An interesting note on "Hunting at Constantinople" was contributed recently to the *Field* by "D.C." "When the British Salonika Force entered Constantinople," he writes, "we found to our great surprise that there still existed a remnant of the pack of ten couples of hounds, which used to be the property of the British colony in Constantinople. This remnant was in charge of Harry Maiden, formerly of the Chiddingfold, Belvoir, and Sir Watkin Williams-Wynn's (indeed, I can remember seeing Maiden hunting with Sir Watkin.) Somehow, by hook or by crook, and no doubt by a good deal of wangling, Maiden had managed to obtain enough scraps to maintain three couples of hounds and also to bring up a litter of puppies, which it is hoped to enter next season. The pack was used indiscriminately to hunt either a drag or jackal, the drag being more popular, as the country, except in selected parts, is very rough and wild, resembling a mixture of the Devon and Somerset and the heather country of Brittany. Maiden himself had suffered considerably during the war, as although he was allowed his liberty, food was scarce for man and beast, and became practically non-obtainable towards the end of the war." One feels that this brief mention can hardly do justice to one who must be a very prince of "wanglers." But that is by the way. Here is a passage that will be read with interest by hunting men who know not the Constantinople region:—

Capt. Reginald Wilson, A.D.C. to Sir Henry Wilson, Commander of the Allied Forces occupying Constantinople (Turkey in Europe), took over charge of the hounds, and very soon a weekly drag was instituted, with occasional by-days after jackal. To realise the difficulties of hunting a jack or fox it must be remembered that the country is very hilly and "*accidenté*," as our French Allies call it, and in most parts is covered with heather which grows high enough to hide a horse, that the country is intersected by deep combes or gullies, which are thickly filled with brambles, oak scrub, laurels, heather, and forest trees, and that hounds, even when running over the so-called open, are entirely hidden from sight and have to smeuse their way along the pig and jackal paths bored through the heather. The accepted theory of keeping to the high ground and the heads of the combes will not work here if a huntsman wishes to see what his hounds are doing. He must keep in touch with their cry at all hazards (which means continual climbing up and sliding down steep hills) if he is not to lose them once they disappear into the thick stuff. The only so-called rides are the forest tracks made by the woodcutters' and charcoal-burners' ponies, and as they usually lead to clearings they do not help much in a run after a jackal, whose one idea is to bury himself in the heaviest thickets he can find. Against these disadvantages of terrain may be set the fact that a jackal never travels far ahead, but keeps waiting for hounds to come up to him, and that the heather carries a wonderful scent, or the jackal smells very strong, which, after all, amounts to the same thing, and that the jackals here do not go to ground, but are apparently stub-bred, and lie up in the thickets. I have not yet seen a jackal earth, though I have come across several foxes' and badgers' earths.

The article concludes with a lively description of a fine run, and an appeal to Masters of foxhounds for hounds.

Indian Rumours and Reports.

In a leading article, "The Condition of India," *The Times* (March 6) says:—

Private advices suggest that India may be on the verge of a worse food famine than the visitation of 1900. There is also a grave fodder famine, which is said to be resulting in a wholesale loss of cattle, just as the herds of Gujerat were all but wiped out eighteen years ago. Prices are astonishingly high, and an official statement says that in mid-December last the wholesale price of the principal food grains had risen by 51 per cent. as compared with the corresponding month of 1917, which was also an abnormal period. This figure is simply an average, and in some provinces, including Bombay, Sind, and Baluchistan, the rise is over 100 per cent. Although in this matter India is only sharing the common lot of the whole world, the pressure upon the peasantry must be exceptionally severe, because even in normal times the bulk of the people live on a scale of bare subsistence. Simultaneously there have been grievous cholera epidemics, possibly accentuated by malnutrition, while statements are current that the influenza epidemic has in some places swept away a fifth of the local population in two months. Owing to the congestion of the cable routes, it is now extremely difficult to obtain prompt information. We have no adequate means of judging the present economic condition of India. The India Office remains dumb, and leaves us to suppose that the Indian peoples are solely engaged in rather acrid discussions of the reform schemes. We suggest that a simple statement should be issued, explaining to what extent the reports we have mentioned are well founded.

The same article refers to the Montagu-Chelmsford scheme and certain opinions on it that have been expressed. The writer concludes:—

The scheme was never meant to be a cut-and-dried plan which both Parliament and India were expected to accept without amendment. It was and is a rough design which must be finally shaped by mutual agreement. It may require either pruning or expanding, and we do not necessarily associate ourselves with the Viceroy's declaration last September that the scheme reaches "right up to the line beyond which our principles forbid us to go." The great need of the Montagu-Chelmsford scheme at this juncture is neither laudation nor abuse, of both of which it has had far too much, but constructive criticism, of which there has been far too little. The chief defect of the scheme is its complexity. It postulates the creation of at least five new bodies, and will make the already intricate machinery of the Indian Administration far more involved than ever. Oriental countries require simplicity of control, especially in the earlier stages of self-government, and any changes made should be in this direction.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

English in Egypt. March 5.

Major HURST asked the Secretary of State for Foreign Affairs whether a resolution from the principal business houses of Port Said, Egypt, has been transmitted to him by the High Commissioner of Egypt; whether this resolution emphasises the necessity of the use of the English language and the adoption of English law and procedure in the Courts, particularly in criminal matters; whether any reply has been sent; and what action it is proposed to take?

Mr. HARMSWORTH: The answer to the first and second part of the hon. and gallant member's question is in the affirmative, subject to the reservation that the form of the communication in question was that of a letter expressing agreement with a memorial previously addressed to Sir R. Wingate by British lawyers in Egypt; it consequently required no special reply. The views put forward by the British lawyers, and supported by the British business houses, were communicated at the time to the Commission sitting at Cairo, which is charged with the preparation of the proposed new judicial organisation, and is receiving careful consideration by the Advisory Committee in this country as well as by the Foreign Office.

Major HURST: Is the hon. gentleman aware of the indignation that is felt among business classes, both in Egypt and in England, at the proposed exclusion of the English language and English law from the Egyptian Courts?

Mr. HARMSWORTH: Yes, sir, I am fully aware of that. I have received a deputation on the subject quite recently.

Distress in India. March 10.

Mr. BENNETT asked the Secretary for India if he had any information as to the extent and intensity of famine conditions now prevailing in India?

Mr. FISHER, who replied for Mr. Montagu, said "famine" in the technical sense that relief works had been opened had been declared in one district in Bombay, and in parts of two other districts in the same province. There was distress of a less severe character in several other districts in Bombay and the Central Provinces, in two districts in the United Provinces, and in a few places in other provinces. In November and December there was in India as a whole a serious deficiency in the rainfall, resulting in failure of the autumn crops over wide areas and restricted sowings of winter crops. The latter had benefited considerably by fairly general rain. There were about 43,000 persons on relief works. The number was kept down by the good demand for labour on private account. The increase in the price of food grains had varied in different parts of India. As far as could be judged from the figures that had been received, the average increase over normal prices would appear to be about 50 per cent. Prices had not as yet shown a tendency to decline.

General Townshend. March 11.

Captain GUEST, replying to Sir F. Hall, said:—General Townshend is on the active list on half-pay. There is, at present, I understand, no suitable appointment available in which his services could be employed.

Topics in Parliament.

The subject headings are those given in the Official Report:—

India: Government Headquarters (Overcrowding). Constitutional Reforms. Mutiny Veterans.
Demobilisation: Troops Serving in India.
Montenegro.
Europe and Asia Minor (Revictualling).
Demobilisation: Troops in the East (March 5).
Malta Hospital Staff (Leave).
Demobilisation: Troops in Egypt (March 6).

GENERAL ALLENBY'S CAMPAIGN.

A private view of three films illustrating General Allenby's campaign in Palestine was given at the New Gallery Kinema, Regent Street, on Tuesday morning. Two of the films were new official war films, released for the first time; the other depicted life in the Holy Land before the war. Some coloured lantern slides by the Australian official photographer were also shown. All were full of interest, and remarkably good in the matter of clearness, and Miss Frances E. Newton, who delivered the accompanying lecture, added further vividness by her admirable descriptions. The lecture is to tour the country in aid of the Syria and Palestine Relief Fund, and we advise all our readers who can do so to attend it.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The British staff of the Smyrna-Aidin Railway left London for the Levant on February 26.

***

The appointment of Sir Richard Crawford to succeed Lord Edward Cecil as Financial Adviser, which is forecasted by the Cairo correspondent of *The Times*, is a development on which Egypt is to be congratulated. Sir Richard, who was Adviser to the Turkish Ministry of Finance from 1911 to 1914, and subsequently Commercial Adviser to the Embassy at Washington, and from February, 1918, Commercial Commissioner at Washington, has made a great reputation by his able handling of financial questions. He will have a field worthy of his ability in Egypt, and his presence there will inspire additional confidence in the outlook for that country.

***

A contemporary pointed out this week that the question of the exchange was the great obstacle in regard to British trade with Turkey. The solution of the problem undoubtedly is to allow the free export of goods from Turkey to this country. I understand that there is a fairly large amount of goods in Turkey which could be shipped, and if no obstacle is placed on its coming to this country, but rather every facility is given, it will naturally produce Turkish credits in London, which are necessary as a counterpart to British exports. In this connection I understand that an Inter-Allied Committee has been formed at Constantinople which will issue import and export permits to subjects of the Allies pending the abolition of all restrictions on Allied trade with Turkey This step will facilitate exports from Turkey.

***

The decision of the British Government to appoint a British Commercial Agent to Egypt, which has just been announced by the president of the British Chamber of Commerce of Egypt at a general meeting of that body, marks a most important development of the policy of furthering trade within the Empire. There is great scope for the extension of British commerce with Egypt; trade lost to Germany and Austria can and must be recovered; but besides that there is the fact that the rapid progress of the country will find expression in a wider range of requirements, and if British merchants and manufacturers are to obtain their proper share of this trade it is obvious that expert guidance will be necessary, and in this direction the Commercial Agent's services should be of great help.

***

The decision, it may be noted, follows very closely on the presentation by the Chamber of a memorandum to the High Commissioner concerning the various measures which might be taken to further the development of British trade with and in Egypt. The memorandum was the work of a Special Commission composed of members of the Alexandria and Cairo committees of the Chamber, assisted by Mr. A. T. Lloyd, O.B.E., specially appointed by the Residency, and formed at the suggestion of the High Commissioner. The appointment of a Trade Commissioner to Egypt was one of the principal recommendations, the Chamber stating that the question was of great importance, and that the country ought not to be left out of the scheme both on account of the interests involved locally and of its geographical situation.

***

In response to representations by the Manchester Chamber of Commerce on the subject of cable delays to Egypt, India, and Ceylon, the Secretary to the General Post Office has written explaining that the delay is due to "the great increase of traffic which, unfortunately, has to be concentrated on a limited number of cables in consequence of the continued interruption of certain of the submarine lines and the stoppage of auxiliary routes through Russia and Germany which were in existence before the war. The increase is largely in Government telegrams, and special steps have been taken to curtail this traffic as much as possible. An auxiliary wireless service has just been established between this country and Egypt by means of existing Government stations, and meanwhile every effort is being made to repair the interrupted cables. There is no doubt that relief would be afforded if an extended use of cables could be permitted, and thus reduce the length of telegrams, and the Censorship authorities have the question now under consideration."

***

The decision to construct a Channel Tunnel is of great importance in regard to communications with the East, for it will make it possible in due course to take a through train from London to Baghdad, and beyond to India, perhaps, if, as is extremely probable, the Indian system is eventually linked up with the Baghdad line. Trains for the East will presumably be run in sections, the first part going to Baghdad, and detaching the Jerusalem and Egypt section at Aleppo. It is a marvellous prospect to look forward to, and one which is the direct result of the war, without which it could only have been regarded as a matter of the far-distant future. As to the influence of the tunnel on trade with the Near East, there are too many considerations involved—such as, for instance, freights; the development of aerial transport, etc.—to make prophecy advisable. Through communication should be of extreme use, but we must wait and see.

***

Pending a definite decision on the whole question of aerial navigation enterprise by private firms is out of the question, but indications are not wanting that once private initiative is permitted there will be rapid developments in the direction of the provision of flying services. There is no question as to the scope for aerial transport, especially in serving the remoter parts of the Empire—districts like the Sudan, where our Khartoum Correspondent points out, in a letter published this week, the advent of the Handley Page may revolutionise the question of transport—but time is obviously required to overcome the initial difficulties.

***

The Allied Powers have taken the important decision in reference to the Turkish Internal 5 per Cent. Loan, to which the public was forced to subscribe, that they cannot admit any operations connected with the payment of the May coupon of this loan while similar transactions in regard to external loans in the possession of Allied subjects must remain in abeyance. The Imperial Ottoman Bank has, therefore, been invited to withhold payment, and to hold the money in question at the disposal of the Ottoman Public Debt Administration.

***

The *Pioneer* believes that the question of utilising ships of the Royal Indian Marine to relieve the situation created by the shortage of passage accommodation is under consideration. It cannot be said that the vessels are very suitable for the purpose, but in the present emergency they may serve to relieve the pressure to some extent, and it is also very evident that some further steps will have to be taken to cope with the position, and the utilisation of these vessels might well be one of them.

***

An interesting note has been written by Mr. A. P. Morris, principal of the Government Engineering School, Insein, on the possibilities of glass manufacture in Burma. This industry has not been introduced into Burma hitherto, one obstacle being the lack of supply of sufficient pure silica; but the researches of Mr. Morris indicate that the manufacture of glass is not only practicable, but that it would apparently be inexpensive. The experiments conducted led to the conclusion that paddy husk can be used to develop sufficient heat for glass manufacture, that paddy husk yields, as a by-product, silica sufficiently pure to be suitable for the manufacture of colourless glass, and that ingredients for lime soda glass are available locally, and the glass obtained is of a high fusibility and good quality.

COMMENTATOR.

TRADE OF THE SUDAN.

Further Improvement in 1918.

(From Our Own Correspondent.)

Cairo, February 21.

The December quarterly statement of the Sudan Customs, which has just reached here, indicates an important development in the foreign trade of that country during 1918. Imports during the year came to £E4,024,582 and exports to £E3,923,771, as compared with £E3,102,117 and £E3,490,565 respectively during 1917. Re-exports for the year totalled £E286,613, as against £E238,616. The total turnover in trade has, therefore, increased by over 20 per cent., the improvement being as to 29 per cent. in imports, 12 per cent. in exports, and 20 per cent. in re-exports. The following table shows what an advance has been made during the past twenty years in the foreign trade of the Sudan:—

	Imports. £E.	Exports. £E.	Re-exports. £E.
1903.....	749,537	378,133	19,434
1908.....	1,892,798	515,938	27,261
1913.....	2,109,776	1,185,186	89,491
1918.....	4,024,582	3,923,771	286,613

As the country was reoccupied in 1898, in which year trade for statistical and, indeed, for all practical purposes was non-existent, I have given figures for the last year of each of the subsequent quinquennial periods up to and including 1918. The progress made is, indeed, quite remarkable. During the first ten years, when the work of development and reconstruction was in full swing, it was only natural that the imports should far outstrip the exports. The effect of that work is, however, seen at the end of the subsequent five years, when, although imports had increased by about 10 per cent., exports had more than doubled; whilst at the conclusion of the fourth five-year period we find that, whereas imports have about doubled, exports have increased more than threefold. What is even more satisfactory is that, taking into account, as one ought, the re-exports, there is to-day a small balance of trade in favour of the Sudan.

Substantial Progress.

It may, of course, be objected that the general inflation of prices which has taken place since the war makes this comparison with previous years somewhat unfair. But the rise in prices naturally affects both sides of the account—possibly the import more than the export—since the values of the former are inflated by the increased freights, whilst those of the latter are the f.o.b. values. Moreover, it must not be forgotten that the shortage in shipping must have had its affect on the total output of the Sudan. Indeed, there is every reason to believe that, had there been more shipping offering, the export quantities would have been very much greater, and consequently the total value of the shipments abroad would have been considerably higher. Since the main object of the above comparison is to show that the Sudan has progressed in its production, and that it is now beginning to pay its way economically, just as it has done administratively since 1913, I submit that this comparison is quite permissible, and that it in nowise leads to an erroneous conclusion.

The appended table, giving the quantities and values of the more important exports in 1918 and in 1913—the last normal year prior to the war—shows clearly the enormous impetus given to the export trade of the Sudan during the five years in question. The increase in the livestock trade and cereal export is considerable. The export of cattle has quadrupled, and that of sheep and goats more than doubled, whilst the export of dura, dukn, dates, ground nuts, etc., has increased in an even more remarkable manner. Cotton, sesame, and dom palm nuts are the only items which show any decrease in quantity, and in these instances, as well as in that of gum—which, however, exceeds the 1913 figure—the lack of shipping has undoubtedly not been without its effect.

The table obviates the necessity of giving the increases in exports as compared with 1917. I will only give these details for the imports. Amongst the latter the most important increases, compared with the preceding year, have been:—Refined sugar from £E409,555 to £E593,137; tea from £E75,083 to £E140,260; wheat from £E5,387 to £E51,917; matches from £E3,200 to £E34,385; soap from £E41,654 to £E62,433; cotton fabrics from £E776,205 to £E1,116,649; sacks from £E110,047 to £E164,743; clothing from £E45,182 to £E70,715; tobacco of all sorts from £E68,068 to £E107,654. The effect of the rise in prices on the world's markets is seen from the following:—Sugar imports increased by about 15 per cent. in quantity, but the value rose by over 40 per cent.; petroleum fell off by 30 per cent. in quantity, but increased by just under 20 per cent. in value; coal decreased by about 20 per cent. in quantity, but rose by 5 per cent. in value; soap, which remained constant in quantity, increased by 50 per cent. in value; and tea, of which practically the same quantity came in, rose by about 90 per cent. in value.

Share of Countries.

Turning to the countries which have been the customers of the Sudan, we find that, as usual, Egypt has sent and taken the major quantity. Her exports to the Sudan amounted to £E2,776,779 and her purchases to £E3,087,094, as against £E1,845,162 and £E2,589,541 respectively in 1917. This is an increase of about 50 and 20 per cent. The next important country under imports is "India and Aden," with £E413,468, a slight decrease compared with 1917, whilst next in order come South Africa, with £E316,429—double the 1917 figure—and Abyssinia, with £E181,558, an increase of about 60 per cent. Great Britain takes fifth place with only £E176,881, as against third in 1917 with £E396,260. Under exports, however, she secures second place with £E515,985, a decrease of £E191,651 compared with the previous year, whilst Eritrea and Arabia fight for third position with £E129,775 and £E118,358 respectively, in the former case an increase of 300 per cent. and in the latter one of 150 per cent. over the 1917 figures.

The set-back to trade with Great Britain is very considerable, but it is more apparent than real. Owing to the shipping difficulty, to which reference has already been made, the Sudan has used the Nile route, and has exported via the Egyptian ports and drawn on the Egyptian stocks of imported goods to a much greater extent than in pre-war days. It is, therefore, only natural that the figures for Egypt should have increased and those for Great Britain have decreased as they have done. In fact, the Egyptian Customs statistics show that cotton piece goods—to name only one item of indisputable British manufacture—of the value of £E693,086 were sent from Egypt to the Sudan, as compared with £E319,244 in 1917, whilst the value of gum and cotton which passed over the Sudan frontier, and a large portion of which was destined to Great Britain, amounted to £E404,027. There is, therefore, reason to expect that as soon as shipping conditions resume their normal state direct trade with Great Britain will take place again in the same manner and at least to the same extent as before the war.

At the same time, it must not be forgotten that trade with Egypt has undergone important development since 1913. For example, the Sudan now consumes Egyptian cane-sugar where before she took Austrian beet-sugar, whilst Egypt is relying on her southern neighbour for her supplies of meat where formerly she obtained her requirements from Serbia, Syria, etc., and she looks to her to supply any shortage in her own production of certain cereals, such as dura, sesame, etc. This interdependence will certainly continue, and will most probably become closer after the war. In fact, there is every indication that the Sudan will in the near future take an important place in the British Empire in so far as trade relationship with its various dependencies are concerned, and from that point of view alone its present development, as shown by the latest statistics, is eminently satisfactory.

CYPRUS TRADE NOTES.

(From a Correspondent.)

At last there is a re-establishment of a mail service. The s.s. Tanta, of the Khedivial Company, is to run between Egypt and Cyprus, taking ten days instead of a week for the circuit, which will considerably increase trade facilities at the principal ports. It is hoped that a weekly service will soon be possible.

All persons who desire to visit occupied territory in Syria and Palestine must apply for passports to the Commissioner of the district in which they reside. All boats have been requisitioned for military purposes, questions of compensation being settled by a board appointed by the Government.

Good rains have fallen during the last days of February, and farmers are satisfied with the prospects.

REDUCED SHIPPING FARES.

Messrs. Bibby Brothers and Co., the managers of the Bibby Line, intimate that now their steamers are being relieved from Government requisition all fares to and from Ceylon and Burmah have been reduced by 20 per cent., and return fares will be issued for a fare and a-half.

The Anchor Line have reduced the fares by their steamers to and from Indian ports by 20 per cent.; the reduction from this country will begin with their first sailing in April, and from India at once. Return tickets to and from India are now issued at the price of a fare and a half.

Mr. W. K. Dods has been appointed a member of the Board of Trustees for the Improvement of Calcutta, in succession to Sir Archy Birkmyre.

Athens newspapers state that an English company will shortly begin construction of the railway line between Drama and Kavalla, east of Salonika.

TRANSPORT IN THE SUDAN.

Promising Field for Motors.

(From Our Own Correspondent.)
Khartoum, February 16.

There has been a slight but gradual increase, noticeable over a considerable period, in the number of motor-cars in the Sudan. The advent of the Handley Page may begin a new era in the history of the country. It is not to be expected that aeroplanes can be used extensively for commercial purposes, in view of the great expense involved in the upkeep and staff of such elaborate mechanism, but the presence of any, if only for military or Imperial purposes, must inevitably give a great impetus to the use of internal combustion engines, implying, as it would, the presence of adequate workshops and an increase in all the necessary supplies and spares for such engines.

It has been shown during the war that the motor-car can go almost anywhere, and the Sudan opens a great field to this class of transport. The larger part of the country is flat, and though the soil is often sandy, it is generally possible to find a route which circumvents the more difficult spots and makes a regular service possible. The outlay on cars suitable for this work (*i.e.*, carrier work) is not very great, and negligible compared to that of putting down a light railway. Moreover, the difficulties in obtaining fuel for any steam-driven engine are great. For instance, there is a quantity of material suitable for export in places such as Gedaref or Nahud, which are a long way from rail or river—200 miles in the one case and 150 in the other—but the roads are feasible for motor traffic, as has been shown by the frequent journeys of a F.I.A.T. from Eretria, or by the regular service to Nahud during the Darfur patrol. It should, therefore, be possible for any enterprising person to manage a business of carrying cotton goods to these places and bringing back the staple products to the Nile.

The use of Ford cars by the Government has been steadily increasing for the purpose of facilitating administrative work. A light car of this character can go practically anywhere, and is of the greatest use for such purposes. It has not, however, been yet applied to commercial uses here. It is likely that the heavy and slower car for heavy transport may be the more useful as a commercial asset, and the light car has yet to increase its sphere of usefulness. It is already used by the agricultural companies settled in the Sudan, but it has not yet extended to the native. There is little doubt that when the native finds opportunity to purchase a cheap car, and to obtain repairs for it without great delay and trouble, that he will adopt it with advantage. There should therefore be a good opening for the motor business in the Sudan as soon as motor matters have returned to something approaching the normal.

SUDAN TRADERS' TAX.

According to *Al Mokattam*, the Sudan Government has in view an increase of the Traders' tax, which will be assessed at the rate of 4 per cent. for persons whose profits do not exceed £E100 per annum, 5 per cent. for those whose profits exceed £E100, but not £E500, and 6 per cent. for those whose profits exceed £E500 per annum.

FACILITATING EXPORTS.

Speedy Information Regarding Licences.

In order further to assist exporters to recover their trade in goods of which the export is or has been controlled, and generally to ensure that no openings for trade are lost to British exporters owing to ignorance of existing export facilities, the Department of Overseas Trade, in concert with the War Trade Department, has made arrangements for bringing to the notice of exporters, through the medium of the Press, trade journals, chambers of commerce, and trade organisations, and by special notes direct to firms on the "Special Register" of the Department, information regarding changes affecting control over exports.

Firms not already on the Special Register who desire to receive such information direct from the Department may apply for admission to the Special Register to the Comptroller-General, Department of Overseas Trade (Development and Intelligence), 73, Basinghall Street, E.C. 2. The annual fee for admission to the Special Register is £2 2s., which includes the supply of the *Board of Trade Journal*.

It is understood that, owing to the necessary formalities and consequent delay in connection with the obtaining of export licences, exporters find themselves at a disadvantage when dealing with orders requiring immediate acceptance. The Department will, therefore, on request, undertake to ascertain from the War Trade Department, and reply by telegram or telephone at the earliest possible moment, whether licences will or will not be granted for such orders. In the event of an applicant being promised a licence, he will be enabled to deal with the order straightaway, with the knowledge that upon application being made formally to the War Trade Department the licence will be granted.

Inquiries should be by telegram rather than by telephone, and should be addressed to "Orders, c.o. Advantage, Stock, London." They should give, in addition to the name and postal or telegraphic address of the applicant, the quantity, value, and description of the goods comprised in the order, and the name and address of the ultimate consignee if the goods are destined for a neutral country. In the case of orders from Allied or British territory, or from territory in the occupation of troops of the Associated Governments, the consignee need not be stated; the country of destination will, of course, need to be given. A reply of twenty-four words (1s. 6d.) must also be prepaid.

Applicants are requested in their own interest to confine their inquiries to orders needing a very urgent decision, since the fewer the inquiries the more promptly can answers be given.

M. George Boncescu, Commercial Attaché to the Roumanian Legation, gave a lecture on "Roumania and its Commercial Possibilities" at a meeting of the Bishopsgate Institute Ward Club at the Great Eastern Hotel, on March 12. The report of the lecture and of the discussion which followed is unavoidably held over until next week.

NEWS FROM ALL SOURCES.

Mr. H. St. G. Gilmore, traffic manager, Eastern Bengal Railway, has been granted combined leave for twelve months.

The editorial office of the *Board of Trade Journal* has been removed to 7, Whitehall Gardens, S.W. 1.

A telegram has been received from the British Commercial Secretary at Odessa stating that navigation in the Sea of Azov is reopened.

Mr. Thomas Smith, of the Muir Mills Co., Ltd., Cawnpore, has been elected President of the Upper India Chamber of Commerce for the ensuing year.

Mr. Sydney Preston, C.I.E., has been appointed to succeed Sir Maurice Fitzmaurice, C.M.G., as chairman of the Canal Control Committee.

The Liverpool branch office of Messrs. Lionda and Co., Ltd., has been moved from Tower Buildings, Water Street, to Apsley Buildings, 4, Oldhall Street.

A branch of the London County Westminster and Parr's Bank has been opened at 4, Silver Street, Hull, under the management of Mr. E. Moore.

Mr. W. L. Frier, assistant traffic manager, Ceylon Government Railways, has left the Island to take up an important appointment on the East African Railway.

It is announced that the Japanese mail steamers are fully booked to Europe until the end of August, and passages are not, therefore, available from Colombo.

It is reported that Mr. Patrick C. Young, formerly Secretary to the Indian Railway Board, and recently employed on military duty in France, will shortly resign Government service.

The International Sleeping Car Company announces that the Rome express, from March 8, will leave Paris at 2 p.m. every Tuesday, Thursday, and Saturday, and will arrive in Rome the following day at 9.30 p.m. A through car for Milan will be detached at Turin. Milan is reached at 11 a.m.

The Tea Commissioner in Ceylon will release 1,000 tons of shipping space monthly for shipments to the United Kingdom from Colombo of teas other than those controlled by him. Nine hundred tons of space were to be reserved for this purpose in the s.s. "Mahsud," sailing for London about February 20.

The Association of British Motor and Allied Manufacturers has appointed Major R. E. Goddard as its overseas commissioner for the purpose of investigating on the spot the markets of Australasia, India, and the East. Major Goddard left England last month, and is due to reach Ceylon about the middle of this month. His tour will last about a year.

ENGINEERING NOTES.

Railway Material.

In view of the contemplated reconstruction of many railway lines in the Near East, which were either damaged or destroyed during the war, and the construction of new lines in accordance with the new territorial arrangements, it is very opportune to remind British manufacturers that in the supply of railway material (other than rolling stock) in those markets, except in Egypt, the United Kingdom has hitherto hardly been represented. Germany has been the principal supplier for years. Therefore, the present difficult position of Germany offers very considerable opportunities to British producers of rails for railways, tram-rails, iron sleepers, fish-plates, bolts for sleepers, gauge-bars, clamp plates, hooked-nails, railway buffers, parts of signals, railway switches, etc., large quantities of which are annually imported in the Near East, provided, of course, that producers act promptly. To secure only Germany's share in the supply of the above-mentioned goods to the principal markets in that region would be an important commercial achievement. In the year 1912, which may be taken as a normal year, Germany exported railway material to Roumania to the value of £32,800; her exports to Turkey were £472,100; to Egypt £90,000; to Serbia £9,100; to Greece £3,600 (iron sleepers); against exports of similar material from the United Kingdom to Turkey of £8,100; to Egypt of £172,500; to Greece of £300; to Roumania of £100; and to Serbia nothing. With regard to Egypt it is interesting to note that the values of iron and steel rails imported into that country in 1912 and 1913 were:—From the United Kingdom £E35,377 in 1912 and £E106,423 in 1913; from Germany £E60,327 in 1912 and £E19,980 in 1913; from all countries £E116,650 in 1912 and £E184,980 in 1913. The position of the United Kingdom improved greatly in 1913, mainly at the expense of Germany, and present conditions should give British manufacturers an opportunity to establish themselves still more firmly in the Egyptian market. With regard to Greece it will be remembered that considerable supplies of railway material, including rolling stock, engines, etc., for the union of the Athens-Larissa railway with the Salonika Monastir and Western Europe lines were obtained, in 1912-1914 from the United States of America.

Minerals in Asia Minor.

Whatever the new territorial arrangements may be in Asia Minor, the natural wealth of that historic land will be an object of great interest to engineers and enterprising business men in the very near future. The realisation of that wealth was one of the aims of the *Drang nach Osten* policy. Many years ago Rocher set out Germany's dreams in that connection in these words: "There, in Asia Minor, by peaceful conquest we can create a new Germany, which would elevate her in grandeur, population and riches, in front of the old Germany and which would form the safest road against our enemy." The Germans contemplated the time when they would obtain the sole control of the natural wealth of the country, which includes important coal and iron mines, petroleum areas, etc. It is proved that the latter are found almost all over Asia Minor, especially in the provinces of Mosul and Baghdad, in which two districts alone there are a couple of hundred areas. There are also petroleum springs at the Van lake and at Puek, in Terdsehan, to the west of Erzereum. The largest iron-ore deposits are in the mountainous country north of Satium, where the annual production is about 300,000 tons, whilst some 30,000 tons per annum are broken at Ayasmaud. The most important coal deposits are those of Ergli (Heraclea), on the Black Sea; the quality of the coal varies, but resembles on the whole Newcastle coal. About ten companies are working in that district, a French concern heading the list with an output of 500,000 tons a year. The Duysa mine has an annual production of 110,000 tons, the Kurdschi Mining Company one of 85,000 tons, and the Zaridscha Brothers Company of 60,000 tons yearly. Some smaller companies produce an annual aggregate of 50,000 tons. With the construction of a small railway, modern loading facilities, and a suitable harbour on a certain point of the district, a French engineer, who had prepared the necessary plans, etc., assured the present writer, on his visit there some years ago that "Heraclea could be another Cardiff!"

Small Machinery.

In view of the urgent need for agricultural machinery and implements in the Near East, and the apparent desire of British manufacturers to do business in those markets, it is advisable to remind the latter that the majority of farmers in that region are small holders, as a rule proprietors of the land they cultivate, and small size machinery is what they want. Large ploughing tractors or steam-engine ploughing sets are in considerable use, and are needed, but only large landowners can afford to buy them, and those who can often prefer a small set of machines. A small ploughing machine for instance, with cultivating tools operated direct from the engine instead of being hauled by a tractor, is in demand, more particularly if it is suitable for use between trees in orchards and vineyards, and between rows of root and ground crops in market garden plantations, as well as in the stubble of the open field. Such a contrivance would appeal to every farmer, small or large, in the Near East. Machines of this type have recently been successfully employed in England. Their light weight is a great advantage, and their cost small; those made in England cost before the war £100, and even less than that amount against the £100 to £140 that had then to be paid for the American product. American firms have sent representatives already to the principal Near Eastern markets, and have booked orders for these and other small machines, promising quick delivery, but, except for harvesters, Oriental farmers, as a rule, are not anxious to buy American machinery.

Peat Powder as Fuel.

It will interest many railway companies and steam users in the East to hear that a new kind of fuel of considerable importance is being introduced on the Swedish State railways. A factory is now under construction for the production of peat powder, and as soon as a sufficient quantity of powder is available a railway line will commence using this peat powder. In previous notes reference was made to the large quantities of peat that occur in certain districts of the Near East, and to the possibilities of its use as a substitute for coal when prepared for this purpose. The method of preparation was mentioned in the notes.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

The tone of the market continues uncertain, and no particular development in the amount of business passing can be recorded. In certain directions buying has been fairly extensive, but buyers and sellers have experienced much difficulty in getting to close quarters for lots of any weight. Fixed prices continue to be maintained in Egyptian cotton. Diverse opinions are being expressed as to the probable acreage in Egypt next season. Yarns made from Egyptian cotton remain slow of sale. Certain of the lower numbers are distinctly cheaper than a week or two ago. Now and again stocks can be found in first hands. In cloth for Egypt a little more inquiry has been experienced and there continues more activity for Persia and Turkey. There are still difficulties in arranging shipments and financial facilities. A few more offers have been mentioned in piece goods for India. Of the several outlets Madras seems to be the most encouraging. Further buying has occurred for China in bleaching descriptions and grey shirtings. The position of most manufacturers continues wretched, and there is a tendency in some weaving districts to stop more looms than ever. No particular activity can be recorded in home trade fabrics. Prices in American yarns continue very irregular. The offtake in all counts and qualities has been unimportant, and users are still disposed to purchase from hand to mouth. Inquiry has been about in export yarns for European and Near Eastern outlets but not much has been done.

On the occasion of his recent visit to the Tata Steel Works the Viceroy announced that to commemorate the name of the founder of the works Sakchi would henceforth be called Jamshadpur. It has now been decided to change the name of Kalimati, the railway station for Jamshadpur, to Tatanagar.

TRADE WITH GREECE.

Openings for Machinery.—II.

One of the most promising openings for machinery in Greece should be in connection with agriculture, but it is necessary to point out that the demand for ploughs, threshing machines, reapers, etc., must depend on the extent to which it is found possible to develop the country's staple industry. It has been one of the outstanding weaknesses of Greece's position that so far agriculture has been to some degree neglected with the result that nothing like the possible yield has been obtained from the country's rich and prolific soil. An improvement was evident in this respect before the war, but much remains to be done, and it is an open question how far it is possible to overcome the numerous difficulties in the way of an extension of cultivation. One of the most real obstacles to progress has been the attitude of the peasant class to innovations. The Greek peasant is an exceedingly conservative person, and needs a great deal of convincing as to the utility of modern methods in agriculture. Rural depopulation, which was growing in recent years as a result of an increasing dislike for rural life, presents another problem, and education would be of little immediate avail if the rural population was insufficient in number to till the land on the most approved methods. There is also the question of communications, which are insufficient in rural areas, and the improvement of which must precede a comprehensive scheme to increase cultivation. The lack of capital has also had a retarding effect, and this is, perhaps, the one direction in which difficulty should not be met with owing to the increased wealth of Greece through the war. The other problems are all capable of solution, and as the authorities are making a determined effort to promote the welfare of agriculture it will probably not be long before the market for agricultural machinery in Greece has developed out of all recognition.

Agricultural Machinery.

These considerations only affect the probable growth of the market, and do not concern the question of the immediate need for agricultural machinery, which all accounts agree is likely to be on a very considerable scale. On this point the report in question has much to say that is of interest. In 1915 the area under cultivation in Old and New Greece in hectares (one hectare = 2.47 acres) amounted to 1,372,838 hectares, 929,928 of which were given over to cereal cultivation, and of the remainder raisins were grown on 133,584 hectares, vegetables on 83,412, plants for industrial purposes on 70,586, and currants on 65,885. The country then possessed only 160 threshers, 1,200 reapers, and 100,000 ploughs, figures which, in view of the acreage devoted to cereal cultivation, show the totally inadequate supply of agricultural machinery. In order to safeguard the food supply of the country by cultivation on an intensive scale it is estimated that at the very least 20 to 30 per cent. more machines would be required than would be necessary under normal conditions. For the present year the needs of the country are put at 10,000 ploughs, 200,000 ploughshares, 500 harrows, 200 reapers, 25 threshers, 100 presses, 500 sulphur spreaders, and 500 copper sulphate sprayers for grapevines. These figures are not a private estimate, it must be remembered, but on the contrary represent the deliberate view of the authorities, and as such should go far to convince even the most sceptical among British merchants and manufacturers as to the prospects in the Balkan markets. There is, in short, at the moment a very great opening in Greece for agricultural machinery, but this, promising as it is, is only the foretaste of the market that should exist there when agriculture at a not far distant date has been properly developed. In this connection British agricultural machinery makers who intend to cultivate the market must see to it that their trade is accompanied by the establishment of repair shops in the country. At present such things do not exist, and no step is more likely to develop a temporary trade into a permanent market.

Market for Motors.

The growing market for motor cars in Greece was emphasised in these columns before the war, and it is of interest to note that the view is expressed in the report that the imports of motor vehicles in the future will be on a large scale, but that their coming into universal use will depend on the prices of gasoline and rubber. The use of the motor-car in Greece dates back to 1894, when a solitary vehicle made its appearance, but as late as 1907 there were only seven cars in Greece, four of which belonged to the royal family. From that year onwards, however, the motor car came rapidly into use, and in 1912 120 cars were utilised during the war. Their utility on war service led to a marked increase in their number, and while in 1914 there were 294 motor vehicles in the country, including 105 lorries, 82 motor cabs and cars in private use, 85 motor cabs and cars for hire, 10 motor cars owned by the royal family, and 8 motor cars owned by the Red Cross, by 1916 the number had increased to 487. The development of motor transport facilities will unquestionably do much to develop the market for motor cars, and the success attending experiments in this direction before the war as, for instance, the service of four motor cars between Preveza and Janina, which shortened the journey from 24 hours to between three and a half and four hours, and the services between Salonika and the interior will supply the encouragement needed for the development of this class of transport on extensive lines. At the moment the conditions of the country roads in Old Greece will present an obstacle to progress in this direction, but in much of Macedonia this handicap will not be encountered owing to the road construction that has been accomplished by the troops, and as regards the roads elsewhere it may be taken for granted that it will be one of the great tasks of the authorities to make them fit for ordinary traffic.

Cranes, Elevators, etc.

Among other classes of machinery for which there is a more or less immediate need cranes may be mentioned. The means of unloading at the ports of the Piraeus, Patras, Volo, and Syra, are not up to date, and there is an opening for steam or electric cranes capable of lifting up to 100 tons. There is also a growing opening for lifts for factories, hotels, and the houses with many stories, which are being built in increasing numbers at Athens and the Piraeus.

A further need is for machinery for bakers, also machinery for making boxes and metal goods and condensers. In regard to the first-mentioned class of goods it is pointed out that there is not a single bakery in Greece with a proper equipment for mixing or baking. The ovens in use obtain only 15 per cent. of the heat produced by the fuel consumed, instead of the 65 per cent. obtained in the case of properly conducted ovens.

It is stated that there is further a great need for machinery for making tin containers, and generally for machinery for producing various articles of tin and other substances. In Greece there are 16 factories for tinned goods, all of them small, and with two exceptions not adequately equipped. Between them they produce goods worth 844,000 francs, an amount which, it is pointed out, is too small in view of the trade which is possible in a country so well off for fruits and vegetables as Greece. Reference may be made finally to the opening for condensers for currant juice, and, in particular for tanning and dyeing extracts. There are at present 108 tanneries in the country, and it is believed that the production of tanning extracts is bound in the course of time to assume large proportions.

ROUMANIAN OIL COMMISSION.

Mr. Cecil Harmsworth, replying to a question by Mr. Cory about the Mission to Roumania to estimate the damage caused to the oil mines, said:—The Commission will be under the charge of the hon. and gallant member for Wandsworth Central (Lieutenant-Colonel Sir J. Norton-Griffiths), who will be accompanied by Mr. A. C. Hearn, representative of the Admiralty; Mr. J. G. Robins, representing the Treasury; Mr. E. Houghton-Fry, representative of the Petroleum Executive and Secretary to the Commission; and Messrs. Andrew Campbell, W. L. Mackenzie, and H. M. J. McCann, technical advisers on oil-drilling, refining, and petroleum chemistry. In addition, there will be two members nominated by the French Government. The terms of reference to the Roumanian Oil Commission, except in regard to matters of detail, are as follows:—"The Commission is charged to visit Roumania and the sites of all damage done under the authority of the Roumanian Government in November-December, 1916, and January, 1917, whether to the oil-fields, oil-works, or refineries, pipelines, pumping stations, or storages, or to corn and other grain stocks or machinery and buildings; to inquire as to the present condition of such properties, and as to how far additional damage was occasioned by enemy action or accident, and as to how far the damage done in November-December, 1916, and January, 1917, was restored or made good by the enemy, and to report on such conditions with a view to advising as to the assessment of any compensation payable by the Roumanian Government." The amount of the claims will depend on the report of the Commission. The number of claimants is forty-nine.

INDIA'S ABSORPTION OF SILVER.

In their latest bullion circular Messrs. Samuel Montagu and Co. remark that the Indian Financial Statement "reveals the inconvenience—to use no stronger word—caused by an insistence upon metallic money. We use advisedly the word money—and not currency—because the bulk of the silver coin is required for hoarding (notes being perishable), rather than currency. The circulation of one-rupee notes has risen to Rs.90,000,000, but this amount, though encouraging, is slight compared with the heavy absorption of coin recorded by the Indian Currency Returns, notwithstanding extremely large remittances of silver from America. Obviously the hoarding habit is still in full swing."

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic receipts of the Egyptian Delta Light Railways, Ltd., for the ten days ended February 10 were £E11,847, making the total from the commencement of the year £E320,494. The figures for the corresponding period of the previous twelve months were £E3,502 and £E243,095.

EGYPTIAN MARKETS.

The receipts of the Egyptian Markets, Limited, for the week ended February 20 were:—Cattle markets, £1,499; general markets, £583; total, £2,082; total for year, £14,531. The figures for the corresponding week in 1918 ended February 21 were:—Cattle markets, £779; general markets, £448; total, £1,227; total for year, £9,479.

(Over 80 Branches in the Near East).

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

NEAR EAST MARKETS.

The Sudan Trade in Gum—

The February issue of the *Sudan Chamber of Commerce Journal* contains the following review of the trade in gum in the past season:—

The 1917-18 crop has been a good one, and although official figures are not yet available, there is every reason to believe it exceeds that of the previous year by at least 1,000 tons, totalling about 16,000 tons. A noticeable feature of the season was the abnormal arrivals in El Obeid in July, August, and September, when as a general rule only small quantities are expected to come into the market. This was probably due to the fact that the natives delayed bringing their gum in in anticipation of a similar rise in price to that which took place at the end of the previous season. Transport facilities from the interior were more satisfactory than formerly owing to an adequate supply of camels being available, and this, coupled with the fact that no gum cargoes were lost at sea by enemy action, doubtless accounted for the steadiness of prices throughout the season. Owing to shipping difficulties merchants have been more or less restricted to the United Kingdom as a market, with the result that large stocks accumulated there, in addition to a considerable quantity awaiting shipment in Port Sudan and Egyptian ports.

—and Ivory.

The export of this article between January 1 and September 30, 1918, amounted to £E32,373, as compared with £E37,320 for the same period in 1917. For the year 1913 the export value was £E113,000. The decrease in arrivals is probably due not so much to a falling-off in supplies as to a reluctance on the part of the native to bring in ivory when he can only sell it at a much lower price than formerly. It is also reported that in the Wau district (Bahr El Ghazal) the natives have been cutting up many tusks for bangles.

There has been considerable development in the ivory cutting trade in Omdurman, where there has been a good demand for bangles, which shows that the natives are prosperous. It may be that owing to the high price of silver the natives have preferred to buy ivory bangles and bracelets. All ivory which has come to hand has been readily disposed of, the bulk being for London and New York. There has been little fluctuation in prices, which have been firm at £E32 to £E40 per kantar, according to size and quality of tusks.

Bombay Groundnut Crop.

A final memorandum on the groundnut crop of the Bombay Presidency, including Sind and Native States, for the Season 1918-19 states that the latest reports show the total area under the crops as: British Districts, 95,000 acres; Native States, 21,000 acres: total, 116,000; 57.2 per cent. below the area of the previous year and 47 per cent. under the average of the preceding 10 years. Panch Mahals and East Khandesh show some extension of area due in the latter district to high prices fetched by the foreign variety which has recently become popular there. Elsewhere sowings were curtailed throughout the Presidency owing to want of timely and sufficient rain.

Serbia has adopted the Gregorian Calendar as from January 28.

The India Office has issued the following statement showing the form in which the balance of the gold standard reserve was held on February 28:—In India, nil; in England, cash placed by the Secretary for India at short notice, £6,014,430; British and Colonial Government securities (value as on September 30, 1918), £18,857,102; British Government securities since purchased (cost price), £10,649,168; total, £35,520,700.

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

COMPANY NOTES & REPORTS

Darjeeling Himalayan Railway.

The report of the Darjeeling Himalayan Railway for the half-year ended September 30 last states that the balance of net earnings, after providing for debenture interest, estimated payment due to the Government and other charges, amounts to Rs.2,26,701. Unclaimed dividends for the half-year September 30, 1915, amounted to Rs.195, and Rs.2,02,597 was brought forward, making Rs.4,29,493. The directors recommend a dividend of rupees six per share on the ordinary shares, amounting to Rs.1,05,000. also a dividend of rupees two and annas eight per share on the preference shares, requiring Rs.1,09,375, to set aside as a contribution to the provident fund Rs.2,779, and to carry forward Rs.2,12,339.

Darjeeling Himalayan Railway Extensions.

