to their last resting-place may be regarded as the measure of the esteem and affection in which he was held by all classes of the local population.

The Question of Leave.

No sooner was the armistice signed than everyone began asking themselves, "When can we get away on leave?" Comparatively few officials and residents have been able to go home since the outbreak of war, and it is to be foreseen that there will be a fairly large demand for steamer accommodation throughout the current year. Whether the shipping companies will be able to cope with this demand is another matter, for most of the steamers coming from the East will have to provide room for passengers from India and other Far Eastern parts, who are as numerous as, if not more so than, those from this country. It was apparent that unless something were done on behalf of the local residents very few of them would find any accommodation this year; and the Egyptian Government has made arrangements for the drawing up of two lists, one of officials and the other of ordinary British residents wishing to proceed to Europe this year, with a view to trying to get the necessary accommodation reserved on certain steamers. It is understood that Mr. Burnett Stewart, Director of Personnel in the Ministry of the Interior, who has just proceeded on leave, has been asked to negotiate this matter with the shipping companies concerned during his stay in London, and it is hoped that at least two ships will be provided, one about April and the second about July.

The New Year's Honours.

The share of Egypt and the Sudan in the New Year's Honours is not a very large one, but all whose names are contained in the list fully deserve the recognition thereby conferred. Colonel Bernard, who receives a K.B.E., is, of course, the able Financial Secretary to the Sudan Government, who has filled that post for the past eighteen years, and who now receives belated but none the less well-merited recognition for his hard work and efficient handling of the difficult problems which the financial administration of that vast territory has produced. Commanderships of the British Empire are conferred on Mr. John Langley, who has been Under-Secretary for Agriculture for the past two years, and who has done an enormous amount of war work on the Permanent Arbitration Board and as President of the Graves Commissions; on Mr. Ross Taylor, the President of the Supplies Control Board, who has also in his capacity of Legal Adviser to the Ministries of Public Works, War, and Agriculture rendered very valuable services during the war; on Mr. Ward Boys, the Licensing Officer, who has done excellent work in connection with the control of the enemy firms and war trade in general; on Captain Midwinter, who has been Director-General of Sudan Railways since Sir George Macaulay was transferred to the Egyptian State Railways; and on Mr. Sidney Wells, Director-General of Technical Education, who has organised the recruiting of civilian clerks, etc., to replace able-bodied military staff returned to the firing line.

The more important recipients of the O.B.E. are Mr. G. D. Hornblower, Chief Inspector of the Ministry of the Interior, who since the outbreak of war has filled the somewhat thankless post of Press Censor with much tact and ability; Major C. Garvice, D.S.P., who, as Sub-Commandant and latterly as Commandant of the Alexandria City Police, has rendered signal services to the Army; Dr. Frank Madden, F.R.C.S., who, as senior surgeon to Kasr El Aini Hospital, had a good deal to do with the wounded in the early days, when that establishment was taken over by the R.A.M.C.; and Captain C. A. Willis, the able Assistant Director of Sudan Intelligence at Khartoum. Honorary O.B.E.s have also been conferred on Ali El Din Gamal Pasha, Mudir of Menoufia; Hassan Hassib Pasha, Mudir of Gharbia; and Ibrahim Halim Pasha, Mudir of the Behera, all of whom have been of great assistance to the military authorities in their respective provinces.

In addition to the general New Year's list many Anglo-Egyptians and Britons well known in the Near East have been the recipients of honours. Amongst them are Colonel, now Brigadier-General, Ronald Storrs, C.M.G., who has done such extraordinarily good work in Palestine, and who is at present acting Chief Administrator; and Colonel C. Garner, who is Chief Medical Officer of the O.E.T.A., and who will, it is understood, succeed to the now vacant Director-Generalship of Public Health, both of whom are nominated to Commanderships of the British Empire. Lieut.-Colonel R. W. Graves, C.M.G.; Major Macdonnel, of the Frontiers Administration; Lieut.-Colonel Hubbard, of the Coastguards; Lieut. P. W. Stout, D.S.O.; Capt. Gabriel Haddad, late of the Egyptian Public Security Department; and Capt. W. H. Crosthwaite, of the Egyptian Survey, receive the O.B.E.

Egypt's Deluge.

Egypt has been visited by a rainstorm the like of which the oldest residents do not recollect. The visitation was a very sudden one, for the meteorological authorities state that it was preceded by none of the usual atmospheric warnings. It appears to have affected the whole country from Aswan down to Alexandria. Complete reports are not in from all parts, but the

Digitized by Google

damage done to crops, buildings, and communications must have been considerable, judging by what one can see for oneself and what one hears. Cairo seems to have fared the worst. Here the rain fell almost incessantly for twenty-four hours, for six of which it came down with terrific force. During the twenty-four hours over 1¾ inches of rain fell, and when it is added that the annual rainfall is under 1 inch it can be gathered that the storm was an unusually intense one for this country. As a matter of fact, while it lasted the visitation could not have been worse in any more rainy clime. As might be expected, the train and tram services were dislocated, the worst instance being that of the Heliopolis Metropolitan. At one point the line was completely swamped and the cars were stopped by the rush of water, while to make matters worse the side of the cutting fell in. It will take several days yet to repair the damage. To add to the serious state of things a village which was adjacent to the line at the point in question was entirely washed away, and the unfortunate inhabitants were stranded. Special relief work has had to be provided for them. Even now, a week after the downpour, pools of water are still to be seen everywhere, whilst in the districts the roads are not yet dry.

Cairo, February 4.

The Mixed Tribunals.

As foreshadowed in a previous letter, the mandate of the Mixed Tribunals, which would have expired on January 31, has been renewed for a further period of nine months ending on October 31 next. The decree signed by the Sultan appeared in the *Official Journal* of January 31. At the same time several important decisions were passed by the Council of Ministers. This does not, however, signify that the "political crisis" is at an end. A Council of Ministers, in the sense that the members of the Cabinet met, as they were wont to do once a week, was not held; but the papers were circulated by the Secretary to the Ministers, including the Prime Minister and the Minister of Education, whose resignations are still in suspense, and each signed the decisions in question, which were then submitted to the Sultan for signature and promulgation. How much longer the crisis itself is going to last no one knows; but from day to day a settlement is expected. At all events it is very satisfactory that in the meantime a way has been found out of the apparent *impasse* created by the indefinite postponement of the Council meetings and the consequent holding up of all important decisions since the beginning of December last.

The Egyptian Expeditionary Forces.

Not unnaturally the question of demobilisation is much exercising the minds of the members of the E.E.F. Many who have been out here for two or three years have felt that they should have been amongst the first to be sent home. Very wisely the military authorities have issued very complete details of the scheme under which the demobilisation is being carried out, accompanied by a statement explaining the situation, pointing out, amongst other things, that if certain members of the forces have already been ordered home, it is not primarily in their own, but in the interests of the nation that they have been given preference over their comrades. This statement has gone a long way towards allaying the somewhat sore feeling among the men, and there is every reason to believe and expect that they will one and all submit to what is after all the inevitable in the same gallant manner as they have borne their share in the past four years' struggle.

That the Commander-in-Chief has implicit confidence in this respect in his men is shown by the special order of the day which he has issued. In it he reminds all ranks that during the trying and unavoidably extended period that must elapse before the force can be completely demobilised the good name of the British Army depends upon the individual conduct of each member of the forces. Courtesy and consideration to the inhabitants of the countries in which they are stationed were never more essential, even during the period of active operations, than they are now; and he relies on every member of the E.E.F. to maintain the traditions of the British Army in this respect. He enjoins them to treat all women with courtesy, but to avoid all undue intimacy. "Final impressions," says General Allenby, "are usually the more lasting," and on the behaviour of the troops during the present period will depend the final impression left by the British Army on the inhabitants of the countries where they are stationed. He concludes by saying that the honour of the E.E.F. is in the hands of the men, and that he does not fear to leave it there.

The Arab Government.

Several important appointments have been made to its administrative service by the Arab Government. Amongst these have been Lieut.-Colonel R. V. Graves, C.M.G., O.B.E., at the outbreak of war Adviser to the Ottoman Ministry of the Interior and lately attached to G.H.Q. of the E.E.F., who is now Political Adviser at Damascus; Captain Gabriel Haddad, O.B.E., for some time Assistant Director-General of Public Security in Egypt, and until recently Local Adviser to the Governor of Jerusalem, who is now in charge of the Public Security in Damascus; Captain W. A. C. Baines, of the Egyptian Bench, who is to be Judicial Adviser to the Arab Government; and Lewa Mussalli Pasha, of the Egyptian Army, who is retiring in order to take over the direction of the Public Health Administration in Damascus. From the nature of these appointments there would appear to be little doubt that the King of the Hejaz and his sons are imbued with far-seeing and enlightened ideas, and that, whilst being determined to start the new administration under the best auspices, they are not allowing any bigoted policy to influence their selection of the more important officials.

Death of Premier's Secretary.

It is with much regret that I have to announce the death of Sadik Bey Rifaat, Private Secretary to H.E. Rushdi Pasha, the Prime Minister, which has occurred quite suddenly. A young man of great promise, Rifaat Bey has had a brilliant career, and was marked out for early promotion. Of great intelligence, with an infinite charm of manner, courteous, conscientious, and level-headed, he was just the man to fill the post of secretary to such a hard-working and active chief as Rushdi Pasha. He will indeed be a serious loss to the Prime Minister, whom he served faithfully and well throughout the past critical five years.

An Experiment that Failed.

Some three or four months ago, when the wheat crisis was imminent, I reported that an arrangement had been made by the Supplies Control Board with the principal cereal merchants, whereby associations were to be created in every province for the supervision of the cereal trade, and that a Central Committee was to be set up in Cairo to which the provincial associations should send delegates. Under the scheme licences were to be issued to merchants recommended by the Committee to enable them to trade in cereals, the idea being to prevent speculation and profiteering, such as had been going on in the past, and to ensure proper distribution of the crops. Beyond the fact that the presidency of the Central Committee was given to the President of the Supplies Control Board, the Committee and the associations were left to work quite independently, the Government, however, giving them its support whenever they required it.

It has now been found necessary to terminate this arrangement, as it has completely failed in attaining the object for which it was made. Far from assisting the Government in its task of controlling the cereal trade and providing the urban centres with their proper quantity of cereals, most of the merchants have used their position on the Committee and their membership of the associations to profiteer on their own account, and the Government has itself had to intervene and control the cereal trade through its own agency. It is very disappointing that this experiment in giving the Egyptians a free hand in the regulation of what is after all one of the purely Egyptian branches of trade should have failed in this manner; but it clearly shows that even with the full authority of the Government, when they want it, at their back they are still not capable of satisfactorily directing even the most elementary enterprises on their own without close outside control.

ROUMANIAN NOTES.

(From a Correspondent.)

The Present Unrest.

There have been rumours again that a revolution has broken out in Roumania. The sources of these reports are German and Magyar, and they are spread mostly from Berne, where Count Andrassy has a big propaganda organization. But the story is not entirely without foundation. Roumania has suffered incredibly heavy losses in the war, and misery and death are still taking toll of the exhausted population. It is not at all an exaggeration, as it might appear, that Roumania has already lost more than 12 per cent. of her population. Pharmaceutical necessaries have become memories of the past, and new clothes are so scarce that only millionaires can afford to buy them. Means of transport have been mostly destroyed; and this explains why, in a great timber-growing country, a cubic metre of wood (used as fuel) costs 800 lei (about £30*). The general discontent is thus easily accounted for, and were it not that the long-desired national unity is providing a silver lining to the dark clouds, Roumania would in probability have been already involved in a terrible revolution. The great war found her politicians engaged in endless discussions concerning social and political reforms. The very imperfect system of government then existing in the country deprived the masses of political rights; and when, apparently, the politicians were disposed to concede any reforms they were always with an eye to their special privileges. It is necessary to recognise that very often the laws were dead letters, and that the power of a very small class of so-called *chocoi* was boundless. These *chocoi*—without any definite nationality, religion, moral or social responsibility; adventurers of the worst type—were ready to do anything and everything for their own interests. They destroyed the old Roumanian nobility and reduced the peasantry to practical serfage. Roumania possessed the most imperfect land system in Europe, and this was the reason why the peasants revolted so often.

These conditions made Roumania peculiarly liable to a social uprising. The old methods of government, the police, the gendarmes, still further increased the discontent, and precipitated the trouble. That trouble could not be prevented merely by sending food, clothing, and other necessaries, and by distributing the land to the peasants. What is called for is a proper social organization and the establishment of right and justice for the masses. The Allies could do the greatest service to the Roumanians by sending them, together with economic and financial help, a kind of economic police—some good organizers, who could bring order out of this chaos. Roumania has, unfortunately, an enormous number of bureaucrats, and therefore she is helpless now from the point of view of social organization, and unable to take prompt and practical measures for her own salvation.

* At pre-war rates.—Ed.

English in the Roumanian Schools.

The Ministry of Public Instruction intends to introduce the teaching of the English language into all the secondary schools. Heretofore the German language has been obligatory for every secondary school, whilst English was taught only in some Lyceums (the modern section) and in the commercial schools.

The Political Situation.

It is nearly certain that the new elections will not take place until after the Peace Conference, partly because of the permanent mobilization, and partly owing to the impossibility of communication between various parts of the country. It seems that M. Bratianu has not succeeded in forming a National Government, and that he intends to assume the responsibility of building the Great Roumania with only the forces of the Liberal Party.

ROUMANIA'S URGENT WANTS.

Under date of February 14, Reuter's Paris correspondent reports:—M. Blank, a Roumanian economist and a specialist in all questions relating to that country's food supply and finance, declares that the misery in Roumania has reached an unheard of degree. The country is dying of hunger, cold, and disease. The stocks of seed corn required are still in France, Great Britain, and America, although the gathering of the crops should begin in July.

M. Blank urges the necessity for expediting the dispatch of food supplies to Roumania by a Danube port, preferably Galatz, and asks for raw material and the necessary machinery for re-starting the country's industries, and the means for re-establishing her commercial intercourse. In exchange for these imports Roumania promises within a period of fifteen to thirty months to furnish supplies of corn and petroleum to the Allies.

SYRIA & PALESTINE RELIEF FUND

AT THE REQUEST OF

GENERAL SIR EDMUND ALLENBY

A NEW

RELIEF UNIT

IS GOING OUT

ORGANISED BY THE SYRIA & PALESTINE RELIEF FUND
AND THE ORDER OF ST. JOHN OF JERUSALEM.

VAST NUMBERS STILL IN DIRE DISTRESS.

CABLE FROM DAMASCUS.

"Urgent calls for help. Practically no medical relief in the whole city. Resources quite inadequate for varied needs of Damascus alone."

CABLE FROM THE LEBANON.

"Desolation everywhere. Parents inconsolable over loss of all their children. Other children left parentless and deserted. Houses in ruins. Survivors at limit of their resources. Clothing situation desperate. Immediate help will save lives."

Cheques to Secretary:

SYRIA & PALESTINE RELIEF FUND

110, VICTORIA ST., S.W.1

(*Registered under the War Charities' Act*, 1916.)

Chairman: Lt.-Col. Sir Henry Macmahon, G.C.M.G., &c.

Hon. Treasurer: J. F. W. Deacon, Esq.

Jerusalem: S. & P.R.F., Jerusalem.

Cairo: S. & P.R.F., St. David's Buildings, Cairo.

CYPRUS NOTES.

(From a Correspondent.)

The Future of the Island.

Letters received from the Greek deputation to England, and published in the local Greek papers, state that they met with considerable difficulties during their journey, viâ Genoa and Paris, though the time spent in the former city was fully appreciated. They have telegraphed that their "work proceeds well," and they mention that interviews in London have been satisfactory. The Press has every confidence that M. Venizelos will be able to secure for Greece the fulfilment of her claims, which include not only the Dodecanese and the Smyrna zone, but also Cyprus.

The Turks held a large meeting at Nicosia, at which it was resolved to send representatives of their community to Constantinople and Paris, to ask for the return of the island to Turkey; or, should this petition not be favourably received by the Conference, that it should remain under British administration. It was decided that the Mufti Effendi should be one of the representatives. The Greek papers comment on the futility of any such mission, and argue that it is unreasonable that the voice of a minority should prevail over that of four-fifths of the inhabitants, and that the Turks need be under no apprehension as to any prospect of illiberal treatment by a Greek Government, as is evident from the character of Hellenic rule in other provinces. In reply to suggestions that there is no proof that the Greek deputation represents the real wishes of the Cypriots, and that the rural classes should be fully consulted as to their views, they assert that it is preposterous to imagine that there can be any doubt on the subject that all Greeks are one in their desire for liberty, and that liberty is with them synonymous with absorption in the Motherland.

The Anglican and Orthodox Churches.

Considerable space is devoted to articles respecting the friendly relations between the Anglican and the Orthodox Eastern Churches. The cordial reception of the Metropolitan of Athens (formerly Bishop of Kition) in America has given great satisfaction. The meeting held in honour of the Metropolitan in the Synod Hall at New York has tended greatly to strengthen the hopes of those who desire to promote still closer union between the Churches.

The Bishop of Papho, as senior prelate in Cyprus, acts for the Archbishop, now in London, and is in residence at Nicosia. He has paid an official visit to the Acting High Commissioner, Mr. M. Stevenson, cordial expressions of mutual esteem being exchanged.

At Larnaca the Commissioner has had occasion to comment on some recent utterances of the Bishop of Kition, suggesting that it would be well if the prelate were less outspoken, as his words might be open to misconstruction by the people. The Bishop replied that he should always speak in a manner which he deemed to be consistent with his duty.

Agricultural Outlook.

Agricultural prospects are very promising in all parts, the position having been, up to the end of 1918, satisfactory, and weather conditions generally favourable. It would seem that the state of the roads in some parts of the island is leading to much dissatisfaction, and the Government is urged to take the matter in hand. Great damage has been done by the exceptionally heavy rains of last month.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

CYPRUS AND THE DODECANESE.

(*To the Editor of* The Near East.)

Sir,—In your issue of the 7th inst. the question of the Greek islands of the Mediterranean is discussed, and, more precisely, that of Cyprus with regard to England and that of the Dodecanese with regard to Italy. The two cases are substantially and historically identical, in view of the fact that, as The Near East itself recognises, the populations of both Cyprus and the Dodecanese are in majority Greek, but neither has ever belonged to Greece politically. The Near East, however, comes to the conclusion (p. 106) that Cyprus should remain to England, while (p. 115) the Dodecanese should be handed over to Greece.

I do not profess to know how the question of the Dodecanese will be solved, nor do I propose here to advocate any special solution either in favour of Greece or of Italy. But I will simply mention the fact that a tendency towards an Italo-Greek understanding is daily growing stronger in Italy, and also that quite recently newspapers of different shades of opinion, such as *La Gazzetta del Popolo*, *Il Tempo*, *Il Messaggero*, and *Il Popolo Romano*, have expressed the view that it is quite possible to find a basis of mutual agreement between Italy and Greece.

The problem, as I put it, is quite different. Why, I ask, even admitting that (p. 115) the negotiations for the peace after the great war are acknowledged to be conducted "on national lines of thought and not of strategic or imperialistic annexations," why does The Near East propose for identical questions a solution favourable to England and against Greek interests where England is concerned, and on the other hand one opposed to Italian and favourable to Greek interests in the case of Italy? Is it not to be hoped that one of the elements of peace should be to apply to outstanding questions the same principles for all the Allies, or, if it be necessary to make an exception in favour of one of them, consideration should be had for the claims of other Allies in identical positions?

In the case of the Dodecanese I may be allowed to mention that the latest settlement concerning these islands, confirming their Italian occupation, was made in London and bears, among others, the signature of the British Government.—I am, etc., An Italian.

[The question of Cyprus and that of the Dodecanese are not on all fours, if only for the reason that the former has been for forty years under the jurisdiction of Great Britain. Italy's title to the islands of the Dodecanese was to lapse as soon as Turkey had withdrawn her forces from North Africa.—Ed.]

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your last issue a correspondent, in attempting to enlighten the readers of The Near East on the Cyprus question, made several original and startling statements, which are easily disposed of.

To commence with, we are told that Greece never for a single hour possessed Cyprus, a statement which shows a lamentable misunderstanding, or lack of understanding, of the Ancient Greeks' conception of Hellas. If the gentleman will take the trouble of perusing an authoritative work on Ancient Greece two things above all will be impressed upon his mind. First, that in so far as political entirety was concerned, Greece was non-existent, the whole people being bound together only by ties of blood, civilization, and religion; and, secondly, that, to the Greek, Hellas meant not only the southern portion of what is now called the Balkan Peninsula, but every town, district, and island inhabited by Greeks. Since Cyprus, even in ancient times, was occupied by Greeks, and since for quite a lengthy period it was a federation of Greek States, it therefore follows that Cyprus was an integral portion of Hellas for considerably longer than one hour.

But let us leave ancient history behind and face present-day facts. Candidly, it does not matter a *sou* whether Cyprus acknowledged Alexander the Great, was conquered by Cœur de Lion, and sold by him to the rest of Europe's riff-raff that posed under the name of Crusaders. The main point is who inhabit the island nowadays, and what are the wishes of the majority of the inhabitants This being, of course, if President Wilson's fourteen points were worth bringing across the "pond."

According to these points, all people are to have the right of self-determination, and if doubts are cast upon "those persons who are supposed to represent the majority of the inhabitants of Cyprus," surely a plebiscite could be taken, and the question of the islanders' wishes settled once and for all.

The main reason advanced why Britain should retain Cyprus is the island's proximity to the new British spheres of influence in the Near East. But Italy could just as well claim to keep the Dodecanese, owing to their proximity to her promised sphere of influence round Adalia. It is extremely unlikely that Italy will evacuate the Twelve Islands so long as Britain remains in Cyprus, this being quite in keeping with an "imperial way of thinking," but it does not require a prophet to predict that the trouble you expect the Moslems to cause on the cession of Cyprus to Greece will be nothing compared with the trouble that will keep breaking out all over the Near East if Italy remains in the Ægean.—I am, etc.,

Alexander Callinicos.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.
OMAR KHAYYAM.

On more than one occasion I have referred to the assistance that our archæologists and excavators have been able to render to the Army. But the favours have not been all on the one side. On the Gallipoli Peninsula, for instance, there are to-day visible many ruins that were uncovered—none too gently, one supposes—by the British Fleet. Bombardment as a method of exploring ancient ruins is unlikely to become popular: it is too expensive for one thing, and too indiscriminating for another. But the fact remains that the ships' guns *did* bring art treasures to light, and that the French, at any rate, followed up the clues thus presented to them. Again, did not enthusiastic Australians unearth, clear, and eventually remove a fine mosaic pavement somewhere in Southern Palestine during the early days of our advance? Unless my memory plays me false, they actually did much of the work under fire. If so, they certainly deserve the thanks of the archæological world.

***

Another example of co-operation between the Army and archæology is afforded by Captain R. Campbell Thompson's work at Abu Shahrein, regarding which the fortunate digger read a paper recently before the Society of Antiquaries. These ruins, which mark the site of the ancient Eridu, were examined in 1855 by J. E. Taylor, British Consul at Busreh, and the excavations which he conducted there served to identify the site and to indicate its importance from the digger's point of view; and, naturally, not a few of his successors in the archæological field cast longing glances—metaphorically—at it. But it was difficult, almost impossible, to get at. It lies some way back from the river, in a deep valley, which is only open to the Euphrates on the north; and, as it was in the "territory" of particularly turbulent and independent Arabs, the Turkish Government was never willing to let travellers try to visit it. Nor would the Arabs themselves help the would-be explorer; and one heard so much of the risks of the undertaking that it did not seem worth while to make the attempt to reach the site. Now, however, the war has changed all that. Captain Thompson and his Irish orderly were well received by the local *Sheikh*, who provided them with fifty workmen, and seems to have accompanied them himself. That is a pretty good testimonial to the popularity of the British soldier in Lower Mesopotamia; and at the same time the incident affords another bit of evidence, if such be wanted at this late date, of the dislike of the Arab for the Turk.

***

That Captain Thompson made good use of the opportunity thus put in his way we may feel sure. He has excavated at many sites on behalf of the British Museum; and in pursuit of knowledge of the Past has travelled much in Turkey, Persia, the Sudan, and Sinai. If you have not read his entertaining book, "A Pilgrim's Scrip," I advise you to do so at once. It is to be hoped that he will give us in due time a written account of his work at Abu Shahrein and his experiences in Mesopotamia.

***

Malaria is such a terrible scourge that anyone who suffered badly from it would probably be ready to take very drastic measures if they held out any promise of a cure. Yet I doubt whether the worst sufferer would care to face such an experience as that which befell an Indian woman not long ago, even though it effected a cure. The woman referred to, a widow of forty, had been suffering much from malaria; and is described as having become so weak that she could scarcely move on her bed. Her friends were, therefore, not surprised when she (apparently) died. She was taken off to the Bally *ghat* for cremation, and the pyre was lighted. But at once cries of alarm came from "the corpse." The attendants rushed to the pyre, flung aside the wood, and rescued the woman, almost unharmed. And to the intense surprise of all who had known how weak she had become, she was able to sit up and hold an informal reception of the multitude that quickly gathered to see the miraculously preserved one. From which it would appear that "shock" is not without virtue as a cure for malaria.

***

In connection with the subject of "shock," I was interested to read the other day that gum-arabic has been found very useful in the treatment of this complaint—for complaint it must be called, although in the case quoted above the "shock" proved a blessing in disguise. I gather that in cases of "shock," no matter how caused, the victim loses a certain amount of fluid from the circulation; and to overcome the evil this loss must be made good by the injection of some viscous fluid. The most likely materials were gelatine and gum-arabic; and of the two gum-arabic was preferable, because it was free from certain dangers attaching to gelatine. Professor Bayliss, who recommended its use, has performed a very great service to humanity; for it is said to be certain that it has saved the life of many patients. I suppose this is not likely to increase the demand sufficiently to cause a "gum-arabic" shortage. But let us be thankful to the Sudan for sending us such a useful material—useful for repairing not only our broken household goods, but also our broken bodies.

***

My curiosity has been aroused by the following paragraph in the *Egyptian Gazette* of January 30:—

> "Abdel Aziz Yehia Bey, Governor of Fayoum Province, arrived in Cairo on Tuesday morning on duty in connection with his promise."

What *was* the promise? To whom was it made? And did the Bey keep it?

***

It is safe to assume that a certain young Mohammedan of Calcutta is not a whole-hearted admirer of the modern practice of employing scientific methods in the detection of crime. The young man in question was at a Calcutta race meeting recently, when he was seen to snatch a thin gold chain, about a foot long, from the neck of an infant who was being carried by his (or her) father. Arrest followed almost immediately, but the chain could not be found on the Oriental Noah Claypole. For the moment it looked as if he might get off. But an up-to-date inspector decided to call in the aid of the X-rays, and the result was that the missing chain was located in the prisoner's interior. The *Pioneer*, from which I glean my information, adds tersely: "A petty surgical operation followed, and the stolen chain was recovered. The man is to be sent up for trial." Another instance of the awful methods employed by a brutal police in dealing with an unsophisticated people!

CORSAIR.

THE NUSHKI-SEISTAN RAILWAY.

At the meeting of the Central Asian Society last Tuesday, Colonel Webb-Ware told the story of the building of the Nushki-Seistan Railway. He said the railway passed parallel to and a little south of the boundary between Afghanistan and Baluchistan. The late and present Amirs of Afghanistan both pursued a policy of isolation. Moreover, there were no real roads or telegraphs in the country; and not only dues on goods brought in for domestic consumption, but also those on goods passing through, were very heavy. Consequently, India did but little trade with Afghanistan; while, as for Central Asia, the Russians, after building the railway to Samarkand, had followed this up with a series of tariffs which, combined with other obstacles, made Indian trade with Central Asia almost impossible. In 1897, said Colonel Webb-Ware, following on the boundary agreement with Afghanistan, he had been deputed to take charge of the country which fell to us, with instructions to establish overland trade communications with Persia. When he first went to Nushki the country was in a very unsettled state, and the people much given to raiding and blood feuds. But he had won their confidence, and, in spite of great difficulties, had opened a trade route, with wells and caravanserais. Gradually the country became more settled, crimes of violence became exceptional, the carrying of arms ceased, tribal forts were abandoned and fell into ruin, cultivation—rude though it was—increased, and peace reigned in the country. A railway from Quetta to Nushki was built in 1905, and since the war this had been extended to the Persian frontier and beyond to Seistan; so that now, in place of a tract of country very difficult from the point of view of transport, there was a broad-gauge railway running from Karachi and linked up with the Indian railway system. Apart from the benefit of opening up a country in which, on our side of the frontier, salt in vast quantities was to be obtained, and where lead, copper, antimony, iron, ochre and sulphur had been found, as well as outcrops of marble and jasper, Seistan would now become the great distributing centre for South-Western Afghanistan, and was itself capable of great agricultural development. The River Helmund there discharged on to an open plain. Its waters were richly charged with silt, and there were immense stretches of land fit for cultivation. Irrigation presented no difficulty, and there was cheap and abundant labour. Beyond lay Meshed, the capital of Khorassan, with a population of 80,000 and attracting 50,000 pilgrims annually. Here there were untouched deposits of copper, iron and coal, and the most celebrated turquoise mines in the world. As to what had already been done, the trade of India through Nushki had increased tenfold since the year of the first working of the caravan route.

The Postmaster-General states that letters and postcards of a personal and domestic character, but not other classes of postal packets, addressed to Bulgaria may now be posted in the ordinary way, and, if passed by the War Office Censors, will be forwarded by the best means available. Delivery cannot be guaranteed; and correspondence cannot be accepted for registration.

The *Matin* publishes a Zurich telegram reporting that the Chief of Police at Bucharest has discovered a plot to murder the Crown Prince Carol. The conspirators' grievance is said to have been that the only regiment which fired on the workmen during the recent demonstrations in Bucharest was the 8th Regiment of Chasseurs, of which the Prince is Colonel-in-Chief.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Montenegro.

February 13.

Mr. McNeill asked to what extent, and through what agency, the schemes for relief of Montenegro, which were under consideration on November 7, 1918, have since been carried out; and whether it is a fact that the Serbian troops in occupation of the country have prevented the supplies reaching the Montenegrin people for whose relief they were intended?

Mr. Harmsworth: I understand that shipments of relief supplies have already been made to Montenegro in accordance with a decision of the Supreme Council of Supply and Relief. The Supreme Council, which sits at Paris, is charged with the relief of Montenegro. They have not yet reported the particulars of the shipments made or contemplated. They decided at a meeting on 13th ultimo that Mr. Hoover, the United States delegate, should designate an American officer to act on behalf of the Associated Governments for the moment in provisioning Montenegro. No report has reached me that Serbian troops have prevented supplies reaching the people for whom they are intended.

Mr. R. McNeill asked whether the Secretary of State for Foreign Affairs was aware that, in consequence of the refusal of the Government to allow the government of Montenegro to be diplomatically represented in London the interests of that country throughout the war have been informally entrusted to an English private gentleman, Mr. Alexander Devine, whose position in that respect has been known to the Foreign Office through correspondence and personal interviews; and would he say why Mr. Devine was for two months refused a passport to Paris when desiring to go there, since the Armistice, on a mission to consult with Mr. Hoover and the American Red Cross with regard to the revictualling of Montenegro?

Mr. Harmsworth: The answer to the first part of the question is in the affirmative. Mr. Devine visited Paris in August last and has lately been permitted to proceed there again. But the Foreign Office has seen no reason to press for the removal of the restrictions on travelling in order to enable Mr. Devine to make frequent journeys to Paris, where the Montenegrin Government is already fully represented.

In reply to a further question, Mr. Harmsworth added that the question of the best method of arriving at the true wishes of the Montenegrin people as to the future status of their country without outside interference was at present engaging the attention of the Allied and Associated Powers, and it would be premature to make any declaration at this stage.

Mesopotamia Commission.

Mr. Bonar Law, replying to Captain Viscount Wolmer and Mr. R. McNeill said the Government did not consider that it would be in the public interest to publish at present the evidence given before the Mesopotamia and Dardanelles Commissions.

Viscount Wolmer inquired whether the right hon. gentleman would indicate why it would not be in the public interest—whether because there were diplomatic considerations or because it was necessary to shield individuals.

Mr. Bonar Law: It is not at all because it is necessary to shield individuals. The whole subject has been minutely considered by the Cabinet, and they were quite clear that, at all events until peace is signed, publication would not be advisable.

Bombay Mill Strikes.

Sir J. D. Rees asked the Secretary of State for India whether the mill strike in Bombay has been brought to a satisfactory conclusion; and whether he has any information to give the House regarding the riots by which it was accompanied?

Mr. Montagu: Through the intervention of the Governor, a settlement of the Bombay mill strike was come to on January 22, and the men returned to work. Sir G. Lloyd has since reported that some mills have again suspended work. The presence of cholera is said to be making the workers restless and anxious to return to their villages. There were sporadic riots, accompanied by shop looting and intimidation, in the first few days of the strike. These were kept within bounds by tactful management of the police and show of military force. The Governor reports that though nearly 200,000 strikers were demonstrating in the streets for some days and attempting violence, law and order were preserved at the cost of only seven lives.

Indian Reform.

February 17.

Mr. Montagu, replying to Sir J. D. Rees, who asked when the Bill dealing with reforms in Indian administration would be introduced, said: I hope, this Session. But the precise date depends largely on the time when the Government receive the reports from the Committees which are now investigating certain questions connected with the proposed reforms. I can assure my hon. friend that no avoidable delay will be allowed to occur in the introduction of the Bill.

Albania at the Conference.

Mr. C. Harmsworth, Parliamentary Under-Secretary for Foreign Affairs, asked by Major Hills whether Albania was represented at the Peace Conference, said: Albania not having been a belligerent, and no formally constituted Government for the whole country having been recognised, the question of official Albanian representation at the Peace Conference could not arise. Committees of the Conference on territorial questions have, however, been given discretionary powers to hear any interested parties representing disputed territories; and there is no reason to doubt that under this arrangement certain prominent and representative Albanians at present in Paris will have full opportunity to state their case.

Enemy Aliens in India.

Replying to Colonel Yate, Mr. Montagu (Secretary for India) said: The Government of India have in contemplation the transfer out of India of all enemy persons, interned and uninterned, subject to exceptions for cogent reasons. Further, they possess adequate statutory powers enabling them to exclude or expel aliens at their discretion.

Colonel Yate: Will these powers be put in force?

Mr. Montagu: Presumably the Government of India will adopt the policy of the Home Government.

Cast Horses in the East.

Earl Winterton asked the Prime Minister whether the Government adhered to the undertaking given that no Army horses should be sold in the East?

Captain Guest: The only undertaking given was that no cast or worn-out horses should be sold in the East. As regards other horses the instructions issued to General Officers Commanding in Eastern theatres of war were as follows: Animals no longer required by the Armies in the Eastern theatres of war should be disposed of to the best advantage, by sale or otherwise. At the same time, General Officers Commanding are instructed to exercise a very liberal discretion in destroying instead of selling horses, especially those of British origin, which it may be found impossible to repatriate or which are not worth the freight, and for which good homes cannot be found on the spot.

Earl Winterton: Before the Government proceeds with this scheme, will it take the advice of those who have served in the East, who have seen the unrestricted cruelty with which animals are treated?

Captain Guest: Certainly.

Missing Prisoners.

February 18.

In a written reply to a question put by Major Hennessy, Captain Guest says: Active steps have been taken by the High Commissioner to trace all missing prisoners of war in Turkey, but owing to the difficulties of communications this must take a considerable time. The number of missing prisoners of war in Bulgaria is small. The General Officer Commanding-in-Chief at Salonika has been instructed to make every possible investigation.

ARAB HORSE SOCIETY.

A council meeting of the Arab Horse Society was held on Wednesday, February 12, at the Grosvenor Hotel, London. Mr. S. G. Hough (vice-president) was in the chair. There were also present: Messrs. E. R. Calthrop, H. Musgrave Clark, A. Stanley Cochrane, R. A. Willis, Capt. L. Edmunds, and the secretary, Rev. D. B. Montefiore (Islip, Oxon.).

The Council recorded the acceptance of Prince Feisal of Arabia of the position of Patron of the Society, and of Colonel T. E. Lawrence, C.B., and of Brigadier-General Nouri Saed (members of the Emir Feisal's staff) as honorary members. The following new members were elected:—Baemberger, Morton De Witte, Cholderton, Salisbury; Beckley, Major R. H., 2nd Battery R.F.A., Mesopotamia; Browne, Arthur Scott, Buckland Fidleigh, High Crompton; Clegg, Assheton, Brackendene; Denham, Massey, Altringham; Edwards, Miss P., Cholderton Lodge, Cholderton, Salisbury; Fenton, A. Douglas, Maristow, Roborough, S. Devon; Forsyth, Major F. R. G., 4th Dragoon Guards, A.D.C., Royal Hospital, Dublin; Richards, Miss C. D., Silvie House, Meigle, Perthshire; Rogers, Chas. Coltman, Stenage Park, Brampton Bryan, Herefordshire; Sabine, Major G. A., 16, St. James's Street, S.W.; Stewart, Bimbashi W. A., Sub-Dep. Agriculture, Tokar, Sudan; Williams, Major John Lloyd, I.D., Bailey's Hotel, S.W.; Zogheb, Comte de, 19, Bruton Street, Berkeley Square, W.

The Council examined and accepted further entries for the Arab Horse Stud Book, and also for the Arab-bred Register. It was decided to have a section for Eastern horses and mares other than pure-bred Arabs, this section to be in the Arab-bred Register, the Arab Horse Stud Book receiving entries for pure-bred Arabs only. The number of entries in the Arab Stallion Class for the Newmarket Show was considered highly satisfactory. The Council then adjourned until their next meeting on April 9 at the Grosvenor Hotel, London.

THE EGYPT EXPLORATION FUND.

The annual meeting of the Egypt Exploration Fund was held at the rooms of the Royal Society on February 14, when a very excellent report was read and adopted. The number of members and subscribers is practically the same as eighteen months ago (for the report covers that period), and financially the society has been the recipient of a number of special donations. The *Journal of Egyptian Archæology* has continued to appear, and has kept up its reputation. Dr. Alan Gardner, the editor, has ample material for the back numbers due and for those for 1919. Naturally, as the object of the Fund is chiefly to carry on explorations for antiquities in Egypt, the committee are anxious to resume this work. Dr. Grenfell, the papyrologist, is expected to visit Egypt next winter, but no decision as to his excavating any site for papyri has yet been come to. The uncovering of the Osireon, which was carried out by Dr. Edouard Naville, is not entirely completed, but it is possible that work there may be postponed next season in favour of some other place that would probably yield more prolific results. Meanwhile, time is precious, because the spread of irrigation destroys many papyri by the resulting moisture, and the continual absorption of the desert areas into cultivable land renders acquisition for archæological examination too costly.

NEAR EAST BOOKSHELF.

BULGARIA.*

No one who wishes to form an accurate judgment on Balkan affairs should fail to read Mr. Clenton Logio's "Bulgaria," and it should certainly be in the hands of every member of the Paris Conference. Let it be said at the outset that it is not a propagandist publication, as the term has come to be understood in this country. Rather is it a cold searching analysis of Bulgaria, its people, politicians, economic conditions, and national aspirations. The Near Eastern question cannot be settled satisfactorily by those who understand only a part of it, and we doubt whether anyone can read this book without adding to their knowledge. There will be a strong reluctance in certain quarters to accept the author's view of the exclusive responsibility of King Ferdinand and his advisers; but it will require something much more definite than mere scepticism to shake the impression created by the masterly character reading to which political parties in Bulgaria are subjected. Mr. Logio is sure enough of his facts to risk at least half a dozen libel actions, but only by lifting in this way the veil from the amazing corruption of Bulgarian politics can he show the country as it really is. He wants a commonsense settlement for the whole Balkan Peninsula:

"Our Balkan Allies must certainly exact safeguards for the future, and before giving any satisfaction to the Bulgarian people it is absolutely essential for the security of peace in the Balkans that the cleansing of their Augean stable be imposed on them. Bulgarian Imperialism is not an invention of Bulgaria's opponents; it is a reality, and constitutes a danger for all Balkan nations, including the Bulgarians themselves."

Mr. Logio shows how Bulgarian Imperialism had been fostered by King Ferdinand. He stoutly maintains that "nothing could be more foreign to the nature of the Bulgarian peasant than a desire for conquest, and it is grotesque to ascribe to him Imperialistic tendencies of which he would be the first to feel the evils and the last to reap the benefits." In order to stifle what there is of Bulgarian Imperialism, the author continues, we should help the Bulgarian people to obtain the upper hand in the Government of their country. Bulgaria is small, and cannot hope to develop freely, if left to herself. If the Allies, or rather Great Britain, will not offer aid and support, she has no alternative to economic and political gravitation towards Germany. Incidentally, Mr. Logio suggests that the Allies should insist on Bulgaria's repudiating her war debt to Germany, as otherwise she will remain at the mercy of the latter.

For those who have no personal knowledge of Bulgarian affairs it will be necessary to read the account given in this book of the recent history of the country in order to understand how completely the nation had allowed itself to become the victim of its politicians. "And yet, in spite of this blight on Bulgarian political life, thanks to the unceasing toil and industry of the peasant, Bulgaria had attained a foremost place among the Balkan States." It is these characteristics which must be relied upon in the future to enable the Peninsula as a whole to exorcise the past and to get the best for itself out of the Bulgarian nation. For that, after all, should be the object continually kept in view by Balkan statesmen when once the danger of any recrudescence of Bulgarian Imperialism has been removed. At a moment when passions run high between the different nationalities, it is of interest for those who believe in the future of the Balkans as a league or federation of friendly nations, having common interests, to be reminded that the antagonism between Serbian and Bulgarian dates back only to the Russo-Turkish war. Mr. Logio has marshalled a formidable series of quotations in support of his contention that "never were Serbo-Bulgarian relations more cordial than towards the middle of the nineteenth century." The reason, he adds, is easy to find: "Serbians were not asked to look for their conationals in Macedonia, but, on the contrary, respected Bulgarian susceptibilities, and far from seeking aggrandisement at the expense of their Eastern neighbours, laboured wholeheartedly to assist them." Subsequent history, no doubt, cannot be altogether ignored. Certain it is that the Balkan States require no outside help in keeping their feuds alive; but all those who desire to live up to the spirit of the League of Nations, and appreciate the necessity for neighbouring people living so close together to be at peace and amity with one another may feel grateful to the author of this book for helping them to unravel one of the tangles connected with South-Eastern Europe.

INDIA'S PRESENT DISCONTENTS.*

Sir O'Moore Creagh has produced a most interesting book, but we must demur to the title he has chosen. We should call most of the chapters Impressions rather than Studies, for the truth is that the General is out with a thick stick, and takes a hit at almost every head which comes within his reach. Secretaries of State, Viceroys, Lieutenant-Governors, Financial Departments, civil officers generally, politicians and eminent citizens, all fare alike, and since the General has a good eye and a strong right arm, some at least of the heads sustain considerable damage. The book will thus be a godsend to the Extremist party in India, for they will be quick to argue that if the administration be really as bad as the General makes out, the case for a complete change is decisively established. The objective value, however, of the different chapters varies greatly. Where the writer has full knowledge, as of the inner working of the Indian Army, or of the recent Hardinge regime, he usually comes very near the truth; where he gets out into the fields and villages, he is obviously dependent on his informants, and since these are almost all of one class, the resulting picture becomes partial or even prejudiced. The real interest of these chapters lies, in fact, in their accurate reproduction of the sentiments of the martial classes of Northern India; they have few spokesmen of their own, but General O'Moore Creagh voices their ideas and aspirations with a fidelity which will be admitted by everyone who really knows them. Reduction in land revenue, cheap canal water, good pay and pensions for the Army, a few more Englishmen in the civil administration, and a clean sweep of the whole crowd of town-bred Indian subordinates—that is the gist of his account, and it is a programme which would undoubtedly carry the Punjab almost solid in an election on a popular franchise. Politicians will doubtless reply that the voters must first be "educated" out of such barbarous ideas, but if we know the Punjabi, it will take a vast amount of education to alter his convictions on such matters as these, and should the Franchise Committee provide for really representative constituencies, the politicians in that part of India may find that they have met their masters. However that may be, it is well that a really popular programme should have been put forward, and the whole book may be read with profit as well as pleasure, if the reader will remember that there are two sides to almost every case.

BOOKS RECEIVED.

"The Industrial Development of Palestine." By Maurice H. Farbridge, M.A. (Skeffington and Son, Ltd. 1s. net.)

"The Kingdom of Serbia." By R. A. Reiss. (London: Allen and Unwin, Ltd. 3s. 6d. net.)

"Studies in Early Indian Thought." By Dorothea Jane Stephen. (Cambridge: University Press. 6s. net.)

"The New Eastern Europe." By Ralph Butler. (London: Longman, Green, and Co. 10s. 6d. net.)

The Council of the British Armenian Chamber of Commerce has elected Mr. E. Brayley-Hodgetts chairman, Professor Tounmaian deputy-chairman, Mr. F. H. Stephens hon. treasurer, and Mr. C. E. Town secretary.

* "Indian Studies." By General Sir O'Moore Creagh, V.C., G.C.B G.C.S.I. (London: Hutchinson and Co.)

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

Mr. Rudyard Kipling has been staying at Bath.

Major Norman Coates, M.C., of Newton Manor, Swanage, who arrived in England early in December, has left London for Egypt.

Colonel Boyovitch, formerly Serbian Minister of War, accompanied by his wife and daughter, left London on Monday for Belgrade.

General Sir Reginald Wingate and Lady Wingate had the honour of being invited to luncheon with the King and Queen on Tuesday, at Buckingham Palace.

His Excellency Monsieur Jean Gennadius (Honorary Greek Envoy Extraordinary and Minister Plenipotentiary) was received in audience by the King at Buckingham Palace on Tuesday.

Accompanied by General Sir C. C. Monro, Commander-in-Chief, the Viceroy of India, on February 5, reviewed ten regiments of the Nepalese Contingent at Delhi prior to their return to Nepal.

Sir Charles Marling was received in audience by the King on Monday morning, at Buckingham Palace, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Copenhagen.

A marriage has been arranged between Captain Lord Carnegie, Scots Guards, eldest son of the Earl and Countess of Southesk, and the Hon. Anne Thesiger, second daughter of Lord Chelmsford, Viceroy of India, and Lady Chelmsford.

The engagement is announced of Captain Reginald Onslow Skinner, R.G.A., younger son of Colonel Swinton Skinner, I.S.C. (retired), and Mrs. Skinner, and Gwendolyn, younger daughter of Mr. and Mrs. H. Osborne Baldry, of Rushmere, Leighton Buzzard.

An engagement is announced between Major Colin Arthur Jardine, D.S.O., M.C., R.F.A., second son of Sir John Jardine, Bt., K.C.I.E., J.P., and Jean Evelyn Livesey, only child of Major-General W. A Liddell, C.B., and granddaughter of Mr. James Livesey.

The engagement is announced, and the marriage will shortly take place, between Captain R. Maurice Bayley, D.F.C., Royal Air Force (late Royal Navy), son of Mr. Ernest W. Bayley, of Rye, Sussex, and Enid Care, younger daughter of Mr. and Mrs. F. T. Peake, Port Tewfik, Egypt.

The engagement is announced of Josiah (Peter), lieutenant, R.A.F., elder son of the late Rev. Josiah Wedgwood, of Norwich, and Mrs. Wedgwood, of Neatishead, Norfolk, and Edith Helen, only daughter and younger child of the late Neville E. Maltass, of Westbourne Terrace Road and Harrow, and the late Mrs. Maltass.

The engagement is announced between Captain J. R. H. Hutchison, 17th Cavalry, I.A., elder son of the late Mr. T. H. Hutchison and Mrs. Hutchison, Cranley, Carstairs, and Dorothy Joan, elder daughter of Major Surtees, of Redworth Hall, Darlington, late 2nd Life Guards, and of Mrs. Surtees, 28, Basil Street, London.

On February 6, at All Saints' Church, Darton, Yorkshire, Captain E. J. Caldwell Ashmore, D.S.O., 10th Gurkha Rifles, I.A., was married to Dulcie Marguerite, youngest daughter of the late Frederick Dransfield, of Longsight House, Darton, and of Mrs. Dransfield. The Rev. G. B. Dransfield, brother of the bride, officiated.

The second Slavo dance in aid of the Hon. Evelina Haverfield's Fund for Disabled Serbian Soldiers will be held on February 24, at the Piccadilly Hotel. Countess Cathcart, Lady Muir-Mackenzie, Lady Nownes, Lady Williams, and the Marquise de Bourbel will act as hostesses, and the Marchioness of Carisbrooke will present prizes for the most artistic and original costumes.

On February 15, at the British Consulate and All Saints' Church, Cairo, the marriage took place of Nevinson William de Courcy, Ministry of Public Works, Egypt, son of the late Col. N. W. de Courcy, C.B., R.M.L.I., to Grace Russell, M.D., Ministry of Public Health, Egypt, daughter of the late J. B. Russell, of Auckland, N.Z., and Mrs. Russell, 18, Westbury Park, Bristol.

General Sir Charles Townshend authorizes the statement that he has not definitely decided to stand as an independent candidate in the forthcoming by-election in the West Leyton division. At present General Townshend is an officer on the active list of the Army, and he is not desirous of entering Parliament except in the event of his ceasing to be employed in a military capacity by the War Office.

The marriage between Captain Basil Drew, M.C., second son of Mr. and Mrs. Julius C. Drewe, of Wadhurst Hall, Sussex, and Drewsteignton, Devon, and Ruth, only daughter of the the late Mr. Frank Haselden and Mrs. Haselden, of East Lymden, Ticehurst, Sussex, and Alexandria, Egypt, will take place very quietly, in consequence of influenza, on Thursday, February 27, instead of as previously announced.

A telegram received from the Bishop of Khartoum says that he is unable to leave France before July, says the *Egyptian Gazette*. He will naturally need a few weeks' rest and time to attend to various matters which have been standing over for some time before he starts back to the Sudan, and it is unlikely that he will be able to start back until October. When he reaches Egypt he will very possibly find other matters to delay him there, and therefore his arrival in the Sudan will probably be postponed until December.

APPOINTMENTS, PROMOTIONS, &c.

Admiral Calthorpe is returning to Malta from Constantinople for a short stay.

Mr. W. H. H. Thorne has been appointed Judge of the Alexandria Mixed Court of First Instance, in place of Mr. Carey, who has resigned.

Mr. W. R. Gourlay has been appointed to be Secretary of the Committee which is to report, under the Chairmanship of the Marquess of Crewe, on the India Office and the Home administration of Indian affairs.

The following announcements are made through the Press Bureau:—

The King has been pleased to approve the appointment of Sir Bijay Chand Mahtab, K.C.S.I., K.C.I.E., Maharajadhiraja Bahadur of Burdwan, to be a Member of the Executive Council of the Governor of Bengal, in succession to the Right Hon. Lord Sinha, K.C.

The King has been pleased to approve the appointment of Sir Saiyid Ali Imam, K.C.S.I., a Puisne Judge of the Patna High Court, to be a Member of the Executive Council of the Lieutenant-Governor of Bihar and Orissa, in succession to Mr. Saiyid Sharf-ud-din, who has relinquished his appointment owing to ill-health.

His Majesty has also been pleased to approve the appointment of Mr. Profulla Ranjan Das, Barrister-at-law, to be a Puisne Judge of the Patna High Court, in succession to Sir Saiyid Ali Imam.

OBITUARY.

SIR MARK SYKES, M.P.

We regret to announce that Lieut.-Colonel Sir Mark Sykes, Bart., M.P., died in Paris on February 16. He only quite recently returned to England from Palestine and Egypt, where he had been engaged on a special mission for the Government, and he proceeded almost at once to Paris for the Conference. There he contracted influenza, which terminated fatally.

Sir Mark was the only son of Sir Tatton Sykes, of Sledmere, Yorkshire, and was born in 1879. Since 1911 he had been Member of Parliament for Central Hull, and during this period had acquired a considerable reputation in the political world. Good judges predicted a brilliant career for him in this sphere, the Foreign Secretaryship being regarded as a prize that he might almost certainly count upon securing sooner or later. It was at one time reported that the Under-Secretaryship had been definitely offered to him, and that he had refused it because he felt he could better serve his country abroad at the time. However that may be, he himself declared that he would be unlikely to take office under any Government because he valued his freedom of action too highly to sacrifice it in such fashion. This characteristic independence made him always interesting, but it was not invariably appreciated by his political chiefs. On the Irish question, for instance, he struck out a line of his own, and followed it tenaciously. He was a pleasing and effective speaker, and his maiden speech in the House of Commons was so admirable that it won a special compliment from the Premier.

In spite of his successes in politics, it is probably as a traveller and author, and especially as a student of the Near East, rather than as a politician, that Sir Mark Sykes will be best remembered. The work he did in these directions was almost unique, and it proved of extraordinary value to his country during the war;

Digitized by Google

while the books of travel in which he recorded the impressions of his journeys and the results of his study of Near Eastern questions are admirable, and will probably continue to delight many readers long after his political activities are forgotten. He first made acquaintance with the East as a very small boy, when his father took him to Syria and Palestine, and the taste thus implanted in him appeared to grow stronger with the passing of time. He was in the fortunate position of being able to gratify it to the full, and he made many journeys to and through Turkey, the Arabian portions of that Empire specially claiming his attention. These journeys were not mere "pleasure trips": he mapped thousands of miles of road, and his study of Turks, Arabs, Kurds and other "Near Easterns" was close and marked by great shrewdness of judgment. For a short period (1905-1907) he was an Honorary Attaché at the British Embassy in Constantinople, but much of the time was spent in journeys off the beaten track. He had a good knowledge of Turkish and Arabic.

Sir Mark served in the South African War, and on the outbreak of the recent war he raised a battalion of the Yorkshire Regiment, and desired to accompany it to France. The authorities, however, recognised that his services and his rare knowledge were too valuable to be thus employed, and he was soon engaged on other work in the region he knew so well. He was sent, first, to the Caucasus on a mission to the Grand Duke, and, later, to Aden and Mesopotamia. His reports on the results of his missions are stated to have been of great value to our Government and to the military authorities. He is credited also with having drawn up the Proclamation issued by General Allenby on the British entry into Jerusalem. And it is certain that he rendered other services of which it is as yet too early to speak.

His death will be regretted not only by those who knew him personally, but by many admirers to whom he was known only by his writings and speeches; and by all those who value originality of character and fearlessness in expressing an opinion.

Sir Mark married in 1903 a daughter of the late Sir John Gorst, who survives him. He leaves three sons and three daughters.

Mrs. Patteson, wife of Mr Harold Patteson, Acting Vice-Consul at Saffi, Morocco, died at Marrakesh, Morocco, on February 4.

Mr. Charles James Weir, of the Indian Civil Service, formerly Chief Secretary and Member of the Revenue Board, Madras, died on February 11 at Moorcroft, Cobham. He joined the service in 1879, and served until 1911.

A Calcutta telegram, dated February 7, announces the death of Mrs. A. Sinha, Lord Sinha's eldest daughter-in-law, as the result of injuries received through her *sari* accidentally catching fire on Wednesday last.

News has been received from India of the death at Dehra Dun of Mr. George Kempthorne Watts, of the Public Works Department, India, and late Commissioner of Public Works, Nairobi. He was appointed to the Public Works Department in 1875, and retired in 1907. He was afterwards Commissioner in the Public Works Department of British East Africa, a temporary engineer in the United Provinces, and on special duty in Tehri-Garhwal State.

Sir Roper Lethbridge, K.C.I.E., died at Exbourne, last Saturday, aged 79. He was born in Devonshire, educated at Plymouth and Mannamead College, and at Exeter College, Oxford. On leaving Oxford he was appointed the Government Professor of Political Economy in the State Colleges of the Calcutta University. He became secretary of the Simla Education Commission in 1877, was created C.I.E. in 1878, and was Indian Political Agent in 1878. He was the author of several works on Indian education.

The death has occurred at Richmond of Mr. Alexander Finn, who was for forty years engaged in the Consular Service. He was a son of Mr. James Finn, Consul in Palestine, and first went to Teheran in 1874 as clerk in the Chancery of the Legation. Later he served as pro-consul and vice-consul at many places in Persia. In 1884 and 1885 he was employed on special service on the Perso-Afghan frontier. Thereafter he was transferred to America, where the rest of his official career was spent. He retired in 1912.

NEWS IN BRIEF.

A civil Post Office has been opened at Nejef.

Fifty missionaries have sailed from New York for Turkey.

Outbreaks of typhus are reported from Belgrade, Sofia, Philippopolis and Varna.

A Greek Deputy, who has recently visited Smyrna, says that order has been completely restored there.

A regular Paris-Bucharest train service, with direct connections with Warsaw and Prague, has been opened.

Mr. Montagu, Secretary for India, will preside at a public Rhodes lecture on "The District," to be delivered by Sir J. D. Rees at University College, Gower Street, next Monday.

Captain Shortridge, of the Royal Air Force, has left Cape Town for the north for the purpose of arranging landing grounds at Bulawayo and other places in Central Africa in connection with the flight of Brigadier-General Herbert from Egypt to the Cape on a Handley Page machine.

According to a telegram from Bucharest, the Roumanian Jockey Club has expelled certain well-known personages compromised during the German occupation.

General Allenby, who had been to Constantinople in order to enforce compliance with certain conditions of the Armistice, has returned to Haifa and Jerusalem.

Bulgaria's obligations now reach about £400,000,000 excluding Germany's claim to £80,000,000 for munitions of war, which Bulgaria may disown, and also a German advance of £54,000,000.

General Torcom, Head of the Armenian Military Mission in England, has addressed a letter to President Wilson in which he complains that Armenia is being ignored at the Peace Conference.

It is announced from Salonika that Bulgarian komitajis, escaping the notice of the Greek guards, penetrated on to Greek soil. They entered a village where they committed robberies and killed one of the inhabitants.

The Australian Canteens for Serbians, through Sir Charles Wade, Agent-General for New South Wales, have despatched to Serbia large quantities of shirts and socks for relief purposes which have been donated by the Australian Comforts Fund.

The Times Literary Supplement of February 13 contained the Arabic text of an address presented to the Emir Faisal by Mr. Séfi on behalf of a deputation of Syrians resident in London and Manchester. The address welcomed the Emir to this country, and expressed hopes for a brilliant future for the Arabs and the Arab Kingdom.

It is proposed to hold a Bombay Presidency war dinner, at which Lord Willingdon will preside, at 7.15 p.m. on Friday, February 28, at the Café Royal, Regent Street, W. Any who may wish to attend are asked to send their names and addresses, on or before February 22, to Mr. O. C. B. Wimbush, the hon. secretary, at the Norwich Union Life Buildings, 39, St. James's Street, S.W.1.

A Reuter's message from Constantinople, dated February 3, says:—The notorious Dr. Reshid Bey, ex-Vali of Diarbekir, and a prominent member of the Unionist party, who was accused of complicity in the massacre and deportation of Armenians, and who, it will be remembered, escaped from custody a fortnight ago, was finally run to earth yesterday, but met with a sudden and tragic end. While the Turkish police were surrounding his place of refuge in the Deshiktash quarter, Reshid Bey, finding his means of escape cut off, committed suicide by blowing his brains out with a revolver.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

THE PROBLEM OF INDIAN LABOUR.

Events which have recently occurred in Bombay, Madras, and other parts of India must have brought home to the general public the truth of the opinion which has long been held by many men of experience that the position in regard to Indian labour is by no means satisfactory. It is true that in some localities strikes have been attributed, and apparently on good grounds, to the instigation of outside agitators, concerned rather to make political capital than to ameliorate the conditions of industrial life, and no condemnation can be too severe for such conduct, which, if persisted in, must cause almost as much injury to politics as to industry; but at the safe time external interference is by no means the only cause at work, and the frequency of strikes due strictly to social or economic causes is by itself sufficient to show that widespread dissatisfaction exists among the workers in whose hands the economic future of the country so largely lies. It would be an error to assume that the particular methods by which this dissatisfaction is manifested are copied from Western models: in India strikes are far older than organised industries, and when large bodies of workmen suddenly "come out," we must remember that they are attempting to exercise against their employers that particular form of communal pressure which was for so long the sole defence of peasants and shopkeepers against the oppression of Hindu and Moslem administrators. In India, then, as elsewhere the strike shows that dissatisfaction exists, but Indian workmen have not yet learned the art of putting their case before the public, and it is often exceedingly difficult to ascertain the reasons underlying their acts, or to form an independent judgment on the merits of a particular dispute. Students of this perplexing question have been waiting for the report of the Indian Industrial Commission in the hope that full light would be thrown on the dark places, but their hope has been to some extent disappointed. The report lays stress on the inefficiency of Indian labour, endorses the common view that in existing conditions higher wages result only in less work, and concludes that nothing material can be done until the standard of comfort has been raised: it then proceeds to indicate an official programme of education, housing-reform, and sanitary improvement directed to this end, while in regard to welfare-work in general it invokes the disinterested labours of private individuals and associations. The weakness of this scheme lies in the fact that it requires more time than can be spared. It is admitted that, with one or two brilliant exceptions, welfare-workers as yet scarcely exist: education can produce no influence until the children now to be sent to school become old enough to take the lead; and until then better housing means simply more lodgers, while sanitary measures, however desirable and urgent in themselves, will tend to be regarded merely as additional drawbacks to industrial life. India, in fact, must wait for something like a generation before measures of amelioration can have any practical result.

This conclusion is so discouraging that we are led to ask whether the Commission has really probed the full depth of the industrial situation, and a further study of the report shows that this question must be answered in the negative. Thus the important matter of the length of the working day is definitely put aside as requiring more detailed consideration than it has been possible to give, while we have failed to trace any discussion of the effect of different systems of remuneration on the quantity and quality of the output. The report deplores indeed the slavery to debt in which so many workers habitually live, but it does not indicate how far this ugly fact is due to the common practice of paying wages in arrears. We are told, for instance, that in Bombay the textile operatives are paid monthly, one month in arrears; if this means that a newcomer has to work for two months before he gets any wages, then the initial cause of indebtedness is not far to seek, and its perpetuation follows naturally in the conditions which prevail. Such examples as we have given indicate that the report is weakest on the human side: the high officials and prosperous employers composing the Commission have looked upon the workers from above, and, except in the case of one or two particular industries, there is nothing to shew us what the worker himself thinks, or, what is perhaps even more important, what the worker's wife feels. The report tells of many things which would be good for the worker, but it does not tell us what the worker wants. There is ample evidence to show that dissatisfaction exists: there is good reason to believe that it is increasing in intensity, and extending steadily over a wider and wider area, but we have only the vaguest knowledge of its precise nature and its underlying causes.

