TO THE EDITOR OF "THE NEAR EAST."

Sir,—"Truth has rough flavours if you bite it through," as your correspondent, Mr. Burlumi, whose letter appears in your last issue, seems to have realised. I think I am entitled to claim that the present-day Greek is what Sir Patrick Colquhoun's investigations discovered him to be. Mr. Burlumi does not deny the accuracy of Sir Patrick's conclusions, neither did Dr. Lanitas in his letter, to which Mr. Burlumi refers as being both true and statesmanlike.

In spite of its mixed population, the administration of Cyprus has been generally successful. It must be remembered that for the last forty years it has been practically a British colony with an English High Commissioner at its head, whose duty it has been, amongst other things, to safeguard the political rights of the Moslem population. The manifest prosperity of the island is due entirely to British rule, and this prosperity, no doubt, is greatly attracting the attention of the "Motherland." Hence the bare assertions and the groundless claims which are made in respect of nationality and for the "restoration" of the island. Why should England now give it up? No English statesman, surely, would care to risk a repetition of the blunder of the cession of Heligoland? And why, indeed, should the Cypriots be thought to be so intensely anxious to join modern Greece?

The present-day Greeks are pretty shrewd, if they are nothing else, and I can well imagine some who see the singular statements of their compatriots about Cyprus crying out, "Save us from our friends"!—I am, etc.,

Cypriot.

THE NEW ARMENIA.

At a meeting held on May 16, under the auspices of the British Armenian Chamber of Commerce, at the offices of the London Chamber of Commerce, Cannon Street, over which Lieut.-Colonel Sir Albert K. Rollit presided, General A. H. H. Torcom, chief of the Armenian Military Mission, said that Armenia at the Peace Conference claimed Cilicia, with its free ports on the Mediterranean, as the indispensable factor to its existence and development. During the war she had lost through massacres and deportations one-third of her population, and had made considerable military efforts. The new Armenia appealed to capitalists in the allied and associated countries to exploit a soil fertile in agricultural products and a subsoil rich in minerals, and to help her to prosperity. M. Take Jonescu, in moving a vote of thanks, said peace would not be concluded without the creation of a large and independent Armenia, and remarked that Roumania and Armenia would be neighbours by the Black Sea.

WAR GRATUITY OF THE INDIAN ARMY.

The Secretary of State for India announces that, with the concurrence of the Government of India, it has been decided to issue to Regular officers of the Indian Army, Indian Medical Service, and of the British Garrison in India, and to departmental officers with honorary rank of the Indian Unattached List, a gratuity for war service on the same conditions generally as those announced for officers of the British Army in Army Order IV., dated February 11, 1919. The gratuity will be payable, in the case of officers still on the active list, on August 4, 1919, or the termination of the war as defined by statutory authority, whichever is earlier. It is not payable to any officer commissioned after February 11, 1919. Officers who have retired, and the legal representatives of officers who have died or have been killed during the war, should apply for a form of claim to the Secretary, Military Department, India Office, London, S.W. 1.

PALESTINE AND THE UNIVERSITY OF LIVERPOOL.

The University Extension Board of the University of Liverpool have organised a course of lectures on Palestine. The course should prove of particular interest and a valuable means of acquiring information upon the subject, a unique characteristic of the series being the comprehensive nature of the topics and the fact that the lectures will be delivered by Christian, Moslem, and Jewish lecturers, thus affording opportunities for hearing facts from authoritative sources and opinions by representative exponents. Having regard to its inter-credal and international nature, the course is the first of its kind held under the auspices of an English University, and testifies to the sympathetic interest aroused by the new prospects in Palestine. The lectures (admission to which will be free) will be delivered in the Lecture Theatre, New Arts Building, Ashton Street, Liverpool, on Tuesdays, commencing May 6, at eight o'clock, the hour being subject to alteration, due notice of which will be given. The syllabus is as follows:—May 27. Islam in Palestine. Mr. H. K. Selim. June 3, The Re-settlement of Palestine by the Jews. Mr. Bertram B. Benas, B.A., LL.B. June 10, The Economic Prospects of Palestine. Professor P. M. Roxby, B.A. June 17, The Political Prospects of Palestine. Mr. Bertram B. Benas, B.A., LL.B.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Time was when it fell not to my lot to read the leading articles of newspapers, and exceeding happy I was in my wise ignorance. But, alas! a sadder fate has long befallen me, and it is part of my daily duty to pick out the rich gems of journalistic thought. Now every schoolboy knows that the present problem of the world is the future of Turkey, but I sorrowfully confess that I do not know what is the best plan for that unhappy part of our globe. But happily, I am nearly alone in my ignorance, for the journals of Fleet Street know all about it—at least I thought so until in a leading article in a contemporary this week, entitled "The Scramble for Turkey," I discovered the following:—"Mr. Montagu, accompanied by the Maharaja of Bikanir *and other representative Mohammedans*, has arrived in Paris. . . ." The italics are mine. I repeat, I do not know much about the subject, but I do know that the Maharaja of Bikanir is not a Mohammedan.

***

A few days ago I read in the *Manchester Dispatch* some delightful stories of the popularity of the British Tommy in Syria. Mr. Roy Young, who calls his article "Two Conquests in Syria," describes, or rather refers to, the conquest of the land and the conquest of the heart. Especially was the second victory complete among the Arab children, for whom Tommy always had a kind and cheery word. But where in this war have children not loved the British soldier? "The Syrian folk," says Mr. Young, "have not forgotten that when the English reached the country and found a starving population despoiled and robbed by the Turks, our men, in hundreds of cases, gave half their own rations to women and children." This case finds plenty of parallels in other theatres of war. The British soldier is notorious for hating a void in his own stomach, but that hatred has often been overcome in this war. Although it was forbidden by the authorities, I often saw in France soldiers scrounging tins of bully or coughing up a few centimes for French or Belgian kiddies. These memories do not fade in a day; and as the French and the Orientals are credited with having long memories, I hope that the unconscious kindness of the simple British soldier will be seeds sown in a fertile soil.

***

I wonder how many of my readers know the history of the Hope Diamond, which is a great stone, weighing 44½ carats, and flashes with the beauty of a sapphire and a diamond. The history of it is connected with its evil influence, which is supposed to date from the time when Europeans stole it from a temple in Burma. From that time all its owners have suffered evilly. The son of the latest owner, who is Mr. Edward B. McLean, proprietor of the *Washington Post*, was a little time ago killed in a motor accident. The tale of the victims of the Hope Diamond is really an extraordinary one. Tavernier, the great traveller who brought it from the East in 1688, died of fever. Marie Antoinette frequently wore the Diamond, and her end is common knowledge. The Hope family purchased it in 1830, but in 1901 Lord Henry Francis Hope sold the jewel. After that it passed through many hands, including that of the Russian Prince Kanitovski, who was assassinated by revolutionists. For a short time a Greek jeweller was the unfortunate possessor of it, but he was thrown over a precipice and killed. It was then obtained by the ex-Sultan Abdul Hamid, and it did not bring him luck! The misfortune which appears always to have beset the owner of the diamon dis really inexplciable.

***

The European war has differed from past wars in many respects; it has created new elements, and has improved old methods; but one thing which can never be beaten is the record of good marching which past wars show. Yet the latest campaign has some singular examples of marching ability. We have recently read how one British sergeant marched a small party of eighteen Russians from Archangel to Ekaterenburg, in the Urals—a distance of 1,400 miles! My readers will remember how a small party of Russians from the Caucasus met a detachment of our Mesopotamian force; though in this case the agents were not, if my memory serves me correctly, on foot, being Cossacks, and a troop of British cavalry. Of course, these *rencontres* serve little military purpose, but they do help further to show what man, unaided by mechanical contrivances, can do against natural obstacles.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Egyptian Gift. May 15.

Mr. CECIL HARMSWORTH, replying to Captain Wedgwood Benn, said: On March 9, 1918, the Egyptian Council of Ministers offered to contribute £E3,000,000 towards the expenses of the war, and they described this gift "as an evidence of gratitude towards Great Britain, in that Egypt has been spared the evils of an invasion." Their offer was gratefully accepted. They further decided to open a credit in the Budget of 1918-19 of £E500,000 in order to meet other military expenditure directly connected with Egypt, and provisionaliy estimated at that figure. I am not able to state at the moment what is the exact sum contributed by the Egyptian Exchequer during the year 1918-19, nor am I aware that any further contributions are expected.

Major ORMSBY-GORE: Is it not a fact that this offer was made entirely by the native Ministers, and that British officials neither asked for it nor expected it?

Mr. CECIL HARMSWORTH: I think it is an accurate statement.

Charges Against British Troops. May 19.

Sir J. D. REES asked the Secretary for War whether he possessed any evidence that Britsh Indians, or any troops under British command during the war committed atrocities in Egypt, such as maltreating women, firing villages, and robbing the inhabitants.

Captain GUEST: No information, official or unofficial, has been received to the effect that any troops, either British, colonial, or native, have committed any of the atrocities suggested. General Allenby reports that a Press campaign of this kind was evidently being worked up by agitators, probably with a view to assisting the Nationalist campaign in Paris. He has also reported that the troops showed most praiseworthy restraint, often under great provocation. This has been confirmed by both foreign and native witnesses. In a few cases, where a search for arms had to be made at night, portions of certain villages were accidentlly set on fire and women were naturally frightened, but no more. Egyptian villages are made of mud, with roofs of dry cotton stalks, and fires are always a frequent occurrence. To anyone who knows British and colonial troops and the standard of discipline in Indian units, the suggestion that they would maltreat women is manifestly absurd.

May 20.

Earl WINTERTON asked the Secretary for War whether any action had been taken against the person residing at the Imperial Hotel who had issued circulars reflecting on the honour of our troops in Egypt on behalf of an organisation called the Egyptian Association.

Captain GUEST (Joint Parliamentary Secretary, Treasury): Yes. In consequence of the circulation of documents containing a number of mendacious statements concerning the conduct of British troops in Egypt, search was made yesterday afternoon in a room at the Imperial Hotel rented by an Egyptian. The documents seized are now being considered by the Director of Public Prosecutions.

NEAR EAST BOOKSHELF.

FROM ADAM TO JOSHUA.

This is a fascinating and brilliant study of the beginnings of the history of Man and his relations with the Creator, the Old Testament story of the Garden of Eden and of the Wanderings in the Wilderness. Sir William Willcocks approaches his theme and handles it throughout with all the originality that we should expect from him; but it would be impossible for the most orthodox critic to accuse him of any lack of reverence; and the average man is likely to find the book of great value in helping him to regard as real events that he has, in all probability, regarded in quite a different light. It is not that the view put forward is an entirely new one; Sir William's theory regarding the crossing of the Jordan, for instance, has been advanced before, and more than once; but his intimate acquaintance with the lands he writes of, and his unrivalled knowledge of irrigation engineering enable him to reinforce his arguments with many a telling point; while his constant reference to present-day manners and customs of the regions dealt with lend his comments on, and explanations of, the ancient narrative a virility that is lacking in many other writers on the subject. No one can avoid being struck by the manner in which his professional studies have enabled him again and again to throw light on some knotty problem, or in which his knowledge of irrigational requirements in both countries has enabled him to identify himself, so to say, with the very spirit of those who studied the subject in the past. As Professor Sayce writes in the Preface which he contributes to the book:—

He has brought us not only fresh materials for the solution of the old Biblical problems, but, what is even more important, fresh ways of solving them. Untrammelled by traditional interpretations and critical theories or assumptions, he has attacked them with a fearless disregard of accepted "conclusions," and with a combination of robust common sense and expert knowledge. I do not agree with all his results, but there is not one of them which can be disregarded or which does not excite thought and discussion.

The author places the Garden of Eden of the Bible between Anah and Hitt, on the Euphrates, and the Sumerian Garden of Eden between Jello and Eridu—or at the southern end of the Shatt el Hai. He tells us that "Adam represents mankind and Eve represents womankind, just as Cain represents the agriculturists and Abel the shepherds. It is the Oriental way of recording facts or narrating events." The truth of this statement will be recognised at once by anybody acquainted with the Orient; and Sir William's development of the Cain and Abel theory will surely convince all who know the border lands of the Bedouin. Similarly his arguments in support of the Anah-Hitt site will carry conviction to most minds. Unfortunately it is impossible to do justice to them here; but they will richly repay reading in the original.

In his chapter on the story of The Flood Sir William is on ground more familiar to the public; and though his remarks about the confusion between "mountain" and "desert" may still come as a surprise to some people who cling to the Ararat mountain theory, they will not startle many readers. It is good, however, to have the real meanings of *Bahr* and *Jebel* so forcibly driven home as is here done. In this chapter we learn incidentally that the great bar at the mouth of the Shatt el Arab "is formed almost entirely of Karun mud," and that salt water from the Gulf has never penetrated into the Affech swamps or even to the Susiana marshes.

The description of the plagues of Egypt and of their severely natural origin is one of the best things in the book, and nowhere, perhaps, does the extraordinary range of the author's studies and experience make itself felt than in this and the preceding chapter. The description given of the ancient engineering feats in the Fayoum is vivid and sympathetic, and by the time we read: "Three thousand five hundred years ago the Egyptian question was the irrigation question, even more thoroughly than it is in our day," we can feel the truth of the statement in our bones. Surely, if Sir William Willcocks had taken up either Assyriology or Egyptology, he would have clothed the dry bones of those sciences for us in a way that very few of their professors succeed in doing!

But it is not only in regard to the past that the author is so interesting. Constantly we come across descriptive bits and shrewd comments concerning the present. Thus, in the first chapter, we read of an Arab sheikh who asked why the English did not "come over and teach us freedom." "No use, sheikh,' I said. "We have been in Egypt under thirty years, and from one end of the country to the other they all wish us out. In twenty years you would be tired of us, and try to get rid of us." The old man stroked his beard and said: "Yes; are we not all the sons of Adam? He thought he could improve on Paradise." Again, it is surprising to read of the Emir Khazzal of Mohammerah stating "that the Arabs were pleased to see irrigation engineers, not because they looked forward to agricultural pursuits, but because the land could no longer support them as shepherds." So the cradle of civilization is now feeling the pinch of competition!

BOOK NOTES.

The Cambridge University Press are publishing shortly "The Church of the Holy Sepulchre," an illustrated history and description, by Mr. G. Jeffery.

We have received a copy of the *Russian Outlook*, a new journal dealing with Russian and Russo-British affairs. The paper, which has the support of prominent Englishmen and Russians who are determined that Bolshevism shall not triumph in Russia, appears to be interested chiefly in the political, social, and commercial aspects of Russia. Its production is excellent.

THE AFGHAN TROUBLE.

The India Office issued the following communiqués on May 15:—

MAY 12.—No change in the situation at Landi Kotal [Khyber]. All quiet Kohat. Wazaristan and Baluchistan. Operations on May 11 included air reconnaissances in Bazar to Besewal and Kam Dakka. Bombing raids were carried out with effect. Guns captured by us on the 11th now number six and one Gardner gun. Estimate enemy killed on 11th at least 100, including many Afghan regulars.

MAY 14.—Dakka still reported evacuated as result of our air raids, and no movements of importance observed on Jalalabad road. No tribal Lashkars had collected in Tirah, Mohmand, and Bajaur up to May 10, and nothing further from Khost.

The following announcement was issued on May 19 by the India Office:—

Information from Chaman [in the Quetta area] indicates that three Afghan regiments have arrived at Fort Baldak [within the Afghan border, sixty miles from Quetta, and 400 miles S.W. of the Khyber]. These are stated to be for defensive purposes. Considerable supplies of arms and ammunition are also reported to have arrived. Parachinar reports two Afghan regiments on Peiwar Kotal [a pass on the frontier, 90 miles west of Peshawar] on the night of the 13th-14th, and a position taken up by Afghans on spurs within the British limits at the head of Kurram Valley [immediately south of Peiwar Kotal]. The arrival of three regiments and two guns at Ali Khel [nine miles on the Afghan side of the frontier] is also reported. Waziristan is normal, the frontier tribes all being quiet, and the internal situation also quiet. From the Khyber area it is reported that the forward concentration of the force continues. There is wire-cutting and sniping in the Khyber. Information from Kohat is that dispositions to deal with the Afghan movement in the Peiwar area have been made, and the Kohat force is being reinforced.

The following communiqué was issued by the India Office on May 21:—

Reports received from the Government of India state that our forces at Dakka were attacked by the Afghans in force on May 16. The enemy were driven off, and the night was quiet. Our casualties are reported at about 130. On the 17th the 1st (Indian) Brigade, with the co-operation of aeroplanes, attacked the enemy on the hills to the west of Dakka, which were captured by 3.50 p.m. Our casualties have not yet been reported. The enemy's strength was reported as eight battalions with guns, four of which were captured, and over 100 enemy dead, mostly regular troops, have already been counted. On the 18th the situation was reported by the G.O.C. 1st (Indian) Division as very satisfactory. Our pickets now hold the hills to the west of Dakka, and Sherabad and Robat (about two miles north-west of Dakka) are occupied by us. This successful action is reported to have had an instantaneous and beneficial effect on the tribes.

The India Office announced on May 20 that the following message had been received from the Viceroy of India:—

Council of Regency, Bahawalpur, have placed Imperial Service troops and whole resources at disposal of Government in view of Afghan war. At representative gathering of Moslems, Sikhs, and Hindus at Lahore, Lieut.-Governor of Punjab received from all communities convincing assurances of support to Government in the present crisis.

26	13	Monday	26	26
27	14	Tuesday	27	27
28	15	Wednesday	28	28
29	16	Thursday	29	29

The Thakore Saheb of Limbdi visited the King on May 17.

Prince and Princess Antoine Bibesco have returned to town from Walmer Castle.

The Roumanian Minister has left London for Paris to attend the Peace Conference.

The Maharajah of Bikanir and Lord Sinha arrived in London from Paris on May 18.

M. Také Jonescu was married on May 21 to Madame Adine Olmazu, a Roumanian lady.

M. A. G. Cretziano, Secretary to the Serbian Legation, left London on May 21 for Paris.

Princess Marie, daughter of the Queen of Roumania, has taken up her residence at Ascot.

M. Nicolas Misu, a member of the Roumanian Military Delegation, left London on May 21 for Paris.

Madame Bratiano, wife of the Roumanian Prime Minister, arrived in town on May 19 from the country.

General Sir Horace Smith-Dorrien, Governor of Gibraltar, arrived at Casablanca (Morocco) on May 18, and was received by the Resident-General.

Lady Oranmore and Browne is now convalescent after her recent operation, and has left London for Bexhill. Lord Oranmore remains at 12, Cavendish Place.

Major-General Louis Vaughan, upon his appointment as Commandant of the Staff College, Quetta, India, had the honour of being received by His Majesty on May 17.

The paper which Colonel Tilho was to read on June 16, under the auspices of the Royal Geographical Society, has been postponed, as the author finds himself unable to come to London.

Prince Paul of Serbia on May 21 visited W. Yovan M. Yovanovitch, formerly Serbian Minister in London, and Madame Yovanovitch. Prince Paul will visit Italy before returning to Serbia.

The marriage took place on April 30, at the Catholic Church, Feltham, between Major F. R. Cosens, 4th P.A.V. Rajputs, and Miss Peggy Allan, only daughter of Mr. and Mrs. John Allan, Crendon Lodge, Feltham.

The marriage took place on April 14, at Ambala, India, between Charles T. I. Roark, 1st Life Guards, attached Poona Horse, and Grace Muriel (Molly), youngest daughter of Mr. and Mrs. J. F. Campbell, of Perth, Western Australia.

On May 22 Lieut.-Colonel Andrew Balfour, C.B., C.M.G., M.D., gave the first of the two Chadwick Public Lectures at the Barnes Hall, 1, Wimpole Street. His subject is "Hygiene in Egypt," upon which he is lecturing again on May 29.

A marriage has been arranged, and will take place shortly, between Ariston St. John Diamant, of Eastling Manor, Faversham, Kent, and Cairo, Egypt, and Nora, eldest daughter of Mr. and Mrs. Shore, of The Old Mill House, Farnham, Surrey.

PALESTINE EXPLORATION FUND.

THE

ANNUAL GENERAL MEETING

will be held at 3.30 on FRIDAY, the 30th MAY (for business only), at the Offices of the Society, 2, Hinde Street, Manchester Square, W.1.

The marriage of Captain L. H. Barford, I.A.R., and Mary Sheila, eldest daughter of the late H. P. Todd-Naylor, C.S.I., C.I.E., I.C.S., and Mrs. H. P. Todd-Naylor, of Walton Court, Cheltenham, will take place at Christ Church, Westminster, on June 12, at two o'clock.

The engagement is announced between Captain R. C. Lyons, M.C., Royal Field Artillery, only son of Mr. and Mrs. R. Lyons, late of Kilmore, Tunbridge Wells, and Francis, elder daughter of Colonel A. L. Lindesay, Indian Army, and Mrs. Lindesay, West View House, St Andrews.

A marriage has been arranged, and will shortly take place, between Lieutenant Raymond George Francis Herault de Caen, D.S.C., Royal Navy, only son of the late John Herault de Caen, Pewessalawa, Ceylon and Gladys, only daughter of the late Charles Hussey Panton Vivian.

The engagement is announced between Godfrey T. B. Harvey, of Calcutta, late of the Guides, Cavalry, Indian Army, eldest son of the Rev. Frank and Mrs. Harvey, of Whitchurch, Hants, and Hilare, elder daughter of Mr. and Mrs. George E. J. H. Barlow, of River Lodge, Bourne End, Bucks.

The marriage was celebrated on April 2, at the Cathedral, Lahore, by the Rev. H. S. Stephenson, between Major C. J. R. Turner, 15th Sikhs, elder son of the Rev. W. H. Turner, Hazelwood Vicarage, Derby, and Stella, only daughter of Mr. and Mrs. Muir Masson, Caversham, Lahore.

The wedding of Brevet-Major E. R. P. Berryman, D.S.O., 39th Garhwal Rifles, third son of the late Rev. C. P. Berryman and Mrs. Berryman, Delaford, Guildford, and Nell, fourth daughter of Mr. and Mrs. John Fielding, Broadsground, Opton St. Leonards, will take place at Opton St. Leonards on June 10.

The council of the British Academy have awarded the Cromer Greek Prize, founded in the academy by the late Lord Cromer, to Mr. J. F. Mountford, M.A. (Birmingham), Lecturer in Classics and Ancient History, Armstrong College, Newcastle-upon-Tyne, for an essay on "Greek Music and Its Relation to Modern Times."

A marriage is arranged, and will shortly take place, between the Rev. I. Lloyd-Jones, of St. Stephen's, South Kensington, only son of the late Rev. D. Lloyd-Jones, vicar of Amlwch, Anglesea, and Margaret Campbell Broadfoot, only daughter of the late Ramsay Douglas Broadfoot, barrister-at-law, of the Indian Civil Service.

A marriage is arranged, and will shortly take place, between Captain Reginald F. Atkins, 67th Punjabis, third son of the late Colonel Robert Atkins, 15th Bengal Lancers, and Mrs. Atkins, 10, Florence Road, Southsea, and Flora Jean Evans, youngest daughter of Stephen W. Evans, J.P., and Mrs. Evans, of March Hill, Bagshot.

The marriage was celebrated on May 10, at Beeston Regis Church, between Capt. R. E. Marriott, I.A.R.O., of the Indian Public Works Department, U.P., second son of Mr. W. Marriott, M.Inst.C.E., and Mrs. Marriott, "Kylemore," Sheringham, and Valérie Maria (Sister Valérie), eldest daughter of Mr. and Mrs. J. Hoch, of Bâle, Switzerland.

Among wills recently proved are those of Major-General Jas. Lawtie Fagan, of Porchester Terrace, W., late of the Indian Army, who left £5,163; Colonel Robert Henry Jennings, C.S.I., R.E., 4, Roland Gardens, South Kensington, S.W., who left £8,839; and Major Charles Francis Blackett, late Rifle Brigade, an Indian Mutiny veteran, who left £22,862.

Professor Vacher Burch read a paper on "The Name of the Mother of Zeus in the 'Minoan' Script" on May 15 in the Latin Theatre of Birmingham University. He claimed to have deciphered the script, which has hitherto been a mystery, and showed that her name was the same in root as De or De-meter and Zeus himself. His evidence is to be published shortly.

The engagement is announced of Wilfred F. H. Watson, Egyptian State Railways, of Ballingarrane, Clonmel, County Tipperary, eldest son of the late Lieut.-Colonel S. Watson, Royal Artillery, and the Hon. Mrs. Watson, and Evelyn Irene Hamilton, only child of the late Arthur J. H. Wills and Mrs. Macculloch, and niece of Brigadier-General and Mrs. Curteis, of 9, Southwell Gardens, S.W.

At the Greek Church of St. Sophia, in Moscow Road, Bayswater, after the Liturgy of St. Chrysostom, on May 17, a *Te Deum* was sung to commemorate the taking over of Smyrna by Greece. Dr. Pagon's, the Great Archimandrite, officiated. Among the congregation were the Greek Minister, with the *personnel* of the Legation, M. Gennadius, hon. Greek Minister, and Lady Gennadius.

The marriage was celebrated on May 17, at the Pro-Cathedral, Kensington, by Father Bernard Vaughan, assisted by Father Nicholson, between Lieutenant Philip Tudor Owen, late the Buffs, only son of the late Dr. S. Holgate Owen, of Manchester, and of Mrs. Holgate Owen, of 33, Addison Mansions, Kensington, and Rita Ethel Mary, youngest daughter of the late Major-General H. Warrington, Madras Infantry.

Digitized by Google

The King has awarded a Knight Commandership of the Bath to Lieutenant-Colonel and Brevet-Colonel (T./Major-General) Alfred William Fortescue Knox, C.B., Indian Army, in recognition of the valuable services rendered by him in Eastern Russia.

The engagement is announced between Montague C. Kelway Bamber, only son of Mr. and Mrs. M. Kelway Bamber, of Ceylon, and Beatrice Kemble, elder daughter of Mr. and Mrs. Horace W. Twiss, formerly of 5, Bullingham Mansions, Kensington.

The engagement is announced of Major L. A. Howes, D.S.O., M.C., R.A., son of Charles Anley Howes and Mrs. Howes, of Bombay, India, and Gwendolen Mary, only daughter of D. Herbert Grimsdale, J.P., and Mrs. Grimsdale, of The Shrubbery, Uxbridge.

The engagement is announced between Harold Alfred MacMichael, D.S.O., of the Sudan Civil Service, eldest son of the late Rev. Charles MacMichael and of the Hon. Mrs. MacMichael, and Nesta, elder daughter of Canon and Mrs. Stephens, 104, Belgrave Road, S.W.

At the annual meeting of the London branch of the Women's Friendly Society in Calcutta, at Lady Stanley's house in Gledhow Gardens, Lady Chelmsford was present and expressed great sympathy with the work of the society. The Rev. Herbert Anderson, the hon. secretary, spoke on the various phases of the work and the necessity of support and encouragement from home. Sir John Stanley and Mrs. Pugh also spoke, and the meeting was followed by a sale of the work done by the girls and women in the homes.

The garden party of the Indian Civil Service Dinner Club will take place at the Royal Botanical Gardens, Regent's Park, at 4 p.m. on Wednesday, June 11. Tickets, for themselves and their guests, will be supplied to any Indian civilian, or to the wives or families of Indian civilians, price 5s. each, on application to the hon. sec., Austin Low, Esq., C.I.E., care of Messrs. Grindlay and Co., 54, Parliament Street, S.W. Owing to there being so few civilians home on leave, the annual dinner will not be held this year.

The annual dinner of the Punjab Frontier Force Dinner Club will be held at the Imperial Restaurant, Regent Street, on Wednesday, June 11.

The annual dinner of the Hyderabad Contingent Dinner Club will take place at the Imperial Restaurant, Regent Street, on Thursday, June 12.

OBITUARY.

Professor R. P. Karkaria, of St. Xavier's College, Bombay, died on May 13.

Mr. Charles Ceccarelli Morgan, British Consul at Rome, died on May 12 at Taranto.

The death occurred on April 14 at Blair Athol, Coona, India, of Norman Roswell, aged 64.

The death occurred on May 13, at Bognor, of Houghton Baldwin, late of Calcutta, in his 66th year.

The death occurred on May 16, at Bude, of Gavan Andrew Gilchrist, of Constantinople, in his 73rd year.

The death occurred on May 16, at Southsea, of Major-General Charles Lewis Prendergast, Indian Army, retired, Colonel 28th Punjabis, aged seventy-five.

Surgeon-General P. M. Ellis died suddenly at his residence at Benlleck, near Pwllheli, on May 16, at the age of 65. He retired from the Indian Medical Service six years ago. General Ellis took part in the Burmese Expedition in 1886-7, for which he had the medal with clasp.

Major-General John Beresford Beresford, late of the Bengal Staff Corps, died at Portrush on May 16 in his 92nd year. He entered the East India Company's service in 1845, and was posted to the 29th Regiment Bengal Infantry. During the Indian Mutiny he served on the Punjab frontier, and for two years he was British Resident in Kashmir.

Colonel G. H. Brook Coats, C.B., has died at Brighton. Son of the late Colonel John Wilson Coats, M.S.C., he was born in 1852 and served in the Afghan war of 1878-80, taking part in the famous march from Kabul to Kandahar and the battle of Kandahar. He was also present at the relief of Chitral in 1895 and the storming of the Malakand Pass. Later, while serving with the Tochi expedition, he was mentioned in dispatches. From 1886 to 1891 he was district staff officer and D.A.A.G., Bengal.

Two more bands of Bulgarian *komitadjis*, armed with army rifles, are reported to be active in the Strumnitza district.

Officers of the Indian Medical Service holding the temporary ranks and appointments in the field as D's.M.S., with the acting rank of surgeon-general, or D.D's.M.S., with the acting rank of colonel, are now to be permitted to count service therein towards the additional pensions for which surgeon-generals and colonels respectively are eligible after certain periods of active employment in permanent appointments. Such services need not be continuous.

NEWS IN BRIEF.

An appropriation of £600,000 for the relief of Armenia and Syria has been placed in the hands of the distribution committee at a meeting in New York of the American Relief Committee.

The Belgrade *Pravda* of April 26 announces that an English mission, under the direction of Miss Wilson, has founded in Belgrade a kindergarten for the children, which is to be managed on the English system of education.

To the Inter-Allied games which are to take place at Paris from June 22 to July 6, the Kingdom of Hedjaz is sending Arabian thoroughbreds for the horse-riding contests. Roumania, Czecho-Slovakia, and Yugoslavia are also sending contestants.

On May 14 His Majesty inspected a party of Indian officers and non-commissioned officers belonging to the Royal Field Artillery Base at Rouen, under the command of Captain H. C. Clogstoun, Indian Labour Corps, who are on short leave from France.

The Serbian Relief Fund desires to express its appreciation of British Red Cross help. During the past year the British Red Cross Society, through its representative at Salonika, has given £11,410 in material to the fund, hospitals, and dispensaries in Serbia.

Reuter's Madrid correspondent states that on May 15 the police forces and loyal troops occupied the Laasieltuya position of the Benisaid Kabile, the right flank of which and the front facing Tafersit were already occupied. This completes the encirclement of the Kabile. The enemy lost five killed.

The production of the new Abyssinian postage stamp is, after a delay of nearly two years, due this month. In May, 1917, after the coronation of the Empress Zeonditou, an order was placed in France, but owing to paper shortage could not be executed. Eventually the work was undertaken by a Swiss printing house in Berne, but further delay was caused through the original designs furnished by the Ethiopian Government proving unsuitable for reproduction. Fresh drawings were therefore made, and by December, 1918, the plates had been prepared, and last March the first consignment was dispatched to Addis Abeba. There are eleven pictorial designs in the series, eight of which are illustrative of big game—antelopes, giraffes, leopards, lions, buffalo, rhinoceros, and ostriches. The likeness of the Empress appears on the three highest values, while that of the heir-apparent, Ras Tafari, is seen on the 1, 2, and 4 guersch stamps.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

THE DESTINY OF AUSTRIA.

Even more important to the Near East than the terms which the Allied Powers have imposed on Germany are the terms which the statesmen in Paris are now engaged on for settling the future of Austria; for while German ambition in the outer world was the ultimate cause of the war, it was obviously Austrian ambitions in the Near East which were its immediate cause. At one time, it is true, public opinion in this country, and to a less extent in France, was naturally less concerned with the past, and therefore more tender regarding the future of Austria, which was regarded as more of a formal than an actual enemy; and the fact that Austrian rule was admittedly less harsh than that of Germany was for long advanced as a reason for pursuing a less drastic course with Vienna than Berlin. It was not seen that Austrian rule was less harsh because it was less efficient, and that as Vienna came to lean more heavily on the support of Berlin the case for clemency, such as it was, grew steadily less. But even early in 1918 some at least of our statesmen were still ready to speak of an autonomous Austrian Empire run on apparently much the same lines as before 1914 as a possibility for the future; and it was not until much later in the year of victory that the full conviction became general that the Austrian Empire as it had been understood for the last few centuries must in fact cease to exist. In every forecast of the terms of peace that conviction has been manifest, but it has been manifest, we must frankly admit, not merely because such is recognised to be the necessary fate of Austria, but because Austria has itself fallen to pieces of its own weight. It has been destroyed from within at least as much as from without; and it is therefore hopeless for Conservative politicians of the old type to attempt to restore it.

Austria, said Bismarck in a well-known epigram, "is a house of bad Slav bricks held together by good German mortar." The mortar, whether good or bad, has fallen out, but the walls of the house which has collapsed are being successfully used to form national States after the new model. The theory of the Austrian Empire, as an Imperial State of diverse races ruled for the common good by one common Crown and Parliament, was in truth admirable, but the practice was in fact abominable, for the policy of the Habsburgs was purely selfish, and the methods of the Parliament alternated between occasional suspension by an autocratic Ministry and the quarrels of a beargarden by the rival deputies. The whole system was noxious and unnatural to a degree, and only the political antiquary and the few ruling families that lived by exploiting the Crown and the country in Vienna need regret its extinction. The path before the new nations that have taken the place of the old Empire will not be easy, but at least it will run on more natural lines than the mediæval methods which survived so long revolutions, defeats, and even universal suffrage in the nineteenth century, and which only collapsed with the utter exhaustion of the whole country last autumn. The revolt of the Yugoslavs and Czechs, the defection of the Poles, and the selfish policy of Hungary, in fact, anticipated and underwrote the decisions of the Peace Conference. Whatever theoretical conclusions had been come to before by the statesmen now in Paris had to be studied afresh in the light of these fundamental facts, which reduced Austria as the geographers had known it to two or three insignificant German provinces and an Imperial city without an Empire or an Emperor.

The future of Vienna would be a matter of interest for Vienna rather than the world at large were it not that the city, with its long traditions of government and the admitted distinction of tone which has hidden from many the barbarity of its policy, may yet dispute the future headship of the German people with Berlin, which was merely vulgar with the Hohenzollerns, and is merely impotent without them. In that event, and in view of the obvious German revolt against Prussia and the tendency of the political centre to swing again to the south, at least towards Bavaria, we may look for a repercussion on Eastern and Near Eastern polity generally. Three new States in any event will be set up out of the ruins of Austria and Germany—Poland, Yugoslavia, and Bohemia. These three, if they were to cohere together in a new triple alliance, could successfully oppose the curious combination of Prussian bullying and Austrian intrigue which so successfully domineered over Central and Eastern Europe before the war, and which may again attempt to seek some profit from the smouldering ruins of ambition when the dust of the recent conflict has begun to disappear. Disunion between the three new States, and any attempt to pursue those old sectional quarrels and jealousies which have been somewhat too evident in the past, here as in the Balkans, would naturally tempt the defeated Powers to revive the methods which were intended to conquer the world, and which, on a smaller and less conspicuous stage, would at least stand some chance of disturbing small and new States whose people are exhausted by the war, and who cannot in any event have many resources behind them at the start of their career. For the next generation at least the most urgent necessity of the States which will take the place of the Austrian Empire must be peaceful economic progress, and it is probably true to say that the less they have to do with politics and the more they give their energies to commerce the better will it be for their political future and their economic stability. The same is true undoubtedly of all the Balkan States, who will be neighbours and we hope intimate associates of the national States which are taking the place of the Austrian Empire. The disappearance of that unwieldy and unprogressive dominion was a necessity of the new Europe; it has given the opportunity of liberty to peoples whom it had too long oppressed, and it has at length removed an intolerable menace from the Balkans and the Levant. The conception of the Berlin-Byzantium-Baghdad Railway, which a year ago lay athwart the free development of the whole Near East, has finally vanished with the collapse of Prussia; the downfall of Vienna will be the means of opening fresh commercial routes and developing the great economic potentialities of the Balkans on sounder lines than would have been possible before the war. But it is for the people concerned to use their opportunities sanely; nor will they look in vain for sympathy and encouragement from the peoples of England and France in the difficulties which undoubtedly await them, as well as in the opportunities which now furnish so rich a promise for their future.

Miss E. J. Robinson, hon. secretary of the Armenian Red Cross and Refugee Fund, has received the following cable:—"Condition refugees Erivan, Alexandropol districts too awful to describe; 1,500 dying daily starvation, disease. More than 10,000 orphans want care, food, clothing. Large quantity flour, foodstuffs, medical, clothing urgently needed. Cable funds, Khatissian, Prime Minister, British Force, Constantinople."

THE INDIAN FRANCHISE.

THE POLITICAL CENTRE OF GRAVITY.

India is to have a new Constitution, under which certain limited powers will be assigned to elected representatives. Lord Southborough's Committee has now prepared schemes for the election of these representatives in each of the more important provinces, and we turn to the Report to ascertain the location of the political centre of gravity; if these schemes are adopted, what class or classes of the people will control the exercise of the powers which are to be transferred?

Past and Present.

Everyone knows that in India as a whole, and in most if not all the separate provinces, the peasant cultivators form a majority of the entire population, and consequently in a pure democracy they would be entitled to control an absolute majority of votes in each legislative assembly; for the moment these majorities would probably be homogeneous, so that, if democracy were introduced to-day, the peasants would be masters of the country, and would retain that position until the inevitable formation of parties should give the minorities a chance of turning the scale. Everyone also knows, or should know, that within the historical period the peasants have had no political power whatever. Before British rule the centre of gravity shifted between individual despots and the bureaucratic oligarchy which they employed; the peasants could assert themselves only by rebellion, and, so long as they submitted, the despots or the oligarchs could do what they liked. Our rule has been not less despotic in form, but has been characterised by a different spirit. During the nineteenth century the interests of the peasants usually came first; though they had no power, they had much influence, which was exercised through the local officers, on whom the governments relied for advice, and in this way a very real, though informal, change in the centre of gravity took place. The enlarged Legislative Councils formed under the Morley-Minto scheme, and still in existence, marked a reaction from this advance, because so much increased influence was given to the privileged classes that the peasants' voices could scarcely be heard; Governments have had to ask not what the peasant needed, but what an unrepresentative Council thought, and we have of late been on the high road to oligarchy, a fact of which the privileged classes have been perfectly aware.

The Distribution of Seats.

A few figures will make the present position clear. Leaving Assam out of account, we find that in the seven large provinces the Councils now include 130 elected members: forty-six of these represent special interests (landholders, universities, commerce, industry, and the like), while eighty-four are supposed to represent the general population, but mainly under a system of indirect election which makes representation a farce. These eighty-four members, again, are about equally divided between the town and the country; the rural population is about nine-tenths of the whole, so we may say that, while in a pure democracy 117 members out of 130 would speak for the country, at present not more than forty-five do so in theory, and not more than half-a-dozen in practice. The position will be very different if the Southborough proposals are accepted; in the same provinces there will then be 562 elected members, of whom ninety-two will represent special interests, eighty-five will come from the large towns, and 385 (or 69 per cent. of the whole) from rural constituencies under a system of direct election. Rural members will have an absolute majority over all others (including officials and nominations) in the Councils of every province except Bengal, and there can be no doubt that while they hold together, and so long as they correctly interpret the wishes of their constituents, the rural electors will be in a position to do nearly as they like within the limited sphere provided at the outset by the new Constitution. The proposals thus involve a definite shifting of the centre of gravity in the direction which democratic theory indicates; their practical working will depend partly on the franchise and partly on the capacities of the men who are to exercise it.

UNIVERSITY OF CALIFORNIA

The Franchise.

Who, then, are to be the electors in rural constituencies? Only a few general statements can be made on this point. Women must wait, and, in the country at least, they will not mind; there is to be no literacy test, but military service will very properly qualify. Beyond this point we get into details, because conditions differ from province to province, and the proposals can best be explained by examining the case of one unit as a sample. For this purpose we take the United Provinces, the most populous administration in India. Here the rural electors will consist of (*a*) some small classes, such as income-tax payers, military pensioners, and tenants with special rights; (*b*) all but the very smallest landholders; and (*c*) the aristocracy of the ordinary cultivators, those paying rent of at least Rs. 50. The ordinary rural constituency will consist essentially of the mass of landholders and the larger tenants, diluted, but not swamped, by the householders of the smaller towns; it is estimated that 6 per cent. of the male population will have votes, but most of the voters will have interests substantially identical with those of the bulk of the smaller tenants, so that the constituencies may be regarded as predominantly peasant. Landless labourers and servants will have no votes; they, like the women, must wait. No attempt is made to secure that the values of votes shall be equal; this ideal is indeed rendered impossible by the wise acceptance of the compromise on the religious question reached by the politicians in 1916, and we find that, while in Moslem constituencies a rural member will on the average represent only 7,500 electors, elsewhere the number will be about 25,000. In the non-Moslem constituencies, again, variations in economic conditions produce some startling results; in the Eastern districts, where holdings are very small, only from 2 to 3 per cent. of the males will have votes, while in the West the percentage rises to 10 or 12, and in one exceptional district one male out of every five will be enfranchised at the outset, a very big step in the direction of democracy. We do not complain of such inequalities as these; we are only at the beginning, and, so far as we can judge, the distribution of votes, while it is unequal, follows roughly the distribution of potential political capacity. The scheme for this province is a bold experiment on a great scale. Should it fail it will give invaluable data for a fresh start, while if, as we hope, it is successful, it can be developed readily on the original lines until the masses of the people become masters of their own destinies.

The schemes for Bombay and Bengal provide for the enfranchisement of about the same proportion of males as that which we have just examined; elsewhere the proportion is substantially smaller, ranging from 3½ per cent. in Bihar to little over 1 per cent. in the Punjab. The general basis of the franchise is the same in each case, but the qualifications differ according to the circumstances of each province, and the precise figures adopted appear to have been chosen, as a rule, by the local government immediately concerned. We are not at present disposed to criticise them in detail. The extent of the opportunity varies, but in each case we are justified in saying that, for the first time in history, an opportunity will be offered to the predominant elements of the population to choose members who shall be able to speak for them with authority and give effect to their united wishes.

The Electors.

What use will the peasants make of this opportunity? Data for a detailed forecast do not exist, and for the present pessimists and optimists have equal scope. We may, however, recall the fact that, while Indian peasants are slow to learn, they are not fools; they will probably make many mistakes at the outset, and the experiment

Digitized by Google

must not be judged on the results of the first elections, but rather on the progress made as time goes on. The best thing that could happen would be that the second election should be fought on some simple outstanding issue—compulsory education, rural sanitation, or, best of all, a tax falling directly and obviously on the peasants; in that case we should expect to see the downfall of many shams, windbags, and axe-grinders, and the appearance in politics of a class who exist but are as yet in the background, the sane and moderate men who are in a position to voice the peasants' interests and to press their claims. That would mean a very different India, but, in any case, it is still some distance off.

PRESS ON THE NEAR EAST.

London and Baghdad.

In the *Contemporary Review* for May Mr. J. E. G. de Montmorency has written round an exceedingly beautiful idea, and has called his article "The Magic Bowl of Baghdad." He commences by showing that the Baghdadi sees in London much that is invisible to the Cockney's eyes, and similarly the Londoner as a stranger to Baghdad has a grasp over the city impossible to its permanent inhabitants.

Baghdad sees many strange foreigners wandering in its bazaars. Fugitives from Armenistan, from Ispahan, from wherever the Christians of the Middle East are slaughtered, Jews from Aleppo, Smyrna, Antioch, Turks from the Bosphorus, Russians, Persians, Kurds, mingle with the dwellers of Mesopotamia, and not least strange are the men from Ultima Thule, from Britain. It is a place of wandering wondering strangers who gather here as they gathered in Babylon, in the land of dreams and shadowy shapes, of magical enchantment, the land between the brimming rivers where Haroun al Rashid wandered in the moonlit nights of breathless wonderment. But perhaps even Baghdad, in its hushed, teeming twilights, sees not so many strange men as London; and the Thames is not less mysterious than the Tigris. For the Thames the Channel is the Euphrates, and she flows down from London Bridge, with her mystic cargoes of human souls as hungry for the Channel tides as ever the Tigris is for the slow throb of the Euphrates across the Mesopotamian marsh, the vast land of floods and fruitfulness. London, the Baghdad, the Babylon, of the West, hungers, too, for the sound of many waters, and hides in her bosom mysterious strangers, who come and go with tidings of strange things. . . . To those who look for wonderful creatures, many are vouchsafed in London—Chinamen, magnificently robed, with pigtail hanging even to the heels, may be seen in the open daylight of Chancery Lane. Turbanned men, negroes, American Indians, lords of the yellow races, may be seen in strange attire.

The New Arabian State.

In the *Correspondance d'Orient* of April 30, Dr. Georges Samné has written a well-reasoned article upon "Le Califat Arabo-Syrien," in which he points out that King Hussein is truly a national sovereign:—

Hussein is not only an ardent Mohammedan; he is an experienced man, capable of deep thought. He guards against falling into an excess of that more or less mystic ambition which for so long urged on the sultans of Constantinople to cherish the dream of a chimerical and dangerous Pan-Islamism. He knows how poor a claimant he would be to the universal Caliphate, and wisely limits this Caliphate to the Arabs and Syrians. In this his moral authority and prestige are in no danger of being contested. For Arabia Hussein is truly a national sovereign; he acts only with his people, whose affection and respect he possesses. What other sentiments could the Syrians have towards this whole-hearted man who has toiled so well for their deliverance The whole history of the Syrian people shows us that this country remember sand never forgets services done for them. Just as their attachment to France is unshakable, so will they always be devoted to the generous ruler who so resolutely espoused their cause, even in the darkest hours.

Hussein, says Dr. Samné, was more fitted than anyone else to become the spiritual chief of the Mohammedan Syrians; and he was assisted in gaining this position by "the two great Powers destined henceforth to play the most important part in the East, France and England." And this mutual assistance will not cease.

The maintenance of all the alliances, thanks to which civilisation has been saved, must be the corner-stone of future peace. Just as the solidarity of the barrier of the Rhine depends on a union of France, England, and Belgium; just as the barrier of Eastern Europe depends on the union of Poland and Roumania in close collaboration with the great Western Powers; just as the alliance of France and Italy is the condition of peace in the Mediterranean, so the peace of Asia can be founded only on the faithful and disinterested union of France and Britain with the Arabs and Syrians. It is good to see in the Caliphate of Hussein a token of the solidity and permanence of this union

Turkey.

To the *Observer* of May 18 Sir Theodore Morison contributed a very interesting article, entitled "The Future of Islam," in which he dwelt on the fears of the Mohammedan world regarding the fate of Turkey, and shows that those fears are not merely selfish.

How can I make intelligible the devotion which Mohammedans feel for Islam? It is not patriotism in the ordinary sense of the word, for it is not associated with one particular country or race, nor is it bigotry or religious fanaticism, for some of the most zealous defenders of Islam at the present day hardly believe in its creed at all. The young Moslems in India, Turkey, and Egypt are either sceptics or they hold unorthodox opinions which would scandalise the divines of Al Azhar or Deoband; even among old-fashioned Moslems who are untouched by European ideas there is, and has always been, a good deal of free thought. I know in India a Mohammedan scholar who was notoriously an atheist, but he was a vigorous champion of Islam, and was for that reason accepted even in orthodox circles as a good Moslem. The explanation of this apparent anomaly is, I believe, that Islam is more than a creed—it is a civilisation; it is a social group with a philosophy, a culture and an art of its own; it is conscious of its separate existence, proud of its past, and confident of its capacity to develop in the future. For this social group Mohammedans feel an intense affection, which, if not patriotism, has many of the characteristics of patriotism.

INDIAN ARMY RETIREMENTS.

In the *Gazette* of May 16 it was announced that, the suspension of retirements during the war having been withdrawn, the King has approved the retirement of the following officers of the Indian Army, with effect from April 12, 1919: General Sir J. E. Nixon, General Sir J. B. Woon, General Sir R. I. Scallon, General Sir M. H. S. Grover, General Sir H. B. B. Watkis, Major-General Sir C. H. Powell, Major-General E. C. W. Mackenzie-Kennedy, C.B., Major-General A. Wallace, Major-General Sir J. A. Bell, Major-General K. S. Davison, Major-General P. M. Carnegy, Major-General C. P. W. Pirie, Major-General W. A. Watson, Major-General C. I. Fry, Major-General M. Cowper, Major-General F. W. G. Wadeson, and Major-General W. G. Walker, V.C.

THE JEWISH LEGION.

The Zionist Organisation has issued the following:—

Lieut. V. Jabotinsky has made the following statement respecting the "Judeans" now stationed in Palestine:—

"The Jewish Legions are a part of the British Army, and will stay in Palestine if Britain will maintain an army in that country. At any rate, until the Peace Conference has determined the international status of Palestine it is impossible to commit oneself on the future of our Legions. Of course, we all hope that our country will come under the trusteeship of England; then we shall have here a still greater Jewish Legion with its own name (the Jewish Legion is now a part of the Egyptian Expeditionary Forces), insignia, and language.

"Every Jewish volunteer must realise that the Jewish Legion in Palestine has at the present moment even a more important mission than it had before. For their own sake and for the sake of our ideal, these men ought to stay in the army until the general demobilisation. The Government is in full agreement with this attitude, so far as we know. What is more urgent in this transition period is: Good military behaviour, exemplary discipline, boundless patience, and ideal tact."

The Zionist Commission is making an inquiry with a view to ascertaining the number of "Judeans" who desire to settle in Palestine and the nature of their qualifications. It is stated that a knowledge of Hebrew will be requisite for most of the positions which the commission may have to fill.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Trade conditions in Greece are discussed in an important dispatch which appears on page 484, to which I would draw the attention of British exporters. While the present position is complicated, it is pointed out, by large imports of certain products from Spain which importers are desirous of disposing of elsewhere in order to obtain better goods from Great Britain and other countries, calling for discrimination on the part of exporters for the time being, the present range of requirements is, nevertheless, wide, and "on all hands," says our correspondent, "one is met with the same appeal: Cannot British manufacturers be urged to interest themselves practically in this market before the control of it has passed entirely or largely into other hands?" With an opportunity such as is presented in Greece before them, it is unthinkable that the business community here should be backward; but I would venture to impress upon them that time is not on their side, and that the market must be entered now.

***

While the war lasted there was every excuse for the absence of optimism on the part of Allied holders of Turkish bonds, but Sir Adam Block's report shows that the position is much better than might have been expected. The amount of the uncashed coupons of bondholders is £5,500,000, and funds to meet this total exist, only they are in Turkish paper piastres or German paper marks, and the present state of the exchange makes it impossible to remit these funds. The exchange question cannot improve until Turkey is in a position to export her produce freely, since only by that means can she create the necessary credits abroad. Some of the restrictions on trade have been removed, but so long as any remain the position is bound to continue to be difficult.

***

The great opening for British goods in Egypt is the subject of interesting comment in the *Journal* of the British Chamber of Commerce there. It is pointed out that the country has always been regarded as a promising market by Manchester exporters, and that during the war it has lived well up to that reputation, cotton fabrics being one of the few classes of goods, apart from materials needed in the prosecution of the war, which have not shown a decline both as regards value and quantity of imports since 1913. As regards the future, however, emphasis is laid on the point that British merchants should henceforward regard the market as more than an outlet for textiles, and in this connection the *Journal* states that Egypt affords as good an opening as can be found anywhere for developing business in substitutes for the merchandise previously supplied by Germany and Austria.

***

The scope in this direction has been dealt with at length in these columns, and I refer to the subject now merely in order to keep before the business community here an extremely promising opening for the extension of British trade in the Near East. It goes without saying that the claims of the Egyptian market must receive adequate attention at the hands of British merchants and manufacturers. So far other countries have made no progress worth mentioning in filling the places of Germany and Austria, and there is no reason in the world why most of the trade in question should not be secured by this country. But if this is to be done there must be no delay in entering the market.

***

I shall only briefly touch on some outstanding points in the report of the Indian Cotton Committee, a summary of which will be found elsewhere in this issue, as it will in due course be the subject of detailed criticism. As regards the all-important question of the extension of the cultivation of long-staple cotton in India, the broad conclusion of the committee is that India cannot for at least ten years grow cotton in any large commercial quantity of a staple longer than 1 1-16 in., but that India can, however, render very material assistance to Lancashire in hosiery yarns. The "Northerns" and Karuganni cottons of Madras, the Broach and Kumpta cottons of Bombay, and the Gaorani cotton of Hyderabad, it is pointed out, if picked in a clean condition, carefully ginned and pressed, and shipped in a pure state, would provide a yarn suitable for the hosiery trade.

***

The most important of the recommendations of the committee is the proposal that a central cotton committee should be established, with its headquarters at Bombay, its main function being to act as an advisory body to the Government and the trade on all matters connected with cotton. Adulteration and other practices which have adversely affected the reputation of Indian cotton cannot be securely prevented, in the committee's opinion, without a system of licensing ginning and pressing factories, coupled with the preliminary step of the assignment to all factories of distinctive numbers and marks. Finally, the problem of securing an adequate price to the cultivator, who is at present handicapped by the number of persons who handle his products, is met with the proposal that the system of cotton markets already existing in the Central Provinces and Berar should be extended to other parts of India. It is further recommended that cotton prices should be published in up-country markets, and that efforts should be made to increase the numbers and expand the activities of co-operative sale societies.

***

Cable delays have again given rise to complaints on the part of the business community. Following the recent representations to the authorities, to which I have referred, and in which Manchester took a leading part, a marked improvement took place, but it was, apparently, only temporary, and last week traders were again complaining of delays, it being stated that in some cases it was taking about 20 days to get a reply to telegrams to India, and that there were also heavy delays in regard to messages to the Near East. The President of the Manchester Chamber of Commerce has sent a further letter on the subject to the Board of Trade, pointing out the adverse effect on trade development "owing to the really hopeless position of the cable services between this country and both the Near and Far East." He urges that permission to use codes should be granted, and asks whether Government messages are not taking a somewhat undue share of the available services.

***

India and Ceylon plantation companies will be somewhat seriously affected in the event of the new rate for rupee exchange continuing for some time, which seems not improbable. These companies while receiving sterling for their produce have to buy rupees in order to establish the necessary credits on the other side for working expenses, and an addition of 2d. the rupee will mean a considerable increase in their costs.

***

The strike of Suez Canal employees, which broke out last week, is, it appears, entirely an economic movement. Negotiations had been taking place between the company and the employees, some of whose demands were to have been granted. Despite the sympathetic treatment of their claims by the company, however, the employees adopted the attitude that all their claims must be met. The company refused to agree to this, and a strike was thereupon threatened for May 15. Two days earlier the employees at Port Said stopped work, and their action was followed by further developments. Coming at a time when it is essential that shipping movements should be unhampered, the strike is particularly unfortunate, for, in view of the general nature of the strike, it is obvious that its continuance cannot fail to have a serious effect on transit movements.

***

Some particulars of the trade of Mesopotamia for 1917 through Busreh are given in a recent American Consular report, the most interesting feature of which to me is the wide range of imports which include such commodities as candles, clocks and watches, jewellery, liquors, matches, paints and painters' materials, soap, spices, umbrellas, oilcloth, and mats and mattings. The Mesopotamian market is one which deserves, and must receive, special attention at the hands of British traders, for with the development of the country the openings for trade there will be immensely increased.

TRADE CONDITIONS IN GREECE.

(From Our Own Correspondent.)
Athens, May 1.

The Congestion in the Piræus.

It is hardly necessary to explain to the newcomer on arrival at the Piræus that the port is suffering from congestion. The Customs sheds have overflowed right round the harbour; mountains of goods are piled up on the quays and in adjacent squares in the enclosures formed by barbed-wire fencing; tarpaulins do their best to afford protection, but here and there are obliged to give up the attempt, and all concerned have reason to congratulate themselves on the Greek climate.

The reasons for such a state of affairs are not far to seek. Greek merchants appear to have overlooked the fact that the war might one day come to an end. It is only fair to them, however, to remember that they had passed through the particularly uncomfortable period of the blockade, and when things were righting themselves very slowly they jumped at the chance of obtaining all—possibly more than—they wanted from Spain. Orders were given in 1918 as if the war were going to last indefinitely, and prices remain of no consideration to the purchaser. The armistice came, and close upon its heels the goods from Spain, together with the immediate prospect of better stuff from the Allies. The Greeks like good things when they can get them. The Spanish goods could not hope to compete with the more popular makes or products of Great Britain, France, and the United States. Merchants, sighting an opportunity of getting rid of their Spanish purchases in Turkey, Roumania, and elsewhere, refused to sell at a loss, preferring to leave their goods at the Piræus until trade with these countries could be resumed.

In the meantime more and more ships arrived with cargoes at the Piræus. Labour difficulties caused delay in the unloading, and congestion increased; goods got left in lighters, with a tendency for those most urgently required to be at the bottom; others went astray more actively, providing a convenient explanation for failure to discover those that were merely misplaced.

It is a long road, however, that has no turning, and there is no reason to suppose that the Piræus will not ultimately prove able to overcome its present difficulties. Some relief has been found with the opening up to trade of Turkey, Roumania, etc., and it would, no doubt, be greater if the problem of exchange and return cargoes could be solved. But the fact remains that Athens—or, rather, Greece—has outgrown the existing harbour accommodation at the Piræus, and until this has been enlarged the rapid handling of goods at the port must be handicapped.

An Expectant Market.

While the present state of things lasts there must needs be some discrimination in the type of goods sent to Greece. In some instances, indeed, very careful investigation may be required to prevent the repetition of the experience of one firm that sent a large consignment of a product very much in demand in Greece, overlooking the fact that the Greek Government had already on hand a supply sufficient for a very considerable length of time. But not much examination is necessary to show that Greece has many requirements waiting to be filled. Great Britain's trade rivals are alive to the fact, and are busy—sometimes too busy—securing orders. An inquiry for some important bridging material was sent to England. News of this reached an Allied agent on the spot, who at once offered the railway in question to supply to the same specifications in every particular at 15 per cent. lower than the price quoted in England, whatever that might prove to be when the quotation arrived.

On all hands one is met with the same appeal: Cannot British manufacturers be urged to interest themselves practically in this market before the control of it has passed entirely or largely into other hands. The enterprise of the Federation of British Industries is thoroughly appreciated; but, needless to say, it has had the effect of stimulating the business people of other countries to establish as firm a hold as possible before the exhibition opens next September. Americans especially must be given credit for their activities. They form a substantial proportion of the foreigners moving about in this part of the world, and if the Greek shopkeeper is to be believed, they must all, male and female, have constituted themselves trade commissioners for the benefit of American industries.

Petrol and Gas Engines.

A more detailed investigation of Greek requirements calls for a separate article. Here I should like to emphasise again a point that has been repeatedly urged in The Near East—the large demand for petrol and gas engines, both for marine and land purposes. Greece is developing her shipbuilding trade, and will need to purchase an increasing number of engines of all types, from the small auxiliary for fishing craft upwards.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated May 15:—

Weather conditions satisfactory. Recent rains have benefited spring crops and facilitated preparations for later crops.

Afghan disturbance at first caused slump share and Industrial Markets but firm measures successfully taken have revived confidence and better tone.

Bombay Fully Good Broach Rupees 512 Spot, 523 July and August. Piecegoods market little change. Calcutta Jute Market quieter, sowings completed, prospects good. Sackings quiet. Hessians easier. Rice maximum control price Rangoon increased from 335 to 385.

Cable delays and exchange position restricting business.

For all India new companies registered 1918-19 number 292 authorised, capital 2138 lakhs. (In 1917-18 and 1916-17 the corresponding figures were 278 covering 3058 lakhs and 184 covering 1726 lakhs. The capital Issues Act of March, 1918, checked the formation of public companies in 1918-19.

—Dated May 11:—

General beneficial rain obtains. Weather still feebly unsettled.

Total imports into India for year 1918-19, Rs.16,903 lakhs. Total exports Rs.25.585 lakhs. (Similar figures for 1917-18 were 15,042 and 24,256 respectively.)

Fully Good Broach 529 Rupees (last week 519). Piece Goods market more active both Manchester and local. Calcutta Jute market quiet but steady. Jat Fours 11 rupees 8 annas (last week 12 rupees). Rejections 6 rupees 8 annas (last week 6 rupees 8 annas). Jute sowings almost completed and prospects favourable. Sackings very firm. Hessians firm at advance.

AMERICAN SILVER FOR INDIA.

In reply to Mr. Rupert Gwynne, who asked how many United States treasury dollars sent to the Government of India, under the Pittman Act, had been delivered, Mr. Montagu says:—On May 1, 194,961,672 fine ounces of silver, representing approximately 252,000,000 melted dollars, had been delivered.

TRADE WITH PALESTINE AND SYRIA.

From Our Port Said Correspondent.
Port Said, May 1.

Trade with Palestine and Syria seems to be still hampered by regulations, though a ray of hope came a few weeks ago only to be later extinguished. On March 7 there was an official notice to the effect that "All military regulations governing trade between Egypt and these areas (O.E.T.A.) . . . . are hereby withdrawn." Then the next paragraph tells the trader where he is to apply for a licence to trade. To an ordinary man they seem mutually contradictory.

Later on in the same notice are the words "O.E.T.A. (South) Permits are not required for export of merchandise by sea to Jaffa and Haifa, nor for the despatch of goods by parcel post." Perhaps there is some occult difference between a permit that you don't want and a licence that you must have, but a clear explanation would be welcome.

Seeing this notice, a man took a parcel containing four small bottles of magnesia powder to the post office to send to a friend in Palestine. The official at the P.O. said that he must have a permit to send a parcel to Palestine, but suggested that the contents should be made into two parcels, when perhaps they could be sent by letter post. This was accordingly done, but the clerk at the letter department insisted on the parcels being opened, and then said that the powder would have to be emptied out of the bottles and put into boxes before he could accept them. The man thereupon did them up again and slipped them into the sample post box. They arrived safely a few days later. However, he wrote to the War Trade Department in Cairo, asking whether the P.O. official had the right to refuse the parcel in view of the official notice previously quoted. His letter was returned to him ten days later, stamped "Approved for export."

Of course, owing to the upset in Egypt the carriage of goods by rail is rather disorganised, but the regulations as to trucks seem to have been framed to make the charges prohibitive for the small trader who only has ten or fifteen cases to send at a time, for he must pay for a whole truck whetner he uses it or not. This, of course, leads to great waste of space. The sea carriage up to Palestine is equally unsatisfactory, as £7 10s. per ton is being charged for merchandise between Egypt and Beyrout. Delays are frequent, and merchants say that London is nearer than Jerusalem, as goods sometimes take eight weeks to reach the latter place from Egypt. There are plenty of small vessels being demobilised now, which could be run on the coast during the summer and relieve the commercial stagnation, till the regular lines trading up the Syrian coast, get into working order.

The immense amount of cargo, which was stored during the war in the French Government sheds in Port Said, has practically all gone now, and has no doubt materially assisted in getting French industry restarted.

TUNISIAN PROPERTY TAX.

A tax has been imposed in Tunis on the surplus value as compared with the pre-war value of any real property of which the ownership may in the future be conveyed by a French or Tunisian subject to a foreigner. This special tax, which came into force on March 1, is calculated on the following basis:—50 per cent. on the amount below 100,000 francs; 60 per cent. on the amount between 100,000 francs to 250,000 francs; 70 per cent. on the amount between 250,000 francs to 500,000 francs; 80 per cent. on the amount over 500,000 francs.

INDIAN COTTON.

Committee's Recommendations.

The report of the Committee appointed by the Government of India in 1917 to investigate the question of the extension and improvement of cotton cultivation in India has now been published. The president of the Committee was Mr. J. Mackenna, I.C.S., Agricultural Adviser to the Government of India, and the other members were Mr. F. Hodgkinson, member of the Council of the British Cotton Growing Association, who represented Lancashire interests; Mr. N. N. Wadia, representing the Bombay Millowners' Association; Mr. W. Roberts, Principal of the Lyallpur Agricultural College; Mr. G. S. Henderson, Officiating Imperial Agriculturist; Mr. H. F. Ashton, executive engineer, Punjab; and Mr. F. Noyce, secretary.

Stress is laid in the report on the necessity for treating the problem of cotton cultivation as an organic whole, and it is pointed out that it avails little if pure, or improved, strains of cotton are evolved, or if facilities are provided by the Irrigation Department for the extension of cultivation unless the product is marketed in a condition which enables it to secure its proper price, and unless the cotton trade pays that price for it. The Committee explains that it has acted throughout on the fundamental assumption that "there is a genuine demand for long-staple Indian cotton, and that the trade is willing to pay a sufficient premium for it, to make it worth the while of the cultivator to grow it, but that there have been various obstacles in the past which have prevented it from doing so. We have submitted proposals which will remove these obstacles and will enable long-staple cotton to compete with short-staple cotton on its merits. It will therefore rest with the cotton trade to convince the cultivator in the only way in which he can be convinced, that long-staple cotton pays him better than any other varieties. If it succeeds in doing so, as we trust it will, India will be able to make no mean contribution to the resources of the Empire."

Prospects of Help for Lancashire.

It is the view of the Committee that the only parts of India from which assistance to Lancashire can be expected in the near future are the districts in which cotton of an inch or slightly more in staple can be grown in large quantities—that is those parts of the Madras Presidency in which Cambodia and Karunganni cotton are grown, and the Punjab, where American cotton is making rapid headway. Egyptian and American cotton has been successfully grown in Sind in spite of many difficulties; it is considered that cotton of a quality even better than that grown in the Punjab, and up to 1¼ inch in staple, could be grown there with ease, provided that perennial irrigation were established by the construction of a barrage on the river Indus at Sukkar. In no other part of India is it possible to bring about so great an extension of cotton cultivation as in Sind. All that is required is water.

The conclusion arrived at is that India cannot for at least ten years grow cotton in any large commercial quantity of a staple longer than 1 1-16 in. Up to this length Madras might furnish half a million bales and the Punjab 200,000 bales, but these cottons will only be capable of spinning up to 34's twist and 44's weft in the Lancashire mills if the quality of the material and the production per spindle are taken into consideration. Lancashire has not derived as much assistance from India as she might have done in hosiery yarns, and in this direction it is suggested that she should be able to render very material assistance. The "Northerns" and Karungarni cottons of Madras, the Broach and kumpta cottons of Bombay, and the gaorani cotton of Hyderabad are of excellent colour and strong and regular in staple, the length of which is from six-eighths to one inch. If these cottons were picked in a clean condition, carefully ginned and pressed, and shipped in a pure state, they would spin an excellent, full, and even yarn suitable for the hosiery trade, especially if certain necessary alterations were made in the preparation machinery in Lancashire. At present this class of cotton is almost entirely exported to Japan and the Continent.

The Cultivators.

The securing of an adequate return to the cultivator presents one of the most difficult questions. Here the committee advocates the establishment of cotton markets such as exist in the Central Provinces and Berar. The advantages of the Berar system are that the cultivator is able to come into direct contact with the buyers and to sell his produce when and to whom he likes; and under it he is paid for the full weight of his cotton. It is recommended that markets should also promote clean picking and prevent the damping, mixing, and adulteration which are very prevalent in India. The establishment of more co-operative societies and the payment of land revenue assessment after the marketing of the crop, instead of before, are also recommended. For the prevention of malpractices such as damping, mixing, and adulteration the Committee recommends the licensing of all ginning and pressing factories and the provision of an identifying stamp for the bales of each factory.

Recommendations.

The Committee recommends the appointment of a Central Cotton Committee, with a Central Cotton Exchange under a royal charter in Bombay as a remedy for the present lack of co-ordination and co-operation in regard to matters concerning the crop. The Central Committee would consist of nine official and ten non-official members, including a representative of Lancashire, and would be a purely advisory body. Besides disseminating information the Committee should give advice on such subjects as general cotton policy, the safeguarding of existing areas of long-stapled cotton and their extension, necessary or desirable legislation, the publication of cotton forecasts and yields, valuations of new varieties of cotton, and the standardisation of weights. A further recommendation is the establishment of a central cotton trade association under a royal charter in Bombay, which would be to the trade in India what the Liverpool Cotton Association is to the cotton trade of Lancashire. This Association would establish a proper basis of classes of cotton for future contracts by fixing the number of grades which may be tendered under each, licence brokers and commission-houses, and establish a clearing-house for settlements at least weekly.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Prices in the market continue to advance and in all quarters more money has had to be paid for yarn and cloth than a week ago. The tone undoubtedly is very strong and bullish views prevail in all sections. It is difficult to obtain reliable information as to the prospects for the new Egyptian cotton crop. With a larger acreage, however, bigger supplies should be available next year, but, of course, the weather conditions later on will be very important. It is officially announced that it is not the intention of the Government to retain control after the end of July. Trading in futures in Liverpool, therefore, will be resumed on June 2. The adjustment of values will be very interesting. A more extensive business has been done in yarns made from Egyptian cotton. Some substantial lines have been put through in both carded and combed qualities, and prices have hardened. Plenty of cloth demand has been met with for Egypt, and an encouraging turnover has transpired in a variety of goods. Owing to the recent advance in prices offers from Cairo are falling behind and local shippers are acting on their own initiative. Free operations continue to take place for India and China in standard makes and miscellaneous cloths. Steady support has been given by shippers to Java, Singapore, the Straits Settlements and South American outlets. Manufacturers of cloth are improving their position almost from day to day, and the amount of employment available for the operatives is distinctly larger than for a long time back. Home American yarns have been decidedly dearer. There has been an active demand for all counts and qualities. Ring beams are stronger than ever, and cannot be obtained quickly. Some fair lines have been put through in yarns suitable for dyeing for India and cops for the Continent continue in active request.

THE REBUILDING OF BELGRADE.

An article in the *Trgovinski Glasnik* of April 20 deals with the rebuilding of the different public buildings in Belgrade, which will shortly be commenced, and for which a new credit of ten millions dinars has been voted. This journal urges the rebuilding and extension of the Belgrade Central Railway Station to cope with inland trains and also to provide adequate facilities for the passage of the London-Paris-Constantinople-Baghdad, the Athens-Saloniki-Belgrade-Bucharest-Odessa, and the Belgrade-Zagreb (Agram) Fiume-Sarajevo-Dubrovnik (Raguza) trains.

ENGINEERING NOTES.

Wealth of Baku.

In view of future commercial developments a few notes on the history and resources of one of the more important districts of the Near East, Baku, may be of interest. Baku, the great petroleum district, in the industry of which a considerable amount of British capital is invested. Baku is a well-known name, but the history and immense value of its oil-fields are not so generally known. "In oil Baku is incomparable," says a well-known British expert in petroleum and its industries, "and I know of no oil city that will compare with it in subterranean wealth. Los Angeles, chief town in the oilfields of California; Petrolea, Canada's petroleum capital; Beaumont, of Texas; Boryslaw, chief town of the widely scattered group of oil-fields in Galicia; Campina, in Roumania; and a score of other oil-producing centres, can in no way be compared with Baku. Baku is greater than any other oil city in the world. If oil is king, Baku is its throne."

The discovery of petroleum at Baku is by no means new. On the Apsheron Peninsula, where the famous Baku oilfields are situated, springs of oil and natural gas have been known to exist from time immemorial. Indeed, there is evidence that petroleum has been flowing from the Peninsula for at least 2,500 years. Some of these springs, formally held sacred by local fire-worshippers, who took them to be manifestations of the gods, still exist, and have been giving out gas and oil for centuries; but it was not until the tenth century that the natives first appear to have utilised the oil for practical purposes. An Arabian chronicler of the Masudi period mentions that the people of Baku, having no wood, prepared their food by means of earth saturated with oil; and he gives an account of a great volcanic mountain in its vicinity, which is now extinct. By the thirteenth century the industry appears to have made some progress. Marco Polo, the celebrated explorer, mentions that at that time petroleum was already being exported on camels to the surrounding countries. Peter the Great was not slow in recognising the potentialities of the mineral wealth of Baku, and one of his first instructions to General Matoushkin, who captured Baku from the Persians in 1723, was to send him "a thousand poods (about sixteen tons) of white oil, or as much as possible," and to find a refining master. In 1735, when Baku was restored to Persia, there were about sixty hand-dug pits at Balakhani, which produced from 1,500 to 4,000 tons per annum. The oil was chiefly used for burning in lamps and lubricating the axles of carts.

First British Connection.

In 1754 an Englishman, Jonas Hanway, was entrusted by the British Government with a commercial mission on the shores of the Caspian Sea, and in the course of his travels visited Baku He has left an account of his impressions in a book entitled "An Historical Account of the British Trade Over the Caspian Sea," in which he mentions the fire-worshippers of Baku, and describes the object of their cult as follows:—"A few feet from the temple is a recess in the rock in which is an underground opening 6 ft. long by 3 ft. wide, from which there issues a perpetual flame, very similar to that produced by alcohol when burning, but even more pure. When the wind blows it rises sometimes to the height of 8 ft., but is not so ardent in calm weather." He also describes the oil found at Baku as an excellent remedy for "gravel, chest affections, and headaches," and also mentions that it was exported to India as a varnish. In 1800 the oil sources of these fields were being exploited by Armenians and Persians, who produced from primitive hand-dugs about 15,000 tons per annum. In 1813, when the Baku Khanate was finally restored to Russia a start was made to develop the industry on commercial lines, and the Crown Department leased all the pits to a contractor for £13,000 per annum, then considered a large sum. During the succeeding years, however, the industry developed very slowly, and it was not until 1872, when the contract system was abolished and land leased to private individuals, that any real progress was made.

First Use of Boring Machines.

This change of system coincided with the advent of the first wells drilled by machinery, and from that time the output grew by leaps and bounds. In 1883 there were in the Baku fields more than 400 drilled wells, producing about one million tons. By 1890 the number of wells had increased to 680, producing 2½ million tons. In January, 1912, there were about 4,300 wells producing as average of 500,000 tons per month! The most important producing field in Baku is that of Saboonchi, which contributes rather more than one-third of the total output. Next in order of production come Bibi-Eibat, Ramani and Balakhani. Some mention is called for here regarding the phenomenal spouters, or fountains, which Baku has produced during the last forty years. One of the first was struck in 1874 at Balakhani, and flowed for several days at the rate of 2,500 tons of oil per day. Two years later the same company struck another well, which flowed for ninety days, and gave up during that time about 100,000 tons of oil. In 1877 Orbelov Brothers brought in a monster spouter at Shaitan Bazaar. At the start the well was easily capped, but while the valve was being tightened the pressure shattered it, and the oil burst forth with uncontrollable force. In less than forty days some 150,000 tons of oil had gone to waste. About that time big spouters became of such frequent occurrence that they ceased to become a matter of comment, and every well drilled was confidently expected to become a fountain. The result was that the price of oil fell, in consequence of the glut on the market, to about ¾ copeck per pood, or 11d. per ton, as compared with 37 copecks a pood in the year before the Balkan War. The record for spouters was maintained during the period 1880 to 1890. The year 1891 was famous for the celebrated Zubalov spouter, which brought in at Bibi-Eibat, and gave up more than 400,000 tons of oil in a few weeks, the price of which would to-day fetch over a million of pounds. The number of spouters struck in the Baku fields has since decreased greatly, not more than about 100,000 tons of oil being obtained before the war from that source per year.

Agricultural Machinery for Greece

Although the special opportunities in Greece for the disposal of all classes of agricultural machinery and implements have already been pointed out in these columns, some further particulars derived from a recent report prepared by the Greek Government on the same subject might be of interest to agricultural engineers, manufacturers and shippers. Moreover, the official facts and figures give a better idea of the requirements of the country in that line of goods. The cultivated area under cereals is given as just below 2,250,000 acres, and under raisins, currants, and other produce an additional 665,000 acres. To deal with this acreage and its produce it is stated that the country has only 160 threshing machines, 120 reapers, and 100,000 ploughs; and it is added that the Greek Government some time ago placed an order with an American company for 15 motor-ploughs and 200 tractors, fully equipped for ploughing, harrowing, hoeing and threshing It is mentioned that two agricultural machinery factories in Volo (Thessaly) are capable of producing annually 15,000 to 19,000 ploughs, 500 threshers, 200 hand presses, 40 presses for olive oil, and 60 wine presses. The Greek Government's estimate of the imports of machinery necessary to supply a year's need is as follows:—10,000 ploughs, 200,000 ploughshares, 500 harrows, 200 reapers, 25 threshers, 100 presses, 500 sulphur sprayers, and 500 sulphate of copper sprayers for grape vines. Ploughs used to be imported, to a large extent, from Germany, and certain other kinds of agricultural machinery and implements from Austria. It must be mentioned here that although the two agricultural machinery factories in Volo are capable of producing annually a considerable number of ploughs, threshers, and other implements and presses, many of them are exported to Asia Minor, Turkey and Egypt, where they are often preferred to others of Continental or American manufacture. It may also be pointed out that now is the season when agriculturists in Greece are able to buy machinery and implements mostly on cash terms, if the machinery can be promptly delivered; or to give orders for it for the next season.

Diesel and Semi-Diesel Engines.

Disputes have often occurred between buyers and sellers in the East over the definition of Diesel and semi-Diesel engines. A correct and approved definition will be of much interest to buyers, and a help to them in the purchase of such engines. A Diesel engine is a prime mover actuated by the gases resulting from the combustion of a liquid or pulverised fuel injected in a fine state of subdivision into the engine cylinder at or about the conclusion of a compression stroke. The heat generated by the compression to a high temperature of air within the cylinder is the sole means of igniting the charge. The combustion of the charge proceeds at, or approximately at, constant pressure. A semi-Diesel engine is a prime mover actuated by the gases resulting from the combustion of a hydro-carbon oil. A charge of oil is injected in the form of a spray into a combustion space open to the cylinder of the engine at or about the time of maximum compression in the cylinder. The heat derived from an uncooled portion of the combustion chamber, together with the heat generated by the compression of air to a moderate temperature, ignites the charge. The combustion of the charge takes place at, or approximately at, constant volume.

TRADE ENQUIRIES.

AN English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

PERSIA. — AGENCY REQUIRED for chemicals, foodstuffs, cutlery, stationery, photographic articles, by French officer demobilised; age 32; speaks English, Persian, and Turkish; 5 years Near East.—Write P. Hoillet, 47, Rue W. Rousseau, Asnières, Seine.

INDIAN INDUSTRIES.

Convened by the East India Section of the London Chamber of Commerce, a meeting was held on May 19 under the presidency of Sir Charles C. McLeod.

Mr. D. T. Chadwick, Indian Trade Commissioner, said that they were on the threshold of a new era in Indian economic development. For their hopes to be realised close co-operation was necessary between British and Indian firms. If India was to be the Asiatic pillar of the Empire the co-operation which had already started must grow.

Sir Charles McLeod said that for some years he had been trying to induce English firms to employ Indian students who wished to learn industrial methods It had been thought by some that if they did so the students would make use of the knowledge to the detriment of the trading concerns of this country. He thought the reverse would be the case. If British traders did not welcome those students they would do in the future as they had done in the past—go to other places and open connections with those countries to the detriment of the industries of the Empire.

Mr. Dick, deputy chairman of the section, pointed out that in India there was a want of labour. Government assistance was necessary, and if the Government could only distinguish between assistance and interference they would get on very well. Whenever they went to a Government Department they were treated with suspicion if they asked for a concession.

The Serbian Ministry of Commerce announces that British merchants can avail themselves of the port of Salonika for all articles to be sent to the South of Serbia and all the districts up to Nish, as the railway line Salonika-Nish is free for traffic. The port of Fiume can be used only for transport going to Serbia, Slavonia, and Croatia.

INDIGO CULTIVATION IN INDIA.

Professor H. E. Armstrong, speaking before the Royal Society of Arts on May 15 on "Soil deficiencies in India, with special reference to indigo," pointed out that before the war, in 1914, the area devoted to the indigo plant in India was less than 150,000 acres, whereas when synthetic indigo was first put upon the market by the Germans in 1897 the area occupied was 1,688,042 acres. When war broke out, arrangements were made to increase the production, and the total area, in 1916-17, under cultivation was three and a half times that of the five preceding years. The greatest increase was in the Madras Presidency, where the industry was mainly in the hands of the small-holder, who, however, produced a very inferior quality of the dyestuff, containing only 40 to 50 per cent. of indigotin, the Bihar product containing 60 to 70 per cent. In Bihar, an increased acreage of only about one-third was brought under cultivation, and there was an actual slight falling off as compared with the average of the five years preceding 1915. The conditions became changed during the latter part of the war, and in consequence of the stoppage of export, growers were no longer encouraged; now the Madras district, once more, was ceasing to produce; moreover, the total quantity of Bengal indigo available from last season's crop was only 1,600 chests (4,200 cwt.), and much of this, he believed, was not of high quality. And not only had the area under cultivation been small, but there had been also a great diminution in the yield.

Phosphatic Depletion of Soils.

Christopher Rawson, who was the first to study the problems of indigo cultivation and manufacture, he continued, was led to the conclusion that many, although not by any means all, of the Bihar soils were deficient in available phosphoric acid. A large number of soils, sampled in 1907, were subsequently examined by Dr. Leather, who reported in 1908 that they were almost uniformly deficient in available phosphate. Mr. W. A. Davis was led to the conclusion that neglect of these warnings was the main cause of the difficulties which had been met with in the cultivation of indigo, and the undoubted falling off in the yield, especially of cereals, on many of the estates. He drew special attention to the danger ahead in his paper—published in the special Indian Science Congress (1917) number of the *Agricultural Journal of India*—and in the first of his indigo publications from the Agricultural research Institute, Pusa. He had found that no attempt had been made by planters to meet the deficiencies pointed out by Dr. Leather, and that it had not been suspected that the more and more marked failure of the indigo plant to afford second cuttings, as well as the almost complete impossibility of securing seed from the Java plant, was due to the steady and continuous impoverishment of the soil.

From the large body of evidence as to the depleted state of the Bihar soils brought forward in his paper, Mr. Davis drew the conclusion that unless manuring with superphosphate were at once resorted to on a considerable scale, a very serious falling off of indigo crops, similar to that experienced at Belsand, would take place over a very wide area. He met with great variation in the total amount of phosphate in the soils, but in most cases it had been present in an unavailable form. Mr. Davis was convinced, from careful study of a large number of individual fields on indigo estates, that the actual fertility practically always (putting aside those in which some other obvious cause of failure was apparent, such as the presence of salts, continued water-logging, or a light, highly porous soil which failed to hold moisture) corresponded closely with the available phosphate values. In nearly all the soils examined the phosphate was the one constituent which was extraordinarily deficient—potash, lime, nitrogen, and humus being present in relatively great excess. Mr. Davis's explanation had been challenged and it had been urged that defective aeration or waterlogging were the real causes of failure. But against this was to be set the fact that all crops had been affected; moreover, the failure had been only of comparatively recent occurrence; it had come about gradually, and it had been greater in extent and magnitude as time had gone on. Methods of cultivation and climatic differences were not likely to have altered in this way; moreover, well-drained, well-aerated areas had suffered as badly as those which were subject to flooding.

The Future.

Turning to the question whether it be possible to bring about a return to the high yields of indigo obtained formerly, Mr. Davis had accumulated much evidence from which it was clear that the necessary improvements could be effected by continuous and systematic treatment with phosphatic manures, provided these be properly applied, taking into account local peculiarities. He was able to quote a few instances in his Indigo Publication No. 2., and had added to these in No. 4. From his latest advices, he learnt that instances were accumulating in which his forecast had been justified beyond question.

The real difficulty now to be overcome lay in restoring phosphate to depleted subsoils. In the case of light, sandy soils, apparently, superphosphate was readily washed down by the rains and an immediate response followed; but in very fine soils, like that at Pusa, the superphosphate was held, at first physically, in the topmost layer; and later, by the action of the lime which was present in large amount, it was changed into insoluble phosphate. The aim must be to maintain the phosphate in a soluble condition. In the Pusa soils, when superphosphate was used alone, or in conjunction with a slow-acting organic manure like cake, there was little benefit apparent in the first year, but the effect was obvious in the second; but when a large dressing of green manure was also applied, the whole benefit of the superphosphate was secured at once.

The late Sir William Crookes, in his well-known address to the British Association at Bristol in 1898, drew special attention to the need of nitrogenous fertilisers, if the world were to be kept supplied with wheat; and he laid stress on the probable shortage of such materials. He may have exaggerated the difficulty, in view of the method of overcoming it, adopted by man from time immemorial, by growing leguminous crops in alternation with cereals. But in the interval, the difficulty had been met by the discovery of converting the nitrogen, of which there was inexhaustible stores in the atmosphere, into either ammonia or nitrate. A far more serious difficulty ahead than that foreseen by Crookes, although of the same order, was the smallness of the phosphate supply of the world—for that, apparently, there was no remedy.

NEAR EAST MARKETS.

Crops in Asia Minor.

The following are further extracts from the economic reports of the Imperial Ottoman Bank for the early part of the year:—

Ada Bazar.

The snow, and subsequently the rain, which fell during the month of February, have been very beneficial for the cultivated land; on the other hand, these conditions have retarded the sowing of potatoes, of which 50 per cent. should already have been sown, whereas these sowings have not even yet commenced. It is expected that this delay will adversely influence the production.

Likewise, owing to the snow and rain, the soil already cultivated for the summer sowings will have to be recultivated when the weather permits, and this will also put back the summer sowings.

Angora.

The forecasts of the coming harvest are universally favourable. It is hoped that the harvest will be exceptional.

There is a complete cessation of all commercial transactions. This place has never known a similar lull.

Prices have remained stationary; they vary between Ps.65-70 per oke.

Aintab.

The 1918 harvests were very good. The areas sown during these three months have surpassed those of the year 1918 by 100 per cent. The work and sowings of the winter, nearly finished everywhere, have been carried out in good conditions. Up to now the temperature has been satisfactory, and continues to be favourable to the sowings. Beneficial rains have fallen during these last two months. Up to the present no complaint is manifest; on the contrary, it is generally agreed that, provided no unforeseen contingencies arise, the harvest will be good, and 100 per cent. superior to that of last year. The rural population of our region, which was very reduced, has, to a certain measure, increased by reason of demobilisation.

The stocks of cereals are amply sufficient

Digitized by Google

to satisfy local needs. For, in spite of the lack of means of transport, arrivals continue. The harvest of pistachio nuts, which constitute an important article in our district, according to reliable forecasts, will also, be good.

Kastambol.

Sowings have taken place under good conditions. The winter, less rigorous this year, has enabled the peasants to work in the fields, and the cultivated soil has been sown. It is not at present possible to predict what sort of harvest there will be, as this will specially depend on the spring rains. All the same, it is hoped that it will far surpass that of the past year, which was very much below the normal figure.

There has not been much business doing during the month.

Eski-Chehir.

Atmospheric conditions continue to be favourable to sowings, which have been effected on a much larger scale owing to the return of the agriculturists. According to reliable estimates, the area of the fields sown has exceeded that of the preceding year by more than 80 per cent. The disposable stock of cereals on our market is valued at from 40 to 50 wagons.

Konia.

The agricultural situation of our district is far better than it was the preceding year. The ground sown is 50 per cent. more, it is said, than that of 1918. Although this figure appears to be exaggerated, there is every reason to suppose that the sowings must be better, if we take into account the particularly fine weather and rainy winter of this year, which enabled the demobilised villagers to cultivate a greater part of their fields.

Rodosto.

The climatic conditions having generally continued to be favourable, the germination of the cereals has been premature, and the vegetation is advanced. Forecasts for the next harvest continue to be good. It must be added, however, that its success will depend largely on the spring rains. The rains falling this month have benefited the work in the fields for the spring sowings. The condition of the livestock is very satisfactory.

The report of the Lochnagar (Ceylon) Produce Company to December 31 last states that the balance brought forward was £6,165, less excess profits duty 1917, £2,528. After writing off depreciation of buildings and machinery there was a loss for the year of £2,885, leaving to be carried forward £752.

The report of the Panawatte Tea and Rubber Estates for 1918 states that the net profit amounted to £6,619, which with £12,526 brought in gives a total amount for appropriation of £19,145. The directors propose the following appropriations:—To interim dividend of 5 per cent., less income-tax, paid in January, which, with tax, absorbed £5,750; to final dividend of 7½ per cent. (making 12½ per cent. for the year), less income-tax, £8,625; to write off for depreciation £1,000; to carry forward £3,770.

The directors of the Madras and Southern Mahratta Railway have declared an interim dividend of £3 per cent., payable on July 1, the same as last year.

The report of the Pundaloya Tea Company of Ceylon for the year ended December 31 last states that the balance at credit of profit and loss is £7,575. The directors recommend a dividend of 7 per cent. (less tax at 5s. 9d.) on the Ordinary shares, and to carry forward £4,283.

THE AGRICULTURAL BANK of EGYPT.

Notice is hereby given that at a General Meeting of the above-named Company, held in Cairo, on the 16th May, 1919, it was decided that a DIVIDEND of 8s. per Share on the Ordinary Shares of £5 each and £40 per Share on the Deferred Shares of £5 each, should be PAID, on and after the 19th May, 1919, at the National Bank of Egypt, in Cairo, Alexandria, and London (6 and 7, King William Street, E.C.4).

Payment will be made in London, less income-tax.

The said dividends will be paid to the holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 16, Deferred No. 15) at the above Banks.

Forms for listing the above-mentioned Coupons will be supplied on application by the bankers above-mentioned.

Coupons must be left with the bankers for previous examination.

By order,

F. T. ROWLATT,

Cairo, 16th May, 1919.

COMPANY RESULTS, Etc.

The report of the Balmoral (Ceylon) Estates Company for 1918 states that the net profit amounted to £14,546, to which has to be added interest, £576, and balance from the previous year, £5,872, less excess profits duty 1917, £1,965, making £19,029. It is proposed to pay a final dividend of 14 per cent. on the ordinary shares, making 24 per cent .for the year, £7,285; to place to reserve for depreciation £1,000, and to carry forward, subject to excess profits duty, £2,887.

The report of the General Ceylon Rubber and Tea Estates for 1918 shows a profit of £17,759. After providing for London charges there remains £18,206 at the credit of profit and loss, to whioh has been added £30,314 brought forward, making £48,519 to be dealt with. The directors recommend a final dividend of 10 per cent., less tax, which, with the interim dividend of 5 per cent., paid free of tax, is equivalent to about 17.02 per cent. for the year. This leaves £21,069, out of which the directors propose to place £10,000 to reserve and carry forward £11,069.

ON 'CHANGE

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

The better tone at the close of last week has again been in evidence during the present week, excepting as regards Egyptian Unified Stock, where some rather large amounts have come on the market, with the result that, although they have been fairly readily absorbed, the price has receded a point to 88. A fair business has been done in Egypt 3½ per cent. Prefs. round the current level.

In Bank shares, there have been a fair amount of transactions in Agriculturals, and the price is about unchanged at 6⅛ xd. There has also been a good demand from Egypt for Nat. Banks, which close ¼ up at 20⅜. Anglo-Egyptians have remained a firm spot.

As regards Railways, Delta Lights are fractionally firmer at 7⅜.

In Land Shares Aboukirs are unaltered at 25 xd. There has been a sustained demand for Delta Lands, helped to a certain extent by purchases for Egyptian account, and the price closes 1/3 up at 15/6. Foreign Trusts have also been enquired for, and have jumped a similar fraction to 15/6. Gharbieh Lands remained a dull spot and are 1-16th easier at 2⅜d., but no business has been possible. New Egyptians have again come into favour, and have advanced 1s. 6d. to 25s. 6d. Union Foncières, on the other hand, are 1-16 easier at 3⅜ and Sudan Plantations have gone back ⅜ to 7⅜.

Amongst Miscellaneous Shares there has been a big demand from Egypt for Alexandria Waters, with the result that the price has advanced ⅝ to 13. Salts and Sodas are fractionally firmer at 2⅜, and some buying for Egyptian account of Khedivial Mails has raised the price ¼ to 6¼.

Among the Oils, in Anglo-Egyptian B, there was a very lively market throughout the week, and the price, after rising ½ to 5 15-16, closes unchanged at 5 7-16. Roumanian Oil Shares are all rather lower.

In Greek Securities, there is no change to report except in Monopolies, which are 1½ up at 60, while the 1902, 1910 and 1914 Loans are each a point higher at 66, 64 and 85 respectively.

CONDITIONS IN BATOUM.

With reference to previous notifications on the subject of representatives of business firms proceeding to South Russia a telegram has been received from His Majesty's Consul at Batoum describing the present conditions of living in that town.

Batoum is stated to be much overcrowded with refugees from various other places, and living is very expensive. Hotel accommodation, which is the only kind available, is procurable only with difficulty. A single room costs 140 roubles per diem, and restaurant meals cost on an average 100 roubles each (100 to 140 roubles have been obtainable in Transcaucasia recently for £1). Foodstuffs are scarce, and in general business men visiting Batoum must be prepared for conditions of discomfort. Similar conditions are stated to exist elsewhere in the Caucasus.

Travellers are advised to take supplies of the following articles for personal use, as they are practically unobtainable:—Tea, coffee, cocoa, soap, candles, medicines, bed linen, blankets, pillows, needles, thread, darning wool, and stationery.

NOTES OF THE WEEK.

The treaty with Germany has not yet been signed, and the terms to Austria are still delayed in the delivery, while those to be presented to Turkey are evidently only in the preliminary and formative stage of discussion. Meanwhile the German efforts to arouse opinion against the terms appear to have evoked no response in any of the Allied countries, and the suggestion made in some quarters that it will be the business of the League of Nations to revise the terms of the treaty in favour of Germany is calculated to do no good to Germany and only harm to the League itself.

The preliminary difficulty with regard to the Austrian terms appears to rest on the question whether the German-Austrian provinces are to be regarded as the direct heirs of the Austrian Empire or as an entirely new State. This is, of course, a matter both of political philosophy and of practical convenience. It is hardly probable that the Hapsburg tradition of centuries has been entirely uprooted even by four years of war, and the Catholic peoples of German-Austria are naturally a Conservative race. The greater part of the Hapsburg dominions are, it is true, gone for ever, and it is fortunate that it is so, but it is by no means impossible that Vienna may yet desire to regard itself and its immediate provinces as the legitimate remainder of the old Empire, and will again make a bid for the leadership of the "German tribes." Whatever the decision of the Peace Conference on this matter, it can hardly control the future indefinitely; but the practical importance of the question depends on the financial arrangements by which the new States agree to take over and share some part of the heavy debt of the old Austro-Hungarian Empire. That must in itself be a difficult and complicated problem.

No suggestion has been made that the Fiume difficulty can be regarded as settled, and the French Press continues to discuss in some detail the part that international finance is playing in the matter, hinting broadly that the German-American banks are agitating for the allocation of the port to the Yugoslavs. It is a pity that no definite reply has been made to this accusation, which is repeated with a detail of names and dates to give it greater weight; it would surely have been easy for President Wilson, who has been a doughty champion of the Yugoslavs, to have instructed some of his staff to make a semi-official reply. It may be, of course, that after the not very fortunate outcome of his appeal to Italy over the heads of the Italian Government he feels the less said the better over this controverted point.

The Greek occupation of Smyrna has, as we anticipated last week, not tended to ease the old difficulty between Greece and Italy. The latter country, which has a definite Adriatic policy that has not altogether commended itself to every delegate in Paris, has also a Levant policy, and a very definite interest in the Levant. No good purpose would be served by denying that this policy does in some respects conflict with Greek ambitions in the same quarter; and very great care will have to be taken to see that in the final settlement of claims and adjustment of ambitions the old rivalries of Byzantine and Roman policy are not exacerbated and made a cause of permanent friction in Mediterranean affairs. Unfortunately the Greek action, supported by the Allies, at Smyrna has been taken in that sense, and it will be difficult to nullify the impression already caused in Rome.

The suggestion has been made that Italy should be compensated for her practical exclusion from Asia Minor and the watering down of her claims in the Adriatic by assigning to her certain spheres of influence in Northern and Eastern Africa; that is to say, in effect, that she should receive a free hand south of Tripoli and in Somaliland and Abyssinia. The prospect does not appear to have been received with enthusiasm in Rome. Italy requires opportunities for expanding her trade as well as for colonisation, and it can hardly be contended that commercial prospects are as bright in Somaliland as in Asia Minor. Moreover, any large expansion of Italy in Africa would tend to bring her into conflict with France, whose African policy is now of primary importance to the Republic; and anything that caused friction between France and Italy would be disastrous to the future well-being of Europe. It can hardly be suggested that the Conference has been very felicitous in its dealings with this part of the general problem before it.

A

Digitized by Google

The detailed proposals for the dismemberment of the Turkish Empire were, as we indicated last week, in the nature of a *ballon d'essai*, and their reception has been the very reverse of cordial. Indeed, it would be difficult to find a good word for them in the Press of any of the countries of the Entente. The idea that the United States should become the guardian of Armenia and Constantinople has been decisively discountenanced in America. The United States are ready to trade with the Levant to any extent, but they clearly dislike the idea of accepting responsibility for the government. On this point the tone of the American Press appears almost unanimous. It is agreed by all observers that President Wilson is less sure of support in his own country than before. Part of the trouble appears to arise from his action over prohibition, which is no affair of ours; part over the League of Nations, but more over the supplement which binds America to go to the aid of France in the event of emergency, and part again over the idea of America intervening permanently in the affairs of the Near East as a responsible guardian.

It is quite impossible to mistake the significance of these manifestations of opinion. With the best will in the world towards President Wilson, his people appear to be preparing to reject his theory that America should enter the European and Asiatic world as mentors, advisers, and trustees; the prevalent conception in the United States appears to be that America has enough to do to look after her own affairs, and that to accept responsibility for the future of Constantinople or France or Russia would be to ask for trouble. While the general idea of a League of Nations appears to be welcomed across the water, the revolt against the League of Nations with its mandatory powers of control appears to be definite and formidable, so far as the acceptance of mandates by the United States is concerned.

Another and not less relevant argument against the proposed complete dismemberment of the Turkish Empire has been the very powerful protest of the Indian Mohammedans. In deference to this it has been stated, with some show of unanimity, if not of authority, that Constantinople will remain at least nominally Turkish, and that the Sultan will not be deposed. This protest was so obviously well founded that it could not be disregarded, but the result has evidently been that the whole question of the future of the Turkish Empire has to be considered *de novo*, and the delay in the final ratification of peace will therefore be considerable.

While the Roumanian campaign against Hungary appears to have come to a close at least for the time being, recent events in Russia are bound to have an effect over the whole field of Balkan politics. The Bolshevist Government has been so frequently proclaimed to be tottering to its fall that we may perhaps be pardoned some scepticism at the repetition of the announcement, but it seems clear that General Koltchak's movement offers the best hope for the reconstitution of Russia that has been seen since the fatal weakness of Kerensky destroyed all hope for the fortunes of the provisional Republic. Another sign of the real strength of Koltchak appears in the wild denunciations of his progress and policy in various journals which ardently support the Bolshevist movement in all parts of the world. But until Bolshevism is crushed there can be no hope for the progress of civilisation in Russia, and consequently in the Balkans.

Another aspect of this matter to be borne in mind is the attitude of Germany. The appeals that are being made in pacifist quarters to "feed starving Germany" —appeals which so strangely ignore the far harder plight of our Allies in the Near East—are always reinforced by the threat of Bolshevism in Germany. Now by general consent of those who know the country and the people, Germany is not inclined to Bolshevism by nature; but the German Government—and by this we mean not the pale and transient shadows which flit across the stage in Berlin, but the real authorities in the Foreign Office, which is unchanged—is distinctly inclined to co-operate with the Bolshevist Government in Russia, for its own purposes

The signs continue to accumulate that Germany, having lost all hope of overseas domination in Africa and admittedly unable to conquer France or England, is now definitely turning again to an Eastern policy. For the time being the Berlin-Baghdad dream is over, but the possibility of making good the political losses of the war by incorporating German-Austria in Germany is being discussed, and the natural reaction from the discredited maritime and colonial policy of Herr Ballin is the reversion from westernism to easternism. In order to carry that policy to a successful conclusion, a dismembered and discredited Russia, such as exists at present, is essential, if Germany is to gain control in Russia; and the Koltchak movement would be fatal to German hopes of control in the East.

If she could once attain control in Russia she would infallibly attempt again the policy of penetration in the Balkans, with the disastrous results of the years before the war. The only sure way to circumvent this policy is for the Balkan States to agree among themselves, and to join with the new Slav States and Poland in friendly co-operation for the economic and political progress of the countries from Constantinople to Danzig.

An American writer is reported this week to have remarked that the League of Nations will remain an aspiration and a futility, because the peoples of Europe will not abandon their old quarrels—quarrels, we may remark, which were once credited to dynasties, but which might be more accurately referred to the peoples concerned. Whatever foundation the writer may have for his political pessimism—and it appeared to be the result of studying the rival claims of the smaller nations at the Peace Conference—it is clear that there can be no hope for the future unless these recriminations and local jealousies, which survive more strongly in the Balkans perhaps than elsewhere, are abandoned. There are said to be signs of a more accommodating spirit between the Poles and Czechs; it is perhaps not too much to hope that this excellent, if belated, example will be imitated elsewhere.