The report of the Darjeeling Himalayan Railway Extensions Company for the half-year ended September 30 last states that both the lines were worked by the Darjeeling Himalayan Railway Company on the terms laid down in the contract with that company, namely, at 50 per cent. of the gross earnings of the Extensions. Rebate for the half-year's working has been claimed from Government according to agreement. The net earnings of the Extensions, supplemented by the rebate from Government, yields a balance of Rs.1.24,878. The directors recommend a dividend of two rupees and eight annas per share, amounting to Rs.1,09,375, and to carry forward Rs.15,503.

Southern Punjab Railway.

The report of the Southern Punjab Railway for the year to September 30 last states that the total expenditure on capital account to the end of the year was £4,223,504, leaving a balance of capital in hand of £76,496. Expenditure during the year amounted to £11,704. The net earnings at exchange of 1s. 4d. were: Main Line and Kaithal Branch, £291,400, against £210,577; Ludhiana Extension, £41,282, against £43,087; Sutlej Valley Railway, £45,927, against £45,869, Jullundur Doab Railway and rebate, £39,752, against £39,730. The net revenue was £410,577, of which £146,209 is payable to the Secretary of State for India as the share of surplus profits due to the Government, and £20,000 is transferred to contingencies account, leaving £244,368; £103,847 was brought forward, making £348,215. Final dividend on the ordinary stock of £7 per cent. and a further bonus of £1 per cent., making a total distribution of £14 per cent. for the year, from which English income-tax at 4s. 9.24d. will be deducted, leaving £116,215 to be carried forward, subject to excess profits duty.

Dividends, Payments, &c.

The directors of the Mysore Gold Mining Company have declared a balance dividend for the year 1918 of 2s. per share, less income-tax at 5s. 9d. in £, payable on April 2 to holders registered 6th instant. The distribution for the year is at the rate of 45 per cent. on the nominal capital of the company.

The directors of the National Bank of Egypt recommend a dividend of 10 per cent. The annual general meeting of the bank will be held in Cairo on March 24.

The directors of Peacock and Nilambe (Ceylon) Tea and Rubber Estates have declared a dividend of 6s., less income-tax, at 5s. 9d. in £, payable 15th inst.

The directors of the Dimbula Valley (Ceylon) Tea Company have declared a final dividend of 3 per cent. for the half-year ending 31st instant on the preference shares, payable, less tax, on that date.

The report of the Central Bank of India for 1918 states that the net profit was Rs.5,22,747, making with amount brought forward a total of Rs.5,53.242. From this an ad-interim dividend at 8 per cent. per annum, free of tax, was paid for the six months ended June 30, 1918, and the directors have transferred to reserve fund Rs.3,00,000. Dividend declared at rate of 9 per cent. per annum, free of tax, for half-year ended December 31, 1918; carry forward, Rs.40,742.

The extraordinary general meeting of the Khedivial Steamship and Graving Dock Company, Limited, held on March 11, was adjourned to April 28.

NEW COMPANIES.

The Gavatenne Estate Company has been formed in Ceylon to acquire the Gavatenne estate in Madulkela. The company has a nominal capital of Rs.200,000, divided into Rs.10 shares, and the first directors are Mr. Andrew Young, Mr. C. A. Hutson, and Mr. C. C. Stephen.

International and Balkan Co.

The International and Balkan Trading Co., Ltd., has been registered with a capital of £10,000 in 10s. shares, as importers, exporters, bankers, capitalists, etc., in Great Britain, the U.S.A., the Levant, or elsewhere; also as dealers in and refiners, cutters, and manipulators of ores, marble, minerals, oils, timber, etc. The first directors are:—J. MacKechnie, banker; W. R. Smith, quarry master; and L. W. Farrow, C.A., all of 53, New Broad Street, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been a fairly active market in Egyptian descriptions, and here and there there is a further appreciation in prices. But telegraphic communication with Egypt has been worse than ever, telegrams now taking as long as letters. This, of course, is very seriously interfering with business between the two markets.

In Government stocks Egyptian Unifieds have put on a further ½ at 92½, but business has been very restricted, as sellers are few and far between. Egypt 3½ per cent. Prefs. have likewise risen ½ to 78½.

In Bank shares there has been a sharp rise in National Banks of 7-16 to 22⅝ on the increased dividend announced for last year—namely, 10 per cent., against 8 per cent. for the previous year. The profits, when published, are expected to make an excellent showing. Agriculturals have firmed up 1-16 to 6 29-32. Anglo-Egyptian banks have been exceptionally a dull spot, and are ½ down at 15¾.

In Land shares a very active business has been going on, particularly in New Egyptians and Sudan Plantations. The former, after rising to 28s. 3d., are finishing 4½d. higher at 27s. 9d. Sudan Plantations had a sensational rise to 5 7-16, and are closing 1 1-16 higher at 5¼. Allotments have improved ⅛ to 4⅜, but shares are scarce. Union Foncières have risen 3s. to 75s. 6d., with a certain amount of business passing, but sellers are scarce. United Egyptian Lands, on the reconstruction proposals, have weakened 3d. to 2s. 3d., after being down to 2s.

In Miscellaneous descriptions Salts and Sodas, after being down to 2⅞, close 1-16 firmer at 3. Khedivial Mail Ordinaries are fractionally quieter at 5⅝.

In Greek securities there is a demand for the 1881, 1884, and 1890 Loans round the current level. Monopolies are ½ firmer at 53½. Rentes have appreciated a point to 56½, and the other loans are unchanged.

Oil Shares.

Anglo-Egyptians "B" close at 82s. 6d., Anglo-Persian Prefs. are 25s. 7d., and Burmahs are 8 5-16. Anglo-Roumanians are 11s. 1½d. and Roumanian Consols are 17s. 1½d. Other prices are Bakus, 4s. 6d., and North Caucasians, 23s. 3d.

GREEK OPIUM.

The Greek opium crop has been mediocre as to quantity, says an American Consular report. The cloudy and cool weather during March caused considerable damage to the growing poppy, and consequently the Macedonian regions of Salonika, Kilkich, Langaza, and Chalcidice produced only about 40 cases of opium, weighing approximately 4,230 lb. The quality has been good, yielding an average of 13 per cent. of morphine, according to the English test. The sowing for the coming crop took place under fairly favourable circumstances, and therefore the prospects at present seem good for a profitable yield in 1919. Prices during the course of the 1917-18 season have been strongly fluctuating.

Mr. H. V. Lanchester, the well-known town-planning expert, is visiting the United Provinces, where his advice is being sought in connection with the Cawnpore town-planning scheme.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The necessity for speeding up the Paris deliberations having been recognised, in order that the world may wait no longer for peace than is actually unavoidable, the work of the Council of Ten during the last week has been connected mainly with the terms to be imposed upon Germany. It is understood that the committees engaged on territorial adjustments have found their task just as difficult as was anticipated, with the result that reports are apt to be behindhand. The Italo-Yugoslav controversy has been reserved for the Council of Ten, and for this reason would seem to be regarded in Italy as still susceptible to propaganda. This at least is one explanation offered of the publication in Rome of an official memorandum giving a summary of Italy's territorial claims. It is more likely that the step has been taken to safeguard the Government before Italian public opinion. Other Governments—not among the Great Powers, it is true—have adopted the same course, which, although not without its drawbacks, has the merit of being strictly in accord with the principles of democracy.

Unexpected opposition to the claims of Greece to Smyrna and the west coast of Asia Minor has revealed itself on the part of the American representatives on the Committee dealing with Greek affairs. Their contention is said to be that Smyrna is essential to the future Ottoman State as a port of exit and entrance on the Ægean Sea, and for this reason they would override the obvious claims of nationality. If a compromise has to be effected on this point, it should be rendered the more easily attainable by the fact that the bulk of the trade with the interior of Asia Minor is likely to be in Greek hands, and it will be to the advantage of the merchants not to have to pay double duties on goods entering Turkey by this route. In regard to the Dodecanese, the Committee, as was foreseen, was unanimous in recognising the Greek civilisation of the islands. The American delegates desired that this decision should be carried to its logical conclusion by a recommendation for the incorporation of the islands in Greece; but in view of the provisions of the secret Treaty of London the British, French, and Italian Delegates withheld their approval until the subject could be diplomatically adjusted with Italy.

Italy, however, so far as is known, is showing no alacrity to waive her claims to a variety of pounds of flesh to the surrender of which the British and French Governments gave their consent in 1915 under pressure of an impelling necessity. But a definite decision on this point cannot be deferred much longer. It is natural that Great Britain and France should feel their hands tied in the matter; but the United States Government has a free hand, and has let it be clearly known through its delegates to the Conference that it refuses to take any account of the London Treaty or to sanction any peace settlement based on it. In claiming Fiume Italy has herself gone outside the Treaty, and this step may have been prompted by a desire to peg out a fresh claim as compensation for the renunciation of the London Treaty.

In Egypt three incidents have followed in quick succession, the acceptance of the resignation of the Prime Minister, the deportation of four prominent Nationalists, and the outbreak of riots. The Nationalists deported were Zaghlul Pasha, Ismail Pasha Sidky, Mohammed Pasha Mahmoud, and Hamed Pasha Bassel, all of whom are mentioned in the article which we publish in this issue from our Cairo Correspondent. They had previously been warned that their conduct had come under the disapproval of the British authorities, and it has to be inferred from their subsequent arrest that they made no attempt to mend their ways. *Prima facie* evidence against them is afforded by the outbreak of riots following upon their deportation. The extremist doctrines of nationalism must have been inculcated among the student class and the lower orders to a sufficient extent to provide the nucleus for disturbances. In this particular trial of strength with the forces of order the Nationalists can hardly have found much encouragement. The disturbances were at first confined to Cairo, and in their collisions with the military the rioters suffered a number of casualties. A subsequent outbreak occurred at Tantah in the Delta, which has rather a bad reputation in regard to riots, and this time eleven rioters were killed, and the total number of casualties was sixty-two, as compared with thirty-seven in Cairo. Order in both places has been restored. The disturbances are to be regretted; but there is no need to exaggerate their importance, and it will be noted that General Allenby has not been prevented from leaving Egypt.

Although the urgency of the Preliminary Peace Treaty is admitted, it is to be hoped that, if it has to omit a number of questions which cannot claim the priority of the settlement of Germany, no long interval will be allowed to elapse before the Final Treaty is signed. A large number of interests are concerned in the future of the lands that formed the Turkish Empire, and the welfare, if not the actual existence, of thousands of people is dependent on an early return to settled conditions. It is now believed in Paris that what was formerly Ottoman territory will be split up

Digitized by Google

into eight or nine units, and *The Times* correspondent suggests that while the Turkish homelands alone will be left under Turkish rule, Kurdistan, Armenia, Constantinople and the Straits with adjacent strips of territory, Arabia, Mesopotamia, Syria, Palestine, and Cilicia will be allotted to mandatory States. The enumeration is interesting. As the number of possible mandatory Powers is limited, it will be important to group the different units under a single Power in a way that will facilitate trade relations. Turkey, however, is not the only country in this part of the world for which provision has to be made. If Transcaucasia is to be permanently separated from Russia, it is evident that it will be long before the component parts are in a position to govern themselves and to keep the peace between one another. There will be even less alacrity, it will be imagined, on the part of any Power to look after this territory than to become responsible for portions of Turkey.

The question of the succession to the throne of Afghanistan has been settled in favour of Aman Ullah Khan, the third son of the late Ameer Habib Ullah. The readiness of the eldest son, Inayat Ullah, to waive his claim before the pretensions of his uncle, Nasr Ullah, and the apparent intention of the latter to profit by the murder of his brother without taking steps to avenge it are said to have led to a general desire that the Government should be placed in strong hands. Aman Ullah was accordingly proclaimed Ameer in Kabul, and Nasr Ullah has renounced his claims and sworn allegiance. One of the first acts of the new ruler has been to send a letter to the Government of India announcing his succession and giving assurances that he will continue the policy of friendly relations with the British Government so steadily maintained by his father. Further, he expressed profound grief and indignation with regard to the murder of the Ameer Habib Ullah.

Reference was made last week in these columns to the rival claims to the attention of the scientific excavator of Egypt on the one hand and of Assyria and Babylonia on the other. One extremely important point was not, however, touched upon. Whereas the rainless climate of Egypt and the dryness of the Egyptian desert favour the preservation of any relics of the past that still await excavation in that region, the winter rains, the floods, and the salt-impregnated soil of Lower Mesopotamia—the Babylonia of the Old Testament—render it imperative to rescue such relics of the civilisation of that country as may yet be left to the world. The still vivid colouring and the marvellous air of having been made but yesterday that mark many Egyptian antiquities serve to show that sites in the Nile Valley may safely be left to await exploration, if necessary, for a century or two longer. In Mesopotamia conditions are very different. We have not, and in all probability never shall have from that field, any antiquity to equal in freshness of appearance the statues of Rykos and Nefert, or in wonderful preservation the well-known wooden "Sheikh el-Beled" of the Cairo Museum. But Assyrian and Babylonian relics are often of great artistic merit, and in any case they are at least as valuable as those of Ancient Egypt. Therefore, as they are in much greater danger of being lost to the world, it would seem that they should naturally claim first the attention of the archæological digger.

In his statement in Parliament last week General Seely made it clear that the transport of the Indian mails by air has passed well beyond the stage of amateur discussion. Apparently there are still difficulties in the European section of the journey, but between Egypt and India the road is so far clear that the question of agency is now "a matter for consideration though not for long delay." Careful estimates give a prospect of profit, the enthusiasm of the Postmaster-General has been aroused, and the Air Ministry intends to concentrate its efforts on this service as the pioneer of future developments. The prospect of accelerated communication will undoubtedly be welcomed in this country as well as in India; it is particularly attractive just now, with the cable service going apparently from bad to worse, and we trust that General Seely's aspirations will be quickly realised.

An excellent illustration of the need for improved means of communication may be seen in the anxiety which is finding expression in this country regarding the economic position in India. There is a disposition to hope that "the situation is well in hand," but we cannot recall any occasion on which the lack of confidence was more manifest, and the main reason undoubtedly is that so little information reaches the public—and reaches it so late—that conjecture has a practically undisputed field, and ordinary people are tempted to suspect that something is being concealed. It is now more than a fortnight since this anxiety was voiced by *The Times;* in the interval a question in Parliament has elicited a not very enlightening reply, but the full official statement which was demanded has not yet appeared, and, speaking for ourselves, we consider that in such a matter no official statement can wholly take the place of a prompt and regular supply of news which members of the public can weigh and interpret for themselves.

The demand for news is, however, intensified in this instance by uncertainty regarding the policy of the Government of India. Men of experience in this country recognised that the exceptional circumstances which prevailed last autumn might justify the sudden decision to abandon old maxims and establish State-control over the distribution of supplies of food, but they doubted whether control could be made effective. It has since been substantially relaxed, while Sir Claude Hill has now admitted that his heroic attempt to estimate food-stocks has completely broken down, and consequently the basis for scientific control has not been in existence. If, as these changes of policy suggest, the Supreme Government has been groping in the dark, the difficulties of the provincial administrations must have been greatly increased, and the alarmist statements which are reaching this country through unofficial sources cannot be discounted in the way which was possible when the old and tried system was working with the regularity of a machine.

We believe, however, that these anxieties could in great measure be dispelled if the India Office could find the time to place the facts clearly before the public. The last mail brings us the information that on February 8 there were fewer than 33,000 people receiving relief in the affected districts of the United Provinces; the numbers on the same date in 1908 were about 780,000, and since distress usually reaches the maximum during March, we are justified in concluding that in the North at least the situation gives no reason for alarm. Corresponding figures have not reached us for Bombay or Central India, but we take it that they could be discovered somewhere in Whitehall, and a clear statement of the comparative intensity of distress in these parts of the country would go a long way towards filling the void created by the dislocation of the ordinary system of intelligence.

Speaking of famines, the Indian weather authorities would be well-advised to prepare for a renewal of the demand for a comprehensive formula indicating the years when the rains are likely to fail. Enthusiasts on this topic have in the past made much play with the mystic numbers 11 and 19. Now the last three serious droughts in the North were 1896, 1907, and 1918, giving an 11-year period, while the West was dry in 1899 and 1918, or an interval of nineteen years, and the double coincidence cannot fail to whet the appetites of those who maintain that it is the duty of Science to predict. Should the North fill its granaries against a lean year in 1929, and may the West think of pleasanter things till 1937? Perhaps the question is unnecessary, for by that time responsible government may be in force, and the politicians who assure us that famine is bred by bureaucracy will have had time to bring the weather under popular control.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 25.

The Question of Leave.

Difficulty still seems to be experienced to a certain extent in obtaining passages on homeward bound steamers, and the Government has not yet been able to complete its arrangements for the provision of accommodation for British officials and residents. Inquiry at the various passenger agents has elicited the amazing fact that there are several thousand names down for berths to Europe and England this summer. Allowing for the tendency of some of the more eager folk to put their names down at more than one agency, in the hopes of thereby standing a better chance of securing a berth, this is considerably more than the normal number of European residents who might wish to go away this year. There is, indeed, reason to believe that in this total are quite a number of Egyptians and local people who in pre-war years were accustomed to proceed to Europe every summer in order to enjoy themselves. Whilst one quite sympathises with these people at their having been forced to remain in their own country for four years without being able to obtain their customary change of air and diversion; yet the fact remains that, if accommodation on homeward-bound steamers is going to be restricted, the European element that requires to get away for purely health reasons should have first consideration and should in every instance have precedence. There is no reason why the pleasure-seeking local element should take up the accommodation so badly needed by the European community, and it is to be hoped that the authorities will take steps to prevent this.

The Censorship.

It has been with great pleasure that we noted in the New Year's Honours, and more recently in General Allenby's list of mentions, the names of Anglo-Egyptians who have been identified with the censorship. Few people realise what a burdensome and ungrateful task theirs has been and how well they have carried it out during the last four and a-half years. With the Press Censorship I have personally not come into contact, and the task of appreciating its work must be left to my colleagues in Egypt. But of the Cable and Postal Censorship I can speak from experience, and to them, if they will allow me, I should like to express what I believe is the opinion of everyone who has had anything to do with them, an appreciation of the courtesy, tact, and impartiality with which they have carried out what must at times have been a very distasteful and thankless job. The Postal Censors especially deserve more than passing praise. They may not have been in the public eye to anything like the same extent as their colleagues of the telegraph, etc., but theirs has been an even more exacting and uninteresting task; which has, however, been of infinite value to the authorities, and which they have carried out to the complete satisfaction of the latter. From the public point of view the results have also been satisfactory. There have indeed at no time been any complaints of unnecessary delay in the delivery of the mails, etc.; and considering the erratic nature of the arrivals of mail steamers and the almost inconceivable number of languages and dialects in which correspondence in and with this country is carried on, this is an achievement that speaks volumes for the conscientiousness and industry with which the Postal Censors have fulfilled their duties.

Cairo, March 3.

The Financial Adviserships.

The most important item of news this week is the appointment of Sir Richard Crawford, late adviser to the Turkish Customs, to the Financial Adviserships. Although the late Lord Edward Cecil had been compelled by ill-health to give up his duties as far back as the autumn of 1917, the post did not fall vacant until his death, about three months ago. The work was meanwhile carried on by Sir William Brunyate, the Judicial Adviser, who moved over from the Ministry of Justice, where Mr. Sheldon Amos has since acted for him. With the duties of Financial Adviser Sir William Brunyate has combined the task of reporter to the Capitulations Committee. The work attaching to the Financial Adviserships (never by any means a sinecure) has been considerably increased since the war, and, the task of Reporter to the Capitulations Committee being itself by its very nature an extremely onerous one, it has become apparent that the two posts could not possibly continue indefinitely to be concentrated in the hands of one man. Obviously at the present moment the most important and the most urgent question before the country is the administrative and judicial reorganisation necessitated by the projected abolition of the Capitulations. Such being the case, and Sir William Brunyate having already done much of the hard work of the Capitulations Committee, and being, in fact, the one man indicated for the post of Reporter to that body, the British Government has decided that it will be in the general interest that a new man be appointed to the Financial Adviserships; and that Sir William Brunyate should revert to the Judicial Adviserships, where he will be able to give his whole attention to the work of the Capitulations Committee.

It is stated—and I have every reason to believe that the information is substantially correct—that in recognition of the work he has done since he assumed the duties of Acting Financial Adviser, the status of the Judicial Adviserships is to be raised during the time Sir William Brunyate remains at the Ministry of Justice. Hitherto the Adviserships of Justice, the Interior, Education, and Public Works have been of equal rank, the Financial Adviserships taking precedence by reason of its higher salary and of the fact that the holder has a seat on the Council of Ministers. It is stated that Sir William Brunyate as Judicial Adviser will draw the same salary as and rank equally with the Financial Adviser, and it is further rumoured that he may also be given a seat on the Council of Ministers.

I understand that as soon as Sir Richard Crawford has taken up his duties, which is expected to be very shortly, Sir William Brunyate will proceed on leave for a well-earned rest. The Hon. R. Lindsay, who is Under-Secretary for Finance, will vacate that post on his appointment to Washington in the very near future, and will be replaced by Mr. E. M. Dowson, Director-General of Survey, who has carried out the duties of Under-Secretary during Mr. Lindsay's absence on leave and more recently since the latter's appointment as chairman of the Cotton Control Commission in Alexandria.

Army Sports.

This week there took place at Gezira a three-day athletic meeting, the first of the series organised for the Egyptian Expeditionary Force Championships in connection with the Imperial Army Sports Meeting, which is to be held in England about the middle of April. The greatest interest is being taken in these meetings by the men for whose benefit they are primarily being organised, and for weeks past the various units have been hard at work training and carrying out eliminating competitions. Exceedingly large entries had been received for this week's meeting, which took place on the grounds of the Sporting Club, and included, in addition to the usual races and athletic competitions, a five-mile cross-country race—the first, it is said, ever to have been organised in Egypt.

The finals attracted a very large gathering, which included a considerable sprinkling of civilians. The last day was attended by His Highness the Sultan, who drove over in State and was very much interested in the day's entertainment; and by General and Lady Allenby, both of whom had come up specially from Palestine. The Acting High Commissioner, Sir Milne Cheetham, and Lady Cheetham were also present. Some of the finals were very hotly disputed. The Australians gained the honours of the day by the number of events they won; but it is only fair to say that in many of them they only secured first place by the narrowest margin. The British representatives did exceedingly well, so also did the Indians, one of whom won one of the group cross-country races and shortly afterwards won

Digitized by Google

the quarter-mile race. At the close of the meeting the prizes were presented by Lady Allenby.

Further events have been organised, and will take place during the next three weeks, and teams will be selected to represent the E.E.F. in Rugby football, Association football, the cross-country race, and boxing. The teams which eventually go to England to compete with teams from other fronts should be able worthily to uphold the honour of the E.E.F., if one may judge by the form shown at the meeting held here this week.

The Racing Season.

Racing is continuing very successfully here in Cairo. In addition to the weekly meetings held alternatively at Gezira and at Heliopolis, which are attracting enormous crowds, the Cairo Command has been organising military meetings, three of which have already been held and have provided excellent sport. At the last Gezira race meeting a novelty was afforded us by the spectacle of a coach and four, fully charged with a military passenger cargo, driving up on the far side of the course opposite the grand stand to the "toot-toot" of the familiar coach-horn (supplied in this instance by the regimental cornet). In many of us this spectacle awakened reminiscences of old pre-war days, when the cavalry regiment stationed out at Abbassia always attended the fortnightly race meetings in this manner. A novel feature was contributed later on in the afternoon by the appearance of two highwaymen with masks and revolvers, who held up the coach, the passengers of which gravely handed over their field-glasses and other impedimenta amid the intense amusement of the spectators, and not least of the Egyptian element, which thoroughly entered into the fun of the proceedings.

The Mixed Courts.

The appointment is announced of Mr. W. W. Thorne as Judge of the Mixed Courts of First Instance at Alexandria. Strictly speaking, this is a reappointment, as Mr. Thorne was appointed a Judge in the Mixed Courts about two years ago, but was almost immediately nominated by the British Government as British Delegate on the Greek Indemnities Commission, and thus had to relinquish his Egyptian appointment. The work of that Commission having terminated, Mr. Thorne has now been able to take up once more his appointment in the Mixed Courts. I understand that his collaboration proved most valuable to his colleagues on the Commission and to the British and Greek Governments, and that had the Egyptian Government been prepared to spare his services, he would have been appointed to other Commissions about to sit on Balkan questions.

The Ministerial Crisis.

Just as I close this letter the announcement is made that His Highness the Sultan has accepted the resignation of the Prime Minister, His Excellency Hussein Rushdi Pasha. This entails the resignation of the whole Cabinet, and the formation of a new one is now in progress. Pending the constitution of a new Ministry, Rushdi Pasha and his colleagues have been asked to carry on.

JOINING THE WINNING SIDE.

Of the keen desire of the average Persian to be on the winning side, the following extract from some "Persian Pictures" in the "C.M.S. Gleaner" for April gives a very good idea:—"One day we saw coming towards us over the desert a party of about twenty men. They were very poorly clad, unkempt, and wild, with sun-browned faces and long straggling hair; and each one carried over his shoulder a rough stick or native spade, to which was tied a small bundle of provisions and a water-pot. As is the custom with those who meet or pass in the desert, my fellow-traveller called out to them the favourite Persian greeting: 'O slaves of God, salaam!' (Peace be to you.) They drew near and talked, ready enough to ask our business and to tell us theirs.

"They were a group of labourers from some small village near the southern coast, and they had heard that, very far away, up in the northern desert, there was war. Their food was dear and scarce, and money very hard to earn. So they were marching north that they might fight, and, maybe, if they joined the winning side, some of the riches that a victory brings might fall into their hands.

"'Are you our friends or enemies?' we asked. 'We do not know; at present we are friends, but till we reach the place where nations fight we cannot tell on which side we shall help.'"

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, March 6.

The first real excitement since the signing of the Armistice was occasioned this week by the arrival of H.M.S. New Zealand, carrying Admiral and Lady Jellicoe. At daylight those who were watching observed her two tripod masts emerging from the morning mist, and before 8 a.m. she was safely berthed in the harbour, opposite the Queen Victoria Jubilee memorial. It had been proposed that Admiral Jellicoe should have an official welcome from the British residents, but circumstances prevented this. However, committees had arranged a welcome for the officers and men. For the former a cricket match against Port Said was arranged, and lunch was served on the Sports' Ground for the visitors' eleven, and tea at the same place for all the officers. The game resulted in a win for the visitors, though the home team put up a remarkably good fight.

Admiral Jellicoe left Port Said for Cairo by the mid-day train, but on his way to the station he watched the progress of the cricket match for a few minutes, and chatted to some of the residents. He rejoined the New Zealand at Suez.

The petty officers and men came ashore at 4 p.m., and, headed by the ship's band of bagpipes and drums, marched up to the Rest Camp, Y.M.C.A., where tea was provided for them. After tea each man was given a packet of cigarettes and oranges. The size of the latter astonished some of the visitors, and they were with difficulty persuaded that the size was due to natural growth and not to boiling, and that less than three days previously those same oranges had been growing in the gardens at Jaffa.

After the tables were cleared a party of children, known locally as the "Fairies," gave a fine entertainment, which was thoroughly enjoyed by all present; and after that a good cinema show took place in a specially constructed hut adjoining. At 9 p.m. the visitors marched back to their ship, and, judging by the songs and cheering, were thoroughly pleased with their reception at Port Said.

The New Zealand left the following morning for Suez, but was somewhat delayed in her passage through the Canal, owing to the bad weather which prevented the movements of light ships.

We have been reminded of some of the effects of the war by the appearance in the outer harbour yesterday of a large floating dock, which was brought from Aden to Mudros in the early days of the war. It is now being taken back there. Owing to the bad weather it could not be brought into the harbour, but was anchored in the outer roadstead attended by the tugs which towed it here. It will have to await very favourable weather for its passage through the Canal, as the railway bridge which crosses the Canal, and which has been constructed since it passed through, leaves no room for zig-zagging, however slight.

THE CHURCH OF KADIKEUI.

(From a Correspondent.)

Constantinople, March 1.

A few weeks ago the death of Rev. F. R. Elliot, formerly chaplain of Kadikeui, Constantinople, was recorded in The Near East. This chaplaincy is still in existence, the present occupant being Rev. W. S. Langston Day, M.A., who carried on services regularly during the war, and also for the last fifteen months conducted services in the Crimean Memorial Church, Pera, the *locum tenens*, Dr. Wigram, having been deported. The church at Kadikeui experienced hard usage during the last four years, the stained-glass windows in memory of the late Sir William Whittall being broken with stones, and on another occasion the altar cross and other objects of value being stolen by burglars who entered the church one night. Services, however, continued as usual, and the faithful few who formed the congregation during this trying period now have the joy of seeing their numbers largely increased by the detachment of the King's Royal Rifles, who march to church from their quarters at Haidar Pasha every Sunday.

CYPRUS NOTES.

(From a Correspondent.)

Official Changes.

Considerable changes are pending in the public services. Retirements will include those of Sir Charles Tyser, Chief Justice; Mr. J. R. Holmes, President of the District Court of Nicosia; and Mr. Hore, island Postmaster. Mr. G. Jeffrey, Curator of Public Monuments, also retires. The death of Mr. Baxendale, Commissioner of Larnaca, creates another vacancy.

A number of officials desire to go on leave, but great difficulties unfortunately exist as regards communications with Europe. Mr. E. McDonald, Commissioner of Kyrenia, who got as far as Egypt, met with obstacles in proceeding further, and may even have to return to Cyprus.

Mr. Malcolm Stevenson, who has administered the government since the death of Sir John Clauson, carries on to the satisfaction of all, and is ably helped in all social matters by Mrs. Stevenson.

The Nicosia Municipality.

Nicosia has lately shown a sorry example as regards municipal work and supervision. The insanitary state of the meat market, the slaughter-house, and many streets and public places has given rise to universal complaint, and reflects grave discredit on the municipal body. Refuse from the houses is thrown into the great moat which surrounds the city wall, and sheep and goats are kept in filthy premises. An Order in Council has been published requiring the municipal council—which, on inquiry, has been shown to have "made default in the performance of its duty"—to abate the nuisances (which are "a source of danger to the public health") by a fixed date. The state of things is not what one would expect in the capital after a British occupation of forty years, but rather characteristic of a neglected Levantine town still under Turkish rule. Much wider powers have been given to municipal councils under British administration, but unfortunately in too many instances the corresponding duties are ignored. British officials have no *locus standi* or control over them, as they had in the early days, and a European is rarely elected to a seat. The need of a guiding hand would seem to be as great as ever in some of the most important spheres of municipal work.

The opening of the Legislative Council should take place in March, but no date has yet been fixed. The absence of the Greek members, excepting one, now in London, should affect but little the course of legislation. There will be many less speeches, a fact which may bring its compensations. The work awaiting the Council is, moreover, not heavy. During the war the island has been none the worse for the subsidence of "nomo-mania," as the Greeks have nicknamed the previous super-thirst for legislation and rhetoric.

Future of Cyprus.

The Greek Press is very optimistic as to the political outlook, and is now quite convinced that a favourable reply will be given by the Imperial Government, or as an outcome of the Peace Conference, to the petition for union with Greece. The work of the deputation in London is reported regularly in a series of letters published by the leading Greek paper at Nicosia (the "Voice of Cyprus"), which records the progress made step by step. Accounts are given of interviews with leading Phil-Hellenes and partisans of the Hellenic cause in England. A "favourable atmosphere" is said to have been created in liberty-loving Britain. Translations of all articles and letters in the British Press bearing upon the Cyprus question in a favourable spirit are printed in most of the papers, and the views of Mr. Pember Reeves, Professor Ronald Burrows, and others are given prominence. The Greeks also follow with great interest the progress of Greek claims elsewhere; the course of which is not regarded as so promising. It is urged that Cypriots must not be behind other Greeks in helping M. Venizelos to push forward the consolidation of national interests.

First O.B.E. for Cyprus.

The Acting High Commissioner, Mr. M. Stevenson, during a visit of several days to Limassol, presented to Mr. Vrasidas Laniti, chief secretary to the Commissioner, the medal of the O.B.E., recently conferred upon him. The principal law court in which the presentation took place was densely crowded. Mr. Laniti is greatly esteemed in Cyprus, and the honour—the first conferred on a Cypriot—marks, as Mr. Stevenson stated, the high appreciation of the British Government of Mr. Laniti's zealous services.

The state of the roads, after the late heavy rains, prevented Mr. Stevenson from proceeding to Papho, as intended. He hopes to go there early in March.

General Sir Edmund ALLENBY writes:

General Headquarters, Egyptian Expeditionary Force,
January, 1919.

My dear Bishop MacInnes,

I have been looking into various problems in connection with the relief of distress in the areas which are now under my administration in Palestine and Syria, and I wish to support very heartily your appeal to the generosity of the British public, through the Syria and Palestine Relief Fund, for funds to carry on this work.

The next few months, until the new harvest is reaped, **will be a critical period.** War and sickness have taken heavy toll of the manhood of these countries; stocks of food and clothing are almost entirely depleted, and it must be long before we can repair the damages done by four years of war following centuries of misrule.

You will, I think, be well advised largely to concentrate your efforts on raising and also on spending during the coming six months as much money as possible for **the need now is urgent,** while I trust that a little later on it will not be so acute.

The work already accomplished by the Syria and Palestine Relief Fund in Jerusalem and Southern Palestine **has been admirable.** I am particularly impressed by the endeavours of your staff of workers personally to investigate the cases of all those who apply for relief, and thus to minimise the danger of pauperising the people.

I regard it as important that you should not just yet relax your efforts in Jerusalem, but at the same time the work now covers a much wider area than ever. **All possible help is required.** The Syria and Palestine Relief Fund already has the necessary organisation and experience. Its agents mostly know the country well and are working in close touch with my administrators in each place. I hope that the efforts to obtain continued support for the work will be highly successful.

Yours sincerely,
(Signed) EDMUND H. H. ALLENBY.

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916.)

IN THE NORTH. Clothing situation desperate. Thousands of children orphaned and uncared for. Destitution everywhere. New Relief Unit being dispatched at once, at General Allenby's request. **Money most urgently needed.**

Cheques payable to the Secretary, 110, Victoria Street, London, S.W.1.

ROUMANIAN NOTES.

(From a Correspondent.)

Transylvania.

The Roumanian Executive Council, under the presidency of Dr. Julius Maniu, is making every effort to reorganise Transylvania. Magyar propagandists, however, are trying to stir up trouble and to incite the non-Roumanian population to revolt. The latest attempt of this propaganda was made in the domain of religion; the Magyar agents denouncing the Roumanians as the most intolerant people, who intend to interfere with the religious liberty of the non-Orthodox peoples of Transylvania. The Roumanian Executive Council has declared—from the first days of its coming into power—that the policy of Roumania is absolute respect for religious and political rights of the non-Roumanian minorities. This declaration has not remained a dead letter, but has been the guiding principle of the policy of the Roumanian National Council. They have respected the school organisation of the minorities, their religious institutions, their local organisations; and even in the purely Roumanian districts they have maintained the Magyar officials if they would take the oath of allegiance to the Roumanian Council. The only Magyar officials removed from their posts were those who refused to recognise the Roumanian authority, and were found to be *agents provocateurs* of the Magyar propaganda. It is quite natural that a population subjected to a brutal policy of denationalisation, as was the case with the Roumanians of Transylvania, should be inclined to take revenge upon its former oppressor; but the Roumanian Council, in accord with the Government of Bucharest, entrusted Roumanians from the Kingdom with the work of keeping order in some of the localities where the situation was most delicate.

Concerning the accusation of religious intolerance, it may be interesting to note that Transylvania, during its period of independent existence, provided the first striking instance of religious toleration in Europe, by establishing all religions on a footing of absolute equality before the law (1571). In order to understand the peculiar political position of Transylvania, as well as the mentality of its inhabitants, it is necessary to glance briefly at the history of that province. Transylvania always enjoyed a certain autonomy under the Hungarian Crown, at the beginning under her own governors or *voivodes*. The Szekels, who inhabit the northern corner of Transylvania, and who are the true descendants of the real Huns, first settled in Transylvania in the second half of the eleventh century. The Saxons were brought in as colonists by successive Hungarian kings, and their privileges are granted by the "Golden Charter," dated in the year 1224. Until the year 1437 there were in Transylvania only three privileged nations: the Magyars, Szekels, and Saxons; and their privileges were supported by the Hungarian State as well as by the Austrian Empire against the Roumanians, considered as "heretics" because of their Orthodox religion. After that date, however, the Roumanians, revolting on various occasions, succeeded in gaining a position equal to that of the three other nations. This sort of league became in 1542 the real basis of the Transylvanian Constitution. After the conquest of Central Hungary by the Turks, Transylvania became a principality under the rule of Magyar princes, but paying tribute to the Sultan. In 1691 Transylvania recognised the suzerainty of the House of Habsburg, and continued to enjoy autonomy until April, 1848, when the Hungarian Diet at Pressburg voted the annexation of Transylvania to Hungary. The Roumanians, supported by the Saxons, protested with the utmost vigour against this annexation, and revolted. When the disaster of the Italian war came the Diet of Transylvania began to sit again, and continued to do so until 1867, when Transylvania ceased to exist as an autonomous province; and thereafter the non-Magyar nationalities were completely subjected to the oppression of the Magyar oligarchy until the days of the great war.

The Agrarian Reforms.

It is very difficult, if not impossible, to deal in a very short time with the Roumanian landed estates. The Government was pressed to keep its promise at once by distributing the land to the peasants, according to the Agrarian Law voted in January, 1917. To effect a fair division of the land is, however, a very difficult operation, and might delay the application of the law for a long time; but the peasants were anxious to begin their work now during the month of March. The Government therefore found a transitory solution by placing all the lands to be divided at the disposal of the Administration of the popular banks. The land is not to be divided for the present, but is to be taken on lease by the peasants, who are to constitute an association and to be supported by a popular bank. This kind of peasant association for the purpose of leasing land was very prosperous before the war.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Omar Khayyam.

For some few weeks past the Indian papers that the mail has brought us have been devoting space to accounts of "Moplah risings" and "Moplah outbreaks." Now I am free to confess that until quite recently I had not the faintest idea who or what a "Moplah" was; but the word fascinated me, and I made inquiries among friends whose knowledge of India and Indian affairs is as great as my own ignorance. For the benefit of any reader who shares that ignorance I will explain that the Moplahs are a people scattered about Southern India, mostly on the coast. They are descended from the old Arab traders; and have a well-earned reputation for fanaticism. Indeed, it is their fanaticism that you hear of from anyone to whom you turn for information; and it makes them a thorn in the side of the authorities, as I gather. They have a habit—it really seems to amount to that!—of going on the warpath suddenly, and very often without any justification at all; and when they are on it they "see red" in a very thorough way. The result is that very often a good many harmless people lose their lives; and, naturally, the Moplahs have a distinctly unenviable reputation amongst their neighbours.

***

In the latest case, in Malabar, a band of them, consisting largely of youths, and led by an ex-policeman, did to death a number of people; and then barricaded themselves in a barn, where for a while they defied the authorities, quite in the Sidney Street style. The authorities, however, acted promptly and effectively, and as a result the particular gang in question will give no more trouble in this world. In this case it seems to me the Moplahs hardly lived up to—or, perhaps, I ought to write "down to"—their reputation. For the ringleader's son gave warning at the magistrate's court of the coming outbreak; and "large numbers of Moplahs were among those who helped" in the siege of the barn. Moreover, the leader of the gang "is understood to have left a letter explaining that he intended to kill his Nambadiri landlord for evicting him from his homestead and obstructing his daughter's marriage. The letter explains that the Nambadiri who were killed were the innocent victims of wrong identification." That is hard luck on the victims; but the letter does not seem to me to suggest a very rabid fanatic. And when I read that the "landlord is believed to have admitted the eviction and the obstruction of the marriage," I find it difficult, in view of the importance attached in India to the marriage ceremonials, to withhold sympathy entirely from the angry father. And in these delightfully democratic and Bolshevistic days it is surely exasperating to think of any landlord daring to evict any tenant under any circumstances. So, upon the whole, I am left wondering whether the Moplahs are not, after all, martyrs rather than nuisances—though, to be sure, it seems quite possible for people to be both at the same time!

***

We have not heard much about the future of Cyprus this week. How the subject was ever allowed to become a "Question" I cannot imagine; and it strikes me as a piece of gross impertinence for anyone to suggest that it should be "discussed" at the Paris Conference. However, that is doubtless due to my own crass stupidity and my failure to realise the beauties of much talking as a substitute for deeds. At any rate, if any question there be, it seems to me that it is one for Great Britain, Greece and Cyprus to settle between them—amicably if possible. But may I respectfully offer to our Great Ones a suggestion which is, I believe, quite original? If, in ultra-generous mood, Great Britain should decide to go as far as possible towards meeting the views of the Cyprus "delegates," why not divide the island, giving the West portion to the Greeks and retaining the Eastern portion for the Moslems, under our protection. Just where the boundary should be drawn could be settled by arrangement. I would suggest a line drawn from Mazoto due north. This would include Larnaca and Famagusta, and would enable us to keep an eye comfortably on a good many points that may be of much interest to us in the future. In common decency Greece could hardly look such a gift horse in the mouth! And the Moslems could, if they so desired, all concentrate in the British-governed portion of the island.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Situation in Egypt. March 18.

The MARQUESS OF CREWE asked for information regarding the situation in Egypt.

Earl CURZON said that in November last a deputation of Egyptian Nationalists called at the British Residency to advocate a programme of complete autonomy in Egypt, which would leave to the British only the right of supervision in regard to the public debt and shipping in the Suez Canal. They demanded that they should be allowed to proceed to London at once to put forward their views. At the same time, the Nationalists elected a committee of fourteen leaders, who commenced an agitation throughout the country, collecting signatures to a petition and subscriptions in support of their programme. Shortly afterwards the Prime Minister of Egypt suggested that he and the Minister of Education should visit London in the immediate future to discuss Egyptian affairs. He further urged that Nationalist leaders should also be allowed to go to London. His Majesty's Government, in reply, while sympathising with the idea that the Egyptians should be allowed an increasing share in the government of Egypt, said they could not abandon the responsibilities for order and good conduct in Egypt, and of safeguarding the rights and interests of the native and foreign populations, and that therefore no useful purpose would be served by the leaders coming to London. As regards the two Ministers, they said their visit would be very welcome, but it would be better in the interests of their own dignity that it should not coincide with the first weeks of the Peace Conference, as Mr. Balfour would be absent in Paris. The two Ministers then tendered their resignations to the Sultan, and the British High Commissioner was summoned to London at the beginning of January to report on the situation. An invitation was addressed to the two Ministers to come here in the middle of February, but they declined to come unless the Nationalist leaders also proceeded to London. The Government could not accept such a condition, and the resignation of the two Ministers, which had remained in suspense, was accepted by the Sultan. Steps were taken for the formation of a new Ministry, and the Nationalists tried to prevent a new Ministry being formed. The Sultan appealed for protection against further insults and intimidation, and authority was given for arrest and deportation to Malta of four Nationalist leaders. There had since been some demonstrations, chiefly organised by students in Cairo and other provincial centres, and collisions had occurred between the Nationalists and British troops. There had been some casualties, and a few looters had been shot. These manifestations were not approved by the more sober element of the population. There was every reason to believe from the latest information that the situation was well in hand.

HOUSE OF COMMONS.

Mediterranean Squadron. March 12.

Viscount CURZON asked the First Lord of the Admiralty what has been decided as to the composition of the Mediterranean Squadron?

Dr. MACNAMARA: The provisional composition of the Mediterranean Squadron is six battleships, six light cruisers, a destroyer flotilla, and a submarine flotilla.

The Ipek-Jakovo District. March 13.

Mr. HARMSWORTH, Under Secretary for Foreign Affairs, replying to Lieut.-Colonel W. Guinness, said that the reports received by the Government with regard to the serious situation in the districts of Ipek and Jakovo were now engaging the attention of the Allied Governments and Peace Delegates in Paris. He understood that no attempt had been made by Montenegro to occupy the district, which was allotted to it in 1913. He did not think the public interest would be served by saying anything further now.

Topics in Parliament.

The subject headings are those given in the Official Report.

India: Southborough Committee.—Rowlatt Committee.—Indian Army (British Officers).—Famine Conditions. Afghanistan. India: Influenza and cholera. (March 10.)

Church of St. Sofia. Demobilisation: Troops in India.—Egypt. Aziz Ahmed. General Townshend. (March 11.)

India: Steamer fares.—Defence force.—Relief codes. Demobilisation: Khartoum Garrison. "Goeben" and "Breslau." Mesopotamia Expeditionary Force (Transport). (March 12.)

SUDAN.

¶ All interested in the commercial development of the Sudan are invited to communicate with the offices of the

Sudan Government Railways & Steamers,

5, Northumberland Avenue, London, W.C. 2,

where information regarding the produce of the country, facilities for transport, etc., may be obtained.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

RHODES AND THE ENDECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The intemperate tone of the two letters on this theme which appear in THE NEAR EAST of March 13 suggests to me not to embark on controversy. Let me merely mention that on March 3 a question regarding the much-valued Hospitaller buildings in Rhodes was addressed in the House of Commons to the Secretary of State for Foreign Affairs, and in reply to it an assurance was given that the subject "would be borne in mind by the British delegates at the Peace." After the action taken by M. Bompard and General Etier on behalf of France, Italy, and Spain, as related in my first letter, we can hardly suppose that the French and Italian delegates will not support the British in this matter. The tone in which your Greek correspondents write proves that some safeguard for the Hospitaller buildings in Rhodes is necessary, should that island revert to Greece. The knights holding Rhodes held also Smyrna until Taimur Lang's hordes descended upon them. Later they long held Budrum (Halicarnassus), and made it a great refuge for escaped Christian slaves in Asia Minor. Their galleys at the same time swept the Moslem corsair off the seas. You will judge the veracity of those who apply the term "brigand" and "pirate" to these staunch defenders of Christendom. Islam, surely, is more tolerant.—I am, etc.,

A. C. YATE.

The Athenæum, Pall Mall, March 17, 1919.

AFGHAN REPRESENTATION AT PARIS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In one of your contemporaries I have noticed a letter from Lieut.-Colonel A. C. Yate urging the necessity of an Afghan Representation at the Peace Conference. That the Afghans were not represented seems to me nothing but an omission. The Afghanistan of to-day is vitally different from that of Durani days, socially, economically, and politically. Great Britain has taken a great interest in the welfare of the buffer State ever since its historical birth. The Afghans are conscious of this fact. On their part the late Ameer and his people have given abundant proof that Afghanistan was a zone wherein war could not enter. The Afghan wars against Russia, Persia, Borderland, or the British were in almost all cases fanned by religious misgivings. And be it borne in mind that never before in Afghan history was such a severe test imposed upon the Afghan temperament as in this war. But Habib Ullah Khan—I cannot but term him the "Worthy Ameer"—stuck to the British to his last days. And are the British people going to remain silent while the just claims of their most faithful ally are passed unheard at the Council of Nations? If this should happen, then it would be the first incident of its kind in the characteristic history of British statesmanship. It will severely ignore the birthright of the Independent State of Afghanistan. But my mind is optimistically inclined, for I have known the British public, which has always respected the right, and there is every hope that the cause of my motherland will not lie unheeded.