The matter should not be allowed to rest here. Alike for security and for subsistence, India requires a large immediate development of organised industry, and as the Commission justly remark, "no industrial edifice can be permanent which is built on such unsound foundations as those afforded by Indian labour under its present conditions." Surely, then, it would be worth the while of the Administration to probe these matters further, and ascertain definitely the workers' point of view: given accurate knowledge of what the workers dislike, and of what they want, the whole industrial situation would be clarified, and employers, whether existing or prospective, would be able to know how they would stand, and to make their plans with a reasonable prospect of stability. Such knowledge would in any case be worth having, but there is a further and cogent reason for endeavouring to secure it at the present juncture. The existing dissatisfaction may mean one of several things, and among other possibilities it may be the first faint indication of that desirable change in attitude for which we have been waiting for so long. All authorities on industrial questions are agreed that the worker's standard of comfort must be raised, but the experience of the world demonstrates that no class will ever climb while its members are satisfied with their present status, and it is quite possible that Indian workers are at last getting ready to climb: if that should happily prove to be the case, the future would be comparatively clear, and no time should be lost in taking occasion by the hand, and making the upward path as smooth and easy as may be. No such action is, however, possible without wide and detailed knowledge of the motives now at work: whether it be that the Indian labourer is beginning to cast his eyes upwards, or whether the existing dissatisfaction has an entirely different significance, the broad facts remain that he wants something, and that until the nature of his wants be known, neither the employers nor the Administration can act with confidence. We recognise that the necessary knowledge will not be easily obtained; the ordinary workman does not wear his heart upon his sleeve, and a spectacular inquiry conducted by prominent politicians would serve merely to confuse the issues. What is wanted is rather a small number of men and women, familiar with the details of industrial life, studying the problems presented by the working-classes at different centres, and meeting from time to time to co-ordinate and harmonise their experiences, until the facts of the situation are made clear, and the lines of a constructive policy can be laid down. Such an undertaking would doubtless be a novelty in India, but the situation itself is new, and calls for a departure from existing precedents. A new industrial population has come into being; its expansion is essential to the progress of the country, and the administration cannot afford to remain ignorant or neglectful of its interests and its aspirations.

ITALY AND THE ADRIATIC.

By JULIUS M. PRICE.

The trend of events in Eastern Europe appears to be bringing about so complete a modification of Italy's position and ambitions with regard to the Adriatic that it is small wonder that the Italians await the result of the deliberations of the Peace Conference on the question of the demarcation of the Yugoslav territory with undisguised anxiety.

As a result of the momentous *pourparlers* between Baron Sonnino and Count Berchtold in those fateful days of May, 1915, which culminated in the declaration of war, there could be no shadow of a doubt as to the pretensions of Italy with regard to the eastern shore of the Adriatic and its immediate hinterland. In fact, is it now fully recognised that, had the Austrian Minister given way and conceded the Italian demands even at the eleventh hour, Italy would have remained neutral, These demands practically meant the control of the Adriatic, as they comprised the most important section of the Dalmatian coast line and included Trieste and the naval base of Pola. The possession of these points would counterbalance the peculiar geographical weakness of Italy's eastern frontier. The creation of the Yugoslav State raises considerable obstacles to the realisation of Italy's dream.

The importance of the Dalmatian coast has been long recognised, and it looms up with added significance at the present juncture. It has been frequently asserted that this seaboard in itself was likely one day to bring about a European war, and there is no blinking the fact that the Italians would regard any allotment of it in which they did not largely participate with the most extreme indignation and resentment. With the disappearance of Austria from the Adriatic Italy's constant bugbear vanished; but now has again arisen her imperative necessity for ports and dockyards on the Adriatic, the absence of which has always been Italy's greatest weakness.

It is almost needless to point out that this is owing to the peculiarly tame configuration of her coastline. As compared with that on the eastern side of the Adriatic no greater contrast could be imagined. Nature was indeed lavish in her gifts to Austria in this direction. Deep-water inlets forming natural harbours which were invaluable as havens for warships or as submarine bases are to be found all along the Dalmatian coast, as for instance Tager, Zara, Lesina, Lissa, Curzola, Meleda-Sabioncello, Gravesa, and Sebenico. Several of these natural harbours have of late years been transformed at enormous expense into naval ports. Millions, it is said, have been spent on Sebenico, and it has been so fortified as to be absolutely impregnable from the sea, even the rocks facing the harbour having been cased in concrete.

The whole coast-line of Dalmatia is fronted by a chain of islands, and in the rear of these is a succession of navigable channels, the Spelado, Brazza, Narenta, Meleda, etc., through which a fleet of warships could pass under cover of the coast the whole way from Pola to Cattaro. As evidence of the great importance the Austrians attached to this passage a canal, named the Sabioncello, was cut at enormous expense specially to avoid a *cul de sac* at one point.

The Italian coast-line is the very antithesis of the Dalmatian. Between Venice and Brindisi, the whole length of the Adriatic, there is not a single natural harbour or, in fact, any port sufficiently large to shelter a battleship or a liner, or to be of any use for naval or commercial purposes, with the exception of Porto Corsina, close to Ravenna, which during the war was used as a base for torpedo-boats and other small craft. Ancona harbour is very shallow, and is only used by small coasting vessels; and the same may be said of Bari, Ravenna, and Pesaro. About eight years ago a publication appeared in Italy drawing attention to the potentialities of Varano Lake as a big naval base, and the Government, anxious not to leave a stone unturned in the endeavour to strengthen their position on the Adriatic, went into the matter; but on investigation it was found that it would necessitate an outlay of hundreds of millions, as there was no depth of water and no natural protection whatever, so the scheme was not taken up.

The claim of Venice to be mistress of the Adriatic belongs to a remote age. It has long since been ousted by Trieste, which for many years past has been progressing by leaps and bounds. In this connection it is of interest to mention that Trieste never came under the complete domination of Austria, as it has always been what is termed a "free town," like Hamburg, and all the Hanseatic towns, in fact; quite 90 per cent. of its population is Italian, this big majority being mainly composed of wealthy Venetians who settled there several generations ago. One of the first things that strike one on going through the city is that there is nothing Austrian about it, for the nomenclature of the streets and even the names over the shops are all Italian. There is, therefore, no change beyond the disappearance of Austrian uniforms and flags as a result of the Italian occupation; and the Italian troops were welcomed by the inhabitants with open arms as their "liberators."

The bearing of all this on Italy's claims is significant. In the early months of the war, and, of course, before the question of the establishment of a big Yugoslav State was seriously on the *tapis*, the question of the supremacy of the Adriatic, whilst concerning the interests of all the Allies, affected Great Britain more particularly, as it meant the safeguarding of the Mediterranean as the key of the Empire. In the remaking of the map of Europe, whilst recognising that the newly born Yugoslav State is entitled to its legitimate apportionment of the eastern coast-line of the Adriatic, Italy's ambitions with regard to the Dalmatian coast cannot altogether be ignored. The possession of Trieste will be found to be outside all argument, so far as the Italians are concerned. Whenever I raised the question in Italy I always received the one reply, "Trieste is Italian, and Italian it must remain." Nor is this surprising when one recalls the sacrifices Italy has made during the past three years to get there.

We regret to learn that a certain number of copies of last week's issue of "The Near East" were despatched from the Printers with eight pages out of twenty-eight omitted. If any readers who received defective copies will communicate with "The Near East," 1, Devonshire Square, E.C. 2, other copies will be forwarded to them.

PRESS ON THE NEAR EAST.

New Equilibrists?

In an interesting article, "The Balance in the Balkans," which he contributes to the *International Review*, Mr. H. N. Brailsford expresses the fear that, although Austria and Russia no longer menace the Balkans, "another two-Power balance may be discerned" already:—

Italy aspires frankly to a career as a Balkan Power, and official France seems to be reviving the interest which for a brief moment Louis Napoleon took in the Near East. The Sonnino policy involves an open antagonism with Great Serbia. No one who has tried to piece together the fragments of censored news during recent weeks can doubt that the presence of American and Allied contingents on the Adriatic Coast alone prevented the scandal of an open war. If the Peace Conference should give effect in this region to the Secret Treaty, that war is only postponed. With Greece the relations of Italy are only a little less strained. The pretensions of Italian Imperialism to Southern Albania, to Rhodes and the Twelve Islands, and, above all, to Smyrna, are a challenge to the Greek race only a little less defiant than the simultaneous claim to the Serbian heritage in Fiume and Dalmatia. If Italy remains in lasting antagonism to Serbia and Greece, their common enemy, Bulgaria, will inevitably turn her eyes to Rome. Once more, as on the eve of the war, the clumsily astute diplomatists of Sofia will offer their services to Serbia's Western antagonist, and a new Balkan Balance of Power will be adjusted. Indeed, the Bulgarian Cabinet is already agitating for permission to send a special envoy to Rome. Similar antagonisms in other directions will recruit the group further. The logic of the Balance will cause a diminished Hungary, fatally opposed to the Serbs, to look instinctively towards Italy. Thus two groups emerge. One composed of Serbs, Greeks, and perhaps Roumanians (with Czechs and Poles in the distance) looks to France. The other, composed of Bulgarians and Hungarians, gravitates to Italy.

Of Albania and the Albanians, Mr. Brailsford writes with sympathy. Of the people he says:—

This lonely race has no affinity with any other stock on our Continent. Divided between three religions, it can make no single appeal to faith. Its sons are not cosmopolitan traders, permeating Western finance and journalism like the enterprising Greeks. There is no one to speak for them save the few travellers who have lived among them. And yet the fact is, that from Byron's day downwards, it would be hard to find a West European who has learned to know the Albanians without admiring them. Consuls, soldiers, missionaries, ethnologists—all come under the spell of this attractive and original race. I have known them myself in all stages of culture. When I survey my own memory's gallery of Balkan character, the men who stand out in it with a certain native aristocracy are nearly all Albanians. They are of all classes and faiths. It was a servant who first excited my curiosity. He was a handsome, spirited lad, and in a time of insurrection I used to employ him to carry large sums of money over dangerous roads. One day when I asked him if he knew a certain short cut, he answered with the simplest of smiles: "Yes, we always used that path at night when I was with Shahin." Shahin (the Falcon) was the most noted brigand of that region. My man, then, who had just brought me a big bag of gold, was an ex-brigand. Troubled to know if I dare trust him, I told the story to the Bulgarian bishop. His comment was short and decisive: "The man is an Albanian, is he not?" That was the verdict of an hereditary enemy on this singular race. It has a name for honour. Again, I think of a pale, stooping, studious-looking man, with a name that indicated his Moslem religion and landowning origin, who once introduced himself to me. After a brief conversation, conducted on his side in meticulously perfect French, he suddenly inquired: "Are you a descendant of Joseph Brailsford who wrote chamber-music in the early eighteenth century?" In point of fact, I am, but even among professed students of music in England I have never yet met one who had ever heard of the old composer's name. A musician with a passion for eighteenth century work, a brilliant philologist who knows Gothic and Sanscrit, as well as French, German, Italian, and all the Balkan tongues, a student of history who has by long grubbing unearthed a whole treasury of discoveries about the unworked history of Old Albania, I soon came to rank my visitor, born in a wild upland village of the Pindus, as the most learned of all my friends. I could go on indefinitely. Now I think of a simple peasant—a Protestant colporteur, who by his sheer moral ascendency would, day after day, alone and unarmed, rescue Bulgarian victims, after a bloody insurrection, from under the very bayonets of the Turks. Again, I recall an official in Abdul Hamid's time, who steadily defied all the inhumane orders of his Turkish superiors.

It is a race worth saving, but if the "Balance" is to come, its fate will be to be dismembered among its hereditary foes. The London Conference of 1912 having created Albania a perpetually neutral State, under the guarantee of the Great Powers, Mr. Brailsford asks by what casuistry these same Powers now hold themselves competent to divide it up. Wherein has Albania sinned? What is to become of her?—

My own solution is rather practical than ideal. Politically, Albania is not yet quite ripe for unaided independence: she is much too ripe and much too conscious for partition. Any destiny is better than dismemberment. The best available fate for Albania is now to bring the whole of its territory as defined in 1912 under an Italian protectorate. Let Italy for a term of years do this work as the mandatory of the League of Nations, subject to the condition that her lease is not perpetual and may be revised or revoked. Let her educate and develop; she must not colonise. The coast will be under her control, and with this addition to her power and prestige she might the more easily be persuaded to relinquish what she has claimed amiss in Dalmatia.

Egypt's "Nationalists."

The Cairo correspondent of *The Times* contributes to that paper (February 14) an article on "The Egyptian Nationalists." He begins by reporting that the "spirit of self-determination which is abroad in the world has perhaps not unnaturally spread to Egypt, where in certain circles the statements made by European and American statesmen on the subject have been interpreted to include the Egyptians among the peoples whom the war has liberated from oppression, and who are to be permitted to enjoy the political liberty to which their moral and intellectual development entitles them, and of which they have hitherto been deprived." These circles began to talk of their "rights" as a nation as soon as it became evident that we were going to win the war; and a movement has manifested itself, which "has so far been conducted within constitutional limits." The leaders are a section of the Intelligentzia, and some of them are men disappointed in their aspirations, who see some chance of personal gain in their political activity.

Their demands, as far as they can be understood, are so extremist that for that reason alone they would not commend themselves to the Powers, to whom they profess the intention of submitting their grievances, and from whom they confidently expect to receive satisfaction.

Disdainful of the fact that from the earliest days of the Occupation we have consistently endeavoured to associate with ourselves in the administration of the country the better elements of the population, and that the Egyptian nation to-day enjoys a great degree of prosperity and well-being, these misguided members of the Intelligentzia would try to make out to the world at large that their country is in the same position as some of those nations above referred to. Equally disregarding the peculiar political and financial relationship of Egypt to Europe, they would claim the right to govern themselves without any interference from without. This blindness to the practical requirements of the situation is perhaps one of the strongest points in the case against any such departure as they advocate, since if, as they claim, they are representative of the nation, it shows that the Egyptians do not as yet possess the sense of proportion and of public spirit indispensable to responsible government.

It is, however, a fact that these people do not represent even the social class to which they belong. Their more enlightened fellows disapprove their actions very strongly, and it is felt that any extension of their activities will do the country an incredible amount of harm at the present time, when there is some prospect of local reorganisation. The writer continues:—

No one would deny to the Egyptians the right to aspire to govern themselves, but they must not forget that in the history of all nations that have attained to that condition it has been a long, gradual, and at times painful process, which has only been the result of development of the moral and intellectual character of the nation as a whole. Apart from the fact that the extremes to which this clique yearns to go at one jump are incompatible with the situation as it will be in Egypt after the reorganisation at present in course of elaboration, the political independence of the country as they want it would lead to but one thing—the supremacy of the very small intellectual section of the population, the exclusion of the comparatively small but very important European community, and the complete submersion of the very large mass of the population, which is as yet in no condition to combat the Intelligentzia.

It has always been, and it still is, part of our policy to raise the moral and intellectual level of the nation as a whole, and meanwhile to protect the voiceless masses from the identical state of affairs which acquiescence in the present demands would bring about. Until that consummation is completely attained, and each section of the population is capable of holding its own against any encroachments on its rights, it will be useless to talk of greater or complete political liberty for Egypt.

The article concludes by advising those Egyptians who have the welfare of their country at heart to devote their activities at present to local government.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The decision of the Board of Trade that, under restrictions, trade may be resumed with Turkey and Bulgaria is very welcome. These countries are in an entirely different category from Germany, and it was impossible to make out a good case for an indefinite delay in resuming commercial relations with them. Manchester merchants have been agitating for some time for permission to trade with the Levant, where British cottons have always been largely imported, and where it was essential to re-enter the market as early as possible in order to anticipate the competition of others, and in no quarter is the decision calculated to give greater satisfaction. It is to be hoped that the keenness of Manchester will infect manufacturers of other commodities, and that they will lose no time in availing themselves of the numerous openings for business in those countries.

***

Besides Turkey and Bulgaria the Black Sea ports are now open to British trade under certain conditions, and as South Russia presents from many points of view a unique market I trust that our merchants and manufacturers will not fail to take advantage of the opportunity. Odessa has proved an excellent market for British goods in past years, and in the absence of German competition for the time being it should be possible for our traders to establish themselves firmly in the market. They have every encouragement to do so, and they will be admirably served as regards shipping facilities, for I see that six steamship companies are arranging for the immediate establishment of services with the Black Sea ports.

***

An important memorandum has been issued by the Federation of British Industries containing some of the information gathered by its representative, Major Kennard, during his recent visit to Greece. Major Kennard was greatly impressed at the opportunity now presenting itself for re-establishing British trade in its old position of predominance in the Levant, but the Federation emphasises the necessity for speedy action if we are to utilise the Anglophile sentiment which exists in Greece as strongly as in Roumania, as the commercial houses of other countries are sparing no effort to establish themselves in the Near East markets. The Federation further points out that while the need for immediate action is great, the forthcoming Athens exhibition will presently afford a unique opportunity of entry into the Near Eastern market.

***

The arrangements for this exhibition are well advanced. It will be held, as already stated, in the Zappeion, which is in every way suitable for the purpose. Aeroplanes, agricultural machinery, and other exhibits will be shown in an "annexe," where land will be available for demonstrations. Members of the Federation have already received a preliminary notice of the exhibition, and full details, with plans of the floor space, are being prepared. Firms desiring to participate in the exhibition will naturally require all manner of specialised information, and the Federation is arranging for Major Kennard to visit a number of centres, including those visited by the Greek delegates, when members requiring particulars regarding openings for trade in the Near East will be able to obtain them at first hand.

***

Apropos of the question of the future of the Khedivial Mail, which was recently discussed in these columns, I see that Dr. J. G. Levi, speaking before the Economics Section of the Sultanic Society of Economics, Statistics, and Legislation, drew special attention to the inadequate steamship services directly connected with Egypt. The Khedivial Mail, he pointed out, was the only line, and this company, assisted by the Russian line, carried Egyptian products valued at £E340,000. The development of this trade obviously requires adequate shipping facilities, and the opening for an extension of the services of the Khedivial Mail is too obvious to need emphasis. Certainly it is absurd even to contemplate liquidation in view of the prospects before the company.

***

The death of Mr. D. P. McGillivray, general manager of the Sudan Plantations Syndicate, which took place last week in London, removes from the business world connected with the Near East one of its most prominent figures. Mr. McGillivray was for a time associated with the National Bank of Egypt, and subsequently, in 1908, joined the Sudan Plantations Syndicate, and became managing director of that business. A man of remarkable ability and sound business acumen, Mr. McGillivray was greatly liked and esteemed by all who knew him, and his death will be deeply regretted by wide circles of friends here and in Egypt and the Sudan.

***

I have had a very interesting letter from Messrs. Andrew Weir and Co., Busrah, with reference to my comments on the price of dates in the issue of THE NEAR EAST of November 15. "We quite agree with you," the firm states, "that 2s. 6d. per lb. for dates is absurd, but you are entirely wrong in putting the blame on the importers, as last season all the importers received from the Food Controller was 2d. per lb., or, to be exact, 17s. 2d. per cwt., which you cannot consider excessive. As a matter of fact, this price left us with a considerable loss owing to the increased cost of production, cost of wood, materials, etc."

***

I see that the Dutch Press has been devoting considerable attention to the resources and economic prospects of Serbia. Holland's commercial interests in that part of the world have hitherto been insignificant, and I imagine that the explanation of this sudden and rather curious show of interest is that new fields have to be found for the capital which Holland, in common with other countries not involved in the struggle, has acquired during the past four years. The fact that the industrial possibilities of the country are discussed at some length supports this view. The point is emphasised that the country has been backward for lack of labour and capital, and that the most promising openings are for millers, distillers, brewers, and for the meat, timber, leather, and sugar industries, as all the necessary raw materials are available in the country.

***

The reports for the past half-year show that banks in India have enjoyed almost, if not quite, as great prosperity as those in this country. Thus the Bank of Madras was able to declare a dividend of 10 and a bonus of 2 per cent. per annum, carrying forward Rs.2,57,550. The Bank of Bengal declared a dividend of 12 per cent. per annum, a bonus of 4 per cent. per annum, and a special bonus of 1 per cent. per annum, in each case free of Income-tax, while the carry forward was Rs.5,60,167. The Bank of Bombay declared a dividend of 15 per cent. per annum and a bonus of 4 per cent. per annum, Rs.3,20,606 being carried forward. The position is further illustrated by the results of the Tata Industrial Bank, which only commenced operations in April, but up to December 31 made a net profit after providing for taxes and depreciation, of Rs.4,32,398.

***

The Administration Report of Railways in India for 1917-18 is of special interest in view of the negotiations now in progress between the India Office and the East Indian Railway in reference to the company's contract for working the system, which expires on December 31. If the company succeeds in achieving its object the contract will be prolonged for ten years, but may be determined at the end of five years, provided two years' notice is given. The report states that the question arises whether, in the event of the present system being continued, it would not be better to have Indian companies with boards in India instead of in England. "These matters have been reported on to the Secretary of State," it adds, "and are now under his consideration. The prosperity of railways and the prosperity of the country are interdependent, and his decision will be a momentous one for both."

COMMENTATOR.

BANK OF ROUMANIA LIMITED

TRADE IN TANGIER.

British Merchants' Views.

(From Our Own Correspondent.)

Tangier, January 23.

With reference to the rumours regarding the future of Tangier, there is a certain feeling of uneasiness in some commercial circles. So far as British trade is concerned, the most responsible French statesmen and officials, both in Paris and Morocco, have given assurances of equality of treatment, and it is to be hoped that both in the French zone and in Tangier they will take steps to see that their subordinate officials and—possibly a more difficult task—their colonists, carry out this principle. How necessary this is with regard to the latter is shown by articles in some Protectorate newspapers and questions raised in their public bodies during the last year or two. The authorities must see to it that no undue influence, direct *or indirect*, in favour of French manufactures is brought to bear on any native from the most powerful Kaids to the humblest peasant.

Further, the conditions which have made it easier for British firms in the French zone to sell produce to French houses for re-sale at a profit to the Intendance, instead of selling to the latter, must be changed. Not only that, but the possibility of French colonists buying from British firms produce at the same price at which the colonist will re-sell to the Intendance should not exist. If British traders can feel assured of the co-operation of all officials, civil and military, with their Resident General in the matter of equal treatment, there should be no cause for nervousness regarding the security and extension of our trade in the future, but confidence would be greatly strengthened by the appointment of a strong Commercial Counsellor, who should have business experience of Morocco: one who will be able to judge the value of any complaints made to him, who will understand that in many cases it is useless to ask for proofs, and on the strength of assurances from reliable firms, and after prompt investigation, would bring the complaints before the French authorities—who would otherwise probably be quite ignorant of them—and then, if necessary, to the notice of the British Government.

If British traders can thus feel that in case of difficulties arising he has his own Government behind him he can go on with full confidence in the future. These remarks apply especially to the French zone at present, but also, of course, to any extension of the Protectorate that may take place.

Vegetable Fibre Freed.

A notice has just been published announcing the cessation of the purchases by the Intendance of vegetable fibre, which may now be freely exported, and it is to be hoped that the restrictions on the export of other products will soon be removed. In this connection, however, it should be remembered that some time ago it was stated to be the intention of the Intendance to buy the 1919 crop of the most important cereals. A certain amount of vegetable fibre is manufactured at Tangier, and the quantity could be doubled or trebled. There has long been a market in France for this fibre, which was supplied from Algeria, and although its use for war purposes may have ceased, there should be some demand for it in England by furniture manufacturers and others.

Neither here nor on the coast is there any improvement in trade. Tangier is worse off than the coast towns: there those wishing to realise have some chance of finding buyers according to the amount they are prepared to lose: here there are no buyers at all.

Efforts are being made to have the restrictions removed on the re-export of imported goods which are overstocked, and permission has been granted for some articles; the difficulty has been that the French zone has very large stocks of the same articles, and so far the permission has been confined to re-export to other Moroccan ports, and even if it were extended to neutral countries, several of the articles would not find a market without going far afield.

Fuel Position.

There have been arrivals of gazolene and petroleum at Casablanca, and the authorities have somewhat relaxed the restrictions on motor traffic. Further shipments are expected, and it is hoped that motoring may be soon as free as it was before the gazolene crisis. We have also received a small supply of gazolene and petroleum at Tangier, and more is hoped for, especially of the latter, as the lack of petroleum has been more widely felt than the shortage of gazolene. The price of candles was prohibitive until quite recently, and charcoal was very dear, and for very many petroleum was the only means of lighting and, for some, of heating their houses.

British Trade Commission.

The British Trade Commissioners are expected back at Tangier shortly—they are at present at Mellilla. They have been very busy in the French zone, and have accumulated a large amount of information that should enable them to make a very full and useful report.

MOROCCO.

The Agricultural Position.

The prospects of agricultural enterprise in Morocco form the subject of the following report from the British Commercial Mission there:—

Considerable agricultural and stock rearing developments are to be observed in the Chaouia and adjoining districts behind Casablanca, Mazagan, and Mogador, and also in the Gharb to the north of Kenitra. In view of the relative proximity to the United Kingdom in comparison with, for example, Canada, enquiries have been made into the prospects these districts offer for successful farming by British settlers. As a result of such enquiry, it must be pointed out that there are many grave difficulties to be encountered in any enterprise of this character, and that these difficulties are to a large extent peculiar to Morocco.

As a preliminary step the conditions under which land is purchased require the most careful examination. In no case should any holding be purchased unless the land in question has been "immatriculated," i.e., the vendor has registered his claim thereto, such registration being only made after public announcement in the *Bulletin Officiel* for a specified period, after which no opposition or counterclaim is admissable. This preliminary is necessitated by the peculiarities of the Moorish law of inheritance, whereby a property is divided among a multitude of descendants, and an exclusive right by an individual is consequently the exception. The matter is further complicated in that the "immatriculation" system is by no means universal, and in certain districts, notably in the south, no immatriculations have yet been made.

Apart from privately-owned properties, there are large tracts of land at the disposal of the Government, but the first condition for the tenure of these "domaine" or Crown lands is that the holder shall be of French nationality, and there is no reason to suppose that this condition is likely to be relaxed. Finally, there is land in the possession of large British and French firms, which is in some cases to let or for sale to intending settlers, and in regard to which negotiations could doubtless be conducted without special precautions, but such property is limited in extent.

High Cost of Land.

The cost of land in Morocco is at present decidedly high, particularly as regards the last-mentioned class, which, when cleared and irrigated, obtains as high a price as 2,500 to 4,000 francs per hectare. The average rate for land which has been cleared but not irrigated is estimated at about 500 francs per hectare, but the essential character of irrigation and its difficulty in many districts requires to be fully realised by intending settlers.

A brief visit to the country may give a very misleading idea as to the value of the land for grazing and similar purposes, since recent rains will temporarily convert what is normally a desert into rich pasture. In estimating the price that can profitably be paid for land, the ever present risk of drought must be borne in mind, since it is usually reckoned that two years of drought swallow six years' profits.

The most serious difficulties of all, however, reside in the arduous and peculiar conditions of life in the up-country districts of Morocco. In addition to the normal absence of water, there is in most parts of the country a complete absence of timber, which renders impossible the erection of temporary dwellings and shelters, and necessitates the use of stone for practically all purposes of this character, thus involving the heavy labour of quarrying, and also of transport where even this material is not locally available. The alternative building material is mud, and this gives some indication of the mode of living that has to be endured.

Need for Economy.

An extraordinary degree of economy is also necessary if the settler's venture is to have the slightest chance of proving profitable, and the French peasant is better suited by his normal upbringing to such a mode of life than is the Englishman. A great many of the established colonists have come from Algeria, where more or less identical conditions prevail, and these will necessarily always prove very severe competitors, especially in view of the fact that a thorough knowledge of the French language is essential, and some knowledge of both Arabic and Spanish advisable. Knowledge of the languages of the country is, of course, important, and unless a settler in Morocco is acquainted with them he will be out of touch both with the local authorities and with the natives and Spanish foremen he will have to employ.

In view of these and kindred objections, it does not appear that Morocco can on the whole be regarded as a favourable field for farming enterprise by the individual English settler, and this it may be stated is the considered opinion of those resident in the country best competent to judge. It may be mentioned that if the opinions of the local press can be relied upon, the French colonists themselves are far from satisfied with the facilities granted to them by the Government; but even if, as the result of agitation, greater facilities are granted, it does not appear probable that the position from the point of view of the British settler is likely to be appreciably improved. On the whole, therefore, the small farmer cannot be advised to venture into this field. It would rather seem that if any attempt is to be made to take advantage of these unexploited lands, it should be undertaken by a comparatively large farming organisation possessed of considerable capital reserves to meet emergencies, and to stand the unremunerative period that would inevitably be experienced at the outset.

Certainly, in view of the situation of Morocco and the undoubted richness of its soil when irrigated, an investigation by a farming and cattle-rearing expert would be well worth while, and some steps, it is understood, have already been taken in this direction. But, until a thorough investigation of this character has been made and its results carefully examined, emigration to Morocco for the purpose of farming can only be regarded as a very problematical venture.

Sir George Paish delivered a lecture on "The Interdependence of Nations" before the Institute of Bankers at the School of Oriental Studies, Finsbury Circus, on February 19.

It is estimated that the total of Greek shipping losses during the war amounts to more than £40,000,000. One hundred and fifty-four steamers of a gross tonnage of 399,000 tons and 126 sailing vessels of a gross tonnage of over 12,000 tons were sunk, and eighteen steamers totalling 32,000 tons were seized in enemy ports.

ABYSSINIA'S DEVELOPMENT.—II.

Market for Manufactures.

There is only one qualification to make in regard to what Mr. Southard, the American Consul at Aden, says in his report on Abyssinia as a market for manufactures, and that is that it must be borne in mind that the class of market into which Abyssinia falls is likely to develop rapidly, and the list of manufactures for which he indicates a special demand must be regarded in the light of that fact. The principal requirements of the market at the moment are mainly confined, he states, to cotton fabrics and yarns, iron and steel bars, corrugated iron roofing, enamel ware and hardware in general, wines and liquors, soap and scent, silks and silk thread, felt hats, and sewing machines. The leading imports are unbleached cotton piece goods, which, it is estimated, were imported in 1916 to the extent of 30,000,000 yards. The trade in this line has been mainly confined to American goods, but the war has brought about a change in this respect, and Japanese and Indian goods had last year practically taken the place of the American cottons. Mr. Southard says that the Japanese imitation of American grey goods promises to win a permanent place in the market, and also that the Japanese manufacturers have succeeded in placing on the market a sheeting that compares favourably with the American, and he thinks it is not improbable that Japan will permanently acquire an appreciable share in the markets for these goods. Imports of bleached cottons are also on a substantial scale, and it is satisfactory that they are mainly supplied by the United Kingdom. There is a growing demand, it is stated, for white shirtings, especially those with a style of fancy weave. Another commodity in increasing request is Turkey red shirting for clothing, etc. Mr. Southard also notes the excellent market for cotton shawls, in which both the Indian and Manchester mills have specialised, and points out, incidentally, that the use of cotton textiles of all sorts is growing. "Both men and women of the poorer classes," he adds, "have garments of unbleached cotton sheeting, shirting, or drill, and the wealthier classes use finer bleached cotton textiles or silks. The Gallas and other Mohammedan subjects of the Abyssinians wear more cotton prints or Turkey red as a rule. With 8,000,000 to 10,000,000 of people to clothe the importance of the Abyssinian market may be judged.

Hardware in Demand.

The demand for hardware of all kinds is stated to be excellent. In this line Mr. Southard makes special mention of the opening for enamelled ironware, corrugated iron roofing, iron and steel bars, jack knives, lanterns, metal lamps, and builders' hardware. The imports of enamelled ironware amount to about £40,000 a year, and the view is expressed that the demand will continue to increase. Among articles particularly in request mention is made of saucepans 8 to 20 inches wide and 4 to 6 inches deep, of large narrow-necked jars holding one to three or four gallons, of tea-kettles holding two quarts and upwards, and of quart cups with handles. As regards colour, it is pointed out that the national colours are red, yellow, and green, and it is suggested that these colours combined with white would most please the Abyssinians, but that green or blue enamels with white would be most popular with the Mohammedan population. Most of the enamelled ironware came from Germany and Austria, and there is at present a very considerable shortage of this commodity. The Austrian success in the market is attributed to excellent goods, moderate prices, and the great care taken to meet trade requirements. In some cases imitation is to be recommended, and if only British merchants will follow the Austrian method of cultivating the market there is every probability that they will take the place occupied by the enemy in this line.

Corrugated iron sheets are imported to a considerable extent, and at present it is stated that the demand exceeds the supply. Corrugated iron sheeting is utilised, it may be noted, not only for roofing, but also often for the sides of buildings. "Abyssinia has a heavy rainfall at certain seasons, and galvanised-iron roofing," says Mr. Southard, "is rapidly replacing the native straw and earthen roofs in the districts touched by the railroad." Iron and steel bars and rods are also imported mainly for the purpose of turning them into lance-heads, plough points, and horseshoes. As regards cutlery, strong and well-made clasp knives are particularly desired. "These knives," says Mr. Southard, "should have at least one large blade 5 or 6 inches, and a corkscrew, with a swivel ring to which a chain or cord may be attached to fasten it to the belt of the owner. One Adis Abeba firm estimates that it alone can sell 100,000 of these knives annually. They should not be too expensive, but there is no set standard of prices." There is a good market also for hurricane lanterns, as everyone in Abyssinia who goes about by night is required to carry a lantern.

Opening for Builders' Materials.

Better houses are now being built in parts of Abyssinia which have come under the influence of citizens of other countries, with the result that there is a growing demand for locks, hinges, screws, nails, and other builders' materials. Padlocks are also in demand, and this market has been recently supplied from India, but the Indian lock is apparently not altogether in favour with the Abyssinian.

Sewing machines are in fair demand, and this market was formerly almost a monopoly of Germany, which exported cheap machines for Abyssinia which were sold to dealers on favourable credit terms, and in addition the German manufacturers took an active interest in furthering the sales of the machines.

Soap affords a good opening for enterprising merchants, for the use of this commodity is on the increase. Care must, however, be taken to cater for the tastes of the Abyssinians, who are very fond of perfumes, and prefer strong scented soaps which must be a moderate price. The favourite scents are musk and geranium, and it is stated that the stronger they are the better. An opening also exists for scents, and here the qualifications are the same as in the case of soaps.

Other promising openings indicated by Mr. Southard are for silk and silk thread, which is used for the clothing of the wealthier Abyssinians, for cheap woollen carpets of light colours, for patent medicines, which appear to gain favour readily among the Abyssinians, for such commodities as vaseline, for candles, and for felt hats. "According to importers' estimates," says Mr. Southard, in discussing the opening for the last commodity, "the Abyssinian market can take about 50,000 cheap felt hats annually. Grey is the colour preferred, and hats with rather high crowns, medium brims, and green lining out to the edge of the brim seem to meet with the greatest favour."

COTTON BUYERS WAITING.

There are signs, according to the British Empire Producers' Organisation, that the present business "hold-up"—on account of buyers waiting for a slump which does not come—may at any time come to an end, for it is known that in certain trades, at all events, instructions have been received in this country for purchasing agents to get busy. Yet many who feel an intermittent impulse to place their orders are scared by others still displaying over-caution. In a report just received from Manchester a correspondent says that he can see a probable move to buy largely very soon. The big Eastern buyers there are inundated with heaps of orders, but are all waiting for one another to make the first move for their "grey" supplies, each hesitating to break the ice. One of the largest buyers of a most important Manchester house went on 'Change recently fully determined to place his "grey" contracts, but, finding others withholding their contracts, he decided finally to await the evidence of a move by other houses. The correspondent adds that it is plain that as soon as another indication of a move is made there will be some heavy bargains completed, and that raw cotton prices will not rule immediate supplies. The fall in raw cotton is largely for futures, but although this is conceded, it is quite evident that confidence has not yet been restored. The markets are not over-supplied with cotton fabrics.

SYRIA AND PALESTINE.

Railway Systems and Harbours.

The railway systems and harbours of Syria and Palestine, it is pointed out in an article on the economic resources of these districts in the *Board of Trade Journal*, possess an interest which is strategical rather than economic, and they cannot be regarded merely as a means for the commercial development of the countries in which they lie.

It is because Syria and Palestine are strategically so important that their railways have been developed to a much greater extent than might have been expected in countries so commercially humble. In Northern Syria we find the roadstead of Alexandretta linked up to Aleppo and Jerablus on the Euphrates by a section of the German Baghdad Railway of standard 4 ft. 8½ ins. gauge. This Syrian section had been completed before the war broke out and measured 295 kilometres (185 miles). Further south comes the French system with a narrow gauge of slightly more than a metre—3 ft. 5 3-7 ins. There are 682 kilometres of French lines forming a network and connecting up Beirut, Aleppo, Damascus, Homs, and Tripoli. A French line also runs from Jaffa to Jerusalem, 87 kilometres. Thirdly, we get to the east part of the Hejaz Railway, which was built to connect Damascus with the Holy Places of Arabia and to form a pilgrims' road. The Hejaz Railway, which is of the narrow French gauge, is connected up with the French railway system by short branches, though, of course, the Baghdad Railway's Syrian section, with its full standard gauge, cannot make a direct connection with either the French lines or the Hejaz Railway. All the lines are of single track. The Hejaz Railway belongs to the Turkish Government; the other railway systems are the property of companies, French and German respectively.

It will be clear that, in spite of the inconvenience due to the use of two gauges, Syria and Palestine are well supplied with railways. Altogether there are 2,080 kilometres (1,300 miles) of line within the borders of the countries, besides light tracks laid by the British Expeditionary Force. A good deal of damage has been done in the course of military operations, and the Turkish management of the French lines during the war must involve substantial claims for reparation. But, speaking generally, Syria and Palestine remain with railway communications in advance of their present economic development—and, in this respect, are in a more immediately favourable position than is Mesopotamia.

There are several roadsteads in Syria and Palestine but only one port—Beirut. Beirut alone possesses proper warehouse accommodation. Much French money has been spent upon Beirut, but it is too small and too shallow for the requirements of large modern steamers. The harbour, enclosed between two moles, is of not more than fifty acres, and there is a maximum depth of seven fathoms, decreasing to one fathom at the quays. One railway runs on to the main quay, and there are two coaling wharfs. The other ports, such as Alexandretta, Tripoli, Haifa and Jaffa, are open roadsteads without artificial protection. They are, however, regularly visited by steamers. Alexandretta, lying in the Gulf of the same name, though unprotected, has the safest anchorage on the Syrian coast. Alexandretta has advantages of position which can scarcely fail to make it the principal harbour of Northern Syria, when the works, projected by the Germans, have been carried into effect by other hands. Before the war, however, almost three times as much tonnage entered Beirut as lay off Alexandretta.

Even though Alexandretta, served by the standard gauge Baghdad Railway, may become the principal sea outlet of Northern Syria, the hinterland of Beirut—Lebanon, the Bekaa and Damascus—will ensure to it importance as a large distributing centre of foreign manufactured goods, especially of textile imports from England. Its wharves make it at present the chief coaling station on the coast, and through it passes much of the silk exports to France.

Haifa, especially if the harbour works projected there are carried out, may compete with Beirut for the Damascus trade. It is

Digitized by Google

now the Mediterranean port of the Hejaz Railway, and has a fertile hinterland in the Plain of Esdraelon and the Upper Jordan Valley. Haifa has shown signs of attracting imports both for Arabia and Damascus. It lies under Mount Carmel, not far from the ancient Acre, and may become the chief port of Southern Syria. There would then be Alexandretta, Beirut and Haifa—situated in Northern, Middle and Southern Syria—each secure of a considerable traffic sphere yet each in competition with its neighbours. Tripoli, the sea-gate of the Homs district, and Jaffa, the port of Jerusalem, will no doubt also play their parts, especially after harbour works have been constructed. A French concession for harbour works at Haifa, Tripoli and Jaffa was granted in 1913, and some progress had been made before war broke out. The shipping trade with Syrian ports before the war was chiefly with Alexandria, whence goods were sent from Europe and reshipped to their destinations. . . .

Syria and Palestine have owed much to foreign enterprise and capital. French companies have built a large part of the railway system and have equipped the harbour works at Beirut. The Imperial Ottoman Bank, in which French influence is strong, has branches in Syria. French, German, Austrian, Italian, and Greek business houses are, or were, found in the seaports of Beirut, Jaffa, and Haifa, and in the towns of Aleppo, Damascus and Jerusalem. English firms usually employed native representatives. American companies had agents in many towns, the most important interests represented being sewing machines, oil and dealers in liquorice root. The French were prominent in Beirut, but elsewhere Germans and Austrians were strong and were well supported by the German colonists.

Although Syria and Palestine are well supplied with railways, there will be room for local branch lines as the country develops. The harbours are urgently in need of suitable works, especially Alexandretta, Haifa and Jaffa. The Baghdad Railway Company had a concession for Alexandretta, and a concession for Haifa and Jaffa was granted in 1913 to France. The development of electricity for water-power offers fruitful possibilities, especially as Beirut and Damascus alone among the Syrian towns have electrical supplies at present. Much drainage and irrigation need to be done if the land is to be made fully available for cultivation. Various branches of industry, for which the raw materials can be produced in the country, are capable of development. Milling and oil-pressing, sugar cultivation, manufacture of building materials, alcohol production and paper-making may be mentioned. Syrian industries are very lop-sided. Silk-spinning, the textile industry, and the production of olive oil and soap have attained some significance, but there the list practically ends. Mining is negligible, and the absence of local fuel has been a serious hindrance to substantial industrial development. Agriculture, upon which everything else depends, has been crippled by lack of security, the uncertain tenure, and a vicious system of taxation. The Turk has blighted Syria as he has blighted Mesopotamia. A revision of the land tenure system, a just method of taxation, irrigation and drainage might do much to restore the productiveness of Syria.

War has changed much in Syria and Palestine. It has improved the roads, more especially in the south, and it has opened up a new era, but for the immediate present it has drained the population, destroyed very many animals, led to the felling of the olive and mulberry trees, and stopped all overseas business. Flourishing industries, even those in Lebanon silk and Jaffa oranges, have lost their markets, the ports have been cut off from shipping, much land has gone out of cultivation. The future of the country will depend so completely on political conditions that it cannot be profitably discussed until these have finally been determined.

CEYLON.

Outlook for Plumbago Industry.

The plumbago industry in the island is at present in a difficult position owing to the elimination of the United States as a market, and it is feared that with the rapidly increasing competition from Madagascar the Ceylon industry is to some extent imperilled, says H.M. Trade Commissioner at Calcutta in a recent report.

While exports remained fairly steady until the year 1917, the exports for the first nine months of 1918 decreased by almost 50 per cent., this being almost entirely due to the embargo placed by the United States Government upon imports. As the United States, however, must be short of stocks, it is considered that there should be revival in demand before the coming spring. Madagascar competition is, however, serious, and may permanently affect the prosperity of the Ceylon industry.

The total exports in 1907 were 32,026 tons, of which the United Kingdom took 8,507 tons, the United States 14,170 tons, Germany and Austria 4,884 tons. In 1917 the United Kingdom took 4,602 tons, and the United States 21,964 tons. In 1918 (1st January—4th October) the United Kingdom received 3,826 tons, and the United States 14,415 tons.

Mr. James Wilson, accountant of the National Bank of India, retires as from the 28th inst., after forty years' service in the bank. The directors have appointed Mr. G. B. Linton sub-manager and accountant, and Mr. J. A. Bunch secretary of the bank.

The number of units sold to consumers of the Calcutta Electric Supply Corporation, Limited, during the four weeks ended December 27 amounted to 2,000,352, compared with 1,946,348 units in the corresponding four weeks of 1917.

ENGINEERING NOTES.

Reopening of Near Eastern Markets

The permission given by the Board of Trade for the resumption of trade with Turkey in Europe, Asia Minor, Armenia, Kurdistan, Mesopotamia, Syria, and Bulgaria will be welcomed throughout the Near East and Middle East, where there is a keen desire for commercial relations with Great Britain. However, the successful restoration of the once undisputed predominance of British trade in those desirable markets depends on the trade policy and also on the prompt action of British manufacturers, for the markets will also be open to others who, of course, will hasten to enter them and do their best to consolidate their position.

There is a special need of machinery and implements for all purposes throughout the East, especially in the above regions where, owing to the war conditions, machinery, like other private property, has been destroyed or stolen. Consequently, one of the foremost demands from these markets will be for machinery and implements of all kinds, and British manufacturers ought to do their utmost to take advantage of this opening.

The Russian Black Sea Ports.

The Russian Black Sea ports, to which the announcement referred to also applies, are the distributing centres of Southern Russia, Caucasia, Armenia, Kurdistan, and the Caspian coast, all of which are noted agricultural districts, and where agricultural machinery is very extensively used. Odessa is the chief port in Southern Russia, where the demand for up-to-date labour and time saving agricultural machinery has been increasing annually. There are, or perhaps were, local factories, but they have been so occupied with the manufacture of small and simple machines that they have been unable to devote their energies to the instalment of plant for the manufacture of more complicated machines, apart from the fact that they lack proper systems of economical production. According to official returns, United States manufacturers had about 90 per cent. of the trade in self-binders and reapers before the war, the balance being made up of Canadian, United Kingdom, and German goods. The large American syndicate was really controlling the market in these machines. Steam threshing machines and steam ploughs were imported from the United Kingdom, Germany, and Austria-Hungary; and horse rakes and hay-making machines, manure spreaders and sowing machines from the United States and the latter two countries. Motors of all kinds have been used to an increasing extent in factories and mills, and as motive power for agricultural machines. Owing to the higher price of crude oil the demand for suction gas engines has increased. In both these lines British manufacturers will have an excellent opportunity. The Caucasian districts, including Armenia, are very promising markets for agricultural machinery. At present the peasantry are using primitive implements for the most part, but the wealthier landowners of the country were in possession of machinery of modern type. Generally, Southern Russia, Caucasia, with the northern districts of Anatolia, all served from the Black Sea ports, offer exceptional opportunities for British engineer manufacturers, provided they lose no time in entering those markets.

Turkey in Europe.

Owing to the unsettled political conditions in European Turkey it is not probable that a brisk trade in machinery will be done before peace is concluded. Subsequently there will be a great demand for industrial and agricultural machinery; and it is strongly recommended that manufacturers of oil motors and tractors suitable for both agricultural and general industrial and engineering operations should be prepared to place their products promptly in that market. Milling machinery, steam ploughs, pumping machinery, machine tools, hand tools, etc., are much wanted in Thrace and in the Constantinople district.

Apropos of references in recent notes to the class of machinery that is in demand in Syria and Mesopotamia, we hear that representatives or agents of American, French, Italian, Japanese, and Scandinavian engineering firms are very active in those regions, offering, it is said, to send machinery on approval. It depends, therefore, on the energy of British firms what share will be secured by them in this trade.

The Bulgarian Market.

It has been suggested that a British firm, if it wishes to enter the Bulgarian market with success, must not depend on English catalogues and local agents, but must send out a representative with a supply of machines for show purposes, to work the country systematically, setting up the machinery and superintending its working for a season at least. The suggestion is very practical, but it is very doubtful whether a firm would decide at present to undertake such a comparatively expensive campaign in a mountainous country. The despatch of a competent representative with a good knowledge of engineering and commercial ability, able to speak the language, aided, of course, by a judicious advertising campaign, would be just as effective, at least to begin with. Official and private opinions agree that Bulgaria offers a promising field for the sale of agricultural machinery, as the farming and peasant classes are alive to the advantages of modern methods. Threshing machines are very popular in Bulgaria, and are frequently purchased by small groups of farmers, who share the expenses of a machine for their common use. Machines of from 4 to 10 and 12 h.p., fitted with a straw-cutting and bruising apparatus, are chiefly in demand. Hitherto they have been obtained from England, Austria, and Germany. Mowing machines and binders have been greatly used, imported principally from America, and also from Germany and Hungary. Sowing machines and ploughs have been imported in great numbers from Austria-Hungary and Germany. Pumps for various agricultural and industrial purposes have found a large sale; they have been imported principally from Germany and America. Tools of all kinds, especially the Alsace makes, have been supplied in great quantities by Germany. The whole of the business in agricultural machinery of the expensive varieties in Bulgaria is carried on by dealers possessed of strong financial resources, enabling them to offer terms of long-extended payments, carried sometimes over several years to the actual purchasers.

A Corn Dryer.

Owing to climatic conditions and inadequate means of storage corn is often damaged in the Near East and Southern Russia through an excessive percentage of moisture. Corn to bake well or to be stored with safety should not contain more than 11 to 12 per cent. of moisture. Thus, corn-drying methods, or special installations for the purpose, are much in use in some districts, which considerably increase the cost of the corn, but are not always quite effective. It may, therefore, be of interest to farmers and corn merchants to learn that a corn-drying apparatus has recently been invented, by means of which any damage from excessive moisture is prevented. It consists of a brick stove in which air can be raised to a temperature of 100 to 120 deg. F., and, by means of a fan, sent through the drying room at a pressure of 1¾ in. of water. The corn is placed in ordinary sacks and deposited in wooden hoppers in such a way that air entering at the narrow neck of the hopper must pass through the corn in order to escape. The apparatus is very simple, and does not require skilled attendants. In official tests the results were very satisfactory. It was possible to obtain an hourly evaporation of 50 lb. of water from 3 1-3 cwt. of corn, maintained at a temperature not exceeding 95 deg. F. The heat utilised was about 21.6 per cent. of the calorific value of the coal used. The process of drying does not injure the germinating power of the corn, as the temperature of the air is automatically regulated, and does not exceed a pre-determined limit. The corn can also be washed by soaking the full sacks in a special apparatus containing warm water, previous to placing them in the drying hoppers.

HOLLAND INDUSTRIAL COMMISSION

Mr. Montagu, answering an inquiry by Sir J. D. Rees as to the action the Government of India proposed to take upon the report of the Holland Industrial Commission, said:—I have agreed to the appointment for the time being of Sir Thomas Holland, the President of the Commission, as the Industrial Adviser to the Government of India. But as regards the detailed recommendations of the Commission, I am awaiting the considered opinion of the Government of India and local Governments.

NEAR EAST MARKETS.

Egyptian Crops.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in December:—

Wheat and Barley.—The weather has been generally favourable; the very heavy rain which fell on the 16th and 17th of the month was beneficial in some districts to the growth of the plants, as the canals were closed for clearance. In a few instances, however, where the fields had been newly watered from artesian wells or where the drainage is poor, the crops suffered to a slight extent, turning off colour or being laid down. Owing to the recent arrival of nitrate of soda, chemical manure is now being applied on a wider scale than before, but the majority of cultivators are using farmyard manure and *kufri*. Cutworm is reported from Asyût; elsewhere the crops are free from pests. They are, on the whole, promising well, and wheat is in ear in advanced fields.

Beans.—The rainstorms of January 16 and 17 caused a certain amount of damage by knocking off flowers. They have, however, helped the growth of the plants by giving them a natural watering after the water supply had been cut off by the closure of canals. Sparrows have done a good deal of damage at Ma'âdi and in Girga province. Attacks from broomrape occurred in some provinces, but the damage caused is not greater than usual. Flowering is general, and the formation of pods has begun in early-sown fields.

Lentils.—The cold weather at the beginning of the month and the rain in its middle retarded the growth of the plants in Minya province, but elsewhere it was favourable. The crop is free from pests and has formed flowers in all provinces.

Helba.—Weather on the whole favourable. Flowering is general and early-sown fields are bearing pods. The crop is doing well and is being cut green for local consumption.

Onions.—Weather generally favourable. Transplantation is over in all provinces except in Beni Suef, where it is later than usual. Mildew is still noticed in Asyût province, but so far damage is negligible. On the whole the crop is progressing favourably.

Sugar Cane.—Weather on the whole favourable, though cold at night. Stalk-borer is still reported from most provinces. Cutting of canes for factories is general. The yield is satisfactory.

Bersim.—Weather generally favourable. The copious rainfall has been of help to the crop during the canal clearances. Slight attacks of dodder have been observed in Minya and Asyût, and a few attacks of cutworm in Daqahliya. Ploughing up the catch crop for cotton cultivation is going on everywhere, though somewhat delayed by the rain. Some of the land which was originally put to full crop is also being turned into cotton, seeing that cotton growing is now no longer restricted. The second cutting of *bersim* is general, and the third has been started in Minya. The crop is healthy and shows slight improvement on last month.

Price of Dates.

The Persian Dates (Retail Prices) Order, 1918, has been revoked, and all varieties of dates have been brought under the new Schedule to the Dried Fruits (Retail Prices) Order as amended, at the maximum retail price of 6d. per lb. This maximum price for all varieties of dates will not come into operation until March 3, 1919, up to which date Egyptian dates may be sold at the present maximum price of 10d. per lb., but on and after March 3 the maximum retail price of all dates, irrespective of variety, will be 6d. per lb.

Opening for Fertilisers.

During the war Egypt had to depend on her home production of cereals, and the need for nitrogenous manures was thus keenly felt, says the Egyptian Ministry of Agriculture. The application of nitrogenous manures to the wheat crop in Egypt results in an increase of from 1½ to 2 ardebs, or 7 to 10 bushels per acre. During 1913 more than 60,000 tons of these manures were imported, resulting in a probably increased production of 5,000,000 bushels of grain. A similar increase would result in the amount of straw. A shortage of nitrogenous fertilisers was thus bound to have a serious effect on the supply of grain.

With the end of the war there should be a favourable opportunity for the introduction of nitrate of lime. Experiments made here proved its efficiency, inasmuch as the land of Egyptalready contains small quantities of soda. Superphosphate had begun to be imported before the war, but the quantity is insignificant as compared with nitrogenous manures. Should a demand arise, however, this manure can be manufactured locally, seeing the large deposits of mineral phosphate in the country.

RESUMPTION OF TRADE.

Opening of Turkey, Bulgaria and South Russia.

The Board of Trade has issued a general licence authorising, so far as the trading with the enemy legislation is concerned, the resumption of trade with Turkey (including Turkey in Europe, Asia Minor, Armenia, Kurdistan, Mesopotamia, and Syria) and Bulgaria. Trade with Russian Black Sea ports may also now be resumed.

It will be necessary for exporters to obtain licences from the War Trade Department before shipping to these countries and ports goods of kinds which are prohibited to be exported from the United Kingdom, and for importers in this country to obtain licences from the Department of Import Restrictions before importing goods covered by the Prohibition of Import Proclamations. The general licence does not remove certain existing restrictions in respect of the payment of pre-war debts and the return of property held or managed before the war for persons in Turkey or Bulgaria. Moreover, any permission which may be necessary in respect of any transaction under Defence of the Realm Regulations 41D or 41DD must be obtained from the Treasury.

Arrangements have been made to grant permits for travel to South Russia to persons having business interests there, who are recommended by the Department of Overseas Trade, provided that such persons are willing to undertake the journey at their own risk and provided also that no objection is seen by the naval or military authorities. In reply to communications received from the Association of Chambers of Commerce, the Federation of British Industries, the London Chamber of Commerce, the British Russia Club, the Russo-British Chamber of Commerce, and the Manchester Association of Importers and Exporters, full particulars have been supplied with regard to the matter of travelling to South Russia, and it has been suggested that members should in the first instance make applications for the necessary permits through these bodies, instead of approaching the Department of Overseas Trade direct. The Department of Overseas Trade feels sure that firms will not fail to consider whether they cannot take early advantage of the opportunity now provided for sending representatives to South Russia. It is realised that in view of the disturbed state of the country, it is not possible at present to transact business in more than a comparatively small area, but firms who know Russia need no reminder of the advantage of having representatives on the spot who can keep their headquarters informed of any improvement in this respect and of local conditions and who will be ready to proceed without delay into any new districts which may become available for trade. It is felt that when normal conditions return to Russia it should be possible for British traders to obtain a far larger share of Russian trade than in pre-war days, and it is hoped that this possibility will encourage firms who have not previously dealt with Russia to investigate the great potentialities of this market. It will be remembered that in the last year before the war Germany's exports to Russia amounted to 643 millions of roubles. Britain came second with 170 millions, and an exceptional opportunity exists now, owing to the temporary elimination of German competition from the South Russian market

A list of commodities which are known to be urgently required in certain districts of South Russia and the Caucasus and goods which are available for export from those territories is now in preparation and will be communicated to firms and bodies known to be interested and also to others, on application.

The Department of Overseas Trade has been informed that the following steamship companies are making arrangements for the immediate establishment of services with Russian Black Sea ports.—The Cunard Steamship Company, Limited (London and Liverpool), Ellerman Wilson Line (Hull), Ellerman Papayanni Line (Liverpool), William Johnston and Co. (Liverpool and London), Maclay and McIntyre (Glasgow and Liverpool), James Moss and Co. (Liverpool), Westcott and Laurance Line (Limited) (Thorners Chambers, Fenchurch Street, E.C.3).

The Department of Overseas Trade understands that these companies are prepared to accept cargo at once, and also that they will be glad to supply the inquirers with any information that may be available with regard to the carrying of passengers, sailing dates, etc.

LANCASHIRE COTTON.

Position More Hopeful.

(From Our Own Correspondent.)

Manchester, Wednesday.

Throughout the past week a rather more hopeful feeling has prevailed in the market. Producers with machinery stopped are not securing relief as quickly as they would like, but in some quarters the turnover has shown some improvement. The shorter hours question was discussed at a joint conference of employers and trade union leaders at the beginning of this week, and it was decided that the masters would give their considered reply to the operatives' demand at a meeting to be held on March 20. In cloth for export purposes rather more business has taken place for China, some fair sales having been put through in both grey and white goods. Most shippers to India are still inclined to mark time, although inquiry has broadened and a few lines of dhooties have been booked for Bombay. Buyers for Java and Singapore have again looked on, and operations for Egypt and South America have been of a sorting-up character. A rather improved demand has been experienced in home American yarns, and prices have been steady. Bolton spinnings have dragged, and quotations have been irregular, with an easier tendency.

BRITISH INDUSTRIES FAIR, 1919.

The British Industries Fair, organised by the Board of Trade, will be held in the Pennington Street premises of the London Dock from Monday, February 24, to Friday, March 7.

The fair will be confined to the same trades which exhibited last year, but about 150 more firms are exhibiting this year.

The number of firms exhibiting in each section is as follows:—Paper, printing, and stationery, 130; glass and pottery, 114; fancy goods, 128; toys, 198.

As in former years, admission to the fair is confined to trade buyers, the general public not being admitted.

The Board of Trade have already issued over 80,000 invitations to firms and individuals in the United Kingdom interested in the trades covered by the fair, but any firms which have not yet received an invitation and are anxious to visit the fair should apply to the Director, British Industries Fair, Board of Trade, 10, Basinghall Street, London, E.C. 2.

For the convenience of visitors and exhibitors, a service of motor-omnibuses will ply between Mark Lane Station, on the Metropolitan and District Railway, and the fair.

A Ukrainian Economic Mission recently arrived at The Hague. There is great scarcity of colonial produce in the Ukraine, and the object of the mission is to establish relations with the big Dutch firms representing Dutch East Indian firms.

ROUMANIA'S FUTURE.

"Since her dramatic entry into the war, Roumania has assured for herself a position of vast importance. In fact, from a mere name, which most people had vaguely but erroneously associated with the group of nations known as the Balkan States—for it is not, and never has been, a Balkan State—Roumania now ranks with the nations that count." This is the introduction of a valuable treatise on Roumania issued by the Bank of Roumania, Ltd., dealing with the history and growth of the country, its system of government, financial resources, commerce, etc. The intention of the booklet is to meet the demand for more and reliable information about Roumania, and it is admirably designed for this purpose for its twelve and a-half pages of reading matter are a perfect mine of material. As an example of the art of condensation it unquestionably deserves a very high place, for it gives just those details that are required to furnish at a glance a bird's eye view of the country and its potentialities.

The strength of Roumania's position before the war, both financially and commercially, is well brought out. The surplus on the Budget for 1914-15 of nearly four million francs is quoted, and it is pointed out that the internal loan of £6,000,000 (at five per cent. and issued at eighty-four) floated in May, 1916—the first to be issued in Roumania—resulted in subscriptions being received for £16,000,000. Then as regards commerce, the considerable surplus of exports over imports during the last three normal years is emphasised, and an interesting comparison is also given of Roumanian commerce and that of Greece, Serbia, and Bulgaria.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated February 13:—

Rain nearly general throughout Orissa and Bengal Coast; light to moderate in parts of the Central Provinces. The situation is improving, but more rain is required in the Punjab.

Bombay cotton market continues irregular; fully good broach, April-May, quoted at Rs.573. Piece goods market steady; rice market unchanged. Prices of gunnies lower, and market very quiet owing to delay in cables and lack of demand from America.

£400,000 deferred telegraphic transfers on London applied and allotted in Bombay on February 6.

Notification issued on February 8 prohibiting the export of barley grain, maize, and pulse to all destinations; also transferring telephone and telegraphic material to Class D (compare U.K. Class C) for export from India.

NEWS FROM ALL SOURCES

An additional 9,000 tons of Australian wheat have been sold to India at 5s. 6d. per bushel, f.o.b.

According to the *Mokattam*, Mr. John Wells is leaving the service of the Egyptian Government on April 8.

The Dominion Government authorises substantial credits for Greek and Roumanian purchasers from Canada.

The annual general meeting of the British Chamber of Commerce of Egypt will be held on February 24 at Alexandria.

It is rumoured that the Nippon Yusen Kaisha intends to open a direct route between Japan and Copenhagen.

It is stated that one of the most vital questions for the economic life of Greece is the release by the Allies of the requisitioned Greek merchant ships.

Hamid Effendi Shakir, an official of the Wakfs, will be at the head of the technical mission which is being sent from Egypt to Mecca for the construction of drainage.