In the *Sunday Times* Mr. Crawfurd Price, whose predictions have been less inaccurate than those of most of his colleagues in Paris, suggests that it is decided that Bulgaria is to lose Thrace, and that in return she will secure the use of a Greek port in the Ægean, in accordance with the original proposition of M. Venizelos—whose policy appears to have triumphed all along the line. It is thought, too, that a section of Bulgarian territory may be placed under military occupation until she has paid her debt to Serbia and Greece, and it is believed that a rectification of her frontiers in the Vidin district—which, according to Mr. Price, "is altogether too near the Nish-Danube line"—is also contemplated.

We deal in another column with the leading features of Mr. Montagu's speech on Indian affairs, but a few of the many topics on which he touched call for separate notice. In regard to Afghanistan, we may note the explicit recognition of the fact that Bolshevist influences have contributed to the unprovoked attack made on India by the new Ameer, and our knowledge of Afghan psychology justifies the inference that a good deal of hard cash has changed hands. Whether the result was so inevitable as Mr. Montagu says is a question on which judgment may suitably be reserved; for the moment we are less interested in the causes than in the consequences, that "stern and just punishment" which is essential for the sake of future peace, and which, if we may trust the latest telegrams, is already drawing near.

Mr. Montagu had something to say about some of the inquiries called for by recent events. First, there is to be yet another Currency Commission to investigate the perplexing situation in the silver market, a situation which was certainly not contemplated when the present system of currency was framed, and we can only hope that Sir Henry Babington Smith and his colleagues may succeed in finding a way out of what looks very like an *impasse*. Next, there is to be an inquiry into the

Digitized by Google

organisation of the Indian Army, the necessity of which no one is likely to question seriously. Thirdly, there is to be an inquiry into the recent disturbances, but this is wisely relegated to the somewhat uncertain future, and for ourselves we hope that most of the important facts will be brought out in the Courts; and that the police, who have done so well in action, will be able to place some at least of the real conspirators in the dock.

Nothing was said regarding an inquiry into the measures which have been taken for the relief of distress, but, if precedents are followed, that will come as a matter of course. The need for such an inquiry is indeed greater than usual, because last winter the Government broke with old-established principles, and we trust that some of the great famine administrators of the past will be given an opportunity of comparing the new methods with the old. Mr. Montagu justly laid stress on the enormous rise in the price of food, and in order to find a basis for future policy this phenomenon in particular requires to be very carefully examined. Was the rise wholly inevitable, or did the measures improvised last winter drive stocks into concealment, and thus superimpose an artificial scarcity on the real one which unfortunately existed? That is a question which must be pressed even when a new constitution is on the anvil: votes are great things, but in India food comes first.

There is always something piquant in references to Free Trade by Liberal members of the Coalition, but on the whole Mr. Montagu's handling of the subject was distinctly adroit. Free Trade should be achieved by a nation at its own risk, and not be imposed on it from outside"; let the educated classes of India "find their own salvation"; and, if you like, buoy yourself up with the hope that when they are given freedom of choice they will choose the Cobden road. Such utterances will be acclaimed by the vast majority of Indian politicians, and though we can detect no actual promise in Mr. Montagu's words, we think it will be generally recognised that they mark a definite stage in the development of the question. The Tariff will, of course, remain under the control of the Government of India, and will not for the present be determined by a direct popular vote.

The foundation for Mr. Montagu's hope that India will "find salvation" in fiscal matters is, of course, purely speculative. We must recognise that the teachable spirit is not very prominent among the many virtues of present-day Indian politicians, and some years must elapse before the effects of the new schools of economics can manifest themselves in public life. India's aspiration for Protection will not disappear at once, but, on the other hand, her Government moves slowly and cautiously in such matters, and for some time to come the abnormal conditions of the world's trade will afford abundant justification for the maintenance of that attitude. A Cobdenite Indian Legislature is one of the many possibilities of the future, but until we learn by experience how the new representative system works we shall have no means of estimating whether the possibility is likely to be realised.

Mr. Montagu's direct attack on the Indo-British Association has called forth an immediate protest from the leaders of that body, in which their aims are placed before the public more explicitly than in any previous utterance. The association accept the Declaration of August, 1917, and are strong advocates of reform, but they oppose the Dyarchy, and they stand in particular for communal representation to secure some protection for the lower castes. This last article was, by the way, obscured by an unfortunate misprint in the association's letter as printed in *The Times*. The word "commercial" was substituted for "communal," and a handle was thus given to those politicians who say that the association is too much under the influence of British commerce; but the intention must have been obvious to informed readers, and with this correction the programme is one for which a tolerably good case can be made out. It will doubtless be pressed strongly upon the Joint Committee when that body gets to work.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 5.

The Students.

The hope expressed in these columns that the students would respond to the notice issued by the departments concerned that the various schools would reopen on the 3rd has not been fulfilled. The students have held several meetings during the past week, and at one of the last it was decided that they should not return to their lectures until Egypt's demands had been granted. In consequence of this, on the 3rd no students presented themselves at the Schools of Law, Medicine, or Agriculture. One solitary student appeared at the Polytechnic, and there were very few pupils at the secondary schools, some of which were quite empty. Sunday, the 4th, the same story was told by the attendance sheets, and, it being evident that the students intended to defy the educational authorities, it became necessary for some more authoritative measures. Accordingly General Allenby, in his capacity of General Commanding the British Forces in Egypt, issued on Sunday afternoon an order under martial law announcing that, unless a sufficient number of students attended by the 7th inst. to justify keeping open the higher colleges, the secondary schools, etc., these would be closed until the usual date for the commencement of the new term. Also he gave notice that no student at present on the registers who did not attend on or before the 7th inst., or who, if the colleges remain open, does not continue to attend regularly until the end of the term, would be admitted to the examinations this year. This order is intended to apply not only to Government colleges and schools, but also to those private establishments which are under State supervision.

We now wait to see the effect and result of this order, which is fully justified by all the circumstances. Indeed, if it had gone so far as to shut the schools until the students themselves petitioned for their reopening, or if it had decreed that no examinations at all would be held this year, such a decision would not have been too severe. However, the students who have wilfully interrupted their studies for two months now have one more chance, and if they do not take it they will have themselves alone to blame for the further loss of precious time which the suspension for one year of all examinations constitutes.

Events at Cairo.

Cairo has been comparatively quiet during the past week. The Government officials have continued at their posts, though they seem by no means at rest in their minds, and the tramway and railway workers have returned, a settlement, as foreshadowed in my last letter, having at last been reached. Al Azhar is still the most unsatisfactory element, and it seems very difficult to bring it to heel. As pointed out before, it is the nerve centre of all the propaganda which is going on all over the country. Meetings are held there daily and nightly, and inflammatory sermons are delivered, which are not without their effect on the hearers, who comprise not only Azharites but also people from all parts. So active has this speechifying been this last week that the authorities have been compelled to arrest several of the more notorious of the speakers. This led to some excitement in Al Azhar, and attempts at demonstrations were made on two days. On the first it was frustrated, and on the second it was split up and the various portions chased through the city until they were effectively dispersed. The authorities have now posted up in Al Azhar a notice that any who take part in a demonstration will be arrested and will be dealt with by a military court. This may, to a certain extent, damp the ardour of the more hot-headed spirits of that institution—it is noteworthy that since the arrests the sermons have been less frequent and less incitative—but it is to be feared that only the shutting of the college as distinct from the Mosque and the dispersal to their villages of the students, many of whom, be it noted, have already left, will stop the fermentation and excitement

Digitized by Google

which go on in its precincts and which have their pernicious repercussion on the country.

Military Areas.

Meanwhile in the provinces there is little to report, and the work of pacifying the country, rounding up the offenders, and ensuring a return to normal is going ahead. The work of dealing with the very numerous cases arising out of the recent disturbances is being closely attended to. Special military courts have been set up, and are now in full working order. The country has been divided into what are known as military areas, viz., the Western Delta, the Eastern Delta, the Canal, Alexandria, Cairo, Central and Upper Egypt. In each of these at least one military court has been established, and for each there is a separate Legal Adviser, chosen from the personnel of the Ministry of Justice. These appointments to date are as follows: Alexandria, Judge Sanderson; Western Delta, Judge Clapcott; Eastern Delta and Canal, Judge Kershaw; Cairo, Judge Percival; Central, Judge Hill; Upper Egypt, Judge MacBarnett. All of these have been granted the rank of lieut.-colonel. In addition, Judge Percival is Legal Adviser to the Commander-in-Chief, with Mr. G. H. Hughes, of the Native Appeal Parquet, as assistant.

The courts are empowered to deal with all cases which are too serious to be dealt with by a Summary Military Court, and in which one or more foreign subjects or foreign protected subjects are accused. In the latter event the consular authority interested is advised and is permitted to send a representative to attend the proceedings. These courts are empowered to inflict any sentence they consider advisable except where the offence is against any particular proclamation, in which event, if any punishment is specified therein, it must be inflicted.

The Question of a Cabinet.

No new Cabinet has yet been formed; and as far as one can gather, Egypt may quite possibly be administered without one for some little while to come. It is, indeed, useless to set up a Cabinet if the people show no inclination to accept its authority (as was the case with the last Rushdi Ministry). Under normal conditions the non-existence of a Council of Ministers over any period would be calculated to paralyse all State business, since the constitutional channels created for the promulgation of decisions would no longer be available. Fortunately, however, Egypt is still under the regime of martial law, which provides an alternative channel for putting into effect any urgent measures in the form of Proclamations promulgated by the Commander-in-Chief. Having this alternative course, there is no reason why Egyptians who might be patriotic enough to be prepared to take office at the present juncture should be laid open to the risk of indignities such as the Rushdi Cabinet had to submit to, and a non-repetition of which is by no means guaranteed. Moreover, a recurrence of what took place during those fifteen days could but serve to bring Ministerial office into disrepute, and it is perhaps just as well if the Egyptians are not given a Cabinet until they themselves come forward and ask for it and are prepared to support it.

New Appointments.

Following on the Proclamation issued by General Allenby in his capacity of Commander-in-Chief of the British Forces in Egypt, authorising the Under-Secretaries of State or Acting Under-Secretaries of State in each Ministry to exercise and perform all the powers and functions of the Ministers in administration matters, including the power of representing the Ministry before any Tribune, various appointments have been made by notice under martial law to posts which have either become vacant or have been newly created. The appointments are the following, viz.: Mr. E. M. Dowson, C.B.E., Director-General of Survey and Acting Under-Secretary of State for Finance, is confirmed in the latter post, and is succeeded at the Survey Department by Lieut.-Colonel B. F. E. Keeling, M.C., O.B.E., who is given the title of Surveyor-General instead of Director-General. Mr. R. S. Patterson, Director-General of State Accounts, is promoted to a new post of Assistant Under-Secretary of State for Finance, and is succeeded by Mr. W. B. Trelawny, Controller of the Government Press, who receives the title of Controller-General of Administration and Accounts. Colonel Cathcart Garner, C.B.E., Principal Medical Officer in Palestine, and formerly Deputy Director-General of the Public Health Administration, is appointed Director-General in succession to Sir David Semple, and Dr. Ferguson Lees is promoted to the post of Deputy Director-General of that administration.

By further Proclamation Brig.-General Sir George Macauley has been appointed Controller-General of Ways of Communication and Civil Transport in Egypt. As already announced, provision was made in the Budget for the current financial year for the creation of a Ministry of Communications, in which Sir George Macauley had accepted the post of Adviser. It has, however, not been possible to promulgate the necessary legislation, and since it is urgently necessary that "provision" should be made for the control and co-ordination of all means of transport in Egypt in order to assure the supply of food to the main centres of population, the post of Controller-General has been created, with full powers "to take such measures as may be necessary to maintain and improve all existing means of communication and to assure the carriage of goods, passengers, and mails by railway, road, or water." The Controller-General will have control of the Egyptian State Railways, Telegraph and Telephone, the Postal Administration, the Ports and Lighthouse Administration, the Harbour Works Department, inland water transport, mechanical transport, main road and bridges, and the supervision, licensing, and control of civil aerial traffic as well as a general supervision of all light railways.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 9.

A Bolshevist Ultimatum.

A few days ago M. Pherekide, the President of the Council *ad interim*, received a wireless from Rakowsky demanding the immediate evacuation of Bessarabia and Bukovina. Rakowsky, who heads the Bolshevist movement in Ukraine, signs himself "Prime Minister of Ukraine and Minister for Foreign Affairs." He is of Bulgarian origin, and recently practised as a third-rate doctor in Constantza. It will be remembered that not so long ago he was giving himself the title of "President of the Roumanian Government of Odessa," and, in virtue of this, bullying and robbing Roumanian refugees. Needless to say, this "ultimatum" elicited no response, for it is nothing more than a piece of brazen impudence. Regarded seriously, it would amount to an act of high-handed imperialistic rapacity, reminiscent of late Tzarist methods, obsolete, and to be rejected as such, if on no other grounds. Bessarabia has twice been ravished under such circumstances, and Bukovina suffered a similar fate in 1777 at the hands of the Habsburg Monarchy. But, apart from such considerations, the fact remains that the Bolshevists are actually at war with Roumania, and, therefore, superadded menaces are not likely to aggravate the situation.

A Ukrainian Opinion.

In a recent interview the Ukrainian Minister in Bucharest, M. Gasenko, ridiculed Rakowsky's pretensions. "Our actual military situation," he said, "is splendid. Three parts of the whole country is in our hands. The peasants

Digitized by Google

have taken up arms and are fighting with us against the Bolshevists. Our troops have occupied practically the whole of Kieff. A single suburb has remained unoccupied so far, and into this Rakowsky and his supporters have had to withdraw themselves."

Kuhn's Proposals.

The rapid advance of the Roumanian troops on Hungarian territory and their junction with the Czecho-Slovak forces have produced a salutary effect in Budapest, which shows itself in the less cavalier tone of the proposals of peace addressed by Bela Kuhn to the Czecho-Slovak, Roumanian, and Yugoslav Governments, and the exhibition of sentiments which, under other circumstances, might have redounded to his credit. He lays on the late Government the charge of having refused to agree to the claims put forward by these nations, invoking in its defence historical rights sanctioning the continuance of the ancient régime of oppression. "From the first moment of our coming into power we denounced this principle, declaring repeatedly, and with all solemnity, that we do not found any pretensions on the principle of territorial integrity, and we now communicate to you in mode direct our recognition, without any reserve, of all your national territorial claims." In exchange, he demands immediate cessation of hostilities, and complete abstention from interference in the internal affairs of Hungary.

A Remarkable Coincidence.

That Rakowsky's "ultimatum" should have coincided with Kuhn's request that Bolshevism should be allowed to develop itself in Hungary unhampered by foreign interference (for that is what his peace proposals amount to) is of itself suggestive. But if we associate with these circumstances the causes alleged to underlie the fall of the late Bulgarian Government, we can no longer doubt that we find ourselves in the presence of a Bolshevist plot with wide ramifications. It appears that in the late Coalition Government of Sofia Agrarians, Socialists, and Radicals had, according to a writer in the *Indépendance Roumaine*, simply set themselves the task of introducing Bolshevism into Bulgaria. Their plans were to be furthered by the convocation of a "Congress of Agrarians." The Allies, however, got wind of the affair. In consequence of this, M. Teodoroff was obliged to interdict the Congress, thereby producing a crisis which resulted in the fall of the Government.

General Berthelot.

General Berthelot quits the country once again. But how different this time the circumstances of his leave-taking! On the last occasion he left heavy hearts behind him—the hearts of a people vanquished by a pitiless fate. It was for Roumania, undoubtedly, the most melancholy episode of the war. To-day his kindly countenance smiles in parting on a land freed from the invader, on a nation that has realised its unity, on a people before whom are opening up wide horizons of material and moral prosperity. He came out at the end of 1916, after the cruel retreat, when the whole of Moldavia was in a lamentable state of chaos, and the remnants of the army completely disorganised. He came out to cast his expert glance upon the ruins, and estimate the chances of being able to raise them again into the semblance of a building. Fortunately for the country, he judged the task feasible, and there ensued a display of feverish activity on the part of his collaborators, French and Roumanian, that put new heart into the people. The results are known. Completely reorganised, and furnisned for the first time with modern weapons of war, the Army gave such an account of itself on the banks of the Siret as the Germans are not likely to forget. The workman was a master of his craft, his instruments reliable, and he used them on a material of superlative quality. Over and over again he has testified to the wonderful qualities of discipline and endurance possessed by the peasant soldier, to his uncomplaining patience, shrewd intelligence, and natural aptitude for the game of war. In his own words, "The Roumanian soldier is the best in the world." He leaves behind him a nation that has been enriched by his presence, and a debt of personal gratitude as it is the privilege of few mortals to incur.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, May 10.

Malta is settling down to its usual cosmopolitan state, and its harbours are fast approaching their normal appearance, but one or two events of more than ordinary local interest have recently occurred, notably the departure of Lord Methuen from the island, and the somewhat unexpected arrival in our midst of a great number of Russian refugees from Odessa and the South-East of Russia.

Departure of the Governor.

Before leaving the island the Governor issued an order in the following terms:—"On leaving Malta I wish to say good-bye to all my comrades. My command has been full of interest, and made easy through the unvarying support given to me. The relations which have existed between the Army, Navy, and Air Force, as well as the civilian population, have been of the happiest, and at times the strain has been great. Malta has never been found wanting when called upon to give a helping hand. We may not have had to share the danger and sufferings of our comrades in the front line, but we can in after life feel that in the background we have to the best of our ability done our best to aid our country in its great and successful work."

The Governor's tenure of office has been an arduous one, notably in regard to the work performed in connection with the thousands of sick and wounded who have passed through the hospitals here. Lord Methuen's work has been a labour of love, and his devotion to duty has brought him much gratitude and world-wide appreciation. Lady Methuen and her daughter, the Honourable Seymour Methuen, accompanied by Captain Ingham, have left for England on H.M.S. Diana. The name of Lady Methuen will ever be recalled with feelings of affection and gratitude not only by those whom she has so largely and liberally assisted by means of the fund (to help distressed middle-class families) which bears her name, but also by the legion of friends with whom she has been associated in the various forms of social work which have been benefited by her influence and active participation.

Russian Refugees.

With the arrival of a further batch of British and Russian refugees from Constantinople the number of British refugees is now some two hundred and fifty. They were in a destitute condition when they reached Malta. The British Red Cross and Order of St. John have come to their rescue, and have done all they could for their relief. The societies have provided clothing and other necessaries, and the refugees, accommodated as they are in comfortable military quarters, may be said to lack nothing. Every effort is being made locally to make the stay of these refugees as happy as possible, and a series of special matinées at the Royal Opera House has been arranged, to which invitations were also given to a number of patients from the local Navy and Army hospitals. The first of these matinées took place on May 9, when the Opera House was literally packed.

Naval Movements.

H.M. ships Martis, Lily, and Sir Joseph Pease, together with hospital paddlers 3 and 7, are leaving Malta for Gibraltar and England.

We understand that the battleships Benbow, Ajax, and Centurion, which are to bring up the newly reconstituted Mediterranean Battle Fleet to full strength, as provisionally decided, and which have hitherto been unable to leave for Malta owing to demobilisation, may now be expected to arrive here in June.

H.M.S. Katie arrived here from Constantinople. The American destroyers Luce and Gregory have left Malta. H.M.S. Seabank arrives here to-day from Constantinople. H.M.S. Rowan is here from Constantinople and Syria.

Japanese Visitors.

Rear-Admiral Kozo Sato, K.C.M.G., commanding the Japanese Squadron in the Mediterranean, has arrived here from Toulon in his flagship and cruiser Idzumo. Whilst away from Malta the Japanese Fleet visited Italy and France. According to previous arrangements, Admiral Sato was to have made Malta his base for months to come, a fact at which the commercial community rejoiced, but other instructions have been received, and the Japanese Squadron is to leave for Tokio, calling at the Piræus, Port Said, and other ports *en route*. It should be stated that during the whole time of their stay our gallant Allies have been on the most cordial terms with the people of this island, and their departure is the subject of general regret.

A Strike.

As we write, the students of the University have "downed tools," and the police have struck for more pay; developments in these matters will be dealt with in our next Notes.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE DESTINY OF AUSTRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I fully agree with the views expressed in your leading article under the above heading in your last issue. Austria was no less responsible for the war than Germany, for the policy of both Germany and Austria was the same, and the Austrian waging of war was perhaps still more barbarous. Yet a tendency is making itself apparent to show unmerited benevolence towards German Austria, and grant her favourable economic terms. Some of the Allies, especially the French, still cherish the vain hopes of separating the Germans into a Southern and Northern Germany, and dread the incorporation of German Austria into Germany, and, therefore, want to induce the Austrians, by granting them favourable terms, not to be so incorporated. The Austrians know this, and are making the best of it.

Moreover, there is a tendency to place the Czecho-Slovaks and the Yugoslavs, who fought side by side with the Allies, on the same footing with the Austrian Germans and Magyars as regards the reparation of war damages. Especially some of the Italian delegates and the Italian Press advocate that all the nations inhabiting the former Austro-Hungarian Monarchy should pay the war costs of Italy. The Czecho-Slovaks, of course, cannot and will not agree to this, because they not only did not want the war, but from the very beginning sided with the Allies.—I am, etc.,

ALEXANDER BROZ.

May 24.

THE QUESTION OF DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Allow me as a Roumanian, and particularly as a man of science familiar with Balkan affairs, and as director of the Institute for the Study of South-East Europe, to call your attention to the following facts connected with the question of the Dobruja, quite incorrectly exposed by your correspondent "S. P." in THE NEAR EAST of April 17:—

1. The Dobruja was at one time Scythian territory, then Getan, finally Roman and Daco-Roman, half a millennium before the invasion of the Bulgars.

2. This invasion, tending towards Constantinople, has left no traces and founded nothing whatsoever in a country which was valueless to the invader.

3. The first Roumanian state-foundations, the principalities of Tatul, etc., which were under Byzantine influence, appeared here two centuries before those influenced by Western political life.

4. Later on, this region, which had remained under Byzantine influence in connection with the Imperial Black Sea Fleet, became the appanage of the Byzantine despot Dobrotici, "the son of Dobrota," whose name is common among Roumanians, while the water-ways, land and mouths of the Danube were Genoese.

5. Both as Byzantine despot and as representative of the people that had always inhabited both banks of the Danube, the Valachian Prince Mircea (1386-1418) ruled over the Dobruja together with Silistra. His predecessors brought to these parts from Vicina the first Metropolitan Primate of Valachia. All his successors up to 1610 sought to reclaim the Dobruja from the Turks, who had conquered it from the Roumanians, not from the Bulgarians.

6. The cultural and economic life of Turkish Dobruja was connected with the left Roumanian bank, the bishopric being at Braila and the chief market at Piua Petrei. The Roumanian villages have maintained themselves during the course of centuries, whereas those of the Bulgarians, who had emigrated after 1828 from the colonies organised by the Russians in Bessarabia, made their appearance less than a century ago. The shepherds of Dobruja are nearly all of them "Mocani," from Transylvania. The inhabitants of the centre along the line Tsaccea-Babadag-Rasgrad are Turco-Tartars. Greeks persisted on the coast.

7. In 1878 many Roumanians were against the acceptance of the Dobruja, but only because they were averse to receiving it at the hands of Russia, and because Southern Bessarabia, conferred by Europe in 1856, was claimed in exchange by a disloyal ally.

8. Once conferred upon us by Europe, we transformed the Dobruja, which was a desert, into a new country, and no dissatisfaction on the part of other nations assumed any general character up to the actual war. Bulgarians were always in the minority, whereas the Roumanians constituted a crushing majority in 1916. There were not 50,000 Bulgarians living in a country with a population more than six times more numerous.

I am ready to uphold any one of these points with the unassailable arguments of the historian.—I am, etc.

Bucharest, April 25. N. JORGA.

ARMENIAN RED CROSS AND REFUGEE FUND.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Referring to the cable which I received from Mr. Khatissian, Prime Minister of the Armenian Republic at Erivan, which you published in your issue of the 23rd inst., will you kindly let me say that I shall be most thankful to receive at the undermentioned address money donations for relief of the Armenian refugees in the Caucasus? Cheques should be made payable to Mrs. Lydia Chambers, hon. treasurer of this fund. The military authorities will give every facility to us to send out relief, and I have been asked to make preparations for doing this. There must be many wealthy people here who will gladly give of their abundance to save the lives of those helpless sufferers, who are dying, as Mr. Khatissian says, "1,500 daily of starvation and disease."—I am, etc.,

EMILY J. ROBINSON
Hon. Secretary.

35a, Elsham Road, Kensington,
London, W.14, May 27.

JUBILEE OF THE ROYAL COLONIAL INSTITUTE.

The Jubilee dinner of the Royal Colonial Institute was held on May 23 in the Connaught Rooms. The Duke of Connaught presided, and the large gathering included the Maharaja of Bikanir, the Maharaja Kumar of Bikanir, the Marquess of Crewe, Viscount Bryce, Major-General Lord Loch, Lieut.-General Sir John Monash, Lord Morris, Lord Emmott, General Sir W. Birdwood, Lieut.-General Sir A. Godley, Admiral Sir Rosslyn Wemyss, Lieut.-General Sir A. Currie, and Bishop Montgomery.

His Royal Highness, proposing the toast of the evening, said that the Institute came to birth in 1868. The original number of members was 174, but to-day the number was nearly 14,000. One of the shortcomings of the Institute was that India was not adequately represented either in name or in fact, and in order to try to remedy this a standing India Committee had been appointed.

He then referred to other necessary developments, and said that what was aimed at was a comprehensive scheme justified by their fifty years' work, worthy as a war memorial and wholly in consonance with the views of Lord Grey, whose mind was set upon some building which would be worthy of and stand for United Empire. Sir Charles Lucas responded to the toast.

Viscount Bryce proposed the toast of "United Empire," and Sir George Perley, High Commissioner for Canada, responded.

The Maharaja of Bikanir said it was a happy augury that the Jubilee celebration of the Institute, which had done so much to promote Imperial solidarity, coincided with the full recognition of India's partnership with the Empire. Not only had India shared in the Imperial Councils of War and the Peace deliberations, but, along with the Dominions, she was to be a signatory to the Peace Treaty, and to-day she shared the responsibility of membership in the League of Nations. The mainspring of the sacrifice and devotion of the people of India had been the devotion of the people to the King-Emperor. India, he emphasised, was loyal to the King-Emperor and staunch to the British connection.

Sir Hugh Clifford responded for the Colonies and Protectorates. "The Armed Forces of the Empire" was submitted by the Marquess of Crewe.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Greece, like this country, has been, and is, suffering much at the hands of the Profiteer; and, like the Briton, the Greek is easing his feelings by telling himself and his friends of the Profiteer's funny little ways. A friend in Athens passes on some of these to me, and here is one of them—a true one, by the way. A motor draws up at a bookseller's, and an expensively dressed female, the property of a Profiteer, gets out and enters the shop. "I want some books." "Yes, madam, what kind of books?" "Well, books!" "Yes, madam, would you like poetry or prose, or ——?" "It really doesn't matter. You see, I don't read; my husband doesn't read. But we have just bought a house, and must have some books in the library. So just send me round one hundred pounds' worth of books, and see that they are nicely bound." The bookseller was asked by someone who had overheard the conversation what he meant to do. He pointed to sundry magazines, and said that he would have those bound as expensively as he could.

***

Here is another story sent me by the same correspondent—and again told at the expense of the Profiteer. In this case, the central figure was the wife of a shipowner, and she was being shown over a large and expensive house, with a view to purchase. "And here," said her guide, "is the bathroom, which you'll like to see." "All right," said Mrs. Crœsus, "I'll look at it. But God forbid that we should ever have to use it!"

***

This reminds me that it is not only the *owners* of ships who have been "making their bit" out of the war. A little while ago a Greek gentleman recognised at the Piræus a man who had been a small fisherman on one of the islands. At the time he was dressed as a ship's fireman. The gentleman greeted him, and inquired how the world was treating him. The man said that he wanted some advice. He had made some money, and now did not know what to do about it. Inquiries as to the amount he really had revealed that it was £22,000—yes, twenty-two thousand English pounds!—and that on one of his trips as a stoker to England he had been persuaded to put all the money into English loans. Now he had been told in his own country that England was going bankrupt, and he wanted to know how he could save his money! One wonders who set the bankruptcy yarn afloat, and whether it had any connection with the appreciation of Greek money.

***

In case my readers did not see *The Times* of May 22, I am setting down a stanza from a book of verse which Mr. D. A. Naik has sent to England from Bombay. *The Times* says that the book put the members of the House of Commons in a good humour for the Indian debate. That is not surprising. Here is the stanza:—

Dear Wilson's Big Ben voice, Lloyd George's watchful eye,
Worked so wondrous great, never their force would perish or die.
Unity spirit amazing grand, in Britain's blissful land,
Tho' on opposite beach, dear Asquith held a helping hand.
There my Balfour, too, Bonar Law, Curzon (Lord) as well,
Readily stood to dispel doubts as if by spell.

The lines show how, says *The Times* in quiet mirth, even in politics, distance lends enchantment to the view! The gentle truth of the comment is ridiculously obvious. Epithets of love when applied to politicians are really extremely funny. And the simple faith in the imperishability or immortality (do you catch the difference? I've missed it!) of the League of Nations is touching. Would that we all could indent for a pair of these Bombay spectacles through which to see the world! But possibly the most heart-breaking (or side-cracking) vision is that of an unholy trinity standing by to "dispel doubts as if by spell." Politicians will dispel doubts when they have ceased to create them; and that period is more distant than are the stars!

HOUSE OF LORDS.

Indian Cavalry in Palestine. May 21.

The Earl of MAYO called attention to the fine work done by the Indian Cavalry during the campaign in Palestine, and asked why no mention had been made of their services in that campaign. It was well known, he said, that the Indian Cavalry did very good work under General Allenby, but little, if any, notice had been taken of it.

Viscount PEEL, in reply, expressed surprise that the noble earl had put down the question. There was not the slightest justification for the charge that the Indian Cavalry had not received honourable mention for the work they did. The noble lord read copious extracts from the last dispatch of General Allenby, and said he could not understand how, in face of the expressions used in that dispatch, anyone could say that no mention had been made of the work done in Palestine by the Indian Cavalry. So far from no mention having been made, the dispatch was saturated through and through with praise of these gallant troops. He deeply regretted that any noble lord should suggest that inadequate mention had been given to the great services rendered by the Indian Cavalry in this most successful and dramatic campaign.

HOUSE OF COMMONS.

Schools in Egypt. May 22.

Mr. CECIL HARMSWORTH, asked by Captain Ormsby-Gore whether any support from public funds was given to any school in Egypt which had for its object the education of children of Englishmen engaged in the public service in Egypt; whether the only schools in Cairo before the war where a European education could be obtained by English children were State-supported German, French, and Italian schools; and whether he would examine the question with a view to assisting British parents in the Egyptian service to educate their families in Egypt, replied: The answer to the first part of the question is in the negative. As regards the second part, I understand that previous to the war the only British schools in Egypt were the Victoria College in Alexandria, which owed its existence to private generosity, and a day school in Cairo. Since the war a new English school has been started in Cairo, which has over 100 pupils and has been of great assistance to British parents. His Majesty's High Commissioner reported at length in 1916 on the serious lack of educational facilities for British children in Egypt, and he was assured that the whole question would be carefully and sympathetically examined at the end of the war. It is now being so considered.

Topics in Parliament.

The subjoined headings are those given in the official Report.

BRITISH PRISONERS OF WAR: Treatment in Turkey. ARAB NON-COMBATANTS (MURDERS BY TURKISH SOLDIERS). CONSCIENTIOUS OBJECTORS (EGYPT). PALESTINE FORCE (SOLDIERS' WIVES). INDIA: Education Service.—Silver from United States.—Mails. (May 20.)

INDIA: Defence of Kut.—Furlough Allowances (Civil Service).—Deportation (Mr. B. J. Horniman).—Coinage.—British Goods Preference.—Passenger Accommodation. PEACE TERMS AND CELEBRATIONS: Indian Troops. ANGLO-EGYPTIAN CIVIL SERVANTS. DEMOBILISATION: Signallers in India. ALBANIA AND SERBIA. (May 21.)

NEAR EAST BOOKSHELF.

THE BREAK-UP OF RUSSIA.

It was inevitable that a large number of books should be produced on the downfall of Russia, and various phases of the revolution. It appears also to be inevitable that many of these should add little to our knowledge. It cannot honestly be said that Mr. Hugh Brennan's "Sidelights on Russia" (David Nutt) is of much use either to the student or the popular reader; and the chapters on "The Russian Revolution," by M. Alexander Petrunkevitch, Samuel Harper, and F. A. Golder (Harvard: Cambridge University Press), come into the same category. This latter book is, however, somewhat relieved from the reproach of inadequacy by a discussion of the Yugoslav movement by Mr. Robert J. Kearner, for Yugoslav history is still sufficiently unfamiliar to most people for there to be room for an introductory essay of no great length on the subject. But more relevant to the present political problems of Eastern Europe is Mr. Frederick Moore's "The Chaos in Europe" (Putnam). The author has travelled over the ground whose destiny he discusses, and has thought about what he has seen. He makes an independent study of the position from the point of view of an impartial American—one notes, by the way, that he does not fully agree with President Wilson's policy or aims—and there is one particular chapter in which he discusses the question of the backward State, and its general relations to the rest of the world, which strikes us as particularly sound and worthy of attention. Incidentally he pays a handsome tribute to the British solution of this question by the system of a Protectorate which both secures the economic development of "the backward State" and yet regards the responsibility for its proper administration as a kind of moral trusteeship. But it would frankly be difficult, if not impossible, to institute such a system either in Russia or the Balkans, and it is recognised by all schools of political thought that those countries must attempt to work out their own salvation.

A. W. T.

SCHOLARLY COMMONPLACE.*

A few poems in this small volume were written in Gallipoli and Egypt, but they are not the author's happiest efforts. It is originality that he lacks. He has no difficulties with his technique (his technical efforts, indeed, are very creditable), and the translations from the French at the end of the book are the most satisfying things in the book. In "Spindrift" there are far too many of the clichés and the tricks of verse, and Mr. V. de S. Pinto has indulged overmuch his bent towards facile writing. But when he has learnt what to avoid, and when, in place of his present rather commonplace ideas, he has something to say, he certainly will produce a far better book than this.

THE PACIFIC.†

As can be seen from its title, "The Problem of the Pacific," has little relation to "The Near East." The book is well prepared, and views and the interpretation of facts are given with modest clarity. Mr. Fletcher especially pleads for a closer *rapprochement* between India and Australia, and suggests the introduction, under good conditions, of Indians into those Pacific islands where native labour is insufficient. "The Indian," he says, "is the hope of the Pacific," and is essential to the development of British territories in the tropics.

BOOK NOTES.

John Lane is shortly publishing "Temporary Crusaders," by Cecil Sommers. The book is made up of adventures in various theatres of war, chiefly Palestine.

Messrs. Harrap announce "Tales of Serbian Life," by Ellen Chivers Davies, and "Hindu Fairy Tales," retold by Florence Griswold. Both these books are illustrated in colour.

P. S. King and Son have published "The Silk Industry in Trade," by Ratan C. Rawlley. Among other things, the book deals with the export trade of Kashmir and Indian silks. Its price is 10s. 6d. net.

"Fishing in Egypt," by "Fluker," which Luzac and Co. have published at 2s. 6d., is a collection of articles which the writer contributed to the *Egyptian Gazette*.

Through the firm of C. Arthur Pearson, Sax Rohmer has published "The Quest of the Sacred Slipper" (2s. net), a story of Oriental adventure.

BOOKS RECEIVED.

"The Bulgarians and Anglo-Saxondom," with Maps. By Constantine Stephanove, M.A. (Berne: Paul Haupt, Librairie Académique.)

* "Spindrift," by V. de S. Pinto. (Chapman and Hall. 5s. net.)

† "The Problem of the Pacific." By C. Brunston Fletcher. (London Heinemann. 12s. net.)

THE AFGHAN TROUBLE.

The India Office issued the following on May 26:—

With reference to the statement that has appeared in the Press to the effect that the Afghan Commander-in-Chief applied for a cessation of hostilities, the facts are as follows: In telegraphing on May 15 to the Secretary of State on the military position, the Government of India incidentally mentioned the receipt of such an application, but without appearing to attach much importance to it. The Secretary of State at once telegraphed for further particulars, and asked whether the request could not be made the basis of negotiation. In reply, the Government of India telegraphed on May 18 the full text of the Commander-in-Chief's message, which was addressed to the Political Agent, Khyber. The Government of India added that this insolent message was obviously devised to gain time (an explanation to which the Afghans themselves gave currency among the frontier tribes), and that they had instructed the Political Agent, Khyber, to reply that he was not authorised to answer the message, and that if the Amir wished for peace he should address the Viceroy through the officer in command of the British forces. Meanwhile offensive preparations continue to be made by the Afghans along the whole frontier. The Amir's reply to the Viceroy's letter protesting against the Afghan proceedings has now been received. It is defiant in tone, and leaves no doubt as to Amanullah's personal complicity.

On the same date the India Office announced the following:—

Following information has been received from Government of India up to May 26, 1919: On May 22 air reconnaissance reported no movements of importance east of Jelalabad; Afghan troops on the Dakka front were reported to be having difficulty with their ration supply, and local lashkirs to be disinclined to concentrate for the same reason. Attempts to get the local tribesmen to attack Dakka are reported to have failed owing to the difficulties of supply. Amanullah is said to have visited Jelalabad, but to have returned to Kabul. The tribal gathering in Gandao, in the Mohmand country, is said to be increasing. General Nadir Khan is reported as still vacillating in Khost. Our propaganda is believed to be having a good effect in Ningrahar, and the *moral* of the Afghan troops is said to be deteriorating. Tribesmen generally are still holding aloof, though in some cases tribal lashkars are said to be with the Afghan forces. The Zakka Khel Maliks have brought in without ransom two airmen—Lieutenants Hoare and Barker—who were forced to descend in the Bazar Valley—*i.e.*, tribal territory. From Jelalabad it is reported that great confusion was caused there by the air raid of May 21. Several Government buildings were set on fire, and the town is reported as practically deserted. On May 23 the general position was unchanged, and all the frontier districts were reported quiet. Great activity as regards military preparations was reported in Kandahar on May 21.

The India Office announced on May 27 that the following further information had been received from the Government of India:—

Up to May 24 the general situation remained unchanged, and the tribal attitude good. From Chitral it was reported that some Afghans were holding a position five miles above Arnawai (forty miles south of Chitral, on Kunar River). A small Afghan force was still in Gandao (in Mohmand country). Our patrols on the Mohmand border and our aeroplanes in this area were fired on by small Afghan guns. A trustworthy report stated that no Afghan troops had left Kandahar up to May 21. On the 25th the Mohmands were reported to be behaving correctly, and the Afridis to be in a submissive mood. The latter are surrendering rifles taken away by deserters from the Khyber Rifles. The Afridis are reported to have looted a large number of rifles and artillery ammunition from Jalalabad, when it was deserted after our air raid. In the Kurram Valley a party of militia has been fired on by an Afghan picquet. The militia returned the fire, killing three of the picquet.

The following announcement was made by the India Office on May 28:—

Increased activity is reported on the Khost border. From Miramshah (in the Tochi valley, thirty miles west of Baneu) a report has been received that General Nadir Khan has sent a tribal lashkar to Zanshora, fifteen miles north-west of Miramshah, on the Afghan side of the border, and it is rumoured that General Nadir Khan intends to advance down the Kaita valley on Soirwam (eighteen miles north-west of Baneu) or towards Charkai (twelve miles north of Miramshah). In the Tochi valley the cutting of telegraph wires continues. On May 24 a tribal lashkar, near Galanai (thirteen miles north-west of Shabkadar, in the Mohmand country), believed to be composed mainly of Afghan tribesmen from Kunar, was very effectively bombed and scattered northwards. Another lashkar, estimated at 4,000, was seen moving north-west from Nahakki (eight miles N.N.W. of Galanai, in the Mohmand country). Jelalabad was again effectively bombed, and large portions of the military part of the town are reported to be burnt out. On May 24 our aeroplanes bombed the powder factory and fort of Kabul. A large explosion was observed. Up to May 24 the tribal situation on the N.W. frontier was reported to be improving day by day, and the danger of an Afridi rising appeared to be decreasing.

The Aga Khan has returned to London from Paris.

Sir Sankaran Nair has resigned from the Viceroy's Executive Council.

Prince Nicolas of Roumania is confined to his room at Eton through illness.

The Greek General Korakas arrived at Marseilles on May 26 from the Piræus.

Capt. Raja Sir Hari Singh of Kashmir was received by His Majesty on May 24.

Prince Mahomet Djemil Eddin, of Egypt, arrived at Marseilles on May 26 from Port Said.

Mme. Bratiano, the wife of the Roumanian Prime Minister, left London on May 28 for Paris.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, returned to London on May 24 from Paris.

Lieut.-Colonel S. Marinkovitch, who was commander-in-chief of the Serbian Army in Russia, has left London for Paris.

M. Kyriakos Venizelos, son of the Greek Premier and Secretary to the Greek Legation, returned to London on May 25 from Paris.

The Government of India have selected Mr. R. Burn, C.S.I., I.C.S., for employment as the next Census Commissioner for India.

The Maharaja of Bikanir was visited on May 25 by Capt. Raja Sir Hari Singh of Kashmir.

Princess Marie of Roumania, who is staying at Ascot, was visited on May 25 by Mme. Bratiano, the wife of the Roumanian Premier.

In the Harcourt Room at the House of Commons on May 27 a wedding gift from the Independent Liberal M.P.s was presented to Princess Bibesco.

Admiral Beatty arrived at the Piræus on May 20 and visited the antiquities of Athens. He has been nominated an honorary citizen of the city of Athens.

Commander Budissawlevitch, Serbian Delegate attending the Peace Conference in Paris, has arrived in London for the purpose of studying naval matters.

Mr. A. T. Holme is to officiate as Agent in Rajputana, in place of Lieut.-Colonel J. Manners-Smith, who is proceeding home on leave preparatory to retirement.

Mr. A. N. L. Cater, I.C.S., lately first assistant to the Resident, Hyderabad, has arrived at Simla and taken over the appointment of Deputy Secretary, Foreign Department.

The marriage arranged between Major A. S. B. Roberts, I.A., Burma Commission, and Miss Nan Forbes, Oland's, Porlock, will take place at Luccombe, Somerset, on June 4.

Mr. W. Sutherland is to officiate as Postmaster-General of the United Provinces in place of Mr. L. Truninger, who has been granted one year and six months' leave, combined with furlough.

The engagement is announced, and the marriage will take place in August, between Henry Rupert Fiennes Sullivan, Royal Irish Rifles (retired), only son of Colonel R. E. Sullivan, Indian Army, and Mrs. Sullivan, and grandson of the late H E. Sullivan, C.S.I., Indian Civil Service, and Vera, younger daughter of the Rev. C. J. Percival, late Vicar of Nassington, Northamptonshire, and Mrs. Percival, Pivington House, Pluckley, Kent.

The King has granted to R. A. Wilson, M.B.C.M., permission to wear the Serbian Order of St. Sava, Class IV., in recognition of his services to the Serbian sick and wounded under the auspices of the Serbian Relief Fund.

Brigadier-General Lord Montagu of Beaulieu, Adviser on Mechanical Transport Services to the Government of India, will read a paper on "Aviation as Affecting India" at a meeting of the Royal Society of Arts on June 5.

On May 22 the King inspected a party of Indian officers, non-commissioned officers, and men belonging to Divisional Ammunition Columns, Royal Horse Artillery, under the command of Capt. H. C. Clogstoun, Indian Labour Corps, who are on short leave from France.

The engagement is announced, and the marriage will shortly take place, of Geoffrey Dawson, of Langcliffe Hall, Settle, eldest son of the late George Robinson, of Skipton-in-Craven, and Cecilia, younger daughter of Sir Arthur and Lady Lawley, of 9, Seymour Street, W.

The engagement is announced between Brevet-Major James Mance Whittall, 6th Gurkha Rifles, elder son of James Whittall, Esq., Montagu Mansions, London, and Marion Bessie, second daughter of Capt. C. O. Liddell, J.P., and Mrs. Liddell, of Shirenewton Hall, Chepstow.

The engagement is announced between Capt. Lionel D. W. Hearsey, M.C., 2nd Bengal Lancers, son of the late Mr. and Mrs. L. D. Hearsey, Kheri, Oudh, India, and Dorothy Maud, younger daughter of the late Mr. E. Herbert Nicholl and Mrs. Nicholl, of Holmbury, Upper Avenue, Eastbourne, Sussex.

The marriage arranged between Lieutenant J. C. Powell, M.C., R.A., only son of Mr. J. C. Powell, Amballa Cantonment, Punjab, India, and Violet Eileen, second daughter of Mr. and Mrs. Richard Anning, Temple Dinsley, Branksome Park, Bournemouth, will take place at St. George's, Hanover Square, on June 25.

The marriage was celebrated on May 7, at the British Consulate, and afterwards at All Saints' Church, Cairo, between Lieut.-Commander Walter Jeremy Bright-Barton, Royal Navy, and Caroline Louise Hine-Moa, youngest daughter of the late Thomas Bowman Whytehead, J.P., of Acomb House, Acomb, Yorkshire.

A marriage is arranged, and will shortly take place, between Capt. Reginald F. Atkins, 67th Punjabis, third son of the late Colonel Robert Atkins, 15th Bengal Lancers, and Mrs. Atkins, 10, Florence Road, Southsea, and Flora Jean Evans, youngest daughter of Stephen W. Evans, J.P., and Mrs. Evans, of March Hill, Bagshot.

A marriage has been arranged, and will shortly take place, between Capt. (Acting Major) M. D. Vigors, D.S.O., M.C., Croix de Guerre, 9th Hodson's Horse, Indian Army, only son of Mr. and Mrs. Vigors, of Gowran Castle, Co. Kilkenny, and Daphne Stuart, second daughter of Mr. and Mrs. James Wilson, of Hockley Lodge, Co. Armagh.

The marriage was celebrated on May 23, by special licence, at Bywell St. Peter's, Northumberland, by the Rev. W. M. Potts, between Donald Stuart, I.C.S., Lieut. I.A.R.O., son of Mr. and Mrs. Fraser, of 331, Norwood Road, Herne Hill, S.E., and Kathleen, eldest daughter of Mr. and Mrs. Joseph Brown, of Stocksfield, Northumberland.

An engagement is announced between Capt. J. A. Denny, Grenadier Guards, A.D.C. to H.E. the Viceroy of India, only son of Mr. and Mrs. Frederick A. Denny, of Horwood House, Bucks, and 73, Grosvenor Street, W., and Eileen, third daughter of Mr. and Mrs. Meyrick Selby-Lowndes, of Bucks House, Netley, Hants, and Mursley Grange, Bucks.

The marriage was celebrated on May 26, at St. Anne's Church, Bagshot, by the Rev. A. H. Ford, between Capt. Reginald F. Atkins, 67th Punjabis, third son of the late Colonel Robert Atkins, 15th Bengal Lancers, and Mrs. Atkins, Southsea, and Flora Jeannie, youngest daughter of Stephen W. Evans, J.P., and Mrs. Evans, of March Hill, Bagshot.

The engagement is announced of Major Steele Haughton, Indian Medical Service, son of Samuel Haughton (late Ceylon Civil Service) and Mrs. Haughton, of 17, Clyde Road, Dublin, and grandson of the late Professor Samuel Haughton, F.T.C.D., to Marjorie Winifred Porter, eldest daughter of Mr. and Mrs. Everard Porter, of The Manor House, Haddenham, Cambs. The marriage will take place in London on June 20.

The marriage was celebrated on May 19, at Holy Trinity Church, Karachi, India, by the Rev. C. Hemming, Chaplain of Karachi, between Capt. Eric James Shearer, M.C., 31st D.C.O. Lancers and General Staff, Mesopotamia, younger son of the late Brevet-Colonel Johnston Shearer, C.B., D.S.O., I.M.S., and Mrs. Shearer, and Phyllis Muriel, elder daughter of Horace Charles Mules, C.S.I., M.V.O., O.B.E., and Mrs. Mules.

Digitized by Google

Queen Marie of Roumania expects to visit the United States in the coming autumn.

Monsignor Camassei, the Patriarch of Jerusalem, has arrived in Rome, and is expected to be created a Cardinal at the next Consistory (says the *Morning Post* correspondent there).

On May 29—the birthday of the Shah of Persia—by command of the King, the Marshal of Ceremonies called on the Persian Minister and conveyed his Majesty's congratulations and good wishes.

The marriage was celebrated on May 28, at Valetta, Malta, between Paymaster-Lieutenant E. A. Crook R.N.R., of Huddersfield, and Mary, daughter of Colonel John Lancaster, I.M.S. (retired), and Mrs. Lancaster.

The wedding of Brevet-Major E. R. P. Berryman, D.S.O., 39th Garhwal Rifles, third son of the late Rev. C. P. Berryman and Mrs. Berryman, of Delaford, Guildford, and Nell, fourth daughter of Mr. and Mrs. John Fielding, of Broadsground, Upton-St. Leonards, near Gloucester, will take place at Upton-St. Leonards on June 10 at half-past twelve o'clock.

APPOINTMENTS, PROMOTIONS, &c.

Capt. Jovan K. Tanovitch, formerly director of the Serbian Press Bureau in London and Paris, has been appointed editor of the Belgrade newspaper *Politika*.

Lieut.-Colonel T. A. Hiam, R.E., has been appointed Military Director of the Anatolian-Baghdad Railway at Constantinople. Prior to the war he was in the service of the Canadian Northern Railway.

OBITUARY.

The death occurred on May 25 of Henry Wood Payne, late of Bombay, in his eighty-fifth year.

The death occurred on May 25 of Lieut.-Colonel Arthur Wilbraham Twining Radcliffe, late XIV. Sikhs, aged sixty-five, son of late Capt. Charles Wilbraham Radcliffe, 7th Bengal Cavalry.

Lieut.-Colonel Thomas James Bailey, late of the Indian Army, has died at Waterford, in his seventy-sixth year. He served in the Afghan War of 1878-80, the Zhob Valley Expedition of 1884, and the Burmese Expedition of 1886-7. He retired in 1892.

Lieut.-Colonel Cuthbert Montagu, late of the Suffolk Regiment, died on May 23 from heart failure at the age of fifty-three. He had his first commission in 1884, and took part in the Hazara Expedition of 1888, for which he had the medal with clasp.

NEWS IN BRIEF.

The offices of the Roumanian Legation in Paris have been burgled, but no diplomatic documents have been stolen.

Twenty thousand pounds have been sent to the American Yugo-slav Relief Fund by the United States Steel Corporation.

The Times reports that Enver Pasha, formerly Turkish Minister of War, has been discovered among the Tartars of Transcaucasia.

A larger share in the Government, in so far as is consistent with Imperial interests, is to be granted to residents in the Crown Colony of Malta.

At Resht, on the Caspian, where the tribes in the adjacent jungle looted the British Consulate and the Bank of Persia, the situation is still unsettled.

On May 21 a deputation representing three million unredeemed Greeks in Turkey waited on Admiral Beatty at the British Embassy, Athens.

An Abyssinian Mission, composed of high dignitaries, arrived at Rome on May 27, and was welcomed at the station by a representative of the Ministry of Foreign Affairs.

The Berne correspondent of *The Times* states that the first Swiss relief train, containing 700 tons of general goods, left Buchs on May 18 with a large military escort for Roumania.

American hospitals are sending fully-equipped hospital units to Palestine and Serbia, each mobile hospital consisting of forty to sixty motor-ambulances, with drivers, doctors, nurses, and others.

The National Council has forwarded to the Serbo-Croat-Slovene Delegation a declaration on behalf of 58,000 inhabitants of the town and district of Sebenico of their desire to cling to the union of the kingdom of the Serbs, Croats, and Slovenes.

Greek and Egyptian antiquities collected by the late Sir Hermann Weber, F.R.C.P., and other properties were sold on May 22 at Sotheby's. A Panathenaic amphora, black-figure period, 15 ins. high, found at Rhodes, sold for £170, and a Greek black-figure Kylix, 7¼ ins. diameter, 600-500 B.C., with a combat between Greek warriors, £175.

Since May 7 a new 1½ anna stamp has been on sale at all post offices in India. Its colour is a deep chocolate, and, like the ½ anna stamp, it bears the design of the King's head. The Post Office is issuing booklets containing sixteen stamps for sale at Rs.1.8 each.

Mr. Montagu states that operations on or beyond the Indian frontier, which, if they had occurred before 1914, would have been held eligible for the Indian General Service Medal, will be eligible for any medals that may be awarded for active service during the war.

A red-figured amphora, 16½ ins. high, Attic, about 480 B.C., was sold for £850 to Mr. Permain on May 23, at Sotheby's, among a series of Greek antiquities. The same buyer paid £260 for a black-figured hydria, 12½ ins. high, Attic, middle of the sixth century B.C.

The Lieutenant-Governor of Burma has directed the placing at the disposal of each commissioner of a division, with effect from April 1, of an annual discretionary grant of Rs.2,000 for expenditure in connection with deeds of special merit for services rendered to the State or conspicuous public aid to the police and other special work done.

KORITZA.

Koritza has figured so largely in writings on the Near East that a recent letter to *The Times* by Captain H. S. Spencer, late Political Officer, British Adriatic Mission, may be of interest. He says:—

"Having been in Koritza for a longer period than any one else in British service, may I be permitted to state that, outside the household of the Greek Bishop, I was able to find only one Greek family there? The inhabitants were Albanian by blood and language, while all the young men, both Orthodox and Moslem, were ardent—even militant—Nationalists. While I was there 1,500 of them, all Christians, had formed a regiment under Themisticles Grameni, a prominent Christian merchant, to fight against the regiment from Crete, which had advanced by orders of the Greek Government to occupy the district."

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

FRIDAY, MAY 30, 1919.

GREECE AFTER THE WAR.

It would be difficult to point to a single country in the world—there is certainly none in Europe—that can view the immediate future with entire complacency. Greece is no exception to the rule. The problems that are awaiting solution are accumulating in number and complexity. Her great asset, that she can claim for her own one of the foremost statesmen of the day, is at the same time a disadvantage, in so far as the Greek people and the politicians have come to look to him not only to rescue them out of all their troubles, but also as the sole source of energy and statesmanship. In justice to M. Venizelos's colleagues it must be admitted that there has been a tendency in every State more or less to mark time during the Paris Conference and to avoid all major commitments until the terms of peace are known. The Greeks, not without some justification, may have considered that in their case the necessity for such a policy was overwhelming. Apart from the absence of M. Venizelos, there has been complete uncertainty as to the extent of the additional territory that may accrue to Greece from the victory of the Entente, and, despite the respect that may be felt for the League of Nations, all the people of the Near East have been far too accustomed in the past to battle, murder, and unrest as the normal character of international relations to believe in the possibility of the immediate translation of this part of the world into the middle of the millennium. They can hardly be blamed for the scepticism in view of the circumstance that the latter stages of the Peace Conference witnessed no little military activity on the part of Italy in districts which the bulk of the Italian nation would have some difficulty in locating on a map, and, further, that on the eve of the declaration of the peace terms, as far as they affected the Eastern Mediterranean, the Greeks themselves had to carry out movements of substantial bodies of troops with the acquiescence, if not at the instance, of the Allied Powers. Until, therefore, a limit can be set to its military programme, the Greek Government may claim some indulgence for treading warily in the domain of national politics. Here indeed is the crucial factor in any settlement of the Near East. The first essential is the inviolability of the terms that may be imposed, and the acid test of Allied statesmanship will consist in its capacity to adjust the inevitable compromise between conflicting claims to its resources for maintaining peace. For let there be no mistake, a peace that is left entirely to the devices of Greek, Serbian, Bulgarian, and Turk is going to be no peace at all. One and all must feel that the maintenance of peace between the different peoples, whether as nations, communities, or individuals, now rests in much stronger hands than their own, and that the least breach will be visited with far more effectual punishment for all concerned than mere localised reprisals. The experience of all these States in the matter of brigandage will enable them to appreciate the wisdom of such action. Until the villagers were made to realise that it did not pay to connive at lawlessness in their neighbourhood, brigandage remained rife, however dire the penalties imposed on individual brigands when caught. Similarly, until each nation understands that it will suffer corporately and severely for the least disturbance of the peace or for the violation of the sanctity of personal liberty and security, the settlement evolved in Paris will have no permanency.

The first to benefit from such a penal code would be the more peacefully inclined among the States in question: for so long as a Government can plead international preoccupations or can cover its shortcomings in domestic politics by an effective appeal to national animosities it has a plausible excuse for glossing over or neglecting the major interests of the country. Greece without doubt would have reason to be grateful for the guarantee of several decades of uninterrupted peace, and, in spite of the fervour with which national claims are upheld, the intelligence of the nation as a whole is equal to placing more store on the opportunity for peaceful development than on any considerable accession of territory before the administrative capacity of the country is sufficient to bear the additional burden. Chief among the problems with which M. Venizelos will be confronted on his return are the labour question and the general political situation. With regard to the latter it is difficult, as far as can be gathered from information that reaches the outside world from Greece, to speak with any degree of certainty. If in a country of such established political traditions as Great Britain the pendulum can start swinging so soon after the seemingly most convincing of general elections, it need not be a matter for surprise that in Greece, where politics are essentially of the personal type, the long absence of M. Venizelos should prompt the wiseacres to discover a slackening of his wonderful hold upon the people. But until the Prime Minister does return to Greece and has had time to devote his whole attention once more to internal affairs, it is impossible to say whether such a slackening is imaginary or to what extent, if any, it may prove embarrassing to M. Venizelos. It is equally impossible to anyone outside Greece, and probably difficult for the Greeks themselves, to determine whether the unfortunate events of the past few years have left any deep-seated and lasting cleavage in the nation. No doubt the political vocabulary still includes the words Venizelist, Anti-Venizelist, and Royalist, but whether they represent three parties or two parties, and what may be their respective strengths, only the future can tell. The friends of Greece—the term includes the people of Great Britain as a whole—will hope to find that the result of the war and the conditions of peace, in so far as they affect the Hellenic race, have convinced all sections of Greek thought that the wisdom of M. Venizelos's policy has been so proved beyond all challenge that there can be no justification for a condition of things approximating that of a nation divided against itself. The only possibility of any permanent bitterness remaining—and we prefer to think that it is remote—would be due to those whose policy has been conclusively discredited having been given occasion to brood over treatment which has no judicial sanction.

In the handling of Greece's economic problems the need for a high order of statesmanship is no less paramount. The attitude of labour is essentially a cause for anxiety, the more so, as up to the present the guiding principle has appeared to be in the main a desire to imitate what is understood from telegraphic summaries to be the labour attitude elsewhere rather than to approach the local aspect of the question from a logical point of view. Until the Greek Labour party, or trades unions, do this they cannot hope to arouse much sympathy. No one will contend that labour conditions and the position of the individual labourer in Greece were ideal, but behind the claims for higher wages should be a knowledge of and a recognisable desire for better conditions of life, together with a willingness to make out a more or less convincing case. So far it appears to be generally held in Greece that Greek labour has not "played the game" in any of these points; but the whole question is one that must inevitably engage the serious attention of M. Venizelos on his return, and until it has been examined from a broad point of view by both sides there is little prospect of any real improvement in the situation. Greece has reached an important stage in her economic development. A considerable amount of money has been acquired during the war, the country is ripe for an expansion of its industries, and the moment is most favourable for strengthening and widening Greece's commercial position in the Eastern Mediterranean. Future prospects, however, will be seriously overclouded if labour conditions are allowed to interfere with the normal movement of Greek trade and earn Greece a bad name abroad. At the same time those prospects depend in no small measure on the statecraft of Greek Governments. Neighbouring countries will also be anxious to make up leeway and not to be left behind in the intensified struggle for existence. Greece—it seems almost certain—will

Digitized by Google

have two flourishing ports, Smyrna and Salonika, that have benefited in the past from their trade with a hinterland which has been under the same jurisdiction or has had no other outlet. Both these towns must suffer materially if for one reason or another that trade is entirely deflected to other ports. The point is not an unimportant one for Greece as a whole, and must sooner or later set long-sighted politicians and the *intelligenzia* of the country thinking whether a blind adherence to traditional animosities or a fresh orientation of Greek policy in the light of possible economic developments in the Near East will be the better policy.

MR. MONTAGU ON INDIA.

The occasion of Mr. Montagu's speech last week was currently described as the Indian Budget debate, but let us say at once that the current description is a misnomer; practically, nothing was said about the Budget, and the taxpayers of this country were not even invited to admire, or envy, the solidity of India's finances, a solidity which at the moment is equalled by very few of the great nations of the world. Judging by the ordinary reports, the word debate is scarcely less misleading, for, though the allotted time was occupied, the unofficial speeches have not been considered worthy of reproduction, and, in the estimation of the public, Mr. Montagu held the stage alone, a position which was perhaps not altogether uncongenial. It is pleasant to be able to record that, on the whole, he filled it worthily; some passages of his speech, indeed, show traces of qualities which a few years ago made him so intensely unpopular in Indian administrative circles; but when we read it as a whole, we find a broader, and perhaps a saner, view, and a greater readiness to recognise those hard facts which eager politicians prefer to keep as far as possible in the background. In a word, there was more of India, and less of Mr. Montagu, than we can recall in any of the speaker's previous efforts, and we are not disposed to quarrel seriously with his presentment of the existing situation.

In what light then did he exhibit the vast interests committed to his charge? Externally, he showed us a nation ranking only below the very greatest Powers, and taking an important part in the necessary reorganisation of a disordered world. That picture at least is true: India has been granted a position which a very few years ago would have been deemed incredible, but it is a position which demands from her serious and prolonged effort if she is to rise to the level of her new responsibilities, and at the present juncture we must concentrate our attention rather upon the internal condition of the country. Here the view is for the moment less attractive. We are shown a dense population, poor, ignorant, and excitable, including dangerous classes sufficiently numerous to necessitate the continuance of mild but unpopular repressive measures, and liable as a whole to be swept by sudden gusts of passion. We are told that the people are animated by "a passion for self-government," but we have the same speaker's authority for the statement that nine-tenths of them suffer from "placid, pathetic contentment" with things as they are, and we know that the truth lies somewhere between these extremes. Can such a population assert any moral claim to give laws to the rest of the world? So much at least is obvious, that India must set her own house in order before she can expect other nations to listen to her voice. On this point Mr. Montagu has no illusions, and he now recognises that, while economic and political reforms are urgently required, the maintenance of the Rule of Law must stand first on the programme; "we intend," he said, "to maintain order in India, and to safeguard it, because we believe that it is the only atmosphere in which nationality can grow uninterruptedly, surely, and swiftly"; and, while the reason offered may appear to some critics to be an inadequate statement of the case, the declaration of policy will be welcomed by all who have India's permanent interests at heart. The forces of disorder must indeed be steadily repressed, but at the same time measures must be taken to prevent their reinforcement by classes or sections suffering from real or fancied grievances, and from this point of view particular interest attaches to Mr. Montagu's observations on the state of Moslem feeling; Indian Moslems should at least recognise that they have had an energetic champion in Paris, and we trust that they will be influenced by the explicit statements regarding the Caliphate and the status of holy places and religious buildings, though until the terms of the Treaty are published there must always be room for suspicion, and also unfortunately for interested and malignant misrepresentation.

As regards the necessary economic changes, Mr. Montagu said less than we could have wished. He affirmed indeed the obvious need for scientific investigation into the widespread diseases which affect physical efficiency, and he undertook that the Industrial Commission should bear fruit; but he had nothing to say of the fundamental question of labour, which the Commission barely touched, or of those large and complex agrarian problems which lie so near the root of India's chronic poverty. On the political programme he was naturally more explicit, and he furnished a certain amount of information which came as news to most sections of the public in this country. It is noteworthy that he said much less of the franchise than of the division of functions, the two branches into which the subject falls; his attitude in this matter has indeed been read as a reflection of the current trend of political talk in India, which, as we said last week, is devoted chiefly to the question of immediate powers, but it is at least as probable that he said little of the franchise because at the moment there is little to say. Lord Southborough's Committee has discovered the beginnings of an electorate of sufficient numbers, but of very uncertain capacity, and further discussion can do little until experience shall show how the scheme actually works; the House of Commons at least is not in a position to criticise it in detail, and, if the underlying principles are accepted, the constituencies and electoral qualifications will probably emerge very much as originally designed. The actual controversy relates, as we indicated recently, to the particular method of marking off the functions to be discharged by the new popular authorities. Lord Chelmsford and Mr. Montagu devised for this purpose the arrangement which has come to be known as the Dyarchy. Most of the provincial governments dislike this arrangement, and some of them have formulated alternatives; the Government of India adhere to the Dyarchy, and the Home Government will embody it (with some amendments) in the Bill, but the alternatives will be placed before the Joint Committee, by whom the whole question will be thrashed out. We think it is matter for regret that Mr. Montagu was unable to publish the despatches on this subject before the debate took place, so that members could have grasped the arguments against the Dyarchy as formulated by some of the ablest and most experienced men in India, but the delay in publication will serve only to increase the burden of responsibility which the Committee will have to bear. That burden is undoubtedly great, but at the same time it should not be exaggerated: the ultimate questions of principle have in substance been settled, and the immediate problem is to devise, not a theoretic-

ally perfect administrative machine, but one which can be trusted to work for a limited period without serious risk of a breakdown. Dyarchy or no Dyarchy, the new authorities must be given enough work to make the change worth having, and arrangements must be made to define their powers in such doubtful cases as may arise. That is eminently work for practical men, and while it is possible that the growing opposition to the appointment of the Joint Committee may eventually prevail, for ourselves we would prefer to see the questions now at issue decided by such a body, rather than by an overworked Cabinet, or a department of which the Minister is already committed to one particular solution.

PRESS ON THE NEAR EAST.

Palestine, Great Britain, and the United States.

In its issue of May 24 *Palestine* sets out the political significance to Great Britain of a Jewish Palestine. Apart from the claims of justice, it says, the claims of interest are supremely important:—

The whole British Empire in the East hinges upon Palestine and the Suez Canal. A Jewish Palestine is the securest—we are inclined to say the only secure form—that hinge can take. All the agitation which has recently marked Egypt and the East is anti-British, and those who have directed this agitation are not likely in the future to change its character. Nor, on the other hand, is there any reasonable expectation that the agitation itself will disappear. No matter what progress is made with self-government, it will never be speedy enough to satisfy the minority which demands the entire abolition of Western and, in the first instance, British rule in the East. The masses of the population, who now and for many years to come will have no mature political understanding, will always be at the mercy of an agitation which appeals to religious passions. We do not say, and we do not believe, that this agitation need be a very serious military menace, but a political fabric cannot be built upon so unreliable a foundation. British policy must seek something more stable. That stability will be found in a Jewish Palestine, and in a Jewish Palestine only.

The article states that there are in America elements of possible opposition to Great Britain, but that if Britain acts upon her Declaration, American Jewry will not constitute one of these: rather it will be a very powerful supporter of England. The article concludes with a decided statement on the future of Anglo-American relations:—

Beyond dispute the devotion of American Jewry to Great Britain has been won by the Declaration. Beyond dispute that devotion would disappear if the Declaration were not fulfilled by Great Britain in the spirit and in the letter, and if the British Government did not use every endeavour towards the creation of a Jewish Palestine. Any action by the British Government which could be justly interpreted as wanting in fidelity or cordiality to the great Jewish ideal of a Jewish Palestine would be counted in America by American Jews as a breach of faith. It would convert American Jewry, the warmest friends of this country, into cold and sceptical critics. We are saying no more than the literal truth when we declare that on the British attitude towards a Jewish Palestine there depends the vast political issue of intimate association, distinguishable only in forms from an alliance, with America and conflict with America. We think it necessary to state this in terms too plain to be misunderstood, because it is the truth, and because no diplomatic drifting can escape from this central truth. The future of Anglo-American relations will be decided in Palestine.

Armenia and America.

In the May issue of *Asia*, the journal of the American Asiatic Association, Dr. E. G. Tabet, in an article "The Near East in Liquidation," summarises the probable futures of Turkey, Armenia, Syria, and so on. He is especially interesting on the proposed mandate to the United States for Armenia. He says:—

There is a moral element of obligation upon the United States to act for Armenia. Because the massacres have reduced the Armenian population to a minority in their own country, Armenia cannot stand alone. Her national development will be opposed, possibly prevented, by her enemies, or be subject to international exploitation. This does not mean that she will need an American army of protection. She already has a not insignificant nucleus for a national army, which may either remain such or be transformed into a gendarmerie. The need is that this force be under American command, with a few American gunboats to police the Black Sea coast. The fact that the new Armenia is under American protection would of itself be sufficient to remove all fear of encroachment by Turks and Kurds, especially if a firm hand is shown at the beginning. Turkey is now wise enough to know that the old days of plaguing the world with massacres and disorders in the security that international jealousy gave her are gone by. If the United States declines to act in Armenia, the international possibilities are significant. While France in all probability will be willing, if the United States accepts a mandatory for Armenia, to forgo her claims to territory allotted to her by the Anglo-French-Russian treaty of 1916, not included within the geographical boundaries of Northern Syria, she will naturally want to act herself in that area where she has predominant economic interests if the United States refuses. In the latter event, Britain and Italy will in all probability ask, in order to safeguard their interests against a preponderance of power in Asia Minor by their ally, that they, too, should share in a mandatory capacity over the rest of Armenian territory—that part assigned to Russia by the entente arrangement of 1916. Thus Armenia will stand to lose her separate national existence through the conflicting interests of the Powers. A United States mandatory for Armenia would solve this difficulty of international jealousy.

The Future of Turkey.

In the *Observer* of May 25 M. Philippe Millet, discussing the future of Turkey, says:—

Whatever the final solution may be, one general principle ought, however, to be enforced, which applies equally to all parts of the Near East, and which consists in respecting as much as possible the natural boundaries of each national group. The peoples we have to deal with in that part of the world are certainly far from being ripe for self-determination. The Turks themselves know it. Therefore, it is but fair and right that civilised nations should be called upon to help and educate each of them. But this does not mean that the Conference has the right to disregard the possibilities of the future and so to divide the map that when those Eastern peoples will come of age they will find themselves hopelessly cut up by some artificial boundaries. We should preserve the unity of Syria, of Mesopotamia, of Armenia just as much as that of Turkish Anatolia itself. Unless we do so, the new order of things may prove more fatal to the Near East than the old Turkish rule, which, at any rate, left the door open for all the conflicting national aspirations inside the Turkish Empire. It is to be hoped that selfish European interests will not prevent the settlement from being true to such a principle, however difficult it may be to define its application to each particular case.

BEGINNINGS OF MODERN GREECE.

At King's College, London, on May 26, Mr. John Mavrogordato commenced a series of lectures upon the history of modern Greece. His Excellency the Greek Minister presided, and opened the proceedings with a short address, in which he spoke of the ties of common interest, gratitude, and friendship that bound Greece to England.

Mr. Mavrogordato said that the force—the actual physical violence that drove the Turks out of the Morea—was in the klefts of Epirus, Thessaly, and Macedonia. These were largely brigands who defied all authority, Christian or Turkish, and partly bodies of Christian militia who had been recognised at some period by the Turkish authorities. It was extremely doubtful that these men had any Greek national consciousness before the outbreak of the revolution. Their patriotism was necessarily local. They were prepared to die for the traditional freedom of a native town or village, but did not concern themselves with the inherited traditions of the Hellenic race. They were conscious of being Christians, and in religious fanaticism were more than a match for their enemies. The direction and preparation of the revolution, without which it would have been no more than a series of disconnected and ineffectual explosions, lay with three classes of intellectuals. First were the Fanariots, who had accepted office under the Turkish Government, and who brought to the revolution political experience. Next were the merchants living in foreign cities, who had come in contact with the commercial and political movements of Europe; these gave money. Thirdly, and most important, were the educators. The greatest of these was Adamantios Koraes. Born at Smyrna in 1748, Koraes entered his father's house of business at Amsterdam as a young man, but afterwards studied medicine and settled in Paris, where he lived, surrounded by a circle of Hellenes and Phil-Hellenes. He produced a monumental series of editions of Greek classics and much other work tending to revive and develop the national spirit of his countrymen. He continually taught that the problems which faced the world were to be solved not by blindly imitating the ancients, but by applying principles which those ancients had discovered, but had never learned to apply for themselves. He thought the modern Greeks might succeed where their ancestors had failed, because they had certain advantages which might school them in toleration and capacity for co-operation. Of these the chief was education; he believed that education might teach them the political art of dwelling together in unity. Together with the benefits of scholastic education, Koraes coupled the use of the printing press. Another weapon to ensure the preservation of freedom was representative government. With education, representative government, ecclesiastical reform, tolerance, and goodwill, he believed that the Greeks might set an example to the rest of Europe.

Of the events which led to the intervention of England, France, and Russia, Mr. Mavrogordato said that the action of the Czar was not dictated by sympathy with Greek revolutionists, but by the fact that Russia was looking for an opportunity to extend its own rights of encroachment—encroachment spiritually in the Orthodox Church, and geographically in the provinces of Wallachia and Moldavia; while the other two Powers were chiefly anxious to avoid a European conflagration. Phil-Hellenic sentiment in England and France was strong enough for it to be necessary for the governments to conciliate it, but it was not strong enough to dictate policy. The three Powers became sponsors of Greek independence. At the time there was only one court in Europe that shared to the full the Phil-Hellenic sentiment of the democrats of that period. This was the court of Bavaria. Thus it was that, after the crown of the new kingdom had been offered to Saxony and Saxe-Coburg, and had been in both cases refused, it was offered to and accepted by Otho, the second son of King Louis of Bavaria. Otho landed in Greece in February, 1833.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The formation of an American Foreign Trade Corporation, with a capital of £4,000,000, for trade and commerce with the Near East is an event of considerable importance, for it indicates very clearly the intentions of America with regard to trade enterprise in that part of the world. The development is not one which will surprise anyone who realises how thoroughly the opportunities in the Near East are understood in the United States. The Near East is in many respects the best possible field for the individual trader, but there, as elsewhere, the scope for the large company is immense, and the formation of the American corporation is probably due to the view that for the adequate development of American interests there an organisation of this character was to be desired.

***

I understand that the Tobacco Products Corporation and some of the largest mercantile firms in America are behind the new enterprise, and that the preliminary organising work is already under way. The main base of the company in the Near East is to be at Constantinople, and it is proposed to have branch offices in Syria, Armenia, and the Black Sea territory. The function of these branch offices will be to distribute American goods, receiving in return local products, for the transport of which caravans and other facilities will be provided.

***

During the past year excellent progress was made by the Ionian Bank, the net profits amounting to £79,865, as against £72,884 for 1917. The dividend and bonus are again 7 per cent, but £35,000 is put to reserve, as against £10,000 in 1917, £9,000 is placed to the staff pension fund, as against £3,837, making this fund £29,000, and £11,008 is carried forward, as against £9,134.

***

The profits of the Oriental Telephone and Electric Company for the past year show a slight decrease at £100,300, compared with £110,400, this being due to the sale of the Egyptian undertaking to the Government and the consequent decrease in receipts by way of interest and dividends. The dividend is also lower at 10 per cent., free of tax, against 15 per cent., but here again it is only a superficial reduction, as the capital ranking for dividend is now larger owing to the share bonus last year. It only remains to add that £7,600 is placed to the reserve fund, compared with £25,000 for 1917, and the carry forward is now £11,500, as against £17,200.

***

Sir Charles McLeod, in advocating the exemption of Indian investments from the double income-tax before the Royal Commission on the income-tax, pointed out that this double taxation was bound to affect adversely the development of India's industries and natural resources, because her trade and commerce are largely financed by capital belonging to British subjects. This argument is incontrovertible, for Indians have still to be educated up to the point of providing capital to a sufficient extent for business undertakings. The War Loans have been of great educative value, but the leeway to be made up is very great, and as India's industrial development in the near future will in all probability still mainly depend on the provision of capital by individuals who will in the ordinary course of events be liable to the double tax, it follows that the point emphasised by Sir Charles has a very special incidence at the present time.

***

At a recent meeting of the Chambers of Commerce of the French zone of Morocco, a statement was made by the Director of the Public Works Services there as to the present position with regard to the construction of the works on the Tangier-Fez Railway. The line in the French zone is divided into eight sections for construction purposes, and of these he stated that work on three had already commenced, three other sections would shortly be put up for adjudication, and the two remaining sections would be constructed by private contract; and that by the end of the year work on all the sections would have commenced. The position with regard to the line in the Spanish zone is not so satisfactory, for the route to be adopted, it appears, has given rise to discussion, and instead of the direct line at first decided upon, the Government desires a deviation which would bring the line past Arzila. The effect of this change would be to add considerably to the expenditure involved.

***

It seems doubtful whether the extent to which Japan is entering into competition with India is generally realised. An illuminating example of this process was given by Mr. Wadia in the course of an address before the Bombay Millowners' Association recently. Owing to rebates, Japan was able, he stated, to buy Indian cotton, to spin it, and to deliver it in China on a competitive basis, with the result that there has been a serious falling off in the Indian exports of yarn to China. The trade had been informed, said Mr. Wadia, that the decrease was due to shortage of freight, but he asked how this could be so when Japan was able to export much more than her previous requirements of cotton.

***

The Indian market for motor vehicles is already fairly considerable, and the demand for motor cars of all kinds is bound to grow in the near future, a fact which makes it very desirable that British manufacturers of motor cars should make every effort to cater for the market's requirements. During the war considerable ground was lost by British exporters, and last year only 122 British motor cars were imported into India, as against 265 from America. British motor vehicles, however, are greatly preferred in India, so that the recovery of the position should not be a very difficult matter.

A circular has been issued by Mr. Herbert Allen, chairman of the Baku Russian Petroleum Company (1909), the Bibi Eibat Oil Company, the European Oilfields Corporation, and the Russian Petroleum Company, to the share and debenture holders in these companies, stating that negotiations are in progress for the formation of a company to take over and combine the undertakings of the companies in question, or alternatively of three of them. "Apart from the substantial economies which should result from unified control of the several properties, the directors are of the opinion," the circular continues, "that amalgamation would considerably strengthen the position of British oil interests at Baku, and facilitate the task of commercial 'reconstruction' with which these companies, in common with the local oil industry generally, will be confronted." It is pointed out that the negotiations are necessarily of an intricate and difficult character, and that in any event some time must elapse before they can be completed. The scheme contemplates the reduction of capitalisation, the elimination of debentures, the provision of working capital, and the purchase of plant and machinery in anticipation of the time when development and drilling operations can be resumed. Should the negotiations in question be brought to a successful conclusion full details will be furnished to share and debenture holders, and class meetings will eventually be called for the ratification of any provisional agreements which may be entered into.

***

Replying to the recent representations by the President of the Manchester Chamber of Commerce regarding cable delays to the Near and Far East, the Postmaster-General states that the present delays are caused partly by the large amount of Government traffic, and that "steps have been taken to secure the curtailment of such messages and to obviate commercial traffic being delayed in favour of Government telegrams which are not really urgent. Certain important cables of the Eastern Telegraph Company which were interrupted have lately been repaired, but the American Pacific Cable is unfortunately interrupted, and this throws additional work on British cables to the Far East. It is expected, however, that the cable will be repaired shortly, and that the position will then be improved. There is no wireless service between this country and India. There is, however, a wireless service to Egypt, which is used to relieve as far as possible the pressure on the Eastern Company's cables, though the relief thus afforded is at present small."

THE PORT OF BUSREH.

War Time Developments.

To those of us who have been out in Mesopotamia it seems surprising that people in England and elsewhere know so little about what the British Army out there has done. For, although I know that comparisons are odious, these "side-shows" of war have more to show for their labours than has the principal campaign against the Germans in France. I doubt whether even the Palestine campaign has so much constructive work to show as Mesopotamia. By the time that I got there miracles of transformation had been accomplished, and so fast was progress being made that on one occasion when I was three months away from Busreh, I felt like Rip Van Winkle on my return.

At the risk of being misleading I should explain, when writing of the Port of Busreh, that Busreh is not a port. A ship that desired to sail to Busreh should have a flat bottom of about three inches draft and long landing-boards, so that its occupants could escape the mud. Out there we seldom spoke of Busreh. Ashar—or 'Ashar as purists printed it—is the place where all the work is done. Busreh is a city some three miles up Ashar Creek, which flows into the Shatt-el-Arab (as the joint Tigris and Euphrates is called), about fifty miles north of the Persian Gulf. However, I have no desire to be superior, so we will accept the popular name of Busreh for the whole area. In point of fact, however, Ashar and Busreh are quite separate. A road (called "The Strand" since the British occupation) runs alongside the very muddy and evil-smelling Ashar Creek into Busreh proper. Busreh is, I should think, one of the most mis-spelt places on the globe. While there I saw official packages and letters addressed to Basra, Busreh, Basreh, and Bussorah.

Busreh was certainly an uninviting place from which to base a big campaign. Mesopotamia apparently always had a reputation as an inhospitable place. The Old Testament (24 Genesis, 10) tells us that when Abraham's servants went there, they made elaborate preparations before starting; and Judges (chapter 3, verse 8) tells us that when "the anger of the Lord was kindled against Israel," they were "sold into the hand of Chushan-rishathaim, King of Mesopotamia." So, apparently, Mesopotamia was even then a place of punishment. That is certainly how we regarded it.

It was long after the arrival of our troops there that any real attempt was made to develop Busreh as a port. In fact, as the Royal Commission found, many of the difficulties of our Army were caused by the hopeless conditions in which ships from India had to be unloaded. I heard many graphic accounts of how transport work was done in these early days. On the arrival of a ship, it would be boarded by representatives of all the different departments; each would rush for the bills of lading and struggle with its own stores in the various holds. The consequence was countless breakages, numerous losses, and universal muddle. There were no quays, so that all ships had to be unloaded in mid-stream into barges and "mahailas," as the Arab sailing-ship is called.

When I arrived there were wharves and jetties at Busreh, on both sides of Ashar Creek, and at intervals for three miles right up to Lower Margil, where vessels as large as the "Egra" and "Ekma" class of the B. I. Company could be berthed. There were more wharves at Upper Margil, where Messrs. Lynch had their pre-war establishment. The river at Busreh has sufficient depth at all states of the tides for all ships that can cross the bar at Fao, at the top of the Gulf. Just above Garmat Ali, the modern junction between the Euphrates and the Tigris, it was discovered while I was at Busreh that this deep water continued for some miles up the Tigris, so a new port was opened at Nar Umar, and proved invaluable as a relief to Margil, especially when the railway to Kurna and Amara was completed.

A large electric light plant was erected at Busreh early in the campaign, and telephones followed. The first difficulty in developing the Busreh area was the low level of the land; the banks were no protection against the periodical floods for which the Tigris is famous. The original depôts which lined the river were raised two and three feet by the most primitive methods. Teams of donkeys, loaded by Arab boys with soil, were used and accomplished wonders. Late in 1917 a wonderful dredger appeared which sucked the muddy water from the river and poured it on to the land; the water was allowed to flow back, and it was astonishing how quickly the mud raised the level of *terra firma*. Early in 1918 a big dry-dock was opened on the north side of Ashar Creek. This dock can accommodate B. I. steamers, and has now been taken over from the Government by the new company, formed in conjunction with the B. I.

The Government has not yet announced its policy with regard to land tenure. The reduction of the garrison in Mesopotamia will enable many hospitals, and, eventually, many depôts to close down. Two large hospitals, one British and one Indian, front the river on splendid sites between Busreh and Margil, and the firms that are fortunate enough to secure them should do well. But, of course, the Government will have to give up the inland sites first, and these will be of little commercial value for us. There should be great development on the left bank of the river. Save for comparatively few buildings at Tanooma, immediately opposite the mouth of Ashar Creek, the left bank has scarcely been touched, and there is very little interruption in the long line of desert and date palms on the left bank between Amara and Mohammerah. This side of the river was considered unsafe from the wilder elements among the Arabs during the war. But if further river-side accommodation is required, the left bank will have to be brought into use.

With the development of commerce and the settling down to peace conditions, will come the need for a residential quarter, on the lines of cantonments in India. The right bank of the river between Busreh and the fine Sheikh's palace at Beit Naama (used as a convalescent hospital during the war) would provide a fine site, but Ashar Creek would be an obstacle, as it cuts off this area from the busy district to the north of the Creek. I think that private bungalows will grow up mostly between the river and Makina, to the north-west of Ashar, near to where the Officers' Club stands. That institution, which was well planned on the lines of an Indian Club, will form a convenient and suitable centre for social life. In this neighbourhood, too, will probably be the Busreh Station on the Baghdad Railway. The lines are there, but certainly when I was at Busreh it was a puzzle to find the station. When the lines are continued south to Koweit, there will probably be considerable traffic, for by unloading at Koweit the transhipment at the bar can be avoided. But that is looking a good distance into the future.

C. W. M.

TRADE ENQUIRIES.

AN English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

CAIRO.—Active and energetic Agents of good standing, knowing the languages and customs of the countries, with good connections with the Sudan, Palestine and Syria, desire to represent British houses wishing to develop trade in those countries.—Address, SALAMA and FRANCO, P.O.B.843, Cairo, Egypt.

ROUMANIA.—S. N. Iancovici, Bucharest, Str. Academiei 6, desires to obtain English agencies. English correspondence. First-class references.

ROUMANIAN IMPORTS.

(From Our Own Correspondent.)

Bucharest, May 9.

Up to the end of March imports had been made to the value of 270 million lei. These goods have been placed on the market. A further 100 millions' worth of goods had at that time arrived in Roumanian ports. Further, up to April 9, the Roumanian "Commission d'Approvisionnement" in Paris had effected purchases for the State to the value of over 346 millions. Among these are not included flour, maize, meat, and fat imported from America. So that, excluding the latter, over 700 millions of goods have been purchased abroad. If we add probate orders effected on the basis of permits issued by the Ministry of Industry and Commerce, not yet arrived, the total amounts to about one milliard. Nine-tenths of this is represented by foodstuffs and manufactured goods, the remaining fraction by materials of first necessity. Foodstuffs and clothing suffice, it is said, for a period of six months. Most of these things have been bought on credit, which partly explains the momentary depreciation of the Roumanian leu. In the future, as a result of the exportation of petrol, salt, and wood, the value of the leu will, it is hoped, be considerably raised.

JAFFA CHAMBER OF COMMERCE.

(From Our Own Correspondent.)

Jaffa, May 10.

A Chamber of Commerce was instituted in Jaffa some months ago, and in order that it should gain a footing without delay it was established as a purely advisory body, with no executive power. In this capacity it has done useful work, and has justified its existence, if only as the foundation and forerunner of a Chamber of Commerce on broader lines. In order that the promotion of the Chamber of Commerce at Jaffa should be thoroughly representative of trade and commerce in the district, a general meeting of all shipping and insurance agents, fruit growers, wholesale merchants, bankers, importers and exporters, was held at the Jaffa Municipality on May 8, the chairman of the meeting being H.E. the Military Governor, Major Postlethwaite.

Having expressed a hope for a return to normal conditions at Jaffa, the Military Governor introduced to the meeting Captain Williamson, of the Chamber of Commerce. Captain Williamson showed what extremely good work the late Chamber of Commerce had done, especially in regard to buying wheat and selling it on its own account, by doing which it had much lessened the market price of that article. Also it was through the efforts of the late Chamber that the petroleum question was settled. As union was power, he had requested the introduction of new members and subscribers to the new Chamber.

The Mayor of Jaffa and Messrs. Rose, Tadros, and Gluskin emphasised the necessity of introducing new members to the new Chamber, so that it might be thoroughly representative and self-supporting. It was decided to hold the election meeting on May 15, and the meeting was accordingly adjourned to that date.

ANTHRACITE IN ALGERIA.

A Reuter message from Paris, dated May 20, states that an interesting report by M. Lallonie on the coalfields in the Province of Oran was yesterday laid before the Academy of Science. In it the author described his discovery of an important layer of anthracite at a considerable depth under the local sandstone grit. If it is possible to work this seam there is every prospect that in the future a successful mining industry will develop in Algeria.

DEMOBILISED BRITISH CAVALRY OFFICER (28), desires Employment in TURKEY—SMYRNA, CONSTANTINOPLE or Inland. Has had nine years' experience timber trade, home and abroad, and has a thorough working knowledge of woodworking and constructional machinery. Used to outdoor life—good horsemaster and used to the management of men.—Apply Box H.6, NEAR EAST, Devonshire Square, London, E.C.2.

TRADE OF THE SPANISH ZONE OF MOROCCO.

Exports From Tetuan.

In a review of the export trade of Tetuan the British Vice-Consul there points out that the most important export articles from Tetuan are hides and skins. These are divided into :—

(1) *Sheep Skins.*—The approximate weight of each skin with its wool, salted and dry, is from two to four kilos, and the quality of the wool generally soft. The majority of the consignments sold here come from the Gharb, and, when permitted by the authorities of the French Zone, they also come from the "coast" of Morocco—*i.e.*, the Atlantic side. Since the war the greater part of these skins has gone to Spain, being principally acquired by small leather dressers of Granada and Antequera. The quality is not held in much esteem owing to the careless way the skins are salted and dried in this market, which gives them a disagreeable appearance.

(2) *Hides (Cattle).*—Those weighing from 8-30 kilos each come almost entirely from the slaughter house of this town and are auctioned every day publicly and skin by skin. Those weighing from 2-8 kilos are nearly all bought in the Socos. The best quality is acquired in summer, as the hides are thicker at that time than in the winter, when they are also apt to be infested with parasites. They are exported fresh salted, with the salt removed, dry salted. The amount at present exported is very small, but, if a sure market were in view, it would be possible to collect annually about 20,000 skins. The principal importer is Spain.

(3) *Goat Skins.*—Exports from Tetuan are small in this line, as local merchants find it more convenient to sell to important firms in Tangier, which go in for the buying and export of skins on a large scale for France, Italy, and the United States, etc. The quantity which might be annually obtainable for export in this market is roughly 70,000 skins, and the quality, that usual in Morocco, weights running from 8-9 and even 10 kilogrammes per dozen, fresh salted.

Local leather dressers acquire a considerable quantity of every kind of skin or hide which appears in the market. Otherwise the quantity available for exportation would be much greater. Skins are exported in bundles, and the expenses of putting a bundle weighing 100 kilogrammes on board a vessel at Rio Martin are ptas. hassani 14.90. Cattle and sheep horns can be collected to the amount of 20,000 and 4,000 respectively per annum. The principal market for this article has been Marseilles.

Linseed.

Although but small quantities of this article are produced here in comparison with the French Zone, its quality is considerably better, and it has always commanded a higher price in the European market. The season for gathering it is in May, and it appears in the Tetuan market in June, continuing to come in in diminishing quantities up till the month of October. The amount which can be obtained here in a good year is from 800-1,000 sacks of 100 kilogrammes, while, in a middling year not more than 400 sacks can be counted on. The way in which the exporter acquires the linseed is by buying it in small quantities from the small merchants who have purchased it in the native country markets. It is bought before cleaning, which work is done by women who pass it through sieves, as no machinery exists here. The consequent loss in weight is about 4 per cent. The cost of getting a sack of 100 kilos ready and on board a ship at Rio Martin is ptas. hassani 13.05.

Before the war the greater part of the exports in this article went to Marseilles. Occasionally lots were sent to London, but this only occurred rarely, owing to freight rates, etc., being higher for that place than for Marseilles, apart from the delays occasioned by the lack of a direct service for England. Since the war, linseed has begun to go to Spain, which has taken the whole crop of this district, it having proved a convenient market since business can be effected easily owing to direct communications, even though the port of Ceuta has to be employed.

Almonds and Beeswax.

Almonds are collected in the months of July and August. The quality is better than that of the Riff almond, but the amount produced in the neighbourhood of Tetuan is so small that, as a rule, it is hardly enough for the needs of the town. Occasionally consignments come from the Riff, but that only happens when the owners have been unable to take them to Melilla, which is a more suitable outlet for them, as here an entrance duty of 10 per cent. has to be paid as well as an exportation duty on taking them out again. Plantations of almond trees have been made round the town of Tetuan and, when the district is pacified, it should be eventually possible to export a certain quantity. Cost of sack of 100 kilos f.o.b. Rio Martin, ptas. hassani, 15.70.

The beeswax exported from this town is mainly made on the spot and is absolutely pure, being considered to be the best in Morocco. The greatest amounts are collected during the months from January to June, and the amount which could be exported per annum would be from 200-250 sacks of 100 kilos, the price at present in Tetuan (March, 1919) being about 200 pesetas hassani the quintal of 51 kilos. Costs occasioned by a sack of 100 kilos f.o.b Rio Martin, 35.20 pesetas hassani. The markets for this product before the war were Hamburg, Genoa, and London principally. Since the war London has taken practically all. Latterly, however, some consignments have gone to Barcelona, part of which were in transit for Greece.

NEAR EAST MARKETS.

Crops in Asia Minor.

The following extracts are taken from the economic reports of the Imperial Ottoman Bank for the early part of the year :—

Rodosto.

The month of March has been chiefly marked by the even temperature alternating with some beneficial rains, thanks to which germination is proceeding under the best conditions. The agricultural situation of our district, therefore, presents for the moment a most favourable aspect. This exceptional temperature has been equally favourable to the cattle, and the production of wool is good. The arrivals of American flour on the Constantinople market have put a complete stoppage to the export of this commodity from our town. With the exception of some few imports of colonial produce, the market is rather quiet. The lack of the export of flour from our district has naturally stopped any activity in the local corn trade, which is only carried on for the limited needs of the district. The receipts from this enterprise, compared with those of the preceding months, are greatly reduced.

Broussa.

The abundant rains which fell during January have been a serious obstacle to the work of sowing, of which the progress has already been impeded by the lack of labour due to the war. However, it is to be hoped that, the weather being favourable, the harvest will be a good one.

The market has been quiet. Prices have been very steady all round, specially for silk, for which the last current price reached £T14.1/2 the kilo. Business is likewise stationary. Silk crêpe alone has become active again, and has reached Ps.28/30 per piece. Transactions in this article, which during the war was exported to Bulgaria, have completely ceased. The price has fallen to Ps.15.

The winter sowings which have not had to suffer from frosts this year are good. On the other hand, those of the summer, which are by far the most important at Broussa, have been hindered by the numerous rains which fell in February, and which have been a very serious obstacle to the work of sowing. The latter, which has equally had to suffer on account of lack of manual labour, animals and machinery, has only been about 40 per cent. that of the preceding year. Cultivators will find themselves obliged to replace their corn harvest by oats, barley, maize and sesame. With regard to mulberries, a large number of trees have been cut down for fuel. Those which remain, owing to lack of manual labour, have been totally neglected. The trees which have been pruned this year are valued at one-tenth of the total of mulberry trees before the war.

In regard to the industrial situation we can only repeat what we wrote in our last report. We are hoping that with the resumption of commercial operations the burnous and towel industry will, by reason of the arrival of English spun cotton, be able partially to recover its importance. This industry before the war consumed weekly 6,000-8,000 packets of cotton thread.

Denizli.

Despite the efforts displayed by the entire rural population and the favourable climatic conditions, the autumn sowings have not been on a large scale, and the area sown with corn, compared with that of the previous year, shows a deficit of about 30 per cent., which may be accounted for, principally, by lack of labour. Thus, owing to the lack of male population in several villages, practically all the work in the fields was done by the women. Although the temperature during January has been very favourable to sowings, it would be premature to predict the yield of the next harvests.

Owing to the interruption of communications between Denizli and Condjeli export activity recently suffered a stoppage. The line was only opened up again towards the end of January, and the stock of flour and cereals stored in the sheds of the Aidin Ottoman Railway Company was then able to be shipped in part to Smyrna. The price of colonial produce remaining steady at Smyrna considerable quantities of cereals arrive from the interior by camel, and are warehoused here in order to be loaded at the earliest opportunity. Nevertheless the lack of coal and rolling stock preventing the Aidin Company from putting the necessary wagons at the disposal of the exporters, these arrivals very often remain in the sheds of the Company for some months. The purchases of cereals are ruled by the Smyrna prices with a deviation of from 2 to 3 piastres per oke.

Smyrna.

The last cereal harvest has been about 40,000,000 okes. That of raisins and figs may be valued at 6,600,000 okes. The stock of these two products of the preceding year is 4,400,000 okes. The sowings have suffered on account of the unfavourable atmospheric conditions. Unless more advantage is taken of conditions, which have been very favourable for agriculture, it is already evident that in general the yield will be 30 per cent. less than the preceding harvest. The rural population has appreciably diminished owing to the war. A large number of vineyards at Vourla, Cesmé, etc., have been completely destroyed. Imports from the interior have been insignificant through lack of communication. The stock of carpets in Smyrna is valued at about £T2,000,000.

The only industry which is now active is the corn trade. All other big industrial enterprises are now practically at a standstill owing to lack of coal, and have not published reports since the beginning of the war.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in April :—

Cotton.—The weather has been rather cold, windy, and changeable. Water supply generally sufficient, except in Beheira. Attacks of cut-worm, mole-cricket, and soreshin, are reported from most provinces, the latter being responsible for a good deal of resowing in parts of Sharqîya. Watering, resowing, thinning, and hoeing are being actively carried on. The plants seem healthy in nearly all provinces, except in Beheira and Faiyûm where sowing has been later than usual.

Wheat.—The weather has been generally favourable, though somewhat changeable. Water supply has been everywhere sufficient. Attacks of rust and smut are reported from all provinces, but they are generally slight, except in Beheira and Sharqîya, where the hindi crop suffers from the former disease to a large extent. Harvesting of the early-sown crop began towards the middle of April in Upper Egypt, and the end of the month elsewhere.

ENGINEERING NOTES.

A New Combustion Engine.

Particulars of the new internal combustion engine were disclosed this week at the Royal Society of Arts in a paper read by Captain Frank E. Acland. It is the invention of a British engineer, and it is believed that it will have very far-reaching effects on the future of industry. Its effects will undoubtedly be very appreciable in the East, where the question of fuel as a medium of motive power is a matter of vital importance to the establishment and successful development of any industry. For it appears that the new engine combines all the advantages of steam and internal combustion with the elasticity of the former and a higher fuel economy than the latter. Searching tests of the engine were made by various Governments and by scientists, and it was proved to use 25 per cent. less fuel per horse-power than any other engine yet constructed. The system has already been applied in practice to engines of small and large power using gas, petrol, or heavy oil. Engines have been constructed giving up to 500 h.p. per cylinder during the war, each engine being capable of using in its main working cylinder any form of liquid or gaseous fuel hitherto employed.

No Waste of Heat.

It makes use of the recoverable heat which passed through the surfaces of the combustion cylinder, as well as into the exhaust gases, for the evaporation of steam, which steam is expanded in the combustion cylinder itself on one side of the main piston, the combustion stroke acting on the other side. It increases thus the power of the engine, and reduces the consumption of the fuel per horse-power developed. Its primary object is not to use the waste heat for raising steam, but first to use it in improving the thermal conditions of the working cylinder, and so ensure the maximum efficiency from the fuel burnt within it, diminishing as a consequence the heat lost in that operation. One of the disadvantages of the internal combustion engine is that it cannot start itself without some external source of power, and it also cannot develop its full power except at full speed. The inventor of the new engine has solved the problem of making his internal combustion engine a "self-starter." The possibility of combining in one engine the superior thermal cycle at the high temperatures and pressures of the combustion engine with the low thermal cycle of steam to deal with its rejected heat, and to add in the same engine the superior working advantages of the steam engine, was the basis of his work.

Cheaper Than Electricity.

Sir Charles Parsons, who presided at the meeting, said that all noticed the loss of steam from the radiators of motor cars and buses. Engineers had been forced to think about the serious waste of energy, and the inventor of the new engine succeeded in utilising a greater part of the steam which came from the radiator, and had also tackled another drawback, namely, its want of elasticity, especially in locomotives. In utilising the steam he had secured a reserve of power which was able to sustain a very large overload for a short time, and which rendered the internal combustion engine much more suitable for use in the propelling of ships. A number of well-known engineers and prominent scientists who were present at the meeting, expressed the view that when fully developed the new engine would probably nullify the British Government's scheme for universal electrification. Where under that scheme the cost would be about one penny per unit, with the use of the new engine the cost should work out at about one farthing per unit.

The above particulars should be of much interest to engineers, local governments, masters of industries, and users of motive power generally throughout the East, where, owing to the high price of coal and by preference, the utilisation of internal combustion engines for all purposes is constantly increasing.

American Engineering Activity.

In view of the great American activity in the Eastern markets, commercial circles there, according to an engineer writing from the Near East, are surprised at the "apparent apathy of British manufacturers who allow such activity to proceed unopposed." On the other hand, American engineer-representatives' views are highly optimistic regarding the prospects of a brisk and well-founded trade in the very near future. They see that the history of past conflicts points absolutely to a period of reconstruction, the extent and duration of the rebuilding being always proportionate to the losses brought about in the destruction. Damaged railways and canals, destroyed bridges, twisted steelwork, ruined roads, destroyed power stations, smashed and stolen plants of industrial and agricultural machinery, will all have to be replaced; and there the American manufacturers see great opportunities. In the meantime, official United States bulletins call attention to the opportunities for expansion in the trades necessary for supplying the raw materials for the engineering structures that it is hoped to send to Europe. It is also reported that great advantage is being taken of an Act passed last year, which authorises combines of American firms for the export trade, which previously were illegal under the Anti-Trust legislation. Thus, the Consolidated Steel Corporation, with a capital of £2,000,000, the Textile Alliance Export Corporation, and the American Coal Exporters Incorporated are amongst the combines already formed; whilst another combine with a joint capital of £4.000,000 has already sent a number of efficient representatives to the Near East and the Balkan States, who can speak the local languages, in order to prepare the ground and to make the necessary business arrangements in those markets. All these combines prove the determination of American manufacturers and others to develop their foreign trade in the East.

Oil Engines at High Altitudes.