Things at Kabul are at present in some degree unsettled, and it would be extremely difficult for any delegates or even nominations to arrive at Paris in time. Why, then, should not Colonel Yate's most excellent suggestion be considered? That useful body "The Central Asian Society" possesses some members of rare ability.—I am, etc.,

IKBAL ALI SHAH.

University Union,
Edinburgh, March 12, 1919.

ITALY AND THE YUGOSLAVS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In "Notes of the Week," published in your issue of March 7, THE NEAR EAST justly calls attention to the seriousness of the friction that exists between the Italians and Yugoslavs.

Will you kindly permit an Italian writer to explain the Italian point of view? That explanation must be given somewhat in detail because the question is one of those that touch upon general and important problems, little known to the general public.

The Italian refusal to accept arbitration was due to respect for principle and also a recognition of two main facts that concern the case. If it be admitted that the Peace Conference is the competent authority for the solution of questions arising

Digitized by Google

out of the war, it must also be accepted as the competent authority for the solution of the Italo-Yugoslav problem; because this problem is essentially one with the many others which nobody would think of placing outside the jurisdiction of the Conference. The steadfast recognition of this principle is necessary in order to prevent enemies and rebels from resuming their intrigues behind the back of the Peace Conference.

If the precedent of arbitration were to be adopted, it would have to be applied in all cases of this kind wherever it might be demanded by one or other of the parties interested. In other words, if justice is to be meted out to all there is no reason why others, as well as the Yugoslavs, may not claim the right of withdrawing their case from the Conference and submitting it to outside arbitration. For instance, the Greeks of Cyprus would have the right to demand neutral arbitration on the question of their claim to be united to Greece, on the plea that, while England is represented therein, and is one of the parties interested in the Cyprus question, the Council of Ten is not competent to deal with it. In the same way the Italians of Malta and Tunisia, and even the Germans of Austria, might put forward similar demands. The new arbitration tribunal would thus give rise to contentions on problems that are at present causing no trouble, because they await the decision of the Peace Conference.

The Italian refusal saves the principle of unity in the authority that is entrusted with the task of settling the questions arising out of the war. This is obviously a most essential element for the definiteness and security of the peace settlement. Therefore, here the interests of all countries are concerned.

As regards the recognition of facts, which is responsible for the Italian refusal, one must first of all point out that the Treaty of London represents a promise of the minimum compensation made by the Allies to Italy, in exchange for the unforeseen sacrifices which Italy undertook to make for the success of the Entente cause. Three facts go to prove that these sacrifices have reached a maximum of measure, expressed in the following figures:—500,000 dead, 60 milliards of money spent, and a year of war against the *whole* armed force of the Austro-Hungarian Empire. We have here, so to speak, a compact. It has become effective and inviolable, since one of the contracting parties has faithfully fulfilled its obligations with its own blood and treasure. If it was desired to change the terms of the contract, if it was desired to lessen the amount of compensation due to Italy, justice demands that the request should have been made before Italy entered the war, and before the Italian people had made its colossal sacrifices. It cannot be said that the terms of the contract were not known. It is true that the text of the official document signed by the Governments was not published; but it is also true that the treaty concerned only claims which, during ten months of neutrality, were put forth by the Italian Press and commented upon and accepted by the Press—i.e., the public opinion—of France and Great Britain.

The second consideration of fact in the matter is this: Italian claims in the Adriatic do not concern territories owned or peopled by the friendly and Allied Serbian nation, but Austrian territories inhabited by Slovenes and Croatians. Therefore, it is enemy territory, inhabited by people who for four years of war faithfully followed *en bloc* the banners of the enemy, fighting against Italy, Serbia, and the Entente. If today the Croats in Dalmatia and Croatia demand their independence as a result of the downfall of Austria, it has yet to be proved that the masses of them really desire to become part of Serbia, against whom, until yesterday, they fought strenuously, both on the battlefield and in the sphere of politics. The fact that some respectable Croatian agitators have during the war carried on a very noisy Yugoslav propaganda in the capitals of the Entente does not in the least alter these two fundamental truths.

The original conflict arising out of the Dalmatian and Adriatic problem is, therefore, a conflict between Italians and Austro-Croats. It exactly corresponds to that which exists between the French and Germans in regard to the Alsace-Lorraine question. In this class of problem the suggestion of arbitration is *prima facie* excluded.

A different kind of conflict exists between Italy and Serbia, inasmuch as Serbia, just as Italy, has plans of expansion in the Adriatic. I fully recognise, as every Italian does, the right of Serbia to ample and free access to the sea. As an Italian I should, however, wish that Serbia would remember that Italy alone has fought the final war against Austria, which brought about the liberation of the Serbian territories. She should also remember that in 1859, after the war which gave Lombardy to Italy, Italy paid France for the French help she had received by giving her the two whole provinces of Nice and Savoy.

I am, etc.,

VIRGINIO GAYDA.

AUTONOMY FOR MACEDONIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of February 7 a correspondent in Salonika—in all probability a serious neutral resident—in saying that "If the Macedonians are not filling the newspapers with cries for autonomy it is because under present circumstances *they dare not speak. Fear is the great ruler here*," is giving vent to a truth but half told. The present condition of things in our unhappy land is terrible. Terror reigns supreme. As was the case in 1913, we are completely cut off from our kindred, whose fate is uncertain.

It has been exceedingly painful to all of us, children of unhappy Macedonia, to observe how in Paris, while the Peace Conference has been discussing and deciding the fate of such provinces as Bukovina, the Banat, Transylvania, Dalmatia, etc., no word has been said about Macedonia, which, since the fatal Berlin Treaty, has sacrificed the flower of its manhood in an incessant and bloody struggle for human rights and freedom. Nor are the Macedonians allowed to plead their cause in Paris against their oppressors. Yet in what manner does Macedonia differ from Alsace and Lorraine? Is it simple because France is now on the victorious side? Why should Macedonia be compelled to pay for the mistakes of this or that Bulgarian Government? It cannot be denied that Macedonia to-day is held by *conquest*, not in accordance with the principles enunciated by President Wilson, for the realisation of which he threw America's power on the side of the Entente.

In order to see the principles of President Wilson applied to Macedonia also, a General Macedonian Council was recently organised in Switzerland. This Council sent to the American President and to the Premiers of the other Entente Powers a note of protest saying:

"Sir,—In view of the recent declarations made at Zagreb by certain political leaders, in which it was stated that Yougoslavia is "extending to Vardar," and even the Ægean Sea, and in view of reiterated intimations of an official character emanating from the capitals of other Balkan States, to the effect that Macedonia is to be dismembered to suit their imperialistic designs, we, the General Council of the Macedonian Societies in Switzerland, as true interpreters of the feelings and aspirations of the Macedonian people, consider it our sacred duty to raise our voice before the civilised world against such encroachments, which are contrary to the noble principles enunciated by you and approved by your faithful Allies, according to which all small and down-trodden peoples are to be guaranteed the privilege of deciding their own fate.

"While many nations are to-day recovering their lost liberty and independence . . . the unhappy Macedonian people, which has made far greater sacrifices in its struggle for human rights and freedom, is still groaning under an alien and cruel yoke. This people, for centuries the victim of persecutions, discriminations, and massacres, which to-day is still filled with anxiety and dread about its future destiny, turns to you, fearless defender of the oppressed, and unreservedly entrusts its fate in your hands, firmly confident that the principle of self-determination will be accorded to it also.

"In inviting your kind attention to these facts, we, the General Council of the Macedonian Societies in Switzerland, are fully convinced that the proper, just, and lasting solution of the Macedonian question may be found by giving the Macedonian people, too, the opportunity to freely declare its will as to its form of Government, which may be effected: (1) By the occupation of the country only by American, French, English, and Italian troops. (2) By permitting all Macedonian refugees abroad, without distinction of race and religion, to return to their homes unmolested, and to be allowed to participate in the organisation and management of their country's State affairs. (3) By entrusting the local administrations of Macedonia in the hands of the native inhabitants, under the control of the Army of Occupation."

The above document speaks for itself. Its contents can be opposed by neither of the interested parties if they desire the real welfare of Macedonia. All who are versed in Near Eastern affairs know that it was the wrong solution of the Macedonian Question that actually brought about the Balkan-Turkish war in 1912, the second Balkan conflict in 1913, and the third Balkan war in 1915.

Let us hope the new order of things which is being established will not deprive the Macedonians of the principle of nationality and self-determination, the *sine qua non* for a rational settlement of the Macedonian problem and Balkan security.—I am, etc.,

CONSTANTINE STEPHANOVE
(Secretary, General Council of the Macedonian Societies in Switzerland).

Langganstr 27, Berne, Feb. 28, 1919.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

NEAR EAST BOOKSHELF.

PALESTINE OF THE JEWS.*

In spite of the flood of literature on "Zionism" which is now deluging Europe and America, this little book stands out as one of the most interesting recent publications on Palestine. In the early chapters the author gives a rapid survey of the past relation of the Jews to the Holy Land, their undying love for it, and their unquenchable hope of a return. He sketches the beginning of that remarkable modern Zionist movement of which Herzl was the leader; and describes in sober language, not without criticism of mistakes, the planting of those colonies all over Palestine which are to-day so important an asset in the presentation of the Jewish claims. It is no mere arid enumeration of dates and figures, but a narrative of the personal experiences of one who is saturated with love of his own race. The two chapters on "Jerusalem" and the "Sea of Galilee" give an excellent account of the inhabitants of those regions, and are fair to interests other than the Jewish. The author's criticism of the pauperisation of the Jews by the mistaken system of *Chaluka* echo the feelings of all progressive Zionists. The future of Palestine with respect to outside control is still a political secret, but all the world now accepts the idea of a "Jewish Palestine"—that is, one where the predominant element is Jewish, and where the material development of the land will be along the main lines of the Zionist programme. When the author writes of "millions" settling in Palestine we think he steps beyond the language of sober prose; nor do we think that outside of agriculture there is much wealth in the land to support great numbers of such a progressive people. But all who read this book will better understand the spirit which moves the Zionists to-day.

It may be added that by no means the least interesting chapters of the book are the little sketches of the author's own experiences while with the British forces, which are collected in an appendix entitled "The Redemption of Judæa."

* "Palestine of the Jews—Past, Present, and Future." By Norman Bentwich. (London: Kegan Paul, Trench, Trubner and Co., Limited. 6s. net.)

LOVE, WAR AND MASSACRE.*

This is the story of the love of a Russo-Armenian girl and a Frenchman. Of course it—the love, not the story—does not run smooth: a German Consul of the most Prussian type and a Turkish Pasha, whose character is very sketchy, provide a good many bumps in the young people's path, and the war and the (latest) Armenian massacres provide some more. The Prussian and the Pasha both try their hands at abducting the heroine, and her lover has to thank the Turks for free, if not very desirable, lodging in a tomb converted into a prison. Mrs. Inchbold knows her ground well, and the "local colour" is skilfully applied. The plot, too, has the merit of being quite feasible, and most readers will doubtless find the book enjoyable; but the author is to some extent handicapped by the fact that she is dealing with scenes and incidents that are more or less known already, thanks to the widespread publicity given to Turkey's shortcomings during the war. Perhaps a few critical readers will wonder whether the light and shade, the villainy and the virtue, are not overdone. One captious person finds it hard to sympathise unreservedly with a hero whose professions seem to be far in advance of his practice. When a man protests: "If I had known, neither stones nor mortar could have held me back," etc., one wonders how it was that he did not, in fact, escape.

That Deir-el-Zor should be spelt in one place Deir-el-Zur and in another Der-el-Zor seems strange. Nor do we like such expressions as: "These features were forgotten by the beauty of her eyes" (p. 92), or "he had looked blindly for acquiescence" (p. 35), instead of "for blind acquiescence." But, as a rule, the "bumps" are only in the path of the hero and heroine and their friends—until the end of the book, when the Prussian Consul gets a bad one—and we commend the story to our readers' notice.

WHY SERBIA WEEPS

¶ In Serbia there is weeping. Everywhere there is desolation. The whole country is despoiled. Thousands are living on the border-line of starvation.

¶ No people in proportion to size contributed more to Victory than the Serbians. No people suffered so much as they endured uncomplainingly in the Great Cause.

¶ Will you not help to relieve them NOW? The Serbian Relief Fund is working night and day to provide clothing and medical aid for the stricken people of Serbia. Your donation to this splendid work is urgently needed. It will be gratefully received and duly acknowledged by the Hon. Treasurer, the Right Hon. the Earl of Plymouth, G.B.E., C.B.

Major and Mrs. Godfrey Heseltine have left England for Ootacamund, India

General the Hon. Sir Julian Byng arrived on Sunday evening in London from France.

General Allenby arrived at Marseilles on March 17, and left the same evening for Paris and London.

M. Robert Naville, Director-General of the Banque Franco-Serbe, has arrived in Paris on a visit.

Madame Yovanovitch, the wife of the Serbian Minister, returned to London last Friday from Paris.

After visiting the Allied armies on the Rhine, the Emir Faisal has arrived in Brussels, to meet King Albert.

His Highness the Aga Khan had the honour of being invited to luncheon with the King and Queen on March 12.

General Sir Reginald Wingate arrived last Thursday (March 13), at Knockenhair, Dunbar, his East Lothian residence.

Dr. A. Trecitch Pavitchitch, a member of the National Council of the Yugoslavs, has arrived in London from Paris.

The Territorial Decoration has been conferred on Major Prince Frederick V. Duleep Singh, M.V.O., Norfolk Yeomanry.

Colonel A. H. Tubby, having relinquished the post of consulting surgeon to the Egyptian Expeditionary Force, has returned to 68, Harley Street.

King Alexander of Greece, who was present at a luncheon in his honour in the flagship Superb, decorated Admiral Calthorpe with the Insignia of the Order of the Grand Cross of the Saviour.

Sir Frederick Alexander Robertson, K.B.E., LL.D., of Eaton Terrace, S.W., formerly Judge of the Chief Court, Punjab, Lecturer on Mohammedan Law at the Imperial Institute, left property valued at £6,316.

The engagement is announced of Captain Ivan Cobbold, Scots Guards, son of Mr. John Cobbold and Lady Evelyn Cobbold, of Holywells, Ipswich, to Lady Blanche Cavendish, second daughter of the Duke and Duchess of Devonshire.

Mr. Montagu, Secretary of State for India, returned from Paris on Monday night for the funeral of his mother, the Dowager Lady Swaythling. Sir Arthur Hirtzel, Assistant Under-Secretary for India, has also arrived from Paris.

Lord Inchcape has left London for a cruise in the Mediterranean, to recuperate after his illness. He is accompanied by Lady Inchcape and their daughter, the Hon. Effie Mackay, and they hope to be able to be away until after Easter.

The engagement is announced of Captain R. E. H. Crosbie, O.E.T.A., Palestine, only son of the late Rev. H. A. Crosbie and of Mrs. Crosbie, of Hurstbury, Lindfield, Sussex, to Elsa, eldest daughter of Mr. and Mrs. Muller, of Duncroft, Kenley, Surrey.

On January 14, at Poona, India, the marriage took place of Charles Sydney Forster Witts, Captain, Indian Army, elder son of Mrs. F. S. Witts, of Ramsgate, to Ida Margaret, younger daughter of Mr. and Mrs. Edwin Fox, of Warwick House, South Canterbury.

The marriage of Captain John Maitland Salusbury-Trelawny, M.C., I.A.R.O., elder son of Mr. and Mrs. John Salusbury-Trelawny, and Miss Freda Mainwaring, youngest daughter of the late Captain Guy Mainwaring, R.N., and Mrs. Mainwaring, of 18, Iverna Court, Kensington, took place at Christ Church, Chelsea, on Tuesday, March 18. The bride was given away by her uncle, Mr. Harcourt Williams, and Captain Reginald Salusbury-Trelawny, brother of the bridegroom, was best man.

The engagement is announced between Hector Russell Wilkinson, I.C.S., eldest son of the Rev. G. G. Wilkinson, Knossington Rectory, Oakham, and Mrs. Wilkinson, and Theodora, daughter of Mr. and Mrs. Robert Daintree, Swan Wood, Horeham Road, Sussex.

An engagement is announced between Dennis Whitehorn Reid, D.S.O., M.C., Seaforth Highlanders, attached I.A., younger son of the late Rev. John Reid, M.A., of Inverness, and Alicia Betty, only daughter of Lieutenant-Colonel W. H. Wooldridge, 126th Baluchistan Infantry.

An engagement is announced between Henry Francis Ayres, of the Egyptian Irrigation Service, eldest son of H. B. Ayres, of Harold Wood, Essex, and Mrs. Ayres, and Evelyn d'Arblay, second daughter of the late Rev. E. M. Burney and Mrs. Burney, Winforton House, Herefordshire.

A marriage is arranged, and will take place in April, leave permitting, between Major-General A. P. Blenkinsop, C.B., C.M.G., D.M.S., Mesopotamian Expeditionary Force, and Ada Mary, widow of Lieutenant-Colonel C. H. Moore, and daughter of the late Colonel P. W. Bannerman.

A marriage has been arranged, and will shortly take place, between Major E. B. Morris, R.G.A., son of the Rev. Canon Morris, J.P., and Mrs. Morris, of Ashbourne, Derbyshire, and Madeline Ida, youngest daughter of Mr. Edward Bedford, C.E., and Mrs. Bedford, of Delbrook, Belvedere, Kent, late of India.

A marriage has been arranged, and will shortly take place in Penang, between Major H. D. Jensen, M.C., R.A.F., son of the late Mr. H. P. F. Jensen and Mrs. Jensen, of Broadwater, Worthing, and Aline Hutchinson, younger daughter of Colonel T. H. Haughton (Indian Army, (retired) and Mrs. Haughton, of Chisbeach, West Worthing.

On March 17, at the Kensington Parish Church, Brevet Lieut.-Colonel Richard Aubrey De Burgh Rose, C.M.G., D.S.O., the Worcestershire Regiment, only surviving son of the late Surgeon-General H. J. Rose, was married to Vera Burnaby, only daughter of Dr. J. A. Turner, C.I.E., of Bombay, and Mrs. Turner, 34a, Pembroke Square, W.

The engagement is announced between Lieutenant-Colonel A. P. Browne, D.S.O., late Central India Horse, younger son of the late General Sir Samuel Browne, V.C., G.C.B., K.C.S.I., late of The Wood, Ryde, Isle of Wight, and Winifred Marie, elder daughter of Lieutenant-Colonel J. E. Rhodes, late K.R.R., and Mrs. J. E. Rhodes, of Apley Rise, Ryde, Isle of Wight.

M. Jean Bratiano, the Roumanian Prime Minister, arrived in London on Saturday evening from Paris. At the station were the Roumanian Minister and the personnel of the Legation. On Sunday M. Bratiano was received by the Queen of Roumania, and in the morning he was visited by M. Misu. On Monday he had the honour of being received by the King at Buckingham Palace.

Lord Willingdon and Lady Willingdon left London on Tuesday en route for Madras. They are expected to arrive on or about April 10, when Lord Willingdon will assume charge as Governor of the Presidency. The staff will comprise Major K. O. Goldie, 10th Lancers, Military Secretary, and Captain Parbury, 17th Lancers, Captain Powell, 30th Punjabis, Lieutenant H. Brand, R.N., and Lieutenant Howard Vincent, 60th K.R.R., as A.D.C.'s.

A marriage has been arranged between Lieutenant-Colonel Hugh Castle Smith, 12th Foot (Suffolk Regiment), attached Egyptian Army, A.D.C. to his Highness the Sultan of Egypt, eldest son of Mr. and Mrs. Castle Smith, late of Netherhall Gardens, N.W., and Maude Ellefred, only daughter of Sir Frederick Evans, K.C.M.G., K.C.V.O., C.B.E., Colonial Secretary, Gibraltar, and Lady Evans, 57, Wetherby Mansions, S.W.

THE QUEEN OF ROUMANIA.

The Queen of Roumania, accompanied by Princess Marie and Princess Ileana, arrived in London on Wednesday evening last week, on a visit to the King and Queen. She was met at Charing Cross Station by the King and Queen and the Prince of Wales, with whom she drove to Buckingham Palace.

Captain Sir Charles Cust, R.N. (Equerry to the King), who has been specially attached to Queen Marie's suite, was in attendance from Folkestone.

On Thursday Queen Marie and her daughters, accompanied by Princess Mary and attended by Captain Sir Charles Cust, Bart., R.N., paid a visit to Eton College, where Prince Nicolas of Roumania is a pupil. The Royal party motored from London, and on arrival at Eton were received by Dr. C. A. Alington and Prince Nicolas. After luncheon with the Headmaster and the Hon. Mrs. Alington, the Royal visitors proceeded to the College Library, where they were received by the Provost, Dr. M. R. James, who conducted them through the various rooms. The Royal party afterwards proceeded to Warre House, which is Prince Nicolas's house, where they were received by Mr. Brinton. They afterwards took tea with Prince Nicolas before motoring back to London.

On Friday Queen Marie received visitors, and in the evening dined with Major the Hon. Waldorf Astor and Mrs. Astor. She afterwards visited the Palace Theatre. On Tuesday her Majesty visited the King George Hospital, Stamford Street.

Digitized by Google

The engagement is announced between Lieutenant F. J. Bridges, M.C., 15th ("The King's") Hussars, son of Mr. J. E. Bridges, I.C.S. ((retired), and Mrs. Bridges, of 71, Westbourne Terrace, and Veronica, eldest daughter of Dr. and Mrs. Charles Macdonell Anderson, of 96, Elm Park Gardens.

A marriage has been arranged and will shortly take place in India, between Sir Berkeley Pigott, Bart., 21st Lancers, son of the late Lieut.-Colonel C. B. Pigott, C.B., D.S.O., 21st Lancers, and Mrs. Pigott, The Weirs Cottage, Brockenhurst, and Christabel, younger daughter of the late Rev. F. H. Bowden-Smith and Mrs. Bowden-Smith, of Careys, Brockenhurst.

APPOINTMENTS, PROMOTIONS, &c.

The appointment of Colonel P. Carr-White, Indian Medical Service, as honorary physician to the King is gazetted.

Dr. Koyitch, who has been acting as secretary to the Serbian Delegation attending the Peace Conference, has been appointed Counsellor to the Serbian Legation in London.

Sir Bijay Chand Mahtab, Maharajadhirija Bahadur of Burdwan, has been appointed a member of the Executive Council of the Governor of Bengal, in succession to Lord Sinha of Raipur.

The King has been pleased to approve the appointment of General Sir Herbert C. O. Plumer, G.C.B., G.C.M.G., G.C.V.O., A.D.C., as Governor and Commander-in-Chief of Malta, in succession to Field-Marshal the Right Honourable Lord Methuen, G.C.B., G.C.V.O., C.M.G., who has resigned that post.

OBITUARY.

Mr. Keith Vivian Gurney, late of the Sudan Civil Service, died at Meopham, Kent, on Sunday, March 16, of pneumonia, following on influenza. He was thirty-three years old.

Mr. John Dyson, late Judicial Commissioner at Oudh, India, died on Saturday, at Merriott, Somerset, aged eighty-three. He joined the Indian Civil Service in 1858 and retired in 1891.

Colonel W. V. Jacob, late Bengal Staff Corps, died on March 14, at 45, Sinclair Road, Kensington, W. Colonel Jacob, who was an Indian Mutiny veteran, was in his eighty-second year.

Lieut.-Colonel Sir George L. Eyles, K.C.M.G., died at East Grinstead on March 12, aged sixty-nine. He was consulting engineer for Government Railways in Ceylon, and to the Crown Agents for the Colonies.

A cabled message from India announces the death, at Cachar, of Colonel J. G. Knowles, C.I.E. He was engaged as a tea-planter, and was Commandant of the Surma Valley Light Horse. Colonel Knowles was an honorary aide-de-camp to the Viceroy and Governor-General.

Colonel W. B. Wilson, late 12th Bengal Cavalry, died at Minehead on March 17, aged 71. He served in the Afghan War of 1878-80, and had the medal with three clasps. Eight years later he was engaged in the Burmese Expedition, was mentioned in despatches, and received the brevet of major and the medal with clasp.

Lieutenant-Colonel John Stuart-Wortley, whose death is announced, at one time served with the 11th Sudanese Regiment, and later as a Civil Administrator in the Sudan until 1912. He received the Order of the Mejidieh for his valuable services in the Bahr-el-Ghazal, and the Sudan Medal with one bar. In 1912 he joined the Reserve of Officers. He had previously served in the South African War, and in the late war he had greatly distinguished himself in France.

Mrs. Amy Woodforde-Finden, the well-known musical composer, died suddenly on March 13 at her residence in Cork Street, W. She was the widow of Colonel Woodforde-Finden, of the Indian Army. Among her best known and most popular compositions were "Stars of the Desert," "On the Jhelum River," and "The Pagoda of Flowers."

Lieutenant-Colonel Brackley Herbert Barrington-Kennett, of the Royal Body Guard, died on Wednesday of last week at his residence in Cheyne Gardens, Chelsea, from heart failure, at the age of seventy-two. He took part in the Jowaki Afridi Expedition in 1877, for which he had the medal with clasp, and he also fought in the Afghan War of 1878-80, when he received a "mention" and the medal.

Colonel Henry Wood, C.B., late of the Rifle Brigade, died on March 17, at Norwich, aged 84. He served in the Crimean Campaign of 1855-6, and in the campaign on the North-West Frontier of India in 1864. During the Afghan War he served with the Peshawar Valley Field Force, and in 1881 was engaged in the Mahsud Wuzeerce Expedition, when he was mentioned in despatches.

NEWS IN BRIEF.

Allied subjects interned in Bulgaria have been released.

45,000 tons of British coal for Yugoslav towns have arrived at Fiume.

The preliminary reduction of Indian combatants in the Army up to January 31, 1919, amounted to 70,000 men.

Turkish defences at Gallipoli in 1915 are shortly to be investigated on the spot by a mixed Naval and Military Commission.

In India the designation Director of Aeronautics is abolished, and will be superseded by General Officer Commanding Royal Air Force in India.

General Liman von Sanders, the German supervisor of Turkish operations, was recently disembarked at Malta from Constantinople.

Dr. G. Diouritch, Assistant Professor of Political Economy at Belgrade University, read a paper on "The Development of the Serbian (Southern Slav) Race" before the Royal Statistical Society on Tuesday evening.

Influenza, which had lately been diminishing, is again raging furiously in Malta, fatal cases, says Reuter, being many and frequent. The recrudescence of the epidemic is attributed to the overcrowding during the Carnival festivities.

At Chittagong, India, General Borton and Captain Ross-Smith, engaged in surveying the coast for suitable stations for the Calcutta-Rangoon air route, lost their boat and records through an explosion, which injured six men, though they were unhurt.

A dispatch from General Sir Charles Monro, Commander-in-Chief in India, dealing with military operations in South and East Persia, Bushire, and Aden between March 31, 1917, and May 31, 1918, was published on Monday as a supplement to the *London Gazette*.

The Rev. B. G. Chandler, formerly at St. George's College, Jerusalem, lectured on Tuesday at the Church of St. Mary the Virgin, Aldermanbury, on Jerusalem. Under Turkish rule, he said, Jerusalem was indescribably filthy, but he was told that since the British had cleaned it out he would not know it.

The New Ameer, Aman Ullah Khan, has (says Reuter's Agency) sent to the Government of India a letter formally announcing his accession to the Afghan Throne, and expressing his desire for a continuance of the friendly relations between his country and Great Britain. The message contains other expressions of friendship.

THE FUTURE OF PERSIA.

The presence of a Persian delegation in Paris is evidence that the Teheran Government looks to the Conference to come to some decision regarding the future of Persia. Two main points, it is to be expected, will be raised by the delegates, if they are accorded an opportunity of submitting their claims in person, the status of the country in the family of nations and its frontier line with Transcaucasia. Whether the Persians can make out a case for a Persia Irredenta north of the Araxes, which will be strong enough to allow them to dispense with that natural boundary remains to be seen; but there can be no doubt that they can claim a formal charter of national independence from the Paris Conference, if they set store on a document of that nature. Their anxiety on this subject, however, is easily understood. They have lived for decades under the shadow of Russian aggression, and now that it has passed they want the most effective guarantees against its recurrence that they can secure. It is not to be wondered at, therefore, that Persia is inclined at this juncture to pin her faith to the League of Nations. She must bear in mind, however, that the Paris Conference has to be guided by actual realities, and not merely by sentiment. It has already placed in a separate category the territories "inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world," and it may have to decide whether Persia comes under this or some other special category. Thus an appeal to the Conference might have the effect of attaching to Persia a label that would be correct enough for the moment, but which would not do justice to any latent capacity of which she may be conscious. For this reason the Teheran Government might be well advised to pause before admitting the inability of Persia to determine her own status, apart from the decision of the Allied Conference. For what are the facts? The Conference might draft the most satisfactory charter of absolute independence, but the document would not enable Persia to stand alone for a single day. The independence that the Conference or the League of Nations will desire to confirm implies stable government, law and order, and an established financial system. All these are lacking in Persia. Two alternatives, therefore, present themselves to the Persian authorities. They can submit themselves, cap in hand, at the door of the Conference, to which they have not been invited, and wait to be told what they will have to do to qualify themselves for national independence; or they can say, in effect, "The Russian nightmare has gone for ever; we are a free people, but it leaves us temporarily crippled. We recognise our own limitations, and that for the present we need help in the administration of the country. We will seek that help, where we know that it can be found, of our own accord, and not at the dictation of others."

An attitude such as this would reflect a spirit of true independence, and is calculated to impress the Allied nations represented in Paris far more than a weak imitation of more virile claimants. It is true that Transcaucasia has been thrown into the melting-pot and that there may be some pickings to be had for anybody who pushes and talks hard enough; it is also a fact that Persia has had the war brought within her borders, and has suffered accordingly. But the reverse of the shield is equally apparent: Persia allowed full play to pro-German elements, and not a little of the ravages of war of which she complains was the handiwork of her own lawless tribesmen, who not many months ago did their best to wipe out the only force that Persia can rely upon for the maintenance of law and order in the country—the gendarmerie under British officers. If, therefore, the Persians try to turn the war in part to their benefit, they must expect to have their attitude during the struggle subjected to a critical investigation. We are convinced, however, that the nation, as a whole, if it could express its views, would have nothing to do with the policy of bargaining and make-believe in Paris. It has grasped the essentials of the situation, which are that the Russians have gone and that the country wants security and settled government. The feeling towards the British is, on the whole, favourable, for among those who are capable of forming a judgment it is recognised that Great Britain alone averted a worse fate at the hands of Imperialist Russia. What may not be so generally understood is the altruism of the British attitude. Our interests call for an independent Persia strong enough to resist aggression from without and to maintain order and some measure of progress within. In the past Persia has failed so signally to live up to this standard that it requires with some people the exercise of considerable faith to believe her capable of ever making a success of self-government. This pessimistic view, however, does not take sufficiently into account the paralysing effect of the Russian incubus. In any case, there can be no question that Great Britain is in honour bound to give Persia a fair and full chance to rehabilitate herself, if only as amends for the failure to hold Russia in check. Some allowance must also be made for Persian misunderstanding and lack of initiative. It is conceivable that both parties might stand aloof from one another indefinitely, each expecting the other to make the first move. If this should happen, it would argue something amiss in British representation at Teheran, where friendly co-operation must be a *sine qua non*.

At the root of the failure of Great Britain's handling of the Persian question in the past lies the absence of any definite policy. Apart from the anxiety to prevent Russia from absorbing the whole country, no attempt was made to formulate a constructive policy and to compel its adoption by the Russians for Persia's benefit. The international situation in Europe was largely responsible for this negative attitude. To-day, however, this obstacle no longer exists, and it will be a long step towards the satisfactory settlement of the Persian problem when the British Government draws up an unequivocal statement of the lines on which it is prepared to help the Teheran Government to come again into its own. Persia herself is ready to admit that she cannot stand alone, if only for the reason that she has an empty Exchequer and has no means of filling it except by means of borrowed money. It is not necessary that Great Britain should supply all the advisers required for the reform of the Persian administration; but the Persians will, no doubt, have their own opinions as to the advisability of multiplying the nationalities called in to help them. The British Government on its part, in spite of the elimination for the time being of the Russian menace, has a special interest in expediting the establishment of ordered government in Persia. Great Britain now stands committed along the whole western border of Persia by her occupation of Mesopotamia, and to the north by the presence of British troops in Transcaucasia and Transcaspia. While no permanency is claimed for the latter phenomenon, it is an indication that Great Britain cannot be indifferent to the course of events in these regions, if they threaten to assume a definitely hostile character. In these circumstances an added incentive is found to place Persia on her feet again; and if she has no constructive policy already mapped out, it is for Great Britain to help her to prepare one and to indicate the extent to which British advisers can be loaned for the assistance of Persian officials.

"NATIONALISM" IN EGYPT.*

A SELF-INTERESTED CLIQUE.

(From Our Cairo Correspondent.)

It was perhaps to be expected that the new political ideas brought into being by the war should be reflected in Egypt. It was also to be expected, in view of the declaration made by the Anglo-French Governments to the peoples of Syria and Mesopotamia, that certain hopes might be aroused in the Egyptians. But no reasonable person ever dreamed that the principles enunciated by President Wilson, and since admitted by most of the Allied Powers, in regard to small nations would be regarded in the sense in which a certain political element in Egypt has taken them.

A clique—I decline to call it a party, although its members give themselves that name—has seized upon the statements of the President of the United States as a pretext for agitation for the application to Egypt of the principles of self-determination which are to be applied to peoples rescued by the war from the domination of alien races. They started their activities in the late summer of 1918, and they have carried it on ever since. No kindly hints of the absurdity of their demands, or of the serious position in which their words and actions were placing them, have had any effect. The tolerant treatment—too tolerant in the opinion of many—which they have received at the hands of the Anglo-Egyptian authorities has merely served to make them more active in their attempts to stir up an agitation, and more insistent in their demands. Their courage and persistence are certainly worthy of a better cause; and if they were not so blind to the practical side of the question, and to the true requirements of Egypt, they could have put the qualities which they now display to better use, and so have had reasonable hope of benefiting the country which they pretend to serve.

The composition of this clique throws an interesting light on the inward motive of its creation. First and foremost comes Said Zaghlul Pasha, ex-Minister of Education and Justice, and elected Vice-President of the Legislative Assembly, who disappointed even his warmest well-wishers by his undignified attitude during the one and only session which that representative body has so far been able to hold. From the early time when he received severe punishment from Tewfik Pasha for his refractory attitude he has displayed qualities that have caused him to fall foul of every high-minded Egyptian with whom he has at one time or another had to work. Next comes Ismail Sidky Pasha, ex-Minister of Wakfs, admittedly an able man, who had to resign his post owing to a private scandal. Whilst doing some quite useful economic work since his eclipse from the Ministerial firmament, he has not belied his reputation as a political intriguer.

With him are Mohammed Mahmud Pasha, an ex-Mudir and a young Egyptian educated and trained at an English University, for whom a brilliant future was at one time predicted. Unfortunately, however, he had to be removed from the governorship of the Behera Province owing to his having countenanced methods of crime repression and detection which savoured more of Ismailian times than of the present day. Other members of the clique are: Sufani Bey, a rabid Extremist Nationalist, who has always been a thorn in the side of the Egyptian Government on account of his reactionary ideas, and who had to be warned at the beginning of the war to cease his activities and remain quiet in his village if he did not wish to be sent to Malta; Sharawi Pasha, an Egyptian landowner of great wealth, who has always inclined to Nationalist politics, and has probably been included in the clique owing to his being in a position to provide the much-needed sinews of war; Hamed El Bassel Pasha, a Bedawi of the Fayoum, and said to be a relative of sorts of Enver Pasha; Abdel Aziz Fahmy Bey, leader of the Native Bar, and a much-respected lawyer, whose impetuosity has undoubtedly led him into the fold, from which he would find it difficult to extricate himself with dignity; and one or two younger members of the Legislative Assembly who have political ambitions, and have been attracted by the specious arguments of the older leaders of the movement. There are also two Coptic members, whom the clique recruited late in the day, when they realised that without some Coptic element they could not appear before the world as representing the Egyptian nation. These two Copts are mere figureheads, even so far as concerns their own community, who disapprove of their adhesion to a movement the success of which could not in the long run benefit the non-Moslem element in Egypt.

The foregoing are the principal members of the clique. As can be seen, they are by no means representative of the best elements of the Egyptian nation. They are, in fact, men who have either lost their public positions or whose political ambitions have so far not been satisfied, and who, realising that probably they stand no chance of coming into political prominence so long as the present regime lasts, desire to bring about a complete change, which will, they hope, bring them personal advancement in the shape of a prominent share in the government of the country.

It may be asked what are the demands which these gentry are putting forward with so much insistence, and which are looked upon with such disapproval, even ridicule, by the rest of their social class. They are nothing less than the complete political independence of Egypt without any control from any foreign Power. So rabid is their desire to obtain what they call "complete autonomy for Egypt," that they would be prepared to allow the Capitulations to remain in force, if by so doing they could assure the "liberty" which they claim for their fellow-countrymen. Those of our readers who have followed Egyptian affairs during the past ten years or so will remember that one of the great grievances of the Egyptians has always been the existence of the Capitulations, which have made it difficult—in many instances impossible—to introduce the social and other reforms which the country so much requires. It is generally admitted by the more intelligent and rational Egyptians that the time has come for the abolition of these Capitulations and the substitution of some formula which will satisfy the Powers interested and at the same time enable Egypt to carry out whatever reforms she considers necessary. Yet these "patriots," who profess to have the interests of Egypt so much at heart, are prepared to bind these international fetters for all time on their country, merely to obtain what they are pleased to call "autonomy."

The unreasonable nature of their demands is not lost on the rest of the intellectual element of Egypt, from whom they receive no support whatever, and who condemn their action as likely to prejudice the country at the very time when there is reason to believe that some greater share in its government is contemplated for the Egyptians by the Protecting Power as the outcome of the judicial and administrative reforms at present under consideration.

Moreover, the majority of the Egyptian population for whom the clique makes out it is speaking, and for whose benefit it declares the proposed change will be, have by no means subscribed to their programme. Generally speaking, the masses do not interest themselves in politics, and as long as their village affairs go well and they are prosperous they are content to let things political alone—and in this who can say that they are not well advised? In any event, any chances of success that such an agitation might have had with the masses, say, four years ago have now entirely vanished. To-day the fellaheen, who constitute 90 per cent. of the indigenous population, are enjoying a prosperity which they have never known before. Most, if not all, of their indebtedness has been paid off—the remission of their debts to foreigners was one of the specious arguments used by political agitators in pre-war days in favour of the overthrow of the British Occupation—and they are quite contented with the present regime, and happy at the prospects which it holds out.

Again, those of them who remember the old days or recollect the tales told them by their parents and older relatives are not so sure that an "Egypt for the Egyptians" without any foreign control would be all for their benefit. In fact, they realise quite well that any such change in status would inevitably mean an Egypt for the more intellectual and more powerful classes to the detriment of the relatively voiceless masses, whose interests would go by the board whenever they came in conflict with those of the element which is now trying to get rid of the one guarantee for fair government, viz., British control.

In short, an autonomous and independent Egypt such as Zaghlul and Co. depict would merely mean a return to the state of affairs which existed prior to the Occupation, when the Pasha element was all-powerful and the mass of the fellaheen were downtrodden and oppressed for the benefit of the former.

To sum up, neither the constitution of the self-appointed Nationalist "party" nor its demands commend themselves to the consideration of any reasonable member of the Egyptian nation, since they afford no guarantee that liberty and fairplay, such as are now enjoyed by all classes and all sects, would exist under the proposed new regime; and the more one studies its demands and watches its actions the more convinced does one become that the whole movement, such as it is, is coloured by the personal bias of its leaders, viz., disappointment at their present exclusion from participation in the government of the country, due in most cases to their own behaviour, and a hope that out of the agitation, even if it does not succeed, may come some satisfaction of their own personal ambitions.

PRESS ON THE NEAR EAST.

The Break-Up of Turkey.

Sir Edwin Pears contributes to *Everyman* (March 15) an article entitled "The Liquidation of Turkey," in which he discusses the future of various portions of "the old Empire that will cease to be under Turkish rule." Everyone (he writes) agrees that Turkey has been seen at her worst in the government of subject races; but he adds what many people either forget or ignore, that "her misgovernment has not been a question either of religion or of race." Then follows a passage which certainly makes painful reading for all but the most rabid of Turcophobes:

The dream of a regenerated Turkey in which the Moslem minority was to extend a fraternal greeting to Christian and Jew has vanished into space. An honest movement in that direction was made in 1908 and 1909 by a brave minority of Moslems and Christians alike. To us who were in Constantinople it was hopeful because the men who were at the head of the movement were manifestly sincere. It was pleasant also to Englishmen to recognise that the persons favouring it, who carried with them the majority of the population, looked to Great Britain as the example in government which they would willingly imitate. Constantinople had been sickened with stories of bakhshish and general corruption. Every railway concession granted to Germany had been obtained by bribes in which most of the officials in power shared. The result was that the revolution of 1908 sent German influence down to zero and British influence up to boiling point. When, in the following year, a deputation of Young Turks came to London, they went to our Foreign Office with high hopes. They came out of it chastened men. The truth is that neither the French Foreign Office nor the British had any use for enthusiasts.

Gradually Young Turkey followed in the wake of Old Turkey, and when the honest men in the party recognised that their more ardent colleagues cared nothing about liberty, irrespective of race and religion, a steady movement began which left the extremists of Young Turkey free to do what they liked. The result need not be traced here. It ended by the extremists in question going over to the side of Germany, and, in spite of the warnings of men who knew something of the history of Turkey, the Sublime Porte abandoned the traditional friendship to which it had been faithful for nearly a century.

Another very interesting passage is that in which Sir Edwin Pears gives his views on the future of Constantinople:—

Probably the favourite solution would make of Constantinople a district which should not belong to any state, but should be under the sovereignty of the League of Nations. Its boundaries might be practically those which were agreed upon by the Balkan States in 1913. A line from Enos to Midia on the Black Sea would cut off a section of the peninsula, while to the south of the Straits there would be an artificial line running between the Black Sea and probably as far as the northern boundaries of the Vilayet of Aidin. In any arrangement by which Constantinople is dealt with there must necessarily be a considerable population included. Within the boundaries here suggested there would be about one and a-half millions. The crucial question is whether the Powers will compel this population to remain under Turkish rule, or whether they will grant the district of Constantinople, with the boundaries already suggested, a separate national existence. It may safely be said that all Powers, and especially Conferences, tend to take the line of least resistance, and the fact that in Constantinople there exist already an International Sanitary Commission, another dealing with the Public Debt, and various law courts, which, though bad, may seem easier to knock into shape than to replace, will urge members to let as many things alone as they possibly can.

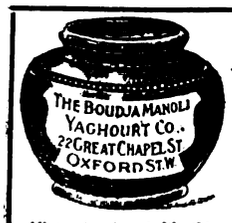
The Intrigues in Egypt.

The "Nationalist" intrigues in Egypt have not attracted much attention in this country, where the tendency is to treat them with contempt. The *Spectator* (March 15) expressed the general feeling very well when it remarked, in a note, that General Watson had "had to give the Egyptian Nationalists a sharp reminder that there are limits to British patience," and concluded its note:—

The High Commissioner has been very tolerant towards the Nationalists, in accordance with our traditions, but Zaghlul and his colleagues must of late have overstepped the bounds of prudence. It is well for the Egyptians to know that the British Protectorate, which has conferred untold blessings on them, is not to be undermined by intriguing Pashas. After defending Egypt at great cost against the Turks and Germans, we shall not let the Nationalists throw the country into confusion.

The *Pall Mall Gazette* (March 17) is of opinion that—

The Government is greatly to blame for permitting agitations to continue until spectacular arrests have to be made. The deportation of offenders as they offend is the better way of meeting these troubles.



Sympathy with the agitators is conspicuous by its absence.

INDIAN CAMPAIGN LITERATURE.

We have received for review some further instalments of the stream of pamphlets which flows steadily from the headquarters of the Extremist party in India. We need not describe their character in detail, since they resemble those which we reviewed at length some months ago, and it is sufficient to say that they take a fairly high rank in this particular department of literature, putting their own case well forward, and evading its weak points with no little dexterity. The most interesting document in the batch is the annual report of the "Home Rule for India League," with its wealth of tabular appendices, which bear testimony to the insatiable appetite of the country for such pabulum. We notice that (excluding cross entries) the League had an income of about Rs.60,000, out of which Rs.53,000 were spent; the fact that over 30 per cent. of this sum is charged to general expenses, including a large item for telegrams and a smaller one for commission on collection of subscriptions, is further evidence of the bureaucratic tendencies of the movement.

The League has been busy in the villages, and claims to have secured 15,000 members in eleven months; the rates of subscription charged are, unfortunately, not stated, but we are assured that "the staunchest Home Rulers are to be found in the villages, where the hardships inflicted by the present system of administration are most felt," and it is claimed that as a result of this activity the tyranny of the petty village officials has considerably diminished. We could wish that this statement had been illustrated by statistics; Englishmen have not yet succeeded in curing Indians of the vice of tyranny, but we should like to know in how many cases the diminution followed on a threat to complain to the Englishman at headquarters. This particular feature apart, the movement in the villages is undoubtedly interesting, but its full significance will not become apparent until other parties take a hand.

We have received the first issue of the "*Bulletin* of the Russian Society at King's College" (University of London). Its contents are partly in English and partly in Russian, and it contains contributions by Professor Miliukov (the well-known Russian critic and writer), Dioneo, and others. Copies of this number (price 1s.) can be obtained from the Editor, at the School of Slavonic, King's College, Strand, W.C. 2, or from Mr. A. A. Raffi, 153, Regent Street, W. 1.

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Recommended by the leading medical faculty of to-day.

Suitable alike for the invalid and the healthy.