COMPANY NOTES & REPORTS

Venesta.

The report of Venesta, Ltd., for the year ended June 30 last states that the net amount at credit of profit and loss is £146,294; £133,457 was brought forward, making £279,752. An interim dividend of 5 per cent. (less income-tax) on the ordinary shares was paid on July 31. It is now proposed to pay on the 28th inst. a further dividend of 15 per cent. (less income-tax of 5s. 3d. in £), to place to reserve for losses on Continental assets £100,000, and to carry forward £114,752. Meeting, 38, Eastcheap, E.C., 27th inst., noon.

County Westminster & Parr's Bank.

An extraordinary meeting of the London County Westminster and Parr's Bank was held on February 14, when the extraordinary resolution altering the articles of association passed at the extraordinary meeting on the 30th ult. was confirmed. At a further extraordinary meeting which followed a resolution increasing the capital to £33,000,000 by the creation of 3,000,000 new shares of £1 each was unanimously agreed to. Mr. Walter Leaf, the chairman, announced it had been decided that the price to be paid for the new shares would be payable in one amount of 35s. on July 1, 1919, instead of in two instalments as originally contemplated.

Monerakelle Rubber.

The report of Monerakelle Rubber Estates for the year ended June 30 last states that the balance at credit of profit and loss at June 30 was £8,606. It is proposed to pay a final dividend of 10 per cent. (less tax) on the ordinary shares, making 14 per cent. for the year, and to carry forward, subject to excess profits duty, £5,473. Meeting, 12, Fenchurch Street, E.C., 21st inst., noon.

Egyptian and Foreign Trust.

The report of the directors of the Egyptian and Foreign Trust, Ltd., for the year ended December 31, 1918, states that the year's working has resulted in a net profit of £6,182 13s. 1d.; this has been placed to the credit of profit and loss account, bringing the credit balance (after making sundry adjustments amounting to £344 19s. 11d.) to £11,958 17s. 10d., which it is proposed to carry forward. Investments have been taken in at cost; a valuation at current market prices at December 31, 1918, shows a shortage of £15,480 11s 1d. on cost price. During the year Sir Alexander Roger, Mr. A. T. Cruickshank, and Captain B. A. H. Goldie resigned their seats on the board, and Messrs. A. Mitchelson, J. S. Holmes, and T. L. Farnes were elected directors. Under Article 88 of the articles of association the appointment of these gentlemen has to be confirmed. Meeting, Dashwood House, 9, New Broad Street, E.C.2, February 26, 12.30 p.m.

Dividends, Payments, &c.

The report of the Del Rey Tea Co. for the year ended August 31 states that net profit amounted to £5,417, which, added to interest and £4,366 brought forward, makes £9,927. After providing for excess profits duty 1916-17, £1,522, and income-tax £970, it is proposed to pay a dividend of 8 per cent., less income-tax, on the ordinary shares, carrying forward, subject to excess profits duty, £4,158.

Oil Outputs.

British Burmah Petroleum.—Total production of crude oil by company and Rangoon Oil Company amounted to 81,257 barrels for January.

NEW COMPANIES.

A Shipping Company.

A group of Greek capitalists in Constantinople have formed a shipping company with a capital of £T20,000,000, and have purchased four vessels.

New Roumanian Oil Syndicate.

The Dacia Romana Petroleum Syndicate, Ltd., has been registered with a nominal capital of £200,000 in £1 shares, to acquire oil-bearing lands and other properties and rights in Roumania, or elsewhere, to work and refine oil, and to adopt three agreements, the parties to which are not named. The subscribers appoint the directors. Notice of situation of registered office has not yet been filed.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to November 30, 1918. (New Style, January 14 to December 13, 1918):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Nov. 1918		2,516,579	2,371,000
Do. do. do 1917		3,108,836	2,146,000
Estimated receipts for 11 months (Law of Control)		26,491,666	9,808,333
Actual do. do. 1 18..		34,296,054	28,944,000
" " " 1917..		31,118,358	12,705,000
Difference between estimated and actual receipts for 11 months	1918	+ 7,804,488	+ 19,135,666
	1917	+ 4,626,691	+ 2,896,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

EGYPTIAN MARKETS.

The receipts of the Egyptian Markets, Ltd., for the week ended January 30 were: Cattle markets. £1,530; general markets, £676; total, £2,206. Total for year, £8,250. The figures for the corresponding week in 1918, ended January 31, were: Cattle markets, £827; general markets, £467; total, £1,294. Total for year, £5,799.

MERCANTILE BANK OF INDIA.

The Mercantile Bank of India has now been informed by the Treasury that the restriction on sale of the new issue has been withdrawn. Certificates will be forwarded in due course. The emission consists of the unallotted portion of the bank's capital, representing 15,000 "A" shares of £25 each, and is being offered to existing holders in the proportion of one in three. There will be called up £12 10s. per share, the same as in the case of the existing shares. The new issue will rank for dividend as from January 1 last.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been a fair amount of business in Egyptian securities, but changes in prices have only been fractional; excepting for Aboukirs, which have had a smart rise of 2s. 9d. to 28s.

In Government stocks Egyptian Unifieds have remained in constant demand, but transactions have been restricted by the scarcity of sellers. Turkish Fours of 1891 have receded a point to 82.

In Bank shares Nationals are at the finish a quarter down at 22¼ after a very fair amount of business round 22½. Agricultural Banks are 1-16 easier at 6 13-16. On the other hand Agricultural Preferences are 1-16 better at 7⅝. Some small business took place in Land Banks at 7.

In Railways Delta Lights are ⅛ down at 8 5-16.

Amongst Land shares Delta Lands are 3d. easier at 16s. 6d., whilst New Egyptians have improved a like fraction to 25s. 6d. There has again been a good deal of business in the latter share. Sudan Plantations, after improving to 4 9-16, are closing 1-16 easier at 4⅜. United Egyptian Lands are 4½d. down at 3s. Egyptian and Foreign Trusts, in spite of a very excellent report, are 6d. lower at 16s. The intrinsic value of these shares, from the report just issued, would appear to be about 17s. 6d., so that during the past year a great deal of leeway has been made up.

In Miscellaneous shares Alexandria Waters are ⅛ up at 12½. On the other hand Salts and Sodas are 1-16 lower at 2⅞; while Khedivial Mails, after rising to 115s., are unchanged at 12s. 6d.

In Greek securities the Rente Loan is half a point up at 55½, while Bank of Athens shares are fractionally lower at 4 nominal. Otherwise there are no changes to report.

Oil Shares.

The oil market has been quieter. Burmahs are ¼ lower at 8⅜, but British Burmahs have continued their rise, and are 6d up at 20s. Anglo-Persian prefs. are 1s. down at 25s. 9d. Anglo-Egyptians "B" are stronger at 3 25-32.

Roumanians have been depressed on profit taking. Roumanian Consols at 17s. 7½d. are 7½d. lower, and Traians at 13s. 9d. are 1s. 6d. down. Anglo-Roumanians, however, at 13s. 4½d. are 7½d. up.

Ural Caspians are weaker at 34s. 8½d., and Bakus are 1½d. lower at 4s. 10½d.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—February 9-10, 760,000 francs against 470,000 francs.

At the meeting of the council of the British-Armenian Chamber of Commerce, just held at the offices of the London Chamber of Commerce, Mr. E. Brayley-Hodgetts was elected chairman, Professor Toumaiain deputy-chairman, Mr. F. H. Stephens hon. treasurer, and Mr. C. E. Town secretary.

The Tata Industrial Bank in Bombay, which was opened in April last, made a net profit for the period ended December 31 of Rs.4,32,398-8-10.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanjue, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and oversees business. **Moneys received on fixed deposit. Terms on application.**

NOTES OF THE WEEK.

The almost defiant tones of President Wilson's inaugural speech on his return home shows that his words were addressed more to his own people than to the rest of the world; and they seem in some sense a justification of himself and his European policy in the face of those domestic criticisms which were meant to be audible across the Atlantic, but which an elementary instinct of good manners among his European hosts has perforce ignored. On that aspect of affairs silence is still the golden policy for the Allies; but in several directions of fundamental importance his speech was addressed to a wider audience than the United States.

President Wilson lays it down definitely that the new small States must be protected; he mentions by name Poland, Yugoslavia, and Armenia, and also included the new State of Bohemia as equally worthy and in not less need of support. So far as Poland is concerned, it is clear that her main need is, and is likely to be, protection against Germany, for the domination of Poland was the corner-stone of Prussian rule; the same is true of the Czecho-Slavs, who will form a smaller State and be in a relatively more difficult position. It might perhaps have been suspected that the Presidential reference to the Yugoslavs implied a hint that Italy had put forward rather large and conflicting demands, but his subsequent remark that national aspirations had been in every case moderately urged shows clearly enough that both the Yugoslavs and Italy have carefully avoided that tendency to intransigence in the council chamber which has not always characterised their rival propagandists. It is against a revival of Germanism that the Yugoslavs, like the Poles, need to be secured.

The textual reports of the speech make it clear that President Wilson means to see that this is done, and this is the first public pronouncement which states the fact definitely. The importance of this utterance can, therefore, hardly be exaggerated; for it is not only a direct message to the smaller and newer States of Europe that Washington is concerned with their interests and their future prosperity; but it is also an indication that the United States, if President Wilson has his way, will for ever discard her policy of aloofness. His reference to Poland and Yugoslavia commits him to a European policy; his reference to Armenia to an Asiatic policy.

His silence regarding Palestine, Mesopotamia, and Arabia, may, perhaps, be taken as an indication that the President has rejected the suggestion, which at one time seemed popular with a few publicists, that America should become the mandatory power of the League of Nations for those countries. Should that prove to be the case, we cannot but think that the renunciation may prove to be wise; for the United States is in many ways a conservative country in its politics, and the last thing its people thought of when they entered the war in 1917 was that they should be asked to become trustees of Jerusalem and Mecca in 1920.

Even as things are, and with their limitations, the change of policy which the President advocates is sufficiently startling. There will be no criticism of it in Europe, where it has long been felt that the isolation of the United States, like the one-time "splendid isolation" of Britain, was an outworn political dogma, unsuited for a world of quick communications and rapid transit; but it would be ridiculous to pretend that there will be no criticism of it in America. Indeed, the somewhat defiant way in which the President framed his question—"Do you believe in the aspiration of the Czecho-Slovaks and Yugoslavs as I do?"—suggests a doubt in his own mind whether the United States are as enthusiastic as he obviously is. It is a kind of categorical imperative in the form of an interrogation.

The proceedings of the Peace Conference during the past week, during the enforced absence of the chief actors in that rather lengthy drama, at which no audience is permitted except when the safety curtain rises at intervals for a second or so, have been of little apparent interest. The projected constitution of the League of Nations have on the whole had a bad press, and there have been the usual indications that the delegates, while talking about principles and ideals, were really thinking of territorial readjustments. Some further indications of the new map of Europe that may some day emerge from the Peace Conference have been given by the order to the Germans to withdraw from part of the Polish territory which they have so long occupied; but there have apparently been no decisions regarding the boundaries of the Balkans, or at least none has been published.

President Wilson's hearty reference to the Greek scholars who interviewed him in Paris will be warmly welcomed in Athens. But the remark involves something more than appears on the surface. The President, who is a distinguished historian as well as a maker of history, is well aware that the original American constitutions, although modelled by practical men who were innocent of Greek, does in fact owe a good deal indirectly to Greek political philosophy. The keynote of the old Greek state was its independence; it was one of a loose confederation, whereas Roman political thought tended towards centralisation. The Roman model was imitated in Europe, but the Greek method, although unconsciously imitated by men who have worked out their own political philosophy for themselves, has always appealed more to the British and American mind.

There has been no confirmation of the report received from German sources of a revolution in Roumania, a report which would appear to have been the last expiring effort of that form of Teutonic propaganda which proved so singularly futile during the war, but there has been a very definite confirmation of the conjecture that Roumania badly needed feeding; and perhaps some of those who have been entreating us to love our brother German and to contribute to the "comforter" fund for infantile Germany may give a thought to the plight of our Ally, who underwent infinitely greater hardships than any German felt or is likely to feel. So far, it must be confessed, our humanitarian pacifists seem to have forgotten our friends in the joy of embracing the enemy.

But there is further and more hopeful news from Roumania. *The Times* correspondent at Bucharest sends details of the steps which have been and are being taken to reunite Transylvania with the mother country; apparently the Hungarians, if not reconciled to the inevitable, at least recognise that the loss of that beautiful province is inevitable. Its incorporation with Roumania is not merely an act of national justice but a fact of political importance, for the consequent increase of area and population will make Roumania a more important power than before, and will raise her higher in the category of second-class States than she was. Of course, now that the League of Nations has secured, or at least promised, us the Millenium, these matters of size and population and territory are only of academic importance; but in the inconceivable event of any of the old Adam of politics and national rivalry surviving in the new Europe, the accretion of Roumanian power would be a factor of some weight.

Hungary, by the same token, will bulk far smaller in the future. Transylvania was one of the strongholds of the Hungarian feudal aristocracy, and the future of that proud nobility under another allegiance is not easy to forecast. But this is in any event a less serious blow to the Magyar domination than the loss of the Southern Slavs; and it seems certain that the new Hungary, shut in as it will be by an enlarged Roumania on the east, a reconstituted Poland on the north, and a greater Serbia on the south, will have to moderate its pretensions in the field of politics very considerably. Its economic future, thanks to a fertile soil and an industrious peasantry, seems assured, after the present hardships are surmounted and the existing wave of Bolshevism has spent its force.

It seems quite certain that Hungary will be unable to stand entirely alone, and she will, therefore, have to come to terms with at least one of her neighbours. Which will it be? Not with Roumania, if she can help it; even in the new world one can no more forgive the ravisher of one's provinces than, according to Homer, Agamemnon in Hades could forgive the co-respondent in the Clytemnestra affair. With the national temper of Poland, an aristocratic and Catholic country of great landowners, Hungary is more likely to be in accord with Roumania; but it cannot be overlooked that a powerful party in Budapest may again attempt to open up an understanding with Berlin now that the future of Austria seems definitely determined as a German province.

It is quite probable that these advances would be welcomed, for Germany, for all her fair words about a League of Nations, still has an eye on the main chance, and the professions of a new heart which Count Bernstorff and his friends are making are not altogether convincing. In that event it would only be a question of time before German Near Eastern ambitions would revive, possibly under a different form. For the time being, of course, it is unlikely that anything will be done, for Germany is still faced with the necessity of revising the political faith in which two, if not more, generations have put unquestioning trust. Brought up to believe that the German army was invincible and that the German boot was universally efficient in treading on its neighbours, it has suddenly discovered that its creed was founded on a wrong assumption, and that the whole of German political philosophy will have to be recast. Fortunately for the rest of the world, that process will take some little time.

As if by way of commentary on this necessity, in an obscure paragraph in an obscure South German newspaper the fact is recorded that one day last week the German regiments from Tiflis and the neighbourhood returned home; but only a few flags greeted the troops as they marched through Munich, and the usually demonstrative folk of that city seem to have regarded them with indifference. So great is the contrast from a year ago, when Germany's Eastern adventure received columns of exposition, and prophecies of her impending domination of the East were frequent in every self-respecting Teutonic sheet. The change is less dramatic than Napoleon's retreat from Moscow, but it is none the less complete and, in a military sense, disastrous.

It is not, however, by any means certain that Germany has accepted the prospect of her utter downfall in the Near and Middle East. As an unquiet sleeper's dream may suddenly change its form completely but still remain the same dream at bottom, so a careful study of the German Press reveals that the dream of Eastern expansion still exists. The military idea, it is true, has vanished, and the idea of using the Baghdad Railway as a route for some new Teutonic Alexander the Great is probably too far-fetched even for a provincial *Stammtisch* in these days; but the belief in economic and commercial domination is still strong, and it may be found in time that the German confession of defeat in the field and on the high seas has only emphasised the determination of the German bagman to go forth conquering and to conquer.

The action of the Government of India in regard to the Emergency Powers Bill requires better justification than the cable has so far disclosed. The Rowlatt Committee, the strongest judicial tribunal which has ever met in India, considered it essential that the Administration should have these emergency powers in reserve, so that on the need arising action could be taken at once without the tedious, and also somewhat discreditable, preliminary of passing special legislation. The Government accepted this recommendation, and framed the Bill accordingly, but when the anticipated outcry arose, they agreed to limit its operation to a period of three years after the conclusion of the war, and thereby altered the whole foundation of the measure. It was intended to provide a permanent safeguard; it becomes yet another piece of temporary *ad hoc* legislation, the expiry of which may place the next Viceroy in an exceedingly difficult position.

We refuse to take the view which is being expressed in this country that the present Administration has finally succumbed to opportunism, and is content that

Digitized by Google

the deluge should come, provided it does not come at once, while we should be sorry to think that Lord Chelmsford and his Council had failed to foresee the unanimous opposition to which they have so quickly bowed. The more probable explanation is that they have been "playing politics." Extremist opposition was in any case certain, while the Moderates have not yet secured a position sufficiently stable to enable them to face the "popular" abuse which would have resulted, if they had supported the official measure; the time-limit may have been intended to serve as a wedge to split the two parties; and, regarded as a piece of tactics, the move is not lightly to be condemned. Whether such tactics become the Government of India is another question, and we confess we should have preferred to see the original measure carried by the official vote on the straightforward ground that it was essential to the continued security of the country.

The situation has, however, another side, for it is reasonable to conjecture that the opposition, though it may be violent, is not altogether sincere. Indian politicians aspire to control the administration of the country, and there is not the least doubt that, when that time comes, they will use their emergency and other powers with a vigour and freedom which India has not experienced since the days of Aurangzeb. A popular Indian Government would, doubtless, shrink from asking the Legislature for special powers to repress disorders in the State, but it is equally certain that they would not hesitate to use powers which had been placed ready to their hand by the forethought of their bureaucratic predecessors. We suspect that these considerations have not been overlooked by the more far-sighted members of the Legislative Council, and they are probably as much disappointed as surprised by the success achieved by their opposition.

Silence has at last been broken regarding the exorbitant charges for homeward passages from India, but it cannot be said that the result is satisfactory. The position of the India Office is clear enough. Mr. Montagu has worked hard, and is still working, but so far achievement has fallen far short of aspiration. The Ministry of Shipping has not yet spoken officially, but we take it that its views are represented by the laboured apologia which appeared in *The Times* last Monday, the gist of which lies in the statement that "it is felt by authorities in London that in the present highly unsettled state of affairs any amendment would be entirely inopportune." The pure departmentalism of that sentence is calculated to appeal to Indian bureaucrats; translated into ordinary language, it means that, if the Ministry "sits tight" for a little, the present leave-season will be over and the trouble will pass away. Unfortunately, it also means that leave out of India, which is necessary for all ranks, is to remain a luxury for the rich, and the consequent injustice and hardships are so obvious that we hope Mr. Montagu will succeed in bringing the matter before the Cabinet.

Mr. Tilak's action for libel against Sir Valentine Chirol came to an end last Friday, when, after a hearing extending over eleven days, it took a special jury less than half an hour to decide that the criticisms passed on the plaintiff's conduct were justified in detail and as a whole. The decision is important at the present time, because the public in this country will very shortly be asked to pronounce on the future governance of India, and they are entitled to know the past record of the leaders who claim to represent the population *immediately* concerned. Thanks to Sir Valentine Chirol's book on "Indian Unrest," and still more to his public spirit in defending a costly and exhausting suit—which could have been terminated by the easy course of offering a formal apology—the country has now ample materials for "placing" one of the most conspicuous of the self-styled leaders, and the impending discussion cannot fail to benefit from the timely ventilation of these essential facts.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 11.

The Question of Judicial Reforms.

The question of the judicial reforms to be introduced as a result of the abolition of the Capitulations appears to be exercising the minds of the local legal community very much, and a series of notes, memoranda, and articles have appeared recently in the local Press and in the official organ of the Mixed Courts. Amongst these criticisms and commentaries on the work which the Capitulations Commission is at present doing, the most important has been a memorandum presented by the Mixed Bar to its leader, in which it attacked the Capitulations Commission and asked him to take up the cudgels in defence of the Bar's rights, and in order to safeguard the interests of the country itself.

The main grievances voiced in the memorandum, which is of considerable length, appear to be the proposed immediate introduction of an entirely new and complete legislation based, the writers allege, for the most part, on English law; the substitution at short notice of English for French and Italian as the judicial language; the failure to consult the Mixed Bar Council in connection with the scheme for the proposed fusion of the Mixed and Native Bars and for the creation of a special Bar attached to the Supreme Court; and the insufficiency of the publicity accorded to the projects in course of elaboration by the Capitulations Commission. To this memorandum the Acting Financial Adviser and Reporter to the Capitulations Commission, Sir William Brunyate, has now, on his own behalf, sent a reply, which appears in the *Journal de la Gazette des Tribunaux Mixtes*. The following is a summary of his remarks:—

To the protest that the Draft Judicature Law on which the Commission has been working has not been communicated to the Bar Council, Sir William replies that the Commission itself regrets this, but that it was impossible to give publicity to that document, as it was communicated to the Commission in confidence. The *communiqué* issued in March, 1918, contained substantially everything that it was open to the Commission to make public; but he trusts that at no distant date a larger measure of publicity may become possible.

English or French?

With regard to the fear that the French language may disappear at an early date as a judicial language, he points out that as far as the Commission is concerned in the draft before it the English and French languages are placed upon an identical footing; and as regards the question of making the English language the judicial language, on which the British Bar pre-

sented a memorial to the Commission, to which the Mixed Bar has taken exception, he adds that the Commission in their comments on that document have already drawn attention to practically all the considerations advanced by the Mixed Bar against that proposal.

Dealing in this connection with the recognised fact that at some date in the more or less remote future English is destined to replace French as the "lingua franca" of the foreign communities of Egypt, he says that the rapidity with which that process is taking place is a matter likely to give rise to legitimate differences of opinion, but that his own personal impression is that in the business world it is proceeding somewhat more rapidly than the Mixed Bar suggests, whilst at the same time it is indubitable that the slowest progress has been made in non-Egyptian legal circles. He thinks the more simple explanation of this latter phenomenon is that hitherto no steps have been taken to render possible the hearing of cases in the English language. Measures in that sense will have to be taken in the near future, but in his opinion so long as any widespread demand continues to exist for facilities for the hearing of cases in French those facilities ought to be provided; and if that view is right, it is clear that those facilities will only disappear when the inconvenience and expense of maintaining them become altogether disproportionate to the demand.

Coming to the suggestion that there may be some desire to make the Supreme Court Bar a special preserve for British advocates, Sir William declares himself to be at a loss to understand how it has arisen unless it is based on the suggested provision that admission to the Supreme Court Bar should be controlled by the Supreme Court itself. He points out that the Commission considered that the creation of this special Bar would be in the interests of the Bar itself, and that some control for admission thereto is necessary lest its standard should be lowered by the admission of men of mediocre ability; and he adds that the reason why the Court itself has been suggested for the exercise of such control has been only because it appeared by its probable composition and by the lofty nature of its duties to offer guarantees of impartiality beyond what could be obtained elsewhere. He admits, however, that as regards the whole scheme for the creation of this special Supreme Court Bar, which the Commission considers to be in the public interest, they are entirely in the hands of the existing Mixed and Native Bars; for it can only serve its intended purpose if it includes men who by their experience and by the public confidence they enjoy are the natural leaders of the Bar; and if the present leaders of the two Bars prefer to stand aside, the whole proposal would necessarily fall through.

The Business View.

As regards the suggestion that the Commission's proposals for reform go beyond what even the present exceptional circumstances call for, he states that eventually it will probably be found that mere exigencies of time have out down their programme to little more than what is absolutely essential. He adds that nothing has been inquired into in connection with which the Commission was not unanimous that there was necessity for serious reform, and that in practically everything taken up the Commission has preferred to rely on the opinion of those most closely affected by the law. He says that to judge from the replies received from Chambers of Commerce and business houses and from recommendations made to the Commission by its representative sub-commissions on different branches of commercial activity a case could be made out for the need of much wider reform than the memorial under reply would appear to admit.

With regard to the suggestion that the Commission has failed to give effect to certain assurances given by himself concerning the consultation of the Bar as to Bar regulations, he gives a brief statement of the facts, from which it appears that for various reasons the Commission considered it more desirable to set up a sub-Commission where certain questions could be most conveniently threshed out in the presence of representatives of the two Bars than merely to consult the two Bar Councils as to proposals already formulated. He adds that the composition of the sub-Commission clearly shows that the interests most carefully protected were those of the Bar itself. The offer of the Commission to submit to the Mixed Bar for criticism the draft prepared by the sub-Commission having been declined, the Commission now proposes as soon as possible, and before itself taking the draft into consideration, to give it the widest publicity possible, so that they may have the benefit of the observations of all concerned on what are, after all, merely the recommendations of the Capitulations Commission.

Bars to Progress.

Sir William quite naturally refrains from dealing with other questions raised by the memorial, which, he says, would readily lend themselves to public controversy; and he concludes his letter with a reference to the difficulties that the Commission has encountered. He points out that they are all in favour of the greatest possible publicity, but that they have found themselves hampered at every turn. On certain matters, for instance, political considerations have been a bar to the publicity they would desire. Again, the many calls upon the time of every member of the Commission under war conditions have rendered their progress less rapid than they might have hoped. He claims that at a time when even most urgent matters were being postponed until the war was won they drew attention to the necessity of examining in advance problems which would become urgent so soon as the war was over and of settling them, if possible, by general agreement. He knows of no serious interests which were not adequately represented among them, and it has been their policy to make the widest appeal to help from outside. With the full recognition of the anxieties necessarily incident to great changes he feels justified in appealing for the continuance of public confidence in their efforts.

Sir William Brunyate's letter does not appear to have satisfied his critics, for simultaneously there appears in the *Gazette des Tribunaux Mixtes* two articles returning to the fray. The questions raised are too controversial and too technical for a layman like your correspondent to deal with them. All that he can say is that it is in the highest degree regrettable that at a time when there is so much to be done in connection with the judicial and administrative reforms necessitated by the abolition of the Capitulations so much time and energy should be taken up with the raising of controversial and in some cases purely academic points, which would appear to, and quite possibly may, have their origin in a misapprehension of the facts and of the true intentions of the British Government.

Unfortunate Polemics.

That the Capitulations Commission has no intention of imposing its projects on the community at large, that it has at heart the interests of the country and of the elements of the population for which the new legislation is intended, and that it is desirous of ascertaining and meeting the views of all qualified to present such views is proved by the facts that the leading spirit in the drafting of the new penal code, Mr. Percival, Counsellor of the Native Court of Appeal, has just given two conferences at the Société Sultanienne de l'Economie Politique, at which he has explained at length the alterations, additions, and omissions made in the old code, their reasons and the sources from which the changes have been drawn. Arrangements have also been made whereby all who have any criticisms, suggestions, etc., to make can send in their memoirs to the society for discussion at a special session to be held later on. Incidentally, it may be added that Mr. Percival, in the course of his conferences, laid stress on the point—and gave innumerable illustrations in support of it—that the changes made in the Penal Code are by no means all drawn from English law, but that in a very large number of instances foreign codes, Belgian, Swiss, Italian, Siamese, etc., have been followed. It is to be hoped, therefore, that the good faith evidenced by this departure, the explanations given by Mr. Percival, and the opportunity offered to criticise the proposed judicial reforms in a forum of such a high level, will conduce to the cessation of these unfortunate polemics.

ROUMANIAN NOTES.

(From a Correspondent.)

Roumania, Bessarabia—

The problem regarding Roumania's claims to reincorporate Bessarabia is not a complicated one. It is particularly important at this time to remember that the Roumanian claim to Bessarabia rests on a firm foundation of history, as well as upon the indisputably Roumanian character of the present population. For more than five centuries (the fourteenth to nineteenth) Bessarabia was an integral part of the Roumanian principalities. Even before 1300 the dynasty of the Bessarabs, the builders of Wallachia, extended their power on both sides of the Danube as far as the sea; and at the death of Mircea the Old (1418), the Dobruja of our days, as well as the fortresses of Chilia and Cetatea Alba, or the southern part of Bessarabia, were among the Wallachian dominions. The name of the province itself is a reminder of the dominating power of the Bessarabs over its southern districts. To-day Bessarabia comprises the same area as in 1812, when, in accordance with the Treaty of Bucharest, it was severed from the Danubian Principalities and incorporated into Tsarist Russia. It is bordered by the Pruth, Dniester, and the Black Sea, and covers an area of about 17,620 square miles. The injustice committed by Russia against the Roumanians was only partially repaired after the Crimean War, in 1856, when, by the Paris Treaty of Peace, the southern districts of Cahul, Ismail, and Bolgrad were restored to Roumania. But at the Berlin Congress (1878) Bismarck and Andrassy, in their anxiety to prevent a *rapprochement* between Russia and Roumania, prompted the Russian Government to lay hands once more upon Bessarabia, the land and home of the very Roumanian soldiers who had been fighting shoulder to shoulder with the Russians at Plevna! After this annexation the commercial importance of Bessarabia waned, and the region became an asylum for all kinds of political adventurers and strange religious sects, as well as the object of a deliberate Russian colonisation. But beneath the frothy cosmopolitan surface the main current of Bessarabian life remained true and never lost its essential Roumanian character. Despite all the efforts of the Russian Government to denationalise the population by the influence of the clergy, of a bureaucracy, and of an apostate nobility, the "Moldavians," as they call themselves, have clung tenaciously to their Roumanian nationality, and have never given up the Roumanian language. Only in one or two cases, such as the great families of Purishkievitch and Krupensky, do we find any instance of success in the Russian policy of denationalisation. Throughout the nineteenth century Bessarabia retained her Roumanian character. In 1812, according to the reports of the Roumanian Academy in 1889, there were 350,000 Roumanians and 30,000 other nationalities. Fifty years later the Bulletin of the Russian General Staff, in a report on the Bessarabian Province, concluded that three-quarters of the whole population of the province were Roumanian. The Russian official statistics of 1890 and 1900 bear much the same witness; while an authentic and authoritative ethnographical chart published by the French historian Rambaud, shows clearly that the Roumanians form an absolute majority of the population. Thus, historical as well as economical reasons would weigh against a division of the province, and its reunion with Roumania has been proclaimed by the National Assembly of Bessarabia. The fullest political freedom and citizenship have already been granted to all sections of the population, whose racial aspirations it would be absolutely impossible to satisfy. The Near East has already published some particulars of the organisation of the schools in Bessarabia, according to the principle of nationality.

—and the Banat.

It is announced that the Roumanians and the Serbs have arrived at a compromise on the question of the Banat. The southern part of the province, where the Serbians are more numerous, has been ceded to Serbia, while the rest goes to Roumania. It is to be hoped that this adjustment of frontiers in the Near East will serve to draw the nations concerned more closely together, and will be a step towards a single economic unit, the only guarantee for their freedom and progress.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

AGRARIAN REFORM IN ROUMANIA.

(From a Correspondent.)

A new agrarian law had been passed almost without any dissentients by the Roumanian Parliament (*i.e.*, the Chamber sitting at Jassy in 1916) under the Coalition Ministry. These measures proved abortive, for there supervened the German occupation and the Marghiloman Ministry. The new Bratiano Government urged the enforcement of this law, and the King, by a decree of December 27, 1918, has put the law into operation, subject to ratification by a new Parliament, to be elected by universal suffrage. The provisions may be briefly summarised:—

The following categories of land are to be expropriated in their entirety, without regard to any trust under which they may be held or administered—all cultivable land belonging to the Crown Estates, to agricultural bodies (*Caisses rurales*), all public or private ecclesiastical foundations; secondly, country estates belonging to aliens; thirdly, estates belonging to absentee landlords who have for the past five years paid the double land-tax to which they are liable. Other estates are to be partially expropriated, to the extent of two million hectares* of cultivable land, in estates exceeding 100 hectares, in private hands. All this land is to be sold to working peasants.

This partial expropriation will reduce private estates to a maximum of about 500 hectares. The case had to be met of a landowner whose estates were scattered, and it is provided that he may keep on one estate the total that he may reserve, on the condition that he elect to conserve an estate which is unsuitable for division amongst the local peasants, and would only be useful to colonists from other parts. Private estates which are also petroliferous can be retained to an extent of 12,000 hectares; but the proprietor of any such estate must release an equivalent amount of cultivable ground, and in no event may he retain more than 12,000 hectares.

The purchase price is to be determined by the average prices reached locally during the five years preceding 1916 (the date of the original law), by local farm rents, by the net earnings per hectare, and similar considerations; but the sum may not in any circumstances exceed twenty years' purchase, to be ascertained by the local rentals.

Expropriation is to proceed synchronously throughout the kingdom, and detailed regulations are laid down to this end. The local commissions are to consist of the district Justice of the Peace, the owner and delegates elected by the peasants, or, in default, selected from them by the Justice of the Peace. Within one month and twenty days the title is to pass by virtue of the expropriation, and the Association of the Peasants can enter into immediate possession, unless there be an appeal pending to the Departmental Commission. This Commission will also have two peasant delegates to sit with the two landlords' nominees. A sliding scale has been drawn up of what may be reserved from compulsory expropriation, ranging from .4 hectare for estates of 105 hectares to a maximum of 500 hectares on estates of 10,000 hectares and beyond.

There is a further appeal to a Regional Commission; and this is final, save in the matter of a disputed price, which is irrevocably decided by the Court of Appeal in summary jurisdiction.

Similar procedure governs the ascertainment of the price. The landlord is to be recompensed for his improvements; the price is to be paid to private owners in 5 per cent. annuities determinable in fifty years, or in perpetual annuities to ecclesiastical bodies; and, to expedite peasant ownership, the State can contribute up to 35 per cent. of the price of expropriation.

On the delivery of the deeds, the title to the land expropriated passes to the State, free of all charges except moneys owing to the land-banks; and any legal claims that attached to the land thenceforth attach to the price paid for it; and, furthermore, all documents necessary in the process of expropriation are exempted from stamp-duty.

Roumania is now administering Bessarabia, and this law is to extend to this ex-Russian province. In Bessarabia the following estates are to be expropriated in their entirety:—Crown and State properties, land belonging to the Peasants' Bank and foreign monasteries; land belonging to the former *zemstva*, and to public and private ecclesiastical bodies; cultivable land belonging to the municipalities; land owned by foreigners; land belonging to local monasteries, save for half a hectare per monk; and land belonging to churches, save for a portion for the use of the officiating priest; furthermore, one other category, all land which has been leased out for successive periods of five years from 1905-1918—*i.e.*, held as an investment. For the rest, the regulations are much the same as for Roumania proper.

* A hectare is 2.47 acres.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, February 1.

Naval Movements.

Great interest has been aroused by the receipt of the news that a Mediterranean Fleet, including the super-Dreadnought battleships of the Iron Duke class, is to leave British ports in time to reach Malta by March 15.

The destroyers "Sendan" and "Kanran," which formed part of the Japanese squadron in Malta waters, have been returned to the British Admiralty, having been lent to the Japanese Navy. These ships have now resumed their original names "Minstrel" and Nemesis."

The U.S.A. light cruiser, "Olympia," flying the flag of Admiral Niblac, has reached Malta.

The U.S.A. submarine-chasers, thirty in number, together with the mother ship "Leonidas," have been here for some time. They are leaving for Messina, Palermo, and then proceed to Civita Vecchia, whence the crews will visit Rome, Villa Franche, and Marseilles.

H.M.H.S. "Wandilla" left Malta for Southampton on the 29th ult. Amongst the passengers were some Russian refugees.

February 10.

Malta and Palestine.

Malta is settling down to her normal state, but there are rocks ahead which threaten economic disaster. The lower classes have been in clover during the past four years, and have reaped a rich harvest from the mobilising of labour battalions, and a great increase of labour in the dockyard. Countrymen left their wooden ploughs, their bread and oil, to take up the spade, with regular daily pay and Army rations. This is over now, and, on the authority of His Excellency the Governor, 16,000 men will soon be thrown out of employment. This has revived the "hardy annual" of emigration. It may not be generally known that Malta is one of the most thickly populated portions of the world.

Many countries have been cited as being likely fields of emigration, but the last one concerns the Near East very intimately. Lord Methuen, who has ever the interests of the island at heart, has expatiated on Palestine as a suitable place. These are his own words:—"When I was in Palestine in November last I spoke to the Governor there, regarding the expediency of starting Maltese colonies in that country, and when I returned to Malta I received a despatch from the Secretary of State for the Colonies, asking me to interest myself in the question of emigration, and suggesting the advisability of starting colonies in Palestine and Mesopotamia. I was able to reply that I had already taken steps in regard to sending Maltese to Palestine. By a curious coincidence, Colonel Gabriel, Financial Adviser to the Governor of Palestine, spoke on the same subject; and I had made a previous engagement to see Father Lamb, Carmelite Friar, on precisely the same matter. So that we three came together with our minds in exactly the same lines. Father Lamb pointed out that he was on his way to Haifa, in order to put the Carmelite monastery there into proper repair, as it had been considerably damaged during the war. He pointed out the advantages that would ensue from establishing a colony of Maltese at Haifa. He said that the climatic conditions were the same as in Malta; that the language, being Arabic, would not present the same difficulties as it would elsewhere; that the system of cultivation was practically the same; and that the Maltese would be well received in that town. He thought that he would be able to find them land, and even be able to procure houses for them.

Malta and Lord Jellicoe.

Malta is looking forward to a call from Admiral Lord Jellicoe's fleet on his Empire tour. It is understood that the battle cruiser "New Zealand," which is to bear his flag, will first proceed to Gibraltar, and afterwards call at Malta on her way East. She may be expected to arrive towards the latter part of the month.

Following a very ancient custom, the parish priests of Malta waited on Monday last upon the Governor, at the Palace, Valletta, for the purpose of presenting candles to his Excellency on Candlemas Day. In his address, Lord Methuen intimated that it would be the last time that he would be honoured by the ancient and interesting custom.

A Persian Visitor.

The new Persian Minister at Berne, his Excellency Zohn-ed-Doulih, was with us for several days, and left again on Tuesday, the 4th inst. The Minister, accompanied by his Attaché and Private Secretary, had travelled to Malta on board one of His Majesty's ships from Constantinople, and is proceeding to Berne, to assume his new duties. On arrival here he took up his residence at the Hotel D'Angleterre, where Chevalier J. C. Camilleri, Consul for Persia, paid him a visit, the Persian Minister returning the visit shortly afterwards. During his stay the Persian Minister was also the guest of the Governor and Lady Methuen to tea and dinner at the palace.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Omar Khayyam.

The East has not yet lost its attraction for the theatre-goer, apparently. I learn from a correspondent that London is soon to be visited by a "Maid of the East," who has already made her appearance in the North of England, where she has secured many admirers. With all our men home from Egypt, Macedonia and Mesopotamia, the playwright and the scenic artist will have to mind their p's and q's rather more closely than in the past. I remember seeing Wilson Barrett's company in a play named (I think) "The Daughters of Babylon," in which Babylon was shown backed by fine mountains!

***

I am not out to defend Turkey and the Turks, but it does seem to me that, however badly they have behaved, it was a cruel thing to suggest shipping numbers of Bolsheviks to Prinkipo. It would not have mattered if we were dealing only with "Young" Turks, who have shown themselves as big anarchists and robbers as the wildest followers of Lenin. And the Old Turk, whatever his faults may be, is far too good to be contaminated by forced association with the scum of Russia. He has his harem; but his treatment of woman is chivalrous to the last degree by comparison with that of the Bolsheviki. At the time of writing President Wilson's scheme seems likely to fall through—and I am glad of it.

***

At a Yugoslav meeting held in New York recently, it was decided that the Peace Conference should be asked to institute a "Monroe doctrine" for the Balkans." As I understand it, the "Monroe doctrine" amounts to saying—"very loud and clear," like the gentleman in "Alice"—"hands off" to all outsiders. You announce, so to say, that you will not tolerate trespassers in your back garden, or in your neighbours'; but you do not ask your neighbours, or the man on the other side of the street, or the gentleman round the corner, to protect your property. Again, unless I am very much mistaken, the chief troubles in the Balkans in the past have come from the Balkans themselves and their squabbles—really, it is the only word to use—with one another: and how could a "Monroe doctrine" help in such case? I am afraid that the Yugoslavs in New York were not thinking very clearly when they reached the decision mentioned above.

***

At one time during the siege of Kut the authorities—doubtless with a view to putting heart into the native civilian population—announced that compensation would be paid to the near relations of any Arab or other civilian killed by the enemy's fire. A scale was fixed, and in due time the system began to work. But it is hardly surprising to learn that it did not prove quite so successful as its originators hoped. The lower-class Arab of those parts regards 200 rupees as a very great deal of money, and, on the other hand, he usually sets no very high value on the wife of his bosom. At any rate, 200 rupees would be a "top price." So some of these gentlemen, in whom the business instinct was more developed than the marital affections, took steps to place their luckless wives in dangerous situations. I believe that on one occasion an Arab woman was heard to exclaim to her husband: "But I can't go there; it is dangerous, and I shall be killed!" And her mercenary spouse replied calmly: "Yes; and *I* shall get the compensation." Indeed, ribald soldier men have endeavoured to persuade me that it was quite a common sight to see husbands in considerable numbers driving their wives to "likely" spots, in the hope of "earning" compensation. Needless to say, I accept *those* yarns *cum grano salis*; but there is only too good reason to fear that the others rest on a foundation of fact; and that is why the system had to be abolished.

***

This hardly shows the Arab in a very favourable light, especially with regard to his domestic affections. Yet, I am assured, and by trustworthy observers, that the system did bring out, in the queerest possible way, extraordinary devotion to the family interests on the part of some Arabs. Old men, for instance, were known to suggest that, as they were no longer any use, and were merely a burden to the family, their sons should shoot them, and, representing their deaths as due to enemy action, claim the compensation, which, in the case of men was, I believe, 400 rupees. Of course, it is impossible to defend such conduct on the part of these "untutored savages." It is on a level with the worst cases of infant insurance swindling in this country. At least, it would be if the "victim" had not been a volunteer. As it is, I can't help feeling a certain admiration for the old gentlemen.

Corsair.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

A PLEA FOR GREECE AND ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I be permitted the use of the columns of your esteemed paper to plead for the cause of Armenia and Greece.

It seems to me that of all the countries which have fought on the side of the Allies, the services rendered by the above-mentioned countries have been least appreciated. The Allied Press has been loud in its praises of Belgium and Serbia—and rightly so—for the hardships they have borne during the war, yet comparatively nothing has been said of the proportionately greater sacrifices borne by the Armenians and Greeks. It must not be lost sight of that over two million Greeks and Armenians in Turkey have been sacrificed to the Allied cause; for nobody will deny that the Armenian or Greek who was butchered by the Turk was just as much a soldier fighting for the preservation of human liberty as the English Tommy in Flanders. Yet how have these peoples been rewarded for their sacrifices? Whereas Belgians and Serbians have been freed from oppression, the Armenians and Greeks are still suffering untold misery when a slight exertion on the part of the Allies could set them free.

Is it to be believed that with well-nigh a million Allied troops in Turkey, sufficient forces could not be detached to put an end to the butchery that is going on in Armenia and Western Asia Minor? It is said that there are difficulties of transport. Is it easier to maintain troops in the Syrian Desert than it is to send a few thousand soldiers to Smyrna and maintain them? And why is Greece not permitted to send her own soldiers to protect men of her own flesh and blood in Asia Minor? Is it easier to maintain garrisons in the Caucasus than in Adana, Trebizond, and other places where there is so much human misery? Why carry on any longer this hypocrisy, which deceives no one, and not come out frankly and say that the Caucasus contains oil wells, which most of Armenia does not, and that Greece is not wanted in Smyrna.

Why are not the just and honest claims of Armenia to complete independence, of Greece to Thrace and Albania, Smyrna and its hinterland, the Dodecanese, and Cyprus recognised by Allied statesmen without quibbling and hair-splitting refinements? Or has victory blinded us to our war-time professions and pledges with regard to the right of peoples to self-determination?—I am, etc.

BARKIE D. BAIRAM.

London, February 24, 1919.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—As a constant reader of THE NEAR EAST ever since its appearance, I was truly pained to see in your last issue in the "Notes of the Week" your remarks regarding Cyprus.

Nobody denies, and least of all the Greek population of the island, how beneficent has been the British rule for over forty years, and the gratitude of the islanders has been loud and sincere to this day. Your objection to the island reverting to Greece is that there is not another Venizelos among its local politicians. Strange logic! Was there another Venizelos in the other islands incorporated into the Greek Kingdom after the Balkan war? I mean Mitylene, Chios, Lemnos, Samos, etc. And yet there has not been even a whisper of dissatisfaction since those islands joined the Motherland—Greece.

The local politicians are not likely to interfere with the administration and frustrate the patriotic policy of the great Greek statesman. The Greek State, as all civilized States, cannot depend upon one man, however eminent that man may be, and M. Venizelos would be the first to admit that no man is indispensable. His great policy will be followed by others—let the date be far distant!—who collaborated with him during these last eventful years. England has not suffered much by the passing of such great figures as Canning, Beaconsfield, and Gladstone in the last century; and the same thing must be expected in Greece or any other country as time goes by.—I am, etc.,

GEORGE A. BURLUMI.

74, Great Tower Street, London, February 24.

FOR NEEDY ARMENIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Now that the war is happily a thing of the past there must be many needlework guilds and depots overstocked with clothing for the sick and wounded and prisoners of war which is no longer required. May I put in a public appeal to those in authority to send us anything they can spare—men's, women's, children's garments—for our needy compatriots in Armenia and elsewhere? The distress is great, appalling, and our guild is only a small one; therefore, unless our British sympathisers help us, the garments which we are able to send out from our own guild would be a mere drop in the ocean for the hundreds of thousands of Armenians who are unable to buy any articles of clothing for themselves.

Through the kind appeal of Miss Emily Robinson, the founder of the Armenian Red Cross and Refugee Fund, we gratefully received recently a large consignment of goods from her Majesty Queen Mary's Needlework Guild. The Australian Red Cross Society have also kindly offered us whatever they can spare from their clothing depot. May I hope that other guilds, societies, and private working associations will follow this fine example of graciousness and kindly sympathy for those in distress? Many Armenian mothers' dearly loved British-born sons have laid down their lives for King and country. I feel sure that it will be a great consolation to the broken-hearted mothers should my appeal on behalf of our sorely tried people meet with a generous response.—I am, etc.,

(Miss) PAULINE AGANOOR, Hon. Sec.,
The Armenian Ladies' Guild of London.

47A, Redcliffe Square, London, S.W.10.

ROUMANIAN FOLK POETRY.

Lecturing at King's College (on February 18), Mr. M. Beza said that about the middle of the nineteenth century, when Roumanian literature was living more or less upon imitations and exotics, the poet Alexandri published a collection of folk poems. These came as a revelation alike to intellectuals and to the general public, not only of a new and unsuspected charm in the vernacular, but also of an unusual kind of subject matter: taking the reader out of everyday life to a world fitly opened by one of the ballads—"Away, brother, away, but not too far away." They took one to the plains and hills, where memories of bygone times still lingered, where still remained the old type of *boyar*, who could sing, "I will drink to the elms, the giants of the heights; for they are ready to respond and wave in the air with a cheery rustle of the leaves." What impressed the public most in these ballads was the rare quality of expressing in a few spontaneous words a feeling or thought of great depth and beauty, "You asked for a violet; I gave you my heart."

Proceeding to compare the Roumanian folk poetry with that of other Balkan peoples, Mr. Beza said it was a mistake to consider these peoples separately and apart from one another without regard to their mutual ties. He compared several Roumanian legends and ballads with parallel legends and ballads from other Balkan communities. Among these was the legend of the Argesh Monastery. According to the story, when this beautiful building was being erected the work done in the day crumbled in the night. At length the master builder, Manoli, was warned in a dream that this would continue until a human being was built up in the walls. Manoli told the other masons, and, with them, agreed that the first woman who came to the building should be sacrificed in this manner. As it happened, this was his own wife. He saw her approaching from afar off, and prayed for heavy rain to stop her. The rain fell, but she came on. Then he prayed for wind, but with no better result; she arrived at the monastery and was walled up alive. A similar story, said Mr. Beza, was told among Albanians, Bulgars, Greeks, and Vlachs, varying from people to people, and being told of different churches, bridges, and so forth. All the various forms of the legend had sprung from a common source—the primeval custom of sacrificing a human being at the foundation of an important building. There existed to this day a superstition on the subject. You were warned to be careful lest anyone took your shadow for the purpose, i.e., measured it with a reed or string; for, after this, you died and became the protecting ghost of the building. The Turkish invasion had been responsible for many ballads, notably those centring around the *haiduks*, who were the popular champions against the oppressor. Another cycle of ballads was pastoral in character, and one of these, Mr. Beza thought, was a later form of the old myth of Venus and Adonis. In the purely lyrical songs, one might notice that Turkish influence on life and manners had been less in Roumania than in the countries south of the Danube. There was a great capacity for joy retained by the Roumanian peasant even in his utmost wretchedness, and the freer intercourse between men and women found vent in songs of a more distinctly passionate character. A notable feature of the Roumanian songs was their being usually introduced by a reference to a green leaf, and in the genuine folk poems this leaf was usually one appropriate to the particular emotion sought to be aroused.

Of the folk songs of the Balkans generally, Mr. Beza said they afforded an insight into the life of the Balkan peoples as a whole. The traditions, manners and beliefs of these peoples had so much in common that he was sure that if instead of being pushed against one another as had been the case in the past—they were guided along the pathway of toleration and mutual goodwill, they would find in their own popular wisdom the means to live in harmony.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

February 20.

Condition of Asiatic Turkey.

Viscount BRYCE asked whether the Government could give some information as to the present condition of the Asiatic provinces of the Turkish Empire and the measures taken by the Allied Governments for the protection of the unarmed Christian population. The disbanded Turkish troops had scattered themselves over the country, and the Christian populations were at their mercy. He urged that steps should be taken to send as many Allied troops as could be spared to occupy a few important points. He hoped that they would look with full sympathy to the efforts an ancient race were making to re-establish their national life, and that British influence would always be exerted on behalf of freedom and peace.

Earl CURZON said that for fifty years at least the cruel and tragic sufferings of the Armenian people had never failed to evoke not merely expressions of sympathy but active assistance in this country. The Asiatic provinces of the Ottoman Empire were not an inconsiderable part of the world's surface, but he was more concerned with what was passing in the areas over which the military and political influence of the Allied Powers had not extended or had only imperfectly extended. In Mesopotamia the British had been securely established for over two years. The advance that had been made in that time in the development of the country in respect of irrigation, agriculture, planting, the introduction of agricultural machinery, and the education of the children had been amazing. He could not imagine a more proud experience for any Englishman than to go out to Mesopotamia and see what had been done there. A distinguished American who had recently visited that part of the world said of Mesopotamia: "The work accomplished by the British since their occupation has been excellent in all respects. The population are free and happy, justice is administered, life and property are secure." Somewhat similar conditions applied to Syria and Palestine. With regard to the outlying portions of the Turkish Empire, he repeated what he had already said, that the areas which had been occupied by the Allied forces were not to be returned, but he did not wish to prejudge decisions which might be come to at the Peace Conference with regard to other areas. The Committee of Union and Progress was still in existence, concealing from the people the reality of defeat and acting as if Turkey remained the conquering Power. Simultaneously there was the difficulty of formidable armed bands engaged in many parts in wholesale brigandage. It was not possible for us to move very great bodies of troops, but within the limits of possible action a good deal had been done. Again, the position which we occupied at Constantinople enabled us to exercise a continuous pressure upon the capital. With regard to the Armenians and those unhappy bands who had been driven out of their country, who seemed destined to be the most fugitive races of mankind, there were at this moment in Syria and Palestine over 40,000, and in Silesia several thousands. All these were being cared for as far as possible. In Mesopotamia there were 40,000 refugees being fed at British expense, and in Transcaucasia there were about 45,000. In other words, there was a total of something like 150,000 destitute Armenians who were being kept from starvation by the efforts of this country. Perhaps there was more shadow than light in the picture he had drawn, but we had no reason to be dissatisfied with the part we had played in this work. Officers, soldiers, and civilians were not merely carrying on the necessary duties of military conquest, but were engaged in the additional task of charity and of mercy.

Lord Sinha.

February 25.

Lord Sinha, Under-Secretary for India, took the oath and his seat on his elevation to the peerage. He was introduced by Lord Islington and Lord Carmichael.

HOUSE OF COMMONS.

Ceylon (Self-Government).

Feb. 19.

Colonel WEDGWOOD asked the Secretary of State for the Colonies whether any scheme is in preparation for extending more self-government to Ceylon on the lines of the reforms proposed in India?

Colonel AMERY: The question of the constitution of Ceylon is engaging the attention of the Governor, who will submit to the Secretary of State in due course his recommendations in the matter.

Army Officers, Mesopotamia.

Lieutenant-Colonel HERBERT asked the Secretary of State for War whether he is aware that junior officers from England have superseded senior officers in Mesopotamia; and can he give any reason for this procedure?

Captain GUEST: I am afraid it is not possible to answer a general question of this nature, but if my hon. and gallant friend will furnish me with particulars of any cases he has in mind, I shall be happy to have inquiries made.

The Egyptian Bar.

Feb. 20.

Mr. HOGGE asked the Secretary for Foreign Affairs whether he is aware that the mixed Court of Appeal of the mixed tribunals of Egypt has forbidden, without a hearing, an English barrister in Egypt to have chambers in two places; and whether he has any statement to make on the subject?

Mr. HARMSWORTH: A complaint to this effect has been received from a barrister practising in Egypt and has been referred to his Majesty's High Commissioner in Cairo for a report.

Passages from India.

Mr. BENNETT asked the Secretary of State for India if his attention has been directed to a telegram from Delhi stating that the Government of India have urged in the most emphatic manner the difficulties in the way of procuring homeward passages and the exorbitancy of the rates of passage; that the local governments and the chambers of commerce have made forcible representations to the Government of India on the subject, and that public indignation prevails; and whether, in view of the urgent nature of the problem, he will endeavour by all means in his power to hasten a solution of it?

Mr. MONTAGU: I fully realise the difficulty and urgency of the question. The rates have been fixed by the Ministry of Shipping, which is also responsible for the provision of accommodation. For more than two months I have been impressing on the Ministry the serious position of Europeans in India who, after years of tropical conditions, have as yet been unable to procure passages home; and in my communications with the Ministry I have done all I could to reinforce the urgent representations made by the Government of India.

Our Troops in the Dobruja.

Captain GUEST, Joint Parliamentary Secretary to the Treasury, answering questions put by Major NEWMAN, said:—The Roumanians have assumed the task of administering the territory over which they exercised sovereign rights under the Treaty of 1912, and which was wrested from them in 1916 by the Bulgarians and Germans. The British troops are kept in the Dobruja at the urgent request of our Allies. They are solely concerned with the maintenance of order, and are not in any way interfering with the political rights or religious beliefs of the inhabitants.

A "Patriot"?

Feb. 24.

Colonel WEDGWOOD asked the Secretary of State for India whether the Indian patriot, Lajpat Rai, may yet be permitted to return from America to this country.

Mr. G. TERRELL: Before the right hon. gentleman answers, may I ask you, Mr. Speaker, whether it is quite in order to describe a person of doubtful character as an Indian patriot in a question?

Sir H. CRAIK: And may I ask, Sir, whether it is not the case that the person whose name is in the question was deported for seditious and treacherous conduct in India?

The SPEAKER: I don't know anything of this. Everybody calls himself a patriot in these days.

Mr. FISHER, President of the Board of Education, who said he had been asked to answer the question on the paper, replied:—The answer is in the negative. If my hon. friend will repeat his question on the signature of peace, the Secretary of State will be glad to consider the matter further.

Indian Army Pay.

Mr. FISHER, in reply to Colonel YATE, said:—The Government of India have decided to increase the pay of British officers of the Indian Army by extending to them the bonus increases of pay recently granted to officers of the British Regular Army for the period during which armies of occupation will be maintained. In view of this concession, the Government of India do not propose at present to revise the permanent rates of pay.

Indian Arms Act.

Replying to Colonel WEDGWOOD, who asked whether the regulations under the Arms Act have yet been discontinued in India, Mr. FISHER said:—The Government of India are about to issue revised regulations, based on the recommendations of a committee of official and non-official members of the Imperial Legislative Council. The new regulations will abolish all distinctions of a racial character, and will enable persons of recognised status and character to obtain licences.

The Dobruja.

Feb. 25.

Major NEWMAN asked whether it was a fact that in Southern Dobruja all Bulgar school teachers and priests were being turned out by the Roumanian authorities and Bulgar libraries and books being burnt; what form of local autonomy, if any, the population was to be allowed to enjoy by its conquerors: to what nationality and religious faith the mass of the inhabitants of Southern Dobruja belonged; whether the town of Kavarna consisted of 4,000 inhabitants, of whom the Bulgars numbered 2,500, Turks 1,350, Greeks 150, and no Roumanians; and why Southern Dobruja had been handed over to Roumania without the knowledge or consent of the Peace Conference and against the wish of its population?

Mr. CECIL HARMSWORTH: The district referred to by the hon. and gallant member is in the occupation of British troops, and I cannot accept as correct his description of the situation prevailing there. The Peace Conference is now concerned with the settlement of the problems of South-Eastern Europe, and I therefore regret that I am unable to make any further statement on this subject at present.

Topics in Parliament.

The subject headings are those given in the Official Report.

Demobilisation: Troops in India and the Far East (February 18).

Officer Prisoners in Turkey (February 18).

Ex-prisoners of War, Salonika (February 18).

India: Lord Southborough's Inquiries.—Arms Act (Regulations).—Lajpat Rai (February 18).

India: Officers' Pensions.—Rice (Freight Rate) (Febraury 19).

Provincial Governments.—Police (Pay) (February 19).

Salonika and Egyptian Expeditionary Forces (February 19).

Dobruja (Bulgarian Population) (February 20).

India: North West Frontier Troops.—Military Barracks.—Bishopric (Appointment) (February 20).

NEAR EAST BOOKSHELF.

ROMA REDIVIVA.*

A little two-shilling volume of very big account. Our sea writers are only too few; the prophet of them all is the master who wrote—

"Mines reported in the fairway"

and closed the poem thus:—

"Send back Unity, Claribel, Assyrian, Stormcock, and Golden Gain."

Not a very long way after the national service of Rudyard Kipling comes the national service of our present naval enthusiast, Archibald Hurd. Here he has endeavoured to explain to England the naval genius of Italy as evidenced in this war. The average Englishman forgets how military Rome conquered naval Carthage and naval Greece, and how mediæval Venice and Genoa again mastered the Mediterranean and rediscovered America. This little volume is, of course, very imperfect, as our brilliant author would be the first to admit; but we are delighted with its unexpected excellence.

The secret of Rome's power was that she made herself the half-way house. The secret of modern Italy—her resurrection—is that she has learned at long last to embrace within her millenium-old bosom the three great races of the West, the Nordic, the Alpine, and the Mediterranean. In Milan these amalgamate and impose their fusion. The mechanic of modern Italy is second to none of the victors of this war; if you will read the "1915" discoveries of Signor Tittoni, Italian Ambassador in Paris, you will realise why Italy joined the Triple Alliance and why she saved France by flouting that alliance—that is to say, you will rediscover the statesmanship of Macchiavelli and Cicero. If you will read this, our author's little prose-poem, you will appreciate how and why the naval and therefore military power of Austria-Hungary is "napoo." It is a fine tribute to a noble effort.

THE OLDEST ROAD IN THE WORLD.†

Monarchs and cranks have essayed it, the oldest road in the world. Sennacherib, who flung cats over the battlements of Memphis, was quite a modern theorist; it was beloved of Ishmael; Alexander, Cæsar and Napoleon thirsted along it; it is so old and so long that it leads to and from the East and the West, the opium fields of China and the bone-dry prairies of the United States, from fanaticism to science, from Mrs. Eddy to Mohammed from Armageddon to the Freedom of the Seas, and back again, but—we are immensely grateful to our author that it also leads from Ferry Post to Ismailia and from Solloum to the gates of Gaza.

Of the multiplicative library of Egypt we have read our share, and still hope that some day an Alexandrian cotton merchant may quench the thirst of a perspiring world by giving us a book on something besides cotton. Meanwhile we have here the work of an English architect, temporarily transformed into a British Army sanitary officer, picturing for us with pen, pencil and camera the realities and abnormalities of the oldest road in the world, of the long-awaited handshake between East and West—so bright a book on Egypt that only the brightest casualty could have fashioned it. Our author had never seen Egypt before the spring of 1916, but he has made wonderful value out of nearly two years of peregrination and observation. It is the mentality of the Florentine artisan, the inborn eye for detail, the subtle subjectivity of the craftsman, and the guild chain of simplicity, which make this volume so engaging. We suggest, much no doubt to the astonishment of our author, that the hoariest and most satiated of Anglo-Egyptians, or Franko-Egyptians for that matter, will find here corners of Egypt which his way by the Nile never permitted him to see or penetrate. We have searched for a typical quotation: here is one which hardly Mascagni, Forbes-Robertson, or President Wilson could have composed singly, or together—on the Egyptian Labour Corps:—

"They are just like children in all their ways: they squabble and laugh and weep; they dress themselves up in ridiculous clothes; they walk hand in hand like sentimental schoolgirls; they splash each other when they bathe. But whatever they are doing, they sing. They sing as they draw the heavy ferry-boat across the canal by means of a chain; they sing as they dig or carry great weights; they sing as they go to work, and after dark as they prepare for sleep. When at last they leave the Army for their homes, they sing and cheer more loudly than ever as they cross the desert in railway-trucks, waving flags made of any old bits of fabric they can find.

"It is difficult to describe their curious wailing music, usually in a minor key. Rythmical hand-clapping always accompanies the song, which is antiphonal. Some gifted *waled* sings the first line, and the remainder supply the chorus for the second line. Then the first singer improvises a third line, followed again by the chorus, and so on alternately. The improvised portion of the song is topical, and is suggested by the whim of the singer. He may speculate as to the time that their present work will last; as to the food they will get for their next meal, the personality of their commanding officer, the greed of the *raïs* for *backsheesh*; or he may expatiate on the delights of his native village and its damsels. But the chorus is usually one of these two refrains: '*Kàm lil'o kàm yum*' ('How many nights and how many days'), or '*Yà habèbe sàlamàt*' (Oh, sweetheart, my greetings)."