Reference was made last week in these columns to the disputes that often occur between buyers and sellers in the East over the definition of Diesel and semi-Diesel engines. More serious disputes and disappointments, however, occur over the question of the power of an oil engine. It rarely occurs to the buyer of an oil engine to state to the manufacturers at what elevation above sea-level it is going to work. Generally speaking, the elevation is not very great, but every user should know that oil engines depend as much on their supply of oxygen for power as on their supply of oil, and if the oxygen is reduced the oil will not be completely burnt. A test with the dynamometer will show that the power is diminished. At 1,000 feet above sea-level there is less oxygen in a cubic foot of air than at a sea-level, and every additional thousand feet reduces the oxygen still more. For instance, at any town or station on a hill an oil engine would do less work than at a town or station by the sea, that is to say, a few feet above sea-level, and at a greater elevation the efficiency would be still more reduced. A six-horse power oil engine was sent up once to a village situated at an elevation of 9,000 feet, and was found to be quite unequal to its rated power. This caused much dissatisfaction until it was realised that the rarified air was the cause. One pound of air at sea-level in the Near East and at 62 degrees Fahrenheit would have a volume of 13.141 cubic feet. If raised to 9,000 feet it would expand to 21.1 cubic feet, and the amount of oxygen in each cubic foot would be reduced by 37.4 per cent. It was, therefore, no matter for surprise that the engine referred to did not give satisfaction. The only remedy in that case was either to get an engine of increased power that would use a greater air supply, or to supply air of the required density to the engine at work. A rotary pump delivering air at 4½ lb. pressure per square inch would bring it up to full power. The gas-engine using cheap wood refuse is likely to find favour in places where water-power is not available, but in every case due attention must be given to the subject of altitude and air density, otherwise loss of power will be the inevitable result.

TRANSPORT CONDITIONS IN YUGO-SLAVIA.

Reuter's Agency is informed that a message has been sent by the Serbian Ministry of Commerce and Industry on behalf of the Ministry of Communications, stating that "British business men and merchants can avail themselves of the port of Salonika for all articles to be sent to the south of Serbia and all the district up to Nish, as the railway line Salonika-Nish is free for traffic. The ports of Gravosa and Ragusa can be used only for smaller transport, especially those for Bosnia and Herzegovina, Dalmatia and Montenegro, and in emergency for Serbia and other parts of Yugoslavia, as Gravosa is connected with Brod by a narrow-gauge line, which is already used by military transport. The port is rather small, and not available for large transport."

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The recent upward movement of prices in the market has been followed by another decided advance, and to some extent business has been checked. It is held that the rise during the last week or two has been too swift for buyers to keep pace. Some reaction in raw cotton rates is now anticipated, but there is very little belief in lower values in manufactured articles in the near future. Mixed reports continue to be received relating to the progress of the Egyptian cotton crop. On the whole, however, the advices are encouraging. It is feared, however, that the marketing of supplies may be delayed. The larger demand in yarns made from Egyptian cotton has been well maintained, and some producers have sold freely at hardening rates. The inquiry in piece goods for Egypt has again been extensive. Some shippers have placed orders with manufacturers with considerable confidence, and it is quite evident that dealers abroad are determined to secure supplies, quite irrespective of price. Certain outlets of the Levant have been more active, there being freer operations for Constantinople. India has given rather less support, but trade continues to be done in light bleaching fabrics and grey staples for Bombay, Madras, and Karachi. Numerous manufacturers are now being enabled to consolidate their position, and in most kinds of goods the market is a difficult one for buyers to operate in. American yarns have been decidedly dearer on the week, with a healthy undercurrent of demand, especially for quick delivery. Cops for Holland and bundles for India continue in encouraging request.

INDIA AND DOUBLE INCOME TAX.

At the meeting on May 22 of the Royal Commission on Income-tax, under the Chairmanship of Lord Colwyn, at the Surveyors' Institution, evidence was given by Sir Charles Campbell McLeod (Chairman of the Imperial Commercial Association and of the East India section of the London Chamber of Commerce) on the subject of the imposition of double income-tax as it especially affects India. He stated that such double taxation reacted adversely upon the Indian Exchequer, and retarded the development of India's natural wealth and staple industries, because her trade and commerce were largely financed by capital belonging to British subjects, who are called upon to pay double income-tax in respect of their Indian interests. Income arising in India should be regarded, he said, as a preserve sacred to the Indian Exchequer. Where the income was that of a man who had worked in India, made his money there, and left it there for the purpose of his business, although he himself now resided in the United Kingdom, he suggested that in any case British income-tax should only be levied on such Indian income as was remitted to this country. He suggested further that there should be no British taxation levied on the profits of companies operating solely in India or the Dominions. The main object to be achieved, he submitted, was to avoid the taxpayer having to pay two income-taxes within the Empire, and that the distribution of any tax raised should be a question of negotiations between the Mother Country and the Dominions.

OVERSEAS TRADE.

In the House of Commons, on May 26, Lieutenant-Colonel Sir S. Hoare asked the Secretary of State for Foreign Affairs to state who were the members of the Committee appointed to determine the relations between the Consular and Diplomatic Services and the Department of Overseas Trade, and what were their terms of reference.

Mr. Cecil Harmsworth: The Committee appointed by the War Cabinet has the following terms of reference:—"To examine the question of Government machinery for dealing with trade and commerce." The following are the names of the members of the Committee:—Viscount Cave (chairman), Sir Horace C. Munro, K.C.B., Mr. F. Dudley Docker, C.B., and Mr. Kenneth Lee.

COMPANY NOTES & REPORTS

Ionian Bank.

The report of the Ionian Bank for 1918 states that the profits, after providing for expenses of management, losses, all bad and doubtful debts, depreciation of securities, bonus for staff, rates, taxes, income-tax, and excess profits duty, both in Greece and England, amount to £79,865; £9,134 was brought forward, making £88,999. Interim dividend at 3s. per share, free of income-tax, paid September 10 last, absorbed £14,567, leaving £74,432 The directors propose a final dividend for the year at 3s. per share, free of income-tax, £14,567, also a bonus for the year at 1s. per share, free of income-tax, £4,856, to transfer to reserve fund £35,000 (making £120,000), to staff pension fund £9,000 (making £30,000), and to carry forward £11,008. The dividend and bonus will be payable on and after June 5. The operations undertaken for the provisioning of Greece have been renewed by the consortium of Greek banks for the current year on behalf of the Greek Government. Meeting, Basildon House, Moorgate Street, E.C., 4th proximo, 11 a.m.

The "Financial Times."

The report of the Financial Times, Ltd., for the year 1918 states that the profits earned by the company amounted to £29,160, and adding £32,651, the amount brought into the accounts, gives a total of £61,810. Debenture interest for the year and directors' and managing director's remuneration have been paid, and the directors now recommend payment of the preference dividend for the past six months ended December 31, making with the interim dividend already paid for the first six months 5 per cent. for the year. The directors have pleasure in recommending the payment of a dividend on the ordinary shares for the year at the rate of 10 per cent., less income-tax. Adequate allowance has been made in writing off depreciation on plant and maintenance charges, and the necessary redemption of debenture stock has been effected. Messrs. G. E. Hart and H. A. Randall retire from the board in accordance with the articles of association, and, being eligible, offer themselves for re-election. Messrs. A. J. Davis and Co. offer themselves for re-election as auditors. Meeting, 72, Coleman Street, E.C., 3rd proximo, noon.

Oriental Telephone.

The report of the Oriental Telephone and Electric Company for the year ended December 31 last states that the gross earnings, including dividends and interest and contributions for fees from subsidiary companies, etc., amounted to £100,321, which added to excess profits duty (refund for 1917), £1,617, and £17,196 brought forward makes £119,133. Deducting working expenses, maintenance, etc. (£55,720), interim dividends, debenture interest and redemption charges (£22,806), and expenses incurred in connection with the increase of capital and the issue of bonus shares (£654), there remains £39,953. The directors recommend a final dividend of 3 per cent. (less income-tax) for the year on the preference shares and a final dividend of 6 per cent. (free of income-tax) on the ordinary shares, making 10 per cent. (free of income-tax) for the year; to transfer to general reserve account £7,587, to staff pension fund £2,000, and to carry forward £11,502. The Government embargo on the supply of telephone material, both here and in India, and the difficulties of shipment have in particular proved a serious obstacle to the expansion of the service during the year. Expenditure in connection with new stations and other deferred work is likely to be heavy for some time to come. The rates of subscriptions at Madras, Rangoon, and Moulmein have been slightly raised in order to counterbalance to some extent the abnormal cost of maintenance and working. The authorised capital of the company has been increased to £400,000 by the creation of a further 100,000 new ordinary shares of £1 each, and a sum of £107,587, forming part of the company's reserve fund, capitalised and applied to paying in full for 107,587 ordinary shares which were allotted to shareholders in proportion to their holdings. As notified in last year's report, the Government of Egypt purchased the undertaking of the Telephone Company of Egypt as from January 1, 1918. The liquidation of that company is now proceeding, and, it is hoped, will be finally completed at an early date. The company on November 20 last resolved that the sum of £1 6s. per ordinary share (being part of the surplus capital assets of the company, consequent upon the sale of the Egyptian undertaking) be distributed as capital among ordinary shareholders, and the distribution was accordingly made. The Indian local companies continue to show increased revenues, and dividends have been declared by both at the same rates as for 1917, namely, 16 per cent. by the Bombay Telephone Company, and 7 per cent. by the Bengal Telephone Company. The usual rate of dividend, namely, 10 per cent., free of income-tax, has, however, been maintained. Warrants will be posted 31st instant.

Calcutta Electric Supply.

The report of the Calcutta Electric Supply Corporation for 1918 states that 30,431,132 units of electrical energy were sold, compared with 26,596,827 units, and the number of houses connected at December 31 last was 9,897, compared with 9,741. Profits amount to £214,095, which, with the balance brought forward and interest received, makes £261,960. After deducting interim dividend of 3½ per cent. actual, paid on the ordinary shares in November, £54,429 placed to depreciation and renewals account, an estimated sum of £32,000 in respect of excess profits duty on account of 1917 and 1918, in addition to £15,000 reserved in last year's accounts, making £47,000 in all, and other charges, there remains £111,598. The directors recommend that £4,000 be added to reserve fund, £5,000 to insurance fund, £12,500 to pension fund, and a final dividend on the ordinary shares, for the second half-year, of 6½ per cent. actual, plus a bonus of 1 per cent., which will leave £56,324 to be carried forward, after providing for directors' additional remuneration of £3,000. The reserve for depreciation and renewals, with the addition of £2,291 from dividends on investments, is increased to £275,397, and the reserve fund, with the addition of £3,522, will stand at £142,225. Expenditure on capital account amounted to £30,856, the total outlay to December 31 last being £1,398,676.

Hutti (Nizam's) Gold.

The report of the Hutti (Nizam's) Gold Mines for 1918 states that 23,100 tons of quartz were crushed, while 24,210 tons of sands and slimes were treated, yielding a total of 11,502 oz. gold of a value of £45,376. Of this £37,599 was obtained from the mill and £7,777 from sands and slimes. There is a decrease in the ore crushed of 230 tons, and in the gold obtained of 1,964 oz., as compared with 1917. The fine gold per ton crushed is equivalent to 9 dwt., comparing with 12 dwt. Total expenditure was £48,054 and receipts £47,323, leaving a loss of £731. Outlay on capital account was £550 on the sinking of main shaft. The decrease in value is largely responsible for the loss incurred, but other causes have been the very high prices of supplies and the excessively high rate of exchange, this item amounting to £4,333, as against £1,226 for 1917.

COMPANY RESULTS, Etc.

The directors of the Darjeeling Company have declared a dividend of 7 per cent., less income-tax. Warrants will be posted on 2nd proximo.

The directors of the Chargola Tea Association propose to pay a final dividend of 15 per cent., less income-tax on the ordinary shares, making 20 per cent. for the year ended November 30 last.

The report of the Hanipha (Ceylon) Tea and Rubber Company for 1918 states that balance at profit and loss, including £5,173 brought forward, is £10,203. The directors propose a final dividend of 7½ per cent. (less income-tax), making 10 per cent. for the year: to add to reserve for coolie advances £1,000, and to carry forward (including provision for income-tax and excess profits duty) £3,203.

The report of the Grand Central (Ceylon) Rubber Estates for 1918 states that the profit amounted to £106,325; £8,575 has been written off for depreciation of buildings and machinery, leaving £97,750, which with £176,781 brought forward, less excess profits duty to December 31, 1917, £95,541, makes

Digitized by Google

available £178,990. The directors recommend a dividend of 9 per cent., less tax, which will absorb £110,250, leaving to be carried forward £68,740. This amount makes provision for the estimated excess profits duty for the year.

The report of Telbedde Ceylon Estates for 1918 states that the receipts from the sale of produce were £29,542. Expenditure in Ceylon and London, including mortgage interest, directors' fees, London charges, income-tax, etc., less transfer fees, was £25,482, profit being £4,061; £3,993 was brought in, giving £8,054. The directors have transferred to reserve account £1,000, and propose to pay a final dividend of 13 per cent. on the ordinary shares, making 20 per cent. for the year, less income-tax, carrying forward £1,254.

The report of the Talawakelle Estates Company for the year ended December 31, 1918, states that the balance at credit of profit and loss account is £8,094. The directors recommend a dividend of 12 per cent., less tax, on the Ordinary shares, making 17 per cent., leaving to be carried forward £4,925.

The report of South Wanarajah Tea Estates for 1918 states that the profit, after writing off £500 for depreciation and £400 against coast advances, is £6,217; £2,038 was brought in, making £8,255. The directors recommend a final dividend of 8 per cent. on the Ordinary shares, making 12 per cent. for the year, and to carry forward £1,055.

The report of the Ellawatte Ceylon Tea Estates for 1918 shows a profit for the year of £1,259; add balance brought forward, £1,503; less dividend paid on Six per Cent. Preference shares, less income-tax (£600), and interim dividend on Ordinary shares of 5 per cent., less income-tax (£750), leaving a balance of £1,412, out of which it is proposed to pay a final dividend of 4 per cent. on the Ordinary shares, making 7 per cent. for the year, less income-tax (£1,000), and to carry forward £412.

The report of the Ouvah Ceylon Estates for 1918 shows a profit for the year of £19,108. Add balance brought forward £3,614, less interim dividend of 2½ per cent. (less income-tax) £4,000, transfer to reserve account £1,000, leaving a balance of £17,722, out of which it is proposed to pay a final dividend of 10 per cent., making 12½ per cent. for the year (less income-tax) £16,000, and to carry forward £1,722.

The report of the Spring Valley Ceylon Estates for 1918 shows a profit for the year of £15,714. Balance brought forward £8,184, less dividend paid on Six per Cent. Preference shares (less income-tax) £900 and interim dividend on Ordinary shares of 2½ per cent. (less income-tax), £2,000, leaving a balance of £20,998, out of which it is proposed to pay a final dividend of 17½ per cent. on the Ordinary shares, making 20 per cent. (less income-tax), £14,000, and to carry forward £6,998.

The Egyptian Markets, Ltd.—First 5 per cent. debenture coupons No. 41, falling due June 1, 1919, are payable at the Anglo-Egyptian Bank, Ltd., 27, Clements Lane, London, E.C.4, at the face value, and at the branch offices of the Anglo-Egyptian Bank, Ltd., at Cairo and Alexandria, at the current rate of exchange.

The directors of the Colombo Electric Tramways and Lighting Company announce that the profit for 1918 amounted to £40,965. It is proposed to place to general reserve and renewal fund £19,700, pay a dividend of 10 per cent., free of tax, and to carry forward £8,181.

Nagolle (Ceylon) Rubber and Tea.—Transfer books will be closed from June 2 to June 14 inclusive.

Calcutta Tramways.—Transfer books of the Ordinary shares will be closed from May 30 to June 16 inclusive.

The report of Doranakande Rubber Estates to December 31 last states that profit and loss, after deduction of depreciation and income-tax, shows a credit balance of £1,587; £13,035 was brought in, making £14,622. It is proposed to pay a dividend of 8 per cent. and to carry forward £7,249.

PROPOSED FEZ-CAIRO RAILWAY.

A recent report from the British Consul-General at Tripoli, published in the *Board of Trade Journal*, states that a North African railway, about the 30th parallel, from Morocco to Egypt, across Algeria, Tunis and Libya, was discussed recently in the Tripoli official newspaper *La Nuova Italia*. A memorandum by an expert in colonial railway construction treats of the question of connecting Tripoli with the rest of North Africa—an enterprise which, in his opinion, cannot long be delayed. He points out that it is not a case of competing with the railway developments of other Powers, which tend inevitably towards the most complete and perfect railway communication, but rather of the co-ordination of the proposed lines in agreement with the interest of colonial expansion and penetration in the rest of Africa. Therefore the final scheme of colonial railway systems must not be limited to the construction of detached lines connecting the emporiums of the coast with the commercial centres of the interior.

The memorandum makes the important point that the function of the Trans-Sahara line must not be subsidiary to the Cape to Cairo line, but must be independent and complete in itself. The great trans-continental railways are latitudinal in direction, as the Trans-Siberian line and the trans-continental lines of North America, and it is in this way that the Trans-African railways will be successfully developed. In the case of the French railways—and the same holds good in the case of the Italian railways in North Africa because of Italy's geographical position—their development must be in two transverse directions and for West and East Africa the two following lines are proposed :—(1) The line of the Atlantic littoral from Tangier to Dakar (eventually to be extended to Conarkry), which would have no competitor and would be the shortest route from Europe to South America. (2) The line of the Mediterranean littoral from Fez to Cairo through Algeria, Tunis, and Tripoli, already in part existing in Algeria and Egypt, to link up Palestine and Mecca.

THE PERSIAN TRADE.

The minutes of the India Section of the Manchester Chamber of Commerce record a suggestion which has been received from a Government Department that the merchants engaged in the Persian trade in Manchester should be formed into one organisation for the purpose of considering matters interesting to them collectively. The India Section has, therefore, proposed that the Persian merchants in Manchester should form a sub-committee of their section, and that steps should be taken to arrange a meeting at an early date. It is possible that the sub-committee will also represent merchants engaged in trade with Mesopotamia.

A British Tractor Manufacturers' Association has been formed for developing and protecting the British tractor industry, and Mr. George Wood, of Elstow Works, Bedford, has been elected chairman for the first year.

The directors of the Burma Tramways have decided to pay on July 1, in addition to the guaranteed interest of £1 5s., an interim dividend of £2 5s. per cent.

ON 'CHANGE

(From Our Own Correspondent.)
Throgmorton Street, Thursday.

We have had a rather quiet market this week, with few changes in prices. Telegraphic communication with Egypt has again become rather dilatory.

Egyptian Government stocks have dropped half a point, the Unified Loan to 87½, and the 3½ per cent. prefs. to 74½, owing to a cessation of buying from Egypt.

In Bank shares, Nationals have remained a firm spot, but Agriculturals are slightly weaker at 6 1-16 xd. There is a continuation of demand for Agricultural Prefs., but there has been no sellers. Anglo-Egyptian Banks have jumped ¼ to 15⅜, and Land Banks are in demand, but here also there are no sellers.

Delta Light Railway Prefs. are ⅛ lower at 7¼. As regards Land shares, Aboukirs have dropped 6d. to 24s. 6d., and Delta Lands have remained firm at 15s. 6d., but New Egyptians are slightly lower at 25s. 3d., after a fair number of transactions. Sudan Plantations, after being up to 7½, close ⅛ down at 7¼.

In Miscellaneous shares, some small transactions have been effected in Alexandria Water round £13, and there has also been some business in Salts and Sodas round the current level. In Khedivial Mails, the prefs. remain firm, but the ordinaries are a rather nominal market.

As regards Oils, there has been a big recovery in Anglo-Egyptian B., which close 9-16 higher at 5 31-32, after being up to 6 3-16. Roumanian Oils are only 3d. higher at 20s. 3d., after touching 21s. 3d., and Traian are 4½d. higher at 13s. 9d., after being up to 14s. 3d.

In Greek securities the only changes to record are an advance of 1½ points in the 1890 Loan to 74, and a rise of one point in the 1902 Loan to 67.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to March 31, 1919. (New Style, January 14 to April 13, 1919) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Mar.	1919	3,309,855	5,056,405
Do. do. do	1918	3,002,985	2,454,000
Estimated receipts for 3 months (Law of Control)		7,225,000	2,675,000
Actual do. do	1919	10,594,341	10,407,415
" " "	1918	10,592,466	8,766,000
Difference between estimated and actual receipts for 3 months	1919	+ 3,369,341	+ 7,732,415
	1918	+ 3,367,466	+ 6,091,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

The Roumanian Consolidated Oilfields, Limited, issued on April 10, 1919, £50,000 Debentures, part of a series already registered.

NOTES OF THE WEEK.

The India Office has been hustling—if the word be not derogatory to the dignity of the institution—and since we last wrote we have had two sets of despatches in addition to the text of the Reform Bill itself. The Bill is necessarily a skeleton, and for the blood and muscles we must look to the statutory rules, for whose issue it provides; the despatches, on the other hand, are clogged with detail, important indeed, but impossible to survey within reasonable limits of space, and discussion of the whole subject may be postponed until the debate on the Second Reading, when we may expect from Mr. Montagu a reasoned explanation of the decisions taken on a mass of controversial questions. For the present it is enough to say that the Bill makes it possible to set up the Dyarchy, but that many features of this novel institution remain somewhat obscure.

Let us turn meanwhile to the correspondence published in *The Times* on the attitude of Indian Moslems towards the Turkish Empire, a transition which is less abrupt than might at first sight appear. We have heard the usual two parties: the scholars and historians, who maintain that Moslems should not care what happens to the temporal power, and the men of affairs, who insist that, as a matter of practical politics, Moslems care very much indeed, and that their sentiments, however irrational, cannot be left out of account. The matter is of great importance in itself, but it is only a particular case of one of the outstanding difficulties in the way of progress in the East, the profoundly unhistorical attitude of the great majority of the population.

It is, of course, true that Orientals set great store by tradition, but in the East generally, and more particularly in India, tradition is very easily made. Practically anything that has once been written, or for that matter said, may come to be accepted as traditional truth, and then it may be defended to the death. The importance of this principle has been recognised by the Bolshevist propaganda, which we are told is arranging for a pamphlet deriving its peculiar principles from the Koran; the idea is in itself ludicrous; but there is seldom any real difficulty in twisting isolated texts so as to support accepted conclusions, and such a pamphlet might easily acquire an importance which might take accurate scholars entirely by surprise. The manufacture of tradition is, in fact, on the way to become a recognised branch of industry, and the authorities cannot afford to be blind to its potential importance.

Education is, doubtless, the only complete remedy for this, as for other disorders of the State, but education works by generations rather than by years, and India, at any rate, cannot wait till the children now at school have become old enough to influence popular opinion. In the meantime, it seems necessary to recognise frankly the force of the written or spoken word, and to take measures to secure that truth is at least as widely disseminated as lies. We have had a lesson lately from the Punjab of what can be done by spreading false statements. Will the Government of India show us the contrary process in operation, not for some special temporary purpose, but as part of the ordinary working of its machinery? Will it undertake to see that the truth is within reach of town and country, and that the inevitable lie shall not get too long a start? The question concerns almost every branch of the Administration, but just now it is of particular importance in relation to the electoral system which has to be devised out of nothing. The Southborough Committee were satisfied that the ballot could be adapted to the needs of an illiterate electorate: accepting their assurance on this point, can the system of election addresses and campaign speeches be adapted to Indian conditions with an equal prospect of success? Can the issues be so presented that an ignorant and inexperienced electorate will understand the matters which they are privileged to decide? No committee seem to have said anything as yet on this aspect of the Reforms scheme, but it is not too much to say that the success or failure of the great experiment will depend very largely on the answer which can be furnished to these questions.

With true Teutonic patience and perseverance, Count Brockdorff-Rantzau and his fellow delegates continue to produce counter-proposals and to despatch Notes on various points, among the most recent examples of their industry being a Note on the Ottoman Public Debt. What the tenor of this communication may be we do not yet know, but it is safe to say that it is not inspired by any consideration for Germany's Turkish dupes; and for the rest it is pleasing to reflect that it is likely to be dealt with by the Allies' technical experts. That Germany should be interested in the subject of Turkey's debts is natural enough in view of the very complicated financial transactions between the two countries that are understood to have taken place during the past five years—transactions even more scandalous in their one-sidedness than those of pre-war days. The average Englishman will probably consider that morally Turkey owes Germany nothing but her misfortunes. The really

Digitized by Google

interesting thing would be to know what Turkey thinks about it.

The Peace Terms were to have been presented to the Austrian delegates last Friday, but on the previous day, when the Allied delegates met to review them, they were found to be still incomplete; and M. Bratiano protested that many points of vital importance to Roumania and Yugoslavia were left undecided. He therefore moved an adjournment; and as a result it was not until Monday that the Terms were presented to the Austrian delegation at St. Germain. Even then the Treaty was not by any means complete. In parts little more than the scaffolding had been provided. The financial clauses and the clauses relating to reparation are reserved, as are the political clauses relating to Italy and the recognition of the Serbo-Croat-Slovene State, and the military clauses. The boundaries of the new Austria also are left very much in the air in regard to the south-east. All this was no doubt inevitable in the circumstances that have been allowed to develop, but it is none the less to be regretted that so much has had to be left for future decision.

In its general outlines the Treaty is very similar to that presented for Germany's acceptance (or rejection), and in many cases the clauses of the two documents are identical. Thus, Austria recognises the British Protectorate over Egypt and the French one over Morocco in exactly the same way as Germany has to; and the arrangements regarding the property of her nationals in these countries are along just the same lines as for Germans. Similarly, she agrees to accept all arrangements which the Allied Powers make with Turkey and Bulgaria with reference to any rights, privileges, or interests claimed in those countries by her or her nationals and not dealt with elsewhere.

The clauses relating to the Danube and to communications with the Adriatic are interesting. The Danube below Ulm is to be internationalised, with portions of its affluents and dependent canals; and the League of Nations is to be charged with the supervision of the working of the arrangement. The Danube Commission will resume its powers, but only Great Britain, France, Italy and Roumania will be represented on it henceforth; while beyond the point at which the authority of the Commission ceases the river is to be under the authority of an International Commission until a definitive statute is arrived at. Hungary is deprived of her rights to carry out works at the Iron Gate, and the other riparian States are to be granted certain rights on the Austrian bank of the river. Should it be decided to construct a deep-draught Rhine-Danube canal within twenty-five years, the Treaty provides for its international character. Free access to the Adriatic is to be accorded to Austria, with freedom of transit over territories and in ports severed from the old Dual Monarchy, such freedom extending to postal and kindred services.

As far as it is possible to do so by treaty the protection of racial, religious, and linguistic minorities in the territories that change hands is to be secured by the Peace Terms. The conditions already published contain clauses specifically binding Czecho-Slovakia and Roumania to protect such minorities, and it is obvious that similar pledges must in due course be forthcoming from other countries which take over fresh territory. In this connection it is satisfactory to be able to record that Roumania has already, and voluntarily, grappled with her Jewish Question, and solved it, in a spirit of liberality that augurs well for the future. Roumanian citizenship is to be granted on formal application to Jews resident in the country, to the number, it is estimated, of about 800,000. The taking of this step has not been quite such a simple matter as might be supposed by those unacquainted with the country, and it has probably called for some little courage, even to-day. At the same time, it cannot be doubted that it is a statesmanlike measure, and one that will have good results.

Freed from the Austro-Hungarian yoke, Transylvania has had an opportunity of welcoming its new rulers, and has done so with an enthusiasm that has left no room for doubt regarding its satisfaction at the change. King Ferdinand and Queen Marie were welcomed not only by the Roumanian authorities, but also by the Hungarian notables and the Hungarian Roman Catholic clergy. They watched 200,000 peasants, dressed in national costume, march past them in procession; and King Ferdinand, in an address to the people, assured them that henceforth the whole population should enjoy equality of treatment. That being the policy of the Government, and the Roumanians of Transylvania having displayed such admirable qualities of self-restraint, it is possible to look forward with some confidence to this region enjoying in the future a liberty to which it has been too long a stranger.

The Greeks continue to occupy fresh points in the Smyrna region. On May 29 they occupied Aivalik (or Aivali), which lies opposite Mitylene and some sixty miles north of Smyrna, and Kassaba, the name of which is familiar to Englishmen in connection with the Smyrna-Kassaba Railway. They appear to have encountered very little opposition at Aivalik, and none at all at Kassaba. They have also occupied Aidin and Magnesia, the operation being effected, according to statements emanating from Greek official sources, without incident. Later reports state that "perfect order reigns in Smyrna and in all the occupied territory." Even should this be a somewhat optimistic view, the Greek authorities are undoubtedly to be congratulated upon the measures they have taken to deal with such offences against order as might be expected to occur in the circumstances. The Commander-in-Chief of their Army of Occupation has announced that he will deal rigorously and promptly with attacks by Greeks upon Turks; has established a court-martial to try such cases; and, translating words into action, has already had executed Greek soldiers and civilians found guilty by this court. Turkish bands led by ex-officers of the Sultan's army are reported to have appeared in the Smyrna hinterland, and will probably cause trouble as soon as they find themselves strong enough to do so.

A statement issued through Reuter's Agency announces that: "The Kingdom of the Serbs, Croats, and Slovenes has been recognised by his Majesty's Government." As it stands, the announcement has a bare, and, it must be confessed, somewhat unsatisfying appearance, and the absence of any official congratulations on the event will probably lead many people to believe that it is premature. The circumstances are unfortunate, and the more so because there have been so many rumours about the relations of Montenegro towards the new State. If the British Government has actually accorded its recognition to the Triune Kingdom, we must conclude that the Black Mountain is satisfied, and shall accordingly congratulate the Serbs, Croats, and Slovenes upon the attainment of their ambition, for which they have both worked and fought so hard.

Two incidents reported during the past week seem to indicate that the troubled region along the Turco-Persian frontier and between it and the Caspian remains at heart much as it was before the war. At Suleimania —about sixty miles east of Kerkook; and not to be confused with the town of similar name between Teheran and Kazvin—a Kurdish Agha has gained control of the town and captured some British officers and staff. It is thought that he aims at establishing himself as an independent ruler. As it has been announced in the House of Commons that "steps are being taken to deal with the situation," his ambition is unlikely to be realised. It must be borne in mind, however, that the region is a particularly wild one, and that the Kurds are experts in their own way of fighting; so that the British authorities may find the task of dealing adequately with the adventurer not quite easy. The second incident referred to may be regarded as closed already, and satisfactorily so. It consisted of an attempt by

Digitized by Google

the leader of the Jangali tribe—which dwells in the Kazvin-Enzeli region—to make the Gilan province independent of Persia under his own governance. In this he was supported by the Bolshevists; but the Persian Government asked for, and obtained, British co-operation in dealing with him; and he has now been driven out of Gilan, and the province has been restored to the authority of the Persian Government.

If Enver, Talaat, and other criminals who formerly occupied high places in Turkey ever hoped that by lying hidden long enough they might eventually have their misdeeds forgiven, that hope must to-day be extremely exiguous. Last week Mr. Cecil Harmsworth, replying to a question put by Captain Ormsby-Gore, announced in the Commons that the Government are resolved to bring these people to account, and that provision to this effect will be made in the peace settlement with Turkey—an announcement which was greeted with cheers. Some of the smaller fry, less notorious members of the C.U.P. have been shipped off from Constantinople to Malta. The fact that British and French soldiers have been placed on guard over the Committee leaders imprisoned in Constantinople is a small indication that the Allies do not intend to take any chances with regard to these gentry. With the forty odd specimens who have been removed to Malta there went a collection of members of the "Government of South-West Transcaucasia," who were arrested by the British military authorities for attempting to organise yet another massacre of Armenians.

Egypt's new Prime Minister and his Cabinet have been honoured by being made the targets for some of the vilest abuse that has ever been poured forth even by the so-called "Nationalists" of Egypt. The Cairo correspondent of *The Times* has enabled us to judge for ourselves of the quality of the language employed by these disappointed self-seekers, who, it would seem, are eminently qualified to produce a Hymn of Hate of their own. Indeed, one of their effusions informs the world that "eyes of hate look on them" [the new Ministers], and it is only too easy to believe that hatred is the driving power behind all the recent demonstrations inspired by these people. We note that the Ministers are described, *inter alia*, as "driving off the vultures and crows," and it is impossible to refrain from adding that it appears to be bad policy for the carrion birds to show their disappointment quite so clearly. Seriously, Mohammed Said Pasha is not the man to be frightened by such foolish and unsavoury demonstrations on the part of the irreconcilables, who have shown themselves as hopelessly incapable of grasping the truth as certain of their countrymen who have been endeavouring to make mischief in London are of telling it.

Mohammed Said Pasha has announced that the object of his Ministry is the realisation as soon as possible of the legitimate and reasonable aspirations of Egypt. That is an object with which all true friends of Egypt and the Egyptians will sympathise; but before it can be achieved it will be imperative to purge the country of the evil counsellors who have led it astray so woefully of late. And though the dupes and tools may well be treated with all leniency, it will be necessary to make examples of those who are found guilty of egging them on to folly and crime. The trial now in progress at Deirut has served to show what inflammable material there is to hand for the unscrupulous agitator in the Nile Valley. It seems to show also that it is not only the Fellah—the land-working peasant—who loses his head in moments of excitement. In fact, it has not revealed the Egyptian character in a very favourable light. But we must not judge a nation by a madly excited mob, and if it is hard to find any redeeming features in the story of the Deirut butchery, the troubles in Egypt have elsewhere shown that the Egyptian is capable of loyalty and self-sacrifice. What the country requires now is a period of quiet.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 12.

The King's Accession Day.

The King's accession day, which was as usual a Government holiday, passed off without incident. There had been much talk of strikes and other similar activities, but the attempts in this direction came to nothing serious. Azharites and students made a small hostile demonstration in the Mousky Quarter in the morning, which was speedily dispersed. Students tried to intimidate shop and restaurant keepers to take down the flags and decorations which they had hoisted in honour of the day, but in only a few rare cases was any attention paid to them. Likewise an attempt to get the cab-drivers to strike again proved abortive. A few students appeared in the streets with mourning bands round their arms, but they received no encouragement, and soon disappeared. A circular with wide black edge was also issued by them containing disrespectful and even scurrilous references to the King and the British Empire (I only refer to it as showing how childishly the present agitators are acting), but apart from these incidents the day was quite uneventful.

The Students.

Wednesday, being the 7th, was the last day on which students could return in order to comply with General Allenby's Proclamation, the details of which I gave in last week's letter. No one attended in the Higher Schools, but about 20 per cent. of the pupils of the Secondary Schools returned to their classes. There is reason to believe, however, that some of the students would have followed the example of their juniors had they not been intimidated. All the Higher Colleges have now been closed until the autumn, but the Secondary and Intermediate Schools are remaining open so as not to penalise those who have complied with the order. The students now say that there was no object in their returning to the colleges, seeing that they were bound in any case to lose a year, as they could not possibly have made up for the two months they had lost so as to be able to pass the examination. That is, however merely an idle excuse, for they held a meeting the day before and definitely decided that none of them would return until such time as Egypt had been granted her independence. Whether they will adhere to this decision now that the Peace Conference has recognised the British Protectorate over Egypt is however another question.

In regard to the attitude maintained by the students, their parents are undoubtedly a great deal to blame. In some cases they have been in complete sympathy with their children. Those who have not sympathised have been quite incapable of bringing their parental influence to bear on their offspring. In either case the result has

been equally deplorable. The students have had none of the "family" control which might have acted as a deterrent from their present misguided and futile attitude, and the contempt and disrespect for their parents which have of late years been an unfortunate feature of the younger generation of Egyptians have become accentuated as a result of the present agitation, until to-day they have got completely out of hand. If, however, the fathers only had the moral courage to stop "supplies" in the shape of the handsome allowances many of them make to their sons, most of the latter could certainly be brought to heel.

I said that the students had now got out of hand, and I would add to that that there is every reason to believe that they, together with some of the Government officials who were the ringleaders in the strike movement, and who merely returned to their posts in order to retain their pensions, are responsible for the continuation of the agitation and for the demonstrations which have taken place during the past two or three days. It is true that Azharites have also participated in these demonstrations, but my information is that many of the latter had no intention of taking any action, and that it was only as a result of inflammatory speeches delivered at Al Azhar that they were persuaded to come out and join the students.

The most important demonstration took place on the night of the 7th, when a crowd of about 2,000 came down from Al Azhar and invaded Kasr El Doubara. Their object, incredible as it may seem, was to demonstrate against the Commission of Inquiry, which it was rumoured had arrived from London, and was said to be staying at the Residency. The demonstrators received a severe lesson. The authorities had got wind of their intention, and had made all their preparations. When the demonstrators got near their goal they suddenly found that they were caught between two fires, soldiers blocking the road at both ends. The latter made short work of them. No firearms were used, only sticks, but the demonstrators got such a hammering that it is doubtful whether any of them will be able, even if they were so inclined, to come out "on active service" for some time to come. This is the sort of lesson which the students and Azharites have long been in need of, and it should go a long way towards bringing them to their senses.

The only other incident of importance has been the discovery by the police of a printing press where seditious circulars were in course of being printed. Throughout the agitation one of the features has been the mass of seditious and inflammatory literature which has been put into circulation. The police do not delude themselves into thinking that they have laid their hands on the source of issue of all this literature. There is no doubt however that this is an important find, and as the owner is a well-known Extremist Nationalist this may be the means of restricting the output, especially if an exemplary sentence is inflicted. Some of the circulars and pamphlets issued are veritable masterpieces of style and rhetoric, but the sentiments they express are violently revolutionary and anti-British. Translated into English they afford somewhat amusing reading, but there is no doubt that in the original they have largely contributed to inflaming the minds not only of the ignorant but also of the educated.

This ends the narrative of the week's events, and beyond the foregoing the life of the country has followed its normal course. As I said last week, if only the student element and Al Azhar could be brought to order we could all turn our attention to the work of reconstruction and of repairing the serious damage, moral as well as material, which the past two months have done to Egypt. Perhaps the publication of the Peace terms, containing as they do the international recognition of the British Protectorate over Egypt, may have a calming effect, but it is to be feared that only when the few ringleaders who are responsible for the persistent attitude of the students have been brought to book, or the students and Azharites have been dispersed to their villages, where under present conditions they will have little chance of a hearing, will the agitation be completely and permanently suppressed.

That beyond the fermentation still indulged in by the students the situation is otherwise well in hand, and is giving no cause for real anxiety, is proved by the fact that General Allenby has left Cairo on a short visit to Palestine.

ATHENS NOTES.

(From Our Own Correspondent.)

Athens, May 10.

The Question of Cyprus.

An article contributed by Dr. Dillon to the *Daily Telegraph* explaining why up to the present no mention of Cyprus has been made at the Peace Conference has roused considerable enthusiasm in the Greek Press. Public opinion in Greece was becoming a little uneasy at the silence observed on this point, and the article in question has dissipated many vague fears. On the other hand, Cypriotes in Greece are already becoming anxious whether in case of a cession of the Island to Greece they will lose their British nationality and the privileges appertaining thereto.

Overcrowded Hotels.

The last ten days have seen a great influx of Russian refugees into Athens and Piræus, and in consequence of this hotels are again full to overflowing. All the lesser hotels are crowded, and it is no uncommon thing for a traveller arriving here to visit a dozen or more hotels before finding a room. In order to house the poorer class of refugees the Government has decreed that any person possessing a town and country or seaside residence must decide in which he is going to live, and the other is then requisitioned. This is hard on those landlords who had richly furnished houses in town and country, and are now compelled to house people of whom they know nothing. Some of the refugees appear to be extremely well off, and wear jewellery of great value; these lodge in the best hotels; but others are in great want, and have been proved in one or two cases to live by pilfering. Travellers should be warned of the difficulties encountered here in finding accommodation.

The organisers of the exhibition arranged by the Federation of British Industries, having foreseen the difficulty just mentioned have arranged to rent two hotels for the period of the exhibition, in order to house the expected number of visitors.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 10.

The General Situation in Roumania.

M. Duca, Minister of Agriculture, dealt with the local situation at a recent meeting of the National Liberal Club. Referring to the expropriation of lands, he stated that the transfer of 2 million hectares into the hands of the peasants was actually an accomplished fact, and that a considerably larger proportion of ground had been ploughed and sown than could have been expected. The peasants have displayed extraordinary activity and obtained by their own efforts the necessary seeds, travelling on foot from one district to another and carrying sacks of maize-seed on their backs. An American vessel, which put in at Constanza a few days ago, brought 300 tons of Indian corn, which, together with 100 car-loads that have begun to come in from Transylvania, about suffice to make good the deficit in seed. The harvest promises to be excellent, "in spite of the attitude of professional pessimism which it behoves a Minister of Agriculture to adopt."

The Commissions working in Paris have purchased large quantities of clothing material and food-stuffs. Thus there have been acquired 36 million yards of cloth and different stuffs for the village populations at very reasonable prices, a fact which will tend to reduce speculation. 1,700,000 pairs of boots, sugar, rice, etc., represent further acquisitions.

A serious question is that regarding the lack of cattle. As much of the cattle stolen during the occupation was driven into Hungary, requisitions are being made by the Roumanian troops operating in the regions lying between the Demarcational Line and the river Theiss. Exactly the same requisition prices are being paid as those made by the Germans during their occupation of Roumania. An offer of 10 thousand head of cattle from Argentina has been accepted. There are further large herds of cattle in Transylvania and the parts of Hungary belonging to Roumania, more, indeed, than before the war. It is a fact that the Hungarians made no requisitions and gave very little to the Germans.

Referring to the subject of public order, M. Duca said that two elements could have contributed to compromise the same; the peasants and the working classes. At present the spirit of the peasantry is most satisfactory, and due partly to the law of expropriation, partly to the admirable good sense and patriotism of the peasant, who realises perfectly that the evils from which he suffers are direct consequences of the war, and therefore not remediable from one day to another. In the towns the agitation of the working class was essentially the outcome of two causes: misery on the one hand, and on the other Bolshevist instigation, having its source in Moscow and Budapest. As a result of the measures taken by the Government the material situation of the workmen has been much improved. Everything has been done to permit of their provisioning themselves under favourable conditions, and their pay has been increased to such a degree that a railway workman gets nearly 1,000 francs a month, "the salary of a member of the Court of Cassation." On the other hand, Bolshevist agitations have almost completely ceased, thanks to the good sense of the leaders of the workman's movement.

As regards universal suffrage and the elections, the grounds on which these have been adjourned are obvious. Bessarabia actually constitutes a military zone, and as such it is impossible to proceed with the elections in this province. It would be a mistake not to hold general elections for all the territories united to the mother-country, for the next parliament must be the expression of the entire population of Great Roumania. This is also the view of the Transylvanian ministers. It is to be hoped that the elections will be held in these conditions at the end of July, or at latest in the autumn.

Then and Now.

The thriving condition of the Dobruja was too well known to travellers up to 1916 to require description. Many people are less familiar with the picture presented by the country at the time when it passed into Roumanian hands in 1878. To those the following account, taken from a report sent by Mirza-Said-pasha to the Grand Vizier towards the end of the 'fifties, may prove of interest:—

The whole Dobruja . . . presents the characters of the steppes; water is to be found only at a depth of 60-80 metres. Vegetation is almost completely absent, and such as exists belongs to the flora of the steppes; the ground is uneven, and the hills are covered with rocks. As far as the eye can see there is not a tree visible, but what attracts attention are the innumerable herds of every kind, especially of horses—the Dobrujan horse, celebrated by the poet—goats, horned cattle and, above all, sheep of every variety.

Further, all sorts of wild animals, wolves, foxes, beavers, etc.; birds, eagles, bustard, swans, falcons, duck, etc.; numerous reptiles, especially vipers. The wind blows, so to speak, permanently, and with the greatest violence. Winter begins in October, and the north wind does not cease till March. . . .

During the summer it is the south wind that rages; though much less frequent, it blows with great violence, overthrowing the minarets. This wind is sometimes so hot that respiration becomes difficult. It is said that during the strong gales from the south grains of sand, similar to those of the African desert, have been seen to fall. And there is no summer during which this wind does not blow at least once in the Dobruja. The Roumanians call it *Saracila* (from *saracie*—indigence, misery), for it is enough for it to blow half an hour in the month of May, when the wheat is in flower, to burn and destroy the entire harvest.

The description of the climate is perhaps a little pessimistic. But after all, that is a mater of individual appreciation, and even modern officials desirous of repatriation have been known to lay immoderate stress on climatic defects.

Bulgaria and the Dobruja.

That Bulgarians should continue to formulate pretentions on the Dobruja, that they should use spurious arguments in support of such, is not astonishing to those who are familiar with their peculiar, crude mentality. That they should count on the support of that Hyde Park fraction of the British Public which is disposed to back up any cause, provided it be sufficiently cranky or exotic, and regard its vapourings as the expression of British public opinion, merely indicates an inability to view matters in their true proportions perfectly compatible with racial immaturity. That they should in silence pass over the part played by Roumania on the Bulgarian battlefields in '77 and '78, and the debt of gratitude they owe her, is again comprehensible, for *real-politik* deals not in sentiment. That they should, however, go to the extremity of actually denying these facts of history, with which every Bulgarian schoolboy is, or should be, familiar, can imply nothing short of bad faith spun out to its uttermost limits.

Many Roumanians, in the light of subsequent events, have had cause to remember "Tsar" Ferdinand's desperate appeal to King Charles, in 1913, not to inflict upon him the humiliation of allowing Roumanian troops to enter Sofia, and have at the same time recalled the old, bitter Roumanian saying, that "he whom you prevent from dying will prevent you from living."

AN INTERNATIONAL ACT OF COURTESY.

In the last days of Abdul Hamid's reign the Sheikh-ul-Islam was a certain Jemal-ed-Din Effendi, who left Turkey when the Committee of Union and Progress took all power into their own hands, and thereafter never returned. He died at Alexandria early in April, and the British authorities in Egypt were approached with a request that special facilities might be given for the conveyance of his body to Constantinople. This request was readily granted, and the body was embarked on H.M. transport Empire, with all due honours. The vessel also carried to Constantinople the wife and granddaughter of the late Sheikh, with suite—the party numbering eleven persons.

On arrival at Constantinople the body was buried with the proper ceremonies. The Sheikh's family have since expressed both to our authorities in Egypt and in Constantinople their extreme gratification that this honoured bearer of a name which has been famous for 350 years in Turkish history should have received these marks of consideration and respect from the British in both countries.

A report from Petrograd states that a fresh Bolshevist agitation, with headquarters in Odessa, aims at the formation of a Soviet Republic, to be called "The United States of the Orient," and to include Turkey, Persia, Algeria, Morocco, India, etc.

The *Busreh Times* of April 26, states:—The result of the latest census gives the total population of Busreh City as 20,752. This total is divided into 19 different race headings, the main of which are:—Arabs 10,866; Jews, 5,966; Persians 2,387; Oriental Christians, 970. The minor race headings include 145 Armenians, 125 Kurds and 83 Indians.

Reuter's Malta correspondent, writing on June 3, says:—Vice-Admiral Sir J. M. de Robeck, who has been appointed to succeed Vice-Admiral Sir A. Gough-Calthorpe as Commander-in-Chief of the Mediterranean Fleet, will not assume command before August or September next. It is understood that Vice-Admiral Calthorpe, who remains High Commissioner at Constantinople, will eventually become the first British Ambassador under the new régime for the Turkish capital.

MALTA NOTES.

(From Our Own Correspondent.)

The Japanese Squadron.

Admiral Sato with the Japanese Squadron has left Malta after a long and happy connection with the Island. The Japanese ships will proceed to the Piræus at the invitation of the Hellenic Government; and Admiral Sato and the senior officers will go on to Athens, where they will be received by the King of the Hellenes. After the Greek visit, Admiral Sato's squadron will visit Port Said, thence proceeding to home waters. The late Governor sent the following message to the Japanese squadron:—"When you receive your sailing orders, I trust that you may leave with many happy recollections of Malta, and you will take with you the good wishes of all in this Island. God grant our alliance, cemented in blood, may endure for many a long year to come."

The Malta Dockyard.

The economic conditions of Malta are far from good, and the chief hope for the Island lies in the Fleet. The news, therefore, of the stationing here of a great Armada, has enabled the authorities to breathe a little more freely.

The University.

The students are still on strike. The main point of contention is on account of the alteration by the Council of Government of the title of the degree in law. Up to the present the degree granted at the end of the course to the successful student was that of Doctor, but it has been proposed to grant only the Bachelorship. This would entail two more years of study; and that, added to an already long course of 7 or 8 years, makes it a serious matter for those about to leave the University and practise their profession. Public opinion is with the students. With the exception of a casual collision or so with the police things are fairly orderly.

Shipping.

The following steamers and battleships have left for the East:—H.M.S. "Sweet Briar" for Constantinople, H.M.S. "Ivy," the W.S. Destroyers "Chew," "Bukney" and "Hazelwood," H.M. ships "Senstemmon" and "Moth," P.S. 88, P.A. 5, and the trawlers "Cambrisin" and "Ben Loyal" have left Malta. Very few trawlers now remain on the station.

The cruiser "Suffolk" has just arrived here from Port Said *en route* for England. The "Suffolk" is an old friend of Malta. She came straight to the Mediterranean from the builders' hands in 1904, and spent the best of her time in these waters. In her first two commissions in the Mediterranean she was successively commanded by Captain David Beatty and Captain R. E. Wemyss, now Admiral of the Fleet Sir David Beatty, the ex-Commander-in-Chief of the Grand Fleet and Admiral Sir Rosslyn Wemyss, the present First Sea Lord of the Admiralty.

H.M.S. "Foresight" has left Malta for Gibraltar and England.

Personal.

Lieutenant-Colonel W. L. Steele, C.M.G., R.A.M.C., has taken over the duties of the Deputy Director of Medical Services in succession to Colonel G. B. Price, C.M.G.

Great regret has been felt at the death of Commander Noel S. Tindall, R.N., which took place from heart failure following ten days' illness from broncho-pneumonia at the age of 37.

CYPRUS NOTES.

(From a Correspondent.)

New Laws.

As expected, the course of a quite unique session of the Legislative Council has progressed smoothly. The official and Ottoman members have been in general agreement. Consequently the last issue of the Government *Gazette*, a weighty number of more than forty pages, contains twenty-one laws to which the Acting High Commissioner has assented in the name and on behalf of his Majesty. An Appropriation Bill provides a sum of £353,057 for the service of the current year; while another sanctions a further sum of £58,950, which includes £20,000 for the railway (£11,000 for purchasing locomotives and £9,000 for rolling stock); Public Works, £26,000; and Forest, £7,700. Several Acts aim at relief for the agricultural classes, the indebtedness of which is still such an oppressive burden. Interest on loans must not exceed 12 per cent., and no interest is payable on interest due on any loan until one year after such interest has become due. Farmers, in the law, include fruit growers and graziers. Great results can hardly perhaps be hoped for for some time to come, but these Acts are a step in advance of former measures, which have done but little to meet the real difficulties of the impoverished villager. There is another Act which amends the existing laws relative to dealings between traders and farmers, always a grievance and complaint on the part of the latter. And there is yet another for the relief of insolvent farmers. Among the other enactments is one to prevent the spread of contagious and infectious diseases. Cypriot peasants, like others of the Near East, are fast bound in the fetters of superstition, and their fatalism only too often seeks to baffle the efforts of the Medical Department.

Nicosia Race Meeting.

The Nicosia Race Meeting has been carried out with great success, the attendance being unusually large. Many visitors came up from other districts. The Acting High Commissioner and Mrs. Stevenson were present, and all three communities, British, Turkish, and Greek, were fully represented. The sporting instinct is by no means confined to the first, but is strong in all, as these meetings always prove. There was some good racing.

The Greek Community.

The Greek town community has made up its mind that the island is to go to Greece, though perhaps subject to certain conditions. Letters from the "Greek Mission" in London, of which fifty have already been received and published by the *Voice of Cyprus*, encourage the growing confidence. A letter from Paris states categorically that this decision is assured; and a letter from M. Venizelos is referred to, in which that statesman says that the obstacles, mainly naval and military, will probably be satisfactorily removed. The deputation is being well supplied with funds, a further sum of £500 having been remitted, and further support promised.

Personal.

The Chief Justice, Sir Charles Tyser, who has been granted three months' vacation leave, will be going away shortly. The Acting High Commissioner gave a reception to Sir C. and Lady Tyser.

Mr. Stanley Fisher, Puisne Judge, will fill the office of Chief Justice until further orders.

Mr. A. L. Stuart, President of the District Court of Larnaca, will act as Puisne Judge until further orders.

Canon Newham, Chief Inspector of Schools, is shortly proceeding to England on leave.

ROYAL ASIATIC SOCIETY.

Award of Public Schools Medal.

At the anniversary meeting of the Royal Asiatic Society it was announced that the Public Schools Gold Medal for Indian history had been won for the first time since its institution by an Indian, Mr. S. S. Bajpai, of Dulwich College, for an essay on the Emperor Shah Jahan. The subject chosen for the next competition is "The Rise and Decline of the Maratha Power."

Lord Reay, who presided, said that the competition for the medal had been lamentably small, and that a circular letter was being addressed to the public schools calling attention to the annual award and to the importance of the study of Indian history.

PRESS ON THE NEAR EAST.

Persia.

In a leading article *The Times* of May 30 makes some outspoken comments on the subject of Persia. After referring to the vast change in the external situation of Persia, it says:—

The Persians are still a nation, and no one who knows the country can question their right to independence on the basis of "self-determination." And Great Britain has not the will, even if there were a way, to saddle herself with the task of governing Persia. Persia, therefore, must be prevented from perishing, and to ensure this Persia must be helped. How? First of all she must bestir herself, for now is the accepted time which with wisdom may prove the day of her salvation. She will assuredly gain nothing by disseminating, either at home or abroad, such vain dreams as have been embodied in the brochure submitted to the Peace Conference, wherein a claim is put forward for vast tracts of territory to be taken from the Russian and Turkish empires. Let her grasp firmly two central truths, one of which she should find palatable. The first is that Great Britain not only harbours no designs against her independence, but, on the contrary, is determined to maintain it. The second is that Great Britain is the only Power which has any active interest in maintaining that independence, or will do a real hand's turn to help Persia. From others she can get advice and sympathy, which cost nothing, but she will not get the strength which will enable her once again to be the truly sovereign State we wish her to be.

Anatolia.

To the *Manchester Guardian* of May 29 Sir W. M. Ramsay has contributed an extremely interesting and forcible article called "Allies and Anatolia." He says that all discussion must start from the fact that Anatolia is almost purely Moslem. Speaking of the Greek population, he says that they (the old Ionians) are not, and never have been, the same as the Greeks of Greece proper; but to their value he thus testifies:—

It has been suggested that this scattered Greek population would withdraw from the Turkish territory to that which has been allotted to them on the west. This withdrawal (which is impossible) would be a grave misfortune. The power of the Greeks in the world's history has been due largely to their instinct for colonisation. They never stayed as a nation at home, but have been settlers in non-Greek countries from the beginning, and they will continue as of old. The greatest value of the Greek lies in his settlement abroad, generally as trader, sometimes as cultivator; I have even seen a Greek shepherd in the employment of a purely Turkish village. To attempt to restrain this instinct is worse than vain; it is destructive of the future. Most of what is greatest in Greek history springs from the instinct for colonisation. It is the function of the sons of Javan to give vitality to Western Asia generally. The West Asiatic coast, with its great cities, all centres of colonisation and voyaging in ancient times, has been their basis, and thence they have spread and made themselves an influence of the highest value. How much of Greek literature and art depends on this instinct. From Homer downwards it is the Greek abroad that is the subject and the inspiration. Much of what is least valuable in ancient Greek literature is restricted to the Greek at home. At the present day they are most useful in the almost purely Moslem Anatolia. The attempt to sort out religions and settle them in different localities is wrong, and will prove fatal. The progress of history depends upon the diversity of population in each district. The failure to mix has been an evil which can be overcome, for nature is against it. What is wanted is a sensible, unifying administration which maintains peace. Beyond this the cure lies in a large amount of local self-government. Wherever this has been tried in Turkey to my knowledge it has been highly successful.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

THE BALKANS.

Lecture by Sir V. Chirol.

On May 29, at the Royal Institution, Albemarle Street, Sir Valentine Chirol told the long story of the Balkans from the earliest times up to the assassination at Sarajevo. He said the problem presented was not one of our own days, and did not arise out of the disintegration of the Ottoman Empire; it dated back to before the coming of the Turks, and had presented at all times certain recurring phenomena, the persistency of which had never been fully recognised.

Of ancient times the lecturer said the Greek and Roman civilisations had never penetrated far into the Balkans. The influence of Greece had been confined to the extreme south and to the coastal region, while Rome had built great military roads and garrisoned the most important strategic centres; but only in the plains of the lower Danube had she bequeathed something of her characteristics, her language and her name. This was because before she had had time to complete her work of penetration the barbarians had poured down, and there had begun the triangular duel between Greek, Serb, and Bulgar, which had continued until all were subdued by the Turk.

The lecturer described how after this event the Balkan peoples passed for centuries almost wholly out of history, though in each case there remained an enduring memory of the past, which kept the lamp of nationality steadily burning against the day of awakening. The Turkish conquerors, he said, never sought to assimilate the peoples they had subdued, and they made no sustained attempt to convert them by force to Islam. Influenced by material interests they preferred to grind their alien subjects down and plunder them unmercifully. This they could do with a Christian population, whereas Moslems would have been entitled to equality of treatment. When the Ottoman Empire showed signs of decay the hand of the ruling power became heavier and heavier within the Balkan peninsula. This increased oppression, which was itself mainly a symptom of weakness, stirred up the dormant forces of resistance; and, by the beginning of the 18th Century, in the more remote parts of the country, bands of heyducs and klephts began to take regularly to the forests and mountains, whence they sallied forth as opportunity served for purposes of plunder, or to waylay parties of Ottoman soldiers on their way back from unsuccessful wars on the ever-receding frontiers of the empire.

The lecturer then described the part played at the period by Russia, Prussia and Austria. It was the Napoleonic wars, he said, which gave the subject peoples of the Balkans their chance—a chance for which they were just ready—and to the Serbs belonged the honour of being the first to rise in open rebellion against the Turks; thereby preparing the way for the Greek war of independence. Coming to the war of 1877-78 and its results, he said that the treaty of San Stefano had extended the boundaries of the new state then created—Bulgaria—into territory not inhabited by Bulgars, but the treaty of Berlin gave them too little. Whether the earlier treaty contained more seeds of trouble than the latter was an arguable point, but it was certain that either treaty alone would have been better than the two which settled, unsettled and re-settled the Balkan question, thereby completely unsettling the minds of the Balkan peoples.

Speaking of subsequent events the lecturer told how the Bulgars had proved a sturdy, stiff-necked and democratic people, not in the least prepared to substitute the Russian yoke for the Turkish, while Prince Alexander, although the nominee of Russia, would not play the part of a Russian pro-consul. When he abdicated another ruler was found in Ferdinand; who proved himself capable of betraying in turn every cause, and of corrupting for his own purposes all the fine qualities of the young nation that blindly trusted him, and, after playing a very close diplomatic game for twenty years, finally came into line with Germany and Austria when William the Second attempted to put into operation his scheme for making Turkey a bridge-head to world domination.

Sir Valentine also described the long-drawn struggle between Austria and Serbia, with its occasional "pig wars," when the Austrian Empire brought pressure to bear on the smaller state by preventing, under one pretext or another, the export of pigs from Serbia to Austria; also the events that led up to and followed the Turkish revolution. Of the peace of Bucharest, following on the second Balkan war, he said that it aggrandised Serbia at the cost of an enduring feud with Bulgaria, and erected a formidable barrier between Austria and Salonika which the Central Powers resolved must be broken at all costs.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

CYPRUS AND GREECE.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—I am sorry to see that "Cypriot" continues to insist seriously in his argument against the cession of Cyprus to Greece, on the ground that my compatriots are not of Greek origin! This argument is, of course, not worthy of any further attention; but I cannot refrain from remarking that your correspondent's suggestion to the effect that the unalterable and persistent wish of a people to unite its fate with a Kingdom with which they are in no way connected constitutes an historical phenomenon well worthy of unique and hitherto unprecedented investigation and indeed scientific study.

Will you, Sir, allow me to take afresh this opportunity of inviting those Englishmen who are particularly interested in the affairs of our Island, and also to extend this invitation to our Turkish compatriots, to give us their united co-operation and support for the promotion and progress of our Island under the Greek regime, which, it is now beyond any doubt, is going to be established in Cyprus, as a sincere and tangible application of the high principles of nationality and justice?—I am, etc.,

(DR.) NIC. KL. LANITIS.

THE QUESTION OF THE DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I never imagined that my few explanatory lines on the Dobruja would elicit a passionate and polemical reply from the "Writer" in question. My mild and inoffensive letter does not provoke such language. Though averse to combative writing I feel bound further to insist that:—

1. Article 1 of the Armistice runs: "Immediate evacuation of the territories occupied *in Greece and Serbia*. The Bulgarian administration shall continue to operate in the parts of Bulgaria actually occupied by the Allies." Hence, the Allies in allowing the Bulgarian administration in Dobruja conformed to the agreement as stipulated in the Armistice, and therefore, to assert the fact is no "phantasy."

2. It is not my purpose to defend the Bulgarians, but why should they always be branded as "treacherous"? Bulgaria's rash act in June, 1913, was, as the Report of the Carnegie Inquiry Commission testifies, provoked by the terrible persecution to which the Bulgarian population of Macedonia was exposed at the hands of her Allies.

3. The "Writer's" denial that the decadence of the Varna and Rustchuk districts is due to the loss of southern Dobruja to Roumania, is too naïve to need comment. Those districts can hardly thrive without the hinterland, the granary of north Bulgaria, which new Dobruja constituted.

4. In regard to Bulgaria's claims to the Dobruja, the "Writer" has no reason to be angry with the Bulgarian professors. Before there were any Bulgarian professors that country was recognised by all, even the Roumanians themselves, as a Bulgarian land. Professor Edward A. Freeman in speaking of Dobruja prior to the Turkish invasion says: "Presently we hear of three Bulgarias, the central state of Tirnovo, the sea-land of Dobroditus, and a north-western state at Widdin." ("Historical Geography of Europe," p. 430.)

Schiltberger, who visited the province in the fourteenth century, then under the Turks, writes: "The second Bulgaria lies opposite Wallachia. The third is found along the mouth of the Danube; its capital is Kallacerca (Kaliacra) ("Reise des Joh. Schiltberger," p. 93).

Lord Strangford as early as 1863 writing from the Balkans warned his countrymen with these words: "The entire mass of the rural and non-Mussulman population of Turkey in Europe, with the exception of Bosnia, Thessaly, Albania, the Chalcidic peninsula, and a very narrow belt of the seaboard, consists not of Greeks and Slavs but of Bulgarians." ("The Eastern shores of the Adriatic" p. 316). The following passage applies equally as well to-day: "Bulgaria refrains from Russian political work, and dances but sluggishly to the piping of Pan-Slavists, and Yugoslavists, and Danubianists" (p. 323).

Perhaps no man can speak with better authority on the subject than Dr. G. B. Washburn, for forty years President of Robert College, Constantinople. In his great book "Fifty years in Constantinople" (pp. 183, 184) speaking of the evil results of the same Treaty of Berlin, he says: "The treaty of San Stefano had created a Bulgaria essentially on the lines agreed to by the Powers at the Conference of Constantinople. The treaty of Berlin divided the Bulgarians into five sections, giving one part to Servia (Nish, Pirot, etc.), one (Dobruja) to Roumania, one to an autonomous province called East Roumelia, one to Turkey (Macedonia), and one to constitute the Principality of Bulgaria under the suzerainty of the Sultan; and it was England especially that insisted upon this, and also upon the right of Turkey to occupy and fortify the range of the Balkans all with the object of making it impossible for the Bulgarians to form a viable state, which might be friendly to Russia. The Englishmen who knew Bulgaria, all our friends, understood the folly and wickedness of this at the time. All England has learned it since. Thus far the results have been the revolution of 1885, which resulted in the union of Bulgaria and Eastern Roumelia, the war with Servia, the insurrection in Macedonia and province of Adrianople, and all the massacres and unspeakable horrors of the last thirty-nine years—in Macedonia, to say nothing of what Bulgaria has suffered from the intrigues of foreign Powers ever since the treaty of Berlin. The awful massacres and persecutions from which the Armenians have suffered since 1886 have been equally the results of this treaty." And we may add the recent Balkan wars and the present world conflict, too.

No one denies that Mizcea once ruled Dobruja for twenty-five years. So did Doushan of Serbia once rule Macedonia for several scores of years, and the Cæsars England for five hundred years! Yes, Dobruja to-day is Roumanian, as Nish and Macedonia are Serbian and Greek. In the same way Alsace-Lorraine had been German since 1870. It is not so much a question of punishing "treacherous" Bulgaria as of doing one's duty and of rectifying former wrongs for which the World-Tribunal is at this hour gathered at Paris, if a new order of things is in reality to be ushered in upon this ill-starred planet.—I am, etc.,

CONSTANTINE STEPHANOVE.

19, Sonnenbergsti, 19, Berne, Switzerland,
May 21, 1919.

The Elsie Inglis Unit of the Scottish Women's Hospitals, which was sent out to serve the Yugoslav Division of the Serbian Army on the Macedonian front in February, 1918, and which took part in the Macedonian offensive of last autumn, was transferred to Sarajevo in Bosnia last December. The need for its services in that district having now ceased, it has been recalled. Before leaving for home all members of the hospital staff were presented with the Serbian Gold Medal for Meritorious Service.

NEAR EAST BOOKSHELF.

A MODERN PILGRIM'S PROGRESS.*

We are all born Aristotelians or Platonists—prone to take a pragmatic view of the universe, or to see symbols of the Divine Absolute in every phase of our terrestrial existence. A European dreamer, whose pen-name is "Sri Ananda Acharya," belongs to the second category. He has given the world an "authentic" account of a pilgrimage to the Himalayas. Three travellers, yclept the Pilgrims of the Sky, the Ocean Wanderer, and the Sister of the Birch, foregather in a cave on the flanks of Mighty Gaurisankar, whence they are wafted upwards to the world of spirits, which must be an Inferno to its denizens. Swedenborg believed that married couples who have been happy together on earth melt into one angel in heaven. According to Sri Ananda Acharya, they dance and sing face to face throughout eternity; while people whose connubial existence has been stormy walk mournfully back to back. Bachelors and spinsters who believed in self-help progress with their feet in the air, and sometimes on all-fours. Men of science and bacteriologists have lighted candles sticking to every part of their bodies; their heads perpetually revolve, with a telescope and a microscope attached to either eye. A harder lot awaits successful generals and the men whom they led to victory, for they roll along ball-wise, followed by a myriad of similar spheres, on wheels constructed of Military Medals. Sri Ananda Acharya's nightmare was evidently suggested by the visions of Dante, Bunyan, and Swedenborg; but it lacks the touch of genius which makes their work immortal. It is astounding that such rhapsodies as his should see the light at an epoch which, beyond all others, calls for constructive imagination and practical achievement. F. H. S.

COLES PASHA'S REMINISCENCES.†

Coles Pasha's book of reminiscences is, as might have been expected, well stocked with facts and anecdotes that will be of unusual interest to Anglo-Egyptians, and it appears at a time when Egypt is in the public eye at home. His talks with Lord Kitchener about the coming German war (which "K" always regarded as inevitable) and his stories of encounters with mad jackals and rabid dogs in Egypt (it is alarming to note that one of the latter succeeded in biting Coles Pasha, although it had a muzzle on at the time) are of more than local interest. Anglo-Egyptians will be interested to hear of the early days of the Turf Club; of the precautions adopted to prevent the poisoning of Wardani, Butros Pasha's murderer, when in gaol awaiting execution; and of the weird and wonderful uniforms worn by the police in Baker Pasha's day—"light blue and yellow facings for the Gendarmerie, chocolate with red facings for the Cities, and a much gallooned patrol jacket with light blue trousers for the staff."

But incomparably the most important part of this little work (it contains only 200 pages) is Coles Pasha's interesting and fairly full account of his work in the Prisons Department, from his nomination as Inspector-General in 1897 to his departure from Egypt in 1913. Coles Pasha was a daring reformer, but we do not call to mind any one of his chief innovations that has not stood the test of time. Those who wish to go into the matter more fully should turn to the official reports (Coles Pasha is a great believer in annual reports), but the present pages will serve as a useful introduction, summarizing the position as the author found it and as he left it, showing how in some respects Egypt has gone even further than Europe in prison reforms, how in others much remains to be done, and how Coles Pasha would have us do it.

The book is well illustrated and well printed, but somebody ought to have gone through the Pasha's exclamation marks with a pruning knife. He uses so many of them that when he really has occasion to be exclamatory he finds it necessary to employ two.

BALKAN FANCIES.‡

The author of this slender, but none too slender, volume of verse says his book "came into being in the first instance as a wholly personal antidote against Balkan 'ennui.'" His Muse may have whiled away idle hours, and against this purpose of writing we say nothing, except to remark that the matter had best been left as it was "in the first instance." Frankly, the level of Capt. Mann's verse never rises above the indifferent.

THE AFGHAN TROUBLE.

The following announcement was made by the India Office on May 29:—

Owing to Nadir Khan's offensive on May 26 a concentration of the small scattered garrisons in the Tochi and Gomal valleys, on the general line Thal-Idak-Murtaza, has been carried out. (Thal is roughly 60 miles W.S.W. of Kohat, at the head of a light railway line from the latter station; Idak is about 20 miles W. of Bannu, on the road leading up the Tochi Valley; and Murtaza is about 20 miles W.S.W. of Tank, at the head of a branch of the light railway which runs from Kalabagh, on the Indus, to Bannu.) Mahsud and Wazir Lashkars joined the Afghan forces, which occupied the abandoned territory. The latest news, dated Simla, May 28, reports that the main Afghan forces in Khost, under Nadir Khan, are operating against Thal, which was being shelled from the right bank of the Karram river on May 27, large concentrations of the enemy being reported within three miles of the fort. A telegram from Simla dated May 26 shows that during the air raid on Kabul on May 24 troops estimated at 5,000 to 6,000 were observed mostly moving westwards between Gandamak (28 miles south-west of Jelalabad) and Kabul. The above confirms an agent's report that by May 20 six battalions and two cavalry regiments had left Jelalabad for Gandamak, to which place stores were also being evacuated.

On June 1 the India Office made the following announcement:—

The latest information received from Simla, dated May 29-30, shows that all the Afghan attacks on our fort at Thal [Kurram Valley] have been repulsed, although it was being fired at by artillery throughout the day of May 28. The Afghans have occupied and looted the bazaar at Thal (outside the fort.) An air reconnaissance disclosed 3,000 to 3,500 enemy near Thal. Bombs were dropped on their camps with good effect. Idak post (20 miles west of Bannu, on the road up the Tochi Valley) has been unsuccessfully attacked by tribesmen. Further weak attacks by Afghans in the neighbourhood of Peiwar Kotal have been beaten off. At the capture of the Afghan fort Baldak (opposite Chaman, in Baluchistan) our troops took 169 prisoners and killed 320 of the enemy. The fort is being occupied and held by us. In the Khyber region and to the north the attitude of the tribes and the general situation remains satisfactory.

The India Office made on June 2 the following announcement:—

Further information received from the Government of India, dated May 31, shows that Thal fort has resisted all Afghan attempts to take it, although the adjacent village has been completely gutted by the enemy. An unsuccessful attempt has been made to rush our post at Sadda (30 miles from Thal up the Kurram valley), and some fighting continues near Lakka Tigga (10 miles S.W. of Sadda). The arrival of our aeroplanes at Miramshah, in Waziristan, is reported to have eased the local situation as regards the tribesmen in that neighbourhood. Our post at Manjhi, to the south of Murtaza, where the Gomal valley debouches from the mountains, was unsuccessfully attacked during the night of May 29-30.

The India Office made the following announcement on June 4:—

A full translation of the Amir's letter to the Viceroy of May 28 has now been received by telegraph from the Government of India. The Viceroy also reports that he has replied to the letter, stating the terms on which he is prepared to conclude an armistice as a preliminary to the discussion of terms of peace. In the course of his letter the Viceroy gave a reasoned statement of the causes that led to the outbreak of hostilities, and of the various acts of unprovoked aggression committed by the Afghans. He made it plain that explanations such as that given in the Amir's orders to his commanders, to the effect that the "Afghans were obliged to take defensive measures," are wholly inadmissible; and that the Afghan incursion had no justification whatever in any action on the part of the British authorities.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

The British soldier in Syria and Palestine has received much well-merited praise. Several correspondents of THE NEAR EAST have told us what a popularity he has achieved, and I have referred to the subject quite recently myself. His comrade in Greece has not been so fortunate in the matter of publicity—if fortunate, indeed, it be to achieve fame of the kind—but it is a fact that with the Greeks he has been and is a prime favourite, an easy first in the International, so to say. Here is what a correspondent writes on the subject: "Any money spent here [in Greece] by your Government on propaganda has been wasted; nothing, pictorial or otherwise, can compete with Tommy Atkins in this way." After referring to pre-war days and to certain changes of feeling that have taken place in Greece since that period, the writer goes on to say that Tommy "has been an absolute eye-opener" to the Greeks. He continues: "The climax was reached at the Salonika fire. ——, ——, and possibly —— were out for loot, or, shall we say, souvenir hunting? Tommy had no other thought than for saving lives and property; houses were cleared of their contents as best it could be done; things were labelled with the address and dumped or stored under British care; and when all was over the people were informed that their property was waiting to be claimed. They had never expected to see it again."

***

And here is another little bit about our men in Greece. In the early days of our presence in the country a regiment was to be quartered on a village, which was notified accordingly. The villagers protested, and were inclined to kick; and billeting was carried out very much against their will. After being there a month the troops were ordered elsewhere. Thereupon a deputation, headed by the mayor, waited on the C.O. to ask what they had done to cause the removal of the troops. They felt it as a slight to the village, and they wanted the troops to remain!

***

We have heard much about the ill-treatment of British prisoners of war in Turkey. What will my readers say when they learn that one of these unfortunate beings is still kept captive—and behind bars, for the curious to gaze upon? It seems incredible, no doubt. But it is a fact nevertheless, as is vouched by one of the victim's former companions. I learned of it through a letter which lately reached England. I quote: "By the way, X——, who was at Afion Kava Hissar as a prisoner, had rather a curious meeting at Alexandria. He and I drove out to the Nouzha Gardens, and in wandering round the menagerie section came across a cage bearing a label inscribed 'Syrian Wolf.' Who should be the inmate but the pet wolf belonging to the Prisoners of War Camp at Afion, which had been brought into the camp by a Turkish sentry when it was about the size of a kitten; had been trained by the officers; and had learned to follow them about and answer to its name like a dog. It had been brought out of the country by them when they were released, and had been placed in the care of the keepers of the Nouzha Gardens. It still remembers its pet name." I wish the writer had given the name. "Grey Brother" surely would be appropriate for this reversal of the Mowgli story. I am sorry the poor beast has to be kept behind bars; but I expect it is wiser.

***

All armies have their peculiar forms of discipline, and these forms very largely correspond to national temperaments. Now you all know that the Russian is an idealist who pursues his ends in ways impossible to more Western nations. This fact is illustrated by a cutting which I have taken from a recent *Pioneer*. Here is the extract:—

"General Dunsterville, according to a correspondent who heard him lecture on the subject of the British advance to Baku, tells the following story about the state of discipline amongst the Russian troops who were at one time assisting the British. The General on one occasion went to the Russian Commandant's tent to see him about something. He found the aged Commandant on the floor with a Russian subaltern clawing at his throat and kneeling on his chest. When General Dunsterville entered the subaltern got up and walked away, and the Commandant rose to his feet, saying, 'Some of these young officers of mine are rather impulsive, don't you think?' The matter was not mentioned again."

However, other places other manners. What a distance from the British subaltern, whose highest social daring is the trumping of his colonel's ace! And even then he does not always get let off with mild remarks about impulsiveness!

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Cyprus.

May 28.

Sir PHILIP MAGNUS asked the Under-Secretary of State for the Colonies whether the Government has received a telegram from the representatives of the Moslems in Cyprus, numbering about 60,000, praying that they may be permitted to continue to live under British rule; and, if so, whether, having regard to the extent and loyalty of the Mahomedan population of his Majesty's Dominions, the petition of the Moslem inhabitants of Cyprus will receive favourable consideration?

Lieut.-Colonel AMERY: The Secretary of State has received a communication in the sense indicated by the hon. Member, and has replied that the interests of his Majesty's Moslem subjects in Cyprus will receive full consideration at the hands of his Majesty's Government.

Sir P. MAGNUS: Will the inhabitants of Cyprus have an opportunity of determining for themselves whether they desire the island to be annexed to Greece or whether they prefer to remain under British rule?

Lieut.-Colonel AMERY: I must have notice of that question. I think the Government must be the judge of the situation as it arises.

Captain ORMSBY-GORE: Is it not the fact that the people by a large majority are in favour of union with Greece, and that is one of the difficulties?

Lieut.-Colonel AMERY: Yes; but it is undesirable to argue the question at this moment.

Trouble in Kurdistan.

June 2.

Captain ORMSBY-GORE asked the Under Secretary for Foreign Affairs where the reported outbreak in South Kurdistan had taken place; whether any British soldiers had been captured by the insurgents; and what was the alleged cause.

Mr. PRATT, Lord of the Treasury, who replied, said: The outbreak occurred at Suleimaniyeh, a town in South Kurdistan, in ex-Ottoman territory, where a Kurdish notable has obtained temporary control of the town, after an engagement with the local levies, in which the latter appear to have been worsted. The British officer and staff are prisoners, but are reported to be unharmed. Steps are being taken to extricate them and to deal with the situation. The Kurdish chief's action seems to be due to a wish to establish himself as an independent ruler.

Colonel A. HERBERT: Is my hon. friend aware that a dangerous feeling of fear and suspicion is growing up against us among populations in the East who have been perfectly loyal during the war, and that only a clear statement of a British policy will allay these suspicions?

German Missionaries in India.

Mr. PRATT, Lord of the Treasury, in answer to Sir A. Fell, said that the Secretary of State for India had no doubt that, as soon as opportunity offered, the Government of India would repatriate, in accordance with their settled policy, the few German missionaries who still remained in India, with such individual exceptions, if any, as reasons of humanity might make expedient. Those who were repatriated would not be allowed to return to India after the peace, and care would be taken that they did not return in the guise of Swiss or any other nationality. The Secretary of State was in communication with the Government of India as to the treatment of ex-enemy aliens in trade after the war. At present he was not in a position to make a statement on that subject.

Topics in Parliament.

The subjoined headings are those given in the official Report.

BRITISH ARMY (MEDICAL OFFICERS AT BATOUM)—DEMOBILISATION: Troops in Egypt. Troops in Salonika. (May 27.)

INDIA: Bombing by Aeroplanes.—Recent Riots (Total Civilian Casualties).—Civil Services (Selection Board).—Promoting Rebellion.—Currency Commission.—Press Criticism.—Karachi (Troop Train Incident).—Afghanistan. Prince Paul of Serbia has left London for Italy.

The Aga Khan left London on June 4 for Paris.

M. Také Jonesco and Mme. Jonesco left London on May 30 for Paris.

Prince Cantacuzene of Roumania left London on June 1 by aeroplane for Paris.

Bimbashi W. M. Richards is being posted to the Sudan Government for duty.

Sir Godfrey Fell, Military Financial Advisor, has left India for England on six months' leave.

The French Ambassador was visited on May 31 by M. Yovan M. Yovanovitch, formerly Serbian Minister in London.

Mr. J. L. Rieu has taken over the office of Commissioner of Sind from the Hon. Mr. H. S. Lawrence, C.S.I., who is going home on six months' leave.

General Hébert, Commander-in-Chief of the 3rd French Army, arrived on May 31 at Salonika on a special mission to the Greek Army Headquarters.

Rear-Admiral Gaunt, the Naval Commander-in-Chief, East Indies Station, who is to go home shortly, will be succeeded by Rear-Admiral Sir Hugh Tothill.

Mr. W. H. J. Wilkinson, I.C.S., who recently returned from military duty, is shortly to join the Foreign and Political Department, Simla, on special duty.

M. Ivan Mestrovitch, the Serbian sculptor, has arrived in London from Paris, and on May 29 visited M. Yovanovitch, late Serbian Minister to the Court of St. James's.

The marriage arranged between Lieut.-Colonel A. P. Browne, D.S.O., late Central India Horse, and Miss Winifred Rhodes will take place on June 19, at St. John's Church, Ryde.

The King has been pleased to confer the honour of knighthood on Mr. Justice Norman Cranstoun Macleod on appointment as Chief Justice of the Bombay High Court.

The anniversary meeting of the Central Asian Society will be held at 22, Albemarle Street, on June 11, at 4.30 p.m. The chair will be taken by the Rt. Hon. Lord Carnock, P.C., G.C.B.

The marriage was celebrated on May 29, at Penzance, between Major Arthur Montagu Brigstocke, I.D.F., Indian Civil Service (retired), and Doris Mamie, widow of the late A. E. Ross, Imperial Forest Service, Burma.

The marriage was celebrated on May 23 at All Saints' Church, Fulham, between Captain Douglas Aylward, M.C., I.A.R.O., youngest son of H. N. Aylward, of Lockerley, Hants, and Wilhelmina Hurst, daughter of Mrs. Hurst, of Preston, Lancs.

An engagement is announced between Douglas Royle Tweedie, Bimbashi, Egyptian Coastguard Service, elder son of Mr. and Mrs. A. J. Tweedie, Port Said, and Ethelwyn Marjorie, daughter of Mr. and Mrs. Frank W. Chanter, of Bloomfield, Braunton, North Devon.

The marriage was celebrated on May 29 at St. Andrew's Church, West Tarring, Sussex, between Leslie Seymour, Captain, I.A.R.O., 104th Wellesley's Rifles, son of Major H. Bell-Syer, Royal Irish Rifles, and Phyllis Mabel Charlotte, third daughter of the late Percy Wansbrough Stevens, barrister-at-law, India, and Mrs. Percy Stevens, Dunooltie, West Tarring, Sussex.

Sir Krishna Gupta, formerly of the India Council, and Sir B. C. Mitter, members of the Moderate deputation on the Indian reforms, have arrived in London, and are staying at the National Liberal Club.

The King inspected, on May 29, a party of Indian officers and non-commissioned officers belonging to the Royal Field Artillery base at Rouen, under the command of Captain H. C. Clogstoun, Indian Labour Corps, who are on short leave from France.

The European Association of India has deputed its secretary, Mr. T. E. Welby, to visit Great Britain and place its criticism of the Montagu-Chelmsford scheme of Indian reform before the British public. It is understood that Mr. Welby will arrive this month.

Miss Grace Burch Walkup, of the United States, who has sailed for Europe to work in Belgrade for the Serbian Relief Committee, intends to take 1,000 photographs of Serbian children and send the pictures to America for use in a campaign for their aid.

His Majesty King Albert of Belgium has been pleased to confer upon the Hon. Mr. Thomas Smith, of Cawnpore, the decoration of Chevalier de l'Ordie de la Couronne in recognition of his services as treasurer of the United Provinces Belgian Relief Fund and Red Cross Fund.

The marriage was celebrated on May 29 at St. Mary Abbot's Church, Kensington, by the Ven. Arthur Kitchin (uncle of the bride), between Captain J. P. W. Howden, R.A.S.C., of Durban, Natal, and Alison, younger daughter of Lieut.-Colonel T. H. Sweeny, C.M.G., I.M.S., retired.

The marriage was celebrated on May 28 at the Parish Church, Eastbourne, by the Rev. Canon Streatfield, between Frank Henry, Lieut., attached 27th Indian Cavalry, son of the late F. H. Simons, of Petworth, and Betty, daughter of Mr. and Mrs. S. H. Weston, of Ballybritt, Eastbourne.

A marriage has been arranged, and will take place in the autumn, between Commander G. H. S. La Touche, O.B.E., Royal Indian Marine, and Mrs. J. W. Consadine, widow of Major J. W. Consadine, Royal Munster Fusiliers, and daughter of Mr. and Mrs. W. Black-Law, of Kingstown, Ireland.

The marriage arranged between Rudolph John Agnew, elder son of John A. Agnew and Mrs. Agnew, 13, West Heath Avenue, Hampstead, and Pamela, daughter of the late I. D. F. Campbell and Mrs. Campbell, Rosemount, Naina Tal, U.P., India, will take place at St. Edward's Church, Golders Green, on June 12.

Serbia is to have her Emblem Day on June 12 in aid of "the Hon. Evelina Haverfield's Fund for Disabled Serbian Soldiers." There is also to be a Slava Week Ball, the last for the spring season, on June 16, at the Hyde Park Hotel, beginning at 10 o'clock in the evening. The organiser of both is Mrs. Erica Beale, Slava Week Offices, 38, Conduit Street, W.

Reuter's Cairo correspondent, writing on May 26, states:—The official *Gazette* announces:—"In the desire to conform to the commands of the Moslem religion regarding marriage, and to be guided by the holy traditions of the Prophet, his Highness the Sultan has decided to carry out his previous resolution on the subject." The marriage contract with the Sultana Nazli, a descendant of illustrious and noble houses, was exchanged on May 24 in the presence of the Sultan and the father of the bride, Abdel Rahim, Sabri Pasha, Minister of Agriculture, representing the Sultana.

On May 31 Lord Pentland was received in audience by his Majesty upon relinquishing his appointment as Governor of Madras, when the King invested him with the Insignia of a Knight Grand Commander of the Most Exalted Order of the Star of India. Lady Pentland was invested by his Majesty with the Insignia of a Dame Commander of the Most Excellent Order of the British Empire, Civil Division. Lord and Lady Pentland afterwards had the honour of being invited to luncheon with the King and Queen.

APPOINTMENTS, PROMOTIONS, &c.

The Hon. Dewan Bahadur P. Rajagopalachariar has been appointed Vice-President of the Madras Legislative Council.

Mr. W. P. Barton, I.C.S., Judicial Commissioner, North-West Frontier Province, has been appointed to officiate as Resident, Baroda.

Mr. C. Moss King, Legal Remembrancer, and Mr. G. B. Lambert, Financial Secretary to Government, have been appointed members of the United Provinces Legislative Council.

The King has approved the appointment of Sir Grimwood Mears, barrister-at-law, as Chief Justice of the High Court of Judicature at Allahabad in succession to Sir H. E. Richards, retired.

Lieut.-Colonel H. C. Oakes, Indian Army, now on war service, has been appointed Commandant of the Travancore State Army, vice Lieut.-Colonel D. E. L. Faunce, who reverts to the British service.

OBITUARY.

Lieut.-Colonel William Joliffe Twyford, of Bronwylfa, Welshpool, a Mutiny veteran, died on June 2, aged 82.

The death occurred on May 26, at Tay Park, Broughty Ferry, N.B., of Clement Jakman Danby, late of Calcutta.

Sadighol-Molk, who was for ten years' Persian Minister at The Hague, has died in Paris. He was seventy-three years of age.

The death occurred on May 27, at Arosca, Switzerland, of Captain Donald Macintyre, 2nd Gurkhas, eldest son of the late Major-General Donald Macintyre, V.C.

Lieut.-Colonel Charles E. S. Scott died at Teignmouth on May 29, at the age of eighty-three. He served throughout the Crimean Campaign, and at the siege of Sebastopol was wounded. He had the medal with clasp, the Fifth Class of the Medjidie, and the Turkish medal.

The death took place at Allahabad, on April 22, of Mr. William Burbridge, a Mutiny veteran and the oldest translator in the Allahabad High Court.

Colonel Elliott Armstrong Bruce died at Stenhouse, Barnstaple, on May 29, at the age of 79. In the Afghan War of 1878-80 he was Executive Commissariat Officer with the Vitakri and Lower Kuram Field Forces, and five years later he accompanied the Burmese Expedition in a similar capacity.

Our Malta correspondent writes (May 20):—The Island has heard with deep regret of the death of Colonel E. C. Seaman, C.M.G., R.E., well remembered in Malta, which took place on May 10. The deceased officer had been appointed to succeed General Painter as Chief Engineer at Malta.

NEWS IN BRIEF.

From May 31 the Orient express *via* the Simplon tunnel will carry Swiss mails for Yugoslavia, Serbia, Roumania, and the Levant.

It is intended to erect a memorial to the fallen of the British Saloniki Force. The proposed site is the Grande Couroune Mountain, overlooking Lake Doiran.

Reuter's Madrid correspondent, writing on May 27, states that Spanish troops from the Larache sector, operating on the Garra and Saaza hills, engaged the enemy, who retired, leaving behind 32 killed. Native Regular troops surprised an enemy detachment between Lanizan and Bini-Haros.

"DAILY BREAD" IN THE CITY OF DAMASCUS.

From the assistant organising secretary of the Syria and Palestine Relief Fund we have received an account of the bread distributions to thirty thousand of the poor and refugees in Damascus, written by one of the fund's relief workers, Mr. Victor Caldwell. He says:—

Amongst its other activities in Damascus, the Syria and Palestine Relief Fund provides for the inspection of bakeries in the city, which distribute bread on behalf of the British Government to nearly 30,000 people.

For three ordinary British citizens to be asked suddenly to superintend the issue of bread to a great number of the poor of Damascus shows that relief workers must be prepared for emergencies. Unaccustomed as we are to public bakeries, we must overcome diffidence, and carry on because the work is waiting for somebody. The foundation of the whole scheme of cheap bread distribution is the work of the Investigation Department, presided over by one of our Arabic-speaking ladies and staffed by native women. This is a patient and scientific work on lines developed by experience. A card index and a number of forms had to be started, and many interviews held with individuals and institutions to mark off boundaries and prevent overlapping. The homes of claimants are always visited, and much insight into the life behind the scenes is thus gained.

As inspectors, we frequently call at the bakeries when the people who have been passed by this careful censorship and obtained a ticket come to get their bread, and we get some impressions of them with our eyes. Their clothes tell the tale of poverty most plainly, but sometimes it is rather their faces, for there are those who have known better days and preserve some pride.

The idea of order and of waiting their turn is not familiar, and their endeavour all to be first frequently creates delay. Children often come with their cloths or paper bags to fetch the portions for the family. Their appearance, with their shining white teeth and alert faces, is prepossessing. Sometimes the small ones get crushed and cries are heard. Sometimes, too, they may lose the precious ticket, and then you may be prepared for a real copy of the "importunate widow" when the mother comes to crave a new one, which is not supposed to be granted again until after an interval.

INDIAN CIVIL SERVICE DINNER CLUB.

THE GARDEN PARTY

will take place at the

ROYAL BOTANICAL GARDENS, REGENT'S PARK,

at 4 p.m., on WEDNESDAY, the 11th JUNE.

Tickets, for themselves and their guests, will be supplied to any Indian civilian, or to the wives or families of Indian civilians, price 5s. each, on application to the Honorary Secretary, Austin Low, Esq., C.I.E., care of Messrs. Grindlay & Co., 54, Parliament Street, S.W. Owing to there being so few civilians home on leave, the Annual Dinner will not be held this year.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

THE TERMS TO AUSTRIA.

The terms which the Allies have imposed on Austria, so far as they have been published or presented to the enemy—and many points are still held over for further consideration—contain no surprises. Nor is it likely that they will be seriously disputed by the plenipotentiaries from Vienna. Indeed, there is relatively little at present to dispute. The financial clauses are not yet decided, and the political clauses are little more than the recognition of accomplished facts. It is in this respect that the treaty, for all its superficial likeness to the German, differs fundamentally from that which Count Brockdorff-Rantzau finds it is difficult to digest. Germany will be obliged to resign certain provinces obtained by conquest, but she still remains a great State. Austria loses nothing but what she has already lost, but what she has lost reduces her from a first to a third-rate Power. The territories which Germany loses are insignificant in comparison with those she retains, and that quite justly on the principle of nationality. In the case of Austria the position is reversed, and the territories she retains are insignificant in comparison with those she loses; and then again, on the principle of nationality, with perfect justice. Seldom has there been a greater political revolution. The old Austria was a country with a long Imperial tradition; in some sort it was the descendant of the Roman Empire; it had a policy which reached back to the Middle Ages and which looked forward to the dominance of the Balkans and the Adriatic; it had an imposing military power, and during the last few years, conformably to its growing ambitions, it had been at pains to increase its naval power. The new Austria is a country little if at all larger than was the opponent whom it challenged in 1914. It has neither army nor navy; it has no seaboard, and the ports which this new inland State will be allowed to use will be either Italian or Yugoslav. There is poetic justice in the fact that the country which did its utmost to prevent Serbia having access to the sea should now be itself a land-locked State.

Of the future of Austria we need say little, save that the natural inclination of its now purely German population will be to associate themselves more closely than before with the neighbouring Catholic country of Bavaria. Any political union is indeed forbidden by the treaty of peace, but this condition, which has excited some legitimate criticism, is likely to remain meaningless in practice, since there are many forms of close co-operation and understanding that escape the precise definition of political union, but are nevertheless to all intents and purposes the same thing. Now that Europe has definitely decided to revert from the Great Power to the Small State system, both Bavaria and the Rhinelands are free to express their common and historic dislike of Prussia. But both Bavaria and the Rhine, to say nothing of Wurtemburg and Baden, have much in common, in religion, in character, and in social life, with what remains of Austria, and the inevitable tendency will therefore be for Vienna to be regarded as the capital of the South German people, whether the headship takes concrete political form or not. It is quite certain that the small States, from their very lack of size and power, will feel that their existence is somewhat unstable, and that they will endeavour to buttress themselves by every means in their power. It may be said, of course, that the League of Nations secures them, and such is in fact the intention of that admirable conception. But old habits and instincts are deeply rooted, and the demand for an additional security is comprehensible. The world has already seen America and Britain pledge themselves to France, over and above the doubtless ample assurances of the League of Nations, and it is by no means improbable that the German States, always ready to copy a good political model, will imitate among themselves this additional covenant by some unofficial understanding.

Four new States—Hungary, Bohemia, Poland, and Yugoslavia—will be built up out of the Austro-Hungarian dominions. Of these Poland has the traditions and the prospects of becoming a first-class Power, and it is the more to be regretted that the solution of the Polish question, so far as it has been solved, is not altogether satisfactory nor impressed with the promise of permanence. Bohemia, a rich territory that is economically well-developed, has brilliant commercial prospects; its people have been fortunate in finding a President of great political weight, and the national culture in literature and music indicates the high general capacity of the Czechs. Hungary, defeated, impoverished, and in the throes of a social revolution, loses part at least of the territories which should never have belonged to the kingdom as the price of an aggressive war; but if society can be so re-established, her fertile soil should make a quick recovery possible, and an entirely fresh orientation of her policy is compelled by her present isolation and diminution of frontiers. The fourth State remains, and Serbia gains the reward for her heroic defence and sufferings for an unprovoked war in the construction of the Greater Serbia, or Yugoslavia, which will incorporate under one flag the whole Serb, Slovene, and Croat population. It would be foolish to discount the difficulties under which the new State begins its course. Hundreds of thousands of its people have been killed. Its property has been wantonly destroyed. Its existing relations with Italy, which will be its neighbour under any system of boundaries that is adopted, can hardly be called cordial by the wildest stretch of the imagination, and in proportion as it is successful and prosperous it will gain the enmity of the Germans, who perceive in it the barrier to their ambitions in the Balkans and in Asia Minor. It can but be hoped that the dangers and jealousies which surround it will give a sense of responsibility and political caution to the leaders of the Greater Serbia, which has received at last a somewhat belated recognition from the Great Powers. The new kingdom should be able to make itself secure, now that its legitimate aspirations are realised; but it will not be able to do so unless it eschews absolutely and permanently all internal friction, whether religious or political, between the various units which now make the greater whole; and we would add, as another indispensable point, that it should cultivate good relations with Italy. The Adriatic is a narrow sea, and commerce will not prosper unless the nations on either side recognise that they must have dealings in common, and that there is no real place for old feuds in a new Europe. If those feuds are allowed to continue, and friendly States are still to be deluged with the mass of propagandist literature that has been distributed to all and sundry during the past few months, the only sufferers will in the long run be the protagonists who have exhausted the sympathy of their friends, and the profits will remain with the common enemy of both, the Germans. There remains one further point to be discussed in the still incomplete terms of peace for Austria, and that is the navigation of the Danube. The whole river, which now runs through or divides six States—Bavaria, Austria, Hungary, Jugoslavia, Roumania, and Bulgaria—is to be internationalised, and administered by the League of Nations. There is no doubt that the right solution has been found in this matter—a very different solution from that which the Germans were proposing less than a year ago—and we may add that if the six States concerned show a disposition to sink their differences, within a few years the practical details of the Danube navigation will naturally fall to them, with the League of Nations as a benevolent nominal authority in the background. In this case at least the paradox is true that the more the League has to exert its authority the less successful will be the principles for which the League stands.

EGYPT UNDER THE ROMANS.

By JOSEPH OFFORD.

The Institut Archéologique Français d'Archéologie Orientale of Cairo has recently published "L'Armée Romaine d'Egypte d'Auguste à Dioclétien," a learned and interesting book by M. J. Lesquier. The story of the Roman occupation of Egypt is full of matter for us, that country's present sponsors, and from a comparison of the two occupations there are several conclusions to be drawn. The first point noticeable is the curious coincidence between the approximate number of troops retained by the Romans in Egypt and that (until the present war) considered to be proper for that purpose by the British administration. During the earlier period of Roman occupation the forces employed for the country's conquest, and to maintain it, amounted to between 22 and 23 thousand men. By the second century of our era these were reduced almost by half. From time to time, because of insurrection or invasion, this strength was hurriedly augmented; but as the attacks upon the Empire's borders became fiercer Egypt was dangerously denuded of warlike troops, so that in the later third century the Palmyra Arabs and the Sudanese Blemyes were able to invade and occupy almost all the country.

The first serious diminution in the army's numbers was caused by drafts from it being despatched to assist Corbulo in the Parthian war of A.D. 62-63. A more destructive call was that for the campaign of Vespasian and Titus in Judea, when 2,000 veterans were sent to Palestine from the two legions Dejotariana and Cyrenaica, whose permanent fortified camp adjoined Alexandria. Almost certainly these units were also accompanied by some of the auxiliary corps allotted to each of these legions, who were then the only troops of that grade in Egypt. In 116, at the period of Trajan's Parthian war a vexillation of the Cyrenaica was in Palestine, and in 119 the whole legion was transferred from Egypt for garrison duty in Arabia with headquarters at Bostra. A further and greater diminution of the force took place during the suppression of the critical Jewish revolt under Hadrian in 132-135; for as a result of these troublous times, and perhaps also of the transference of some of its cadres to the creation of a new XXII. Legion in Britain, the XXII. Dejotariana disappeared from history.

Egypt could not with any safety have been deprived of these two legions unless early in the second century another had been stationed in the country; and so we find that in about 109 A.D. records of the II. Trajana appear in the province. We also know that in 116 one of its vexillations was in Palestine with the before-mentioned detachment of the Cyrenaica, and these took part under Tiberius Claudius Quarternus in Trajan's Parthian war.

The Trajana legion doubtless brought with it the bodies of auxiliaries pertaining to it, and this explains a number of new titles for such corps, found in inscriptions in Egypt and Ethiopia, and dating from early in the second century. It appears, however, that many of the twenty-second legion's auxiliaries remained in Egypt after its departure. For the Marcomanian war the single remaining legion, II. Trajana, was withdrawn, and its absence probably produced the Egyptian revolt of about A.D. 172.

The dangerous reductions of the Roman forces proved extremely impolitic and expensive; for the small numbers remaining tempted to insurrection both the Jews and the native Egyptians. These outbreaks entailed the loss of valuable lives and treasure, and increased the impoverishment of the much over-taxed country. Equally deplorable was the effect upon the Ethiopians, who, dwelling in a sterile land, were irresistibly attracted by any prospect of a successful invasion of Egypt. The insufficiency of the forces in Egypt to insure internal order and at the same time to defend the southern border, was undoubtedly the prime cause of attacks upon the Upper Nile frontier by the Blemyes, the devastating campaigns with whom are described by Roman historians as well as illustrated by papyrus records.

The danger from Ethiopians was so great that to drive them out of the Assouan country large bodies of troops, often quite unsuited for the climate, had to be imported; but when they had been driven out the forces accumulated were again reduced for emergencies elsewhere, or for want of new recruits were permitted to dwindle away, and so the trouble recommenced. The consequences of depleting the army of Egypt, to meet urgent military necessities elsewhere, below its already inadequate normal strength must have been obvious to the higher and wiser Empire statesmen. Therefore we are compelled to consider that such a course would not have been so frequently adopted if it had been avoidable. This leads up to the lesson that the story of the Roman army in Egypt provides for us, because now that it has been so excellently told it clearly indicates that the Cæsars did not provide an adequate army for the Empire's defence. It was not only in Egypt, but also in the other provinces that the forces were insufficient. Thus, whenever a serious invasion or rising took place upon one frontier, or in a province, the garrisons of several others were denuded at a sudden summons to send help to the endangered district. For instance, Egypt's legionaries were not only called upon for campaigns in Palestine, Syria, and Arabia, but for North Italy, and even Britain. Upon the other hand, when hostilities broke out in Egypt we find inhabitants from some four-fifths of the Empire being employed there.

Now that, by means of M. Lesquier's work, we are familiar with these facts, the wonder to us must be that the Empire held together so long as it did. For, forgetting previous reverses, invaders renewed their attacks from time to time, and the continual warfare exhausted the virility of the Latin race. The obvious remedy would have been to provide an adequate army for every province, or one linked up for the defence of several contiguous provinces. We may surmise that one reason why this step was not taken was because the commander-in-chief of such an army would, if he were a great soldier, have had in his hands such a power as would enable him to make a bid for the independence of his part of the State, or even to aspire to the Imperial Purple. Therefore, with a series of such armies the Emperor would never have felt safe even in Rome itself.