Obtainable at HARROD'S, SELFRIDGE'S and all the leading Stores.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The announcement was made last week that the Department of Overseas Trade (Development and Intelligence) and the Association of British Motor and Allied Manufacturers are to despatch an investigator to the Eastern markets to ascertain the conditions and prospects for the sale of British motor vehicles, their parts and accessories. Bombay, Calcutta, Rangoon, Ceylon, and other places will be visited, and among the subjects to be covered in the investigation will be technical specifications of the cars most in demand, facilities for obtaining fuel, road systems, Customs duties, legislative restrictions, importers, trade organisations, methods of competitors, and transport facilities. The scheme is excellent, and has everything to commend it, and I can only hope that in due course this precedent will be applied to other trades and other markets.

***

The suggestion to utilise Royal Indian Marine vessels as passenger ships, in view of the great shortage of shipping accommodation, for Anglo-Indians and their wives and families who wish to come home this year, has given rise to the demand in some quarters that British war vessels should be utilised for this purpose. I have heard the same idea mooted over here in conversation; but so far as I know there has been no attempt to bring influence to bear on the authorities in this direction. If it is possible to use warships—cruisers, for instance—for passengers, and I fail to see why it should be impossible, perhaps evidence of strong feeling on the subject in the Anglo-Indian Press will bring about the innovation.

***

I hope my readers read General Seely's remarks on the value of the aeroplane in the East, in the course of his speech on the Air Force Estimates. I have constantly emphasised the point that it is in the establishment of communications in the East that the aeroplane is likely to be of the greatest immediate value, and on this aspect General Seely laid particular stress. "It is there," he said, referring to Egypt, Mesopotamia, and the Near East, "where air development will very likely have its greatest future, as it has its greatest present." He illustrated this by saying that the Political Officer at Baghdad could do the same inspections in two days as he could before in two months. Turning to the question of mails, General Seely said that the possibilities of carrying the mail from Cairo to India were extremely favourable. "How best to do it," he added, "whether by carrying it by members of the Royal Air Force or by putting it up to public tender, or by means of a chartered company, is a matter for consideration, though not for long delay.

***

This week's development in regard to the French exchange is not likely to render any easier the task of developing British trade with Morocco. Another effect will be to make it more difficult to re-export the surplus stocks there, the disposal of which presents one of the pressing problems of the moment.

The report of the Anglo-Persian Oil Company for the year ended March last shows an expansion in business that can only be described as remarkable. The net profits have risen to £1,308,558 from £344,110 in the previous year. The company again places £100,000 to general reserve, while the allocation to preference share reserve remains at £50,000, but, besides this, £175,547 is now repaid to the Burmah Oil Company in respect of dividends on the preference shares guaranteed by the company, £100,000 is placed to amortisation reserve, and £80,000 to debenture stock redemption reserve. The preference dividend of 8 per cent. accounts for £40,000 more than in the previous year owing to the larger capital, while the ordinary dividend, raised from 6 to 8 per cent., absorbs £204,986. The balance carried forward is now £454,723, against £19,537, but this large sum is subject to excess profits duty. It remains to mention that the claim against the Persian Government for damage to the pipe line is still unsettled, but a friendly settlement is anticipated.

***

As to the future, it can only be said that the indications point to a further increase in the profits of the company. When the refinery extensions at Abadan are completed its capacity will be about two and a-half times greater than in the year under review. Another refinery which will further considerably increase the company's throughput is being erected near Swansea. The field maintains its productive character, and in a reserve field an additional large area of productive territory has been proved, while a number of other fields of a most promising character have been reported on by the company's geologists. This, in brief, summarises the company's position, which must even make those who opposed the scheme willing to admit that a British Government never did a shrewder stroke of business than when it acquired two-thirds of the ordinary shares of the company.

***

A very satisfactory report is forthcoming from the National Bank of Egypt. The gross profits have risen to £964,600 from £764,100 in 1918, while the expenses were £270,700, as against £214,200, and the net profit amounted to £693,900, as against £519,200. The balance brought forward was £49,500, making the available balance £743,400, and this sum has been utilised to pay a dividend of 10 per cent., as against 8 per cent. in 1917, which takes £300,000, and to place to the statutory and special reserves £336,700, as against £251,900 for the previous year, leaving £106,600 to be carried forward.

In the near future it is thought that there should be an excellent opening in Persia for machinery for brick-making. The war has had the same effect on building operations in Persia as in other countries, and for some time building is reported to have been practically at a standstill. The result must be that when economic conditions improve there will be a great demand for building in the country, and brick-makers will only be able to keep pace with it by installing machinery on a considerable scale. The market in this commodity is certainly one which should be worth the attention of British manufacturers.

***

An industrial development of importance in the Sudan is the coming establishment at Mekwar of a cement factory, the foundation stone of which was laid on February 24 by Mrs. McCrae and Madame Buccianti. It has long been recognised that a great saving would be effected in the comprehensive scheme of constructional work in the Sudan if it was possible to manufacture Portland cement locally, and the favourable result of experiments by Mr. Alessandrini with various materials obtainable in the Sudan, which proved that a suitable cement could be produced there, led to the present project. There is no doubt that the public works now being carried out will require the entire output of this factory for some time, and the possibility of developing an export trade in cement must be a matter of a very distant future.

***

At the extraordinary general meeting of the Cyprus Oil Trust the chairman stated that the directors understood that it had been decided that oil deposits in the Empire should be absolutely under the control of the Imperial Government, and that an arrangement had been entered into with the largest group of the British oil companies to send oil experts to different parts of the Empire for the purpose of making thorough examinations. The directors considered it inadvisable, he added, to proceed with further exploratory work in Cyprus, and they had approached a company who owned a concession for petroleum in the Near East, and had been granted the right to prospect over 500 acres for a year from the signing of peace. The property was situated, he stated, seven miles from Dedeagatch, and the railway from Salonika to Constantinople ran through the property.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

INDIA'S INDUSTRIAL DEVELOPMENT.

Influence on British Trade.

Speaking before the Indian Section of the Royal Society of Arts, on March 13, on the report of the Indian Industrial Commission, Mr. D. T. Chadwick, I.C.S., Indian Trade Commissioner, said that they were all living in days of change. Movements which before the war were gathering force were rapidly taking form and demanding decisions—decisions profoundly affecting alike both the individual and State policy. India had not been exempt therefrom. Steamships, education, newspapers, telegraphs, and Japan have all combined to render no longer applicable to India the epithet of the "unchanging East."

Amongst other movements, the last twenty years there had shown the existence of a belief, widespread through the different classes, and often seeking vague, partial and hesitating expression, that industrial development and change in India were both possible and necessary for the general welfare of the country. In competent business circles there had been a breaking away from traditional lines of Indian industrial effort, viz., textiles, leather and mining. New ventures had been successfully inaugurated, such as steel and cement works, the application of electricity to industry, whilst at the other end of the scale were to be found some agriculturists who used internal-combustion engines to raise water, or who had invested money in rice-hulling plant, or joined together to erect a co-operative bone-crushing factory.

There had also been many failures and partial successes, due at times to insufficient preliminary inquiries or deficient management, or to any of the hundred and one difficulties which beset the path of the over-confident pioneer; but all these were efforts to broaden the field of industrial activity. Local governments, responding to the spirit of the times, had also felt the need of a wider basis of employment, and had endeavoured to help the movement by constantly revising the syllabus of studies at technical schools, by occasionally engaging experts, and even at times by actually pioneering, testing, and founding new industries. There were, however, no settled broad lines of general policy, and the Orders of the Secretary of State in 1910 and 1912, while restricting these official feelers after industrial development, seemed to leave local governments in doubt as to what extent and in what form they could give direct assistance to industrial effort. Moreover, they had neither the organisation nor equipment to give expression to their desire to help.

Thus in 1916 there was a large body of public and official opinion in India not content with existing industrial conditions, and looking to Government for a declaration of its policy, and for an ordered scheme of action. They had to remember to-day that the events of the last two years had brought in glaring relief many of India's industrial deficiencies, had called forth more varied industrial efforts, and had greatly intensified the belief in, and the need of, Indian industrial development. Such development was not necessarily antagonistic to British industries and commerce. Increased productive power would mean increasing needs and increased purchasing power. If India was to be the Asiatic pillar of the British Empire, sound in its foundations, shapely in its form, and durable in its structure, it was necessary that the basis of employment of her people be widened, her economic efforts better balanced, and her ability to meet her most urgent needs in years of stress increased.

Mr. Chadwick proceeded to give a very able and comprehensive analysis of the Commission's recommendations, and pointed out that it was clear that they forecasted great changes of method. 1. On the part of Government, a much more intimate association with commercial and industrial development, a smoothing away of some of the administrative annoyances in the working of certain acts, the more complete collection of information, and its presentation in forms more useful commercially, a marked increase in the amount of Government stores purchased locally, the provision of facilities for research, advice, and education, the fostering of cottage and small industries by demonstration, advice, organisation, and occasionally with finance, and aid to large ones where necessary in national interests. 2. On the part of the people a willingness to submit to the hard practical work of the factory, a readiness to understand and ameliorate the conditions of labour, and the adoption in many cases of more business-like methods. The co-operation and sustained effort of both sections are needed to achieve the far-reaching aims of the Commission.

Sir Charles McLeod, chairman of the East India Section of the London Chamber of Commerce, who presided, said that the report laid a great responsibility on the shoulders of the Government. Its acceptance would be to the great benefit of India. India would become prosperous and strong, and England would be more prosperous and stronger.

Sir Charles Armstrong proposed a resolution requesting the Council of the Society "To convey to the Secretary of State for India and the Government of India the opinion of the meeting of the desirability of prompt action, and of the necessity for appointing a special officer with an adequate staff to give early effect to such recommendations of the Commission as are approved by the Government of India." He said that there should be no delay in giving effect to the recommendations of the report. There had been some tendency to belittle the work of English people in India. The Englishman had done and was doing a splendid work in developing Indian industries, and there was every reason to encourage joint British and Indian enterprise. The resolution was adopted.

COMPETITION FOR INDIAN MARKET.

All interested in British trade with India are watching with absorbing interest the attitude of British labour, says the Delhi correspondent of *The Times* in a message dated March 4 (delayed). The present position is still that, whilst India is hungry for British goods, particularly machinery, and has money to pay for them, few are coming forward, ships arriving half empty.

A sign of the times is that whilst the embargo on motor-cars is removed, the first shipment of the new cars promised hails from America.

Most significant is the Prime Minister's statement that the concession of the miners' demands would raise the pit-mouth price of coal from 18s. to 26s. a ton. Whilst the sea route has been interrupted owing to shortage of freight, coal can be railed from the Bengal coalfields and delivered in Bombay at 16 rupees (£1) a ton. In addition, hundreds of thousands of hydro-electric horse-power will shortly be generated in the Western Ghats and cheaply delivered to Bombay industries.

The increase in wages, present and prospective, in India will do nothing appreciable to redress the balance. Nor can British labour hope to compete with Indian on the basis of higher technical skill. Indian manufacturers have learnt their lesson, and, putting aside the former practice of relying on an abundance of cheap labour, are installing the best automatic machinery that the world can supply. I know of many new industries being actively promoted, all founded on the installation of the finest plant that money can buy. Experience shows that with a modicum of skilled supervision Indian labour is capable of working such plant at a tithe of the wages that English mechanics would demand.

The question of price is vital in the Indian market. If the present attitude of British labour induces a large increase in the cost of production, whether actual or relative, British industry can say good-bye to the Indian market, where it is now supreme, but is faced with a daily increasing competition from the United States and Japan, whilst traders are eagerly awaiting the reopening of the market for cheap Continental goods.

EGYPTIAN MARKETS.

The receipts of the Egyptian Markets, Ltd., for the week ended March 6 were :—Cattle markets £1,337, general markets £564, total £1,901; total for year £18,530. For the corresponding week in 1918, ended March 7, the figures were :—Cattle markets £759, general markets £464, total £1,223; total for year £11,872.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

Although in some quarters of the market during the past week the tone has been slightly better than recently, no particular development in the turnover can be recorded. Traders are somewhat nervous as to the outcome of the Peace Conference in Paris, and, of course, the strained situation with regard to labour questions has had its effect upon business. A most artificial situation continues to exist with regard to Egyptian cotton prices. It is believed that if the Government control is released and free buying and selling allowed values might drop a 1s. a pound. In the circumstances users cannot be expected to buy at the moment. This factor is also adversely affecting trade in yarns made from Egyptian cotton. Spinners are quite unable to compete against producers of American descriptions. Order-lists for firms in Bolton and district are steadily running down, and now and again producers accept very low figures, there being considerable irregularity in quotations. Merchants who trade with Egypt have been somewhat concerned at the reports of the disturbances in Cairo. Business in cloth has been very quiet. Rather more inquiry, however, continues to be met with for the outlets of the Levant, and shipping facilities to certain ports in the Near East are now increasing. India has provided a few more offers in grey shirtings and lighter fabrics, chiefly for Calcutta, but only occasional sales have been arranged. A steady business continues to be done, chiefly in bleaching descriptions, for China. Reports from manufacturers as a body remain discouraging. American yarns have again moved off slowly. There is no possibility of spinners improving their position until stocks at the mills are reduced. Only a sorting up trade has been mentioned in export yarns.

NEAR EAST MARKETS.

Tobacco Factory for Cyprus.

Most of the tobacco grown last year is still in the island, owing to failure to obtain good prices. At a meeting of cultivators and merchants it was decided to form a company for the establishment of a tobacco factory, and to promote the development of the industry, with a capital of £10,000 (shares at £2). A provisional committee has been elected of seven well-known Limasol citizens, chiefly merchants. The planting of this year's crop should be completed by February 28; but District Commissioners have power to extend the time to the end of March. A hopeful view is taken as to island possibilities by growers, who hold that tobacco culture, under improved organisation and more expert knowledge, should prove an important addition to island industries. The formation of the company may be regarded as a welcome example of enterprise, the absence of which has been so marked in the past. Agriculturists are now busy over tobacco planting and other operations, and the outlook is excellent. The winter has been exceptionally mild, but there has been a fall of snow which has covered the heights of Troodos, and more would be welcome, as the rainfall, though good, has hardly been sufficient to supply the springs on which the summer supplies depend.

Madras Rice and Groundnut Estimates.

The total area under groundnut in the Madras presidency is estimated at 952,300 acres, which is 32.7 per cent. below the area finally reported last year.

The final report of the Madras rice crop for 1918-19 states that the total area under the crop is estimated at 9,711,000 acres, which is less by 194,000 acres than the area finally reported for the previous year. The yield is estimated at 77,514,000 cwt. against last year's final estimate of 20,044,000 cwt., a decrease of 35 per cent.

Burma's rice crop available for export is estimated at 2,250,000 tons of cargo rice, equivalent to 1,900,000 tons of cleaned rice. This is a serious decline compared with former years.

BRITISH COMMERCE IN THE BALKANS.

The Problem of the Ports.

(From a Correspondent.)

The prospects of British and, indeed, all sea-borne commerce in the Balkan Peninsula are seriously threatened by the efforts of two Powers to control the seaports which serve as distributing centres for the interior. Italy claims the great majority of the ports on the Adriatic coast, while Greece desires to appropriate the entire Ægean coast from Salonika to the Dardanelles. If these claims are conceded a formidable barrier against British trade with the interior of the peninsula will be created. Neither Italy nor Greece can hope to possess the back countries which are served by the ports to which they respectively lay claim; these Powers can only instal themselves in a fringe of territory along the sea-coast, but their tenure of this territory will involve the formation of a twofold customs barrier against sea-borne commerce destined for the interior.

Italy now lays claim to Trieste, Pola, Zara, Sebenico, and Avlona (Valona). The last-named port is the only important outlet which Albania possesses. The prosperity of Trieste, hitherto dependent on communication with an extensive hinterland, seems seriously threatened. Under the secret arrangement of 1915, Italy waived her claim to Fiume, but her recent occupation of the town with considerable forces has now been followed by Signor Orlando's declaration that it must be Italian. Fiume is a necessary outlet, not only for Croatia-Slavonica, but for Hungary; and British and Western interests, as well as local interests, require that commercial intercourse between the port and those countries should not be obstructed.

The question of the Ægean ports is still more important, and is now raised in an acute form by the demand of M. Venizelos for the assignment of the entire European coast of the Ægean to Greece. The proposal seriously affects the prospects of Western trade with a large portion of the Balkan Peninsula. The ports of Salonika and Kavalla form distributing centres for the whole of Macedonia and for the greater part of Bulgaria and Thrace. The other ports—Dedeagatch, the only outlet allowed to Bulgaria by the Treaty of Bucharest in 1913, which M. Venizelos now proposes to take from her, and Enos, at the mouth of the Maritza—are of minor importance. But the transference of all these ports to Greece, entailing the exclusion of the Macedonian, Bulgarian, and Thracian hinterlands from the sea and the bestowal of a complete monopoly of the maritime regions on Greece, is a matter which affects many interests besides those of the States immediately concerned. The wide regions of the interior possess great mineral and agricultural wealth, and will offer a splendid field for the employment of foreign capital—once a just settlement, satisfying legitimate claims, has been carried out—and a great demand for foreign industrial products will arise. The competition between Austro-German and British commerce, which in the years before the war was all to the advantage of the former, will revive, and British commerce, being entirely sea-borne, will be hopelessly handicapped unless it obtains unrestricted access to the interior.

On more than one occasion M. Venizelos, recognising the necessity for a maritime outlet to Macedonia and Bulgaria, declared his readiness to cede Kavalla to Bulgaria, provided Greece was allowed to retain Salonika. In the winter of 1912 he distinctly stated that he admitted the possession of an Ægean port by Bulgaria as a commercial necessity. He now couples his claim to the entire Ægean coast with an offer to afford transit facilities for merchandise to and from the interior similar to those which may be arranged by the Congress for certain States situated in the heart of Europe. An arrangement of this kind cannot be regarded as satisfactory. "So long," writes Sir Thomas Holdich, "as a developing country, growing in agricultural wealth and in physical manpower, is under the necessity of appealing to some other country for a right of commercial highway which can only be obtained by grace or favour, there is little chance of that permanent peace between the two countries which is the offspring of mutual independence." An arrangement of this nature may be inevitable in the case of states such as Czecho-Slovakia, which are situated at a great distance from the sea, but is inapplicable to Bulgaria, in view of the fact that the Bulgarian element, both Moslem and Christian, reaches the Ægean coast at various points. It is also more than doubtful whether the merchandise in transit to and from Bulgaria would pass unmolested through a town under Greek administration in view of the intense hostility of the Greeks to the Bulgarians. The interests of all countries that hope to have trade relations by sea with Bulgaria require that she should have her own outlet at Kavalla. Dedeagatch, which was assigned to her in 1913, is of little value as a port owing to the shallowness of the roadstead and to difficulty of access from the interior. Western commerce would be seriously penalised if compelled to take the circuitous route by Varna and Burgas, which in any case possess no importance as regards Macedonia.

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

THE ATHENS BRITISH CHAMBER OF COMMERCE.

Its Development and Future.

The first annual general meeting of the founders of the British Chamber of Commerce for Greece and British Club was held recently in the reading-room of the Association under the presidency of the British Minister, the Earl Granville, G.C.V.O. In opening the proceedings the president said that it was with regret he had to announce the resignation of the chairman, vice-chairman, and the secretary, who were all leaving Athens. Lord Granville paid a tribute to the valuable work they had done in starting the Association, and said that they would all agree that the Chamber would not have got on so well without the invaluable help and experience of Mr. Bilinski. He further announced that two other members of the original committee had also left, Mr. Waugh and Mr. Charlton Whittall.

Mr. Bilinski then addressed the meeting as follows:—A brief survey of the inception and work of the British Chamber of Commerce and British Club, I think, will not be considered out of place. Thanks to the initiative of Mr. Waugh, who was Commercial Attaché in Athens, to the wholehearted support of Lord Granville, and to the willing and generous aid of the members of the British communities in Greece the Chamber of Commerce and Club were founded on June 3 last. Owing to the state of war trade and commerce were at a standstill, but it had been felt that steps should be taken as soon as possible to establish closer relations with Greece and to lay the foundation for future activities. The British Chamber of Commerce was, therefore, established, and with a view to still further promoting the objects aimed at arrangements were made for a group of representative Greek business men to visit England as the guests of the Federation of British Industries. I understand that the visit was a great success, and there is every reason to hope that a considerable expansion of trade with Great Britain will follow.

Owing to unavoidable delays in connection with the registration of the Chamber of Commerce under Greek law it has not hitherto been possible to admit Greek members, but I am glad to say that the Chamber of Commerce has now been duly registered, and I have every hope that we shall have a very large membership. Before saying anything of the future activities of the Chamber of Commerce I should like to make a few remarks about the British Club. As you are aware the club was formed not only for social purposes but also as an indirect means of furthering British influence and interests by creating a common meeting place for British subjects, where they could exchange views on matters affecting the British community itself, and on the wider subject of knitting closer still the social, commercial, and other relations between Great Britain and Greece.

This is one of the principal reasons why it was decided to pool the resources of the British Chamber of Commerce and Club, although the two institutions are distinct. As you will see by reference to the balance-sheet and income and expenditure account to December 31, which I will later submit for approval, the result of seven months' working has been most satisfactory. I think I may also say that the club has been a success in other respects, and has, in particular, been happy in being able to offer hospitality to a large number of naval and military officers on leave or temporarily in Athens. But I must strike a note of warning. The end of the war has necessarily brought many changes, and I regret to say that a considerable number of our members, including myself, are leaving Greece to take up again their various duties and avocations which the war had interrupted. Speaking for myself, and I feel sure I shall be expressing the feeling of others also, I shall follow the fortunes of the Chamber of Commerce and of the Club with the greatest interest, and will be glad to do anything I can to further the common cause we have at heart. The community will be greatly reduced, however, and it will be up to those members of it who remain to put even more enthusiasm and energy into the work than they have already done. Knowing each member personally I have no doubts in my mind on this point, but so far we have only been delving, the real hard work of digging foundations and building thereon is to come and we must all put our backs into it, co-ordinating our individual efforts so as to form them into one harmonious national purpose, even though this may occasionally involve the sacrifice of personal interests.

I think most of you are aware of the fact that I am leaving Greece to take up new duties in the execution of which I hope I may be able to do something towards the furtherance of British interests, and I take this opportunity of wishing you farewell and thanking you again for the great honour you conferred on me by electing me your first chairman. I sincerely regret that I was not able to do as much work as I should have liked. As a matter of fact a good deal of delving, which I referred to above, has been done, but that has mainly been done by my colleagues on your committee. Without wishing to make any invidious distinctions since all have been so loyal and zealous, I should nevertheless like specially to thank Mr. Bates, the honorary treasurer, who has willingly devoted much time, thought, and energy in all times and seasons to the work of the club and to Mr. Mountain, the honorary secretary, whose equally willing efforts and whose experience and help in matters relating to the Chamber of Commerce have been invaluable. May I also thank you, my lord, for the invaluable courtesy, support and wise counsel you have favoured me personally with in addition to everything else you have done as president.

On the conclusion of Mr. Bilinski's address the following gentlemen were elected to form the committee for the current year: Captain Cottrell, R.N.V.R., C.M.G., chairman; the Commercial Attaché of H.M.'s Legation, vice-chairman; Mr. E. Bates, treasurer; Mr. W. Hillier, acting secretary; and Messrs. Butler, Calphoglu, Major Kennard, J. MacDowall, and Rowe. Mr. E. T. Agius, 12, Lime Street, London, has kindly undertaken to act as secretary for the Chamber in London, and Mr. Felix Cauchi has been appointed secretary for Salonika.

SHIPPING INTELLIGENCE.

White Star America—Egypt Service

The White Star Line has resumed its passenger and cargo service between New York and Boston and the Mediterranean after a considerable interval, owing to the war, the s.s. "Canopic," of 12,000 tons register, having left New York recently with over 1,000 passengers.

In the years before the war the White Star Line transferred each winter some of its finest and most popular units on the North Atlantic service to the New York, Mediterranean, and Orient route. The service proved extremely popular, some of the boats carrying as many as 400 first-class passengers from America to Egypt in January and February.

Sailings to Roumania.

According to advices received from Bucharest, it is advisable that all vessels proceeding to Roumanian ports should take sufficient provisions for the round voyage, including the period of their stay in such ports, as foodstuffs of all descriptions are very scarce throughout Roumania.

Cunard Developments.

Another freight service is being started to Near Eastern ports by the Cunard Steamship Co., Ltd. The first ship will sail this month for the Piræus, Salonika, and Constantinople.

A contract has been placed by this line with Messrs. Swan, Hunter, and Wigham Richardson, Ltd., of Wallsend-on-Tyne, for a large passenger steamer 600 ft. long. The vessel is to have a displacement of 25,000 tons and a deadweight carrying capacity of 12,500 tons.

Prince Line.

The offices of the Prince Steamship Company are to be removed from Newcastle to London on March 31. It is stated that the reason for the change is that with offices in London greater facilities will be given. The whole of the staff with the exception of juniors is being transferred.

VIA SUEZ OR THE CAPE.

Canal Dues v. Coal.

In an interesting article on the Suez Canal route in the *Egyptian Gazette* Mr. Victor L. Trumper points out that shipowners must see that his ships make as many voyages as they can to make the necessary earnings in their limited life, and in the Eastern trade this can only be done by using the Suez Canal. "It may be objected," he says, "that the heavy dues for Canal transit neutralise the saving effected; but except where the difference in distance is very small, the Suez Canal dues do not affect the main contention. Taking the voyage from London to Calcutta as a standard, the distance viâ the Cape route is 11,600 miles, whereas viâ the Canal it is 8,000 miles, a gain of 3,600 miles. Now taking only one item of cost incurred by this increased mileage, namely, coal: The extra amount of coal burnt would probably be 500 tons, and this at an average of £5 per ton is £2,500, or more than two and a-half times the Canal dues; and this coal expenditure is only one item amongst many others.

"Someone will say, What about the Australian ports, surely the difference in distance between the Cape and Canal routes is so small that the latter's dues balance the cost of the increase of mileage? Taking London to Adelaide as the standard, there is a saving of about 1,000 miles on the Canal route, which means an expenditure of about £700 on coal, or not far short of the Canal dues that she would pay; and if one takes her other expenses into account, it would probably more than balance matters. But there is another factor which enters into this case, and that is the distance between coaling stations. A ship carries two things, coal for consumption in her furnaces (generally known as bunkers), and cargo. If a ship is loaded down to her marks, it means that those in charge have decided how much bunkers they need, and the rest of the weight in the ship consists of the cargo, so that it does not need a deep student of mathematics to see that more bunkers mean less cargo in exact ratio. Now on the Canal route between Australia and London, the longest distance between coaling ports, namely, Fremantle and Colombo, is in round figures 3,000 miles. On the Cape route the longest run is between Adelaide and the Cape, a distance of nearly 6,000 miles, or if Albany is taken as the last coaling port it is a thousand miles less. Even with this smaller estimate a ship has to steam 2,000 more miles without rebunkering, and consequently the extra coal that it would be necessary to carry would be from two to three hundred tons. This means that that quantity less cargo can be carried, and with high freights that has to be seriously considered. A certain large company used to send their steamers out to Australia viâ the Cape, because freights were comparatively low and it paid to put bunkers in freight-earning space; but the ships were sent home viâ the Canal, for freights were high and space was more valuable for cargo than for bunkers.

"Recently a large 'standard' ship passed through the Canal. She was built in Japan less than a year ago, and cost over £650,000. She has already cost a good deal in repairs, and will probably not last more than ten years, so that for even a moderate return on the outlay she will have to make gross earnings of about a million pounds in ten years. Of course, this is an extreme case, but it serves to point the moral as to the necessity for quick returns, for if the ship can make four or five voyages more during her lifetime by using the Suez Canal it may make all the difference between profit or a big loss. Perhaps the most convincing example, however, of the value of the Canal route was shown during the war. At one time, owing to the danger from submarines of the passage through the Mediterranean, ships from ports east of Bombay were sent home viâ the Cape. However, after a few months the route was changed again to come through the Canal, as in spite of the increased losses of ships, which was serious, it was found that food got home in greater quantities, because owing to the length of the Cape route, ships were immobilised for such a long period, and this more than counterbalanced the losses involved by the Canal route."

PROMINENT INDIAN INDUSTRIES.

ENGINEERING NOTES.

Markets for Water Lifts.

An agricultural engineer who has recently returned from the East lays great stress on the need for agricultural machinery there. Large landowners unable to obtain the required machines are compelled to leave the greater part of their land uncultivated; whilst small holders who form the majority of agriculturists are struggling with damaged implements and primitive devices to carry on the various works on their farms. Many orders, it is said, have been booked by representatives of foreign engineering firms, but none of them will undertake prompt delivery and no time is fixed. What really puzzled this agricultural engineer was why in such districts as Egypt, Syria, some districts in the Persian Gulf and in the Balkans, British firms do not avail themselves of the present opportunity to secure these markets by supplying the best buyers, the farmers, with what they urgently need before other competitors are thoroughly organised for this purpose. The question of irrigation is, of course, one of the most important for all Oriental agriculturists. Various devices for the purpose are in use, more or less of primitive design. The Persian wheel is still used on irrigated land which is 3 or 4 ft. above water level. Driven by an animal this wheel, on such a lift, will discharge less than a gallon per second. Another device is the Archimedian screw water lift which discharges nearly one gallon per second on a 2 ft. lift, and will water an acre an inch deep in an hour. It consists of a double spiral working in a tight masonry cylinder, and costs from £40 to £45.

The wooden Archimedian screw is a very common implement in Egypt, and when water is scarce or at a low level the fellaheen can be seen working it day and night. The centre is composed of a square iron shaft, and round this thin pieces of wood are strung. Each piece of wood has a square hole in the middle, the holes are made at a greater and greater angle, so the slips of wood form a double spiral. The edges of each piece of wood are bevelled to give a smooth passage for the water. Finally the implement is incased in a wood cylinder, and a handle is put at the end of the shaft. The bottom end is inserted into the water to be lifted. The out-turn of water is very good, and the implement can be made by any village carpenter. These and other "home made" water lifts are simple but not efficient, and some cost more than a modern water lift of British design and manufacture, simple as the Persian wheel or the Archimedian screw water lift, but stronger and capable of working on high or low lifts. Manufacturers of such water lifts should lose no time in approaching the Eastern Markets.

Openings for Threshers.

The primitive system of threshing throughout the East, by tying a number of horses or cattle together and making them walk or run round in a circle, has been mentioned in previous notes. In Egypt they use a machine called the "Norag," which consists of three axles, on each of which are fixed six to seven iron discs. The axles revolve in iron bearings, and the whole rests in an angle-iron frame. The machine is pulled by one pair of bullocks, and will thresh as much as five to six pairs of bullocks would tread out. The discs are kept sharp by the occasional use of the file. Beyond this the machine needs no attention, as the whole thing is very strong and practical. The price is from £2 15s. to £4. In working the grain is put in a heap on the threshing floor, and the Norag is driven round this over a thin layer of grain spread out round the circumference of the heap. The straw is carefully turned and fresh material is gradually taken from the heap, which gradually diminishes in size till the whole is threshed. This machine, however, often causes injury to the grain by bruising it between the ground and the iron discs. Users of this primitive device should be shown the small-size thresher, as made in Scotland and Ireland, which, driven by one-horse gear, or by hand-power or treadle, will give them better and cleaner results in comparatively much shorter time, while the price of the thresher is only £3 to £4 more than the device without the bullocks. The season is approaching, and if these threshers are introduced in time a number of orders should be obtained from Egypt, Syria, Macedonia, and Bulgaria.

Shipbuilding in Greece.

The great losses caused by submarines and mines during the war have given rise to a serious shortage of shipping throughout Europe, and especially in the Mediterranean and the adjacent seas, where the carrying and distribution of food and other necessities depend on shipping transport. An effect of this shortage was the employment of many sailing ships for long and short distances, and the successful installation of oil-engines in some of these vessels as an auxiliary power for propulsion. As a rule the engines in such cases are used when the vessel is becalmed, or to assist her during bad weather; but it will be readily understood that in a sailing ship with sails set and engines under way the speed with a fair wind could be equal to, if not greater than, that of the ordinary steam tramp. Scandinavian shipowners were the first to appreciate the value of these auxiliary ships, many of them being owners of sailing craft fitted with auxiliary power. France, also, has recently become interested, and a large number of these ships has been purchased by the French Government, which has also placed very extensive orders for further craft constructed on similar lines. It is interesting, therefore, to note that the construction of such auxiliary ships has been taken up by shipbuilders in Greece. According to recent reports, a 600-tons sailing ship fitted with auxiliary power was successfully launched from one of the shipyards at the Piræus three or four weeks ago. At present no other particulars of the ship, which was named "Venizelos the Liberator," are known, but it is stated that her lines and the construction generally have been admired by foreign experts. The launching and naming of the ship was telegraphed to M. Venizelos in Paris. The shipbuilding industry was flourishing in Greece in the early part of the nineteenth century, and up to the time that sailing ships were superseded by the steamships. In recent years shipbuilding yards of the most modern type and technical efficiency have been established at the Piræus and Syra, in which iron steamships and other craft are built and engined mostly for the Mediterranean and Black Sea trade. The high price of coal has probably encouraged the building of auxiliary ships, which, again, compared with sailing ships, have the advantage of more or less regular speed throughout the entire voyage, while higher freights are obtainable. Moreover, precedence is usually given to auxiliary vessels over ordinary sailing ships when docking, entering or leaving port, the ships being accorded steamer turns while towage expenses are entirely eliminated.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news from the Director General of Commercial Intelligence, dated March 13:—

Light rains in the west of the United Provinces and in parts of Bihar and Orissa and South Burma. Rain is still needed for unirrigated crops in the Punjab.

The forecast for rape and mustard seed is 2,939,000 acres, as compared with 3,942,000 acres at this time last year. Linseed is 1,841,000 acres as compared with 2,932,000.

Bombay cotton market is steadying, fully good broach being quoted April-May delivery 449 rupees 8 annas.

There is no improvement in the piece goods market.

Calcutta jute gunny market remains quiet. Rice market no change.

Dated March 7 (delayed).

Widespread rain in Bengal and Assam; light rain in Orissa, Chota Nagpur, in parts of Burma, the Central Provinces, and Punjab.

The Cambodia cotton crop of Madras is reported to be particularly good. Estimated yield, 250,000 bales of good quality.

The Bombay cotton market is depressed. Fully good broach April-May delivery is quoted Rs. 467. Piece goods dull. Jute and gunny prices are slightly easier. Rice market, no change.

The reconnaissance survey (ten miles) of the Ghum, Simana, Bustee Railway (Darjhiling line) has been sanctioned.

The following deferred telegraphic transfers on London have been applied for and allotted in India:—February 27, Calcutta £85,000, Bombay £20,000; March 6, £110,000.

ROUMANIA'S COMMERCIAL POSSIBILITIES.

Outlook for British Trade.

M. George Boncescu, Commercial Attaché at the Roumanian Legation, gave an interesting lecture on "The Commercial Possibilities of Roumania" to the members of the Bishopsgate Ward Club at the Great Eastern Hotel on March 12.

The real revenue of Roumania, the revenue that went to the country itself and not to the various enterprises worked with foreign capital, he pointed out, was derived from agriculture. The agricultural produce was responsible for nine-tenths of the total exports of Roumania. For this reason the general policy of the State tended towards the consolidation of the agricultural elements. This element had varied according to the evolution of the political and social life of the country during the last centuries. Before 1864, the peasants were little better than slaves; they owned only one-sixth of the land, and their property rights were very uncertain. The consequence was that the total production of the country (wheat, maize, barley, and oats) at that time only reached 13,000,000 to 14,000,000 bushels. After the land reforms enacted in 1864 by Prince Alexander Cuza, and also after the passing of the Land Property Act of 1907, the peasants had the possibility of getting gradually more land from the great landowners, so that now the peasants owned four-sixths of the land, and the production in 1912 had risen to over 83.000,000 bushels.

These reforms were considered insufficient, and in 1916 a new agrarian law was passed by the Roumanian Parliament. Owing to the German occupation this law could not be enforced, and it was only in December, 1918, that the King signed a decree making the law operative after ratification by a new Parliament to be elected by universal suffrage. In accordance with the stipulations of this law all the cultivable lands belonging to the Crown, agricultural bodies, public or private ecclesiastical foundations, and country estates belonging to absentee landlords, were to be expropriated and sold to peasants at a price to be determined by local distribution committees, taking as a basis of settlement the prices ruling in the locality during the five years prior to 1916. Under the provisions of this law no property could now exceed 500 ha (about 1,200 acres), except oil-bearing properties. The purchase price was to be paid to private owners in 50 year annuities yielding 5 per cent., or in perpetual annuities to ecclesiastical bodies. The law would release to small farmers about 2½ million ha (about 6½ million acres) of cultivable land in Roumania proper, and would also be applied to Bessarabia. It was interesting to note that in a country where large estates were prevalent this law had met with little or no opposition. There had, however, been critics who had predicted a marked fall in the output and quality of the crops as a result of too much parcelling out of property and owing to the lack of means of cultivation at the disposal of the farmer. Of course, *prima facie* the argument would seem convincing, and to a certain extent was right. But if it was true that at present the peasant lacked both material, means, and agricultural education; it was also true that, by changing the system and giving the peasant the possibility of bettering his situation and also the necessary education, he was very apt to become in a short time an intelligent and independent farmer. A vivid illustration of the capacity of economic development of the peasant farmer was to be found in the creation of Country Farming Associations, which, in 1903, numbered but eight. In 1910 they formed 275 associations, with a membership of 36.000, farming 500.000 acres, and paying £225.000 rent. Another powerful group of peasant institutions were the peasant banks. Their development was really remarkable. In 1901 there was only one bank, but in 1911 they found 2.056 banks, with 450.000 members, and nearly £2,500,000 capital.

Industries.

The Roumanian industry was, so far, in its infancy, he continued. Fifty or sixty years ago there was no such thing as Roumanian industry, because no industrial enterprise could start and flourish in a country which had no political independence and was always under the menace of becoming the battleground of her neighbours. In 1887 was passed the first law for the encouragement of national industry. This law was supplemented by two Acts of Parliament passed in 1906 and 1912, giving to every individual enterprise using at least 5 h.p. or employing twenty hands daily, the right to import free of duty for a period of from twenty-one to thirty years the raw materials used in certain industries. They also could obtain the use of land belonging to the State at a low rental for the purpose of putting up factories; reduction in the rate of freights on the State railways, exemption of taxes on the payment of a small tax if the profit of the enterprise exceeded 5½ per cent. The number of protected industrial enterprises was in 1912 769, representing a capital of £11,250.000, and employing 46.200 hands, of which 37,000 were males and 9,200 females. The manufacture of the following articles was protected:—Bricks, metallurgy, manufactured wood work, woollens, ribbons, leather, vegetable oils, sugar, breadstuffs, petroleum products, soap, candles, and chemicals.

The Oilfields.

Discussing the oil industry, M. Boncescu said that the existence of oil was noticed as far back as 1640 in the district of Bacau. The exploitation was, of course, at the time most primitive. The peasants used to dig a well up to 200 yards deep and extract the oil by hand devices. It was only in 1857 that the extraction attained anything approaching an appreciable figure. In that year 275 tons, valued at £6,000, were extracted. With the improvement of means of communication the output increased by leaps and bounds, and in 1912 the total production was 1,700.000 tons, valued at £2,500.000, out of a total world production of 47,000.000 tons. The number of borings in exploitation in 1912 was 946, and the pipe-lines for the transportation of crude oil then had a length of 1,094 k.m., of which 853 k.m. were in Prahova district alone. There were sixty-five refineries in 1912, but they had been destroyed together with all the plant before the Germans invaded Roumania. He believed there were now only two in working order. The borings had been restored to a great extent by the Germans during the occupation, and they retired in too great a hurry after the Armistice to be able to destroy them, so that the crude oil production at present was about 75 per cent. of the pre-war output. Unfortunately, the lack of means of transportation made it impossible to export any appreciable quantity at present.

The coal mines of Roumania proper only gave an inferior quality of lignite, and very little anthracite (about 2,520 tons). The total coal output reached 242,000 tons in 1912, valued at £100.000. It was estimated that the total quantity in Roumania did not exceed 36.000,000 tons, but with the incorporation of Transylvania new sources of supply would be available from existing mines, which would make Roumania practically self-supporting in this commodity. The quarries occupied a surface of 725 ha,, and the output reached 170,000 cubic metres in 1912. The extraction and sale of salt was a Government monopoly, yielding a revenue of about £350,000. The quantity extracted in 1912 was 115.000 tons. The sugar industry in Roumania was very prosperous, thanks to the protection granted by various Acts of Parliament. The consumption of beetroot in 1911 was over 12,000,000 tons, the quantity of sugar produced in the same year being 500,000 tons. The forest industry was far from being developed to its full capacity. There were before the war 75 sawmills provided with modern machinery, with an invested capital of about £2.000.000, and using 5.500 h.p. The metallurgical and textile industries were still undeveloped, but (especially the latter) could be greatly improved, as there was a good deal of raw material in the country, and more could be produced. The same could be said of the cement industry.

Commercial Progress.

The foreign trade of Roumania showed a remarkable development during the last forty or fifty years. Whilst in 1877 the total trade was only about £19,000,000, with a balance of £7,500,000 in favour of the imports, in 1912 it reached over £46,000,000, and the balance of trade was shifted to the exports to the extent of over £9,000,000. It was interesting to note that the total trade of Roumania exceeded the foreign trade of Bulgaria, Serbia, Greece, and Montenegro put together. Belgium was the biggest buyer of Roumanian grain (about £10,500,000), but most of the quantity imported was re-exported from Antwerp. Great Britain bought direct only to the extent of about £1,000,000, and about the same figure was reached by Germany.

With the exception of cotton yarn and cotton piece goods, the bulk of manufactured articles imported into Roumania came from Germany and Austria-Hungary. In 1913 Germany contributed 40 per cent. to the total of imports, Austria coming second with 23 per cent., and Great Britain third with 9.45 per cent. Some articles, like jute bags, cotton goods, etc., were shipped to Roumania via Hamburg, and were thus included in Germany's figures. Not many years ago Great Britain and France were the largest suppliers of woollen goods, but the Germans succeeded in imitating the British and French patterns, and by bringing down the price and by granting special credit facilities they increased their exports to Roumania to the detriment of British and French manufactures. What happened with the woollen goods happened with many other manufactured articles.

M. Boncescu went on to describe Germany's methods in accomplishing the economic domination of Roumania. Fortunately for Roumania, he said, this domination was now a thing of the past. The Germans themselves provided the undoing of their own creation. What Roumania had suffered under the German occupation no one who had not been an eye-witness could tell. On one thing every Roumanian was firmly decided: never to have any more intercourse, commercial or otherwise, with Germany.

The Future.

Roumania was undoubtedly destined to become one of the most important countries in Central Europe. Not being an industrial country the destruction wrought by the Germans would not paralyse the power of recuperation of the country. If Roumania was sufficiently and quickly provided with agricultural machinery, cattle and seed, and also with railway material she would soon be in a position to start the export of grain and oil, which would provide the means of paying the enormous debt contracted during the war. So far as trading relations were concerned, Roumania was at present a no-man's land, and the opportunity offered to British enterprise was undoubtedly unique. The Roumanians had always considered the British trader as most reliable, and the best to deal with. Roumania would be a most important market for British goods, and there was unlimited scope for British capital in participating in the development of the industrial life of the country.

Mr. H. Locke, Manager of the Bank of Roumania, said that he endorsed what had been said about the good prospects for business between this country and Roumania. The figures given by the lecturer referred principally to old Roumania, the addition of Transylvania, Bessarabia, and the Bukovina would make a great difference to the resources of the country. In Transylvania coal mining was an established industry, and, besides this, there were various metals; whilst Bessarabia was one of the most fertile spots in the world for the production of cereals. With regard to the present trade in grain, he believed that part of what was at present put down in the returns as going to Antwerp ultimately found its way to Scottish ports. He believed that the Consular representation of this country would shortly be improved. The British were extremely popular in Roumania. If we could find the means of doing the trade that the Roumanians seemed disposed to do with us, all their trade would come to this country. In the matter of payment there was a difficulty, because there was not much in the country, and prospects of exports this year were very slender apart from oil. If the railway system could be get into order, there was some prospect of oil being exported, and next year some quantity of cereals might be available.

COMPANY NOTES & REPORTS

Anglo-Persian Oil Co.

The report of the Anglo-Persian Oil Company for the year ended March 31 states that the profit for the year, after allowing for depreciation, debenture interest, home charges, and royalty amounts to £1,308,558, to which has to be added the balance brought forward from 1916, £19,537, making a total of £1,328,095; from which the following deductions and appropriations have been made :—Repayment to the Burmah Oil Co., Ltd., of amount advanced under preference share dividend guarantee, £175,547; expenses in connection with the new issue of capital and of debenture stock, £42.839; debenture stock redemption reserve, £80,000; preference share reserve, £50,000; general reserve, £100,000; amortisation reserve, £100,000; total, £548,386; leaving £779,708. From this the following dividends have been paid :—Preference shares : Dividend at the rate of 6 per cent. less income-tax for the half-year ended September 30, 1917, £30,000; do. do. for the half-year ended March 31, £60,000; participating dividend at the rate of 2 per cent. per annum, less income-tax, £30,000; total, £120,000; and the payment is now recommended of a dividend on the ordinary shares at the rate of 8 per cent. per annum, free of income-tax, £204,966; total, £324,986; leaving a balance of £454,722 to be carried forward subject to excess profits duty. During the year under review the further 1,000,000 participating preference shares referred to in the last report were issued at a premium of 2s 6d. per share, and further 5 per cent. debenture stock to the amount of £1,800,000 was issued for the purpose of providing additional capital for the company's subsidiary concerns. The claim against the Persian Government for the loss sustained in connection with the cutting of the company's pipe line in 1915 still remains unsettled, but proposals have been put forward which will, it is hoped, lead to a friendly settlement. The balance of the refinery extensions at Abadan for which capital was subscribed by his Majesty's Government is now coming into operation, but the full benefit of these will only be shown in the accounts for the financial year of 1919-20. The further extensions for which the preference share issue was made last year have been a good deal delayed by the difficulties in securing delivery of plant, but they are now well in hand. When these are completed, the refinery capacity at Abadan will be about two and a-half times greater than it was in the year for which accounts are now submitted. Another refinery which will further considerably increase the company's throughput is now being erected in the neighbourhood of Swansea. The present producing field still maintains its highly productive character, and a further well sunk in a reserve field has proved an additional large area of productive territory, the well in question being fully equal in capacity to the best of the wells hitherto struck. A number of other fields of a most promising character have been reported upon by our geologists. In several of these test wells are now being sunk. The undertakings of the British Petroleum Co., Limited; the Homelight Oil Co., Limited; and the Petroleum Steamship Co., Limited; which were acquired from the Public Trustee in 1917 have proved to be valuable acquisitions, and arrangements are now being made for largely extending their activities. The company, through its subsidiaries, now owns tankers and other vessels of an aggregate deadweight capacity of 162,000 tons, and contracts have been placed for further vessels to a capacity of about 150,000 tons deadweight. Since the last general meeting Sir Campbell K. Finlay has resigned his seat on the board, and Mr. Robert I. Watson has been elected to fill the vacancy. During the year Lord Southborough, P.C., G.C.B., G.C.M.G., G.C.V.O., has accepted the seat on the board rendered vacant by the death of the late Mr. W. K. D'Arcy. Under Clause 84 of the Articles of Association, both Mr. Watson and Lord Southborough now retire, and, being eligible, offer themselves for re-election. Mr. F. W. Lund, Mr. Frank C. Tiarks, and Sir T. R. Wynne, K.C.S.I., K.C.I.E., retire by rotation, and, being eligible, offer themselves for re-election. Mr. W. St.D. Jenkins, C.B.E., was appointed last year by his Majesty's Government as an *ex officio* member of the board to take the place of Admiral Sir

Edmond J. W. Slade, K.C.I.E., K.C.V.O., who now holds the position of an ordinary director. Mr. Jenkins has recently retired, and Sir Frederick W. Black, K.C.B., has since been nominated by the Government as their second representative. Messrs. Brown, Fleming and Murray, C.A., retire from their position as auditors under Clause 115 of the Articles of Association, and, being eligible, offer themselves for reappointment.