So page after page is splashed with that indefinable pulsing charm, which is admittedly the immemorial legacy of the desert and the Nile; and, what with the background of the war as waged by the triumphant but thirsty E.E.F., the oldest road in the world, and literature and history and architecture, to say nothing of sanitation, we here readily confess that our author's artistic secret is his very own. The Army will welcome this scintillating contribution to the record of its sufferings and its swearings, and the lay reader will find in it a mine of accurate information and gay story-telling, as by a singer of the charms of his new mistress.

INDIAN INSTITUTIONS.

On Monday, at University College, London, Sir J. D. Rees described the district of Madura, where he for long resided. He said the ordinary natives there were strong, wiry and, though a little fine-drawn in appearance, he did not believe they suffered from want of food. The idea, for which Sir William Hunter was so largely responsible, that the majority of the inhabitants of India never knew what it was to satisfy their hunger, was contrary to the fact. The word "famine" also was far too readily used. A failure of crops did not now result in a large mortality; because, owing to the development of roads, railways, steamships and other means of transport, the surplus of one district was brought in to relieve another. Besides this, the Indian Government had evolved a most satisfactory system of famine relief.

Of caste, Sir John Rees said the institution was monumentally misunderstood in this country. In Madura the Brahman, had not very much influence social or religious, but he (the speaker) had lived in districts where members of certain low castes were not allowed to come within twenty yards of a Brahman, and had to shout as they walked through the fields lest a Brahman should unwittingly come near them. Yet he had not seen that the members of these castes wanted to upset the caste system.

In a discussion that followed Mr. G. K. Devadhar said that he had lived in parts of India where the people could not get more than one meal a day. He had had experience of four or five famine campaigns, and it was correct to say that the Government had elaborate machinery ready to save life at such times; but the low standard of vitality caused the people to fall a ready prey to epidemics such as plague, cholera or the influenza, which had recently carried off three million victims.

Lord Sinha (who presided) said that while, he thought, some were too ready to insist on the poverty of the people of India, others inclined to belittle it. He thought the best course was to seek a remedy for such poverty as did undoubtedly exist. As to caste, he was in agreement with Sir John Rees. There was no greater fallacy than the notion current in England that the higher castes in India oppressed the lower ones. He had himself been largely brought up by a woman of very low caste. When he was fractious and rebellious his mother would send him to this woman, and he would spend the day with her goats, pigs and chickens. A Brahman was not necessarily a priest, any more than in England Mr. Taylor was a maker of clothes. Tens of thousands of them were cooks in the families of people who did not belong to the higher castes.

INDIA AND WAR GRATUITIES.

The Secretary of State for India announces, with reference to the publication of an Army Order on the subject of war gratuities for Regular officers of the British Army, that he is in communication with the Government of India regarding the grant of war gratuities to Regular officers of the Indian Army and Royal Indian Marine and hopes to publish shortly his decision on the matter.

Lord Lamington has left London for Lamington, Lanarkshire.

Mrs. Bertram Romilly is leaving for Egypt to join Colonel Romilly.

The funeral of Sir Mark Sykes took place at Sledmere, near Maldon, on Tuesday.

On February 2, at Khartoum, a son was born to Mr. and Mrs. Herbert S. Job.

The wife of Viscount Broome, only son of the present Earl Kitchener, gave birth to a son and heir on Monday.

Sir Charles Marling and Lady Marling had the honour of being received by the Queen on Tuesday afternoon.

Sir Edward Maclagan was received by the King on Wednesday, upon his appointment as Lieutenant-Governor of the Punjab.

On February 22, at Pocklington, Yorkshire, a son was born to Brigadier-General G. E. Bayley, C.M.G., D.S.O., and Mrs. Bayley.

Mr. Robert S. Hunter, vice-chairman of the Bristol Merchants' Morocco Association, accompanied by his daughter, is now on a visit to Morocco.

The King has conferred upon M. Jean Gennadius, the honorary Greek Minister to the Court of St. James, the Grand Cross of the Victorian Order.

Brigadier-General Sir Percy Molesworth Sykes, K.C.I.E., Inspector-General South Persia Rifles, is at present on a visit to this country, on leave.

Major R. J. Archibald, D.S.O., pathologist at the Wellcome Research Laboratories, left Khartoum on February 3 for Cairo and England, on leave of absence.

Major-General W. H. Greenly, Chief of the Military Mission to Roumania, had the honour of being received by the King, at Buckingham Palace, on Tuesday.

Lord Inchcape has been confined to his room since Saturday suffering from a rather severe attack of influenza. He hopes to be about again next Monday or Tuesday.

The Maharajah of Bikaner and party and Colonel Sir James Dunlop Smith, who have been in Paris since the commencement of the Peace Conference, arrived in London on Monday night.

On January 15, at Roorkhee, U.P., India, the marriage took place of Major Cyril N. Steel, 141st Bikanir Infantry, and Evelyn Blanche, youngest daughter of Dr. and Mrs. C. E. Candle, of Henfield, Sussex, and Assam.

On February 19, at the Church of King Charles the Martyr, Tunbridge Wells, Captain T. G. Spinney, British Vice-Consul at Mazagan, Morocco, was married to Elizabeth Mary, daughter of the late Commander George Campbell, R.N.

Lady Chelmsford and the Hon. Bridget Thesiger had the honour of being invited to luncheon with their Majesties at Buckingham Palace last Friday. Lady Chelmsford was afterwards invested by the King with the insignia of a Dame Grand Cross of the Most Excellent Order of the British Empire.

On February 19, at St. Luke's Church, West Holloway, the marriage took place of Alexander Robert Turing Gibbon, eldest son of Mr. and Mrs. Charles Gibbon, of Wattegama, Ceylon, and Kathleen Minnie, only daughter of Mr. and Mrs. Frederick Boulton Truby, of 73, Upper Tollington Park, Stroud Green.

A marriage has been arranged, and will (D.V.) take place early in March, between Dr. G. Wheldale Stanley, M.C., of the Church Missionary Society, Mosul, Mesopotamia, second son of Mr. George Wilson Stanley, The Beeches, Ashburton Road, Croydon, late of Dalkey, Co. Dublin, and Miss C. Aileen Gardner, elder daughter of Mr. Frank Simpson Gardner, Heddon, Albemarle Road, Beckenham.

A marriage has been arranged, and will shortly take place, between Captain F. H. L. Strange, R.E., eldest son of Mr. W. L. Strange (late Indian P.W.D.) and Mrs. Strange, Laracor, Mill Road, Worthing, and Grace Mary, elder daughter of Mr. and Mrs. W. E. S. Wilson, Friars Hall, Hadleigh, Suffolk.

The marriage of Lieutenant Niels Christian Gude, 21st Indian Cavalry, elder son of Mr. and Mrs. P. Gude, of Trondhjem, Norway, and Miss Eileen Frances Lane, elder daughter of Lieutenant-Colonel and Mrs. D. T. Lane, of Patiala, India, will take place, leave permitting, at Patiala on Saturday, March 8.

On February 19, at the Cathedral, Glasgow, the marriage took place of Lieut.-Colonel George Ramsay Maitland, D.S.O., 14th Jat Lancers, younger son of Sir John Nisbet Maitland, Bart., and Jean Hamilton, only surviving daughter of Robert Findlay, Cathkin, Rutherglen.

On February 7, at Wadby Road United Free Church, Bombay, the marriage took place of Arthur Allen Waugh, I.C.S., Meerut, United Provinces, youngest son of Mr. and Mrs. Percival Waugh, 21, Cluny Gardens, Edinburgh, and Effie May, elder daughter of Mr. and Mrs. Robert D. McEwan, of Eglinton Drive, Glasgow.

Under date of February 19, Reuter's Malta correspondent reports:—It is understood that Lord Methuen, the Governor of Malta, is leaving for England at the beginning of March on a three-months' leave, which expires on May 31, and that he will not return to Malta after this period, the Governorship thus becoming vacant on June 1.

Lord Willingdon was invested by the King with the insignia of a Knight Grand Commander of the Order of the Star of India, and of a Knight Grand Cross of the Order of the British Empire, on February 19. On the same day Lady Willingdon was invested by the King with the insignia of a Dame Commander of the Order of the British Empire. Lord and Lady Willingdon had the honour of being invited to luncheon with their Majesties.

Lewa R. S. Wilson Pasha, Governor of Nuba Mountains Province, who is retiring from the Sudan Government Service, left Khartoum on February 3. An official farewell was accorded him, and many high officers and officials were present at the station to bid him good-bye. Wilson Pasha joined the Egyptian Army in 1903, and had been Junior Inspector and Senior Inspector, Kindfar Province, before being appointed Acting-Governor and, later, Governor of Nuba Mountains.

APPOINTMENTS, PROMOTIONS, &c.

Mr. T. Emerson, C.I.E., has been appointed an additional member of the Imperial Legislative Council, in place of Mr. Monahan, resigned.

The *Pioneer* announces that it is understood that Sir Henry Richards, K.B.E., Chief Justice of the Allahabad High Court, will retire in April next.

Mr. Reginald Edward Stubbs, C.M.G., Colonial Secretary of Ceylon, has been appointed Governor and Commander-in-Chief of Hong Kong, in succession to Sir Francis May.

The following Memoranda are from the *London Gazette* of February 25:—

Lieutenant-General Sir F. J. Aylmer, V.C., K.C.B., retires on an Indian pension. January 8, 1919.

Colonel R. T. J. Ridgway, C.B., Indian Army, to be temporary brigadier-general whilst a brigade commander in India. February 1, 1919.

OBITUARY.

THE AMEER OF AFGHANISTAN.

A statement issued by the Press Bureau on Monday announced that news had been received from Kabul of the death of the Ameer of Afghanistan on February 20. From later reports it appears that the Ameer was in camp in the Laghman Valley, about forty miles from Kabul, and that while he was asleep two men entered his tent, shot him and stabbed him, and then succeeded in making good their escape. The funeral took place in the evening of the same day.

His Highness the Ameer Habib Ullah Khan, G.C.B., C.C.M.G., was the son of the former Ameer, Abdur Rahman, and was born at Samarkand in 1872, his mother being a daughter of the Mir of Badakshan. He succeeded to the throne in 1901, on the death of his father, and his rule was extremely successful upon the whole. At first he manifested a certain desire for independence in his dealings with the Indian Government, and his reception of Sir Louis Dane's mission was not entirely satisfactory. After he visited India, however, in 1907 his views underwent a change, and he became a sincere admirer of our rule and government, and apparently an equally sincere friend of the British. His friendship and his powers as a ruler were both put to a severe test by the war; for it is notorious that Germany had built high hopes on a rising in Afghanistan, and that she and her Turkish ally both worked hard to corrupt the Afghans and to incite them to a

Digitized by Google

jehad against the British. They found plenty of favourable soil to work on; but the Ameer stood loyal to us, and, thanks to his tact and firmness, was able to save his country from committing the folly into which our enemies would have thrust her. If only on that ground he would deserve our gratitude as well as that of his own people, and the admiration due to his success in keeping the control of events in his own hands. But as a matter of fact, he showed himself consistently a capable ruler; and those who had a chance of judging declare that he was an honourable and excellently-intentioned man. Certainly he was extremely gifted in many ways: he was progressive, a good linguist, an excellent shot, musical, and a speaker of some parts. To friends he was genial, and socially he was quite a success during his visit to India. He was, of course, a Moslem and was very strict in observing the teachings of the Prophet, especially that regarding the avoidance of alcohol. His loss, it is to be feared, will prove a severe one both for Afghanistan and Great Britain.

Rev. Walter Clayton, Rector of Oborne, Sherborne, died on Friday. He was for many years at Masulipatam, Southern India.

Julie, Princess of Arenberg, widow of Prince Karl of Arenberg, and widow by her first marriage of Prince Michael Obrenovitch of Serbia, has died at Vienna, at the age of eighty-eight.

Lady Molesworth, the wife of Sir Guilford Molesworth, K.C.I.E., died on Saturday at The Manor House, Bexley. She was the daughter of Mr. John Thomas Bridges, of Walmer, and was married to Sir Guilford in 1854.

Lieutenant-Colonel William Wilson Petrie died at his residence, Bois Hall, Addlestone, Surrey, on Saturday. He was given his lieutenant-colonelcy for his work with the Sind Volunteers in India, where he was associated with Messrs. Ralli Brothers.

Colonel William Henry Wilson, who died at Petersfield on the 22nd inst., in his eightieth year, was for five years Commissioner of Police for the Town and Island of Bombay. He served in the Indian Mutiny campaign, taking part in the operations against Dessaies in the North Canara and Bedee Districts.

Lieutenant-Colonel J. J. Macleod, C.I.E., late of Lalserich, Chumparun, India, has died at Oban in his seventy-eighth year. He was formerly engaged as an indigo planter in Tirhoot, and had been major and honorary lieutenant-colonel of the Bihar Light Horse and honorary aide-de-camp to the Lieutenant-Governor of Bengal.

Lotfy Effendi Abdalla Semaika died last week in London. He was the eldest son of Abdalla Bey Semaika, Legal Adviser to the Egyptian State Railways, and a nephew of Marcos Pasha Semaika, of Cairo. He came to this country about two years ago, and joined St. Bartholomew's Hospital as a medical student. The funeral took place at Paddington Cemetery, Kilburn, last Friday afternoon.

NEWS IN BRIEF.

The Bengal lawn tennis championship has again been won by the Japanese player Z. Shimidzu.

Snow began to fall in Simla on January 18, and twenty-one inches were recorded in twenty-four hours.

During the week ended January 11 the mortality from plague in India was 1,964 seizures and 1,460 deaths.

A deputation of the Indian National Congress will shortly visit England in connection with the reform scheme.

It is officially stated that there is no truth in the statement that the Duke of Connaught is going shortly to Egypt.

The British military authorities have made several arrests in connection with the ill treatment of Kut prisoners of war.

At the funeral of Mr. Alexander Finn, of Richmond, who was for over forty years in the Consular Service, earth from Jerusalem, where Mr. Finn was born, was sprinkled on the coffin.

It is reported that the Galician and Ukrainian prisoners of war in Italy, to the number of 100,000, are being formed into divisions and sent, via Odessa, to join the Ukrainian Army.

The Postmaster-General announces that the despatch of the overland Indian mail this week has been cancelled, as the ship which would have conveyed it has been damaged in collision. The next mail will now leave on March 6.

Sir James Meston will present the financial statement to the Imperial Legislative Council on March 1, and the discussion on it will take place from 7th to the 12th. The Budget will be present to the Council in final form on March 21.

The statement that it has been decided that the appointment of Governor of Malta shall be filled in the near future by a senior officer of the Royal Navy instead of a general officer of the Army as heretofore is officially described as being without foundation.

About forty members of the First Fourth Hampshire Regiment, who were taken prisoners at the fall of Kut and have recently been repatriated, were given a public welcome in Winchester on Thursday last week, the men and their friends being given dinner, tea, and an entertainment.

According to Turkish official returns, the total losses of the Ottoman Army from the beginning of the war to the end of 1918 are as follows:—Killed and died of wounds or diseases, 5,550 officers, 431,424 men; wounded, officers and men, 407,772; prisoners and missing, 3,030 officers, 199,701 men.

Under date of February 3 the Delhi correspondent of *The Times* reports:—A widespread agitation, frequently characterized by violent language and gross misrepresentation, has been set on foot against the Rowlatt Bills. The passive resistance proposal, which was mooted during the war, has been revived in some quarters.

M. Angelesco, Roumanian Minister of Education, and President of the War Damages Commission, has forwarded to M. Bratiano, the Premier, a memorandum, in which he estimates the damage suffered by Roumania at the hands of the Central Powers at twenty-eight and a-half milliards of francs, and at the hands of Russia at four milliards of francs.

The Bhavnagar correspondent of the *Times of India* says that the postal sorters of the division, numbering about 200, recently sent a telegram separately to the Director-General of Posts and Telegraphs at Simla and the Deputy-General Postmaster, Poona, requesting them to take into consideration the question of the revision of grades and the grain allowance.

The Egyptian Association of Paris has sent to the President of the Peace Conference a letter protesting against the absence of Egyptian delegates from the Conference which will decide the fate of their country "occupied since 1882 by a British Army in violation of all international guarantees, and of the pledges of numerous English statesmen to leave the people of Egypt free to enjoy their legitimate independence."

Reuter's Constantinople correspondent reports (February 18).—According to the newspapers Ismail Hakki Pasha, the head of the Commissariat Department of the Ministry of War during the tenure of office of Enver Pasha, has been sentenced by court-martial to one year's detention in a fortress, confiscation of his property, and dismissal from the Army on account of his shameful speculations at the expense of the Army and the public.

Abdullah Yusuf Ali, lecturing last week at Bedford College on "Indian Education," said that elementary education was quite out of touch with the life of the people, and would require to be built up anew, based on the needs of the agricultural and working classes. The middle classes were better educated than those in some of the advanced countries of the world. As regarded the percentage of University students, India suffered little by comparison with England or Wales, and was greatly ahead of Japan.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant. Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.

THE DEATH OF THE AMEER.

The assassination of the Ameer of Afghanistan is an unwelcome reminder that the unrest fomented in Central Asia as well as nearer home by the war has not yet subsided, but in the absence of further information we have no means of knowing whether the crime is of purely local significance or whether its origin is traceable outside Afghanistan. It is certain that in the death of Habib Ullah Khan Great Britain has lost a loyal supporter, who proved his friendship during a critical period. Afghanistan was pledged by treaty to observe neutrality; but it required the exercise of all the Ameer's authority to restrain from time to time some of his subjects from kicking over the traces. The Afghans are Moslems and also a fighting race, and if they were persuaded that the faith of Islam was threatened, it would require more than treaty obligations to keep them neutral. The circumstances of the struggle in which Turkey and Great Britain were ranged on opposite sides compelled the Afghans to consider whether it had to be regarded as a religious war. Thanks, probably to the unequivocal attitude of the Ameer, it was resolved at a general meeting of the Ulemas that there was no call upon Afghanistan to embrace the cause of Turkey. The decision was helped by the fact that the Afghans have no high opinion of the religion of Young Turkey, whose leaders are regarded as indifferent followers of the Prophet, if not actually apostates. Nevertheless, the fighting instinct of the Afghan was sorely tried by Turco-German intrigue, and a weaker or less loyal ruler at Kabul might have been tempted to court popularity at home by relaxing the strict hold that he maintained on his subjects. A German mission, it will be remembered, reached Kabul and remained several months in the country. Its object was by bribes and promises to induce the Ameer to prove false to Great Britain and to raise a *jehad*, which must have seriously embarrassed the India Government. The mission met its match in Habib Ullah Khan, for not only did it fail to shake his loyalty, but by his discreet handling of it he seems to have contrived to make the members "lose face" even among those who were inclined to accept their arguments with their largesse. In all probability, however, there would remain a pro-German party in Afghanistan, who would seek to discount the shortcomings of the Young Turks as Moslems by insisting upon the Sultan's position as Khalif.

Only a few weeks ago negotiations were reported to have been opened at Kabul between the Ameer of Afghanistan and representatives of the Emir of Bokhara and various petty Khans of Central Asia. The object in view was supposed to be the establishment of a league of the Mohammedan rulers of this part of the world. From the fact that the Emir of Bokhara was to receive help from Kabul in the reorganisation of his army and territory, it was to be inferred that the Ameer was the leading spirit in the movement, which at first sight would be expected to commend itself to Moslem opinion. On the other hand, if the Central Asian league was meant to be an effective counter to Turkey's Pan-Turanian ambitions, there would be a further reason why the Turco-German party in Afghanistan should regard the Ameer as the main obstacle to the attainment of their ends. Habib Ullah Khan's "advanced" tendencies must always have created mistrust in the minds of the more fanatical of his subjects. His partiality for the conveniences of European civilisation, ranging from motor-cars to doctors, would be interpreted as a falling away from grace, while the introduction of numerous modern industries will have afforded a standing incentive to the forces of reaction. Habib Ullah Khan, however, knew his people, and showed himself capable of providing for his own safety. A policy of repression, however, sooner or later results in counter measures, and the recent Afridi outbreaks on the border may have been a symptom of the movement slowly coming to a head in Afghanistan. Whatever explanation, therefore, may be given for the Ameer's murder, it will be wise to regard the situation as dangerous until such time as it can be shown that the new ruler has established himself firmly on the throne and intends to continue the policy of his predecessor in wholehearted co-operation with the India Government. It is by no means certain that the succession will be effected peacefully. Custom prescribes that the son of the first marriage contracted by the father should be his heir, but Court intrigue is not always eliminated, and in the present instance, in view of the Ameer's sudden death, may wholly determine the question of the next ruler. The late Ameer's eldest son, Inayat Ullah Khan, should by right ascend the throne; but at one time or another his two uncles, one a year younger than himself, and the other, Nasr Ullah Khan, who has occupied a prominent position in Afghanistan, not always on lines of strict accountability to the Ameer Habib Ullah, have been credited with designs on the succession. The latest report, indeed, states that Nasr Ullah Khan has seized the reins of power.

The removal of a ruler of such tried ability as the Habib Ullah Khan can hardly fail to unsettle some of the small Central Asian States that were inclined to look to him for political guidance. Whoever the new Ameer may be, he will lack the prestige that his predecessor had won on the strength of his seventeen years' experience on the throne, and the aspirants to the leadership of the Khanates will not be confined to the Afghan Court. In these circumstances a more watchful policy than ever will be necessary both on the Indian frontier and in the territory bounding Afghanistan on the west and north. It is fortunate that the war in Europe is over, and that the knowledge of the defeat of Germany and Turkey will have reached those regions. More important still, the presence of British troops will help to discourage unrest among the Khanates. In this connection, however, the advance of Bolshevism in the direction of Central Asia cannot be overlooked. Bolshevist forces hold the line of the Lower Oxus, and it is not many days since an engagement took place between them and a small British force aided by Russo-Turcoman Menshevist irregulars at a point fifty miles north-east of Merv. The Bolshevists were defeated, but the peace of Persia and Afghanistan requires their complete elimination from the Transcaspian district. In this part of the world politics and economic factors are closely allied. One effect of the disorders in Russia will have been to shut off Afghanistan from a variety of goods which the people were in the habit of importing from her northern neighbour. The deficiency should be made good as far as possible from India, not only in the interests of Indian trade, but to prevent any shortage of necessary commodities being used in the stirring up of unrest.

THE ORGANISATION OF INDIAN LABOUR.

By JANUS.

I should like to try to carry a little further the ideas propounded in the leading article in THE NEAR EAST last week on the subject of Indian labour. I am in entire agreement with the view there put forward that careful inquiry is necessary to ascertain the causes of the existing dissatisfaction and to prepare a basis for some constructive policy, but I want to urge that the inquiry should be directed in particular to the whole question of the organisation of the workers. So far as I have been able to observe, most of the real difficulties confronting employers and managers arise from the impossibility of knowing what is in the minds of the heterogeneous crowds with whom they have to deal; they cannot have familiar intercourse with each individual, and there are usually no authorised spokesmen whom they can consult, though there may be busybodies ready, and perhaps willing, to mislead. I should hesitate to make this statement entirely on my own responsibility, but in fact it has no claim to novelty. The Bombay correspondent of *The Times* has recently insisted on the fact that in that great city there is very little contact between the millowners and the employees: the enlightened and progressive firms which manage the big textile factories in Madras have stated publicly that they would cordially meet more than halfway a properly constituted union of their workpeople; and from smaller centres of industry one hears very much the same thing. Organisation, then, would be an immediate convenience, but even if that were not the case, it is well to recognise that in some form or other trades unions must come; for it is impossible to believe that in this matter India will strike out a line of her own and continue to dispense with what other countries have found to be essential.

What should be the attitude of the Government towards this impending change? Unions of workers may be allowed, as happened in England, to grow up outside of, and perhaps in conflict with, the law of the land, or their advent may be welcomed and fostered as meeting a national need. The whole industrial history of England during the last half-century demonstrates the folly of the former course. Manual labour has thereby been largely cut off from the main current of the national life, and now tends to regard that current as destined exclusively to the satisfaction of its own wants. We have worried through so far, and I believe that with statesmanlike leading we shall worry through to the end, and eventually establish a more reasonable economic regime, but the waste of the process has been, and probably will be, enormous, and it is still quite possible that the nation will go to pieces and the leadership of the world fall into less worthy hands. Let us imagine for a moment how different the position would now be if a century or so ago some good fairy had taken charge of the movement, when it was just beginning to make itself seriously inconvenient, and had guided masters and men (and also Parliament) on a steady course, harmonising the apparently divergent interests and gradually fashioning the productive forces into a supple and well-trained team, all pulling together and each member sure of an adequate reward. The contrast between that picture and the actual position may safely be left to speak for itself, but my present point is that it is the bounden duty of the Indian Government to play the good fairy in matters of the kind. If India on the path of progress is to take all the wrong turnings, and stick in all the thickets, and fall into all the holes, what is the use of having an experienced guide? We in England have made almost every possible mistake; we have walked on the edge of every precipice within reach, we have wandered into deep morasses and extricated ourselves with pain and toil, and now it is at once our duty and our privilege to let India benefit by the experience we have gained. The inconveniences of a labour movement are beginning to be seriously felt in India; and now is the time to bring our experience into play.

These considerations appear to me to be conclusive as against a policy of wait-and-see. Things in India are not yet very bad, but they are certain to get worse, and if the people are left without guidance, we must expect to witness a rapid growth of class-antagonism which will cripple industrial expansion and perhaps leave the country even poorer than it is. I urge then that the Indian Government should act, but I am not going to lay down any precise line of action. Industry is still plastic in India, and it can be moulded gradually by wisdom based on accurate knowledge; but while the Government is (I hope) sufficiently wise, it is certainly not equipped with the knowledge on which action can be based, and inquiries such as were proposed in the article I have quoted are obviously necessary as a preliminary measure. Their difficulty lies in the fact that they require a special agency, and that India contains very few men and women with the requisite qualifications. There are, however, a few, and the individuals who have helped to settle recent strikes would obviously form a nucleus for the investigating body. This nucleus needs to be enlarged, and I would like to suggest the inclusion of two or three English trades-unionists, not of the theoretical type which has done so much to discredit the movement, but the solid men who have been through the mill and have realised the weak points of the system they control. Send out two or three of such men, with a few experienced social workers, mainly women, let them join hands with the few workers now in the country and with representatives of the employers, give them plenty of time, and ask them to formulate a policy which shall conduce to the gradual development out of the existing material of a body of workmen of increasing efficiency, better paid and better treated, and worth more to the country as a whole and to their employers in particular. India wants a labour policy of this kind, and if, as is almost certain, it cannot be framed without providing for trades unions, then let the Government welcome the unions at once, and recognise that they must form an important element in the national life. Everyone now admits that capital, labour, and management must work together as a team if there is to be any prospect of industrial peace: the business of the moment is to settle how the team can be broken in and trained.

PRESS ON THE NEAR EAST

Greek and Briton.

The *Contemporary Review* contains a paper entitled "The Unity of the Greek Race," by Professor Ronald Burrows. The greater part of this is devoted to setting forth the claims of Greece upon the Allies, and a plea that those claims shall be met in the most generous spirit, and especially that they shall be supported by Great Britain. Perhaps the part that will appeal most to the reader is that in which Professor Burrows sums up those "points in common between Greece and Great Britain which exist between us and few of the people with whom we are allied":—

> We are both a "Nation of shopkeepers," and yet we have not been found wanting in the day of battle. We are both—and here there is no "and yet"—a nation of sailors. At our best we turn out something of the same type of man. English archæologists who know their own country have often been startled by the resemblance between the Greek peasant and the best type of English artisan. If Venizelos strikes us as just the man we should like our own statesmen to be, it is not a little, I think, because we find in him no discordant note to our own ideals. Is it because we ourselves have been brought up upon the thoughts and the lives of the ancient Greeks, and that descendants by adoption and descendants by blood cannot be alien to each other? Certain it is that if we genuinely understand and admire the modern Greek at his best, he in his turn has a natural friendliness to us which hardly a nation in Europe has. The vote of sympathy to England passed in the Greek Parliament at the most unpopular moment of the Boer War finds an echo in the hospitality, and, indeed, the affection, that is shown in Greece to the individual Englishman. At the present moment rich Greeks have left the sum of £30,000 for the establishment of what they call a Greek Eton on one of the small islands off the Attic Coast, and a committee of representatives of both countries is now at work to organise both this public school on the English model, and two big day schools, one for boys and one for girls, in Athens itself, in which the education is to be of the English type, and

Digitized by Google

to begin with, at any rate, conducted by English teachers. Even those who may raise eyebrows at such an imitation of institutions which we ourselves often criticise, must at least confess that it is not everywhere that we find appreciation of what is so typically English. I was reading the other day the account of a lecture given in a town in Peloponnesus this last spring by a local notable on his return from serving on the Salonika Front. The title of the lecture is "Why the English are what they are." There is a long description of the influence of our sanitary arrangements, our baths, and our shaving on the Greek private. "One night in April," says the Greek officer, "the men of my company had succeeded in a very dangerous attack, and occupied the enemy's trenches. All night the whole force stood to their arms, some guarding their new position, and others digging themselves in. The very first report made by the N.C.O.s next morning was that their men wanted to shave." "Yet," adds the officer, "they had all shaved the day before the attack!" Similarly, there is much talk of the influence of the English breakfast with its tea, marmalade, and bacon. The Tommy's habit of bathing anywhere and everywhere, "even if the water was cold as snow," proved for some time a stumbling-block to perfect imitation, but the Greeks finally compromised on hot baths, and tubbed by companies twice a week. Above all, Mr. Papantonion was eloquent on the merits of the young English officers, "not one of them older than twenty-six," who gave them so freely and pleasantly of their three years' lore of war. "One would have thought one was not listening to an English aristocrat, but to some hoary-headed shepherd of the mountains of Arcadia."

The Tilak-Chirol Action.

The verdict in the action for libel brought by Mr. Tilak against Sir Valentine Chirol and Messrs. Macmillan must have been welcomed by all right-minded people who had followed the case at all closely. Referring to the public spirit shown by Sir Valentine Chirol, *The Times*, in a leading article (February 22), remarks:—

The action was instituted in 1915, and ever since, with very little intermission, Sir Valentine Chirol has been compelled in the public interest to devote himself to the preparation of his defence. The immediate issue may have seemed simple enough, but it was necessary for him to conduct elaborate researches in order to substantiate the statements of which complaint was made. He was compelled to pay long special visits to India for the purpose of collecting further evidence; and he had to undertake this task at a time when His Majesty's Government desired to avail themselves of his long and unique knowledge of the international affairs of Europe. Four years is a very large slice to take out of the life of a distinguished man who had already retired from the active practice of his profession. Sir Valentine Chirol might have avoided a long period of strain and anxiety, and a vast amount of expense, if he had been willing to make even the formal apology which was invited. He refused to do so because he believed that his charges were well founded, as an impartial British jury has now testified. But a larger consideration influenced Sir Valentine and those associated with him in this issue. He and they felt, in the words of Sir Edward Carson, "that any apology or withdrawal would prove disastrous to the interests of good government of India." Now that the case is over, it will be recognised that Sir Valentine was actuated throughout by the loftiest public spirit, and that he rendered valuable service to the cause of British rule by flatly refusing to make any admission which would have left Mr. Tilak free to pursue with an enhanced reputation the courses so severely condemned.

The plaintiff's character, as disclosed in the course of the action, is then examined, and the results of his activities are indicated. The article concludes with a tribute to Sir Valentine Chirol which will be endorsed by all who admire faithful service to one's country and determination to stand by the right at all costs rather than to worship that modern fetish of politicians—"compromise."

The case was serious, because if Mr. Tilak had succeeded in his action the inevitable, though erroneous, assumption of the public in India would have been that his past offences had been whitewashed. It was still more serious because a verdict adverse to Sir Valentine Chirol might have had the deplorable result of preventing in future the free and candid exposure of movements in India (and elsewhere) hostile to the State. Revolutionary conspiracies in India have not disappeared. The Rowlatt Report, and the two Sedition Bills now before the Imperial Legislative Council, show that the need for vigilance and for precautionary measures remains as great as ever. The accusation against Mr. Tilak was in effect that by pen and speech he created an atmosphere in which the germs of revolution flourished, and led to the commission of criminal outrages. The best remedy for all such tendencies is, of course, publicity. Sir Valentine Chirol applied the remedy with unerring discernment, and shed a flood of light upon the earlier phases of Indian unrest. His zealous devotion to the public weal has most undeservedly given him four years of worry and suspense, but we believe that in England and in India alike there will be nothing but praise for the stedfast manner in which he refused to abate one jot or tittle of the words he had penned after the most careful and impartial consideration. Even Mr. Tilak did not dare to suggest that he had written down aught in malice.

The Central Asia Problem.

The assassination of the Ameer of Afghanistan lends additional interest to Iktal Ali Shah's article on "The Khanates of the Middle East" which appears in the *Contemporary Review*. The writer begins by pointing out that the collapse of Russia may provide the world with a kind of "Balkan Question" on a vast scale. He questions whether Russian administration showed any signs of permanency.

From very early times the Russian system of government in the mid-East has been lacking in that moral impulse which is the best guarantee of peace and submission. On the Steppes, Turcomania, Russian Turkestan, and over the Khanates, no real exertions were made for the amelioration of the people. After the Russian victories protocols were signed, which contained most liberal terms for the vanquished; but in practice only concessions were granted, though points of importance to the people of Turkestan were almost always regarded by the Russians as involving Imperial prestige. Their non-fulfilment of peace terms, as also the heartless treatment of the subdued people by the Russians, has even made their rule in the Middle East politically unstable. Very few people will be found to question this view to-day. The article continues:—

In the beginning of the war the attitude of the Khanates was anxiously discussed. It was pretty generally admitted by students of mid-Asiatic questions that if ever the Khanates participated in the conflict it would be the result of external pressure, and of whispers to the Khan that his opportunity had at last arrived to revive the glory of his ancestors. For a time Turkestan and Bokhara meditated, but it was not long before Russian prestige had been shaken to its foundations. Bolsheviks won the armed assistance of the people of Central Asia, and the war, as predicted before, was declared against the "infidels."

For successive centuries the Khans had been autocratic rulers, and it was not until the Russian penetration that their liberties were curtailed. At the outbreak of this war civilisation first entered the gates of Khiva, where a form of representative government was installed. Bokhara followed suit, and the Kirghiz and the Turcomans, overthrowing the Russian yoke, once again breathed the air of freedom. The whole mid-Eastern question was altered, and politics were moving rapidly in the land which had for long remained a tortoise of the East. Abdullahed, the Khan of Bokhara, received representatives from the Russian Tartar communities round the Ural Sea and Kazan, seeking his assistance and sympathy for the Pan-Turanian movement. To all these overtures the Uzbeks gave their hearty approval; for the promoters of the scheme had founded it on sound principles. It was pointed out that a marked affinity existed amongst all the members of the Tartar race: in language, religion, and traditions they were alike. A claim was put forward to demand from Russia and other Powers the policy of "non-interference and self-determination."

The Russian advance in Asia, steady and stealthy, is sketched with a nice touch of irony, which pays fitting tribute to "the humanitarian work" and "the intense hospitality" of Russia of the old days. And finally we find ourselves brought up to the "menace to India." The article concludes:—

To us Afghans also the danger was of great magnitude. The cause of all the Anglo-Afghan wars can be traced to Russian intrigues, and the cost of these campaigns amounts to about £71,000,000. First of all, Amir Dost Mohamed was incited to clash with the British, and there is evidence to show that secret treaties existed between Russia and Afghanistan which led to the second Afghan War. In recent times the late Amir was also approached regarding a Russian alliance, but he proved deaf to all such solicitations. The Afghans deplore such a great proximity of the Russian frontier to their own: nor have the Khanates forgotten the Kaufmann march.

Why should Russia fetter the Khanates any longer? And why should these regions not have the right of self-determination? Apart from sentiment, political expediency warrants the liberation of Bokhara, Khiva, and Khokand. The great dread of a "Russian march to India" will for ever be removed, and the peacefulness of that great British dependency will be secured. Further, this step will enable Afghanistan and India to come closer together, which in itself cannot fail to produce a beneficial effect on Mid-Asiatic politics. . . . An inauguration of the former liberty of the Khanates has now become a pressing need against all possible attacks on India; and when this point is viewed in relation to the new condition of things in Mesopotamia and Persia the question at once assumes an aspect of Imperial necessity.

THE KING AND INDIAN RELIEF.

The King and Queen have received numerous offers of donations from ruling Princes and others in India in commemoration of their Silver Wedding, and the sum of £35,000 has already been received.

His Majesty has approved a proposal that these donations should be constituted into a special fund, to be called "The King Emperor's Patriotic Fund." The money will be invested and its income administered at the discretion of the Viceroy for relief of Indian sufferers with claims based on the war which are not covered by any other funds at present in existence, such as the Imperial Indian Relief Fund, or which may only come to light when such funds have been finally closed.

The King Emperor's Patriotic Fund is wholly distinct from the Indian Silver Wedding Fund, which has been raised by gifts and by public subscription in India, and which, in accordance with their Majesties' wishes, is to be devoted to the higher education of the children of Indian soldiers who have fallen in the war.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The removal of the embargo on shipments to Turkey and the Black Sea ports has speedily been followed by arrangements by a number of steamship lines for the early despatch of vessels to the Levant. The preliminary list of ships with their closing dates for cargo will be found elsewhere in this issue. In view of the short time available the list must be regarded as very satisfactory, and the number of lines concerned offers the best guarantee that British trade with the Near East will not be handicapped for lack of shipping facilities. The Cunard line, it may be noted, are going to pay special attention to the trade with South Russia, and it is proposed as soon as normal navigation is restored to establish direct through services with the ports of the Black Sea. The Eastern Company of Warehouses Insurance and Transport of Goods with Advances, Ltd., of Petrograd, which operates the Caucasus and Mercury Steamship Company and other lines, are to act as the general agents of the company, and they are shortly despatching a representative to Odessa in connection with the development of Anglo-Russian trade.

***

In some commercial circles I find that considerable exception is being taken to the fact that restrictions are still being maintained on exports. The view taken is that in regard to trade with Turkey, Bulgaria, and South Russia the restrictions will have a hampering effect, and that little progress can be expected in restoring trade to its normal level until the exporter enjoys perfect liberty. No doubt there is much to be said for this view, and there can be no question that there ought to be no delay in removing all restrictions on trade as soon as this can safely be done. At the same time, there are obvious difficulties in the way, and in justice to the authorities it must be pointed out that in many quarters it is felt that the restrictions are going as rapidly as possible.

***

Even if all restrictions on exports were removed trade would still be subject to a number of handicaps. To say nothing of the labour position—a world-wide trouble apparently, and one which naturally leads manufacturers to adopt a hesitating attitude—there is the question of cable delays, for instance, which is referred to in the extracts from letters from Saloniki which are given on page 190. The writer points out the difficulties created as regards trade with the Near East by the delay in cablegrams, and his remarks unfortunately have a world-wide incidence. A cable could reach Colombo from London in about two hours before the war, and now it takes about 96 hours. As regards messages from India, the position is the same, and cables often take a number of days to come. The postal authorities are not optimistic as regards the prospect of an early improvement, but it is satisfactory to learn that they are doing their best to help the business community, and that with this end in view Government use of the cables, particularly to the Near East, has been considerably diminished.

***

A further important step in the promotion of British trade overseas has been taken by the amalgamation of the British Manufacturers' Corporation with the Federation of British Industries. The object of the development, it is pointed out, is to proceed with the appointment of unofficial representatives of British industries abroad. Suitable representatives with business experience and a knowledge of the foreign country in which they are to serve will be selected by the Federation to represent the interests of British manufacturers in the markets of the world. It is in short, an attempt to represent British industry by men chosen by the industrialists themselves. The advantages of this course, especially in markets like those of the Near East which require to be catered for with special care, are very evident, and this new intelligence service ought to be a priceless boon to the business community.

***

At first sight it might be imagined that the appointment of these representatives would entail overlapping with the official services, but it is maintained that there is no risk of this, as there are many directions in which it is impossible for officials to render the services desired. It is intended that the representatives of the Federation shall work in the closest touch with the Government's representatives abroad. Certain preliminary steps, it is interesting to learn, have already been taken by the Federation in regard to the establishment of this intelligence service, notably in Greece, where, since the visit of the Greek Mission, the Federation has had a temporary representative, who has performed valuable work in the interests of British industry. The appointment has now been made permanent, and in the course of the next few weeks a Federation office will be opened in Athens.

A further illustration of the efforts that are being made to develop the resources of the Indian States is provided by Hyderabad, where not long ago a special department of industries was created with a view to the promotion of the industrial progress of the State. Among the industries that are being investigated is the production of alcohol and of alcohol motor spirit, for which Hyderabad is favourably situated owing to its large supplies of the mahua flower in the jungles. Soap-making is regarded as another promising industry, as the raw materials are produced locally; and there are also possibilities in regard to paper-making, for which there are abundant raw materials in the shape of grasses and cotton stalks, etc., and also for tanning, an industry already established, but which, it is thought, is capable of considerable development.

***

Very shortly we are to see the establishment of another new bank for the financing of foreign trade. The bank, which will be named the British Overseas Bank, is being formed by a group of banking institutions, including Messrs. Glyn, Mills, Currie, and Co., the Union Bank of Scotland, and Williams Deacon's Bank. Its capital is expected to be £2,000,000, divided into ordinary and preference shares, the former being taken up by the banks concerned, while the latter will be open to public subscription. Besides a dividend of 6 per cent., it is understood that the preference shares will participate in surplus profits. The object of the bank is to give further facilities to the British import and export trade. Branches of the new institution will be established abroad, thus saving the banks concerned from each having to open a branch when entering new territory.

***

Discussing the Empire's oil resources and the control and the future outlook for the industry, Mr. Montagu Summers, in the course of an interesting paper before the Royal Society of Arts this week, said that the paramount importance of a proper control of all the resources for oil production in the hands of the British Empire was going to become a very prominent and urgent question. He had reason to believe that the Government was fully alive to the urgency and importance of the matter, and that action was already being taken towards the desirable end of placing the oil industry on a national basis. Mr. Summers explained that what must give stress to the need for an all-British organisation effectively controlling the present and prospective oil resources of the Empire was the coming failure of American oil supplies. Some American experts, he remarked, went so far as to say that the supply of crude oil in the United States would cease soon after 1930, and while this was no doubt the worst view, it emphasised the importance of careful control and management of new oilfields. Finally, in regard to the question of future supplies, consideration must be given, he pointed out, to the large amount of oil and oil properties destroyed in Russia, Roumania, and Galicia.

***

I hear that the Egyptian State Railways have contracted for about 150,000 tons of South Wales coal.

EGYPT'S TRADE IN 1918.

Great Rise in Imports.

(From Our Own Correspondent.)

Cairo, February 9.

The Egyptian Customs Administration has this week published its returns for the month of December, and it is therefore possible to review the trade figures of the country during the year 1918. The year has, in fact, been another record, for the figures for both imports and exports far exceed anything ever attained in the past. During 1918 imports totalled £E51,155,306 and exports £E45,370,020, as against £E33,175,139 and £E41,050,612 respectively in 1917. The following table will perhaps best show how the trade of the country has progressed since 1913:—

	1913. £E	1915. £E	1916. £E
Imports..	27,865,195	19,328,993	30,854,141
Exports..	31,662,035	27,045,872	37,462,453
		1917. £E	1918 £E
Imports		31,175,139	51,155,306
Exports		41,060,612	45,370,020

From this it can be seen that imports have risen by 50 per cent. compared with the previous year and that they are almost double the figure at which they stood in 1913, the last normal pre-war year, whilst exports have increased by about 10 per cent. on 1917, and by about 40 per cent. on 1913. On the other hand the balance of trade has swung over completely against Egypt. Throughout the above period it has been in favour of the country, the amount having been in the neighbourhood of seven millions in each of the preceding three years. In 1918 the balance, even allowing for re-exports, which amounted to £E1,378,732, was over four millions against the country. The reason for the change is undoubtedly on the one hand the great rise in freights and cost of production of all the articles of import, the price of most of which has not been controlled in the country of production, and on the other hand the control exercised over the main exports of Egypt—viz., cotton and cotton seed, in addition to the fact that export of most of the country's products is still prohibited, or at best restricted owing to the local demand for foodstuffs of every description. There is indeed every reason to anticipate that a continuance of this adverse trade balance will manifest itself for some time to come, though this is offset by the very substantial sums lying to the credit of Egypt in Europe as the result of previous favourable trade balances, investments since the war, etc.

Imports.

The principal imports during the year have been preserved meat £E1,900,609, skins and tanned goods £E501,454, wheat and other flour £E614,632, fresh and dried fruits £E392,189, raw sugar £E760,186, coffee £E597,674, tea £E373,600, wines £E279,076, spirits £E355,322, olive and vegetable oils £E784,206, petroleum £E818,959, benzine £E1,802,896, mineral oils £E475,820, stationery £E1,658,673, coal £E5,154,125, manufactured dyestuffs and paints £E265,325, matches £E471,605, medicinal preparations £E620,731, soap £E305,370, cotton yarn and thread £E1,147,551, cotton piece goods £E13,686,079, woollen textiles £E889,074, raw silk and silk thread, £E478,993, silks and ribbons £E761,118, sacks £E1,368,771, textiles of mixed yarns £E560,458, ready-made underclothing and hosiery £E1,494,827, ready-made clothing £E398,971, manufactured iron and steel £E2,125,553, machinery £E446,550, smallware £E658,924, and tobacco £E3,100,929.

The chief increases compared with 1917 were borne by preserved meat, £E497,445; sugar, £E430,607; vegetable oils, £E429,054; benzine, £E723,882; mineral oils, £E228,069; stationery, £E1,109,925 (of which £E402,194 was in writing and printing paper and £E273,125 in cardboard); coal, £E1,844,294; matches, £E250,238; medicinal preparations, £E270,549; cotton yarn and thread, £E426,313; cotton piece goods, £E6,696,231; silks and ribbons, £E492,842; sacks, £E282,689; ready-made underclothing and hosiery, £E1,000,699; ready-made clothing, £E298,364; manufactured iron and steel, £E1,042,289; and smallware, £E436,871. The only important decrease was in manures, which fell from £E752,806 to £E87,274.

Exports.

Under exports the principal items were:—Eggs, £E296,197; untanned hides and skins, £E432,478; rice, £E294,854; cotton seed, £E2,657,084; sugar, £E734,645; gum, £E472,933; cotton, £E38,034,467; and cigarettes, £E732,155. The most important increases were in cotton seed, £E838,827; cotton, £E4,539,274; and cigarettes, £E326,390. Decreases were recorded in eggs by £E157,707; cotton cake from £E587,691 to practically nil; onions by £E130,232 from £E289,052; sugar by £E183,467; and maize by £E133,603 to barely £E20,000.

As indicating the manner in which the inflation of prices has affected the returns, it is interesting to note the details of the following imports, the first figure representing the increase in quantity and the second the increase in value:—Sugar, 75 per cent. and 130 per cent.; tea, 7 per cent. and 26 per cent.; coal, 8 per cent. and 55 per cent.; cotton yarn, 23 per cent. and 40 per cent.; cotton piece goods, weight, 10 per cent. and 78 per cent.; woollen textiles, 15 per cent. and 26 per cent.; sacks, 21 per cent. and 26 per cent.; flour, 33 per cent. and 13 per cent.; and soap, 60 per cent. and 100 per cent. As regards exports the position may be indicated by the following percentages:—Cottonseed, 70 per cent. and 46 per cent.; rice, 41 per cent. and 52 per cent.; sugar, 34 per cent. and 20 per cent.; gum, 5 per cent. and 30 per cent.; cotton, 23 per cent. and 13 per cent.; cigarettes, 40 per cent. and 80 per cent.: and eggs, 60 per cent. and 33 per cent.

Trade with United Kingdom.

Coming now to the share taken by each of the foreign trading countries we find that Great Britain increased her sales by nearly 100 per cent. to £E27,077,635, or about 53 per cent. of the total import trade, and that taken altogether the Empire accounted for just under £135,000,000, or nearly three-quarters of the total. Between them the various parts of the Empire provided practically all the soap, cotton yarn, cotton thread, cotton piece goods, woollen textiles, iron and steel wares, coal, sacks, rice, and meat. The United States showed a falling off of 50 per cent., Chili one of 90 per cent., but France doubled her sales, Japan quadrupled hers, and Italy showed a small increase.

Under exports the United Kingdom took two-thirds of the total, the balance going as to 10 per cent. to the United States, 5 per cent. each to France and Italy. All these countries showed a falling-off compared with their share the previous year. The United Kingdom took practically all the eggs, cotton seed, onions and dates, 25 per cent. of the gum and 70 per cent. of the cotton. Greece took 60 per cent. of the hides and skins, France 20 per cent. of the gum and 4 per cent. of the cotton, the United States 25 per cent. of the gum and 10 per cent. of the cotton, Italy 10 per cent. of the gum and 5 per cent. of the cotton. Most of the sugar went to French Mediterranean possessions and India. Cigarettes, of which 404 tons (an increase of 40 per cent.) were exported, went as to 130 tons to France, 90 tons to the United Kingdom, 64 tons to the Far East, 20 tons to India, 20 tons to other British possessions in the Far East, and 11 tons to Switzerland.

It has been mentioned above that the United Kingdom provided practically all the cotton piece goods. The exact proportion was £E12,591,053 out of a total of £E13,686,079. From the special table drawn up at the end of the statistics it is possible to see not only whence the balance came but also in what line of this article it figures. In grey, bleached and printed cotton piece goods the United Kingdom stands supreme, but in Italy she has a keen competitor in dyed in the yarn articles of which that country supplied nearly one-quarter of the imports.

Trade between Egypt and the Sudan underwent considerable expansion. Imports into Egypt rose from £E2,116,974 to £E2,718,891, and exports to the Sudan from £E1,491,784 to £E2,492,208. It is interesting to note that in 1916 the figures were respectively £E923,175 and £E1,157,891. The principal imports from the Sudan were livestock £E1,119,315 (229,318 head), hides and skins £E185,861, maize £E233,885, sesame £E166,064, gum £E349,383. The chief increases were in livestock, where the number of head rose from 159,149 to 229,318, and gum where the quantity about doubled; but a decrease was shown in cotton, which fell from 2,500 tons to 391 tons, and in maize and sesame, which both dropped by half. The most important exports from Egypt were sugar £E563,253, cotton piece goods £E693,086, and tobacco £E182,416. A sign of the rise in prices is afforded by the fact that whereas the quantity of sugar exported increased by about 17 per cent. the value rose by 54 per cent.

Dr J. Collis Browne's Chlorodyne

Safe guard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

Checks and arrests FEVER, CROUP, AGUE.

The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

ACTS LIKE A CHARM IN DIARRHŒA, CHOLERA, DYSENTERY.

Of all Chemists, 1/3 and 3/-.

THE FUTURE OF FLYING.

Communications with the East.

In view of the remarkable achievements of Handley-Page aeroplanes in the closing months of the war and since the Armistice, it is not surprising that the general public should be looking to the famous firm at Cricklewood to lead the way in the development of the peace-time rôle of the flying machine as a medium for passenger and goods traffic. It is, at any rate, certain that no other type of machine has such a variety of performances to its credit, ranging from bombing expeditions to record long-distance flights. Some of the more notable feats have had the Near East or the way to India for their setting, and *en passant* a few particulars of these may be given.

Recent Flights.

There was in the first place the flight to Constantinople in July, 1917, the announcement of which provided one of the war sensations of that year. When it was decided to bomb Constantinople and the Goeben it appeared that none of the air bases in the East offered facilities for the erection of such a large machine as the Handley-Page if it had been despatched in parts. Therefore, it was decided to fly the machine the whole way, and, piloted by Major Savory, the aeroplane covered the journey from London —a distance of 1,955 miles—in 31 hours, 24 minutes actual flying time. Including five persons, the weight carried by the machine to Mudros, the base from which the capital was attacked, was 6½ tons.

Another remarkable performance was the flight from Egypt to Calcutta of several weeks ago with General Salmon and Major McLaren on board. The route was via Alexandria, Cairo, Baghdad, Karachi and Delhi.

A final illustration of the potentialities of the Handley-Page machine is to be found in the successful flight from Ipswich to India, which began on December 13 last. Unfavourable weather and climatic conditions, fog and heavy rains were encountered on this occasion, when the route included a sea journey of over 700 miles over the Mediterranean.

These great flights point the moral that future aerial development should be speedy, and that it should not be long before the time comes for the establishment of regular services between England and Egypt and India, and also with regions of the Near East like Mesopotamia, which are so situated that communications with them are a matter of more than ordinary difficulty. An official of Handley-Page, Ltd., discussing this question with a representative of THE NEAR EAST, explained that this firm were ready to provide every facility required, but that nothing could be done at the moment until it was known what the Government's plans were. "The vital point," he said, "is, in short, the extent to which private enterprise is going to be allowed to pursue aerial development. When we know that we shall know what to do. But it would be as well for the public not to expect immediate marvels, for they will only be disappointed. Rome was not built in a day, and the creation of aerial services requires a vast amount of preliminary organisation."

"At present," he went on, "there is nothing settled as regards routes. Probable lines of flight to India and other places are now in process of being explored by the authorities. The present flights are merely the journeys of explorers. It must be remembered that flight, to be of the greatest use, must be direct, and that entails crossing deserts, etc., and there must be repair depôts at convenient distances, and aerodromes with spare machines."

The Aerial Post.

The advantages of an aerial service over other methods of communication were discussed in detail by the official. "As regards passenger traffic, it is the business man," he said, "who is going to benefit. To India, for example, the cost of a ticket will be something like double that by steamer, and members of the I.C.S. and other services coming home on long leave are not likely to incur the expense merely to do the journey in four or five days. They get their holiday partly on the steamer, and they will continue to do so. Now, the business man here who has interests in India or elsewhere in the East, or in a region like Mesopotamia, which is not easily accessible, has not hitherto been able to go out to visit his agents, for he is usually unable to spare the time needed for the journey. Now he will be able to go out almost as readily as he would set out to visit Manchester or Glasgow. He will benefit also by the letter-post. In many businesses it is necessary to be in frequent communication with agents, and this is done at the present time by cables. The disadvantages of the abbreviated messages usually sent are obvious. They may so readily be misinterpreted or misunderstood. This difficulty will be removed by the introduction of the aerial post, for by paying 1s. to 5s. the head of the firm will be able to send a letter daily to his agents in the knowledge that it will reach them in a few days, and that while it will be slower than the cable, it will leave no room for misunderstanding. "The aerial mail, in fact, will be something between the ordinary mail and the cable. Normal correspondence will still be sent in the usual way, while the cable will remain the medium for urgent messages."

"One of the most valuable uses of the aeroplane," he concluded, "will be as a medium for the conveyance of samples. In the immediate future it is probably in this direction that the aeroplane is going to confer the greatest boon on the commercial community. The matter of getting samples on the market first is of supreme importance. Especially is this the case as regards samples of seasonable crops, and I imagine that to begin with much of the cargo of the commercial aeroplane will consist of this class of goods."

THE ORIENT EXPRESS.

Return of the Sleeping Car.

The re-establishment of the Orient Express between Paris and Bucharest is a foretaste of the facilities for reaching all parts of the Near East that will be provided in due course by the International Sleeping Car Company.

Mr. H. M. Snow, agent-general for the company, discussing this latest development, stated that at present the trains are running twice weekly, and that in connection with the service direct connections with Warsaw and Prague have been opened. "The route," he pointed out, "is from Paris to Basle, Zurich, Vienna, Budapest, and Bucharest. A section is detached at Linz for Prague, and another section at Vienna for Warsaw.

"The time taken for the journey from Paris to Vienna is now thirty-eight hours, as against thirty-five when we used to run through a corner of Germany. Of course, the speed is necessarily very limited, as the railways have suffered severely as the result of over four years of war. No doubt when normal conditions obtain this new route will be at least as quick as the old one, and it will have the additional advantage of avoiding German territory. From Vienna to Bucharest takes another eleven hours, making the time for the whole journey forty-nine hours.

"With regard to passenger facilities, the service at present exists primarily for officials, and no one can travel by the train without special permission from the French Ministry of War.

"After peace is signed," Mr. Snow went on, "the Orient Express may be running all right to Constantinople, but at present the only method of reaching Constantinople is by way of Constantza. At present we can only get as far as Fetesti, and from there the river must be crossed by boats. When the Orient Express is resumed to Constantinople it will be established on the old route—viâ Belgrade and Sofia. As regards connections with Greece, a section will be detached at Nish, and will run viâ Uskub to Salonika, Larissa, and Athens. Then there are numerous connections in Bulgaria and elsewhere that will presently be restored."

This covers the immediate developments contemplated by the company as regards the Near East, but Mr. Snow pointed out that only time and settled conditions were required for much wider schemes. "The time is certainly not far distant," he said, "when Constantinople will no longer be the terminus of the Orient Express. Steamers will be used to take the trains across the Bosphorus, and a service will be run to Aleppo, and from there to Baghdad. At Aleppo a section will be detached for the Syria and Palestine service, and eventually the trains on this route will be able to go as far as Egypt. But that, of course, is a matter of time."

OUTLOOK IN THE LEVANT.

British Traders' Opportunities.

We are able to publish a number of extracts from recent letters from Salonika, giving interesting details regarding the position there and at Constantinople, where the writer recently spent a week or two. Amongst other things, he points out that the great prestige attaching to this country in the Near East is largely due to the splendid conduct of the British troops:

"A Messagerie Maritime steamer, with an inspector on board, passed here weeks ago to open up the company's lines. I went to Constantinople on January 8 on board one of the Italian Steam Navigation Company's steamers, on board of which there was also an inspector, who was investigating the opening up of various lines, and had quite big schemes in view. The Roumanian Company was expecting to start immediately, and have had their offices gorgeously fitted up. The Ottoman Steam Navigation Company still continue running their steamers, trading to and fro under the Turkish flag, as usual.

Italian Traders Active.

"Italian merchants and commercial travellers from Italy were already to be seen in Constantinople booking orders. British firms at home must change their system. Many splendid opportunities for buying raw material and produce are missed owing to the difficulties of communication, both postal and telegraphic, with the United Kingdom, letters taking as long as from eighteen to twenty days in transmission, and telegrams ten, twelve, and fifteen days. Business in such circumstances is impossible.

"There is always a large business to be done in tobacco, but again the old story has to be repeated. One cannot trade with the growers and buy tobacco without full authority from the principals at home, especially owing to the difficulties of communication. *Bona fide* buyers in London should encourage the industry, and, where necessary, even make advances on expected harvests. Many districts in Macedonia which never grew this article before are now growing it in large quantities.

British Prestige.

"In these parts both the British Army and Navy have done more for British prestige in every sense of the word than our Consuls and Commercial Departments would have done in 50 years. Our soldiers and sailors have raised British prestige to the highest possible point. Britain was an unknown quantity before the Army and Navy came to these parts. To-day we stand higher than any nation. The Army and Navy have done wonders. I do not refer to their fighting qualities. I refer to their behaviour both to rich and to poor; to their politeness, their straightforwardness, and everything one can imagine and think of. Our commercial friends in Greater Britain have a lot to thank the Army and Navy for, not only for winning the war, but at the same time bringing forward the real qualities of the true Briton. Talking about the 'Silent Navy,' Jack has not had a chance of showing off his qualities ashore. Tommy has not, however, fallen short of Jack, as ashore he has lifted the flag to the highest point. He has beaten all records. The Army and Navy have done more than their duty, and the war is over. It is now for the fighters to rest and let the commercial element of Great Britain take their place in carrying forward commercially the good work done by those brave men now lying in their graves.

The Re-building of Salonika.

"Rebuilding plans will mature twenty years hence. Meanwhile this place lies in ruins. It would have been preferable in the circumstances to have started building Salonika on present-day requirements and let the future work out its own salvation. There is a great deal to be done both in and around Salonika and Constantinople, for which there is still a great future. We cannot go back to the old days.

Life in Constantinople.

"The poorer class of people have suffered terribly during the war, but I was surprised at life in general. Those who could afford it have lived well. From what I saw, things were comparatively better and cheaper in Constantinople than in Salonika. The reason for this was, no doubt, that the English pound note was worth 330-340 piastres; so that when one paid 200 piastres for a good luncheon or dinner one was really paying about 12s. Restaurants had a limited quantity of beautiful white bread. The bread supplied to the poor was *very bad*."

TAXATION IN MALTA.

(From Our Own Correspondent.)

Malta, February 1.

Speaking at the sixty-ninth annual general meeting of the Chamber of Commerce, the President, Colonel J. L. Francian said:—"From the national and commercial point of view this past year has been an eventful one for us here in Malta. I refer especially to the incidence of fresh taxation, whereby the revenue may be raised to meet increased expenditure. This fresh taxation has consisted of additions to the *ad valorem* and other duties, increases in port dues, tax on entertainments, increases in stamp duties, succession and legacy duties. Emphatic dissent has been universally expressed to some of the above new taxes, and the Chamber, realising that these pressed very hardly on the population in general, took part in the expressions of dissent."

PROMINENT INDIAN INDUSTRIES.

ENGINEERING NOTES.

Gas and Water Pipes and Tubes.