A second remedy would have been the retention of a special army in Italy itself ready as a whole, or by contingents to proceed to the danger zone if it could be reached in time, or, if not, to regarrison neighbouring provinces whose garrisons had been temporarily withdrawn for the emergency.

It should be remembered that Egypt differed from almost all other parts of the Roman Empire in being a sole appanage of the Emperor. He governed it by his prefect, and senators were not allowed to visit the country. This régime prevented the people from appealing to those of Rome against their grievances. It also enabled the Emperors to ruin the country by excessive taxation. This foolish policy was the result of the disastrous practice of bribing the immense Roman proletariat by vast grants of free food, most of it obtained from Egypt by the exhausting *annona*, or tax in kind upon agricultural produce. It was entirely a matter of politics, or unwise statecraft. The result in Italy was the creation of immense hordes of ne'er-do-weels, for it drew the workers from the fields, so that the *latifundia*, or small farmers vanished, and turned artizans into loafers, who preferred idleness because they lived upon the palace doles. It thus emasculated the people and resulted in an army of alien mercenaries, and the Empire's downfall.

We learn from the *Busreh Times* of April 26, that a Civil Post Office has been opened at Kufah.

The next census of India, of which Mr. R. Burn, I.C.S., United Provinces, will take charge, will take place at the end of February or the beginning of March, 1921.

The last meeting of the United Provinces Legislative Council was held at Government House, Naini Tal, on June 2.

THE BIRTHDAY HONOURS.

On June 3, His Majesty's birthday, the customary list of honours and appointments was published. Three members of the Royal Family are among the recipients of honours; the Prince of Wales and Prince Albert become Personal Aides-de-Camp to the King, and Prince Arthur of Connaught receives the brevet rank of Lieutenant-Colonel. The Order of Merit is conferred upon Admiral of the Fleet Sir David Beatty and Field-Marshal Sir Douglas Haig. The list of Indian Honours is especially interesting, and in it appear the names of General Sir C. C. Monro, Major-General Sir G. F. MacMunn, Major-General Sir H. T. Brooking, and Lieutenant-General Sir E. L. Elliot. We give below some of the honours of special interest to our readers :—

C.P. (CIVIL).

SIR FRANK FORBES ADAM, C.I.E., LL.D., D.L.
Chairman, East Lancashire T.F. Association.

C.M.G.

H. MACLEAN, Esq.
Honorary Attaché to his Majesty's Legation at Teheran.

THE STAR OF INDIA.

For services in connection with the military operations in Mesopotamia :—

K.C.S.I.

MAJOR-GENERAL SIR H. T. BROOKING, K.C.B., K.C.M.G.
MAJOR-GENERAL SIR G. F. MACMUNN, K.C.B., C.S.I., D.S.O.
Inspector-General of Communications.

C.S.I.

COLONEL (TEMPORARY BRIGADIER-GENERAL) A. J. H. SWINEY, C.B., C.M.G.
Indian Army.
BREVET COLONEL (TEMPORARY BRIGADIER-GENERAL) J. W. O'DOWDA, C.B., C.M.G.
Royal Dublin Fusiliers.
COLONEL (TEMPORARY BRIGADIER-GENERAL) F. G. LUCAS, C.B., D.S.O.
Indian Army.
BREVET LIEUTENANT-COLONEL A. T. WILSON, C.M.G., C.I.E., D.S.O.
Indian Army.
LIEUTENANT-COLONEL AND BREVET COLONEL (TEMPORARY BRIGADIER-GENERAL) C. E. G. NORTON, A.D.C.
7th Hussars.

For meritorious services connected with the war :—

C.S.I.

LIEUTENANT-COLONEL T. W. HAIG, C.M.G.
Political Department, His Britannic Majesty's Consul-General, Ispahan.
H. C. NORMAN, Esq., C.B.E.
Counsellor, His Britannic Majesty's Embassy, Tokio, Japan.

The King has been pleased, on the occasion of his Majesty's Birthday, to make the following promotions in, and appointments to, the Most Exalted Order of the Star of India :—

G.C.S.I.

HIS EXCELLENCY GENERAL SIR C. C. MONRO, G.C.B., G.C.M.G., A.D.C.
Commander-in-Chief in India.
HIS HIGHNESS MAHARAO RAJA SIR RAGHUBIR SINGH BAHADUR, G.C.I.E., G.C.V.O., K.C.S.I.
Bundi, Rajputana.

K.C.S.I.

G. CARMICHAEL, Esq., C.S.I.
Indian Civil Service, Member of the Council of His Excellency the Governor, Bombay.
M. E. SADLER, Esq., C.B., Hon. Litt.D.
Chairman of Calcutta University Commission.

C.S.I.

P. R. CADELL, Esq., C.I.E.
Indian Civil Service, Chief Secretary to the Government of Bombay.
LIEUTENANT-COLONEL M. W. DOUGLAS, C.I.E.
Indian Army, Chief Commissioner of the Andamans.
COLONEL C. MACTAGGART, C.I.E.
Indian Medical Service, Inspector-General of Civil Hospitals, United Provinces.
J. P. THOMPSON, Esq.
Indian Civil Service, Chief Secretary to the Government of the Punjab.
R. MEREDITH, Esq., C.I.E.
Chief Engineer, Telegraphs.
H. L. STEPHENSON, Esq., C.I.E.
Indian Civil Servise, Magistrate and Collector, Bengal.
MANUBHAI NANDSHANKAR MEHTA, Esq.
Minister of the Baroda State.

ORDER OF THE INDIAN EMPIRE.

For valuable services rendered in connection with the military operations :—

K.C.I.E.

LIEUTENANT-GENERAL SIR E. L. ELLIOTT, K.C.B., D.S.O.

C.I.E.

LIEUTENANT (TEMPORARY CAPTAIN) H. H. F. M. TYLER.
Indian Army Reserve of Officers.
COLONEL H. W. R. SENIOR, D.S.O.
Indian Army.
LIEUTENANT-COLONEL R. H. MADDOX
Indian Medical Service.
LIEUTENANT-COLONEL (TEMPORARY COLONEL) H. W. BOWEN, D.S.O.
Indian Ordnance Service.
LIEUTENANT-COLONEL J. W. MILNE.
82nd Punjabis, Indian Army.
LIEUTENANT-COLONEL J. B. KEOGH, D.S.O.
32nd Lancers.
BREVET LIEUTENANT-COLONEL E. A. PORCH, M.C.
Supply and Transport Corps.
MAJOR (ACTING LIEUTENANT-COLONEL) A. B. FRY, D.S.O.
Indian Medical Service.
MAJOR (ACTING LIEUTENANT-COLONEL) A. V. W. HOPE.
1st Battalion, 32nd Pioneers.
MAJOR (ACTING LIEUTENANT-COLONEL) L. E. GILBERT.
Indian Medical Service.
MAJOR (ACTING LIEUTENANT-COLONEL) W. D. A. KEYS, M.D.
Indian Medical Service.
MAJOR (TEMPORARY LIEUTENANT-COLONEL) W. M. ANDERSON, M.D.
Indian Medical Service.
MAJOR (TEMPORARY LIEUTENANT-COLONEL) H. MURRAY.
Military Accounts Department.
CAPTAIN AND BREVET MAJOR (TEMPORARY LIEUTENANT-COLONEL) C. DE L. CHRISTOPHER.
Supply and Transport Corps.
CAPTAIN AND BREVET MAJOR F. M. CARPENDALE.
42nd Deoli Regiment.
MAJOR (TEMPORARY LIEUTENANT-COLONEL) A. H. C. TRENCH.
Royal Engineers.
TEMPORARY MAJOR L. F. NALDER.
Special List, attached Political Department.
CAPTAIN (TEMPORARY LIEUTENANT-COLONEL) C. G. LLOYD.
Supply and Transport Corps.
TEMPORARY CAPTAIN R. MARRS.
Special List, attached Political Department.
LIEUTENANT (TEMPORARY COLONEL) G. EVANS.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

On the strength of a reciprocity treaty British ships participate in the Greek coasting trade. At a moment when commercial treaties are being denounced on a more or less wholesale scale there is a danger that one or two of considerable importance may be overlooked, and no provision be made for their re-introduction or for the retention of their essential clauses. There can be no intention on the part of Greece to exclude British ships from her coasting trade, but a point that may be lost sight of is that the spirit of the reciprocity treaty was more important than the letter. If the movement now on foot to bring all Greek coasting lines into a single combine be carried through, and the spirit of give and take were eliminated from Anglo-Greek shipping relations, it would be possible for British steamers still to be left in the coasting trade, but to be so penalised in a hundred different ways that the privilege was of no practical use to them. Attention has only to be drawn to the subject, one would think, to prevent a state of affairs from arising which would be contrary to the real interests of the Greeks, and cannot be desired by them.

***

A very satisfactory report has just been issued by the Bombay Electric Supply and Tramways Company. During the past year the gross revenue amounted to £512,700, an increase of £72,900, as against which the expenditure only rose by £34,300 to £217,800, the net receipts thus being £294,900, or an increase of £38,600. The disposable balance, after allowing for interest on the debentures, and for depreciation, etc., is £187,700, and from this a dividend and bonus of 16 per cent. for the year is to be paid, as against 14 per cent., and £12,700 is to be carried forward.

***

The Abyssinian Corporation, Ltd., whose prospectus appeared last week, has been formed under the most influential auspices to promote the development of British commercial interests in Abyssinia. It will be one of the chief objects of the corporation to arrange for the export to Abyssinia of British goods and for the export from Abyssinia of commodities produced in that country, and in this direction alone there should be very great scope. As regards this field of activities, it may be noted that the Corporation has obtained an option of purchasing the business of one of the leading firms in Abyssinia, with branches at Adis Abeba, Goré, Bouré, Gambela, Dirre Douah, and Khartoum, and the directors will consider the question of acquiring this and other businesses.

***

As regards the further activities of the corporation, I may mention that it is intended to apply for road, railway, and other concessions which would command the approval of the British Government. Roads and railways are essential for the opening up of what is practically an undeveloped country, and their construction will naturally stimulate trade and increase production. They will also make possible the development of the mineral resources of the country, which are believed to be very considerable, and in which direction very possibly one of the most promising fields for the corporation will be found.

***

I feel that it would be impossible to congratulate too heartily those responsible for this enterprise, which carries great promise for the development of British trade in a region which, for the most part, British traders have hitherto been content to leave to others. There are behind the corporation some of the most influential firms and individuals in the commercial life of this country, and I shall, therefore, scarcely be too optimistic if I anticipate that henceforward British interests will play a leading part in the commercial life of Abyssinia.

***

I see that it is proposed to supplement communications between Western Europe and the Near East by the construction of a series of waterways connecting the Danube with the French rivers. The project is one which naturally makes a strong appeal to France in view of that country's considerable interests in the Near East, and it is to be expected that every effort will be made in that quarter to carry the scheme through. The preliminary negotiations are evidently already well advanced, as the various governments concerned are stated to be appointing commissions to study the question. It is stated that a canal between the Upper Danube and Lake Constance will be the central link in the scheme, and that from the lake a new route will lead to the Rhine.

***

The announcement that an air mail is to be established between Greece and Italy affords a further interesting example of the way in which the authorities in the Near East intend to utilise the aeroplane for public services. Beyond question there is a great future for the aeroplane in the Near East, and I would strongly advise British aircraft manufacturers to lose no time in entering so promising a field.

***

I am glad to have news of the resumption of the activities of the British Chamber of Commerce of Turkey and the Balkan States at Constantinople. The Chamber is at present administered by a council of five, pending the return of all the local British traders, and I am informed that the council has recently been successful in dealing with a number of questions affecting British trade. The scope before the Chamber in the future will be immense, for henceforward more than ever there will be need of such a body in the Levant to supplement and to support the efforts of British traders.

***

One of the greatest difficulties which confront British firms who desire to enter foreign markets, and, in particular, markets like those of the Near East, with which they may not have had much to do previously, is the question of the appointment of suitable agents and representatives. In last week's issue of the *Board of Trade Journal* attention is drawn to the fact that H.M. Trade Commissioners and Consuls "are able to afford valuable assistance to British firms who may desire information respecting agency arrangements: (*a*) by suggesting the names of firms likely to be suitable as representatives or agents in their areas, and (*b*) by answering enquiries as to local firms concerning whom information is desired." British firms seeking representatives or agents overseas, it is pointed out, should apply in the first instance to the Department of Overseas Trade, and that with the application information should be furnished on the following points:—"1. Whether the goods of the applicant have been exported to the indicated territory; and, if so, in what manner. 2. Whether the agent required is to be paid a commission, and how far financial responsibility on the orders secured is to be borne by the agent. 3. Whether the representative required is to act as buyer for his own account. 4. Whether the agent or representative required is to act in some other capacity."

***

One of the most satisfactory features of the present economic position in Greece is the accumulation of wealth as a result of the war. Estimates of the surplus over the country's normal wealth vary from £40,000,000 to £60,000,000, and this money will be available for trade and commercial developments generally. The accumulation of certain classes of goods at the Piræus, which has been discussed at length in these columns, and is the subject of a further letter this week from our Athens Correspondent, is naturally a purely passing phase, and the fact that now the demand for goods of various descriptions is very great indicates very plainly the prospects in the Greek market in the future.

GREEK TRADE NOTES.

The Congestion in the Piræus.

(From Our Own Correspondent.)

Athens, May 10.

The congestion of the port of Piræus continues unabated. All the quays are stacked high with various goods for which there is no room in the Customs' warehouses. This is due partly to insufficient accommodation and partly to the frequent arrival of steamers with goods. It is extremely difficult to obtain delivery of goods under six weeks from the arrival of the steamers. Consignees are now receiving goods ordered before the blockade of Greece in 1917 and during 1918, and cannot deal with this sudden influx. Even before the arrival of British and American goods the Customs' warehouses were full to overflowing with Spanish goods, of which delivery had not been taken owing to the release on the signing of the Armistice in November of hoarded goods and the consequent drop in prices. The drop in prices was also considerably influenced by the decline of the rate of the Spanish exchange. During the war, and especially during 1918, large credits had been opened in Spain through the Greek banks for the purchase of various necessities, and also by speculators. On the signing of the Armistice, when prices dropped, and the exchange also went down far below the rates at which the credits had been opened, a great many merchants preferred to lose the deposits made against the credits rather than be faced with a far heavier loss if they took delivery of the goods. The situation was made slightly easier when permission was given for the export to the Black Sea and Turkey of goods from Greece; but this was only granted after one or two steamers with British and American goods had already arrived at the Piræus. Thus, before the warehouses could be cleared of Spanish goods, British and American goods arrived and covered them. The Government has taken steps to better this state of affairs by imposing heavy storage charges on goods remaining after a certain time in the Customs' houses, by opening fifteen additional sub-offices where goods may be examined and weighed, and by making arrangements for additional warehouses. The Government also contemplates providing storage of a temporary character by roofing over the quays and two squares adjacent thereto, but it will be some little time yet before these measures can be carried into effect, and by then it is hoped the congestion will have lessened. At the moment each steamer which arrives brings less and less goods to the Piræus, the remaining space being occupied by goods for the Black Sea and Turkey. Consignees complain of the great delay in bringing their goods into the Customs house and also of wholesale pilferage, the latter being due to insufficient surveillance of goods stored outside the warehouses.

At all Greek ports, without exception, the ship delivers goods into lighters, and these are again discharged into the Customs' warehouses. To-day, owing to the delay in doing this the steamship companies are forced to charge demurrage for the lighters employed, and such expenses, added to the already high discharging expenses, have combined to burden goods with from 25 to 45 drachmas per ton. In pre-war days the discharging expenses were never higher than 6 to 8 drachmas per ton. The difference is accounted for partly by the higher wages demanded by workmen employed on discharging and partly by the difficulties outlined above. The difficulties mentioned may be overcome in the course of the next six months, but it is doubtful if wages will be reduced appreciably within that time.

Something *Quite* Different

from All other Paints—

"Riversea" Paint

Is Elastic, Waterproof, and is Impervious to Heat, Cold, and Atmospheric Conditions.

Is a Perfect Preservative for Iron, Wood, Stone, etc. Salt Water has no effect, and the Paint is a positive cure for damp, and resists the action of strong Acids. Can be submerged under water.

Is supplied in any Ordinary Colour.

THE AGRICULTURAL OUTLOOK IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 10.

The country is still suffering from the effects of last year's drought, the sequel to a snowless winter and a rainless spring. I shall never forget the desolate aspect presented by an estate situated on the banks of the Pruth, where I spent a part of the summer. There was scarcely a wisp of green where in previous years you walked up to the waist in flowers and riverside vegetation, and the pastures, one of the chief sources of wealth of the district, were transformed into vast grey stretches from which the dust rose behind the ambling skeletons that had once been horses. I recall the dead and dying cattle: an ox that had lain down to a cool death in a branch of the river, and a dead horse about which a dozen huge eagles, never before seen in these parts, were perched. The poor brute that had perished from starvation must have provided a generous meal to these his uninvited guests, for they were so gorged that they allowed us to approach to within a hundred yards, when they hopped away in a cumbersome crescendo, finally raising themselves into the air with obvious difficulty. The harvest, which in 1916 had yielded sixty cartloads of wheat on this estate, this year repaid its owner with barely three, a quantity quite inadequate even as seed, so that large tracts remain uncultivated this year. This is only one instance, but it is typical.

What is lacking with regard to quantity may be compensated for, with a little luck, by the quality of the wheat, though at the best the compensation can be only partial. The outlook is decidedly bright up to now, but risks being compromised unless the present long spell of damp weather is replaced by sunshine. Fortunately, Indian corn has arrived in sufficient amount to insure a sufficient crop next autumn, so that the population need not suffer from hunger, as it did last winter.

YUGOSLAV CONSULATES.

(From a Correspondent.)

I hear that the Yugoslav Government have issued a new decree concerning the opening of many new Consulates in all important commercial and industrial towns in West Europe, and especially in Allied countries, in view of the new commercial connections and prospects of the new State. For Great Britain, London, Glasgow, and Manchester are mentioned as the consular places.

The Belgrade papers announce that the Yugoslav inland loan at 6 per cent. of 200 millions kronen has met with most encouraging support in all parts of the State.

M. M. T.

The sheep to be sent out to Serbia will consist of Cheviots, Wensleydales, and Herdwicks. The Herdwick will suit the mountains of Serbia, the Cheviot the foot hills, and the Wensleydale the rough pasture.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The strong feeling in the market has been well maintained. When business has been under consideration sellers have presented a very stiff front to buyers. Varied reports continue to come through relating to the Egyptian crop. On the whole, however, the plants seem to be doing fairly well. The larger demand continues in yarns made from Egyptian cotton. Most producers of the finer counts are very independent. There has been a substantial rise in prices during the last week or two. Buying has been chiefly for home use, the offers for export descriptions being rather poor. A large trade has been done in cloth for Egypt and the Near East generally. Prices have been paid for certain materials which were scarcely expected. The demand for the early delivery of goods is very active. A larger turnover has also taken place for European countries, especially the occupied portion of Germany. India has given fair support, but the turnover has not been very important. It seems quite impossible to satisfy China, and further contracts of an encouraging character for distant delivery have been arranged in standard makes and fancies. Manufacturers of cloth are steadily strengthening their position. In American yarns, demand has been a little quieter, but quotations have been very firmly held. Rather more business has come round in shipping descriptions for India and Holland. A serious position of affairs has arisen on the mill hours and wages question. The employers and operatives have failed to agree, and a strike is threatened on June 21. The Government is expected to intervene.

OVERSEAS TRADE DEPARTMENT.

At Whitsuntide the greater part of the Department of Overseas Trade, the head of which is Sir Arthur Steel-Maitland, will be moved to 4, Queen Anne's Gate Buildings, Queen Anne's Gate, S.W.1. A well-equipped inquiry office will be left at 73, Basinghall Street, E.C.2., the present offices, as well as one or two sections of the Department the nature of whose work necessitates the closest touch with the financial and shipping interests in the City. In addition, Sir Arthur Steel-Maitland will retain a room for interviews at 73, Basinghall Street, and responsible officials of various sections of the Department will attend there also by arrangement to receive visitors and deputations.

MINING CLAIMS IN MOROCCO.

The Board of Trade call attention to the fact that the sittings of the Arbitration Commission on Mining Claims in Morocco have been resumed in Paris, and that the Commission have extended to July 15 next the period in which applicants may rectify their claims in accordance with article 3, paragraph 3, of the Dahir of January 19, 1914, as regards the French zone, and that of January 20, 1914, as regards the Spanish zone.

Thirteen thousand guineas were paid for two Persian rugs at Messrs. Christie's last week. The rugs were a pair, 13 ft. by 5 ft. 9 in., woven in silk with arabesque designs, foliage and rosette ornaments, with narrow borders of the same, the ground of gold and silk, upon which were blue and pink panels.

TRADE ENQUIRIES.

AN English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

CAIRO.—Active and energetic Agents of good standing, knowing the languages and customs of the countries, with good connections with the Sudan, Palestine and Syria, desire to represent British houses wishing to develop trade in those countries.—Address, SALAMA and FRANCO, P.O.B.843, Cairo, Egypt.

THE ALEPPO MARKET.

Demand for Manchester Piece Goods.

(FROM A CORRESPONDENT.)

March 19 was a red-letter day for the cotton merchants of Aleppo, in that it heralded the arrival of the first consignment of goods from Manchester since the blockade. These goods had left England per s.s. Kaffir Prince on January 29. As may be imagined, the goods were eagerly snapped up, and in a month the entire consignment was sold out by the wholesale merchants. Prices, which before the Armistice had risen as high as ten times pre-war prices, came down with a run, and now rate at less than three times pre-war prices. As an example of prices ruling now, the following may be quoted:—White shirting, best quality, fetches 350 piastres Egyptian the piece (39 yards); Indian prints, second quality, 5 piastres Egyptian the metre; and best quality "T" cloth (Hoyle quality), 175 piastres Egyptian the piece (24 yards). These three goods are most in demand in Aleppo, and of the three the "T" cloth is the most important. After having been dyed in indigo it goes to make the blouse and pantaloons worn by nine-tenths of the "fellahs"; indeed, one may safely say that there is not a man of the labouring classes—countryman or townsman—but wears the indigo-dyed "T" cloth. Both the other goods quoted are sold almost entirely to the "fellah." When the first rush had died down, and the supply had dried up, prices rose again ten per cent. Merchants then transferred stock from Egypt to Syria. In Cairo, prices which had dropped 40 per cent. since the Armistice rose again 20 per cent., owing to the transfer of large quantities of goods to Syria. These goods are now also sold out, and the merchants are eagerly awaiting the arrival of the s.s. "Modesta" of the Prince Line, which left Manchester on April 23. It is expected that prices will remain the same even after the arrival of the second consignment. The chief complaints of the local merchants are high rail freights in this country and long delays between consignments. They would gladly welcome at least one ship per month could the shipping question admit of it. The rail journey from Beyrout to Aleppo now takes approximately eight days for goods traffic; and the cost per ton, by the time the goods reach the merchant is roughly £E6½. The rail from Beyrout to Aleppo belongs to the French Compagnie Damascus, Hama, et Prolongement, and unless these freights are substantially reduced the merchant will find it cheaper to ship via Alexandretta and employ camel transport. For the moment beggars cannot be choosers, and high freights are willingly paid for the privilege of being first in a market that has suffered a long drought. It is interesting to note that the arrival of these goods sent the rate of exchange for £100 Egyptian notes from £75 gold up to its present rate of £98 gold per £100 Egyptian paper.

NEAR EAST MARKETS.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in April:—

Barley.—Attacks of rust and smut have caused some slight damage in Minúfiya and Minya. Harvesting is progressing everywhere, and in the provinces of Middle and Upper Egypt threshing and winnowing have begun. A satisfactory yield is expected.

Beans. — Weather generally favourable. The damage caused by broom-rape has been slight, except in the provinces of Sharqiya and Minya, where it has been of some importance. Harvesting is almost at an end, and the crop is now being threshed and winnowed. The yield is, on the whole, below the average, except in Faiyúm.

Lentils.—Weather suitable. The crop is free from pests. Harvesting is at its end, and threshing is progressing. The yield is an average one.

Helba.—Weather favourable; no enemies have been reported. Harvesting is nearly over, and threshing is advancing in a satisfactory way.

Onions.—Weather favourable. A slight attack of mildew is reported from Beni Suef, but elsewhere the crop is free from pests. Harvesting is in progress. The yield is an average one, but its marketing has been rendered almost impossible through the lack of the usual facilities for transport, and there probably will be a considerable loss of crop.

Sugar Cane.—Weather suitable, and water supply sufficient. The new crop is still being planted, and the transport of the old crop to the factories in Minya Province has been checked owing to the suspension of traffic on the auxiliary line, which will no doubt considerably reduce the yield.

Milleet (Séfi).—Weather favourable. The land is in preparation, but water supply in several localities is not sufficiently available for sowing to be proceeded with.

INDIAN CURRENCY COMMISSION.

The Secretary of State for India has appointed a committee to advise in regard to the future of Indian currency and exchange, constituted as follows:—Sir Henry Babington Smith (chairman), Lord Chalmers, Sir Marshall F. Reid, Sir James B. Brunyate, Mr. F. C. Goodenough, Sir C. Addis, Sir C. Needham, Mr. M. M. Gubbay (Controller of Currency, representing the Government of India), Sir Bernard Hunter, Mr. Dadiba Merwanji Dalal (Bombay), and Mr. Thomas McMorran (Messrs. Duncan Brothers, Calcutta). The secretaries to the committee are Messrs. C. H. Kisch and H. Denning.

The terms of reference are as follows:—"To examine the effect of the war on the Indian exchange and currency system and practice, and upon the position of the Indian note issue, and to consider whether, in the light of this experience and of possible future variations in the price of silver, modifications of system or practice may be required; to make recommendations as to such modifications, and generally as to the policy that should be pursued with a view to meeting the requirements of trade, to maintaining a satisfactory monetary circulation, and to ensuring a stable gold exchange standard."

Any communications relating to the business of the committee should be addressed to one of the secretaries at the India Office, if from persons in this country; and to the Secretary to the Government of India, Finance Department, Simla, if from persons in India.

In the House of Commons, on June 2, Mr. Stewart asked the Secretary of State for India whether the terms of reference to the Indian Currency Commission debarred the Commission from considering whether the legislation of 1893, closing the Indian mints to the free coinage of silver, should be removed; and whether they would also be debarred from considering any possible scheme for stabilising the price of silver by international arrangement or otherwise, in view of the large requirements of India for silver, and of the violent fluctuations which were continually taking place in that metal.

Mr. Pratt, who replied, said that the policy of the legislation of 1893, whereby the mints were closed to the free coinage of silver and a gold standard had been established, was not within the scope of the reference to the Commission. The reference would permit the Commission to consider arrangements for stabilising the price of silver that did not involve the setting up of a bimetallic standard.

ENGINEERING NOTES.

British Motor-Ploughs.

Self-propelled ploughs seem to have found a ready market in the Near East, and especially in Greece, where several of them have been imported from America this year. They were ordered, according to an American report, by the Greek Government, and a few more have recently been ordered by private landowners. It is very strange that no efforts, at least so far as we know, have been made by British manufacturers to introduce this small and useful implement into Greece and the large Aegean Islands, where, as is well known, British-made goods and especially machinery are highly appreciated. We understand that the price of the American is, if anything, higher than that of the British. We had occasion in previous notes to mention the efficiency and great adaptability of these little machines, but it appears many improvements have since been made; and an improved design which has recently been brought out will be of particular interest to the majority of landowners in the Near East who possess gardens with fruit-trees, etc. This machine is specially constructed for use between trees and bushes, and for the cultivation of growing crops. Its extreme overall width is 3 ft., and its height 4 ft., so that it will pass underneath the majority of boughs in an orchard. A special shield fitment for the upper portion of the machine can be added to move without injury to the unduly low branches as the machine passes along. This little motor-plough, therefore, has all the attributes for efficient work in fruit plantations and market gardens. A special arrangement of ploughs is provided, which permits four furrows to be turned between each row of bushes—two furrows to the right and two to the left. In this case, the extreme outside right and left furrows are first ploughed, the machine passing up the centre of the row. Then the plough-boards are placed back to back in the centre of the machine and the two centre furrows worked outwards, thus leaving an open furrow up the middle of the row. In this way, the tractor travels always in the centre, whereas horses would move first on one side and then on the other. Cultivation between trees is simplified by low, wide cultivators, which expand or contract as may be necessary, so that the soil right beneath the low bushes can be worked to a maximum width of 6 ft. 6 ins. at one cut. The working of potato rows, strawberry beds, etc., is facilitated by the contraction of the cultivator frames at the back. Ridging work, and the moulding-up of potatoes, can also be done by the use of two double mould-board ploughs. For extra deep work, the machine can be fitted with one large single furrow turn-wrest plough which lays the soil all one way and avoids all ridges and furrows. This plough can actually be turned in its own length. The value of such a plough to a vine owner is also obvious.

American Interest in Macedonia.

Americans are taking a remarkable interest in the cultivation of the Macedonian wheat fields by machinery. Soon after the liberation of that province from the Turks a party of American commercial travellers arrived in Salonika with a cinematograph, the latter being used every evening at any convenient café or inn that could be engaged in town or villages for the entertainment of large numbers of people who were watching, free of charge, the large moving pictures of ploughs, motor ploughs, tractors, with sowing, harvesting, or threshing machines at work. Somebody stood near the screen pointing out the various parts of the machines and explaining the operations with an occasional joke, and the assurance that any of those machines or implements could be obtained within two or five weeks time. And, it is said, many machines now in Macedonia were sold in that way. Americans consider Greece an excellent market for agricultural machinery. The United States Consul at Salonika reported that American machines should have a good future in Greece, for they had a magnificent introduction into the country. He has been visiting the plains of Eastern Macedonia which the men of the French army are cultivating to provide food for the soldiers and forage for the horses of the Army of the Orient. Seven farms, he says, have been laid out, and, in addition to barracks on each farm for housing, there is a workshop for repairing agricultural implements and machines. There is also a large central workshop where extensive repairs and alterations can be made to motors and tractors.

Near East Markets.

There was a prevailing belief that the end of the war would be followed by a very brisk revival of trade. It was supposed that, apart from the inevitable demands at home, the great destruction in Northern France and in Belgium alone would place such a heavy demand upon all classes of industries, especially engineering, that British manufacturers would be assured of an abundance of work for years to come. It is very probable that undue reliance placed upon such expectations has been responsible for the apparent disinclination of manufacturers to take energetic measures in other markets where, in the meantime, their foreign competitors have been actively engaged in establishing themselves. Now, however, it would appear that the market in Europe in the immediate future may not be nearly so extensive as was supposed. France, for instance, has placed an embargo upon all kinds of imports, except what are absolutely necessary, and it is reported that so far as industrial and agricultural machinery and implements are concerned it is probable that the prohibition will be more complete than it is with most other manufactures. Moreover, since Italy has decided to make all the machinery that she requires in her own engineering shops, it is declared that British manufacturers have no alternative but to prepare for markets where the conditions do not permit of the same restrictions being enforced. And it has been suggested that for the moment Belgium is the only market on the Continent where British makers can have a free hand! But what about the South-Eastern regions of the Continent? Roumania, Serbia, Greece, Bulgaria and Turkey, also Poland and the new Yugoslavia and Czecho-Slovakia, are all very fertile and form ready and desirable markets. British makers can have a freer hand, a wider scope and more trade prospects in these Eastern regions of the Continent than in the Western. German commercial energy was principally directed "towards the East." And at the present time the principal commercial and industrial centres on the Continent of Europe, in America and even in Japan are directing their attention towards those markets.

Poland as a Market.

With the liberation of Poland a market of great importance is opened to manufacturers of all classes of modern agricultural machinery and implements; for Poland is notably an agricultural country, and it and Serbia are the only two countries in that Eastern region in which agricultural associations on co-operative lines have been established. It was not until 1900 that the first of such associations was started in Poland, but their number soon increased, and in 1917 the Warsaw Association, which is the foremost, had a trading profit of £24,000 on a turnover of £1,000,000. One of the main objects sought by these co-operative agricultural societies has been that of facilitating the more general use of machinery for the purpose of helping the large proprietors to solve the labour problem, or for promoting the interest of the small-holders, many of whom found it difficult enough to carry on their operations at a profit, and regarded as the greatest of boons the possibility of acquiring or obtaining the use of machines and implements on the most advantageous terms. In some cases the society enables a member to secure machinery at cash price on credit; in others it will itself purchase the machinery and let it out at a low rate to farmers. Before the war, from 2d. to 5d. was charged per day for a plough, from 5d. to 2s. for winnowers, and from 2s. to 2s. 6d. for drills. The societies also deal in artificial manures and seeds, buying at wholesale prices and selling retail on credit. In addition to the purchase of machinery, etc., agricultural organisation is likewise being developed in Poland in the interest of the dairy industry. Other societies have taken up the question of improving the breed of cattle. It is announced on reliable authority that the Polish requirements of agricultural machinery will amount to more than £1,000,000 per annum. This year's needs are, it appears, greater by reason of the German confiscation during the war, and also the restrictions of imports during hostilities. British firms should very seriously consider opening up business connections with these societies, who are among the most important buyers of articles connected with agriculture.

SMYRNA-AIDIN RAILWAY.

Estimated traffic receipts (by telegraph) for the week ended May 10 amount to £10,392. The number of miles open is 379.

COMPANY MEETINGS.

IONIAN BANK.

The annual meeting of the Ionian Bank, Ltd., was held at the offices, Basildon House, Moorgate Street, London, on June 4, the Chairman of the company, Mr. Falconer Larkworthy, presiding.

The notice of meeting and auditor's report having been read, the Chairman said:—

Gentlemen,—This is the 81st year of the existence of the bank, and the fifth time we have met since the beginning of the great European war.

You will note from the report of your directors and the accounts that accompany it, that our operations during the year 1918 have continued to be of a progressive character. This progress has been accomplished whilst our business has been handicapped by conditions of a most trying character. Our difficulties may be defined as: (1) Staff conditions arising out of war conditions, and from the influenza epidemic; and (2) the lack of a satisfactory international banking system in Greece, Egypt, and in this country, greatly aggravated by domestic legislation in Greece, which, on the one hand, has paralysed the movement of our funds, and on the other has caused the formation of a number of local banks.

To deal with the staff question first. Mobilisation and the formation of these new banks have led to so great a demand for experienced clerks that this bank has been deprived practically of the whole of its experienced staff of the lower grades, and its reduced business has been carried on by ladies and apprentices at great risk of loss. It has been physically impossible to supervise and check the daily work and to carry out regular inspection of branches and agencies. Further—in regard to the joint control in Greece located in Athens—our chief officer, co-manager, and inspector, Mr. de Bilinski, whose valued services, at the request of the British Government, we shared with them, vacated his position in the bank in favour of the British Treasury in April, 1918. During the same period Mr. Moscovik, co-manager with Mr. de Bilinski, became a martyr to prolonged illness, and for a considerable portion of the year the chief control of the bank in Greece devolved upon the two sub-managers.

An inspection by our general manager for Egypt—whose services, together with those of other members of our Egyptian staff, as an emergency measure, transferred to Greece—has been made.

Outlook in Greece.

The principal features which call for comment in connection with the commercial movement of Greece during the year under review are, as may be imagined, all more or less intimately connected with the special situation produced by the war; consequently they may not be of a lasting nature, but they are worthy of a few remarks. During the past year we have witnessed the establishment of a number of new banks. It may be thought that these would increase competition to your disadvantage, but your directors are of the opinion that there is ample room in Greece for new banks, provided they are administered in a sound and prudent manner with a view to increasing the international and domestic banking facilities. There is a great future in front of Greece, and the development of Old Greece and the new territories, especially the improvement of the means of communication both by rail and road, should offer attractive prospects for financiers and capitalists and provide remunerative business for all. In this connection your directors have taken the necessary preliminary steps, and are only awaiting the result of the Peace Conference to take definite measures to obtain for your Institution its proper share of the banking transactions in the new territories.

Owing to the restriction by the Greek Government of the export of funds abroad, speculation in securities, particularly industrial shares, has been very rife. Also goods have been purchased far in advance of the actual requirements of the country, and a vast accumulation of goods has resulted at the Piræus and elsewhere. These events have given rise to two mild crises. With such a big fall in prices of securities and goods, we are afraid that some of our customers may suffer, but any losses that might fall on the bank are amply provided for. It is estimated that the war profits of Greece amount to about Drs. 1,000,000,000, part of which is deposited with British banks. All this money is awaiting investment for the development of the country. Money has been comparatively cheap throughout the year, being offered freely at between 5 to 6 per cent. per annum in the chief towns.

In my address last year I have referred to the losses sustained by Greek shipping owing to the piratical acts of our enemies, but I should like to add a few words. The losses of Greek tonnage have reached 54½ per cent. of their total shipping in June, 1914. The shortage of tonnage which has resulted has already begun to be acutely felt in Greece, and although the large deposits which shipowners keep abroad, representing the insured value of lost ships, will no doubt soon be placed on the market for the purchase of new tonnage, it will be a long while before new ships can be obtained to fill this gap. As an economic feature it is worthy of note that the present Greek tonnage is insufficient to carry Greek cargoes; consequently the foreign earning power of the Greek mercantile marine—which in the years before the war was a feature in Greek finance—will now disappear, although it is hoped only temporarily. The large revictualling operations to which I referred last year for account of the Greek Government have, as you will notice in the balance-sheet, been decreased to smaller proportions. This is of course due to the conclusion of the war and the relaxing of Government restrictions, and naturally this account will tend to disappear.

The Athens Exhibition.

A large exhibition of British goods at the Zappeion is now being arranged, and British manufacturers are being urged to support the exhibition to their utmost with a view to keeping between the two countries trade which in the past was in the hands of Germany and Austria. It is interesting to record here that in the year 1911-12 the trade between Greece and the United Kingdom represented one-quarter of the total foreign trade of Greece. But during the war the imports from America have increased to very large figures; in fact, during the two years 1916 and 1917 Greece imported from America goods to the value of Drs. 345,000,000, against Drs. 67,000,000 from the United Kingdom.

The action of the British Government, to which I referred when addressing you last year, in arranging to purchase the whole of the cotton crop at fixed prices, and on fixed types, has naturally affected considerably the bank's business in Egypt. Our business with exporters, as anticipated, has been reduced to quite small dimensions, but I am pleased to report that there has been no diminution in our up-country operations, which, as you are aware, form the backbone of our transactions. The crop for 1917-18 reached nearly 6¼ million cantars, and of the total arrivals in Alexandria during the year 1918 the bank handled 623,000 cantars, or 11½ per cent. Thus, notwithstanding the decline of the exporters' business, the figures remain very satisfactory. The acreage under cotton has been further restricted, and the crop for the current season is expected to reach 5,000,000 cantars only.

Having regard to the circumstances to which I have already referred, there has been keen cutting of rates by competitors, but your directors feel confident that with the return to normal conditions the bank's organisation in Egypt—which they claim is better than that of any other similar institution—will attract ever-increasing business. The Government arrangements did not work so easily as was anticipated, and although the Cotton Control Commission was supposed to take delivery of cotton immediately on its arrival at Alexandria, and, in fact, had requisitioned our Shoonahs in order to provide a portion of the storage room, there were considerable delays, which necessitated the bank obtaining additional storage accommodation. Notwithstanding these somewhat adverse factors, you will be pleased to learn that the profits of your business in Egypt have been greater than ever before, and that the whole business has been carried through without loss. An agency of the bank was opened at Cairo late in the year. At the first opportunity, as soon as the questions of staff can be satisfactorily settled, this will be turned into a branch of the bank, and your directors are confident that this new departure will result in appreciable benefit to the bank's operations.

What is true of Greece in regard to Macedonia and Asia Minor is true of Egypt in relation to her extended surroundings. Her commerce and wealth during the war have greatly increased, and her possibilities of inward development and of outward trade extension under the new conditions are immense.

With stable transport facilities in view, and with the accomplishment of the various irrigation schemes, forming an integral part of the future irrigation programme of the Nile Valley, including the scheme in connection with the Blue and White Nile, we have the promise that enormous tracts of country that have blossomed as a rose in the past will once more blossom and prove themselves fertile beyond conception, and will become one of, if not the greatest of, the productive granaries of the world.

I have already alluded to the difficulties in regard to staff under which the bank's business has been carried on, but before closing my remarks I take this opportunity again to record our appreciation of, and thanks for, the services which have been untiringly rendered to the bank by the Advisory Committee at Athens, the Corfu Local Board, and the staff at home and abroad.

Balance Sheet.

In presenting the figures to the shareholders we are very pleased to report that once again the exceptional profits shown are due to a normal increase of resources and to the discriminating care always exercised by the bank in avoiding unprofitable and risky business. The issued capital continues to stand at £485,580, or 97,116 shares of £5 each, fully paid. The question of increasing the capital of the bank continues to occupy the attention of your directors, but so far the general national conditions have not permitted the issue. The raising of new capital for home enterprises is now permitted by the Treasury, but not for companies transacting business abroad. If you adopt the report now presented, the reserve fund will be increased from £85,000 to £120,000. The limit of the bank's note circulation under its convention with the Greek Government is £280,000, and the amount outstanding £227,169. As you are aware, the bank's right of issue expires on May 25-28, 1920. Deposits and current accounts show a further increase of £491,092, and now stand at £6,427,197. Other accounts show a reduction during the year from £2,739,391 to £2,340,321. On the assets side your directors would again draw attention to the strong position of the bank in regard to available cash. Cash in hand, notes of other banks, money at call in London and with the National Bank of Greece amount to £1,540,854; investments, exclusive of the £76,900 bonds of the Greek Government Two and a-Half per Cent. Guaranteed loan held by the bank and deposited with the Bank of England under the Greek law of 1898, £1,441,040; and the bills receivable, £682,395, or a total of £3,664,290. The above are all of a liquid character and are equivalent to over 70 per cent. on the demand liabilities of the bank, totalling £5,193,643. You will observe from the figures the absolute strength of the bank in regard to its cash resources and its ability to meet any requirements which may be made by its customers on the resumption of more normal trading conditions.

The report and accounts were unanimously adopted; the dividend and bonus recommended were declared; and the retiring directors and auditors having been re-elected, a vote of thanks to the Advisory Committee at Athens, the Local Board at Corfu, and the officers at home and abroad concluded the proceedings.

THE "FINANCIAL TIMES."

The ordinary general meeting of the Financial Times, Ltd., was held on June 2, at 72, Coleman Street, E.C. Mr. William Graham (the Chairman) presiding.

The secretary (Mr. H. A. Randall, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume you will take the report and accounts as read. This is the fourth occasion on which I have presided at the annual general meeting of the company, and at each meeting you have had to consider accounts for a period during which the country has been at war. The conditions therefore have been of a wholly abnormal character, and the business has been conducted under great difficulties and with the existence of many hampering conditions. During the year 1918 the war conditions were more accentuated than during any previous year. The staff of the company had become still more attenuated, and the labour therefore thrown on those who remained was all the more severe. The paper condition during 1918 was one of the greatest possible difficulty, and it made the limiting of the size of the *Financial Times* and the economy of space in the paper as produced a matter of vital importance and necessity, but we have successfully lived through the long period of war, and I think the shareholders should have every reason to be satisfied with the results which have been achieved.

The company at no time in its history has been in so sound a financial condition. In normal years the *Financial Times* has provided a large contribution towards the profits of the company. The war of necessity affected that paper very seriously. Financial operations were practically at a standstill, but in spite of the very adverse conditions prevailing a profit was made last year by that branch of the business, and in the conditions now prevailing the *Financial Times* is contributing handsomely towards the current profits of the undertaking. The *Financial Times* to-day stands pre-eminent among financial papers. The sale during the war was well maintained, and since the conclusion of the Armistice has largely increased, and there is no doubt that it substantially exceeds that of any other financial paper at present published.

The other properties of the company were carried on with great success during last year. The company's printing business—St. Clements Press—had a record year. In addition to the large business that it conducts in printing newspapers and periodicals, it operates an important general printing business. The general business has been considerably increased and developed. The *Drapers' Record and Men's Wear* were both carried on with great success during last year. They occupy a pre-eminent position as the organs of the drapery and textile trades. To prophesy is no part of my duty, but it is right that you should know that the progress of the company's business in all branches so far this year is such as to justify the hope that we shall be able to place before you, as a result of this year's working, a thoroughly satisfactory profit and loss account.

I now turn to the directors' report and balance-sheet. The profit for the year 1918, after making all proper reserves, is shown to be the substantial sum of £29,159 12s. 11d. The usual amount has been placed to the staff pensions fund, and the necessary redemption of Debenture stock has been effected. The amount standing in the accounts as "Work in hand, stock, etc.," is very much larger than usual. This is due to the greatly increased cost of paper it was necessary for us to accumulate during the war period, to the larger amount of stock necessary to meet the requirements of the increased printing business, and also, of course, to the increased cost of all materials. It is proposed to carry £15,000 to the general reserve, which will bring that item up to £75,000, and to pay a dividend at the rate of 10 per cent. per annum upon the Ordinary shares, carrying forward a balance of £31,585. If you will contrast the position of the company as at December 31, 1914, with the position of the company as at December 31, 1918, you will note that at the former period the accounts showed a reserve fund of £50,000 and profits available for distribution of £52,000, whereas at December 31, 1918, the accounts show a reserve fund of £60,000 and profits available for distribution of £61,810 7s. 6d.—an improvement effected in the surplus assets of the company of approximately £20,000. Before sitting down I should like to add my appreciation of the unstinted efforts of all members of the company's staff during the trying years we have passed through, for which I think the shareholders have every reason to be grateful. I beg to move the adoption of the directors' report and accounts, and after Mr. Hart has seconded the motion I shall be pleased to answer to the best of my ability any questions which shareholders may desire to put.

Mr. G. E. Hart, who seconded the resolution, said that it was very remarkable that during the difficult years of war the company had been able to maintain so excellent a position. This was due to the fact that a lean year in one department was equalised by the success of other departments.

The resolution was carried unanimously.

The chairman next moved the re-election of Mr. H. A. Randall as a director of the company, and remarked that that gentleman had given his life service to the company. He had its welfare very warmly at heart, and was of the greatest possible assistance.

Mr. Thos. F. Willerson seconded the motion, which was unanimously agreed to.

Mr. Randall thanked the shareholders for his re-election, and stated that in view of the fact that the company had been able to hold its own through practically barren years, the shareholders need have no fear of the continued prosperity of the Financial Times in normal times.

The chairman also proposed the re-election of Mr. G. E. Hart, the other retiring director. Mr. Hart, he said, had been for very many years a servant and officer of the company, and among printers his name was a household word.

Mr. Willerson seconded the motion, which also passed unanimously.

Mr. Hart expressed his gratitude to the proposer and seconder for the flattering remarks which they had made, and stated that his one idea throughout the whole of his life had been to place the company on a high pinnacle, and it would be his earnest endeavour in the future to maintain the position which the printing works had attained in the printing world.

On the motion of Mr. Howard Bridgewater, seconded by Mr. E. F. Donne, Messrs. A. J. Davis and Co. were reappointed auditors for the current year.

Mr. Howard Bridgewater proposed a vote of thanks to the chairman and directors, remarking that they were all very much encouraged by the prospects which the chairman had foreshadowed.

Mr. Donne seconded the vote, which was unanimously accorded, and the chairman briefly acknowledged the compliment.

COMPANY NOTES & REPORTS

Algerian Oilfields.

The directors of the Algerian Oilfields, Ltd., have received a letter from the company's technologist, Mr. C. B. Rosenplaenter, in which he writes:—"M. Ména (manager of the Tiliouanet Company) realises as well as I do the importance of deepening wells No. 12 and the well on 2,149, and as we have found an impervious layer of marl below the sandstone formation, followed by a gritty marl full of oil gas, the certainty of the existence of a lower oil-bearing stratum is obvious.

"No. 12 well, in which the water will be shut off at 170 metres with the 14 in casing, offers the best prospects, as it can be continued with 10 in. and 9 in. casing, and the next oil stratum would be reached at 100 metres lesser depth than in 2,149 well. The upper oil-bearing formation dips at an angle at 70 degrees. Messrs. Ména, Bordeaux, Dalloni and I are all in agreement on the geology of the M'sila field."

The North Caucasian Oil Issue.

The share register of the North Caucasian Oil Fields will be made up at the close of business to-day for the purpose of preparing a list of shareholders entitled to subscribe for 268,800 Ordinary shares at par, for the issue of which Treasury consent has now been given. Notice will be sent to registered shareholders in due course of the exact number of new shares for which they are entitled to apply, being in the proportion of one new ordinary share for every five Ordinary shares held. Holders of share warrants to bearer must deposit their share warrants with Barclays Bank, 54, Lombard Street, E.C.3; Messrs. Benard and Jarislowsky, 19, Rue Scribe, Paris; or Messrs, Hendrik Braat and Co., Singel 338, Amsterdam, and they will be entitled to receive allotment letters for one new share for every five held. The new shares will in due course be registered and may, after December 1, 1919, be exchanged, if so desired, for bearer warrants upon payment of the usual stamp duty and fee. Forms of application for allotment letter, which can be obtained from either of the above bankers, must be duly signed and deposited there with either the share warrants or an approved certificate from bankers stating that such warrants are deposited with them, and giving full particulars of same, together with name and address of the owner, not later than July 5, 1919, or the right to an allotment will be forfeited. Payment for the shares may be made either in one payment of 10s. per share on or before July 5, 1919, or 5s. per share on or before July 5, 1919, and 5s. per share on or before July 31, 1919. The new shares will rank pari passu with the existing Ordinary shares. Applications cannot be considered in respect of fractions of five shares.

Anglo-American Nile.

The report of the Anglo-American Nile Company for the year ended March 31 last states that the total reserves with the proposed additions amount to £E32,336, equal to 25 per cent. of the capital of the company. After providing for depreciation and maintenance, there remains a profit on the year's working of £E22,004. The directors propose a dividend of 5 per cent.; to add to reserve £E1,560, to directors' fees £E1,404, leaving £E12,642; £E4,288 was brought in, making £E16,930. The 7 per cent. supplementary dividend absorbed £E8,955, leaving to be carried forward £E7,974. At an extraordinary general meeting held on May 8 it was decided to change the name of the company to the Anglo-American Nile and Tourist Company.

Great Indian Peninsula Railway.

The directors of the Great Indian Peninsula Railway Company announce that the revenue accounts for the half-year having been passed by the Government, they propose to recommend to the half-yearly meeting to be held this month that a dividend of 35s. be declared out of surplus profit for the year ended March 31, to be paid to proprietors of the Three per cent. stock in addition to the guaranteed interest, making a total distribution of £3 5s. for the half-year, less income-tax.

Delhi Electric Tramways and Lighting.

The report of the Delhi Electric Tramways and Lighting Company for 1918 states that the gross receipts were:—From tramway undertaking, £14,828; electric supply, £28,736, an increase in each case of approximately 11 per cent. on the previous year. The combined net revenue was £18,010, as compared with £15,119. The profit, after charging general expenditure in London and Delhi and Debenture interest, and after providing £6,000 for depreciation of plant and equipment and a reserve of £1,500 for taxation in India, was £6,767. The balance brought forward was £1,508, making £8,275. The directors recommend writing off part of preliminary expenses, £1,000; payment of a dividend upon the Preferred shares at the rate of 6 per cent., £6,000, leaving to be carried forward £1,275. Additions to plant amount to £1,137. The provision of further plant, equipment and mains to meet the growing demands is receiving consideration. The amount provided out of the profits to meet depreciation has been increased to £6,000, making the total to date £21,000.

COMPANY RESULTS, Etc.

United Egyptian Lands (Limited).—Scheme of reconstruction has now been completed, and the whole of the capital of the Egyptian Consolidated Lands (the new company) has been allotted.

The Bank of England announce the numbers of 448 Four per Cent. Egyptian Government Irrigation Trust Certificates which have been drawn for redemption on July 1 next, when interest thereon will cease.

Eighty-five debentures of the Bombay Electric Supply and Tramways Company Five per Cent. Second Mortgage Debentures, the numbers of which are announced, have been drawn for redemption on July 1.

The directors of the Associated Tea Estates of Ceylon announce a dividend on the preference shares for the half-year ending June 30 at the rate of 6 per cent. per annum, payable June 30, less tax at 6s. in £.

The directors of the British Indian Tea Company have declared a final dividend of 9 per cent., less income-tax, making 12 per cent. for the year ended April 30 last, payable on and after June 28.

The directors of the Assam Company announce a final dividend of 7½ per cent. and bonus of 10 per cent., or £3 10s. per share, less tax, payable on July 1, making 25 per cent. for the year.

The directors of the Imperial Bank of Persia announce an interim dividend for the half-year ended March 20 last at 3s. per share, free of income-tax, payable on and after 18th proximo. The transfer books were closed on June 3 until June 17, the latter day included.

The directors of the Balijan Tea Company recommend a final dividend of 14 per cent., less income-tax, on account of 1918, making 20 per cent. per annum.

Bengal Nagpur Railway.—Register of members for ordinary stock and four per cent. debenture stock have been closed from June 5 to June 30, inclusive.

The report of the Panawal Tea Company for the year ended December 31 last states that the net amount at credit of profit and loss, including balance brought forward, is £3,227; a claim for the refund of excess profits duty has been made for £2,465, making £5,692. It is proposed to pay a final dividend of 10 per cent. on the ordinary shares, less income-tax, making 30 per cent. for the year, and to carry forward £618.

Jaipur Tea.—Ordinary general meeting will be held at the registered office, 14, St. Mary Axe, E.C.3, on June 13, at 2.30 p.m. Transfer register will be closed from June 7 to June 13, inclusive.

The report of the Ceylon Tea Plantations Company states that the net amount at credit of profit and loss, including balance brought forward, and after providing for 1917 excess profits tax, general expenses, directors' fees, etc., is £142,167. Dividends on the seven per cent. preference shares were paid for 1918, amounting to £6,580. An interim dividend of 10 per cent. on the ordinary shares was paid, amounting to £18.800. It is proposed to pay a final dividend of 25 per cent. on the ordinary shares (making 35 per cent.), £47,000; to income-tax account, £8,000; to pay to the staff pension fund, £2,000; and to carry forward £59,787.

The report of the Bandarapola Ceylon Company states that, after deducting all charges, the net profit amounts to £3,813; £3,072 was brought forward, giving £6,885. The directors propose a final dividend of 6 per cent. (making 10 per cent. for the year), less tax at 5s. 9d. in £; to write off estates account for depreciation of buildings and machinery, £1,000, and to carry forward £885.

The report of Doolgalla (Ceylon) Rubber Estates states that the balance at credit of profit and loss, after writing off depreciation from machinery and buildings, payment of preference dividend, and transferring £300 to income-tax reserve, is £6,473. The directors propose to carry to reserve £1,000, pay a dividend of 5 per cent. on the ordinary shares, and carry forward £1,366.

South Indian Railway.—The transfer books for ordinary and debenture stock will be closed from June 16 to June 30, inclusive, for the preparation of half-yearly warrants.

The directors of the Bengal Coal Company, of Calcutta, announce a profit of Rs. 18,60,000 for the half-year ended April 30. After setting aside Rs. 1,25,000 for depreciation, Rs. 4,10,000 for mines development, and paying a dividend at the rate of 60 per cent. per annum, the balance to carry forward is about Rs. 1,50,000.

The report of the Lunuva (Ceylon) Tea and Rubber Estates states that the amount brought forward was £4,710, which, added to £13,600 refunded in respect of excess profits duty paid, makes £18,310, from which has to be deducted the net loss for the year (after providing £1,500 for income-tax) of £2,724, leaving £15,586. The directors recommend the payment (less tax) of a dividend of 5 per cent., and to carry forward £6,836, subject to a claim for refund of balance of excess profits duty paid.

The report of the Gingia Tea Company for 1918 states that revenue account shows a profit of £3,323. Adding the balance brought in, £3,327, gives a total of £6,651, from which has to be deducted income-tax, £1,385; excess profits duty, 1917, £337; garden managers' commission, £166; and adjustment from season 1917, £106, leaving a balance for disposal of £4,657, out of which are proposed interim dividend at 5 per cent., less tax (already paid), £883, and a final dividend at 5 per cent., less tax (making 10 per cent. for the year), £884, leaving to be carried forward £2,890.

NEW COMPANIES.

Mediterranean Cargo Steamers, Ltd

A private company with the above title was registered on May 24 with a capital of £250,000 in £100 shares. Its objects are to acquire any ships, vessels or craft, to use the same for any trade or business and for towage, salvage, conveyance of passengers, produce, etc. First directors to be appointed by subscribers. Registered office, 20, Abchurch Lane, E.C.

CANADIAN WHEAT FOR GREECE.

Questioned in the House of Commons, says a Reuter message from Ottawa dated May 28, the Finance Minister (Sir Thomas White) stated that the Government had negotiated with the British Government the sale of twelve or thirteen million bushels of wheat for Greece. They would have preferred to sell flour, but the British Government desired wheat, the price of which would be the Canadian price at the head of the Great Lakes plus the cost of transport to Montreal.

ON 'CHANGE

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

We have had a very quiet week, which is not surprising in view of the imminence of the large new British war loan and the Whitsuntide holiday. Telegraphic communication with Egypt still remains very bad. Government stocks are about half a point down at 87 for Unified and 74 for the 3½ per cent. Pref.

In Bank shares, Nationals are ¼ lower at 20⅜, but very few shares are offering. Agriculturals have receded a further 1-16 to 6. There is a demand for Agricultural Prefs., but there are no sellers. Anglo-Egyptian Banks and Land Banks have both remained firm spots.

In Railways, Delta Lights are ⅛ lower at 7⅜.

Amongst Land shares, there is a further small decline of 6d. in Aboukir to 24s., and Delta Land are 9d. lower at 14s. 9d. New Egyptians are also somewhat weaker at 25s. Sudan Plantations, after a fair number of transactions, finished ¼ down at 7.

In Miscellaneous shares, Egyptian Markets are 1s. easier at 25s., and in the Oil department the feature has been the renewed firmness of Anglo-Egyptian B., which are closing at the top with a rise of 5-16 to 6 9-32.

In Greek securities, the 1881, 1884, and Larissas loans are nominally 1 to 2½ points lower at 71, 70, and 73 respectively. On the other hand, the 1914 issue has further appreciated a point to 86.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director-General of Commercial Intelligence, dated May 24:—

Weather seasonable. Crop prospects good.

Bombay: Good broach, Rs. 479, May. Revival local piecegoods market, owing to satisfactory Afghanistan news now checked by rise in exchange. Manchester goods, present price 30 to 40 per cent. below highest limits previously touched, and sale prospects improved by rise in exchange. Calcutta Jute market unchanged, crop conditions good. Sackings steadier. Hessians firmer owing to increased demands for early deliveries, but exchange position prevented forward trading.

CABLE DELAYS.

At a meeting held on June 3 the directors of the Manchester Chamber of Commerce decided to ask the members of Parliament for Manchester and Salford to raise the question of cable delays to the Near and Far East in the House of Commons if a reassuring announcement was not received during the next few days. Mr. Edwin Stockton, president of the Chamber, stated that quotations of prices and offers of business had for some time been quite unavailing in consequence of the delays.

M. Vasile Stefan, Under-Secretary of the Roumanian Ministry for Industries and Commerce, and M. Teodoresco, representative of the Roumanian Food Supply Mission, has left London for Paris.

The first report on the condition of the cotton crop of this year's growth, issued on June 2 by the Washington Agricultural Bureau, states that the average condition on May 25 was 75.6, against 82.3 at the same date last year, and 79.3 the ten-year average.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

6.—Buys and sells country and foreign cheques, etc. 7.—The Bank is entitled to the exclusive privilege of putting in circulation gold and silver banknotes. The telegraphic address for the Head Office: **Nationalbank**, and for the branches and the agencies: **Bank.**

IONIAN BANK, LTD.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the HEAD OFFICE:

BASILDON HOUSE, MOORGATE ST., LONDON, E.C.2.

AUTHORISED CAPITAL - -	*£600,000*
PAID-UP CAPITAL - - - -	*£485,580*
RESERVE - - - - - - -	*£85,000*

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	**£850,000**
RESERVE - - - - -	**£220,000**
Reserve Liability of Shareholders	**£1,000,000**

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bunder Abbas, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agencies at Busreh and Baghdad

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANK OF BENGAL.

Capital, Fully paid up	**Rs.2,00,00,000**
Reserve Fund	**Rs.1,61,00,000**
Reserve for Depreciation of Investments	**Rs. 25,00,000**

Head Office: Strand Road, CALCUTTA.

Branches: CLIVE STREET, PARK STREET, AND BURRA BAZAAR, CALCUTTA, AGRA, AKYAB, ALLAHABAD, BENARES, CAWNPORE, CHITTAGONG, DACCA, DELHI, HYDERABAD (DECCAN), JALPAIGURI, LAHORE, LUCKNOW, MOULMEIN, NAGPORE, PATNA, RANGOON, SIMLA.

Agency: ELPHINSTONE CIRCLE. BOMBAY.

Sub-Agencies: NARAINGUNGE and SECUNDERABAD.

Pay Offices:

CHANDPORE, SERAJGUNGE } Usually open from July to December.
PARBHANI (DECCAN) ,, November to March.

Current Accounts opened free of charge. **Fixed Deposits** received at interest.
Government and other Securities received for safe custody. Purchases and sales effected.
Interest collected and **Remittances** made.
Loans and Cash Credits granted. **Discount Accounts** opened and approved. **Mercantile Bills** discounted.
Savings Banks Deposits received and interest allowed.
Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches, Sub-Agencies or Pay Offices.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

BANK OF MADRAS

Capital (Fully Paid up) - -	**Rs.75,00,000**
Reserve Fund - - - -	**Rs.52,00,000**

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Accounts or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

REMITTANCES TO SERBIA.

Remittances to Belgrade, Uskub and Monastir can now be effected through

NOTES OF THE WEEK.

The Near East has been comparatively quiet during the past week, and perhaps the announcement that Turkey has been invited to send peace delegates to Paris is the most important item of news regarding that part of the world. The Turks themselves, always inclined to optimism in such matters, are reported to be hopeful that their representatives will be allowed to put the Turkish case before the Peace Conference. The hope probably rests upon the slenderest foundations, if on any foundations at all; but the fact that such a privilege has not been accorded to Germany or Austria is not in itself sufficient to make it utterly impossible for it to be accorded to Turkey. For while Germany has been proved to have been much more knave than fool, and Austria-Hungary at least as much knave as fool, Turkey—as a nation—has undoubtedly been fool rather than knave; though, as regards the Committee of Union and Progress, and especially its leaders, the reverse is distinctly the case. Turkey will have to pay for its folly: that is certain. But it seems to be generally recognised that in the interests of justice, the decent portion of its population will have to be helped on to its feet again in one way or another by Europe and America, and if that be so, a heart to heart talk at the Conference might serve to clear the ground of many misunderstandings. The moment appears to be a favourable one for an attempt of the kind to be made; several factors that helped to complicate the problem needlessly in the past having been eliminated by the war.

We have no desire to see Turkey spared any punishment that may justly be due to her, but we do desire —and there is evidence that a considerable body of opinion in this country desires—that she shall be treated fairly, not vindictively. The Turks have shown themselves unfit to rule, and in the future they should not be allowed to rule, over other races; but it would be fatal to lose sight of the fact that not every race is capable of ruling over the Turks. Again, the Turks, or the heterogeneous crowd of adventurers who passed themselves off as "Turks," are cordially hated by most of the people over whom they formerly exercised authority, and it may be admitted that they gave only too good reasons for such hatred. But this secular hatred should not on any account be allowed to play a part in deciding what terms are to be granted to the Turks at the Peace Conference, or what their fate is to be in the future. Let it be recognised at once that Turkey has not always had perfect justice from Europe in the past, that on one occasion at least in quite recent years an honest attempt on her part to set her house in order was deliberately thwarted by the Russian veto upon the loan to her by Great Britain of the Advisers for whom she asked. In the interests of justice and of the future peace of the world—no longer only of Europe, be it noted—America, France, Italy, and Great Britain should make a determined effort without delay to solve the Turkish Question on the lines indicated, and should sternly resist and repress all attempts to "pay off old scores."

In this matter Great Britain and France cannot afford to ignore the sentiments of their own Moslem subjects; sentiments regarding the character of which there can be no doubt. The unrest in the Moslem world is very largely, if not chiefly, due to the activities of those Turco-German agents, to whom reference was made in these columns a few weeks ago; but these gentry could never have achieved such success if fears regarding the future of Turkey and its Sultan had not been at work as well. To the detached observer it may seem inexplicable that such fears should exist in India or in Egypt; for if the Indian or Egyptian Moslem would only pause to ask himself what benefit he had ever received from Stamboul, and then reflect upon the solid advantages bestowed on him by British rule he would surely turn a deaf ear to the Turkish tempter. The Indian Government, for example, lately completed special arrangements for pilgrims desiring to make the *Hajj*, who, as a result, will be able to carry out that sacred obligation in safety and at a cost not greater than before the war. There is a lesson that ought not to be thrown away—especially if *hajjis* who made the pilgrimage in the old days would tell the present generation of the conditions that, under Turkish rule, used to make it so much more arduous and dangerous than it need ever have been.

The attitude of Indian Moslems towards the Turkish question was defined further last week in a letter signed by the Aga Khan and Syed Ameer Ali, names which undoubtedly carry weight in a matter of the kind. The writers urge that "the Turkish Sovereign, as the Khalif of the vast Sunni congregation, should be left in absolute possession of Constantinople, Thrace, and Asia Minor, stretching from the North of Syria proper along the Ægean coast to the Black Sea." That settlement, together with "the maintenance of the Ottoman Sovereign's spiritual suzerainty" in the countries detached from his temporal sway, would in their judgment

Digitized by Google

rally Indian Moslems to the support of the new constitution, from which they may otherwise "stand aloof in sullen bitterness"; and if the matter had to be settled by India alone, we have no doubt that some such arrangement would result. The Conference at Paris have, however, to hear many voices besides that of India, and without attempting to forecast the eventual decision, we may express the hope that the Indian leaders will be wise enough to discourage a political strike, should that decision be not entirely favourable to their claims.

A week ago we were told by the correspondents in Paris that at last there really was a prospect of the problem presented by Italy's claims being solved. Up to the moment of writing, however, no announcement of the accomplished fact has been forthcoming. The delay is regrettable inasmuch as it must surely tend to a further exacerbation of feelings; but if only it were possible to believe that its prolongation was due to a determination to clear the ground not only of the Fiume difficulty but also of the Dodecanese injustice and the unhappy bargain over southern Asia Minor, we should be prepared to wait even longer for a solution that might give some promise of peace. On the other hand, if the wrong that has been done in the matter of the Dodecanese and Asia Minor is to be made worse by further action along the same lines, in order to provide compensation for disappointments in the Adriatic, then it would surely be well to let us know the worst at once. A decision of a palpably unfair kind, announced after such a long period of discussion and bargaining, would inevitably exasperate decent feeling throughout the civilised world.

In spite of the advent of Ramadan, which is always a trying time, Egypt appears to be approaching a condition more nearly balanced. There have been one or two attempts at demonstrations, but they have evoked little or no enthusiasm, and though the agitators continue industriously to disseminate poisonous literature, their activities in other fields appear to have been curtailed. The spirit of lawlessness, which was so thoroughly aroused during the recent events, still makes itself felt in frequent instances of intimidation by the strikers along the Canal, but these are devoid of any political significance. The Cabinet is no better liked by the Nationalists now than it was when it first took office; but it refuses to be daunted by abuse and threats, and Mohammed Said Pasha shows that he has no intention of being driven from office by such tactics, by readjusting his Cabinet. Ziwer Pasha it is announced, is to be replaced as Minister of Education by Talat Pasha; and will become Minister of Communications.

In the House of Commons last week Mr. Cecil Harmsworth, replying to a question, stated that a mission consisting of an American military officer and a British diplomatist recently proceeded to Montenegro "in order to obtain information with regard to conditions prevailing in that country." The Government of Montenegro, Mr. Harmsworth added, were not consulted as to the appointment of this mission, and "have made no protest on the subject." This makes the confusion that already existed regarding Montenegro worse confused than ever. For there are certainly in existence in this country copies (or translations) of a Note sent to the delegates of the Great Powers at the Peace Conference, which contains an extremely vigorous protest against the despatch of the mission, "both from the point of view of the principle and the way it is carried out." The Note, which is dated from Neuilly-sur-Seine, May 23, and signed by M. Plamenatz, King Nicholas's Foreign Minister, protests that the mission will be unable to collect trustworthy evidence owing—to put it briefly—to the pressure that will be brought to bear by the Serbians, who are now in military occupation of the country. The sooner this mystery regarding the status of Montenegro—and of King Nicholas—is cleared up the better it will be for all concerned.

The second reading debate on the Government of India Bill may justly be described as adequate but not inspiring. Speeches were made by the small band of members who know something about the subject; they said what they were expected to say, and when they had finished the Bill was read without any suggestion of opposition so far as its underlying principles are concerned. The next step is the Joint Committee, where, as Mr. Montagu said, the various alternatives to the Dyarchy will be considered in detail, and if they are rejected the Dyarchy itself will be put into its final shape; then, to quote the same speaker, "India will have something better to do than fiercely and impotently to criticise those who are at present the agents of Parliament." The gospel of constructive work is always alluring, and though achievement may fall short of aspiration, there can be very few people in this country who regret that, whatever form the Bill may finally take, India is to be given an opportunity of showing what she can do.

Labour members took less part in the debate than had been expected. Colonel Wedgwood, of course, spoke as a recruit to the Independent Labour Party, but the permanence of this *avatar* is open to question, and, apart from him, there was only Mr. Spoor, who comes from Bishop Auckland, and whose contribution was not particularly noteworthy. The intimate relations known to subsist between the Indian Extremists and some of the Labour leaders in this country suggested the possibility of a more effective demonstration on this occasion, but possibly tactical considerations came into play; at any rate, there was no sign of that uncompromising opposition to the official proposals which was so conspicuous last year among Indian Extremists, and we presume that effort will be concentrated on "democratising" the Bill during its discussion in the Joint Committee.

Mr. Montagu had nothing to say about the risk of overloading the Governor under the Dyarchy, as now designed, but other speakers were less reticent, and Captain Ormsby-Gore said bluntly that under the Bill eight supermen would be required. We notice that the attention of the Government of India has been directed to this question, and in their despatch on the Reforms Scheme they lay stress on the need for securing the best talent which the services can furnish, and the highest qualities and ripest experience obtainable in appointments made from home. They go on, however, to pile fresh burdens on the unfortunate Governors' backs, and we hope the Joint Committee will give particular attention to this aspect of the scheme. No one expects the new arrangements to be perfect, but at the same time all possible care should be taken to avoid overstraining such an essential portion of the mechanism.

Lord Montagu of Beaulieu offered some striking predictions in the course of his lecture last week on the future of aviation in India, predictions which the speaker's past record shows must be taken into serious consideration. Of special interest is the suggestion that the Northern plains from Peshawar to Calcutta may one day become one of the world's greatest airways, carrying the traffic between Europe on the one hand and Australia and the Far East on the other. India's history has been dominated for so long by her secular seclusion between mountains and seas that a change of this kind must almost certainly have momentous results, and we should expect to see a gradual widening of her outlook, and a decline in that curious provincialism which characterises so many of her activities at the present time. We wish the change could come quickly, but there are still obstacles in the way. Lord Montagu mentioned only a few of them—and the most that can be hoped is that the new factor will co-operate with the other forces now at work to mould that future India which will be so much better than the India of the past.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 19.

The General Situation.

Beyond the labour strikes in the canal zone, which are certainly serious, and a small demonstration in Alexandria on the night of "Nusf Shaaban," there is nothing of interest to report. The work of pacification has made considerable progress, and the country generally is, in fact, rapidly returning to normal, as is emphasised by the removal of cereals and other important articles of first necessity from the tariff, and the almost complete re-establishment of the train service in Lower Egypt, where all restrictions on travelling have been removed. In Upper Egypt, although the repair work is not yet advanced enough to permit of normal traffic, a more or less regular service is being run, and the various crops are being brought down, much to the relief of the local population and of the towns. Cairo itself, the seat of all the trouble, has been remarkably quiet. Preaching still goes on at Al Azhar, and excited students still periodically run about the Muski trying to get the shopkeepers to shut, but the activities of the clique which is responsible for the continuation of the agitation have not been translated into hostile acts of any description on the part of their followers.

The absence of any information as to the progress of the Zaghlul Mission has gradually tended to set up a state of depression mongst the adherents of the movement, which has become accentuated by the publication of the Peace terms and the official recognition by the Conference of the Protectorate. The leading spirits, who for the most part comprise Azharites and students, with one or two of the more uncompromising lawyers and officials, have tried their best to discredit the news and to revive the flagging spirits of their followers, but their efforts have met with little or no success. They are indeed finding that their influence has considerably weakened, and that their arguments and inflammatory speeches no longer meet with the same response from their auditors as they did a month ago.

To sum up, the situation has generally assumed a much healthier aspect, which inspires one with hope for the future. We must, of course, expect to find for some considerable time an atmosphere of restlessness everywhere—that is only natural after the acute nervous crisis through which all communities have passed during the past two and half months—and there may be a recrudescence of excitement during Ramadan and on such occasions as the publication of the Turkish Peace terms and the return of the "delegates" from Europe. Generally speaking, however, everything points to the storm having spent itself, and to its being merely a question of time for the general effervescence to die down altogether; and especially will this be so if we pursue to the end the same firm policy as has characterised our actions in the provinces, and more recently in Cairo.

The Co-operative Movement.

A great deal of curiosity and even anxiety is being expressed as to the attitude adopted by the co-operative societies during the recent events. I am credibly informed that not only were many of them used as channels of propaganda by the agitators, but that their profits were voted as a subscription to the funds of the movement. If this information is correct, it serves to confirm only too well the fears expressed when the movement first started that the existence of these societies in the manner in which they were created would constitute a great and constant danger, since in the event of political trouble they might become a very important weapon in the hands of the agitators.

The co-operative movement started in Egypt in 1910, since which date some fifty societies have been formed in various part of Egypt. These have had a varying existence: fourteen had an exceedingly short life and died a natural death; fifteen, after passing through many vicissitudes, disappeared; and fifteen are still working. In many of them the principles of co-operation are, however, as yet not clearly understood. Many of them appear to be actuated more by the desire of profit on transactions than by the wish to be of mutual benefit to their members, and pay more attention to the distribution of a high dividend to their members than to the building up of a reserve fund, which would enable them to become to a great extent independent of outside financial assistance, and be able to extend their co-operative activities over a large area. One or two in addition to assisting their members are, however, doing useful municipal work in the village.

As mentioned previously in this correspondence a draft law for the control of co-operative societies was submitted to and approved with certain amendments by the Legislative Assembly, but its promulgation was suspended owing to the outbreak of war. Whilst it is to be hoped that as soon as normal conditions set in once more some official action will be taken so as to extend as much as possible the co-operative movement which has proved so beneficial in other countries, and which in view of local conditions and the characteristics of the people is peculiarly applicable to Egypt, at the same time it would be highly inadvisable in the light of recent events to allow anything approaching the same liberty of action as has in the past been enjoyed by the co-operative societies. The more the movement becomes extended the greater will be the danger of its being turned at some time or other to political purposes, and the lesson to be gained from the past three months clearly is that such a movement should only be permitted to exist under the strictest control from Cairo, and that that control should be entirely in the hands of the representatives of the Protecting Power which is responsible for, and as has now been proved is alone able to guarantee, public security in the country.

MESOPOTAMIAN GEOGRAPHY AND ARCHÆOLOGY.

At the School of Oriental Studies, on June 4, Mr. R. Campbell Thompson commenced a series of lectures on Mesopotamia. He said it was divided into three belts—a mountainous belt in the north, a middle belt where wheat could be produced under irrigation, and a southern belt where the date palm grew. The climate was subject to extremes. At Baghdad, in the hot season, the temperature might rise to 124° F., but in winter it sometimes dropped to 14° F. He had seen snow lie for over a week, and, in April last year, while excavating, he had been pelted with hail stones two inches wide. The chief port was Busreh, on a tidal river, with a bar, so that ships had to wait for the tide to rise before they could get over. The chief products of the country were dates, corn, vegetables and wonderful fruit, especially oranges and melons. In the date producing region there were not many timber trees, but north of Baghdad nearly every village had its copse of poplars to provide rafters.

Turning to the archæological side the lecturer told the story of archæological investigation and discovery in Mesopotamia, producing some interesting objects resulting from his own excavations. Among these were some small clay tablets, dating from about the time of Nebuchadnezzar, which, upon being deciphered, proved to be private letters. He read translations from some of these. One which had not previously been published was from Zirya to Zirukin and began: "My Lord. Daily I pray to the Lady of Erech and Nanâ for the life of my lord. In the matter of the work of my lord, let my lord remain quite satisfied." Another letter contained the following sentences: "By the Gods I have had no news of you for long. I am delighted to hear of the addition to our family. Now things are going very badly with me, so please send me some money."

ATHENS NOTES.

(From Our Own Correspondent.)

Athens, May 22.

The Occupation of Smyrna.

Satisfaction at the realisation of heartfelt hope has been deep and sincere. Rumours that some such step was in contemplation had been current for a full week before the Government made the official announcement on May 14 that permission had been given for a landing to be made in Smyrna, and that the Greek troops would actually land on May 15. Enthusiasm was great—not the fanatical and provocative enthusiasm to which Athens had become accustomed in the days of Tino, but rather the outward sign of the deep satisfaction felt that the legitimate aspirations of Greece were at last nearing consummation. Demonstrations were the order of the day, and a long procession with the garrison band at its head paraded the streets. Crowds collected before the Municipality, and after the Mayor had spoken a few words, drowned in tumults of applause, the demonstrators proceeded to the British, American, French, and Italian Legations, sending in deputations to the Ministers to thank the Allies for the goodwill they were showing to Greece. In the evening the streets were illuminated, and bands of students celebrated the occasion by patriotic songs till a late hour of the night. Further detachments of troops and gendarmes are being despatched to maintain order in the occupied town and environs. News is daily awaited of the occupation of Vourlah and Aïdin, which had originally not been occupied. A commissioner, M. Stergiadis, has been appointed, and has already arrived in Smyrna to take over the Administration from the Military Governor, Colonel Fafiriou, who was in command of the division which made the first landing.

It is hoped that the occupation of Smyrna is only the forerunner of the full realisation of Greece's aims, and that permission will shortly be accorded by the Peace Conference to the occupation of Thrace and the Dodecanese and the cession of Cyprus to Greece. In fact, telegrams from Paris give good ground for hopes that this will shortly be the case. If these hopes materialise then indeed will Greece's cup be full, as although the most hot-headed and enthusiastic patriots still aspire to "The City," all thinking Greeks realise that for the present, at any rate, it is impossible that this should be given them, in view of the supreme importance to Russian affairs that Constantinople exercises.

The Arraignment of the Skouloudis Government

The High Court of Justice appointed by the Chamber and composed of Judges from the Court of Cassation and Appeal with members of the Chamber as prosecuting counsels met on May 21 for the first time. The chief of the latter is M. G. Kafantaris, Minister for Agriculture. The accused are MM. S. Skouloudis, S. Dragoumis, D. Rallis, J. Jiannakitsas, M. Hatzakos, A. Michelidakis, and D. Gounaris. The latter was found to be absent, but the Court decided that he shall be judged and sentence be pronounced even in his absence. The counsel for the defence took exception to the composition of the Court as being contrary to the Articles of the Constitution owing to the presence of a Minister therein, and one of the accused desired the erasure from the list of counsel for the prosecution of a member thereof owing to the alleged personal enmity existing between them. Discussions on these points took up the whole of the first day of session, but the objections were finally overruled after a speech by M. Kafantaris. The great age of the accused (M. Skouloudis is eighty-one years of age, M. Rallis is seventy-six, M. Dragoumis is seventy-eight, M. Jiannakitas is sixty-one, M. Michelidakis is seventy-five, and M. Hatzakos is fifty-eight), and the high positions the first three have held (M. Skouloudis was Minister for Foreign Affairs and President of the Cabinet, M. Rallis has been four times Prime Minister, and served as Minister eight times in the course of his life, and M. Dragoumis has been Prime Minister and held various portfolios at various times), make this trial of the highest interest apart from the charge, which is that of high treason. The upshot of the trial is awaited in Greece with great interest.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, May 25.

The University.

There is a deadlock as far as the University "strike" is concerned, as the Senate will not unbend and the students will not return. Life in Malta has been uneventful of late, and the doings of the students have afforded quite a touch of colour to our usually drab life. There has been much good-humoured fun, especially from the younger "bloods," but collisions with the police have arisen, and four of the students have been brought before the local Court and remanded for throwing eggs at one of the representatives of the Council of Government. All round there is general unrest and the contagion has affected the police; and it is rumoured that the Civil Service clerks are about to agitate for better pay and shorter hours.

Local Aspirations.

Small islands generally have their continuous political squabbles, and Malta is no exception. For years gone by there has been a constant struggle on the part of the two extreme parties to obtain a greater share of self-government at the hands of the Colonial Office. The war has given further support to the idea, and some time ago as a result of a mass meeting a petition was sent to the Home Government. Dr. F. Sciberras, President of the National Assembly, has received information to the effect that the new Governor has been instructed to make inquiries with a view to granting to the people of these islands a larger share in the Government consistently with Imperial interests.

Shipping.

The Tribune destroyer is being re-commissioned at Portsmouth for further service with the Sixth (Mediterranean) Destroyer Flotilla. The following vessels have arrived:—The transport Vita from Port Said, H.M.S. Lynn from Bizerta, the s.s. Cagliari, with 235 passengers on board, from Benghasi *en route* to Syracuse, the French torpedo boat destroyer Epien from Bizerta *en route* to Benghasi, and the Italian gunboat Feridono from Tripoli bound for Naples. The following vessels have left the island:—H.M.S. Asphodel for Alexandria and Port Said. and H.M.S. Craigie for Mudros, the cruiser Suffolk, which has resumed her voyage on her way home to be paid off, the Partridge II. from Mudros and Constantinople, the Heroic from Marseilles, the Ceanothus from Syracuse, and the troop transport Indarra from Port Said.

The new Pasteur Institute in Ceylon, during the twelve months ended April 25, treated 408 persons, including sixteen Europeans.

La Libre Parole announces that an Arab mission, consisting of General Nourry Pasha, two colonels, four commandants, eight captains, sixteen well-known Arabs, fifteen soldiers, and ten servants, has arrived at Marseilles and has proceeded to Paris.

CYPRUS NOTES.

(From a Correspondent.)

Athletic Sports.

The Pan-Cypriot Athletic Sports have been celebrated by the Greek community with much enthusiasm at Nicosia. They are held in turn in the larger towns. The programme of events and entries was a good one, and included a five miles race. Among the spectators were the Chief Secretary, the King's Advocate, Archdeacon Beresford Potter, the Greek Acting Archbishop, and the Hellenic Consul. Speeches were made at the close. Having regard to the contests themselves, and the simple wreaths which were the only prizes and sufficient honour, it was no exaggeration, said the Bishop of Papho, to compare the meeting to its great Olympian prototype, the ideals aimed at being the same now as of old. Away to the south-west rises the Cyprian Olympus, which crowns Mount Troodos, and was also a seat of the gods, where Aphrodite had her many temples; and Adonis hunted in this very plain.

Cyprus and Egypt.

News of a better outlook in Egypt has given great satisfaction, as considerable anxiety had been felt on account of previous gloomy reports. It is felt that the situation should be kept well in hand under the firm rule of General Allenby. Prices "have reached their zenith," says a correspondent, "and far exceed those ruling at Athens." Better communications are hoped for. The close connection always maintained with the large Cypriot fraternity in Egypt was being strengthened by the increasing migration of families to the Cyprus hills in the hot season.

The Festival of Venus.

The annual Festival of Venus, commonly called the *Kataklysmos*, or Deluge, is to be celebrated with great rejoicings this year in the coast towns. There is to be an Agricultural Show at Larnaca, as well as aquatic sports, poetical contests, concerts, theatricals, and other amusements. This great anniversary, which no doubt had its origin in remote antiquity, is perhaps the most picturesque of all Cypriot gatherings. Thousands of villagers flock to the ports and join the townsfolk. The correct thing is to go for a short sail. Near the piers and jetties are fleets of boats, most of which carry a few musicians. The air is filled with lively strains and loud tom-tomming. Turkish ladies sit in bright groups of many colours along the sea front, and Greeks chat at open-air cafés over cool drinks. A kind of fair is held in the streets, and the long series of summer festivals is ushered in.

PRESS ON THE NEAR EAST.

Turkey.

In a leading article the *Globe* of June 3 discusses the future of Turkey. It shows how different the Turk is from men of surrounding nationalities. It says:—

The Turkish theory of life is not ours. He makes no roads, builds no bridges, has not the least desire to be carried swiftly from place to place, is not at all attracted by "progress," and has, it is to be feared, the faintest possible confidence in the wisdom of democracy. But he is on the whole a decent fellow, cursed with a very bad Government, and his natural disposition now, whatever it may have been years ago, is to live and let live if only people will leave him alone. We agree that he cannot be left to rule in Constantinople. That city was once the pivot on which both East and West swung like double stars in the orbit of their mutual attraction, and it might be so again. Its site is in every way the finest in the world, and under efficient government the old metropolis of the Eastern Empire could become one of the richest, as it is already one of the most beautiful, cities on earth.

"A North Caucasus Republic."

The Ekaterinodar correspondent of *The Times* had in the issue of June 5 an illuminating despatch on the North Caucasus. Commenting on the proposal of an artificial North Caucasus Republic, he says:—

Here we have a group of small hill tribes, the Daghestanis Tchetchen, Kabardines, Ossetes or Asetin, Ingouske, Koumik, Tcherkess or Circassians, and others, many of them divided against one another, and some among themselves. There is no traditional or historical foundation for the combination, and apparently no nucleus for cohesion. In Daghestan alone there are eighteen different tribes, each speaking a different tongue not understood by the others. The movement does not spring from the masses of the people, who are indifferent to it, even if they have heard of its existence. These mountaineers are attractive, manly folk, pleasing to the eye; they are happily innocent of being 'politically minded.'

The history of the various tribes during the war is then traced, and the correspondent proceeds:—

Paris is not likely to listen seriously to the claims of the North Caucasus Republic, but as a bait for European sentiment the scheme is being invested with the glamour of Caucasian irredentism. It is claimed that the Circassian nation who made an armed retreat in 1864, emigrating to Turkey and elsewhere, never renounced their rights and are only waiting for the establishment of the new Cis-Caucasian Republic to flock back to their national land. To support this view of the republic it has been described as a Pan-Circassian Federation. One hears the title "Circassian" applied to it as synonymous with "mountaineer," as if these hill tribes were sprung from a common Circassian stock. As a matter of fact, the Tcherkess alone are Circassians, if one excepts the nobility of the Kabardine. The other heterogeneous tribes are the remnants of distinct races who have been left behind in the Caucasus during migration.

It will be seen from the map that the southern frontier claimed by the republic is drawn from the mouth of the River Samur on the Caspian to a point a few miles beyond Tuapse on the Black Sea. The line follows the natural barriers of the Caucasus with two important deviations to the south of the range. The first of these is the district of Zakataki, claimed both by the Georgians and Azerbaijan Republics. The claim of the North Caucasus Republic is on racial grounds. The inhabitants of the district are mostly Lezguines, a Mahomedan tribe, allied to the Daghestanis, who prefer the Daghestan connexion. The Georgian and Azerbaijan claims are geographical. The other disputed territory in the south is the Sukhum district, on the Black Sea Coast, inhabited by the Abkhazis. Here again, Georgian claim is geographical, and that of the Cis-Caucasians ethnical. Sukhum was occupied by the Georgians in June, 1918, and annexed by them, with the help of German troops, in July. The small Abkhazi force, which was ill-armed and ill-equipped, fled into the hills. The Georgians still occupy the province, in which one hears rumours of an Abkhazi rising. The Abkhazis, it seems, would be better off under the Cis-Caucasia connexion, however chaotic. But it will be gathered that the establishment of independent republics, whether in Trans- or Cis-Caucasia, is not a responsibility to be undertaken with a light heart.

Arabia.

In the current issue of *Flying*, C. Thompson Walker writes on "Red Sea Service," a service the history of which is little known. He shows what the British fleet and seaplanes did to depress the Turks on the Arabian coast; and concludes with a paragraph on the gratitude of the Arabs towards the British.

Before we left Loheiya Said Mustafa came aboard and through his interpreter thanked us all for the valuable assistance we had rendered to his troops, which had resulted in the capitulation of hostile villages and ensured the final surrender of the besieged Turks. He concluded this speech with the quaintly poetical words, "As a man is without a soul, so should I be without seaplanes."

Mustafa, who is brother to the Kings of the Idrissi and Senussi Arabs, was educated at Cairo, and is possessed of considerable statesmanship, political influence, and diplomacy. I believe we had his influence largely to thank for the friendly conduct during the war of the formerly hostile Senussi. As evidence of his modernity he boasts a Ford car, although Loheiya and the surrounding district are roadless and quite unfit for motoring.

We left Loheiya with great regret for many reasons. It was disappointing to leave our task uncompleted, and we were sorry to lose the powerful fascination that a little-known race and country held for us. We had spent many halcyon days at Loheiya, days abounding with interest, full of absolute freedom from the trammels of convention and civilisation, days of pleasantly relaxed discipline, hours of dreamy lotus-eating under a cloudless sky, a sun always bright, afloat on a sea whose azure depths revealed a landscape more beautiful and strange than that around us. After bidding good-bye to our friends on the *Fox*, *Clio*, and *Odin* we steamed slowly up the coast until we reached the village of Midi, where resided, in hermit-like seclusion, the King of the Idrissi. We anchored to take in a supply of sheep, fowls, eggs, tomatoes, aubergines, and bananas, sent to the ship by the generous monarch, and carried out one more flight, this time for the peaceful purpose of dropping a letter to the King, setting forth our thanks and good wishes. The letter in its weighted carrier was seen to fall in the courtyard of the royal palace.

And so, after introducing into that mediæval atmosphere a glimpse of the twentieth century, we left Loheiya. Some months afterwards the C.O. of the contingent and the Senior Observer Officer each received a curved steel dagger, with a massive enriched silver hilt and scabbard, and ornate belt, accompanied by the *printed visiting card* of Said Mustafa, with his compliments and thanks.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have the honour and advantage of studying in the pages of THE NEAR EAST the sentiments and opinion of those who, being themselves Greek, claim Rhodes and Cyprus as appanages of the Greek realm. I note the confidence—the wish being doubtless father to the thought—with which Dr. Nic. Kl. Lanitis assures us that "the Greek régime is, *beyond any doubt* (the italics are mine), going to be established in Cyprus." More than four months ago I listened to Sir W. M. Ramsay, lecturing before the Central Asian Society, throw doubts upon Greek statements made in support of Greek claims to territorial acquisition, and in the *Manchester Guardian* of May 29 I see the same great authority dwelling upon the Greek genius for colonising and settling among *alien* peoples, and maintaining that what is wanted for the Greek, even amid a largely Moslem population, is "a sensible unifying administration which maintains peace" and "a large amount of local self-government." Now, that is precisely what the Greek in Cyprus gets under British Government. I am not going to say much here which I might say—for your space and even my time have value—but I think it necessary to point out that the confidence of Dr. Lanitis is mere assumption. There are the strongest possible reasons why Cyprus should be retained by Britain as a base in the Levant.

When, a month or two ago, I pointed out in your columns that Hospitaller associations with Rhodes must not be overlooked, I succeeded in extracting from your Greek correspondents such ebullitions as may be regarded as a complete exposition of their hand. It was an instance of the value of the reconnaissance or *ballon d'essai*. All those who set value on Hospitaller edifices and traditions know now that, if the Greeks get Rhodes, those edifices and traditions will meet with no respect. The Italian Government has given full proof of its interest in Rhodian remains, and some reflection of that interest has at last penetrated to St. John's Gate, Clerkenwell. Facts also have been submitted to the Peace Conference. I feel therefore that the confidence which seems to prevail in some quarters that Cyprus and Rhodes are already practically "Greek" is an illusion. The wish with me is certainly father to the thought, but there is some good solid backing behind the wish. In the uncertain future of Constantinople and the unsettled state of Egypt and the Levant, the hands of Britain and, indeed, of the Western Allies need to be strengthened in the Mediterranean from end to end.—I am, etc.,

A. C. YATE, Lt.-Col.,
June 8. Hon. Sec., Central Asian Society.

THE PROBLEM OF INDIAN LABOUR.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Archdeacon Potter's letter may be divided into two sections. The first portion deals with Indian labour pure and simple, and the conclusion he arrives at is open to question. The second portion brings up a new problem. Unrest there undoubtedly is. To quote the Archdeacon: "An opportunity is now open to provide a cure." He advocates handing over German East Africa as an outlet for surplus Indian labour and as a field for native Indian energy. I agree most heartily with him on this point, and hope he may be able to do something which will bring the problem nearer solution.

It has always seemed to me that migration of this kind within the Empire would be best obtained by the assignation of certain countries to certain peoples. Forbidding an Indian to enter a certain country, or heavily penalising him for doing so, only creates friction. There is, however, no hardship in determining and announcing that if he does go there he cannot purchase land or become a citizen—cannot obtain the franchise or acquire any share in the government of the country.

The League of Nations having given a mandate to Great Britain as regards German East Africa, let Archdeacon Potter's wish be fulfilled, and that immense territory be made an Indian reserve.

Kyrenia, Cyprus, May 15. G. L. H.

THE BALKANS.

Lecture by Sir V. Chirol.

On June 5 at the Royal Institution, Albemarle Street, W., Sir Valentine Chirol, in the course of his second lecture on the Balkans, said that when war broke out, among the causes that contributed to the difficulties of the Allied Powers was the fact that the Germanic powers had already prepared and had at their immediate disposal not only an admirable intelligence department in every Balkan State, but the whole machinery for a most effective propaganda. In every large Balkan centre, in every market place, in the cafés, the schools, the press, even in the Government offices and the leading hotels they had their interested friends who spied, intrigued and agitated according to programme; whereas the Allies had neither the information, the organisation nor the ready-made agents for such a propaganda. Moreover, towards the end of 1914 it became generally known that Great Britain and France had acquiesced in Russia's claim to Constantinople and the Straits. But Roumania dreaded the idea of the Straits passing under Russian control, while, in Sofia and Athens, the definite installation of Russia at Constantinople meant a final blow at ambitions which both Bulgars and Greeks had long cherished; and German diplomacy was not slow to point out to the neutral states of the Balkans the folly of throwing in their lot with the Entente Powers, whose defeat would involve their smaller allies in a common disaster, and whose victory would merely fasten on their necks the formidable yoke of Russian domination. The terms on which Italy was induced to ally herself with the Entente were even more prejudicial to a diplomacy, the purpose of which was to keep the peace between Bulgaria and Serbia, for when the tenor of those terms leaked out, and it appeared to the Serbs that the Adriatic was to be handed over to Italian domination, it was natural they should feel less inclined than ever to hand over to Bulgaria a slice of Macedonian territory, and thereby cut themselves off from Greece and access to the Ægean.

How little the gravity of the situation in the Balkans was realised in London in the summer of 1915 was shown, said the lecturer, by an interview which he had in September of that year with Lord Kitchener, who assured him that the Germans had shot their bolt in Russia, that Austria had her hands full on the Italian front, and that, with the approach of winter, no new developments were probable in the Balkans. Yet within the next three weeks Serbia had been attacked on three fronts and overwhelmed. A year later Roumania at last came in, but only to suffer almost as grievous a fate as Serbia; largely owing to the cruel inadequacy of the military supplies promised to her but not rendered by Russia. The treaties of Brest-Litovsk and of Bucharest were the high-water mark of German military supremacy in eastern and south-eastern Europe, and demonstrated the economic and political servitude in which German military supremacy would have involved the world.

Of present difficulties, Sir Valentine Chirol said that in regions where races and nationalities were so strangely intermingled without achieving fusion, it would be impossible to draw boundaries that would not be open to objection on ethnical, economic or other grounds. Still less could we hope for the cheerful acceptance of those boundaries. In some cases, the best remedy might be found in the migration across the new boundary lines of those sections of the population that could not reconcile themselves to the new allegiance; and, in the relatively primitive conditions in which the Balkan peoples lived, migration would not constitute the hardship that it would to others in a more advanced stage of social development.

THE BIRTHDAY HONOURS.

We give below a list of further honours conferred on the occasion of His Majesty's Birthday:—

C.I.E.

PURUSHOTTAMDAS THAKURDAS, ESQ., M.B.E.
Additional Member of the Council of His Excellency the Governor, Bombay.

KHAN BAHADUR KHWAJA YUSAF SHAH.
Member of the Legislative Council of the Punjab.

N. E. MARJORIBANKS, ESQ.
Indian Civil Service, Additional Member of the Council of His Excellency the Governor, and Commissioner of Land Revenue and Forests, Madras.

ATUL CHANDRA CHATARJI, ESQ.
Indian Civil Service, Revenue Secretary to the Government of the United Provinces.

R. D. BELL, ESQ.
Indian Civil Service, Secretary Indian Industrial Commission, and Controller of Industrial Intelligence.

RAI BAHADUR RALA RAM, I.S.O.
Chief Engineer, Eastern Bengal Railway, Bengal.

LIEUTENANT-COLONEL H. C. BEADON.
Indian Army, Deputy Commissioner, Delhi.

H. C. BARNES, ESQ.
Indian Civil Service, Deputy Commissioner, Naga Hills, Assam.

H. CLAYTON, ESQ.
Indian Civil Service, Registrar of Co-operative Credit Societies, Maymyo, Burma.

C. B. PETMAN, ESQ.
Government Advocate, Punjab.

F. A. M. H. VINCENT, ESQ., M.V.O.
Commissioner of Police, Bombay.

R. CLARKE, ESQ.
Commissioner of Police, Calcutta, Bengal.

M. J. COGSWELL, ESQ.
Controller of Printing, Stationery, and Stamps.

LIEUTENANT-COLONEL W. D. SUTHERLAND.
Indian Medical Service, Imperial Serologist, Calcutta, and Chemical Examiner to the Government of Bengal.

LIEUTENANT-COLONEL J. J. BOURKE.
Indian Medical Service, Assay Master and Officiating Mint Master, Calcutta.

LIEUTENANT-COLONEL J. STEPHENSON.
Indian Medical Service, Principal and Professor of Biology, Government College, Lahore, Punjab.

H. H. HAINES, ESQ.
Conservator of Forests, Bihar and Orissa.

R. S. HOLE, ESQ.
Imperial Forest Botanist, Dehra Dun, United Provinces.

CURSETJI NOWROJI WADIA, ESQ.

E. TEICHMAN, ESQ.
British Consular Service, China.

D. CLOUSTON, ESQ.
Director of Agriculture, Central Provinces.

C. A. BELL, ESQ., C.M.G.
Indian Civil Service (Retired), late Political Officer in Sikkim.

RAJA BAHADUR RAO JOGENDRA NARAYAN RAY.

NORENDRA NATH SEN, ESQ.
Dewan, Cooch Behar State, and Member, State Council, Bengal.

W. J. BRADSHAW, ESQ.

ORDER OF THE BRITISH EMPIRE.

K.B.E.

NAWAB SIR BAHRAM KHAN, K.C.I.E.
Mazari of the Dera Ghazi Khan District, Member of the Legislative Council of the Punjab.

RAJA DALJIT SINGH, C.S.I.
Chief Minister Jammu and Kashmir State.

LIEUTENANT-COLONEL SARDAR APPAJI RAO SITOLE, C.I.E.
Amir-ul-Umra, Member of the Majlis-i-Khas, Gwalior State, Central India.

D.B.E.

THE HON. MARY LADY MONRO.

UNA LADY O'DWYER, C.B.E., Punjab.

COMPANION OF THE ORDER OF THE BATH.

ROBERT RUSSEL SCOTT, ESQ., C.S.I.
Admiralty Establishments.

KNIGHTS BACHELOR.

MR. JUSTICE ABDUR RAHIM.
Judge of the High Court of Judicature at Madras.

WILLIAM ALLAN IRONSIDE, ESQ.
Additional Member, Imperial Legislative Council.

KHAN ZULFIKAR ALI KHAN, C.S.I.
Maler Kotla. Additional Member of the Imperial Legislative Council.

FRANK WILLINGTON CARTER, ESQ., C.I.E., C.B.E.
Additional Member of the Council of His Excellency the Governor of Bengal.

COLONEL GERALD PONSONBY LENNOX-CONYNGHAM, R.E.
Superintendent of the Trigonometrical Survey, Dehra Dun, United Provinces.

HORACE CHARLES MULES, ESQ., C.S.I., M.V.O., O.B.E.
Chairman of the Karachi Port Trust, Bombay.

ALFRED CHATTERTON, ESQ., C.I.E.
Indian Educational Service, retired, Member of the Indian Industrial Commission.

JAMES ALLAN HORNE, ESQ.
Controller of Munitions, Bombay.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Montenegro. June 5.

Mr. R. MCNEILL asked the Secretary of State for Foreign Affairs whether an international mission had recently been sent to Montenegro; if so, would he say of what persons the mission was composed, by whose authority was it sent, what were its instructions, and was the Royal Government of Montenegro consulted as to the despatch of the mission; and had any protest been received by the delegates of the Allied Powers in Paris from the Montenegrin Government with regard to the mission?

Mr. HARMSWORTH: A mission, consisting of a United States military officer on behalf of the United States Government and of a distinguished British diplomatist on behalf of His Majesty's Government, recently proceeded to Montenegro in order to obtain information with regard to conditions prevailing in that country. The Government of Montenegro were not consulted as to the appointment of this mission, and have made no protest on the subject.

Mr. MCNEILL: Why were the Montenegrin Government not consulted, seeing that they were a sovereign and Allied State, and that it would be in accordance with the usual procedure?