Meeting, Britannia House, Great Winchester Street, E.C., 26th instant.

Eastern Bank.

The directors of the Eastern Bank announce that the net profits to December 31 last, after providing for contingencies and including the balance brought forward, amount to £84,806. An interim dividend at the rate of 3s. per share was paid on October 7 last, absorbing £22,500, and it is now proposed to pay a final dividend of 3s. per share, less income-tax, making 7½ per cent. for the year, which will absorb £22,500, placing £20,000 to the reserve fund, which will then stand at £110,000, and carying forward £19,806.

National Bank of Egypt.

The report of the directors for the year ended December 31 states that the gross profit for the year, after providing for depreciation on the bank's building and furniture, for rebate of discount and for bad and doubtful debts, amounts to £964,595—after deducting from this sum—for directors' fees, £7,400; for current expenses, £255,343; for special bonus to staff, £8,000, £270,743, there remains a net profit of £693,851. In conformity with article 49 of the Bank's Statutes a dividend of 4 per cent. is payable on the share capital, £120,000, and 10 per cent. of the net profit must be passed to the statutory reserve fund, £69,385, £189,385. After these statutory reductions there remain £504,466, adding to this the balance carried forward last year, £49,505, the amount available is £553,972. The directors propose, in accordance with article 49, par. 2a, of the statutes:—1. To transfer from the special reserve fund (Fonds de Prévoyance) to the statutory reserve fund a sum of £47,336, to bring the statutory reserve fund up to £1,500,000; 2. To transfer from the available undivided profits of the year to the special reserve fund the sum of £267,336, to bring the special reserve fund up to £500,000, £267,336, which leaves £286,635. From this amount the directors recommend the payment of an additional dividend of 6 per cent. on the share capital, which will absorb £180,000, and leave a balance to be carried forward of £106,635. Each share will thus be entitled to a dividend of £1, equivalent to 10 per cent. on the share capital.

Ooregum Gold.

The directors of the Ooregum Gold Mining Company of India, Ltd., recommend a balance dividend for the year ended December 31 last of 1s. 6d. per share, less income-tax at the rate of 5s. 9d. in the £, on both preference and ordinary shares, payable on April 16 to holders registered 18th instant. This will make a total distribution for the year of 35 per cent. on the preference and 25 per cent. on the ordinary shares.

Dividends, Payments, &c.

Baraoora (Sylhet) Tea.—Second interim dividend of 5 per cent. (10s. per share), less tax, on ordinary, payable 31st instant.

Greek Guaranteed £2 10s. per Cent. Gold Loan of 1898.—The Bank of England is prepared to receive coupons due 1st proximo on these bonds. Lists can be procured at the dividend pay office.

The net profits of the Bank of Mysore for 1918 amounted to Rs.2,28,294, making with Rs.24,158 brought down an available sum of Rs.2,52,453. At the meeting held on February 5, a further dividend of 5 per cent. was declared, making 9 per cent. for year, as compared with 8 per cent. for each of the two preceding years, and Rs.70,000 was added to reserve fund, leaving Rs.13,453 to be carried forward.

The directors of Venesta, Ltd., have declared a dividend at the rate of 6 per cent. per annum (less income-tax at 6s. in the £) on the Preference shares for the six months ending 31st instant, payable on that date.

The report of the Uyakellie Tea Company of Ceylon for the year ended December 31 states that the profit was Rs.5,119; Rs.5,714 was brought forward, making Rs.10,833, which the directors propose to carry forward.

The directors of the Bengal Iron and Steel Company announce an interim dividend of 8 per cent. actual, less tax.

The report of the Central Bank of India for 1918 states that the net profit was Rs.5,22,747, making with amount brought forward Rs.5,53,242. From this an ad-interim dividend at 8 per cent. per annum, free of tax, was paid for six months ended June 30, 1918, and directors have transferred to reserve fund Rs.3,00,000. Dividend declared at rate of 9 per cent. per annum, free of tax, for half-year ended December 31, Rs.40,742 being carried forward. With a view to increased ability to take a more important part in the ever-growing requirements of Indian banking the directors think it advisable to increase the authorised and subscribed capital of the bank from rupees 50 lakhs to rupees one crore.

The Bank of England announces the numbers of 689 bonds of the Greek Guaranteed Two-and-a-Half per Cent. Gold Loan of 1898 which have been purchased for the sinking fund and cancelled.

Khedivial Mail Steamship and Graving Dock.—Holders of preference share warrants to bearer should present coupon No. 41 for payment on 31st instant. Preference transfer books will be closed from March 24 to March 31 inclusive.

The directors of the Compagnie Algérienne of Paris, have declared a dividend of 57½ francs per share for 1918. The previous dividend was 54 francs.

The ordinary general meeting of the Produits Chimiques et Huileries d'Odessa will be held at Brussels on March 27.

The ordinary general meeting and an extraordinary general meeting of the Est-Asiatique Français will be held at Paris on March 28.

Messrs. R. Raphael and Sons announce the numbers of 4½ per cent. bonds of the Piræus, Athens, and Peloponnesus Railway drawn for repayment at par on April 15.

Mr. Sidney Lamert presided at an extraordinary general meeting of the United Egyptian Lands on March 17, when a resolution was adopted making alterations in the articles of association in connection with the proposed reconstruction of the company.

According to a wireless message from Trieste, the Austrian-Lloyd Steamship Company has been renamed the Lloyd-Triestino Steamship Company.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Our market this week has been affected by the possibilities of coal and other strikes, and, also, to a certain extent, by the cables from Egypt regarding the recent political troubles there in connection with the Nationalist agitation.

Government stocks, however, have continued an exceedingly firm spot, and Unifieds are again a point up at 93½, with sellers still exceedingly scarce. Some business has been done in the 3½ per cent. Prefs. round the current level at 78½.

In Bank shares Agriculturals are 1-32 easier at 6⅞, and Nationals are ¼ lower at 22⅜. The report of the latter bank shows that although the dividend to be distributed is only 20s. per share, the profits earned have amounted to something like 45s. per share. Land Banks are a harder market; some business has been done at 7 1-16, a rise of 1-16.

Amongst Railways Delta Lights are somewhat quieter, and are closing 1-16 lower at 8 7-16.

In Land descriptions there has again been some profit-taking in progress. Aboukirs have receded 9d. to 28s., Delta Lands are 3d. down at 15s. 9d., and Egyptian and Foreign Trusts have dropped 6d. to 15s. 6d. New Egyptians have gone back a further 1s. 3d. to 26s. 6d.; but, on the other hand, Sidi Salems have improved ¼ to 2⅞, and Sudan Plantations have risen a like fraction to 5⅜, after being at one time as high as 5⅝. Union Foncières are a little quieter again, and show a loss of 6d. at 75s. In United Egyptian Lands there has been a fair amount going on, and the price is again 3d. easier at 2s.

Amongst Miscellaneous descriptions Alexandria Waters have come to business about the current price of 12⅛, and there has been a fair amount of business in Egyptian Markets without, however, altering the price. Salts and Sodas are ⅛ firmer at 3⅛, and there has been a renewal of demand for Khedivial Mails Ordinary, which are ¼ higher at 5⅝. On the other hand Khedivial Mail Prefs. have receded ¼ to 4¼.

Amongst Greek securities the 1889 Loan has improved ½ to 57, and the 1914 Loan is two points up at 83: but business is on only a small scale.

Oil Shares.

The Anglo-Persian report had an encouraging effect on the market. Anglo-Persian Prefs. were 26s. 6d., and Burmahs were in demand, the price varying from 8 11-16 to 8 19-32. British Burmahs were 17s. 10½d., and Anglo-Egyptians B 86s. 10½d., though subsequently easing a few pence. Roumanian Consols were firm and reached 17s. 9d. Traians were 12s. 10½d. North Caucasians were rather a feature at 24s.

The ordinary general meeting of the Société Franco-Hellénique d'Explosifs et de Produits Chimiques will be held at Paris on March 25.

The ordinary general meeting of the Egyptian Enterprise and Development Company will be held at Cairo on March 31.

An extraordinary general meeting of the Sucreries et Rafineries d'Egypte will be held at Cairo on March 22.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

NOTES OF THE WEEK.

With the ostentatious conversion of Hungary to Bolshevism the Paris Conference is able to appreciate its mistake in allowing its proceedings to be unduly protracted. The responsibility, it is to be feared, is shared by all the States alike; by the Great Powers, for having left so many questions unsettled while the stress of the military situation provided the necessary incentive to an amicable arrangement, and by the minor Powers for having put forward extremist demands and having shown no disposition to meet rival claimants in a spirit of give-and-take. That there should have been a sudden speeding-up of the machinery of the Conference suggests that the procedure is recognised now as having been too leisurely in the past. Although no one is inclined to under-estimate the weight of the burden placed upon the Council of Ten, there is a general feeling that they could have lightened their own labours by showing a greater readiness to accept responsibility for final decisions.

The appointment of a Commission to visit Syria in order to report on conditions there, in Palestine, and in Armenia is a case in point. For the findings of such a Commission to have any real value the members ought to separate and move about incognito for a year or more. It is most unlikely that as a formal mission they will obtain any evidence of practical utility other than what is or ought to be available in Paris. But they will have caused serious delay in the settlement of Syria. According as they allow themselves to be shepherded by one or other of the different sections of opinion in the country, so the nature of the testimony given them will vary, but whether they will be able to form a more accurate judgment of the relation of the evidence supplied to the state of public opinion as a whole must be regarded as problematical. They cannot tour the country as free agents; they must be conducted by one authority or another, and, if we may judge by the attitude already taken up by the French Press, we may count upon being told, if they decide against the French in regard to Syria, that it was entirely owing to the presence of British troops; whereas, if they recommend the allocation of Palestine to France, it will be realised that they have sacrificed the wishes of Southern Syria to those of the more westernised Syrians in the north.

The only indication that the Conference may inadvertently have stumbled upon the right course in regard to the Syrian question is supplied by the violent protest of Chekri Ganem, President of the Syrian Central Committee. This very able spokesman of the Northern Syrians affords a striking illustration of the fact, well known to those with first-hand knowledge of Syria, that a section of his countrymen have assimilated their French training to such an extent that they are to-day a little less Syrian than French. They differ in many respects from the more numerous Syrians of the south, who, if allowed a free choice, would undoubtedly prefer to work out their political development under freer conditions than those which have satisfied the Northerners. From Chekri Ganem's protest it is to be inferred that he is afraid lest a Mission sent to Syria would learn of this division in the Syrian nation and discover the numerical preponderance of the Southerners. If such elementary facts have been withheld from the Conference, a very strong case is made out for the Commission in spite of the regrettable delay.

The symptoms of restlessness in Egypt which manifested themselves after the arrest of the four Pashas did not die out quite so quickly as was hoped. They spread in a rather disquieting way, and at the end of last week the situation was officially declared to be grave. In view of that gravity, and of the absence of Sir Reginald Wingate from Egypt, General Allenby has been appointed Special High Commissioner for Egypt and the Sudan, and, abandoning his projected visit to this country, hastened back to Egypt. He has been "directed to exercise supreme authority in all matters, military and civil, to take all such measures as he considers necessary and expedient to restore law and order" in the two countries given into his charge, "and to order and administer in all matters as may be required by the necessity of maintaining the King's protectorate over Egypt on a secure and equable basis." There is about this phraseology a refreshingly vigorous ring that has been lacking in most official pronouncements of late, and Sir Edmund Allenby may be trusted to perform the task set him to the entire satisfaction of his King and his country. Happily for themselves, the Egyptians have almost certainly taken his measure correctly—for they are good judges of a man—and his presence in their midst will undoubtedly have a steadying effect at once.

The situation, as at present known to us, is dealt with elsewhere, but here we may put on record a few of the leading events reported during the past week.

Digitized by Google

In the first place, the makers of trouble have succeeded in astonishing most people by the extent and comparative efficiency of their organisation. Tantah no longer stands alone as the only place outside Cairo that has distinguished itself by rioting. Galioub, Wasta, Rekka, Shebin el-Kom, and Zagazig must now share that doubtful honour; while Assiout appears to have been affected to some extent, and Alexandria has also figured in the telegrams. Railway and telegraphic communications have been cut, and in Cairo itself the rioters plucked up courage to fire on an armoured motor-car, which—probably to their surprise—returned the compliment. The capital has also had the excitement of a demonstration before the Sultan's Palace and the foreign Consulates. In this demonstration students and railway strikers supplied the bulk of the procession, which is reported to have consisted of some 10,000 people, but a few leading sheikhs and the Ulema also participated. That the manifestation was an orderly one is clear from the fact that the city Police Commandant rode in a car with one of the sheikhs. Unfortunately, demonstrations elsewhere were not so orderly. Egyptian officials were terrorised into ceasing work; other Egyptian officials and some police have been killed; at Galioub some British soldiers met a like fate; and at Wasta, it is reported, an English railway employee lost his life. Here the crowd, said to have numbered 2,000, stopped the train, smashed up the carriages, and threatened the European passengers. At Galioub a similar riot was only broken up by the timely arrival of an aeroplane. Air patrols have also proved very useful in preventing further damage being done to the railways.

Perhaps the most disquieting feature of the disturbance is the appearance on the scene of Bedouin from the western desert, who had the temerity to attack a detachment of British troops in the Fayoum and Australian troops in Sharkia. In both cases they were beaten off with loss to themselves. They have, however, been looting the Baharia oasis, and according to one report, quoted by Lord Curzon in the House of Lords on Monday, they have killed some British officers who were returning from leave at Luxor, in the express train from Upper Egypt. It is also reported that the Turkish flag has been hoisted in some of the villages. It would be interesting to know how close the connection between the "Nationalists" and the Young Turks is at the present time. In the past it was undoubtedly very close indeed. The native police have won praise for their tact and steadiness in trying circumstances. The Sudan remains unaffected, and it has been possible to send troops thence to occupy Assouan.

A notable memorandum concerning the future of the Turkish Empire has been presented to the Secretary of State for Foreign Affairs by a number of Moslems, including the Aga Khan, the Right Hon. Ameer Ali, Sir Abbas Ali Baig, and Mr. M. H. Ispahani. It should not be necessary to point out in Great Britain that such a document is entitled to the most sympathetic consideration, and that, if there has to be any departure from its conclusions or recommendations, the decision should not be taken until the points at issue have been discussed with Moslems and an attempt has been made to convince them of the overruling urgency for running counter to their views. The signatories call attention to the fact that there is no Mohammedan representative in the Peace Conference, and by inference claim that their memorandum represents the opinions of the bulk of his Majesty's Mussulman subjects. At a round-table discussion they would, no doubt, recognise that Moslem opinion has had a very distinguished representative at the Conference in the person of the Emir Faisal, and it would be possible to clear up the confusion that evidently exists in the minds of the memorialists between the civil or political aspect of the question and the religious side. The Khalif's position, which will never be interfered with by Great Britain, can hardly be affected in the eyes of Islam by a change of domicile, say, from Constantinople to Konia, when Islam has maintained for centuries the utmost indifference to the individual fate of any number of Khalifs at the hands of Constantinople assassins.

The more important points of the Memorandum are thus set forth:—

We welcome the proposal to create self-governing institutions in the occupied provinces of Turkey and in Armenia, but we most strongly deprecate the suggestion to sever them absolutely from the Turkish Empire.

We have no hesitation in expressing our conviction that Turkey, under a Government such as she has now been fortunate enough to obtain, with her prestige among the Mussulmans of the world, would be an immense source of strength to England and the Allied Powers, who rule over large masses of Moslems.

We venture strongly to urge that these proposed new autonomous States should not be withdrawn from the spiritual suzerainty of the Ottoman Sovereign as Khalif.

If the Peace Conference were to decide to create Palestine into a self-governing State, the entire Mussulman world would resent its being placed under any but a Mussulman ruler, whatever other form the Government may take.

We appeal that the rights and interests, together with the religious institutions and places of worship of the large Mussulman population inhabiting Armenia, should be safeguarded and that they should be protected from persecution, and that they should be placed on an equal footing with the non-Moslem population in the enjoyment of all civil rights and privileges.

It would be of interest to know on what tangible evidence the signatories of this Memorandum base their eulogy of the present Turkish Government. There can be no doubt that the new Cabinet has made a good start in Constantinople by effecting arrests of prominent members of the Committee of Union and Progress, and it may be unfair in these early days to complain of its failure to exercise any authority over the provinces, where outrages are still being perpetrated on the non-Turkish population. But if it is too soon to expect the new Government to be able to exercise its authority throughout the present restricted limits of Turkey, it must also be too soon to decide that it is entitled to be hailed as the ideal Administration for which Turkey has had to wait so long. In regard to one point the signatories of the Memorandum are undoubtedly on sure ground, when they urge that Great Britain should loan to the Turkish Government the services of a distinguished Anglo-Indian administrator with a competent staff to take charge of the civil and revenue administration of Asia Minor.

In a letter published a fortnight ago our Morocco Correspondent reported the mooting of a proposal to establish a British school at Tangier, and referred to the steps taken by the British colony to ascertain what chances of success such a project would have. He reverts to the subject in a letter appearing in this issue, and though it is too early yet to feel any certainty in the matter the scheme seems to be in a fair way to develop satisfactorily. The local British community at Tangier is evidently ready to do its part, and though official utterances have thus far been marked by caution rather than by cordiality, we may reasonably hope that the new spirit will make its influence felt in this direction ere long. A school such as that proposed could hardly fail to prove beneficial to British interests throughout Morocco; but if it is to be of the maximum benefit it will require powerful and steady support, especially in its early stages. It is to be hoped that both the British Government and that section of the British public which is interested in Morocco will be ready to respond to the first appeal for help that may be made by those who originated the project.

The India Office has wisely decided to let the public in this country know how the famine is getting on, and the figures issued at the end of last week go far to meet the demand we have put forward for a clear statement of the intensity of distress. What is still more satisfactory, they show that there are no real grounds for the anxiety which the absence of information has produced; undoubtedly there is severe

Digitized by Google

distress, but it is confined to relatively small areas, and the dread of a repetition of the widespread horrors of 1900 may be definitely put aside. May we hope that this somewhat tardy step towards publicity is an earnest of better things to come, and that in future we shall be allowed to know of important facts and momentous decisions as soon as they become common property in India?

The position in regard to the future management of the State railways is a case in point. The question is one which concerns a very large number of people in this country, and when a definite stage was reached in the discussion, the announcement should surely have been made simultaneously in England and in India. As a matter of fact India learned the position on March 7; England heard of it a fortnight afterwards through a belated Press telegram, corrected a day later by what a critic has described as a demi-semi-*dementi*, which has since been further elucidated by an anonymous but apparently authoritative statement. There would seem to be no reason why the text of Sir Arthur Anderson's statement should not have been made available in this country as soon as it was communicated to the Indian Legislative Council.

If we have learned the position regarding railway management, we are still without official information as to the bearing of the International Labour Office on the future of Indian industry. Perhaps in this case we are justified in accepting the published statement of a Labour correspondent, which has not been contradicted, and is in itself probable, as indicating that Utopia is not expected to materialise at once. We are told by this authority that "it is believed" that even in Oriental countries improvements in labour conditions may be brought about *pari passu* with those achieved in the West, so that the handicap on Europe may not be increased. That is a not unreasonable proposition, though there are obvious difficulties in its concrete application, but it is widely at variance with the aspirations of Labour as voiced by Mr. Barnes, and we have still to learn whether it is accepted by the men on whose behalf he spoke.

It has been left to the Bishop of London to suggest that the solution of the Labour difficulty may be reached through missionary activity. If it be permissible to view this suggestion for the moment from the strictly economic standpoint, we must take into account the fact, which is a commonplace of official reports, that in the case of the lower castes conversion is ordinarily followed by an immediate and progressive rise in the standard of life, and since all authorities are agreed that India's future depends on that very change, it is quite possible that the "mass-movements" towards Christianity, of the imminence of which we hear so much nowadays, may mark a turning-point in the industrial history of the country. It is, of course, also possible that the results may be entirely different, but the attempt to raise the standard of life is so exceedingly difficult that no potential influences should be overlooked by students of this group of questions.

The return to this country of Lord Southborough and some of his recent colleagues will probably be followed by a revival of interest in the question of Indian constitutional reform, which has fallen somewhat into the background during the last few weeks. Some forecasts of the Report of the Franchise Committee are, in fact, already in circulation, but they differ so widely from each other that no inference can be based on them unless it be that the secret has so far been carefully kept, and the public will probably be well advised to wait for the official announcement, which should not now be greatly delayed. When the Report is published, it will be possible for everyone to form his own opinion whether the foundations can bear the weight of the imposing constitutional structure designed by Lord Chelmsford and Mr. Montagu, and then at last there will be scope for practical and useful discussion.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 10.

Admiral Jellicoe in Egypt.

Admiral and Lady Jellicoe this week paid a flying visit to Cairo on their way through the Canal. They stayed for two nights at the Continental Hotel, and were the guests at a dinner given in their honour by the Acting High Commissioner and Lady Cheetham. The Admiral also had a special audience of the Sultan at Abdin Palace, and the party found time to visit several of the sights, including the pyramids, rejoining the New Zealand at Suez, where Admiral Jellicoe had a most enthusiastic send-off.

The Order of St. John of Jerusalem.

Sir Courtauld Thomson, Chief Commissioner in the Mediterranean of the Red Cross and the Order of St. John, is now in Egypt engaged in arranging for the gradual demobilisation of the organisation and equipment of the societies. This demobilisation will take some time, since it will be dependent in the first place on the speed with which the troops themselves are demobilised and, secondly, on the number of those retained in hospitals. Sir Courtauld has just returned from Palestine, where he was present at the re-opening of the Ophthalmic Hospital of the Order in Jerusalem, which, having been used as an ammunition dump by the Turks, was blown up by them before they evacuated Jerusalem. The hospital has been entirely rebuilt; and the inauguration of the new building by General Allenby was made a very festive ceremony, which was followed by the investing of General Storrs and Colonel Garner with the ribbon of the Knight of the Order and with the breaking by the Commander-in-Chief of the flag of the Order, which several months ago he had draped in the Chapel of St. John in the Anglican Cathedral in anticipation of this ceremony.

The Syrian Community.

The Syrian Community is very actively endeavouring to set up a united front in defence of its claims to an undivided Syria, and several meetings have been held in Cairo and in Alexandria with the object of bringing the various elements together. At each of these meetings, which have been attended by all the more prominent members of the community, speeches have been made by Dr. Faris Nimr, the editor of *Al Mokattam*, who is as well known in the political world for his wide outlook and great ability as he is in journalistic and Arabic-reading circles for his eloquent and virile style and his purity of diction. It is mainly thanks to his insistence and his masterly exposition of the facts of the Syrian case that a complete understanding between the various sections of the community is being reached. For, while

united in their desire for the future independence of their native country, the Syrians have not been altogether unanimous as to the means to be adopted to attain that end. It is believed that matters have now progressed so satisfactorily that the whole community will be able to stand together in regard to every aspect of the question, and so bring its influence to bear on the Allies in the settlement of the future political status of Syria.

Interesting Medical Exhibition.

An interesting exhibition was held during the past week at Nasria School, where the Egyptian Expeditionary Force War Medical Exhibition was inaugurated by the Director of Medical Services. It contained a most instructive collection of exhibits, showing, amongst other things, the life history of the various insects, worms, bacteria, etc., which are responsible for the divers diseases from which our troops have suffered; and the extension of which has only been kept within reasonable bounds by the strenuous efforts of our R.A.M.C., the results of whose labours in this direction were evident from the exhibits. Several new devices for detecting diseases are shown, and the utility of the X-rays was also demonstrated. There was an interesting exhibit, showing the strides sanitation has made and what an important part it has played in maintaining the health of our troops. The exhibition was from start to finish replete with apparatus, data, photographs, sketches, coloured drawings, etc., which not only interested even the lay visitors, but also threw valuable light on the wonderful work which the R.A.M.C. has done, and is still doing, in this part of the world. There is, indeed, no doubt that, especially in regard to the many exhibits demonstrating medical and other features of the Desert Campaign, it will constitute one of the most interesting and important portions of the War Museum in England, of which it is intended eventually to form a part.

An Interesting Vegetable Show.

An excellent vegetable show was held in the Ezbekia Gardens this week by that active little society, the Sultania Horticultural Society. The vegetables and fruit shown were certainly above the average, and of special interest was the exhibit of the Cairo Sewage Farm, which comprised vegetables of every description as well as many varieties of delicious-looking fruit. In view of the difficulty of late years in procuring vegetables in Egypt the holding of these shows is very commendable, for in the long run they cannot fail to encourage production amongst cultivators, who have probably not realised what a gold-mine vegetable production can constitute if conducted on practical up-to-date lines.

The Political Situation.

Things politically have developed since my last week's letter. The clique headed by Zaghlul Pasha has been actively intimidating all Egyptians who were likely candidates for posts in the new Cabinet, and has written an insulting letter to his Highness the Sultan, blaming him very severely for his treachery to Egypt in accepting the resignation of Rushdi Pasha. In view of this attitude, the leaders were summoned on Thursday afternoon before Major-General H. D. Watson, Commanding the British Force in Egypt, who warned them that, if they continued to act in a manner calculated to interfere with the government of the country under the British Protectorate, they would make themselves liable to serious measures under martial law. The leaders protested at this, and as they persisted in their attitude the military authorities decided on Saturday that it would be expedient to take decisive action, and that evening Zaghlul Pasha, the head of the clique, and three of his chief abettors—Ismail Pasha Sidky, late Minister of Wakfs; Mohammed Pasha Mahmud, late Mudir of Behera; and Hamed Pasha El Bassel, a Bedawi notable of Fayoum—were arrested and taken to Kasr El Nil Barracks. Yesterday they were conveyed to Port Said en route for Malta, where they will be interned. This development has not unnaturally created some sensation in Egyptian circles, and the students of the various Government schools, who since time immemorial have always been ready to "down tools" and join in political demonstrations, have struck and demonstrated outside the principal Government offices, being joined by certain elements of the El Azhar University. Measures have been taken by the authorities to keep the demonstrators within reasonable bounds and prevent any spreading of the excitement, which has been fomented solely by adherents of the deported Pashas.

CYPRUS NOTES.

(From a Correspondent.)

Among the many rumours now afloat is one, regarded as well founded, that an Indian force is to be sent to Cyprus, to the old quarters of the garrison at Polemidia, near Limassol. During the war Famagusta has been the military centre. It is not an ideal spot for British soldiers, as there is little to do beyond playing games, and the neighbourhood is far from attractive. Hopes are raised in Limassol that there will be a revival of social life, of increased trade, and of sport, which will include hunting—at least, a drag—polo, paper-chases, gymkhanas, racing, and all those local interests which for thirty-six years helped to make Limassol the most progressive district of the island. At Nicosia there is to be a renewal of racing, and it is anticipated that a Spring Meeting, which is to be held shortly, will be a great success, especially as the Acting High Commissioner is a keen upholder of sport.

The Annual Festival of the Schools, lately celebrated at Nicosia, was the occasion of a great gathering in the large hall of the Pan-Cypriot Gymnasium. This meeting is made the annual starting point of a movement, in conformity with the Greek spirit, to stimulate the teaching body to increased efforts in what is considered a most essential part of education—viz., laying the foundation of a life-long patriotism. The Press takes an energetic part in supporting the movement, and local papers publish strong appeals to all school teachers in the island not to lose sight of what is their highest and noblest duty. Those who fail in this respect show themselves, they are told, unmoved by the history of their country. Every endeavour has been made for years past to strengthen the idea that Cyprus is, like her sister Crete, in reality a detached portion of the Hellenic kingdom.

The retirements of officials are so numerous, and so many will be going on leave, that the Government, it is said, is asking that a steamer may be provided to convey them and their families to England.

Among those retired are Mr. C. Cade, Commissioner of Nicosia, and Mr. A. K. Bovill, Principal Forest Officer.

EGYPT.

At the Royal Victoria Hall, Southwark, on Tuesday, Mr. G. P. Gooch lectured on Egypt. He said that the people of that country had changed little in the course of their long history either in features or in habit. They were now and always had been the creatures of the Nile, living along the borders of the great river. They were an industrious and unwarlike people. It was sometimes said that they could have done very well without us, but they had not the science to enable them to get the full value out of the Nile. The only dam that was built under Ismail Pasha had had to be built over again. The modern European interest in Egypt had begun with Napoleon's invasion and conquest. After three years we turned him out, but not before French scholars had laid the foundations of scientific Egyptian archæology. Afterwards Mehemet Ali, an Albanian, had got himself recognised as Khedive by the Sultan of Turkey—the nominal ruler of the country—and Mehemet Ali's descendants were still on the Egyptian throne. His grandson, Ismail, brought the country nearly to bankruptcy, and this had been the occasion of our entering and taking over its administration. Under our rule Egypt had prospered, but we had not secured the confidence and gratitude of the people; and we could not expect them to enjoy being governed by men of an alien race and a religion different from their own. We had promised to clear out when there was a reasonable chance of an orderly government being formed; but when the world ranged itself into two camps we felt that we could not give up the country which held our line of communications to India. Now that the war was over, he believed we should endeavour to carry out a policy of conciliation and closer co-operation with the native people.

Letters received by the London Jews' Society foreshadow the probability of a system of electric lighting being installed in Jerusalem, following upon a good water supply, which is now being provided by the British authorities. The source of the power would be the River Jordan.

ROUMANIAN NOTES.

(From a Correspondent.)

The Danger of Bolshevism.

The Bolshevist advance in Southern Russia, and especially in Ukrainia, is regarded by the Roumanians as the greatest peril that has ever menaced their existence. The Roumanian peasants and soldiers have resisted the tremendous Bolshevist propaganda, and Roumania has been, until now, the only organised state left in Eastern Europe. Now, the great Bolshevist armies are ready to overwhelm the Roumanians and to advance into Central Europe, and the Magyar Bolshevists—who are nothing but the old Magyar Nationalists—have been encouraged by the advance of the armies of Lenin in Ukrainia and have begun to play the rôle of Bolshevists in order to alarm Western Europe. Lenin and Trotsky were perfectly aware that they could not maintain their power unless Ukrainia and Southern Russia were under their rule, and the food supply thus secured. It is absolutely certain that the greatest Bolshevist forces are concentrating on Ukrainian territory, and are ready to force the gate of Europe, taking the same route as did the Barbarians of the past. The resistance of the Roumanians could cope with the danger and perhaps overcome it, if help reached them from the Allies in time. But they have no food, no clothes, no means of transport, and no war material; and in such circumstances it is doubtful if their *moral* can endure much longer.

The Hungarian Bolshevism is a manœuvre, but it is indirectly dangerous, because in playing with it the Magyar chauvinists are playing with fire. It has now been proved by documentary evidence that the Karolyi Government has been trying to kindle Bolshevism amongst the Roumanians, the Czechs, and the Serbs, in order to preserve its domination over the subject peoples in Hungary. Agents of the Budapest Government were sent to all the Roumanian villages, not only in Transylvania, but even in Old Roumania, to provoke revolts and to spread Bolshevism, so as to paralyse the national movement of the Roumanians. The Roumanian authorities arrested a great number of such agents and seized their papers; which prove that they were supplied with money by the Karolyi Government. Furthermore, the Magyar propaganda accused the Roumanians of having the intention to destroy the religious life of the other nationalities in Transylvania, and engineered a movement in Allied countries against "the intolerant Roumanians." Now the Roumanians might, perhaps, be accused of many things, but not religious intolerance. Their past is an open book, and everyone can see that there is there not a single mark of religious intolerance. But the Magyars are determined to resist the restoration of Roumania and Bohemia, and it does not matter to them how they traduce their adversaries. However, the theatricalities of Budapest and the manœuvres of Count Karolyi will not impress the Allies. The Magyars have not the power to overcome the Roumanians, the Serbs, and the Czechs, if these peoples are helped in time. All the compliments exchanged with Lenin are nothing but so many clumsy tricks to impress Western Europe. The change of the Budapest Government has been effected, not by force, but by understanding and by collusion; and the denouncing of the Roumanian *boyars* and the "Czech *bourgeoisie*" shows clearly enough what kind of revolution is going on at Budapest. Still, the danger of Bolshevism is greater than ever. It is not, however, that of Hungary we fear, but the armies of Lenin in Ukrainia and the South of Russia.

Roumania and Poland.

There are these two countries in direct touch with the real Bolsheviks, and so long as they resist, the danger of the fire of revolution spreading all over Europe may be prevented. The Poles and the Roumanians are already discussing the organisation of their resistance against the anarchy of Bolshevism, and they are trying to become neighbours. The Poles claim that Galicia shall be annexed to their country, thus making them neighbours of the Roumanians in Bukovina, and the suggestion is regarded as very simple and as not doing violence to the rights of anybody.

Roumanian Elections.

The elections have been again postponed until May, and perhaps a further postponement will then be necessary, owing to the situation.

Additional details of the recent tour of an Allied Commission under General Franchet d'Esperey, through Montenegro, have been received by Reuter's Agency. Among the members were a British general, an Italian colonel, and an American officer. The Commission traversed the whole country, and everywhere had a most enthusiastic reception. Great celebrations were held in Cettinje to welcome the Allied delegation.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, March 14.

A Press Campaign.

The leading papers of the Protectorate have recently been publishing some very outspoken articles accusing European officials in the French zone of every possible kind of corruption. The articles are so circumstantially written that one feels bound to believe that the editors are quite sure of their ground and are in possession of convincing proofs. The series began by an open letter to the Resident-General, inviting him to make close inquiries into the characters and conduct of most of those in his immediate circle, who, according to the article, misled, thwarted, and dishonoured him. Succeeding articles attacked French officials generally, applied to them, I should think, all the opprobrious epithets to be found in the largest French dictionary, and accused them of all sorts of tricks to line their own pockets, such as giving to friends early information of proposed Government regulations, holding back patent documents until their unlawful demands were satisfied, and so on; in fact, a very terrible indictment of a body of officials who might have been expected to be specially selected for their high character and trustworthiness to administer a new country. Under the old regime corruption was naturally rampant and to be more or less anticipated, but one of the advantages expected with the change of Administration, and one that was, of course, taken for granted, was the honesty of the officials.

Red Cross Working Parties.

On the 11th instant a meeting of the subscribers to the local British Red Cross working party was held at the British Agency to pass the accounts and wind up the branch. Sir Herbert E. White, K.C.M.G., his Majesty's Agent and Consul-General, presided. In his remarks, after referring to the very large number of articles that had been made and sent to headquarters, both from Tangier and from the other branches in Morocco, he said that this was the more satisfactory from the fact that not only had such a large amount of work been done, but that all the material used had been supplied by the subscribers, and, after everything had been paid, there would remain a balance to be remitted to the head office. The accounts being passed, Sir Herbert White proposed a vote of thanks to Mr. David Macleod, to whose efforts in securing both subscribers and gifts of material the success was very largely due. Mr. Macleod, whilst thanking the chairman and the meeting for the hearty way in which the proposal was received, said that his work had been greatly facilitated by the very generous way in which he was met, both by donors of material and by subscribers, to whom he thought thanks were more justly due than to himself. A vote of thanks was then proposed to Lady White, who had devoted so very much time and trouble to the work not only of the sewing parties, but also to the Tombola which had been highly successful. The vote was carried by acclamation.

The Proposed School.

After the Red Cross business was concluded, Mr. G. F. Moore said that he had Sir Herbert White's permission to refer to the proposal to establish a British school in Tangier. A sub-committee of the Chamber of Commerce was drawing up a report on the subject at the request of the Government, who, it must be distinctly understood, in asking for the report, in no way engaged themselves to do anything in the matter. There were several French schools, and an additional new Spanish school and an Italian school had recently been opened. The sub-committee thought that this meeting for winding up the British Red Cross working party would give an excellent opportunity for an appeal to subscribers to the Red Cross working party to transfer their subscriptions to a British school. Though the meeting was not very largely attended, annual subscriptions for over £100 were promised.

"Britons Overseas."

The annual meeting of the Tangier Branch of the Patriotic League of Britons Overseas was held in the rooms of the Chamber of Commerce after the above-mentioned meeting.

On the invitation of Kaid Sir Harry Maclean, president of the branch, Sir Herbert E. White took the chair. The treasurer, Mr. L. Biddulph, read the accounts, which showed a balance in hand of £117. It was decided to remit £100 to headquarters, with the suggestion that £50 of this should be applied to the funds for Britons Overseas Memorial Fund. Sir Harry Maclean, president, and the other officers and committee were re-elected. It was suggested that the committee should show a little more activity in propaganda work and in arranging entertainments to draw the colony together.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, March 13.

Naval Movements

It is expected that the entire Mediterranean Fleet, as it is to be revived, will concentrate at Malta in about six weeks' time. We understand that the Superb, battleship, and her sister ship, the Temeraire, will then return to England.

The light cruiser Dublin has returned to her home port. At the outbreak of war, she formed part of the Mediterranean Light Cruiser Squadron, and had been since continually employed at different theatres of war and had done excellent work, especially in the Adriatic, where she carried the flag of an Italian Rear-Admiral. She was twice torpedoed in those waters, but managed to reach her base under her own steam on both occasions. Her damage was made good at Malta Dockyard.

The Japanese cruiser Nisshin and five of the destroyers which accompanied the flag of Rear-Admiral Sato to England from the Mediterranean are on their way back to Malta, en route to the Far East. They have arrived at Gibraltar and are bringing out with them the three ex-German submarines allotted to Japan.

Two of the new type of boats to be based on Malta, namely the Calypso and Ceres, have arrived from Chatham, commanded respectively by Captain B. B. Thesiger, C.B., C.M.G., well remembered on this station, and Captain H. G. E. Lane.

Sir E. S. Alexander Sinclair is coming out to the Mediterranean in command of the Light Cruiser Squadron, which will be composed of vessels of the above modern type known as the "C" class. Admiral Sinclair has lately been in the Baltic with a squadron of vessels of the type he is to take over command of in these waters.

The battleship Agamemnon, Captain F. S. Litchfield-Speer, C.M.G., D.S.O., which was attached to the Mediterranean throughout the greater part of the war, has just left Malta and has returned to Sheerness. She will be paid off.

The Australian cruiser Melbourne and several Australian destroyers may be expected to call at Malta on their way home The Melbourne called at Malta, along with the Sydney, soon after the latter had put an end to the exploits of the German light cruiser Emden, but the fact could not then be disclosed.

The destroyers of His Majesty's Australian Navy which served in the Mediterranean during the war and sailed for England some three months ago, are returning to Malta. They are at present at Gibraltar.

The Influenza.

The "Flu" epidemic, which was supposed to have abated, has broken out in a most virulent form and is claiming many victims. The renewed activity of the disease is attributed to the recent Carnival celebrations with their attendant overcrowding. The military authorities have taken very rigorous precautions, and several camps are in quarantine. The cases are so numerous that the hospitals are overflowing, and barracks are being requisitioned for the milder cases. Schools are closed and whole villages are placed out of bounds.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Situation in Egypt.

March 24.

Earl Curzon, replying to the Earl of Crewe, who asked for information regarding the situation in Egypt, said: The position in Egypt is rather less anxious. In Cairo there have been demonstrations on a small scale (chiefly by students) and collisions betwen rioters and patrols, but, on the whole, Cairo and Alexandria are quiet. In the provinces, however, violent outbreaks have occurred. In both Lower and Upper Egypt mobs have attacked communications with a system and method that seem to indicate a carefully prepared organisation, and several railway stations have been burnt. Trains are now being run between Cairo and Alexandria and Cairo and the Canal, and the difficulties and delays are diminishing. Telegraphic communication between Cairo and Tantah has been re-established, but both railway and telegraphic communications with Upper Egypt have been interrupted, the line and station at Wasta and elsewhere being damaged. Communications have, however, been assured by the use of aeroplanes and wireless. Recent manifestations have been predatory rather than political in character—rioters at Tantah, Zagazig, and elsewhere looting European shops. In certain districts the movement has taken the form of peasant tenants rising against landowners. A more serious feature of the situation is that some of the Bedouin tribesmen who live on the edge of the cultivated area, especially in the Behera and Fayoum provinces, have joined in the disturbances. They are comparatively well armed, and a report has been received that they have killed some British officers who were in the Upper Egypt express returning from leave at Luxor. Full particulars on this head are awaited. Bedouin on the 19th attacked the detachment of British troops in the Fayoum, but were beaten off with loss, and Australian troops in Sharkia were also attacked with similar results. A party of seventy-one passengers from Luxor and Assouan has arrived safely at Halfa. Peace and order reign in the Sudan, where there is no sympathy with the present agitation. One gratifying feature of these deplorable occurrences in Egypt has been the behaviour of many of the Egyptian officials and of the Army and police. These last have behaved especially well. There are growing signs that better-instructed native opinion deplores these outbreaks, and that some of the notables are doing their best to calm the agitation. I should like to make clear one point on which there would appear to be some misconception. His Majesty's Government have never entertained the slightest disinclination to the two Egyptian Ministers Rushdi Pasha and Adly Pasha coming to this country. On the contrary, their presence here would be most welcome. The request to them at the end of last year to postpone their visit for a short period was solely prompted by the consideration that during the initial phases of the Peace Conference sufficient time and attention could not be afforded to discuss the important questions of our future relations with Egypt and Egyptian constitutional reform. The visit of these or other responsible Egyptian statesmen would have been welcomed, and the discussion with them of the exact form which the British Protectorate is to assume in the future has always been regarded by us as of capital importance. But as regards Said Zaghlul Pasha and the persons who have organised the present movement it is a different matter. They are the self-appointed and irresponsible leaders of an agitation for the avowed purpose of expelling the British from Egypt, and it is this agitation, timed, as it would seem, to coincide with the meeting of the Peace Conference at Paris, which led to the present deplorable outbreak. With its authors and abettors there is no common ground for discussion. Their presence here would have been generally misunderstood in Egypt, where it would have been interpreted as evidence that we were willing to consider the complete abandonment of our responsibilities for that country. And, further, it would only have served to embarrass and render abortive those discussions with representative and responsible Egyptian opinion to which we still look, as soon as a favourable opportunity presents itself, for the conclusion of a settlement that will be equally satisfactory to Egypt and to the Protecting Power.

HOUSE OF COMMONS.

The State of Egypt.

March 20.

Captain Ormsby-Gore raised the question of Egypt, the condition of which, he said, was causing anxiety to those who cared for that country and for the part Great Britain had played in bringing it to a pitch of progress and prosperity which it had never before known in all the days of its age-long history. He asked the representative of the Foreign Office to supply the House with more information than had yet been given about the origin of the recent trouble and as to the policy which the Government intended to pursue in the future. In particular, he wanted fuller information regarding the events which led up to the unfortunate resignation of the Prime Minister of Egypt, who during the war had stood loyally by England. He was anxious to see British influence and control maintained in Egypt not only in our own interests, but in the interests of Egypt herself. The situation which led to the resignation of the Egyptian Government, and the trial and deportation of the leaders of the National Party, followed by riots of a somewhat serious kind, had been foreseen by a great many people or should have been foreseen. He understood that now the declared policy of the British Government was one of sympathy with the idea that the Egyptians should be allowed an increased share in the government of their country. There was a great deal to be said against the present administration of Egypt through the Foreign Office. What was needed in the Egyptian department particularly was a new spirit. His ideal was that the Arabic-speaking world and our responsibilities in the Arabic-speaking world should be a Department just as India was. Neither the Foreign Office nor the India Office was so constituted as to enable it to deal adequately with the needs and aspirations of the great Civil Service that would be needed by the British to help and assist the people of the Arabic-speaking world. A certain constitutional development in Egypt was necessary, and it would brook no delay. There were large and important minorities in Egypt, and those elements required representation and their interests required to be guarded. But in order to do that they must have a satisfactory Constitutional Assembly of two Chambers. The new Constitution in Egypt must consist of a Senate as well as a Legislative Assembly duly elected, and, in addition, they would have to have a reorganisation of the whole Ministry of the Interior. We had yet to create in Egypt that feeling of responsibility among Egyptians which only years of example and tuition and assistance, sympathy, guidance and help could give them. He did see dawn ahead in Egypt; but he warned the Government that there should be no more attempts by native Ministers to shelter behind the British Adviser. He hoped the Foreign Office would do all they could to get out of this situation in Egypt, and lead us back into the paths which Lord Kitchener showed could be

Digitized by Google

pursued with success. He hoped that such a policy of working with the Egyptians would bring about a better moral, political and material state of things.

Sir HENRY CRAIK thought there could be no question that the position of the whole administration in Egypt at this moment was at a very critical point. We had accomplished a great work in Egypt. We had improved her resources, developed her commerce, adjusted her political relations, and he hoped we should be able to develop in her the instinct of free government. All these things we might be proud of, but they brought their responsibilities with them. Our administration in Egypt would be judged by what we had done for the people of Egypt who were under our charge. The first necessity to lift them out of their misery was to provide for their health, and not to let them rot away in insanitary villages without water supply and devoured by all sorts of plagues. We had to do that work for them, and we must have a Ministry properly organised and independent, with full access to sympathetic administration in Egypt, not hampered at every turn by the palsied effect of bureaucratic administration of a department.