Sufficient notice has not been taken by British manufacturers of the fact that in recent years the trade in gas and water pipes, boring pipes and steel tubes has undergone a remarkable change in the Near East and the neighbouring regions. Owing to the increased activity of the oil companies, the carrying out of extensive schemes for waterworks and gasworks and the discarding of the old-fashioned earthenware tubes in buildings and water supplies, etc., the demand has greatly increased; a fact of which German manufacturers availed themselves with remarkable success. As an example we may mention that Roumania alone bought from Germany in 1913, the last normal year, iron or steel tubes, pipes, and fittings to the value of £464,100; and from the United Kingdom, similar goods, to the value of only £2,400. Greece's purchases amounted to £10,600 from Germany and £4,300 from the United Kingdom; Serbia's to £14,100 from Germany and £200 from the United Kingdom; Bulgaria's to £21,600 from Germany and £400 from the United Kingdom; Turkey's to £45,800 from Germany and £18,300 from the United Kingdom; while Egypt bought pipes, tubes, and fittings to the value of £40,200 from Germany and £123,800 from the United Kingdom. With regard to Egypt cast-iron pipes which command good prices are imported chiefly from France and England. Drain pipes are an English speciality, whilst pipes for water and gas supply are imported mainly from France. The demand in Egypt is likely to increase as, according to official reports, numerous new undertakings are projected. The same may be said for Roumania. Greece, Serbia, Bulgaria and Turkey. In Roumania, of course, for the restoration and further development of her petroleum industry; in Greece for carrying out various schemes for the water supply of towns, in Old and New Greece, the most important of which is the water-supply of Athens from Lake Stymphalia, a distance of about eighty miles; whilst Serbia will probably need great quantities of all kinds of pipes and fittings for her devastated towns. British manufacturers should give special attention to this line of trade since, according to official reports, Germany in 1912 exported tubes and pipes and fittings to Western and Southern Europe to the value of £2,500,000, against the United Kingdom's £330,000 in the same markets.

Agricultural Machinery Market.

Adana is one of the most important agricultural districts in Asia Minor, and probably the least known to British engineer manufacturers as a desirable market for agricultural machinery and implements. The Adana-Mersina Railway is connected with the Baghdad Railway, which will link Mersina with Constantinople and the Persian Gulf as opposite termini. While a large part of the Cilician plain is under cultivation, vast tracts of swampland can be reclaimed, and a system of irrigation would greatly improve the cotton culture. Plans for this are prepared, and will be carried out in the very near future. An extensive system of irrigation was put into operation, three or four years ago, on the plain of Konia, and the productivity of over 2,000 square miles of valuable farm land was greatly increased. The works were constructed by a German company. The farmers of the Adana plain have been more enterprising than those of other parts of Turkey in regard to the use of modern agricultural implements and machinery, and there the wooden plough has largely been superseded by steel ploughs. Hitherto ploughs of German manufacture have been used. A large number of steam ploughs and threshing machines have also been used, mainly of British origin. American reapers commanded a practical monopoly both in Adana and Konia. Apart from private initiative, it must be admitted that the Government Agricultural Bank and schools of agriculture have done much to extend the use of all such modern implements. The market is worth the special and immediate attention of British agricultural machinery makers.

Electric Power in Farming.

The great benefits that can be derived for the modern development of the agricultural resources in the Balkan States, especially in Serbia, by the utilisation of the water power of the rivers Vardar, Morava, Drin and Ibar, for the production of electricity, have often been pointed out in these columns. According to recent reports from Austria, President Seitz, dealing with the chaotic state of affairs in that country and the immediate need for the reorganisation of Austria's industries, said that the greatest development of all, perhaps, was to be expected in the matter of water power, in which German Austria was very rich. Only in this way, he said, could that country find compensation for the lack of coal, the supplies of which were now in Czecho-Slovak hands. Lecturing at the Royal Society of Arts last week on the use of electricity in agriculture in Germany, Dr. J. F. Cowley said that much good had been done in that country by means of farmers' combinations and co-operation in the use of intensive machinery. Most of the power used on German farms was generated at large central stations on grounds of economy. Electric lamps were used in cowsheds, barns, and dairies, as well as in the bedrooms and living rooms of the farmers. It was proved that lighting by metallic filament lamps cost less than half that of lighting by petroleum lamps. Power was carried to outlying farms by long-distance high-tension lines, and was then passed through transformers into lines of lower tension. Power was transmitted in many parts of the country by portable transformers. All these facilities can be attained at lower cost in Serbia, Montenegro, Albania, and Eastern Macedonia by the utilisation of the rivers of those districts.

The Steam Meter.

Now that the price of coal is high and is expected to be higher any method or instrument that can successfully facilitate control in the use of coal, or any other steam-producing fuel, and can also record the flow of steam over a given period of time, is more than ever a matter of great interest to engineers and steam-power users. To steam-furnace users in the East, where a coal famine prevails, such an instrument would be a boon. Several devices for that purpose have from time to time been brought out, but for some reason or other most of them have not been satisfactory. Some of German or American origin that have been introduced in the East have met, it is said, in certain cases, with fair success, but it is a remarkable fact that the new steam meters which are now obtainable in the British market are unknown in those regions. For they are superior in efficiency, simpler in design, and suitable for the requirements of factories in the East. By the use of the steam meter the amount of steam produced can be seen at once, also the amount that is used for other purposes than engine-driving, and the amount that is wasted through carelessness or imperfect covering of the steam pipes. With the aid of the steam meter steam can be sold to an adjoining factory without risk of dispute for it measures the steam with the same certainty as coal gas is measured by the gas-meter. The meter is especially valuable when charges have to be adjusted between several departments of a factory using steam from the same boiler-house. The steam meter records the flow of steam along any pipe by means of a pencil line on a chart giving the volume that has passed within a fixed period. Only one opening has to be made in a steam pipe to connect the meter, and this opening admits a plug through which pass two small tubes bent at right angles at the end, one facing the steam current and the other pointing in the opposite direction. The connection is so easy to make and break that the meter may be moved from one department to another in a very short time.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 20:—

Widespread rain in North-Western India: general at Chota Nagpur, and parts United Provinces; local in Bengal, Assam, Bombay, Central Provinces, Bihar and Orissa; more required in Bengal, Assam, and parts Punjab.

Bombay cotton market steady. Fully good broach, April-May, quoted at 574 rupees. Piecegoods market tending downwards. Calcutta rice and jute markets as during last week.

All-India cotton acreage, 20,497,000 (end of February, 1917-18, 24,781,000); estimated outturn, 3,671,000 (end of February, 1917-18, 4,036,000) bales. Ground nuts, 1,312,000 (end of February, 1917-18, 1,894,000) acres; outturn, 490,000 tons (end of February, 1917-18, 1,042,000 tons).

£588,000 reversed deferred T.T.'s were applied for and allotted on the 13th inst.; £110,000 at Calcutta and the rest of Bombay.

The Indian gold output for January at 37,280 oz. shows a decrease of 2,870 oz. compared with the total for the previous month.

SHIPPING INTELLIGENCE.

Steamship Movements.

In consideration of the announcement by the Board of Trade that trade with Turkey and Black Sea ports may now be taken up again, the Liverpool steamship lines give notice of the reopening of their services with sailings as may be required.

Moss Line.—The initial departure will be taken by the Moss Liner Glenrazan, closing for cargo on March 8, loading cargo for Syra, Smyrna, Constantinople, Odessa and Batoum.

Cunard Line.—The s.s. Brescia, for Smyrna, Constantinople and Odessa, will close for cargo in Manchester and Liverpool on March 15. The s.s. Verentia, for the same ports, will close for cargo in London on March 8.

Ellerman-Wilson Line.—The s.s. City of Delhi, the first steamer to take private cargo from this country to Constantinople, commenced loading at Hull early this week.

Ellerman Lines.—The s.s. Austrian, for Smyrna and Constantinople, will close for cargo at Manchester on March 25. The s.s. Worsley Hall, for Malta and Alexandria, will leave Liverpool on March 6.

Johnston Line (Furness Withy and Co., Ltd.).—The s.s. Maplemore, for Piræus and Salonika, also Constantza, Galatz and Braila (if sufficient inducement offers), will close for cargo at Liverpool on March 8.

BLACK SEA COMMERCE.

Financial Facilities.

The Treasury makes the following announcement:—A general license under regulation 41 D D of the Defence of the Realm Regulations is hereby granted by the Treasury to all persons engaged in the banking, bill-discounting, or any transaction in foreign moneys or exchange, or any business of a similar nature, to do, or to allow to be done, through him or through any account kept by him, any transaction whether or not involving the sending of money credit or securities out of the United Kingdom necessary for the purpose of financing the movement of merchandise to or from any Russian Black Sea port.

Trade Openings.

The Department of Overseas Trade announces that a list of certain goods which are urgently wanted in the Russian territories bordering the Black Sea, and a list of commodities now available for export from that district, have been compiled from a number of sources which are believed to be reliable. Applications for these lists from firms interested should be made to the Department of Overseas Trade (Russian Section), Sunderland House, Curzon Street, Mayfair, W. 1.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended January 31 amounted to £E13,325 making the total for the year £E308,647. The corresponding figures for the previous year were £10,394 and £E234,594.

Mr. Nigel F. Paton has been elected chairman of the Bombay Chamber of Commerce for the current year.

NEAR EAST MARKETS.

Sudan Products.

The C.E.B. report for December states:—9,349 kantars of gum were sold in El Obeid market against 9,448 kantars in the same month last year. The average price was £E1,180 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 4,968 kantars as against 3,152 last year. At Um Ruaba 4,300 kantars of gum were sold against 1,418 kantars in the same month last year. The average price was £E1,200 per kantar. At Rahad 4,458 kantars of gum were sold as against 6,591 last year.

From April 14, to the middle of October 7,088 kantars of hashab and 1,114 kantars of talh gum were exported from Mafaza, Karsala Province.

3,569 kantars of gum and 528 kantars of talh gum were exported from the northern district of Upper Nile Province during 1918.

Of Sennar Province it is stated that the great scarcity of water inland this year is proving a serious hindrance to the collection of what would otherwise be a very good gum crop. The result, however, of this and of the division with which the gum areas have now been marked off and allotted, is that the people to whom an area has been allotted are keen on improving the hafirs with a view to better water supplies next season.

Cotton.

In the Red Sea Province there were fair rains at Tokar between December 18 and 28, from which the cotton benefited considerably; but a strong east wind during the last three days of the month did much to counteract the good done by the rain. However, given normal weather there seems every hope that the crop will be considerably larger than that of last season, and it should reach a figure of some 31,000 kantars of 315 rottles. Picking is not likely to begin till the early days of February.

In the Mahas District of Halfa Province, owing to the high price of cloths, in many sagias, 20 to 30 hods have been sown with cotton.

In Berta Province at Gendetu, the southern area (sown in July), which has the least suitable soil for cotton, has already given 2½ kantars, and yields up to 7 kantars are expected on some holdings.

Dates.

A report from the Halfa Province states that the more important merchants have left the Sukkot and Mahas districts after completing their purchases. In Mahas district all the dates for the market have been sold, but in the villages north of Abri, such as Forket, Sarkametto and Mograka, there remains a fair quantity unsold. The price at Abri of Barakawi dates at times was as high as P.T.300, while many sold their Gondeila dates at P.T.320 the sack of 300 rottles (135 kilos). The prices now have fallen to P.T.240 and P.T.300 respectively. In Halfa market Barakawi dates are being sold at £E3.700 the sack, the Cairo price being £E32—33 the ton.

The Mamur Amadi reports that the amount of beeswax brought in by the natives this year in Mongalla Province is far less than last year.

Tombac in Roseires is reported to be a poor crop.

Indian Indigo Crop.

The final Memorandum issued by the Department of Statistics, relating to the crop which is now being marketed, gives the total estimated area under crop at 300,700 acres, which is 58 per cent. below the finally revised acreage (710,600 acres) of last year. The total yield of dye is estimated at 44,100 cwt. (65,900 factory maunds), as against 88,300 cwt. (131,900 factory maunds), the finally revised estimate of last year, or a decrease of 50 per cent. The production of the artificial dye in the United Kingdom, it is stated, has not been without its effect on the Indian industry. The season, on the whole, has not been favourable for the indigo crop, owing mainly to deficient rainfall.

Rosin and Turpentine in the Punjab.

The Progress Report of Forest Administration in the Punjab for the year ending June 30, 1918, states that the Jallo factory produced 16,426 maunds of rosin and 46,709 maunds of turpentine. The Lieutenant-Governor has recently sanctioned a proposal that the sale price of Jallo rosin and turpentine should be fixed at approximately one-sixth less than the price of the corresponding imported article, while during the period of the war Government Departments are being supplied at a still lower rate. The rates will be revised every six months. Hitherto the prices of Indian distillery products have usually been considerably below the market rates for imported products. The quality of the products of the Jallo factory, it is stated, has undergone great improvement during the last three years, and now compares favourably with that of foreign products. The rates at which imported products have been placed on the Indian market have hitherto determined the prices of the much smaller output of Indian products, and though Indian manufacture is at present having a steady effect on the volume of imports, a considerable amount of expansion is still necessary before the Indian market can be wholly secured. The future prospects of the industry in the Punjab are considered exceedingly bright. During the year only 14,521 acres of forest were tapped, but it is estimated that with the early removal of the chief obstacles to progress, tapping operations could be extended at once to about five times this area in the Punjab and North-West Frontier Province, and that the yield of rosin and turpentine could be increased in similar proportion. This estimate excludes tappable areas in Jammu, Kashmir, Chamba, and other Native States. The main obstacles to rapid progress, since the new factory at Jallo was built in 1914, have been the scarcity of labour, the lack of staff, and difficulties connected with transport from forest to rail head.

LANCASHIRE COTTON.

(From Our Own Correspondent.)
Manchester, Wednesday.

The market during the past week has presented a firm appearance, but the recent partial resumption of activity has not been fully maintained. The future course of events is still very uncertain. In addition to the question of shorter working hours in the spinning mills and weaving sheds, which is at present receiving the attention of the various associations concerned, there is the coal menace to be dealt with. It is not possible to report very much change in the position of affairs relating to Egyptian cotton, either with reference to prices or the supplies for next season. Egyptian yarns have only been purchased sparingly, and rates have shown a rather easier tendency. Buying in cloth for Egypt has been very restricted. Grey staples for India have again been almost entirely neglected, and recent advices from our Dependency are not so encouraging as those previously received. Shippers to China seem to have satisfied their requirements for the time being. Inquiry for Java and Singapore has been on rather broader lines during the last few days, and occasional sales have been arranged. Home trade buyers have had to make some provision for immediate wants. Users of American yarns have purchased to a moderate extent at late rates, but the turnover is far from satisfactory.

BRITISH INDUSTRIES FAIR.

This year's British Industries Fair, organised by the Board of Trade, which was opened on February 24 in the Pennington Street premises of the London Docks, makes a further great advance on its predecessors. Each year the fair has given greater proof of the capacity of British manufacturers in lines which before the war were largely in the hands of Germany and Austria, and this year many warehouses are devoted to the display of a bewildering variety of the products of British enterprise.

The Armistice came too late for any alteration in the conditions governing the exhibits; otherwise it may be presumed that the fair would have been thrown open to all British trades As it is, the exhibits are once again confined to paper, printing, and stationery, in which section there are 130 entries; glass and pottery, with 114 entries; fancy goods, with 128 entries; and toys, with 198 entries.

Both in their range and appearance the exhibits reflect the greatest credit on the skill and ingenuity of British manufacturers. The stalls given over to pottery, for instance, in many respects among the most attractive in the exhibition, include innumerable examples of delicate workmanship, fit to hold their own in any foreign markets. And the exhibits of glassware merit equal praise. There are cut-glass vases and bowls and table ware equal to anything that has been produced.

Another interesting glimpse of the possibilities of British industry is afforded by the exhibits of the leather trade. Pocket cases, purses, wallets, and similar articles serve to show the great advance that has been made in the last few years in this branch of industry. A word must be said, too, in praise of the exhibits of small metal goods and other fancy ware, and also for the admirable prints to which a number of stalls are devoted. It is worthy of note that toys, hitherto an enemy specialty, predominate at the exhibition; and it is evident that this branch of industry has taken firm root in this country, and in future years should make an important contribution to our lists of exports.

As regards the class of goods in the exhibition most suited for the Near East markets, it is rather difficult to discriminate, since these markets are very comprehensive in character. A few indications may, however, be given of articles likely to prove particularly acceptable there. In Turkey, for instance, the best china was imported from this country, and both for this article and for toilet ware exhibitors of china ware should find a good market in that country. Cut glass also sells well in the Levant and neighbouring markets. Then, before the war there was a considerable business done in Constantinople in oleographs, and firms producing them would do well to investigate the requirements there. Ash-trays and similar goods and wooden frames for picturesque articles are very suitable for the Near East, also long trays for pens, which are in use in Turkey. Finally, leather goods of all kinds, and, indeed, fancy goods in general, are very suitable for Eastern bazaars. But, as a matter of fact, most of the exhibits would find a market in the Near East: and these comments are intended merely to show the wide range of objects for which there is a demand in that region.

THE KHEDIVIAL MAIL.
Meeting to Consider Realisation of Assets.

An extraordinary meeting of the Khedivial Mail Steamship and Graving Dock Company will be held on March 10 next at Winchester House, Old Broad Street, E.C., at noon, to consider the following resolution, with or without modification: "That the directors should take all necessary steps to realise the assets of the company, either by sale of the business as a going concern or by sale of the assets separately, with the view of the ultimate liquidation of the company."

Holders of share warrants to bearer, in order to be entitled to vote, should deposit their share warrants with Messrs. Glyn Mills Currie and Co., 67, Lombard Street, E.C., on or before March 4. Mr. Hugh Reeves, of 42 Old Broad Street, E.C.2, on behalf of shareholders who support the resolution and himself, asks for proxies.

(Over 80 Branches in the Near East).

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

THE OUTLOOK FOR SILVER.

In an analysis of the silver position, the *Metal World* states that the principal causes for the stringency that has been a marked feature for a lengthy period are:—(1) The India Government or their advisers some time back interfered with the regular trade in the metal, and prohibited imports on private account. This action was largely responsible for a high premium being placed on the value of silver, as it opened the eyes of the natives of India to the importance of hoarding the metal still further, and they refused to part with it even at advanced rates. The result of this prohibition had quite a contrary effect to what was intended, as it raised the price of the metal all over the world instead of lowering it. . . . .

(2) China, who during the past two or three years has not possessed a superabundance of silver, now requires the metal more than any other country in the world. In fact, it is reported that very high prices have been offered to America by Chinese operators, and it is said that a shipment of Mexican coin was recently made from San Francisco to China, and that further shipments of silver are anticipated. After the sudden rise from 27d. to 37d. in 1916, China unloaded about £10,000,000 to India, on the hope of being able to replace it at lower prices later on. She found this impossible, and is thus compelled to replenish her stocks at much enhanced prices direct from San Francisco. It is more than probable that she will have to pay still higher prices for future requirements if she can get them.

(3) The high prices of commodities now general all over the world obviously require that more currency must be employed in trade, and had it not been for the high credit of England, France, and America, and their mutual help to each other, silver at 60d., or even 70d., would to-day be cheap. Besides the demand for India and China, the Eastern markets, such as Africa, Mesopotamia, Persia, Palestine, etc., would have been expanded owing to the war, all will probably as soon as peace is made require even more silver currency in the shape of rupees and other coins.

(4) The surplus left over to the sellers of practically all commodities now sold at enormously inflated prices compared with those ruling before the war has to be invested or hoarded in the article which is the least susceptible to heavy fluctuations. Gold and silver are generally used for this purpose. Commodities may come down in value in the near future, but even this is very doubtful; but whatever happens labour is bound to command high wages; and if this be so more currency will certainly be required.

(5) For many years the parity of silver to gold was in the neighbourhood of 14 to 15½ to one of gold, or, say, about 60d. per oz., and it was only after Germany demonetised silver in 1872—which action was followed by other countries—that the value of silver began to fall away. It is likely that the metal will rehabilitate itself to something approaching its former value unless the output can be greatly increased, which is unlikely, although the outlook in Mexico is much better.

(6) As regards production, this is now under 200,000,000 oz. per annum, against 226,000,000 oz. a few years back, and, considering the enormous expansion of trade all the world over, coupled with the very large increase in the production of gold since 1850, silver has not increased in anything like the same proportion. Furthermore, there is no sign of new silver mines being found, and it is therefore quite likely that there will be a shortage of silver for many years to come. At the present time there is undoubtedly a shortage in all countries of the world, whether it be China, India, Russia, France, Italy, Holland, and Belgium, to say nothing of the enemy countries. These shortages will have to be made good before there will be a surplus large enough to affect the market.

COMPANY NOTES & REPORTS

North Anantapur Gold.

The directors of the North Anantapur Gold Mines have declared a dividend at the rate of 20 per cent. per annum, less income-tax at 6s. in £, on the preference shares, for the half-year ended December 31 last, payable on March 22 to holders registered 20th instant.

East Indian Coal.

The report of the East Indian Coal Company for the half-year ended October 31, 1918, states that, after making allowance for the depreciation of buildings, plant, and machinery, and writing £7,500 off development account, there was a profit of £10,759, which with £740 brought forward makes £11,498 for disposal. A dividend of 9 per cent. for the half-year was paid on January 7, which leaves £698 to be carried forward. The output was 313,359 tons, as against 313,065 tons in the corresponding half-year of 1917. The output was affected by the influenza epidemic. The Government requisition of the best coal still continues in force, but the company has been able to recommence oversea sales.

BRITISH TRADE WITH PALESTINE.

The Department of Overseas Trade has prepared a "Report on Openings for British Trade in Palestine," which can be consulted by firms on the Special Register (says the *Board of Trade Journal*). This report has been drawn up with the object of bringing to the attention of British manufacturers the openings resulting from the elimination of German and Austro-Hungarian competition in Palestine.

The information available in occupied territory, supplemented by that derived from credible—principally British and Allied—former residents, all of which has been submitted to very careful sifting and corroboration by qualified officials, affords an indication of the situation as regards foreign import trade in the whole area.

Where direct information regarding the conditions of Palestine was not available, its close proximity to Egypt and the similarity of trading conditions have often given a clue to the nature of the trade and the competition to be expected.

Thus any fresh foreign trade competition noticeable in Egypt will spread to Palestine as soon as normal trading conditions and means of communication are once more available. Where, for the present, any particular line of trade is inactive in occupied territory, conditions existing in Egypt have been quoted as a guide to British manufacturers of what competition in Palestine they may reasonably expect.

SUEZ CANAL RECE'PTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—February 13, 440,000 francs, against 410,000 francs; February 14, 15, 16, 17, 1,300,000 francs, against 630,000 francs.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a fair amount of business doing this week, but prices have been rather irregular.

In Government stocks Egyptian Unifieds have continued in request, but business has been restricted by the continued absence of sellers.

In Bank shares, National's, after changing hands up to 22⅞, are closing 1-16 easier at 22 3-16, whilst Agricultural Banks have also receded 1-16 to 6¾. On the other hand, Agricultural Prefs. have improved ⅛ to 7¾. In Anglo-Egyptian Banks there has been a smart drop of ½ to 16¼.

In Railways, Delta Lights are ⅛ better at 8 7-16.

Amongst Land shares Aboukirs have been dealt in pretty largely, and after rising to 30s. 6d. they close 1s. 6d. up at 29s. 6d. Gharbieh Lands have improved 1-32 to 2¾. There has been a fairly large business doing in New Egyptians, which, after temporarily receding to 25s., close fractionally better at 25s. 7½d. Sudan Plantations have been easier, and close ⅛ lower at 4¼. United Egyptian Lands are 3d. down at 2s. 9d.

In Miscellaneous shares some transactions have taken place in Alexandria Waters around the current level, and several hundred Markets have also been done at 28s. 3d. Khedivial Mails are closing 2s. 6d. down at 5½, but, on the other hand, the prefs. are ⅛ better at 4½, with some business transacted at 4⅝.

In Greek stocks the 1881, 1884, and 1890 loans are all 1 point down at 71. On the other hand, the 1902 loan and Currant bonds have improved 1 to 64 and 97 respectively, and the 1914 loan has jumped up 3½ points to 82½.

Oil Shares.

The Oil market has continued dull. Burmahs are unchanged at 8⅝, as are British Burmahs at 20s. Anglo-Persian Prefs. are firm at 25s. 7d. Anglo-Egyptians B are slightly stronger at 3 15-16.

Roumanians are lower. Roumanian Consols are 4½d. down at 17s. 3d., and Anglo-Roumanians have fallen 1s. 1½d. to 12s. 3d. Traians, however, are 3d. up at 14s.

Ural Caspians are 1 11-16. Bakus at 4s. 9d. are again 1½d. lower. Russian Generals close at 1 1-16 and Russian Petroleums at 1s. 9d.

Paris Bourse.

Suez Canal shares are lower at 5,175 francs. Other prices are:—Egyptian Unifieds, 96; Serbian 1895's, 60.90; Turkish Unifieds, 72.25; Banque d'Athenes, 95; Crédit Foncier Egyptiens, 779; Land Banks, 185; and Ottoman Banks, 550.

CYPRUS OIL TRUST.

An extraordinary general meeting of the Cyprus Oil Trust, Limited, will be held at 52, New Broad Street, E.C.2, on March 3, at 12.30 p.m. when the following resolution will be submitted:—"That the company hereby authorise the board to enter into negotiations and to execute on behalf of the company any agreement or agreements as they, the said board, may consider necessary or expedient for the acquisition by the company by purchase or otherwise of a new oil property."

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The chief feature in connection with the Paris Conference during the past week has been the friction between the Italians and Yugoslavs. This development is the more regrettable, as at one time there seemed reason for supposing that the two nations had found a method of composing their differences. It was a grave mistake, as was continually pointed out in these columns at the time, to allow the controversy between two of the Allies to drag on until the war came to an end. There was ample justification for imposing a settlement "from above" when the two peoples showed that they were unable to agree among themselves; but neither the British nor the French Government seemed able to appreciate the seriousness of the quarrel or was willing to exercise the necessary pressure to bring about an understanding. The result is that the proceedings of the Allied Conference in Paris are punctuated with reports of unfriendly actions and reprisals on the part of the disputants, which in the circumstances reflect considerable discredit on both parties.

There can be no desire to attempt to apportion blame. It is enough that the responsible heads of the two nations prefer to allow the quarrel to find expression in local incidents than to thresh out an agreement between themselves. The Yugoslavs proposed that the controversy should be submitted to the arbitration of President Wilson. This suggestion was rejected by the Italian Government, and accordingly the territorial issues will be dealt with directly by the Council of Ten. One reason for the Yugoslav proposal was that, if the matter were left to the Council, the Italians would enjoy an unfair advantage by being represented on the tribunal trying the case. It is hardly to be supposed, however, that the Italian Government would avail itself of this advantage, or that the Executive would tolerate the injustice. The Council of Ten for this purpose would have to become a Council of Eight. Most onlookers will hold that the Italians and Yugoslavs would have been well advised to patch up their differences without outside interference. A settlement has to be reached, and one based on mutual concessions would seem to have been more desirable than an enforced settlement, which will probably leave both parties dissatisfied.

The more recent reports of the Conference proceedings indicate that there has been a reversion to the old rule that in every controversy the rival parties should submit the most extreme claims. Apparently there is not a single statesman, apart from Signor Bissolati, among the nations concerned who has the courage, or sufficient confidence in his own position, to give a lead to his countrymen instead of being led by them on points that call for specialist knowledge. This attitude increases the difficulties of the Allied Conference, and it is hardly a matter of surprise to learn that a special committee has now had to be set up in order to ensure that the work of other committees which deal with territorial questions may be envisaged as a whole and presented from a broad world point of view to the Council of Ten before submission to the Plenary Conference. One instance of the kind of problem that calls for a solution is the destiny of Fiume. For the last four years Yugoslav propaganda has insisted that there can be no question as to the Yugoslav character of the town and district. In spite of this contention, Signor Bissolati, who sacrificed his Ministerial position in the cause of moderating Italy's demands, made a point of his country's right to Fiume, and now Signor Orlando has declared that Fiume must and will be Italian.

In the meantime, despite the uncertainty regarding its boundaries, some progress is being made in the establishment of the new kingdom of the Serbs, Croats and Slovenes. On March 1 the Provisional Chamber of Deputies was opened at Belgrade. One of its tasks will be to draw up a scheme for the election of a Constituent Assembly and to devise measures necessary for the temporary administration of the State pending the decisions of that Assembly. It will be well for Yugoslavia when its foreign relations are satisfactorily adjusted, and it can devote the whole of its attention to social and economic reform and to the material progress of the country. The latter is, indeed, being further handicapped by the interruption of railway communication as an episode of the Italo-Yugoslav dispute. When the privations of the peoples of the Near East are remembered and their paramount anxiety for measures that will enable the respective countries to become self-supporting at the earliest possible opportunity, an impression of unreality is caused by the action of politicians who are apparently prepared to see their nation starve, while they hold up the peace settlement, provided that they can point to their own intransigent attitude on a subject which clearly calls for compromise.

Serbia, we are reminded by Lord Crewe, stands in need not only of bodily sustenance, but also of mental food. The troops or officials of the Dual Monarchy and of Bulgaria were at special pains to remove all means of

Digitized by Google

education and culture in the country, and they destroyed her libraries after taking from them all that they themselves wanted. For this reason an appeal is made for books, old or new, of practically every kind, and in any language, to be sent to the Honorary Organising Secretary for the Reconstruction of Serbian Libraries, Royal Society of Literature. The very wide nature of the appeal is, perhaps, in danger of defeating its purpose, for the well-disposed will hesitate to send books that in view of the difficulty of transport may be indefinitely detained in this country. It would be well if the Royal Society of Literature formulated more in detail the scheme that it has in view. Presumably it is pressing at the same time for a systematic search in enemy countries for the stolen contents of the Serbian libraries; but when this has been done the need for literature in Serbia will still be great, and it is to be hoped that the request for financial aid will meet with a generous response.

A Reuter's message from Paris states that the Commission appointed by the Allied and Associated Powers under the presidency of General Franchet d'Esperey to inquire on the spot as to the events that have occurred in Montenegro since last November has now reported. Its findings, as recorded in this message, are of such an amazing character that it would appear as if a practical joke had been played upon the correspondent. The first paragraph declares that the troops resident in Montenegro consist of Yugoslav volunteers and of soldiers who have come from Serbia, the total number not exceeding 500 men throughout the country. As it was the advance of the Serbian troops which was largely responsible for the withdrawal of the Austrian army, we have to infer that this result was attained by 500 Serbians. Again, these troops have exercised no influence on the elections, "and 500 Yugoslav soldiers could not impose their will on 50,000 armed Montenegrins." It would have been of interest if the Commission had reported where the 50,000 Montenegrins secured their arms after disarmament and two years of Austrian occupation. Another paragraph reads: "The whole Montenegrin incident has been raised through the instrumentality of the ex-King, supported by Italian agents"—a sentence which is calculated to rouse the curiosity of the reader in regard to the composition of a Commission that could perpetrate such a solecism in a judicial report. If the document were *bona fide*, it would supply the explanation of the despatch to Montenegro of an independent American mission of inquiry.

Further news from Afghanistan indicates that the usurpation of Nasr Ullah Khan has not been allowed to pass unchallenged. While he was being proclaimed Ameer at Jellalabad, Aman Ullah Khan, the second son of Habib Ullah, assumed the reins of government in Kabul, and the latest information is to the effect that Nasr Ullah has made his submission to Aman Ullah. The situation, however, remains obscure for the present. The effacement of the eldest son, Inayat Ullah Khan, may be the outcome of Court intrigue. His mother was reckoned as the fourth wife of Habib Ullah, whereas the mother of Aman Ullah, who was born in 1890, was the chief wife at the time of the Ameer's death. From the statement that Inayat Ullah had waived his claims to the throne in his uncle's favour it may be inferred that Nasr Ullah had taken the precaution of securing his person as well as his acquiescence when usurping the throne. Such an arrangement is not likely to have commended itself to the mother of Aman Ullah, whose domineering character always made itself felt at the late Ameer's Court.

No official statement has yet been made on the question we asked some time ago: how India stands with regard to the new international labour organisation, the machinery of which is being rapidly put together in Paris. We can scarcely believe that the India Office does not realise the need for a definite announcement of policy: it is, of course, possible that the new machinery will work slowly at first, but it is certain that changes in the efficiency of Indian labour will come more slowly still, and until the position is cleared up no prudent employer is likely to undertake any new venture. As things now stand, we know only that a prominent member of the Cabinet aspires to promote the current ideals of Western Labour by eliminating "the international competition of low-wage countries." Is that aspiration shared by the Cabinet as a whole? Does Mr. Montagu accept the policy as applied to India? And, if so, how is he going to put it into practice?

Let us put the concrete case of the Tata Iron and Steel Works, a concern which is rapidly occupying a large and valuable Asiatic market hitherto supplied from European countries. It represents, perhaps, the high-water mark of industrial India; its inception and growth have been fostered by the India Government, and only two months ago Lord Chelmsford visited the principal works to pay a tribute to the memory of the founder, Mr. Jamshedji Tata, and announced that in his honour the new steel-city would in future be known as Jamshedpur—a city with a population of nearly 50,000, settled on land which ten years ago was jungle. The concern employs many thousands of labourers, who are paid low wages when judged by European, though not by Indian, standards: is this low-wage competition to be "eliminated"? The idea is grotesque to anyone who cares for the future of India, but the formula enunciated by Mr. Barnes fits it precisely, and India is entitled to know whether that formula is going to be applied.

Take again the situation in regard to imports as described in a message published recently in *The Times*. We are told that the high level of prices for English goods has already checked business in India, that any further rise will finally and permanently close the market, and that importers are looking eagerly for cheaper sources of supply. Mr. Barnes proposes to eliminate these cheaper sources in so far as their cheapness depends on low wages, and if that policy is carried out, it is not to be expected that in the present conditions India will work harder in order to pay higher prices for what she wants. It is much more likely that she will remember how many things she used to do without, that the small rise in the standard of living will presently be lost, and that along with it will go the hope of increased efficiency of labour, on which the whole economic future of the country depends.

The death of Sir Andrew Fraser recalls the bad times in Bengal during the period of his administration. Their history has not yet been adequately written, but it is possible now to see them in their true perspective, as the first genuine clash between the contending ideals of nationalist sentiment and administrative efficiency. From the latter standpoint the division of Bengal into two provinces, which it fell to Sir Andrew to carry out, was infinitely better than the arrangement which it superseded, and also than the arrangement now in force, but it occurred at a time when Bengal was just becoming conscious of its separate individuality, and undoubtedly it did much to consolidate the new "nation." The bearing of this development on the wider aspiration for a united India is still uncertain; some observers are disposed to anticipate a bitter conflict between the nationalisms of the parts and the nationalism of the whole, but, however that may be, the unity of Bengal is not likely to be seriously threatened in the future.

Probably Sir Andrew's best work was done as President of the Police Commission, the labours of which laid the foundation of the great advance observable in the last decade. The Indian Police force is by no means perfect, but it is much more efficient than it was, and we have no doubt that it would be still better if more money had been spent. Even now we believe that some of the reforms recommended by the Commission in 1903 are still awaiting the allotment of sufficient funds, and so long as under-payment and under-equipment continue, the organisation cannot give entirely satisfactory results. That, however, is not the fault of the men by whom it was designed, and India owes a heavy debt of gratitude to the Commission.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 18.

The High Commissioner.

The sudden departure of the High Commissioner has given rise to all manner of rumours, a fact which will perhaps not be altogether surprising to anyone who knows Egypt. Sir Reginald Wingate, who has been accompanied by his Liaison Officer and the Second Secretary to the Residency, has been summoned home in connection with the many important Oriental questions at present before the British and Allied Governments. It must not be forgotten that the High Commissioner, from his long residence in this part of the world and his wide experience, possesses a good deal more than a nodding acquaintance with most of the Near Eastern and North-East African problems at present before the Powers, and that, since he has been directly dealing with some of these questions, the British Government would quite naturally desire to have the benefit of his first-hand advice.

It is, of course, to be expected that during his visit to London the Egyptian question will come up for discussion, but the Egyptians are very much mistaken if they think that that matter bulks largely on the order of the day at the present moment. There are other far more important international, even Imperial, questions to be settled before that of the internal political organisation of this country can be taken in hand. Those Egyptians who look for certain political concessions must, therefore, wait for the propitious moment with patience and self-restraint, and must not jump to the conclusion that, because a matter in which, quite naturally, they are vitally interested is not dealt with forthwith, their interests are being overlooked. They may rest assured that, when the time comes, they will receive every consideration at the hands of a nation which has ever shaped its colonial policy in the direction of the moral and material advancement of the peoples subjected to its authority rather than for the furtherance of its own individual interests.

The Mixed Bar Protest.

I gather that the general opinion is not favourable to the attitude which the Mixed Bar is adopting towards the new scheme for judicial reform. It is admitted that the subject must by its very nature always give rise to criticism, which at the same time, like competition in commerce, can be productive of results most beneficial to the community at large. The impression is, however, that the Mixed Bar is more concerned with the effect of these changes on its own material situation than with the question of whether or not they meet the requirements of the country in which it lives and for which it pretends to speak. Indeed, viewed in the light of all the facts, the nature of the criticism which it now brings forward would tend to confirm that impression. The hope is generally expressed by competent critics, who are deeply interested in the matter of providing Egypt with a judicial regime complying with its peculiar needs, that an end will now be put to what bade fair to become an unfortunate and unproductive polemic, and that the Mixed Bar will collaborate with the other elements of the local communities in assisting the authorities by reasoned, healthy, and disinterested criticism; so that the judicial and administrative reforms, when they are finally elaborated and promulgated, may respond as closely as it is possible to make them to the requirements of the situation as it will be in Egypt on the abolition of the Capitulations.

The Draft Penal Code.

As mentioned last week, two conferences have been given by Mr. Percival on the Draft Penal Code, which has been prepared by the Capitulations Commission. The Société d'Economie Politique, which has in the most public-spirited manner placed its hall at the disposal of those interested in the matter, is now collecting the memoirs and criticisms on the subject, with a view to fixing the date when a debate can be held and the critics and Mr. Percival can have an opportunity of discussing the various points in question.

In this connection it should be mentioned that at the last conference a speech was made by Saad Zaghlul Pasha in which he protested against the proposal to make radical changes in the existing legislation and the intention of introducing these changes without submitting them to the Legislative Assembly, which, he said, is the only legislative body existing in the country. He also disputed the political status of the country referred to in the second part of the Code in the following terms: "Our country still possesses the autonomy which the London Convention of 1840 and international treaties conferred on it. In vain can one invoke the change in political status made since the war. International law agrees on the point that a protectorate is an agreement between two countries, one of which asks the other to take it under its wing, and the second accepts the mandate. Nothing of the kind has happened nor could ever happen in Egypt. The unilateral Act of 1914 was merely a war measure. It is, therefore, non-existent, for it could not last even for one hour once the war is ended."

There are two important points to be noted about this speech. In the first place, it should be mentioned that Zaghlul Pasha had announced his intention of giving a tea-party at his house and of delivering to his guests a speech on the political situation. Judging by what he had said on another, similar occasion, it was considered advisable to tell him that he must not hold these political meetings. He submitted to the letter of the order, but, as can be seen, took the earliest opportunity of evading its spirit and of delivering the speech, or, from his point of view, the most important part of it, according to a pre-arranged plan, the existence of which was evident from the composition of the audience, certain members of which were fully aware of the substance of his expected oration.

Secondly, in speaking as he did, he committed a breach of etiquette, for it had been clearly laid down that no speeches were to be made at the end of these conferences, but that any who had any remarks to offer should present them to the Société, when a date would be fixed for a debate. The reasons for this were, first, that the time available at the end of a conference is always too short for any useful discussion; and, secondly, that the subject was so important and of such general interest that it was considered advisable to have a special debate. This was fully known to Zaghlul Pasha, who, as a member of the Society, had received the usual advice of the conference, on which a notice to this effect was printed. His action, which was certainly a breach of etiquette, was aggravated by the fact that he transgressed the rules of the Society, which forbid political speeches or speeches which have any political references, such as had the one in question.

This incident is instructive merely for the fact that it shows what little respect for law and order and for the rules of etiquette is felt by the clique headed by Zaghlul, which wants to have the reins of Government in its own hands. It is certainly not calculated to increase sympathy for its cause, or to encourage the making of the experiment for which it asks. In fact, it is by such acts that these self-appointed patriots do more harm than good to their fellow-countrymen. For, if we were to take them at their word, and accept their statement that they are representative of the Egyptian nation, we would be justified in coming to the conclusion that that nation is as yet unfitted to have the responsibilities of government entrusted to it.

The Question of Sugar.

The Supplies Control Board has prohibited, until the end of December next, the importation of sugar into Egypt, unless such importation is effected under licence granted by it. This measure has been necessitated, first, by the existence of previous agreements with the Société Générale des Sucreries et de la Raffinerie d'Egypte, which has assured sugar supplies to Egypt, the Sudan, the Army, and the Navy, under the supervision of the

Digitized by Google

Egyptian Government during the past four years; and secondly, by the great extension which sugar cane cultivation and refining have undergone in Egypt since the war and by the urgency of affording the industry some, even temporary, protection.

In this connection it is interesting to recall that, prior to the war, Austrian beet sugar was dumped into Egypt at prices which completely undercut those at which the local refining industry could deliver on the Egyptian market sugar produced from Egyptian cane. In view of the extension of cane production in Egypt and of the refining industry, it is to be hoped that, if eventually trade relations between Egypt and enemy countries are resumed, the recommendations of the British Chamber of Commerce of Egypt will be adopted, viz., that such trade relations shall be so restricted as to render any attempt at dumping or a return to pre-war trade conditions impossible; and that special taxes shall be put on goods which may benefit by enemy export bounty, whether directly on the goods themselves or on the ships which carry them. The Egyptian sugar industry has, indeed, become such an important one that it merits all the protection which it is possible to give it, provided, of course, that the agricultural community and the State each derive their proper benefit from the protection afforded to the industry.

NEWS FROM PALESTINE.

We are indebted to the London Bureau of the Zionist Organisation for the following notes:—

A conference of Palestinian Jews took place at Tel Aviv, near Jaffa, on December 18 to 22. The members of the conference were representative of the whole of Palestinian Jewry. The chief resolutions passed by the conference were those asking that the Jewish representatives should urge the Peace Conference to make of Palestine a Jewish Commonwealth, in which the Jews of the world should have predominance in government and administration; further, that the Powers should nominate Great Britain as their trustee, and confer on it the government of Palestine, with a view to aiding the Jewish people in building its Commonwealth. They also urged that the Executive Council of the new State should be nominated by Great Britain in agreement with the world Zionist Organisation, representing the Jewish people.

Arrangements are being made for the calling of a Constituent Assembly, which will probably be summoned at the beginning of April. The election campaign is already in full progress and is being carried on especially vigorously by the Orthodox and the Labour section, the Hapoel Hazair, which is advocating an advanced social programme. It is not in favour of class-attacks, and is especially anxious to promote a policy of Jewish manual labour in Jewish colonies and the elimination of all commercial and exploiting ideals, which would hinder the building up of a sound colonisation in Palestine based on agriculture and aiming at a self-contained, self-supporting community.

The call to the Constituent Assembly of Palestine Jewry was issued by the Zionist Commission in Palestine, which was sent out with the approval of the British Government on April 19, 1918. It is noteworthy that the democratic spirit prevailing in the new Palestine has manifested itself in two proposals embodied in its organic constitution. All Jews of both sexes who have reached their twentieth year are entitled to vote, and all who have reached their twenty-fourth year are eligible for election. One of the other qualifications necessary for candidates is that they will be able to read, write, and speak Hebrew.

Of special interest to music lovers in England will be the news that Anton Tschaikoff, who joined the 38th Battalion of the Royal Fusiliers (the Jewish Battalion), has taken over the musical directorship of the Shulamith music school, in Jaffa. Numerous concerts are being arranged by the English military authorities in various parts of Jaffa and Jerusalem, and these are very popular, whilst they are in turn invited to the British musical entertainments provided by the Jewish colonists. The Hebrew Dramatic Company is proving very popular.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

ROUMANIAN NOTES.

(From a Correspondent.)

The Question of the Dobruja.

As the result of a curious omission from the Armistice terms imposed upon the Bulgarians concerning the withdrawal of their troops from all the Allied territory, the Dobruja remained for a time under Bulgarian occupation. Later on British troops were sent to maintain order instead of the Roumanians being allowed to reoccupy their lost territory. Unfortunately, this has given rise to great discontent in Roumania, and enemy agents have tried to create the impression that the Allies intend to give the Dobruja to the Bulgarians. The Allies have now decided to withdraw the British troops—who were unjustly bearing all the odium of the regrettable misunderstanding—and to entrust the Roumanians with the maintenance of order. The Dobruja is the natural outlet to the Black Sea of the rich Roumanian land. If the Roumanians should be deprived of that province, they would be forced to create traffic facilities with Central Europe, and it is to be hoped that the Allies will not drive Roumania again into the political and economic sphere of pre-war days. Bulgaria already possesses a considerable stretch of coast along the Black Sea, as well as on the Ægean Sea. The ports in the south of Bessarabia are too far away to satisfy the requirements of the whole of Wallachia and Moldavia, and now even of a great part of Transylvania. Moreover, the Dobruja is of no use for Bulgaria, because it is too far north from the Bulgarian centres of production. Roumania could be greatly aided in getting rid of German economic domination if her exports could follow their normal way to the West through the Black Sea. From the historical point of view, the Roumanians argue, they have a better right to the Dobruja than any other nation; for this strip of land was originally a Roman province called Scythia Minor, and its native inhabitants were Daco-Thracians civilised by the Roman legionaries and some Greek colonists. Before it became the battleground between Turk and Russian, it had witnessed the passage of Kuman and Tatar hordes, as well as that of the Bulgars. Even from the fourteenth century the Wallachian princes extended their rule over the Dobruja. Ethnologically, the country, before its incorporation into Roumania (1881), was a veritable museum of races. After the annexation of the province the Roumanian population increased rapidly, partly being sent there as colonists and partly because of the great development of the ports and of agriculture. From the geographic and economic point of view the Dobruja is an integral part of the whole system of the Roumanian State. The roads and waterways, the railways, and the pipe-lines for oil all converge upon the Dobruja, and particularly upon Constantza.

The Financial Situation.

The question of credit being not yet settled, the financial situation of Roumania is becoming disastrous. Buying in the Allied countries is impossible owing to the depreciation of the Roumanian money. Before the war the *leu* was equal in value to the franc; last week a rich Roumanian paid 120,000 *lei* for 50,000 francs. The depreciation of the Roumanian money is due to the cessation of the export of the country, as well as to the banknotes which the Germans scattered broadcast over the country during their occupation. If prompt and urgent measures are not taken ruin awaits the economic life of Roumania.

The Pro-German Politicians.

In the public life of Roumania there were few people who could be regarded as pro-Germans by conviction. Perhaps the only pro-Germans were those who belonged to the old literary society, "Junimea." They were inspired by German, or, rather, by the Prussian, ideas of the middle of the last century. The only living prominent member of "Junimea" is M. P. Carp, who is also the only Roumanian statesman who could be styled pro-German, and he during the German occupation maintained a most dignified attitude and took no part in political life. The so-called "pro-Germans" of the Allied Press are just a few opportunists whose influence is absolutely nil. It is true that German finance helped very much to create an apparent movement, but the persons prominent in this movement were not men of any moral authority. It is necessary to refer to these subjects because some people are inclined to believe that there is a pro-German political party in Roumania, which is not true.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

There is a certain old West Country song—quoted by our greatest living novelist, in "The Woodlanders"—in which a young woman laments:

"A maid again I never shall be
Till apples grow on an orange tree!"

In the days when this ditty was composed, we may safely conclude, the expression was used as a synonym for "The Greek Kalends"; and, indeed, few of us would care to-day to bet on the happening of such an arboreal miracle. Yet it seems quite possible that in a moment of freakishness Dame Nature may some day produce such a marvel in an English orchard—I do not mean with the assistance of the modern Scientific Gardener, but by her own simple, unaided efforts. For I observe that the *Journal of Heredity* reports "a case of a lemon tree which proceeded to produce oranges"; and if a lemon tree can do it, why not an apple tree? Why the lemon tree should have broken out in this way I do not pretend to say. It may have been that it thought mankind had had enough Lemon Marmalade, and determined to do something to meet the demand for the more popular orange variety; or it may have been endeavouring to show resentment at being transplanted. For I forgot to mention that the tree—one "of the ordinary Italian lemon variety"—had been transplanted to Egypt. There it produced lemons that were "more spherical than lemons usually are, and bore an orange-coloured stripe," and at least "one branch bore a large fruit which was unmistakably an orange."

***

The mention of oranges reminds me that recently a friend, an Englishman, formerly resident for many years in Constantinople, remarked that since his arrival in England he had missed most terribly the fruit that one gets in such abundance out in Turkey. It is a trifling matter, no doubt, but it is the kind of trifle that makes itself felt; and with fruit at such prices as it has fetched of late in this country, one feels it pretty acutely. For the fruit you get in Constantinople is not the kind that you forget readily. I was surprised to learn that it is quite possible to tell what part of the country an orange comes from. The Jaffa orange is (my friend said) the largest and the freest from pips, it has also a shape of its own; next, both in size and in freedom from pips, comes the orange from the Tripoli (Tarablus) district; and third, the one from the Alexandretta region. Personally, I am inclined to doubt whether the best of these can beat the Baghdad orange, which is large, juicy, and of very fine flavour.

***

It is not only the fruit that one misses when one leaves Turkey or the East. The spicy meat dishes—the *dolma* and the *kebab*, the cream and honey, or date-sugar, and the rich pastry and sweetmeats, all have their attractions; though when you are in the land of their origin you do not always appreciate them at their true value. I remember an American telling me of some youthful friends of his who, after living several years in Constantinople with their parents, were sent to the States to complete their education. In a short time their letters began to contain such sentences as: "The food here is very insipid," and "Can you *please* send us some Turkish sweetmeats?"

***

"Any port in a storm," runs an old saying; and I was reminded of it when an army chaplain home from Salonika told me recently of one of his experiences. He was going out at night, accompanied by a sergeant, to bring in a dead soldier and give him decent burial, and they were leading with them a mule. Just after leaving camp they discovered that they had forgotten something, and the padre sent the sergeant back to fetch it. A few minutes later the Bulgars suddenly started spreading shrapnel round that part rather more lavishly than the padre cared for. He glanced round quickly for shelter of some sort, but could see nothing of the kind. Then he observed that the old mule was standing like a rock—meditative, unmoved. In half a second the chaplain was squatting between the mule's legs, trusting to such protection as the animal's body afforded. "And," said he, "the old beast stood like an image, just cocking first one ear, then the other, until the shelling was over; when the sergeant rejoined us and we went on our way." For my part, I am not sure that I should have had courage to try such a "shelter."

CORSAIR.

THE DODECANESOS IN THE PRE-CHRISTIAN ERA.

(By Dr. Skevos Zervos.)

By the term Dodecanesos is understood that chain of twelve islands which, lying spread out along the coast of Asia Minor, between Samos and Crete, counts as its links Patmos, Astypalea, Leros, Calymnos, Cos, Nisyros, Halki, Tilos, Symi, Rhodes, Carpathos, and Cassos. Viewed from the geological standpoint, these islands are fragments torn at some remote epoch from the Asiatic mainland by volcanic action. In Calymnos, Leros, Patmos, and elsewhere are to be found the fossilised remains of marine shells and fishes, proving that these places were once beneath the sea, whilst at Rhodes and Cos have been discovered the teeth of elephants and other primeval monsters which inhabited the islands before their severance from the neighbouring continent.

Investigated in the light of history, the Dodecanesos is revealed as the seat of important activities dating back into pre-Homeric times. Homer is well acquainted with the position of the various islands, their kings, and the vessels with which they participated in Agamemnon's expedition against Troy. He tells how Rhodes venerates as her patron deity Helios, the Sun-god, who dries her marshes, sucks up the excessive moisture of her low-lying territory, and safeguards her people from disease. Leros worships Artemis, Calymnos prefers Apollo, and the remaining islands others among the gods enthroned on Olympus. Cos having sheltered Podaleirios, the shipwrecked son of Asclepios, rears its famous Asclepieion, and founds mankind's first medical school, the worth and services of which, thanks to Hippocrates and his disciples, stand pre-eminent.

Dodecanesian medicine was the first to investigate disease scientifically, to describe various disorders accurately, and in many cases to diagnose their causes. By the comparative study of animals it threw light on the human organism and revealed many of the natural laws controlling it, alternately employing the anatomist's scalpel and the lamp of philosophy. But Hippocratic medicine interrogated Nature in the widest spirit, and, following her as the wisest guide and teacher, has continued for 2,500 years to be the healer of mankind, until within the present generation the work of the Dodecanesos was, in certain branches only, supplemented and perfected by Pasteur and his followers. Thus, in the person of Hippocrates, the father of healing, it was the Dodecanese that on the anvil of medicine hammered out the first eternal natural laws, the first scientific axioms. By giving birth to Herodotus she bestowed upon humanity the father of history.

The school of Alexandria, also, is spiritually the child of the Dodecanesos, for its founder and greatest teacher, Praxagoras, was a kinsman of Hippocrates, and after learning the holy mysteries of science in his native land carried them to the kingdom of the Pharaohs and Ptolemies, where he applied and developed them successfully.

Whilst Cos was doing great things the largest of the twelve islands, Rhodes, with its classical myths and brilliant history, was contributing to the development of poetry in the Mediterranean, furnishing rich material to literature, and giving a mighty impetus to the fine arts, exact sciences, mechanics, and history.

Of Rhodian medicine we know little but its high reputation. The excavator's shovel has yet to lay bare its Asclepieion. We are told that in the streets of Rhodes there were images endowed with lifelike movements and a hundred statues to Helios, marvellously fashioned, amongst which was the famous Colossus. Laocoon struggling with the serpents has been happily preserved, and supplies a tangible proof of the island's artistic genius. At the same time Rhodes was fashioning a codex of maritime law, which has continued until the present day to form the basis of universal legislation on nautical matters.

Finally, Patmos welcomed to its peaceful shores the well-beloved disciple, St. John the Divine, maternally sheltering him in her miraculous grotto, where he composed his Gospel and bequeathed to mankind the inspired Book of Revelations.

What land can point to greater services rendered to science, art, civilisation, and humanity? May it not with confidence look forward to the restoration of its liberty?

POST TO TURKEY.

It is announced by the Postmaster-General that postal packets of all kinds, except parcels, may now be sent, subject to censorship, to any part of Turkey-in-Europe or Turkey-in-Asia. Parcels cannot be sent, except to Mesopotamia and Palestine.

Registration is restricted to correspondence for Mesopotamia, Palestine, occupied territory in Syria, and to correspondence addressed "Posto Restante, British Army Post Office, Constantinople," where it must be called for by the addressees.

Remittances may be made by money order to Mesopotamia, Palestine, Beyrout, and Damascus, but not to other parts. British postal orders can, however, be cashed at the British Army Post Office, Galata, Constantinople, at Indian Post Offices in Mesopotamia, and at British Post Offices in Palestine.

A delayed Reuter's message from Delhi announces that Mr. Surendranath Banerjee will preside over a delegation of Moderates who have been selected to proceed to England in order to promote the cause of Indian reforms.

AN EARLY EGYPTIAN NAVAL BASE.

By JOSEPH OFFORD.

During the past ten years accounts have been published from time to time in the *Bulletin de Correspondance Hellenique* of important discoveries of antiquities by French explorers in the island of Delos. The results achieved by the uncovering of temples, statues and inscriptions, as well as smaller relics of all descriptions, have exceeded the most sanguine expectations. One series of monuments brought to light was unexpected—that is, remains of shrines dedicated to Egyptian divinities, with epigraphical texts concerning their erection and the worship carried on in them.

These cults of the gods whose home was by the Nile were undoubtedly introduced into the island of Delos in the third century B.C., when the Ptolemies, in order to strengthen themselves against any invasion by the successors of Alexander's generals, who had become princes in Asia Minor, had to adopt an active policy. The ability to hold Egypt was becoming partly a question of sea power; and to secure any genuine maritime supremacy in the Eastern Mediterranean it was necessary for Egypt to have control of some of the islands of the Greek archipelago. This position the Ptolemies succeeded in securing, with the exception of some intervals during which the Syrian Selucidae were superior in power, until the advent of the Roman fleets. Greek colonists from the Hellenic inhabitants of Egypt were judiciously placed in some of the islands as part of Egyptian policy, and it is of their existence in these sporadic possessions of the Lagid Pharaohs that these discoveries disclose the story.

Just before the war one of the French *savants* who had taken part in the Delos explorations, M. Pierre Roussel, prepared a work upon the subject, entitled "Les Cultes Égyptiennes à Delos du III. au Ier. Siecle Avant J.C.," and it has now been published. The contents of the book chiefly concern the results of excavation among edifices, the remains of which are at the foot of Mount Cynthus, especially a shrine of Serapis entitled a Serapieion. The inscriptions from this and other temples of Egyptian deities, such as Isis, are numerous and important, providing much information as to cults of the gods revered at this late period, including accounts of the cost of worship offered, and the general organisation of this type of religion.

M. Roussel treats of this part of the subject in his introduction; whilst in the body of his work he describes and discusses the buildings, especially the Serapieion, which was a large edifice approached by a dromos or avenue bordered by Sphinxes and altars, an architectural arrangement almost certainly copied from the causeway leading to some celebrated Egyptian sanctuary. Further researches may indicate definitely which temple was imitated, but M. Roussel thinks that it was the Memphis Serapeum. The epigraphical results of the excavations are of exceptional interest, many of the inscriptions being lengthy and in good preservation, and relating to matters of much importance. Many refer to the dedication of votive objects, or give lists of priests; decrees of various associations or clubs; inventories of temple possessions and furnishings. All these throw a vivid light upon the connections of Egypt with Delos and its administration there.

In the last part of his work M. Roussel takes up the rôle of historian of the three centuries illustrated by the discoveries, and of the religion introduced into the island from Egypt. The new matter concerning the cult of these deities at Delos is dealt with and its value indicated. The importation of Egyptian deities by the colonists or officials from that country became of sufficient importance to deserve the building of special shrines for them. These Greeks and Macedonians from the Nile Valley appear to have so valued some types of the Egyptian religion and its ceremonies that they decided to continue them in their new island home. This shows how little faith they must have had in the members of their own Pantheon. It should be remembered that Delos was a sacred seat of certain Hellenic gods. Yet the priests of these deities, we now see, permitted the Egyptian gods to have their special shrines in the island. Doubtless, however, the Greek clerics alleged that the Egyptian gods were in reality merely some of the Hellenic ones under strange foreign names.

This archæological evidence tends to show how the Ptolemies and their statesmen endeavoured to retain their realm of Egypt by occupying certain islands to the north and east as bases for their fleet, the vessels of which were mainly manned by Phœnician sailors. That their policy was prescient is proved by the fact that when the fleet of Cleopatra and Antony, which represented Egypt's sea power, was defeated and as a fighting force destroyed, Egypt became an appanage of Rome. Her fate subsequently was to be exhausted by taxation and the greed of her governors until, her population diminished and discouraged, she fell an easy prey to the Arabs, and even to some extent welcomed the followers of Islam.

General Sir Edmund ALLENBY writes:

General Headquarters, Egyptian Expeditionary Force,
January, 1919.

My dear Bishop MacInnes,

I have been looking into various problems in connection with the relief of distress in the areas which are now under my administration in Palestine and Syria, and I wish to support very heartily your appeal to the generosity of the British public, through the Syria and Palestine Relief Fund, for funds to carry on this work.

The next few months, until the new harvest is reaped, **will be a critical period.** War and sickness have taken heavy toll of the manhood of these countries; stocks of food and clothing are almost entirely depleted, and it must be long before we can repair the damages done by four years of war following centuries of misrule.

You will, I think, be well advised largely to concentrate your efforts on raising and also on spending during the coming six months as much money as possible for **the need now is urgent,** while I trust that a little later on it will not be so acute.

The work already accomplished by the Syria and Palestine Relief Fund in Jerusalem and Southern Palestine **has been admirable.** I am particularly impressed by the endeavours of your staff of workers personally to investigate the cases of all those who apply for relief, and thus to minimise the danger of pauperising the people.

I regard it as important that you should not just yet relax your efforts in Jerusalem, but at the same time the work now covers a much wider area than ever. **All possible help is required.** The Syria and Palestine Relief Fund already has the necessary organisation and experience. Its agents mostly know the country well and are working in close touch with my administrators in each place. I hope that the efforts to obtain continued support for the work will be highly successful.

Yours sincerely,
(Signed) EDMUND H. H. ALLENBY.

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916.)

IN THE NORTH. Clothing situation desperate. Thousands of children orphaned and uncared for. Destitution everywhere. New Relief Unit being dispatched at once, at General Allenby's request. **Money most urgently needed.**

Cheques payable to the Secretary, 110, Victoria Street, London, S.W.1.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Late Ameer.

February 27.

Lord LAMINGTON asked for information regarding the assassination of the Ameer of Afghanistan.

Earl CURZON, Lord President of the Council, in replying, said that domestic policy in Eastern Courts was a very obscure factor, and whether the assassination was due to religious reasons or reasons of politics, or to domestic intrigue, the Government did not know. The late Ameer was a consistent and loyal friend of this country during his long reign. He pursued, as far as possible, his father's policy of loyalty to this country. On the outbreak of war the eyes of the enemy were at once turned to find a weak spot in our armour, and German and Turkish missions visited Kabul. The Ameer received them, listened to what they had to say, and in due time dismissed them. It was a great misfortune that he had ceased to live, but it was perhaps a less misfortune than if he had died during the war. He hoped that the policy initiated and carried on with so much vigour by the late Ameer and his father might continue in the hands of his successor.

Events in S. Persia.

The Marquess of CREWE asked when the Government would be in a position to issue any further dispatches regarding the operations of Imperial Forces in Southern Persia for the maintenance of order and the protection of life and property. Our interests in the Persian Gulf had been recognised as paramount for a great number of years, and it was essential for us to intervene on strictly limited lines to maintain the trade routes. Very little was known about our forces in Southern Persia. But when all the facts were known he was sure it would be found that they had performed operations as arduous as those performed in other parts of Asia, Africa, or Europe itself.

Earl CURZON said that although perhaps in some respects Persia had been withdrawn from the public view, it had been one of the most interesting minor theatres of military activity. It had been full of interest, drama, and even events which he hoped at some time to be allowed to say something about. The question, however, was limited to operations in Shiraz, with regard to which he believed a dispatch from Sir Percy Sykes was issued, printed, and circulated at an earlier date. The operations were only just over, if indeed they were over now.

The Marquess of CREWE: My impression was that some dispatches had arrived but had been withheld for some object I do not understand.