Mr. HARMSWORTH: I would be glad if my hon. friend would give me notice of that question.

Mr. MCNEILL asked the Under-Secretary of State for Foreign Affairs whether His Majesty's Government had officially recognised the Kingdom of Serbs, Croats, and Slovenes; and whether such recognition had safeguarded the right of the Montenegrin people to determine for themselves whether or not they should be included in such Kingdom, and under what conditions as to the retention or otherwise of their own monarchy in the event of their desiring to be so included?

Mr. HARMSWORTH: The reply to the first part of the question is in the affirmative. The second part is a matter for the consideration of the Peace Conference in Paris.

Mr. MCNEILL: Can my hon. friend not give any information as to the terms upon which the recognition has taken place, as asked in the second part of the question?

Mr. HARMSWORTH: I could not without notice.

Topics in Parliament.

NEAR EAST BOOKSHELF.

THE PERSIAN GULF, PAST AND PRESENT.*

The events of the past four years have, amongst many other changes, produced a great improvement in the geographical knowledge of the average man or woman. Thus, one now hears names of places in all parts of the globe fall glibly, yet with understanding, from the lips of the man in the street, and the mention of, say, the Persian Gulf, Busreh, or the Hejaz is certain to secure from many people a prompt and keen attention, whereas in bygone days it would have fallen on unheeding ears. To all such as are interested in those little-known countries lying on the sea and land routes between the Mediterranean and India there is afforded an opportunity of learning something of the history of these lands and their inhabitants from these two volumes by the late Colonel S. B. Miles, of the Indian Army and Political Service, whose duties called him during the latter part of the nineteenth century to spend many years in Muskat, Baghdad, Zanzibar and the neighbourhood.

In his book Colonel Miles deals chiefly with the country of Oman, giving in his copious notes on the history and geography, flora and fauna of that part of Arabia, the fruit of his many years of residence on that inhospitable coast, whose history for long periods is one series of inter-tribal wars, varied only occasionally by intervals of peace and industrial prosperity when a chief stronger than the average held the coveted position of Imam. But there was a time when Oman and the neighbouring regions were far from being the somewhat insignificant lands they now are. In those days they held the doorway through which must pass the great trade from India, and even China, to Mesopotamia and Asia Minor; by which the spices and products of the Far East were supplied to the wealthy and luxurious inhabitants of Babylonia and Egypt, thanks to the daring and enterprise of the Omani navigators. It seems hard to realise in these modern days that the Arabs were amongst the first to practise the art of navigation, and their courage and seamanship were submitted to no slight test when making a voyage to the Indian or East African coasts in their *baghtas*, much the same craft as may be seen to-day in the Shatt-el-Arab. It was only the fact that the Omanis were so badly situated for land transport that prevented them from developing into a great and prosperous nation.

Coming to more recent times, Col. Miles has devoted considerable space to an account of the rivalry between the Portuguese, Dutch, French, and English for the Gulf trade which led to the establishment of the first factories and political representatives in these parts, and relates how our Indian shipping was preyed upon by the native highwaymen of the seas to such an extent that for many years the country west of Ras Mussandum was known to Europeans by the ill-sounding title of "The Pirate Coast." Nor was it till after several attempts had been made that the piracy on these seas was eventually stamped out by an expedition sent from India as recently as 1820; while in the present century this same stretch has provided a base for many a gun-running adventure. One most admit, however, that the Arabs were not the only pirates to frequent these parts: towards the end of the seventeenth century the Arabian and Red Seas became the happy hunting grounds of English and French pirates, amongst whom one learns, figured the notorious names of Kidd and Avory.

That part of the book, however, which calls for most recognition is the dynastic and internal history of Oman and the appreciation of the influence of Mohammed. Though the Arab races are perhaps the most retentive people in the world regarding their genealogy, it is no easy matter to collate and reconcile the conglomeration of detail which has to a large extent been handed down by word of mouth from one generation to another and is not infrequently conflicting. In attempting this task Col. Miles proves clearly that his was no passing interest in the country to which his service took him, and though the succession of names of kings and dynasties may at times weary or confuse the reader, we cannot fail to be grasped now and then by sketches given occasionally of strong and striking characters, such as the Imam Seyidd Saud, the glory of the Al-Bu Saur dynasty, who was deemed not unworthy of notice by Napoleon when he was shaping his plans against India.

So much has been written about Mohammed, his life and work, that one may scarcely avoid the pitfalls of repetition; but whatever may be said concerning the religious side of the subject, it is pleasing to read the following appreciation of a remarkable character, written by one who had spent so much of his time among the followers of Islam.—

> Mohammed, to at least the same extent as any other law-giver, is entitled to the applause, veneration and gratitude of the world. It is the business of a law-giver to demarcate the boundaries of men's actions, to lay down just ordinances for the protection of the oppressed and helpless, to screen offenders from partial punishment, etc., and this is just what Mohammed did. His code was crude and imperfect, shortsighted and inadequate perhaps, but it represented the spirit of the age and nation and was intended for the Arab race. The difficulty is that his laws are not elastic enough: they are so mixed up with religion that they are unchangeable. But they took the place of chaos and worked an unexampled change in the condition and in promoting the social welfare of the Arab.

From the above may be obtained some idea of the wide range of subjects touched on by the notes of Col. Miles in these two volumes. Admittedly a book hardly likely to appeal *per se* to the public in general, but to that rather restricted circle who have a more than superficial interest in "the Gulf," as it is known to them, a most interesting and useful book of reference. We can only regret that the author was not permitted by his failing health to amplify and publish in their completed form these notes and records of travel in lands for which the future now promises so much.

*"The Countries and Tribes of the Persian Gulf." By Colonel S. B. Miles. 2 vols. (Harrison. 31s. 6d. net.)

THE NEW ROUMANIA.†

The world has been so surfeited with propaganda during the past four years that it is naturally suspicious of anything that looks like political propaganda. Fortunately, the justice of the Roumanian cause is so clear that it does not need to depend on the ordinary arts of the propagandist; it is only necessary for the Roumanian patriot to cite facts, and they interpret themselves. The case for a greater Roumania is indeed clear and unchallengeable by whatever principles we test it, and these two books sum up the position convincingly. Of the two we must regard that of M. Poporici as the more valuable contribution, for it discusses, with a mass of detail and statistics and an admirable map, the question of the Rumane populations in Transylvania and Hungary. The existence of the great fringe of Roumanian nationals under foreign control was scarcely recognised in France and England before the war, but since 1914 it has become notorious, and it has appealed to liberal sentiment among the Allies as a cogent argument for revising the national frontiers in the Near East. Curiously enough, the pacifists who have started from the assumption that the Central Powers were usually right in their position, have attempted to ignore the unliberated nationalities, or fractions of nationalities, in a way that would have profoundly shocked the old liberal sympathisers with the old national cause of Italy and Greece; yet if justice can be done to the one it should be done to the other, and the Roumanian question, like that of the freedom of Poland, is an effective touchstone for the pacifist who masquerades under the banner of Liberalism. The pacifist, in fact, applauds self-determination in theory, but opposes it in practice, because it works out to the detriment of Germany and Austria and to the benefit of the Allies—a curious contradiction which helps to explain the impotence and perhaps the irritation of the pacifists of the world to-day.

That Germany continues to hate Roumania, even with a so-called reformed Government in office at Berlin, is shown by the fact that in the remarks on the Peace Terms the Germans hold it an indisputable fact that Roumania entered the war "as a war of conquest," and they apply the same judgment to Italy. They do not realise, or at least they do not care to admit, that the only conquest which Roumania desired was the liberation of her own oppressed people. The justice of Roumania's ambitions emerges clearly from the statements of her case in these two excellent little books.

†"La Question Roumaine." By Aurele C. Poporici. (Payot et Cie. "Pourquoi la Roumanie a fait la Guerre." By J. Wisu. (Payot et Cie.)

BOOK NOTES.

John Lane has published, at 12s. 6d., "Asia Minor," by W. A. Hawley.

We have received the first number of "Hutchinson's Story Magazine." A poem by Rudyard Kipling commences the number, which includes, among other things, characteristic stories by Rider Haggard, H. de Vere Stacpoole, Baroness Orczy, and Charles Garvice.

Mr. V. J. Seligman has in preparation with Messrs. Allen and Unwin a new volume called "The Salonika Side-Show."

Paul Selver, one of our rare translators of Slavonic literature, has published through Kegan Paul, at 2s. 6d. net, an "Anthology of Modern Slavonic Literature."

A small book called "A New Constitution for India," which discusses the problem of the electorates, has been published at Calcutta by W. Newman and Co.

On Thursday, the 13th November, 1919	£10 "
On Thursday, the 11th December, 1919	£15 "
On Thursday, the 8th January, 1920	£10 "
	£80 per cent.

The Stock is an Investment authorised by "The Trustee Act, 1893," and Trustees may invest therein notwithstanding that the price may at the time of investment exceed the redemption value of £100 per cent.

THE GOVERNOR and COMPANY of the BANK OF ENGLAND and THE GOVERNOR and COMPANY of the BANK OF IRELAND are authorised to receive applications for the above Loan, which will take the form of Stock or Bonds to Bearer at the option of Subscribers; Stock may be inscribed as "transferable in the Stock Transfer Books," or may be registered as "transferable by Deed."

Applications must be for sums which are multiples of £50, and may be for either (1) "Fully-paid Allotments," or (2) "Instalment Allotments." They will be received at the Bank of England Loans Office, 5 and 6, Lombard Street, London, E.C.3, and at the Bank of Ireland, Dublin, and may be forwarded either direct, or through the medium of any Banker or Stockbroker in the United Kingdom.

British Government Treasury Bills issued prior to the 1st June, 1919, will be accepted under discount at 3½ per cent. per annum as from the 21st June, 1919, in lieu of cash in payment for "Fully-paid Allotments," provided that the entire proceeds of the Bills are so applied. "Fully-paid Allotments" made in respect of such Applications will receive on the 1st November, 1919, the dividend payable on that date in respect of "Fully-paid Allotments" applied for on or before the 21st June, 1919.

Stock and Bonds of the undermentioned Issues will be accepted at par as the equivalent of cash in payment, in whole or in part, for "Fully-paid Allotments" of this Issue:—

£4: 10s. per cent. War Loan, 1925-1945.
£5 per cent. Exchequer Bonds, 1919, 1920, 1921 and 1922.
£6 per cent. Exchequer Bonds 1920.
£4 per cent. National War Bonds, 1st, 2nd and 3rd Series.
£5 per cent. National War Bonds, 1st, 2nd and 3rd Series.

Where the Stock or Bonds surrendered do not represent the exact sum required to pay for an Allotment (which must be a multiple of £50), the requisite balance must be provided in cash. Interest accrued to the 21st June, 1919, will be paid on holdings surrendered, and the Allotments issued in lieu of such holdings will receive on the 1st November, 1919, the dividend payable on that date in respect of "Fully-paid Allotments" applied for on or before the 21st June, 1919. In the case of the £6 per Cent. Exchequer Bonds, 1920, an additional payment will be made representing interest at 1 per cent. from the 21st June, 1919, to the 16th February, 1920, upon the holdings surrendered.

NOTE.—Applications paid for, in whole or in part, by the surrender of Stock inscribed or Bonds registered in the Books of the Bank of Ireland must be forwarded to the Bank of Ireland, Dublin.

Stock registered in the Books of the General Post Office, and Bonds issued by the General Post Office, will not be accepted at the Bank of England. They will be accepted at the Post Office under the arrangements set forth in the separate Prospectus issued by H.M. Postmaster-General.

The Principal and Interest of the Loan will be a charge on the Consolidated Fund of the United Kingdom.

His Majesty's Government undertake to set aside at the close of each half-year a sum equal to 2½ per cent. on the nominal amount of the Loan orginally created. After deducting therefrom the amount required for payment of Interest on the Loan for the half-year, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied during the succeeding half-year to the purchase of the Loan for cancellation if the price is at or under par; when the price is above par it will be either so applied or otherwise invested under the control of His Majesty's Treasury. Any outstanding balance of the Loan not previously redeemed will be repaid at par on the 1st May, 1990, but His Majesty's Government reserve to themselves the right, on giving three calendar months' notice in the "London Gazette," to redeem at par at any time on or after the 1st May, 1960, any outstanding balance of the Loan not previously purchased and cancelled by the operation of the Sinking Fund.

Stock and Bonds of this issue will be accepted by the Commissioners of Inland Revenue as the equivalent of cash on the basis of £80 cash for each £100 Stock or Bonds surrendered, with due adjustment on account of interest, in satisfaction of amounts due on account of Death Duties, provided that the Stock or Bonds surrendered have formed part of the Estate passing on death of the deceased continuously up to the date of death from the date of the original subscription or for a period of not less than six months immediately preceding the date of death. Stock and Bonds so surrendered and outstanding will be held for account of His Majesty's Government until redeemed by the operation of the Sinking Fund, or until the final redemption of the Loan, any portion of the Sinking Fund applied in any half-year to the purchase for cancellation of Stock or Bonds so held will bear to the total of the Sinking Fund available a ratio not exceeding that which the Stock and Bonds so held at the commencement of such half-year bore to the total of the Loan then outstanding.

Stock or Bonds of this issue and the interest payable from time to time in respect thereof will be exempt from all British Taxation, present or future, so long as it is shown in the manner directed by the Treasury that they are in the beneficial ownership of persons who are neither domiciled nor ordinarily resident in the United Kingdom of Great Britain and Ireland.

Further, the interest payable from time to time in respect of Stock and Bonds of this Issue will be exempt from British Income Tax, present or future, so long as it is shown in the manner directed by the Treasury that the Stock or Bonds are in the beneficial ownership of persons not ordinarily resident in the United Kingdom of Great Britain and Ireland, without regard to the question of domicile. Where Bonds are in the beneficial ownership of a person entitled to exemption under these provisions, the relative Coupons will be paid without deduction for Income Tax or other taxes if accompanied by a declaration of ownership in such form as may be required by the Treasury.

The Books of the Loan will be kept at the Bank of England and at the Bank of Ireland.

Stock will be convertible into Bonds to Bearer (in denominations of £50, £100, £200, £500, £1,000, and £5,000), with Coupons attached for the Interest payable half-yearly, and Bonds will be convertible into Stock without payment of any fee. Stock will be transferable in any sums which are multiples of a penny.

Dividend warrants will be forwarded by post. In the case of inscribed and registered holdings of "Fully-paid Allotments," the warrants for the first dividend, payable 1st November, 1919, will be forwarded in all cases to the original Allottees or their Nominees.

"Fully-paid Allotments" will be issued in one or other of the following forms as applicants may direct,:—

1. "Certificate of Inscription" of Stock transferable in the Stock Transfer Books;
2. "Register Certificate" of Stock transferable by Deed;
3. "Bond Certificate(s)" exchangeable in due course for Bond(s) to Bearer.

Allotments made in respect of applications paid for, in whole or in part, by the surrender of Stock or Registered Bonds will in all cases be inscribed or registered in the names of the holders in whose names the surrendered holdings stood. Allotments made in respect of applications paid for, in whole or in part, by the surrender of Bearer Bonds will in all cases be made in Bearer form.

Allotment Letters with Coupon attached for the dividend, if any, due 1st November, 1919, will be issued in respect of "Instalment Allotments," and, when paid in full, may be inscribed or registered on or after the 1st September, 1919, or may be exchanged for Bonds to Bearer as soon as these can be prepared.

The Instalments payable in respect of "Instalment Allotments" may be paid in full on or after the 29th July, 1919, under discount at the rate of 3½ per cent. per annum. Where payment in full is made between two instalment dates, discount will be calculated as from the instalment date next succeeding the date of such full payment. In case of default in the payment of any instalment by its proper date, the deposit and any instalments previously paid will be liable to forfeiture. Payments may be made without additional charge at Offices of the undermentioned Banks in the United Kingdom.

A commission of one-eighth per cent. will be allowed to Bankers, Stockbrokers, and Financial Houses on Allotments made in respect of applications bearing their Stamp, and paid for wholly in cash and/or by the discounting of Treasury Bills. No commission will be allowed on Allotments paid for, in whole or in part, by the surrender of Stock or Bonds.

Application Forms for
(1) "Fully-paid Allotments,"
(2) "Instalment Allotments,"
to be paid for wholly in cash and/or by the discounting of Treasury Bills may be obtained at the Bank of England and at the Bank of Ireland; at any Bank or Money Order Office in the United Kingdom; of Messrs. Mullens, Marshall, and Co., 13, George Street, Mansion House, E.C.4; and of any of the principal Stockbrokers.

Application Forms for "Fully-paid Allotments" to be paid for, in whole or in part, by the surrender of Stock or Registered Bonds, have been sent by post to all inscribed and registered holders (in the case of a joint account to the first holder) of Issues receivable in lieu of Cash. Further Forms may be obtained—

(At the Bank of England, London, E.C.)—
1 (a) For the surrender of holdings registered or inscribed in the Books of the Bank of England;
(b) For the surrender of Bonds to Bearer.
(At the Bank of Ireland, Dublin)—
2 For the surrender of holdings registered or inscribed in the Books of the Bank of Ireland.

Applicants for these Forms must state the description of holding which it is desired to surrender.

The List of Applications will be closed on Saturday, the 12th July, 1919.

ISSUE OF

4 PER CENT. VICTORY BONDS.

Redeemable at par by a cumulative Sinking Fund operating by means of Annual Drawings commencing 1st September, 1920. Interest payable half-yearly on the 1st MARCH and 1st SEPTEMBER. First Dividends as follows will be paid on the 1st March, 1920:—

ON ALLOTMENTS APPLIED FOR—	"Fully-paid Allotments."	"Instalment Allotments."
On or before the 21st June	£2 15 9%	£1 6 3%
From the 23rd June to the 28th June	£2 14 3%	£1 6 2%
From the 30th June to the 5th July	£2 12 8%	£1 6 1%
From the 7th July to the 12th July	£2 11 2%	£1 6 0%

PRICE OF ISSUE, £85 per Cent.

Payable as follows: 1.—FOR FULLY-PAID ALLOTMENTS—

On Application	£85 per cent.

2.—FOR INSTALMENT ALLOTMENTS—

On Application	£5 per cent.
On Friday, the 8th August, 1919	£10 "
On Thursday, the 4th September, 1919	£10 "
On Thursday, the 2nd October, 1919	£15 "
On Thursday, the 30th October, 1919	£10 "
On Monday, the 24th November, 1919	£10 "
On Thursday, the 11th December, 1919	£10 "
On Thursday, the 8th January, 1920	£15 "
	£85 per cent.

The Bonds are an investment authorised by "The Trustee Act, 1893," and Trustees may invest therein notwithstanding that the price may at the time of investment exceed the redemption value of £100 per cent.

THE GOVERNOR and COMPANY of the BANK OF ENGLAND and THE GOVERNOR and COMPANY of the BANK OF IRELAND are authorised to receive applications for the above Bonds which will be issued in denominations of £50, £100, £200, £500, £1,000, and £5,000.

Applications may be for either "Fully-paid Allotments" or "Instalment Allotments." They will be received at the Bank of England Loans Office, 5 and 6, Lombard Street, London, E.C.3, and at the Bank of Ireland, Dublin, and may be forwarded either direct or through the medium of any Banker or Stockbroker in the United Kingdom.

British Government Treasury Bills issued prior to the 1st June, 1919, will be accepted under discount at 3½ per cent. per annum as from the 21st June, 1919, in lieu of cash in payment for "Fully-paid Allotments," provided that the entire proceeds of the Bills are so applied. "Fully-paid Allotments" made in respect of such applications will receive on the 1st March, 1920, the dividend payable on that date in respect of "Fully-paid Allotments" applied for on or before the 21st June, 1919.

Stock and Bonds of the undermentioned Issues will be accepted at par as the equivalent of cash in payment, in whole or in part, for "Fully-paid Allotments" of this Issue:—

£4 10s. per cent. War Loan, 1925-1945
£5 per cent. Exchequer Bonds, 1919, 1920, 1921, and 1922.
£6 per cent. Exchequer Bonds, 1920.
£4 per cent. National War Bonds, 1st, 2nd and 3rd Series.
£5 per cent. National War Bonds, 1st, 2nd and 3rd Series.

Where the Stock or Bonds surrendered do not represent the exact sum required to pay for an Allotment (which must be a multiple of £50), the requisite balance must be provided in cash. Interest accrued to 21st June, 1919, will be paid on holdings surrendered, and the Bonds issued in lieu of such holdings will receive on the 1st March, 1920, the dividend payable on that date in respect of "Fully-paid Allotments" applied for on or before the 21st June, 1919. In the case of the £6 per cent. Exchequer Bonds, 1920, an additional payment will be made representing interest at 1 per cent. from the 21st June, 1919, to the 16th February, 1920, upon the holdings surrendered.

NOTE.—Applications paid for, in whole or in part, by the surrender of Stock inscribed or Bonds registered in the Books of the Bank of Ireland must be forwarded to the Bank of Ireland, Dublin.

Stock registered in the Books of the General Post Office, and Bonds issued by the General Post Office, will not be accepted at the Bank of England. They will be accepted at the Post Office under the arrangements set forth in the separate Prospectus issued by H.M. Postmaster-General.

The Principal and Interest of the Bonds will be a charge on the Consolidated Fund of the United Kingdom.

His Majesty's Government undertake to set aside at the close of each half-year a sum equal to 2½ per cent. on the nominal amount of the Bonds originally created. After deducting therefrom the amount required for payment of interest on the Bonds for the half-year, the balance of the sum so set aside will be carried to a Sinking Fund which will be applied by means of annual drawings to the redemption of the Bonds at par (including Bonds which have been surrendered to the Commissioners of Inland Revenue for death duties as hereinafter provided), the Bonds to be redeemed in each year being determined by lot and paid off on the 1st September in such year in accordance with regulations made by the Treasury. The numbers of the Bonds drawn for redemption on each occasion will be advertised in the "London Gazette" not less than two months prior to the date of redemption. Interest on Bonds drawn for repayment will cease from the date on which the Bonds become repayable. The first drawing will be that for the Bonds to be redeemed on the 1st September, 1920.

Bonds of this Issue will be accepted at their face value by the Commissioners of Inland Revenue as the equivalent of cash, with due adjustment on account of interest, in satisfaction of amounts due on account of Death Duties, provided that the Bonds surrendered have formed part of the Estate passing on death of the deceased continuously up to the date of death from the date of the original subscription or for a period of not less than six months immediately preceding the date of death. Bonds surrendered under these provisions will be held for account of His Majesty's Government until drawn for redemption as provided in the preceding paragraph.

Bonds of this Issue and the interest payable from time to time in respect thereof will be exempt from all British taxation, present or future, so long as it is shown in the manner directed by the Treasury that they are in the beneficial ownership of persons who are neither domiciled nor ordinarily resident in the United Kingdom of Great Britain and Ireland.

Further, the interest payable from time to time in respect of Bonds of this Issue will be exempt from British Income Tax, present or future, so long as it is shown in the manner directed by the Treasury that the Bonds are in the beneficial ownership of persons not ordinarily resident in the United Kingdom of Great Britain and Ireland, without regard to the question of domicile. Where Bonds are in the beneficial ownership of a person entitled to exemption under these provisions, the relative Coupons will be paid without deduction for Income Tax or other taxes if accompanied by a declaration of ownership in such form as may be required by the Treasury.

Bonds of this Issue may be registered in the Books of the Bank of England. For this purpose the Bonds must be lodged at the Bank to be endorsed with particulars of registration, after which they will be redelivered to the registered holders. Registered Bonds will be "Transferable by Deed" and may be re-converted into Bonds to Bearer by means of transfer.

Dividends will in all cases be paid by means of Coupons attached to the Bonds, whether registered or to bearer.

Bonds with Coupons attached for the dividend due 1st March, 1920, and subsequent dividends will be issued in respect of "Fully-paid Allotments." Bonds issued in respect of applications paid for, in whole or in part, by the surrender of Stock or Registered Bonds will in all cases be registered in the names of the holders in whose names the surrendered holdings stood. Allotments made in respect of applications paid for, in whole or in part, by the surrender of Bearer Bonds will in all cases be made in Bearer form.

Allotment Letters with Coupon attached for the dividend due 1st March, 1920, will be issued in respect of "Instalment Allotments" and, when paid in full, may be exchanged on and after the 1st March, 1920, for Bonds with Coupons attached for subsequent dividends.

The instalments payable in respect of "Instalment Allotments" may be paid in full on or after the 8th August, 1919, under discount at the rate of 3½ per cent. per annum. Where payment in full is made between two instalment dates, discount will be calculated as from the instalment date next succeeding the date of such full payment. In case of default in the payment of any instalment by its proper date, the deposit and any instalments previously paid will be liable to forfeiture. Payments may be made without additional charge at Offices of the undermentioned Banks in the United Kingdom.

A commission of one-eighth per cent. will be allowed to Bankers, Stockbrokers, and Financial Houses on Allotments made in respect of applications bearing their Stamp, and paid for wholly in cash and/or by the discounting of Treasury Bills. No commission will be allowed on Allotments paid for, in whole or in part, by the surrender of Stock or Bonds.

Application Forms for
(1) "Fully-paid Allotments,"
(2) "Instalment Allotments,"
to be paid for wholly in cash and/or by the discounting of Treasury Bills may be obtained at the Bank of England and at the Bank of Ireland; at any Bank or Money Order Office in the United Kingdom; of Messrs. Mullens, Marshall, and Co., 13, George Street, Mansion House, E.C.4; and of any of the principal Stockbrokers.

Application Forms for "Fully-paid Allotments" to be paid for, in whole or in part, by the surrender of Stock or Registered Bonds, have been sent by post to all inscribed and registered holders (in the case of a joint account to the first holder) of Issues receivable in lieu of Cash. Further Forms may be obtained—

(At the Bank of England, London, E.C.)—
1 (a) For the surrender of holdings registered or inscribed in the Books of the Bank of England;
(b) For the surrender of Bonds to Bearer.
(At the Bank of Ireland, Dublin)—
2 For the surrender of holdings registered or inscribed in the Books of the Bank of Ireland.

Applicants for these Forms must state the description of holding which it is desired to surrender.

The List of Applications will be closed on Saturday, the 12th July, 1919.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Arabic.	Jewish.
1919. June 13	1919. May. 31	Friday	1337. Ramadan. 15	5679. Sivan. 15
14	June 1	Saturday.....	16	16
15	2	Sunday	17	17
16	3	Monday	18	18
17	4	Tuesday	19	19
18	5	Wednesday	20	20
19	6	Thursday	21	21

Lord and Lady Inchcape have returned to London from Scotland.

Mr. O. F. Jenkins, I. C. S., has been posted as Sessions Judge of Benares.

Prince and Princess Antoine Bibesco have left town for Sutton, Surrey.

Prebendary Gough has returned from his visit to the troops at Constantinople and Salonika.

In the Birthday Honours List appears the name of Capt. T. Angus Swan, who has been awarded the M.B.E.

The Abyssinian Mission, consisting of Dejazmatch Nado, Kantibar Gabru, and Ato Herui, is now in London.

Raj. Kumari Sri Leilaba, Princess of Gondal, was married to H.H. Raja Rana Bhagat Ghandra of Jubbal on May 11.

Lord Dalmeny, eldest son and heir of the Earl of Rosebery, has been appointed to the Staff of the High Commissioner in Egypt.

M. Pericles Argyropoulis, the Greek Minister accredited to Norway, Sweden, and Denmark, left London on June 5 for Helsingfors.

Sir Sidney Low is lecturing on "The Government of India" at three o'clock to-day at 52, Portland Place, by kind permission of Lady St. Helier.

Lieutenant-General Sir William and Lady Marshall have returned to town. For the next two months their address will be 18, Berkeley Street, W.1.

On reversion from military duty Lieutenant-Colonel C. A. Gill, I.M.S., has resumed his former appointment of Malaria Medical Officer in the Punjab.

Madame Nikolas P. Pashitch, the wife of the head of the Serbian Delegation attending the Peace Conference, arrived in London on June 10 from Paris.

Mr. R. A. Mant, of the Indian Civil Service, has been appointed a Companion of the Order of the Star of India on the occasion of the King's Birthday.

The marriage arranged between Major J. St. Aubyn King (62nd Punjabis) and Miss Jeanne Demuth will take place at the Church of the Holy Trinity, Kensington Gore, on June 28.

Mr. Shuttleworth, Commissioner of Police, Rangoon, is to succeed Lieut.-Colonel H. Des Vœux as Inspector-General of the Burma Police when he proceeds on long leave in August prior to retirement.

The engagement is announced between Edward B. Robinson, of Alma, Maturata, Ceylon, eldest son of the Rev. E. C. and Mrs. Robinson, of Chadsmore, Malvern, and Isaline Margaret, youngest daughter of Mr. and Mrs. Horn, of Ivylands, Epping.

General Sir Horace Smith-Dorrien, the Governor of Gibraltar, and Lady Smith-Dorrien, accompanied by Captain Carrington, A.D.C., have returned to Gibraltar after an eight-day tour in Morocco as guests of General Lyautey, French Resident-General.

The engagement is announced of (Temporary) Captain James Elmslie Henderson, M.C., R.A., Egyptian Civil Service, only son of the Rev. George Henderson, B.D., Monzie, Scotland, and Edith Mary (Maidie), elder daughter of H. Michael Elliott, Hallamgate Road, Sheffield.

An engagement is announced between Douglas Royle Tweedie, bimbashi, Egyptian Coastguard Service, elder son of Mr. and Mrs. A. J. Tweedie, Port Said, and Ethelwyn Marjorie, daughter of Mr. and Mrs. Frank. W. Chanter, of Bloomfield, Braunton, North Devon.

The *Egyptian Gazette* states that Sirry Pasha has finally accepted the invitation of the Greek Government to go to that country and draw up the plans of an irrigation scheme in a certain province there, and is expected to leave in the course of August next for that purpose.

The marriage of Captain J. D. Gabb, Indian Army, son of Dr. J. P. A. Gabb, of Poyle Mount, Guildford, and Constance Margaret, daughter of Mr. and Mrs. Davids, of Hillier House, Guildford, will take place at Holy Trinity Church, Guildford, on June 14 at half-past two o'clock.

Viscount Gladstone will preside, and Lord Bryce, Lieut.-Colonel Lord Henry Cavendish-Bentinck, M.P., Dr. Ronald Burrows, and Dr. Clifford will speak, at a public meeting, to be held at the Central Hall, Westminster, on June 19, at 8.15 p.m., to express sympathy with the Armenian cause.

The marriage was celebrated on June 4 at All Saints', Wokingham, by the Rector, the Rev. B. Long, M.A., of Lt.-Paymaster A. R. Henderson, R.N., son of the late Richmond Henderson, Esq., Allahabad, India, with Phyllis Agnes, eldest daughter of Dr. Ernest Ward, Wokingham.

The marriage was celebrated on May 27 at Eltham Parish Church, by the Rev. Elphinstone Rivers, between Captain A. G. H. Dyce, Indian Army, son of Colonel G. H. C. Dyce, C.B., and Mrs. Dyce, and Evelyn, second daughter of the late A. J. Brown and of Mrs. A. J. Brown, Cheviots, Eltham.

The marriage took place on June 3, at St. Martin-in-the-Fields, Charing Cross, by the Rev. E. Powell, between John Mackay Pringle, I.C.S., son of the late David Pringle, and of Mrs. Pringle, Castelnau, Barnes, and May, widow of the Rev. T. L. Williams, and daughter of Mr. and Mrs. W. E. Downing, Elm Lodge, Hagley.

The *Egyptian Mail* of May 14 states:—Mr. W. A. Lloyd, recently of the A.I.F. in Egypt, has been created a Knight of the Holy Sepulchre by the Orthodox Patriarch of Jerusalem. This is a unique honour for an Australian. The Order corresponds to the Papal Knighthoods, and is the only ecclesiastical Order of the Orthodox Church.

The marriage was celebrated on June 3 at the Church of St. Martin-in-the-Fields, by the Lord Bishop of Khartoum, assisted by the Rev. R. Sheppard, Vicar of the Parish, between Harold Alfred MacMichael, son of the late Rev. Charles MacMichael and the Hon. Mrs. MacMichael, and Nesta, daughter of Canon and Mrs. Stephens, of 104, Belgrave Road, S.W.

The marriage was celebrated on April 25, at S. Thomas Cathedral, Bombay, by the Rev. W. T. M. Hamerton, between Arthur Hugh Jay (Bunnie), Captain 1st, 150th Indian Infantry, second son of Mr. and Mrs. Arthur Snelling, of Norwich, and Bryn-Coed, Wroxham, and Elizabeth Helen, daughter of Captain E. J. W. and Mrs. Reader, of Guildford, Surrey.

The engagement is announced between Major Nelson Rooke, Highland Light Infantry, younger son of the late Dibney Rooke and Mrs. Edith de Chair, Twickenham, and Marjorie Leslie, elder daughter of Sir Alexander Wood Renton, lately Chief Justice of Ceylon, and Lady Wood Renton, Camberley. The marriage will take place in Cairo in the middle of June.

A marriage has been arranged between Captain Thomas Hall Plumer, M.C., only son of General Sir Herbert Plumer, G.C.B., G.C.M.G., G.C.V.O., A.D.C. General, and Lady Plumer, O.B.E., of 22, Ennismore Gardens, and Monica Anne Georgiana, only surviving child of Brigadier-General Tempest-Hicks, C.B., and Mrs. Tempest Hicks, of Gladsmuir, Monken Hadley, Herts, and Hillgrove, Wells, Somerset.

Colonel Lawrence, who has now completed his work with the Egyptian Expeditionary Force, will shortly return to Oxford, where he will take up a Fellowship, and will resume his task of lecturing on history. It will be remembered by our readers that Colonel Lawrence, who is twenty-nine years of age, was for two years staff officer to the Emir Feisal, Commander-in-Chief of the Arab army, and son of the King of the Hejaz.

APPOINTMENTS, PROMOTIONS, &c.

A telegram from Belgrade states that Admiral Koltchak's Government at Omsk has appointed M. Straudman as Minister Plenipotentiary to the Yugoslav kingdom.

Ahmed Ziwar Pasha, the Egyptian Minister of Education, has been appointed Minister of Communications. He is succeeded in the Ministry of Education by Ahmed Talat Pasha, Procurator-General of Native Courts.

The Most Rev. John Henry Bernard, D.D., Archbishop of Dublin, has been appointed by the Crown Provost of Trinity College, Dublin, in succession to the late Sir J. P. Mahaffy. The new provost was born in India in 1860.

Brigadier-General Robert Byron Drury Blackeney, C.M.G., D.S.O., has been appointed general manager of the Egyptian State Railways, Telegraphs and Telephones as from April 1, with the precedence and privileges of an Under-Secretary of State.

The appointment of a Chief Conservator of Forests has been sanctioned for the Madras Presidency, and Mr. S. Cox, at present Conservator of Forests, Northern Circle, has been selected to that post. His headquarters will be at Madras.

OBITUARY.

The death occurred on May 11 of W. Weekes, Sudan Government Railways.

The death occurred on June 1, at 87, Devonshire Road, Bristol, of Robert Dick, late of the East Indian Railway, in his 75th year.

The death occurred on May 26 at 4, College Road, Reading, of Major-General Richard Carruthers Budd, late Madras Staff Corps, aged 84.

The death occurred on May 24 at Kandapola, Ceylon, of William Poyntz Spurway, surviving son of Charles Spurway, of Spurway, Devon, aged forty-five.

The death is announced of Sir Vincent Frendo Azopardi, Chief Justice and President of the Court of Appeal and Vice-President of the Council of Government of Malta.

The death is announced from Bombay of Professor R. P. Karkaria, at the age of 50. Mr. Karkaria was well known for his mastery of the scientific historical methods of the West. His researches covered the most varied ground of Indian history, both ancient and modern; of the classics; of the sacred books of the East, and essays in both French and English history.

NEWS IN BRIEF.

A combined Civil Post and Telegraph Office has been opened at Deltawah.

A Serbian Royal decree orders the demobilisation of the third class of the Serbian Army in the case of soldiers over 38 years of age.

The Government of India is now experimenting with a proposal made by Commissioner Booth-Tucker, of the Salvation Army, for the treatment of cactus as food for cattle.

The *Busreh Times* of May 3 states that the Civil Post Office at Qumah has been converted into a combined Post and Telegraph Office, open to paid inland telegraph traffic.

A message from Simla states that the monsoon rainfall in India shows signs of being considerably below the normal for June and July, although there is no indication of the drought reaching serious proportions.

On June 6 the Serbian Prince Regent gave a lunch in honour of the general commanding the French forces at Belgrade on the departure of his staff. A dinner and reception were also given by the Serbian officers in Belgrade to their French comrades of the "Army of Hungary," who are leaving Belgrade for a town in the Banat.

BRITISH ADRIATIC MISSION.

Nearly 10 per cent. of the British Adriatic Mission, which co-operated with the French and Italian Missions in the evacuation and re-equipment of the Serbian Army, lost their lives by drowning, through enemy bombing, and kindred causes. A Committee has now been formed, with Colonel F. P. S. Taylor as president, Lieutenant-Colonel E. C. L. Fitzwilliams as hon. treasurer, and Captain J. R. Johnson as hon. secretary, with the object of commemorating the fallen, and subscriptions are invited. Lieutenant-Colonel Solomon is writing an official history of the Mission, and photographs, diaries, or information for that purpose should be addressed to Captain Johnson, 804 M.T. Coy., R.A.S.C., Darlington, Co. Durham.

THE CAMPS' LIBRARY.

The report of the work of the Camps' Library recounts the history of one of the worthiest efforts of the war. Few people can fail to realise what an immense boon books and magazines were to our fighting men, but the value and work of the organisation which provided that boon are not so readily recognised. When it is realised that up to the Armistice some 16 million publications had been dealt with by the Camps' Library (which were sent to the armies in France, Salonika, Egypt, British East Africa, Mesopotamia, Italy, and Russia), some idea of the amount of labour which this excellent institution performed can be obtained.

The story of the collecting of the books is not without humour. Absolutely every kind was sent for despatch overseas, from Shakespeare to "How to Cut a Smart Blouse"! "Books of every language," says the report, "were sent in: French, German, Chinese, Japanese, Greek, Hindustani, Maori, and Gaelic found their way to the library, and once, in grave and anxious days at the beginning of the war, someone sent in a 'Guide to Germany.' It was first suggested that this should be thrown away, but a far-seeing optimist rescued it from destruction and set it in a prominent place to be kept for the day when it should be useful to guide our army into the land of our enemies. On the day the Armistice was signed that book went over to France."

"The absence of red tape in all this very complicated system of 'book rationing' for the whole Army is the one thing on which the Camps' Library prides itself, and is probably one of the reasons why it is believed the Army liked the Camps' Library." Without doubt the library was extremely popular with the troops, and deservedly so; in fact, it still is, because the work of the library is not yet complete, and literature is still being forwarded to the troops overseas.

A delegation of the International Red Cross, instructed to visit and give pecuniary help to the prisoners of the Central Powers in Greece and Macedonia, has left Switzerland for Rome, Athens, and Salonika.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

FRIDAY, JUNE 13, 1919.

THE NEW GOVERNMENT OF INDIA BILL.

At a time when the whole world is suffering from indecision and the lack of any settled policy in high places, it is much to the credit of the Secretary of State for India that he at least knows how to pursue in spite of stress and storm an even course towards an appointed goal. There are and must inevitably be wide differences of opinion as to the methods by which he proposes to carry into effect the declaration of policy made to Parliament on August 20, 1917. But the procedure he has followed since then has been steadily and courageously consistent with the momentous announcement that "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India, as an integral part of the British Empire," was the policy of H.M. Government, who must, however, remain together with the Government of India "judges of the time and measure of each advance, and be guided by the co-operation received by those upon whom new opportunities will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility." Mr. Montagu, it will be remembered, proceeded in person to India to study on the spot in consultation with the Viceroy and with official and unofficial opinion the first steps to be taken in order to apply the principles set forth in it to the actual task of government and administration. As the result of his mission an exhaustive report bearing his signature and that of the Viceroy was laid just a year ago before Parliament. It proposed far-reaching changes of which the most important affected the sphere of Provincial Government. There was nothing very novel in the recommendations it contained for relaxing the rigid control hitherto exercised by the Central Government over the provinces, for, years ago, a Royal Commission on decentralisation had already pointed the way. The crucial recommendations were those that urged the transfer of certain administrative departments in the Provinces to Indian Ministers who, though sitting together with the Governor and his Council as members of one Government, responsible as hitherto to the British Parliament, were to be made separately and directly responsible in regard to those departments to Indian assemblies elected on the broadest franchise possible under existing conditions. The Report at once provoked the criticism which its authors indeed invited. Some of the criticism was very violent. The Report was denounced by Indian extremists as a ludicrous evasion of India's demand for immediate and full-blown Home Rule. It was denounced no less fiercely by British extremists as an abject surrender of our trusteeship for the Indian masses to a small body of political agitators. More reasonable were those critics who pointed out that it was impossible to judge of the value of the scheme as a whole until two vital *lacunæ* were filled in. What were precisely the subjects which could be properly and safely "transferred" to Indian Ministers, and how were the electorates to be constituted that should return the assemblies to which those Ministers would be held responsible in regard to the "transferred subjects"? Mr. Montagu did not hesitate to admit the validity of this criticism, for the Report admitted that its authors had not had either the time or the opportunity fully to explore those two very difficult problems; and he appointed two Committees, under Lord Southborough, to investigate them thoroughly in the course of last winter by inquiries conducted in each of the eight provinces to be brought within the scheme. At the same time the Government of India and the Provincial Governments were to submit their reasoned opinions on the scheme as a whole. Their final reports, together with those of the Southborough Committees, having been duly received and considered by the Secretary of State, he has now laid before Parliament the Bill which he has commended to it for adoption in a second reading speech of great ability and moderation, whilst inviting the co-operation of a Select Committee of both Houses to examine its provisions and suggest, if necessary, such amendments as may be compatible with its fundamental principles.

Public opinion, both in this country and in India, will, we feel confident, recognise that the thoroughness and skill with which the introduction of so grave a measure has been handled are not unworthy of the magnitude of the issues involved. We shall doubtless again be told that the Bill represents a tremendous leap into the dark, but if that expression could ever be properly applied to a policy which, after all, merely pursues an ideal that has been present to the mind of many of our best administrators in India since the days of Thomas Munro and Mountstewart Elphinstone, nearly a hundred years ago, it could be applied only to the declaration in which it was first definitely formulated. Even the Indo-British Association does not, however, demur to the principles of the declaration, and it may be averred without fear of contradiction that the policy which the Bill attempts to carry into effect is now definitely accepted in this country. The Montagu-Chelmsford Report, upon which the Bill is based, has itself been for some twelve months before the public, and not the least cogent of the arguments used in the House by the Secretary of State is the failure of his critics to produce any real alternative scheme for translating the declaration into practice. He contends, and justifiably contends, that his scheme therefore holds the field, and, if once that contention be admitted, his case is clearly more than half won. For what is his case? It is that, if we want to train the Indians to self-government, we must give to the best and ablest amongst them, within limits however restricted, some measure of administrative authority, and that that measure of authority must be coupled with a corresponding measure of responsibility, without which power is invariably a snare and a temptation; and we must also create from the best materials available some representative body to which they shall discharge their responsibility. Indians have long complained that we will not allow them to go near the water because they have not yet learnt how to swim. We propose now to meet that complaint, not by allowing them at once to plunge into deep water in which they might come to grief themselves and drag the British *raj* down with them, but by marking off certain smoother areas of water in which they can learn and be helped by us to learn with less risk either to themselves or to us. Those areas are to be enlarged in proportion as they learn, until experience shows them capable of breasting the deepest waters without assistance or restraint.

That is the object of the diarchical or dual system which the Bill proposes to introduce in the first place into provincial government and administration, and no one has hitherto produced any practical alternative by which that object can be achieved. It is admittedly an experiment in political education—a delicate and difficult experiment, not free from danger, and for that reason hedged round with substantial safeguards which, if used by provincial governors to whose hands they are chiefly committed with caution and with firmness,

Digitized by Google

ought to prove adequate and effective. We cannot therefore regret that in spite of the objections urged with great ability by five provincial governments, whose own counter-proposals have been subjected to exhaustive and, we think, convincing criticism by the Government of India, the Secretary of State has committed himself finally in the Bill to the introduction of the much-disputed dual system. It will, of course, be open to the Joint Committee to recommend modifications or even rejection, but we doubt whether it will do so, as its task should be not destructive but constructive, and it will find an ample field for its energies in the many important questions that the Bill still leaves open, as, for instance, to name only one of great perplexity, whether there shall be a common or a separate purpose for the "reserved" and the "transferred" departments in the Provinces. Upon the Joint Committee will also devolve the duty of considering the proposals to be submitted to it by the Secretary of State for giving effect to various recommendations of the Southborough Committees in the light of the despatches in which the Government of India has reviewed them. Many of their recommendations as well as other matters determined only in principle by the Bill are to be worked out in detail in the form of rules issuing in India, the policy on which those rules are framed being alone laid down by statute. This is, indeed, one of the wisest provisions of the Bill, for it secures the elasticity necessary to a scheme which is intended avowedly to be a transitional scheme capable of steady expansion, and nothing would tend more to delay and hamper expansion than the necessity for referring back to London for statutory sanction every modification which experience may suggest. Nevertheless, no evasion of Parliamentary control over the exercise of the rule-making power will be possible, as all rules will have to be laid before Parliament for such action as it may think fit to take upon them before they can actually come into force.

There are many other important sections of the Bill dealing with the constitution of the Government of India and with the future of the Indian public services on which space does not allow us to comment to-day, and the provisions concerning the reorganisation of the India Office are still incomplete, as Lord Crewe's Committee appointed to inquire into the subject has not yet submitted its Report. But the chief interest unquestionably centres in the great constitutional experiment which it initiates in the sphere of Provincial Government. Mr. Montagu pleads very eloquently that a measure of reform for which India—or, as we should prefer to put it, an influential body of Indian opinion that we can no longer afford to ignore—is waiting with confidence, not unmixed with impatience, cannot be safely curtailed or delayed. We agree with him, because this measure constitutes the fulfilment of a definite promise made to the people of India, and throws on to them the onus of proving their own fitness for further instalments of the power and responsibility essential to that true partnership in the British Commonwealth of Nations to which they aspire, and to which we have ourselves recognised their aspirations by securing the recognition of India as an original member of the League of Nations. In justice to ourselves as well as to India we could not do less, nor could we safely at present do more. Recent events in India itself have shown how dangerous are the elemental forces of disorder which even high-minded dreamers like Mr. Ghandi are apt to let loose but find themselves powerless to restrain; and how immature and helpless are still many of the best of the "politically minded" classes who allow themselves to be carried blindly down the inclined plane of emotional agitation into stormy waters of which they cannot plumb the depths. They can only be taught by responsibility, and, within the utmost limits of their safety and ours, responsibility is about to be given to them. We must hope that for their own sake and ours they will use it rightly. That hope might be less confident if the great material and economic changes which the war has produced in India, as in every other part of the world, were not bound to divert to more fruitful fields some of the excessive but rather sterile energies hitherto concentrated in India on political controversies. The Report of the Indian Industrial Commission set up during the war may well prove to be a document of no less abiding importance than the Montagu-Chelmsford Report, which itself contains a chapter on the economic aspects of the Indian problem that has attracted far less attention than it deserves. The British public has not yet begun to realise the economic ferment generated by the discovery and exploitation under the pressure of war necessity of India's vast material resources and industrial potentialities. Much has been said in this country, and rightly said, about India's loyalty during the war and about the gallant part played by Indian troops on every battle-front; but little has yet been said about the almost priceless value of the raw materials for war purposes which India supplied and, in many cases, could alone supply. Still less has been said about the extent to which Japanese and American as well as native competition have already succeeded as a consequence of war conditions in displacing our British import trade into India. We are on the eve, if not actually in the presence, of a complete transformation of Indian economic conditions almost as momentous as any political revolution. The demand for Indian self-government has been based hitherto mainly on political considerations, and it is well that a serious attempt should be made in this country to meet it before it has enlisted the overwhelming support of irresistible economic forces.

ENVER, HIS CHARACTER AND CAREER.—I.

(FROM A CORRESPONDENT.)

The following are extracts from a series of notes jotted down by a late Arab officer in the Ottoman Army who knew Enver and his circle at the military school at Constantinople, and is therefore qualified to form a correct estimate of his character and intelligence. They give a true account of his career and define the real motives that led to his rapid advancement until he reached the top of the ladder of political power. One man sometimes alters the course of an empire's destiny, and, though genius is not always necessary, audacity and overwhelming ambition are indispensable qualities, especially in the case of a man like Enver, who rose from the ranks and had not the prestige of dynastic traditions behind him. In Enver's early career these traits lay hidden; indeed, he used then to give the impression of modesty bordering on timidity. A friend of the writer, a cultured Druse Emir, who knew all the young C.U.P. leaders intimately, once described Enver as being "shy like a maiden." That he possessed courage nobody can deny, but this quality degenerated into bold arrogance as soon as he came under the baleful influence of the Germans. Afterwards he acted like a mesmerised man, reflecting in thought and deed the dominant will of the Kaiser and his clique.

As a student he was mediocre, and used indeed to be taunted by his classmates with his backwardness in mathematics. His ignorance of this important branch of military science was once illustrated in instructions that he, when Governor of Benghazi, gave to the commandant of artillery for the utilisation of an old Italian 18-in. gun. Had these ignorant instructions been carried out the gun would have burst.

As is well known, Enver came into the limelight on the outbreak of the Revolution, the origin of which may be traced to the incessant and costly punitive expeditions against Serbian, Bulgarian, Greek, and Albanian bands. Abdul Hamid's greatest error was the policy he adopted on the Macedonian question. The thinking section of the Ottoman Army finally saw that the only means of putting an end to this suicidal policy was to cut off the nails of the autocrat, and to that end they started founding secret military societies (committees). It was Enver's fortune to be one of the founders. He had just distinguished himself for conspicuous bravery in a fight against the Komitajis. His great ambition then was to vie with Aziz, Niazi, and Ayoub Sabri, who had distinguished themselves before him. When these military societies finally decided upon overt action, the following officers were, among many others, appointed for the fulfilment of that memorable deed: Ayoub Sabri, Aziz, Yussuf Zia, the artillery officer Niazi (who surpassed Enver in everything except cupidity), and Enver. Orders were passed to all the branches of the Committee to afford to these chosen delegates every possible help in the fulfilment of their mission. The regiments of Niazi and Enver had the largest measure of luck and success, as they had secured the support of the Albanian mountaineers, who were told that the chief object of the Revolution was the liberation of Macedonia, and especially of Albania, from the Bulgarian and Serbian yokes. This was the first symptom of Enver's nascent chauvinism. His ruse succeeded with those simple mountaineers, who trusted and respected Ayoub Sabri, Niazi, and Dervish Humbu, all three of Albanian origin.

When this first act of the Committee achieved the great success of compelling the autocrat of Yildiz to proclaim the Constitution, the eyes of all the weary empire turned naturally to what seemed to them to incarnate their salvation; and it so happened that the only names mentioned in connection with this first act of the drama in the telegrams that were flashed from end to end of the empire were those of Niazi and Enver; and the people, thirsting for freedom and in that psychological mood that favours the creation of dramatic situations, caught at these two names and idolised their bearers. The Central Committee, indeed, was anxious to screen its real leaders and active members behind the names of these two subaltern officers, as they still dreaded the party of Abdul Hamid and its myriad-eyed army of "mouchards." The real souls of the Committee were Atef and Sadek Bey, who, by the avowal of Niazi himself (*vide* his diary), was the all in all, and without whom there would have been no escape from Abdul Hamid's tentacles. Niazi as a real hero found his supreme satisfaction in the people's love and confidence, whereas Enver exploited this for playing the big game of the empire's fate; and a strange concourse of circumstances favoured the realisation of his Neroic ambition beyond his wildest dreams.

When, following the event of March 31, Mahmoud Shevket entered Constantinople at the head of his revolutionary army and crushed the reactionary movement, Enver was with him, and gained distinction in his attack on the Taxim Barracks. The youthful leaders of the Committee indulged on that occasion in many atrocities, and the dethronement of Abdul Hamid was succeeded by a state of wild anarchy at the capital. The German Ambassador, von Biberstein, with his well-known political cunning and acumen, saw his opportunity, and knew how to exploit the situation fully. In circumstances like these, when the gates of authority are unhinged, it is the audacious that cleaves his way to the forefront most quickly, and Enver was the man to serve this archplotter's end, especially as he and his compeers were known to have been nursing schemes of vengeance against Kamel Pasha. Biberstein gave a fête, and had special success in the circles of the youthful Unionists. Enver and his fellow-officers were, of course, invited, and at the close of the fête the Ambassador, after extolling the acts of Enver, is reported to have said to him: "The German people long to see you, and German military circles look forward to meeting the second Saladin, the saviour (*sic*) of Turkey." The weaker fell under the spell of the stronger man. Next day Enver begged Shevket Pasha for the post of Military Attaché at Berlin, and his request was promptly granted. This apparently simple incident marked the beginning of the era that was to be fraught with misfortunes and to bring about the utter ruin of the Ottoman Empire. German ascendancy, which von der Goltz had so sedulously fostered, was re-established in heightened glory. Biberstein reaped what von der Goltz had sown.

On his arrival at the Ottoman Embassy in Berlin Enver found the Kronprinz's chamberlain waiting for him. After flattering him by saying that von Biberstein had conveyed to the Kronprinz highly complimentary messages about him, the official asked him to call on his Imperial Highness. It was an unofficial call, wherein Enver had a warm reception, such as even a member of the Ottoman Imperial House could hardly expect. In the course of the frequent visits that ensued the process of shaping Enver in the German militarist mould was elaborately achieved. When Italy declared war on Turkey the Committee recalled Enver in haste, and on the occasion of his farewell visit to the Kronprinz he begged him for an audience with the Kaiser. The Kronprinz is said to have apologised by saying that, in spite of the admiration that his father the Emperor had for his character and remarkable qualities, yet he could not grant his wish. He declared that Fate had so decreed that Enver was one of the revolutionaries who rose against Abdul Hamid, his friend. Nevertheless, Enver might rest assured that the Kaiser's personal predilections did not affect the solidity of the ties of their friendship.

When on his return to the Embassy Enver acquainted Nizami Pasha with the conversation he had just had with the Kronprinz, the Ambassador observed: "The Kronprinz has politely masked the truth. The fact of the matter is that the Kaiser avoids granting audience to anyone who rises against potentates, even by their pens, for he is a firm believer in the divine right of kings." It was not long, however, before the "ruse" of the Kaiser was unmasked. The real cause for not granting the audience was that then he had doubts of the Unionists' ultimate success. As soon as they consolidated their position and securely held the reins the Kaiser cultivated with Enver a friendship such as the Sultan himself did not enjoy. The unalterable loyalty of his friendship with Abdul Hamid was discovered to be a myth. It was one of the many "ruses" that this man of boundless ambition introduced into his elaborate and vast game for world dominion.

THE AFGHAN TROUBLE.

The following telegram from the Viceroy, dated June 4, has been issued by the India Office:—

"At the beginning of the Afghan trouble I wrote personally explaining the situation to all ruling princes and chiefs. All important rulers have in their replies offered their resources to the Government and have expressed unswerving loyalty to the Throne and detestation of the Amir's action. Necessary measures have been taken by the Nizam, the Begum of Bhopal, and other rulers to ensure that the real circumstances of the Afghan attack are fully understood by their Mohammedan subjects, and that the latter realise that no question of religion is involved. In placing his Imperial Service troops and resources at the Government of India's disposal, the Nizam of Hyderabad has specially asked me to convey to his Majesty the King his humble and respectful offer. The rulers of Baria, Ratlam, Patiala and Dholpur are among those who have offered personal service. Staff appointments in the field have been given to the Nawab of Loharu's two sons, including the heir apparent. We are considering other offers. Sir Partab Singh was eager to go, but in view of the importance of his duties as Regent of Jodhpur I discouraged him.

"Units have been offered by all ruling princes and chiefs who maintain Imperial Service troops. These units have in some cases only just returned from the front. We have selected for active service or garrison duty in India contingents of infantry, cavalry, artillery, sappers, etc., from Gwalior, Faridkot, Jaipur, Indore, Khairpur, Kashmir, Patiala, Maler Kotla, Sirmur, Tehri, and Rampur. We are considering the employment of Imperial Service troops of Bikaner, Nabha, and Kapurthala. We are receiving and accepting offers of camels, motor-cars, and money for providing comforts for the troops engaged in the campaign.

"Assistance was offered by the Nepalese Government in February last on the death of the late Amir. I asked the Prime Minister for a Nepalese contingent at the outbreak of hostilities, and, in spite of the great difficulties of moving troops through Terai in the hot weather, he promptly agreed. Arrangements for their reception in India are being made.

"Chiefs and Governors of the Gilgit Agency, the Khan of Kelat, and tribes in Baluchistan have also sent offers of assistance and loyal messages. Active assistance in repelling raiding parties has been given by the Mehtar of Chitral. The Nawab of Dir has expelled all Afghan agents who were in his country, and has offered his son's services."

The Madrid correspondent of *The Times*, writing on June 4, states:—A successful operation is reported from Morocco, where the Spanish forces ejected the Jebel Hebid and Beni Aros tribesmen from an important entrenched position on the Jarruo Valley. The enemy left forty-three dead on the field. The Spanish casualties totalled twenty-nine.

THE FUTURE OF MESOPOTAMIA

(From a Correspondent.)

A short time ago a correspondent pleaded in these columns that the Government should lift the veil from Mesopotamia and tell the public what is the present position in the country. This plea deserves to be heartily endorsed, and it may well be hoped that before long there will be ample information about conditions in this long dormant country. As the correspondent pointed out, for two years already our men out there have been mainly occupied, not in fighting, but in the work of organising the country and securing its peaceful settlement. Opportunities for trade are ripe. The demand for imports must be considerable, yet it cannot be expected that advantage will be taken of the present opportunities unless ample information is forthcoming as to the state of the country, the conditions and restrictions affecting trade, the position as to railways and river traffic, and so on, and considerable information is necessary as to the proposals and scope of the big new company which, the correspondent stated, has been formed under the leadership of Lord Inchcape.

When the facts as to the new company are published there will probably be a revival of the controversy whether Government should or should not embark on trading enterprises in undeveloped countries. No finality has been reached on the proposals of the Empire Resources Development Commission with its recommendations that, in order to earn money with which to pay off our colossal war debt, the State should become "an owner of vast herds of cattle overseas, a proprietor of forests and valuable plantations of tropical shrubs and trees, the harnesser of mighty waterfalls, an organiser of great commercial air services, the reaper of the manifold harvest of the seas." The writer would view the carrying out of any such proposals with anxiety. The State is not fitted for commercial enterprise in distant parts, and official-run concerns would lack that spirit of initiative and keenness which alone can bring success. Nevertheless, there is ample room for Government co-operation on the lines of the Anglo-Persian Oil Company. That scheme at Ahwaz and Abadan has been thoroughly successful, and shows how valuable Government effort can be if kept within proper limits.

Mesopotamia undoubtedly offers splendid opportunities for reasonable experiments of this kind. The country has lain so long dormant that every kind of effort has good chances of success. It is said by some that Mesopotamia will never fulfil the expectations of the war-time prophets, since any country which depends on artificial irrigation is periodically rendered sterile, because alkaline and other salts are brought to the surface. According to this view the ruin of the Mesopotamia of olden time was brought about by this natural cause rather than by misgovernment and warfare. That is a question for experts to decide, though one would have thought that British experience in Egypt and the Punjab would have been an answer to this depressing theory at least sufficient to justify big irrigation schemes in Mesopotamia. If this theory be correct in principle, the fact that it took very many generations to cripple Mesopotamia entitles us to set to work now, after so long, to make the country prosperous once more. A possible exhaustion in several hundred years hence can be viewed with equanimity. The writer has a very real faith in the future of the country, though it may be accepted that many of the attractive prospects held out by theorists who do not know the country are never likely to be fulfilled. For instance, too much can easily be said about the overland railway route to India. Anyone who knows the frontier railways of India will scarcely be able to imagine a great commercial traffic with Europe overland. When the railway from Constantinople is eventually linked with India it will probably enter India either through Quetta or Peshawar, which lines are both laid through mountainous regions and which are both scarcely suited for through goods traffic. One day beyond doubt these connections will be made, but they will have little importance for those who wish to despatch goods to India. From the Mediterranean and from Mesopotamia the main route to India will remain by sea. But although it is possible to be sceptical regarding some of the efforts of the journalists' imagination, the writer believes in the great future of Mesopotamia, and would like to see full and frank reports issued by the Government at an early date.

THE NEAR EAST.

The Manager of The Near East *would be glad to be informed of any instances of difficulty being experienced in securing copies of the Paper. If any readers have friends who are not already subscribers to* The Near East *and, in their opinion, are likely to be interested in the Paper, they are invited to send the names and addresses to the Manager, 1, Devonshire Square, London, E.C.2.*

The Near East *will be sent weekly by post for £1 2s. 2d. per annum (£1 4s. 4d. abroad), or can be obtained from any bookstall or newsagent for £1 per annum.*

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Egypt appears to have caught the diseases of the modern world rather badly. It is now concerned with the position of its women. The paper *Ahram*, in an article on the organisation of women societies in Egypt, says that women must be soundly educated. The writer says: "I am one of those who dislike the organisation of these women committees of which we frequently hear in these days. They are nothing but places for chatting, in which ladies waste their time. . . ." We see no great harm in this; it is when ladies chat to waste other folks' time that one starts lamenting. There have been hundreds of explanations of women's chatter, but never a real excuse. The best thing to do is to make light of it, as Congreve did when he said in his "Way of the World": "I know a lady that loves talking so incessantly she won't give an echo fair play; she has that everlasting rotation of tongue, that an echo must wait till she dies before it can catch her last words." To find a woman a good listener is a rare joy; it is like the transient discovery of an eighth wonder of the world. The elation of those who had discovered the fourth dimension could not be greater than the pleasure experienced by the sight of a woman listening with never a thought of displaying her own pretty teeth!

***

I do not believe that the British forces could have carried on the war without their great sense of humour, with which they turned the edge of the sharpest things. Largely, of course, this quality was unconscious. I write this after reading an article on "Humour in Palestine" in the *Egyptian Gazette* (May 30), by R. Thurston Hopkins. In that country life was made easier not only by the humour of the inexhaustible Tommy, but by the naïve remarks of the natives as well. Here is one very choice incident: "An Egyptian interpreter, attached to a regiment in Palestine, failed to turn up after ten days' leave at Cairo, and sent, by way of excuse, this note in English (?) to his O.C.: 'My absence is impossible. Someone has removed my wife. My God, I am annoyed.'" Is not the blasphemous indignation pricelessly transparent? I am not giving the O.C.'s comments, which probably were of rather too vivid a colour to be printed in this column.

Corsair.

. . A . .

PUBLIC MEETING

will be held at the

CENTRAL HALL,

WESTMINSTER, S.W.I.

On THURSDAY, JUNE 19th, 1919,

at **8.15** p.m.,

To Express Sympathy with the Armenian Cause.

Chair to be taken by **VISCOUNT GLADSTONE**

SPEAKERS & SUPPORTERS—

THE RT. HON. VISCOUNT BRYCE, O.M.
Lt.-Col. LORD HENRY CAVENDISH-BENTINCK, M.P.
DR. RONALD BURROWS.
DR. JOHN CLIFFORD.
ANEURIN WILLIAMS, Esq., M.P.
SIR ARTHUR CROSFIELD, Bart.
SIR EDWARD DENISON ROSS.
NOEL BUXTON, Esq.
G. P. COOCH, Esq.
SIR ROBERT PERKS, Bart.
MAJOR THE HON. GEORGE PEEL.
ATHELSTAN RILEY, Esq.

ADMISSION FREE.

All enquiries should be made to THE ARMENIAN BUREAU, 153, REGENT STREET, LONDON, W.1. 'Phone: Gerrard 8234.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Particulars of the new loan will be found elsewhere in this issue. Subscriptions are invited either to a 4 per cent. loan at the price of £80 per cent., redeemable between 1960 and 1990, or to 4 per cent. Victory Bonds at the price of £85 per cent., redeemable by annual drawings at par commencing on September 1, 1920. In both cases a series of carefully graduated instalments are arranged, and subscriptions are invited for amounts from £50 upwards. The conditions are thus framed to make the widest possible appeal. No definite amount is asked for, but it is obvious that the occasion is one on which every British subject must do his duty as far as in him lies.

***

The figures for the trade of the Sudan during the first quarter of the present year, which are now available, show a slight decrease in imports and a fairly substantial rise in exports. The imports were valued at £E1,040,710, as against £E1,040,912 in 1918, and exports at £E882,820 as against £E734,732. As regards the imports, Egypt's share increased from £E589,087 to £E725,585, while the figures for the United Kingdom rose from £E64,079 to £E78,609. On the other hand, there was a very marked decline in imports from India from £E248,425 to £E85,699, while the imports from South Africa decreased from £E96,653 to £E57,432. As regards exports, Egypt took goods valued at £E409,566, as against £E705,645, while the exports to the United Kingdom were valued at £E188,305, as against £E107,502. It remains to add that the chief items in the list of imports were cotton fabrics, £E277,213, as against £E272,629, and sugar, £E193,507, as against £E139,142; while the chief exports were sheep and goats, £E106,834, as against £E92,387, cattle, £E97,836, as against £E107,259, and gum, £E93,711, as against £E204,759.

***

In an interesting article in the current issue of the *Bulletin* of the Federation of British Industries on the prospect for the Athens Exhibition, which is to be opened on October 13, reference is made to a number of the more important openings for British enterprise in Greece at the present time. As regards building and constructional engineering, it is pointed out that important schemes, such as the rebuilding of part of Salonika and the construction of new buildings in Athens and other towns will afford vast opportunities, but, in addition, the reconstruction of the devastated areas of the Struma Valley is contemplated, "large undertakings being under review to the value of 60,000,000 drachmæ as a temporary measure only." Then a scheme has been proposed for the improvement of the telephone system, at a cost of 6,000,000 drachmæ, and mention is also made of the need for good printing machinery, for which "there are inquiries everywhere," and for electrical goods, regarding which it is stated that equipment of all kinds, from dynamos to fittings, is wanted immediately.

***

Then there are openings for such commodities as clothing, in which direction "there is undoubtedly a large field for enterprise in costly materials, apart from ordinary clothing fabrics; food products, such as sweet pickles, sweets, and especially jams, all of which "appeal particularly to the Greek palate"; stationery, which is "very scarce and expensive, and apparently the scarcity will continue until English firms come to the rescue; and fancy articles, such as menu holders, mascots, etc., fancy leather bags, and jewellery. When it is added that other promising openings are for furniture, office equipment, sanitary appliances, cutlery, glass, china, photographic materials, and dental and surgical instruments, the wide range of Greek requirements, which has been the subject of constant emphasis in these columns, will be better appreciated.

***

Apropos of the Athens Exhibition, I may mention that an influential committee has been formed in Athens, with Major Kennard, the Special Trade Commissioner in Greece of the Federation of British Industries, as chairman, to look after the interests of the exhibitors and to work in conjunction with the Federation in London. The members of the committee are: M. A. Typaldo Bassia, LL.D., M.P., ex-Minister, President of the Council of Exhibitions and Touring, Ministry of National Economy, and vice-president of the Zappeion Committee; M. P. Koukeas, Director of Exhibitions and Touring, Ministry of National Economy; M. A. Skintzopoulos, Inspector of Industry, Ministry of National Economy; M. J. Axelos, head of the Department of Architecture, Ministry of Communications and architect of the Zappeion; M. N. Iatrou, Director of Commerce and Industry, Ministry of National Economy; Mr. J. McDowall, of the Piræus; Mr. B. M. Bellasis, organiser of the Athens Exhibition; and Captain R. C. Cumberbatch, F.B.I., Assistant Trade Commissioner.

***

An interesting feature of the recently issued report of the Persian Customs authorities is the light it throws on the continued growth of Anglo-Indian trade with Persia in 1917-18. During that period British imports into Persia were valued at 313,136,268 krans (£5,693,386 at the normal exchange of 55 krans to the pound sterling), about two-thirds of which came from India, an increase of 83,621,276 krans (£1,520,386) on the figures for the previous year. Cotton fabrics, iron and minerals, sugar, rice, flour and cereals, spices, woollens, indigo, and cloths were among the imports in which the chief increases took place. British imports, it may be noted, represented about 65 per cent. of the total imports into Persia, but the figures are subject to the qualification that, as in the case of Indian exports to other regions it is possible, if not probable, that India's share of the imports includes goods which were imported into India from Japan and were subsequently re-exported. Finally, as regards exports, the British Empire took from Persia, apart from petroleum products, goods valued at 41,000,000 krans (£745,454).

***

Currency problems came in for full attention in the speech of Mr. Larkworthy, chairman of the Ionian Bank, at the recent annual meeting of that institution, and it is interesting to note that he expressed himself against the findings of Lord Cunliffe's Committee, and recorded his "deep conviction that our present currency note system is sound in itself, completely acceptable to the community, perfectly elastic, and properly and fully covered, and that neither the Government nor the banking world need trouble themselves for a moment with the question of redemption or convertibility."

***

The dividend declared on the shares of the Bank of Abyssinia of 1s. per share, or 4 per cent., is specially noteworthy, as it is the first dividend paid by this bank since its formation in 1905. With the great possibilities for development before Abyssinia it is to be expected that this result will merely prove the forerunner of a period of prosperity for the shareholders of the bank.

***

It will have been noted that Canada has begun to pay special attention to the Near East markets, and it may be hoped that the reason for this interesting development will act as a spur to business men in this country, who are still lingering over the decision whether or no to enter these markets. Canada is a country with a great industrial future before her, and the Trade Commission which has just been examining openings for her trade is stated to have come to the conclusion that there was little immediate prospect of orders from France and Belgium, and that in view of trade and financial conditions in general on the Continent it was necessary to look further afield. The possibilities of establishing trade with the Near East were then examined, and the conclusion was arrived at—and what other verdict was possible on the facts?—that there then was every prospect of important trade. I refer to this matter simply because I think this spontaneous testimony to the outlook in the Near East may be trusted to carry its own appeal to our business men.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

THE TIGRIS PORTS.

Future of Koweit.

(From a Correspondent.)

In writing of the Tigris ports it is necessary to place a very liberal construction on the word port. For there is only one real port on the Tigris (or rather on the Shatt-el-Arab) and that is Busreh. I have already written in these columns on the subject of Busreh as a port. My object now is to refer briefly to the other riverside towns which are likely to play their part in the development of Mesopotamia.

Looking well ahead, I can see Koweit as the big port of Mesopotamia (strictly speaking, it is not in Mesopotamia at all), duly connected by rail with Busreh, Baghdad, and Constantinople. Koweit is under independent rule, but our flag has always had a special position there, despite the efforts of the old-time Turk and his German backers. Lord Curzon, as Viceroy of India, paid special attention to these Persian Gulf ports, and our operations at Bushire and Bunder-Abbas might well have been impossible if it had not been for him. But of all the Persian Gulf ports, so far as trade with Mesopotamia is concerned, Koweit is the most important. Bushire and Bunder-Abbas are bases for Persia, and will develop, and have developed, enormously. But I back Koweit for Mesopotamia's trade. At Koweit, deep-water ships can unload, untroubled by the great natural bar which runs right across the Gulf just south of Fao. When proper wharf accommodation has been erected at Koweit and the railway to the north has been built, a very big trade will assuredly develop. But Koweit is very much in its infancy as yet. We have made practically no use of it during the war.

The first port on the river is Abadan, where the Anglo-Persian Oil Company has its vast works. Abadan is likely to remain an oil port, and I should not think that there will be any other developments there. Mohammerah is a little way up the Karun River. A good deal of trade from Persia is likely to come to Mohammerah, but the main tendency of Persia's revived trade will be to go south-west to Bushire and Bundar-Abbas rather than to Mohammerah. In my previous article I included Margil in the port of Busreh. It really is an extension of Busreh, and will always be part and parcel of the Busreh area. It extends practically to Gurmat Ali, the junction of the Euphrates and Tigris.

The main agricultural development of Mesopotamia will be in the area of the Euphrates, but it is impossible to speak of Euphrates ports. The river is only navigable by the very smallest craft, and nothing more than mere ferrying trade is possible. The Baghdad Railway is likely to follow the Euphrates course, but the principal value of the Euphrates itself will be for irrigation purposes. All the big irrigation schemes, in process or planned, will derive their water from the Euphrates.

Nar Umar, just above Gurmat Ali, on the right bank of the Tigris, was mentioned in the Busreh article. It is likely to become a place of considerable importance, for all ships which can pass the bar can be berthed there, and there is already a good railway to Amara. Nar Umar is only two years old. Above Nar Umar comes Kurna, the old junction of the Euphrates and Tigris. Here is, incidentally, an alleged Garden of Eden with an apple tree, surrounded by a wall, and nicknamed by Tommy "Temptation Square." Kurna was of very great importance in the earlier days of our military operations, but it has been superseded by Nar Umar. As a river port I do not anticipate much of a future for it.

At Kalit Sali the famous Narrows begin. These narrows will ever be a problem in Tigris navigation. Everything possible has been done to overcome their natural difficulties, and when passing through them I have been amazed at the comparative ease of movement, but they remain a problem. People fond of heroic solutions have suggested a direct canal from a point south of Amara to Kalit Sali. This sounds very practical, but Nature had a purpose in forming the Narrows, namely, to keep the water in the river above Amara. If the narrows were not there as a natural obstacle the water would flow rapidly throuhg the Upper Tigris and render navigation next to impossible. It might be practicable to build a canal with locks, but it would be a bold venture. When the river is in flood the Narrows, with their wonderful hairpin bends, become a vast lake. As the waters usually fall very rapidly, it is no uncommon sight to see ships stranded on dry land at some distance from the channel.

Amara has been called the "Brighton of Mesopotamia." It certainly is the best spot on the river. It has a noble facade of uniform houses on the left bank, and the fine MacMunn Bridge is a splendid feat of war-time engineering. The Jehaila Canal leaves the river at Amara and goes eastwards, but it was necessary to block up part of the entrance in order to keep the water in the Tigris. Amara is a big trading town, and is sure to be a progressive river port in the future. Between Amara and Kut the river is comparatively easy. I have done the journey in little over twelve hours, coming south. There is no place of importance between the two towns.

Kut is full of memories, but has no great commercial importance. Even after our recapture of the town we made our military base about five miles to the south, for at Kut itself the river banks are shelving and hopeless for accommodating craft. This consideration has always to be borne in mind when planning ports on the Tigris. Above Kut there are several small townships and military posts. Baghahlia and Azizieh are the principal of these, and may develop considerably when cross-traffic to the Euphrates area is needed. Ctesiphon, on the left bank, is of great historic and war interest, but has no commercial importance as yet.

Approaching Baghdad, there is likely to be development at the junction between the Dialah river and the Tigris, a spot hallowed by much magnificent bravery in the early days of 1917. Hinaidi (about seven miles south of Baghdad as the crow flies) is a military base. It is the railhead for the Kut and the Dialah lines, but I prophesy an eclipse for Hinaidi. The railway to Kut will probably be eventually transferred to the other side of the river, and when the Dialah railway is connected by a bridge across the Tigris with Baghdad, Hinaidi will lose its importance. Few of us who have been there will shed a tear.

The port of Baghdad has considerably extended during the war, absorbing Karradah, on the left bank, and necessitating a new area on the right bank, prosaically called Advanced Base. The river immediately south of Baghdad is very difficult, and the channel varies week by week. Commercial development in Baghdad is likely to concentrate on the west side. Here already are Baghdad Station and other buildings. I can foresee that the whole area between Western Baghdad and Advanced Base (I wish the name Maude could be commemorated here) will become one day a centre of trade. The river winds tremendously, but the distance by road is only about three miles.

Baghdad still presents the appearance of a much-shelled city, though nothing save a few aeroplane bombs ever fell on her. The new streets, constructed by the Turks, were invaluable to our troops, but new buildings have not yet been erected alongside. Baghdad will always be the centre of a vast trade. As far as Baghdad shipping up to a four-foot draught is always possible. Beyond Baghdad the river can only be navigated by small craft. In fact, north of Baghdad we cannot speak of Tigris ports. Samarra, Tekrit, and Mosul are inland towns, and very little of their trade is likely to come south by water. Beyond Baghdad the bed of the river slowly changes from mud to rock, but south of Baghdad all is mud, and I doubt if anybody has sailed the Tigris without touching bottom countless times. At Baghdad the Tigris as a commercial river ends, so I will leave her there, confident in her future, but also determined to see her no more, though plenty of bolder spirits will.

C. W. M.

INDIA'S GOLD IMPORTS.

In the House of Commons last week Captain Moreing asked the Chancellor of the Exchequer whether he would state what was the present position regarding the shipment of gold from Australia to India, and the sale of such gold in that country; whether there were any restrictions, and, if there were, when they were likely to be removed.

Mr. Chamberlain said these were matters for the consideration of the Commonwealth Government and the Government of India. So far as he was aware, there were no restrictions on the export of gold from Australia. But under the Indian Ordinance regulating gold imports, imports could only be made by licence for tender to the Indian Government, for payment in Indian currency at a rate close to the par of exchange. He was informed by the Secretary of State for India that he could not consider the removal of this restriction until he had received and considered the report of the recently appointed Indian Currency Committee.

PRICE OF GOLD IN INDIA.

The Government of India announced on May 31 that the price for gold imported into India by licence under ordinance for tender to Government has been altered in conformity with the recent rise in the exchange value of the rupee from 1s. 6d. to 1s. 8d. The price is now 12 rupees 4½ annas per sovereign, or one rupee for 9.20115 grains troy of fine gold. The old rates will be applicable to shipments made on a through bill of lading before May 31, 1919.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated May 30:—

General rain in Assam and Mysore. Local in Bengal, Bihar, at Chota-Nagpur, Burma, Southern Madras, and Bombay Deccan.

Bombay cotton market strong. Fully good broach, July-August delivery, quoted at Rs.515. Piece-goods market steady. Cabled delays hampering trade. Revised all India rice forecast; estimates yield 23,672,000 tons. Calcutta jute market dull. Jat Fours, Rs.11; rejections, Rs.6. Gunny market firm, but inquiries mainly for near deliveries.

Export trade generally handicapped by cable delays and rise in exchange.

Second edition "Industrial Handbook" published.

MALTA TUNNY FISHING.

(From Our Own Correspondent.)

Malta, May 25.

Tunny fishing for the season has just commenced very auspiciously with a catch of five splendid fish weighing almost 16 cantars. This is an excellent start, and will be generally welcomed as a prospect of relief from the present scarcity and high price of fish, especially at a time when meat is beyond the average means.

Up to May 24 Indian Treasury bills were issued to the following amounts:—October 16, 1917, to March 31, 1919, Rs.136,39,05,000; April 1, 1919, to May 24, 1919, Rs.8,08,40,000—Rs.144,47,45,000; bills discharged or discounted, Rs.94,56,05,000; bills outstanding May 24, Rs.49,91,40,000.

According to an American contemporary, the American Trade Corporation is about to open a tobacco store at Constantinople. It will have agents in the Black Sea, Smyrna, Syria, and Armenia, who will purchase the tobacco and ship it to the coast by caravans. From there the tobacco will be shipped to the United States by the company's own vessels.

A new addition to the Bibby Line—the twin-screw steamer Yorkshire—was recently launched at Belfast by Messrs. Harland and Woolf, Ltd. Her gross tonnage is 10,500, and she is designed to carry 300 first class passengers. The state rooms are arranged on the well-known "tandem" system, giving daylight and fresh air to all the rooms. The Yorkshire is the first large passenger steamer launched at Belfast since 1914.

THE DEVELOPMENT OF FLYING.

Aviation as Affecting India.

Speaking at a meeting of the Royal Society of Arts on June 5, at which General Seely presided, on "Aviation as Affecting India," Lord Montagu of Beaulieu said that it was a maxim now realised by everyone who had studied aviation that the longer the distance the greater the gain of the airplane over other methods of transport. Whether they took the shortest possible direct route to India—say, 3,000 miles in length—or the longer journey now being used by way of France, Italy, Egypt, Palestine, and Mesopotamia—some 5,000 miles in length—in either case many days were saved.

When they were considering the question of routes other than those by air, they must realise that the distances from Indian ports to English ports were much lengthened by the peninsulas of Spain and Arabia, which jutted out in such a way as to make the course from the Channel to India a zig-zag one, resulting in the distance by sea—about 6,000 miles—being about double the distance by air direct. Even by the most rapid mail route, viâ Brindisi, Italy, and France, the distance from Bombay to London was nearly 5,000 miles, or 2,000 miles longer than the shortest air route. Then there were the necessary delays of the Suez Canal, say, twenty-four hours on an average.

In the case of flying between England and India, however, there was now a long but well-mapped-out route, to some extent provided with insufficiently numerous but regular stages, landing grounds, and spare part depots. With the exception of the flight over the Channel, France, and Northern Italy, no serious climatic disadvantages existed. As regards Imperial or international control, the present air routes to India passed, with the exception of France, Italy, and Crete, entirely under the direction of the British Empire. Moreover, when India was reached it was by no means a dead end, to use an old railway phrase, as some might think. India was half-way between London and Australia, and beyond India lay many important parts of the Empire, such as Australia and New Zealand, Burma, the Federated Malay Straits, British Borneo, and Hong Kong. The winter conditions in Siberia and Tibet would preclude regular flying from China and the East to Europe for many years to come, and the route south of the Himalayas was, therefore, certain to be used. The Northern Plains of India, from Peshawar to Calcutta, therefore, would become one day one of the world's greatest airways. He considered that Heliopolis (Cairo) would be the most important single centre of air transport for the Old World—Europe, Asia, and Africa—for thence would radiate services to East, Central, and South Africa on the one side, and on the other to India and countries beyond. But next to Cairo in importance would be some Indian station for reception of all mails east of India to places ranging from Vladivostock to New Zealand.

Advantage of Local Services.

He would give but one illustration here of how time might be saved in regard to the services between Simla, the political capital of the Government of India for eight months of the year, and Bombay, the chief seaport for Europe. Between Simla and Bombay there were two principal railway routes, varying from about 1,000 to 1,250 miles. The quickest journey to-day by either took about forty-eight hours, or an average speed of about twenty-five miles per hour. The same distance could be flown by an airplane (at the rate of 70 m.p.h. as a minimum) in rather over fourteen hours, a saving of thirty-four hours out of forty-eight hours. On a journey from Peshawar to Calcutta, or from Peshawar to Bombay—longer distances—the saving would be proportionately greater; while a direct air route from Karachi to Delhi, across Rajputana, at present a matter of forty-eight hours' journey by rail, would reduce the time taken to about ten hours. In considering the matter of mails, and whether it would pay to fly them, it was a question, of course, how much the letter-writing public in India—a small number all told—would pay for increased speed, even if they would pay at all. But the answer to this question could only be ascertained after trial for some time, and would probably have to be considered in connection with passenger services, as was the case with the present mail train and mail ship services. Another special aspect of flying within India itself should be considered, namely, if it was possible to set up regular passenger services between hill stations and the plains below, except, perhaps, during the months of November, December, and January. Such services would give overworked officials, civil and military, and their families, suffering from the effects of heat, an easier chance of constant recuperation in the hills for short periods, or even week-ends, without so large a proportion of time being absorbed as at present, in slow railway or road journeys.

Passenger Services.

He was often asked how soon passenger services by air would be established between India and England. In reply, he would say, first of all, let them establish for at least a year regular postal services, for the experience gained thereby would avoid loss of valuable lives, and the discouragement which was bound to come when only a proportion of the hopes they set out with were realised. Moreover, he thought it would be a long time before it was commercially profitable to fly passengers, on account of their weight compared with mails. The world was ready to pay much more per ounce for the rapid conveyance of information and news than it was prepared to pay for the transport of human bodies. But, of course, a year hence, if money was no object, anyone would be able to fly between England and India, and in time the fares would be much reduced.

He had worked out the following table to show the truth of this assertion. Taking the average load of a man with a very limited amount of luggage as weighing 12 stone, this weight came out at 2,688 oz. They would assume that airgrams pay at the rate of 2s. 6d. an ounce. If 2,688 oz. be taken in the form of postal matter they get a return of £336. Now a man would have to be very rich, or in a great hurry, to pay £336 for a passage between India and England, and the price was a prohibitive one to ordinary persons. At the price of 2s. 6d. per ounce of airgrams, the conveyance of a ton would return £4,480, and the airplane flying mails at this rate between England and India would therefore earn about £1 per mile by the present route. Against these receipts he ventured to put the expense at about 10s. a mile, including all ordinary expenses, depreciation, and interest at 7½ per cent. on capital. As regards passengers only, it took only thirteen and a third men to weigh a ton at an allowance of 12 stone for each man and baggage, and one would hardly imagine thirteen men, apart from the third of a man, paying collectively £4,480 for a passage between Karachi and London.

It was clear, therefore, that at first the main payable traffic by air must consist of what the Post Office called "mail matter," and he was sure that the commercial world in India, here, and elsewhere, when services became regular—the most important point of mail services—and rapid, would use air services very largely. It was interesting to note that about five thousand words could be written on thin foreign paper and, with envelop and stamp, weighed just under an ounce in weight. Any such letter up to five thousand words in length could be taken the 5,000 miles, the present route, in forty-eight hours, and for 2s. 6d. He assumed, of course, that the rate for internal mails in India was going to be a much cheaper one—namely, a maximum of 1s., or, say, 12 annas for an ounce letter. Then there was the use of photography for transmitting letters. A typewritten letter could be photographed in an exceedingly small compass, and enlarged again by the recipient. Probably at least 10,000 words could thus be sent for an ounce by this process.

The subject of flying, apart from mails, to India and in India, was so large a one that he would not let himself go into all the branches and aspects of it. But as to mail services to England, he would like to bring to their notice the fact that the present war route, viâ Cairo, Damascus, and Mesopotamia, was by no means the most direct, and that something like 1,000 miles would be saved by following a direct line from Cairo viâ Akabah to Busreh, the distance being only 790 miles between Cairo and Busreh.

NOTES FROM GREECE.

(From Our Own Correspondent.)

Athens, May 22.

Step towards Nationalisation of Mines.

It is reported in a Greek newspaper that M. Venizelos, now in Paris, is entering into negotiations with a French combine with a view to the latter working all mineral deposits in Greece. The mines are to be nationalised, and the idea is said to be the result of special study and inquiry by the Premier. In the meantime M. Venizelos has telegraphed to the Mining Department in the Ministry of National Economy that mining concessions are to be sparingly issued. The French combine in question is said to be treating for the sole exploitation of any petroleum deposits found in Greece, and especially those known to exist in Epirus. The competent authorities do not regard the proposal to nationalise mines with any great favour, for the reason that in such circumstances private enterprise would be eliminated, and the Government would only work the richest deposits. Moreover, the Greek workman, when employed by the State, is not over-conscientious, and it is thought that cargoes of minerals would often be refused owing to the insufficient cleaning of ores and selection. It is also doubtful whether the State could find sufficient capital to make the necessary installations for opening up new mineral deposits.

Success of the Greek Loan.

According to the latest information, the Greek Loan has been over-subscribed, if the original subscriptions of the Greek banks, amounting to 25,000,000 drachmæ, be taken into account. It is stated the banks will now only have to pay in 60 per cent. of the amount they had originally underwritten, as the Government desires that private subscribers should receive the whole amount of their contribution. The loan was very widely and effectively advertised, and undoubtedly this had a great share in the success. It is stated by the Government that all advertising was carried out for the moderate sum of a quarter of a million drachmæ. It is extremely satisfactory to note that Greece and the Greeks have sufficient patriotism and financial soundness to be able and willing to subscribe the not inconsiderable amount of the last loan. The total subscriptions, according to the Ministry statistics, amount to more than 84,000,000 drachmæ.

ENGINEERING NOTES.

German Efforts in Roumania.

During the last two or three decades Germany, as has often been pointed out in these notes, contrived to find in Roumania a first-rate market for her goods. This was specially noticeable in the supply of agricultural and industrial machinery and implements. To give an idea of the importance of the Roumanian market for agricultural machinery, and the preponderating position of Germany in it—a position which formerly was held by England—we may mention that, taking one of the last normal years before the war, in 1912 the aggregate exports of agricultural machinery from Germany to Roumania represented a value of £215,900, from Austria-Hungary £54,750, and from the United Kingdom only £17,000. Of the £215,900 :—£112,600 was for iron ploughs, £25,600 for ploughs driven by mechanical motive power, £8,300 for mowing machines, £38,800 for threshing machines, £200 for separators, £22,800 for sowing machines, hay-turning machines, hay, straw, etc., presses, fodder chopping, chaff-cutting, and butter-making machines, rough grinding mills, lawn mowers, etc., £5,600 for machines for cleaning and separating corn, rice, and oil-seeds, and £2,600 for individual parts of the foregoing classes of machinery. Taking separately only the value of agricultural implements and tools imported into Roumania during 1912, the figures for Germany were £165,650, for Austria-Hungary £23,800, and only £300 for the United Kingdom. We mention the class of machinery and implements as a reminder to British manufacturers of similar goods; for in present circumstances an appreciable portion, if not the whole, of this trade should fall to them. Prompt action, however, is essential to achieve this end; for, apart from other competitors, the Germans, according to authentic reports, are only waiting for the signing of the Peace Treaty to start their commercial campaign. It is asserted that they are prepared to make "a big effort" to do business in Roumania, and it may be taken for granted that they will not easily let that good market go out of their hands, since it is known that one German plough maker had orders for as many as 35,000 ploughs for Roumania. It must be remembered that there will be a greater demand for agricultural machinery of all kinds in the new territory, and that to do business successfully there it is essential to supply high quality goods. Reapers and binders are imported mainly from America. Reapers of British manufacture are said to require six horses, and consequently to be too heavy for local requirements, as only four are used for the purpose with the American machines. This point should be seriously considered.

Poland's Requirements.

The Minister of Agriculture of Poland has recently announced that the most urgent agricultural machinery needs of United Poland are approximately as follows:—50 12-15 h.p. motor ploughs; 6,000 5 ft. harvesting machines; 2,500 6 ft. binders; 2,500 4½ ft. grass cutters; 700 54 by 24 threshing machines; 500 20 to 24 h.p. steam engines; 600 elevators; and 2,000 1½-3 metres wide seed drills. In addition, there are very heavy inquiries for all descriptions of sections, parts, etc. The purchasers of agricultural machinery, it is stated, are not confined to the large landholders nor to the United Agricultural Syndicates of Poland, but also include the peasants. These latter will buy directly from abroad, but the greater proportion of trade, which is expected to be of the value of £1,250,000 per annum, will be done through the larger bodies named. At the same time, in studying the needs of Poland, it is well to bear in mind that the peasants themselves possess two-thirds of the land of the entire country. It appears that so far few British firms have displayed any eagerness to accept Polish orders for agricultural machinery, and they seem to be awaiting the definite establishment of the currency. On the other hand, certain French and American houses are not averse to taking what is something of a risk in the hope that hereafter they will reap the full benefit. The lack of enterprise on our part has been criticised on the assumption that it is prompted by groundless fears, and it is pointed out that the Poles, being producers, prospered to a fairly large extent during the war, and there is plenty of money in the country.

Rubber Substitutes.

During the war Germany was in great need of rubber, which was unobtainable owing to the blockade. Her chemical-engineering industry has, therefore, been very busy in endeavouring to produce substitutes: and a partial success was, apparently, achieved in the production of one or two synthetic substances which in some way are said to have answered the purpose; whilst of others, although substantial similarity to the genuine rubber was evident, the production could not be extended beyond the experimental stage, owing to the want of the necessary material or compounds. In the latter category was included a rubbery substance which could be obtained from a common plant which grows in abundance in North Africa, as well as in the Near East. It is of the species *Euphorbia*, consisting of shrubs or large trees (*tithymalus peplus* and *cyparissias*), commonly called in Greek *flomos*, and in Arabic *forbion*. In either form this plant contains a milky, acrid juice, which is sometimes poisonous, but is known to abound in caoutchouc (india-rubber). The juice of these species of *euphorbia*, either exuding naturally or from incisions made in the bark, hardens in the air, like ordinary gum, and takes a light yellow colour. But to return to the German experiments; these have shown that the sap of the *euphorbia* contains one to three per cent. of rubber, and if plants of the species *cyparissias* and *tithymalus peplus* are dried and reduced to a coarse powder, from which, by treating it with benzine, ether and carbon tetrachloride, an extract of dark green colour is obtained which consists of two-thirds to one-half of fat. By dissolving this extract in ether and adding alcohol, a rubbery substance is derived, corresponding to 20 per cent. of the extract. Assuming that one square mile of pasture land would produce an average of 1.2 kg. of fresh *tithymalus peplus*, this represents 4.3 g. of rubber and 12 g. of fat, or 43 kg. rubber and 120 kg. fat per hct. Thus, with an increasing cultivation of *euphorbia*, considerable quantities of rubber and fat could be extracted by the installation of suitable plant for the purpose. And the undesirable and repulsive *tithymalus*, or *flomos*, in the Near East, would thus become the base of a great industry and a source of wealth.

New American Bureau.

A bureau to establish commercial relations between the U.S.A. and Poland has been opened in New York.

TURKISH 4 PER CENT. GUARANTEED LOAN.

A number of holders, representing a large proportion of the Turkish Four per Cent. Guaranteed Loan of 1855, have addressed the following letter to Mr. James Cooper, secretary of the Council of the Corporation of Foreign Bondholders :—

"We are of opinion that immediate steps should be taken to safeguard our interests in view of the general rearrangement by which the revenues specifically hypothecated to the service of this loan may be removed from the control of the Turkish Empire.

"All the bonds have been drawn for redemption, but have not been paid, notwithstanding the provision of a sinking fund. The interest and sinking fund are secured by a specific charge on the tribute of Egypt, and on the receipts from the Customs of Smyrna and Syria, in addition to being a general charge on the revenues of Turkey, but no portion of these revenues has been applied to a sinking fund since 1873. If, as we understand, there have been yearly surpluses available for this purpose, we should like some explanation as to the amount of these funds, and how they have been employed.

"In these circumstances we should be obliged if you would represent our case to the proper authorities, and take such steps as you may consider necessary to safeguard our interests."

CANADIAN LOAN TO ROUMANIA.

In the House of Commons to-day, says Reuter's Ottawa correspondent in a message dated June 9, Sir Thomas White, Minister of Finance, in reply to a question, said that the Government was advancing Roumania a credit of 25 million dollars for the purchase of supplies in Canada, and charging 5½ per cent. interest on the Loan.

Colonel W. Carew Smyth, R.E., until lately agent and chief engineer of the company in India, has joined the board of H.H. the Nizam's Guaranteed State Railways Co., Ltd.

LANCASHIRE COTTON.

(From Our Own Correspondent.)
Manchester, Wednesday.

The market during the past week has been under the influence of the Whitsuntide holidays, and very little business of importance has been attempted. Prices in most quarters have been firmer. Reports relating to the Egyptian cotton crop do not show very much change. According to some advices, the plants are still suffering as a result of low temperatures. It is believed in some quarters that the acreage will not be as large as at one time expected. Prices have tended to harden in yarns made from Egyptian cotton. Some producers of fine numbers are now strongly situated. Buying has been rather irregular, but a very fair turnover has taken place. Cloth demand for Egypt remains extensive. Now and again shippers hesitate to pay higher figures, but there is undoubtedly confidence in the general outlook. Grey shirtings and printing cloths have been in encouraging request. More business is now coming round for several outlets of the Levant. Many firms are looking forward to a larger turnover in the near future for Turkey. Considerable activity continues to show itself for China. Bleaching cloths and grey shirtings have been in healthy request. Certain goods that have not been sold for four or five years back are now attracting increased attention. India has not been very active. The cable delays are still very serious and harass negotiations between manufacturers in Lancashire and dealers in the bazaars abroad. Rather more inquiry has been mentioned for South American outlets. American yarns for home use have been stiff in quotation, with a steady demand. Twists are stronger than wefts. Fine numbers have been wanted for India, especially in qualities suitable for dyeing. Cops have been sold in fair lots for Holland. There is every prospect of an early settlement of the dispute on mill hours and wages. The Minister of Labour is arranging another conference of employers and workpeople.

TRADE WITH MOROCCO.

The regulations of September 15, 1917 (says a French contemporary), have been rescinded as regards merchandise and imported products, with the exception of sugar, the export of which remains forbidden. The free export of all products or merchandise, sugar excepted, is permitted as from May 3 to France, her colonies and protectorates, and to allied or neutral countries.

A French decree authorises the export from Morocco, up to August 31 next, of 20,000 cattle to France, her colonies, and protectorates, and to allied and neutral countries. The export can only be effected via the ports of the French zone, and will only apply to animals of a specified age.

Lord Chalmers is joining the board of the Peninsular and Oriental Steamship Company.

Returns of the trade of British India for April show that imports increased by £439,000 and exports by £2,883,000 as compared with last year.

The directors of the Northern Assurance Company have decided to establish a branch of the company at Alexandria, and have appointed as manager Mr. C. N. Tadros, who entered the service of the company as Inspector for the Near East in December, 1908, having previously been associated with it as Agent at Jerusalem.

The International Sleeping Car Company announces that one of the cars of the Paris-Rome express will, on the Thursday of every week, continue direct to Taranto, where it is timed to correspond with the Italian steamer services to and from Piræus and Constantinople, leaving Taranto every Monday. This through service from Paris began on June 5.

TRADE ENQUIRIES.

CAIRO.—Active and energetic Agents of good standing, knowing the languages and customs of the countries, with good connections with the Sudan, Palestine and Syria, desire to represent British houses wishing to develop trade in those countries.—Address, SALAMA and FRANCO, P.O.B.843, Cairo, Egypt.

COMPANY NOTES & REPORTS

Bombay Electric Supply.

The report of the Bombay Electric Supply and Tramways Company for the year ended December 31 states that the total revenue from all sources, including the amount represented by sale of current to the tramways, amounted to £512,756, an increase of £72,907, or 16.57 per cent. Total expenditure amounted to £217,805, an increase of £34,348, or 18.72 per cent., and the net receipts from the year's working aggregated £294,951, an increase of £38,559, or 15.04 per cent. Deducting interest on debenture debt (£33,388), provision for depreciation account (£56,667), capital amortisation fund (£16,350), Indian super tax (£644), contribution to officers' and employees' provident fund (£6,989), there remains an available balance of £180,914; £6,763 was brought forward, making £187,682. The directors recommend a dividend for the year on six per cent. cumulative preference shares, and a final dividend for the half-year on ordinary shares at the rate of 14 per cent. per annum and a bonus for the year at the rate of 2 per cent. per annum, making 16 per cent. for the year (both free of income-tax to shareholders domiciled in India), to set aside as bonus to officers and employees £6,167, and to carry forward £12,716. Gross receipts from the company's traction branch amounted to £261,594, an increase of £33,534, or 14.70 per cent. Working expenses were £118,682, an increase of £16,541, or 16.19 per cent. Net receipts amounted to £142,912, an increase of £16,993, or 13.49 per cent. Gross receipts from electric supply, including the amount represented by sale of current to the tramways, amounted to £234,805, an increase of £26,784, or 12.87 per cent. Working expenses were £97,702, an increase of £17,990, or 22.56 per cent., net receipts being £137,102, an increase of £8,793, or 6.85 per cent. Capital expenditure during the year amounted to £137,602. The premium realised on the issue of the 11,000 additional ordinary shares at £20 per share, amounting to £110,150, less expenses, has been carried to the reserve fund, and it is proposed to meet the excess profits tax for the year, after it has been assessed, out of that fund.

Societe Anonyme du Behera.

The report of the Société Anonyme du Béhéra for 1918 states that at December 31, 1914, the company was indebted to its bankers in the sum of £E106,000. At December 31 last, instead of a debt to the bank, the company had a credit balance of £E72,600, and in the interval £E48,535 had been applied to the redemption of debentures. It will thus be seen that the company's financial position is now on a very healthy basis. But for the necessity of keeping funds in hand to provide for the current needs of the company and for the purchase of machinery, all the arrears of interest on the preference shares could be cleared off at once. The area of land sales registered during the year, exclusive of Sidi Salem, is 1,367 feddans, the highest figure recorded since 1908. In addition to this, the company holds sales contracts, maturing for registration under the deferred sales scheme, for an approximate area of 7,035 feddans, of a value of £E292,631. The Sidi Salem estate continues to do well. After meeting all annual charges, interest and capital expenditure on development, the total debt has been reduced from £E231,704 to £E218,170. Land sales for an area of 388 feddans were registered during the year, and sales contracts maturing for registration cover an area of about 2,490 feddans of a value of £E156,130. Considerable damage was caused by worm to the cotton crop, but the poorness of the yield was to some extent compensated by the high prices obtained. It is hoped that the Egyptian Government will relax none of its efforts in combating the various pests to which agriculture is exposed. The prospects for 1919, as far as can be foreseen at present, give cause for anxiety on account of the shortage of water. Considerable areas of land, usually under rice, will be deprived of this valuable crop. It is to be hoped that the flood will be early this year, so as to compensate this loss somewhat. The industrial section has been kept fairly busy. After setting aside the arrears of interest on annuities and of rents, amounting to £E4,428 and £E244 respectively, transferred to accrued interest in suspense and accrued rents in suspense, the net profit for 1918 amounted to £E43,417; £E103,790 was brought in, making £E147,208. From this must be deducted the coupons paid during 1918 on the preference shares, namely, No. 22, No. 23, and No. 24, which absorbed £E36,562, leaving £E110,645, which the directors propose to carry forward. The arrear coupons on preference shares, which amounted to £E48,750 on December 31, 1918, have been further reduced by the payment of two coupons on January 8 and March 3 respectively. It is the board's intention to pay off the outstanding coupons as soon as possible.

Nagolle Rubber.