EARL WINTERTON said that so long as the Capitulations remained as they were, Egypt would be a badly governed country. Under them profiteering neutrals and foreigners had escaped taxation, a judicial system or a judiciary in which anybody could have confidence was impossible, and the country had become an entrepôt of the white slave traffic. He was told it was intended to continue the Capitulations two or three years longer. He considered that would be a disaster to Egypt of the first order. The whole future government of Egypt depended on the abolition of the Capitulations immediately after peace was signed. The best form of government, he believed, would be a full British protectorate. It was essential for the future of Egypt and the British Empire that with the mandatory power should go the fullest possible opportunity for the development of the country in the educational and also in a commercial sense. He considered that it was one of the primary duties of our representatives at the Peace Conference to urge that Britain should be the mandatory Power, and we should have no false modesty in that respect.

Major HURST said that it was an amazing thing that in Egypt, where the French population did not exceed 7,000 out of 13 millions, the French language should be obligatory in the courts of law, and that a small minority should inflict an archaic relic of the Napoleonic Code on a community which required more modern procedure. The English language ought to be encouraged and not discouraged in the courts of law.

Mr. C. HARMSWORTH (Under-Secretary for Foreign Affairs) said that in regard to recent events in Egypt a full statement had already been made in the House of Lords by Lord Curzon. After quoting from this statement, he went on to say that no doubt the situation in Egypt was such as to give rise to very considerable anxiety. It was the desire of the Government that the natives of Egypt should have a larger share in the control of their country. As to the Capitulations, he was informed that the discussions on the question between his Majesty's representative and the representative of the French Government in Paris were now entering upon their concluding stage, and it was hoped that during the current year the abolition of the Capitulations would be an accomplished fact. The situation required that law and order must be restored before they could embark on the speculative enterprises which had so largely engaged their attention that evening. It also required firmness and decision, and those the Government would enforce with all the power at its command.

A Dardanelles Exploit.

Major MORRISON-BELL asked the First Lord of the Admiralty if it is the intention of the Admiralty to grant any posthumous honour to the late Lieutenant-Commander G. S. White for his gallantry in forcing the Dardanelles in submarine E 14, with a view to torpedoing the Goeben, in January, 1918, or to grant any reward to the survivors?

Dr. MACNAMARA: The question of awards to officers and men of E 14 is under consideration with other cases in which the evidence of survivors who took part in the enterprise has only become available on their release from captivity under the terms of the Armistice.

Egyptian Affairs.

March 24.

Replying to Captain Ormsby-Gore and Earl Winterton, Mr. CECIL HARMSWORTH made a statement as to the situation in Egypt, giving similar information to that conveyed by Lord Curzon to the House of Lords on the same date.

Replying to a further question by Captain Ormsby-Gore, Mr. CECIL HARMSWORTH said:—Sir Reginald Wingate is remaining here to afford valuable advice and assistance to his Majesty's Government. In the meantime, as already announced, General Allenby is proceeding to Egypt as Special High Commissioner with supreme civil and military authority, and will receive the full support of his Majesty's Government in dealing with the situation.

Captain ORMSBY-GORE: Am I to understand that Sir Reginald Wingate has not in any way been superseded, and that this arrangement is a temporary one?

Mr. HARMSWORTH: I do not think Sir R. Wingate is in any sense superseded.

Captain ORMSBY-GORE asked whether, as soon as order had been restored in Egypt, the Government would set up a Royal Commission to examine and report on what constitutional and departmental changes were necessary, if any, to give effect to the declared policy of the Government in regard to the future development of the administration of Egypt; and whether, in the event of such a Commission being set up, the evidence of responsible Egyptian public opinion would be taken and the present composition and functions of the Egyptian Department of the Foreign Office and its relation to the Egyptian Government and the Anglo-Egyptian Civil Service reviewed.

Mr. CECIL HARMSWORTH: It has always been the intention of his Majesty's Government that as soon as possible a full inquiry should be made on the lines indicated in the first part of the question, and at such inquiry the evidence of responsible Egyptian public opinion will have every opportunity of being heard. It would be premature, however, to decide at the moment whether a Royal Commission will be the most suitable machinery for the purpose, and the last part of the hon. and gallant member's question does not, therefore, at present arise.

Captain ORMSBY-GORE: Are we to understand that the Government are considering the alternative of a purely Departmental Committee of the Foreign Office?

Mr. CECIL HARMSWORTH: No, sir. The Government are considering everything relevant to the question.

Albania's Neighbours.

Mr. HARMSWORTH, in reply to Colonel Walter Guinness, said he was not aware of the arrival at Scutari and Zadrima of Albanian refugees from Serbian attacks. There was every reason to believe that they would be looked after. The Government had received no information confirming the report that bands of Greek *Komitajis* were preparing to invade Southern Albania.

Afghanistan.

March 25.

Mr. RAMSDEN asked the Secretary of State for India whether he could furnish the House with the latest reliable information from Afghanistan.

Mr. MONTAGU said that according to the latest accounts Aman Ullah Khan continued to control the situation, and no disturbances appeared to have occurred. European employees of the late Ameer who arrived at Peshawar from Jelalabad on March 13 reported all quiet at Kabul up to March 8 and at Khandahar up to the 9th. Nasr Ullah and Inayat Ullah were believed to be under surveillance. The Government of India had received a letter from Aman Ullah couched in friendly terms, announcing his accession and expressing his desire for co-operation with the British Government.

St. Sophia.

Colonel WEDGWOOD asked the Secretary for India whether he had made any representations to the Foreign Office as to the importance to the peace of India of retaining under Moslem control the ancient church of St. Sophia, in Constantinople?

Mr. MONTAGU: Yes, sir. The hon. and gallant member may rest assured that Indian interests in such matters have not been, and will not be, overlooked.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

INDIA: Revolver Licences.—Secretary of State's Report.—Famine Relief Code.—Rowlatt Bills.—Indian Service Gratuities. DEMOBILISATION: Salonika Forces.—Khartoum Garrison.—Flight Cadets (Egypt). Albania (Frontiers). (March 17).

EGYPT: Mixed Court of Appeal.—British Protectorate Courts (English Language).—Deportation of Notable Egyptians.—Shipping Accommodation (Egypt to England). DEMOBILISATION: India (Short Service). Ministry of Health (Egypt). (March 18).

INDIA: Lajpat Rai (Deportation).—Army Officers (Invalid Pensions).—Emergency Legislation.—Homeward Passages.—Delhi Conference.—Civil Service (Pay and Leave). Gezira Agreement. Roumania (British Losses). India (Persons Interned). (March 19).

Ukraine. Albania. Suez Canal. St Sophia's, Constantinople. (March 20).

RELIEF FOR SERBIAN LADIES.

Princess Marie Louise was present at a meeting of the British Women's Patriotic League held at Lady Nathan's house in Cornwall Gardens on Tuesday afternoon, to receive, on behalf of the Serbian Relief Fund, gifts of clothing intended for distressed Serbian gentlewomen and children. She was supported by Lady Bective and Mrs. Carrington-Wilde, inaugurator of the Serbian Relief Fund early in the war. Mrs. Carrington-Wilde stated that the fund sent, last week, 200,000 articles of clothing and comfort, and during December last the total reached was between five and six hundred thousand. Four hospitals, an orphanage, and other institutions had also been established through its agency, in Serbia and in this country.

GREEK FOLK SONGS.

M. P. J. Petrides delivered a lecture on "Greek Folk Songs and Greek Music" before the Anglo-Hellenic League last week. The character and spirit of the Greek nation were, he said, reflected in the folk-lore as sung by the ancient bards. The songs of a domestic and individual character revealed the ancient spirit, as in a mother's injunction to her son: "It were better to lose thy head than the arms left thee by thy father." All shades of tender and idealistic feeling were represented. Poetry, music, and dancing were combined, the dancing songs being often austere and imposing. Modern Greeks, like the ancients, widely practised dancing combined with song.

CORRESPONDENCE.

THE FUTURE OF SMYRNA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—From unofficial, but apparently reliable, reports from the Peace Conference it seems that the minority of the Committee sitting on the Greek claims, and composed of the American representatives, has espoused the cause of the American missionaries and overlooked Mr. Wilson's principles, in wishing to leave Smyrna to the Turks.

I would be the very last to minimise the good educational work done by the different missions amongst the oppressed Christians of the Turkish Empire, and I also believe that the cause of Christianity must have precedence over any national or political consideration; but let us consider with what spiritual or educational success the work of the American Missions has met amongst the Turks, during the last fifty years. If any evidence is required to prove the utter failure of the missions in making any impression on the Turk (let alone converting him to Christianity) allow me to cite the case of the Robert College at Constantinople. This most excellent institution—one of the finest educational institutions of the East—established many years ago by American missionaries and maintained by American funds, numbers many hundreds of Greek, Armenian, and Bulgarian students, while on the other hand the number of Turkish students who have entered its precincts is absolutely negligible.

There is, however, another and more important consideration that the good American missionaries ought to bear in mind, namely, that the light of Christianity came from the East. It is still burning there amongst the millions of oppressed Christians, perhaps with a dimmed flame, due to the demoralising Turkish yoke of 600 years' duration, but pure enough and strong enough to appeal to the Turk whenever he decides to change his heart and be converted.

In the meantime let the American missionaries follow the example of Livingstone, John Paton, Mary Slessor, and others and go in search of darker fields where the light is most needed.

Dr. Benson, the late Archbishop of Canterbury, said: "We sons of Japhet are not the people who will bring back the people of Islam. I believe they must be brought back by Oriental Christians who regard us with favour and affection."—I am, etc.,

G. S. NAXAKIS.

"Stoneygate," Broughton Park, Manchester,
March 24, 1919.

RHODES AND THE ENDECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In reply to Colonel Yate's letter of the 17th inst., I should like to say that if I have in any way offended him it was only because I was under the impression from his previous letter that he advocated the cession of Rhodes to Italy, under the cloak of placing the island in the hands of the Hospitallers.

If Colonel Yate is only anxious about the Auberges he need have no fear. As I have previously mentioned, the Hospitaller buildings in Rhodes, having been raised by the sweat of unpaid Greek labour, are regarded by the Greeks as almost their own property, and they serve the useful purpose of reminding the Greeks in what manner "staunch defenders of Christendom" are capable of treating their fellow-Christians. I entirely fail to see what Colonel Yate imagines the Greeks are going to do with his "much valued" Hospitaller buildings. Does he think we are going to ship the whole lot of ramshackle Auberges across to Athens and place them on the Acropolis by the side of the Parthenon, as specimens of architecture? Unlike Morosini, we do not destroy historic buildings. Unlike Lord Elgin, we respect the feelings of others, and do not covet that which is foreign to us, and we would willingly let Italy, France, Britain, and Spain have their Auberges. From the question addressed in the House of Commons on this point one would imagine that the Greeks were a barbarous non-Christian people, instead of being one of the oldest existing races, with a civilisation second to none, and a code of laws which is the basis of all European codes.

Colonel Yate, in attempting to prove how inaccurate and intolerant I am, cites the fact that the Knights held Halicarnassus and made it a refuge for escaped Christian slaves in Asia Minor. He has, however, omitted to mention that if these slaves happened to be Greeks they could only gain their freedom by renouncing their religion and acknowledging the Pope.

No person with any knowledge of mediæval Greek history can deny that the behaviour of the Hospitallers in Cyprus, the Dodecanese, and Asia Minor towards the Greeks was that of the haughty conqueror towards the conquered. The unfortunate Greeks were ground down by taxation, and even their religion was not respected. I merely called the Knights "pirates" because I could not find words strong enough to voice my opinion of these persons, who, posing as Knights of the Cross, committed all these infamies; for hypocrisy is the worst of sins.

Anyway, since Colonel Yate no longer questions the right of Hellas to Rhodes, and the matter is merely one of the fate of the Auberges, we need not argue about what our respective forefathers did in days of yore, and so far as I am concerned the matter is at an end.—I am, etc.,

ALEXANDER CALLINICOS.

The Y.M.C.A., Peter Street, Manchester,
March 21, 1919.

"His House was Bare"

A SERB'S SAD HOME-COMING.

"D———was a Serbian exile. He returned to his home to prepare it for the return of his family. Then he learned that his house was bare—that the Austrians had looted every stick, and even carried off his beloved books."

That is one of the tragedies of the return of the Serbian exiles. And in the great tragedy of Serbia this case can be multiplied a thousand-fold. In many cases not even the house of the returned exile remains. While we rejoice in peace, the Serb sorrows when he gazes on the sad aftermath of war. But in Serbia the trustees of British benevolence—the Serbian Relief Fund—are hard at work mitigating the suffering, giving food and raiment to the weak and helpless, and hope and inspiration to the despairing. Will you help? The work of the Serbian Relief Fund is only bounded by the resources that your generosity supplies.

Hospital supplies and material should be sent to 53, Grosvenor Street, W.1, care of THE COUNTESS OF BECTIVE.

Parcels of clothing should be addressed to Mrs. Carrington Wilde, and offers of personal help at home and abroad should be addressed to Lady Grogan, Serbian Relief Fund, 5, Cromwell Road, S.W.7.

Cheques and donations of money should be sent to the Hon. Treasurer, the RIGHT HON. the EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

(*Registered under the War Charities Act*, 1916.)

5, Cromwell Road, London, S.W.7.

NEAR EAST BOOKSHELF.

THE ROMANCE OF THE RED TRIANGLE.*

This little volume is well named. It is not a dry cut history with tables of statistics—such as we imagine must some day be issued—but a fascinating account, full of anecdotes, many humorous and all to the point, of the great work of the Y.M.C.A., which has done so much to relieve the tediousness and gild the brutality and tragedy of our great war. If there are any who doubt the appreciation of this work by our leaders, the various extracts of their appreciations, one of which heads each chapter, should convince the sceptic. The outburst of war in August, 1914, found the skeleton of the organisation, which has since grown so vast, complete, but the "sinews of war" were lacking. It was absolutely necessary to secure £25,000 at once. Not to be daunted by the cry of "impossible" from the more cautious, the younger organisers went ahead, and within a few days the whole sum was secured, and an appeal for a further £50,000 was issued. By August, 1918, the war fund had reached two and a-half million. Astonishing as this sum is, it is not much more than a fifth of what the United States Y.M.C.A. raised in the same time. The author says "we have always been short of money, have always had a big overdraft at the bank." "The bank overdraft of the war fund has often reached four and five hundred thousand pounds!"

The work has been a happy co-operation between people of many religious views. No Red Triangle hut can be used for proselytizing by Catholic, Protestant, Moslem, or Jew. These all have been able to help and receive benefit. "A visit to one of the Red Triangle huts or tents in an Indian camp is a revelation. You hear the Mahommedan call to prayer, see the tiny mosque and realise how in many and varied ways it is possible for the Y.M.C.A. to be of service to these brave men of another faith."

The hut, or dugouts were in Mudros, Imbros, and Tenedos, and even on Anzac beach and Cape Helles. They flourished at Kantara, in the midst of the desert of Sinai, along the Gaza-Beersheba lines, and later in many points in Palestine; on the Macedonian front as well as all the way from Busreh to Baghdad; among the interned British prisoners in Switzerland and Holland, and under the White Ensign. But their greatest effort necessarily was with our vast armies in France and Flanders. We get glimpses in this book of the heroism displayed on many occasions when Y.M.C.A. centres were kept as near as possible to the fighting line, many of these depots being destroyed by shell fire or engulfed by a sudden advance of the Hun. In our great retreat last spring the association lost more than 130 huts and other centres in Picardy and Flanders, as well as upwards of £15,000 in cash. At Noyon one local secretary made three attempts to return and secure the hut's cash, and finally made his escape with ten thousand francs in his pocket.

The three dozen illustrations greatly add to the interest of the book.

E. W. G. M.

AN EARLY SANSKRIT DRAMA.†

The translators have done well to publish this version of a play which they describe as the earliest romantic drama of the East, the manuscript of which was included in the famous find made ten years ago by Pandit Ganapati Shastri. The place occupied by Bhasa in the literary history of ancient India is sufficiently important to justify the issue of a translation for the benefit of those who are unable to read the original; we are not in a position to test the faithfulness of the rendering, but it reads well, and Mr. Shirreff's name is sufficient guarantee of its literary quality.

BOOKS RECEIVED.

"Gitanjali and Fruit-Gathering." With illustrations. By Sir Rabindranath Tagore. (London: Macmillan and Co. 10s. net.)

"In and About Palestine." By Alfred Forder. (Religious Tract Society. 3s. 6d. net.)

"The Yougoslavic Littoral on the Adriatic Sea." Edited by M. Rojc. (Zagreb: Government Press.)

* "The Romance of the Red Triangle." By Sir Arthur K. Yapp, K.B.E. London: Hodder and Stoughton. 6s. net.)

† "The Dream Queen." A translation of the Svapnavasavadatta of Bhasa by A. G. Shirreff and Panna Lal. (Allahabad: The Indian Press. Price 12 annas.)

ALBANIA.

Recently, at 28, Bruton Street, W., Miss M. E. Durham delivered a most interesting lecture on the Albanians. They were, she said, a very ancient people, who had been pressed back into the mountains by later settlers in the Balkan peninsula, where they had been not only long before the Slavs but also long before the Greeks. Their language was still that spoken by Alexander's Macedonians. They had survived all the empires great and small that had held sway for a time over them. The Serbs they regarded as the enemies and oppressors both of their race and religion. More or less, they had fought them ever since they came into the Balkan peninsula, and they were fighting them now. The Albanians claimed to have been converted to Christianity by Saint Paul, and the majority of those among them who had remained Christians were still Roman Catholics; but, late in the 17th century, a great number of them had gone over to Islam. This, however, had not weakened the national spirit whether Moslem or Christian, the Albanian remained an Albanian first of all.

Miss Durham sketched the course of Albanian history. Coming to recent times, she said that M. Venizelos claimed the whole of Southern Albania because it contained 120,000 Greeks. But although these people were members of the Greek church, they were not Greek either by race or language. The Greeks had tried at one time to win Albania by establishing schools, and these the Turkish government had encouraged, hoping that if the Christian children went to Greek schools and the Moslem to Turkish schools, the growth of a national Albanian sentiment would be arrested. But when the Albanians found that the Greek objective was propaganda and annexation, they had turned against the schools. In 1908 the Albanians took a leading part in the revolution which compelled Abdul Hamid to grant a constitution. They greeted this with extraordinary enthusiasm. Albanian schools, until then prohibited, were opened in every place, and many newspapers were started. But the joy of the people was short-lived. The Young Turks had started with good intentions, but they made some bad blunders, and among the worst was their treatment of the Albanians. They closed the schools and stopped the printing presses. The newspapers they could not suppress entirely—because they had guaranteed the freedom of the Press—but they forbade them to publish any political information less than twenty years old! The Albanians revolted in 1910, 1911 and 1912. Then the Turks granted autonomy. But Serbs, Greeks, and Montenegrins did not want Albania recognised by the Powers and delimited, and they made the first Balkan War the occasion to make war on Albania before it should have time to establish and organise itself. In this war the Albanians had suffered terribly. Their villages had been burned, and there had been great slaughter and suffering. They had appealed to Europe again in 1913 and were recognised, but their country had been bounded by a very narrow delimitation. Then had come the great war, and Albania had been entered by seven armies—including the French and British Contingents. In the end, three-quarters of the country had been brought under the Austrians and held by them until last November. They were now appealing again to Europe to have their rights recognised, and to have restored to them lands taken by the Berlin Treaty and the Treaty of 1913.

A number of interesting lantern slides illustrated the lecture. Among the most curious were some pictures of "Albanian virgins." Miss Durham explained that the betrothal of children is still customary in the country, but if, when the time for the marriage comes the girl refuses the man and swears eternal virginity, she may own property and in other ways have all the privileges of a man. Thenceforward she associates with the men, dresses like them, and smokes.

Lady Willingdon has written testifying to the splendid organisation of the Y.W.C.A. in Bombay, and speaks of the nurses' clubs started there and in Mesopotamia as being great boons. The Association now supports sixteen secretaries in India, some being responsible for as many as thirty branches.

Parcels for civilians in Constantinople can now be accepted for transmission if addressed Poste Restante, British Army Post Office, Constantinople, at the following rates of postage: For a parcel not exceeding 3 lb., 1s.; over 3 lb. and not over 7 lb., 1s. 4d.; over 7 lb. and not over 11 lb., 1s. 8d. Persons sending parcels to Turkey should make inquiry of the War Trade Department as to export restrictions.

31	18	Monday	29	29
April 1	19	Tuesday	30 Rejeb	Nisan 1
2	20	Wednesday	1	2
3	21	Thursday	2	3

The Greek Minister left town on Sunday for Brighton.

The Aga Khan visited the India Office on Tuesday.

The Greek Metropolitan of Serres, Mgr. Christopher, arrived in London on March 20 from Paris.

Colonel Napier, hitherto British military representative in Bulgaria, has arrived in London from Sofia.

Mr. E. McDonald, Commissioner of Kyrenia, Cyprus, has arrived in England, and is at present in London.

A Cairo telegram announces an engagement between the Sultan's daughter and Sabri Pasha, Governor of Cairo.

On Thursday afternoon of last week, the King and Queen received M. and Mme. Gennadius and M. D. Caclamanos.

Mr. E. Hanson Freshfield has left London for Smyrna, and will be absent for a few weeks.

Mr. E. S. Montagu, Secretary of State for India, who came to London to attend Lady Swaythling's funeral, returned to Paris last week, but he is now back in town.

On Saturday, at Buckingham Palace, the King invested Major Harold Thorburn, I.M.S., with the insignia of a C.I.E.

Mr. S. Polychroniadis, the newly-appointed First Secretary to the Greek Legation, has arrived in London and taken up his duties.

The Emir Faisal arrived in Brussels on March 19 from Cologne and Crefeld, on his way to Paris, and was received that afternoon by King Albert.

A Reuter message from Cairo states that the Sultan has conferred the Order of the Nile, Second Class, on Sir George Lloyd, the Governor of Bombay.

Major-General Sir Travers Clarke, K.C.M.G., whose appointment as Quartermaster-General was announced last week, served on the North-West Frontier of India in 1897-98.

Lieut.-Colonel Arion, the Roumanian Military Attaché, has left the Albany for 3, Down Street, Piccadilly (telephone No. Mayfair 6,508).

The Emir Faisal is transferring his racing stable to France, where he hopes to enter for the Grand Prix and other French races.

Mr. Arthur Garrels, American Consul, left Alexandria on March 1 for the United States, on leave. During his absence, Mr. Pinkney Tuck, Jr., Vice-Consul, will be in charge of the affairs of the Consulate.

M. N. Misu, son of the Roumanian Minister in London, last week beat M. Max Décugis, the well-known French tennis player, in the Finals for the Lawn Tennis Championship of the Riviera at Mentone.

The engagement is announced between Captain Archibald F. W. Brown, Indian Army, and Mollie, only daughter of Colonel J. H. Balfour, late 13th (Duke of Connaught's) Lancers, Indian Army, and Mrs. J. H. Balfour, of Stoke Gabriel, South Devon.

The Roumanian Prime Minister, M. Jean Bratiano, left London on March 20 for Paris. The Roumanian Minister, the personnel of the Legation, and Mr. R. F. Synge, representing Earl Curzon of Kedleston, were at Victoria Station to see him off.

At the memorial service for Sir Mark Sykes, held in Westminster Cathedral on Wednesday morning, the King of the Hejaz was represented by M. Alexander Séfi, of the London School of Oriental Studies.

There will be given to-morrow (March 28), at the Palladium, a Serbian matinée, under the patronage of Queen Alexandra, in aid of the Royal Horticultural Society's War Relief Fund. The special object is to help to restore the gardens and orchards of Serbia.

The engagement is announced between Captain Gordon Cranstoun, R.A.F.M.S., son of the Rev. J. P. Cranstoun, Welland Vicarage, Malvern, and Charlotte Chicheley, daughter of Richard Chicheley Plowden, Indian Police (retired), and Mrs. Plowden, 22, Eccleston Square, S.W.

Lord Carnock, P.C., will take the chair at a meeting of the Central Asian Society to be held at 22, Albemarle Street, on Wednesday, April 2, at 4.30 p.m., when Mr. E. P. Stebbing will read a paper on "The Bolshevik and German Danger in Russia: It's Threat to the British Empire."

The engagement is announced of Todd Harold Treather, of the Federated Malay States, eldest son of Mr. and Mrs. Treacher, Dullatur, Camberley, and Dorothy Maud Pennington, elder daughter of the late Major Eales, The Buffs, and Mrs. Eales, The Haven, Camberley, and grand-daughter of the late Major-General Sir Charles Pennington, K.C.B., Indian Army.

Our Malta Correspondent writes (March 13):—It has given universal pleasure to the community to learn that Rear-Admiral Ballard, C.B., has been promoted to the rank of Vice-Admiral. He only recently relinquished the appointment of Admiral-Superintendent, Malta Dockyard, and his great interest in the welfare of the men working under him earned for him their lasting gratitude and the esteem of the entire community.

The Persian New Year began on March 21, and in celebration of the event the Persian Minister (who returned from Paris in the morning) and the Councillor held a reception at the Legation. Among those present were H.H. the Aga Khan, Nasir-el-Mulk, the late Regent of Persia, the personnel of the Legation and members of the Persian Colony in London, and many English friends.

Commander Locker-Lampson, M.P., speaking last Friday at Cannon Street Hotel on his adventures in Russia, said we must all welcome Roumania's great queen to this country. Nobody had behaved more magnificently during the war than that gracious and gallant lady. He had seen her in times of suffering and difficulty, and he could not speak with enough enthusiasm of what she had done.

An engagement is announced between the Rev. Harold Spooner, M.C., chaplain to the forces (Indian Army), youngest son of the late Rev. George Woodberry Spooner, M.A., Vicar of Inglesham, Lechlade, Glos., and Alice Maud, youngest daughter of Surgeon-General G. F. A. Harris, C.S.I., I.M.S., of 6, Corfton Road, Ealing, and granddaughter of Major-General A. E. Campbell, of Mannamead, Plymouth.

The engagement is announced between Lieutenant Antony Floyer, Royal Navy, second son of the late Ernest Ayscoghe Floyer, of Cairo, and Mrs. Vaughan Cornish, and stepson of Vaughan Cornish, D.Sc., of Woodville, Camberley, and Alice Rosalie (Aileen), second daughter of R. B. Whitehead and Mrs. Whitehead, of Alvie, Kincraig, Inverness-shire, and granddaughter of the late Robert Whitehead, of Fiume.

Dr. Tresitch Pavitchitch, the Yugoslav leader attached to the Yugoslav Delegation, and representing Dalmatia at the Peace Conference, was entertained by the Yugoslav Colony in London at the Florence Restaurant on March 20. M. Cheddo Miyatovitch presided, and among those present were M. George Gentchitch (ex-Minister for Serbia), Dr. Dragutinkoyich (Chargé d'Affaires for the Serbs, Croats, and Slovenes), and M. L. Smodlaka.

The marriage arranged between Lieutenant Edwin S. F. Turner, youngest son of the late Samuel Turner, of Cashel, Co. Tipperary, and Mrs. Turner, 8, Clarinda Park, N. Kingstown, and grandson of the late Francis Fosbery, of Curragh Bridge House, Adare, Co. Limerick, and Alison, eldest daughter of the late Frederick Sikes, of Cloyne Estate, Badulla, Ceylon, will take place quietly (leave permitting) early in April.

The Queen of Roumania received the Roumanian Minister on Monday morning, and subsequently called upon Princess Christian and remained to luncheon. In the afternoon her Majesty attended a reception held by Sir George H. Perley (High Commissioner for Canada) and Lady Perley at the Ritz Hotel. The reception, which was largely attended, was arranged in order to afford her Majesty an opportunity of meeting representatives of Canada.

A Supplement to Monday's *Gazette* contained a list of names brought to the notice of the Secretary of State for valuable services rendered in connection with the military operations in Arabia. Among the officers of the Royal Navy mentioned is that of Rear-Admiral T. Jackson, and those of the Army include General Sir E. H. Allenby, Major-General Sir L. J. Bols, and Temporary Brigadier-General G. F. Clayton (Egyptian Expeditionary Force), and Temporary Major-General Sir L. O. F. Stack (British officer attached to the Egyptian Army).

OBITUARY.

Lady Elles died on Sunday at Kincraig, Guildford. She was the widow of Lieutenant-General Sir William Kidston Elles, K.C.B., who formerly commanded the Bengal Army, and who died at Naini Tal in 1896.

Surgeon-General W. D. Cattell died on March 20, aged ninety. He served in the Crimea sixty-six years ago, and saw the battles of Balaclava and the charge of the Light Brigade. He served also in South Africa and in India. In the Afghan War of '79 he served with the 10th Hussars. He retired from the Army in 1889.

Lieut.-Colonel Dudley Beaumont died on March 17. He was born in September, 1840, and was gazetted ensign when under sixteen years old. He served through the Bhootan Expedition of 1865-6 and the Egyptian campaign of 1882—in the latter as Paymaster to the Grenadier Guards. He passed the Staff College, and was subsequently transferred to the Army Pay Department.

The Rev. William Townsend Storrs died at Sandown on March 18, aged 87. He passed many years (1855-1871) in India, going out as a C.M.S. missionary to Benares, and passing through the period of the Mutiny partly in that city and partly at Lucknow. He was largely instrumental in starting medical missions; but he was best known for his devoted work among the Santals. He retired from active work in 1910.

The death took place at Reading on Sunday of Brigade Surgeon-Lieutenant-Colonel John Robinson. He entered the Army Medical Service in 1858, taking first place in the entrance examination. He served in the Afghan War in 1878 (for which he had the medal), the Egyptian Expedition of 1882 (when he was present at the Battle of Tel-el-Kebir, receiving the medal with clasp and the bronze star), and in the operations in Zululand in 1888. Colonel Robinson retired in 1889.

Sir William Duff Gibbon (a former chairman of the Ceylon Press Association) died on March 19 at Bournemouth, where he had lived since his return to England. A son of the Rev. Charles Gibbon, D.D., of Lonmay, Aberdeenshire, he was born in 1837 and at the age of eighteen went to Ceylon. He was for some years a member of the Kandy Municipal Council, and also occupied for a time a seat on the Ceylon Legislative Council. He took a keen interest in philanthropic and religious work, especially among the coolies employed on the tea estates in the island. He was a Fellow of the Royal Colonial Institute.

Colonel Edmund Spencer Eardley Childers, C.B., late Royal Engineers, died at Bath on March 18. He took part in the Afghan war of '78-'80, and was present at the action of Tukt-i-Pul and the capture of Kabul, and marched with Lord Roberts from Kabul to the relief of Kandahar. He was mentioned in dispatches, and received the medal with three clasps and the bronze star. In the Egyptian campaign of 1882 he was A.D.C. to Lord Wolseley, and was in the battles of Tel-el-Mahuta Kassassin, and Tel-el-Kebir. Again he was mentioned in dispatches, and gained the medal, the bronze star, the fifth class of the Mejidieh, and the brevet rank of major. Later he took part in the Sudan Expedition of 1884-5, as A.D.C. to the General Officer Commanding, and for the third time was mentioned in dispatches, and received the brevet of lieutenant-colonel. Later he held several important positions at home.

Deputy Surgeon-General S. J. Wyndowe died on March 19. He was born in 1830, and joined the Indian Medical Service in 1854. After being employed with various Regular Corps in the Madras Army, he was appointed to the medical charge of a cavalry regiment in the Nagpur Irregular Force in November, 1855, and took part in an engagement with the rebels near Sambulpore in December, 1857, when his horse was shot. For services during the Mutiny he received the medal, the thanks of the Government of India, and of H.M.'s Government. Later he accepted civil employment in the Central Provinces, and was afterwards Chemical Examiner and Professor of Chemistry in the Madras Medical College. In 1867 he was appointed Resident Surgeon at Hyderabad and Superintendent of the Hyderabad Medical School and Civil Dispensaries in the Nizam's Dominions. He retired in 1881 with the rank of Deputy Surgeon-General.

NEWS IN BRIEF.

Greek war losses in Bulgaria, Turkey, and Roumania amounted to £56,250,000, and in Eastern Macedonia to £28,125,000.

The *Ahram* says that the number of new posts for foreigners provided for in the Egyptian budget of the coming financial year is 560, of which 100 posts have been created in the Ministry of Public Works and its branches.

Replying to Sir Stuart Coats, Mr. Churchill, in Parliamentary debates, says that the question of the granting of leave to British officers of the Army of Occupation in Egypt is at present receiving sympathetic consideration.

Parts of Northern Asia Minor do not yet know of the armistice, and the Turks are still terrorising the Greeks there, according to an appeal for Allied help from the Greek Metropolitan of Sivas, about 160 miles south-west of Trebizond.

The Italian Zionist Federation has (says the *Morning Post's* Rome correspondent) issued a statement, in reference to the Pope's recent Allocution, that the delegates of the Jewish people have explicitly excluded the Holy Places from the sphere of their claims.

Sir Alfred Mond, M.P., First Commissioner of Works, has sent to Mr. Israel Cohen a cheque for £5,000, being the first instalment of the donation of £25,000 which he has promised, in five annual instalments, to the Jewish National Fund for the purchase of land in Palestine.

The Hon. Sir Charles Wade, Agent-General for New South Wales, has received through his Government a further contribution of £10,000 towards the Australian Canteens for Serbians Fund, which through its Belgrade and Nish canteens is helping to feed the starving and alleviate distress.

The *Basrah Times* contains an announcement that stamps bearing Turkish designs overprinted, "Postage I.E.F. 'D.'" and surcharged with values ranging from ½ anna to 8 annas, have been issued for use in payment of postage and postal fees in the Civil Posts in Mosul Town and Division.

A delegation from the American Episcopal Church has invited the Archbishop of Cyprus, who is at present in London, to send representatives to a World Conference which it is proposed to convene to discuss matters concerning Faith and Order in the Christian Churches. The Archbishop replied that he would transmit the invitation to the Holy Synod of Cyprus.

The charity fête recently organised under the presidency of Countess Granville at Athens has, says Reuter's correspondent in that city, been a great success. A sum of 240,000 drachmai was obtained, and this will be devoted to the erection of a sanatorium for children suffering from tubercular arthritis of the hip.

Reuter's Paris correspondent reports:—The Executive Council of the Central Syrian Committee has decided to address a protest to the Peace Conference regarding its decision to send an Inter-Allied Commission of Inquiry to Syria and Asia Minor. The protest adds that the inquiry which has been ordered by the Peace Conference will be impracticable, and will throw no light upon problems "which have been arbitrarily obscured."

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

THURSDAY, MARCH 27, 1919.

THE DISTURBANCES IN EGYPT.

The confident predictions of last week that the situation in Egypt was well in hand were speedily belied. Disturbances, which at first had been confined to Cairo and Tantah, took place over the whole country from Alexandria to Assiout. The railway lines became a special object of attack, and sufficient damage was done to cause the suspension of all traffic between Cairo and the sea for a number of days. Telegraph wires were also cut. At the same time armed Bedouin entered the Baharia oasis, looted some of the villages, and are said to have hoisted the Turkish flag. The sequence of events points to the existence of an organisation working for a general outbreak, which had had its hands forced by the arrest of the Nationalist leaders. In the hope of forestalling their deportation the machinery of unrest was set going in the capital before the co-operation of the outlying districts could be secured. In due course, however, these responded to the call, and something like systematic rioting broke out simultaneously up and down the country. None of it, perhaps, was very serious in comparison with what is happening elsewhere at this time. The crowds were for the most part unarmed, and trusted merely to their numbers to effect what damage they could. An effort was made to direct the movement into a clear-cut issue between Egyptians as a whole and the British authorities by a strike of all Government employees. But the attempt failed, and the students and the lower classes were the only members of the community who responded to the summons to embarrass the Government. Nevertheless, the organisation at the back of the disturbances can claim to have achieved considerable success. The whole country has been thrown into a turmoil, the Administration has been seriously inconvenienced, and the British Government has had to send General Allenby back to Egypt post haste from the Paris Conference as Special High Commissioner.

It is evident from what has happened that a movement designed to undermine the government of the country has been allowed for a long period to mature its plans with impunity. An accident or the overconfidence of its leaders at last compelled the Administration to intervene, and for the first time the extent of the organisation is discovered from the subsequent disturbances. Hasty judgment is to be deprecated, but only the Egyptian Government will be able to explain why it allowed so much rope to the agitators without taking adequate precautions to cope with their designs. In the debate in the House of Commons on March 20 an attempt was made to fasten most of, if not all, the blame on the Foreign Office, which was taken to task for not having sought an earlier opportunity for discussing with the Egyptian Ministers the plans his Majesty's Government had in view with regard to the future administration of Egypt. No doubt the Foreign Office was responsible for the refusal to allow the Prime Minister and the Nationalist deputation to come to England, and if its decision ran counter to the advice of the High Commissioner, the latter is exonerated in regard to this point. But it would appear as if by that time most of the harm had been done; for the machinery that ultimately started disturbances from Assiout to the Mediterranean coast and stirred up the Bedouin on the West can hardly have been put together at short notice. The importance of close relations between the British and the Egyptian officials was rightly insisted upon by Captain Ormsby-Gore, who initiated the debate in a speech conspicuous for its studied moderation and its knowledge of Egypt. Failure to discover the ramifications of a wide subversive movement may not unjustly be held to imply that there was room for considerable improvement in the relations of the two sections of the Government, and it is at least open to argument that Rushdi Pasha, if not Saad Pasha Zaghlul as well, might have been deterred from taking the action he did by more sympathetic handling. For the trouble, as far as is known, dates back beyond last November when the deputation of Nationalists called at the Residency with their programme of complete autonomy for Egypt. Even before the joint declaration made by the British and French Governments in Syria and Mesopotamia it was understood in Egypt that ultimately the question of constitutional reform would come up for discussion. As the actual event showed, a scheme was drafted without any special collaboration between the British authorities and the Egyptian Cabinet. When completed, it was submitted to the Prime Minister; but it is one thing to consider a Constitution that has been elaborated as the result of joint deliberation during which every item has been carefully considered, and another thing to be confronted with a cut-and-dried draft which differs materially from one's own unadjusted views. Whether from pique or from war strain Rushdi Pasha decided at once that no bridge could be thrown across the gulf which separated him from the British authorities. The Nationalists were quick to seize their opportunity, hoping that a bold stroke would bring the whole Egyptian people, official and non-official, to their side. They have been disappointed; but the work of restoring confidence all round has been rendered difficult by the mistaken policy of the last two years.

There is much to be said for the suggestion that the Arabic-speaking world and our responsibility to it should become the special concern of a separate Department, not as a reflection on the Foreign Office, which by common consent has been conspicuously successful during the war in its handling of the problems of the Orient, but in virtue of the wide extent of territory now involved and its importance in the scheme of the British Empire. Questions of policy would still have to be determined by the Home Government, and for right decisions we should have to trust to the standard of statecraft obtaining at the time. But it would be possible to train a larger class of officials with expert knowledge of the Arab world, and consequently to enlarge the circle from which the chief officials have to be drawn. In the future Mesopotamia, Palestine, and possibly Syria will call for as expert and sympathetic handling as Egypt. The latter country is showing signs of outgrowing the supply of the ready-made administrator as distinct from the trained specialist. General Allenby will now take the situation in hand, and on the strength of his prestige among the people and his innate tact may be expected to undo some of the mischief done. There will remain the problem of constitutional reform, and it would seem as if the first thing to be carried out should be to scrap any draft constitution already in existence and to elaborate another in consultation with various sections of the people. Great Britain's position and her determination to uphold it and to safeguard the interests of the fellaheen could be made perfectly clear: but within these limits it should be possible to find room for a constitution which will satisfy the legitimate aspirations of the more enlightened elements of the population.

THE EGYPTIAN STUDENT.

(By One Who Knows Him.)

It seems to be generally agreed that the present trouble in Egypt has drawn its support largely from the Secondary and Higher Schools. Ever since the Egyptian Nationalist Party came into existence, its rank and file has been composed mainly, if not entirely, of the students of these schools. Their subscriptions kept the *Lewa* going, their attendance turned the party meetings into "mass meetings," and their shrill cheers assured Mustapha Pasha Kamel that he had "the nation" behind him when he appeared upon the platform at Cairo or Alexandria to denounce the British Occupation.

As a matter of fact, the students began the present trouble by going out on strike, and they have played an equally conspicuous part in its later, and more dangerous, phases. They have been the leaders of the Cairo mob in attacking Government offices and private property, and last week's telegrams from Egypt made it clear that they have also appeared as leaders of bands of hooligans in the provinces. In the attack on the railway station at Wasta, for instance, *The Times* correspondent tells us, the crowd, which consisted of 2,000 fellaheen, was "led by a student mounted on a donkey."

The extreme youth of these students (most of them must be well under twenty) makes the phenomenon one which may well puzzle European readers. But, in the first place, the fellaheen are very easily led by anyone with a smattering of education. In the second place, the sense of difference in age is, in some ways, curiously lacking among the Egyptians. It is quite a common thing in the Secondary Schools for a well-grown lad of eighteen to complain to his teacher, with tears in his eyes, that he has been kicked or beaten by a child of fourteen, whose head scarcely reaches to his shoulder. It does not seem to occur to him to assume any superiority on account of his advantage in years and stature; and it is, therefore, the less surprising to hear that crowds of full-grown men have been prepared to follow eighteen-year-old leaders into perilous adventures during these times of abnormal excitement.

Furthermore, there is the Egyptian students' extraordinary gift for organising strikes—in a country where strike organisations hardly exist. They will strike about anything, from an over-stiff examination paper to a political controversy entirely unconnected with their work. They have brought the business to a fine art. A master will lay down some rule, or announce some decision that they do not like. There will be no protest, no whisperings; but suddenly he will notice that every student in the room has put his books away and is sitting with folded arms. Of course, they are punished for this; but the truth is that they generally end by extorting some concession, though one does one's best to conceal the extent of their victory from them.

I think I am right in saying that the first strike on a large scale, organised by the Egyptian students, was on the occasion of the death of the Nationalist leader, Mustapha Pasha Kamel, in the winter of 1907-1908, when they elected to take a holiday in order to attend the funeral of "the lion of Egypt"—as one of them described the late Pasha to me. They simply stayed away from school that day, and attended the funeral in due course. But one hesitates to write of it, lest schoolboys in other countries should get hold of the idea, and being less industrious than the Egyptians (who are really exemplary students as far as their work is concerned) should take to commemorating the death of some favourite politician on every fine afternoon!

Saad Zaghlul Pasha, the Nationalist leader, whose desire to visit London and subsequent deportation to Malta, brought the present trouble to a head, was at that time Minister of Education, and, of course, a great opponent of Mustapha Pasha Kamel and his party. Strikes began to increase in frequency after the funeral incident, though not on the same scale; and the Minister presently decided to intervene in person and put a stop to the practice. There was a strike in progress at the moment at Saidieh Secondary School, Cairo, over some paltry question of the date of an examination paper—if my memory serves me—and the Minister went to the school himself, reversed the decision of the English headmaster, and settled the matter to his own satisfaction, but not, apparently, to that of the students. For as Zaghlul Pasha left the building, some of the malcontents got together and hooted him, whereupon he hastened back to the Ministry in a state of considerable alarm and sent down a *posse* of police—to the great amusement of all concerned. The joke was told against him in Cairo for many months after. One wonders whether he himself, in his new character of the popular leader, ever remembers these early encounters of his with the schoolboy "Nationalists" of Cairo.

It must not be supposed, from what has been written above, that discipline is altogether lacking in the Secondary and Higher Schools of Egypt. At all ordinary times the students are well in hand, and they have a genuine respect for their instructors, whether British, French, or native. The students are docile, well mannered, and as industrious as any that could be found in the world. And strikes, after all, do not occur every day—or every month. Nor, as far as one can gather, do the students, as a rule, attempt to take undue advantage of any success they may have gained by such demonstrations. There is, however, an extraordinary solidarity among them, a sort of public spirit—too often a perverted public spirit—which one may hope will some day be turned to better uses in the true service of their country.

SOUTHERN MACEDONIA.

Lecturing before the Royal Geographical Society on Monday, Captain Alan Ogilvie said that the region north of Salonika where from 1915 onwards military operations had been carried on, had to the north an unbroken range of mountains five thousand feet high, and to the east and west the Vardar and Struma rivers. The mountain range was rather a plateau with a flat top and steep sides. The region combined the long hot Mediterranean summer with the cold dry winter of Eastern Europe; but this was broken by snowstorms, which sometimes lasted several days. In spring and autumn thunderstorms were frequent. The rainfall averaged about two inches a month. Cultivation was carried on in the plain and on patches of alluvial soil, which occurred at higher levels; elsewhere the ground was covered by scrub, sometimes forest, or was bare rock. The only four-footed creature native to the country that occurred in great numbers was the tortoise, but bird life was abundant and very interesting; for summer migrants came from Africa, while geese and ducks of all sorts came from Eastern Europe in winter. Birds of prey of all kinds, from vultures to sparrowhawks, abounded in the hills. The most important insect was the mosquito. Of this several species were found, including the one which carried malaria. The classification of the races of men in Macedonia had given trouble to anthropologists ever since they had studied the question. The Turk, Greek and Slav were predominant. Language was the great distinguishing mark, for racially there had been great admixture. Other races were the Kutzo-Vlachs, who were a pastoral people, the Jews of Salonika, and the Gypsies. The last-named were very dark skinned, almost negroid in appearance; and he had discovered that their language was intelligible to some of the Indian troops who were with the British expedition.

Speaking of the economic future of the country, he said that the agriculture of the plain might be greatly improved and developed by a system of irrigation, of such a character that all might benefit by it, by draining swamps and making roads, by setting up an equitable system of land tenure, by instituting co-operation among the farmers on a plan similar to that in use in Denmark, by providing agricultural education, and by supplying machinery and fertilisers. The hills should be reafforested, and the migrations of the shepherds and their flocks restricted. As to Salonika, there was some danger of the harbour being destroyed by silt from the Vardar river, but there was the possibility of developing a port of the character of Marseilles.

Professor Ernest Gardiner, who had been at Salonika as a Naval Intelligence officer, said that all over Southern Macedonia one came across the remains of water channels and irrigation pipes; it must have been a most productive country in the past, and, given a stable government, could be so again. As to the port of Salonika, the course of the Vardar river might be diverted a few miles to the west, where it had an old mouth.

Lady Grogan said that where the lecturer had used the word Slav she would have said Bulgarian. The people could not be divided into watertight compartments; very often you found a village half Greek and half Bulgarian, or half Turk and half Greek. No settlement could be just or final that did not take into account the fact that the bulk of the inhabitants of Macedonia regarded themselves as Bulgarians. It was not wise to put one Balkan people under the domination of another.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

OMAR KHAYYAM.