Earl CURZON: My noble friend at the India Office (Lord Sinha) is not aware of that, and I am not aware of it either. These operations had been in a theatre quite apart, and he saw no reason why dispatches should not be laid. He hoped as soon as they were received that he might satisfy the very legitimate curiosity of the noble marquess. In answer to Lord Lamington, Earl Curzon added that our troops, which penetrated about 100 miles from the coast, relieved Shiraz. That was the object we had in view.

Indian Questions.

March 4.

Lord SYDENHAM asked when the opinions of the Provincial Governments in India on the report of the Viceroy and the Secretary of State would be made available for the information of Parliament and the public. He also asked for the publication of the evidence taken before Lord Southborough's Committee.

Lord ISLINGTON thought that the question put by Lord Sydenham was an important one. In this matter a liberal and definite policy was necessary. He also appealed for more details of the Industrial Commission, which was of vital importance.

Lord SINHA, Under-Secretary for India, said his task was comparatively easy, because he had only to draw their lordships' attention to what was promised in November last by Lord Islington himself, and last month by Mr. Montagu. Both Mr. Montagu and Lord Islington promised that when the considered opinions of the Provincial Governments on the scheme had been received they would be placed before Parliament in so far as they did not contain confidential matter, and would be published without unnecessary delay. He could only repeat that assurance. The Government of India's dispatch giving their view on the opinions of the local Governments had not yet been received, but was expected before long, not later than the end of this month. The other set of papers which the noble lord asked for referred to the report of the two committees over which Lord Southborough presided in India and the evidence recorded by those Committees. The Secretary of State had pledged himself to produce the reports as soon as they were received. Lord Southborough and the members of his committee were on their way back from India, and until their return it was not possible to give any information or publish the evidence. As to the report of the Indian Industrial Commission, it was formally laid before their lordships on February 19, and would be available for circulation on Thursday.

Riots at Katarpur.

Lord SYDENHAM asked whether the Under-Secretary could give any information as to the riots at Katarpur last year, when, it was stated, a mob of 3,000 Hindus murdered a number of Mohammedans, burying some of them alive and destroying their village.

Lord SINHA said it was the case that serious rioting had taken place at Katarpur on September 18 last, when thirty Mohammedans were killed and sixteen injured, and a large part of the village was burned. About 100 persons were now on trial for taking part in the rioting. He did not for a moment minimise the significance of this riot, but it had nothing whatever of a political character. Unfortunately these outbursts of religious fanaticism were still common in India. They were confined to the lower and poorer classes, and the real remedy was the progressive enlightenment and education of these classes as well as the closer co-operation of the wealthier and better educated classes. It was somewhat far-fetched to connect these riots, which had occurred for many years, with the concessions which it was alleged were going to be made.

HOUSE OF COMMONS.

India: Defence Force.

Feb. 26.

Colonel YATE asked the Secretary of State for India what steps have been taken by the Government of India for the permanent establishment of the Indian Defence Force?

Mr. FISHER: The Government of India propose to constitute a force which will replace the Indian Defence Force under modifications suitable to post-war conditions. Pending the settlement of various questions in connection with the constitution, organisation and training of this force they propose to continue temporarily the Indian Defence Force in its present form.

Officers' Pay in Mesopotamia.

Viscount WOLMER asked the Secretary of State for India: (1) Whether a British Service officer appointed on the staff of an Indian formation of the Mesopotamian Expeditionary Force receives only British rates of pay, whilst an Indian Army officer appointed to a British formation also only gets British rates of pay; and why such expedients are adopted to reduce the pay of officers serving in more arduous, unhealthy, and dangerous fields than that which falls to the lot of the Army in India; and (2) why British officers serving in India have their pay reduced on proceeding to the Mesopotamian Expeditionary Force?

Captain GUEST: I have been asked to answer these questions. A British Service officer who was not in India on August 4, 1914, and therefore was not promised that he should retain his Indian pay, draws the British rate of Staff pay if appointed to an Indian formation. An Indian Army officer appointed to a British Staff draws the British rate, or may retain the Indian rate of his substantive appointment if more advantageous. In neither case is there any reduction of an officers' existing emoluments. These decisions have been arrived at after the fullest consideration of the difficulties arising from the clashing of the British and Indian pay codes in mixed forces in the various theatres of war. As regards the second question, the rate of pay of British regimental officers is at identical Indian rates whether serving in India or Mesopotamia.

Lajpat Rai.

March 3.

Colonel YATE asked whether the Secretary of State for India was aware that Lajpat Rai, who was stated to be now in America, was the leader of a widespread sedition movement in the Punjab in 1907 which the Lieutenant-Governor described as extremely dangerous; that he was deported in that year from India to Burma, and subsequently became the intimate friend of Krishna Varma, the founder of India House in London, and of other revolutionaries; and would he consider the inadvisability of permitting a man with such a record to return either to India or England.

Mr. FISHER, who replied, said the Secretary of State for India had refused passports up to the present.

Our Caucasus Force.

In the course of the speech in which he introduced the Army Estimates, Mr. CHURCHILL referred to our force in the Caucasus. There, he said, we have an army of a certain size, a moderate size. These troops were sent there when the Turkish resistance collapsed, and they were sent there for the purpose of making sure that the German and Turkish forces were turned out of the country. They remain there for the purpose of maintaining order in those wild regions, and amongst those turbulent people pending the decision of the Peace Conference as to their future. In consequence, we are now holding in some force the railway line from Batum to Baku, with our headquarters at Tiflis, and the Admiralty have a fleet of armed vessels on the Caspian, which gives us the command of that extensive inland sea. In this theatre we have no special British interests of any sort to serve, nor are we under any special obligations to the inhabitants. We are simply discharging a duty to the League of Nations, or to the League of Allied Nations, and endeavouring to prevent new areas of the world from degenerating into the welter of Bolshevist anarchy. These troops are, of course, not engaged in fighting with any enemy. They are not in contact with any enemy, but they are a certain source of strength and support to the army of General Denikin, which is fighting the Bolshevists about 100 miles to the north of them. This army, which is the best of all the Russian armies now fighting against the Bolshevists, is being to some extent supplied by us with arms, munitions, and equipment. We have a military mission at General Denikin's headquarters, and he has in the last month, in spite of some reverses, gained an important victory, in which, among other things, over 30,000 Bolshevist prisoners were taken.

RHODES AND THE DODECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is contended that, in accordance with the now recognised right of self-determination, the group of islands off the S.W. coast of Asia Minor, known as the Dodecanese, should be ceded under the mandate of the Peace Conference to Greece. M. Venizelos put forward the claim, and Signor Orlando is said to have received it as urbanely as might be expected. From a point of view which suggests—and, indeed, has long suggested itself to me—the Dodecanese should not be thus "lumped" as a whole. It should be "Rhodes and the Dodecanese," and whatever the fate of the latter, I ask your permission to state why Italy should not part with Rhodes.

I will not attempt to encroach upon your space with any detail of the magnificent defence of Rhodes by the Hospitallers from 1310 to 1523. The Manes of Fulco de Villaret, who took Rhodes in 1310; of Dieudonné de Gozon, who slew the famous dragon (see Schiller's poem); and of D'Aubusson and de l'Isle Adam, who were Grand-Masters during the two sieges by the Turks, protest on behalf of the Hospitallers against its cession. If the Sovereign Order of Malta, which now has its *chef-lieu* in Rome, has a spark of the old Hospitaller spirit in it—and we may perhaps venture to hope that a kindred spark might animate St. John's Gate and even the Johanniter Orden—that Sovereign Order will not lose this unique opportunity of retaining Rhodes. If the League of Nations achieves its purpose, it should reunite in one these three scions of perhaps the oldest known League of Nations still claiming existence.

No sooner had Rhodes (in 1911) passed into the keeping of Italy than M. Bompard (the then French Ambassador at Constantinople) at once set to work to secure for France the old "Auberge de France." He restored it and gave it to his country. Bear in mind that it was the defection of France from the Hospitallers under the French Revolution that, to all intents and purposes, ruined the Knights of Malta. You will then appreciate the return of France to-day to its fraternal loyalty to the Order, of which for centuries it had been the backbone.

What M. Bompard began, the Italians have followed up. General Elia, the Italian Governor of Rhodes, has restored the Auberge d'Italie and one or two other Auberges, and certain tentative inquiries have been made regarding the Auberge d'Angleterre. Rhodes is united through its Hospitaller ties and traditions with all Europe, and should not go back either to Turk or Greek; for it was from the Greek that the Grand Master Fulco de Villaret took it. Europe to-day seems to forget the historic hold which Rhodes established upon her eternal gratitude at a time when the Greek Empire was politically and ecclesiastically hostile to the Latin world, and decadent and lethargic in face of the growing Moslem power.

On the old palace of the Grand Masters the Italian flag now floats, and that Italian flag was at once the flag of the House of Savoy and of the very ancient Order of St. John of Jerusalem. That flag should not come down, charm the honeyed tongue of M. Venizelos never so wisely. Under any circumstances the just claims of the Hospitaller Order over the historic "Street of the Knights" and other relics of that Order should be respected.

I hope the French and Italian Press will also take this matter up.—I am, etc.,

A. C. YATE.

Beckbury Hall, Shifnal, Feb. 24, 1919.

ALBANIANS OR EPIROTES?—A REPLY TO MR. CHR. KESSARY.

TO THE EDITOR OF "THE NEAR EAST."

I beg you, Sir, to allow me to say a few words in reply to Mr. Chr. Kessary's letter with regard to the nationality of the so-called Epirotes, who are nothing else but Christian Albanians of the South.

Mr. Kessary argues, with Renan, that the true test of nationality is the community of ideals and feelings. We cheerfully agree with him on this point, inasmuch as the great majority of the Albanian leaders and distinguished patriots belong to that enlightened and progressive Christian element of that Southern Albania which Mr. Kessary claims as Greek. The undersigned is likewise a native of Koritsa and belongs to the Greek Orthodox Church.

As to Mr. Kessary's statement that the Pan-Albanian Federation of America, Vatra, whose representative in London was Mehmed Bey Konitsa, has only 1,600 members, we earnestly advise him to apply to the authorities of Massachusetts State, under the laws of which the Vatra is incorporated, and he will learn that more than that number of members are to be found in the State of Massachusetts alone. The fact, on the other hand, that Mr. Konitsa has been recently appointed Minister of Foreign Affairs by the National Assembly of Durazzo is an eloquent proof of how great an influence this federation of ours is wielding in shaping the destinies of the Albanian nation.

As to the charge that Vatra was "pro-German and pro-Turkish in its policy before America entered the war, or in favour of the notorious Prince William of Wied," it suffices to refer to the fact that in 1916 the Vatra offered to the British Government an Albanian regiment recruited from among the Albanians of America, the overwhelming majority of whom are, moreover, natives of the Epirus of Mr. Kessary. Furthermore, the Albanian Republic of Koritsa (or Korcha), which constitutes half of Northern Epirus, was loyally fighting on the side of the Entente Allies at the time when the Greeks of King Constantine were undermining the Allied successes by their treacherous attitude.

I decline to speak of the rest of the letter of Mr. Kessary. His curious assertion that Epirus is too Hellenic to need to be Hellenized is a regular "omnibus" argument of Greek ingenuity.

CONSTANTINE A. CHEKREZI
(Delegate of the Vatra in the United States).

BOOKS FOR SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May we appeal through your columns for books for Serbia? The Austro-Hungarians and the Bulgarians were at special pains to remove all means of education and culture in Serbia, and they destroyed her libraries after taking from them all that they themselves wanted. They also destroyed every printing press in the country. It is impossible to state in a phrase all that such losses must mean to a nation. But those of us who have imagination will hardly refuse a gift from our well-filled bookshelves. Books, old or new, of practically every kind, and in any language, are needed, and should be sent to Miss Waring, Hon. Organising Secretary for the Reconstruction of Serbian Libraries, Royal Society of Literature, 2, Bloomsbury Square, London, W.C.1. The name and address of sender should be given on the outside of the parcel.

Those who wish to help and who cannot give books are asked to send donations towards expenses, and for the providing of books that may be missing from among the gifts. Cheques should be crossed Messrs. Coutts and Co., A/c War Fund of the Entente Committee.—I am, etc.,

CREWE,
Hon. Director of Foreign Affairs of the Royal Society of Literature.

JERUSALEM "LAND-GIRLS."

Mrs. Norman Bentwich, who has just joined her husband, the Acting Chief Legal Adviser to the Palestine Administration, has started an organisation to provide healthful and remunerative occupation for young girls under proper control, says the *Jewish Chronicle*. Using her experience as Welfare Officer of the Women's Land Army in England, she is now engaged in organising the Jewish unemployed girls into a "Jerusalem Girls' Land Army" to cultivate the waste ground in and about the city. The land has been placed at her disposal, as well as seed, plants, and a few of the necessary tools, and she is now asking for a moderate capital to enable wages to be paid until the produce can be marketed. An amount of £1,000 would enable the work to be carried on until the marketing of crops renders it self-supporting, and there is every reason to expect that before long a large organisation of land girls will be developed.

At a meeting of the Royal Geographical Society to be held on Monday, March 24, at 8 p.m., in the Theatre of the Society, Burlington Gardens, Captain Alan Ogilvie will read a paper on "Macedonia."

NEAR EAST BOOKSHELF.

THE NEW EAST.*

The war, says Mr. Butler, has created a new Balkans, using the world Balkans not as a geographical unit, but as the symbol of political and racial instability. The New East, in his view, lies along the borders of what were once the three Empires of Germany, Russia, and Austria; it is composed of the smaller States and peoples who were once governed by those Empires, but who now, through the collapse of the Great Powers, have the chance of asserting their independence and governing themselves. The question, which is of very considerable importance for the future of Europe, is not so much, will they do it? but, how will they do it?

Mr. Butler enumerates Finland, Balticum (that is Courland, Livonia, and Esthonia), Poland, and the Ukraine as the new States; he might have added Bohemia. Of these Poland is by all odds the greatest; the Poles have been a distinct entity in European politics, they have their own culture, music, literature, and art; they are a creative nation of the major type. Probably their politics is the weakest joint in their armour, and it was their fatal divisions which led to their downfall. It remains to be seen whether they have learnt the lesson; a recent study of Polish politics, with its formidable array of parties, groups, and interests, does not suggest that they have. Moreover, we think Mr. Butler is sound when he declares that the larger Poland is not necessarily the Greater Poland. The country must be freed from the German yoke entirely, and Posen and Danzig must be brought under Polish rule as completely as Warsaw and Lemberg; but the chauvinism which colours the whole Ukraine as semi-Polish territory on the Polish propagandist maps is not helpful. The Poles have many brilliant gifts, but the faculty of ruling other races successfully is not among them.

They will assuredly play a great part in the future of Europe, for they are, as it were, the gate between east and west, an outpost of civilisation almost on its frontiers; but what of the others? Finland is not very popular at the moment, owing to the orientation of her policy towards Berlin a year ago, and the somewhat gross flatteries of the Kaiser which were indulged in then read a little curiously this spring; but Mr. Butler sums up the case correctly when he says that the future of Finland is as a semi-Scandinavian state. The country will be a small independent State, and it will derive its thought from its greater neighbours as at present. It will be safe in the obscurity of a remote corner of Europe—and it will be safe until the Great Powers again revive their rivalries. If ever the German and Russian Empires are restored—and Mr. Butler is perhaps a little too sanguine about their restoration—Finland will have to look out for trouble.

The future of Lithuania, and what Mr. Butler calls Balticum also, seems to depend largely on the strength and constitution of the greater States around them. They will be too weak to stand entirely alone, and yet they will not amalgamate with others and sink their nascent individuality altogether as provinces of a new confederation on the Austrian model, a type which is now definitely out of fashion. A good deal depends on the way in which they face their own rather difficult internal problems, and whether they develop a culture of their own. The making of a nationality is a complex problem, but the chief factor is the genius of the people composing it; and it would be idle to pretend that the world knows much of the capacity of the Letts and Lithuanians.

The Ukraine is a larger and more important territory, and a discussion of its future, which is bound to react considerably on Balkan politics, can hardly be attempted in a review. Suffice it to say that Mr. Butler believes that the Ukraine will retain its independence, and develop on different lines from the rest of Russia.

The whole question of the future of these new States of the second and third magnitude is important, and students of foreign affairs in this country will watch the careers of the countries born in the Great War with interest and sympathy. But the keys of the position are Poland and Bohemia—and again we regret that the author did not include a study of the Czechs and their leader, one of the most brilliant politicians of the new Europe, in his informing and generally impartial survey.

VÆ VICTIS!†

"They depopulate a country and call it Peace," wrote Tacitus; but the Central Powers have far exceeded the licence claimed by Roman conquerors. At a time when the rôles are reversed, and races which aimed at world-dominion are suing for mercy, it is well that the public should learn the treatment which they meted out to Roumania and Serbia under the sacred name of Peace. M. Iancovici has rendered conspicuous service to civilisation by publishing the text of the Treaty of Bucharest (May 7, 1918), and an analysis showing the effect of its monstrous provisions. Under that treaty six provinces were torn from Roumania, a war indemnity was exacted amounting to £124,000,000, or seven times the little country's revenue in 1914. Austro-Germans were authorised to lay hands on the sources of her economic life, and hold her peasant population in abject slavery. It will be remembered that the Treaty of Bucharest synchronized with a period when the German armies seemed to be in the ascendant in France and Belgium; hence the significance of a German officer's reply to a timid remonstrance made by one of M. Bratiano's suite: "Yes," said the vindictive Hun, "the conditions are certainly hard; but just wait and see how we're going to treat France and England!" The Reichstag, elated by successes on the Western front, hastened to ratify this atrocious pact, at the bidding of Ebert, Scheidemann, Erzberger and von Kuhlmann, who now represent Germany in negotiations with the Entente.

If Roumania fared ill at the hands of her conquerors, the plight of Serbia was infinitely worse. It is impossible to read the details of the Austro-Bulgarian occupation given by M. Novakovicht without indignation and horror.

A highly gifted race, thrilling with patriotism, and the heirs of a splendid literature, was systematically destroyed. Many thousands were deported to the swamps of Hungary and Asia Minor, their places being taken by Bulgarian colonists. Males between 19 and 40 were forcibly enrolled in the conquering armies and sent to fight against their brother-Slavs. The harvest of Serbian fertile fields was exported to Germany; her copper mines were worked for the sole benefit of her oppressors. Pillage was carried out with greater thoroughness than in France or Belgium, and German reservists were the greatest offenders. More infamous than the material destruction wrought by the invaders was their attempt to kill Serbia's soul by imposing the Bulgarian language on her schools and forbidding every manifestation of her national spirit. M. Novakovich places beyond all doubt the fact that the Central Powers violated every clause of the Hague Convention; and has some pertinent remarks to make regarding the responsibility of neutrals who,

as parties to the final act of the Convention executed by each of them on October 18, 1907, had recognised the solidarity of civilised nations. And yet throughout the war these neutrals ignored their duty as guardian of international law. Their indifference and negligence undoubtedly encouraged the enemy to persist in setting its principles at nought; and their failure to raise any protest against Germany's manifold crimes has nullified the prospective value of such conventions.

One is inclined to ask whether the League of Nations will be more stable than its predecessor, which was inaugurated with a flourish of trumpets in 1907.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

Lord Inchcape is recovering slowly from his attack of influenza, but is still confined to his bed.

The Greek Minister, M. Demetrius Caclamanos, has now recovered from his illness and resumed his duties.

The Earl and Countess of Carnarvon and Lady Evelyn Herbert left Cairo on February 18 for Luxor.

The Queen of Roumania has left Bucharest for Paris and London.

Prince Alexander of Serbia left Paris on Saturday, proceeding to Belgrade, by way of Toulon, Patras, and Athens.

The Queen of Montenegro has conferred upon Lady Walleran the gold medal and ribbon of the Montenegro Red Cross for her Red Cross work with the Allies.

Mr. Athelstan Riley has received the Royal consent to wear the insignia of the Fourth Class of the Order of Saint Sava, conferred on him by the King of Serbia.

Brigadier-General Sir George Macauley, General Manager Egyptian State Railways, accompanied General Sir Edmund Allenby on his recent visit to Constantinople.

Major-General the Maharaja of Bikanir had the honour of being invited to luncheon with the King and Queen last Saturday.

Major-General G. F. MacMunn, Inspector-General of Communications, Mesopotamian Expeditionary Force, had the honour of being received by the King on Saturday.

Madame Yovanovitch, the wife of the Serbian Minister, and Captain Yovanovitch, Assistant Military Attaché, have left London for Paris.

Lieut.-Colonel N. Arion, Military Attaché to the Roumanian Legation, returned to London on Saturday from his visit to the Western Front.

The Church Missionary Society has received a cable from Baghdad reporting that the Rev. E. E. Lavy is suffering from typhus.

At Bombay, on February 3, the marriage took place of Captain Peter Vievra, I.M.S., to Miss Phyllis Hague, eldest daughter of Mr. and Mrs. D. Hague, of 46, Marlborough Mansions, Hampstead.

Mr. Abel Chapman, author of "On Safari: Big Game Hunting in British East Africa," and other works of travel and natural history, is now on a visit to the Sudan, with his brother, Mr. J. C. Chapman.

The Executive Committee of the Central Hull Conservative Association has unanimously decided to invite Lady Sykes to contest the vacancy caused by the death of her husband, Sir Mark Sykes, Bart.

Colonel Sir Courtauld Thomson, K.B.E., C.B., Chief Commissioner of the British Red Cross and Order of St. John for Malta, Egypt, and the Near East, arrived in Cairo in the middle of February.

Lord and Lady Jellicoe arrived at Gibraltar on February 24. They were welcomed by the Governor, General Sir H. Smith-Dorrien, and Admiral Grant, who went on board the "New Zealand," and afterwards proceeded to Government House.

An engagement is announced between Mr. E. Labouchere Thornton, I.C.S. (retired), of Beachborough, Adyar, Madras, and Miss Eileen Balfour, grand-daughter of the late Mrs. Laura Sisson, of 36, Overstrand Mansions, S.W.

At a meeting of the Royal Geographical Society to be held on Monday, March 10, at 8 p.m., in the Theatre of the Society, Burlington Gardens, Major J. B. Noel, M.G.C., will read a paper on "The Eastern Approaches to Mount Everest."

On February 23, at Alexandria, Brevet Major (Temp. Lieut.-Colonel) William H. Jelf Thornton, M.C., R.A., and Staff, was married to Bianca Dora Anna Marie Capozzi, youngest daughter of M. R. Capozzi, and the late Mrs. Capozzi, Mustapha Pasha, Alexandria.

A marriage has been arranged, and will shortly take place in India, between Seymour Mowbray, son of the late Mowbray Gray and Mrs. Gray, Wongalee, Surbiton, and Dorothea Isabel Emily, only daughter of Mr. W. E. Tempest Bennett, C.S.I., late Public Works Department, India.

The engagement is announced between Major E. C. Pennefather, O.E.T.A., son of the Rev. Prebendary Pennefather, D.D., late vicar of Kensington, and Sylvia Ruth, daughter of the late S. H. Carver, of Alexandria, Egypt, and Mrs. Carver, The Moot, Downton, Salisbury.

Major-General H. D. Watson, C.B., C.M.S., C.I.E., M.V.O., General Officer Commanding Cairo and the Delta, has been appointed a Commander of the Order of the Crown of Italy by the Italian Government in recognition of his distinguished service during the war.

The engagement is announced of Major James Oliver Thurburn, M.C., Royal Field Artillery, only son of Colonel James White Thurburn, C.S.I., late Royal Engineers, and Mrs. Thurburn, of 6, Grimston Gardens, Folkestone, and Kathleen Mary, youngest daughter of Mr. and Mrs. Edward H. Tootal, of 25, Upper Phillimore Gardens, W.

Our Malta correspondent writes:—Universal pleasure has been expressed on receiving the news that a distinguished Maltese, Colonel E. E. Bernard Pasha, C.M.G., Financial Secretary to the Sudan Government, eldest son of the late Colonel Count Dr. P. Bernard and of Countess Bernard, has received the honour of knighthood.

The engagement is announced, and the marriage will take place in April, between Captain H. N. Harrington, the Cheshire Regiment, only son of Dr. H. N. Harrington and Mrs. Harrington, of Birkenhead, and Mary, elder daughter of Colonel L. C. Kerrich (late) Indian Army, and Mrs. Kerrich, of Grasmere, Fleet, Hants.

The engagement is announced, and the marriage will shortly take place, between Captain J. L. Muscat, K.O. Malta Regiment, attached K.R.R.C., elder son of the late Major J. Muscat and Mrs. Muscat, of Valletta, Malta, and Alice, youngest daughter of Mr. and Mrs. Franklin Tyler, of Nico Perez, Uruguay, South America.

The wedding will take place very quietly, at All Saints' Church, Crowborough, on Saturday, March 8, of George Gilbert Mackwood, youngest son of Mr. Frank Mitchell Mackwood, of Colombo, Ceylon, and Joyce, elder daughter of Mr. and Mrs. Henry Lushington Bolton, of The Gables, Crowborough Beacon, and The Sanctuary, Westminster.

Sir Valentine Chirol, who returned on Saturday to the Paris Peace Conference, regrets that he is quite unable to answer the large number of letters and messages of congratulation he has received on the result of the Tilak libel action, and hopes that his friends will accept through this channel the expression of his grateful acknowledgments.

An engagement is announced between Captain Patrick Swinglehurst Hamilton, Border Regiment, attached Headquarter Staff, 1st (Peshawar) Division, barrister-at-law, son of Mr. J. C. Hamilton, of Barrows Green, near Kendal, High Sheriff of Westmorland, and Millicent Joscelyne (Joy), second daughter of Sir Dudley Stewart-Smith, K.C., Vice-Chancellor of Lancaster, and Lady Stewart-Smith, of 42, Albert Court, Kensington.

On February 27, at St. Peter's Church, Stonegate, Sussex, the marriage took place of Captain Basil Drewe, M.C., R.G.A., second son of Mr. and Mrs. J. C. Drewe, Wadhurst Hall, Sussex, and Drewsteignton, Devon, to Ruth, only daughter of the late Frank Haselden and Mrs. Haselden, East Lymden, Ticehurst, Sussex, and Alexandria, Egypt. The Rev. L. C. Stevenson, Vicar of Wadhurst, officiated, assisted by the Rev. G. H. Gray, Vicar of Ticehurst.

On Friday, March 14, at 3.30 p.m., at Steinway Hall, Wigmore Street, Miss M. E. Durham will lecture on "Albania and Her People." Lieutenant-Colonel the Hon. Aubrey Herbert, M.P., will preside, and the lecture will be illustrated by original lantern slides. The proceeds will be devoted to the aid of Albania's war victims. Tickets, 5s. and 2s. 6d. (tax included) can be obtained from Miss Astley, 28, Bruton Street, W.1, or Miss Durham, 71, Belsize Park Gardens, N.W.3, or at the Steinway Hall.

The marriage took place on Monday, at Bromuton Parish Church, of Mr. Frank Colin Craig, second son of Mr. and Mrs. Frank Craig, of Perth, Western Australia, to Constance Jane, elder daughter of General Sir William and Lady Birdwood. A

Digitized by Google

guard of honour was furnished by the Australian Provost Corps, and a large number of men in uniform lined the approaches to the church. Prebendary A. W. Gough performed the rite, assisted by Bishop Long, of Bathurst, N.S.W., and General Birdwood gave away his daughter. Captain Eric Onslow was best man, and Mr. and Mrs. Charles Buckley lent their house, 4, Hans Crescent, for the reception afterwards.

APPOINTMENTS, PROMOTIONS, &c.

It is understood that Mr. Justice Teunon, of the Calcutta High Court, goes on leave in the spring.

The retirement from the Indian Army of General Sir E. G. Barrow and Major-General G. A. Cookson is gazetted.

Lieut.-Colonel W. B. Mereweather, C.I.E., on return from military duty, has been appointed Political Agent for Cutch and Morvi.

Miralai A. G. Cummines Bey, M.C., M.B., Egyptian Medical Corps, has been granted the 3rd Class of the Order of the Nile on the occasion of his retirement from the service of the Egyptian Army on January 21.

Sir Roper Parkington has received intimation that the appointments made by the King of Montenegro of Mr. Henry A. Cole as Montenegrin Consul at Liverpool, and Mr. Robert Wilson as Consul at Edinburgh and Leith, have been approved by the Foreign Office.

OBITUARY.

Mr. F. R. S. Baxendale, Commissioner of Larnaka, has died in Cyprus at the age of fifty-eight. He was educated at Charterhouse, and entered the public service in 1884.

Mrs. Georgina A. T. Paget has died at Park Homer, Wimborne, at the age of 97. She was with her husband, the late Colonel Leopold Grimston Paget, throughout the Indian Mutiny.

Mr. Loftus Richard Tottenham, late of the Indian Civil Service, has died at Cheltenham in his eighty-third year. He joined the Service from Haileybury in 1856, and after twenty-three years' service was appointed a Judge of the High Court, Calcutta. He retired in 1893.

Sir Edward Jenkinson, K.C.B., died on March 1, aged eighty-two. He was educated at Harrow and the E.I.C. school at Haileybury, and first went to India in 1856. As a member of the I.C.S. he served through the Mutiny, for which he received the medal. He was joint magistrate and deputy collector at Benares, and, later, at Farakabad; and rose to be divisional commissioner of Jhansi, and, later, Oudh. In 1880 he retired, but thereafter held one or two posts in connection with the government of Ireland.

SIR ANDREW FRASER, K.C.S.I.

Sir Andrew Henderson Leith Fraser, K.C.S.I., formerly Lieutenant-Governor of Bengal, died on February 26, in Edinburgh, in his seventy-first year. A son of the Rev. A. G. Fraser, D.D., he was born in Bombay, and was educated partly there and partly in Edinburgh. In 1874 he was called to the Bar at the Middle Temple. He joined the Indian Civil Service in 1871, and after holding minor appointments became Chief Commissioner of the Central Provinces in 1899. In 1902 he was appointed President of the Police Commission, and, in 1903, Lieutenant-Governor of Bengal, a post which he retained until he retired from India in 1908. It was during his tenure of office that Bengal was partitioned. He was for some time Moderator of the Presbyterian Church in India, and throughout his life was keenly interested in missionary work. He received the C.S.I. in 1897 for services as Land Revenue Officer, and was promoted K.C.S.I. in 1903.

NEWS IN BRIEF.

The raising of the blockade of Kavalla, the Bulgarian coast, the Dardanelles, Syria, and Karamania (South-Eastern Asia Minor) is announced.

Greek troops operating in Russia, according to a report from Salonika, have occupied Kherson, on the Dnieper, Black Sea, the operations developing favourably.

Various Greek communities established north-east of Kirk Kilisse, Turkey, which are not comprised in M. Venizelos's territorial claims, have addressed a telegram to him asking him to incorporate them in Greater Greece.

A memorandum has been submitted to the Peace Conference by the National Delegation of the Unredeemed Greeks of the Euxine Pontus. The Memorandum claims that the Euxine Pontus should be constituted an independent republic.

MM. Rhallis and Dragoumis, the former Greek Ministers, who are being tried in Athens for offences under the Constantine *régime*, have been granted bail. The applications of M. Skouloudis and General Yannakitsas for bail have been refused.

The world's record for sword swinging of fifty hours, held by Gunner Burher, R.F.A., was beaten at Bareilly recently by Sergeant John Batterby, Yorkshire Regiment, who swung swords for fifty-two hours with 393,080 revolutions.

The Judicial Committee of the Privy Council on Tuesday reserved judgment on the appeal brought by Mrs. Annie Besant against a judgment of the High Court of Madras refusing to set aside an order of the Government of Madras forfeiting to the King the security of 2,000 rupees deposited by her under the provisions of the Indian Press Act.

In the appropriation accounts of the Civil Service and Revenue Departments there appears in the unclassified votes the grant to Lady Maude of the sum of £25,000 "in recognition of the eminent services rendered by the late Lieutenant-General Sir F. Stanley Maude while commanding his Majesty's Forces during the campaign in Mesopotamia."

Arrangements have now been made to forward, subject to censorship, unregistered postal packets of all kinds, except parcels, addressed to any Russian port on the Black Sea, to any port on the Sea of Azov, or to any place in Caucasia. Correspondence for some of these places may be subject to great delay or may even not be delivered at all. The sender must take the risk. Under similar conditions postal packets of all kinds (except parcels) addressed to Bulgaria will be forwarded.

The *Morning Post's* Special Correspondent in Constantinople reports (February 21):—The American relief expedition, under Mr. Peet, has arrived in Constantinople and commenced its work. This Commission will co-operate with the International Food Commission of Mr. Hoover, whose representative here is Mr. Howard Heintz, head of the well-known firm of that name in Chicago. Two ships laden with food, clothes, boots, and agricultural instruments have already arrived in Turkey. The American Relief Commissions will number 200 members to begin with, and they will work in the Caucasus, Syria, and Anatolia.

The first qualifying examination for the Indian Civil Service, and Colonial Service (Eastern Cadetships), under the reconstruction scheme, will begin on Tuesday, April 15, 1919. The first qualifying examination for junior or intermediate appointments will begin on Wednesday, May 7, 1919. Other qualifying examinations for these situations will take place at intervals. Candidates required to attend these examinations will be duly informed. Further particulars may be obtained by writing to the Secretary, Civil Service Commission, 6, Burlington Gardens, London, W.1, in an envelope marked "Reconstruction" in the top left-hand corner.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

FRIDAY, MARCH 7, 1919.

THE EGYPTIAN NATIONALISTS.

The course of the war has inevitably brought the so-called Nationalist movement in Egypt, as in India, very much to the forefront. Troublesome as it may prove in detail to the authorities concerned, the British nation as a whole will do well to regard it philosophically, and to realise that it constitutes a splendid, if unconscious, tribute to the efficacy and disinterestedness of British tutelage. It is only necessary to recall the circumstances which led Great Britain to make herself responsible for the government of the two countries in order to appreciate the gulf that is now fixed between the corruption, misgovernment, and chaos of the pre-Occupation days and the conditions under which a section of the people roll glibly off their tongues appeals to constitutional rights in phraseology that they could only have learned under British political guidance. The phenomenon is worthy of notice. Precocity is not uncommon, and many youths of nineteen or twenty years will be more "grown-up" than men of twenty-two and upwards. But it has not been considered necessary for this reason to alter the legal age-limit for minors, and no number of Nationalist movements should tempt Great Britain to abandon the position that she has taken up for the good of peoples who for centuries were the victims of foreign despots or of oligarchies from among their own countrymen. In spite of the assurance with which British principles are quoted to serve Nationalists' ends, it requires only a cursory examination of their case to detect its weaknesses. The very fact that the war should have brought, as it were, to a head the movements both in India and in Egypt points to an arbitrary attempt on the part of the leaders to turn an extraneous set of circumstances to their own advantage, and does not imply that the two movements have reached an identical stage of maturity. The spokesmen of both, indeed, admit as much. In support of their claims they appeal to the declarations of the Allied statesmen in regard to the aims which these kept in view when prosecuting the war against the Central Alliance to a victorious issue. When mere ethnical groups, which were yesterday but ordinary provinces under Turkish domination, are being made into independent States, is it possible, it is asked, that Egypt should be satisfied with a smaller measure of autonomy?

But the intention of the Allies has been throughout to improve the world as a result of the war, not to allow it to retrogress, if it can be helped, in any single instance. In the case of the nations that are now promised self-government it is indisputable, such was the misgovernment to which they were subjected before, that autonomy is not only necessary, but also offers the best chance of better government. Between the subject races of Austria-Hungary and Turkey, on the one hand, and India and Egypt, on the other, there is no analogy. The two latter countries are as much part and parcel of the British Empire as the Italian community of New York or the negroes of Virginia are of the United States. It is conceivable that, if the American Government were lax enough, a certain number of Italians, Red Indians, or negroes might be found ready to claim the privileges of a separate independent State; but it is certain that no appeal to this effect would ever reach officially the Paris Conference. No doubt, to the limited vision of the Indian or the Egyptian Nationalist, his position appears to be entirely differentiated, because the British Empire is based on sea lines of communication, whereas the United States have a compact land empire. The distinction is immaterial. There is no need to labour the point here; but briefly it may be said that it would be as intolerable for the British to have Egypt cut herself adrift in the manner proposed by the Nationalists as it would be for the Americans to have the negroes set up an independent kingdom in the United States. We may expect this aspect of the case to be ignored in Egypt, but its force is not invalidated by that circumstance. The Egyptian Nationalist experiences no difficulty in doing violence to his intelligence. He has been shrewd enough in the presentation of his case against Great Britain to avoid the suggestion that Egypt under Nationalist rule will be better governed than at present; but he counts upon a wide ignorance prevailing at the Paris Conference in regard to actual conditions in his country. Only on this assumption can a number of sentences in the various "appeals" that have been scattered broadcast by active "delegations" be explained. During the war, we are told in one document, "the people of Egypt decided, for the sake of the larger interests of civilisation and for the success of the cause of the Entente, which they had near at heart, to lay aside their just claims and to concentrate for the moment their efforts on securing the victory of right over might. . . . Now the victory is secure, Egyptians feel the hour is come when it is their duty to their Fatherland, to press on the attention of the world their grievances and their claims. . . . Thus in answer to the persistent demand of the entire population, the members of the Legislative Assembly, which has been suspended ever since the war began, met informally and delegated from their members men capable of adequately expressing the thoughts and sentiments of the whole people." The record of the particular Legislative Assembly referred to is sufficient to indicate the extent to which its members were representative of "the whole people" or gave a thought to the country's real interests.

There is no reason to suppose that the Paris Conference will feel called upon to record any decision regarding the future of Egypt, apart, perhaps, from the application of the mandatory system, which has been taken over from British practice in the case of peoples who are "not yet able to stand by themselves under the strenuous conditions of the modern world." As already pointed out, the Conference is concerned with the better government of the nations, and it will have little evidence to lead it to the belief that Egypt under Saad Zaghlul Pasha will be better governed than under the present regime. On the other hand, the Nationalist movement cannot simply be ignored. To do this is to invite the Egyptians to take its leaders at their own valuation. Despite the cleverness of the individual members, the movement is the product of ill-digested education, and for this reason an effort must be made to correct its ill effects as well as to improve upon the education that produced it. In the present instance the Nationalists have derived some encouragement from the action of Rushdi Pasha in resigning the Premiership. There is some reason to suppose that the Ministerial crisis could have been avoided by a closer understanding between the British and Egyptian authorities in Egypt. The fact that the understanding was lacking implies failure to some extent on the part of the British Administration, although under the conditions of the last four years it is not difficult to make excuses on its behalf. The lessons of the war or the possibility of their having to be applied to Egypt may not have been appreciated. Great Britain has a strong moral position in Egypt, even as judged by the canons of the Draft Covenant of the League of Nations, and care should be taken that this position is not weakened by avoidable mistakes, not of heart but of thought.

THE FUTURE OF AFGHANISTAN.

By J. CLIVE ROOME.

It was in November of the first year of the war that I met in Calcutta an Afghan friend of mine who had recently arrived from Kandahar. He was much concerned then about the future of his country, as he thought that the war was exercising a dangerous influence over the turbulent section of the Afghans. A Sirdar himself among the tribesmen of the premier clan in Kandahar, he had no little difficulty in restraining the martial exuberance of his clansmen. According to him, it was the youthful element among the tribesmen that showed signs of breaking loose from tribal discipline. What puzzled him most was the fact that there was apparently an abundance of money among tribesmen who were inclined to support a policy of political aggression.

Shortly afterwards, the source from which the militant Afghans had obtained money was revealed. Agents of Germany found their way into the country from India and from Persia, and distributed money lavishly among the tribesmen, to win them over to the German cause. Many Afghans, so I was told, left their country and entered the Turkish army.

The unrest among the tribesmen was, however, not due, primarily, at least, to any ill-feeling towards Great Britain; although the lure of loot in India still exercises its magical fascination over the imagination of the Afghan. It was, on the contrary, symptomatic of a widespread desire for a change in the mode of government and life in the country itself. The people were gradually beginning to realise that the policy of splendid isolation had its drawbacks, in so far as it has left them at a standstill. Hemmed in on all sides by powerful neighbours, they have maintained their political independence; but they have, on the other hand, not gained any material advantages from the unique position they occupy between India, Persia, and Russia. Their suspicion of their neighbours has prevented them from entertaining any schemes of railway construction, and even from improving the means of communication between their own country and India, Russia, or Persia; not that they have not been able to appreciate the advantages of railways, but because the iron rails have become for them the symbol of political aggression. On the northern frontier they have jealously watched the Russian railway creeping up inch by inch towards their country, carrying with it the terrible message of loss of independence. On their southern frontier, the delimitation of boundaries between their own country and India has not always been to their advantage territorially. They have, however, begun to realise that from an economic point of view their future is sealed, unless they improve their means of communciation and develop their mineral and agricultural resources. Their dilemma is how to do this without imperilling their independence. They expect their ruler and the Sirdars to find the solution. Now that the military career is practically barred to them, a way out of the difficulty in which they find themselves must be found, if they are to become a law-abiding people.

The late Ameer did all he could to advance their cause by building and keeping in repair a few good roads and employing motor transport. These improvements, however, served to heighten the discontent of those who did not derive any advantage from them, and the Ameer could not undertake an elaborate programme of road construction for the whole country owing to lack of funds. The tribesmen asked their Sirdars for good roads and means of taking their produce to the markets of India, Persia and Russia, and the Sirdars promised to press their claims before the Ameer. They were unable to obtain what the tribesmen wanted, and the Ameer gradually became unpopular. The Ameer's adoption of Western ways was the final blow to his prestige, and the criminal activities of German agents completely undermined the people's confidence in their ruler.

Now that the restraining influence of Ameer Habib Ullah Khan is lost, the future of the country is a source of anxiety not only to the Afghans themselves, but also to the British Government. There is sure to be an upheaval in the country over the question of his successor. The problem is to prevent conditions arising which may necessitate the despatch of a British expedition into the country. If any one has earned his independence in this world, it is the Afghan. His overpowering love for his country has prompted him to deeds which have brought him the opprobrium of savagery. He has, however, been driven in sheer self-defence to show no mercy to his enemy. His primitive weapons and untrained methods of warfare may have been no match for the scientific system of warfare employed by his enemies, but he has always fought bravely and not ineffectively. He has always maintained his freedom.

There is also another aspect of the Afghan character, which, however, is always forgotten when he is regarded as a desperate fighter. Men like Elphinstone, who knew the Afghans well, have borne eloquent testimony to the nobility of their character. They are an enterprising people, keen and businesslike, and capable of giving a good account of themselves as workers.

In the new world which the peacemakers of Paris are busy designing, the small but freedom-loving Afghan nation should be given an opportunity of proving its metal among the workers. In Afghanistan, more than anywhere else, the sword and the gun should yield place to the plough and the mill. Protected against foreign aggression, the Afghans will prove themselves as efficient as workers as they have proved themselves as soldiers. Proof, however, is not wanting already of their business acumen. They are found in many markets in Asia, and they are never deterred by any hardships in the pursuit of their ideals.

What they require is a reliable guarantee that their independence will never be imperilled, and that their mountain homes will ever be secure from foreign aggression, to make them into a useful community among the nations of the world. In spite of their isolation they are not so dense as not to understand the motives that prompt concession-hunters all over the world, and if they are to work out their salvation themselves they would like to do so unaided. Those who go to their aid in the task of nation-building should have their credentials of disinterestedness drawn up carefully and honestly.

If there are any disturbances in Afghanistan owing to disputes over the election of an Ameer, it will be advisable to confine them within the limits of Afghanistan and leave the Afghans to make their own choice of a ruler. Nothing would help them so much in finding a peaceful solution of their difficulties as the assurance that their country is their own, that no power can take it away from them, and that all that they have to do is to have a stable government in the country.

The next decennial census will be taken in India in 1921. Preliminary arrangements are under consideration.

The staff of the Eastern Bengal Railway are providing a monument to the memory of those railwaymen who laid down their lives in the war. It will be erected in the precincts on the Sealdah station.

The Rome correspondent of the *Morning Post* reports that all the Serbian students in Italy, of whom there are 240 in Rome and about forty elsewhere, will leave Italy as soon as all the necessary arrangements can be made. Those of them who have been studying engineering will go to Brünn (Moravia), the rest to France.

PRESS ON THE NEAR EAST

Britain and the East.

In an article headed "Britain's Burden; The Future of Palestine and Mesopotamia," which he contributes to the *Pall Mall Gazette*, Sir Francis Younghusband puts forward some of the reasons why we should not shirk our "burden." "If British control and British influence were now withdrawn from the ex-Turkish territories chaos would result, and some other control would speedily have to be substituted." But why should *we* take up the responsibility? We have enough on our hands already. Egypt has been a heavy expense to us. What have we got out of it to make up for our expenditure? What do we get out of India itself, in fact, at all commensurate with the responsibilities it entails upon us and the drain it is upon the best manhood of our race? The article continues:

The answer to all such questioning is that in the material way alone we do get considerable benefits from the increased prosperity which our efficient administration brings. The lands are made to produce more, so that we procure more raw materials and food for our needs. And the inhabitants acquire a higher standard of living and a greater purchasing power, and also increase in numbers, so that they form a better market for the sale of our manufactures, more especially our cotton goods. We get good interest, in fact, from the capital expended in these countries.

But over and above these cash advantages there is the satisfaction—the deep, satisfying contentment—which any healthy-minded workman feels at having a good job to do and doing it well. We are proud of our work in India and Egypt, and we have a right to be proud. It is not perfect, and we must seek to make it better; but it is good. If we undertake a similar work in the ex-Turkish territories we may have equal cash advantages, for Mesopotamia, in particular, has only a twentieth part of its cultivable area cultivated, and has immense potentialities as a wheat and cotton growing country. We should, therefore, obtain greater material benefit from it than we do from Egypt. But we should also have the opportunity of gaining this far greater advantage—namely, the satisfaction of having a piece of work to do which we know is exactly suited to our genius, and which we would take a pride in carrying out in a manner worthy of the great people we are.

The writer believes, too, that the cost need not be excessive; since much of the pioneer work has already been done in the construction of roads and railways. Also:

The prestige which the marvellously successful campaigns has brought us is now at our disposal, and in these Eastern countries is of great practical value. If we consider Egypt, Palestine, Mesopotamia, and India together and have troops wisely distributed with facilities for moving them rapidly from one quarter to another, the number of British required might be found not to exceed what India and Egypt alone required in pre-war days. The prestige of the British soldier and the British general has greatly increased. And the effect of modern armaments has trebled. By a process of elimination we now have at the head of affairs in Palestine and Mesopotamia men of pronounced ability, whose services are there ready at hand. The war has shown also that we have to a larger extent than ever before that type of young Englishman who possess an innate aptitude for leading backward people. And with the advantages also of the roads, railway, irrigation canals, and water supplies which we have constructed at enormous cost for war purposes, and with the benefit of modern mechanical appliances, such as aeroplanes and motor-cars, for administrative supervision, the burden of responsibility ought to be nothing like what our forefathers readily undertook in what is now many a flourishing part of the Empire.

Indians v. Bolsheviki.

Monday's *Times* contained a stirring account of "The Fighting in Trans-Caspia," contributed by a Special Correspondent at Merv. The Russians and Turcomans invited us to send troops to secure the safety of the railway line between Merv and the Caspians, and this force has had many "scraps" with the Bolshevist "army." In one of them, at Dushak on October 14, we took the offensive, and—

The assault was delivered at dawn after a two-days' march by a flanking column operating on the left of the railway. The attack was completely successful. The Bolshevists fled from the station. One of their armoured trains as it drew out of a siding burst into flames, ignited by a shell. The whole garrison of the train was cut up afterwards by a party of mounted Turcomans, who had made a wide circuit in the rear and destroyed the line behind it. As soon as the Bolshevists were expelled from the station our Allies, the Russian and Turcoman volunteers, instead of preparing to resist a counter-attack left the fight and fell to looting.

Every British officer in the Punjab regiment had fallen in the assault, and when the Bolshevists came on the Indians were exposed to attack from three sides—frontally down the line, on the right flank by troops who had rallied, apparently realizing our inferiority in numbers, and in the rear by a Bolshevist armoured train, which, had the action developed according to plan, should have been cut off. The Indian officer of the Punjabi battalion put up a splendid fight and refused to retire without orders. The situation was getting desperate, when our cavalry, who had been operating wide on the right of the railway, crossed the line and were returning, came into action. They gave the orders to the Indians to retire, and covered their retreat, the Bolshevists giving them frequent opportunities to get in with the lance. The enemy's casualties were estimated at 1,000, which is perhaps an exaggerated figure. Anyhow, the Bolshevists were shaken, and as a result of the Dushak action they evacuated Merv and fell back on Charjui, the bridgehead on the Oxus.

The Bolshevists do not appear to like meeting the Indians face to face. On another occasion we read:

The Punjabis again saved the situation. Our armoured train was surrounded and the whole of our left was in danger of being cut off, when they detrained and counter-attacked. Once more the presence of a small disciplined force was decisive. The Bolshevists, a disorganized rabble, firing wildly, did not wait for the bayonet, but melted away into the mist.

The article concludes with a tribute to the Indian troops that is evidently well earned:

But the thing that impressed us most on this far-flung front was the spirit of the Indians. The Bolshevists fly like sheep before them. In the three critical engagements at Kaakha, Dushak, and Annenkovo it was their coolness and discipline that turned the tide. It was the handful of men who came up from Quetta that saved Askhabad. The line was drawn against the Bolshevist advance at Kaakha; the enemy had every advantage except that of *moral*, and they never crossed it. Where two or three thousand have been engaged on either side the presence of a single company of sepoys has more than once turned the scale. One may be sure that these values will be discussed on the borders of Persia and Afghanistan to the increase of honour in the Punjab. The *izzat* of the Sikh and the Punjabi Musulman stands high; and higher still, among the thoughtful, the *izzat* of the British officer who has trained and led them.

Beautiful Albania.

Miss M. Edith Durham concludes an article on "Albania and Her People," which appears in the *Manchester Guardian*, with the following attractive description of the country and its inhabitants:—

It is a fair and beautiful land. Its long coast is warm and fertile. Even with the present primitive methods of agriculture crops grew freely. The olive and the vine flourish, and there is winter pasture for the flocks which go in summer to the green slopes of the Albanian Alps, with their virgin forests of beech, oak, and pine. The land is well watered. Its lakes, more beautiful than those of Italy, abound in fish of many sorts. Strange wild fowl haunt their banks—beautiful white herons and spoonbills and big pelicans. Grebes and wild duck swarm in winter, and the marshlands are full of woodcock and snipe. The chamois is not yet extinct upon the mountain, though now scarce, and wild pig are plentiful in the woods on the plains.

Small wonder that those whose forefathers have dwelt in the land for so many generations love it with passionate intensity. They derive the old name of the land "Illyria" from the Albanian word "Liria" (freedom), and "Liria! liria!" is now the cry of all. All who wish for a permanent peace must hope that freedom be granted them. For of late years most of Europe's troubles have originated in the Near East, and a just solution of its racial problems can alone establish tranquillity.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I learn that Fiume may be the port for shipments to Serbia instead of Salonika. It has the advantage of being very much more direct.

***

The position in Serbia at present is that the country is fairly well off as regards foodstuffs, but prices are very dear. Transport provides the outstanding trouble. Railways have been destroyed by the enemy with fiendish thoroughness, also the roads, and the difficulties of communication are very great. Judging by outward signs, one would hardly imagine, I am told, that Belgrade had been so severely damaged as is actually the case. The walls are standing, but on entering a house one often finds the interior ruined.

***

I understand that, while as far as Manchester firms are concerned there is already considerable activity in shipments to the Levant, a good many London firms are still hanging back, their timidity doubtless being caused by the uncertainty in the present position. The fact remains, however, that in Constantinople, and doubtless in the majority of other large Turkish towns, there is an extreme shortage of everything, and shipments promptly made will certainly find a good market. I would remind firms interested that the Imperial Ottoman Bank will be very glad to give information to anyone desiring to enter the Turkish market as to the opportunities in that direction. *En passant*, it will be noted that Constantinople makes its reappearance this week in the advertisement of the bank.

***

Of the features of special interest in the Indian Financial Statement, which is given in detail elsewhere in this issue, mention must be made of the relief granted to persons with low salaries. The taxable limit is raised from £67 to £133, and this, it is believed, will give relief to 237,000 persons out of the total number of 381,000. This concession brings the estimated deficit to over £5.000,000, and the excess profits duty is designed "to fill the gap and give a small surplus." The net estimated receipts from this tax are placed at about £6,000,000. As regards the Indian railways, a total expenditure is contemplated of about £24,000,000, consisting of the special revenue renewal programme of £6,500,000 and an expenditure on the railway capital programme of £17,570.000. A new loan of £10,000,000 is provided for, and the funds required for railway capital expenditure will be mainly met from the special reserve. £400,000 is provided for irrigation, and the grant for New Delhi is £300,000.

***

Feeling in business circles is very pronounced because there has been, as yet, no indication of the policy of the authorities with regard to trade problems, and this feeling found expression at a widely attended meeting of prominent merchants, manufacturers, and traders held last week at the instance of the London Chamber of Commerce, when a call was made upon the Government to declare its policy in regard to the extension and encouragement of trade after the war. Among the speakers was Sir C. C. McLeod, who said that the peace negotiations had gone far enough to enable the Government to give a definite lead, and through the lack of such an indication trade was being lost.

***

A further marked increase took place in the external trade of the Sudan in 1918, the figures for the total external trade being £E8,234,966, against £E6,831,298 in 1917. The increase has been mainly in imports, and as a result the favourable trade balance of 1917 of roughly £E488,000, without including re-exports, has given place to a slight adverse balance, which, by the addition of re-exports, however, is turned into one of £E186,802 in favour of the Sudan. Turning to the figures, imports amounted to £E4,024,582, against £E3,102,117 in 1917, or an increase of nearly 30 per cent.; exports to £E3,923,771, against £E3,490,565, or an increase of about 12½ per cent.; and re-exports to £E286,613, against £E238,616, or an increase of about 21 per cent. The principal articles of import were cotton fabrics £E1,116,849, refined sugar £E593,137, and coal £E333,855, while the chief articles of export were sheep and goats £E651,257, gum £E638,765, durra £E589,734, and cattle £E519.920.

***

The Foreign Office last year appointed a Committee, called the Nile Projects Committee, to consider certain charges made by Sir William Willcocks and Lieut.-Colonel M. Ralston Kennedy in connection with the present programme of irrigation in the Sudan. The report has now been published of the Committee, which consisted of Sir Maurice Fitzmaurice, past-president of the Institution of Civil Engineers; Sir John Benton, late Inspector-General of Irrigation in India; Sir William E. Garstin, late Adviser to the Egyptian Ministry of Public Works; Colonel H. G. Lyons, late Director-General, Survey Department of Egypt; Professor W. C. Unwin, past-president of the Institution of Civil Engineers; and Sir Arthur L. Webb, late Adviser to the Egyptian Ministry of Public Works.

***

The charges made by Colonel Kennedy are first dealt with. His first three charges alleged that certain gauge readings and discharge data had been given or used incorrectly, and the Committee's finding is that this was not the case. Colonel Kennedy further stated that taking water from the Blue Nile for the irrigation of the Gezireh would very seriously interfere with the amount of water required for irrigation in Egypt in the early part of the year. The Committee's finding is that there is no justification for this statement. As regards the charges made by Sir William Willcocks, the Committee finds, in the first place, that the measurements at Aswan are direct and absolute, and are the most accurate measurements that have ever been made of the discharge of a large river. His next two charges, referring to records of discharges at Aswan and on the Blue Nile, are not found to be justified, and the Committee further finds no evidence for his complaint that he was refused information by the Public Works Ministry. Finally, with regard to the charge by Sir William Willcocks that "grave inaccuracies in connection with the plates showing the progress of the heightening and widening of the Aswan Dam were published in the Irrigation Reports, 1908-1914," the report states that Sir Murdoch MacDonald had frankly acknowledged that, though he was not personally responsible for the drawings, the plates for certain years were to some extent inaccurate owing to the fact that errors in reproduction were not detected by the officials of the Irrigation Department in checking the proofs.

***

In the preface to its general findings the Committee says that, while it avoided, as far as possible, going into matters outside its reference, it was compelled to touch upon many of the questions which arise in the Irrigation Programme. In these circumstances "we think it may not be out of place to state that, on the information placed before us and from the irrigation point of view, such projects are sound, and form an integral part of the future Irrigation Programme of the Nile Valley. We have not, of course, examined any details of the various works of construction which such schemes necessitate." In the closing passage of the report the Committee states that, "after carefully considering all the matters referred to us, we are unanimously of opinion that there is no foundation for the charges brought forward by Sir William Willcocks and Colonel Kennedy, and further that they should never have been made. We feel bound to express our great regret that two past officials of the Egyptian and Sudan Government Service should have descended to the course of action they have thought fit to adopt in making these charges."

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.

MOROCCO TRADE NOTES.

Problem of Re-Exports.

(From Our Own Correspondent.)

Tangier, February 22.

There is no improvement in business here, and many firms are very badly hit. It was hoped, as mentioned in my last letter, that permission to re-export were granted (efforts to obtain which were being made by the British Chamber of Commerce and others) the situation would be somewhat relieved. Unfortunately this permission has not yet been accorded, though I believe it is now practically assured. After repeated representations to a commission specially appointed to fix prices an endeavour was made to arrive at an agreement as to the conditions under which re-export might be allowed while safeguarding the town against a possible famine of any of the articles concerned.*

Several proposals were made and considered with due deliberation, but most of them proved unsatisfactory; finally, some three weeks ago, an agreement was practically arrived at, and was properly drawn up at the British Agency, and sent round the Diplomatic circle for signature.

Efforts have been made, unsuccessfully at first, but are being renewed, to obtain permission to re-export also from the French zone.

Notwithstanding the state of trade here, it is felt that British manufacturers should not delay sending out their representatives, or they may find others here before them. From the numbers of inquiries received by business firms here it is evident that the interest taken in Morocco by British manufacturers is becoming very widespread. Unfortunately for some of the lines offered this country is not yet ripe, still it is very encouraging to see that Morocco is awakening a much wider interest in British commercial circles than she has done for a very long time.

Cost of Motoring.

A statement appeared lately in an English paper devoted to Morocco that motoring is cheaper here than in England; surely the writer knew little about the conditions of motoring here. To begin with English motors in England have no freight to pay and freight on American cars is higher to Morocco; then there is 12½ per cent. *ad valorem* duty to pay on cars, spirit, spare tyres, oil, etc. Then there are *roads* in England, whilst here even where roads exist they are in a very bad state a great part of the time.

It would be interesting to know the average mileage per gallon of spirit on the moderately good roads in England. Between Tangier and Rabat, for instance, where about 100 out of the 250 kilometres (60 out of 150 miles) are road—five miles per gallon for a five-passenger four-cylinder 30-h.p. American car (we have no British cars here) is as much as one can expect. The price per place for this journey is £6. Lower prices are sometimes charged by certain single car owners, who consider all earnings less cost of spirit as profit.

General News.

I see from a recent French publication that the Comité Consultatif Français are asking that the French Shipping Service between France and Tangier should be subsidised; the impression here is that this line even before the war was making excellent profits.

It is also asked that licences be granted to French subjects for floating coal depots in Tangier Bay until the port is constructed. I believe that just before the war broke out two or three licences had been, or were on the point of being, granted both to French and British firms: of course the war prevented these depots from being established.

Mr. Mulock, of the British Trade Commission, arrived here on leave last week; Mr. Barker has returned to England.

We have had very good rains both here and in the French zones, and the country is beginning to put on its best spring appearance.

* Since this was written the withdrawal of the restrictions on re-export has been published, and candles, soap, and even tea, pepper, and coffee may be freely re-exported by land or sea.

LANCASHIRE COTTON.

Market Still Quiet.

(From Our Own Correspondent.)

Manchester, Tuesday.

The market during the past week has displayed very little life, and leading buyers have adopted a cautious policy. There is still a strong opinion that some advantage can be gained by holding aloof at the present time. The easier tendency in American cotton rates has an adverse influence upon trade generally. According to one authority there is a possibility of a record acreage for cotton in Egypt next season The current crop is doing fairly well. Egyptian yarns continue to move off slowly and spinners tend to lose ground For Egypt piece goods have not attracted much attention. Rather more activity, however, has been met with for Persia and Turkey, certain local shippers having anticipated future wants. Remittances from abroad are now coming in on a freer scale. Cloth demand for India remains poor, offers being very scarce. Steady buying has occurred for China, chiefly in bleaching descriptions. Scarcely anything at all has been done for South America. Home trade buyers have been cautious. There remains a large amount of machinery standing idle in Lancashire for want of work. American yarns have been purchased from hand to mouth, and prices have tended to favour buyers. There has not been much activity in shipping yarns.

IMPORTS INTO SERBIA.

The Commission Internationale de Ravitaillement are advised by the representatives of the Serbian Government that the import into Serbia of the following articles is prohibited, except to the Serbian State Monopolies:—Tobacco of all descriptions, cigarette paper, salt, kerosene oil, matches.

The import of mineral oil and benzine is permitted to be made by private firms, provided they obtain the authorisation of the State Monopolies. High explosives, dynamite blasting powder, and similar material, as well as arms of all descriptions, can only be imported with the authority and licence of the Serbian Minister of War, while drugs, including saccharine, are licensed by the Serbian Ministry of Health for apothecaries and druggists.

Applications which may be submitted for licence to export the foregoing material to Serbia from this country should, therefore, be referred to the Serbian Delegates on the Commission Internationale de Ravitaillement, India House, Kingsway, W.C.2, and, provided they are authorised to support the request, export may be allowed.

The above restrictions do not, of course, apply in the case of supplies asked for by the Serbian Government through their Delegates on this Commission.

NEW INDUSTRY AT JAFFA.

Several hundred women are now employed at Jaffa by the Syria and Palestine Relief Fund in the making up of 5,000 sets of bedding—composed of mattress, quilt, and pillow—an urgent necessity in the plundered and desolate homes. Several rooms are filled by the busy workers. A notable triumph has been achieved in the undertaking of this work by the women at all, men only having been accustomed to beat the cotton and prepare the quilts before the war. There was much hesitation at first in facing this more elaborate task, but once the bolder spirits had made a beginning the rest soon followed suit, and found the work well within their powers. Some of those engaged are amongst the poorest, in whose homes there is absolutely no daily cookery for want of food and fuel.