The report of Nagolle (Ceylon) Rubber and Tea Plantations for the year ended December 31 last states that the profit amounted to £11,069, against £27,369, from which £1,342 has been written off for depreciation of buildings and machinery, leaving £9,727; £8,205 was brought forward, less excess profits duty to December 31, 1917, £5,682, making £12,250. The directors recommend a dividend of 6 per cent., less income-tax, which will absorb £11,108, and to carry forward £1,142.

Jaipur Tea.

The report of the Jaipur Tea Company for 1918 states that profit is £9,530; £5,343 was brought in, making £14,873, and after deducting income-tax and sundry items, £3,546, there is left £11,328. The directors propose a dividend of 10 per cent., free of income-tax, for the year, which will absorb £3,000, and to carry forward £8,328, subject to excess profits duty, estimated at £500. It is not proposed to place any sum to reserve, but to carry forward the balance, so as to meet the heavy expenditure required in providing labour, machinery, and buildings to replace the shortages which could not be made good during the war.

Indian and General Investment.

The report of the Indian and General Investment Trust for the year ended April 30, 1919, states that of the funds held by the company £207,799 are invested in Indian securities, of which £118,079 are in sterling, and of the total funds over £350,090 are invested in bonds, debentures, or debenture stocks. The average rate of exchange at which the money employed in India stands in the books of the company is 1s. 4½d. per rupee; the present value is 1s. 8d. The net interest and dividends on investments amounted to £22,955, as compared with £25,103 last year, the income-tax deducted in the respective years being £8,102, as against £6,410. The sum of £4,892 (including £3,008, net surplus on sales of investments) has been transferred to the reserve account, but against this an equal amount has been applied in writing down certain investments, thus leaving the net balance of £50,000 at credit of the reserve account unchanged. Interim dividends on the preferred stock at the rate of £5 per cent. per annum, and on the deferred stock at the rate of £8 per cent. per annum, for the six months ended October 31, 1918, amounting to £5,528, having been paid, there remains the net sum of £6,872, including £1,005 brought forward. The directors recommend a dividend on £149,400 5 per cent. cumulative preferred stock, less income-tax at 4s. 9½d., £2,653; dividend on £100,600 deferred stock at 9 per cent. per annum (making 8½ per cent. for the

(*Continued from page 567.*)

year), less income-tax at 4s. 9½d., £3,216: balance to be carried forward, £1,002.

Ceylon Consolidated.

The report of Ceylon Consolidated Estates for 1918 states that the balance brought forward from 1917 was £8,782, profit for year amounted to £3,661, less interest on loans £1,353, leaving £11,090. The directors propose to transfer to reserve fund £5,000, and to carry forward £6,090. The transfer of £5,000 will bring the amount arising out of undivided profits at credit of reserve fund to £9,000, which the directors propose to capitalise by the distribution of a share bonus, tax free, in the proportion of one new fully paid share for every ten shares held (equivalent at par to 14¼ per cent., less tax). In order to be in a position to carry out this proposal and to make provision for the repayment of loans at maturity, the erection of a factory and plant capable of dealing with the largely increasing crops which are assured, as well as the cost of the new extensions and the upkeep of the present immature area of the estates, it is essential to increase the authorised capital to £150,000 by the creation of 500,000 new shares of 2s. each, ranking pari passu with existing shares.

CYPRUS NOTES.

(From a Correspondent.)

The maintenance of the regulation of prices is no doubt called for. No transactions in cereals are permitted at prices exceeding the following:—Wheat, 9s. the bushel; oats, 2s. 3d.; and barley of this year, 3s. 9d.

The Asbestos Mine at Amiandos (Mt. Troodos), with plant, etc., has been bought by a Cypriot company for £16,500; and it is hoped that work will be resumed with good results under the new management.

TRACTORS FOR ALGERIA AND TUNIS.

Some little time ago, says the *Journal* of the British Chamber of Commerce, Marseilles, the attention of the French Academy of Agriculture was drawn to the type of farm tractor required in the winegrowing districts of France, Algeria, and Tunis. Ploughing has to be carried to a depth of 4 in. to 6 in., and scarifying to a depth of 2 in. In the opinion of a French expert the maximum width of the tractor should not exceed 40 in., and the weight should not be much more than one ton. The tractor, together with the plough or cultivator, should be able to turn round within a distance of 10 ft. at most. It is also recommended that the tractors should be designed so that they may be used for applying sulphate and sulphur to the vineyards. The wheels should be of the strongest possible construction, in view of the difficult nature of some of the roads. Ploughs should be made so that furrows may be added or taken off, according to the nature of the soil and the depth of ploughing needed. With regard to the smaller implements, numbers are, of course, made in France, including sickles and scythes, rakes, pitchforks, and hoes. The United Kingdom has always done a good trade in well-finished spades, shovels, and picks.

SMYRNA-AIDIN RAILWAY.

The estimated traffic receipts of the Ottoman Railway from Smyrna to Aidin (by telegraph) for the week ended May 17 amounted to £12,958.

COMPANY RESULTS, Etc.

Anglo-Indian Jute Mills.—Dividend on Ordinary shares of 30 per cent. per annum.

Reliance Jute Mills.—Half-yearly dividend on Ordinary shares at rate of 100 per cent. per annum.

Land and Mortgage Co. of Egypt.—Directors recommend final dividend of £2 10s., making £5 per cent. for year to March 31 last.

The directors of the Land Bank of Egypt recommend a dividend of 3s. per share, less income-tax, on ordinary shares, payable June 16.

The directors of the Del Rey Tea Company announce an interim dividend of 4 per cent., less tax at 6s., on the ordinary shares, payable June 13.

The result of the working of the Algerian Tramways to March 31 shows a net profit of 262,096 francs, against 692,407 francs for the preceding year.

The ordinary annual general meeting of the Bank of Roumania, Limited, will be held at Winchester House, Old Broad Street, London, E.C., on June 25, at 12.30 p.m.

The half-yearly general meeting of the Bombay, Baroda and Central India Railway Company will be held at the Cannon-street Hotel, E.C., on June 20 at 1 p.m.

The annual general meeting of the Assam Company will be held at the offices of the company, 5, Lawrence Pountney-hill, Cannon-street, London, E.C.4, on June 23, at 2 p.m.

Monerakelle.—The directors of Monerakelle Rubber Estates announce an interim dividend of 4 per cent., less tax at 6s., payable June 20.

The directors of the Bank of Abyssinia announce that at the general meeting held in Cairo on May 30 a dividend of 1s. per share—namely, 4 per cent. on the amount paid up—was declared payable on June 6.

Transfer books of the British Burmah Petroleum Company 6 per cent. first mortgage debenture stock will be closed from June 20 to June 30, both days inclusive, for the purpose of the preparation of the warrants for the interest payable on July 1.

The directors of Egyptian Markets, Ltd., have declared a final dividend on the Ordinary shares of 5 per cent., less income-tax at 5s. 9d. in £, in respect of the year ended December 31 last, payable on and after June 27.

The Rohilkund and Kumaon Railway Company announces that the preference stock transfer books will be closed from June 23 to July 5, inclusive, for the purpose of preparing the interest warrants payable to the shareholders whose names are on the register at the time of closing the books.

The directors of the Baraoora (Sylhet) Tea Company have resolved to pay on June 30 the following dividends:—On the Preference shares, half-year's dividend to date of 5 per cent., less income-tax at 6s. in £; on the Ordinary shares, final dividend on account of 1918 of 20 per cent., less income-tax at 5s. 9d. in £.

The report of the Poonagalla Valley Ceylon Company for 1918 states that, after providing for debenture interest and all other charges, the net profit amounts to £2,655; £7,228 was brought forward, less excess profits duty, 1917, £5,458, making £4,425. The directors propose to write off estates account for depreciation of buildings and machinery £1,000, to write off capital expenditure in 1918 £1,092, and to carry forward £2,333.

ON 'CHANGE

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

The Whitsuntide holiday this week has again interfered with business, and this has been further hampered by the very serious telegraphic delays in communicating with Egypt, the most recent telegrams taking about nine days each way. There has been, in spite of all these difficulties, a renewal of demand from Egypt for Government stocks and bank shares.

As regards Government stocks, Egyptians rose smartly to nearly 88, after a fairly large business, and are closing half a point up at 87½.

In Bank shares Nationals have been in constant demand throughout the week, and close 3-16 higher at 20 9-16. Egypt has also bought several hundred Agriculturals at last week's price of 6. Anglo-Egyptian Banks, on the other hand, have receded ¼ to 15½. Land Banks remain a firm spot at 7 1-16.

As regards Land shares, Béhéras are ¼ easier at 12½, and both Delta Lands and Foreign Trusts are fractionally lower at 14s. 6d. and 15s. 3d. respectively. A large business has been done in Egyptian Consolidated Lands, which are closing 6d. higher at 2s. 6d.

In Miscellaneous shares there have been constant buyers for Alexandria Waters, but no business has resulted, owing to there being no sellers; and Salts and Sodas, on some quiet buying, have improved ⅛ to 2⅞.

In Oil shares Anglo-Egyptians B, after weakening to about 6 and recovering to 6 7-16 are finishing 1-32 firmer at 6 5-16. Roumanian Consols are unchanged at 20, but Traians are 6d. down at 13s.

In Greek securities business has been practically at a standstill, and the market is irregular. The 1890 Loan is two points up at 75 and the 1884 Loan one point up at 71. On the other hand Monopolies are ¼ a point down at 59½. Bank of Athens shares have been dealt in at a somewhat lower level, and are closing about 3⅝, a fall of ⅜.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows under date May 24:—

Our market became very animated soon after the blockade was raised. All classes of people started buying the article, and consigning it to America, encouraged by prices there of 60s. to 80s. per lb. for 11 per cent. to 13 per cent. The result is that some 800 to 900 cases were sent off by the first two or three direct steamers, and 40 to 50 cases to London. What was to be expected took place: prices here advanced, and in the consuming markets went down. Since shipments have ceased our market has dropped again, and to-day's probable price for 11 per cent. manufacturing materials is about 24s. per lb. c.i.f., port of destination. The quality of the new crop, which will soon be harvested, shows well, for the weather has been all along favourable, but as regards quantity, it will be small, owing to the unsettled state of the country, to lack of hands, and to floods and inundations all through the winter and spring months.

It is reported that the Serbian financial delegates attached to the Serbian Delegation attending the Peace Conference will travel to London this week.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 24·40 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches: PIRÆUS, SYRA.

CAPITAL - Drs. 10,000,000.

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

6.—Buys and sells country and foreign cheques, etc. 7.—The Bank is entitled to the exclusive privilege of putting in circulation gold and silver banknotes. The telegraphic address for the Head Office: **Nationalbank**, and for the branches and the agencies: **Bank.**

IONIAN BANK, LTD.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the HEAD OFFICE:

BASILDON HOUSE, MOORGATE ST., LONDON, E.C.2.

AUTHORISED CAPITAL - -	*£600,000*
PAID-UP CAPITAL - - - -	*£485,580*
RESERVE - - - - - - -	*£85,000*

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	**£850,000**
RESERVE - - - - - -	**£220,000**
Reserve Liability of Shareholders	**£1,000,000**

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bunder Abbas, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agencies at Busreh and Baghdad

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANK OF BENGAL.

NOTES OF THE WEEK.

An official summary of the German counter-proposals for the Treaty of Peace and the Allies' reply to those counter-proposals have been issued this week. As far as it is possible to judge by the former, the enemy does not yet appear to realise either that he is beaten, or that he already stands convicted before the world of crimes for which full reparation will have to be made before he can be admitted into civilised society again. He is ready to admit that crimes—a few crimes, it seems—were committed by the old, Imperial Germany, but the Democratic Germany of to-day, he argues in effect, is quite a different country and cannot justly be asked, or expected, to pay for all the damage done. It expects, on the other hand, to be admitted to the League of Nations forthwith, when it will devote itself to leading the world along the paths of progress. With every wish to avoid flippancy, it is impossible to avoid calling to mind the case of the burglar, who, professing to see the error of his ways, desired to be appointed immediately treasurer of the flourishing friendly society attached to the chapel which claimed him as a convert. His impassioned appeal, if we remember aright, fell upon deaf ears, and similarly it is not surprising to find the Allies making it clear that, while they have no wish to prolong the period of ostracism unnecessarily, they must have solid proofs of Germany's change of spirit before they accede to her request.

The German counter-proposals—or the official summary of them—contain few direct references to the Near East. They remark that "Germany is called upon to violate the Egyptian right to self-determination by recognising the British Protectorate"; but there is no indication of any intention to refuse such recognition; and the moral effect of the reference, coming from such a source, is not likely to be very great. While accepting the obligation to pay for damages sustained by the civilian population of occupied Belgium and France, Germany is opposed to making reparation in occupied Roumania, Serbia, or Montenegro—as also in Italy and Poland—"as no attack in contradiction to international law was involved" in the later cases. Germany also quite bluntly "refuses to accept the general abrogation of engagements with her former Allies and Russia and Roumania," the reason being given as "threatening the ordered relations with these countries"; and she demands representation on both the Danube Commissions. The tone of the Allies' reply indicates that these protests and demands have been taken at their true worth. The period of five days at first allowed for consideration of the Allies' "last word," as the reply is expressly termed, has now been extended to seven days, but Germany is told quite unambiguously that she must then sign the Treaty as now amended or take the consequences.

The Turkish delegates arrived in Paris at the end of last week, and on Tuesday morning, at the Quai d'Orsay, Damad Ferid Pasha, Tewfik Pasha, and Riza Tewfik Bey were accorded a hearing by the Council of Ten. Ferid Pasha read a memorandum which, while admitting that atrocities had taken place, declared that not all the blame was Turkey's, and that not all the crimes had been committed by Turks. He also entered a strong plea for the maintenance of the Turkish Empire. The delegation was later informed that it should receive a communication from the Allies on Saturday. Obviously it is too early to attempt any forecast of that communication, but it is permissible to guess that its character may be affected by the attitude of Germany in regard to signing the Peace Treaty. It is permissible also to add that the Turkish delegates' contention that the Young Turks were responsible for the war is admittedly more genuine than the German attempt to put all responsibility for the war on the ex-Kaiser and his particular set. The present Turkish Government is genuinely hostile to the "Young Turks" and their ways, but it would be ill-advised if it built any high hopes on that foundation.

So little trustworthy news of Bulgaria has found its way into this country recently that the telegram from our Correspondent in Sofia, which will be found elsewhere, is of particular interest and value. It flatly contradicts innumerable reports and rumours which have obtained currency here, and should serve to dissipate a great many fears, real or assumed. For the time being, at any rate, Bulgaria is clearly on her best behaviour, and her people are giving fresh proof of their practical common sense and their undeniable industry. What the future may have in store for them remains to be seen, and in certain eventualities they may, as the telegram hints, show the world a less admirable side of their character. But in the meantime they could not better employ their time than as they are reported to be doing by our Correspondent.

Discussion of Indian constitutional reforms has made little progress since we last wrote, but such attention as has been given to the subject has continued to be con-

Digitized by Google

centrated on Functions rather than on Franchise. Our own view of the relative importance of these categories can best be stated in the form of a parable. India has, let us say, decided to abandon the old family bullock-coach, and we are trying to design a motor-car adapted to her peculiar requirements. We do not expect immediate finality of design, but we want something which for a few years will go better than the bullock-coach, and not be too uncomfortable for the occupant; our principle is to build the *tonneau* as well as possible, but to think of the *chassis* first, while the general trend of discussion both here and in India is far too much concerned with details of the upholstery. During the period of experiment you can drive the *chassis* perched, if necessary, on a soap-box, and though we think India can be made rather more comfortable than that, we should prefer the soap-box on a good *chassis* to the most luxurious seat on top of a machine that would not go. That is why we think of the Franchise first.

From this point of view, the most interesting document hitherto published on this side is the White Paper giving the opinions of the Government of India on the Report of the Franchise Committee. The despatch has obviously been put together somewhat hurriedly, and perhaps for that very reason it gives a vivid picture of the mentality of its authors. The dominant theme is anxiety to go forward, and the changes proposed in the Southborough scheme are on balance distinctly democratic. But interwoven curiously with this theme is the old bureaucratic *motif* of "uniformity," that relic of the Strachey epoch, requiring that the people, from Delhi to Dacca, and from Kumaun to Cape Comorin, should conform to the sealed pattern evolved by the pure intellect of some Under-Secretary at Simla. The interplay of these two ideals is probably a fairly accurate reflection of the mind of India just now, but at present we are concerned only with its effects in the political sphere.

We meet the ideal of uniformity at the very outset of the despatch, when the Government deplore the omission of the Southborough Committee to establish general principles; they go on to apply neat and ingenious tests of the degree of "correlation" resulting from the Committee's work, and, among other changes, they would reduce the electorate in some provinces and expand it elsewhere to mitigate the "abnormalities" thus brought to light. It is quite a good specimen of secretariat work done at high pressure, and the criticisms are sound if the need for uniformity be granted; its defect is that, as nobody outside Simla attaches any particular importance to the principle, the arguments based on it do not carry much weight. The despatch however, makes some good points on various topics too detailed to be discussed here, and will be of much use when the Franchise rules are on the anvil, provided that the men who have to hammer them out will ask not merely whether a rule secures uniformity, but whether uniformity is desirable in the circumstances to which the rule applies.

The White Paper to which we have referred contains some other documents, among them a minute by Sir Sankaran Nair, which possesses a melancholy interest of its own. This gentleman, who has since resigned his seat on the Council, was chosen about four years ago to hold the portfolio of Education, and here we find him basing his arguments on mis-statements of well-known historical facts, so glaring that a schoolboy who perpetrated them would deserve to be—let us say subjected to disciplinary measures. We have noticed two or three statements of the kind, but to take a single example, we are told that "India, we know, was a great manufacturing country, whose wealth attracted the East India Company." That assertion, which was circulated originally for the purposes of political agitation, has been shown to be groundless again and again, and it is really depressing to find it repeated in obvious good faith by the man who has been ultimately responsible for teaching India the truth.

Is it too much to ask that Indian politicians should try to prepare themselves for their new responsibilities by laying aside such cherished fallacies as these? Very little study of the original authorities would suffice to convince them that the East India Company's merchants were not attracted to India by its wealth, but went there in the hope of buying cheap and selling dear, the motive which has influenced merchants since trade came into existence; while if they could spare a little more time they would also learn that far from being "wealthy," India was, if anything, a poorer country then than now, and that she owes most of her material possessions to that British administration which they are so ready to decry. The more widely such truths are told in India just now the better will be the prospects of the new regime; dreams of a purely fictitious past are the worst possible foundation for the future to which she aspires.

The Greek advance in the Aidin vilayet is causing some uneasiness in Italy. The Rome correspondent of *The Times*, for instance, reports that it is asked whether Italian claims in Asia Minor have been definitely rejected, "and, if they have not been, why the Greeks should be permitted to extend their occupation as far as they have done." In many quarters almost any definite decision of Paris on this thorny question would be hailed with relief, and the one suggested in the message quoted would be by no means the least popular, provided that Italy's exertions in the war received due recognition by her Allies.

In any case, if she is to hold Smyrna and its hinterland permanently, Greece will have no easy task to perform, and it is to be hoped that her difficulties will not be increased needlessly. If she is to make the most of the territory and to do it justice, her administration must command the goodwill and respect of the foreign community and at least the respect also of the Turkish community—the goodwill will follow in due course. For the capital necessary to develop the resources of the region, and even to carry on satisfactorily without any extensive development, she will assuredly have to look for foreign help, while for labour she must almost certainly depend largely upon the Turkish community. With the co-operation of the important British and French communities at Smyrna the administration might soon be made a model for the rest of Greece; and fortunately the Greece of to-day is not too proud to learn from her friends. Such co-operation as we refer to would, we cannot doubt, be heartily given if sought, and by the exercise of tact the Greek administration may surely look to secure and provide an efficiency to which Smyrna has been a stranger for at least several centuries. Under the influence of M. Venizelos's inspiration, we believe that happy end will be secured.

The accession of territory which Greece receives as an outcome of the war brings to the front the broad question of the nation's administrative capacity. With the selection as High Commissioner for Smyrna of M. Stergiadis, who is regarded in many quarters as Greece's coming man, it is evident that the Government realises the necessity of creating the best impression in the new territory. But the head of a Government, however gifted, is seriously handicapped if he has only second-rate subordinates. At the moment when Greece finds her administrative responsibilities being largely increased she is trying to carry on with a civil service considerably depleted as a result of the division of the country into two hostile camps. The question, therefore, arises, and is being cautiously referred to in circles whose loyalty to M. Venizelos is beyond challenge, whether in the interests of the Hellenic race it will not be necessary to make a definite attempt to heal the breach that now renders Greece a country divided against herself. It was considered necessary two years ago to remove from office a number of officials, whose services, if the past could be satisfactorily cancelled, might be of great assistance now. Will the experiment be made of in-

Digitized by Google

viting them to return, and, if once introduced, will it be possible to draw any hard and fast line? The problem is of the profoundest interest to Greece.

It is reported from Paris that the Egyptian Nationalist "delegates" have fallen out among themselves, and that some of them are already on their way home. In most quarters there will be little disposition to question the accuracy of this report, or to shed tears over it; for the most ardent supporter of Egyptian "Nationalism" could hardly argue that the presence in Paris of Zaghlul Pasha and his followers could in existing circumstances benefit Egypt in any way; while there can be little doubt that it will tend to prevent the country from settling down to the period of rest and reflection that it so obviously needs after the late excesses. As to the plotters' quarrel, it is natural to suppose that disappointment at not being taken so seriously as they had hoped imposed a greater strain upon their self-control than it could support. Apparently there are other reasons also. The Cairo correspondent of *The Times* reports a rumour to the effect that Zaghlul and Sharawi Pashas have quarrelled because the latter has refused to advance money "for the party funds." As Sharawi Pasha is generally understood to have been admitted to the Zaghlul coterie chiefly by reason of his wealth, his defection will probably be a serious blow for the "delegation," and may hasten its departure from Paris, if it is unable to find another patron to pay the piper for it.

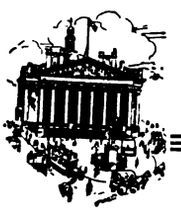
Although Spain took a long time to make up her mind about putting her zone in Morocco into order, now that she has embarked on the operation she is pushing it with some vigour, especially in the north-west portion of her territory. The Anjera tribe is reported to have submitted, and it is hoped that the Beni Msaour, the Beni Aros, and the Wad Ras tribes will shortly be compelled to follow suit, as the result of an encircling movement now being carried out. In view of the fact that the Minister of War announced the complete submission of the Anjera tribe so long ago as April, it is slightly bewildering to find the submission reported again now—and with the qualification in one message of being that of "practically the entire tribe." The fact is, no doubt, that these tribesmen, never too ready to recognise authority, even that of their own chiefs, have felt free to decide, each man for himself, as to submitting or resisting further.

At Buckingham Palace last week a picturesque ceremony took place when the King and Queen received a Special Mission from Abyssinia. The Mission, which was headed by Dejazmatch Nado, bore the congratulations of the Empress Zudito and the Heir-Apparent, Ras Tefari, whose fight against and victory over Lij Yassu were recorded in THE NEAR EAST a year ago. In his reply to the address of Dejazmatch Nado the King expressed the hope that the cordial relations between the two countries will be cemented by a rapid development of communications and commerce. That hope will be widely shared in this country, and, as the members of the Mission have been showing considerable interest in our commerce and industry, as well as in our administrative methods, it is likely to be fulfilled.

A statement issued last Saturday by the War Office reported that a communication, dated June 7, had been received from the British prisoners in South Kurdistan, whose capture at Suleimania was recorded in these columns a fortnight ago. At the time the telegram was despatched all the officers and men referred to were safe, but were still in confinement. This news is satisfactory as far as it goes, and the fact that the prisoners had been able to send off a telegram at all is hopeful. On the other hand, the nature of the country lends itself well to guerrilla warfare as practised by the Kurds, so that it may be some time before the recalcitrant chieftain is brought to book. And, unfortunately, the Kurd, in circumstances like the present, is apt to develop unpleasant characteristics which are lacking in the Arab and even in most genuine Turks.

LETTER FROM CAIRO.

(FROM OUR CORRESPONDENT.)



CAIRO, May 25.

A New Ministry.

Last week was in every sense a busy one. Since the resignation of the Rushdi Cabinet the country has been administered under the provisions of martial law, but the lack of some regularly constituted authority was continually being manifested, and when it was suddenly announced on Thursday that Mohammed Pasha Said had been called upon to form a Ministry, and had succeeded in doing so, the news was received with mixed feelings in different quarters. The partisans of Egyptian independence immediately denounced the new Ministers and all who had anything to do with them, including even the Sultan, as traitors to the national idea, and, not content with muttered threats, published a leaflet to the effect that unless the Sultan accepted the resignation of Mohammed Pasha Said and his colleagues within a few days some, if not all of them, would be assassinated. This sort of bluff, however, is becoming somewhat stale, and it has been proved during the last two months that threatened men live long. Consequently the friends of the new Ministers and most sensible Egyptians congratulated the Cabinet on its accession to office.

Statement of Policy.

The Premier, in receiving the representatives of the Press, made a statement of the policy he aimed at pursuing. He divided his programme into ten heads, as follows:—1. The Cabinet is essentially *Egyptian*, and its only object is the interest of Egypt. 2. It will endeavour to set the public services going again on a normal footing, and to restore the administration to the civilian Egyptian authorities, and so put an end to the grievances arising out of the present state of affairs. 3. It has no political colour, considering that the Egyptian question is for the Peace Conference to decide. 4. It will not take any decisions concerning the political status of Egypt. 5. It will endeavour to place the Legislative Assembly again in effective working order. 6. It will do all it can to bring about the end of the state of siege and the abolition of all exceptional legislative measures, also the suppression of the Press censorship. 7. Also the abrogation of the Press Law. 8. It will spare no effort to realise as rapidly as possible the aspirations of the Egyptians. 9. It will not allow any pressure to be used against individuals or corporations, especially if such is not called for by the needs of State. 10. It trusts that the nation will wait and see the results of its labours before passing judgment on it. The statement in paragraph 8 may arouse some comment coming from the new Cabinet. It may be

taken, however, for granted, without much fear of error, that in mentioning "Egyptian aspirations" Mohammed Pasha did not include, in his own mind, either "total independence" or British evacuation, which are usually amongst the first articles of faith put forward by the Zaghlul Party. Since the declarations made by President Wilson and the other Powers at Paris in recognition of the British Protectorate the aspirations of all moderate and rational Egyptians no longer embrace such fanciful dreams, but are confined to very praiseworthy and meritorious, as well as natural, aspirations for a larger share in national affairs to be thrown open to Egyptians competent to undertake it. There are, of course, many other directions in which an intelligent and cultivated Egyptian may have quite legitimate ideas of improving the position of himself and his contemporaries. A full opportunity is likely soon to be given apparently to all such to air their views and state their case.

The Royal Commission.

According to the information vouchsafed to Parliament, a Royal Commission will shortly reach Egypt with the precise object of examining into the basis on which the Protectorate is to be established, with due regard to the claims of the sons of the soil to participate in administration and legislation. Somewhat curiously, the Nationalist extremists are vehemently protesting against the appointment of this Commission, instead of giving it the welcome it might have expected. Their characteristic argument is that any relations with the Committee are tantamount to an admission that they recognise and acquiesce in the Protectorate, which they continue to repudiate as "anathema maranatha." Emissaries have, in fact, been sent forth throughout the length and breadth of the land to prepare for the Commission "the reception it deserves." Before the Commission arrives, however, better counsels may prevail, and it is difficult to believe that even the most rabid partisans of "independence" will stand by and let their adversaries alone have the ear of the Commission.

For the present little is known about this Commission beyond the mere fact that it will come with very extended powers and will probably be presided over by Lord Milner. Presumably its headquarters will be Cairo, even if the Sultan and Ministry be temporarily in summer quarters at Alexandria. It is also presumed that it will generate a number of sub-commissions to study various separate subjects. If it is really to make an exhaustive inquiry into the present conditions of Egyptian administration with a view to re-modelling them where necessary, its task is a gigantic one.

It is early yet to predict what may be the outcome of the labours of the Commission, but to the impartial observer who is acquainted with past and present happenings in Egypt there appear to be scarcely more than two practical solutions. First, to hand over Egypt administratively to the Egyptians—as, for instance, the Arab kingdom is likely to be handed over to the Arabs—merely keeping a strong hold on the Canal and on strategic points, and possibly on finance, in the interests of Europe. This would delight the whole nation for a short while, but probably not for very long, as it would soon perceive the difference between Oriental self-rule and even modified and "advisory" British administration. Secondly, creation of an Anglo-Egyptian Civil Service—of a large body of *resident* inspectors, political officers, or otherwise-named officials, with *executive* powers really to control and lead their native subordinates. At present there are in normal times a mere handful of British Inspectors of the Interior, Public Works, etc., who mostly live in Cairo or Alexandria, and visit the provinces for purposes of inquiry into anything that is brought before them, or that they consider requires looking into. They have no executive authority, but a powerful advisory position.

Recently a certain number of Englishmen have been appointed, as a purely temporary measure during the unrest, as "Political Officers" in the provinces. Whenever these, or any of the regular British Inspectors, have been on the spot the result has been almost invariably a quick restoration of peace and confidence.

Marriages.

Last week was a truly nuptial one in the Sultanian family. On Sunday Prince Djemaleddin, son of Princess Fatma of Constantinople, married Princess Kadrieh, daughter of the late Sultan Hussein. On Monday the Sultan's Chamberlain, Mahmoud Fakhry Pasha, married the Sultan's daughter, Princess Fewkieh, and on Tuesday the Sultan himself went through the religious form of marriage with the daughter of Abdurrahim Pasha Sabry, Governor of Cairo. The final marriage ceremony was to have taken place, and is said to have been celebrated yesterday, the 24th, but the announcement has not yet been made in the papers. It is indeed seldom that two daughters of Sultans and the father of one of them are all married in the same city during the same week.

GREECE AND SMYRNA.

(From Our Special Correspondent.)

Smyrna, May 30.

The Military Occupation.

Smyrna has had time to get over the physical effects of the Greek military occupation, and is now concerned with the political and economic future. Greece made a bad start when her troops forgot that they were carrying out a mandate of the Paris Conference and imagined that it was just another instalment of the traditional struggle between Greek and Turk, with everything in favour of the former. True, they were fired upon—not necessarily from the barracks themselves—when they were advancing to occupy the barracks; but they had no difficulty in coping with that particular problem, for the barracks quickly capitulated to an effective bombardment, and from that moment the military purpose of the landing was accomplished. There was no need for the massacre of many of their prisoners in the full view of the foreign men-of-war in the harbour, still less was it in the spirit of the injunctions sent by M. Venizelos when he ordered the expedition that there should be a simultaneous and seemingly organised attack on the Turkish quarter. The excesses ceased, however, almost as abruptly as they began. A Greek soldier and a Greek hooligan were condemned to death for their share in the proceedings, and order was restored in the town. Better still, the Greek Government at once sent its ablest available representative in the person of M. Stergiadis to take control of things in Smyrna.

M. Stergiadis.

The Greek High Commissioner has just completed a successful two years of office as Governor of Northern Epirus, where any improvement that has been effected in the relations between the Greeks and Albanians may be attributed to his personal efforts, his broad-mindedness, and administrative capacity. No better choice for Smyrna could be made. M. Stergiadis is prepared to face facts, and he has shown that he could even face the unpleasant facts of the original Greek landing. It would have been better, indeed, if he could

have been in Smyrna at the time in order to prevent the details of the mistakes of those days from being suppressed in Greece itself by the censorship. For the Greeks are on the threshold of great things, and nothing is better calculated to burn into the nation a sense of its responsibilities than the knowledge of its own shortcomings at a time of test. The problem with which Greece is confronted does not concern merely the Government of the day, or a handful of civil servants. It is the business of the race as a whole, and until every Greek realises his responsibility in this matter there will always be the possibility of similar "mistakes" recurring, and the work of the best administrators is liable to be stultified. Let it be added in fairness to the Greeks that the extension of the military occupation in the vilayet of Smyrna has taken place, so far as is known, without incident, an aspect which seems to confirm the theory that the firing on the Greek troops in Smyrna was the work of irresponsible hotheads. The Turks are war-weary; most of their able-bodied men, moreover, are probably away from the districts now being occupied by Greek troops, but it cannot fail to help the Greek cause that the occupation should be carried out peaceably. M. Stergiadis does not expect the Turks to welcome the Greeks with open arms, but he recognises the advantage of this peaceful occupation, as it enables the newcomers to show their best qualities and will encourage the Turk to believe that things may, after all, not turn out to be as bad as he had anticipated.

A Difficult Problem.

At best, the future administration of Asia Minor presents a most intricate problem, in which many other interests than those of the Greeks and Turks are involved. Everyone, therefore, who is concerned for the peace and progress of this part of the world ought to feel constrained to help, as far as possible, in the solution, and, above all, to refrain from handicapping those who are conscientiously trying to secure it according to their ability.

The problem can, perhaps, be more easily understood by a statement of the difficulties ahead of the Greeks. Their mandate, or whatever authority will give them control in Asia Minor, rests on the principle of nationality. They are in Smyrna in virtue of the numerical superiority claimed for their nationals in the town and immediate neighbourhood, although it is problematical whether much reliance can be placed on local statistics. Their preponderance, in any case, ceases at a comparatively short distance from the coast. Smyrna, on the other hand, has been built up and exists on the trade of the interior; its future depends on the maintenance of that trade. If the port is under Greek jurisdiction, and the interior remains under Turkish or any other rule, is there the least guarantee that trade will continue to take the Smyrna route, even if the Greeks adopt the most liberal-minded fiscal policy? Further, Smyrna and its trade depend almost entirely on Turkish labour. At least one Turkish village in the vicinity of the port has been completely abandoned by its inhabitants as the aftermath of the Greek method of occupying Smyrna. It is impossible to say whether this village was the special object of Greek attention or whether the Turks, without a more definite reason, decided that "it wasn't good enough," and disappeared. The incident is significant. M. Stergiadis, as well as his subordinates, knows well enough that Greek interests require every Turk in Greece's sphere of influence to remain where he is; but how long will it take them to instil the same degree of statesmanship into the minds of the rank and file, who have in such a marked degree in their own hands the making or marring of Greater Greece?

The economic interests of Smyrna require that a large extent of the interior should be under the same jurisdiction as the town, and, in any case, that there should be nothing in the way of fiscal barriers to drive trade away from the town. The Greeks, therefore, having inaugurated their military control badly, are compelled, in the interest of their position here, to ask immediately for a wide extension of territory to which they can put forward no claim of nationality. If they should be given this additional territory, have they any certainty that they will be able to prevent the Turkish population from migrating, and thus stultifying the very object they had in view in taking over the territory? Again, with other parts of the Asia Minor coastland under the control of a European Power, it may be taken for granted that an attempt will be made to develop some other port as a rival to Smyrna's hitherto unchallenged position. The future of Smyrna, therefore, hinges partly on the capacity for promoting its development on the part of the controlling Power. There may be plenty of money in Greece to-day; but, apart from the fact that there is more than ample use for it in Greece proper, it is not within the bounds of possibility that it should be used to develop Smyrna. For the progress of this town the Greeks will have to depend largely on foreign capital; but here again the Greek administration is confronted with the uncomfortable factor that the first instinct of foreign trade is to take alarm at the prospect of a Greek regime, and to envy the ease with which the Turk effects his transfer.

In the circumstances the Greeks may well claim sympathy in connection with their acquisition of Smyrna. It will need real statesmanship in Athens to bring home to the people, who have given a thought to nothing beyond the fact that the Greek flag now floats in Asia Minor, an appreciation of the difficulties of the position. One thing is evident: anything in the nature of a crude policy of stereotyped annexation would be suicidal for Greece. This fact, I believe, the Greek Government recognises. Unless it wants to take over a moribund port, it must gain the confidence of Turks and foreigners, and it is unlikely that this can be done without definite steps being taken to secure the co-operation of both in the administration. If Greece will regard her presence in Smyrna as a valuable training-ground for further and still more important expansion, she will tread very warily; she will voluntarily school herself in the curriculum of empire until she has built up an efficient and trustworthy civil service, capable of impartial and effective administration. To evolve such a service without outside help will take five or six times as long as with such help, and in the work ahead of the Greeks time is an important factor.

In view of the internal difficulties attending her presence in Asia Minor, Greece is entitled to protection from complications from outside. If Italy, who is said to have sanctioned the Greek mandate in Smyrna, is bent upon "playing the game," she has adopted a curious method of showing it in her policy in Asia Minor. Misgivings on both sides may be responsible for misunderstandings and exaggerations, but so far there is considerable ground for the belief that the situation can only be satisfactorily cleared up by the direct intervention of Great Britain, France, and the United States, who can hardly claim the introduction of contiguous Greek and Italian spheres as a peaceful solution of the Asia Minor question.

CYPRUS NOTES.

(From a Correspondent.)

The officer administering the Government has decided that Mr. Televantou shall continue to act as Local Commandant at Nicosia until further notice. Hitherto it has not been customary to appoint either Greeks or Turks to the office, and this has long been a grievance on the part of the Greek community. If any exception were made, Mr. Televantou, who is a Greek, certainly deserves the appointment. An energetic and efficient officer and a good linguist, he has rendered long and excellent service in almost every part of Cyprus, both as inspector and Local Commandant.

Empire Day was kept as a holiday, with services in the churches, receptions, and other marks of rejoicing. Ramadan still falls in a hot season, and coincides this year with what is the beginning of the slack summer season. Harvest operations have been carried on and are approaching an end in all the lower lands; but cereals are grown on suitable land in the Nile districts up to nearly 4,000 feet, and hill barley is the best that is grown, especially in the west of the island.

ATHENS NOTES.

(From Our Own Correspondent.)

Athens, May 31.

Visit of Admiral Beatty.

The British Minister at Athens, Earl Granville, accompanied by Countess Granville, left on Monday last for England. Lord Granville is going on leave for four months, and Mr. C. Russell, Counsellor of the Legation, remains as Chargé d'Affaires. During Admiral Beatty's stay here the Municipality of Athens conferred on him the freedom of the city of Athens, and the Municipality of the Piræus passed a resolution that one of the principal streets of that town be named after him. The Admiral and Lady Beatty stayed on board their yacht Sheelah, which had anchored in the Bay of Phalerum. Their visit lasted three days, and they entertained, and were entertained by, the British Minister and Countess Granville. The Admiral and his staff and Lady Beatty were entertained at lunch by H.M. the King, and at dinner the same day by M. Repoulis, Acting President of the Council of Ministers. The Greek press wrote eulogistic articles of welcome to the gallant Admiral, extolling the services he had rendered to humanity and the Allied cause by the ceaseless watch he and his Fleet had maintained during the most critical period of the war.

The Occupation of Smyrna.

The unfortunate incidents in connection with the occupation of Smyrna by the Greek troops which necessitated the hurried journey thither of the Acting President of the Council, M. Repoulis, have now ceased, and telegrams from Smyrna report that order reigns once more. Ultra-Royalists ascribe the incidents to disorderly elements in the Greek Army of Occupation, hoping thereby to discredit the Government, and quite forgetting in their zeal that the army is composed of, and officered by, their own kith and kin, since the mobilisation was a general one, and called to the colours all Greeks, irrespective of their political convictions. These incidents, however, were undoubtedly caused by a few fanatical Turks, who were provoked by the patriotic and triumphal reception accorded by the Smyrniotes to the Greek troops. News has now come of the occupation of Aidin and Aivalik by the Greek troops, together with the confirmation of the fact that order reigns throughout all the occupied districts.

The Trial of the Skouloudis Cabinet.

On the resumption of the sitting of the Court on May 23, the President of the Special Court gave the decision on the proposals made by counsel for the prosecution, and on the pleas put forward by the counsel for the defence, which had been put at the second sitting of the Court on May 22. These proposals and pleas concerned the absence of several witnesses considered important both by the prosecution and by the defence. The decision of the Court was that owing to the absence of these witnesses, whose testimony would have important bearing on the trial—amongst the absent witnesses is also M. Venizelos, Prime Minister—the sitting should be adjourned until September 12. MM. Skouloudis and Jiannakitsas were admitted to bail on the understanding that they are not to absent themselves from Athens without permission of the prosecuting counsel. Bail was fixed for M. Skouloudis at £20,000, and for M. Jiannakitsas at £400. The decision of the Court to allow bail for the ex-Premier has created a very good impression, as he was undoubtedly suffering, owing to his great age, in confinement.

On May 27 the Court-Martial of Athens began the trial of General of Brigade A. Papoulas, Col. K. Konstantinopoulos, M. K. Hoesslin, J. Sagias, President General of the Reservist Leagues, S. Merkouris, former Mayor of Athens, K. Inglessis, and G. Pezmazoglou. The latter is absent, having escaped from Corsica. The charge brought against the accused is that of high treason, it being alleged that they illegally armed the populace in December, 1916. Various counsel for the defence urged that owing to the absence of witnesses considered important for the defence the trial should be adjourned for a more convenient season. Other counsel for the defence urged that in view of national interests being in the hands of the Great Powers it was not seemly that "unfortunate, most unfortunate, occurrences, created in the past by various circumstances and contrasts," should now come up for public discussion. The Public Prosecutor, however, resisted the appeal for adjournment, and the Court decided that the hearing of the case should be resumed on May 31 in the Chamber of Deputies, which had been altered suitably for the trial of the Skouloudis Cabinet.

Skra di Leghen Anniversary.

The anniversary of the capture of the Skra di Leghen was celebrated with all possible pomp yesterday at the Square of the Barracks, Athens. The garrison as well as the Cadet School took part. The King, with his civil and military Staffs, the Cabinet, and General Grammat, Chief of the French Military Mission to Greece, attended. Major-General Joannou, who commanded the Greek troops which carried out the attack, was also present, accompanied by his aide-de-camp. A memorial service for the twenty-eight officers and 594 soldiers who fell in the engagement was celebrated by the Metropolitan of Athens, assisted by his suffragans. The Master of Ceremonies, Lt.-Col. Koimisis, made an oration in honour of the brave troops who had given their lives to become the forerunners of Hellenic victories. A telegram of greeting was also sent to General Guillaumat, who had been in command of the Allied troops on the memorable day.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, May 30.

General Averesco on Britain's Effort.

General Averesco publishes an instructive article in the journal, *Indreptarea*, for May 17, on "Limitation of Armaments," in which, no doubt with the conditions to be imposed on Germany in mind, he emphasises the great difficulty of attaining by such means the practical object of avoiding war. In support of his argument he refers to the total failure of Napoleon's measures to reduce the military power of Prussia after the peace of Tilsit in 1807 by imposing on her a limitation of peace effectives. He then proceeds to lay stress on the recent example supplied by Britain. After giving a succinct account of Britain's military effort, he sums up as follows:—"The country which was least prepared for war on a grand scale at the time when it resolved to measure itself against the most formidable military organisation the world has known, was undoubtedly England. None the less, it is England who, if we put into the balance every variety of consideration, made an effort of such magnitude as to surpass even that of Germany."

Weather and Crops.

There are many people, I am sure, who, reflecting on the unfavourable conditions of the European climate, at heart wonder how our old continent came to be so thickly populated. The weather of the last few years has served to add to this impression, at least in our part of the world. In 1916 we had a spring and summer of intolerable heat, during which the thermometer frequently registered 43 deg. Centigrade in the shade. The following Christmas might have fallen in the spring for all the indications that the climate gave us. Then came two months of intense cold, with the thermometer somewhere between 20 deg. and 30 deg. C., which, under the conditions then obtaining, caused great loss of human life, not to speak of the tens of thousands of frozen feet. After this, in succession, a rainless autumn, a snowless winter, a dry spring, and a droughty summer, which turned the rich countryside into a desert. And now, for the last months, the weather conditions have been most unsettled, the damp element, however, predominating. Rivers have overflown their banks, bridges have been swept away, and crops have been swamped. An amateur meteorologist, gifted with an imaginative turn of mind, tells us that 15 million tons of rain fall on the earth's surface per second, and deplores its distribution over so large an area. If only, he complains, instead of inconveniencing innocent people the world over, it would consent to concentrate itself for a week or so on the regions polluted by Bolshevism, how great the benefits that would accrue to humanity! Roumania would be doubly grateful for such an occurrence.

Digitized by Google

The wheat has remained behindhand on account of the cold, and the wind has caused some damage among the fruit trees. The soil has fortunately been cultivated completely in Bessarabia and Oltenia, and the conditions in Moldavia are, taking all the circumstances into account, satisfactory. The untilled fields of Valachia point eloquently to the German occupation. I had ample leisure for contemplating its effects in the course of a recent trip, during which a motor breakdown near the Sireth kept us 26 hours in the open country. Half-filled trenches, miles of shell-strewn country, abandoned by all living creatures, formed a vast German cemetery, and contrasted strikingly with the green fields and waving yellow colza beyond the lines so bravely defended by the reconstituted Roumanian Army of 1917.

THE SITUATION IN BULGARIA.

(From Our Own Correspondent.)

Sofia, June 17.

In view of repeated misstatements regarding the situation in Bulgaria, it is necessary to establish the fact that the country is at present entirely peaceful, and there is no foundation for the reports of disturbances, or of aggressive intentions on her part. Suggestions that Bulgaria has not conformed to the terms of the armistice constitute an unmerited reflection upon the Allied military control. Whereas the armistice provided for the retention of three mobilised divisions, the whole army has been demobilised. The disarming of the people was never suggested, and no Allied force was provided to carry out any measure of the kind.

Owing to the requirements of the land, and to the people being predominantly agricultural, the transfer of the soldiers to their normal peace occupation has been effected comparatively easily, and the shortage of food is now being met.

It is probably true that the people are buoyed up by the expectation that the Peace Terms cannot conflict with the principle of nationality, and that consequently they are unable to believe that their punishment may take the form of territorial surrenders. It remains to be seen what their attitude will be if the terms offered should prove to be what they should regard as excessive. At present Bulgaria's neighbours have no cause for any anxiety. On the other hand, the reported concentration of several thousand *komitajis* on the other side of the frontier should serve as a warning to the Allied Powers how easily complications may arise in the future unless the suppression of all irregular forces in the peninsula is insisted upon.

MESOPOTAMIAN HISTORY.

On June 6, in the second of the course of lectures which he is giving at the School of Oriental Studies, Mr. R. Campbell Thompson reviewed the history of mankind in the Mesopotamian region from the very earliest times. He said that the Sumerians were not the earliest inhabitants of Babylonia. Before them there were a race who used slings, bows and arrows, made and decorated pottery, but had no writing. Then came the Sumarians; these did not paint their pottery, and did not use the bow. They built temple towers in shape like an Egyptian pyramid. From the fact that they used the same sign for mountain as they did for country, it was assumed that they came originally from a mountainous land. They were not at first familiar with either the horse or the camel, but called the camel the beast from the sea and the horse the ass from the East. Next came the first wave of Semites. This people had been cradled in Arabia, and possibly came originally from Africa, but it did not advance directly on Babylonia from Arabia, but came down the Euphrates, so that the Sumerians were sandwiched between the invaders and the Gulf, and were gradually absorbed. About 2,300 B.C. came the second Semitic invasion, and it was during the period then inaugurated that the land was canalised. Afterwards came the Hittites, and about 1,800 B.C. the Kassites. The first of these was probably, and the second certainly, an Indo-Germanic people. The Kassites brought in the use of the horse and instituted a simpler system of dating. The Assyrians were first mentioned about 2,200 B.C., but their rise was much later; it was about 1,100 B.C. that Tiglath Pileser spread the Assyrian empire abroad. From that time onwards it grew, and its record until about 606 B.C. was one long record of cruelty and bloodshed. That year marked its fall to the Scythians. In 538 Cyrus took Babylon, and the Persian empire rose. Then followed Alexander, who died at Babylon in 323. After him came the Selucids, Arsacids, and Sasanians, which brought us down to 226 A.D. Another and last Semitic wave flowed over the country with the coming of Islam, when the Arabs made themselves masters of the region. Then came the rise of the Abbassids, and the Khalifate was installed at Baghdad. About 1,055 A.D. the Mongols overran the country, and they made later invasions in 1,250 under Hulagu, and in 1,393 under Timur; but by this time the Osmanlis were becoming powerful, and in due course Mesopotamia was included in their empire.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The "Cyprus Mission," now in London, which claims to represent Greek Cypriots, has placed before the British Government and public its arguments in favour of cession to Greece, as M. Venizelos has done before the Peace Conference; and some ardent phil-Hellenes have supported the petition. Little has been said in the Press by advocates of retention; but those who know the Near East best consider that no valid argument has been given why this "outpost of civilization" should be ceded, and our links of Empire weakened at a vital point, at this critical period of unrest in the Near and Far East. On the contrary, while the motives of the "Greek" aspirants are mainly sentimental, our own interests, which militate strongly against abandonment, are very material.

While the circumstances that led to the original occupation of Cyprus in 1878 have altered, and our policy towards Turkey has necessarily changed, our reasons for holding this strategic point are more cogent than ever. The conditional offer of Cyprus to Greece in 1915 by Sir Edward Grey, made without reference to Parliament, was generally condemned in England. The cession of Heligoland, made "without consultation with the naval and military authorities," has proved unfortunate. It might be added that Corfu, had it remained British, would have been of no little value in the late war. And few people know of what use Cyprus has been of late years. As Mr. Joseph Longford has suggested in the *Morning Post*, such a cession might be carried to its logical conclusion by the cession of Gibraltar to Spain, of Ceylon to Holland, and of Hong Kong to Japan.

Mr. T. P. O'Connor has recently stated that he had reason to believe that the Government of Greece would be ready to make it a part of the transfer "that any harbour which the British authorities might deem necessary for the protection of British routes would be pledged to the use of the British authorities whenever required." This is so. But it must not be forgotten that we came very near to being stabbed in the back by Greece in the late war. M. Venizelos saved the situation. But the wise policy of M. Venizelos, Greece's one and only modern statesman, can provide no guarantee for the future.

Greece has more than enough to do for a long time to come in administering Greece and newly-acquired territories, without the additional responsibility of governing Cyprus. She has a very extensive coast line, which she cannot police efficiently. Cyprus also has a large coast-line which offers numerous possibilities. As regards aircraft, which are to play so important a part in the future, the island position is of very great importance. It is, moreover, our only, and excellent, sanatorium in the Levant and Mediterranean.

For the material good of the Cypriot people the change would not be beneficial; and the promise made to the 60,000 Moslems, who strongly oppose abandonment of the island by Great Britain, that their interests would be fully considered, must be fulfilled. Whatever we may do in the future, the main point at present is that the geographical position of Cyprus alongside of continents in which troubles are more than likely to arise, presents a most powerful argument against a surrender which might, and probably soon would, be a cause of regret and of censure upon those responsible for such a blunder. May I therefore endorse the opinion of Colonel A. C. Yate (The Near East, June 13) that "there are the strongest possible reasons why Cyprus should be retained by Britain as a base in the Levant. The hands of Britain, indeed, of the Western Allies, need to be strengthened in the Mediterranean from end to end."—I am, etc.,

June 17. Foresight.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—You will perhaps allow me, in view of Lieut. Col. A. C. Yate's letter in your issue of June 13, once more to expose as simply and unequivocally as may be the standpoint of the Greek population of the island

Lieut.-Col. Yate asks for the foundation of my belief that "the Greek régime is beyond any doubt going to be established in Cyprus." This belief of mine is not based on information secretly gathered behind the political scene.

Digitized by Google

It is primarily based on the simple conviction in which I have been nurtured that the British nation is an honest nation, respectful, above all things, of its plighted word. Now, the British nation has by the mouth of its constitutional representatives given not once, but a hundred times, its free and solemn adhesion to the principles of the self-determination of national groups which have been adopted by the Allied democracies as the basis of a new world. This is a fact which Lieut.-Col. Yate cannot, and, I am sure, would not, wish to deny. But in the light of these principles my belief surely follows from the premises with irresistible logic. I need only ask Lieut.-Col. Yate two simple questions: Is it not a fact that four-fifths of the population of Cyprus are Greeks? Is it not also a fact that they have on every possible occasion affirmed their will for union with Greece? In view of these indisputable facts it is quite clear what the application of the principles on which the new frontiers of the world are to be drawn involves for Cyprus. Great Britain can deny Cyprus union with Greece only by breaking solemn and repeated promises given before the whole world.

As a matter of fact, the value of Cyprus to Britain "as a base in the Levant" has been practically nil. It is unlikely—to say the least—that it would prove more valuable in the future. Nevertheless, it is a proof of the readiness of the Greek Government to meet every exigency of British interests that it is perfectly willing in the event of the cession of Cyprus to Greece to afford every facility demanded by military necessities. The matter, in a nutshell, is this. The Greek claim is indisputable on ethnological grounds. The objections made to it are, therefore, based on the military utility of the Island to the British Empire. That utility is denied by us and by the whole of its past history. Even so, however, Greece is ready, provided the aspirations of the Cypriots are met, to allow the military utility which Cyprus is alleged to possess to be exploited to the full by Britain. I should like to know if, in view of the above, Lieut.-Col. Yate still considers that his wish that Cyprus should not be ceded to Greece has "good solid backing."

Lieut.-Col. Yate's arguments against the union of Rhodes with Greece are curious. "If the Greeks get Rhodes," he says, "those (*i.e.*, the Hospitaller) edifices and traditions will meet with no respect." Does he seriously wish to suggest by this that if Rhodes goes to Greece these "Rhodian remains" will fall victims to Greek vandalism?

Lieut.-Col. Yate quotes in support of his views a lecture of Sir W. M. Ramsay before the Central Asian Society. With all the deference due to the great authority of Sir W. M. Ramsay, I do not think his opinion of Greek colonisation in Anatolia can help us in this matter of Cyprus. I imagine that Lieut.-Col. Yate would hardly describe the 235,000 Greeks living in Cyprus (as against 60,000 Turks) as colonists and settlers amid a largely Moslem population. *Apropos* of lectures, I remember that I, too, attended a lecture in February at the Royal Colonial Institute by Mr. M. G. Chussachi. A few sentences I heard there stuck in my mind: "Roman publicists dwell firmly on the mediæval prowess of the knights of St. John, who for centuries were masters of Rhodes and the surrounding islands, and whose rights they maintain have devolved on the Crown of Savoy. They conveniently forget to quote the admission of Vertot, the historian and panegyrist of the Order, that the Greek inhabitants preferred Turkish rule to the rule of these Latin knights."

I trust that the above will justify in the eyes of Lieut.-Col. Yate the firm belief which I hold in common with the Greek Government and nation that the legitimate aspirations of both Rhodes and Cyprus will be realised shortly.—I am, etc.,

DR. NIC. KL. LANITIS,
Member of the Legislative Council of Cyprus and of the Cyprus deputation.

June 16.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In a letter published in your issue of June 13 Colonel Yate still persists not only in throwing more "light" on the future of Cyprus, but also in stirring up again the question of the restoration of the *non-Greek* (the italics are mine) Rhodes to the Hospitallers; and he again expresses his fears as to the fate of the Auberges of Rhodes should they fall into the hands of the Greeks.

I am sorry that Colonel Yate has misinterpreted the "intemperate tone" of my letter of March 13, and, once for all, I can assure him that neither I nor any other Greek have any evil intention against these poor Auberges. The matter is simply not worth arguing about. The Greeks, though they have never been vandals, will not pour their vials of wrath upon lifeless buildings with the pretext of taking their *revanche* for the unspeakable yoke under which the Dodecanesians groaned when the Knights of Rhodes were governing the South Sporades.

I am fully aware of the fact that Colonel Yate is an excellent authority on Iran or Turkestan, but I am afraid that his historic notions concerning the Hellenism of Cyprus and the Dodecanese are very poor. His good friends the Italians have now proclaimed, *urbi et orbi*, that they will only leave the good harbours of the Dodecanese when England abandons Cyprus and Malta, and when Corsica, Tunis, Nice, and Savoy are restored to their Mother Country! I understand that Great Britain and Greece are about to settle amicably the question of Cyprus outside the Conference circles. We are quite confident in Albion's sense of justice. Our Cypriot brothers have not suffered under the British Government; on the contrary, they have enjoyed the same paternal administration that was adopted in the Ionian Islands before their cession to the Hellenic Kingdom. But, speaking frankly, the Italian "solicitude" for the Dodecanese, which have been for over 3,000 years Greek, looks very suspicious indeed, especially as the same Italian finger is to be found everywhere, not only in Asia Minor, but also in Thrace and Epirus.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester, June 15.

French cruisers have gone to Odessa to superintend the embarkation of foreign refugees from that port. The refugees will be taken to Constantinople in a transport.

The work of the Scottish Women's Hospitals has been greatly reduced, but is continuing vigorously in Serbia, where the need is very great. Hospitals are being maintained at Belgrade and at Vranja, in Old Serbia. In this latter place the Scottish Women's Hospital is the only medical centre for miles around.

The Times' Tangier correspondent, in a message dated June 9, states:—The Spanish Government has at last decided upon the expulsion of the German agents from Larache, in the Spanish zone, who during the whole period of the war have carried on an active and dangerous intrigue against the French in Morocco.

THE GERMANS AT TABRIZ.

GERMAN CONSUL DEFIES THE PERSIANS.

By "MIRZA FIROOZ KHAN."

TABRIZ, April 12.

The German Consul has been responsible for a good deal of trouble here during the last few days. The German Consulate is in the western, or, rather, the south-western, portion of the city, which is the most select quarter. It is in this part of the town that the Germans erected their once-famous rug factory. The staff of the Consulate consists of five persons—the Consul himself, whose name is Wustrow, the doctor of the Consulate (Paul Shints), an orderly, and two soldiers, who act as guards.

The trouble to which I refer was caused by a letter to-day from the Consul addressed to H.E. Amir Toman Kela-Begi, the Governor of the ward of the city in which the German Consulate is situated. The letter, a copy of which has also been received by the Armenian Bishop, Melik Tankian, is in French and typewritten, and reads:—"Permit me to call your Excellency's attention to the fact that the local Persian authorities have demanded that I should hand over to them all the arms and ammunition I have in my Consulate. This demand of the Persian authorities has been dictated to them by the British. I will not give up an ounce of gunpowder or a single rifle or pistol. In my Consulate there are 1,200 kilogrammes of explosive material. If the Persian authorities, who have besieged my Consulate with gendarmes, attempt to force me to submit to their demands (I will submit to no one), I have decided to blow up everything—the materials, the Consulate, the Consular staff, including myself, rather than debase ourselves before these nobodies, who think themselves to be somebodies. Hence I will ask your Excellency to remove the score or more Armenian families who have their residence round my Consulate, so that they may not be harmed by the explosion. I may add that I will hand over the war material at my disposal to the Persian authorities or to anybody only when an order is brought to me from Berlin."

It is generally believed that in sending this letter to the Armenian Bishop it has been the intention of the Consul to inform indirectly the Persian authorities and the other Consuls of his intentions, so that they will not attempt to force him to yield, and so that the gendarmes will be removed. It is not thought that the Consul would worry much about the lives of a few score of Armenians if it actually came to blowing up himself and his Consulate. The letter of the German Consul was received yesterday at 7 p.m. by the Armenian Bishop, who was so alarmed at the possible execution of this threat that he at once informed the Crown Prince, the Acting Governor-General, Mokarram-el-Mulk, and the British, French, and American Consuls. At the same time, Consul Wustrow had the walls of the Consulate buildings raised all round, placed two quick-firing machine guns on the roof, and barricaded the place, preparing for eventualities. The Persian gendarmes were there, of course, not to take the place by storm, but simply to see that no arms or ammunition were transferred to other quarters. This precaution was taken on account of the rumour that the German Consul intended to hand over his ammunition to the Persian democrats, who had been in silent conflict with the Crown Prince and the Governor-General for over a year and a half. In view of this rumour the authorities were naturally obliged to take action.

Karguzar, the agent of the Foreign Minister in Tabriz, called to persuade Consul Wustrow to give up the ammunition, but all he got for his trouble was a stiff lecture from the Consul on the presumption of the Persians, and he took his departure without accomplishing anything. As a matter of fact, he was not even admitted at first, until he had dismissed his few armed attendants, and not until then was the gate opened, and he was allowed to pass in alone.

It is said that a telegram was handed to Consul Wustrow from the German Minister at Teheran, ordering him to give up his ammunition to the Persian authorities, but the Consul flatly refused to comply, basing his refusal on the ground that the telegraph line being in the hands of the British, they could easily make up such a telegram. He added, "I will give up all I have if an autograph letter is brought to me from the German Minister at Teheran ordering me to do so, but not until then."

No one is now permitted to enter the Consulate except the Karguzar (unattended) and H.E. Heshmet Sultanieh, the Master of Ceremonies to the Crown Prince (also without being accompanied by attendants). The only person who leaves the Consulate for official or personal business is the chief *ghulam* of the Consulate, who is over 6 ft. 6 in. When Consul Wustrow stopped his negotiations the local authorities intended to arrest this *ghulam*, and thus cut off the Consulate from communication with the city and the democrats; but a second threat of the Consul, "that if his *ghulam* were placed under arrest he would explode 1,200 bombs within the Persian quarter of the city," made the authorities think again before they acted. The German Consul, it is said, would not have dared to make such threats, considering the small number of his staff—five persons and a few *ghulams*—who, moreover, would not care to sacrifice their lives merely because their Consul wanted to have his will accomplished—had not there been within the Consulate nearly 100 democrats on whose active assistance Consul Wustrow has been depending.

THE HEDJAZ RAILWAY.

On June 17, lecturing before the Royal Asiatic Society, London, Miss F. Newton described a journey made by herself and another lady in the spring of 1913 along the Hedjaz railway from Haifa to Madain Saleh, a place further towards Mecca than Christian women had ever previously travelled. The object of her journey had been to ascertain what opening there was for missionary enterprise in northern Arabia, and she had returned convinced that any such attempt was, in the circumstances of the time, altogether impracticable. But in another way the journey had important results, for some photographs she had taken, and an authentic map of the railway, of which she had obtained a copy, had proved exceedingly useful.

She said the whole story of the railway was a romance. It followed closely the ancient caravan route traversed by Mahommed when journeying as a trader with his camels. It had been built by the labour of Turkish conscripts, working for an average wage of 2s. 6d. a week. It was a narrow-gauge railway. This was partly to save expense, and partly because the rolling stock, brought from Europe, had to be transported from Beyrout to Damascus over a narrow-gauge railway. It had been seen from the first that the railway could not pay as a commercial venture, and the most extraordinary devices had been resorted to in order to raise money to build it. Large sums were received as gifts from pious Moslems; small stamp duties were placed on almost everything. On one occasion, proceeding to the pier at Haifa to take the steamer for Jaffa, she had been engaged in conversation by a Turkish official, who was exceedingly polite, but showed no disposition to let her proceed on her journey. At length someone came and whispered in her ear that nobody would be allowed to go on to the pier that day without giving something voluntarily towards the Hedjaz railway. She had previously made a donation, but she now gave another sixpence, whereupon she was allowed to proceed, and was just in time to catch the steamer.

Speaking of her journey, the lecturer said that through its whole length the railway ran through no towns and hardly any villages; almost the only inhabitants of the country were wandering Bedouin, and one of the deepest impressions left on her mind was that of the absolute silence of the empty space, with here and there a mound beside the railway showing the grave of some poor pilgrim. Another oppressive feature was the absence of any sign of road or footpath at even the most important stations. The journey from Haifa to Madain Saleh occupied from 3 a.m. Monday until the same hour on Wednesday. Madain Saleh was situated in a plain in northern Arabia, with mountainous country all around it. There was no trace of human habitation there now, nor any evidence that a city had ever existed. But the mountains around were full of tombs carved out of the solid rock. The whole district was a vast Nabatean necropolis, extending towards the south for miles It was conjectured that there had never been a town upon the site, but that it was in ancient times a centre to which dwellers in the district around had resorted for purposes of trade.

The dinner of the Gurkha Brigade was held at the Trocadero on June 5. The officers present were:—Colonel R. Fulton and Lieut.-Colonel A. G. B. Lang, 1st G.R.; Colonel J. Fisher, C.B., Lieut.-Colonel E. H. Sweet, D.S.O., Lieut.-Colonel C. L. N. Newall, C.M.G., and Captain C. G. Toogood, D.S.O., 2nd G.R.; Captain F. Barter, V.C., M.C., Captain G. H. Ogilvie, Colonel Sir J. West Ridgeway, G.C.B., G.C.M.G., K.C.S.I., 3rd G.R.; Captain E. C. Lentaigne, D.S.O., Colonel E. P. Mainwaring, and Colonel F. M. Rundall, C.B., D.S.O., 4th G.R.; Colonel G. H. Boisragon, V.C., Lieut. W. B. O. Fox, Colonel G. Hawkes, Lieut.-General Sir A. R. Martin, K.C.B., and Major-General Sir J. M. Stewart, K.C.M.G., C.B., 5th G.R.; Major F. B. Abbott and Major J. M. Whittall, 6th G.R.; Lieut. T. H. Denny and Lieut.-Colonel A. L. Longhurst, 7th G.R.; Major G. C. B. Buckland, D.S.O., M.C., Colonel J. D. Coleridge, C.M.G., D.S.O., Lieut.-Colonel E. R. Johnson, and Major G. L. S. Ward, 8th G.R.; and Mr. H. M. Hales, hon. secretary.

NEAR EAST BOOKSHELF.

A UNIQUE GYNARCHY.*

The history of Bhopál teaches the same lesson as that of the British Empire in Victoria's spacious days. It proves that female rulers may possess considerable administrative ability, and command the chivalrous devotion of their subjects. Bhopál is a Mohammedan State of Central India, with an area of 7,000 square miles and a population slightly under three-quarters of a million. Wedged between the powerful Máráthá kingdoms of Indore and Gwalior, it was saved from destruction by British influence; and its rulers have always proved staunch in their allegiance to the Supreme Government. But Bhopál possesses other claims to our respect and sympathy. For upwards of a century it has been governed by a succession of princesses, who, despite their disabilities imposed by their creed, have taken an active share in the administration. The first of this unique dynasty was Nawáb Begum Qudsia, only daughter of the fifth Nawáb of Bhopál. At fifteen she married a cousin, who succeeded to the throne, but was accidentally killed three and a-half years later. His will placed the State under his young widow's tutelage, and right nobly did she fulfil the trust reposed in her. During the Mutiny of 1857 she kept Bhopál aloof from the Delhi Confederacy, and rendered essential services to the British cause. After reigning wisely for many years, she abdicated in favour of a daughter, and her descendant in the fourth generation is now ruler of Bhopál. The latter, styled officially "Her Highness Nawáb Sultán Jahán Begum, G.C.S.I., G.C.I.E., C.I.," tells the story of her great-grandmother's romantic career in a little book, which is illustrated by portraits of her ancestors and exquisite colour-prints of Bhopál scenery. The Nawáb Begum's Urdu has been ably Englished by the Political Agent in Bhopál, whose "Foreword" gives a graphic picture of the troublous times in which her ancestress's reign began. F. H. S.

THE E.F.C.†

The author has given us a short account of the inception and growth of the Expeditionary Force Canteens, and has increased the interest of his book by the insertion of some excellent photographs. There are brief descriptions of the E.F.C. in France, Flanders, Italy, Salonika, Mesopotamia, Gallipoli, and Egypt. The work of the E.F.C. is too well known to need recounting. Like all the other indispensable things in the war, it received its share of criticism; but it gave to thousands of thirsty and hungry souls satisfaction which, if not made public, was nevertheless very real. (Even if we did have to be present at a lucky time to partake of the goods of which the photographs give so tantalisingly full a picture!) It is a good work that Captain Vredenburg has done in giving to the general public this book, for it shows how much, beyond the normal and excellent rations, the Army did for its men.

THE CHILDREN OF THE ANGELS.‡

It is not every don who can hear the horns of Elf-land, but Mr. Lawson, a tutor of Pembroke College, Cambridge, and Commander British Naval Mission to Greece, knows well the fairy bells and their tinkle, whence they come, and for whom they are ringing. His explanation is made with charming simplicity—everywhere the elves are chiming prayers "to welcome Michael home" from the wars. They started singing their litany (for which I'm sure they might have had a much better tune) last All Saints' Day, and I think they're going on singing it until peace comes. This little book is sad with the joy of the elves, because they are never so happy as when consoling grief; but if it brings to those to whom the war brought tears those jolly little comforters of nature it will have accomplished its simple purpose.

THE ELVES OF EDUCATION.§

This book is delightfully produced; it is charmingly illustrated by Charles Robinson, and it is well printed. It purports to be "a masque of education," dedicated to Bridget Dieudonnée, an Irish child, "who is learning lessons in England from her mother in India." A key is here provided which will unlock the door to all the rooms of education—mathematics, science, music, poetry, and the rest. But we fear that Bridget must have been a very precocious child to understand just how this key fitted the door; and were not the fairies who danced round her a little exclusive? Mrs. Stevenson's fairies are beautiful things, but the simplicity with which they are created is no proof of their existence, which indeed is likely to be perceived more easily by adults than by the compeers of Bridget.

"Co-operation in India." By Henry W. Wolff. (London: W. Thacker and Co. 12s. net.)

THE ARAB HORSE SOCIETY.

A Council meeting was held on Wednesday, June 11, at the Grosvenor Hotel, London, Mr. S. G. Hough (Vice-President) in the chair. There were present Messrs. E. R. Calthrop, H. V. Musgrave Clark, C. W. Laird, G. Buxton, R. A. Willis, Captain the Hon. G. Savile, Major G. B. Ollivant, and the Secretary (Rev. D. B. Montefiore, Islip, Oxon). The Council accepted further entries for the "Stud Book," and decided that the entries for Vol. I. should close on October 1 next. The arrangements made for the Arab Stallion Class at Ranelagh were discussed and approved of. It was unanimously decided that the title and sub-title of the society be expanded as follows:—"The Arab Horse Society: Founded to promote the breeding and importation of pure-bred Arabs, and to encourage the re-introduction of Arab blood into English light horse breeding." It was resolved that the general meeting of members of the society be held at the London Show in March, 1920. The Council then adjourned until their next meeting on Wednesday, October 15, 1919, at the Grosvenor Hotel, London.

RECEPTION FOR LADY CHELMSFORD.

The Secretary of State for India and Mrs. Montagu gave a reception on June 18 at the India Office to meet Lady Chelmsford, wife of the Viceroy, who was accompanied by her daughter, the Hon. Joan Thesiger. Mr. and Mrs. Montagu received the guests in the quadrangle, which was carpeted for the occasion, and refreshments were served at buffets round the sides. The company included:—The Maharaja and the Maharaj-Kumar of Bikanir, the Maharaja of Kapurthala, the Thakore Sahib of Limri, Lord and Lady Cowdray, Lord and Lady Zetland, Lord and Lady Inchcape, Lord Montagu of Beaulieu, the Chief of Ichalkaranji, Lord and Lady Ribblesdale, Lord and Lady Midleton, Lord Sinha, Lady Carmichael, Lord Islington, Lord and Lady Pentland, Lord Chalmers, Lord Inverforth (Mr. Andrew Weir), Sir Henry Craik, M.P., and Lady Craik, Lord Hugh Cecil, M.P., Mr. Justice Rowlatt, Sir Thomas and Lady Holderness, Sir Charles and Lady Bayley, Sir Claude Hill, Sir Lionel and Lady Abrahams, Sir Arthur and Lady Hirtzel, Sir William and Lady Duke, Sir Verney Lovett, Sir Frank Sly, Sir J. D. Rees, M.P., Sir James and Lady Du Boulay, Mr. B. N. Basu, Sir Prabashankar Pattani, Sahibzada Aftab Ahmad Khan, General Sir Edmund Barrow, Sir Murray and Lady Hammick, Sir Marshall Reid, Lieut.-General Sir H. V. Cox, Mr. W. D. Sheppard, Surgeon-General Sir Havelock and Lady Charles, Mr. Laurence Currie, Mr. F. C. Goodenough, Dr. and Mrs. T. W. Arnold, Mr. L. J. Kershaw, and Mr. and Mrs. W. Foster.

26	13	Thursday	28	28

The King and Queen received on June 12 a Special Mission from the Empress of Abyssinia.

The Maharaja of Kapurthala has arrived from Paris, and is staying at the Savoy Hotel.

Lord and Lady Furness have returned from abroad and taken up residence at 39, Park Lane.

Queen Alexandra has given her patronage to the Serbian Red Cross matinée at the St. James's Theatre on June 30.

Commander Talbot, who is specially attached to M. Venizelos, the Greek Premier, left London on June 15 for Paris.

Brigadier-General R. C. Boyle, C.B., C.M.G., gave up the command of the Alexandria District on June 1, 1919.

M. Joannes Gennadius, Honorary Greek Minister, and Mme. Gennadius have returned to London from the country.

M. Diamantides, Greek Under-Secretary of State for Transport, arrived at Marseilles on June 18 from the Piræus.

Mr. Justice E. W. Ormond, of the Chief Court of Lower Burma, has left Rangoon on long leave preparatory to retirement.

Major W. H. Lang, 16th Cav., I.A., was married on June 11, in London, to Miss Gweneth Bewley, daughter of the late Bewley Bey.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, had an interview with Earl Curzon at the Foreign Office on June 12.

M. Jean A. Caradja, First Secretary to the Greek Legation in London, has been appointed Chargé d'Affaires of the Legation at Stockholm.

Mme. Nikolas P. Pachitch, the wife of the head of the Serbian delegation attending the Peace Conference, has arrived in London from Paris.

M. Paul Popovitch, the chief of the Yugoslav Press Bureau, has returned to London from Paris. He will leave town shortly for Belgrade.

Mr. H. McPherson has been nominated an additional member of the Imperial Legislative Council, in place of Mr. E. A. C. Walsh, resigned.

The new Chaplain of St. Mark's, Alexandria, the Rev. W. Gladwyn Batty, is expected to take up his appointment towards the end of this month.

Mr. T. Rowland Hill, Personal Assistant to the Postmaster-General, United Provinces, has been appointed to act as Deputy Postmaster-General, Punjab.

Dr. Nair, the Madras specialist and representative of the non-Brahmin community in the Presidency, has arrived in England, and is staying at 87, Wimpole Street, W.

Mufti Muhammad Sadiq has been appointed by the Ahmadia Community in India as their delegate to represent in this country their views on political reforms in India.

A marriage has been arranged between Major John D'Oyly, 119th Infantry, Indian Army, and Evelyn Alice Giffard, widow of Hardinge Frank Giffard, barrister-at-law.

Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation, accompanied by Mme. Costiesco-Ghyka, left London on June 12 for Bucharest.

Mr. A. J. R. Hope, Deputy Secretary, P.W.D., Government of India, proceeded on six months' leave at the end of May. Major H. Pollard-Lowsley, R.E., is officiating for him.

Mr. R. M. Loan, who is succeeding Mr. F. A. Hadow as Secretary to the Railway Board, has arrived in Simla from England. Mr. Hadow proceeds on long leave home.

Professor J. L. Myres will deliver a short address at the annual general meeting of the Anglo-Hellenic League, to be held to-day in the Lecture Theatre at King's College, Strand, at 5 p.m.

The silver casket and address which will be presented to his Excellency Monsieur J. Gennadius by the Hellenic community is now on view at Messrs. Elkington, Limited, 73, Cheapside.

Lieut.-Colonel Geoffrey Evans, late Director of Agriculture in Mesopotamia, has, on reversion to civil duty, resumed his permanent post of Deputy Director of Agriculture, Central Provinces.

Mr. S. R. Daniels, Additional Judicial Commissioner of Oudh, is to proceed home on six months' leave. Mr. E. H. Ashworth, Sessions Judge of Cawnpore, will act as Additional Judicial Commissioner in his absence.

Mr. Guy Rutledge, barrister-at-law, and Secretary to the Burma Legislative Council, who is expected from leave this month, will act for Mr. Justice Ormond on the latter taking long leave preparatory to retirement.

A reception of the members of the Serbian Red Cross Society in Great Britain was held on June 16 at the headquarters, 9, Ennismore Gardens, to welcome home from Serbia the Society's Commissioner, the Hon. Mrs. Haverfield.

The marriage was celebrated on June 6, at St. Anselm's, Davies Street, W., by the Vicar, the Rev. R. H. Sinclair, M.A., between Gerald Ernest Frye, of Bombay and Ealing, and Beryl Maud Hirst, of Beckenham, Kent.

The marriage was celebrated on June 12, at the Spanish-Portuguese Synagogue, between Mr. A. D. Bassous, of Bombay and London, and Hilda, elder daughter of the late Saul J. Nathan and Mrs. Nathan, of 53, Belsize Park, N.W., and Singapore

The marriage was celebrated on May 28, at St. Paul's Cathedral, Valetta, Malta, between Paymaster Lieut. E. Arnold Crook, R.N.R., and Mary Clare (May) Broad, daughter of Colonel J. Lancaster, I.M.S. (retired), and Mrs. Lancaster, of San Remo, Italy.

The marriage was celebrated on May 3, at the Church of the Holy Name, Wodehouse Road, Bombay, between Major B. de L. Brock, M.C., 126th Baluchistan Infantry, and Ethel Margaret, widow of the late Captain Gordon Cable, I.A.R.O., attached 7th Hariana Lancers.

The King inspected on June 12 a detachment of Indian warrant officers and non-commissioned officers belonging to divisional ammunition columns, Royal Field Artillery, under the command of Captain H. C. Clogstoun, Indian Labour Corps, who are on short leave from France.

The marriage took place on June 17, at Warblington, Hampshire, of Colonel A. M. Moens, C.M.G., D.S.O., 52nd Sikhs F.F., son of the late S. M. Moens, I.C.S., to May, widow of Captain Dermot Affleck Graves, R.E., and daughter of Captain A. J. Douglas, R.N., of Roxburgh, Emsworth, Hampshire.

The marriage was celebrated on June 7, at the Rue Roquépine Church, Paris, by the father of the bride, of John Noel Macbeth, younger son of the late J. B. K. Macbeth, of Bombay, and Mrs. Macbeth, of Hanover Court, Hanover Square, to Enid Mary, only daughter of the Rev. W. T. and Mrs. Allen, 4, Rue Roquépine.

The marriage arranged between Robert Hamilton, Indian Civil Service (82nd Punjabis), son of Mr. and Mrs. Hamilton, Wellhay House, Alberton, and Nora Standen, daughter of Bertram Standen, C.I.E., Indian Civil Service, and Mrs. Standen, Chorley Wood Lodge, Rickmansworth, will take place on June 26 at Christ's Church, Chorley Wood.

The marriage was celebrated on June 12, at St. Mark's Church, Surbiton, between George Farquhar Singer, youngest son of Mr. and Mrs. Paris Singer, and Vera Marguerite, daughter of the late Major George Sartorius, 103rd Mahratta Light Infantry, and step-daughter of Mr. H. F. Freshwater, The Homestead, Cranes Park, Surbiton.

The marriage was celebrated on June 12, at Christ Church, Westminster, by the Right Rev. Bishop W. R. Mounsey, assisted by the Rev. Cavendish Moxon, between L. Holden Barford, A.C.S. and E., Bombay (Captain, I.A.R.O., Cav., Lieut., R.N.R., British Vice-Consul, Genoa), third son of the late J. G. Barford, of Glynfyllyn, Wokingham, Berks, and of Mrs. Barford, of The House, Coulsdon, Surrey, and Mary Sheila, eldest daughter of the late H. P. Todd-Naylor, C.S.I., C.I.E., I.C.S., and Mrs. H. P. Todd-Naylor, of Walton Court, Cheltenham.

The marriage was celebrated on June 4, at Luccombe, Somerset, between Major A. S. B. Roberts, I.A., Burma Commission, elder surviving son of the late Major-General A. W. Roberts, I.A., and of Mrs. M. K. Roberts, and Miss Nan Forbes, youngest daughter of the late C. H. B. Forbes, of Bombay, and of Mrs. Forbes, Oland's, Porlock, Somerset.

The Government of Serbia has conferred upon Mr. F. J. Smith and Mr. J. H. Walker the Order of St. Sava, V. Class (Chevalier), in recognition of the services which they rendered for our gallant ally. Their work was specially brought to the notice of Prince and Princess Alexis of Serbia when their Royal Highnesses visited Bradford.

The marriage was celebrated on June 3, at Murree, India, between Captain Derek Fitzgerald Massy, 33rd Ind. Cav., R.A.F., fourth son of the late Major Hugh Ingoldsby Massy and Mrs. Massy, of Stoneville and Cloughnarold, Co. Limerick, Ireland, and Margaret Vida Smith, daughter of the late Mrs. Anne Smith, of Hampstead and Bradford.

The engagement is announced, and the marriage will shortly take place, between Lieut.-Colonel F. R. Hawkes, O.B.E. (Indian Army Reserve of Officers), Indian State Railways, son of the late George Hawkes and Mrs. Hawkes, Abbey Cottage, Stevenage, and Constance Marion, daughter of the late H. T. Bovey, F.R.S., and Mrs. Bovey, 16, Hans Road, S.W.

The engagement is announced of Lieutenant (temporary Captain) Vaughan Montague Bradley, Royal Field Artillery, eldest son of Colonel Sir A. Montague Bradley and Lady Bradley, of Dover, to Irene Geraldine, only daughter of the late Robert Gerald Pantin, J.P., Indian Civil Service, and Mrs. Pantin, and granddaughter of Andrew Guy Everard, J.P., and Mrs. Everard, Hill Park, Bridgwater, Somerset.

The marriage was celebrated on May 5 at St. Thomas's Cathedral, Bombay, India, by the Rev. W. F. M. Hamerton, between Captain and Adjutant Arthur George Balbernie, M.C., Royal West Kent Regiment (the Queen's Own), son of the late Captain C. R. Balbernie, of Shanghai, and Mrs. Wheeler, Upper Norwood, and Doris Hilda, daughter of Mr. and Mrs. F. W. Higgins, of Chittagong, Bengal, India.

The marriage was celebrated on June 4, at the Barclay Church, Edinburgh, by the Rev. R. Sangster Anderson, D.D., assisted by the Rev. J. A. Hughes, M.A., the Rectory, North Berwick, between Eric Gerald Gauntlett, D.S.O., C.B.E., M.B., F.R.C.S., of King's College Hospital, London, late Lieut.-Colonel, R.A.M.C. (T.F.), Consulting Surgeon to the Salonika Forces, younger son of Mr. and Mrs. T. Lee Gauntlett, 37, Howards Lane, Putney, London, S.W., and Hilda Mary Gerrard, R.R.C., late V.A.D. Salonika, eldest daughter of Mr. and Mrs. James Gerrard, 24, Hermitage Gardens, Edinburgh.

APPOINTMENTS, PROMOTIONS, &c.

The Rev. J. R. Weller has been appointed Assistant Chaplain of Quetta, with effect from April 25.

Our Cyprus Correspondent writes:—Mr. F. B. Thompson, M.R.C.S., L.R.C.P., London, has been appointed District Medical Officer at Nicosia.

Mr. J. T. Martin, I.C.S., Central Provinces Commission, has been appointed Census Commissioner owing to the inability of Mr. Burn, United Provinces, to take up the post.

Lieut.-Colonel F. C. Iremonger, Superintendent of Police, on special duty in the Criminal Investigation Department, Punjab, has been appointed Chief Civil Intelligence Officer, Lahore.

The King has approved the appointment of Mr. Abdeali Mahomedali Kajiji, barrister-at-law, to be Puisne Judge of the High Court of Judicature at Bombay, to fill the vacancy caused by the promotion of Sir Norman Macleod to be Chief Justice.

OBITUARY.

The death is reported on June 9, at a nursing home, after an operation, of Mr. N. P. Chellagin, of Colombo, of the firm Molchanoff, Pechatnoff, and Co., of Russia, Hankow, and Colombo.

The death occurred on June 11, at 137, Cromwell Road, S.W., of Mr. Alec McMillan, Indian Civil Service (retired), late His Majesty's Consul at Nice.

The death occurred on June 13 of Captain I. C. Maling, C.M.G. He was born at Calcutta in 1841, and was one of the few remaining officers who served in the Mutiny.

The death occurred in June 14, in his sixty-first year, of David Hugh Lindsay, of Elmstone House, Barham, Kent, late General Traffic Manager, Madras and Southern Mahratta Railway.

The death occurred on June 14 at 32, Kensington Court Mansions, W., of George Greig, late of the 93rd Sutherland Highlanders, and of the Indian Forest Department, in his eighty-first year.

The death occurred on May 1, in hospital at Poona, India, of Bruce Cunningham Glen, second son of the late Reginald Cunningham Glen, M.A., LL.D., V.D., barrister-at-law, aged 32.

The death took place on June 9, at Redbourne, 6, Woodgrange Avenue, Ealing Common, W., of Mr. Frederick Hodgson Bentham Schneider, eldest son of the late General Frederick Schneider, Indian Army (Bombay Staff Corps), aged 65.

Mr. George Varley, a Crimean veteran, died on June 16 at Littlemore, near Oxford, at the age of 84. As a member of the 23rd Royal Welsh Fusiliers, he took part in the storming of the Redan in June, 1855, and on the following July 22 was wounded outside Sevastopol. Afterwards Varley took part in the capture of Cawnpore and the relief of Lucknow. He was awarded a medal and the Sevastopol clasp, as well as the Turkish medal and the Mutiny medal.

NEWS IN BRIEF.

A post office has been opened at Tel Afar (Mosul Division), announces the *Basrah Times*.

The Union of the East and West is giving a series of Indian performances in the open air. The first took place on June 16.

The American Mission to Syria arrived at Constantinople on June 12, and shortly afterwards proceeded to Jaffa. Thence it will go to Jerusalem, Beirut, and Aleppo.

The Headquarters Committee of the Scottish Women's Hospitals, 2, St. Andrew Square, Edinburgh, is represented in London by an office at 110, Victoria Street, S.W.1.

In recognition of their good work during the recent disturbances, the staff of the Telegraph Department in Lahore have received the following awards:—A bonus of Rs.500 to the superintendent-in-charge, 30 per cent. of their pay to signallers, and one rupee per day for seven days to the menial staff.

THE TURKISH PEACE TERMS.

The peace terms with Germany having been finally settled, and the preliminary statement of the Austrian terms delivered, the Peace Conference in Paris naturally turns to the remaining belligerents. One of these—Bulgaria—has not been mentioned as occupying the attention of the "Big Four," and although that country was the first of the enemy Powers to collapse and withdraw from the war, it appears that she will be considered last in the negotiations. Admittedly Bulgaria is the smallest of the belligerents, and the political, economic, and territorial problems connected with her restoration to the normal conditions of peace are less complex than those connected with Germany or Austria. But the delay, although conceivably inevitable, is none the less unfortunate, since the mere lapse of time alone hinders the rebuilding of civilisation in the Balkans. In the case of Turkey a more definite step has been taken, and Ottoman statesmen have been invited to Paris to enter into discussions with the Allies. The whole world has been struck by the distinction between the method adopted in this case and in dealing with the German and Austrian representatives, who were merely allowed to receive the terms and comment on them in writing, oral discussion being prohibited, and the prohibition being maintained despite the appeals of Berlin and the seductive smiles of Vienna. While in the case of Turkey it is understood that the Allies will formulate the broad principles of the terms before presenting them, it is clear that the discussions will be real, and the negotiations actual, and it may be assumed that there will be a certain amount of give-and-take before the treaty is definitely signed. The Turk is not likely to overlook the advantage, the designed advantage, which this course gives him over his co-belligerents. His worst enemies have never accused him of being either a child in diplomacy or of displaying that combination of truculent rudeness and whining penitence which distinguishes Count Brockdorff-Rantzau.

The fact that the negotiations with Turkey will be real negotiations must be considered in connection with another fact—that President Wilson appears unlikely to take the prominent part in them which he has assumed in the construction of the terms imposed on Germany and Austria. The President is now enjoying his long-delayed visit to Belgium, and it appears that he proposes to return almost immediately to the United States, where he will have, according to current report, to fight a far harder battle with his own people than any that has been waged in the decorous atmosphere of secrecy at Paris. American politics are obviously not our affair, but President Wilson's return to the States before the close of the negotiations indicates clearly enough that in his opinion the settlement with Germany and Austria was vital to American interests, and equally clearly that the settlement with Bulgaria and Turkey is not vital. Nobody on this side of the Atlantic will question that his reading of the situation in that respect at least is correct; but it carries with it the implication that America is unlikely to intervene decisively in the future destinies of Asia Minor. At one time, indeed, President Wilson seemed to favour that extension of responsibility, and in a speech in his brief spring visit to the United States he asked his audience whether their heart beat as passionately as his over the question of Armenia. The immediate response, or subsequent embittered criticism of his opponents and embarrassed silence of his friends on that point may have convinced him that American interest in Asia Minor in general and in Armenia in particular was more platonic than real; and a more recent suggestion of the Parisian Press, which we interpreted as a *ballon d'essai* at the time, to the effect that America should be the mandatory of the League of Nations in large parts of Asia Minor appears to have evoked no response whatever in Washington, despite the recognition by all parties of the legitimate interests of American missionaries. It seems likely, therefore, that President Wilson is meditating a compromise. He is so deeply committed to the League of Nations, of which he desires to be recognised by posterity as the founder, that he cannot withdraw from its advocacy, and he intends to convert his own people, if possible, from their old political isolation into active support of the League. But he appears to recognise that their repugnance to entangling alliances and to intervention in foreign affairs—except at the call of some extraordinary emergency, such as arose when Germany threatened to sink American ships in 1917—is a permanent and unconquerable factor in American political life, which revolted against the Imperialistic schemes of President Roosevelt in precisely the same way that it is now revolting against the intervention and "beneficent guidance" policy of President Wilson; and for that reason apparently the idea of America as a mandatory of the League of Nations will be greatly minimised, if not abandoned altogether. The decision is not unnatural. From every point of view there seemed something incongruous in American intervention in a country which does not interest the majority of her citizens either culturally or commercially, while her renewed insistence on the Monroe Doctrine makes it clear that her special political and economic interests lie nearer home.

We take it, therefore, that the negotiations with Turkey will be carried on mainly by France, Britain, and Italy. There can be no question, of course, of a return to the *status quo;* the war has irrevocably altered the position of the Ottoman Empire, and Turkey can no more be exempted from the consequences of defeat than her late comrades in arms. Three separate questions, however, come up for discussion in Paris in considering the terms of peace. Although there can hardly be any idea of Turkey paying an indemnity, on the familiar principle that blood does not flow from stones, the financial question of the Ottoman Empire will have to be investigated carefully. Now, the finances of the Empire are at once so complicated and so disordered, and the responsibility for the pre-war debt is so scattered through Europe—the war debt, we take it, will be written off by Germany and Austria as a loss—that consideration of this matter in itself must occupy some time. The Turks will certainly desire that those provinces which no longer remain within the Empire shall assume some portion of the Imperial Debt, in accordance with the familiar principle, whose latest example is furnished by Austria, and this claim, if and in so far as it is reasonable, will have to be investigated by responsible statesmen. The territorial question is hardly less difficult. Palestine must obviously be liberated, Arabia has again liberated itself, and Mesopotamia cannot be restored to Constantinople; while the idea of restoring Armenia to the Turk after the massacres would be intolerable. More difficulty is likely to arise over the conflicting claims of Italy and Greece in the Levant, and it is to be regretted that the Conference in Paris has already prejudged these in part aside from the main issue. The path of future agreement has not been rendered more smooth by these sudden decisions, which appear to have been not unconnected with the froth and foam aroused by President Wilson's unexpected plunge into the Adriatic. But the territorial question in Turkey is intimately connected

Digitized by Google

with a problem that does not arise elsewhere in the settlement—the religious question. There is a school of thought, both in America and Europe, which would disestablish the Ottoman dominions altogether, and eject the Turk from Constantinople. This school has been extremely vocal lately, and it has naturally received some support from earnest religious people, who remember that Constantinople was once a Christian city. But Britain is a Mohammedan Power, and now a greater Mohammedan Power than ever, and we are bound to take into consideration the legitimate and praiseworthy susceptibilities of our Mohammedan fellow subjects. India is hotly against the idea of disestablishing the Sultan and ejecting the Turk from Constantinople in favour of a Christian mandatory under the League of Nations, and it would be sheer folly not to take that fact into very serious consideration. Fortunately there is no doubt that the whole subject will be exhaustively reviewed, and the recent protest of Indian opinion remembered, before any definite decision is come to. A mistake on this point would have serious consequences for our prestige in Asia.

ENVER: HIS CHARACTER AND CAREER.—II.*

(FROM A CORRESPONDENT.)

The Sultans of Turkey until Abdul Hamid exercised in regard to the female members of the Imperial House the absolutism of primitive times. The Imperial princesses were deprived of their natural right of disposing of themselves; they could be married only by Imperial *iradé*, and the Sultan's will had to be obeyed, otherwise the recalcitrant princess knew well that she would forfeit any further chance of marriage, and remain besides in disgrace for the rest of her days.

When the Unionists succeeded to power they arrogated to themselves even this dynastic right. At the close of 1909 a list was submitted to the Grand Vizierate of the names of the Princesses who had attained to the marriageable age. The list was referred to a committee composed of senators under the presidency of Hilmi Pasha, who made a judicious selection of husbands from the sons of Ministers, generals, and other personages of exalted rank. The niece of the Sultan Mohammed Reshid fell to the lot of Eslam Bey, one of the sons of Fuad Pasha el Masri ("the Egyptian"), surnamed by the Turks "Deli Fuad." But a few hours after this decision was reached Hilmi Pashi received a warning from the C.U.P., and actual threatening advice from some of its members to withdraw his decision, because, they stated, it was not worthy of the nation that Eslam Bey el Tcherkessi (the Circassian) should be allowed to marry the highest Princess in the reigning house.

This unwarrantable interference in personal matters on the part of the Unionists vexed Hilmi Pasha, and, to find a way out of the *impasse*, he sought the advice of Nejm el Dine Monla, the friend of the Unionists and one of his colleagues on the Committee. But all the latter could do was to tell him that although the Unionists were blameworthy for taking such a strong attitude in regard to a man of his exalted position, yet their intention was laudable, as they wished to marry the Princess (daughter of Suleiman Effendi) to Enver Bey, the hero of liberty, for having consecrated his life to the service of the Ottoman nation. Hilmi Pasha had, of course, to bow, as he had done on previous occasions, to dominant Unionist influence.

This incident produced the worst possible impression on all thinking persons in the capital, who had expected Enver and his compeers to be the defenders of the principle of personal liberty and not the first transgressors of such a sacred right; and it was given no little importance in the Imperial houschold. The matter was, in fact, submitted to the Heir Apparent, Yussuf Izzeddin, whose dislike of the Unionists was notorious, and who forthwith demanded explanations from Hilmi Pasha. The latter plainly said that the candidature of Eslam Bey had to be withdrawn by order of the C.U.P., and that the Senatorial Committee felt unable to run counter to the wishes of Enver and his clique. Prince Yussuf Izzeddin was equally incapable of opposition, because the final decision in these matters rests with the Sultan, and he well knew how little the Sultan's character fitted him for taking a strong attitude in this connection.

The passive attitude of the Heir Apparent finally compelled Saleh Pasha Khair Eddin to take the matter up with Mahmoud Shevket Pasha and the principal leaders of the Army, as well as many of the senators and leading publicists and Ulema. The Mufti of the Sheikh Ul Islam-

* *The first part of this article appeared in the "Near East" of June 13.*

ate felt so strongly over this matter that he forthwith solicited an audience of the Sultan; and actually submitted that such arbitrary action on the part of Enver and the acquiescence of the Khalifa therein would reflect on the honour and prestige of the Imperial House, to which reverence was due from all the nation, and not less so from the members of the C.U.P. To this impassioned appeal the Khalifa gave the cool and curt reply: "And Enver is our child, too." Seeing the hopelessness of trying to counteract Unionist influence through such channels, Saleh Khair Eddin Pasha, as a last resort, sent the Princess, his wife, to her cousin to acquaint her with the high-handed behaviour of the Unionists, and to point out to her that a forced marriage such as they meant to impose on her with Enver even a helpless maid could not tolerate, much less a Princess of the House of Othman. To this the Princess's mother replied, "Such is the will of Sultan; we are powerless to resist aggression."

About a couple of months later the Majliss el Mabouthan (Parliament) voted an allowance of £2,000 for the trousseau of the Imperial Princess. This however did not satisfy Enver, who intimated to his compeers that he wished to have the matter reconsidered; and, after much discussion, the Unionists decided that Enver should exceptionally be allowed a double trousseau allowance, the other half to be drawn from the secret funds, so that the opposition party might not get wind of the matter.

Mahmoud Shevket Pasha was the only outstanding figure among the Young Turks. His own enemies acknowledged his military attainments and ability, as well as his judgment and integrity. He was courageous without being cruel, and earned universal esteem. One of the Opposition party in the House once said to Talaat: "But for the existence of Mahmoud Shevket Pasha in the C.U.P., I would be inclined to call it the Committee of Evildoers." It was he who prevented many an imminent outburst against the Unionists and restrained on the other hand the reckless ambitions of their deluded youths Those who had occasion to note his opposition to their Turkifying policy and to the open declaration of their anti-Islamic doctrine can best realise the value of the man and appreciate the sincerity of his patriotism. The presence of a man of this stamp in the Unionist gang was a source of uneasiness and a stumbling-block in the way of their unholy ambitions. It was not long therefore before he disappeared, and they had the field all to themselves.

It is said that on the occasion of the publication in the Salonika Press of an article entitled "Have the Turks any one but thee, oh Enver," Shevket Pasha remarked to his brother, "These youths seem to have vowed to overturn everything in the Empire, even reason and common sense. They wish to do everything in one day, and they cannot rest until they have got hold of every post in the Government. They now threaten me, in their papers, with Enver, and next with the Committee's power; and I can tell thee, oh brother, that what has happened so far is enough to ruin the mightiest Empire. You can therefore imagine what the consequences will be when these light-headed youths have secured all the Government posts; they aspire to the highest, even to the throne of Othman; for I have often overheard them exchange whispers on the subject. Vain was my advice to a clique whose sole aim and object is to prepare the people's mind to the proclamation of Enver as Dictator."

PRESS ON THE NEAR EAST.

America and Constantinople.

In *The Times* of June 11 Mr. Frank H. Symonds, an American writer, had an exceedingly interesting article on "The Future of Turkey." He shows that American participation in the Near East is an extremely delicate proposition, but one full of enormous possibilities for good. On Constantinople he says:—

If the American mandate is to be stretched to cover Constantinople, Anatolia, and Armenia the task will be far more gigantic and far more difficult. Constantinople has been the cause of more wars than almost any other city in the world. It is hard to believe that in the future it will be less coveted. Greek and Bulgarian ambitions will continue. A day is almost certain to come when Russia will once more look southward towards Tsargrad and Anatolia. We shall find ourselves faced by seven million Turks who will hardly welcome our rôle, and we shall find ourselves confronted with the task of defending them against the Greeks and the Italians. A mandate for Constantinople, Anatolia, and Armenia would mean the employment of an army of a quarter of a million Americans for an extended period of time. It would mean an enormous task of organisation industrially as well as politically, and it would mean inevitable participation in all the disputes of the future in the Near East. It would mean, in reality, that Europe had transferred to the United States the gigantic task of solving the old Eastern problem, which is and remains beyond European possibilities, but we should find ourselves handicapped in such a solution by the fact that essential parts of the territory affected have already been assigned to Italy and Greece, including the natural borders. Armenia would be a much less ambitious task, but one the difficulties of which could not be exaggerated.

It would certainly take thousands of American soldiers and consume years. I have said, and I repeat, that no finer work of national unselfishness is conceivable, and if any mandate is to be taken by the United States none is more worthy of our acceptance, since none would provide greater opportunities for service and fewer of profit. But it would be a task beside which the Philippines was child's play and Cuba a mere pastime.

Between Asia and Europe.

The *Outlook* for June 7 contains a very informative article on "The Gateways to the Orient," by "Seminole." The writer shows that before the war the peoples inhabiting the land that lies between the Caspian and Black Seas and the Persian Gulf were progressing towards union through an economic fusion of interests.

Nationalism was giving place to a natural exchange of trade between the hills and the plains—the nomads and the settled communities. It made little difference to which political system the peoples belonged, whether their allegiance was claimed by the Czar, the Sultan, or the Shah. Religious animosities were giving place to economic and cultural exchanges, and such cleavage upon the lines of nationality as existed were principally of a poetic and artistic nature. Social economy and commonsense seemed to augur well for the unity of the peoples in this geographically confused region. Economic internationalism seemed about to solve the animosities of centuries, and there seemed but little doubt that if left to themselves the various peoples would have worked out their own salvation.

However, the economic ambitions of Russia and Germany broke up this promised unity, and in the resultant confusion all these peoples turned in self-defence to a revival of the old nationalisms. They still are turning from the League of Nations to anarchy or to Islam. But the writer entertains hopes of ultimate union.

Islam is indigenous, and has no ulterior motive of exploitation; it offers a common ground upon which nomad, villager, Turk, Tartar, Persian, and Afghan can combine without strife. Before they were interfered with by Westerners, the Suni and Shiah and the Christian Armenian were in a fair way to compose their difficulties. For a moment, under the influence of the higher ideals of the Russian revolution, they did get together. They seek again for a common means of living and let live for the revival of trade rather than the victory of exploitation. Islam offers to the democratic Christian a sympathetic ground on which to plant his ideas of social economic brotherhood, for the Islamic system is essentially democratic. The idea of nationality splits these people vertically into warring compartments, in which murder or deportation of the minority is the only solution. Bolshevism divides them horizontally into classes and kills off the very idea of brotherhood and freedom. Christian and Moslem must, therefore, find some softer or cultural means of progress. Perhaps in the democratic system of Islam they may find it. Every encouragement should be given to economic fusion of interests, fully utilising the power of Islam in so doing, and "national aspirations" should be definitely discouraged where they cannot be justified.

Industry in Constantinople.