Nobody knows better than I the fascination of a pipe; and cigars, and even cigarettes, are not without their charm for me. But I do object most strongly to youngsters smoking; and should like to have a short Act passed through Parliament authorising any adult to take away the cigarette (or pipe, or cigar!) from any juvenile smoker and administer chastisement to him. Seriously, juvenile smoking is deplorable; and it is, I fear, on the increase. At any rate, I seem to see a lot of foolish lads poisoning their systems with smoke before their undeveloped bodies have acquired strength to resist the toxin. In this matter we might take a hint from Travancore, where steps have been taken by the Popular Assembly "for the preventing of the use of tobacco by school children." The Government had previously, "after carefully considering the problem . . . issued orders to all heads of educational institutions to stop smoking among schoolboys," but this had not achieved the desired result. I am a little sceptical whether the new legislation will prove much more effective; though, I observe, the ten sections of the Bill "follow mainly the provisions of the Mysore regulation of 1911." It seems to me that it is not Mysore regulations that will appeal to the juvenile smokers of Travancore (or Great Britain), but sore portions of their own anatomy, if they offend. At any rate, the experiment is surely well worth trying.

***

A Beyrout paper, the *Lissan el-Hal*, reports that a certain effendi skilled in caligraphy once wrote on an egg the whole of the Ottoman Organic Law, in Arabic and in Turkish, with explanatory notes and two poems about the Ottoman Constitution, adding—to fill up space, one supposes—a map of the Ottoman Empire. Altogether the ingenious gentleman managed to write some 10,000 words on the egg. Now he has presented to the Syrian Protestant College Museum a grain of wheat on which he has written a poem of 107 words, all of which, we are told, can be read clearly through a magnifying glass, and even by a man with strong sight. I agree with the *Lissan el-Hal* that the effendi has given proofs of marvellous patience and skill. But we must remember the training of the Oriental scribe. Usually he holds his paper "all anyhow" in one hand, making it into a kind of crumpled ball, and then writes on it with a split reed, using ink that consists chiefly of lumps of weird chemical substance. After that, writing on an egg-shell, or even on a grain of wheat, must be comparatively "smooth going," and a decent pen and readily-flowing ink must be wonderfully helpful. I am not sure that I do not consider the caligraphic performances of certain Turkish officials that I have witnessed in my travels quite as wonderful as the feat of the writer on the egg and the grain of wheat. At any rate, I could never write anything at all in circumstances which seemed to present no difficulties to the Turks and Arabs referred to; while I could write at least a few words on an egg!

***

The trouble in Egypt did not come altogether as a surprise to me—not because I lay claim to any great foresight in such matters, but because it would have been little short of a miracle if the Egyptian "Nationalists" had not taken advantage of the present state of affairs in their own sweet way. With politicians the world over promising everything to everybody, and the Press predicting that the Millennium will come to-morrow, it is perfectly natural that would-be politicians in the Nile valley should think the time ripe to join the Jazz orchestra. But what *does* puzzle me is to account for the agitators scoring such successes as they have managed to secure. I could understand their finding followers among the rabble of Cairo or Alexandria, but that they should have been able to get at the fellaheen of the provinces does surprise me. Where did the money come from? And who managed the organisation part of the agitation? The "Gippy" unaided?——

***

Of course, the Fellah is a credulous soul, and in all probability a clever agitator could do almost anything with him, if once he could secure his attention. But the Fellah does not, as a rule, like to be bothered over politics, and I suspect that the only way that the agitator has been able to nobble him at all has been either by "cash payment" or by very, very tempting promises of financial gain for himself in the *near* future. Such bait, I fancy, he might find it very difficult to resist. For, like the Bedawi, he is a greedy person. I have often referred to swindles put upon him, and in looking through Egyptian papers the other day I came across several instances of a kind to show what an extraordinarily gullible being he is. For example, a Cairo butcher, named Ismail Hassan, lately sold three rotls of mutton to an effendi, who induced him to hand over also change for a five-pound note which he (the effendi) had "left at home"! The obliging butcher sent one of his boys home with the customer to carry the meat and bring back the note. The effendi, however, despatched the youth to fetch some more mutton—and then disappeared.

***

Another Ismail, this time a resident of Beni Suef, was lately accosted by a venerable old gentleman, who expressed a great desire to bless him. As the ancient one mentioned casually that he was a saint, Ismail granted his request. Next the benevolent stranger desired fervently to bless Ismail's worldly goods, and asked the Fellah to entrust him with some money, in order that he might increase it threefold. Apparently the "saint" would not have been a real success as a company promoter, for 200 per cent. is nothing in these days! Ismail, however, found the prospect pleasing, and parted with three pounds (Egyptian). His saintly friend thereupon despatched him to secure some special kind of dust for some purpose connected with the hocus-pocus. Ismail went. So did the "saint" and the £E3. . . . It is all very ridiculous, no doubt. But it does show how easy it is to mislead the Fellah if only you dangle the right bait before him. And the "Nationalists" have, no doubt, studied the bait question pretty carefully.

CORSAIR.

"THE DOME OF THE ROCK."

(FROM A CORRESPONDENT.)

A most interesting lecture was delivered on the 5th inst. at the Dominican Convent of St. Stephen, Jerusalem, by Major E. T. Richmond, F.R.I.B.A., late Director-General of Public Buildings in Egypt. The lecturer took for his subject the tile work of the world-famed Mosque of Omar, and illustrated his history, remarks, and discoveries upon that unique building by a series of drawings, paintings, and fragments of the tiles representing the progressive deterioration produced by modern and, latterly, European methods of production.

The lecture, which was very largely attended, was delivered in French, and will possibly be incorporated into the authoritative work which, it is understood, Major Richmond will publish on his return to England upon the Dome of the Rock, Mosque of Al Aksa, and, in general, the whole Haram es-Sherif, or sacred enclosure.

THE S.A. IN INDIA.

Sir Louis Dane, who presided at a meeting of the East India Association on Monday at the Lincolnshire Room, Tothill Street, Westminster, paid a tribute to the work of the Salvation Army in India, and said Mr. Tucker, the founder and head of the movement, entered the Indian Civil Service in the same year as he did.

Lieutenant-Colonel James Bedford read a paper on work among the criminal tribes of India; Mrs. Stephenson described her twenty-nine years of service among the Tamils of South India; and Mr. Basu, a member of the Council of the Secretary of State for India, spoke of the great missionary work of the Salvation Army, and more especially its educational and industrial side, for which the Indian people were most grateful.

The formation of a military record office at Bombay, to be designated the Adjutant-General's Office (Record Section), is announced. It will be located at the New Custom House, and will maintain (a) the record of service of every British service officer and British soldier serving in India from the date of embarkation for India to the date of embarkation on leaving India; (b) a card index showing the whereabouts of every British service officer and British soldier whose record of service is maintained.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Last week's article on "British Commerce in the Balkans" has brought me a letter from a correspondent with reference to the statement that Dedeagatch is of little value as a port owing to the shallowness of the roadstead and the difficulty of access from the interior. "May I be allowed to state," he writes, "that Dedeagatch could, at very small cost, be made a first-class port, and that by a glance at the map you will find that Bulgarian and Thracian produce could be more easily brought to Dedeagatch than to Kavalla."

***

The decision to establish a new train service to the East entirely through Allied countries is, in my view, very welcome, as in a case like this the more competition there is the better. I am rather sorry that the political flavour should have been introduced into what should be a purely commercial undertaking. What the average traveller will consider, is his comfort and convenience. Give him the comfortable carriages of the International Sleeping Car Company, and he will use the new line with satisfaction; but give him indifferent accommodation, and he will give it the cold shoulder.

***

The position as regards exports to Morocco appears to be much the same as when I last wrote. Little can be done until the surplus stocks over there have been disposed of, and so far there is no very great improvement in this direction. I understand, however, that hopes are entertained that there will be a change for the better shortly. As regards exports from Morocco, the position is now that the free export is permitted of hides, skins, wool, and linseed. It is confidently anticipated that there will soon be a further relaxation of restrictions. On the whole the outlook in Morocco cannot be regarded as unsatisfactory, especially as this year's crop prospects are certainly well up to the average, and possibly a good deal better.

***

It is satisfactory to learn from a Ceylon contemporary that success has attended experiments to find pulp sufficiently economical for the manufacture of paper in the Island, but I cannot express the same sentiment in regard to the news that the necessary machinery is to be obtained from Japan and America. Are British manufacturers unable to supply it?

***

I learn that Mr. Leslie Couper, C.M.G., general manager of the Bank of British West Africa, is now in Egypt on a business trip.

***

I am glad to hear that the Earl of Onslow, president of the British Merchants' Morocco Association, is now taking an active interest in the work of the association. Hitherto he has been precluded from doing so by his military duties.

***

At the annual meeting of the Anglo-Persian Oil Company the chairman, Mr. Greenway, discussing the remarkable results achieved by the company during the year ended March 31, 1918, pointed out that these results were obtained at a time when the company was only in its early infancy. "With the various extensions already on the way," he added, "the throughput of our refineries will within the next year or two be trebled, and other extensions which we hope to arrange for in the near future should, when completed, bring our throughput up to five times or six times the quantity dealt with in the year under review. And, as I have indicated on previous occasions, we anticipate no difficulty whatever in finding markets for this largely increased production. Our one and only difficulty is to provide refining, transport, and storage facilities fast enough to enable us to meet the demands upon us for our products." The supply of crude oil, Mr. Greenway stated, was practically unlimited, and that, "with the great increase in the demand for oil products of all kinds resulting from the enormous development of motor traction in every part of the world, and for fuel oil as a substitute for coal for steam raising and other purposes, there is endless scope for us in the direction of the sale of our products."

***

As regards the productivity of the company's fields, Mr. Greenway pointed out that the wells in the field from which they had hitherto been obtaining their production still maintained their extraordinarily high rate, and wells already drilled were, it was estimated, capable of yielding a production at the rate of 5,000,000 tons a year. On the field adjacent to it another well, at a distance of about a mile from the preceding one, had struck oil in considerable volume, and the well had been reported as equal to any yet struck in the company's territories. In the third field little progress had been made, but the prospects were satisfactory. "Testing operations are being carried on," he said, "or are about to be started, in a further six fields, all of which give promise of favourable results. We are now substituting electric for steam power in our producing fields, a change which will result in greater efficiency and a minimum of cost for drilling and producing generally."

***

A further letter in reference to the serious delays in telegraphic communication with Eastern countries was sent last week to the Secretary of the General Post Office by Mr. E. F. Stockton, president of the Manchester Chamber of Commerce, in which it was pointed out that the reply to the previous letter had failed to allay the anxiety and irritation which exists owing to the continuance of the trouble. "Only yesterday," Mr. Stockton wrote, "I received complaints from several quarters that recent telegrams from India, China, and Egypt were taking ten days in transmission. Two or three days in a time of great stress would be comprehensible, but it is impossible to believe that longer delays than this are not avoidable. As matters stand at present the telegraph service is for practical business purposes of very little use. It is, in fact, almost a delusion. Offers are submitted by wire and replied to by wire in order that the two parties may have the advantage of contracting if they so choose at the prices current at the time, but of what avail is it to send an expensive wire if three weeks elapses before a reply is received? You observe that relief would be afforded if the use of codes could be permitted, and that 'the censorship authorities have the question under consideration.' This is nine days since, and it is a subject on which a business man would have decided at once."

***

It is, I should think, almost a unique occurrence for a company report to contain anything verging on what Fleet Street would probably regard as the sensational. This is apparently the case as regards the recent report of the Cawnpore Woollen Mills, which, according to the mail papers, seems to have attracted the attention of the business community in India on account of a paragraph regarding the excess profits tax. The paragraph in question states that no provision has been made for the threatened excess profits tax, because the directors cannot believe that it is seriously intended to proceed with an impost that would operate so unfairly and inequitably, and which has been condemned with such unexampled unanimity. It has aroused considerable sympathy, because it is felt that if no absolutely definite promise was given on the question of a tax the implication was that it would not be raised. Many of my readers know, I daresay, of the generous contributions of this company for war purposes, but, for the benefit of those who do not, I may mention that the latest contributions were Rs.25,00,000 to the second Indian War Loan, in addition to subscriptions from the staff to the extent of Rs.16,90,500, and Rs.6,95,000, which the directors handed back to the Government as a free-will gift.

TRADE WITH THE LEVANT.

Greater Enterprise Required.

(From a Correspondent.)

The vital need of the moment is for a forward policy on the part of British traders if advantage is to be taken of the openings for business in the Near East generally, and in particular in the Levant This, unfortunately, is not what is happening, and it must regretfully be admitted that as yet there is little evidence of the widespread endeavour to enter the Near Eastern markets that might justly be expected, in view of the better realisation of the importance of these trade centres in the last few years. A member of a leading house doing business in the Near East explained to the writer that the position was roughly that while Lancashire firms, whose exports to the Levant largely accounted for British trade predominance there before the war, are active in arranging shipments, that is not the case with firms in other parts of the country, notably London, dealing with other commodities. As a matter of fact, since the armistice, it has been Manchester that has led the way in urging the removal of restrictions on trade with the Near East, and in bringing pointedly before the attention of the authorities the hampering effect of various factors on the resumption of commerce. Why this enterprise and initiative should be mainly confined to one centre, it is difficult to understand. One explanation suggested is that while exporters of cotton goods know the character of the Levant markets by experience, they are, to a considerable degree, new territory to exporters of other commodities, among whom there is on that account a certain not unnatural hesitation and a disposition to see what "the other man is doing," which has not been diminished by the element of uncertainty in the outlook. Another factor which is probably not without effect is the belief that some of the districts in question have been too impoverished during the protracted war for trade on an extensive scale to be possible for some time. It is only to be expected that, in the circumstances, there should be difficulties at first, but they can at the worst only be of a temporary character, and the question of the financing of imports will be speedily solved by the export of commodities available in the Levant. As for the outlook, it may be taken for granted that as soon as peace is finally ratified, any anxieties on this score, whether at home or abroad, will quickly disappear, and those who allow this factor to influence them in adopting a Fabian policy will find to their cost that they have been badly in error, while the lack of knowledge of the markets as a reason for inaction is unworthy of serious consideration.

Foreign Competition.

There is, in short, no valid excuse for any absence of enterprise on the part of British merchants and manufacturers. The times call for action, enterprise, and initiative, and those firms who bring these qualities to the markets of the Levant will find that the results will richly repay their efforts. But if, on the contrary, delay and caution are to be the guiding principles, then it may be accepted that Great Britain's place in these markets will be no better than it was before, and one of the most excellent opportunities for increased trade ever offered to this country will have been thrown away. And why? Simply because while British business men are considering the outlook, other countries are rapidly preparing to take advantage of the promising markets in the Near East. They have studied the position there, have estimated correctly the possibilities, and are prepared to lose no time in establishing trade relations. Such considerations as the financing of imports and the general situation are no deterrents in their case, for they know very well that these things are only temporary in their incidence. As showing the activities of foreign countries, it may be mentioned that Japan is making strenuous efforts to develop her trade with Greece; France has established commercial bureaux at Bucharest, Sofia, and Belgrade to facilitate her import trade; America is displaying considerable activity in relation to various Near Eastern trade centres, notably Salonika; while Italy, too, has to be reckoned with. In the Levant the position is just the same, and there, too, serious competition must be anticipated, and the slower British exporters are in entering the markets, the more severe it will be. The maxim for British exporters now is to reach these markets at once by means of travellers and agents, and to do everything possible to cultivate them and to meet local requirements. It may not, and no doubt will not, be possible in many cases to promise immediate delivery, but there is no obstacle of any description in the way of booking orders for delivery as soon as circumstances permit. Acting on these lines, and acting promptly, the foundations of enduring business will be laid.

Goods in Demand.

Finally, emphasis must be laid on the comprehensive character of the Levant markets. The requirements of the inhabitants are not so extensive as those of European countries, but they are far more varied than is generally imagined in business circles in this country, and the present scope of their wants will rapidly increase with the development of the districts. With imports ranging from oleographs to superfine china and cut glass; from ploughs and tractors to felt hats, and from upholstered furniture to fancy leather goods, it is impossible to describe the market as other than important, and there is a demand for all these goods in the Levant, and others too numerous to specify in the present article. To take the Syrian market alone, which, by the way, promises to be one of the most prominent trade centres of the Near East, the list of imports before the war included such commodities as cement, paper for wrapping oranges and lemons, tiles, flooring, paints, hardware, ironware, chemical manures, clocks and jewellery cases, ready-made clothes, silk goods, glassware, building material, and iron and steel. This list, selected at random, is intended merely to show the character of the trade. Before the war, British trade in Syria was mainly confined to cotton goods, though, even so, we were able to head the list of importing countries. There was no reason other than lack of organisation to account for the poor showing we made in the trade in other commodities, and it should be a comparatively simple matter to obtain a fairly large share of the other imports in the future A special effort should be made to cater for the trade in tractors and other agricultural machinery, for which there is certain to be a growing demand in Syria and other similar districts, and this will necessitate arrangements for the provision of repair shops, for, otherwise, as was the case before the war with a competing country, a customer unable to have his machine repaired will be lost for good. There is also likely to be a great deal of constructional work, requiring building materials of all kinds, and here, too, it may be hoped that British firms will be well to the fore. They will be if, as we have said before, they lose no time in entering these markets and are no pains in cultivating them.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal from March 12 to 16 inclusive, amounted to 2,170,000 francs as against 1,260,000 francs for the same period last year.

NEWS FROM ALL SOURCES.

Messrs. Benabu and Co. have removed to Benabu House, 163, Fenchurch Street.

Mr. J. C. G. Bouillat has resigned his position as director of the Eastern Bank, Limited.

Italy is to have a new port near Voltri to cost £5,800,000 and to be completed in twelve years.

A French Commercial Bureau has been opened in Belgrade to promote trade between France and Greater Serbia.

The Dutch Holland-Amerika Linie has issued new capital to the extent of five millions of florins at a premium of 327 per cent.

The Egyptian Ministry of Agriculture has imported a large consignment of empty sacks from India with a view to distributing them among cultivators.

A special bonus equal to one tenth of a year's salary has been granted to all the covenanted Europeans except Italian employees on the Kolar Goldfield.

The Persian Government has decided to use motors for practically the whole of its mail service, and it is reported that an order has been placed with the Fiat Co. for fifty motor mail vans.

A proposal for through navigation between the Rhone and the Rhine, via the Sâone, to link up the Mediterranean with Central Europe, was approved at a Chambers of Commerce meeting at Chalons-sur-Sâone.

Two French banks have decided to increase their capital. The Banque Nationale de Credit is raising its capital from 150 millions to 200 millions of francs, and the Credit Commercial de France from 45 millions to 64 millions of francs.

Mr. Jules J. Hesson, managing director of the Eastern Company of Warehouses, Insurance, and Transport of Goods with Advances, Limited (of Petrograd), and the Caucasus and Mercury Steamship Company, has arrived in England from Petrograd, and is staying at the Piccadilly Hotel.

H.M. Trade Commissioner at Calcutta has forwarded a copy of "A Note on some Shipbuilding Woods of Burma," by Mr. J. D. Hamilton, of the Provincial Forest Service, Burma. It contains a description of such woods as are best suited to the various parts of a ship. A copy may be consulted on application to the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

During the eleven days in which the British Industries Fair remained open, 31,000 persons passed through the turnstiles, as compared with 23,000 the previous year. Over 300 buyers from the Continent visited the fair; there were also 23 buyers from Canada, and four from the United States. It is estimated that the amount of business transacted was in excess of last year, when the orders noted were over £1,500,000.

According to the Department of Statistics in India the number of cycles other than motor-cycles imported by sea into British India from foreign countries was 10,937 in 1917-18, compared with 34,577 in the pre-war year, a decrease of 68 per cent. In 1917-18, 98 per cent of the cycles came from the United Kingdom, 1 per cent. from Japan, and in the pre-war year 99 per cent. came from the United Kingdom and 1 per cent. from Germany.

CONDITIONS IN SYRIA.

Position Improving.

(From A Correspondent.)

Cairo, February 23.

Syria may be said to be fast approaching the end of her troubles. In a letter dated four days ago a lady who had left Egypt for Syria to take part in the work of relief writes: "There is hardly any room left for relief work among the poor. So much has been and is being done by the various relief societies and by the authorities. What strikes the newcomer, however, is the great number of persons in ragged clothing." Actually the cost of living in Syria, or at any rate in Beyrout, is lower than in Egypt. Even sugar is little more than a 1½d. more per lb. than in Egypt. As regards the market position it may be mentioned that several hundred bales of Manchester cotton goods, shipped from Egypt, and discharged last month at Beyrout, are said to be still lying there. The expected arrival of the "Kaffir Prince," which is now discharging at Alexandria, and will be proceeding thence to Beyrout, Tripoli, and probably Alexandretta, with a full cargo, most of which is destined for the Government, but part of which also consists of Manchester goods ordered direct from Beyrout, will tend to aggravate the state of the market. That means of transport to towns in the interior, such as Damascus, Baalbok, Homs and Hama, where a great deal more gold has always existed during the war than in Beyrout, is not available is due to the fact that the railways and motor lorries are still required almost exclusively for military transport, while beasts of burden except a few that the military authorities have given away to relieve urgent needs, are likewise unavailable to the public. Now, however, that the bridge on the Orontes between Homs and Aleppo has been repaired the train service between these two towns has been resumed, and it is hoped that the public will have a better chance of being allowed transport facilities in the interior. But the market position is not only due to lack of transport; another factor is the temporarily reduced purchasing capacity of the inhabitants of Beyrout and of the neighbouring villages. This temporary check to their purchasing capacity is natural, seeing that they have been despoiled in every imaginable manner by the Turks during four years of war, and have been unable to export any produce from the country; but under the greatly improved conditions a very early improvement may be looked for.

It seems that the olive yield was a good one in Syria, and fortunately the Turks were driven away before the ripening of the fruit and the gathering in of the crop. It is said that the first steamer that carried goods to Beyrout could have had on her return to Egypt up to 1,500 tons of olive oil, but the authorities did not allow this export, on the ground that as oil is an article of prime necessity and one consumed largely by the poor its export would lead to a considerable rise in prices, and probably to scarcity in the open market.

PAPER MONEY IN EGYPT.

Complaints of Dirty Notes.

(From Our Own Correspondent.)

Cairo, March 3.

By Proclamation, the embargo placed on the introduction into Egypt of banknotes issued by or under the sanction of any Government at war with his Majesty has been taken off. This means that Turkish notes, of which there is an enormous quantity in Palestine and Syria, can be negotiated by the banks, and in consequence of this considerable relief will be afforded the local population.

Whilst on the subject of banknotes it would be interesting to know whether the almost universal use of paper money which has crept in since the war is not to a very great extent responsible for the continuation, if not actually the propagation, of the present influenza epidemic. I understand that bank notes by reason of their larger surface and of their greater humidity are better conductors than most metal coins, and it would be interesting to hear the opinion of the medical and bacteriological experts on the point now raised. If paper money is to continue in circulation after the war then it would appear highly necessary that some arrangement should be made whereby all notes paid into banks or large business houses are fumigated before being re-issued, and that in the case of the former establishments notes which are at all dirty should be withdrawn from circulation.

(From Our Port Said Correspondent.)

Port Said, March 6.

Great dissatisfaction prevails over the filthy and insanitary condition of the currency notes, which have been issued by the Government in lieu of small change; many of the notes are literally in tatters, and sometimes only held together by sticky paper. Some of the natives refuse to accept notes that have more than one hole in them, even though issued by a bank or the post office. Surely the Government, which must be making a handsome profit out of the note issue, could arrange that any torn, holed, patched, or very dirty notes, could be retained by the post office and the banks, and not put again into circulation. By such means the worst of the notes would be gradually eliminated, and people would be spared the annoyance not only of filthy notes, but the added vexation of having them refused by the very people who are chiefly responsible for their condition.

Some time ago the local Press in announcing the arrival of Monsieur Bonnet, the general manager of the Suez Canal Company, from Paris, also said that the British Government were contemplating giving a war bonus of two months' pay to the Suez Canal employees. Enquiries at headquarters would seem to indicate that this was a hoax, as nothing is known of the matter in British Government circles.

ECONOMIC CONDITIONS IN PALESTINE.

The London Bureau of the Zionist Organisation states that the agriculture and colonisation department of the Zionist Palestine office reports that the first task which it set itself as soon as the whole of Palestine was liberated from the Turk was the investigation of the losses sustained by different Jewish colonies and farms as a result of the war. It also made a comprehensive though necessarily hasty survey of the economic situation in the country, so that the next steps in colonisation might be directed along beneficial lines.

New estates, it declares, will perhaps not be at the disposal of the Zionist Organisation for some time, and even areas acquired will not be ready for colonisation purposes until such improvements as irrigation and drainage works have been effected and roads and highways have been constructed. Schemes for development along those lines must, therefore, be ready for consideration in connection with such colonisation work as will occupy lengthy periods. But for the immediate future it is urged that closer settlement and more intensive culture on the land already in Jewish hands will enable some twelve thousand persons more to live on it. On the various estates in Jewish hands there is room for six hundred settlers' families, say two hundred on land belonging to the Jewish National Fund and the Palestine Land Development Company, and four hundred on land belonging to private societies and individuals. Thus, assuming five to a family, three thousand could be directly engaged in agriculture. Mr. Ettinger, director of the department, estimates that this would provide a basis for twelve thousand persons living directly or indirectly on agriculture and its bye industries. The fact that the land reserve is so small, compared with the need that is sure to arise in the very near future, makes it all the more imperative that every effort should be made to utilise the land now in Jewish hands to its maximum productivity.

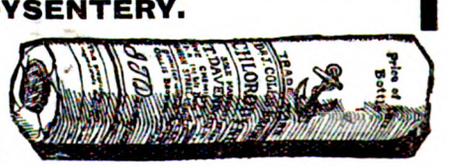
The report proposes that the land to be provided from the Jewish National Fund land should be leased on hereditary leases to families likely to work without hired labour, and containing workers already used to agricultural work. Adequate loans to cover working expenses (seed, cattle and so on) should be advanced from a special agricultural credit institution yet to be created. The settlements should be supervised by committees consisting of representatives of the settlers, of the Jewish National Fund, of the credit-giving institution, and of the intended Jewish National Council. As the establishment costs, namely, the cost of buildings, implements, working capital, schools, sanitation and other public services, cannot be borne by working-men settlers, it is proposed that the latter should be aided by loans. The cost of settling a family is estimated at £600.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.



Checks and arrests FEVER, CROUP, AGUE.

ENGINEERING NOTES.

American Machinery for Greece.

According to Athens newspapers of recent date, a very large consignment of agricultural machinery and implements has arrived in Athens from America. The consignment comprised all classes of power machinery and a considerable number of motor (petrol) ploughs. Most of the latter were stored at the Botanical Gardens, where King Alexander went to view them, and, at his express wish, two or three of them were set to work on an adjacent field, attracting from first to last his special attention. Later these American machines and implements were exhibited at the Zappeion, the large Olympic Exhibition Building, where they were visited by official agriculturists, large numbers of landowners, and the general public. A number of these motor-ploughs and other implements have already been sent by the Government to Eastern Macedonia and to Thessaly, to be used for the spring cultivation. In the meantime, after prolonged arguments, the Bulgarian Government agreed to deliver seven hundred draught animals per week to the Greeks in exchange for the cattle and horses that were taken by the Bulgarian army in Thrace. This weekly delivery will continue until the number is completed. However, in spite of this, comparatively, substantial number, the dearth of draught animals in Macedonia and Thessaly is still causing anxiety to the Government, which is urging the extension of land cultivation in the two provinces, and is offering every possible assistance to farmers. Hence, besides the motor-ploughs from America, some thousands of ordinary ploughs, it is said, have been ordered, and many are still wanted. From the reports it appears that America is the principal supplier at present of these machines. It is hoped that British manufacturers will not neglect this market, which, apart from its local value, is a commercial centre for regions further East.

Motor Ploughs for India.

Apropos of the dearth of draught animals in the Near East, it is interesting to note the remarks made on the same subject by an agricultural engineer, who, writing from India, points out that in that country there will shortly be a need for many motor-ploughs, or light direct ploughs, capable of ploughing from six to seven inches deep, and which can be handled easily in small fields, and are, as far as possible, "fool proof." This is what has been emphasised in these columns as the necessary feature for ploughs intended for work in the East generally. It appears that, owing to the weak monsoon, there are in India now thousands of acres absolutely bare and devoid of a blade of grass or a grain of corn, says this engineer, and consequently it is extremely difficult to keep bullocks alive. Prices had already risen sky high before famine conditions were felt, and it is anticipated that before next ploughing season commences—which will be about the end of next month—about 50 per cent. of the bullocks, which in ordinary circumstances would have been employed for ploughing, will have died. As a result, it is feared that there will be practically no bullocks left to haul the ploughs. The alternative is mechanical cultivation, and as there are several firms in England which have already placed on the market motor-ploughs which are suitable for conditions in the East, and, of course, in India, it is to be hoped that they will take the matter into their hands, and will not allow American and Japanese firms to establish themselves in the Eastern markets practically without competition.

Except by special permission of the Minister of Immigration, the entry of German, Austro-Hungarian, Bulgarian, and Turkish immigrants into Canada is forbidden.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

The general tone of the market has not improved during the past week. Numerous difficulties are still encountered in arranging business. It is believed in many quarters that prices have not yet touched the bottom, although numerous spinners and manufacturers are now willing to accept orders at rates which show either a loss or no profit at all. The disorganisation of the cable service between this country and Eastern markets is a very serious hindrance to trade negotiations. Merchants with connections in Egypt have followed with considerable interest the Press telegrams relating to the disturbances abroad. It is feared that although the unrest may be put down by the Government, this movement must have some effect upon trade developments. Shippers will not be inclined to ship goods if there is a possibility of further riots. There seems to be every probability of a big acreage under cotton in Egypt for next season. There is considerable speculation as to when the control upon prices will be abandoned. No increased activity can be recorded in yarns made from Egyptian cotton. Prices continue to fall, and now and again surprise is expressed at the figures accepted by needy spinners. A little more inquiry has been mentioned in piece goods for India, with occasional offers, and isolated speculative sales have occurred in light fabrics. Operations for China have been irregular, but now and again the contracts arranged have been of fairly substantial dimensions. There are no indications of cloth manufacturers as a body meeting with any definite relief. American yarns have again dragged in demand, and prices are easier on the week. Stocks at some mills are of very serious dimensions. Only odd lines have been mentioned in export yarns.

PROMINENT INDIAN INDUSTRIES.

SHIPPING INTELLIGENCE.

Service to the Near East.

The Ellerman-Wilson line, Hull, have resumed their regular services to the Near East, and propose to maintain regular sailings from Hull to Malta, Constantinople, Novorossisk, and Odessa. The City of Madrid is now taking in cargo intended for shipment to Malta, Constantinople, and Odessa.

Cunard Line's Acquisition.

An agreement has been effected between the Cunard Steamship Co. and the holders of £150,000 ordinary share capital in Thomas and John Brocklebank, Ltd., whereby the shares in question will be transferred to the Cunard Co. in exchange for £150,000 in Cunard ordinary shares. The total issued ordinary share capital of Thomas and John Brocklebank is £250,000. The remaining £100.000 of this capital is held by the Anchor Line (Henderson Bros., Ltd.), while all the ordinary shares in the Anchor Line are owned by the Cunard Co. This agreement secures a complete community of interest between the three companies and involves an increase in the issued ordinary share capital of the Cunard Co. from £1,335,383 to £1,485,383, as against the total amount of £2,000,000 already authorised by the shareholders. The directorate and management of the Brocklebank Line remain unchanged.

The R.M.S.P.

The court of directors of the Royal Mail Steam Packet Company have appointed Mr. H. A. P. Cotton, head of the passenger department, to be an assistant manager of the company, and Mr. D. I. Conradi, assistant secretary, to be the secretary to the company in place of the late Mr. A. H. Bennett.

WAR DAMAGE IN PALESTINE.

The London Bureau of the Zionist Organisation states that the destruction of fruit-trees in Palestine during the war was serious, 8.000 olive and almond trees were so damaged that no hope of their recovery is entertained. The damage sustained reduced the number of trees from 27.000 in 1914 to 4,000. The trees lost down to the present time represent a minimum loss of £9,300, and the total loss by war damage of all kinds (building, trees, cattle, and crops) is valued at over £10,000.

The traffic returns of the Egyptian Delta Light Railway for the eight days ended February 28 amounted to £E8,519, making the total for the year £E340,621.

Mr. G. N. Lionda, managing director of Messrs. Lionda and Co., Ltd., 3, Broad Street Buildings, Liverpool Street, E.C.2, is leaving shortly for the Near East for an inspection of their Athens and Salonika houses and for the establishment of new houses in Constantinople, Smyrna, and Alexandria. The capital of Messrs. Lionda and Co., Ltd., has been raised to £30,000.

PROHIBITED EXPORTS.

Turkey, Bulgaria, and Black Sea Ports.

Two new lists of prohibited exports have been published in the *London Gazette*. The first list, D, prohibits the export of the following war material to Turkey, Bulgaria, and Black Sea ports :—

Aircraft of all kinds, including aeroplanes, airships, balloons, and their component parts, together with accessories and articles suitable for use in connection with aircraft; apparatus which can be used for the storage or projection of compressed or liquefied gases, flame, acids, or other destructive agents capable of use in warlike operations, and their component parts; armoured plates; armoured motor cars; arms of all kinds, including arms for sporting purposes and their component parts; barbed wire and implements for fixing and cutting same; camp equipment, articles of, and their component parts; clothing and equipment of a distinctively military character; electrical appliances, adapted for use in war, and their component parts; explosives specially prepared for use in war; field glasses; gases for war purposes; guns and machine guns; gun mountings; limbers, military wagons of all descriptions; harness or horse equipment of a military character; implements and apparatus designed exclusively for the manufacture of munitions of war or for the manufacture or repair of arms or of war material for use on land or sea; mines, submarines, and their component parts; projectiles, charges, cartridges, and grenades of all kinds and their component parts; rangefinders and their component parts; searchlights and their component parts; submarine sound signalling apparatus; materials for wireless telegraphs; torpedoes; warships, including boats and their component parts of such a nature that they can only be used on a vessel of war; and those articles marked either A or B in the schedule to the Proclamation dated May 10, 1917, as amended or as may be amended by subsequent Orders of Council or Proclamations, which are not included in the above list.

The second list, E, prohibits the export of the following articles connected with land transport, telegraphs, and telephones, to Bulgaria :—All articles for use in transportation on land; saddle or pack animals, vehicles, motor cars, bicycles and their component parts; locomotive and rolling stock; telegraphs and telephones and their component parts, and materials for use therewith.

All articles not included in lists A. B. D. E may be exported to Turkey, Bulgaria, and Black Sea ports without licence.

The Ceylon Government *Gazette* contains the draft of an ordinance making it penal for any person to possess in the colony any imitation of an Indian currency note including cotton or silk, or other goods having impressed thereon designs in imitation of Indian currency notes.

COMPANY RESULTS, Etc.

Mercantile Bank of India.—Transfer books will be closed from March 26 to April 4, inclusive

The directors of the Samnuggur Jute Company recommend a final dividend of 30 per cent., making 50 per cent. for the past year, less tax.

The directors of the Victoria Jute Company recommend a final dividend of 40 per cent., making 60 per cent. for the past year, less tax.

The directors of the Titaghur Jute Company recommend a final dividend of 50 per cent., making 70 per cent. for the past year less tax.

National Bank of India.—Ordinary general meeting will be held at the Wesleyan Hall, Bishopsgate, E.C., on April 7, at noon. Transfer books will be closed from March 26 to April 8, inclusive.

The directors of the Ionian Bank, Limited, recommend a final dividend of 3s. per share with a bonus of 1s. per share, both free of income-tax, subject to audit, for the financial half-year ended December 31, 1918, making, with the interim dividend, 7 per cent. per annum for the financial year 1918.

Madras Electric Tramways.—Holders of preference share warrants to bearer are notified that a final dividend at the rate of 6 per cent. per annum, less tax, will be paid upon presentation of coupon No. 14 on and after 31st instant at the National Provincial and Union Bank of England, 2, Princes Street, E.C.2. Rate of tax is 4s. 6d. in the £.

Eastern Bank.—Transfer books will be closed from April 5 to April 23, inclusive.

Coupon No. 10 of the ordinary shares of the Anglo-Egyptian Land Allotment Co. is payable at the Anglo-Egyptian Bank, 27, Clements' Lane, Lombard Street, E.C.4, at 60 pts.; and Coupon No. 2 of the founders' shares at pts. 15, both at exchange 97½ to the £ sterling.

The report of the Constantinople Land and Building Company for 1918 only shows the transactions in London. The credit balance is £137; £5,593 was brought forward, making £5,731 to be carried forward. Two letters have been received from the company's manager in Constantinople. He has managed the company's affairs during the war, and paid the balance of the moneys collected to the Imperial Ottoman Bank, Constantinople. He hopes in the course of a few weeks to send the accounts from December 31, 1914, up to December 31 last.

Japanese exports for 1918 totalled more than £196,270,000, an increase of £35,969,000 on the figures for 1917, while imports totalled more than £166,813,000, an increase of £63,232,700.

It is announced that French import licences are to be dispensed with in respect of machine parts destined to be used in machines now on the list of goods admitted into France and Algeria without an import licence.

COMPANY MEETINGS.

ANGLO-PERSIAN OIL CO.

The ninth ordinary general meeting of this company was held on March 26 at their offices, Britannic House, Great Winchester Street, London, Mr. Charles Greenway, the chairman and managing director, presiding.

The Secretary having read the auditors' report, and the statement of accounts being taken as read, the Chairman said: At the last annual meeting I expressed the hope that we might be able to accelerate the issue of our next report and balance-sheet. Unfortunately, owing to greater delay in the delivery of mails, shortage of staff, and other causes beyond our control, this hope has not been realised, but these difficulties are so well known to you all that I am sure no apology is needed. It gives me and the rest of the board the greatest possible pleasure to present to you such a very satisfactory report and accounts as are before you to-day, as although we are only at the initial stage of our developments the results shown are such as to more than confirm the anticipations which we have always held out as to the great future which awaits this company

Dealing with the balance-sheet first of all you will see that the paid-up capital shows an increase on the previous year's figures of one and three-quarter millions, due to the payment by His Majesty's Government of the final call on their ordinary shares and to the issue of a further £1,000,000 of participating preference shares, and we have also issued additional debenture stock to the extent of £1,800,000. You will, moreover, notice that our capital resources have been further augmented to the extent of about £2,400,000 by funds lodged with us by our associated companies, share premia, and allocations to reserve accounts. It has been suggested in the Press that we may shortly have to make further capital issues. Although we and our associated companies have a very large amount of new capital outlay to meet in order to provide for the requirements of our rapidly expanding business, yet I am pleased to say that there is no immediate need for any new issue of capital, inasmuch as our available surplus assets to-day in cash or easily convertible securities (including no less than £2,302,000 invested in War Bonds and War Loans) amount to between five and six million pounds, a sum quite ample for our present requirements

Turning to the credit side of the balance-sheet, you will see that the first item of our assets has increased from £1,982,791 in the present year to £7,001,375. This large increase is practically all accounted for by the purchase prices paid by us for the companies acquired in 1917, and by the fresh capital which we have taken up in these and other associated companies.

Profits.

I will now deal with the profit and loss account. The trading profit for the year amounts, you will see, to the very satisfactory sum of £1,516,994 3s. 9d., after making ample allowances for depreciation, as against the conservative estimate of not less than £800,000 to £1,000,000 which I gave when dealing with the previous year's accounts. A substantial portion of this profit was, I may explain, due to the earnings of our fleet, for a portion of which during the year under review we were able to find very remunerative employment. This item of profit will not recur in the following year's accounts, because during the greater portion of that year our boats were under requisition at rates which will barely cover running expenses; and also the profits of our distributing companies will be on a reduced scale. On the other hand, we shall benefit by a larger throughput at our Abadan refinery and by better prices which have been obtained for some of our products, and on the whole I think we can confidently anticipate results for the current year fully equal to those shown in the accounts now before you.

As you will see from the appropriation statements given at the foot of the profit and loss account, we have out of our profits paid off the advances of £175,547 3s. 6d. made by the Burmah Oil Company in our early days to enable us to pay the preference share dividend guaranteed by them, and also the sum of £45,843 10s. 5d. due to them for interest thereon, this latter amount being included in the first item on the debit side of the profit and loss account. We have also written off the whole cost of our last preference share and debenture issues, and allocated a total of £330,000 to various reserve accounts, both of which steps will, no doubt, meet with your full approval. This leaves a balance of £779,708 18s. 1d., out of which we have paid dividends amounting to 8 per cent. per annum on the preference shares, and we now recommend the payment of a similar dividend on the ordinary shares. The balance remaining to be carried forward will be £454,722 12s. 1d., which we estimate will amply suffice to cover the amount which will be payable in respect of excess profits duty, although the amount of this has not yet been definitely settled with the Revenue Commissioners.

This result is, I think you will agree with me, one of which we have every reason to be proud. The dividend which we are proposing to declare on the ordinary shares is not very large, but as I have explained a large amount of our profits has been employed in the liquidation of special liabilities which will not recur, and a further large amount has been reserved to meet excess profits duty, a liability which also we may hope will not recur for very much longer. It will probably interest you to know that the return to His Majesty's Government for the year on their investments in the company, taking into account the amount they will receive from excess profits duty, the payment of which has only been made practicable by their investment in the company, works out to something like 30 per cent. per annum; and that in addition to this they effected a very large saving through the favourable long-term contracts entered into with the company for the purchase of products. It will be borne in mind that these are results achieved at a time when the company was only in its early infancy. With the various extensions already on the way the throughput of our refineries will within the next year or two be trebled, and other extensions which we hope to arrange for in the near future should, when completed, bring our throughput up to five times or six times the quantity dealt with in the year under review. And, as I have indicated on previous occasions, we anticipate no difficulty whatever in finding markets for this largely-increased production. Our one and only difficulty is to provide refining, transport, and storage facilities fast enough to enable us to meet the demands upon us for our products.

Whilst on this subject of outlets for our products I would like, now that this is a subject which can be referred to without detriment to the military situation, to mention that, apart from the large quantities of fuel oil which we have been supplying throughout the war for the use of the Navy, we have been supplying the War Office with practically the whole of the requirements of the Mesopotamian Expeditionary Force for railway, motor, and other transport. It has become rather the fashion nowadays for industrial concerns and others to claim credit for "winning the war." We do not claim any such credit for this company, but it may be claimed that without these supplies the conduct of the Mesopotamian expedition, at any rate on anything like the scale which was eventually found to be necessary, would have been an impossibility, because it would not have been practicable under the later conditions of scarcity of tonnage to have transported these supplies from more distant fields. How far the Mesopotamian expedition has tended to bring about the successful conclusion to the war I will not venture to express an opinion, but notwithstanding the attacks which were at one period of the war made on "side shows," I think it is generally admitted now that had this expedition not been undertaken our position in the East to-day would have been very different from what it is. The credit for this is, however, due to the great foresight, which may now, in the light of our present knowledge of German pre-war aims, he regarded as almost providential, of Lord Fisher and Mr. E. G. Pretyman, who, in 1905, on representations made by the late Mr. D'Arcy, urged the Burmah Oil Company and the late Lord Strathcona to provide the necessary funds for carrying on Mr. D'Arcy's exploratory work to a successful issue in order that the concession might not fall into foreign hands. This is a chapter in the history of this company which is not very well known, and one which deserves to be placed on record now in view of the important bearing which it undoubtedly had on the conduct, if not on the actual issues, of the war.

Great Productivity of Fields.

I am pleased to report that the work carried on since I last addressed you further confirms the opinions we have previously held as to the great productivity of our fields. The wells in the field from which we have hitherto been obtaining our production still maintain their extraordinarily high rate of yield, and the wells already drilled are, it is estimated, capable of yielding a production at the rate of 5,000,000 tons per annum. On the field adjacent to it, to which I referred at the last meeting, another well at a distance of about one mile from the preceding one, has struck oil in considerable volume, the well being reported upon as being equal to any yet struck in the company's territories. In the third field referred to in my last speech little progress has since been made owing to the lack of drilling material, but the prospects are still satisfactory. Testing operations are being carried on, or are about to be started, in a further six fields, all of which give promise of favourable results. We are now substituting electric for steam power in our producing fields, a change which will result in greater efficiency and a minimum of cost for drilling and producing generally.

Since I last addressed you the first of the refinery extensions at Abadan to which I then referred has been completed and brought into operation. The further extensions for which capital was issued a little over twelve months ago have not yet been completed owing to the great delay which has been experienced in obtaining delivery of plant, but they are now well in hand, and should be completed during the year. A further large addition at Abadan has now been decided upon to enable us to meet the rapidly growing demand in the East for our fuel oil, and will be undertaken as soon as plant can be contracted for at reasonable prices and delivery.

In addition to our extensions at Abadan we have now commenced the erection of a large refinery near Swansea, where the refining of such products as are marketable in the United Kingdom can be carried on more thoroughly and more economically than at Abadan. The work at this refinery—the initial capacity of which will be twice that of the whole of the Scottish shale companies—is being executed with all possible speed.

The additional pumping stations referred to by me at the last meeting are now in course of erection, and should be in operation during the course of this year. We have also decided upon the laying of an additional 10-inch line from the fields to our present 8-inch line, in place of the present 6-inch line, which will further considerably augment our pipeage capacity between the fields and the Persian Gulf. We shall, when this line is completed, have one complete 10-inch line from the fields to the Gulf, and another line made up of 10-inch pipe for

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

Digitized by Google

about half the distance, and 8-inch for the remainder.

Our fleet now amounts to a total dead-weight capacity of 162,000 tons, and, as mentioned in the report, we have placed orders for further vessels of a total capacity of about 150,000 tons. We also purpose purchasing further ready tonnage whenever opportunities occur for securing it at reasonable prices. All of our vessels which were requisitioned by the Shipping Controller have now been released, and such as are not required at the moment for our own transport have been chartered at remunerative rates.

Political Situation.

I am pleased to say that the political situation in Persia has improved very much during the past few months. The present Persian Cabinet is well disposed towards this country, and the unrest which existed some time ago as the result of German and Turkish intrigue, followed by the spread of Bolshevism from the Caucasus, has now largely disappeared. Our relations with the Persian Government continue to be of a friendly character, and a representative of the company is now in Teheran discussing with them the settlement of various questions which are outstanding between us—I was hoping to be able to announce to-day the result of these discussions, but so far no advice has been received.