The Indian Currency Report for 1917-18 states:—"The rupee coinage of the year was 23,12 lakhs, and purchases of silver for this coinage amounted to 83¾ million standard ounces. These were supplemented by local purchases in Bombay and Calcutta of 3½ million standard ounces. There were purchased in America 40 million, in China 28½ million, and in Australia 5 million ounces, while 1¾ million ounces were obtained from the Bawdwin Mines. The balance was shipped from London."

NEWS FROM ALL SOURCES.

Goatskins awaiting shipment at Aden in January totalled about 600,000 pieces.

The British flagship Venus has sailed from Rangoon, homeward bound, via Bombay.

Travancore's first industrial exhibition was held on February 17 and the two following days.

A committee for safeguarding Belgian interests in Roumania has been established at Brussels.

The Indian Excess Profits Tax Bill has been referred by the Viceroy's Council to a Select Committee.

Further consignments of silver bullion to the value of eight million dollars have been shipped to India from New York.

The weekly mail service between Egypt and Cyprus by the Khedivial Company, which has been suspended since July, has been resumed.

Mr. A. C. McWatters, I.C.S., of the Commerce and Industry Department of the Government of India, has been deputed to England on special duty.

Mr. W. E. Crum, O.B.E., of Messrs. Graham and Co., has been re-elected to represent the Bengal Chamber of Commerce on the Calcutta Port Commissioners.

The chairmanship of the new British Overseas Bank will, provisionally at any rate, be undertaken by Mr. Arthur C. D. Gairdner, general manager of the Union Bank of Scotland.

Mr. G. H. Griffith has been appointed goods manager of the Egyptian State Railways and has been succeeded as general traffic superintendent at Gabbary by Mr. S. R. Hibbert.

The Suez Canal Company, at their meeting on March 4, elected Lord Downham as British representative on the board in succession to Sir William Garstin, who has resigned after ten years' service.

During January 10,208 bales of tobacco, weighing 571,974 kilos, were received at Alexandria from Greece and other countries. Up to the end of the month the tobacco stock in the Customs tobacco stores was 106,296 bales.

Mr. T. E. Casdagli has been re-elected chairman of the Middle East and North Africa Section of the Manchester Chamber of Commerce, which will henceforth be known as the Egypt, Levant, and North Africa Section.

Mr. Charles Frederick Hooper, of Messrs. Thacker, Spink and Co., has been elected to represent the Calcutta Trades Association on the Corporation of Calcutta in the vacancy created by the resignation of Mr. George Phillips Shelton.

Prince Mohammed Hussein Mirza arrived in India recently from Persia to study local conditions with a view to improving trade relations between the two countries, and to consult local experts with a view to introducing the cultivation of tea into Persia.

Messrs. Cox and Company, bankers and Army agents, of 16, Charing Cross, have opened a City office at 38, Lombard Street, under the management of Mr. C. S. Clarke. This office is being opened with a view to meeting the development of their Indian and foreign business.

The Postmaster-General announces that the Indian mail, which has hitherto been closed for newspapers and other printed matter on Wednesday night, will now be kept open for these classes of correspondence until 2.30 p.m. on Thursdays at the General Post Office. The latest time for posting letters without late fee at the General Post Office remains 6 p.m. on Thursdays.

TRADE WITH GREECE.

Openings for Machinery.

In view of the efforts now being made to develop British trade with Greece, special interest attaches to a report recently issued in Greece in which, besides the development and progress of manufactures and other enterprises in that country using machinery, the probable requirements of Greece in the way of machinery and mechanical equipment are discussed in detail. The report fully confirms all that has been said with regard to Greece as a promising machinery market, and makes it clear that in the next few years there is going to be a large and increasing demand for varied classes of machinery, in particular for machines for motive power and for agricultural machinery.

It is known that vast schemes of development are contemplated in Greece, as for instance the rebuilding of Salonika, the construction of shipyards at the Piraeus, the Athens water supply project, and extensive plans of railway construction, all of which should provide useful opportunities for British engineers and British capital. Plans are also under consideration for the development of Greece's industries, which, it is pointed out, are being carried on at the present time in most unfavourable conditions as regards machinery and equipment. Wages have been increased in Greece as elsewhere. Lignite is insufficient to meet the need for fuel, and it is obvious that it must be a matter of years (if at all) before coal of good quality can again be imported at the pre-war price. It is maintained that it is necessary for Greek manufacturers and business men to effect partial or even complete changes in their mechanical plant. This question, it is understood, is already being taken in hand by manufacturers of chemical products, who intend to renew and enlarge their plants. As regards new industries, in view of the abundance and good quality of Greece's iron ores, attention is being paid to the question of the erection and equipment of plants for the production of pig iron.

Industries.

Industrial establishments in Greece in 1917 numbered 132; of these 92 are concentrated in Attica-Bœotia, including among them 70 per cent. of the enterprises using machinery. Larissa contains workshops producing tools and machinery for agricultural purposes. The figures for the province of Salonika are unimpressive, but it is emphasised that there is no doubt that mechanical industry there will shortly enter on a career of rapid development.

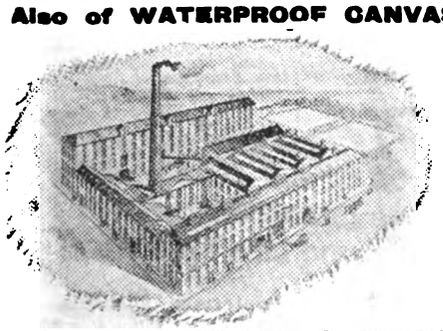
Electricity is used for power by 47 of the mills and workshops in Attica-Bœotia, steam by 19, gas by 13, and petroleum by six. The machinery and equipment of the plants of these establishments leave much to be desired, it is declared, and it is stated that lathes, machine tools, boring, riveting and polishing machines might well provide large orders for the metal working industries of the Allies. The work done in these shops, it may be added, consists mainly in repairing machines, boilers, and other apparatus used by manufacturers and the mercantile marine, and the production of complete machines has been exceptional, though of late they have successfully undertaken the production of pumps, boilers, presses, oil extractors, agricultural machinery, and small motors.

The average annual value of machines and mechanical supplies imported was 2,731,276 francs. Of this amount the imports of pumps were valued at 719,758 francs, of steam engines at 701,676 francs, of sewing machines at 642,505 francs, of safes and locks at 305,512 francs, and of agricultural machinery at 135,672 francs. Germany supplied most of these goods, her figures being 998,276 francs, while Great Britain came next with 915,450 francs, and Germany and Austria between them supplied 44 per cent. of the total. Great Britain has, of course, an excellent opportunity to take the place of the other countries in this trade, but if the scope for extending the export of British machinery to Greece were confined to this limit it would have to be admitted that the scope for enterprise is small. This, it cannot be too strongly emphasised, is not the case. Greece's pre-war imports of machinery and other commodities were on a small scale simply because the country was undeveloped in every direction, and capital was lacking to assist the steps of progress, while, in addition, for a number of years before 1914 conditions were too unsettled to make any great advance possible. Henceforward the adverse factors will not be present, and there is absolutely no question that the figures just quoted provide no guide whatever as to Greece's future requirements. To be correctly estimated they must be regarded merely as marking the opening of a market which promises to be of great importance. There is also the fact, which ought never to be lost sight of, that in entering the Greek market whether for machinery or other commodities, exporters will have a much wider field than is indicated by the map, since the orbit of Greek trade also includes an insignificant part of the Levant.

Opening for Power Plant.

One of the principal openings for machinery will probably be in connection with motive power, and here it is thought that boilers, engines, and motors of all kinds will be the main imports. The power plants at present in use are objected to on the ground of their fuel consumption, and the importation of tubular boilers is regarded as essential for industrial progress. There will be a need for other types of engines and motors, notably in connection with the utilisation of water power, which cannot be carried out without a sufficient number of turbines. The industrial census of 1917 showed that the hydraulic horse-power developed then amounted to 6,272 horse-power. This amount, of which flour mills use 1,662 horse-power, oil factories 202 horse-power, chemical producers, 1,095 horse-power, cotton, woollen and thread mills 3,288 horse-power, tanneries 10 horse-power, and saw mills 15 horse-power, is estimated to be only one tenth of the potential hydraulic power of the country. Steps are to be taken to increase this power to 66,000 horse-power, and the power obtained will be mainly used in the production of high tension electric current for the manufacture of nitrogen fertilisers and for supplying light to certain cities. This development will, of course, bring about a large demand for dynamos, transformers, transmision systems, and other accessories.

Then there should be an excellent opening for steam turbines. Three 10,000 horse-power steam turbines have been installed by the Hellenic Electric Corporation in its main plant at Phaleron, and by the General Cement Corporation in its factory at the Piræus. It is stated, however, that the engines which will be in the greatest demand are the Diesel petroleum motors where large amounts of power are required, and the semi-Diesel for smaller plants. At the present time 282 petroleum motors are in use. It is thought that this type of motor will not only be largely utilised by manufacturers, but will also be used for small ships and sailing vessels.



UNITED EGYPTIAN LANDS.

Scheme of Reconstruction.

An extraordinary general meeting of the United Egyptian Lands, Ltd., will be held at Winchester House, E.C., on April 2, when a scheme of reconstruction will be submitted. The scheme provides for the formation of a new company, with a capital of 1,400,000 shares of 5s. each, to take over the assets and liabilities of the existing company. The consideration is to consist of 1,400,000 shares in the new company of 5s. each, of which 38,829 will be credited as fully paid up and will be applicable to the discharge of the liabilities of the existing company. The remaining 1,361,171 shares will be credited as paid up to the extent of 3s. 9d. per share, and will be offered to the shareholders in the existing company in the proportions of two of such shares for every fully-paid ordinary share and one such share for every fully-paid deferred share in the existing company. The agreement for transfer will contain usual provisions for enabling the liquidator to dispose of shares not applied for, for dealing with the interests of dissentients and for distributing the proceeds of shares sold (other than those required for discharging liabilities) among the shareholders entitled, and other usual provisions. The new company will be entitled to rescind the contract if holders of shares in the existing company to the nominal amount of £50,000 or upwards effectually dissent from the special resolution sanctioning the sale. The subscription of 900,000 of the said shares of 5s. each (3s. 9d. paid) has been guaranteed for a total commission of 1¾d. per share and the right until June 30, 1921, of subscribing for shares not taken up and discharging the liability of 1s. 3d. per share on any shares so subscribed for. The sanction of the Treasury has been obtained to the proposed issue of shares, subject to the conditions that so long as the Treasury restrictions continue (a) not more than 6d. per share is to be called up in respect of the liability of 1s. 3d. per share on the 1,361,171 shares; (b) no cash commission is to be paid to underwriters until these shares have been fully called up, and (c) no part of the proceeds of the issue are to be remitted from England.

GREEK DEBT INTEREST.

The Council of Foreign Bondholders have received information that the surplus of the revenues assigned to the service of the Greek Debt in respect of the year 1918 will permit of the increase of the minimum rates of interest and sinking fund in 1919 by the following percentages of the original interest: Loans of Group 1., interest 26 per cent., sinking fund 14 per cent.; ditto II., interest 26 per cent., sinking fund 16 per cent.; ditto III., interest 26 per cent., sinking fund 14 per cent.

With the addition of the above percentages, the total interest payable in 1919 in respect of 1918 will be 2.76 per cent. on the 4 per cent. Monopoly Loan, 2.90 per cent. on the 5 per cent. Funding Loan, 2.90 per cent. on the 5 per cent. Loans of 1881, 1884, and 1890, and 2.32 per cent. on the 4 per cent. Rentes. The whole of this additional interest is payable on the April coupon in the case of the Funding Loan and Rentes, on the June coupon in the case of the 5 per cent. Loan of 1890, and on the July coupon in the case of the Monopoly Loan and the 5 per cent. Loans of 1881 and 1884.

The following are principal figures on which the above results are based:—The gross receipts in 1918 from the Assigned Revenues from which the plus values are derived were 36,264,901dr., showing an increase of 2,741,810dr. The receipts of the Assigned Revenues after deduction of 18 per cent. of the plus values for expenses were 34,939,219dr., and the amount fixed by the Law of Control being 28,900,000dr., there was a plus value of 6,039,219dr., of which the bondholders are entitled to 60 per cent. or 3,623,531dr.

Net profit on exchange was 6,194,250dr., of which the bondholders are entitled to 60 per cent., or 3,716,550dr. The total plus value applicable to the service of the Debt is 7,340,081dr. Of this amount there is available for interest 3,566,040dr., or 3,726,220 francs (being half the above amount of 7,340,081dr., less 104,000dr. representing the deficiency, due to the fall in the rate of exchange in the equivalent in drachmæ of the amount assigned by the Law of Control for the expenses of the Commission), and for the sinking fund the other half without deduction, viz., 3,670,040dr., or 3,712,022 francs.

Adding to the above amounts balances brought forward from 1917 and, in the case of the former, interest saved on bonds amortised, the following result is shown for 1918: Total amount available for increase of interest, 5,304,061 francs; ditto sinking fund, 3,807,111 francs; balance carried forward, 125,653 francs.

ENTERPRISE IN PALESTINE.

The London Bureau of the Zionist Organisation states that great activity in industrial directions is being shown by the Jews of Palestine, and there is a spirit of optimism in the air. Efforts are being concentrated on procuring agricultural machinery, the purchase of live stock, and the development of credit facilities. Everyone seems inspired with the hope that a splendid era of prosperity, of large agricultural, industrial, and commercial enterprises is about to open out.

During the war the co-operative economic system as applied to farming has won new partisans, particularly in Northern Palestine. Now that Samaria and Galilee are liberated, there are known to be twenty-nine workmen's co-operative groups at work. The eight girls' allotments, or vegetable cultivating groups, are of special interest among these co-operative undertakings. The present high prices for vegetables have encouraged their efforts.

In a Palestine letter published in *Palestine* it is stated that the cultivation of vegetables is appreciably more intensive than in the previous winter. Large tracts of land have been planted with tomatoes, cucumbers, etc. This is particularly the case in the Jewish colonies, where labour groups have been formed specially for this purpose.

In all the colonies the cultivation of almonds and cloves has already begun; and the colonists have begun to plant new trees in place of those destroyed during the war. In the vineyards they are pruning the vines, ploughing, and paying special attention to the preparation of manure, as the vines suffered badly from the locusts and from divers diseases prevalent in the country during the four years of war, and are in great need of special manuring.

The picking of the oranges has already begun, but the work is proceeding very slowly because of the lack of transport to Europe. The Government has indeed allotted to the orchard owners some wagons on the trains to Jerusalem and Egypt; but the demand in these two districts for oranges is very small as compared with the quantity of oranges in the colonies; there is also a great shortage of boxes and packing materials. In such conditions there is scarcely any possibility of exporting oranges.

At the request of the Committee of Federation of the Colonies, the Egyptian Minister of Agriculture supplied them with two sorts of cotton for experimental purposes. The seeds have already been distributed in several colonies.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—February 18, 1,430,000 francs against 360,000 francs; February 19, 20, 21, 22, 23, 24, 25, and 26, 2,620,000 francs against 1,540,000 francs. February 27, 28, and March 1, 760,000 francs against 680,000 francs.

British Indian imports for January increased £1,754,000, and exports increased £1,112,000, as compared with January, 1918.

PROMINENT INDIAN INDUSTRIES.

ENGINEERING NOTES.

Elbe-Oder-Danube Waterway.

Reference was made in previous notes to the ambitious Austro-German scheme for the construction of a waterway so as to make it possible for vessels of 1,000 tons to pass from Antwerp, Hamburg, Bremen, or any other port on any large German river or canal to the Black Sea by way of the Danube. The subject was of great importance to Germany in connection with her schemes for the Central European Commercial Union, for, apart from the great advantages that the waterway would afford to the German trade with the Near and Middle East, it was declared in a "Central Europe Congress" that the waterway "would make the Central Powers independent of British sea-power and give them access to markets hitherto controlled by British sea-power." The original object of this Danube scheme," as it was called, was to secure to Germany the control of both banks of the Danube from source to mouth. Throughout Austria and Hungary, and along the Serbo-Bulgarian frontier the control was assured; whilst it was hoped to bring Roumania into the scheme by persuasion or force. Thus, German control of the whole waterway would be complete, and would, together with the control of the railway route, link Germany indissolubly with the East. How the waterway would affect British trade with Southern Russia, and the Near and Middle East was pointed out in these columns when the scheme was urged in Germany during the war. Heavy goods, such as engines, steam boilers, machinery, etc., would not be sent by German manufacturers to Hamburg or Trieste as hitherto, by rail, to be shipped for the East; but would be despatched by this waterway, via the Rhine or the Elbe, the Danube and the Black Sea, and would reach their destination at undoubtedly very cheap rates. However, this German scheme belongs to the past, and it is very interesting to hear now that the Government of the Czecho-Slovak Republic, too, attaches great weight to the free use of the Danube and the Elbe, as is manifest from the speeches of President Masaryk. It must, therefore, be anticipated that after the consolidation of the political conditions, the Czech State will seriously contemplate the construction of the Elbe-Oder-Danube Canal, a project which has already found much support on the part of the Moravian Czechs. This canal, in connection with a waterway from Semendria, on the Danube, through the valleys of the Morava and the Vardar to Salonika, as has been suggested in these columns, would prove of great benefit to the newly-created States and the Balkan States generally in the development of their industries, agriculture, and commerce. It would also open a new and safe route from the Baltic to the Black Sea and the Ægean Sea, which would offer special advantages for the promotion of British trade in the East.

Iron Trade in the East.

There has been in recent years a remarkably steady increase in the importation of iron of all kinds in the Near East. The demand has been in connection with engineering works, shipbuilding, construction or reconstruction of houses, shops, and a great variety of native industries, such as for making agricultural implements, etc. Great Britain and Belgium were once the principal suppliers, but in recent years Germany, by systematic efforts, managed to supplant both and to secure the greatest share. Thus, taking the year before the war, we find that Roumania alone bought from Germany and Austria iron or steel bars, rods, angles, shapes or sections, girders, etc., to the value of £382,870, and from Great Britain only £4,300; Bulgaria's purchases amounted to £78,930 from Germany and £100 from Great Britain; Serbia's to £41,310 from Germany and nothing from this country; Turkey's to £107,510 from Germany and £10,700 from Great Britain; Greece's to £29,530 from Germany and £5,300 from Great Britain; and Egypt's to £41,000 from Germany and £90,700 from Great Britain. There has been a great and steady demand for girders, and in that line German goods found an increasing opening, because the German manufacturers produced a special section of less weight than the Belgian girders. Girders are used not only by builders, but also as supports for wooden telegraph posts and for light iron buildings. In Serbia girders amounting to 2,500 to 3,000 tons annually were imported. Wrought steel girders are in demand in Syria. The consumption at Beyrout, the Lebanon and Damascus, is estimated at not less than 4,000 to 6,000 tons per annum, which are imported through Beyrout. These girders are from 3 to 11½ metres in length, and the two ends which are at right angles to the length are from 10 to 30 centimetres in breadth. Germany and Belgium have been the principal suppliers, and sent considerable quantities of these girders to Syria. In Aleppo these were scarcely known eight or nine years ago owing to the difficulties of transport by road from the coast, but the linking-up of Aleppo with Beyrout by rail made their introduction into that region possible, and large quantities were imported during the last two or three years before the war, the imports being over 1,000 tons each year. These imports also came from Germany. Iron or steel plates and sheets were also imported in all parts of the Near East in large quantities; also sheets for working shaped articles by stamping, spinning, drawing, etc. Why this very important trade was neglected by British manufacturers and was left to fall almost entirely into the hands of the Germans is a puzzle to the native importers. It is not too soon to draw the attention of manufacturers to this matter, for, according to reliable information, there are already representatives of American iron manufacturers and merchants in the Near East studying the kind of goods required, and making arrangements with native importers who undoubtedly would prefer to deal with British firms if they could.

Persia's Mineral Wealth.

Persia's mineral wealth of various kinds is great, and the greatest yet discovered is mineral oil, the development of which will be the work of the near future. German experts have declared that deposits of undisclosed value underlie the extensive oil-field of the Irak districts. By trial borings it was proved that there is an oil-bearing tract of more than 1,000 square kilometres, apparently capable of yielding a larger output of oil than the wells of Baku, and, it is asserted, of better quality. The northern limits of the oil-zone lie in the province of Kermanshah, to the east it reaches the neighbourhood of Ispahan, then runs diagonally across Arabistan, continues along the border hills of Dashti and Dashtistan behind Bushire, the most important port in the Persian Gulf, and ends in the neighbourhood of Bunder-Abbas, the terminus of the great caravan-route, Meshed-Kerman. Borings made in 1890 proved the existence of rich oil deposits in the island of Kishem, lying off the coast. Since that date great progress has been made in developing the industry. It is in these districts that before the outbreak of the war England obtained the sole concession to work these rich oil-fields for 99 years. Persian oil is said to be superior to the American product. It contains a large proportion of benzine and kerosine.

TRADE WITH BALKANS AND ADRIATIC

The Board of Trade announce that they have issued a General Licence authorising, so far as the Trading with the Enemy legislation is concerned, the resumption of trade with Croatia and Slavonia, Bosnia, and Herzegovina. It is also notified that the restrictions imposed by the Trading with the Enemy (Occupied Territory) Proclamation no longer apply to trading with Montenegro and Albania, and that consequently commercial transactions with those countries may be resumed. It will be necessary to obtain export licences from the War Trade Department before shipping to the above-named countries goods of kinds prohibited to be exported from the United Kingdom, and to obtain import licences from the Department of Import Restrictions before importing goods of kinds covered by the Prohibition of Import Proclamations. The general licence does not remove certain existing restrictions in respect of the payment of pre-war debts and the return of property held or managed before the war for persons in enemy territory. Moreover, any permission which may be necessary in respect of any transaction under the Defence of the Realm Regulation 41D must be obtained from the Treasury. The effect of this and previous notifications is to permit, so far as concerns the Trading with the Enemy legislation, the resumption of trade with the whole Adriatic Coast and with all the countries of the Balkan peninsula.

INDIAN FINANCIAL STATEMENT.

Currency Problem.

The financial statement of the Government of India was presented in the Viceroy's Legislative Council by the Finance Member, Sir James Meston, K.C.S.I., on Saturday last.

Reviewing the closing year, Sir James Meston said that all other features were dominated by the cessation of hostilities in November. The first seven months were a period of great and widespread activity, largely connected with India's war efforts, reflected alike in Government revenues and trade prosperity. The later months were marked by a sharp reaction due to the collapse of speculation and accompanied by unfavourable agricultural conditions and the influenza epidemic. To the painful process of descending to the more normal plane of trade and business the chief obstacle at present was the persistently high range of prices.

The Imperial section in the present year was expected to close with a deficit of £4,500,000, as against an estimated surplus of £2,500.000, the total revenue being now estimated at £85,500,000 and the expenditure at £90,000,000. The revenue improvement amounts to £11,000,000, due to exchange £4,250,000, railways £2,333,000, Customs nearly £2,000,000, and Mints £1,250,000. Expenditure is £18,000,000 more than anticipated, mainly on account of the additional liability accepted by India in September last towards the maintenance of the cost of the additional troops raised in India, amounting to £12,750,000 in the current year. The position was also affected by scarcity, the Imperial share of relief measures costing about £400,000 apart from the loss on land revenue receipts of over £1,000,000.

The difficulties arising from the lock-up of Government resources in London continued in an acute form, and the total disbursements in India for which it was necessary to provide apart from expenditure debited to Indian revenues amounted to £141,000,000, more than half of this representing war outlay on behalf of Home Government. These disbursements were financed mainly by the receipts of the Indian War Loan, £37,000,000, receipts of silver, £56,000,000, and the issue of currency notes against additional investments, £25,000,000. Of the War Loan, subscribers numbered 228,000, against 155,000 to the preceding loan.

Excess Profits Duty.

The forecast of resources for requirements during reconstruction were no less difficult than in the war period, owing to the lack of experience in calculating the legacies of the great war. On the civil side, external trade was largely governed by shipping, which made it difficult to estimate confidently Customs revenue, or gains or loss from exchange; while internal trade might be affected by scarcity or a slump in prices; hence the uncertainty regarding railway earnings and other important heads of revenue. The Government had, however, felt justified in taking an optimistic view of revenue prospects. As regards expenditure, military estimates were £41,200,000, including £8,700,000 for the cost of the additional contribution under the September resolution. The total Imperial expenditure was £85,357,300. On the revenue side the railway estimate, taken at 80 crores, against 76½, anticipated that the current year's revenue would be counterbalanced by heavy expenditure on repairs and renewals. Improvement was also anticipated under Customs, Stamps, Excise, and Posts and Telegraphs, set off by a falling off mainly under mint and exchange gains. In view of the great hardships caused by the present range of prices to persons on low salaries, Government had decided to raise the minimum taxable limit of income-tax from Rs1,000 (£67) to Rs2,000 (£133) entailing a loss of £500,000, but affording relief to 237,000 assessees out of the total number of 381.000. On the existing basis of taxation modified by this concession, Government had to meet a deficit of over £5,000,000. To fill the gap and to give a small surplus an excess profits duty was proposed with an estimated gross yield of £7,500,000, set off by an estimated loss of £1,000,000 under super tax, since this tax and the excess profits duty would not both be charged on the same business, and £450,000 under income-tax, rebate being given for the purpose of this tax in respect of the amount paid as excess profits duty. Allowing for these losses, the net estimated receipts from the excess profits duty were placed at about £6,000.000. Subject to the above the taxation imposed during the war was maintained, including the motor spirit duty of six annas per gallon, the duration of which was previously limited to the period of the war and six months after. The estimated total revenue amounted to £86,225,400, leaving a surplus of £868,100.

The outstanding feature was the capital expenditure of £17,570,000 on the railway capital programme, apart from the special revenue renewal programme of £6,500,000, making a total railway programme expenditure of over £24,000,000. The Budget provided for a new loan of £10,000,000, it being explained that this was an estimate only, the intention being to accept sums received in excess of this amount, with the view of funding the temporary debt as far as possible. A loan of £10,000,000 would already provide for the funding of such debt to the extent of £8,000,000, the funds required for railway capital expenditure, etc., being found mainly by drawing on the special reserve held by the Secretary for India for the purpose. The sum provided for irrigation was £400.000, it being impossible to push preparations of schemes during the war owing to the depleted conditions of the Engineer Cadre, apart from the financial stringency. The grant for New Delhi was fixed at £300,000. The estimate for the Secretary of State's Council Bill drawings was £10,300,000.

The Future.

The necessary task before India on the financial side was coping with the reaction inevitable after the great war. The first obvious necessity was to get currency habits back to a sounder basis. The addition of 120 crores to circulation in the last four years had involved the using up of the world's current production of silver and depleting its accumulated stocks. Two conclusions were inevitable:—(a) The huge sums paid for silver brought home the wasteful and extravagant nature of what had been done; (b) the continuance of a demand on this scale must react violently on the currency and exchange policy of the Government of India. If absorption continued at the present rate it might be physically impossible to purchase sufficient silver, in which case the internal currency policy would have to be fundamentally recast. On the other hand, if by superhuman efforts the requisite amount of silver could be obtained it was more than likely that the operations would force the price up to a giddy height and throw the whole exchange policy in the melting pot. On this side the problem was being carefully examined with a view to defining the exchange and silver policy of Government. The second task was the contraction of the note currency. While it might not seem consistent to deplore the high figures of the currency note circulation after extolling the superiority of paper over metal currency, it could not be regarded as satisfactory for Government to finance itself by borrowing from the paper currency reserve, and the time had come to make a start in the desired direction by the retiring of portions of the fiduciary issue. The third and most imminent phase of the problem was the redemption of the heavy temporary war obligations. If these could not be funded on reasonable terms, it would be necessary to redeem them as they matured. Simultaneously Government would have irresistible claims on them for raising capital for the internal development of railways, industries, forests and the like. In indicating the tasks ahead Sir James Meston disclaimed pessimism, expressing the belief that India's control of raw materials, for which the whole outside world would be contending, placed her in a position of exceptional strength, and would exempt her from many discomforts and sufferings entailed by the reaction period on other countries.

Mr. D. T. Chadwick, I.C.S., Indian Trade Commissioner, will read a paper on "The Report of the Indian Industrial Commission," before the Indian section of the Royal Society of Arts on March 13. Lord Inchcape will preside at the meeting.

ROUMANIA'S ECONOMIC POSITION.

Intense Desire for Trade with Great Britain.

A Roumanian correspondent, writing from Bucharest under date February 19, gives us the following interesting particulars of the situation in that country. It will be noted that he amplifies what has already been said in these columns regarding the attitude towards Great Britain:—

"Stocks of all manufactured articles in our markets have been exhausted. You are aware, of course, of the terrible food position. Had not the Allies sent us some cargoes of flour in time we should have died of hunger.

"As regards prices, a metre of cloth for a costume costs 300 francs (it was 400 when the Allies arrived here). Cloth manufactured in the country costs 65 francs to-day. It is the official price, but at that it can hardly be procured. A yard of linen for shirts costs 40 francs, and a shirt costs 200 francs. A kilo of butter costs 55 francs.

"You will realise from this how anxiously we are awaiting the moment when we shall begin to receive goods from abroad. The French Government has established here a Bureau Economique Français to prepare the way for French trade and commerce. The British Government should also do something like this in order to facilitate the re-establishment of commercial relations between the two countries.

"British business men neglected the Roumanian market before the war. But now that the Black Sea and our harbours are accessible to the British Fleet, there will be no reason why Great Britain should not devote her full attention to the market. The more so since the Roumania of to-day numbers about fourteen millions of inhabitants, and will import goods on a large scale.

"Our business men hold in high esteem British goods and British methods of doing business. Any effort on the part of the British to introduce their goods here will be completely successful. We wish to have close relations with Great Britain, because we know that besides commercial advantages British merchants and British goods will bring us also British civilisation. And, believe me, we want it very much."

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated February 27:—

General rain in Chota Nagpur and parts of the United Provinces, light rain in Bihar and Orissa, Punjab, Sind and Central Provinces. More required in Assam and in the irrigated portions of the Punjab.

Bombay cotton market weak. Fully good Broach April-May quoted Rs.539. Piece goods quiet.

Calcutta Rice Market: The Government standard price has been reduced from 5 rupees 1 anna to 4 rupees 14 annas.

The Jute Market is dull. Fine jute prices are well maintained, but very little available. The gunny market has slightly revived. The mills have announced that they will resume four days' working April to June.

Estimates of crops, 1918-19:—Sugar cane, acreage 2,820.000, yield 2,337.000 tons; rice, acreage 75,864,000, yield 23,822.000 tons: wheat, revised acreage, 23,403,000.

Deferred T.T.s.—£125.000 were applied for and allotted on February 20, viz., £50,000 at Calcutta and £75,000 Bombay.

NEAR EAST MARKETS.

The Monsoon and Indian Prices.

A communique issued by the Department of Statistics in India shows the marked effect of the last monsoon in the level to which prices had risen by the end of the year.

In the middle of December 1918, the wholesale prices of principal food grains in India increased by 51 per cent. (unweighted average), as compared with the corresponding period of the preceding year. The weighted average shows a rise of 63 per cent. The prices of rice advanced by 64 per cent. The increases in the chief producing areas, i.e., in Bengal, the Madras Presidency, and Burma, were 62, 59 and 45 per cent. respectively. Among other provinces the rise of 109 per cent. in Sind and Baluchistan is noteworthy. Wheat prices advanced by 39 per cent. (unweighted average). The weighted average shows a rise of 35 per cent. Among the principal producing provinces prices in the Punjab rose by 20 per cent., in the United Provinces by 43 per cent., and in the Central Provinces and Berar by 55 per cent. Prices of barley increased by 43 per cent. (unweighted average). The rise of 78 per cent. in the United Provinces is noticeable. Jawar prices in India showed a rise of 66 per cent. (unweighted average). The weighted average shows a rise of 93 per cent.

Among the reporting provinces the high prices of jawar in the Central Provinces and Berar, which shows an increase of 163 per cent., and in the Bombay Presidency an increase of 114 per cent., are noteworthy. Prices of gram advanced by 48 per cent., and those of arhar dal by 54 per cent. Maize prices increased by 44 per cent. (unweighted average). The weighted average shows a rise of 71 per cent. In Bihar and Orissa the prices of maize advanced by 100 per cent. The prices of ghi and raw sugar showed a rise of 23 and 16 per cent. respectively, but there was a noticeable fall of 18 per cent. in the prices of salt in India, the noticeable decreases being in Delhi (54 per cent.), Bihar and Orissa (47 per cent.), Bengal (42 per cent.), and in the United Provinces (40 per cent.). Compared with December 1, the prices of food grains in India on December 15 were practically stationary. Although there was a rise of 1 per cent. in wheat, and in gram, and of 2 per cent. in arhar dal, prices of rice, jawar, and maize fell by 2, 5, 1 per cent. respectively, while barley, ghi, and raw sugar showed no fluctuations. There was also a fall of 4 per cent. in salt prices.

Tobacco in Greek Macedonia.

The cessation of hostilities and the liberation of the productive regions of eastern Greek Macedonia, until recently occupied by the Bulgars, have introduced a new factor in the estimates of tobacco in Macedonia, increasing them by 6,500,000 okes. (18,330,000 lb.), says an American Consular report, so that the yield should be figured as follows:—Crop of 1916 in eastern Macedonia, left there in consequence of the Bulgar invasion, 4,230,000 lb.; crop of 1917 in eastern Macedonia, 7,050,000 lb.; crop of 1918 in eastern Macedonia, 7,050,000 lb.; crop of 1918 in western Macedonia, 8,460,000 lb.

The quality of the new production in the districts west of the Struma is about 40 per cent. better than the 1917 crop and 15 per cent. better than the new yield in eastern Macedonia. This unprecedented fact is due to the lack of care in planting, gathering, and drying the tobacco, caused by the war operations in this region, and especially on account of lack of male labour, most of the work having been done by unskilled women and children. The tobaccos left from the 1917 crop in this region are of better quality than those of 1918, but they have been very badly manipulated. Tobaccos left from the 1916 crop were of prime quality and well manipulated, but unfortunately, as they were deprived of the daily care they required for two years, they have lost a few grades in their quality. To sum up, the tobaccos in all Macedonia may be divided as follows:—western Macedonia (1918), 3,000,000 okes (8,460,000 lb.), in excellent condition; eastern Macedonia (1916 and 1917), 4,000,000 okes (11,280,000 lb.), in good condition; eastern Macedonia (1918), 2,500,000 okes (7,050,000 lb.), in fair condition.

COMPANY NOTES & REPORTS

Southern Punjab.

Net revenue for the year to September 30, 1918, was £410,577, of which £146.209 is payable to the Secretary of State for India as the share of surplus profits due to the Government and £20,000 is transferred to contingencies account. This leaves £244,368, to which must be added £103,846 brought forward, making £348,214. The dividend on the Preference stock paid in respect of the six months to March 31, 1918, together with the dividend and bonus on the ordinary stock for the same period, reduce the balance available to £242,214. The dividend of £46,000 on the preference stock for the six months to September 30, 1918, was paid on December 1, leaving £196,214. The directors recommend a final dividend on the ordinary stock of 7 per cent. and a further bonus of 1 per cent. (making a total distribution of 14 per cent. for the year), from which English income tax at 4s. 9.24d. will be deducted. The final dividend and bonus will absorb £80,000 and leave £116,214 to be carried forward, subject to excess profits duty. Meeting, Egypt House, 36, New Broad Street, E.C., on the 12th inst., at 2 p.m.

Dividends, Payments, &c.

The directors of the Galaha Ceylon Tea Estates and Agency have declared an interim dividend of 5 per cent., free of tax, on the ordinary shares, on account of 1918, payable forthwith.

The directors of the Prince Line have declared a dividend of 10 per cent. per annum (1s. per share), free of tax, for the half-year (interim). Last year the dividend was the same.

The dividend of the National Bank of Greece for the second half of 1918 is at the rate of 160 drachmæ per share, against 120 drachmæ for the corresponding period of 1917, making 300 drachmæ for the year, against 245 drachmæ.

The directors of the Compagnie Industrielle du Levant have not yet been able to present the accounts for the past year or those for the preceding year, owing to the lack of communications with the East.

The directors of the Bengal Dooars Railway recommend a final dividend on the ordinary stock of 3½ per cent. and a bonus of 2 per cent., both subject to income-tax, payable on March 28, making a total distribution of 9 per cent. for the year ended September 30 last.

An extraordinary general meeting of the Privileged Company to Protect Production and Trade in Currants will be held in Athens on March 16 O.S. (March 29 New Style) to decide on the modification of the articles of association numbered 26 and 42 and to receive and approve the accounts for the year 1917-1918.

During the year ended October 31, 1918, the total receipts of the Sucreries et Rafineries d'Egypte amounted to £E3,246,505, against £E3,315,888 for the preceding years and the surplus to £E346.839 against £E475,164. The dividends are at the rate of 105.50 piastres on the ordinary shares and 198.26 piastres on the deferred shares, against 164.22 piastres and 346.60 piastres the previous year.

The Bank of Athens made a profit in 1918 of about six million francs, which amount is to be set aside for redemption. The position of the bank, it is stated, has much improved in Egypt.

NEW COMPANIES.

Banking in Turkey.

A syndicate of Greek bankers is to establish a bank with a head office in Constantinople and branches in the territory of the old Turkish Empire. The capital of the new institution will be fifteen million drachmae. It is understood that the Industrial Bank of Athens and the Bank of the Piræus are connected with the scheme.

BRITISH MISSION TO SERBIA.

The following official communiqué has been issued:—

Under the auspices of the Department of Overseas Trade and the British section of the Commission Internationale de Ravitaillement a British Mission is proceeding to Serbia to investigate the damage resulting from enemy occupation of the country and to ascertain the extent to which reconstruction will be necessity and the nature and quantity of the materials required. The mission will also examine general economic conditions in Serbia and will be in a position to report on the prospects of British trade development in that country.

Mr. E. C. Donaldson Rawlins, the Commercial Secretary for Serbia and Greece, is in charge of the first party (which left on March 1st, which includes a civil engineer and architect from H.M. Office of Works and a railway engineer lent by the War Office. Commercial experts are also attached to the mission, and a second party will leave in a few weeks, when the weather conditions will permit of investigation being undertaken into the conditions existing in regard to agriculture, mining, waterways, and other reconstruction problems. It is anticipated that the mission will remain in Serbia for about two or three months.

The functions of the mission do not embrace questions dealing with relief, which are being arranged by the Supreme Council on Supply and Relief, meeting in Paris.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday

There has again been a fair amount of business doing this week in Egyptian securities, and, on balance, the changes in prices are mostly in favour of holders. In Government stocks Unifieds are again one point higher at 92, but business is still restricted through the scarcity of sellers.

In Bank shares a fair amount of business has been done in both Nationals and Agriculturals, and the latter are closing 3-32 higher at 6 27-32.

In Railways Delta Lights are again fractionally firmer at 8½.

Amongst Land shares Aboukirs on further profit-taking receded at one time to 28s. 3d., but are an improving market at the close at 28s. 9d., a decline of 9d. since last week. Allotments are in demand at the current level, but sellers are non-existent. Behéra Prefs. have recovered the further 6d. dividend just declared at 4⅝ x.d. In Delta Lands some selling reduced the price at one time to 15s. 6d., but they are closing only 6d. lower at 16s. New Egyptians have been in persistent demand throughout the week, and a large turnover has resulted, the closing price being 1s. 9d. higher at 27s. 4½d. In Sudan Plantations the price, after dropping 3-16 to 4 1-16, has since recovered to 4 3-16; a large block of shares which was overhanging the market having now been placed. Union Foncières have remained a firm spot, but business has not been possible as there have been no sellers. United Egyptian Lands are 3d. easier at 2s. 6d., at which price some few thousand shares were done.

In Miscellaneous descriptions there has been steady business in Markets round the current level. Salts and Sodas are 1-16 firmer at 2 15-16, and Khedivial Mails are unchanged after being rather better.

In Greek securities there is no change to report since last week, with the exception that the 1914 loan is a shade firmer at 81 x.d.

Oil Shares.

The oil market has been variable. Anglo-Egyptian B are firm at 76s. 10½d., and Anglo-Persian Prefs. have also shown an improving tendency at 26s. 4½d. In Roumanians Roumanian Consols are 17s. 3d., Anglo-Roumanians are 11s. 9d., and Traians 13s. 1½d. Bakus have been the subject of many transactions round 4s. 9d.

REDUCED FARES FROM INDIA.

The P. and O. decided to reduce their fares as soon as their steamers were freed from Government control, with the object of assisting in the homeward exodus. The homeward steamers will not be free till about the middle of April, but the Controller of Shipping has consented to the reduction taking place in all steamers leaving India after March 1. The reduction will be 20 per cent., and the old return tickets for fare-and-a-half will again be introduced.

Following on the relaxation of Government control of shipping, the Ellerman Lines, Limited, have arranged to reduce by 20 per cent. all fares by the City and Hall lines' joint service between the United Kingdom and India. This reduction will apply immediately to homeward steamers, and from April next to the outward steamers also. Return bookings, which were disallowed during the period of Government control, are again in operation on the basis of single fare-and-a-half.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

NOTES OF THE WEEK.

Since March 5, when General Anto Gvozdenovitch, Montenegrin Minister at Washington, submitted the point of view of the Montenegrin Government on the situation in and the future of Montenegro, the Paris Conference has been mainly engaged with subjects not immediately connected with the Near or Middle East. Committee work, however, has been in progress, and we understand that an important statement which may go far to settle the future boundaries of the Balkan Peninsula has been finished by one committee during the past week. It will be of interest to see to what extent the Council of Ten exercise their revisionary powers in regard to the work of the various committees. The pressure upon their time is already great, and there will be a strong temptation to save further trouble by accepting *en bloc* the findings of the subordinate body. But in no instance should the Council forgo its right and duty to check the evidence, and to make sure that all sides of the question have received equal attention. The importance of the Balkan settlement lies in the fact that the least flaw may endanger the peace of Europe. The experts forming the committee may have profound knowledge of a given subject, but unless they adjust that knowledge to the broad issue grave injustices may be done.

The reminder is not altogether wide of the mark, if we may judge from the by-play that is taking place in regard to Montenegro. Last week reference was made in these columns to an alleged report of a Commission appointed by the Allies and the Associated Powers, under the presidency of General Franchet d'Esperey, to inquire on the spot as to the events that have occurred in that country. We are still of opinion that no responsible international body could draft a report in the terms attributed to the findings of this one; but it is evident that Montenegrin opinion is seriously exercised over this Commission. Before its report was published a memorandum on the subject was addressed to the Great Powers, informing them that some *soi-disant* commission was being made the victim of an elaborately staged hoax. People who were not Montenegrins were being presented to them, dressed in the national costume, and were posing as representatives of Montenegrin public opinion. On other occasions the Commission was taken to villages whose inhabitants were also of non-Montenegrin origin, in order to learn the views of the people "on the spot." But the greatest *coup* of all was the unanimous testimony of a host of Montenegrin officials. The explanation given of this phenomenon is that the officials had been reduced to penury as a result of the Austrian occupation; and they were offered food and arrears of salary if they undertook to sign a document in favour of the absorption of Montenegro in Serbia. At the same time they were assured (so it is stated) that King Nicholas had been deposed and was a prisoner in the hands of the Allies.

Here then are two statements: the findings of a Commission—if we suppose that their tenour corresponds with the alleged findings without being couched in such undiplomatic language—and the allegations of the Montenegrin Government regarding the trick played upon that body. In ordinary circumstances the Commission has played the part of the expert committee charged by the Paris Conference to examine a particular question. If it has been made the victim of a hoax, or even if there is the least suspicion that it has allowed itself to be hoodwinked in any way, clearly the Council of Ten cannot accept its findings without further investigation. But if one committee is liable to be imposed upon to the extent alleged, we may be sure that every other investigating body appointed by the Conference runs the risk of being misled by a mass of *ex parte* statements which it may not be in a position to check. For this reason there should be no final decision on any single point connected with the Balkan settlement until the subject has been submitted to the court of appeal after the preliminary hearing by the court of first instance.

It is difficult to exonerate the Great Powers from the unsatisfactory conditions prevailing in the Balkans. While they are deferring action it is the peoples of the different countries who are adding fresh sufferings to their former miseries. It may be only a small clique of irresponsible extremists who are trying to coerce Montenegro into annexation, but they are indirectly victimising the whole population of Yugoslavia. The spirit of distrust is abroad, and Italy is inflicting upon the Yugoslavs something of the treatment meted out to the Montenegrins by the Serbian officials in their country. Even the future of Yugoslavia may be said to be involved, for any undue favouritism by the Powers of Serbia at the expense of the Croats and Slovenes must tend to make the latter suspicious of an arrangement that promises to bind them to the chariot wheels of a Greater Serbia rather than place them on an equal footing with the Serbians in a composite State. In some quarters it is supposed that the international financier concerned for his Serbian investments does not feel sure of his position, if Serbia becomes entirely

Digitized by Google

merged in a Yugoslav federation; and for this reason is encouraging the Serbians to consolidate their power at the expense of all their neighbours. What truth there may be in the insinuation we have no means of knowing; but if the Serbian Government is allowing itself to be prompted by such advice it is doing a disservice to itself, to Serbia, and to Yugoslavia.

There is, let it be added, a more serious aspect of the situation in Montenegro, about which little seems to be known outside the country. A revolt has taken place; and it could only be a revolt of Montenegrins against the troops in occupation of their country. It was put down, presumably, in the way in which similar risings are generally suppressed in the Balkans. If the Council of Ten could spare attention to the subject they would have to ask themselves how it came about that there should be something in the nature of an organised revolt against their authority on the part of an Allied people. For, technically speaking, Montenegro was recovered from Austrian domination by Allied troops, and should either be held in trust by the Allies or be handed back to the Montenegrins. Neither course has been adopted, and the Council of Ten would be hard put to it to say why.

The announcement that the resignation of Hussein Rushdi Pasha, Prime Minister of Egypt, has at last been accepted brings to an end a Ministerial crisis of some months' duration. Our Cairo Correspondent tells the story of the crisis in his letter in this issue, and here we need only express the general regret felt that Rushdi Pasha should have taken this step. The incident proves that the situation in Egypt still calls for skilled and tactful handling. Above all, difficulties require to be faced at once, if they cannot actually be forestalled. There is no room for watertight compartments, and if any responsible person shows signs of wishing to create one, the sooner he is eliminated the better for the country.

Everyone who was able to keep in touch with the course of events in Egypt during the first two years of the war will be glad to see that the case of Sir Henry McMahon has been taken up in the House of Commons. On the evidence adduced there can be little doubt that a capable and distinguished Civil servant has been badly treated. It is possible that he was the victim of political circumstances in having been relieved of his post in Egypt just at the end of Mr. Asquith's regime, and in being "overlooked" by the new Government. The explanation, however, even if correct, is no justification. There is some truth in the contention that Sir Henry McMahon's appointment as High Commissioner was regarded as "provisional," but in those days "provisional" was apt to mean "for the duration of the war." Sir Reginald Wingate was the natural successor of Lord Kitchener, but could hardly be offered the post while there was a chance of Lord Kitchener's returning to Egypt. The mere fact that the British Government made a convenience of Sir Henry McMahon ought to have entitled him to special consideration, the more so in view of the sterling work that he did as High Commissioner. He has been accused of not having exercised sufficient control over the military authorities. It is only necessary to apply such a charge to a Government in this country in order to gauge its justice at a time when Egypt was threatened with invasion. Sir Henry McMahon's work was well summed up by our well-informed Cairo Correspondent in THE NEAR EAST of November 24, 1916. He wrote:—

"The work he has done will, in the long run, prove of the utmost value to Egypt and to Great Britain, and it should in many respects facilitate the settlement of many of the problems which the war has created in Egypt and elsewhere. . . . . Sir Henry has the satisfaction of knowing that, at the end of two momentous and difficult years, he is handing over to his successor a peaceful, prosperous, and contented country, where cordial relations exist between the ruler and the protecting Power, and unity reigns between elements which were previously not in sympathy or accord one with the other."

It is satisfactory to learn that a memorial has been presented to the Lords of the Treasury urging the creation of an Imperial British Institute of Archæology in Cairo, and it will be still more satisfactory to know that the project has been agreed to, and will have the active support of the Government. At present a Service of Antiquities has charge of the monuments in Egypt, and to it is nominally entrusted the supervision of excavation in the interests of the Museum at Cairo. But the bulk of the practical work of excavation has been in the hands of various organisations associated with Great Britain, France, Germany, and the United States. Both the Egyptian Exploration Fund and the British School of Archæology in Egypt have done important work; but it is notorious that their efforts have been handicapped by insufficient funds, and that they have been at a considerable disadvantage in comparison with the French, American, and German institutions. With the altered status of Egypt it is right that this anomalous condition of things should be remedied, and the committee, representing various learned bodies interested in archæological studies, which has been formed under the auspices of the British Academy, has done well to insist upon adequate State recognition and support for archæology in Egypt.

Great Britain's responsibilities in the domain of archæological exploration, however, are no longer restricted to Egypt. Whatever may be the political status of Mesopotamia, the country will rely upon British help and guidance for its material and cultural development. Now the early pages of the history of Babylonian and Assyrian exploration are almost entirely occupied by the record of British achievements. But for the last thirty years British archæologists have done nothing of importance in Assyria, and have paid practically no attention at all to Babylonia. One or two members of the British Museum staff have worked spasmodically at a few sites in the north, their efforts being inevitably hampered by lack of funds. In the meantime the French were busy at Tello, the Germans at no less than five sites, the Americans at Nippur and Bismya, and the Turks at Abu Habba. No doubt good reasons could be adduced for British reluctance to embark on any extensive enterprise in Turkey in the old days. But the excuse no longer holds good. Numerous ruins of Babylonian and Assyrian cities, temples, and fortresses on the banks of the Euphrates and Tigris await exploration, and any scheme inaugurated for the more effective prosecution of archæological research in Egypt should be duplicated for Mesopotamia.

Confirmation of the desperate plight of Roumania as a result of the systematic pillage of the country by the Germans is continually being received. As already recorded in our columns, the worst feature is the lack of transport. It is stated that there are in the whole of the kingdom only eighty-four locomotives in fit condition. All the horses and most of the men were taken by the enemy. Competent observers are of opinion that, given the means of transport—and this means as well repaired roads and bridges—there is sufficient food in the country for the immediate needs of the people. In these circumstances the first need is for railway engines, and it is to be hoped that an effort will be made to send some without delay from the neighbouring countries. Unfortunately the whole world outside America is suffering from a shortage of rolling stock; but by a judicious selection it may be possible to supply Roumania with the measure of relief that she needs most.

It is by no means an unreasonable request that all parties who hold strong views on the future of Constantinople—more particularly in its religious aspect—should adopt an attitude which indicates that they recognise that there are two sides to the question. The Government of India has found it necessary to repeat its assurance that it regards the question of the Khalifate as affecting Moslems alone, and as one to be decided by Moslems without interference. There is, however, not the least ground for any Moslem misgivings on this subject, or as to the pledge given regarding the Holy Places of Islam. On the other hand, that some misconception may prevail with respect to the future of Con-

Digitized by Google

stantinople is suggested by a passage in the Aga Khan's speech at the banquet given in honour of Lord Sinha. Whatever decision may be reached on this point, there is no reason to suppose that the deportation of the Turkish rank and file is contemplated by anybody. It would be possible to move the Turkish seat of government to a town in Asia Minor without interfering with the everyday life and religious exercises of the Moslems, who comprise a large, if not the largest, section of the population of Constantinople. No one can examine the problem presented by Constantinople without appreciating its difficulties, and whatever decision be reached it is to be hoped that the announcement will be made in a form that will convince everybody concerned that every argument bearing on the matter has been carefully considered.

All's well that ends well, and the oracular declaration that any reduction of Indian passage rates would be "entirely inopportune" was promptly followed by the substantial reductions which we announced last week. The credit for this act of justice is claimed very properly by the shipping companies concerned, but in the case of one line at least it is shared by the Controller of Shipping, whose consent was necessary to the immediate change, and homeward passengers will not be greatly concerned as to the precise distribution of their gratitude among the various authorities. Adhering to its recently adopted attitude of abnegation in administrative matters, the India Office has not yet claimed a share, but we believe nevertheless that Mr. Montagu and his staff have worked earnestly on behalf of the community interested, and their efforts should not pass entirely without recognition.

This attitude of abnegation does not, of course, extend to political questions, and Mr. Montagu's speech was, perhaps, the outstanding feature of the proceedings at the complimentary dinner given last week to Lord Sinha. which opinions may differ, but Mr. Montagu is very sensitive to the criticism which he has invited, and since he complains that it is difficult to find an audience, we can understand that the temptation was too great to be resisted. His speech was, in fact, a reaffirmation of the position which he has taken up, and its most noteworthy point was the recognition of the fact that communal representation is practically inevitable: genuine representation is essential, and if it can be secured only through communal electorates, then communal electorates must come. The secrets of Lord Southborough's Committee have, of course, still to be disclosed, and it is possible that some practicable alternative may have been discovered, but at the moment all indications are in the direction which enthusiasts deplore, but which hard-headed opinion recognises as the statesmanlike course.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 25.

The Cairo Cathedral Scheme.

The committee of All Saints' Church held a meeting this week at the Residency, at which it was decided to authorise the sub-committee to prepare and issue as soon as possible an appeal for funds for the erection of the projected Anglican cathedral in Cairo. As has already been announced, the Egyptian Government has generously given the ground on which the Ottoman Commissiariat was formerly situated; the present site occupied by All Saints' Church will, however, revert to the State as soon as the cathedral has been completed. It is computed that a sum of about £100,000 will be required; and I understand that the appeal will be issued not only in Great Britain, but also in Australia and New Zealand, where it is hoped that the connection with Egypt created by the war and the fact that many Australian soldiers worshipped in the present edifice may be productive of subscriptions.

The "Nationalist" Clique.

Apropos of the remarks made last week in this correspondence concerning the attitude of the Extremist Nationalist clique, headed by Saad Zaghlul Pasha, it is amusing to note that while these gentlemen contest the validity of a British Protectorate over Egypt, they do not disavow the Sultanate, which was created by that Protectorate; nor do they hesitate to use the new terms of address introduced under the new regime, or to avail themselves of the grades and titles granted to them under the Sultanate, and therefore under the Protectorate. Surely if these extreme Nationalists were as sincere and disinterested as they say they are, they should not accept the favours bestowed on them under a regime which they so indignantly repudiate. The inconsistency of their attitude in this matter would seem somewhat to weaken the strength of the case which they are trumpeting abroad so loudly.

Sir William Willcocks and the "Sudd."

In the winter of 1918 Sir William Willcocks and Mr. John Wells visited the Upper Nile with a view to investigating the possibilities of that region in the matter of irrigation and agricultural development. The result of the former's studies has been given us in the form of two lectures. In the first, delivered before the Sultania Geographical Society last November, he explained that, in his own opinion and that of Mr. Wells, the vegetable matter of the Sudd could be satisfactorily utilised for the production of the fuel necessary to the dredging machinery required for keeping a channel free in that weed-locked region, as well as for the irrigation plant of the adjoining territory which would be available for cultivation as soon as the necessary works had been carried out in the river. This week he delivered his second lecture before the Egyptian Institute, on the subject of the sudd region as Nature's provision of perennial irrigation and flood protection for the whole of the Nile Valley. Sir William gave it as his considered opinion that the sudd region is one of the most wonderful reservoirs in the world, and that, coupled with the conversion of the basin areas in Upper Egypt to perennial irrigation, it could supply the full measure of the water which will be needed by Egypt for all time and by the Sudan for many generations, whilst at the same time it would free Egypt from the fear of an inundation.

The task which faces the Syria and Palestine Relief Fund in Syria is especially the provision of clothing, medical help, and employment. There are also a number of orphans and sickly children gathered in different places, who need to be provided for; whilst for hundreds of young women, untrained, unmarried, and more or less stranded, shelter and occupation are most necessary. Centres of relief are likely to be established at Damascus and at Beyrout (for the Metn district of Lebanon) and manned from workers already in Palestine; while the new Relief Unit called for by General Allenby is also leaving this country.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, February 16.

Profits and Profiteering.

Notwithstanding high hopes, the harvest of 1918 proved to be but mediocre. Fortunately, the demand for export for military purposes was cancelled, and the country has been able to apply itself to the normal supply of internal wants and such outside trade as might prove sufficiently profitable. This was mainly to be found in Eretria, where there is considerable want, and to some degree in Arabia, where millet is taken for animal food. The local supply, however, has not been coming on to the market with any great freedom, partly because the amount available may have been overestimated and partly because, since 1913, the natives show a tendency to maintain an adequate supply stored to meet emergencies. Even so, the rise in prices is not fully explained, and there is little doubt that certain merchants have taken the opportunity to corner a small market. In these days of restrictions the way of the gambler in differences is hard. But the instinct of gambling is deeply ingrained in the heart of the native, who, indeed, does not really distinguish between it and legitimate trade. It is probable that there are considerable stores of grain on which merchants have paid an advance, making the owner a partner in the deal to ensure his keeping grain in hand. As the grain is stored in "matmuras," or pits in the ground, which are scattered over a very wide area and as the grain in these keeps for a very long time, it is almost impossible to tell what the actual supplies available in the country are or where they may be.

The native passion for unearned increment has been well displayed on the publication of the new regulations dealing with the trade in sugar. The price to the consumer had gone up to such prohibitive heights that it was necessary to do something to control it. It was therefore decided to put the distribution in the hands of the Government, which would allot the sugar to approved dealers, who would, in their turn, distribute to the small retailers at determined prices. Previous to the war the wholesale trade was in the hands of a few, perhaps six, merchants. Now, however, there are said to be over a thousand applicants in Omdurman alone for a proportion of the sugar. It is difficult not to believe that a large number of these have been lured on by the enormous profits made by some of their friends during the last two years, and that they hope to go and do likewise. It will be interesting to see how events turn, and if the regulations will result in a reduction of the price of sugar to the consumer.

Visitors to Khartoum.

Among recent visitors to Khartoum are Mr. and Mrs. Foa. He is the chairman of the Anglo-Egyptian Bank, which has recently taken over the premises of the old Bank of Egypt. The bank has had an increasing business for the last few years, and may, it is hoped, further extend its activities.

Mr. James Laing, of James Laing and Son, the well-known gum merchants, has been staying in Khartoum for some days with his daughters.

Mr. Job, the manager of the National Bank of Egypt in Khartoum, is to be congratulated in every aspect of his life. He was lately decorated as an Officer of the British Empire for his services during the war, he has just become the father of a son and heir, and he won in the last week the tennis championship of the Sudan after an exceptionally fine match. He has held the cup since 1911. The final this year, in which he defeated Mr. Chase, R.N.V.R., in the last set, was an extremely good match, of a standard rarely to be met with outside Wimbledon.

Sheikh Abdallah Abu Sin Nazir of the Shukria, who recently received the M.B.E., has left for Rufaa, his home, after being treated in Khartoum Hospital for several weeks.

where information regarding the produce of the country, facilities for transport, etc., may be obtained.

THE QUESTION OF SYRIA.

(From Our Own Correspondent.)

Cairo, February 20.

The Syrian community in Egypt is bestirring itself in the matter of the future of its own country. Not that its preoccupation in this respect is of recent growth; only the censorship has prevented it durirng the past four years from giving that expression to its hopes and fears which is now heard on all sides.

From all that one hears, and from the documents from Syria and Syrian communities in other parts which one has been privileged to peruse, there seems to be a consensus of opinion among all parties as to the fallacy of dividing the country into separate administrative and political zones, as it is at present, and as threatens to become a permanent feature. The existing state of affairs seems to please no one, and one and all hope for a radical change that will bring the whole country from the Taurus Mountains to the Sinai Peninsula under one administration.

The question of who is to be entrusted with this unified administration is, however, the point on which this general agreement breaks down. From what one can gather, the bulk of opinion tends in one direction—viz., that Great Britain shall be entrusted with the task, or, failing her, the United States of America. The minority—and they appear to be in every sense of the word the minority—incline towards France as the country which should administer the whole area between the limits stated above. The party in favour of France appears to be made up solely of the Maronites, for long years the friends of the French, from whom they have received and still continue to receive material assistance, and the Catholics; though why the latter should support a country which has driven out their Church as opposed to the one which has for several centuries provided a sanctuary for it is not quite clear. On the other hand, those in favour of Great Britain comprise the Moslems, the Greek Orthodox, the Druses, the Protestants, and a certain number even of the Maronites. To these must be added the large Syrian communities in North and South America and elsewhere.

The great argument advanced in favour of Great Britain is the fact that she will have under her protection Egypt and the Irak, both contiguous territories, with which the economic future of Syria must inevitably be closely connected, if the latter country is to attain its proper development. If France assumes the direction of Syria there will necessarily be Customs and administrative boundaries, which will, it is pointed out, militate against the development of the country's trade and its internal economy. This barrier will not exist if Great Britain is in charge of Syria. The minority would appear to be actuated by pure sentiment due to the assistance given by France in the past, and the educational facilities and culture which her missions have provided in Beyrout and the Lebanon. The majority, while also acknowledging their debt of gratitude in this respect, consider that sentiment should not dictate the decision as to the future of their country. They believe that Great Britain's greater experience of colonisation and more abundant resources, added to the fact that she is predominant in the contiguous territory, indicate that she is the Power better responding to the future needs of their country than France.

The majority recognise that the existence of agreements between France and England may prevent either Power from carrying out the wishes of either party in the matter of not dividing Syria; and, since the unity of Syria is the all-important condition in any settlement of their future, they turn to the United States. That country is not bound by any agreements or treaties; in their opinion it fulfils all the other necessary conditions—though, of course, the boundary difficulty would still exist—and the high and enlightened principles of its citizens are known to them through the schools at which so many thousands of Syrians have received their education.