In the June number of the *Wide World Magazine* there is a most instructive article by L. M. J. Garnett called "The Trade Guilds of Constantinople." It shows that an economic system similar to that of Europe in mediæval times still obtains in the Turkish capital.

All members of the various trades, crafts, and callings pursued by the industrial population of Turkey are, for their mutual protection and support, enrolled severally, irrespective of race or religion, in guilds or corporations. Though now less numerous than in former centuries owing to the decay of many once important industries, these guilds still constitute an important feature of urban industrial life, especially at Constantinople, where representatives of all the various crafts and callings practised in the Empire are to be found.

Here each *Esnaf*—to use the native term for these corporations—has one or more lodges in every quarter of the city and suburbs, presided over by officers bearing titles equivalent to priors, sub-priors, superintendents, and inspectors, who are annually elected by the members from among its own master-craftsmen, such officers being formally recognised by the city authorities, who hold them responsible for the good behaviour of their fellow-guildsmen.

Certain among the *Esnafs* possess considerable revenues, and a few enjoy peculiar privileges granted by royal charter in bygone centuries in return for services rendered at some important political crisis. Among these are the shoemakers, who, it is said, have special officers empowered to judge and punish all offenders belonging to their fraternity without the interposition of the legal authorities, this extraordinary privilege having been conferred upon them in the sixteenth century by Suleyman "the Magnificent." Some *Esnafs* are composed entirely of Moslems, certain callings being exclusively in the hands of the ruling race, others entirely of Christians. Many, however, include adherents of both creeds; and, as members of the same *Esnaf*, Christians and Moslems, allied by an *esprit de corps*, and also, of course, by trade interests, pull together much better, and evince mutually a greater liberality of feeling, than is displayed generally in the social relations of Moslems and Christians.

The history of these guilds is also of curious interest.

Though it is a matter of historical fact that certain of these guilds had already been long established among the Greek, Venetian, Genoese, and other Christian nationalities inhabiting Constantinople and the other seaports of the Levant at the time of the Turkish Conquest, their Moslem members assign to them an Oriental and probably much more ancient origin than can be historically verified. The merchants, for instance, maintain that their *Esnaf* was incorporated in the lifetime of the Prophet, who himself followed the calling of a trader, and thus became patron of the Guild of Merchants. For, as with the guilds of Western Europe, every trade has its own patron saint, the majority of them being the prophets and holy men of the Hebrew Scriptures and the Koran, each of whom, according to Moslem tradition, invented or excelled in the craft or calling placed under his protection. Thus Adam, besides being the patron of the Tailors' Guild, is also that of the Bakers'; and among other patron saints of *Esnaf*, Abraham, as the traditional builder of the holy Kaaba at Mecca, is the protector of masons; Cain, of the sextons, and also of all those who shed blood in their callings; David, of armourers and smiths generally; Joseph, of the watch and clock-makers; while Jonah and the Seven Sleepers of Ephesus—who are included by the Moslems in the roll of holy men—watch, somewhat paradoxically, over sailors, especially those who navigate the Black Sea. . . .

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It is satisfactory to learn that the strike of the Suez Canal employees came to an end on June 10. The terms on which the strike has been settled are not yet available here. It may be noted, however, that the strike is described as having been purely an economic movement, and as having been devoid of any political motive.

***

Widespread regret will be felt at the news of the death of Mr. William Allan Ironside, senior partner of Bird and Co., and president of the Bengal Chamber of Commerce and the representative of the Chamber on the Imperial Legislative Council, which took place in India on June 5 from cholera following upon enteric fever. Mr. Ironside, who was only forty-nine years of age, went out to Calcutta seventeen years ago as a member of the great industrial firm with which his career has been associated, and the continued progress of its activities has been in no small measure due to his outstanding ability, initiative, and enterprise. His interests were not confined to business; he took a keen interest in public affairs and did much to promote gifts for war purposes in Bengal. He took a prominent part in the debates on the excess profits tax in the Imperial Legislative Council, and was instrumental in obtaining a number of amendments to that measure. His varied services received recognition in this year's Birthday Honours, a knighthood being conferred on him in the list published on June 7.

***

The value of organisation in the modern world is briefly touched on in an interesting article in a recent issue of the *Journal* of the British Chamber of Commerce of Morocco, in which it is pointed out that as regards Morocco, while in the future there will doubtless be many changes in the nature of the work required, and perhaps in the methods adopted, "there seems little likelihood that the need for the existence of a chamber will be lessened." That, of course, goes without saying, for, while even in British overseas possessions where the trade is, and always has been, mainly confined to the Empire, the local chamber of commerce is a *sine qua non* for the furtherance of British trade interests, it does not need emphasis that the need for such an organisation is far more urgent in territories outside the Empire like Morocco, where British traders are engaged in the uphill task of trying to obtain a satisfactory footing in a market where British trade was once of considerable importance, but where it was allowed to decline in the face of competition until before the war it was of comparatively little account.

***

In supporting British commercial interests in Morocco, and in helping, in common with other agencies, to make known in this country the openings for trade development within its sphere, the chamber has behind it a notable record of good work. But its labours are only commencing. The spade work has been done; British merchants and manufacturers are no longer unacquainted with the opportunities that, in circumstances such as I think we are justified in anticipating, will be presented to them in Morocco; but the development of trade on permanent lines will call for careful guidance, while it naturally follows that the larger British trade interests in Morocco become the greater will be the need for a body which can represent the views and interests of the British community in that country. And equally it follows that for the chamber to be of the fullest utility it must receive ample support from the community. In this connection the statement in the Journal that "the chamber certainly cannot complain of the extent of the support received from its members in Morocco, which has been much more consistent and hearty than, under the circumstances, could well have been expected," is most hopeful, and of excellent augury for the future.

***

The report of the Egyptian Markets, Ltd., for 1918, which has just been issued, shows a somewhat marked falling off in net profits as compared with the figures for 1917. There was a decrease of £1,638 in the gross receipts from the cattle markets, the figures being £31,058, but the gross receipts from the general markets were £1,364 higher at £23,188. The net receipts from the slaughter-houses decreased by £304, while the net profit from the trading account was £10,597, as against £19,896. The net revenue of the company amounted to £31,709 as compared with £46,894, and the balance available for distribution is £29,789, from which it is proposed to pay a final dividend of 5 per cent., making 10 per cent. for the year, which will take £17,470, and also, subject to the settlement of the proportion of profits due to the Government and the amount of excess profits duty payable, to pay a dividend on the deferred shares at the rate of £6 2s. 4d. per share, leaving £10,483, as against £10,307 brought in. The deferred shareholders, incidentally, benefitted substantially as the result of the adjustment of the accounts for 1917, for, while the deferred dividend was estimated to be at the rate of £8 3s. per share, the amount divisible was £11 15s. 4d. per share.

***

At the recent general meeting of the Bank of Abyssinia the chairman, Mr. F. T. Rowlatt, was able to give a most promising review of the growth of this institution during 1918. The net dollar assets of the bank, on a valuation of seven dollars per £1, stood at £213,500 at the end of 1918, against £173,300 at December 31, 1917, when the valuation was 7.50 dollars per £1, and against £129,900 at the end of 1916, when the valuation basis was ten dollars per £1. Provision against this new valuation has been made to the extent of £22,000, making the reserve for this purpose £68,558, the net valuation rate thus working out at 10.31 dollars per £1, as against 10.24 per £1 in the previous year. As the exchange of 10.31 dollars per £1 is equivalent to an intrinsic value of the dollar at the rate of 28½d. per ounce standard silver, a rate which is little more than half the price of silver to-day, it will be realised that the bank's position in this respect is very satisfactory.

***

As regards the balance-sheet, it may be noted that the current and deposit accounts of the bank now stand at £372.500, as against £232,900 on December 31, 1917, and £142.200 at the end of 1916. The gross profits of the bank amounted to £45,150, and after allowing for general expenses and establishment and directors' fees, for the depreciation of premises, and after placing to reserve against the depreciation of the standing value of the bank's dollars the sum of £22,200, there remained a net profit of £6,720. Of this sum one-tenth was placed to the statutory reserve, £5,000 was devoted to the payment of a first dividend of 4 per cent. on the paid-up capital of £125,000, and £1,040 was carried forward. For the rest, the chairman specially referred in his speech to the aid and encouragement given by Her Majesty the Empress Zaouditou and the heir apparent, H.H. the Ras Taffari, who is a member of the board of directors.

***

Sir Henry Kimber, presiding at this week's general meeting of the Calcutta Tramways Company, gave a most encouraging account of the results of the past year's working. The passengers carried exceeded the numbers for the previous year by over four millions, and the traffic receipts increased by £24,800. Of the total receipts, which amounted to £278,300, a more favourable exchange accounted for £14,128, and the total increase in the figures for 1917 was £35,460. The gross profit was £151,100, and adding to this interest and the amount brought forward and deducting income tax there remained £143,704, and deducting £45,450 for debenture interest and dividends paid during the year there remained £98,253, out of which a final dividend of 6s. per share has been declared, making 8½ per cent. free of tax for the year, as against 8 per cent. for 1917. Once again £25,000 is placed to reserve, making that fund £120.500, £2,000 is set aside as a reserve against investment depreciation, and £28,600 is carried forward, as against £8,400 brought in.

THE INDIAN COTTON PROBLEM AND ITS SOLUTION

I.—The Problem.

The whole position in regard to the production of cotton in India—actually the second, and potentially, perhaps, the first, of the world's sources of supply—has been thoroughly explored by the Indian Cotton Committee, a summary of whose recommendations appeared recently in these columns. The Committee was constituted on the approved Indian model, and was designed for business rather than talk. Each of the six members may justly be regarded as an expert on some aspect of the problem, which is too complex to be thoroughly grasped in all its branches by any individual. They went straight to work, lost no time, gave no pyrotechnic displays of the kind with which we are familiar in this country, developed no important differences of opinion, and produced a report which offers a clear and definite programme for immediate and sustained action. We may say at once that the result impresses us most favourably. The measures recommended by the Committee should go far to solve the problem, and lead to an increased production of greatly improved quality, and in view of the Indian Government's absorption in the question of constitutional reform, it is of great importance that commercial and industrial opinion, both in this country and in India, should be speedily and effectively mobilised in favour of the execution of the programme which has at last been provided. We must, however, admit that the report has the defects of its qualities, and, while it deserves serious study, its perusal cannot be recommended unreservedly to busy men who wish to obtain a general view of the problem without being overwhelmed in a mass of technical detail. In these articles we shall attempt to furnish materials for such a general view; to-day we endeavour to explain how the Indian cotton problem has arisen and where the difficulties lie, while in a subsequent article we shall discuss the main lines of the programme by which the Committee hope to reach a satisfactory solution.

How the Cotton Problem Arose.

India was growing cotton, spinning yarn, and weaving cloth long before Lancashire took any interest in the subject. Almost every part of the country clothed itself, the locally-produced cotton being spun and woven on the spot, while some particular types of cloth, woven for the most part on or near the sea coast, were exported to other parts of the world, and commanded extensive markets in Africa and throughout the Eastern seas. The Indian masses were in those days poorer than now. They wore fewer clothes, and what they wore were very coarse, roughly made from the hardy and indigenous fibre; fine goods were, indeed, produced in limited quantities for various special markets, but the bulk of the production would to-day scarcely find a sale. In these circumstances a large number of strains or races of the cotton plant grew up in different localities, a few of good quality, but most of them very inferior when judged by modern standards. From the seventeenth century onwards this ill-organised industry gradually came into touch with the more progressive West; the markets for fine goods were captured by other countries, the increased wealth of India enabled a large proportion of the population to buy foreign goods of better quality than the standard produce of their own country, growth of the superior cottons became unprofitable, and growers came to rely more and more on the hardy and prolific types, the fibre of which was still in demand for certain purposes. It was, and is, bad cotton, but its growth still pays the peasant, and so long as it pays he will continue to grow it until he is shown a better way.

So much for the agricultural side. The change in industrial conditions involved new developments in commerce; the fibre had to be transported over long distances, and this business fell, naturally, into the hands of Indian merchants, men whose traditional experience led them to take the shortest possible view. They preferred an immediate profit, however obtained, to the prospect of developing a sound and durable trade, and their methods in regard to cotton, as to some other staples, have in the past given rise to criticism. The final result of the change was that India was left producing cottons of the very lowest grades, selling them wherever she could, and buying a large proportion of her clothes from abroad. The change was inevitable in the circumstances: India might conceivably have developed her industry so as to retain and extend the markets she originally possessed, if she had commanded cheap power, mechanical ability, and *entrepreneurs* of the requisite calibre; but in the eighteenth century, at least, these essentials did not exist, and the industry was consequently beyond her reach. Of late she has made some headway, but, speaking broadly, she is still far behind the times.

What the Cotton Problem is.

The great question for India is now how to produce more cotton, and cotton of a quality better suited to modern needs. She wants such cotton for herself, and the world wants it also, for the world has not enough good cotton to meet the demand. The world at large does not care greatly whether India spins and weaves the cotton she grows, or exports it to be spun and woven elsewhere; that is a matter for India to settle, in competition with other countries, provided only that the cotton is produced. The Committee have very rightly laid down the fundamental principle that no measures are permissible which savour in any way of exploitation. The Indian grower cannot be forced to raise cotton in the quantity or of the quality required; it must be made worth his while to do so. This being admitted, the problem breaks up into two divisions; first, can Indian peasants grow more and better cotton? and, second, can it be made worth their while? The great merit of the Committee's report is that it examines these questions thoroughly and in detail, and sets out a programme which offers a reasonable prospect of a satisfactory solution; that programme will form the subject of a subsequent article.

YUGOSLAV FINANCIAL MISSION.

At the end of this month the Yugoslav Financial Mission to the Peace Conference in Paris is expected to arrive in Great Britain. This mission is authorised by the Yugoslav Government to make the necessary purchases for industrial and agricultural reconstruction for the devastated country of Serbia and for other districts of the new kingdom. This mission is headed by Dr. K. Stojanovic, formerly Secretary to the Board of Trade, and M. M. Savcic, former Minister of Agriculture. A certain number of authorities and experts will also accompany this mission, among whom are M. M. Pajevic, expert for machinery, and M. D. Tomic, expert on technological questions. The agricultural expert, Mr. R. Neshich, has already arrived to make the necessary preparations for the work of this mission.

The Anglo-Persian Oil Company, which some time ago acquired an option on 10,000 square miles of supposed petroliferous territory in New Brunswick, has now received a cable reporting that a gusher has been struck at a depth of 2,660 feet, the gas pressure being of such force as to blow the oil over the top of the derrick.

INDIAN INTELLIGENCE.

Third Wheat Forecast.

The Indian Trade Commissioner has issued the following weekly cabled news, received from the Director-General of Commercial Intelligence, Calcutta, dated June 6:—

General rain in Tenasserim, Assam, Bengal, Orissa, Konkan, Western Hyderabad, Madras, Deccan and Malabar. Local in Burma at Chota Nagpur, Bombay Deccan and Mysore.

All India third wheat forecast acreage, 23,566,000; yield, 7,407,000 tons. (Last year, similar forecast, 35,342,000 acres; 10,184,000 tons.)

Bombay Cotton Market irregular. Fully good broach, July-August, quoted 545 rupees. Piece goods market active, and general feeling optimistic. Calcutta Jute Gunny Markets unchanged.

Construction Tanakpur Barmdeo metre gauge railway, four miles; Rohilkund and Kumaon Railway Company sanctioned.

INDIA'S INDUSTRIAL DEVELOPMENT

Lord Reay, presiding at the annual meeting of the East India Association on June 16, stated that he considered that the industrial development of India ought now to be taken in hand very firmly, and that the Government should send to India the best representatives of her industry. They wanted a special staff of experts to start the industrial movement in India, and when once started he thought prosperity would be very different from what it had been in the past.

Two Cunarders and a P. and O. Liner are stated to be among the latest orders booked by Sir W. G. Armstrong, Whitworth and Company, of Newcastle.

A preliminary meeting of the recently appointed Indian Currency Committee will be held at the India Office on Monday next, when the course of procedure to be followed at the inquiry will be discussed.

Sir Frederick Black, K.C.B., Director of Navy Contracts, has, with the permission of the Board of Admiralty, resigned his office in order to take up an appointment as a managing director of the Anglo-Persian Oil Company. Sir Frederick Black, who was appointed Director of Navy Contracts in 1906, joined the Ministry of Munitions in 1915, on its first formation, as Director-General of Munitions Supply, and subsequently he served as Acting Chairman of the British War Mission to the United States.

THE FINANCIAL POSITION AT ALEPPO.

The Exchange Problem.

(From a Correspondent.)

It is to be hoped that the Government will shortly publish (and take action upon) the report of the Commission recently sent to Northern Syria to inquire into the question of exchange in that country. Although greatly improved, owing to the arrival of English goods in the Aleppo market, it is still far from satisfactory, and both the British public and our Army of Occupation are still losing over the exchange of the Egyptian note. It must be understood that all payments for requisitions and all payments to our troops are made in Egyptian paper, so that the Egyptian note stands for British credit. To appreciate some of the reasons for the loss which has occurred, it is necessary to consider the situation previous to our occupation of Aleppo. That the Germans intended to stay in Aleppo is abundantly proved by the fact that they treated the inhabitants remarkably well and paid gold for everything they bought. This not only established their credit but facilitated their dealings with the local Arabs, who invariably distrust paper money. Indeed, they will seldom trade for anything but gold, and generally all deals, including payments of rents, were carried out in gold. The rate of exchange of Turkish paper was £T5 paper to £T1 gold. Apropos of this it is admitted that some merchants made fortunes during the war by the simple expedient of buying Turkish paper in Aleppo and transferring it to Germany, where it was met at face value, according to the terms of the agreement between Germany and Turkey. This money was turned into merchandise, which was railed to Aleppo and sold in the bazaar for gold. They then repeated the process, and must have been deeply disappointed when our advent in Aleppo put an end to an exceedingly lucrative game.

Aleppo, it will be evident, was hardly the place to float the Egyptian 100 piastre note at 166 Turkish piastres, unless either gold or goods were imported to back it. If, in the early days of our occupation, £50,000 in British gold had been imported, it would probably have established the Egyptian note at par. It is also probable that the Bedouin, when once they found that they could exchange an Egyptian note for a golden sovereign, would have readily accepted them. The educated classes already knew that £E1 note would buy £1 worth of goods in Egypt. Gold, however, was not forthcoming, and, as the railway line had not yet been repaired and all available lorries were required for supplying the troops, it was impossible to import goods. At first merchants and shopkeepers freely exchanged 8 mejidies (20 P.T. Turkish silver piastres) for an Egyptian 100 P.T. note, but as time went on and no gold or goods were imported into Aleppo, the exchange dropped to 7 and then 6 mejidies. A further cause of the drop was that the food and forage contractors could not get the Egyptian paper, with which their contracts were paid, taken at the Government rate, especially by the Bedouin. The general result of all this was that the Government and our officers and men were losing 25 per cent. on every £1 they spent. At Aintab and places north of Aleppo Egyptian paper was not legal tender, and our requisitions and the troops were paid in Turkish paper.

Now, let us consider the steps taken to remedy this state of affairs. Shortly after our occupation a proclamation was issued by the Commander-in-Chief fixing the value of the £E1 note at 166 Turkish piastres. The proclamation went on to say that it was an offence against the law to change the note for less than its face value. Unfortunately, finance in Aleppo recked little of proclamations signed in Egypt, and continued its extortionate habits. True, one could summon a gendarme and incarcerate the shopman who refused to give the correct change, but as all law courts had been abolished, it merely meant that the shopman had to put his hand in his pocket in order to be loosed. Further, there was a simpler way of eluding the edicts of law and order—either deny that you had any change or put up your price 25 per cent. to cover your loss on exchange. The food and forage contractors naturally had to take payment at Government rates, and as the prices of various commodities were fixed by the local market rate, there were various means by which they could ensure that they should not be out of pocket over the transaction. On January 24 a proclamation was issued by the Arab Government forbidding the export of gold or silver from Aleppo to Adana, and also forbidding the import of German and Austrian securities. This, at first, caused large purchases of Egyptian paper on the Bourse, but intending passengers quickly learned that all payments north of Aleppo were still carried out in Turkish paper, and that this could still be taken. Consequently, the Egyptian paper was unloaded on the Bourse, with a corresponding fall in price. About mid-February Egyptian paper fell again to £76½ Turkish gold per £100 Egyptian notes. This fall was said to be due to the arrival from Constantinople of certain Aleppines, who left Aleppo early in January before the proclamation forbidding the export of gold. This party (twelve in number) brought back from Constantinople (partly on their own account and partly on commission for others) securities for a considerable sum, including a large number of British notes, which they bought in Constantinople at rates varying between £370-405 Turkish paper per £100 British notes. They therefore paid the equivalent of £74-81 Turkish gold for £100 British notes, and could only get £75 gold on their return to Aleppo! The result of the arrival of these securities on the Aleppo Bourse brought the rate for British notes down to £T72 gold and the Egyptian note to £T75 gold. Until the arrival of the first consignment of British goods in Aleppo in April exchange fluctuated between £T75 and £T80 gold, when it rose suddenly to £T98 gold. During this period the troops were losing 30 per cent. on every sovereign they expended in the town. Canteens and stores were sent up as soon as rail transport permitted, and matters improved. It is to be hoped, however, that the Commission will put forward some proposals for reimbursing the troops for the loss they have had to incur. It is understood that the Army of Occupation of the Rhine is paid in German money, and so loses nothing over the exchange. It is only fair that some similar steps should be taken for the Egyptian Expeditionary Force in Syria.

THE NILE LEVEL.

(From Our Own Correspondent.)

Cairo, May 25.

The Nile has been rising much more satisfactorily during the last few days. In three days the Blue Nile has risen at Rosaires by 1¼ metre, and the White Nile at Malakal ¼ metre. This rise was quite unexpected, and the more welcome because the last note of the P.W.D. stated that the flow of the Nile below Assouan was considerably below normal, and "the prospects were not good."

SMYRNA-AIDIN RAILWAY

The estimated traffic receipts of the Ottoman Railway from Smyrna to Aidin (by telegraph) for the week ended May 31 amounted to £14,848.

India's coal output in 1918 was 19,847,039 tons, compared with 17,642,798 in 1917.

Messrs. John Taylor and Sons, the managers, announce that negotiations have now been concluded whereby approximately one-half of the monthly production of gold by the Mysore Gold Mining Company, Limited, the Champion Reef Gold Mining Company of India, Limited, the Ooregum Gold Mining Company of India, Limited, the Nundydroog Company, Limited, the Balaghat Gold Mining Company, Limited, and the North Anantapur Gold Mines, Limited, will be disposed of to the Indian Government in India, the value of such proportion representing approximately the local monthly expenditure, and that the companies will thereby be relieved of the heavy loss suffered in making remittances from England to India.

CYPRUS NOTES.

(From Our Correspondent.)

Nicosia Water Supply.

The waterworks have always been a source of trouble and complaint. A new law (XXII. of 1919) provides that the supply—derived from two sources—shall henceforth be managed and controlled by a Water Commission of six members, two being appointed by the High Commissioner, two by the Municipal Council, the others being the delegates of Evkaf (one British and one Turk). The Commissioner of Nicosia is president. Such a law has long been needed, for municipal control has not been altogether successful. It is hoped that the citizens of the capital will do all they can to assist the new Board. The Commissioner, Mr. Cade, has appealed strongly to all inhabitants to avoid waste. The Nicosia supply is brought in and distributed by means of masonry ducts, which are liable to contamination and are frequently damaged. These should be replaced as soon as possible by iron pipes, the cost of which would be not less than £7,000. That the supply should have been left so long in the present unsatisfactory state is one of the many examples of the slow state of progress in the island. Had a more energetic spirit prevailed, and had the municipality been more alive to its most pressing duties, Nicosia should long ago have enjoyed a far better supply of drinking water than it now possesses.

New Tobacco Company.

The new tobacco company at Limassol appears to take a favourable view of the situation and prospects as regards tobacco cultivation, notwithstanding the not too successful results of last year's crop in various parts of the island. At a recent meeting of the company it was decided to proceed with its operations, and to purchase all the necessary equipment for launching the enterprise. The start is made with a capital of £5,000, which, it is hoped, will be largely increased.

ROUMANIA.

Control of Shares in Enemy Undertakings.

In the *Moniteur Officiel* of May 6, the Roumanian Government has published a Decree with the object of preventing the transfer of shares in enemy undertakings. According to the terms of the Decree, holders of shares in companies, associations, etc., placed under sequestration or control must have these shares stamped within ten days. Failure to comply with this will involve seizure by the Roumanian Government. As regards holders of shares living abroad, the visa will be given by the Roumanian Legations within ten days from the date of publications of the Decree in the countries in question.

ROUMANIAN IMPORT RESTRICTIONS.

The Board of Trade are in receipt, through the Foreign Office, of information from H.M. Legation at Bucharest to the effect that most of the restrictions on importation, which have been in force in Roumania, were removed as from May 15. From that date imports of merchandise, except articles of luxury, were not to be subject to any formalities beyond those relating to Customs, etc., which were in force before the war. An additional *ad valorem* tax of 2 per cent. is, however, imposed on all goods arriving in the country. The Roumanian Government reserves to itself the exclusive right of purchasing and selling direct to the population cereals, rice and sugar. Exporters should note that it is necessary for all invoices to be viséd at the Roumanian Legation in London, and that firms must produce a certificate from a British Chamber of Commerce certifying that the goods are of British origin and that the prices set forth in the invoices were the current prices ruling in the United Kingdom. A list of the goods which are classed as luxuries, and in respect of which an import permit is necessary, may be inspected by British traders interested on application at the Enquiry Room, Department of Overseas Trade (Development and Intelligence).

ENGINEERING NOTES.

Marseilles—Antwerp Waterway.

The question of the construction of a waterway between Marseilles and Antwerp, connecting the Mediterranean with the North Sea is at present attracting considerable attention in France. The scheme, if carried out, will, of course, greatly improve the French inland shipping, and will afford immense economic advantages to French industry and commerce in connection with the future promotion and development of trade in Central Europe and the ports in the North and Baltic Seas. The supposition, however, that this waterway will, as a traffic route, present the best means of transport between the Near and Middle East and Central and North-Western Europe cannot be well sustained; for apart from the technical difficulties which its construction, as well as its navigation will present, if carried out according to the proposals in the scheme, its traverse geographical position places it at a disadvantage when compared with other existing schemes for the same purpose in which the route is proposed in a more practical and direct line via the Danube, the Morava, and the Rhine.

The proposal for the construction of a Marseilles-Antwerp waterway was made over two years ago before the Société d'Encouragement pour l'Industrie Nationale. The line of navigation would be the Comprin Canal, the Rhine, and the Saone, and then the Rhone, which would be connected with the Saone by another side canal. This canal system would be navigable by ships carrying 6,000 tons of actual cargo. The origin of the proposal lies in an improvement in the design of vessels which has diminished the amplitude of the angle of rolling. It is claimed that vessels provided for this purpose with projections just above the water-line present a much larger surface, and when loaded will draw less water. The application of this method to the vessels which have to pass through the Suez Canal would enable 15,000 tons to be carried with a draught of 28 ft., while the actual depth of the channel is 29½ ft. Adopting a similar design it would be possible to build good seagoing vessels of 10,000 tons, carrying 6,000 tons of actual cargo and drawing only 14½ ft., which could cross Europe by a suitable ship canal from Antwerp to Marseilles without breaking cargo, if the canal had a depth of 16½ ft. It is said that a design for such a vessel has already been prepared. If the cost of the canal, which is not mentioned in the various reports, should be considered prohibitive, then it is proposed that the canal should follow a different route utilising some of the existing canals in France, but this would limit the depth to 11½ ft., in which case there would be transhipment at Antwerp and at Marseilles.

The scheme will undoubtedly present great difficulties, and will cost much. How practical or possible it will be to construct such a canal by which sea-going vessels of 10,000 tons could cross Europe from Marseilles to Antwerp is a question which gives rise to considerable scepticism. The Eastern Mediterranean, the Ægean Sea, the Black Sea and the Caspian Sea are the distributive centres of the Near and Middle East; and with the completion of the Danube-Rhine waterway, which will have as a branch the Vardar-Morava-Danube waterway, which has already found much support on the part of the Moravian Czechs, and with the proposed canal connecting the Caspian and Black Seas, the Near and Middle East will have the best, cheapest and safest commercial route for trading with Central Europe and the United Kingdom. Sea-going vessels of 1,000 tons, and for some parts of the waterway more, will be the carriers entering the Vardar from Salonika, the Danube from Sulina in the Black Sea, the Caspian and Black Sea canal from Astrakhan, going through Europe and out into the North Sea and the Baltic.

Poland's Resources.

The special attention which Poland at present receives from all quarters—economic, commercial, as well as political—is not a matter of surprise. Poland is to-day the only country in Europe without a national debt, and the tax revenue is immense. Nature, capital, and work are three indispensable agents for production, and Poland has a good geographical position, a good climate, and fertile soil; great spaces sufficient to supply corn for home and foreign consumption; and her network of waterways needs only a certain amount of regulation of rivers and canals. Her mineral wealth is immense—in oil, salt, coal, iron, and lead. As regards industry, Lodz has been rightly named the Polish Manchester, and other parts of Poland are highly developed industrially. The forests are rich enough to become a foundation of various branches of industry and to employ hundreds of thousands. Poland in 1910 had 10,953 manufacturing concerns and over 400,000 industrial workmen. In short, Poland has all the necessary qualifications for the making of a prosperous and progressive State, whilst the country may be termed virgin soil for capital for the development of all classes of industry.

The rebuilding of the large Polish workshops destroyed during the war will necessitate the importation of a great quantity of workshop engineering equipment, machinery, tools, belting, etc. Railway engines and wagons will also be required. The proposed development of the Polish electrical industry will only be made possible by the importation of turbines and motors. In the meantime, it is remarked that few British firms have hitherto displayed any eagerness to accept Polish orders for agricultural machinery. Probably they wait for a definite settlement of the political affairs of the country. But, on the other hand, certain French and American houses are not averse, it is stated, to taking what is sometimes something of a risk in the hope that hereafter they will reap full benefit for their courageous step.

BULGARIAN TRADE.

Control of Imports.

A dispatch from the British Military Mission, published in the *Board of Trade Journal*, states:—Notices have been appearing in the Bulgarian Press in regard to the suggested operation of the control over imports into Bulgaria which it was proposed to entrust to the Department of Social Insurance. The Council of Ministers have authorised the Department to purchase and import, either direct or through local merchants, all kinds of foodstuffs and clothing. In accordance with this authorisation, the Department has issued a notice to traders to the effect that they are prepared to purchase or to receive offers for any of the following classes of goods:—Grain and flour, rice, salt, olives and olive-oil, soap, petroleum, benzine and other mineral oils, cotton tissues (English Nos. 8-22), sewing threads, sateens, Oxfords, longcloth, calicoes, and materials for men's clothing, leather and hides, and oak-bark extracts.

The Direction may add other articles to this list, as occasion demands, but in the meantime articles not included in it can only be imported with the previous authority of the Direction, and also of the "Devizna Tzentral" (Centrale des devises), at the Bulgarian National Bank, which will grant or withhold permission according to the importance of the goods from the point of view of national economy. The Direction accordingly warn intending importers of the necessity of arriving at a clear understanding with them on the subject before placing orders for goods abroad.

In submitting their proposals to the Commercial Section of the Direction of Social Insurance, where they will be examined and dealt with in the light of all existing circumstances and of all the information in the possession of that Department at the time, merchants are recommended to furnish the fullest possible particulars in regard to:—(1) The nature and quality of the goods, with samples of each; (2) the price at which they are offered for delivery ex Custom House, which price should include freight, insurance, landing charges, Customs and other dues, and the merchant's profit; (3) the date at which the applicant is prepared to guarantee delivery; (4) the manner in which the goods are packed; (5) the method of payment proposed, bearing in mind that preference may be given to offers which do not involve the necessity of application to the "Devizna Tzentral" for permission to remit in foreign currency. In cases where it is proposed to import on the basis of compensatory exportation, the nature and amount of the native produce to be exported in exchange should be fully specified.

Messrs. R. Raphael and Sons, Austin Friars House, E.C., announce the numbers of Piræus, Athens and Peloponnesus Railway 3 per cent. bonds drawn for repayment at par on July 15.

COMPANY NOTES & REPORTS

Scottish Assam Tea.

The report of the Scottish Assam Tea Company for 1918, states that estimating the unsold portion of crop on what is considered a safe basis, the total revenue amounted to £33,007 and expenditure to £27,681, leaving a surplus of £5,326; £1,358 was brought forward, making £6,684. The directors recommend a dividend at 5 per cent. less income tax at 5s. 9d. in £, and to carry forward, subject to income-tax and managers' and assistants' commission (amounting in all to about £2,850), £3,848.

Bombay Baroda Railway.

The report of the Bombay Baroda and Central India Railway includes the audited home accounts for the half-year ended March 31 last and also the detailed accounts of the working of the railways in India for the six months ended September 30, 1918. The detailed accounts prepared in India for the half-year ended March 31 were not completed before the end of May, and will be presented at the general meeting in December next. The total length of railways worked was 3,836.80 miles. Capital expenditure charged off during the half-year ended September 30 was Rs5,85,482 for the broad gauge and Rs5,95,546 for the metre gauge, of which Rs92,476 and Rs2,78,574 respectively are on account of rolling stock. Gross earnings were Rs4,84,73,450, increase Rs89,53,262; expenditure Rs1,97,03,607, increase Rs26,46,828; net earnings Rs2,87,69,843, increase Rs63,06,434; percentage of expenditure to gross earnings 40.65, decrease 2.51. Coaching traffic shows an increase of Rs13,38,953 on the broad gauge and of Rs13,20,520 on the metre gauge; goods traffic, an increase of Rs22,05,744 on the former and of Rs39,66,640 on the latter; sundries, an increase of Rs.1,13,790 on the broad gauge and a decrease of Rs17,927 on the metre gauge; and telegraph, an increase of Rs12,170 on the former and of Rs13,372 on the latter. Passengers carried numbered 25,904,973, against 25,810,410. The number of train miles run was 3,435,667 on the broad gauge and 4,214,443 on the metre-gauge, as compared with 3,498,840 on the former and 3,729,096 on the latter. The results of working for the whole year, as cabled from India, show that the total net earnings amount to Rs5,33,48,843 (which compares with Rs4,51,51,718 earned in the previous year and Rs4,25,00,591 in 1916-17), and the share of surplus earnings accruing to the company under the terms of the contract with the Government, in addition to the guaranteed interest, amounts, after the deduction of Indian income-tax and also the amount due in respect of advances for capital expenditure made from the provident fund, to approximately Rs13,53,625. Of this Rs1,40,625 was received in December last as an interim payment of ½ per cent. on capital, and was utilised in payment of the interim dividend to stock-holders in January last. The balance now available is Rs12,13,000, which will produce about £100,000, subject to English income-tax and excess profits duty. The directors recommend the payment in July next of a final dividend of 1½ per cent., together with a bonus of 1½ per cent., making (including the guaranteed interest for the half-year) 4½ per cent. Including the interim payment of 2 per cent. in January last, this makes a return of 6½ per cent. for the year against 6½ per cent. for the previous year and 5¾ per cent. for 1916-17.

THE ALEXANDRIA WATER COMPANY, LTD.

PAYMENT OF DIVIDEND.

NOTICE IS HEREBY GIVEN that a DIVIDEND of EIGHT SHILLINGS AND NINEPENCE per £5 Share on Coupon No. 61 is PAYABLE on and after June 16th, 1919, at Barclays Bank, Ltd., 1, Pall Mall East, London, S.W. and 54, Lombard Street, London, E.C. or at the Anglo-Egyptian Bank, Ltd., Alexandria, Egypt, upon the making of a declaration as to ownership in the form required by the above Banks, forms of which will be supplied upon application.

By order of the Board,
H. R. C. BLAGDEN,
Managing-Director.

Alexandria, Egypt.
3rd June, 1919.

Calcutta Trams.

The report of the Calcutta Tramways for the year ended December 31 last states that revenue, including interest on investments and deposits, less income-tax, amounts to £135,271; £8,434 was brought forward, making £143,705. Deducting debenture interest, preference dividend, and interim dividend on ordinary shares, there is left £98,254. The directors propose a final dividend of 6s. per share, making 9½ per cent. for the year (against 8 per cent. for 1917), free of income-tax; to transfer to reserve for depreciation, etc., £25,000; to reserve for depreciation of investments, £2,000; to staff provident fund, £1,331; and to carry forward, subject to English excess profits duty and Indian super-tax, £28,639. The reserve for depreciation, etc., at the commencement of the year stood at £100,358. Deducting £4,836 written off for renewals during the year, and adding the proposed allocation, the reserve will stand at £120,495. The total receipts show an increase of £35,460, of which £24,803 is due to traffic and £10,657 to sundry receipts, after including a profit on exchange of £14,128. As regards expenditure, the Indian working expenses show an increase of £8,082. Of this amount £5,637 is represented by a bonus of one month's salaries and wages paid to the Calcutta staff, the balance being due to the increased cost of materials, etc. Small debits and credits to capital account leave that account about the same as last year.

Ruston and Hornsby.

The directors of Ruston and Hornsby, Ltd., announce that for the year ended March 31 last, after providing £40,697 for depreciation on buildings, plant, and machinery, they recommend the payment, on July 10 next, of a final dividend of 5½ per cent. subject to income-tax on 902,132 ordinary shares, which, with the interim dividend of 2½ per cent. paid on December 2 last, is equal to 8 per cent. per annum, and a dividend at the rate of 8 per cent. per annum, subject to income-tax, on 316,200 ordinary shares for the three months ended March 31 last, to place £40,000 to reserve account and to carry forward £41,001.

Rangoon Electric Trams.

The report of the Rangoon Electric Tramway and Supply Company for 1918 states that the cars travelled 1,494,544 miles, a decrease of 63,112 miles, and carried 21,202,591 passengers, an increase of 5,468,389, or of 34.75 per cent., the total receipts being Rs.10,79,573, an increase of Rs.167,427, or 18.35 per cent. In order to meet the expansion that the City of Rangoon demands, the directors have arranged for a considerable extension of the present tramway system. In the private lighting and power department gross receipts for current supplied of all descriptions, amounted to Rs.9,71,733, an increase of 5.28 per cent. Gross receipts of the house wiring and supply department amounted to Rs.1,24,527, the profit realised being Rs.20,173, as compared with Rs.19,778. A revised agreement with the Rangoon Municipal Committee for public lighting of the city and suburbs has been signed. This agreement dates from January 1, 1919, to December 31, 1930 (twelve years), the terms of which the board consider to be mutually favourable. The gross profits were £77,661, which added to transfer fees and interest on deposits and investments in London, £2,912, makes £80,573. Deducting interest on debenture stocks (£12,457), provision for redemption of Four and a Half per Cent. Debenture stock (£7,320), depreciation on sundry assets in Rangoon (£1,753), transfer to reserve for renewals account (12,500), to special reserve for cables, etc. (£12,500), income-tax (balance of) (£6,595), fees for directors, managing director and trustees and expenses in London (£2,598), and employees' provident fund (£811), net profit is £24,039; £4,258 was brought forward, making £28,297. The directors recommend a dividend on the ordinary shares of 5 per cent. for the year, free of income tax, and to carry forward £4,447. Warrants will be posted on June 30. The warrants for the half-yearly payment of interest on debenture stocks and those for interim dividend on preference shares on account of profits to December 31, 1919, payable July 1, will also be posted on June 30.

Egyptian Markets.

The report of the Egyptian Markets, Ltd., for the year ended December 31, states that the gross receipts from the cattle markets, exclusive of slaughter houses, show a decrease of £1,638 as compared with the year 1917, the total being £31,058 against £32,696. This decrease is due to the increased closing of the markets above referred to. The gross receipts from the general markets for the year under review were £23,188 as compared with £21,824 for the year 1917, an increase of £1,364. This is considered satisfactory. The net receipts from the slaughter-houses worked during the year were £1,256 against £1,560 during 1917, a decrease of £304. The expenses in the trading account show an increase of £2,991, which is practically all attributable to war bonuses on salaries and wages necessitated by the increased cost of living in Egypt and of travelling. The net profit derived from this source is £10,597 as compared with £19,896 for the previous year, a decrease of £9,299. This decrease is largely due to the contracts with the Egyptian Government for the supply of fodder (dries and tibbin), not having been renewed, the authorities having decided to carry out the work themselves. Great difficulties have been experienced in dealing with goods consigned to the company under agency agreements, owing to export restrictions, the lack of shipping facilities and the uncertainty created by the termination of hostilities having seriously impeded business. The final settlement of the Government share of profits and the excess profits duty left an additional amount of £1,035 9s. 11d. for distribution to the Deferred shareholders, for the year 1917. The dividend distributable on the Deferred shares for that year was subject to the adjustment of the above accounts, estimated to be at the rate of £8 3s. 0d. per share; the actual amount divisible was £11 15s. 4d. per share. The increases in the amounts disbursed have been adjusted in the accounts under review. The net revenue from all sources for the year 1918 amounted to £31,709 13s. 6d., as compared with £46,894 12s. 0d. during the previous year, a decrease of £15,184 18s. 6d. After deduction of the amount of £4,098 17s. 3d. which it is estimated will be required to meet payment of the Government share of profits for 1918, a balance of £27,610 16s. 3d. remains, which, with the amount of £10,307 6s. 11d. brought forward from 1917, makes a total of £37,918 3s. 2d. to be dealt with. After meeting the fixed charges of the annual premia for the amortisation of the share capital and debentures, amounting to £3,789 1s. 6d., debenture interest £2,840, and carrying the sum of £1,500 to reserve, a balance of £29,789 1s. 8d. remains available for distribution. The directors recommend the payment of a final dividend (No. 29) on the ordinary shares for the year ended December 31, 1918, of 5 per cent., making with the interim dividend of 5 per cent. paid in December, 1918, a total of 10 per cent. for the year, absorbing in all £17,470, and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government and to such excess profits duty, if any, as may be payable, the payment of a dividend (No. 9) on the Deferred shares at the rate of £6 2s. 4d. per share for the year 1918, which will absorb £1,835 4s. 11d. and leave a balance of £10,483 16s. 9d. to be carried forward, which balance is also subject to the settlement above referred to. In conformity with the company's articles of association Sir John P. Hewett, G.C.S.I., C.I.E., and G. H. Redwood, Esq., will retire by rotation, and, being eligible, offer themselves for re-election. The proprietors will be asked to elect auditors for the ensuing year. Messrs. Price, Waterhouse & Co., offer themselves for re-election. The directors desire to record their appreciation of the valuable services rendered by Mr. C. E. Duffield, the general manager, and by other members of the company's staff in Egypt. Meeting 43, Winchester House, Old Broad Street, E.C., June 26, at 12 noon.

COMPANY RESULTS, Etc.

Société Générale Egyptienne pour l'Agriculture et le Commerce.—The profits for the period 1914-1918 amounted to 1,024,723 francs.

British Indian Tea.—The annual general meeting will be held at Winchester House on June 27, at 2.30 p.m. Transfer registers will be closed from June 14 to 27, inclusive.

The directors of the Pundaloya Tea Company of Ceylon recommend a dividend of 7 per cent., less tax at 5s. 9d. in £, on the ordinary shares for the year ended December 31 last.

The directors of the Jhanzie Tea Association have declared a final dividend of 9 per cent. less income-tax, making 13 per cent. for the year ended December 31 last, payable on and after July 8.

The directors of the Upper Assam Tea Company have declared a dividend of 12½ per cent. (2s. 6d. per share), less income-tax at 5s. 9d., for 1918, payable June 30. This is the same as for 1916 and 1917.

The directors of the Eastern Assam Company recommend a balance dividend and bonus of 10 per cent., making with the interim dividend 15 per cent., free of tax, for the year ended December 31, 1918.

The directors of the Consolidated Tea and Lands Company have declared a dividend of 15 per cent. on the ordinary shares, making, with the interim dividend, 20 per cent. for the year, against 22½ per cent. for the previous year.

The directors of the Lungla (Sylhet) Tea Company recommend a final dividend of 15 per cent., subject to income-tax at an average of 5s. 9d. in £, on the ordinary shares, payable on and after July 10 next, making 20 per cent. for 1918.

The preference transfer books of the Rohilkund and Kumaon Railway will be closed from June 23 to July 5, inclusive, for the purpose of preparing the interest warrants payable to the shareholders whose names are on the register at the time of closing the books.

The directors of the Central Travancore Rubber Company announce that the sum at credit of profit and loss account (including the balance brought forward) is £13,475. A dividend is recommended at the rate of 5 per cent., less tax, carrying forward £9,880.

The directors of the Burmah Oil Company, after placing £80,000 to field reserve, £20,000 to insurance reserve, £186,695 to general reserve, recommend a dividend of 5s. per share, carrying forward £1,776,229, subject to excess profits duty, estimated at £1,580,000. Total profit, £3,305,078. Depreciation, £491,021.

The directors of the Assam Railways and Trading Company have declared the following dividends:—Pre-preference shares at 8 per cent. per annum, new six per cent. preference shares at 6 per cent. per annum, both for half-year ending June 30, payable July 4; and on "A" stock a dividend of 4 per cent. for half-year ended December 31 last payable June 21.

The directors of the Bengal-Nagpur Railway have declared an interim dividend of 15s. per cent. and a bonus of £1 10s. per cent. on the capital stock in respect of the half-year ended March 30, payable on July 1 next to holders registered 30th proximo, together with the guaranteed interest of £1 15s. per cent. then due, making a total distribution of £4 per cent.

ON 'CHANGE.

THROGMORTON STREET, Thursday.
(FROM OUR OWN CORRESPONDENT.)

There has been a fair amount of activity this week; but, in a general way, prices are somewhat lower, owing to local sales on behalf of investors in order to obtain money for subscribing to the new British Funding Loan and Victory Bonds. Egypt has been more or less taking the stock offered at reduced prices, but the enormous delay in telegraphic communication is very seriously interfering with business.

Egyptian Unified stock has relapsed 1½ to 86, and the 3½ per cent. loan one point to 73.

In Bank shares, Agriculturals are 1-16 down at 5 15-16, and Nationals have dropped ½ to 20 1-16. On the other hand, Anglo-Egyptian banks are ⅛ firmer at 15⅝, and Land Banks are firm and unaltered at their ex. div. price of 6 29-32.

In Railways there is no change to record.

Amongst Land shares, Aboukirs are fractionally lower at 23s. 9d., and Béhéras are ⅛ down at 12⅜. A fairly large turnover has again taken place in Egyptian Consolidated, at about 2s. 6d. Delta Lands, after being 6d. down, close unchanged. Foreign Trusts have receded 6d. to 14s. 9d. New Egyptians are fractionally quieter at 24s. 9d. Sudan Plantations are closing 1-16 firmer at 7 1-16, after having been somewhat lower.

In Miscellaneous descriptions, Alexandria Waters have been dealt in to some extent in the neighbourhood of 12 9-16 x.d. Salts and Sodas are 1-16 firmer at 2 15-16.

Amongst Oil shares, Anglo-Egyptian B, after being up to 6 7-16, close ⅛ lower than last week at 6 3-16. Roumanians have dropped 6d. to 19s. 6d., but, on the other hand, Traians are 6d. firmer at 13s. 6d.

Amongst Greek securities, the 1890 Loan has recovered a good portion of the dividend recently deducted, and is quoted at 74½ x.d. The 1881 and 1884 Loans are both a point up at 72. There is no change to record otherwise.

BULGARIA'S COAL OUTPUT.

The average yearly output of coal mined in Bulgaria before the war, says a report from the British mission at Constantinople, was about 250,000 tons. This might have published in the *Board of Trade Journal*, been considerably increased with better transport and organisation. During the war the output of the Pernik Mines alone was raised in 1916 to about 600,000 tons (50,000 tons per month) by the employment of large numbers of Serbian prisoners.

The following are the principal coal districts: The Pernik-Bobovdol Basin, the Trevna Planina, and the Haskove district mines. The Pernik-Bobovdol basin lies to the south-west of Sofia and contains the most productive coal mines of the country. The principal mines are at Pernik, Kalkas, Moshino, and Bobovdol. The coal is lignite of fair quality, but it contains about 2.5 per cent. of sulphur. The Pernik mines are worked by the Bulgarian Government, under the supervision of a British officer. The mine is 10¾ miles from Sofia, with which it is connected by rail.

The latest report shows that there are 5,500 men employed at the mine, of whom only about 850 are engaged at the coal face, and 1,500 men are employed on development work. The output of coal for the week 5th-11th April inclusive was 9,066 tons, equivalent to 39,000 tons per month (as against 50,000 tons per month produced in 1916); this apparently includes 4,000 tons from Bobovdol. The average coal produced per man was only just over ¾-ton per day. The Bulgarian Government is apparently only trying to produce sufficient coal for its own railway requirements, and uses most of the labour on development work in order to put the mine into good order for its own use later on. There is, moreover, a certain shortage of plant, rolling stock and material. Proposals have been made by which it is expected that the output will be raised to 60,000 tons per month. Coal obtained from these mines is distributed to the town of Sofia and the Bulgarian railways.

The main supply of coal from the Trevna-Planina district is obtained from the Prince Boris mine, near Radevati, between Gabrovo and Slivno. The coal is easily extracted by means of open workings and adits driven into the hillside, and the mine is now linked up with the railway by a narrow-gauge line. Latest figures give a production of about 3,000 tons per month.

The lignite is of good quality and is used in local factories which have boilers specially adapted to meet the defect which this coal has of crumbling. It is doubtful whether this coal could be used for general purposes. Other mines worked in the Prince Boris group are: Budeshte, Bouroushstitza, Hadji Dimitri, Nadiezhda, Vulcan and Spolouka, and eight others. The total output of these mines is about 3,800 tons per month, which is consumed locally.

LANCASHIRE COTTON.

(FROM OUR OWN CORRESPONDENT.)
MANCHESTER, Wednesday.

Prices in the market have tended to harden, and demand has been on a large scale. There was undoubtedly an important accumulation of business during the Whitsuntide holidays last week. At the time of writing a very serious position of affairs has arisen in connection with the labour dispute on the mill hours and wages question. The master spinners refused to attend the conference at the Ministry of Labour on Wednesday last. Important developments may take place during the next day or two, but there is not much time to be lost, as the strike notices expire on Saturday. Any stoppage of machinery will be very regrettable, as the two sides are not far apart. The advices relating to the Egyptian crop are not very satisfactory. The growth is said to be two to three weeks late, and irregular weather conditions are prevailing. In Egyptian yarns the undercurrent of demand continues healthy and some spinners have sold freely, especially in fine counts. A big demand has been reported in piece goods for Egypt and the Near East generally. Sized shirtings, printing cloths and miscellaneous fabrics of various kinds have been sold on an encouraging scale at top prices. Operations for India have been rather irregular, and more has been done for Bombay, Madras and Karachi than for Calcutta. Trade for China has been active, further buying of a healthy character having occurred. Manufacturers are more independent than ever, and increased difficulty is now being experienced in arranging delivery terms. American yarns have hardened in quotation, with steady buying from day to day. Some fair lines have been put through in export bundles for India. Plenty of demand has been about for the countries of Northern Europe.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

The directors of the Amalgamated Tea Estates Company have declared a dividend of 10 per cent. for the year, the same as for the previous year.

The ordinary transfer books of the Bengal Iron and Steel Company, Ltd., will be closed from June 22 to June 28, both days inclusive, for the preparation of dividend warrants.

Khedival Mail Steamship and Graving Dock.—On July 1 an interim dividend at the rate of 5 per cent. on the Ordinary shares—namely, 1s. per share—less income-tax at 6s. in the £, in respect of the year ending June 30, 1919, will be paid at the bank of Glyn Mills Currie and Co., London, and at the Imperial Ottoman Bank, Alexandria. Holders of Ordinary share warrants to bearer are therefore requested to present coupon No. 14 for payment on that rate. The transfer books will be closed from June 23 to July 1 inclusive.

British Burmah Petroleum.—An interim dividend at the rate of 10 per cent. per annum, free of income-tax, is payable July 31 next to holders registered July 15, 1919, in respect of the profits for the first six months of the company's current financial year. The transfer books will be closed during July 15. The dividend being for six months only will amount to 5 per cent., or 4 4-5d. per share, and the relative warrants to shareholders on the Colonial registers established in Bombay and Rangoon will be issued from the company's offices located in those cities respectively; while shareholders on the London register will receive their warrants direct from the London office.

NOTES OF THE WEEK.

The Germans have not yet signed the Peace Treaty, and doubts are expressed in some quarters of the imminent probability of their doing so. A new Government has replaced the old, but whether it will finally decide to take the plunge—or, rather, be permitted by its opponents to do so—is, at the moment, uncertain. In the circumstances, comments upon the situation, though freely and confidently offered on all hands, would, obviously, be of little value, and must be withheld for the present.

As the result of what was in effect a vote of no confidence, the Orlando Cabinet has fallen, and Signor Orlando has been succeeded by Signor Nitti. Whether the change will have any immediate effect upon Italy's Near Eastern policy remains to be seen, but it appears to be the case that this policy played no small part in bringing about the change. Had Signor Orlando been able to announce a settlement, even an only moderately satisfactory settlement, of the Adriatic question, he might have carried the Chamber with him when he moved that the House should go into secret session in Committee; as it was the motion was rejected by a large majority (259 to 78 being the actual figures of the voting). This being a virtual refusal of that "most complete confidence" for which Signor Orlando had asked, he had no course open to him but resignation.

With regard both to the Adriatic question and to her "claims" in Asia Minor, Italy's policy has been severely criticised, even by her friends, and it has been widely felt that, like another nation in past days, she has shown an inclination to give too little and to ask too much. As to the Adriatic, it must be admitted that she can make out quite a strong case; though that is not necessarily to admit that we endorse all her claims, or, indeed, the greater part of them. But to territory in Asia Minor she has no shadow of claim outside the terms of the Pact of London. If she elects to stand on her rights under that agreement her co-signatories will, presumably, have to support her, and in that case they must assuredly share her moral disgrace. The only satisfactory way out of the difficulty would seem to be for Italy voluntarily to abandon all claims in Asia Minor and for France and Great Britain to compensate her for her very natural disappointment, either by territorial concessions elsewhere, or in some other manner to be agreed upon. Will Signor Nitti and his Cabinet have the courage to make the position clear to their countrymen, and to take the necessary steps to put Italy right once more in the eyes of the world?

The situation with regard to the Hungarian Bolshevist Government and the Allies continues to puzzle the plain man. Especially perplexing is the restraint that appears to have been put upon Roumania, who shows a laudable disinclination to have any truck with Bolshevism in any shape or form; and it is not surprising that the Roumanians, who already felt sore about their treatment at the hands of the Allies, should now be evincing a certain restlessness, not to say irritability. Thus, the Roumanian Press refers indignantly to "the incomprehensible policy of the Allies" in preventing the Roumanian Army from advancing against the Bolshevists, and even forcing them to retire. The latest development, brought about by an exchange of Notes between the Entente and the Hungarian Bolshevist chiefs, appears to be that Roumania has sent delegates to Budapest, and that they are to evacuate Hungarian territory as soon as the Hungarians have left Czecho-Slovakia. If Paris would condescend to explain what looks like an extraordinarily foolish recognition of the powers of anarchy, it might be possible to deprecate Roumania's impatience: as it is, we can only share it.

The dissatisfaction in Roumania with the treatment accorded to her at the Peace Conference is, according to latest reports, rapidly becoming acute. M. Misu lately travelled to Bucharest to inform the King and Government regarding the situation, and according to a communication issued by the Roumanian Press Bureau, his report produced a most painful impression. The Roumanians (the message continues) feel that their country has reached a decisive point in her history, and that fresh sacrifices are imposed upon her; and "demonstrations and meetings have given place to a profound silence." Until Paris enlightens us, we cannot form a trustworthy estimate of the situation, but it appears to be highly probable that M Bratianu may decline to take the responsibility for signing the Treaty, and that it may be necessary to form a new Cabinet. In that event it is thought that M. Take Jonesco may be called upon by King Ferdinand to form the new Ministry.

As must have been foreseen, the Turkish opposition to the Greek occupation of Smyrna and the surrounding region has stiffened considerably, and strong Turkish forces are reported to have been driving the Greeks before them at some points. According to a Reuter message, official advices received in Paris at the beginning of the week described the situation in western Asia Minor as "extremely serious," and Turkish forces were threatening "to oust the Greeks from Asia Minor altogether." The message further spoke of the Greek General Commanding having "decided to make a first stand in defence of the line Pergamos-Magnesia-Nymphaion-Aidin," while other messages referred to the evacuation of Pergamos owing to an attack by superior Turkish forces. These reports may well have been somewhat exaggerated, and in view of the presence of a Turkish delegation in Paris, it is not altogether impossible that they were coloured by political considerations; but it is still strange to find the Turks able to assemble and supply "with good artillery and plenty of ammunition" a force reported to be four times as strong as the Greek army of occupation.

Should the reports referred to be substantially correct, they would seem to reflect unfavourably upon the Allied military control. Probably, however, the alternative hypothesis is the right one, for a later message announces that Pergamos was reoccupied by the Greeks. Nevertheless, the fact that Turkey has been able to put into the field a force sufficient to justify alarm is in itself disquieting, for by the terms of the armistice she was to demobilize her army with the exception of such troops as might be required for the protection of her frontiers and for the maintenance of internal order; and the number of effectives and their disposition were to be determined by the Allies after consultation with the Turkish Government. On the other hand, while specific mention was made of the evacuation of certain regions, and of the right of the Allies to occupy any part of the six "Armenian" vilayets, nothing definite was said regarding the Smyrna region. The Turks may, therefore, feel themselves doubly aggrieved by the appearance of the Greek troops in the Aidin vilayet; and nothing can be more certain than that they will oppose the cession of Smyrna and its hinterland to Greece by every means in their power. Therefore, if the Allied and Associated Powers have definitely decided, as is generally understood, that this region is to go to Greece on the ground of nationality, it would surely be better, in the interests of Turkey, as well as of the rest of the world, to announce the fact at once, and to provide sufficient force to make good the announcement.

Malta has been suffering from an ebullition of disorder similar to those which have been taking place in so many other parts of the world. As our Malta Correspondent indicates, the trouble seems to have been brought about chiefly by the dearness of food and the lack of employment; but the political agitator has certainly had a finger in the pie; while the student class has seized the opportunity to vent certain grievances in connection with the granting of degrees. A rumour had got abroad that the University of Malta was to be abolished, and this had greatly exercised opinion in circles which are particularly sensitive regarding Italian culture and tradition. The rumour, we understand, was quite baseless, but it served well the purpose of those who set it afloat, and in the rioting which took place much property was destroyed and several persons were killed and wounded. The new Governor of the island, General Sir Herbert Plumer, has arrived at a somewhat inauspicious moment, but his influence appears to have made itself felt already, and it is hoped that the island is settling down to a normal condition once more.

The latest news from Malta is that the National Assembly are about to draft a project for the reform of the Constitution. This step has been taken in accordance with instructions received by General Plumer from Lord Milner. The new Governor has also declared that the possibility of the people of Malta sharing in the administration will, if it does not affect Imperial interests, be considered by the Secretary of State.

Whatever view America may finally take with regard to assuming responsibility for the rejuvenated Armenia that we all hope to see very soon, there can be no doubt that the Armenians themselves would welcome America as mandatory. A writer in *The Times* recently pointed out that by acceptance of such a mandate America would be able to do a splendid and unselfish work for the world, and Boghos Nubar Pasha, in the course of an interesting letter, endorses this view, and adds: "I think I am not mistaken in assuming that this would be the best and strongest argument to induce the United States to accept it." He also gives some interesting information regarding Armenian views as to the requirements of the new State in the way of an army for its protection during its infancy. According to General Antranik, who, after fighting in his own country throughout the war, should be a good judge, two divisions of 15,000 men each, of the mandatory Power would be sufficient, supported by Armenian volunteers. Boghos Nubar Pasha points out that the Armenian Republic of the Caucasus could raise an army over 30,000 strong, and that thousands of Armenians have been fighting with the Allied forces in Palestine and even with the Americans in France. General Antranik is of opinion that the forces of the mandatory Power might be gradually withdrawn and replaced by Armenian troops under officers supplied by the mandatory Power.

The days are past when the news from Mesopotamia was consistently bad, and when such surprises as it gave us were nearly always of an unpleasant character. General Maude set the fashion of making the unpleasantness of the surprises felt by the enemy; General Marshall has kept the fashion flourishing and enhanced British prestige; and the treatment of the trouble at Suleimania must have been a revelation to the Kurds, after their inefficient handling by the Turks. The War Office announced last Saturday that all the British prisoners who had been captured by an over-ambitious Kurdish chieftain had been rescued, and that Suleimania had been occupied by our cavalry. Earlier in the day a fight had taken place at the Bazian Pass, to the north-west of Suleimania, where a force under General Fraser came upon and defeated the Kurdish levies of Sheikh Mahmud—as we learn, from the announcement referred to, was the chieftain's name. Our losses were slight, and we had the satisfaction of taking 100 prisoners and three machine-guns.

At the first blush the presence of machine-guns with a highly irregular Kurdish force is somewhat startling; for though the town used, before the war, to have quite a reputation for the manufacture of *martlis*—i.e., imitation Martini-Peabody rifles, and not at all bad imitations either—it is unlikely that it had reached the stage of constructing machine-guns. It is, indeed, much more probable that Sheikh Mahmud obtained these weapons from the Turco-German agents, who, it seems, still hope to be able to stir up trouble for us and our Allies in the region of the Turco-Persian frontier. A month ago we referred to unrest among the Jangalis, in the Kazvin-Resht region; and the account of the activities of the German Consul in Tabriz, sent us by a correspondent in that city, throws an interesting sidelight upon the origin of these troubles. Whether the truculent Prussian at Tabriz has any responsibility for the trouble across the Turkish border we cannot pretend to say, but it is at least permissible to point out that the Turkish Suliemania is about the same distance from Tabriz as is Resht.

In any case, it is to be hoped that Herr Consul Wustrow will be compelled to hand over his arsenal to some body that will prevent its being turned to use against ourselves.

The state of affairs not only in Tabriz, but throughout Azerbaijan, is, and has been for a long time, abnormal. First, the Russians, with their peculiar methods of peaceful penetration, and latterly the Turks and a host of German agents have contrived to reduce this north-west portion of Persia to a condition but little removed from anarchy. In the circumstances, it would be unfair to blame the Shah's Government very severely for what has been taking place at Tabriz. But, obviously, if Persia is to progress, she cannot tolerate such a state of affairs in her territory. She must set her house in order now, when her neighbours are about to undertake a similar task, and since she will certainly require help, help must be given her according to her requirements. What form that help should take and who should give it are largely matters for herself to decide; though it must be recognised that Great Britain, now more than ever, must be profoundly interested in the matter, and could not stand idly by and see any other nation acquiring an influence over Persia, which might eventually operate to her own detriment.

As a matter of fact, the best opinion in Persia recognises that Great Britain really has no other desire regarding that country than to see it strong enough to protect itself against aggression from any direction, and willing and able to advance with the times in the matter of commercial development; and now that the overpowering dread of Russia has been removed it may be that Persia will be willing to accept the help which Great Britain would be only too ready to give her. But if real progress is to be made, it will be necessary for the Persians to develop a faculty for looking facts in the face and dealing with them as they are, rather than endeavouring to substitute for them fancies which may be highly attractive but are quite unrealisable. We do not suggest, of course, that the amiable weakness thus hinted at is peculiar to Persia; but certain claims that have been put forward on her behalf seem to indicate that she may waste in aerial castle building energy that could be usefully employed in laying solid foundations for future political growth. With nations, as with families, a great past may prove a serious drawback if time be spent in contemplating it rather than in working for the present and the future. Similarly, to grieve over old injustices, or even over admitted injustices that are not very old, is apt to sap one's energy disastrously. Persia would do well to get to work without delay on the reconstruction of which she, like other nations, stands badly in need.

The trial of those arrested in connection with the rioting and disturbances at Minia has been completed, and all the accused, numbering over eighty, have been found guilty. We do not yet know what their punishment will be, their sentences having been submitted to the higher authorities before promulgation; but it is to be hoped that no sentimental considerations will have prevented the Court from meting out strict justice, and that if heavy sentences are called for they will have been awarded. Any leniency would certainly be misunderstood by the bulk of the Egyptians, and would inevitably be turned to account by the agitators who lately succeeded in leading the usually placid Fellah into such regrettable excesses. But while the rank and file of the rioters, looters, and assassins must meet the fate they deserve, much more important is it to bring to justice those who have stirred them up to folly. Some of these people are utterly unbalanced, others utterly unprincipled, and Egypt would be well quit of the lot. To try them by the ordinary processes would be a long business, and might give them an advertisement and an opportunity to pose as martyrs, of which they would make the most. To deal with them by the Summary Military Courts would be a much more satisfactory method, and it would be a great pity if the opportunity of so dealing with them were thrown away.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 31.

The New Ministry.

The first week of Mohammed Pasha Said's Ministry has not been a peculiarly easy one, either for the Cabinet to live through or for the chronicler to describe. The installation of the new Ministers was ushered in with cries of "Treason," and the most kind death predicted for them was that of the bullet. Nevertheless the first blasts of the storm have been weathered, and the general situation is to outward seeming more hopeful than it has been for many a long week past. Although the Azhar has been buzzing like a hornet's nest, the only disturbances worth mentioning have been at Alexandria. The amount and quality of the abuse that has been levelled at Mohammed Pasha would be hard to match in the story of any country, for no language is richer in this respect than Arabic. But, in spite of it all, the Minister has disappointed his adversaries somewhat by not displaying any vicious or revengeful tendencies towards his political opponents, or using any oppressive or repressive measures towards the Independentists. On the contrary, he has heaped coals of fire on their heads by begging off a number of leaders in recent rioting who had been arrested and sent away by the military; and does nothing but exhort the opposition to refrain from violence, so as not to give the British an excuse for continuing to employ military forces for the maintenance of peace. Mohammed Pasha's previous tenure of office left rather painful memories to those who resisted his rules and regulations, and it was feared, if not expected, that his return to power would be illustrated with even severer and more inflexible upholding of all constituted authority, whether British or Egyptian, but especially, perhaps, the former. Consequently it has come as a mild surprise to Egypt in general to find that this time the ferocious Mohammed Pasha roared no louder than a sucking dove, and instead of going about like a hungry lion seeking for Nationalists to devour, seems more inclined to lie down with the Independence lamb.

However this may be, the result so far is more or less encouraging, and attempts at getting up demonstrations against the Cabinet are meeting with less and ever less success; while it has even been reported that outsiders have laughed at and abused the feeble little processions that have been trying to excite public opinion against the Ministry. How long this may last, however, and whether Mohammed Pasha may succeed in making good by a change in his methods, it would be rash to prophesy. The month of Ramadan is always rather a trying one to Mohammedan feelings, and much evil has been predicted for the period of the Fast on which we have just entered. The Ministry, however, does not show any signs of apprehension, having, on the contrary, persuaded the military authorities to relax several of their pet regulations for the Ramadan period by allowing mosques and *cafés* to remain open all night, private houses to rejoice in as much illumination as they please, and the population in general to congregate when and where they may elect to do so as long as they behave themselves, instead of being arrested when more than five of them collected in a group. Possibly the country is growing a little tired of the fictitious agitation against the British, who have hitherto always been acknowledged as the best benefactors of Egypt; and it may be also gradually returning to sanity after its fit of temporary aberration.

Egypt and the Conference.

Meanwhile popular interest is again turning to the Peace Conference and to European pronouncements as to the future of the Near East. The newspapers that have arrived during the past week were filled with news of schemes and projects for settling the fates of Egypt and its neighbours. Lord Curzon's declaration that it was hoped to make Egypt "take her rightful place as the leading Moslem Power" has, of course, created much curiosity, and local newspapers are reproducing the whole of the debates in both Houses. Hitherto the Ottoman Empire has been the leader of Islam, and the

Digitized by Google

only Moslem State that had any pretension to rank as a first-class Power or possessed any appreciable material forces to back up a claim to spiritual supremacy. The downfall of Turkey has therefore been a severe blow to Islam as a world-factor, and there is no other political entity at present that is at all competent in Moslem estimation to replace her. For these reasons no surprise or dissatisfaction is expressed here at the rumour that Turkey has suggested retaining some of her provinces under a British Protectorate.

Moslem Feeling.

Probably all Egyptian Moslems would prefer to see the Ottoman Empire retain as much as possible of its old possessions under a British Protectorate rather than to watch portions going to England and France, Arabia to the Hejaz, and, worst of all, the Dodecanese to Italy, Smyrna and Adana to Greece, and her European provinces to Serbia and Bulgaria. The Greek inhabitants of the Dodecanese, who are probably in the proportion of 85 or 90 per cent., are now protesting against being handed over to Italy in despite of all ideas of "self determination," and they would far rather remain under Turkey. In the same way, although the preponderant urban population of Smyrna and a few coast towns thereabouts may be Greek, none of the other races of the districts forming the hinterland but would infinitely prefer Ottoman rule to Greek. So, it is argued, if the Greeks complain of the Italian rule of the Dodecanese how can they expect the Turks of Asia Minor patiently to endure a Greek occupation? The question of the partition of Turkey has, in fact, given rise to considerable sympathy throughout the Moslem world, and undoubtedly in Egypt the feeling is exceedingly strong in favour of Turkey being less ruthlessly despoiled.

Such news as is brought from Syria is naturally tinged with the ideas of the informants. It does not seem, however, that the inhabitants are at all agreed in their opinions as to future government or mandatory Powers, and any authorities who proceed thither to determine their wishes will have a knotty problem set them.

Nationalists' "Grievances."

As for the Egyptian Commission, its task will be colossal. Already the Press is beginning to allude to questions that may be brought before it. The *Bourse*, for example, exhorts Egyptians not to bring forward any grievances that cannot be substantiated as such. It instances one of the favourite complaints of the Nationalists, *i.e.*, that the British bought up compulsorily the cotton crop at over £8½ the kantar, whereas the sellers might have obtained a much higher price at that time in neutral countries. The *Bourse* points out the weakness of this theory, inasmuch as for lack of transport neither would banks have advanced money, nor buyers have come forward to purchase goods that might have lain for an indefinite period in store. Thus, instead of £8½, the cultivators would scarcely have been likely to obtain more than half that price. This cotton question is a fair sample of the "grievances" of the grumblers, who throughout the war have enjoyed a peace and prosperity in Egypt that probably have not been equalled in any other country.

Patriotism and Profit.

The Nationalist agitation has led to the creation of a number of medals, brooches, and other signs and symbols, the latest of which appeared to-day in the shape of a cleverly designed medal, sold in four qualities. On one face it bears a large crescent and three stars—the Egyptian emblem—and under this, crossed flags, one of which has the same crescent and stars as above, and the other a crescent enclosing a cross between its horns. On either side of the flag are written "Long Live the Mother Country," and "Long Live Unity," with the date "1337 of the Hejira." On the reverse is a view of the Nile with the Pyramids and a palm-tree in the distance, and the inscription across the sky, "Long Live Egypt." This medal is struck by the "Camel Society," and the two cheap forms of silver gilt are on sale at twenty-two shops for 4 and 8 piastres (about 10½d.). The next quality ("for gentlemen") is at 60 piastres, in 9-carat gold, and the best is "for ladies" in 22½-carat gold for 225 piastres (about £2 6s.). This is the most ambitious medal yet sold, and seems to be one of the purely commercial undertakings that are so much deprecated by inventors of less taking objects which are advertised to be sold "without any personal profit, and solely for the benefit of the poor." This medal makes no pretence, however, of benefiting anybody but the manufacturers by its sale.

CYPRUS NOTES.

(From a Correspondent.)

Births and Deaths.

According to recent returns, the population of Cyprus was 306,997 at the end of 1918. The births in that year are given as 9,637, but too much reliance cannot be placed on village returns. As regards the death-rate, the district of Kyrenia, in the north of the island, would appear the healthiest, the rate being considerably lower than all the other five, and larger, districts.

Be this as it may, the charm of this part of the island is incontestable, and no traveller willingly misses its many attractions, which include romantic scenery and ruins of various periods. The Anglican Bishop in Jerusalem, now in Cyprus, has been paying a visit to Kyrenia, and, like others, has been delighted with the place.

Conservative Cyprus.

Weather has been capricious. High winds and inclement intervals have done some damage to gardens and fruit trees. The barley harvest in the wide Mesaoria plain has been abundant, but of comparatively poor quality. Government tithe on all cereals is being taken, as for many years past, in kind, and all must be delivered by September 30, at the different Government stores.

In spite of the encouragement given by numerous prizes at agricultural shows and of the readiness of Egypt to take Cyprus produce, there is still a lamentable want of enterprise in market gardening and fruit culture. Excellent vegetables can be grown in the island, and the quality of many kinds of native produce could be vastly improved with very little care, and good prices would be realised; but the Cypriot clings to the old order. In the late harvest labour has been scarce and dear in many parts, and yet there is no introduction of hand-saving machinery, for which there are such manifest openings.

An order of the Acting High Commissioner cancels a proclamation of April, 1918, which regulated the slaughter of he-goats, and the requisition of goats throughout the island. This gives great satisfaction, as it is believed that it will tend to reduce the high price of meat.

Officials' Leave.

In spite of the difficulty of obtaining passages, and of frequent delays in Egypt, there has been a steady exodus of British residents homeward bound. Among those who have recently left are Lady Tyser: Mrs. Russell, wife of the King's Advocate; Mrs. Cade, wife of the Commissioner of Nicosia: Mr. W. Williams, Acting Director of Public Works, with his family; Mr. G. Jeffery; Mr. Barrett, Director of the Government farms, and Mrs. Barrett. Many others will be leaving in July and August. The season at Troodos is now very different from what it was in the "old days," and visitors will find the place much changed.

Official Appointments.

M. Izzet Effendi has been appointed Turkish judge at Famagusta, in succession to Mustafa Raïf Effendi, who has retired on pension.

The Order of the British Empire has been conferred on Mr. H. P. McLaughlan, Chief Clerk in the office of the Chief Secretary, and on Mr. A. Merrifield, Assistant Engineer in the Public Works Department.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest (undated).

A Bolshevist Plot.

Up to the moment of writing the Bolshevists have not resolved to desist from their periodically recurring incursions into Bessarabian territory, in spite of every one of their raids across the Dniester having resulted in disaster. Open methods failing, they have tried to introduce their ideas by means of secret agents, who mingle with the inhabitants of towns and villages. Fortunately their headquarters have been discovered, and all the members of the "Central Bolshevist Committee of Bessarabia" arrested. Registers, correspondence, and a large number of incendiary manifestos have been confiscated, together with a printing plant, which had been functioning secretly in the precincts of a Russian church in Kishinev.

A Royal Journey.

The Sovereigns are proceeding on their course of triumph through Transylvania. Never since Michel the Brave, who held the scattered fragments of the race together for a few short months, have all its constituent parts been united under a common sceptre. Never have such grandiose manifestations been seen as those prepared by the Transylvanians. Hundreds of thousands assemble to greet the Sovereigns at every stage of the journey. The scenes which take place everywhere, even the anxious questions addressed to the King on the subject of the Banat, serve to emphasise the sense of ethnical unity which the Transylvanians are known to possess to a superlative degree, and their determination to rally to a man about the person of their new ruler, whose name will be handed down to posterity as the emblem of national unity. This unity of the Roumanian people, presenting such a pleasant and encouraging spectacle beside the dissensions of some of her immediate neighbours, manifests itself in the movements of the masses rather than in the activities of its ephemeral, selfish, self-constituted representatives, who vituperate against each other, all unconscious of the morrow's oblivion; this homogeneous solidarity constitutes a guarantee for the future course and conduct of the nation. The Powers of the West, bearing in mind the synthetic work carried out in a part of the world where destruction and anarchy prevail, would do well to lend support to a State organisation destined to become ever more firmly welded, ever more qualified to safeguard the fruits of civilisation amid the shifting sands of Eastern Europe.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, June 12.

Discontent in the Island—

A series of apparently unassociated and disconnected circumstances has just come to a head in the island. To those in the know, who were able to estimate events and local feeling at their proper worth, it has been evident that for some considerable time past discontent has been rising. The passing of the Bill for the paying of Succession Duty was taken with the worst of grace by those affected.

The following are the chief points in the causes of the serious state of things that has arisen:—(1) Malta, in comparison with other countries, has suffered little from the war, but the poor countrymen have had to pay more for their bread and oil—the staple food of the labouring people. (2) In accordance with the usual aspirations of small nations, there has been expressed a desire to have a more liberal form of local government. (3) Merchants have suddenly grown rich from the war, and profiteering was suspected, and no doubt existed.

—and its Results.

Demobilisation has begun locally, and the number of workers employed in the Royal Dockyard has been reduced. This was a further cause of the dissatisfaction, which came to a head on Saturday last, June 7. A meeting had been arranged to discuss the national situation, but much more occurred, and rioting took place, with some looting. The offices and the plant of the most important English daily paper here, the *Daily Malta Chronicle*, were completely destroyed. Why this journal should have been attacked is difficult to discover, as it has always been to the fore in propagating wide views. The greatest sympathy is felt for the editor and proprietor, Mr. A. Bartolo. The Lyceum, the chief elementary educational institution, was also attacked. Then came the demolition of the palatial houses and mills of the millers and wheat owners. The damage done in these cases amounts to hundreds of thousands of pounds. For a time the mob had control of Valetta, until charged by the military, when some of the rioters were killed and many wounded. A strong anti-English feeling then manifested itself in the crowd, and a "national" funeral was arranged for the slain Maltese. A day of national mourning was instituted on Monday last.

At this juncture the new Governor, General Sir H. Plumer, arrived, and by his forceful and frank handling of the situation the island has been reduced apparently to quiet. The general and intelligent public opinion is that the ebullition has done, and will do, more harm than good. But if the political disabilities are not removed, the price of bread has immediately fallen from 5¾d. per rotolo (1 lb. 12 ozs.) to 4½d.! This seems the chief concern of the mob responsible.

Whilst there are those who think that the outburst was spontaneous, there are others who hold that the ignorant were goaded on by a class of better well-to-do with axes to grind. With an open mind on this point, there are one or two significant phases which cannot be overlooked, and which should form a basis for future treatment of the island and its Government. There is no compulsory education, and the looters were of the type of youth who would profit by the discipline of a strictly conducted Juvenile House of Correction. If self-government be a *desideratum*, let it be shown that there are men in the island—and we believe that there are—who can keep their own house in order. The further aspects of the situation must be dealt with in my next letter.

ARMENIA AND THE SETTLEMENT.

On June 19 a public meeting was held at the Central Hall, Westminster, S.W., to express sympathy with the Armenian cause. Viscount Gladstone presided, and, in opening the proceedings, said that the Turkish Government had deliberately settled on a policy of exterminating the Armenians by degrees. He recalled an old phrase, "Bag and baggage." Viscount Bryce, O.M., moved a resolution expressing satisfaction at the prospect of Turkish rule over Armenia being extinguished, and read a telegram from Nubar Pasha sending greetings to the meeting from the Armenian delegation in Paris. He said that the Powers at Paris appeared to have finally decided that Turkish rule was to vanish for ever from all the Armenian countries. In settling the future of Turkey three questions arose: What should be done with Constantinople? What should be done with Anatolia? What are we to do with regard to Armenia itself? As regards Constantinople, this city was neither Turkish nor sacred to the Moslems, and very little regard need be paid to those who said that if it was taken from the Sultan offence would be given to the Mohammedan population of India and the rest of the world. As to Anatolia, a large part of the interior of Asia Minor was inhabited almost entirely by Moslems, and there seemed to be no reason why a Turkish sultanate should not be allowed to exist there. This State would have a population of no more than five or six millions. Armenia should be a State stretching from Adana to Yelizavetpol. Around Erivan an Armenian republic had already been established by General Antranik, present at the meeting that evening. The population of the new State would include other elements besides the Armenian, and liberty and equality must be extended to every one of those elements; but among all these people the most educated, industrious, and reliable were the Armenians, and to them belonged the leading place. The only trouble to be apprehended was from the Kurds, and the difficulty from this quarter during the last sixty or seventy years had been almost entirely due to the incitements of the Turks. The Turkish Government being gone, the Kurds would settle down, and a gendarmerie of a few thousand men would be sufficient to maintain order. He hoped, therefore, that if the offer was made to the United States to be the protecting power of the new State, that offer would not be declined from fear of the difficulties of the problem. Mr. T. P. O'Connor, in seconding the resolution, recalled the history of Armenian agitations in this country. Other speakers followed, including Dr. Burrows, Dr. Clifford, Mr. Aneurin Williams, Mr. Noel Buxton, Mr. G. P. Gooch, Mr. Athelstan Riley, an Armenian bishop, and the representatives of a party of Americans who had recently visited the Turkish Empire. The resolution was carried, as was also another appealing to the British public to continue its support to the funds being raised for the relief of Armenian refugees.

FROM BUSREH TO BAGHDAD.

(From a Correspondent.)

Baghdad, April 2.

I left Bundar Abbas in the transport Muttra, and arrived off the Shatt-el-Arab on March 20. This lower reach of the Tigris is a replica of the great Indian rivers. Its winding banks are lined with palm trees and pierced by creeks running far into the cultivated plain. The latter being several feet below bed-level, one has the impression of steaming along a vast aqueduct. We anchored at dusk off Mohammerah, where Outram inflicted a crushing defeat on the Persian army at the very eve of the Indian Mutiny; and next morning pursued our journey to Busreh, passing rows of huge buildings, all run up since the war; endless paddle-steamers at anchor, beautiful white hospital ships; cranes, derricks, I.W.T. dockyards, and six forty standards belonging to the aerial wireless service. Two hours later we made fast to one of the quays at Magil, which is Busreh's riverside quarter. After breakfasting on board I motored to the residence of Major Meek, our Military Governor and Political Agent. It stands on Ashar Creek, with other bungalows occupied by his European staff. The road thither runs through a maze of camps, Red Cross hospitals, and store-sheds. Busreh has its own railway system, a network of lines on the two-foot gauge, along which miniature trains spin merrily to and fro. It also possesses splendid metalled roads, which were carrying a procession of motor-lorries and "caterpillars." The sky overhead bristles with telegraph wires—I counted 144 on a single set of standards. The whole city was humming with activity, for demobilisation is in full swing. Steamers packed with troops start every other day for Europe, and 175,000 rations are issued daily to concentrations awaiting transport. After being entertained for four days with the lavish hospitality which prevails throughout Mesopotamia, I took out a "Movement Order" for Baghdad.

The journey up-stream was performed in 4½ days in a paddle steamer 200 ft. long, which once plied on the Brahmaputra. With a roomy barge—"flat" it is called in India—on either side, she found some difficulty in breasting a four-knot current. After the first novelty has worn off life in a deck cabin of these unwieldy craft is not very exciting. Various landmarks of the 1916 campaign were pointed out by passengers who had been through the mill; but the only traces of war that remain are trenches marking the British and Turkish positions at Sannayat. We passed only four villages in the 153 miles between Amarah and Kut, and yet the plain on either side of the brimming river was green with crops and pasturage; while the Persian mountains loomed hazily in the eastern background. On reaching Kut we exchanged our comfortable cabins for a hot and dusty rest-house, where we literally had to fight for our dinner with myriads of flies. After sunset we walked to the town, 2½ miles from the landing-place. General Townshend's headquarters are now occupied by the Assistant Political Officer, and not far off stands a mosque, heavily pitted with little shell and shrapnel craters, which the Turks used as an observation post.

Baghdad was reached on March 24. Everybody had warned me that the old capital of the Khalifs would prove disappointing. It was not so, because "everybody" had conjured up Tennysonian visions of fairy palaces, mosques, and gardens, while I anticipated an oriental city of the type so familiar to Anglo-Indians. Baghdad has no outstanding architectural feature except the British Residency, now G.H.Q., a huge castellated building which does not harmonise with its environment. But Baghdad has its glorious river, with a wonderfully picturesque front, a fine covered market, and innumerable narrow streets lined with latticed windows, which remind one of illustrated editions of "The Arabian Nights." Our Military, Revenue, and Political departments are housed on the left bank of the Tigris, and the Chief Commissioner's residence is one of a long line of Turkish houses occupied by officials. They are mostly connected by a covered corridor on the first-floor level. The Revenue administration is officered by Indian civilians, and works like a well-oiled machine, thanks to the organising genius of the Chief Commissioner, Brevet-Colonel H. T. Wilson. His substantive rank is captain in the Indian Army, seconded for the Political Department. But by dint of hard work he has fairly won the D.S.O., C.M.G., and C.I.E., and at 35 he is the most outstanding figure in the Middle East. I was sorry to miss an introduction to Colonel Wilson, who had started on March 14 by aeroplane, in order to attend the Peace Conference.

The *Basrah Times* of May 22 announces that post offices have been opened at Table Mountain and at Baghdad West Railway Station; and that Kurna Branch Post Office has been converted into a combined post and telegraph office, dealing with paid inland telegraph traffic.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Land evictions in the West are not unknown in these days, but are far less frequent now than formerly. But a case which I have seen in the *Englishman* shows that these things are not dead in the East. Indeed, complaints of the high-handed actions of Indian landlords are on the increase. A correspondent of the *Englishman* sent the following example of the way in which he received intimation that he could either pay rent at 50 per cent. more than in the past, or quit: "I do hereby give you notice to quit and deliver up possession of the above place, with the expiry of May 31, 1919, failing which I shall file a suit for ejectment, and will also claim from you damages at the rate of Rs. 225 per month so long as you continue wrongful possession after the expiry of the month of May, 1919."—The journal lightly comments: "Quite a nice, friendly, sportsmanlike little note, isn't it? And this was 'the first and only intimation.'" This reminds one of the bad old days in Ireland, when, however, the ejected would not have dared to take refuge in the gentle bosom of the Press.

***

A week or two ago I gave a rather amusing example of how the Russian soldier acts when under great excitement. Then it was a subaltern clawing in rage at his commandant's neck. Now there is another story, told by Dr. Harold Williams in his dispatch from Ekaterinodov on General Denikin's army. In speaking of the gratitude which Russians feel towards Britain for what she is doing in providing them with means of war, he writes:—"The gallant Kuban Cossacks of General Shkuro, the 'Stewart of Kuban,' as the Russians call him, simply fell in love with the whippets. They flung themselves from their horses and kissed the sides of the baby Tanks." The habit of prostrating oneself in reverent delight before mechanical things is not an uncommon one; for I well remember how an Indian in France, when he had a new machine gun given him, almost licked the thing all over! He was an excellent gunner, and when he had orders to leave his machine gun it was like a human parting. And even the unostentatious Tommy, you know, when told finally to hand in the rifle which a thousand times he has fired and pulled through, feels that an old friend has gone out of his life.

***

When a subject people takes to its bosom the idea of independence, strange things nearly always occur. Such occurrences commonly end in tragedies, but comic elements can often be extracted from them. One of the best of these comic stories that I have heard for a long time is the recent narrative of how some ignorant Egyptians surrounded a house and demanded that the cupboards in all the rooms should be opened. They understood that the owner of the house kept locked up the thing called independence, and was withholding it from them as if guarding some treasure! It is true that the majority of people can conceive of an idea only when they see it in concrete form, but this Egyptian conception is surely an unique one! What can one do with such a people? I will not hazard an opinion, lest some of the misguided papers in this country should make the ignorant but obvious comment that Imperialism is to be found even in these columns.

***

The plain facts are, of course, that nationality, as representing the idea of the independence of one united people, does not exist in Egypt or in India; nor will it exist until long after you and I have been buried. Of late I have been reading, with sad amusement, the curious English of some Indian "nationalist" newspapers. It is obvious that the blame lies largely at the door of some men who were born in England, but who have little claim else to be called Englishmen. Their sweet, blind love for other countries is equalled only by their bitter, piercing hatred of their own Motherland. Into India they have imported, f.o.b., ideas wholly alien to the mentality of the natives, and used by them either for the purpose of causing trouble (a purpose always prevalent) or of commercial gain.

"KULTUR" IN TABRIZ.

THE AMMUNITION AT THE GERMAN CONSULATE.

By "Mirza Firooz Khan."

TABRIZ, April 17.

There has been a lull in the situation during the last few days. Apparently the result of the negotiations so far has been in favour of the German Consul, who seems to have had matters his own way up to this morning. At any rate, the Persian authorities have given up pressing their demands, and have declared (so it is reported) that they will have nothing to do with this "foreign affair," which is not their concern. This declaration, it appears, has soothed the Consul so far that he has ordered the removal of the two machine-guns from the roof of the Consulate. But the gates still remain closed, and no one is admitted to or leaves the Consulate, except the *ghulam*, even the doctor not daring to show himself in his office for fear he might be taken a prisoner and thus be used to compel the Consul to yield to the Persian demands.

It was rumoured that the local authorities had altered their attitude after consulting the Central Government, who informed the Tabriz Government, it is stated, that the matter was one for the French and British Consuls. This morning, however, affairs took a different turn, and the news now is that the Central Government have ordered that the German Consul must give up all his ammunition to the local authorities, and that he himself must leave Tabriz for Germany under the protection of a Persian escort.

The origin of the ammunition in the German Consulate is naturally an interesting point. Where did it come from, and what was its intended use? During the summer of 1918, when the foreign consuls and the European and American colonies left Tabriz for Teheran, Tabriz was gradually filled with Turkish troops, whose number, it is generally said, reached one division, extending from Urmi, Salmas, and Khoi, on the West, to Tabriz, Miana, and Zenjam on the East. In Tabriz itself there were anything from 5,000 to 8,000 Turkish troops last August, besides about 40 German soldiers, with more officers than were needed to command 40 men. These officers were here to organise, from Persian volunteers, an expedition which, it is believed, was intended to march from Tabriz to Resht, to assist the notorious Kuchik Khan, who, in the woods of Mazandaran, in the neighbourhood of Resht, first attacked and harassed the Russian Army and then in 1918 the British troops. The ammunition now in the Consulate was transferred here from Constantinople, and was intended partly to arm the Persian local volunteers, so that they might be organised as regular Turkish troops (under German command), and partly to arm the forest men of Kuchik Khan, whose arms were few and old-fashioned, and who were extremely short of ammunition.

During that time, very early one morning an aeroplane appeared in the sky and circled over Tabriz, especially over Bagh-Shumal (the southern garden of the Crown Prince) and over Koum Baghi, which was the headquarters of the Turkish troops. The Turks fired a few times at the machine, which rose higher and higher until it was out of sight. A few days later another machine appeared about 9 in the morning, at the eastern end of Tabriz—both this and the former machine were said to be British—and this second "sky boat," as the Persian cabbies called it, dropped large numbers of leaflets; but the day being windy, the leaflets were all scattered in one direction, and not a copy fell into the hands of the citizens for whom they were intended. The Turkish Commander at once demanded from the Governor-General, Mohta Sham es-Saltaneh, that every single copy of those leaflets should be collected at once and handed over to headquarters. So the services of the entire police force were enlisted, and every copy was picked up and sent to the Turkish Commander.

Not very many days afterwards the Turks posted notices in every part of the city to the effect that it was "Soulhi Imumi" (general peace), and that they were "going to leave Persia for their own country." Their departure began at once, and regiment after regiment left Tabriz, *always by night*, until every man and every wagon had come back from Zenjam and Miana to Tabriz and had left for Turkey. It must be admitted that this retreat of the 30,000 was carried through in a most masterly manner, for it was accomplished with extraordinary secrecy, promptness, and good order. One incident shows how thorough was the retreat. The Turkish Commander had in his room a broken chair, and he also kept a large red hunting dog which had become lame through an accident. In the retreat the lame dog and even the broken chair were not forgotten. What a difference there was between this retreat of the Turks and the retreat of the Russians a year earlier! In the one case it was an orderly movement and in the other the opposite. In the one case, as I have mentioned, nothing was forgotten. In the other, war material and ammunition and many millions of roubles were left behind.

It was only after the retreat of the Turks that we had any authentic information of the real position of affairs. Then we also learned what the printed matter was on the leaflets which were dropped from the aeroplane. The contents, briefly, were that the Bulgars had deserted the Germans, that Constantinople had been occupied by our Allies, that the Turkish Army now in Azerbaijan would soon leave Persia for Turkey, etc., etc. The Turks, when they posted the notice about the "general peace" and about their returning to their homes, of course, knew all this.

With the departure of the Turks the 40 Germans and their officers also went away, their scheme of organising an expedition consisting of Persian volunteers to Resht to aid Kuchik Khan thus coming to an end. The ammunition and war material brought to Constantinople for that purpose, and which was stored in the "late" Imperial German Consulate remained there without serving its intended purpose. It is that ammunition and war material which the Persian authorities are now demanding of the German Consul, basing their demand on the legal ground that as Persia is a neutral state and that the German Consulate is not a barracks or an arsenal, the Consul has no right to have such a large amount of material at his Consulate if he has no evil designs in view. The Persian authorities are afraid lest Consul Wustrow should present the war material to the democrats, but at the same time they probably have no special desire to compel the Consul to submit, in view of his threats. Were there no such things as death or dying, the authorities would easily deal with the Consul and would fight to a finish.

ARAB CHARACTERISTICS.

At the School of Oriental Studies, London, on June 18, in the course of an address dealing with the inhabitants of Mesopotamia, Mr. Campbell Thompson said that the ordinary Bedouin was a sparely made, short man, who could go long distances on poor food, that food consisting chiefly of flat cakes cooked in the ashes, rice, dates, and the inevitable coffee. If one were going to deal with the Arabs one wanted an extraordinary amount of common sense, patience, and sympathy—not meaning by sympathy a sloppy sentimentality, but an understanding of their feelings on such matters as eating the flesh of the unclean animal. In religion they were as conservative as ourselves. Fanaticism was a different matter in peace from what it was in war, and some of the tribes of Arabia itself were far more fanatical than those of Mesopotamia. But the ordinary Arab would accept a man for what he was worth, though there were certain old irreconcilables in the towns who would spit after everybody as they went by. He (the lecturer) thought the Arabs' intelligence was somewhat dulled by their religion, which put a bar to scientific progress, though this remark did not apply to the open-minded dwellers in the towns. These were perfectly ready to accept modern improvements. The ordinary characteristics of the Arab were great simplicity of manner and life, a philosophic habit of mind in time of trouble, dignity, hospitality great gravity, and superstition. They were more pious and kinder than the Turks. Many people said the Bedouin were dishonest, but he personally did not think they merited a sweeping condemnation in that respect. There was a difference in physique between cultivators and nomads owing to the cultivators getting more and different food, but he had found that Bedouins and cultivators could do a very fair day's work. The cultivator, as representing civilisation, despised the nomad, and the nomad reciprocated this feeling. He (the lecturer) had employed two groups, one of nomad Arabs, the other of cultivators, to dig for him. They got on very well together, but each group maintained a kind of academic superiority over the other, and when set to dig in the same trench they would allow a wall of earth about six inches wide to grow up between the two groups as the pit went down. The Arab was a great exponent of melodrama. His bravery was a little bit of the kind described in Gilbert's "Mountebanks," where a robber band proclaimed as its motto "Heroism without risk." His extreme conservatism was seen by comparing life in Mesopotamia to-day with that shown on the sculptures of many centuries ago. At times he would take up an attitude of pig-headed obstinacy, out of which nothing could move him. For this there was no remedy but patience. In dealing with him coffee was the best peacemaker, and it was the best intelligence agent, for it was a great loosener of tongues. On the other hand, the flesh of the pig in any form could do much more harm than coffee could do good.

The lecturer concluded with a word of advice for the traveller who got into trouble with a crowd: "A quiet and dignified attitude is the only one of the least use. Get hold of the oldest man you can see. Don't begin to talk too quickly, but try to talk to him quietly, and you will find that curiosity will silence the crowd."

NEAR EAST BOOKSHELF.

ARMENIA, TRANSCAUCASIA, RUSSIA.

It was a wise proceeding of the United Russia Societies Association not to limit their attention to Russia itself, since Russia impinges on the affairs of many neighbours; and in the first volume of *Proceedings* of the Association, which has been published by David Nutt, there are papers on the Ukraine, the Caucasus, and Armenia, as well as on the more obvious subjects of the Revolution in Petrograd and discussions of the character of Kerensky and Bolshevism. The papers on Armenia (which was contributed by Mr. Brayley Hodgetts, the Secretary of the Association) and on the Caucasus (by Mr. Ghambashidze) are, in fact, particularly valuable for a special reason that hardly applies to the remainder of the proceedings. What has happened in Russia these last two years has been exhaustively described in the newspapers, and several books have already been published on the subject; but only the most scanty information has reached England as to affairs in the Caucasus, and we are not in much better case as regards Armenia. These two papers and the subsequent discussion, throw light on obscure subjects, and will do good. The best of all the contributions, from a general point of view, is Mr. Robert Wilton's, late Petrograd correspondent of *The Times*, analysis of affairs under Kerensky and Lenin. It is a ruthless and able collection of facts and criticisms, done in masterly fashion. One or two papers on Russian music do not impress us very favourably, although the subject was rich enough to have been better treated; but there is a thoughtful account of Tolstoy, and the effect of his teaching and doctrines—by no means altogether beneficial—on the present generation in Russia, by Mr. Aylmer Maude, which well repays reading more than once. It is a significant fact that every leading doctrine of Bolshevism is to be found in Tolstoy's ethical writings.

A. W. T.

IMPASSIONED IMPOTENCE.*

A few of these poems were written on and of the fields of battle, but they are not the best things in the book. Most of the verse is dedicated to the poet's love, who, if she indulged in telepathy, cannot have led an idle life. The author does contrive to inform his work with a certain amount of passion, but it is of rather a frothy nature, and it does not take him out of the known tracks of the ocean of poetry, nor enable him to get beneath the surface. Mr. Solomon is too easily contented, and has not troubled to learn those secrets the key of which this book shows him to possess. He could not have written so excellent a thing as "The King's Song" from "Cleon's Choice" had he been what the majority of these verses would lead one to suppose him to be. The possibilities of immense improvement are his, and we hope he will realise them.

* "Rhymes from an Eastern Battlefield." By W. E. Gladstone Solomon. (W. Thacker and Co.)

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Censorship of India. JUNE 25.

Lord SYDENHAM asked the Under-Secretary of State for India whether it was the fact that there was a double censorship in India, at Peshawar and at Simla; and, if so, whether a competent censor could not be found to do the work at Peshawar, and thus prevent delays in the transmission of news to the Press.

Lord SINHA (Under-Secretary of State for India) said he regretted that the India Office had no information on the point referred to in the question; but it might give the noble lord some satisfaction to know that inquiries were being made. It had already been arranged with Reuter that messages regarding the Afghan situation would have Government priority of transmission.

HOUSE OF COMMONS.

The Mission to Egypt. June 25.

Mr. CECIL HARMSWORTH, Under-Secretary for Foreign Affairs, replying to Captain Wedgwood Benn, said:—His Majesty's Government, acting upon the advice of the Special High Commissioner, have decided to postpone the despatch of the Mission to Egypt until the early autumn. In the meantime, General Allenby is appointing a Commission in Egypt to collaborate and collect such evidence as may be useful to the Mission upon its arrival. The composition of the Mission has not yet been definitely determined.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

INDIAN CONSTITUTIONAL REFORMS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Motors have always been beyond my reach, and I do not know enough about them to quarrel with your opulent parable of the *chassis*. But if it means that the franchise question is more important than that of the subjects to be "transferred" to Indian Ministers who are to be responsible for them to Indian electorates, I must be allowed to disagree. The two questions are so intimately connected that I do not see how the one can be considered more important than the other. The new electorates must be so constituted as to be competent to form a judgment on the way in which the Indian Ministers use the powers and discharge the responsibilities about to be devolved upon them in regard to the "transferred subjects," and the "transferred subjects" must, therefore, be chosen with due regard to the very limited horizon of the new electorate, so as to bring the issues upon which the Indian voter will have to record his judgment within the range of his own practical experience. The usefulness of the voter and of the vote depends upon the voter's recognition of the connection between his vote and his ultimate well-being in matters that directly affect him.—I am, etc.,

VALENTINE CHIROL.

34, Carlyle Square, Chelsea, S.W., June 23, 1919.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On opening your issue of June 20 I note with satisfaction that my *ballon d'essai* of the 13th has been reasonably successful. "Foresight," endorses my opinion. Dr. Lanitis admits that his confidence that Britain will transfer Cyprus to Greece is based solely on that "principle of self-determination of national groups which has been adopted by the Allied democracies as the basis of a new world." Is self-determination an infallible panacea? The world has already gauged the efficacy of self-determination. To Mr. T. D. Mosconas I tender my thanks for the intelligence that "the Italians have now proclaimed, *urbi et orbi*, that they will only leave the good harbours of the Dodecanese when England abandons Cyprus and Malta." That "future" is too distant even for contemplation. Greece is under a very heavy debt to Britain. It is Greece that so unhinged the British Government that it offered Cyprus as a bribe to King Constantine. Britannia still blushes at the memory of it. Greece must pay the penalty of having brought that blush to her cheek.

I have just received from Dr. A. Maiuri, the Director of the Italian Archæological Mission at Rhodes, a copy of his "Guide to the Monuments and to the Archæological Museum of Rhodes." I have not yet had time to study it, but it tends to confirm the belief of Mr. Mosconas that Italy will not quit Rhodes. During the last six or seven years much correspondence about Rhodes has passed through my hands, and my experience is that the cession of Rhodes to Greece is generally viewed with disfavour. Mr. Mosconas talks of "these poor Auberges," but he will find that chivalrous memories and affections are wound around them, and that the example set by M. Bompard seven years ago, when he acquired the Auberge de France and gave it to his nation, will be followed by the representatives of the other time-honoured *Langues* of the Hospitallers. I acknowledge with thanks Mr. Mosconas' tribute to me as "an excellent authority on Iran and Turkestan," and while deploring my shortcomings "concerning the Hellenism of Cyprus and the Dodecanese," I must maintain my conviction that the time has not yet come for their transfer to Greece.—I am, etc.,

A. C. YATE.

The Athenæum, June 22, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—After reading the admirably exhaustive and practical letter of your correspondent "Foresight" in your last issue, I hesitate to trespass further on your valuable space. "Foresight," however, omitted to point to the singular fact that those Greek politicians who are so insistent in their demands for the cession of the island, never offer the smallest amount of evidence to show that the union would be beneficial to the Cypriots. The arrangement would doubtless serve the interests of Greece, but Britain is under no obligation to that country, which is still in a condition of bankruptcy, and whose claim for the union on purely ethnological grounds is untenable.

According to my own experience, which has extended over a period of forty years, the Cypriots have been contented and comfortable, and when Dr. Lanitis states, as he does in his last letter, that England is pledged to hand over Cyprus to Greece, I think he is mistaken. I would remind him that the acceptance of the principle of "self-determination," or of any principle, does not commit one to its exaggerations or corruptions. In a word, the inference he has drawn with reference to the cession of Cyprus would appear to be unwarranted.—I am, etc.,

CYPRIOT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The letter of "Foresight," in THE NEAR EAST of June 20, is an almost literal reproduction of a letter published with the signature "Vigilant," in the *Globe* of May 31. The Cypriot Mission—and it is difficult to see the grounds on which "Foresight" questions its claim to represent the Greeks of Cyprus, seeing that it consists of the Archbishop of the island and all the duly elected Greek members of the Legislative Council—answered "Vigilant's" letter at some length. Nevertheless, it may be permissible for us to summarise yet once more the essential facts of our case.

Is "Foresight" aware, and does he attribute no importance to the fact, that four-fifths of the population of Cyprus are Greeks who have on every occasion affirmed unmistakably their will for union with Greece? If so, "Foresight" might be urged to look backward a moment and recollect that Great Britain has given her solemn adhesion to the principles of self-determination, and proclaimed by the voice of her Prime Minister that "Equality of right among nations, small as well as great, is one of the fundamental issues this country and her Allies are fighting to establish in this war. . . . We feel that government by the consent of the governed must be the basis of any territorial settlement. . . . A territorial settlement must be secured, based on the right of self-determination or the consent of the governed. . . ." (Mr. Lloyd George, on January 5, 1918.) "Vigilant," then, in pleading that Cyprus should not be ceded to Greece, is clearly asking for the right of self-determination to be denied to a population of a quarter of a million. I take it he does not deny that Cyprus is ripe for self-determination, for he himself approvingly quotes the description of the island as "an outpost of civilisation." Yet he is for what would constitute not only an act of injustice but a breach of Britain's plighted word.

"Foresight" admits that the alleged British "interests which militate strongly against abandonment are very material." One reason for retaining Cyprus, which it is unnecessary to take seriously, is found in the qualities of Cyprus as a sanatorium. Carried to its logical conclusion, as "Foresight" would say, this principle would threaten the rights of the Swiss Republic to Davos, which is certainly visited by more convalescent Britons than Troödos. The other argument against the cession of Cyprus is the old unreasoning comparison with Heligoland. The whole point of criticisms of Lord Salisbury's cession of Heligoland to Germany is, I take it, that a point of vital strategic significance was handed over to a dangerous rival of the British Empire. It was like handing a loaded revolver to a personal enemy in the midst of a quarrel. The analogy drawn with Cyprus breaks down hopelessly because (1) Cyprus has no strategic importance—the best proof is that it was not used as a base during the war, and (2) because to suggest that Greece will ever become a dangerous rival of the British Empire is to show a deplorable lack of a sense of humour. "Foresight" refers to Corfu, an island for whose strategic importance we have the word of Napoleon. No doubt, then, "Foresight" would have opposed its cession to Greece if he had been old enough (as I hope he was not) to send letters to the Press in 1863. Yet, would any sane person consider that that cession has become "cause of regret and of censure upon those responsible for such a blunder". The true analogy for Cyprus is Corfu, not Heligoland. As "Foresight" recognises, the Greek Government is ready to meet in every way the exigencies of the defence of British sea-routes to the East. "The hands of Britain, indeed, need to be strengthened in the Mediterranean," but they will be strengthened better by tightening the bonds between the Empire and its natural allies through the cession of Cyprus than by staining the fair name of the British people for the sake of a *place d'armes* which has proved a "white elephant."—We are, etc.,

THE CYPRUS DEPUTATION.

2, Lancaster Street, Lancaster Gate, W.2.
June 24, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In a letter published in your paper of May 2 by a certain Nejmi Bodamializade of Paphos, under the title the "Future of Cyprus," appears the following paragraph:—"A few months ago I myself was insulted badly by a Greek

Digitized by Google

guardian before the statue of Venus in the Cyprus Museum." This statement, I think it my duty to say, is quite incorrect. Hundreds of persons, both Greeks and Moslems, are visiting the museum, and nobody has ever made even the slightest complaint against the conduct of the guardians. In the present case, as I can recollect, Nejmi Bodamializade had been forbidden in a polite manner by the Turkish guardian (and not the Greek one, as he incorrectly states) to enter a room prohibited to visitors. Surely this does not mean that he was badly insulted, and, what is more, for national reasons, as he leaves one to suspect.—I am, etc.,

MARKIDE, Curator, Cyprus Museum.

Nicosia, June 4, 1919.

"A FREE GIFT."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Dr. Dillon has authoritatively announced that this island will be ceded as "a free gift" to Greece. One can only wonder at the perverseness of the remark. Perhaps Dr. Dillon is unaware that 60,000 contented Moslems will be included in this free gift. Sixty thousand British subjects are to be governed from Athens. —I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus, June 4.

PRESS ON THE NEAR EAST.

The Question of Constantinople.

The *Sunday Times* of June 22 contains a vivid despatch from Mr. Crawfurd Price. He pleads very earnestly for a high, ideal line of treatment for the difficult questions with which the Peace Conference has to deal, especially that of Constantinople.

The reasons why the Turks should leave Constantinople and retire to their homesteads are manifold. History calls for this solution, for if the possession of Saint Sophia was the gage of victory in 1453, its loss will be the only effective sign of defeat in 1918. To act otherwise will be to persuade the Turks that they have not been beaten, perpetuate the Pan-Touranian propaganda, which has possibly more to do with the Indian agitation than pure religious sentiment, and create a dangerous belief that the threats of Islam are more to be feared than the sword of Christianity. Political expediency demands a settlement—a settlement to-day, when the world is yearning for peace as it never yearned before. And there will be no settlement if we leave the Padishah at Constantinople. The native Christian races will carry on the old struggle, the Turks will continue to reduce the *giaours* by massacre, great nations will develop their intrigues for the possession of the heritage, and the guardianship of the Straits will be in feeble hands. Turkey is undoubtedly a very rich country, and if we, for example, were charged with its exploitation we could make a lot of money out of it. Possibly this idea has occurred to other people. But has President Wilson retained a copy of his Fourteen Points?

The Position of the Khalifate.

The *Correspondance d'Orient* of May 30, in an article on "La Liquidation Orientale," has strong words on the uncertain attitude which the Peace Conference is adopting towards Turkey. All sorts of providential doctors, it says, have visited the "Big Four" in their efforts to save the sick man; but the Four are quite unable to make up their mind.

At the present moment they are weighing all the claims and measuring off most carefully the zones of influence; they do not wish to displease Greece; they attempt to satisfy Italy, the which is not always easy. And this is how the question of the liquidation of the East does not advance a single step.

We ourselves have always been firm supporters of the integrity of Turkey, not for the same reasons as the maharajahs from India, but first of all because the equitable principle of nationality must be unreservedly applied to all peoples; and next because the maintenance of the Sultan's sovereignty at Constantinople constitutes the most favourable solution to the freedom of the Narrows and for the interests of the Black Sea coasts. To base this Turkish integrity upon the opinion of Hindus, which is in no way that of the majority of the Moslem world, is a great error. For Islam, taken as a whole, does not recognise the spiritual suzerainty of the Ottoman Khalifate. To give to this Khalifate an importance which it does not possess would end in awaking dangerous ambitions and in facilitating the birth of a veritable Pan-Islamic peril.

Constantinople and Islam.

In the *Pall Mall Gazette* of June 18, Dr. C. Yamvakas writes on Constantinople, which he calls an Islam illusion. He scouts the idea that this city is a true centre of the Mohammedan cult.

The maintenance of the Sultan in Constantinople is even against the interests of the Mussulmans themselves. Owing to the atrocious policy of his advisers, Old and Young Turks, he has in recent times lost all religious prestige. Mecca, Medina, Baghdad, Yemen, and Syria have never recognised the preponderating influence of the Ottoman Khalif. A single example is sufficient to illustrate the truth of this. It is already known that the Sultan's religious powers have passed to the Sheik-ul-Islam, just as his political powers have been delegated to the Grand Vizier. By virtue of the Mussulman law, all the judgments, sentences, decrees, or decisions of the religious chiefs of the Ottoman Empire require to be invested with the *exequatur* of the Sheik-ul-Islam.

The Arab religious functionaries have never admitted the indispensable necessity of obtaining the Khalif's authority, through his representative, the Sheik-ul-Islam, on religious questions. That is because they have not recognised the religious supremacy of the Sultan. If proof of this were required, it would only be necessary to try to instal him at Mecca or Medina. The result would be that they would refuse him access to these places on the ground that he is not the chief of the Mussulmans, but simply a usurper of the Khalifate.

In conclusion, the writer suggests that the value of the Sultan and of Constantinople is not great in the eyes of Islam.

As Mecca and Medina, the headquarters of Mohammedanism, refuse to recognise the religious supremacy of the Sultan, is it possible to admit that certain Mussulmans, who are to be found outside the former Ottoman Empire, have good foundation for asserting the contrary? Their attitude is due to the Pan-Islamic propaganda of Abdul Hamid, followed, at the instigation of William II., by that of the Young Turks. From the point of view of the cult, Baghdad must always be the objective of Indian Mohammedans. It is to Baghdad that they go in their thousands each year as pilgrims. Have Indians, Algerians, or Tunisians ever been known to go to Constantinople to render homage to the Padishah, as Catholics from all parts of the world go to the Pope in Rome?

What is needed to-day is the removal of the Sultan from Constantinople, once and for all, to a truly Turkish sphere composed of the vilayets of Konia, Angora, and Castamoine, and a large part of the vilayet of Broussa. This sphere should be converted into an Ottoman State. It would be half as large as France, with a population, however, but one-tenth the size of that of the Republic.

Constantinople.

The *Evening Standard and St. James's Gazette* recently contained an article on the future of Constantinople by "A Statesman from the East." The writer pleads for a clear vision on the matter, and his opinion is that both the Russian and the Turk should be ousted from any possible control of Constantinople.

For two centuries the policy of Russia has been entirely perverted by the dream of Constantinople. For two centuries the peace of the world has been repeatedly disturbed by that political perversion. Now, Russia once restored—since restored she must and will be, sooner or later—she is certain to be hypnotised anew by the self-same vision. And, if we should entrust Constantinople to the Turk, a mere stop-gap, Russia would inevitably strive to evict him, and eventually succeed in so doing. A new conflict in the Balkans 'twixt Greek and Bulgar, or in Asia Minor 'twixt Greek and Turk: a fresh massacre of Christians—that would be ample to warrant Russia's intervention, and the history of the Orient would be re-written.

It is impossible to imagine any genuinely national Russian Government capable of resisting the temptation to seize Constantinople, were the Turk still enthroned there. . . . One thing, but only one thing, could cure Russia of this traditional ambition, which has misshaped her entire history as well as that of the other European States—to see installed at the Golden Horn a Power too strong to be attacked or even challenged without courting grave responsibilities and risks. If we do not wish to see Russia at Constantinople, we must put there not a sick man, but a full-blooded one; and I cannot conceive of any but a Western Power or a group of Western Powers being sufficiently strong to fill such a rôle.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

The Raja of Kapurthala has returned to London from Paris.

The King and Queen of Roumania are expected to pay a visit shortly to Bessarabia.

M. Nicolas Misu, son of the Roumanian Minister, returned to London on June 19 from Paris.

M. Take Jonescu, who left Paris in response to an urgent summons, has arrived in Bucharest.

The Indian Empire Club hold dances every Saturday at the Knightsbridge Hotel from 8 to 11.30.

Mr. Montagu, Secretary of State for India, arrived in Paris on June 21 and dined with Mr. Lloyd George.

King Peter is expected to return to Serbia in the course of this month. He has been staying at Kastel, near Athens.

Major-General the Maharaja of Bikanir, with the Maharaj-Kumar, were received by their Majesties on June 19.

Queen Alexandra received the Special Mission to the King from the Empress of Abyssinia at Marlborough House on June 23.

Sir John Woodroffe, of the Calcutta High Court, has been granted furlough from November of this year to August, 1921.

Captain Boteissis, of the Royal Greek Navy, has arrived in London to represent the Greek Government at the Hydrographic Congress.

Mr. E. A. Richardson, officiating Director of Public Instruction, has been appointed a member of the United Provinces Legislative Council.

Sir John Stavridi, Consul-General for Greece in London, has been called to Paris by an urgent message from M. Venizelos, the Greek Prime Minister.

Commander Boeresco, of the Roumanian Naval Mission, has left London for Paris for the purpose of conferring with the Allied Transport Commissions.

Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation, and Mme. Costiesco-Ghyka returned to London on June 20 from Paris.

General Danglis, Commander-in-Chief of the Greek Army during the conclusive offensive on the Balkan front, arrived in London on June 24 from Paris.

Prince Nicolas of Roumania, attended by Lieutenant-Colonel Arion, has left Eton for Brighton, where he will stay for some days in order to recover from his recent illness.

The Ukrainian Minister, M. Georges de Gassenko, who has been acting as Chief of the Ukrainian Diplomatic Mission at Bucharest, has arrived at Berne on his way to Paris.

Mr. T. K. Johnston, I.C.S., Sessions Judge of Agra, is to proceed on long leave. Babu Gopal Das Mukharjee, Small Cause Court and Subordinate Judge of Agra, will act for him.

The marriage of Captain (Acting Major) Robert Cecil Christie, M.C., 102nd K.E.O. Grenadiers, and Miss Eileen Pickering took place at St. Stephen's Church, Twickenham, on June 21.

Mr. R. H. Williamson, I.C.S., on return from Mesopotamia, will be posted as Collector of Agra, relieving Mr. S. H. Thompson, who reverts as Joint Magistrate in the same district, but shortly proceeds on leave.

The marriage was celebrated on June 14, at St. Stephen's Church, Bournemouth, by the Rev. G. P. Trevelyan, assisted by the Rev. R. C. Bond, C.F., between Captain H. L. Richards, Tank Corps, eldest son of Mr. H. M. Richards, I.C.S., and Mrs. Richards, of Colombo, and Christine Mary, daughter of the late Major C. W. Carrell and Mrs. Carrell, of Bournemouth.

The Maharaja of Kapurthala has remitted to M. Lebrun, Minister for the liberated regions, through the British Ambassador in Paris, the sum of 15,000 francs in aid of the unfortunate people of those districts.

Sir Francis Elliot, lately British Minister in Athens, and his Excellency M. J. Gennadius, G.C.V.O. (honorary Envoy Extraordinary and Minister Plenipotentiary for Greece), have become joint Presidents of the Anglo-Hellenic League.

The marriage was celebrated on June 9, at All Saints' Church, Bulkeley, Egypt, by the Rev. L. Fry, between Lieut. F. H. Abell, R.A.F., son of the late F. H. Abell, of Cape Town, and Gertrude I., daughter of John T. Atkin, of Bulkeley, Egypt.

While Sir James Meston is in this country to represent the Government of India before the Joint Select Committee on the India Bill, Mr. H. F. Howard, C.I.E., Secretary in the Financial Department, is acting as Finance Member of Government.

The marriage was celebrated on June 20, in London, between Major S. Haughton, I.M.S., son of Mr. and Mrs. Samuel Haughton, of Clyde Road, Dublin, and Marjorie Winifred, eldest daughter of Mr. and Mrs. Everard Porter, of Haddenham, Cambs.

Mrs. St. Clair Stobart, who has been appointed a Commissioner of the Serbian Red Cross Society in Great Britain, has left London for Yugoslavia, where she will make arrangements on behalf of the Serbian Red Cross for the opening of wayside dispensaries.

M. Venizelos, the Greek Premier, had arranged to come to England on June 24 for the purpose of receiving the honorary degree of Doctor of Law at Oxford, but owing to the need of his presence at the Peace Conference in Paris he was obliged to cancel the engagement.

Lady Chelmsford is leaving for India to-day by the P. and O. steamer Manora. She is being accompanied by Captain Denny, Grenadier Guards, Captain the Hon. Alexander Agar-Robartes, Grenadier Guards, and Captain the Hon. Donough O'Brien, Rifle Brigade, A.D.C.s to the Viceroy.

A marriage has been arranged, and will shortly take place, between Lieutenant-Colonel W. E. Wilson-Johnston, C.I.E., D.S.O., 36th Sikhs, and Edith, second daughter of the late Captain Francis Gilbert-Jones, R.N., and Mrs. Gilbert-Jones, of 55, Lime Grove, New Malden, Surrey.

The marriage arranged between Captain C. M. S. Manners, D.S.O., 104th (Wellesley's) Rifles, and Maisie, eldest daughter of John J. Calder, of Ardargie, Forgandenny, Perthshire, and 45, South Street, W., will take place at St. Mary's Church, Cadogan Street, on July 10, at half-past eleven o'clock.

An engagement is announced between Captain John de la Hay Gordon, O.B.E., M.C., Indian Army, third son of the late Alexander Hamilton Gordon, D.L., and Mrs. Gordon, of Delamont, Killyleagh, Co. Down, and Esmé Violet Bevan, of The Elms, Appley, Ryde, daughter of Mr. and Mrs. Cecil Bevan.

A marriage has been arranged between Lieut. Redvers Holland-Pryor, R.N., H.M. Submarine R.8, son of Brigadier-General P. Holland-Pryor, C.B., C.M.G., M.V.O., D.S.O., Secunderabad, and of Mrs. Holland-Pryor, and Helen Sybil, youngest daughter of Mr. and Mrs. John Nairn, Forth Park, Kirkcaldy, N.B.

The marriage was celebrated on June 14 at Holy Trinity Church, Guildford, by the Rev. E. C. Kirwan, between Captain James Desmond Gabb, Indian Army, third son of Dr. J. P. A. Gabb, Povle Mount, Guildford, and Constance Margaret, daughter of Mr. and Mrs. H. V. S. Davids, Hillier House, Guildford.

The Maharaja of Bikanir, accompanied by his staff, left Charing Cross on June 21 for the Peace Conference. He has been absent from his State since last November, and is anxious to return to India as soon as possible, in response to urgent requests. Hence it is not likely that he will be in London again before sailing.

The marriage was celebrated on June 12, at the Church of St. Edward the Confessor, Golders Green, by the Rev. W. A. Bendon, between Rudolph John, eldest son of Mr. and Mrs. J. A. Agnew, of "Royston," Hampstead, and Pamela, youngest daughter of the late Mr. I. D. E. Campbell and of Mrs. Campbell, Roses Mount, Naini Tal, V.P., India.

The marriage was celebrated on February 22, at Christ Church, Rawal Pindi, India, by the Rev. — Dixon, Chaplain, between Major Edward Cyril Boutflower, the Duke of Wellington's Regiment, son of E. C. Boutflower, Esq., of Hale, Cheshire, and Violet Eleanor Dunlop, only daughter of the late Arthur Percival Hinde, Esq., late of Beaumont Hall, near Lancaster, and of Mrs. Hinde, of Eastbourne.

The marriage of Captain Richard Hassell Sheepshanks, D.S.O., 12th Cavalry, I.A., formerly A.D.C. to the Viceroy of India, son of the late Rev. T. Sheepshanks, of Arthington Hall, Leeds, and the Hon. Bridget Mary Thesiger, third daughter of the Viceroy of India and Lady Chelmsford, took place on June 24 at Canford Parish Church. The Vicar of Canford, the Rev. G. J. J. O'Shea, officiated, and was assisted by the Rev. M. F. Alderson, Rector of Bemerton, Salisbury, a cousin of the bride. The bride was given away by the Hon. Percy Thesiger, brother of Lord Chelmsford. Captain Yates Brown, 17th Cavalry, was best man.

Digitized by Google

Colonel Wedgwood, M.P., is leaving England on a private visit to Eastern Europe. He expects to be away about three weeks.

M. Venizelos, who has been elected Foreign Associate Member of the French Academy of Moral and Political Science, took his seat on June 20, when M. Lyon-Caen, Permanent Secretary, presented the Member's Medal of the Institute to the great Greek statesman.

Roumanians in this country born in 1898, as well as those born between the years 1877 and 1898, who have previously been temporarily exempted from joining the Army, are asked to present themselves to the Roumanian Military Attaché at 88, Kingsway, W.C.2, between the hours of 10 a.m. and noon.

The marriage was celebrated on June 17, at Warblington, Hampshire, between Colonel A. M. Moens, C.M.G., D.S.O., 52nd Sikhs F.F., son of the late S. M. Moens, I.C.S., and May, widow of the late Captain Dermot Attleck Graves, R.E., and daughter of Captain A. J. Douglas, R.N., of Roxburgh, Emsworth, Hampshire.

The engagement is announced, and the marriage will shortly take place, between Major C. L. Brereton, R.F.A., only son of Mr. R. H. Brereton, C.I.E., late I.C.S., and Mrs. Brereton, and Leila Macdonald, second daughter of the late Dr. Edward Horsey, M.P., North Grey, Canada, and Mrs. Horsey, 55, Albert Hall Mansions.

The marriage was celebrated on June 21, at St. Margaret's Church, Lee, by the Rev. Francis Helm, M.C., assisted by the Rev. H. E. Whately, between Roland Howard Crooke, eldest son of Dr. William Crooke, C.I.E., and Mrs. Crooke, of Langton House, Charlton Kings, Cheltenham, and Edith, elder daughter of the late Mr. J. R. C. Nicolls, Superintending Engineer, P.W.D., India, and Mrs. Nicolls, 31, Blackheath Park, S.E.3.

OBITUARY.

The death occurred on June 22 at Chagford, Devon, of Henry Richard Farmer, Indian Civil Service, retired, of Gatacre Park, Bridgnorth, in his seventy-fourth year.

The death occurred on June 13 of Captain Frank Sinclair, late First Class District Commissioner, Nigeria, son of the late Principal Sinclair, Madras, in his forty-fifth year.

The death occurred on June 16 at 4, Linden Road, Bexhill, of Mr. Charles Wapshare, second son of the late Major W. H. Wapshare, H.M. Madras Army, in his seventy-sixth year.

The death occurred on June 21 at 3, Lansdowne Terrace, Eastbourne, of Haroutune Nishan Mosditchian, of 2, Broad Street Place, London E.C.2, Member of the Armenian National Delegation.

Lieut.-Colonel Peter Robert Bairnsfather, late of the 14th Bengal Lancers, died on June 17 at Baldinnie, Coupar Angus, at the age of sixty-nine. He served with the Jowaki Expedition in 1877-8 and in the Afghan War in 1878-80.

The death occurred on June 5 at Pachmarhi, India, of John Edward Hance, M.A. Oxon, Indian Civil Service, eldest son of the late Edward M. Hance, LL.B., and Mrs. Hance, of 305, Woodstock Road, Oxford, formerly of Liverpool, aged forty-two.

Captain the Hon. Reynolds-Reynolds Moreton, late Royal Navy, died on June 19 at St. John's, Bishopstoke, at the age of eighty-four. Captain Moreton served in the Burma War and in the Black Sea during the Russian War, and received the medals for both campaigns and the Turkish medal.

The death has occurred in India of the Rev. Dr. John F. Steele, one of the missionaries of the General Assembly of the Presbyterian Church in Ireland since 1883. Dr. Steele was the author of several commentaries in Gujarati on the books of the New Testament, and was awarded the Kaisar-i-Hind medal of the first class for distinguished public services.

The *Egyptian Gazette* of June 9 announces the death of Captain Eustace Macartney Parsons-Smith, Royal Army Medical Corps, attached to the Egyptian Army, which took place on May 24 in Khartoum Civil Hospital after a brief illness. Captain Parsons-Smith joined the Egyptian Army on May 11, 1911, as Bimbashi, and was promoted Kaimakam on May 5, 1918.

Lieut.-Colonel Gronow John Davis, of the Indian Army, Military Secretary to the Chief Commissioner of the North-West Frontier Province, has died in London at the age of forty-nine. He was a son of the late Major-General Gronow Davis, V.C., and served on the North-West Frontier of India in 1897-8, when he was present at the relief of Malakand and during the operations in Bajaur. He also served at Tirah, and received the medal with two clasps.

DEATH.

RAMSAY.—On May 24, 1919, at St. Roma's Hospital, after a very short illness, the only son of the late Mr. Gregor McGregor Ramsay, of Constantinople, Allan Ramsay Ramsay, aged 17½ years.

NEWS IN BRIEF.

The Serbian Red Cross Society in Great Britain appeal for the gift of a touring motor-car for the use of their commissioners in Serbia.

In the course of the trial for high treason of M. Mercouris and others, which is now proceeding at Athens, the ex-Premier, M. Zaimis, stated in the witness-box that he always believed Greece's place was on the Entente's side.

At a meeting held at Salonika the delegates of thirteen Zionist societies from the various Greek provinces decided on establishing a federation of all Zionists in Greece, and on publishing in Greek a monthly organ of the federation.

Certain Jews and Moslems of Strumnitza, who took refuge with the Greeks in Greek territory, have telegraphed to the Peace Conference stating that they are in agreement with their Greek neighbours in asking for the inclusion of the Strumnitza district in Greece.

A Bolshevist wireless message says that a Soviet Republic has been proclaimed in the Mugan Province, the southern part of the Baku Government, which has 300,000 inhabitants, of whom 17 per cent. are Moslems. The new Republic is to become federated with the Russian Soviet Republic.

A Moscow wireless message reports that a steamer on the Caspian Sea, carrying a courier with certain documents from General Denikin to Admiral Koltchak, has been captured by a "Red" torpedo-boat. The contents of these documents, says the message, will be published shortly.

THE AFGHAN TROUBLE.

The following communiqué was issued by the India Office on June 21:—

The Ameer's reply to the Viceroy's letter proposing terms of armistice, while it is thought to afford a basis for negotiations for peace, has raised points which required careful consideration by the Government of India and His Majesty's Government. The Viceroy was authorised on Thursday to address a further communication to the Ameer agreeing, on certain conditions, to receive at Rawal Pindi the Afghan delegates whom the Ameer proposes to send as soon as the fast of Ramadan is over.

ELECTIONS IN EAST AND WEST.

Philosophers have been known to argue that the true line of cleavage between East and West must be sought in the region of political institutions, and that while Western ideals have pointed steadily in the direction of responsible self-government, Eastern countries have aimed rather at the perfection of that bureaucracy of which despotism is merely an occasional incident. Without adhering formally to that theory, we may still recognise that it gains point from the coincidence that at the time when the West was making hasty experiments with bureaucracy, various Eastern nations developed a sudden appetite for constitutional changes involving the creation of representative institutions, and consequently requiring the introduction of a system of popular elections It would perhaps be dangerous to assert that the East knows nothing about elections, seeing that some prehistoric ballot-box may be lying even now concealed in an Egyptian tomb or preserved in the mud of Mesopotamia, but we are justified in saying that her recent practical experience is exceedingly slight, and that the framing of a reasonable and workable electoral system is in consequence a task of considerable difficulty, calling for a greater amount of hard and clear thinking than impatient idealists are ready to admit. The Eastern politician is interested for the moment chiefly in checks and balances, or in powers and budgets; he seeks very naturally the maximum of authority, and is apt to take for granted the source whence that authority must spring; he knows that any nation can make its own ballot-boxes from imported patterns, and he assumes that electoral law and procedure can likewise be borrowed ready-made. Such an assumption is at once fallacious and dangerous, and now that the scheme of constitutional reforms for India has brought the whole question of popular election into practical politics throughout the East, it is time to sift the matter with some care, and endeavour to reach some guiding principle which may serve to minimise the undoubted risks of the present situation, and facilitate advance towards the ultimate goal of responsible self-government.

The fallacy underlying the idea that electoral systems can be imported ready-made arises from regarding old-established institutions as products of the intellect, when they are in fact expressions of the national character; the corresponding danger springs from the fact that while it is easy to appropriate codes and regulations, it is impossible to import the conventions and understandings by which codes and regulations are interpreted in practice. The point may be illustrated by examining the probable result of introducing into India the accepted English methods of placing the issues before the electorate. As the law now stands, a candidate may offer nothing to any individual, but (libels and sedition apart) he may promise anything he chooses to the mass; the gift of a single glass of beer will imperil his success, but he may with impunity hold out the prospect of free beer for all, and the electors are left to exercise their own judgment as to the chance of such promises being fulfilled. Candidates may thus in theory appeal to reason, to interest, or to passion, and if in practice their appeals are ordinarily innocuous, the cause must be sought in the conventions and understandings which have grown up, and which set fairly definite limits to the activities of individuals. Let us suppose that India starts with equal theoretical freedom, but necessarily without old-established conventions. According to the present arrangements, there will be two simultaneous elections in an ordinary Indian constituency, the Moslems voting among themselves, and the rest of the community (almost wholly Hindus) having to choose a representative independently of the Moslem vote. What will be the result if a Moslem candidate stands for liberty of sacrifice, while a Hindu is seeking a mandate prohibiting the slaughter of cows? Everyone who knows the country will answer that the masses will rally to the roll of the drums ecclesiastic, and the chances are that the ballot-boxes will be submerged in a torrent of blood. We do not assert that this danger is a permanent feature of the situation, but we are quite certain that it exists at the present day, and so long as this is true, no Government can possibly take the risk that any election may serve to unchain religious passions in their most destructive form. It will doubtless be urged that no candidate would incur a responsibility of such magnitude, but we are by no means confident on that point; the drum ecclesiastic is occasionally heard even now in English electoral campaigns, and it is tolerated because it does little harm, and is not on the whole remunerative; but in India the predominance of conflicting religious ideals makes it highly probable that the appeal to passion will be made, if not by candidates then by their eager partisans, and, whoever makes it, the result is bound to be disastrous.

We contend, then, that in existing circumstances the introduction of the English system into India, or into countries where similar conditions prevail, would be fatal to the realisation of that orderly progress towards self-government to which the Empire stands committed; at the outset some limitations must be imposed on the activities of candidates and their partisans, sufficient to ensure that the main object shall not be defeated, and that the untried device of popular elections shall be given a reasonable chance. It is not enough to say that a candidate who should provoke a riot would be liable to the ordinary criminal law; the riot will have taken place before the law can get to work, and the situation calls for prevention, not for punishment. We do not know whether this aspect of the question has yet been considered by the Government of India, and it may be that the necessary measures have already been taken in hand, though we can find no allusion to the subject in the despatches which have recently been published; but it is due to the public in India as well as in this country that a definite statement of policy should be made, and that prospective candidates and nascent political organisations should know from the start the limits within which their programmes or platforms must be framed, and the responsibility which will attach to them for any transgression beyond those limits. We do not suggest that this responsibility should necessarily be of a penal nature; the matter is political, and political disqualification is the obvious resort. Let it be made clear from the outset that a candidate who, either personally or through his agents, goes outside the wide field left open to legitimate electioneering, shall thereby put himself out of politics, either permanently or for a term of years, and we believe that the danger of illegitimate activity can be brought within reasonable bounds. A candidate offers himself for election because he is desirous of securing a seat, and the knowledge that a certain course of action will render this desire unattainable will suffice to restrain any tendency to transgression which may otherwise exist. Regulations of this nature would not, of course, be designed for permanent adoption; they would form part of that elaborate scaffolding without which no great permanent edifice can be erected, and which is removed when it has done its work. The Dyarchy of which we hear so much from India is itself merely scaffolding, and, if it comes into existence, will be meant to serve for only a limited period. Just as India needs the Dyarchy for a time, so do India and various other countries need some temporary provisions of positive law to allow time for the growth of the conventions and understandings, without which an imported electoral system is foredoomed to failure.

THE FUTURE OF TURKEY.

By "BETA."

Presumably the League of Nations has already mapped out the boundaries of the territories in Mesopotamia and Palestine to be assigned to Great Britain as its mandatory, but one doubts whether the strength and composition of the military force needed for the maintenance of order in these territories have yet been definitely laid down. Does the decision in such matters rest with the League or with the mandatory Power? This is a question which will most certainly be asked in Parliament sooner or later, and the Government would be well advised if, anticipating it, they could furnish the necessary information on the subject without further delay. Then, again, on the question of cost, the Government have hitherto been silent, although it is a matter of vital concern to the taxpayer. A British garrison, even when a portion of the troops composing it is drawn from India, is a costly affair, infinitely more so than a Turkish garrison, for instance, and if the cost of the protecting army assigned to Mesopotamia by the League is to be charged against the revenues of the country in addition to the cost of the no doubt efficient but most assuredly costly civil administration to be provided for its benefit, it is quite safe to prophesy that there will be murmuring in the land. This country has never sought to derive revenue from the Crown Colonies and Protectorates it administers. In the past, only too often the reverse has held good, and the House of Commons has had to make grants in aid of the administration of these territories. But since they all formed part of the British Empire, and their commercial development was to the advantage of British trade, this expenditure has been hitherto sanctioned without much opposition having to be met. If, however, as seems highly probable, the taxpayers of the United Kingdom are called upon to provide large sums of money to make good any deficits in the budgets of countries placed under British administration by the mandate of the League of nations, considerable trouble is likely to result. Good-natured people are still found willing to undertake the thankless office of trustee for other people's property, but while they are ready to do so without receiving any remuneration for their labours, they would certainly decline to act if they were called upon to find even a fraction of the money needed for the upkeep of the estate out of their own pockets, and it may be noted that the Public Trustee makes a charge for his services.

If Mesopotamia had been annexed and formed part of the British Empire as a result of this war, Parliament would probably think it well worth the country's while to finance it during the years which must necessarily elapse before it reaches the stage of establishment as a "going concern," but saddled with the responsibility of administering this ex-Turkish province in the interests of humanity in general and its inhabitants in particular, it is difficult to see on what grounds the British taxpayer could be called upon to lend his assistance. As a matter of fact, millions of British money have already been sunk in Mesopotamia in harbour improvements, railway construction, and irrigation during the past four years, and all of this money has come out of the pockets of the people of the United Kingdom, either in the form of taxes or of loans to the State. The public works so provided are calculated greatly to benefit the inhabitants of the province, and many people would like to know whether they are going to be called upon to pay for them or whether they are to enjoy them as a free gift. In the case of the railways, the lines constructed during the war represent to all intents and purposes the terminal section of the so-called Baghdad Railway; and the linking up with a port on the Mediterranean littoral and also with the main line of the Turkish railway system in Asia Minor is urgently called for. Who is to undertake the work, and who is to pay for it? The mandatory Powers or the League itself? These are only a few of the questions the Government must be prepared to answer before long, and it is surely not too much to ask that they should, without further delay, enlighten us concerning them. Incredible as it must seem to most people, it is nevertheless a fact that there are individuals not lacking in ordinary intelligence, and whose loyalty to the Allied cause cannot be called in question, who have very grave misgivings as to the wisdom of dismembering the Ottoman Empire. They are even inclined to think that its reorganisation on a federal basis might well have been considered before it was portioned out among the Allied Powers without the slightest reference to the wishes of its inhabitants. Western Arabia having effected its own liberation, is apparently to be left to work out its own salvation as an independent kingdom; Syria, Palestine, and Mesopotamia are to be placed under foreign administration; but large territories in Asia Minor which were never really conquered by the victorious Powers are to be assigned to Greek and Italian supervision.

It is difficult to discover even a suspicion of statesmanship in this fatuous scheme for the dismemberment of the Ottoman Empire, which ignores the feelings of millions of Mohammedans in Asia and Africa, and disregards the fact that the majority of them are either British or French subjects. The Young Turks of the Committee of Union and Progress, having betrayed the cause of their country by selling her military power to Germany in 1914, deserve no consideration at the hands of the Allies; but whatever we may think of these men, the fact remains that they at least made an attempt to give the Ottoman Empire parliamentary government, and that in the National Assembly they set up, all the races and religions of the Empire were represented. They aspired to raise Turkey to the level of a great Power, and believed that it was within their capacity to establish prosperity and contentment within her borders. That they were not equal to the task is now a matter of history, but that it might not even now be accomplished if directed by more experienced brains is a question still worth considering. If the task of restoring order in Turkey had been assigned to Great Britain by the Conference one doubts not that it would have been rapidly accomplished with the loyal co-operation of the Turks themselves. Failing Great Britain, France would have been equally competent to undertake it, her work facilitated by the fact that the majority of educated Turks have a fair knowledge of the French language. All that is needed is a resident physician for the "Sick Man" willing to undertake to stay with him until he is restored to health; but for the post only gentlemen with Mohammedan experience need apply. Such experience cannot be acquired either in Washington or in Rome, but it is possessed by thousands of Englishmen and Frenchmen, not a few of them capable administrators who have spent most of their lives in intimate contact with Asiatics and Africans, who regard the Sultan as their spiritual leader. Such men would readily undertake the task of governing Turkey and her subject provinces with the co-operation and assistance of the local officials, provided they were allowed a reasonable amount of discretion in the carrying-out of reforms dear to the Western, but not always quite to the taste of the Oriental, mind. What has been poetically described as "the blasting tyranny of the Turk," translated into plain language means an inefficient and corrupt administration. The Sultan's subjects, Turks no less than Syrians and Arabs, have often in the past been robbed by dishonest civil officials. In addition to being most of them dishonest, these officials were practically all utterly incompetent, but their unpopularity is to be ascribed to the former and not to the latter defect, efficiency making no appeal to the Oriental mind. The popular belief that the unhappy victims of Turkish misrule are crying out for improved sanitation, compulsory education, and what are called comprehensive reforms in the everyday life of the community is quite at variance with the facts. The Oriental cares for none of these things, and a meddlesome administration, no matter how efficient according to Western standards, is his *bête noir*. His conception of good government does not rise beyond the impartial administration of justice, the protection of life and property, and the minimum of direct taxation. Good roads he, of course, appreciates, provided he is not called upon to make them himself, or to pay for their construction, but it is ridiculous to represent him as crying out for improved communications. All the things really wanted by the people of the Ottoman Empire could be easily and cheaply provided by a good native administration, adequately supervised by specially selected European officials, preferably Englishmen of the public school type, kindly sportsmen who might be counted on to see that their native associates and subordinates "played the game." But all these matters have probably been settled long ago by the "Big Four," and it is doubtful whether Parliament will ever be allowed to discuss them. One hopes for the best; but one fears that when the Turkish Empire has been partitioned and the inhabitants come under the benevolent sway of the lofty idealists we will import to make them good, there will be "unrest" in the Mohammedan world.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Elsewhere in this issue will be found the prospectus of the Levant Company, which, as my readers know, has been established to develop trade relations between Great Britain and the Levant and the Near East, and will aim at reviving in a modern form the commercial side of the activities of the old Levant Company. The undoubted prospects for British trade enterprise in the Near East, of which new evidence is forthcoming almost daily, offer a wide and unique scope to an organisation of this nature, and it does not need imagination to realise that the Levant Company should have a great future before it. The company is one of the subsidiary undertakings of the British Trade Corporation, whose general manager, Mr. A. G. M. Dickson, a director of the Levant Company, has recently concluded a tour of the chief commercial centres of the Levant and the Caucasus, which has provided the company with first-hand knowledge of the commercial and industrial potentialities of each district.

***

The Levant Company, which was formed some months ago, has a capital of £1,000.000, divided into 800,000 ordinary shares and 200.000 deferred shares, each of £1. The British Trade Corporation holds the deferred shares, and the issue just made consists of half the ordinary shares at par. Profits are to be distributed on the basis of 7 per cent. on the ordinary shares, then a similar dividend on the deferred shares, after which both classes of shares participate equally. The company, I may point out, has already a very substantial nucleus for its operations, for it has acquired the business of general merchants carried on by Messrs. Henderson, Lane and Co., the whole of the share capital of Henderson's (Manchester), Ltd., and a large holding of shares in J. W. Whittall and Co., Ltd., which was formed in December, 1918, to acquire and develop the business assets and undertaking of the firm of J. W. Whittall and Co., of Constantinople. The capital of J. W. Whittall and Co. consists of £350.000, in 15.000 preference shares of £10 each, and 200 000 ordinary shares of £1, of which 10.000 preference and 150.000 ordinary have been issued, and the Levant Company's holding is 7,000 of the preference shares.

***

It would only be a disservice to Greece to attempt to disguise the fact that in Smyrna itself there is another side to the shield in regard to the rejoicings over the occupation of the port and the adjacent territory. Both Greek and foreign merchants realise that the definite incorporation of this district in the Hellenic kingdom followed by the immediate application of the Greek tariff, with its somewhat severe discrimination, might impose a serious set-back to the trade of Smyrna. It has been the port of entrance and egress for a large part of Asia Minor in the past, and the trade of these territories is bound to forsake it if it is called upon to bear heavy duties when the sea can be reached by another route without passing a tariff barrier. I see no grounds, however, for sharing the pessimism of some Smyrna residents, and strongly advise them to "wait and see." The Greek Government is bound to be alive to the pitfalls of the situation. It does not want to take over a moribund port, and will be obliged to adjust its policy to the peculiar position of Smyrna.

***

If I were to believe all that my Greek friends tell me, I should be forced to the conclusion that the old city-rivalry in Greece is as acute to-day as it was when Thebes, Athens, and Sparta represented different States. No doubt the Greek is an individualist, but he is intelligent as well, and he can hardly fail to recognise that, whether he belongs to the Piræus, to Smyrna, or to Salonika, he is going to benefit in the long run by the progress of each port. What is, perhaps, lacking is a tendency to long-sighted views, at least as far as the Greek public as a whole is concerned. It is only necessary to read a Greek paper to appreciate this failing. The average Greek newspaper seems to publish without the slightest hesitation the most improbable statement, and to insert just as cheerfully a *démenti* a few days later. Both statements provide the cafés with food for conversation, and apparently the sole aim of that newspaper is served. It would have been thought that the mere possibility of having to publish a contradiction would have led to the original statement being checked.

***

The Greek Government, however, has to tread more warily. It is bound to take long-sighted views, and by common consent there is no statesman in Europe more capable of moulding his policy to the real needs of his country, as distinct from the desire to study his immediate reputation, than M. Venizelos. Consequently, with regard to Smyrna, there is no need yet for any firm to put up its shutters. There may have to be an adjustment of business methods to meet the altered situation, but who will doubt that the transfer from Turkish maladministration to Greek jurisdiction will not ultimately produce commercial advantages that will amply compensate for the trouble in changing over from practices which were suited to the Turkish régime, but now promise to become obsoleto?

***

The annual report of the Suez Canal Company, presented at the recent annual general meeting in Paris, shows that in 1918 the total receipts amounted to 92.969.910 francs, an increase of 20.950.883 francs, while the total expenditure for the year was 36.615.776 francs. At the commencement of the year, traffic conditions showed an improvement, and this continued up to the Armistice, when there was naturally a further marked improvement. Transits through the Canal in 1918 totalled 2.522 ships of 9 251.601 tons, an increase of 169 ships and 882.683 tons as against 1917, but a decrease of 2,563 ships and 10,782,283 tons on the figures for the last normal year. It may be noted that the annulment of the reduction in the tariff of 2 francs 50 centimes to vessels in ballast came into force at the beginning of 1918, and this and the advances previously made have to be taken into account in estimating the receipts.

***

During the present year there has naturally been a great increase in transits through the Canal, and while the average monthly tonnage in transit in 1918 was 770,966 tons, each month in 1919 has shown an increase, the last monthly figures giving an average of 1,123,538 tons—figures still far below those of 1913, of 1,669,490 tons—but all the same very satisfactory, as showing quite the expected rate of progress. If the increases in rates imposed during the war are maintained, it can be foreseen that before very long the receipts from the Canal will reach a record level. But against that it has to be noted that the report calls attention to the need in the future for increased expenditure, and it is stated that from now onwards the relation of net profits to receipts will differ from what it was before the war. "Expenditure will go upwards, and the pressure ever exercised to limit its growth cannot any longer be maintained. The life of the Canal must resume its normal activity, and in the present economic conditions there must necessarily be a notable increase in expenses."

***

A most welcome departure is marked by the announcement that the Board of Trade War Risks Insurance Office will give facilities for the insurance of inland risks on British goods imported into Russia, and on goods bought by British firms for export from Russia. The insurance will cover goods against loss or damage arising from war risks, riots, civil commotions, and other risks usually included in an ordinary Lloyd's policy. In the first place, policies will only be issued for the area in South-Eastern Russia and the Northern Caucasus, including the ports of Taganrog, Rostov-on-Don, Novorossisk, and Tuapse, which, however, will afford ample scope to British merchants who desire to enter the Russian market. Many of the leading banks are giving special attention to the question of Russian trade development, and it is hoped that one of the effects of the provision of insurance facilities will be to enable banks to give advances in the ordinary way of business to traders in respect of shipments from the United Kingdom to Russia, and in respect of goods lying in Russia available for export.

INDIAN COTTON PROBLEM AND ITS SOLUTION.

II.—The Lines of a Solution.

In the former article we explained how an Indian cotton problem came into existence, and how it falls naturally into two main divisions, which may be described as agricultural and commercial. To-day we propose to examine the measures recommended by the Cotton Committee under these two heads; the recommendations are numerous and detailed, and we shall not attempt a complete enumeration, but shall concentrate our attention on those which go directly to the heart of the problem.

Agricultural Measures.

First, as regards the agricultural side of the question, the Committee make it plain that the lines of work hitherto pursued by the official experts are essentially sound, but that the scale of operations must be greatly extended. Most parts of India can grow more and better cotton than now, and some of them can grow cotton of really high quality, but it is by no means easy to find the right cotton for each locality. The rough-and-ready methods of the nineteenth century will not suffice to solve this problem: in some cases a foreign variety can be acclimatised, in others an indigenous type can be isolated by selection, in others, again, a new type must be produced by hybridization, but in every case highly skilled workers are essential to success, and the crying need now is for many more experts. The modern Agricultural Departments were started in 1905 with just enough money for immediate needs, and they were already seriously undermanned when the war broke out, and now, after five years of enforced economy, an immediate and vigorous effort is needed to bring them abreast of requirements. The Committee have indicated the extent of these needs so far as cotton is concerned, and we hope that everyone who is interested in the supply of the fibre will exert any influence of which he is capable to secure that their recommendations are promptly carried out.

Trade Malpractices.

Given men and money, the Agricultural Departments may be trusted to solve their branch of the problem. The commercial side calls for different treatment, because, whatever the experts may do, good cotton will not be grown unless the grower gets a fair price, and the Committee are quite satisfied that the price he now gets is very much less, while the introduction of better qualities is rendered almost impossible by the existing organisation of the trade. This point needs a word of explanation. Raw cotton—that is, cotton with the seed attached—is too bulky to be transported for long distances. It must first be "ginned," which means separating the lint from the seed, and then the clean fibre must be "pressed" into bales. Apart, then, from local consumption, the whole crop must pass through the ginning and pressing factories, which exist in all the principal cotton-tracts, and some of these factories, speaking broadly, have been carried on in a most unsatisfactory manner. We would refer readers in this connection to Chapter XVI. of the Report, where they will find that in some factories the use of false weights is quite common, and that every conceivable form of adulteration is regularly practised. On the one hand the grower is directly cheated, on the other the spinner, but in both cases it is on the grower that the loss eventually falls, since the spinner soon learns not to pay the full price for bales made up of water, dirt, seed, waste, and a mixture of various grades of fibre. The case for drastic action in this matter is overwhelming, and we hope the Government will lose no time in adopting the recommendations made by the Committee and bringing these factories under control by a system of licences which can be revoked in case of deliberate and persistent misconduct.

The Middleman.

Assuming that the gins and presses can be put on a better footing, spinners will be assured of honest bales and will pay on that basis, while we may hope that under stress of competition sellers will get their fair share of what the spinners pay. There remains the problem of the middleman. The Committee propose to eliminate him as far as possible by a system of open markets, where grower and ginner will meet face to face, and as markets of this kind have worked well in the Central Provinces, their extension will doubtless be useful in tracts where the local conditions permit; at the same time it must be recognised that the immediate effect of this measure can only be partial, and that the complete elimination of middlemen must come gradually as the result of changes in the economic environment, particularly the growth of co-operative marketing, which is now only in its infancy. Given open markets and honest ginning and pressing, the result should be that when a new type of cotton is grown in any area it will be passed on to the spinners as such, and will stand or fall by its own qualities, not by those of the dirt with which it has been mixed; while the actual growers can hope almost from the outset to get a reasonable share of the premium which spinners are prepared to pay for fibre of a profitable type.

Such are the main features of the Committee's programme. Make it worth the grower's while to produce plenty of good fibre, by seeing that he gets a fair price for his produce, and at the same time bring all the resources of science into play to provide him with the types which the world needs most, and which will consequently command the highest price. If this programme is carried out the existing position would undergo a gradual but rapid amelioration, and as time goes on we should expect the world to draw its supplies more and more largely from India, at prices which would lead to a substantial improvement in the financial resources of the growers. It is a large programme, but the work is well worth doing, and the sooner it is done the better for all the interests concerned.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated June 11:—

General and beneficial rain obtained.

All India, final winter oil-seeds forecast: Rape and mustard area, 4,833,000 acres: yield, 758,000 tons. Linseed area, 1,972,000 acres; yield, 229,000 tons. Last year's forecasts yield this time were 1,111,000 and 507,000 tons. Prospects jute crop, excellent.

Bombay Cotton Market weak. Fully good broach, July-August, Rs. 527. Piecegoods active, and prices steady. Raw jute, market dull. Gunny market steady.

A later cable received by the India Office, despatched 17th, reads as follows:—

Rainfall.—Excess: Bay Islands, Lower Burma, Chota Nagpur, Central India West, Berar, and Central Provinces. Normal: Upper Burma, Assam, Bengal, Orissa, and Madras North Coast. Fair: Bihar, United Provinces (West), Bombay, Deccan, and Hyderabad (North). Scanty elsewhere. At present both monsoon currents are weak.

Canal workers and coal heavers in Port Said have returned to work.

A notice has been received from the Tangier Port Authorities stating that the black bell buoy, with cylindrical topmark, on the eastern side of Almirante Rock, in the approaches to Tangier, has been replaced in position about 1,400 metres north, 26 deg. 5 min. west of the Malabata Tower.

In reference to the issue of 1,366,198 £1 shares at 35s. per share to holders of £20 shares in the London County Westminster and Parr's Bank, registered January 31, 1919, at the rate of one share of £1 in respect of each £20 share held, shareholders entitled to an allotment are reminded that the price of 35s. per share is payable at the head office of the bank, 41, Lothbury, E.C.2, on July 1, after which date the right to an allotment will be forfeited.

LIONDA & COMPANY, Ltd. 3, Broad Street Buildings, Liverpool Street, LONDON, E.C.2.

Tel. Address: "EXPLIONDAC AVE, LONDON." During the War, Tel. Address: "LIONDA 3 BROAD ST. BUILDINGS, LONDON."

SERBIA'S RECONSTRUCTION.

A Survey of the Position.

The issue of the *Board of Trade Journal* of June 19 contained an article prepared from the interim report of the First Section of the British Economic Mission to Serbia, which reached Belgrade early in March, and from accompanying documents. The members of this mission, it is pointed out, were not able to extend their personal examination beyond the Northern districts of Old Serbia, but were able to obtain from official and other sources a good deal of material and to map out lines of inquiry for the guidance of the members of the full mission. The article, which summarises the requirements of reconstruction, runs as follows:—

Serbia has suffered from much more than the destruction which inevitably accompanies military occupation. It has been wrecked and looted deliberately and systematically. The enemy, before retiring, did his utmost to make hard and long the work of economic recovery. The railway stations, equipment, and bridges have been destroyed generally and in detail; horses and live stock have been reduced to a fifth of their pre-war numbers; carts, wagons, and agricultural implements have been taken away; in some districts the houses have been stripped of all furniture and household fittings. Serbia at present lacks almost every necessity of civilised life. It has to begin again, and to begin under very great difficulties at a time when Belgium and France are urgent for restoration, and most European countries, even those which have not suffered actual invasion, are short of almost every kind of goods and materials.

Communications.

The first need is a restoration of communications, by rail, road, and river. From the absence of means of transport springs the universal economic disorganisation, the scarcity, and high prices. Until the great bridge over the Save at Belgrade and the Morava River Bridge are rebuilt, the main line will remain out of action, and the whole Serbian railway system, both internal and external, be paralysed. It is hoped that the Save Bridge will be restored by the end of June; the piers and abutments are intact, and the new steel spans are being made in what were formerly the works of the Hungarian State Railways. The Morava Bridge has been entirely destroyed, and the Serbian engineers have decided to put a temporary bridge on the up-stream side of the old structure. This, also, it is hoped to complete by the end of June. It will thus be possible to reopen the Belgrade-Nish-Salonika main line, and the worst of Serbia's railway isolation will be over. But much will remain to do before anything like full railway communication can be restored. Every station yard, junction, and siding has been systematically destroyed; station buildings and goods yards have been burnt; all locomotive sheds and shops have been made useless, and their pumps and water tanks blown up; engines and rolling stock in the sheds have also been blown up, and stocks of coal drenched with petrol and then fired. Turntables, turnouts, signal posts, telegraphs, telephones—all those means of equipment necessary for railway working—have been wrecked or carried away. There is a brighter side to all this tale of devastation. Much of the damage done can only gradually be made good, but the locomotives and wagons handed over by Hungary and Bulgaria under the Armistice conditions should, with those still in the country and with others provided by the Yugoslav Government, suffice for immediate needs. Coal, however, is very short, and wood fuel insufficient in quantity. The lines themselves, other than at every station, siding, and bridge, are reported to be in good running order.

Roads near Belgrade were found to be in fairly good condition, but in the country districts the heavy military traffic had cut the surface to pieces. Most of the bridges have been destroyed. The greater number of the existing roads never were capable of carrying heavy traffic, and if motor transport is to be developed to relieve and supplement the railways, good roads will have to be made. Stone for roadmaking is plentiful in Serbia, and it is understood that labour will be available after the Army is demobilised. When the report was written most of the labour upon which the country depends for restoration was still in barracks. But stone and labour are not enough. All the plant which goes to the making of roads—rollers, scarifiers, cars, and tools—must be provided from outside Serbia.

Water Transport.

Serbia is well supplied with natural resources for water transport, and the existing waterways are capable of great development. For the moment the shortage of coal has hung up the traffic on the Danube and Save, and steamers, lighters, and barges lie idle when their services are most needed. But this stagnation will pass; the waterways remain, and under a system of canalisation and dredging may be very greatly improved. Admiral Troubridge, in the course of an interesting report on Serbian waterways, points out that the favourable position of Belgrade marks it out as "one of the greatest ports of the future in Central Europe." The Danube flows past at its junction with the Save, a river which comes down from Zaghreb (Agram), the capital of Croatia. The important River Theiss, which drains a large part of Hungary, joins the Danube some twenty-five miles from Belgrade, and is navigable for a long distance. The Save could, in Admiral Troubridge's opinion, be made navigable nearly up to Agram, and by means of a short canal could be connected with the Kluda, and thence with Baccari, near Fiume. Belgrade, though at present lacking wharfs, depôts for goods, and dock equipment generally, stands at the centre of a great natural river system which must be an increasingly important factor in the commerce of Europe. The development of this system must offer considerable opportunities to British constructors.

Reconstruction Difficult.

It will be the more difficult to reconstruct and develop Serbia because of the industrial backwardness of the country before the war. Factories existed, but very few of them had an annual production of more than £50,000, and most of them are incapable, through damage, of being quickly re-started. The country, mainly agricultural, is short of skilled supervision and skilled labour, and is deficient in most of the materials necessary to modern industry. It was, before the war, industrially dependent upon our enemies, and even now is in some danger of being forced to obtain from Austria, Hungary, and Germany those goods which the people would more willingly buy from their Allies. Geographical nearness to its enemies is a very considerable economic factor in Serbia. There has been great destruction of buildings, and their repair and reconstruction are the more urgent because, under the conditions existing before the war, the people in the towns were very badly housed. Some 62 per cent. of the families in Belgrade lived in single-room dwellings. If congestion was great then, it is greater now. No building material, except stone and timber, exists at present in Serbia. Timber cannot be used to any great extent because all the sawmills have been wrecked. Bricks cannot be made because the brickyards have been wrecked and the plant removed. No machinery for stone working exists. The cement works cannot resume work because their plant also has been damaged. The country does not contain any steel or iron for construction work. For the means to rebuild the houses and to re-equip its small factories, Serbia must look to the world outside her borders. It is the same with almost everything.

Of labour in the wide sense Serbia is almost as deficient as in materials. When the Army is freed from duty there will be workers for the fields and unskilled labour for reconstruction. But expert technical and professional men are few in numbers, and are not capable without foreign assistance of handling the problems which press for solution. It is stated that there are not more than seventy constructional engineers, architects, and surveyors in the whole of Serbia. It is much less difficult, however costly it may be, to reconstruct a country like Belgium—before the war the most highly-organised for its size in Europe—than to rebuild Serbia, a country in which industrial development had scarcely passed the stage of infancy. The French have already done much to place technical officers at the disposal of the various public departments in Serbia, and similar help from England would be gladly welcomed. The point which requires emphasis is that Serbia is quite unable, without skilled assistance from the Allies, to re-establish normal life in the country. If that assistance is not forthcoming, Serbia must inevitably, when peace is signed, turn for help to the countries which have been enemies. Orders, it is reported, are already going to Austria for necessary goods.

Serbia's Financial Position.

What Serbia needs Serbia is able to pay for. This may seem strange, but it is a fact that, apart altogether from indemnities for the damage done during the war, the peasant population and shopkeepers have plenty of money—in dinars and Austrian crowns. The explanation is simple. The people in the country during enemy occupation spent little or nothing on luxuries, and all the while were receiving high prices for their goods and produce. They have sold but not bought, and are now in a position to buy largely. Payment in a form acceptable to British manufacturers would be a difficulty, and, so far as our interests are concerned, much benefit would follow the establishment of a local British bank. Such a bank could make all the arrangements under which the Serbian purchaser, with his dinars and crowns, could pay in London for his British-made goods. At present a considerable quantity of goods, sometimes of British origin, are being distributed in Serbia through military and charitable organisations. The Salvation Army, the American Red Cross Society, and the French Bureau Militaire are all running stores, and have been of much help to the Serbian people. The Italians are working in similar fashion by way of Salonika. Before the war there were four foreign banks in Serbia: The Franco-Serbian Bank of Paris, the Serbian Credit Bank in Belgrade, with Austrian capital; Andreivitch and Co., of Belgrade, with Austrian and German capital; and the Prague Credit Bank, with Czech capital. There was no British bank. The Mission was informed that it is the intention of the Government to withdraw at an early date enemy paper money from circulation, and to replace it with State paper money of the Kingdom of Serbia, Croatia, and Slavonia (Yugoslavia). This State money will be in dinars, and be under Government guarantee. The rate of conversion will be 30 dinars per 100 crowns. The total value of Austrian crowns now in circulation in the new Kingdom is estimated at about 8 milliards. Other arrangements are being made in regard to a central exchange office.

Something *Quite* Different

from All other Paints—

"Riversea" Paint

Is Elastic, Waterproof, and is Impervious to Heat, Cold, and Atmospheric Conditions.

Is a Perfect Preservative for Iron, Wood, Stone, etc. Salt Water has no effect, and the Paint is a positive cure for damp, and resists the action of strong Acids. Can be submerged under water.

Is supplied in any Ordinary Colour.

NEAR EAST MARKETS.

Sudan Produce.

Gum.

The C.E.B. report for April states that during the month 1,780,537 kilos of hashab gum, of the value of £E50,648, 37,874 kilos of bleached gum, of the value of £E1,297, and 60,100 kilos of talk gum, of the value of £E1,269, were exported via Port Sudan. Exports via Haifa amounted to 10,226 kilos of hashab gum, of the value of £E314, and 10,180 kilos of talk gum, of the value of £E231. 14,877 kantars of gum were sold in El Obeid Market, as against 26,628 kantars in the same month last year, at an average price of 943 m/ms. per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 3,643 kantars, as against 6,529 last year. At Um Ruaba 2,895 kantars were sold, as against 5,423 kantars in the same month last year. The average price was 950 m/ms. Arrivals were short during the month on all the markets as compared with last year, and there is no doubt that the output this year will be considerably below the average of the last two years. This is mainly due to the early cessation of the rains. Trees had practically no water in September, with the result that they have dried up earlier than usual. Prices also have been very low in comparison with those of recent years. With camel transport rates still high, natives have not found it worth while to bring in gum from long distances.

Cotton.

Red Sea Province.—Tokar: The arrivals in the cotton market still continue to be most disappointing, the total amount sold during the month being only 2,740 kantars. The crop will be a very small one. The price remains excellent, the highest reached being P.T.805 per kantar of 315 rottles (141.52 kilos) and the lowest P.T.724½ for grade one, of which the bulk of the cotton consisted. The annual agricultural show was held on April 10, and was most successful.

Kassala Province.—Cotton is still coming in in fair quantity, and the year's total should be very near that of last year, and some 1,900 kantars in excess of the original estimate. The quality is rather lower, however, due to a brownness of fibre rather than to dirtiness or presence of dead cotton. Disease is little, and almost entirely caused by Egyptian boll-worm.

Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in May:—

Cotton.

The weather all the month was very abnormal, the mean temperature at Giza being 0.9 degrees less than the previous lowest recorded in the last 18 years and 2.3 degrees less than normal. Showers fell on the 7th, 14th and 21st in the northern Delta. Water supply has been generally sufficient, except in Faiyûm, where it has been somewhat scarce at the tailends of canals. Cut-worm, mole-cricket, sore-shin, aphis, thrips and wilt are prevalent in a varying, but generally slight, degree in all the provinces of Lower Egypt and in some parts of Middle Egypt, but have not caused much material harm. Cotton-worm egg-masses appeared in most provinces of Lower Egypt towards the middle of the month, but so far the attack has not been severe. Thinning, hoeing, watering, resowing and manuring are in progress, but in all provinces of Lower Egypt operations are much later than usual owing to the weather. The cotton plants are looking quite healthy, but the whole crop of Lower Egypt is from 20 to 30 days later than the normal. If the cald weather continues, the effect on the crop in Lower Egypt may be serious. The very early sown crop is not so much affected as the later, and buds have already appeared in a few places. Very much depends now on the temperature during the month of June.

Wheat.

Harvesting is at an end in Upper Egypt, and well advanced in Lower. Threshing and winnowing are in active progress everywhere. Reports on the crop are rather conflicting. In Middle and Upper Egypt the crop appears to be nearly an average one, especially where the Beladi variety has been sown. In Lower Egypt it is very disappointing, rust being responsible for almost failure in some places planted with Hindi, and a poor yield is expected. It is, however, impossible at present to make an accurate estimate, as threshing is not sufficiently far advanced, nor are there figures available giving the area of each variety sown. Unsuitable weather and shortage of manure have had a bad effect upon the crop. The Beladi variety in Sharqîya, however, appears to have escaped to a considerable extent the effects of rust.

Barley.

Harvesting and threshing are at an end, and winnowing is advancing in a satisfactory manner. The yield is fairly average everywhere. In the Maryût District, where the rainfall was even less than last year, the yield is expected to be very low.

Millet (Sefi).

Weather not favourable. Water supply sufficient in general, except in the basins of Asyût. No enemies have been reported. The area under this crop will be smaller than last year in the basins of Upper Egypt, owing to the lack of fuel for irrigation by lift, to low water in the new canals of the Asyût basins, and to the disturbances. Sowing is completed, and manuring, hoeing and watering are in progress. The condition of the crop is in general satisfactory.

Sugar Cane.

Weather favourable except in Minya. Water supply sufficient. Planting is at an end: hoeing, watering and manuring are being carried on. The growth of the plants is satisfactory, and the crop is in good condition.

ENGINEERING NOTES.

International Competition.

Emphasis has frequently been laid in these columns on the fact that British manufacturers put forward in the past very small efforts compared with what their competitors did to capture foreign trade; and attention has been drawn to the necessity for collective as well as individual action in order to forestall foreign competitors, particularly in such important markets as those of the Near and Middle East, where those first in the field will have an undeniable advantage. And now that it is becoming increasingly manifest that American as well as Continental and even Far Eastern competitors are bent on serious rivalry with each other and with British interests in those markets, it may be hoped that no efforts will be spared not only to preserve, but also to extend and develop, British trade in that region. In this connection the efforts of the Federation of British Industries in the Near East are very encouraging; nevertheless individual efforts are essential to attain complete success. The task before the directorate of a great trade association is not to regulate the activities of its members in detail, but to co-ordinate them and to indicate their objective. Success, therefore, depends upon the energy and ability with which each member pursues the common policy agreed upon. The great war has left almost every part of the world destitute of many of the essentials for life and progress. Engineering manufactures, such as engines, motors, power-plants, internal combustion engines, pumps, industrial and agricultural machinery and implements, dynamos, lamps, wire, and countless other products of the engineer, have suffered most during the war and are badly needed in almost every part of the world. This is particularly evident in the East. It is essential therefore that British manufacturers individually should inform buyers there of their ability and desire to serve them; and as in the circumstances the despatch of trained and expert salesmen there for the purpose is somewhat difficult and costly, to meet this difficulty it is advisable to resort to judicious advertising. Oriental buyers, as a rule, mistrust agents and middlemen, and an opportunity to communicate direct with manufacturers is much appreciated. Advertisement, therefore, will be found very effective in the East, and of this fact Americans and Germans are well aware.

Progress in Mesopotamia.

Very large schemes of cultivation have been undertaken in the various areas of military operations, and as food is produced abroad a corresponding amount of valuable tonnage has thus been saved. The larger schemes undertaken by the army are in Mesopotamia, where, by skilful irrigation, very large areas can be put under cultivation and made to yield results far greater, and at less cost, than anywhere else in the world. It is estimated that 850,000 acres were under wheat or barley in 1918, and this will be increased to 1,500,000 acres this year. In 1919 it is estimated that 100,000 tons of grain will be available for the forces operating in that theatre of war, besides large amounts for the native population. It is evident that a very great saving of tonnage is thereby effected at a time when this is of the utmost importance. Besides these schemes, vegetables are grown on a very large scale for the troops, and dairy farms have also been started. It is very gratifying to know that the development of agriculture in Mesopotamia is being materially assisted by large quantities of agriculture machinery from the United Kingdom. Harvesting machinery, grinding mills, threshing sets, and other plant of British manufacture have already reached that country, and more is to follow. Thus, Mesopotamia is likely to prove an increasingly valuable market for British implements and machinery, especially as the goods already shipped to that country are admirably qualified to demonstrate the excellence of British production.

Ukraine Coal.

In view of the coal crisis in this country and the probability of a coal famine in the Near East, which will completely paralyse industry, there has been considerable anxiety recently in all industrial centres there as to what measures must be taken in case the cost of transport from America and the prices in England advance the cost of coal delivered at any of the Eastern Mediterranean ports to a prohibitive point. Hopes are entertained of the opening and utilisation of coal mines in South Russia, and, it is said, some arrangements are in progress on this matter. As is known, in the former Russian Empire the iron industry was chiefly found in three districts, of which by far the most important were the South Russian iron and coal deposits. Next in value came the Ural district, and then the Polish ironfields. The iron and coal production of South Russia in 1912 amounted to 21,284,172 tons of coal and 5,358,553 tons of iron; whilst that of the Caucasus amounted to 68.796 tons of coal. The largest proportion comes from Krivoi Rog, in South Russia, and this district is now incorporated with the Ukraine Republic. Kertsch is the second largest producer in South Russia. Ukraine has been given the largest and richest coal area of the South Russian Donetz basin. The new republic has, therefore, very large deposits of both coal and iron at its disposal, and, with the unique facilities she possesses in her Black Sea ports, she may prove the principal supplier of the Near and Middle East for these minerals, and, therefore, a serious competitor of England in that line.

ROUMANIAN CONSOLIDATED OILFIELDS.

The following information has been received from the managing director of the Roumanian Consolidated Oilfields in Roumania :—"The bulk of our production at the moment (1,689 tons for May) is coming from Moreni, but Chiciura has supplied nearly all up till now, and I understand that the Germans have taken from our No. 4 well, Chiciura (which began to flow just before their occupation), over 10,000 tons of oil. The value of this oil will be included in the claim to be made through the Roumanian Government, which is in addition to our claim against the British Government. We have received in Ploesti the first consignment of material from Liverpool and the casing has also arrived in Galatz. In a couple of months' time we should be able to double our present production. We started on May 26 to drill in the Baicoi well, and we are also trying to clear one at Moreni. We may have to build a tank before finishing the Baicoi well, which we believe will be a good one."

TRADE WITH EGYPT.

At a recent meeting at the Manchester Chamber of Commerce of merchants engaged in the Egyptian trade, for the purpose of an interview with Mr. E. H. Mulock, the newly appointed commercial agent for H.M. Government in Egypt and the Sudan, and with Mr. M. G. Harris of the Consular Service, who has spent the last five years at Cairo, Mr. Mulock said it was his hope to visit Manchester from time to time for the purpose of holding private interviews with firms engaged in the Egyptian trade and giving such information as may be useful to them. A general discussion took place, according to the Chamber of Commerce monthly *Journal*, in regard to the hindrance to business conveyed by the recent disturbances; the language question in the Law Courts; legal reform; the question of an Amended Merchandise Marks Act; and standardisation of weights and measures.

TURKISH FOUR PER CENT.

In answer to a letter addressed to the Foreign Office respecting the claims of holders of Turkish Four per Cent. Guaranteed Loan, 1855, the Council of Foreign Bondholders has received a reply stating that the contents of its communication are being brought to the notice of the British Peace Delegation in Paris.

The death is announced, at Neuilly-sur-Seine, at the age of 77, of M. Jules Dollfus, engineer, Officer of the Legion of Honour, President of the Port Administration of Tunis, Sousse and Sfax, a former president of the Société des travaux publics and a director of various companies.

THE LEVANT COMPANY, LIMITED.

(INCORPORATED UNDER THE COMPANIES ACTS, 1908 TO 1917.)

is issuing a prospectus which contains, amongst other information, the following particulars:—
A copy of the prospectus has been filed with the Registrar of Joint-stock Companies.
This issue is made under licence of his Majesty's Treasury under Defence of the Realm Regulation in 30F, dated the 30th May, 1919 but it must be distinctly understood that in granting such licence the Treasury does not thereby take any responsibility for the financial soundness of the proposal or for the correctness of any of the statements made or opinions expressed with regard to it.
The special permission of the Committee of the Stock Exchange for dealing in the shares now offered after allotment has been granted.

The LIST of APPLICATIONS will CLOSE on or before Saturday the 28th day of June, 1919.

CAPITAL - - - - - £1,000,000.

divided into

800,000 Ordinary Shares of £1 each	**£800,000**
200,000 Deferred Shares of £1 each	**200,000**
	£1,000,000

The Ordinary Shares are entitled to priority in any distribution of assets on capital account, and to participate to the extent of one-half in any surplus assets after repayment of the Deferred Shares. The yearly profits of the Company available for distribution are to be divided in the following manner:—(1) 7 per cent. to the Ordinary Shares, (2) 7 per cent. to the Deferred Shares, and the balance—one-half—to the Ordinary Shares and one-half to the Deferred Share .
Of the above-mentioned capital the whole of the deferred shares have been allotted to the British Trade Corporation at par, and have been paid up in full in cash.
The BRITISH TRADE CORPORATION are instructed, as bankers of the Company, to offer for subscription

400,000 of the above Ordinary Shares of £1 each.

Payable—On Application 1s. per share; on Allotment, 9s. per share; on 1st September, 1919, 5s. per share; on 1st December, 1919, 5s. per share.—£1 per share.

Payment in full may be made on allotment only, and interest on such prepayments until the due date thereof will be at the rate of 5 per cent. per annum. Definitive share certificates will be issued as soon as the payments are concluded.

DIRECTORS:

The Right Hon. Sir MAURICE WILLIAM ERNEST DE BUNSEN, Bart., P.C., G.C.M.G., G.C.V.O., C.B., Old Lodge, Taplow, Bucks (Chairman).

Sir FRANCIS HENRY BARKER, Lowndes House, Lowndes Place, London, S.W. (Director of Vickers, Limited).

ARTHUR GEORGE MITTON DICKSON, Esq., 13, Austin Friars, London, E.C. (Manager British Trade Corporation).

ALEXANDER HENDERSON, Esq., 626, Salisbury House, Finsbury Circus, London, E.C., merchant (a Managing Director of the Company).

GUY HAROLD LOCOCK, Esq., C.M.G., Rushwood, Walton-on-the-Hill, Tadworth, Surrey.

ROBERT GROSVENOR PERRY, Esq., C.B.E., Aston Somerville Hall, Broadway, Worcestershire (Chairman the Association of British Chemical Manufacturers).

BANKERS:

BRITISH TRADE CORPORATION, 13, Austin Friars, London, E.C.

AUDITORS:

Messrs. W. B. PEAT & CO., 11, Ironmonger Lane, London, E.C.

SOLICITORS:

Messrs. NORTON, ROSE, BARRINGTON & CO., 57½, Old Broad Street, London, E.C.

SECRETARY AND REGISTERED OFFICE:

GEORGE DE BELS BROUNLIE, Esq., Salisbury House, Finsbury Circus, London, E.C.

This Company has been formed to develop trade relations between Great Britain and the Levant and the Near East, and for other purposes set forth in its memorandum of association. It aims at reviving in a modern form the commercial side of the activities of the old Levant Company which, during the 16th and 17th centuries, was the recognised spearhead of British influence in the Near East, with a view to reconquering for British trading interests the predominant position in the basin of the Eastern Mediterranean and adjacent countries, which during recent years had passed into other hands. It is believed that, with suitable organisation, a large demand for British goods of almost every kind can be estimated.

Mr. A. G. M. Dickson (a director of the Company) has recently completed a tour of the principal commercial centres of the Levant and Caucasus, which has provided the Company with first-hand and up-to-late local knowledge of the industrial and commercial potentialities of each district.

It is recognised that CONSTANTINOPLE will remain a centre around which much trade with Asia Minor and the Black Sea will revolve, and the arrangements with J. W. Whittall and Company, Limited of Constantinople, hereinafter referred to, have been entered into. The business of that company has attained so high a reputation in the Near East that it is believed great benefits will be derived from the Company's close connection with it.

Another extensive field for the Company's operations exists in EGYPT. Official evidence has from time to time been published as to the scope likely to be afforded to British firms by the declaration of the British protectorate in Egypt, and it will be this Company's aim to take full advantage of the situation thus created as well as to open up trade with the undeveloped markets of the Sudan and adjacent regions.

In GREECE the Company has already acquired an important connection with an existing commercial undertaking as a nucleus for its activities in that country.

In the BALKANS a great deal of reconstruction, arising out of the war, will be necessary, and the Company has despatched a number of representatives to these districts, and has already received encouraging reports on trade possibilities in this area.

MESOPOTAMIA will be included in the Company's sphere of activities, and the Company has already established an Agency at Baghdad, which is in active operation.

The Company has also opened an Agency at BATOUM, and has despatched to that town considerable quantities of goods for which there is a ready market owing to the shortage existing in the Caucasus of all classes of British commodities.

Arrangements have been made for opening up Agencies at ODESSA, NICOLAIEFF, and NOVOROSSISK, which will commence active operations as soon as possible.

Arrangements are in progress for the appointment of the Company as the Shipping Agents for the KHEDIVIAL MAIL STEAMSHIP AND GRAVING DOCK COMPANY, LIMITED, in the Eastern Mediterranean and the Black Sea.

An agreement has been entered into with the ABYSSINIAN CORPORATION, LIMITED, whereby this Company will act as its Commercial Agents in the United Kingdom.

It is essential in opening up trade that there should be connected with an enterprise persons having good knowledge of the local conditions prevailing, and it is believed that this Company is particularly fortunate in having associated with it practical men possessed of this knowledge, and this policy is being actively pursued both at home and abroad.

As a nucleus for its operations the Company has acquired, as from 1st January, 1919, the business of general merchants heretofore carried on by Messrs. Henderson, Lane, and Company, as well as the whole of the share capital, consisting of 30,000 fully paid shares of £1 each, of Hendersons (Manchester), Limited, the consideration being the sum of £30,000, and in addition the service agreements referred to under sub-clause (b) of the contracts were entered into as part of the arrangement and as the consideration for goodwill. No other payments of any kind have been made, except in connection with the actual carrying on of the business from the date of the acquisition above referred to.

The Company has also acquired for cash at par 7,000 of the preference shares of £10 each of J. W. Whittall and Company, Limited, a company formed in December, 1918, to acquire and develop the business assets and undertaking of the firm of J. W. Whittall and Company, of Constantinople. J. W. Whittall and Company, Limited, has a share capital of £350,000 in 15,000 preference shares of £10 each, and 200,000 ordinary shares of £1 each, of which 10,000 preference and 150,000 ordinary have been issued and are fully paid.

The preference shares in J. W. Whittall and Company, Limited, are entitled to a cumulative preferential dividend at the rate of 6 per cent per annum, and to a moiety of the net earnings of the Company after payment of a non-cumulative dividend at the rate of 10 per cent. per annum on the ordinary shares and certain payments to the management and the directors, as set out in the articles of association of that Company.

If any application be accepted for less than the number of shares applied for the surplus paid on application will be appropriated towards the amount payable on allotment, and any balance will be returned. Where an application is not accepted the deposit will be returned in full.

Failure to pay any instalment when due will render all instalments previously paid liable to forfeiture and the allotment to cancellation.

Interest at the rate of 10 per cent. per annum will be charged on instalments in arrear.

A brokerage of 3d. per share will be paid in respect of allotments on applications bearing the stamps of brokers or bankers.

Prospectuses and forms of application can be obtained from the British Trade Corporation, 13, Austin Friars, London, E.C.2, or from Messrs. Greenwood and Co., 28, Austin Friars, London, E.C.2.

The prospectus above referred to upon which applications can alone be received, contains information given in compliance with the provisions of the Companies (Consolidation) Act, 1908, and amongst other details states that the issue has been underwritten by the British Trade Corporation for a commission of 2½ per cent. and an overriding commission of ½ per cent.

COMPANY MEETINGS.

ALEXANDRIA WATER.

The forty-first annual general meeting of the Alexandria Water Company, Ltd., was held at Alexandria on June 21, Mr. M. C. Salvago, the chairman, presiding.

The following is the directors' report to the shareholders:—The directors have the honour to submit to the shareholders their report and statement of accounts for the past financial year ended March 31, 1919. The happy end of the war and glorious victory of the Allies will, it is hoped, have a favourable effect on the abnormal prices which have been paid for all articles in connection with the exploitation of the company and also be the means of considerably decreasing the working expenses during the coming year. During the past year the heaviest item of expenditure has been the fuel oil and, owing to the difficulty in obtaining supplies from the Red Sea oilfields, it has been necessary to resort to a more expensive fuel from the Far East. War bonuses to all employees and workmen were considerably increased during the year to meet to some extent the further marked increase in the cost of living. The extra cost of alum, amounting to over £4,000, is due to the increased quantity used and the large increase of price, which has lately been about four times the pre-war price.

The total quantity of water pumped, amounting to 23,903,755 cubic metres, shows an increase of 2,336,418 from the previous year. The Port supply shows an increase of £3,229 over last year. The increase in the number of consumers shows continued progress, being 1,538 more than last year. No extension of machinery has been made during the year with the exception of the installation of two 21 ft. Jewell filters to replace two lost at sea in 1917.

The manager has recommended the Board to make further considerable extensions to filters and pumping machinery in view of the continued progress in the company's affairs, and already four more 21 ft. Jewell filters are on order and will be erected during the coming summer at a cost of about £10,000, also designs have been prepared and a project for two large sets of pumps and Diesel engines for the main pumping station, which with the cost of the new engine house will necessitate a capital expenditure of about £31,000. The engines and pumps have already been ordered from the respective makers. These Diesel engines will effect a very considerable economy in combustible and running expenses. The installation of these engines necessitates the transfer of the present workshop to another site so that the new pumping station can be constructed on the old workshop site. Further capital expenditure will be necessary in the near future for purposes of extension of the company's works, viz., new pump Ramleh Works £3,500, 4 Jewell Filters referred to above £10,000 and an additional reservoir at Kom el Dick £25,000, making a total of £69,500.

The company has during the past year purchased a further share in the ice factory, referred to in last year's report, and now holds one third share instead of one quarter. A sum of £9,251 8s. 2d. has been spent on new works during the year. The extension of mains during the year has been comparatively small owing to the limited amount of new buildings and shortage of buildings material, and only 3,166 metres of new pipes have been laid.

The total receipts amount to £189,622 as against £176,057 realised last year, showing an increase of £13,565 and it is satisfactory to note that under nearly every heading of receipts there is an appreciable increase. The working expenses for reasons given above show an increase of £18,929, due to the continued increase in cost of labour and all materials. In the profit and loss account a sum of £12,937 8s. 8d. has been written off as depreciation of machinery and other wasting assets in accordance with the rates fixed by the board. Some of the securities held at March 31, 1918, have been sold and replaced by National 5 per cent War Bonds. The sum of £6,464 representing the loss realised on the sale of these securities, which stood in our books at the market price of March 31, 1914, has been written off. On the other hand this transaction has resulted in the saving of about £6,500 on the depreciation provided by the special provision put aside in the years 1915 and 1916. This sum will not now be required and has been written back into the present profit and loss account. The "provision for the depreciation of securities" is thus reduced to £20,536. The municipality, having for some years contested the amounts of its share in the profits of the company, and also having recently raised other questions in connection with our contracts with the Egyptian Government, negotiations have been started with a view to arriving at a settlement of these questions.

The balance of the profit and loss account after making the above depreciation and usual allowances, and after deducting the interim dividend of 4 per cent. paid on December 15, 1918, is £69,000, from which should first be deducted 6 per cent. on the capital, £36,000; leaving a balance of £33,000, of which one half is due to the municipality according to our conventions, £16,500, and the other half to our shareholders, £16,500, which represents 2s. 6d. per share, and this added to the 6 per cent. above mentioned, makes a total of 8s. 9d. per share for the dividend of June 15, 1919. The directors therefore recommend the shareholders to fix the dividend payable on June 15, 1919, at 8s. 9d. per share, which with the interim dividend of 4s. paid on December 15, 1918, makes a total dividend of 12s. 9d. for the year. According to article 84 of the articles of association Messrs. M. C. Salvago and H. R. C. Blagden are the two directors who retire by rotation and, being eligible, offer themselves for re-election.

The report and accounts were passed unanimously and the two retiring directors were duly re-elected.

M. C. SALVAGO
H. E. BARKER } Directors.

We have audited the above balance sheet of the Alexandria Water Company, Limited, dated March 31, 1919, as above set forth.

We have obtained all the information and explanations we have required.

In our opinion such balance sheet is properly drawn up so as to exhibit a true and correct view of the company's affairs according to the best of our information and the explanations given us, and as shown by the books of the company.

BANK OF ROUMANIA.

The ordinary annual general meeting of the shareholders of the Bank of Roumania, Ltd., was held on June 25, at Winchester House, Old Broad Street, the Earl of Bessborough, K.P., C.V.O., C.B., presiding.

The Secretary (Mr. H. Locke), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I assume that, as usual, you will take the directors' report and the balance-sheet as read. In rising to move the adoption of the report and accounts up to the end of December last, I cannot refrain from expressing pleasure that I am privileged to address you in happier circumstances than has been the case on the last four occasions. I refer, of course, to the ending of the terrible conflict through which the world has recently passed.

Trading Accounts.

As you will see by the report, the trading accounts for the three years ended December 31, 1918, after making provision for bad debts, taxes—including British income-tax—writing down investments, placing £5,000 to staff pension fund, and writing off the cost of moving into new premises in London, show a credit balance of £53,339 10s. 10d., but, owing to heavy depreciation in exchange and the general unsettled political situation in the Near East, the directors have come to the conclusion that, under the circumstances now existing, they feel unable to recommend the distribution of this amount. They have, therefore, decided that it would be in the best interests of the shareholders to carry this sum to the credit of a contingency account. I might mention that soon after the outbreak of war in 1914 the official rate of exchange in Roumania was fixed at lei 25.22 in the pound sterling. In April of this year this rate was 50.44, and since our report was printed it has been fixed at 44.25. When we take into account the fact that for two years we were cut off from communication with our Bucharest office, and the great handicap to business occasioned by the enemy occupation of a large portion of Roumania, the trading accounts show as favourable a result as one can expect in the circumstances, and I think that we can congratulate ourselves that our position is so satisfactory. During the two years that Bucharest was in the hands of the enemy forces the bank had to cope with many difficulties in handling business. With the retirement of the Central Powers from Roumania communication with our officials in Bucharest was restored, and we were happy to find that our property there was intact.

On the signing of the Armistice in November last the solution of so many business problems became necessary, and our London manager, Mr. Locke, proceeded to Bucharest immediately in order to investigate matters on the spot. He has since paid another visit to Roumania, and has only quite recently returned. Our late manager in Bucharest, Mr. E. E. Goodwin, owing to his advanced age, has retired after nearly fifty years' service. The directors desire to place on record their high appreciation of the long and able assistance that he has rendered to the bank,

Digitized by Google

and they trust that good health will enable him to enjoy for many years the rest he so well merits. I also desire to take this opportunity of expressing the special thanks of the directors to the management and staff at Bucharest for their loyalty and devotion to the bank's interests during the two years they lived under such difficult conditions, deprived of all communication with us in London. An important factor in the development of Anglo-Roumanian trade relations is the recent founding in London of the British-Roumanian Chamber of Commerce, in the establishing of which your bank took an active interest. This Chamber should, when conditions permit, be of considerable assistance to the business houses in this country connected with Roumanian trade, and its aid should also prove valuable to the many firms now wishing to extend their operations into Roumania. I beg to move: "That the report and balance-sheet now read be received and adopted.

The Viscount Goschen: I beg to second that motion.

In the absence of questions the resolution was put to the meeting and carried unanimously.

The Chairman: I beg to move "That the Viscount Goschen be and is hereby re-elected a member of the board."

General the Hon. Sir H. A. Lawrence: I have pleasure in seconding the resolution.

The motion was unanimously agreed to.

Mr. J. Rossell: I beg to propose "That Messrs. Jackson, Pixley, Browning, Husey, and Co. be and are hereby elected auditors for the ensuing year, and that their remuneration be fixed at 50 guineas."

Mr. J. W. Hoskins seconded the motion, which was unanimously carried.

The Chairman: That concludes the business.

Mr. A. Hood, in proposing, on behalf of the shareholders, a hearty vote of thanks to the chairman for presiding, and to the directors and the management and to the staff, both at home and abroad, complimented the board on the cautious policy they had pursued, and expressed his entire agreement with the course they had taken.

Mr. E. C. Barter seconded the motion, and the vote was unanimously accorded.

The Chairman: Mr. Hood and gentlemen, on behalf of my colleagues and the staff, both at home and abroad, and myself, I thank you very much for your vote.

The proceedings then terminated.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

May 29, 370,000 francs against 310,000 francs; May 30, 380,000 francs, against 200,000 francs; May 31, 330.000 francs, against 70.000 francs: June 1, 180,000 francs, against 230,000 francs; June 2, 200,000 francs, against 260.000 francs; June 3, 360,000 francs, against 100.000 francs; June 4, 530,000 francs, against 50,000 francs; June 5, 340,000 francs, against 300,000 francs; June 6, 210,000 francs, against 450,000 francs; June 7, 350,000 francs, against 310.000 francs; June 8, 800,000 francs, against 210.000 francs; June 9, 220,000 francs, against 110,000 francs; June 10, 290,000 francs, against 400,000 francs.

The London County Westminster and Parr's Bank, Ltd., announce that their Brussels branch is now open at 114 and 116, Rue Royale, under the management of Mr. E. S. Tear.

THE NEW EGYPTIAN COMPANY, LIMITED.—NOTICE IS HEREBY GIVEN that the Eighteenth Ordinary General MEETING of the Members of the New Egyptian Company, Ltd., will be HELD on Tuesday, the 8th day of July, 1919, at 12 o'clock noon, at Winchester House, Old Broad Street, in the City of London, to receive and consider the Annual Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon: to elect Directors and Auditors; to declare a Dividend: and to transact any other ordinary business of the Company.

The TRANSFER BOOKS of the Company will be CLOSED from the 25th day of June to the 8th day of July, 1919, both days inclusive.

Dated this 5th day of June, 1919.

By Order of the Board,
THOMAS DAY,
London Manager and Secretary,

Pinner's Hall, Austin Friars, London, E.C. 2.

To enable Holders of Share Warrants to Bearer to attend or vote personally or by proxy, they must deposit their Warrants at the Head Office of the Company, Pinner's Hall, Austin Friars, London, E.C., three days before the Meeting.

COMPANY NOTES & REPORTS

Great Indian Peninsula Railway.

The report of the Great Indian Peninsula Railway Company for the half-year ended March 31, 1919, states that there was a net increase of 8.71 miles in the open mileage worked. Gross receipts were Rs.6,49,85,756, against Rs.6,04,54,778; expenditure, Rs.3,86,65,004, against Rs.3,24,34,575, net revenue, Rs.2,63,20,752, against Rs.2,80.20.203. With an increase of Rs.45,30,978, or 7.49 per cent. in the gross receipts, there was an increase of Rs.62,30,429, or 19.21 per cent. in the expenditure, showing a decrease in net revenue amounting to Rs.16,99,451, or 6.07 per cent., as compared with the corresponding period of 1918. Total interest charges were Rs.1,49,36,576, and, excluding State lines, the surplus of net revenue amounted to Rs.93,48,264. The company's proportion of surplus profits after deduction of income-tax amounts to Rs.9,76,293. Rs.9,76,293 has been remitted to England, at the exchange of 1s. 8d. producing £81,358, which, with £667 brought forward, plus interest due on June 30, makes £82,254. Out of this sum the directors propose that a dividend of 35s. per cent., amounting to £45,062, be declared in addition to the guaranteed interest of the half-year, leaving sufficient balance to meet a possible claim for excess profits duty by the Inland Revenue authorities. Capital expenditure during the half-year amounted to Rs.24,23,091. Meeting, 48, Copthall Avenue, E.C., to-day at 12.30 p.m.

New Egyptian.

The report of the New Egyptian Company for 1918 states that profit and loss shows a credit balance of £59,393, and, deducting £4,196 for service of debentures, there remains a profit of £55,197; £24,483 was brought forward, after deducting dividend of 1s. per share (equal to 6¾) in respect of coupon No. 6, making £79,679. The directors recommend a dividend of 1s. 6d. per share (equal to 10 per cent.), less income-tax at 5s. 9d., which will absorb £33,478, leaving £46,201. In view of the damage caused by the recent riots to plant, buildings and crops on some of the company's estates (the amount of which is approximately estimated at from £10,000 to £15,000), and the general disorganisation of the trade and services of the country, the directors recommend that the balance be carried forward. The net income derived from the estates amounts to £23,210, compared with £23,391. Owing to the increase in the price of all agricultural produce, high rents have been obtained for the current year. The area sold was 1,160 feddans, 229 in Upper Egypt, at an average price of £134 12s. 7d. per feddan, as compared with 150 feddans, at an average price of £111 10s. 7d. per feddan, and 931 in Lower Egypt, at an average price of £118 4s. 9d. per feddan, as compared with 381, at an average price of £100 6s. 2d. per feddan. A further 618 feddans were sold, at an average price of over £150 per feddan, but the deeds were not signed at the conclusion of the year, and therefore they have not been taken into account. Lower Egypt (5,157 feddans).—Capital expenditure amounted to £5.550, as compared with £4,922. The purchase of 215 feddans adjoining the Kahwakia property at a satisfactory figure has been completed. Upper Egypt (2,012 feddans)—Capital expenditure amounted to £1.257, compared with £938. 126 feddans previously sold were expropriated and bought in by the company. During the year the company's loans were redeemed by over £33,000 and the debenture debt by £25.000. In view of the improved results, the directors' remuneration has been calculated in accordance with the articles of association instead of the reduced fees accepted since 1915. Meeting, Winchester House, E.C., July 8, noon.

Morum's Oriental Stores.

Residents in and most visitors to Egypt are well acquainted with the big departmental stores which were formerly conducted under the style and title of Stein's Oriental Stores, Ltd., and more recently under the style of Morum's Oriental Stores. A company has been formed for the purpose of taking over and carrying on this business, under the title of "Morum's Oriental Stores (Limited)," with a share capital of £500,000, consisting of 300,000 preference shares and 200,000 ordinary shares of £1 each.

Burmah Oil.

The report of the Burmah Oil Company to December 31 last states that the profit, after charging income-tax, directors' fees, etc., and writing off £491,021 for depreciation, is £2,814,058, which added to the balance brought forward, after payment of excess profits duty, £148,867, makes £2,962,924. There has been transferred to fields reserve £80,000, and the directors have made the following further appropriations:—To insurance reserve £20,000, to general reserve £186,695, leaving £2,676,229. The directors recommend the following final dividends for the year, payable July 10, namely: On the First Preference shares, 7 1-5d. per share (equivalent to 6 per cent. per annum), less tax at 5s. 9d. in £; on the Second Preference shares, 6s. per share (equivalent to 6 per cent. per annum), less tax at 5s. 9d. in £; on the Ordinary shares, 5s. per share, free of tax, making 30 per cent. for the year; and to carry forward, subject to excess profits duty, estimated at £1,580,000, the balance of £2,776,229. Depreciation has, as usual, been fully provided for, and the following amounts have been written off:—Refineries account, £104,257; oil wells, etc., account, £282,453; pipelines account, £40,000; tankers and tank installations account, £64,310. The large increase in profits is due partly to the further advance that took place on the prices of most petroleum products during the year up to the declaration of the armistice and partly to continued improvements and economies in refining. The total kerosene trade of India, owing to the continued effect of the war on tonnage, showed a large falling off, but with the imports of foreign oils thus enormously curtailed the company's sales of kerosene were considerably greater than those for the previous twelve months.

BRITISH TROOPS IN INDIA.

Appeal to Employers.

The War Office is anxious that no misconception should exist among employers in this country as to the position of the troops in India whose demobilisation has been suspended for the present. Last April details from Mesopotamia and other men awaiting embarkation for the United Kingdom were asked to remain temporarily in India in view of the disturbed state of the country. The men agreed to this on the understanding that they would be released and sent home as soon as the situation admitted and shipping became available. Before this occurred, however, trouble broke out on the Afghan frontier, and with a view to meeting the emergency, demobilisation was stopped by order of the Army Council. Demobilisable men are in no way being kept in India for the Army of Occupation; their services are necessary only while the present situation continues, and will be dispensed with at the earliest possible moment. It appears, however, that there is still some misunderstanding on this point, and that certain men now necessarily detained have been informed that their employment has been cancelled "because they have volunteered for the Armies of Occupation." The War Office accordingly appeals to all employers concerned still to keep open the places reserved for these men, and so relieve their minds of the very real and deeply felt anxiety as to their future when they return to this country.

THE MORTGAGE COMPANY OF EGYPT LIMITED.

NOTICE IS HEREBY GIVEN that WARRANTS, in payment of the Dividend on the 5 per Cent. Cumulative Preferred Shares for the Half-Year ended the 30th June, 1919, will be POSTED on that date.

The BOOKS will be CLOSED from the 18th instant to the 30th instant, inclusive.

By Order of the Board,
ROBERT H. EGGAR, Secretary,

57½, Old Broad Street, London, E.C.2.
20th June, 1919.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Labour questions have overshadowed all other matters in the market this week. Contrary to expectations, the employers and trade union officials failed to agree on mill hours and wages last Friday, and a strike began on Monday. On that day, however, as a result of a further conference, it was decided to recommend the masters and the workpeople to accept a working week of forty-eight hours with a rise in wages of 30 per cent. on list wages. At the time of writing, there is a little uncertainty as to whether certain sections of the operatives will confirm the arrangement. There is disappointment in labour circles that the union officials have not been able to obtain a working week of forty-six and a half hours. It is anticipated, however, that the mills will be running on Monday under the new conditions. Varied reports continue to be received relating to the Egyptian crop. Water is said to be sufficient, but there are still advices of low temperatures. Official reports relating to the American growth will be published by the Government on Tuesday next. Egyptian yarns have advanced in price. Quite a substantial rise has occurred in certain special kinds. Without the turnover being very large, an encouraging demand has been met with, and most spinners can afford to be very firm at the higher quotations. In spite of advancing rates, a considerable trade continues to be put through in piece goods for Egypt and Near Eastern outlets generally. Sized goods and printing cloths have been in active request, especially for anything like early delivery. India is now showing more life. A welcome improvement has taken place in the offtake for Calcutta. The requirements of China are not yet satisfied. Certain makes are being sold for delivery into next year. Most cloth manufacturers have distinctly improved their position during the last few weeks. American yarns have not been sold freely, but the tone has been firm, and a very fair trade has been done. Plenty of offers have been about in bundles for India and cops for the Continent. Coarse numbers continue to be sold for the Levant.

COMPANY RESULTS, Etc.

The directors of the Ceylon Land and Produce Company announce that an interim dividend of 10 per cent., being at the rate of 20 per cent. per annum, will be paid on the ordinary shares on July 1.

Land Bank of Egypt.—Coupons No. 28 of the Three and a-Half per Cent. bonds and No. 26 of the Four per Cent. bonds, payable July 1, should be presented in London at the Comptoir National d'Escompte.

Nedeem Tea.—The directors of the Nedeem Tea Company recommend a final dividend on the ordinary shares of 20 per cent. for 1918, subject to income-tax at an average of 5s 9d. in £, payable on and after July 26, making 25 per cent. for the year.

Egyptian Salt and Soda First Mortgage Debenture.—Coupon No. 34, due June 30, will be paid by the National Bank of Egypt, 6 and 7, King William Street, E.C.

The directors of the Ceylon and Indian Planters' Association announce a dividend of 5 per cent. (10s. per share), less income-tax, on ordinary shares (interim), payable June 24. Last year, dividend same.

The directors of the South Behar Railway announce a dividend of 5 per cent. per annum, less income-tax, on capital stock for half-year (interim), payable July 15. Last year, dividend same.

Mortgage Company of Egypt.—Warrants in payment of the dividend on the 5 per cent. cumulative preferred shares for the half-year ending June 30 will be posted on that date.

The directors of the Eastern Telegraph Company announce a dividend of 6 per cent. per annum, free of income-tax, on ordinary stock for quarter (interim), payable July 15. Last year, dividend same.

London County Westminster and Parr's Bank.—Transfer books will be closed on July 1 for that day only, for preparation of dividend payable August 1. Proprietors registered on June 30 will be entitled to the dividend.

The directors of the East Indian Coal Company recommend a dividend of 12 per cent., less tax, for the half-year ended April 30 last, payable July 10.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

Our market has been rather irregular this week. There has been a large demand from Egypt for Egyptian Government stocks and Bank shares, and this has more than sufficed to absorb what was offering on this side in these securities, which have been realised, no doubt, with a view to reinvestment in the new War Loans. On the other hand, there has been a certain amount of local pressure to sell some of the other securities, and, generally speaking, this has led to some lowering of prices in order to attract buyers.

Egyptian Unifieds close unchanged at 86, with some large business round 85½. The 3½ per cent. 1890 loan is in strong demand at the quoted figure, but sellers are practically non-existent.

In Bank shares the feature has been the rise in National Banks, which spurted very sharply 11-16 to 20⅜ on a big demand from Egypt. There was keen competition for the shares offering here, and the price advanced rather rapidly. Agriculturals, although closing unchanged, are a much better market, as Egypt has taken several hundred shares between 5 15-16 and 6. Anglo-Egyptian Banks have been bought locally, and are ⅜ up at 16. Land Banks have been wanted, but no business has resulted, as there are no sellers.

Delta Light Railway Prefs. have remained unaltered.

In Land shares Aboukirs have receded a further fraction to 23s. 6d. on local realisation. Some small business has taken place in Béhéra at 12⅛, at which price the shares are still wanted, but sellers are asking 12½. A large business has been done in Egyptian Consolidated Lands, which have further receded 4½d. to 2s. 10½d., after changing hands as high as 3s. 1½d. Delta Lands are 3d. lower at 14s. 3d. Gharbieh Lands and Sidi Salems have both receded ⅛ to 2¼, but at this price Gharbiehs are rather buyers, whilst Sidi Salems are rather sellers. New Egyptians close unaltered at 24s. 9d., after having been up to 25s. 3d. The report just issued is considered an excellent one, and shows the company to be in an exceedingly sound financial condition and with very good prospects. Sudan Plantations are 1-16 firmer at 7⅛. Union Foncières, on a forced sale, dropped to 3⅛, at which price, however, there are buyers, while at the moment there are no sellers under 3¼.

In Miscellaneous descriptions Markets have dropped 2s. 6d. to 22s. 6d., at which price several hundred shares changed hands. On the other hand, Salts and Sodas have been persistently inquired for, and have risen 3-16 to 3⅛. Khedivial Mails are ⅛ lower at 6⅛.

In Oil shares Anglo-Egyptian B are 1-32 easier at 6 5-32, while Roumanian Oil have been a feature of strength, and have jumped 2s. to 21s. 6d. Traians, however, have been a dull spot, and are 6d. lower at 13s.

In Greek securities there is again a further rise to record in certain descriptions. The 1881 and 1884 Loans are both 3 points higher at 75, and Rentes have gained a point at 55.

The plant of the Constantinople Telephone Company was taken over finally from the Turkish authorities as from April 1, 1919, and the service is now conducted by the company.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.