To sum up, the position seems to be that the Sykes-Picot agreement, which stipulated a separate zone of influence for France, England, and the Arabs, does not please any of the parties, since it sins on the point of the division of the country. If that agreement is to stand, it will be against the wishes of the people in regard to whose government it has been made. If, on the other hand, it is not to stand, then it would appear that some means should be found to ascertain the real wishes of the Syrian nation, and not leave the matter to be decided on evidence brought forward by interested parties or by persons who have never had any mandate conferred on them by the people on whose behalf they claim to speak. No doubt the League of Nations will study the question in all its aspects; yet one can quite understand the anxiety of the Syrians, who feel very uncertain whether the real interests of Syria as a whole will be consulted when it comes to taking the final decision.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, February 22.

The Administration of Tangier.

From the number of articles and references to Tangier which have been appearing lately, it would seem that the impression that international government has had a fair trial here and has failed is more widespread than was thought. The accuracy of this impression depends entirely on what is understood by international government, and it may be useful to explain the particular form under which Tangier is administered.

The nearest approach to a municipal authority that we have is the "Commission d'Hygiène." This is a body to which the Diplomatic Corps and the "Conseil Sanitaire" (which is the Diplomatic Corps under another guise) have entrusted the government of Tangier, but under their direction and with very limited powers. The Commission d'Hygiène can do very little on its own initiative, most matters having to be referred to the Diplomatic Corps for decision. The Commission consists of twelve elected members, divided amongst the different nationalities, *plus* the official members, of whom one is appointed by the diplomatic agent of each country represented here. The elected members are distributed amongst the different nationalities in supposed proportion to their interests and population. Each nation selects its own candidates, whose names are communicated to the diplomatic agent, who passes the names on to the Commission d'Hygiène at its last meeting before the election. A list is made of the candidates who are submitted for election by all those qualified to vote—the qualification being the payment of ten *pesetas hassani* per year. The term of office is one year. It rarely happens that an independent candidate offers himself. The French and Spanish consuls are elected alternately as President of the Commission for the year, and vice-presidents are chosen from the elected members.

Now, notwithstanding that there are official representatives of the different countries on the Commission, it cannot, as I have said, take a decision on any important, nor on many unimportant, matters without having the approval of the Diplomatic Corps; and this approval must be unanimous. Any proposal from the Commission d'Hygiène, or, indeed, a proposal originating with one of the diplomatic agencies, may or may not be discussed at a meeting of the Corps, but it has to be forwarded to the doyen of the Corps and passed on from one agency to another for signature. Some of, if not all, the diplomatic agents have to submit proposals of a certain importance to their home Governments and await a reply before they can act. It would almost seem as if some of the home authorities occasionally gave leave to their agent to sign a regulation with his tongue in his cheek; for there have been decrees issued, with notices from the various agencies that non-observance would be punished with various fines or imprisonment, according to the law and after trial by the Consular Court of the country to which the offender belongs, but flagrant breaches of these regulations have passed quite unnoticed. Instances of this are to be met with in the streets every day.

It will be seen from the foregoing that there are here just as many Consular Courts administering as many codes of law as there are nations diplomatically represented here.

The British Representatives.

The election of members of the Commission d'Hygiène takes place early in February (this year it was on the 9th). Two of the twelve elected members are allocated to the British colony, and a meeting of the colony, which was fairly well attended, was held at the rooms of the British Chamber of Commerce on the 3rd inst. to select two gentlemen to be proposed as candidates. The question was raised as to why the colony should not have three members, and delegates were appointed to bring the matter before his Majesty's agent.

There is no keen desire among the members of the colony to sit on this Commission, and, as no other names were proposed, the sitting members, Mr. Abensur, partner in Pariente's Bank, and who has for many years been a most useful member, and several times vice-president, of the Commission, and Mr. Biddulph, manager of the Bank of British West Africa at Tangier, were again chosen and were eventually duly elected. Mr. Abensur has long been a prominent member of the British Colony, and has in an unobtrusive manner devoted much of his time and energy to British interests; and at the meeting Mr. W. B. Harris drew attention to Mr. Abensur's devotion, and proposed a vote of thanks to him from the colony. This was unanimously passed.

The Question of a British School.

Advantage was taken of the occasion to bring before the colony the question of establishing a British school at Tangier. The British Chamber of Commerce had been requested officially last year to report on the subject, and more recently had been invited by his Majesty's agent, on behalf of the Government, to submit an estimate of the probable expense of a school based upon their first proposal, and of the amount of financial support (school fees, donations and subscriptions) likely to be obtained locally. This inquiry was not to be taken as engaging the Government in any way. The meeting was informed that a sub-committee of the Chamber of Commerce was at work preparing the report asked for, and it was in order that the sub-committee should have as much information as possible that the views of the colony were invited.

The discussion which took place left no doubt of the keen desire of the colony for the establishment of a British school, not only, nor chiefly, for the children of British parents, but as an aid to the advancement of British trade in the country. It was finally decided that a circular should be issued inviting the members of the colony to state the amount of subscriptions or donations they were prepared to promise, and the hope was expressed that many of the British firms both here and at home interested in the country would promise annual subscriptions. Kaid Sir Harry Maclean, who is greatly interested in this matter and has done much to bring it to a practical solution, promised £25 a year. Mr. L. J. Brown, secretary of the Chamber of Commerce, remarked that Tangier was not alone in desiring a British school; British colonists in other Moroccan cities were just as keen, and in one, at least, although the colony was very small and largely composed of British protected persons, financial support had long been promised, if a school could be started.

Though the labours of the sub-committee having the matter in hand are not completed, the meeting was informed, in reply to a remark by Mr. W. B. Harris, that the report would be based on the principle that the school must offer at least as good an education as that obtainable at the French, Spanish, or Jewish Alliance Schools; otherwise it would have no chance of success. It should be open to all nationalities; the report would also probably propose that there should be kindergarten classes besides those for older children, and evening classes, and that, at least to begin with, a building should be rented, leaving the question of building until it was seen how the school prospered.

It is earnestly to be hoped that people in England interested in British trade here will take this matter up and help in every way they can.

The local French and Spanish papers here have been having a rather heated discussion on rights in the Spanish Zone and Tangier—the French holding that they alone have a treaty with the Sultan of Morocco, the Spanish Zone being a matter of arrangement made subsequently and being a zone of influence only. It is further argued that, as Tangier still forms part of the Sultan's kingdom, the natives, as his subjects, are French *protégés*. The way some of the local Moorish authorities sometimes act, being apparently unwilling or unable to decide cases without permission of the French authorities, has given many people the impression that this view has been pressed upon them.

As to French interests in Tangier, it is as well to remember that even during the war everything possible was done to make these more important. At a time when money would not have been allowed to leave England for such a purpose, at least outside her colonies, very large sums were spent in building new schools here, although the existing college was barely completed and provided accommodation for very much larger numbers than attended.

GENERAL ALLENBY'S VERDICT.

The various problems in connection with the relief of distress in the areas now under his administration have recently been investigated by General Allenby, who warmly commends the work of the Syria and Palestine Relief Fund, and strongly supports their efforts to raise and spend as much money as possible in the next six months. "The work," he writes, "has been admirable," but "all possible help is required." The fund is now facing most intense need in Syria, and the greatest work since its organisation still lies ahead. The sufferings of this country during the last few years have been almost incredible. The scarcity of food has driven the people to eating dead animals, refuse, etc., and in some cases to cannibalism. From one-third to one-half of the population in some parts died of starvation or disease. The work of the Syria and Palestine Relief Fund in relieving distress, feeding and clothing the inhabitants, establishing orphanages, creches, workshops, etc., has already accomplished much, but more money is very urgently needed. Please send what you can to the secretary, Syria and Palestine Relief Fund, 110, Victoria Street, S.W.1.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, February 18.

Change of Governor: Rumours.

There are various surmises current relative to the impending departure of Lord Methuen and a change in the Admiralty *personnel* here. It is rumoured just now that Sir Rosslyn Wemyss will come to Malta as Governor; but if he were to come out to the Mediterranean he would do so, we are inclined to believe, as Commander-in-Chief of the newly reconstituted Fleet rather than to succeed Lord Methuen as Governor. But in the event of the rumour proving correct Malta will have for the first time an admiral as Governor. It is not likely, however, that he would be able to combine the duties of a Governor and Commander-in-Chief of an active fleet. The fact that the present Naval Commander-in-Chief in the Mediterranean holds Vice-Admiral's rank does not preclude Sir Somerset Gough Calthorpe from assuming command of an augmented Mediterranean Fleet. Not all the Commanders-in-Chief of the Mediterranean Fleet held full admiral's rank on first coming out here. Moreover, acting rank has in many cases been resorted to.

Admiral the Honourable Sir Somerset Gough Calthorpe, G.C.M.G., K.C.B., C.V.O., the Naval Commander-in-Chief of the Mediterranean, and now High Commissioner in Constantinople, arrived here on Saturday for a short visit. Admiral Calthorpe is accompanied by his Staff.

Honour for Lord Methuen.

Among the promotions in and appointments to the Order of the Hospital of St. John of Jerusalem in England we are gratified to note that the name of our Governor, Lord Methuen, heads the list of those who have been appointed Knights of Grace, the highest distinction which the ancient and chivalrous Order can bestow. When hostilities broke out, and our little island was called upon to rise to the occasion, his Excellency promptly took the lead in rallying our resources and making due provision for eventualities. The unremitting care for the sick and wounded landed here displayed by him—he was always among the first to board the ships and visit the hospitals—can never be over-praised. Lord Methuen has fully and faithfully upheld the principles of the illustrious Order during a happy occupancy of the Palace of the Grand Masters; and the honour now bestowed upon him will, we are sure, be cherished among the most valued reminiscences of his term of office as Governor of these islands, so long and closely associated with the Order.

The Mediterranean Fleet.

It is understood locally that the restored Mediterranean Fleet, which will mainly consist of a battle fleet of super-Dreadnoughts, may be expected to arrive here from England in the early part of March, whilst all the destroyers at present in our waters will be replaced by a flotilla of the modern destroyers of the "S" class, of which five are already in the Mediterranean. Some twenty of these splendid craft are earmarked for this station, and they may arrive here before the capital ships of the new Mediterranean Fleet. Two destroyer leaders of the modern type have also been detailed for service with the Mediterranean destroyer flotilla, and Captain the Honourable W. S. Leveson-Gower has been appointed captain (D), and will fly his pennant in one of these destroyer leaders.

Naval Movements.

The battleship Agamemnon, Captain F. S. Lichfield, C.M.G., D.S.O., has just left Malta for home waters. The Agamemnon and her sister ship the Lord Nelson have been "roughing it" in the Mediterranean since the earliest stages of the war, and have done yeoman service. These two ships carried the White Ensign wherever British warships may have been required during the four and a-half years of war—from the Dardanelles operations up to the entry of the Allied Fleet through the famous Straits—and they have acquitted themselves in a manner worthy of the great traditions of Britain's "Sure Shield." The Agamemnon and Lord Nelson do not belong to the "all big-gun" or Dreadnought type; they are, nevertheless, fine ships, and at one time were preferred by a section of naval experts to the capital ships.

The Blenheim, cruiser, which is the mother ship for the Mediterranean destroyer flotilla, has returned to Malta. The Blenheim belonged to the original Mediterranean Fleet when war broke out, and was then carrying out her present duties. Since then we have hardly seen her in our harbour, but she is here now, having been continually on the move all through the war, and her officers and ship's company deserve well of their country for the splendid work standing to their credit.

War Echoes.

The wreck of the French S.S. Saint Laurent, which is lying in the Lazzaretto Harbour, partly visible, is to be removed, as it is about to be offered for sale. It will be remembered that three years ago the Saint Laurent was all but completely destroyed by an internal explosion which shook the island to its very foundation and caused great excitement. There were French troops on board at the time, but the loss of life has never been stated; nor has the cause of the explosion. The ill-fated ship was afterwards intentionally sunk in the place where it has since lain.

The French armed yacht Phœnix has arrived here en route for Salonika and Constantinople.

Among the recipients of naval salvage money appear the following ships now serving, or which were serving in Malta in connection with the salvage of the S.S. Sébek between October 13 and November 14, 1916:—H.M. ships Penstemon, Cyclamen, Safa-el-Bahr, Lynmouth, Princeps, Lemberg, and Vigilant II., and H.M. tugs Cracker, Restive, Veteran, and Lingdale. Working parties from Malta Dockyard also are mentioned.

A New Judge.

Several notable changes are announced in the ranks of our Civil Service. The vacancy on the Judicial Bench of the island, caused by the death of Judge Dr. G. Pullicino, has just been filled by the appointment of Dr. Giuseppe Cremona, Magistrate for Gozo, to be one of his Majesty's Judges at Malta. The appointment is sure to be received with general satisfaction, for the new judge's abilities and qualifications, especially in Civil and Canon Law, are well known.

Mr. C. W. Duncan, Commissioner of Police, has been appointed Inspector-General of Police and Director of Prisons for the Southern Provinces of Nigeria, and is expected to leave shortly to take up his new duties. He has been at the head of the local police force only since July, 1916, but he has given proofs of administrative and organising abilities, coupled with great tact.

ROUMANIAN RELIEF FUND.

A further remittance of £16,000 has recently been sent by the National Roumanian Relief Fund to the Roumanian Minister. The fund was founded in Edinburgh, when Roumania joined the Allies, for the purpose of providing Red Cross supplies and relieving civilian distress, and £25,000 had already been handed over by Lord Rosebery for the Queen of Roumania before that country signed the Armistice with the Central Powers.

Acknowledging the recent gift to the Lord Provost of Edinburgh, chairman of the fund, the Roumanian Chargé d'Affaires wrote:—"I take this opportunity to express to your lordship and to the Committee of the National Roumanian Relief Fund, on behalf of her Majesty the Queen of Roumania, and of the Roumanian nation, my most grateful thanks for your lordship's noble efforts on their behalf, which have so much contributed to relieve the distress prevailing in Roumania. When forwarding the goods to her Majesty the Queen, I shall not fail to lay before her Majesty all the facts connected with the efforts of your lordship's committee, resulting in such splendid help for the necessitous population of Roumania."

The Hon. Treasurer is Mr. John Rae, J.P., the Bank of Scotland, Edinburgh.

CAPE TO CAIRO AIR ROUTE.

Under date of February 28, Reuter's Johannesburg correspondent reports:—Major Court Treatt, the officer in charge of the Southern Survey of the aerial route from Cairo to Cape Town, stated to-day, in the course of an interview, that all the sites for aerodromes from Abercorn southwards were now being surveyed preparatory to the erection of the aerodromes. In the meantime, supplies of petrol, oil, distilled water, and other necessaries have been got together at Pretoria for distribution.

The distance between the sites is from 300 to 400 miles. With a large Handley Page machine the 5,300 miles from Cairo to Cape Town should be accomplished, Major Treatt says, in about 50 flying hours. The survey of the region from Victoria Nyanza to Abercorn has been entrusted to Major Emmett, a South African officer, who landed at Mombasa about the middle of January.

MAILS FOR THE NEAR EAST.

The Postmaster-General announces that mails are now forwarded to all countries in the Balkan Peninsula, subject to censorship, and to the additional restrictions shown below:—

Greece.—Correspondence of all kinds, including uninsured parcels. Correspondence may be registered.

Roumania, Serbia, and Albania.—Correspondence of all kinds, except parcels. Correspondence may be registered.

Croatia, Slavonia, Bosnia, Herzegovina, Montenegro, Bulgaria.—Unregistered correspondence of all kinds, except parcels.

Turkey.—Correspondence of all kinds, except parcels. Correspondence can be registered, if addressed "Poste Restante, British Army Post Office, Constantinople."

THE MINISTERIAL CRISIS IN EGYPT.

Reuter's Cairo correspondent reports (March 3):—The Premier, Hussein Rushdi Pasha, has tendered his resignation, which has been accepted. A new Cabinet is in process of formation.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 20.

The Ministerial crisis continues, and we are about to complete the third month since it started. The settlement which has repeatedly been promised us has so far not materialised; and we still possess a Council of Ministers which cannot perform its duties owing to the persistence of the Prime Minister in the matter of his resignation, which has not been accepted. I notice that articles are appearing on the subject in the London Press, and to prevent any misunderstanding it may be as well if I give the history of this affair.

The crisis had its origin in a letter addressed to the Sultan in November last by the Prime Minister, in which he sought the former's consent to his applying for permission for himself and his colleague Adly Yeghen Pasha, to go to London in order to lay before the British Government the views as to the political future of Egypt held by the Egyptian Government, as well as by his Highness. The latter gave his consent, and the request was duly transmitted to the British Government, who replied, quite naturally, that they would be delighted to receive the two Egyptian Ministers, but that, in view of the general press of business connected with the Peace Conference, they would be glad if the proposed visit could be deferred until the earliest convenient moment. Unfortunately, when this reply was communicated to him Rushdi Pasha took it into his head to regard it as a rebuff, and he at once tendered his resignation and that of his colleague Adly Yeghen Pasha. These resignations were not accepted, for it seemed on the face of it obvious that the two Ministers must be labouring under a misapprehension which it should not be difficult to remove. What the British authorities were, indeed, keen about, apart from, any personal considerations for the two Ministers, was to secure continuity of action by keeping in office, at any rate during the period of reconstruction, the same Cabinet as had borne the heat and burden of the day during the war. The Rushdi Cabinet had at its fingers' ends all the details of most of the post-war problems with which Egypt is being faced; and it would obviously conduce to a speedier and easier settlement of those problems if the men who had collaborated so successfully during the previous five years could be retained for the working out of the details. For this reason the British authorities have left no stone unturned to re-establish the *status quo*.

The British Government, shortly after its first reply, intimated that possibly it might be able to receive the two Ministers in March. Interviews between them, the High Commissoner and the Sultan, as well as other high British officials, have been held at frequent intervals, with a view to find a way out of the *impasse*, but all in vain. Rushdi Pasha and Adly Pasha have proved so far deaf to all persuasion, and have persisted in their determination to resign. Except for a brief interlude of about a fortnight at the end of January, during which the decree for the renewal of the mandate of the Mixed Tribunals was passed, all important Government work entailing a decision of the Council Ministers has been at a complete standstill, and it is likely so to remain unless either the two Ministers decide to come into line once again or the British Government makes up its mind to look elsewhere for a Prime Minister. Something will certainly have to be done in this direction during the next month, for at the end of March the Budget will have to be approved by the Council; otherwise, constitutionally the Government will neither have funds to carry on with nor be able legally to collect the revenues.

I notice in the London Press a tendency to belittle the position held by Rushdi Pasha. It may be quite correct, as one of the writers says, that some ten years ago he was only a minor judge in the Mixed Courts. That should, however, not detract from the fact that he has by his receptivity, courageous initiative, and foresight rendered very material assistance to the British authorities in their control of the country, and that he has indeed displayed qualities which, it is generally agreed by all who have come into contact with him, few, if any, other Egyptians could or would have shown in similar circumstances. But while one would like to see due credit given to the Prime Minister for the very loyal and valuable share he has taken in the administration of Egypt during the past five years, nevertheless, look at the matter how one will, one cannot help blaming him severely for his persistence in regarding the British Government's reply as a rebuff and for his refusing to listen to any persuasion.

He seems to have lost all sense of proportion and to have given way to an impulsiveness—which, it is true, is one of his characteristics, but which during the war years certainly has not been a feature of his actions—succeeded by an obstinacy which is entirely foreign to his nature. The most charitable explanation one can give for this is that the distorted view he has taken of this incident is due to his state of health, which has been undermined by the strain and stress of the war, and in regard to which he has never spared himself. At the same time it is highly probable that the fact that the clique to which I referred last week was striving to get permission to go to London to lay its exaggerated ideas before the British Government may have goaded Rushdi Pasha to go to the extreme of trying to force the hands of the latter, so as to be the first in the field, not merely from the personal point of view, but also in order to prevent those misguided Egyptians from creating a false impression and spoiling the political prospects of Egypt.

In this connection it should be made perfectly clear, in all fairness to the two Ministers, that whatever blame they may have to bear for their attitude in this matter they have at no time worked in collusion with what may be called the Zaghlul clique. As far as can be gathered—and there is no reason to think otherwise—they by no means approve of the constitution or of the *modus operandi* of that clique. If anything, they are rather annoyed with it for having taken up a line which could not fail to make their own task somewhat more difficult than it would otherwise have been.

Nor is it correct to say, as some seem to infer, that the activities of the Zaghlulites prompted the Prime Minister to bestir himself in the same direction. I have the best of reasons for denying that there was any connection between the two proposals at all. Indeed, I can definitely state that Rushdi Pasha had for some considerable time been meditating obtaining permission to go to London as soon as hostilities should cease, in order to ask for certain political concessions which he thought might reasonably be demanded for Egypt. The reason I am so certain of this fact is that in the early part of 1918—and I think that in this respect I am not making any breach of confidence—Rushdi Pasha told me what he had in mind, and dwelt on the great hopes he had for the success of his mission, which he intended to undertake as soon as peace came within sight.

Whatever effect the activities of the Zaghlulites may have had on his subsequent attitude, and whatever personal motives may have underlain his persistence in his first decision, the fact remains that the Prime Minister's request to be allowed to go to London to plead the cause of Egypt was not prompted by the action of the other party, but was the fruit of the seed which had been germinating for some considerable time in his mind. In the interest of accuracy as well as in fairness to the man I think that it is only right that this fact should be made clear, but it is extremely difficult to find any excuse for his subsequent mistaken and ill-inspired attitude towards the British Government.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

RHODES AND THE DODECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of March 7 Colonel A. C. Yate gave us his view why Italy should not part with Rhodes, though he allows the Greeks possession of the eleven rocks that constitute the remainder of the Dodecanese.

Colonel Yate has struck out an entirely new line, and his argument is unique. I venture to think that not even the marvellous ingenuity of the Consulta could produce arguments of the kind he advanced. According to him, because over six hundred years ago the Grand Master of the Hospitallers, Fulco de Villaret, and his noble company of God-fearing brigands took advantage of Greek hospitality to make Rhodes their permanent home until they were ejected by the Turks, the island should pass once more under the sway of the Order.

This is not so difficult as one would imagine at first sight, for the charming simplicity of this practical solution to a complicated international problem is instantly seen when we are informed that by some fortunate chance the Sovereign-of-nothing Order of Malta takes its orders from Rome, and by an equally fortunate coincidence the flag of the ancient Order of St. John of Jerusalem is the present Italian flag. Hence the cession of Rhodes to the Hospitallers would entail no change whatever in the present administration, though we presume a certain amount of mummery would be gone through on the return of "the long-lost stolen sheep" to the paternal bosom of the "Brotherhood." There are other striking resemblances, which Colonel Yate has overlooked, between the present holders of Rhodes and that adventurous band of freebooters misnamed Crusaders, of which League of Rogues the Noble and Most Ancient Orders mentioned by Colonel Yate formed a very important part.

With regard to the memorable sieges of Rhodes, the brunt of the defence was borne by the local Greek population; and when things became too hot, the gallant Hospitallers evacuated the island under agreement with the Turks, leaving the unfortunate Greeks at the mercy of the foe, who slew them by the thousand. As for the Auberges, they were raised by exactly the same system as that employed at the building of the Pyramids—namely, the *corvée*—and their existence at the present time is the strongest argument why any of the above Orders should not return to Rhodes.

If Colonel Yate cannot produce a stronger argument in favour of Italy's retention of Rhodes than the melodramatic supposition that objection would be raised to the island's cession to Greece by the Manes of a hoary old pirate like Fulco de Villaret, his "brother" Dieudonné de Gozo—who, we are assured, slew a dragon, in poetry, and whose name in history has about as much significance as that of Sir Roger de Coverley—I should like to express my opinion that if the Hospitallers would like to have a home, they should induce Great Britain to cede Malta to them, especially in view of the fact that whereas they lost Rhodes nearly five hundred years ago, Malta was only taken from them in the days of Napoleon.

But in view of the fact that there are other Powers that be besides Italy and her protéges, the Hospitallers, and in view of the keen determination of all Greeks to be united to their Mother Country and stand no nonsense, I am afraid that the Noble and Most Ancient Orders will be grievously disappointed.—I am, etc.,

ALEXANDER CALLINICOS.

Greek Church House, Manchester, March 8, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read the interesting letter of Colonel Yate in your issue of yesterday.

Being a Dodecanesian, I cannot agree with the "points" put forward by your correspondent, who perhaps knows my native country only through the glasses of the mediæval authors of the History of the Order "Sancti Iohanni Ierosolymitani." As a good scholar, he ought to know the meaning of the Greek "Dodeca" before styling the South Sporades "Rhodes and the Dodecanese." Colonel Yate has generously awarded the "Endecanese" to Greece, but he has reserved the right of the future of Rhodes, though he acknowledges the fact that the Island of Helios Phœbus was taken from the Greeks by the Christian Fulco.

I am afraid your correspondent's historical notions are very poor and of a very "auld" school when he tries to show us that Rhodes, being Greek, should be passed over to the Hospitallers *honoris causa*. This new theory is amazing, and Baron Sonnino must be congratulated on his new ally, *plus royaliste que le roy*. In spite of the present century in which we live, the daring suggestion is made: the resurrection of a mediæval theocratic administration which was by no means purely Italian, and had always boasted of Rome as Motherland and its Bishop as Father. According to that bright idea, the Knights ought to take back Valetta, and Pope Benedict re-take his rank of *Pontifex Maximus Laicorum*. In this wonderful world of ours, which has just escaped from the hideous grip of the Prussian Kultur, we do not need chivalrous Monkish Orders to reappear again, binding and unbinding consciences and holding the keys of eternal life. We have already seen in our days the true and modern Knights receiving their golden spurs at the Marne, Ypres, and Verdun, and the time has happily gone by when knights of the kind of Bois Guilbert (*vide* "Ivanhoe") shamed the title of the Soldiers of Christ. Every civilised nation nowadays has its Red Cross Order, which practically acts as the *locum tenens* of the Hospitallers, and Colonel Yate, instead of being the champion of "ye olde days," ought to use his talent in writing in favour of the people of the Dodecanese that appeals to the principle of self-determination, which he mentions in the beginning of his letter. Your correspondent may be sure that the ghosts of the chivalrous gentlemen that he has invoked will not veto the cession of the islands to the Christian Greeks. Their curses have already been bestowed upon those who pledged their word at Ouchy to give back a Christian people to the Turk.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, March 8, 1919.

STARVING DODECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I beg of you to publish in your hospitable columns the following appeal in favour of the starving Dodecanese. In spite of the present deliberations of the Council of Ten at Paris promising better days for every oppressed nation, the people in the Dodecanese are dying every day, or committing suicide, for lack of food. In your issue of December 20, 1918, you published the official statistics I sent you relative to the population in the Twelve Islands. Since then the Executive Committee of the Dodecanesians in London have issued the second edition of their White Book, which reveals many amazing facts that have occurred in the Island since the Italian Occupation. It is obvious, therefore, that the above-mentioned statistics, given by the Unredeemed Greeks Congress in Paris, have been materially altered, owing to the continuous exodus to Greece of the Islanders, who preferred a voluntary exile and the scanty refugee ration offered by their Motherland Greece than die of starvation and ill-treatment in their own homes. The number of the Dodecanesian refugees in Greece, according to official statistics, is over 80,000 souls.

Kalymnos, for instance, with an original population of 26,000 inhabitants when Proconsul Ameglio landed in the Dodecanese in 1912, had only 14,000 in December, 1917, and her population had decreased by 5,688 souls when a census was taken in the early days of May, 1918. Leros, numbering 8,000 inhabitants, has now only about 2,500, and the Island of Symi, with a population of 23,000, lost 16,500 of her people during six years.

Before leaving Egypt in November last I myself heard from sailor natives of the Island of Cassos that their people were so physically exhausted that they had scarcely the strength to walk about, and I was horrified to learn that Italy had not only failed to send to the Islands the food apportioned solely for the use of the Dodecanese by the Allied Control, but had taken every restrictive step not to allow the import of any foodstuffs sent to the Islanders by their relatives in Egypt and America. I also was told that small children were extremely emaciated for lack of food, and—the bitterest of all—that night classes of the Italian langauge were compulsory for young Greeks, and they were prohibited to speak their own mother tongue even during recreation hours. All these facts, which appeared to me exaggerated, have been fully confirmed by the second edition of the Dodecanesian White Book.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, March 3, 1919.

NEWS IN BRIEF.

A delayed Reuter's message from Delhi says that the news of the Ameer's assassination was received with the sincerest regret in that city, as both before and during the war Habib Ullah proved himself to be a strong and impartial ruler, and maintained quiet among many of the turbulent frontier tribes.

The Church Missionary Society, the Society for the Propagation of the Gospel, and the Church of England Zenana Missionary Society are co-operating with a number of other societies working in India in the issue of an appeal to relieve the alarming distress owing to famine conditions in large districts in India, particularly in the Bombay Presidency, the Punjab, and Central India.

The Syrian Relief Society in Cairo recently asked the Egyptian Customs Administration to exempt from dues the consignments of goods which it forwards occasionally to Syria for the victims of the war, and to refund to the society the money paid on account of former consignments. The Administration has agreed to the request, and has notified the Syrian Committee in Cairo accordingly.

Speaking in Bombay, Dr. Dutta announced that one day while in France he saw the New Zealand troops immersed in digesting the contents of a fifty-paged summary of the Montagu-Chelmsford Report! The General had distributed copies of the report amongst his men, so that they might know something about India. It would be interesting to know, says the *Englishman*, if the General also distributed copies of the Rowlatt Committee report.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.
OMAR KHAYYAM.

A sad state of affairs in an Egyptian household was revealed a few weeks ago, when a native schoolmaster brought an action before the Lebban Summary Court, accusing his wife of having insulted and beaten him. That is bad enough, one would think, but worse is yet to come! "The court could not find that the offence was punishable legally." No wonder that "the teacher has now brought the question before the Parquet, requesting criminal investigation." If an Oriental husband's ideas of the fitness of things are to be thus rudely turned upside down and inside out he might almost as well live in the Occident.

***

I wonder who was responsible for abolishing the bridge tolls at Constantinople? Whoever he was, he must have been blessed by a good many thousands of Constantinopolitans; for, though the charges were not heavy, considering the convenience of the bridge as compared with a ferry, it seems to be a trait of human nature to object to paying anything at all for the mere privilege of walking or driving along a road, even though that road be thrown across a waterway. Personally, I used to dislike Galatea Bridge in the old days because of the beggars who swarmed on it and endeavoured to excite your pity by exhibiting their afflictions. Of course, they were removed some time ago; but I still remember one of them with a feeling almost of nausea. Beggars, by the way, used to be allowed to use the bridge without payment; so were lame people, no matter how well able to pay the toll they might be. But, unless my memory plays me false, dogs were liable to a fourfold tax.

***

Have you ever heard the story of the British Consul, the Vali of Smyrna, and Kara Geuz—of the insult put upon the Consul by the indelicate puppet, and the "apology" offered by the Vali? The incident happened many, many years ago, of course, but it was intensely funny, and if you have never heard the tale I should advise you to get somebody who knows it to tell it to you. Unfortunately, I dare not attempt to give it to you here: no British compositor would set it up; and if it did get itself into type it would result in this respectable journal being suppressed by an outraged Censor of some kind or other. There are so many of 'em, and they are *so* censorious! The point is that Kara Geuz is a very dreadful little person. And having made that clear, I have a suggestion to offer to Turkey. Since one of the Czech representatives at the great Paris Pow-wow of the Politicians is an actress, why should not Kara Geuz go there as one of the Turkish team? At least he would not waste time in talk, as some of the more celebrated performers seem bent on doing.

***

I have before referred to the good feeling often shown by their guards towards our countrymen who were prisoners in Turkey, and I heard recently of another instance of the kind, which seems amusing enough to pass on. At a certain camp in Asia Minor several officers noticed that while most of their guards were somewhat indifferent, so to say, one of them showed a strong tendency to gossip with them. Very soon the reason leaked out. The old gentleman had two sons, and both were prisoners of the British—one being in Egypt, the other in far-away Burma. The father was much afraid that his sons were not getting enough to eat, and he consulted the British prisoners on the subject, inquiring earnestly how he might best send them some meat and some money. Careful questioning revealed the fact that the poor old man's notion was to send them a few piastres and a lump of camel's hump, or some such delicacy. But—great are the benefits of education?—he was not quite sure that the meat would be edible by the time it reached Burma. What did the *Firenghis* think about it? And *would* the money pass safely through the hands of the guards—for his hearers must remember that the war was on; otherwise, of course, he would have no doubts on the subject. Touched by the venerable man's solicitude for his offspring and his patent poverty, the captives gave him the best advice possible: Let him send nothing, and *insh'Allah* he would soon get good news of his sons.. He appeared a little doubtful; but one morning he came to them in great spirits. He had had news of his sons; both were in good health, thanks to Allah; and—verily the British were good people!—both declared that they were better fed than ever before in their lives, and excellently treated in all respects. After that the old man could never do enough for the prisoners over whom he watched; and we have at least one sincere well-wisher in Turkey to-day.

CORSAIR.

NEAR EAST BOOKSHELF.

THE PROPOSED REVIVAL OF A JEWISH STATE.†

This collection of essays entitled "England and Palestine" covers much more ground than the title suggests. The author introduces his subject with a condensed but brightly written account of the "military geography" of Palestine; and then, in three chapters which are models of condensation, he sketches the leading points of Jewish history under the Greeks, under the Romans, and under Islam, including in this last the Crusades. Although necessarily incomplete, it is difficult to see how this historical summary does anything to confirm the modern Jewish claim to Palestine or to reassure the reader as to the fitness of the Jews as a race to control a State. As is here shown, any degree of political independence which they enjoyed under the Greeks and Romans was largely the result of intrigue and compromises, and the extent of temporary independence obtained was at best very limited in area. The best friends of Zionism will, if they are wise, not lay too much stress upon the records of history with respect to a Jewish state. As the writer here shows, the greatest difficulties in the past have been caused by the clashing of the party with purely religious ideals with that with purely secular aims within the Jewish body politic. But what is the guarantee that this will not occur again?

The remaining essays are concerned with the events of modern history. There is a chapter on Napoleon's adventure in Syria. Napoleon was, it appears, a Zionist—for political reasons—and one of his most youthful enthusiasms was his interest in the "restoration of the Jews."

In advocating a British-protected Jewish State, the author is rather inclined to take for granted the continued friendliness of the Jews, forgetting that while the faithfulness of British Jews to the Empire is assured, the great majority of Zionists are not British in their sympathies, nor in the least likely to favour British interests in the land. We fear that Great Britain will either be compelled to leave Palestine severely alone, after securing for Egypt a better frontier, as the author suggests, by the annexation of Gaza—"a possession indispensable to an army marching either to or from Egypt," "the most famous bridgehead in history"—or, if compelled by circumstances to take over the very heavy responsibility of Palestine, she will have to see that the political power of the Jews is strictly confined to self-government with regard to their own community interests. The more practical of British Zionists will, we feel sure, see this.

INDIAN CIVIL SERVICE EXAMINATION.

The Civil Service Commissioners give notice that an open competitive examination for the Indian Civil Service will be held in London, beginning on August 1, 1919. No person will be admitted to examination from whom the Secretary of the Civil Service Commission has not received, on or before June 2, an application, in the candidate's own handwriting, on a prescribed form, which may be obtained from the Secretary at once.

Lady Allenby presented the prizes at the close of the meeting to decide the Egyptian Expeditionary Force championships.

Under the title of "The Land of Heart's Desires," Miss Mary Debenham has written a new Pageant of Twenty-one Centuries of Palestine for the Syria and Palestine Relief Fund. A series of historical scenes, illustrating the Passover Pilgrims, Judas Maccabeus, St. Jerome at Bethlehem, and the Crusaders, is followed by several appealing pictures of Palestine under Turkish rule and the sufferings of the land during the war. Others at the close suggest the work of the Relief Fund. The pageant is arranged for presentation either by adults and children, or in simpler form by children alone. Copies may be had on application to 110, Victoria Street, S.W.1, at 3d., post free.

General and Lady Allenby are taking a short holiday in Upper Egypt.

Mlle. Helen Vacaresco, the Roumanian writer, has arrived in London from Paris.

Dr. Oscar Straus, formerly American Ambassador to Turkey, has arrived in London from Paris.

Archdeacon and Mrs. Beresford Potter, who had been staying in Cairo, have left Egypt for Cyprus.

M. Venizelos has arrived in London from Paris. He visited Earl Curzon at the Foreign Office on Monday.

It is announced that the Sultan of Egypt will proceed to Alexandria for the summer season at the beginning of May.

Lady Sykes has definitely declined to become candidate for Central Hull in place of her late husband, Sir Mark Sykes.

Mr. E. S. Montagu, Secretary of State for India, left London on Sunday night on his return to Paris for the Peace Conference.

Sir Henry Babington Smith was one of the passengers on board the Cunard liner Aquitania, due at Liverpool on Wednesday.

Lieut.-Colonel Robert W. Graves, C.M.G., arrived in Cairo from Damascus recently, and is leaving Egypt for England shortly.

Sir Vincent Caillard, owing to illness, will be unable to join the delegation of the Federation of British Industries which has gone to Paris.

The Maharaja of Bikanir and Lord Sinha, the two Indian delegates to the Peace Conference, left Charing Cross for Paris on Tuesday evening.

Lord and Lady Barrymore, who have both been suffering from colds, left London last Friday for Torquay, where they expect to remain about a week.

Miss Durham's lecture on Albania, which was to have been delivered at the Steinway Hall on Friday, the 14th inst., at half-past three o'clock, will now be given at 28, Bruton Street, W.1.

On January 28, at Lahore, India, the marriage took place of the Rev. H. Jenkin, Wesleyan Chaplain, Lahore, and Amy, second daughter of Mr. W. P. Annear, St. Margaret's, Whitchurch, near Cardiff.

The engagement is announced of Captain C. H. K. Phillips, M.C., I.A.R.O., attached 24th Punjabis, and late of Kandanewera, Matale, Ceylon, and Dorothy, only daughter of Mr. and Mrs. Franklin Dennison, of Cranford, Leamington Spa.

Queen Alexandra has granted her patronage to the Serbian matinée which Colonel Charles Gulliver is arranging at the Palladium, on March 28, in aid of the Royal Horticultural Society War Relief Fund, the proceeds to be allocated to Serbia.

Lieutenant-General Sir W. R. Marshall, the General Officer Commanding-in-Chief, Mesopotamian Expeditionary Force, who arrived in London last week, had the honour of being received by the King, and subsequently by the Queen, on Friday.

The Queen of Roumania was entertained at luncheon at the British Embassy in Paris on Monday. At the time of writing her Majesty was expected to leave Paris for London on Wednesday evening.

Sir Henry McMahon, who, as High Commissioner, was closely in touch with Y.M.C.A. work in Egypt during the war, has consented to become hon. treasurer of the Association during the six months' absence of Sir Henry Proctor in India.

His Highness the Agha Khan arrived in London on Thursday of last week from Paris. He was met at Victoria by, among others, the Maharaja of Bikanir. His Highness is staying at the Hyde Park Hotel, and his visit will last about a month.

A marriage has been arranged between Major Reginald H. Anderson, 11th Lancers (Indian Army), and Miss Ellison Janet Torrie, second daughter of the late Robert Jameson Torrie, 1, Glenfinlas Street, Edinburgh, and will take place in the autumn.

The *Sphinx* (February 1) announces that a marriage has been arranged between Miss Edna Ruth Lawson, eldest daughter of Mr. and Mrs. Walter E. Lawson, of Ibrahimieh, Alexandria, and Lieut. Whittall, Intelligence Corps, son of Mr. and Mrs. Edwin Whittall, of Constantinople.

A solemn requiem will be sung for Sir Mark Sykes in Westminster Cathedral at 11.30 a.m. on March 26. A certain number of seats will be reserved, and it will be a great convenience if applications for them are sent without delay to the Secretary, 9, Buckingham Gate, S.W.1.

A marriage has been arranged, and will take place in Rostrevor on March 20, between Captain E. F. O. Richards, M.C., the Lincolnshire Regiment, only son of Lieut.-Colonel E. W. Richards, late Indian Army, and Rosalie, only daughter of Mr. and Mrs. Butterfield, Bermuda.

A musical entertainment was given in the Central Hall, Westminster, on Thursday of last week, in aid of the Serbian Relief Fund. It was organised by Mr. Walter H. Giles, and was under the patronage of the Duchess of Somerset, Lady Bective, Lady Henry Cavendish Bentinck, and Mr. W. R. Portal.

The marriage arranged between Captain John Maitland Salusbury Trelawny, M.C., I.A.R.O., and Freda, youngest daughter of the late Captain Guy Mainwaring, R.N., and Mrs. Mainwaring, of 18, Iverna Court, Kensington, will take place at Christ Church, Chelsea, on Tuesday, March 18, at 2 p.m.

An engagement has been announced between Captain G. H. Bittles, R.A.F. (late flight-lieutenant, R.N.A.S.), only son of the late Major G. H. Bittles, Indian Army, and of Coleraine, co. Derry, Ireland, and Nora Elsie Bathurst, only daughter of Mrs. K. M. Bathurst, of 9, Matheson Road, West Kensington, W.

The engagement is announced between Basil Herbert Ashton, youngest son of Mr. and Mrs. E. F. Stranack, of Elmhurst, Batheaston, and Haddon, Kodaikanal, South India, and Kathleen Victoria, younger daughter of the late Canon Cleworth, of Middleton, and Mrs. Cleworth, Hatherden, Ashton-upon-Mersey, Cheshire.

The engagement is announced of Temporary Major J. D. Denniston, General Staff, Fellow and tutor of Hertford College, Oxford, younger son of the late J. L. Denniston, I.C.S., and Mrs. Denniston, 6, St. Margaret's Road, Oxford, and Mary Grace, youngest daughter of J. J. Morgan, 134, Holland Road, Kensington, W.

An engagement is announced between Lieutenant Alan C. M. Bennett, D.S.C., R.N., youngest son of Sir Courtenay Bennett, C.I.E., lately H.B.M. Consul-General at New York, and Lady Bennett, of Archerton, Postbridge, Devon, and Gwendoline, youngest daughter of Edward J. Dove, J.P., and Mrs. Dove, of Riding Mill, Northumberland.

An engagement is announced, and the marriage will shortly take place, between Captain E. C. Lentaigne, D.S.O., 4th Gurkha Rifles, eldest son of the late Sir John Lentaigne, F.R.C.S.I., and Cecilia Mary, younger daughter of the late Colonel C. T. Bunbury, Rifle Brigade, and Lady Harriot Bunbury, Cotswold House, Winchester (present address, 1, Albert Court, S.W.7).

Miss Edith Johncock, who as Matron of the British Hospital at Nazareth, Palestine, was made a prisoner by the Turks on the entry of Turkey into the War, has returned to her home at Dover. She and the two other English nurses at the hospital were put in charge of 350 Syrian girls who were brought to Nazareth to act as nurses to the Turks. Subsequently they were removed to Damascus, where they were eventually released by our troops.

The Cairo correspondent of *The Times* understands that Sir Richard Crawford is to be appointed Financial Adviser to the Egyptian Government, and that Sir William Brunyate will now revert to the position of Judicial Adviser. Sir Richard Crawford, as many of our readers will remember, was for some years Adviser to the Turkish Ministry of Finance. During the war he has done splendid work for this country in the United States as Commercial Commissioner.

Lord Lamington, G.C.M.G., G.C.I.E., is to act as Commissioner of the British Relief Unit, which left London for Syria on Wednesday. The party, which numbers about fifty, includes doctors, a full staff of nurses, and others qualified to organise industries for boys and girls. They will be accompanied on a short visit to Syria and Palestine by Mr. T. H. Baxter, organising secretary of the Syria and Palestine Relief Fund, which, in conjunction with the Order of St. John of Jerusalem, has organised the Relief Unit. It is expected that the work of the unit, which will be stationed at Damascus, will continue until nearly the close of the year.

The Hon. Mrs. Watson-Armstrong gave birth to a son, at Cragside, Rothbury, Lord Armstrong's Northumbrian home, on March 6. Her husband, Captain Watson-Armstrong, the only son of Lord Armstrong, is in the Northumberland Fusiliers, and is at present serving in India with the Bhopal Infantry, but expects to be returning to England shortly.

The engagement is announced of Mr. R. H. Crooke, of the Local Government Board, eldest son of Mr. William Crooke, C.I.E., I.C.S. (retired), and Mrs. Crooke, Langton House, Charlton Kings, Cheltenham, and Edith, elder daughter of the late J. R. C. Nicolls, superintending engineer, P.W.D., India, and Mrs. Nicolls, 31, Blackheath Park, S.E.3.

Lieutenant-Colonel Sir Walter Balfour Barttelot, Coldstream Guards, killed in Persia on November 23, left unsettled estate of the value of £62,059.

Colonel James Sconce, Indian Army, of Edinburgh, an Indian Mutiny veteran, late Deputy-Surveyor-General of India, left personal estate valued at £84,317.

APPOINTMENTS, PROMOTIONS, &c.

M. Velimir M. Popovitch has been appointed Secretary to the Serbian Legation in London.

M. Yovanovitch, Secretary to the Serbian Legation, has been transferred to the Legation at Berne.

Mr. T. J. Morris, Deputy Assistant Financial Secretary Sudan Government, has been appointed British Consul at Teneriffe.

Mr. B. C. H. Calcroft-Kennedy has succeeded the Hon. Mr. C. A. Kincaid, C.V O., as Additional Judicial Commissioner for Sind.

Mr. P. L. Moore, C.I.E., I.C.S., Inspector-General of Police, Madras, has been nominated as the official Madras representative on the Imperial Legislative Council.

We learn from a good source that M. Yovan Plamenatz, who recently escaped from Montenegro, has been appointed Prime Minister of Montenegro, *vice* M. Popovitch.

The Hon. Mr. W. F. Rice, Chief Secretary to the Government of Burma, is expected to succeed Lieutenant-Colonel Obbard as Commissioner of Pegu when the latter goes on long leave preparatory to retirement.

Kamala'd-Din Ahmad has been appointed University Teacher in Hindustani at Cambridge during the absence of Lieutenant-Colonel D. C. Phillott on Government service.

Our Cyprus Correspondent writes:—

Mr. H. C. W. Grimshaw has been appointed President of the District Court of Papho.

Captain A. M. Fleury acts as Commissioner of Kyrenia during the absence on leave, of three and a-half months, of Mr. E. McDonald.

Major Northcote has been appointed Local Commandant of Military Police at Famagusta.

Major Bayly, Acting Chief Commandant of Police at Nicosia, will act as Commissioner of Larnaca, visiting that town twice a week and when necessary.

The place of Mr. Nicolls, Director of Public Works, who has left for the Gold Coast, has not yet been filled.

OBITUARY.

MR. D. P. McGILLIVRAY.

(From Our Own Correspondent.)

Cairo, February 25.

By the sudden death of Mr. D. P. McGillivray, Anglo-Egyptian society loses one of its well-known members, and the Sudan one of the chief pioneers of its agricultural development. Mr. McGillivray first came to Egypt about the beginning of the century, when he held an appointment in the national Bank of Egypt. His business ability quickly attracted the attention of the late Sir Elwin Palmer, and he became his right-hand man in many of the enterprises which that financier undertook. When the Bank of Abyssinia was formed, it was only in the nature of things that he should be selected as its first Governor, and he was exceedingly successful in his inauguration of that institution's activities in the realm of the "King of Kings." But the Sudan soon called to him, and it was perhaps there more than anywhere else that his main interest lay, and that he did his best work.

Mr. McGillivray early realised the great future that lay before that wonderful country, and he threw himself heart and soul into the development work which the Sudan Plantations Syndicate carried on in the Gezira. Only those who came into contact with him either on the farms themselves or in the course of the negotiations in connection with the economic development of the country can have any conception of the interest he took in the enterprise, and of the extent to which he sacrificed himself, not only for its success but also to prove to the world the agricultural possibilities of the whole country. If the future of the Sudan as a cotton-growing proposition is assured, it has been in a very great measure due to his enterprise; tenacity, and initiative, and also thanks to the optimistic belief that he had throughout in its destiny. His name will always be intimately associated with the pioneer agricultural work in the Sudan, which loses in him a worker whom it will be very difficult to replace.

MR. EDWARD C. BLECK, C.M.G.

Mr. Edward Charles Bleck, C.M.G., formerly British Consul-General at Port Said, died on March 2 at Genoa, where he was at the time of his death Consul-General. Mr. Bleck became a Student Interpreter in the Levant in 1883, and an Assistant two years later. Afterwards he served as Acting Consul at Bourgas and at Adrianople; then at Sofia, first as Vice-Consul and later as Acting Agent and Consul-General; and in 1892-94 he was at Smyrna. In the latter year he was appointed Dragoman-Archivist at the Constantinople Embassy, and in 1898 became one of H.M. Consuls in that city, where also he acted many times as British delegate on the Board of Health. In 1906 he was sent to Palestine as Consul, with residence at Jerusalem; and in 1909 was promoted to be Consul-General at Port Said. The following year he was made a C.M.G. In 1914 he was appointed Librarian and Keeper of the Papers at the Foreign Office, which post he held until his transfer to Genoa. He was a very able linguist, and an authority on Bulgarian language and literature.

M. Victor Jonescu, formerly Roumanian Minister to Portugal, and a brother of M. Take Jonescu, died at Nice on March 3 from pneumonia following influenza.

Mr. Robert Nathaniel Burn, late Accountant-General of the Public Works Department of India, has died at Gidea Park, Essex, aged eighty-six. He joined the Department in 1870, and after thirty years' work was appointed Accountant-General and Departmental Secretary to the Government of India, and served until 1906. He retired from the Service in 1907.

Colonel John Clerk, C.S.I., late of the Rifle Brigade, died last week at Eastbourne. He was the son of the late Sir George Russell Clerk, G.C.S.I. He served in the Crimea with the Rifle Brigade in 1854-5, and had the medal with two clasps and the Turkish medal. Colonel Clerk was guardian to the Nizam from 1874 till 1876, and was at one time an Extra Equerry to Queen Victoria.

THE INDIAN BUDGET.

The issue of the Indian Financial Statement may almost be classed along with the Nile flood and the strength of the monsoon as one of the great annually recurring facts which the world at large cannot venture to ignore, for, quite apart from the light thrown on the condition of something like a fifth of mankind, producers and merchants may find in it indications of changes in demand and in supply affecting the markets of every other country, while financiers turn to it for information on those complex questions of currency, which—always important—are particularly momentous at the present time. The statement is inevitably a document of considerable length, and the current issue has not yet reached this country, but the summary distributed by the India Office, though of necessity condensed to the verge of exiguity, enables us to view the broad facts of the situation and form a general estimate of India's present position in the commercial and financial world. The accounts of the year now closing need not detain us; revenue on the whole came in well, and the rise in the sterling value of the rupee resulted in a large windfall, but there is nevertheless a substantial deficit due to the heavy military expenditure undertaken on Imperial grounds after last year's Budget was made up. A similar cause dominates the balance-sheet for the coming year, for special military charges are expected to amount to almost £9,000,000, and the surplus on the ordinary transactions is thus converted into an anticipated deficit of close on five millions, which is further increased by the statesmanlike determination to abandon the taxation of small incomes and raise the taxable minimum to approximately the level prevailing in this country. This measure will actually reduce the number of persons liable to income-tax by almost two-thirds, while it will cost only about half-a-million sterling; the fair assessment of these small incomes of from £70 to £133 is practically impossible in the conditions which prevail in India, and there is not the least doubt that the efforts of the limited staff will be much more usefully spent when they are concentrated on the relatively small number of well-to-do persons among whom the practice of evasion is generally believed to prevail. There is unfortunately less prospect of general approval for the excess profits duty, by means of which the anticipated deficit is to be covered, and which has been the subject of vigorous criticism since its imposition was first announced. To our mind, the worst that can be said of this measure is that it is *infelix opportunitate;* it would probably have met with acquiescence if it had been imposed in the years of strenuous effort, before shareholders had become accustomed to dividends of 50 per cent. and upwards, and before prices of stocks had been adjusted to these abnormal conditions. Coming as it does when the call for effort has relaxed, and the anxieties of peace have superseded the anxieties of war, the hostility which it has aroused can readily be understood, but at the same time we must confess that, since the money has to be raised, we can suggest no alternative which would not be open to even greater practical objections.

So far, then, as the current account goes, India expects to pay her way for the next year without undue pressure on any section of the public, a position which is calculated to arouse the envy of almost every European Exchequer. When we turn to the wider prospects for the future, we find that the capital account shows that the railways at least are ready to resume the process of development interrupted by the war, and the provision of £24,000,000 for much-needed extensions and even more necessary renewals is probably at least as much as can be spent in the present condition of European markets, though it cannot suffice to recover the ground which has been lost. Irrigation works, on the other hand, receive only a trifling allotment, the justification for which is even more to be regretted than the fact itself; the depleted and overworked staff of engineers have been unable to push the preparation of schemes of construction, and the country must, therefore, wait still longer for the water which it so urgently requires. No immediate provision appears to be made for capital expenditure on forests or industries, but the needs of these branches of development are recognised to be pressing, and probably in their case also the staff has been unable to perform the essential preliminary work. Except, therefore, as regards railways, the present Budget is one of promise rather than performance, but the promise at least is there, and the measure of its sincerity may be found in the fact that Sir James Meston, the new Finance Member, has definitely accepted the principle that the development of the investing habit is a matter of primary concern to the Administration. We can recall the time when that principle was first put forward, and its chilling reception in official quarters, then committed to the view that the State should encroach as little as possible on the limited resources of the Indian money market. That attitude persisted until quite recently, when the stern necessities of war drove the Government to seek for capital throughout the towns and villages of India; the experience so gained has shown that aggregates hitherto undreamed of can be obtained by suitable methods, and that every man or woman who is induced to make a single investment represents a permanent economic gain; in future, therefore, India will be expected to provide the capital required for her own development, and thus one more "heresy" has found a place in the official creed. With the adoption of this principle, we believe that the economic future of the country is assured; the investing habit is essentially cumulative in its effects, and every year should now see an increase in the proportion of the stream of savings applied to various forms of productive employment.

The importance of this principle becomes still more apparent when we turn to the position of the Indian currency. The appetite of the people for the precious metals is no transient phenomenon. Roman financiers deplored it in the second century of our era, and the first English visitors to the country were struck by its intensity; as one of them wrote, "all nations bring coyne, and carry away commodities for the same, and this coyne is buried in India, and goeth not out." No surprise, therefore, need be felt that the uncertainties of war should have brought this appetite into prominence. We are told that in the space of four years India has used up the world's current production of silver, and depleted its accumulated stocks; if this absorption should continue, the coinage of silver may become physically impossible, and the whole currency system may have suddenly to be recast. Something, indeed, has been achieved of late in the way of popularising the use of paper money, and we are told that over ninety millions of the one-rupee notes have now passed into circulation, but much more than this is required if the currency is to be placed on a really stable basis; it is good news that paper is flowing out, but it is much more important that silver should begin to flow back, and that the vast accumulation of idle treasure should be restored to active use. To achieve this result, the holders must be induced, not forced, to give it up, and it is only through the growth of the investing habit that inducements can influence any substantial proportion of the people. We trust, therefore, that the Administration will leave no stone unturned to ensure the success of this year's Loan, and that its efforts will be backed up by the enlightened members of the community, so that in a few months' time the tide of silver may begin to set strongly towards the Treasury. When that happens, India can face the future with reasoned confidence.

QUEEN MARIE OF ROUMANIA.

(By One Who Knows Her.)

Her Majesty Queen Marie of Roumania has so long been known as one of the most beautiful women in and out of England that her beauty and its recognition has a little obscured the fact that she is also one of the most courageous and intelligent. There are two kinds of courage, the moral and the physical, and I doubt whether any woman during this war has had to bear a longer strain, taxing them both. Her resistance against discouragement has been marvellous, and she comes as an established heroine to her own country this week.

We have, I fear, given little or no thought to what the daily and hourly resistance against discouragement has meant to her, although many of us have often thought of her with admiration; but it has been rather a wondering than an understanding one. Most of us have suffered the sorrow and had the discouragement of this war brought home to us; some of us have had the fear of sudden death forced upon us; but none of us have had to face death, moral and physical, daily through the fear that the oceans round England might rise and wipe us off the map, without our seeing any way to prevent the destruction and extinction of our life, though we saw the waves growing higher each hour!

This moral and physical fear of extinction has been before the Queen's eyes since the beginning of the war, for absorption by Germany meant to the Queen extinction worse than death. Since Roumania's entry into the war as an Ally to The Cause there have been moments when it seemed as if she would indeed be swept off the map, and that the Royal family, if they hoped to escape at all, must "run away." The Queen looked upon this *impasse* in a purely impersonal manner, but it was constantly bef ore her, and to this anxiety of uncertainty was added a great sorrow which came to her just before the great retreat, the loss of a dearly loved child. Queen Marie bore her sorrow with little weeping, though to those who knew her well there was never any doubt how deep it went. It was always at these supreme moments of anxiety and depression that the Queen's courage showed itself most dominant; at such moments she rose above herself, armed with the consolation of the belief in the justice of a great cause for which she fought, and to which all else became subservient. She never faltered in her certainty as to the rescue of Roumania by the Allies, and their ultimate success in the war. It was at one of these supreme moments which would have discouraged most people into weakness that her decision was taken to undergo what no head of a State has suffered during this war, the humiliation of remaining in a country under German rule and sharing the lot of her unfortunate people.

To the Queen the German occupation must have been an agony! For she had to remain an onlooker of the misery of the peasants whom she had known personally through her constant work during the war. This to a woman of her marvellous activity must have caused the acutest pang, yet she had gone about doing what was hardest, saying how desperately sorry she was herself that she had nothing left to give, and could only offer words of sympathy while still asking for patience from the poor people for whose redemption she was working.

Queen Marie has been the active life and soul of family, Court, society, and people in Roumania since the beginning of the war, never resting her body or her mind, organising relief during the typhus epidemic —of which she showed no kind of fear—working in the operating rooms of her hospitals, distributing herself, from her motor-car, all the Red Cross comforts that she could carry when the railways were closed to all but ammunition traffic, and in all ways providing where it was possible for the orphans and the destitute. If I do not lay more stress on the detailed work done by the Queen it is because I honestly think that she left undone nothing that she could do, and that the *résumé* of her labours would fill a volume. Her will to do was only limited by her lack of means; she got as much help in her work of mercy by her charming way of asking for it as most people do by offering exorbitant pay or high promotion. Hers is a nature softened and ennobled by the stress of war, for it must be remembered that all she accomplished was done without the ordinary comforts of life to make it easy. It meant days of heat or cold in open cars on impossible roads leading to distant fronts, and the return to her home was but exchanging one form of discomfort for another. She brushed all inconveniences aside as of no account, and was able to drop from the height of queenly state to sitting by the bedside of feverish conscripts as easily as a drop of rain lights on a rose leaf after its terrific fall through space, and, like the dew, she kept her wonderful brilliancy.

That the Queen of Roumania has played an active part in the history of her country is undoubted, that it has taken all the mental and moral courage of a strong and sweet nature to do so and survive is a fact that I hope will receive the full appreciation of the British public; for by her courage she has woven the first strands of a chord that should bind the country of her adoption to the country of her birth for their mutual benefit, and it must not be thought that the Queen is not fully alive to this great result.

The Queen is a valiant soul, and all those who admire the capacity for "sticking out" the last ten minutes of a horrible trial, at no matter what cost, should do her homage. It is an English, but it is also a Roumanian, attribute this tenacity of purpose, and this the Queen has understood. She averted the humiliation of her country by the magnificent attitude she adopted of sharing it with them. The certainty of ultimate success upheld her, and the country through her. For to the attitude of the Crown is due the moral victory of Roumania's national endurance, which has not only risen triumphant over its natural enemies and home schisms, but has also brought the Roumanians untainted through the menace of Bolshevism that it has put to shame by the serene dignity with which it has ignored it.

INDIAN ADMINISTRATION.

Lecturing at University College, London, on Monday, Sir J. Bampfylde Fuller said that the basis upon which Indian administration rested was that of obedience to command. The Hindustani word for command was one of those in commonest use in the country; one commanded the suspension of the land tax after a hail storm, or commanded another slice of toast at breakfast. But it was not to be imagined that Indian legislation was hasty or slipshod because it was arbitrary. The Indian laws had been complimented by the highest legal authority as models of lucid and intelligible drafting; and the Indian penal code was a signal illustration of a fair-minded compromise in the adjustment of Western standards of morality to Oriental conditions. The British Government of India had followed tradition in interfering despotically for the people's welfare, and, on occasion, by stretching out its authority, had produced results that might be envied by the poor in democratic countries.

The lecturer gave as an example of this the case of an Indian province, where the landlords had enhanced very oppressively the rents of those tenants who were unprotected by the law. The rents were unpayably high, and would have reduced the tenants to such a state of indebtedness as would enable the landlords to exact almost the whole produce. But the Government, using as a lever its power to base its right to a revised land revenue upon the rent rolls, prevailed upon the landlords to agree to a general reduction of rents. Arrears were recalculated, and many thousands of tenants set upon their feet again. The beneficial consequences of the Government's interference were appreciated by the very landlords themselves, and when, some years later, the Government took statutory powers to interfere in this drastic fashion between landlord and tenant, the necessary legislation was accepted as non-contentious. In another somewhat similar case debts due by cultivators to landlords, moneylenders, and the British Government were written off. The load of indebtedness lifted on this occasion from the shoulders of the tenantry amounted to several millions sterling, and the area through which the arrangement operated was equal to that of six or seven English counties. Throughout this extensive region the peasantry were given a new lease of life. But despotism had another side; and democracy, although with grave defects, offered undeniable advantages.

The Punjab Legislative Council has passed a compulsory Primary Education Bill.

The Roumanian Press Bureau announces that 332,000 Roumanian combatants were killed in the war. This number includes those who died of wounds.

A regular mail service has now been resumed between Marseilles and Greece, Turkey, Egypt, and Syria.

Deaths from influenza in India as a whole in 1918 are calculated at 5,000,000 for British India and 1,000,000 for Indian States.

Mr. K. Funduklian, of Manchester, has been elected Delegate of the Armenians in England to the Armenian Conference in Paris, whither he proceeded a few days ago.