I wish to take this opportunity of expressing our regret at losing the valuable services of his Excellency Sadigh-es-Sultaneh, who is giving up his post of Imperial Commissioner to this company to take up the more important position of Minister of his Imperial Majesty the Shah at the Court of Washington, and at the same time the board would like to offer him their heartiest congratulations upon his new appointment. Our relations with his Excellency have always been of a most friendly and cordial character, and we are greatly indebted to him, because he has always done his best to promote the interests of the company as well as those of his Government. His brother—Farid-es-Sultaneh—has been appointed by the Persian Government as his successor, and I am sure, from what he has said to me, that he will do his utmost to maintain the policy of friendly co-operation established by his brother.

Before concluding I would like again to pay a tribute to our staff both here and in Persia, for the good and loyal work which they have rendered to us and the sacrifices they have made during the past years, under conditions which have become more and more trying. Now that the company has arrived at a remunerative stage it has been decided to allow the employees of the Anglo-Persian Company and of all its associated companies to share in the prosperity of the company by establishing what we have designated as a "provident pension and insurance fund." The fund, to which all British employees, both male and female, and certain non-British employees, are eligible for membership, affords a means of enabling the employees to share in the profits of the company, and it at the same time ensures a substantial pension after retirement, and a considerable capital sum—the equivalent of life insurance—for the benefit of their families after death. The scheme has been heartily welcomed, and already over 1,500 employees have applied for and been admitted to membership.

He then moved "that the report of the directors, balance-sheet, and profit and loss account for the year ended March 31, 1918, be received, approved, and adopted." Sir Frederick Black seconded the motion, and the resolution was unanimously adopted.

The Chairman: The next business before the meeting is the declaration of a dividend on the ordinary shares, and I now beg to move "that a dividend at the rate of 8 per cent. per annum, free of income-tax, be paid on the ordinary shares in respect of the year ended March 31, 1918, and that such dividend be paid on April 30 next." Mr. J. T. Cargill seconded the proposal, which was unanimously adopted.

The Chairman: The next business before the meeting is the election of directors. As you will see from the report, Sir Campbell K. Finlay was unfortunately compelled, owing to the exigencies of his Government work, to resign his seat on the board, and

Mr. Robert I. Watson, whose great knowledge of the oil business in all its branches and conspicuous ability will be of great advantage to the company, was appointed to fill his place. A further appointment, to fill the seat rendered vacant by the death of Mr. D'Arcy, which has been made during the past year is that of Lord Southborough, whose great ability and long experience of oil questions at the Admiralty from what may be described as the Imperial point of view, will also undoubtedly be of great benefit to the company. Both of these gentlemen, who now retire under Clause 82 of the articles of association, are valuable acquisitions to the board, and I am sure that you will heartily support their re-election. The directors retiring by rotation are Mr. F. W. Lund, Mr. Frank C. Tiarks, and Sir Trevedyn Wynne. All of these gentlemen have done extremely good work for the company, and I am sure that you will desire to retain their services. I would like to take this opportunity of expressing the pleasure we all feel at welcoming to the board Sir Frederick Black as one of the Government representatives. Sir Frederick has for many years dealt with oil matters at the Admiralty as Director of Contracts—much to the advantage of the nation, as I know from personal experience—and I am sure that his co-operation on the board will be of great service to the company. I would like at the same time to express our appreciation of the valuable services rendered to the company by Mr. Jenkins during the time that he was on the board as a representative of the Government prior to the appointment of Sir Frederick Black. Another reference which I must make to the Government representatives is to express our regret at the absence from to-day's meeting of Lord Inchcape, and at the unfortunate cause thereof. We all know the great services which Lord Inchcape has been rendering to the nation, and I am sure you will all join with me in wishing him a speedy restoration to health in order that he may once more be able to resume his herculean labours on behalf of the country. I now move "that the election to the board of Mr. Robert I. Watson and of the Rt. Hon. Lord Southborough be confirmed, and that Mr. F. W. Lund, Mr. Frank C. Tiarks, and Sir Trevedyn R. Wynne, who retire by rotation and are eligible for re-election, be and are hereby re-elected members of the board."

Admiral Sir E. J. W. Slade seconded the motion, which was carried unanimously. Sir J. D. Rees, M.P., then proposed "that Messrs. Brown, Fleming and Murray be re-elected as auditors for the financial year 1918-9 at such fee as may be determined by the board." Mr. Powell seconded the motion, which was unanimously adopted.

COMPANY NOTES & REPORTS

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31 states that the British military authorities are now in control of the railway, and that, acting under the direction and with the ready assistance of the War Office, the general manager and the other members of the Smyrna staff, who have been in this country since the outbreak of war with Turkey, left England on February 26 in order to undertake the working of the line. Some time must necessarily elapse before the general manager can report upon the present condition of the permanent way and other property of the company in Turkey, but from unofficial information recently received the council have reason to believe that traffic over the railway has not been altogether interrupted during its occupation by the Ottoman Government. The council has also learned from similar sources that recent seasons have been favourable to husbandry in Asia Minor and that substantial quantities of goods will be available for transport so soon as confidence has been restored in the efficient management and regular service of the line. To enable the company to make arrangements for the resumption of traffic it became necessary that the council should provide funds for the purchase of rolling stock and materials and to meet working expenditure, which may exceed the receipts for some time to come. With this object the council have obtained an advance through its bankers of £140,000, secured upon the unissued balance of £100,000 four per cent. and £100,000 five per cent. debenture stock at 6 per cent. per annum. The council are taking all possible steps for establishing before the Peace Conference the claims of the company for reparation of the heavy losses it has sustained in consequence of the interruption of its lawful business and the other damages it has suffered by the usurpation of its property and rights during the last four years by the Ottoman Government. With this object in view the assistance has been secured of Colonel Adrian Corbett, who rendered most valuable aid to the company during the long and complicated negotiations conducted by the Government in 1913 and 1914, which dealt with the railways of Asia Minor. The council have now authorised him to proceed to Asia Minor to co-operate with the general manager in the reconstitution of the railway and with the view of his representing the company's interests before the Peace Conference. If, as the result of the general manager's report upon the present circumstances of the railway, it is ascertained that further funds are necessary for the reinstatement of the line and the restoration of its prosperous working, the council, having now exhausted their borrowing powers, may find it desirable to ask the share and debenture holders to sanction the creation of additional capital.

National Bank of India.

The report of the National Bank of India for the year ended December 31 last states that the net profits, after providing for all bad and doubtful debts, amount to £403,636; £139,829 was brought forward, making £543,464. An ad interim dividend at the rate of 20 per cent. per annum, free of income-tax, was paid for the half-year ended June 30, amounting to £100,000. The directors now recommend a further dividend at the same rate and an addition of £200,000 to the reserve fund, raising it to £1,550,000. They also propose to write £10,000 off house property account, and to add £10,000 to the officers' pension fund, leaving £123,464 to be carried forward. Meeting, Wesleyan Hall, Bishopsgate, E.C., 7th proximo, noon.

Templestowe Estate of Ceylon.

The report of the Templestowe Estate Company of Ceylon for the year ended December 31 states that:—Profit, after writing off Rs. 8,415 for irrecoverable coolie debts, amounted to Rs. 18,521; Rs. 2,432 was brought forward, making Rs. 20,953, out of which the dividend on the preference shares, absorbing Rs. 6,516, has been paid. The directors now recommend that the balance of Rs. 14,437 be carried forward as it is necessary to strengthen the financial position of the company.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Our market has been rather dull and inactive this week, owing to the continuation of the unrest in Egypt, but there has at no time been any pressure to sell. Prices, however, have been lowered here and there as a precautionary measure; but, with the more satisfactory cables to hand during the last few days, there is again an inclination to pick up any cheap stock offering.

In Government stocks, both Unifieds and the 3½ per Cent. Prefs. are about ½ lower.

In Bank shares Nationals, after declining ⅜ to 22, finish only ⅛ down at 22¼. Agricultural banks are a like fraction lower at 6¾. Some business has been done in Land banks at the current level.

In Railways, Delta Lights are 3-16 lower at 8¼.

Amongst the Land shares Aboukirs, after dropping to 27s. 6d., close unchanged at 28s., with some good buying in progress. Allotments have been done at 5, a rise of ¼ on the excellent results for last year—dividends of 15 per cent. on the Ordinary, and 2s. per share on the Deferred being announced, as compared with 7 per cent. and 6d. per share respectively for 1917. Behéras have eased off ¼ to 13½. Dairas are 4½d. higher at 4s. 4½d. Delta Lands are 3d. lower at 15s. 6d. New Egyptians, after falling to 26s., close unchanged at 26s. 6d., and Sidi Salems are 1-16 easier at 2 13-16. Sudan Plantations have again been in continuous demand, and are closing ¼ higher at 5⅝.

In Miscellaneous shares Alexandria Waters and Salt and Sodas are each about ⅛ down at 12 and 3 respectively; on the other hand, Khedivial Mails are a like fraction higher at 5¾.

In Greek securities, with the exception of a rise of two points to 66 in the Funding Loans, there is no change to record; but the market in most Greek stocks is bare of sellers, and prices are firm.

Oil Shares.

Oil shares have been strong. Anglo-Egyptian B. have touched 88s. 1½d., and Burmahs are up to 9 1-32. Anglo-Persian Prefs. closed at 26s. 6d. Roumanians have improved during the week, but yesterday Roumanian Consols fell from 17s. 9d. to 17s.

TENDERS INVITED.

Tangier-Fez Railway.

Tenders are invited for the earthworks of the seventh section of the French part of the Tangier-Fez Railway. This section is about 25 kilometres in length, and is between Meknes and Fez. The provisional deposit is 25,000 francs, and the definite deposit 50,000 francs. Tenders must be in by June 7, 1919, at the latest, but those intending to tender are urged, in their own interest, to send in their certificates "de capacité" at least forty days before this date. All particulars may be obtained at the office of the Cie. Franco-Espagnole du Chemin de Fer de Tangier à Fèz, 41, Avenue de l'Opera, Paris.

At Chittagong, General Borton and Captain Ross-Smith, while engaged in surveying the coast for suitable stations for the Calcutta-Rangoon air route, lost their boat and records through an explosion, which injured six men, though they were unhurt.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

The most important news from Paris during the past week, as far as the Near East is concerned, is the appointment of General Mangin as Commander-in-Chief of the Roumanian and other Allied troops to be employed in the defence of South-Eastern Europe against the Bolshevists. This step is an indication that the extent of the Russian menace is at last being appreciated, and that the Allies realise that a policy of *laissez-faire* is not the wisest way to cope with it. Bolshevism, however, requires to be attacked both by military and by economic methods. It would have been by this time a far less formidable enemy if the Allies had seen their way at the outset to giving the Japanese a free hand in sending help to the moderate section of the Russian people. Behind the cordon of troops with which it is proposed to check the imperialistic designs of the Bolshevists practical measures must be taken to prevent the countries from becoming a prey to unrest from want of food or from enforced idleness of the people, resulting from delay in the restoration of more or less normal conditions of trade and industry. In the case of Roumania it is satisfactory to note that practical assistance to this end is being afforded by Great Britain by the opening of credits for the purchase of immediate necessaries, in particular, of railway material, of which the country is in dire need.

The Allied force that will operate against the Bolshevists will sacrifice much of its strength if it has to take the field with the settlement of the Balkans still unaccomplished. There will be little real co-operation between the various units if, for instance, feeling is still running high over the Banat among both Roumanians and Serbians. General Mangin's task will be materially facilitated if the Council of Four in Paris can first fix the Balkan frontiers and give the different States to understand that the whole question has been closed, and cannot, at least, for a specified number of years, be opened again. It is significant of the uneasiness which the present indeterminate situation engenders that the Roumanians should be, or be reported to be, anxious over the attitude of Bulgaria. According to one statement Roumania is exposed to immediate attack from Russia, from Hungary, and from the Bulgarians. That the latter are in a position to cause their northern neighbour anxiety is not to be credited; but the bogey will be used by interested persons to prevent as far as possible an equitable settlement in the Balkans.

Some idea of the mass of detail that has had to be digested or, at least, examined by the Paris Conference, is afforded by the controversy between Serbia and Montenegro. It appears that in support of the Serbian claim it was urged *inter alia* that the Crown Prince of Montenegro had sold his forest domain, or Zabran, to Austrians. The charge had, of course, to be met and a further memorandum was submitted to the Conference to prove that the sale was actually made to a British subject, who had, it is true, large interests in Austria. The matter, either one way or the other, ought to have no bearing on the Balkan settlement; but its introduction is symptomatic of the means employed to influence the decisions of the Conference.

Reports from Egypt appear to be subject at present to considerable delay, and are somewhat vague. Those describing events of the past week are probably as satisfactory, if not as full, as could be expected; but those giving details of the earlier phases of the disturbances do not make pleasant reading. General Sir E. S. Bulfin, who succeeded General Watson in the Cairo Command, inaugurated his tenure of office by some very plainly worded warnings to the Notables and to the people of the Fayoum and of Upper Egypt. This apparently had a good effect, and General Allenby's arrival, on March 25, has impressed the makers of trouble as we anticipated it would do. Train services have been restored, at least, in part, and telegrams are being forwarded again. The telegraphic service, however, cannot be regarded as satisfactory. Reuter reports that messages for Upper Egypt had to be despatched by aeroplane to Suez, thence on by cable to Suakim, on to Khartoum, and then to their destination. Thus, a telegram to Minia, which is 150 miles from Cairo, had to make a circuit of 3,000 miles.

The fact that the Fayoum has suffered extensively in the way of disorders is a further indication that the Bedouin of the Western Desert constitute the most serious factor in the problem that confronts the authorities. At Medinet el-Fayoum the desert Arabs attacked the garrison on March 19, and were only driven off when they had suffered some 400 casualties—which shows that the attack was conducted with determination. In the Behera Province the situation has been admittedly serious, Damanhur, the capital of the province, having been the scene of "great disturbances," in the course of which the *Mudir*, Ibrahim Halim Pasha, was attacked and severely wounded. This incident is to be the more regretted because Halim Pasha has consistently acquitted himself loyally and

Digitized by Google

well in any work entrusted to him. On this occasion, it is reported, "the troops dispersed the mob, killing 18." It is to be hoped that Damanhur will take the lesson to heart. Beni Suef, again, a town barely 75 miles from Cairo, was for a short time the scene of happenings which bore some resemblance to incidents of the Indian Mutiny. For five days the Europeans and Americans in the place were more or less besieged by a mob of townsmen reinforced by hundreds of Bedouin. Happily, a small force of Indian soldiers and English officers were hurried into the town before the trouble became acute, and in the end the women and children, with most of the civilians, were got safely on board a steamer and conveyed to Cairo. Here, as in other places, many of the native minor officials appear to have behaved very well; and here, as elsewhere, the Bedouin were clearly "out for loot" rather than for any other reason.

What would have been a humorous situation had the outbreak been less serious in character, was brought about when General Watson informed the "Egyptian Independence Committee" that, as they had started the agitation, he looked to them to stop it. The members of this interesting body—of which we had never heard before—had to confess that they could not control the *Jinnee* that they had summoned for their own ends. They even added, with shameless pusillanimity, that they feared that any attempt on their part to quell the disorders would be attendd with risk to themselves, and they concluded by asking, "for their own protection, that they might be ordered to return to their villages." The moral is too obvious to need emphasising here. But the Egyptian Fellah is not quick to see a point, and those who are anxious to obtain his "freedom" for him, in order that they may exploit him for their own purposes, are not likely to call his attention to such little *contretemps*. It is satisfactory to note that the Sudan remains unaffected; that it has actually afforded refuge to a large body of officers, nursing sisters and civilians from Assouan and Luxor; and that it has been able to despatch relief parties to other points in Upper Egypt.

The Council of Four is reported to be making rapid progress with the work it has set itself, but French patience, severely tried by past delays, shows signs of breaking down completely at certain points. Probably this tendency accounts for a remarkable speech made the other day in the Chamber of Deputies by M. Franklin-Bouillon, President of the Chamber Committee on Foreign Affairs. In this oration M. Franklin-Bouillon spoke with some warmth regarding "the problems confronting us in the East," notably of the future of Palestine and Syria Briefly, he contended that there was a treaty still in force between France and Great Britain regarding their spheres of action in this region, and he disapproved of the appointment of a Committee to visit Syria and report to the League of Nations. Even more strongly, apparently, does he object to the League deciding the future of Syria, which, in his opinion, is "already definitely settled." This view would undoubtedly find many ardent supporters in France, but whether the majority of Syrians would regard it with equal favour is less certain. It is perfectly clear, however, that in regard to Syria, Great Britain is in a most self-denying mood, and that the opposition—admittedly strong—to French ambitions there does not emanate from this country.

India's progress in modern methods of transacting business is indicated by the news that the Legislative Council at Delhi has indulged in something like an all-night sitting, the first, if we are not mistaken, since its establishment. Unfortunately for the legislators, it is not likely to be the last; experience in the West shows that the habit of prolonged sittings is easily formed, and since the average length of speeches is greater in India than in this country we must expect that more and more time will be required to dispose of a given volume of business. That will mean, of course, a period of progressive restrictions on debate, and India will have to become familiar with the "kangaroo-closure" and other modern devices for speeding up the machine, the use of which may lead eventually to some reasonable working arrangement.

Such restrictions will, we fear, prove intensely unpalatable to active and earnest politicians, but sooner or later the question will have to be faced. Indians as yet scarcely appreciate the limitations and defects of the system of government which they have been taught to admire, but the truth is that Parliamentary institutions are very far from perfect, and that the best that can be said for them is that an actual breakdown is rare. An administration commanding an adequate majority can usually find a way of getting the powers which it considers to be indispensable, but the process is so cumbrous and is attended by so many drawbacks that students of political science are justified in asking whether India is wise in attempting to reproduce institutions which are only just workable in the country of their origin; can she not apply Western experience so as to devise something better for herself?

One such device, the separation of legislative functions from political discussion, is actually working in some of the Indian States, and possesses undoubted advantages of its own. In Travancore, for instance, as we learn from the last Administration Report, for a copy of which we are indebted to the Chief Minister, the Legislature is a compact body of fifteen members, qualified to frame laws with efficiency and despatch, while there is, in addition, a Popular Assembly, much larger in numbers and based on a wide franchise, which has no legislative authority, but serves to give the people direct access to the Administration and adequate opportunities of expressing their opinion. The Assembly is, perhaps, more truly representative than any public body existing in British India, and judging from the reports of its proceedings its functions of discussion and criticism are faithfully performed; the subjects of the State can make their voices heard, but necessary legislative business has not to wait till they have finished.

Arrangements of this kind are obviously temporary, but a small adjustment would suffice to produce from them a really democratic institution. If, for instance, the Popular Assembly were given authority to pass or to reject, but not to amend, the measures prepared by the Legislative Council, the claims of democracy would be met, and only a short step would remain to lead to complete responsible government. India might thus find her own way to the result which is being gradually evolved in this country, where the details of legislation are being more and more withdrawn from the purview of the House of Commons; but, apart from the question of such developments, we may fairly regret that it did not enter into the plans of Lord Chelmsford and Mr. Montagu to discuss the bearings of these experiments carried out by Indian States; they constitute the one original contribution so far made by India towards the reorganisation of the country on democratic lines.

Apart from these constitutional questions, the most striking fact disclosed in the Travancore Report is undoubtedly the wide extension of education throughout the State. The proportion of 11 per cent. of the population attending recognised schools is far in advance of ordinary Indian standards, and indicates that three children out of every four are receiving instruction of some kind; it is all the more remarkable in view of the social distinctions which prevail in this part of India, and the fact that all the children of some of the depressed classes are attending schools should serve as a stimulus to reformers in other parts of the country where the conditions are at present very different. Assuming that the education provided is worth having, Travancore has thus taken a leading place in preparing for the new epoch, in which India shall look steadily forward instead of dreaming of a more or less mythical past.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 17.

Demonstrations in Cairo.

My last letter told of the arrest and deportation to Malta of Zaghlul Pasha and three of his more active assistants in the movement which he has been heading during the past eight or nine months; and briefly referred to the demonstration which had followed the arrests. Since then the local excitement has spread, and the whole country has suddenly become seized with a fit of lawlessness, the gravity of which cannot be denied. It was the students of the Law School who, as usual, set the ball rolling. They struck work and decided to call on their comrades in the other schools to do likewise. They proceeded to Giza to the Schools of Agriculture and Engineering, where the students readily joined them. Thence the united forces went to Kasr El Aini. Here an unfortunate incident ensued, in the course of which Dr. Keatinge, the Director, who is about to retire after thirty years of hard and valuable work, sprained his hand; but the medicals duly joined the other schools.

A demonstration was then made at the main railway station at the hour when it was thought that the four Pashas would be removed to Port Said. Their departure took place, however, quiet quietly and without any incident. From the station the demonstrators proceeded to the Court of Appeal, and on their way there they were met by the students from El Azhar University, who showed them an example by starting to break street lamps, smash up tramcars, and so forth. The demonstrators were dispersed by the police, and nothing further took place that day.

Next morning, however, matters assumed a graver aspect. The students of the Higher Schools called the pupils of the Secondary Schools out, and these latter for the most part joined them. A demonstration was then made outside the American Agency quite close to the Residency, and the crowd, which by now had been joined by the rabble of the city, refusing to disperse, the police had to charge it. That being insufficient, the military, who had been hurried up, had to fire on the crowd, with the result that there were several casualties. On the way to the American Agency the mob stopped at the Ministry of Finance and tried to get in, to bring out the native employees, but the gates were shut in time, and a strong guard had been posted there. Later on similar efforts were made at the Ministries of Public Works and Agriculture, unsuccessfully in the case of the latter, but with success at the former, where a large number, including several high officials, left their offices.

The crowd having been foiled of its objects at the Ministries and at the American Agency, proceeded to take its revenge on the way back, and it literally smashed everything it could reach in the Sharias Soliman Pasha and Kasr El Nil, tearing up trees to make staves, breaking lamps, smashing glass windows and advertisement signs, etc. Later in the day it passed through the Muski and looted many of the shops. On its way it also wreaked its vengeance on various newspaper offices, especially those of *Al Mokattam* and *Al Ahram*, where it did a lot of damage, on the last-named premises injuring the printing machinery very much. Next day General Watson issued a Proclamation forbidding any gatherings or demonstrations, and warning those who contravened this order that they would be summarily dealt with. The reply to this was a demonstration in the Bab El Hadid Square, where the mob had to be fired on before it would disperse. This demonstration had for its object to get the men of the railways workshops to join; but it was unsuccessful.

The Government's Precautions.

As a result of the more serious aspect which these disturbances had assumed, the city was strongly picketed. Strong guards were posted at all the points of access to the Sultan's Palace and private villa, at the newspaper offices, the *caracols*, etc., whilst strong patrols passed all day and night through the streets. All up the Mohamed Ali street small pickets were posted, and an armoured car patrolled the city during the night.

From that time onward matters seemed to improve in the capital. On Thursday the officials who had left their offices returned for the most part to their duties, and the various administrations contented themselves with signing petitions of protest to the Sultan. The only exception was the Native Bar, which decided to strike, its action taking the form of a request to the Court to transfer its members from the list of practising to that of non-practising lawyers. Friday had been pointed out as the day on which something serious might happen, and, naturally, everyone was prepared for the worst. As a matter of fact, the day passed off quite quietly. The Sultan went peacefully to perform his usual Friday prayer at the Mosque, and the only outward incident was the firing of some shots at one of the armoured cars as it was going up the Muski—an act which, as it wounded one of the crew, called forth a salvo from its machine-gun, with several casualties amongst the people as a result. Saturday and Sunday passed off fairly quietly in the capital. There were one or two minor demonstrations, but it was not until this morning that anything of any importance occurred. At about noon a large procession of Ulema, headed by a car with three of the Grand Sheikhs of Al Azhar, and followed by the students of that Institution, the workmen from the railway workshops, who had, meanwhile, struck, and a huge concourse of people of all sorts and conditions, started from the Citadel and, passing through the city, proceeded to the Italian and American Agencies, where it demonstrated. Thence it passed in front of Saad Zaghlul Pasha's house and the Sultan's private palace, and made a final demonstration before the French Agency. At each place and at intervals along the route, the demonstrators shouted for the independence of Egypt, but the whole proceedings were carried out in a most orderly manner, and the crowd, numbering over 8,000, finally dispersed quite quietly.

Grave Situation in the Provinces.

But if, all said and done, the situation in the capital is satisfactory, the same cannot be said of the provinces, where, in fact, the state of affairs is exceedingly grave. It was, of course, to be expected that the events in Cairo would have their repurcussion in the districts, but no one ever dreamed that matters would take on the proportions which they have done during the past six days. It is difficult to say exactly where the agitation first started. Demonstrations, more or less peaceful, took place early in the week at Damanhur, Zagazig, and Mansourah, while at Tanta some violent scenes were witnessed. The students of the Ahmadi Mosque went on strike and, exciting the rabble, proceeded to make an attack on the station just at the time when the trains from Cairo and Alexandria were about to arrive. Fortunately, the authorities had had wind of the affair, and a strong force of troops had been sent down. The mob was foiled, but it immediately directed its attention to the Mudiria. Here it was met by the Mudir, Hassib Pasha, and the Interior Inspector, Mr. Wild. As it would not disperse, and, in fact, assumed a threatening attitude, the British troops and the police were ordered to fire on it; which they did with serious loss amongst the demonstrators. The gathering was thus dispersed, but feeling ran very high in the town. Meanwhile, a train had been held up at Shebin El Kom by students, who would not let it proceed on its way for several hours. This interference with the railway necessitated the promulgation of a Proclamation from the authorities warning all who tampered with railways, telegraphs or telephones that they rendered themselves liable to be shot. No sooner was this published, than the railways were attacked at various points. Thus a train was held up at Galiub, where the telegraph wires were cut and the passengers threatened. At about the same time an attack was made on the railway centre at Bulak Dakrur, but was repulsed.

On Saturday, however, the worst news came to hand. This was that a body of about two thousand fellaheen, led by a student on a donkey, had made an attack on Wasta station, which is the junction for the Fayoum, had captured a train which had come in, and destroyed it; had demolished the station, and had maltreated the European passengers, after killing the local English railway inspector. First-hand accounts state that the mob

Digitized by Google

was in an infuriated state, and that some of the Europeans only escaped thanks to the intervention of a delegate of the Legislative Assembly who happened to be on the train. It is reported that nothing remains of the station. At about the same time a body of about two thousand fellaheen marched out from Kafr El Sheikh to Sakha, where they demolished the fine rest-house belonging to the Domains, cut all communications, and destroyed everything they could lay their hands on. Another attack was also made on Bulak Dakrur, which this time was considerably damaged. Bridges have been damaged in various places, and telegraph and telephone wires have been cut right and left; so, as a precaution, it has been decided to stop the train services. Since noon yesterday no trains have run, no telegrams can be sent to Lower Egypt except to Alexandria, and then only by one wire, and none to Upper Egypt except by way of Alexandria, Suez, Port Sudan, and Atbara. Late this evening two trains were got through from Benha to Cairo.

The Zaghlulites Warned.

Yesterday evening General H. D. Watson, Commanding the British troops in Egypt, sent for the remaining members of the Zaghlul Committee, and told them that he held them responsible for what had happened, and that they must take action to stop these disorders forthwith. He pointed out that the military authorities had been exceedingly lenient in their action towards the agitators, but that that attitude could not continue, and if the disorders did not cease at once it would be necessary to take very drastic action in the matter. The Committee rejoined, declining responsibility, and said that, in any case, the agitation had got beyond anything they could control, and had assumed proportions which caused them very real alarm. They added that if they called upon the agitators to desist, they would only turn against them; and they asked that, if they did do anything in this direction, they might be ordered back to their villages, which would be the only way they could be protected.

What Should Be Done?

To a certain extent the issues are still obscure. But it is certain that the Zaghlul party have a very serious responsibility in the matter. How far they are directly concerned in the extension of the agitation throughout the country, and in its encouragement once started, is a matter which will have to be clearly investigated, but there is no shadow of doubt whatsoever that they are responsible for the inception of the idea. It has, indeed, been established that they were making arrangements for a general and simultaneous strike of Government officials and employees throughout the country; and the plot was only spoilt by the impetuosity of the students, who precipitated matters by striking and demonstrating themselves. That the Zaghlulites intended to aim a blow by paralysing the Government is generally known, and there is every reason to believe that subsequent events owe their occurrence to the organisation called into being throughout the country by the Zaghlulites, who used every means at their disposal to appeal to the elements they wanted to influence and excite them to join in active demonstrations. By no other means than an organisation directed, or at any rate conceived, from some central point could the outbreaks recorded have taken place at different points simultaneously and on such extraordinarily similar lines.

There are some people who say that the offer of some concession would quickly quell the present agitation. Such a course would be absolutely fatal. There is no guarantee that any such offer would have the required effect, and, in any case, it would establish a precedent that would be far too dangerous to set up. The one thing that must be done is very clear, and that is that before everything else the authority of the Government must be re-asserted and order be re-established. No other consideration can be entertained for one moment. Whether we should be prepared to discuss matters later on is another thing; but no promises in this direction may or can be given now. The authority of the Government has been set at naught, and for the good of Egypt itself it is imperative that before aught else that authority shall be reasserted clearly and definitely.

NOTES ON SYRIA.

(From a Correspondent.)

Cairo, March 2.

Relief Work.

Grand work has been, and is still being, done in Syria by the foreign relief societies. A Syrian lady, who had been working enthusiastically in Egypt for Syrian relief, found on landing lately at Beyrout that there was hardly any room left for her to satisfy her desire to be of direct help among the poor. But if the needs of the avowed poor have been so fully satisfied, it must not be imagined that distress has completely disappeared from the land. It still lurks in many a home hidden under the veil of self-respect. The lady just mentioned, with feminine intuition, had, even when still in Egypt, divined the existence of this field for charity, and her diagnosis of the situation received clear confirmation in an appeal made in a letter written to her by a friend just before she arrived back in Beyrout. This appeal runs as follows:—

"What about that relief money and clothing you have collected? Cannot you get them to appoint a committee here for discreet relief among decent people? Red Cross succour can only reach the children of the gutter, while the children of respectable birth—with something in them worth saving—are perishing. The flower of our manhood has perished—it behoves Syrians abroad to try to save their offspring. These people would die rather than stand in a line of paupers to beg for assistance. . . ." etc.

The writer of this letter is an American lady, who had the painful experience of seeing and going through all the horrors of those four years of war in Syria. Having wide social connections, especially among the Syrian middle-class families, she enjoyed exceptional opportunities of gathering first-hand impressions of the effect of the war on the said class, and is particularly well qualified to speak with authority on the subject. The fact that she is working with the American Red Cross lends special weight to her words, and compels earnest consideration on the part of all Syrians. The matter has already been brought to the attention of the Cairo Central Committee for Syrian Relief, and its members, as well as other Syrians of note whose attention has also been drawn to the point, have unhesitatingly endorsed the suggestion that Syrian relief should henceforth be confined to the impoverished respectable class. It is only Syrian ladies and gentlemen of the country who had known those unhappy families in the former days of their ease, and can have access to their present intimate life, who can be trusted to fulfil such a delicate mission.

The Syrian lady is now finding ample room for work in the field which her intuition opened up not only for herself but also for scores of others. It is satisfactory to know that her connections will enable her to secure the right type of voluntary assistants. She has found that help is needed not only in the matter of clothing and food, but also, and especially, in regard to education. If the children of this class—the mainstay of society in every country—are to be left without education, how can the Syria of to-morrow be expected to rise and take her stand among the living and progressive nations?

Foreign Relief Societies would eventually—perhaps even now—do well to devote part of their funds to this class of help, and many Syrian ladies and gentlemen would be happy to assist their workers in the discreet distribution of such funds as might be available.

Sailings to Syria.

The Messageries Maritimes have at last resumed their service with the Syrian coast. Their steamer Bosphore left Alexandria at the beginning of this week for Beyrout, not touching, this time, at Port Said. The Kaffir Prince, which arrived at Alexandria on the 22nd of last month, was expected, after discharging a part cargo there and filling up the available space, to sail a full ship to Beyrout and other Syrian ports. Much as these increased shipping facilities will ease the situation, it is to be feared that there will be no substantial advance towards prosperity before summer. Then the new harvest of cereals and fruit will be gathered in, and summer visitors are expected to pour into the country by thousands from Egypt. It is hoped that by then the present restrictions on travel will have been removed in the interest both of the people in Egypt, who badly need a change after four successive summers in a semi-tropical climate, and of the Lebanese, for whom the periodical influx of summer visitors has always constituted an important source of profit. Such help will be more valuable than ever to them now in their dire financial need.

Owing to the hanging up of the political fate of Syria hardly any work of reform has been undertaken, and Syrians cannot help looking with envy at the wonderful transformations wrought already in other occupied countries, like Mesopotamia and Palestine.

ROUMANIAN NOTES.

(From a Correspondent.)

In Bessarabia.

The Roumanians are organising the resistance against the Bolshevik forces concentrated in Ukrainia, and during the last week they have obtained remarkable successes against the "Red" armies of Lenin. The Bolsheviks tried to cross the Dniester, in the northern part of Bessarabia, on several occasions, but were repulsed, losing more than 2,000 in dead and wounded. In the southern part of Bessarabia, in the region of Tiraspol, the French troops co-operated with the Roumanians and dispersed large forces of Bolsheviks, capturing their equipment and munitions. But it must be added that the real force of these apostles of anarchy is not their military organisation, nor the superiority of their war material, but simply their propaganda. The danger of infection through ideas is the greatest possible, and the very recent fall of the Cossacks of Denikin is a sign, as well as a warning, to all those who believe that Bolshevism is to be counteracted only by guns and machine-guns. If the Allies decide to fight ideas with ideas and to oppose force only in the most exceptional cases the danger of Bolshevism will be reduced. The Roumanian soldiers—who tested Bolshevism when the Russian armies in Roumania revolted, burned the villages, pillaged and destroyed everything—know what this kind of "new social order" means, and thus it is more easy to make them understand the peril of Bolshevism. In the meantime the Roumanian authorities are devoting their forces to the organisation and improvement of social and political conditions.

The Organisation of the Army.

Now, when the idea of a general disarmament is dominating the democratic world, it appears strange that Roumania should be thinking of reorganising a large army. But this army is a necessity to keep order in the East and to prevent the spread of anarchy in the heart of Europe. The Roumanian army, we hope, will not become an instrument to be used against any democratic movement, but to protect the property and life of the citizens. Present conditions in the Roumanian army are extremely bad. The soldiers cannot get any food other than bread (once or twice a week they receive a kind of bean salad); they have no proper boots or clothes, and shirts are extremely scarce. Forage for the horses is badly needed; and the commandant of a Roumanian regiment told me that during the last month his regiment, out of 320 horses, lost 265 for lack of forage. The lack of transport terribly increases the difficulties. It is nearly impossible to transport the troops because there are no locomotives, and the train carriages are in the worst condition. I hear that at last some railway material and some locomotives are to be sent to Roumania. To restore the means of transport is perhaps one of the principal conditions of making Roumania able to resist Bolshevism. The present Roumanian army will not be able to fight longer than one or two months. The Allied Commissions know the real situation; they realise its gravity; and I hear that they have already warned their respective Governments.

In Transylvania.

The Hungarian Bolshevists so far have been able neither to obtain any success nor to convert the Roumanians of Transylvania to Bolshevism. The economic conditions of the Transylvanian peasant are much better than those of his neighbours in Hungary, and the admirable political commonsense of the Government of Transylvania in taking prompt measures to organise the country prevented the danger. Besides the work of the Government, the Hungarian Bolshevism has the old Magyar tendency of oppressing the other nationalities, and thus the Roumanians understood that they must fight in defence of their rights as a nation. The priests and the school teachers of the Transylvanian villages held a congress recently and discussed not only the organisation of the schools and religious matters, but also the union of all their forces to enable the Roumanians to resist the Bolshevist propaganda carried on by Magyar agents.

Helping the War Invalids.

Colonel Virgil Badulescu, the organiser of the Roumanian Alpine units, who played a glorious part in opposing the forces of von Mackensen in his attempt to conquer Moldavia, has founded an "Association for helping the invalids." This association aims not only at helping materially the invalided soldiers, but at giving them a better education so as to re-establish them socially. The material help was given mostly by the officers who were better off, but also by invalids who were rich. They began with some co-operative societies for timber works, cinematographs, printing, food, etc. The start was a very fortunate one, and the soldiers were so enthusiastic that the prosperity of the association has increased rapidly. They have the intention of founding some educational institutions for the invalids, as well as for the children.

MARIE, QUEEN OF ROUMANIA.

On March 29 the Queen of Roumania brought her visit to England to a close. Her Majesty had spent a very crowded eighteen days, and there can have been very few hours in that time which had not definitely belonged to one programme or another. If anyone had earned a rest after a strenuous period of war-work Queen Marie had; but her activity and her devotion to her adopted country know no limit. By seeing and being seen she realised she could make Roumania mean something more to the British public than a mere territorial unit at the other end of Europe. Wherever the Queen went, whatever she did, it was with the idea of stirring in England a yet greater interest in the country to whose service she has consecrated herself. Her Majesty's efforts, it can be said without a shadow of doubt, have been attended with signal success. England was ready to pay spontaneous homage to one of her own Princesses; but as she finds that love of Roumania is now the mainspring of that Princess's whole being, she is satisfied that there must be much in Roumania that will repay fuller knowledge.

The day before her departure was one of Queen Marie's busiest days. It comprised a visit to a working guild, a presentation to herself at Buckingham Palace of the insignia of a Lady of Justice of the Order of St. John of Jerusalem, a series of visits to various Y.M.C.A. huts, tea at an officers' club, a reception at the Roumanian Legation, and dinner given by the Earl and Countess Curzon of Kedleston. At the Queen's special wish, the Roumanian Minister and Mme. Misu had included among their guests representatives of the Press. Her Majesty entered into conversation with each guest individually, and at the end of the reception she said a few general words of farewell, in view of her return to the Continent the following morning. Her Majesty spoke of the help and comfort that Roumania had already received from Great Britain, but pointed out that there was still need for the closest co-operation. Roumania stood as an outer fort in an exposed position, which could only be held with support from those who were associated with her.

On Saturday Queen Marie concluded her visit to the King and Queen, and left for Paris, accompanied by Princess Marie. Princess Ileana is unfortunately suffering from a slight cold, which prevented her from making the journey. The Royal travellers left Buckingham Palace at one o'clock and drove to Victoria Station, where they bade farewell to the King and Queen, the Prince of Wales, and Princess Mary, Queen Alexandra and other members of the Royal family.

Captain Sir Charles Cust, R.N., Equerry to the King, who had been specially attached to the Queen of Roumania during her visit, attended her Majesty as far as Folkestone, and the Roumanian Minister travelled with her Majesty to Paris. Before leaving, Queen Marie several times declared how greatly she had enjoyed her visit.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, March 14.

An "Incident" Averted.

We were within an ace of having a very nasty incident here on Wednesday, the 12th inst. The Derkawa, a very strict sect of Mohammedans, who are very numerous in Tangier and the surrounding villages, are very bitter against the French, and have not hesitated to show their sentiments on one or two occasions. Now, sugar is more or less rationed here, and the quantity that may be taken out of the town by natives is strictly limited and controlled. The natives, who consume a large amount of sugar, are always protesting against the smallness of the quantity they may take out, and on Wednesday a number of Derkawa determined they would take what they wanted, and persisted in an endeavour to pass the guards in the town. The Tabor (native mounted police) were called, and came into town at full gallop, bringing their machine guns; and the Military Command wished to give the Derkawa a lesson. The Basha and other native officials, however, with the French civilian authorities, decided against this, and after taking one or two prisoners the cavalry returned to barracks, and for the moment things again became calm.

The Act of Algeciras.

The French authorities seem to take it for granted that their demand for the abrogation of the Act of Algeciras will be conceded, and lose no time in acting on the assumption; for I am informed that they have already transferred the payment of the native police, which, under the Act, was made from a special fund through the Banque d'Etat to the Basha from Moorish Government funds.

I am informed that a "Comité d'Aviation,' a French concern, has bought land some few miles out of town in connection with the proposed flying service to the French zone and the interior.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, March 19.

Naval Movements.

The super-Dreadnought battleships **Ajax**, Centurion, Benbow, and Marlborough, earmarked for the Mediterranean, are expected daily, whilst it is stated that the Centaur, famous as having had both her stem and stern blown away by mines while in the great Harwich fleet under Sir Reginald H. Tyrwhitt, is destined to become the flagship of Rear-Admiral Sir E. S. Alexander Sinclair, who is to command the new Mediterranean Light Cruiser Squadron. The light cruiser Melbourne, of the Royal Australian Navy, convoying home the Australian destroyers Warrego, Yarra, Huon, and Paramatta, has just left. Her stay was shorter than was expected, on account of some disciplinary difficulties.

We have with us for a time the following ships of the Imperial Japanese Navy:—The cruiser Kislino (Captain N. Nagasuwa) and the destroyers Raid, Ume, Sakaki, and Sugi. As they are convoying the German submarines allotted to Japan, their arrival has aroused more than ordinary interest.

Mediterranean Fleet.

Nine destroyers: the Tryphon, Spear, Sportive, Torch, Tomahawk, Tumult, Montrose, Speedy, and Swallow have arrived here to form the modern destroyer flotilla of the revived Mediterranean Fleet. They lie moored in the Marsamuschetto Harbour, and are a fine sight. Needless to say the marine merchants welcome them.

The New Governor.

The announcement that General Sir Herbert Plumer has been nominated as Governor in the place of Lord Methuen has been well received, although it appears that the wishes of the people inclined to the appointment of a naval Governor. Lord Methuen has done much for the island, and has had to leave before some of his schemes had become perfected, notably as regards the erection of a hospital for English people stationed here, and in connection with the establishment of compulsory education.

The Influenza Epidemic.

The influenza epidemic has assumed grave proportions, and the sanitary authorities are taxed to the utmost of their capacity. Not only have all educational institutions been closed, but on a petition by the Chamber of Advocates the Courts of Law have been suspended for a fortnight. It is a singular fact that the disease has been particularly hard on the judges of the court, practically every one of whom has met with a family bereavement; and several most promising advocates have fallen victims to the terrible complaint.

Economic Stress.

Malta in some ways is feeling the economic pinch more keenly now than in the actual time of war. The merchants are chary in purchasing, and the Food Control Board are finding that it is far easier to prevent merchants from selling than to compel them to purchase. Government regulations have just been issued dealing with the exportation of what the island possesses.

The island is suffering from a delay, very protracted, in cable communication, and for forty-eight hours no outside news has reached us. Even Reuter failed.

THE CARAVANSERAI.

Recently I was told a curious tale of a much-lost-and-found dog. It begins with the appearance of the animal, ownerless and seeming to have dropped from the clouds, at a certain spot in rural Cyprus, where it was discovered by a Briton. After the fashion of his race this Briton, observing the animal's forlorn appearance, spoke kindly to it; and doubtless, also after the fashion of its kind in such circumstances, the dog wagged its tail (if it had one!) and smiled up at the man. At any rate, it attached itself to him at once, and he allowed it to adopt him, so to say. In course of time he became so attached to the animal that when he came home on a long visit he brought it with him. Then the dog became demoralised, it seems. Perhaps our climate did not agree with him; perhaps——. But why inquire too closely into a painful subject? Whatever the reason, the dog "went to the dogs," and contrived to get itself lost. Its owner advertised for it, offering a substantial reward for its return—and probably because it was not of a fashionable breed—it was soon brought back, at the end of a bit of rope and looking rather sorry for itself. And now comes the curious part of the story. The owner, having paid a stiff price to bring the dog from Cyprus to England, and on top of that having had the expense of advertising for it and of rewarding its finder, now paid for it to go back to the (other) island, and instructed his agent there that the animal was to be taken to the point where it had first been seen, and there turned adrift. It was, you see, an ungrateful dog.

***

To all who have had any length of time in the East the fowl, or "chicken" as it is generally called by your unblushing servants, is a rather sore subject; and, as I have indicated before in these notes, the eggs of these marvellous specimens of rapid muscular development, are usually quite beneath contempt. I am therefore glad to learn that the education of the Mesopotamian Hen and her Owner has been taken in hand by our countrymen. A model poultry farm has been established at Hillah, chiefly with a view to improving the supply of eggs for our military hospitals; and it has already turned out a huge success. Some 10,000 birds are kept at this farm, and already a very marked improvement is reported in the quality of the breed—or "strain," or whatever the proper expression may be! I gather that nearly 100,000 eggs a month had to be supplied a short time ago. Whether these were "Oriental eggs" or real eggs I do not know; but in any case, if the improved hens of Hillah are really putting their backs into it, so to say, they ought to manage ten eggs a month each, and of the respectable size!

***

The Arabs have taken considerable interest in the experiment—for, I suppose, such a farm in Mesopotamia must be regarded as an experiment—and we may therefore hope that in course of time poultry farming will become quite a widespread industry on the banks of the Euphrates. Will the Hillah hen, I wonder, ever rival the Rhode Island Red in popular favour in England? Shall we have Buff Babylonians as well as Buff Orpingtons? And will Buereh Rocks have a class to themselves at all self-respecting poultry shows? It seems quite possible, for if the Arab sees that "there is money in it" he will take up poultry farming, I am convinced, quite as keenly as he will take up other ways of amassing wealth. It really looks as if our more enterprising makers of poultry-houses, "foster-mothers," incubators, and so forth should investigate the possibilities of the Mesopotamian field.

***

Mention of the Irakian hen reminds me of one queer specimen of the kind that I used to know very well when I lived out there. In fact, the old lady—she really was very old, I am sure, but I fear the title of lady can be given her only by courtesy—lived in our own poultry yard, with some fifty or sixty others of her kind. At night all these birds used to roost on a large perch that ran round three sides of the yard, and every night there went on what was a comedy to watch, though the angry fowls doubtless failed to see the humour of it. There was apparently only one spot to get on to the perch comfortably, and that was near one end. About sunset, therefore, the hens used to flutter up on to the perch at this spot, one after the other, and sidle along the perch. Then they performed their simple toilets, and finally settled down comfortably for the night. But the "old lady" already mentioned always upset them all. She would *not* go to bed at a respectable hour. No; she would stay up late, scratching for worms, or something else. Then, when the others were just dozing off, up she would hop, and proceed to make her way right along the perch, pecking each drowsy fowl in turn to make it hop down and allow her to pass, until she reached her particular spot near the other end. She must have had a reputation as a fighter, I suppose, for the others always put up with her bullying. But how they must have hoped each night that we would have her for dinner the next evening. As a matter of fact, we enjoyed her performance so much that we told the cook on no account to sacrifice her.

Corsair.

PRESS ON THE NEAR EAST.

French Propaganda in Palestine.

The issue of *Palestine* of March 22 has some striking passages in connection with "The Friends of the Holy Land," a French society. It says:—

The time has gone by when this French propaganda for Palestine can safely be ignored. Much mischief, in fact, has already been done by the silence of the British Press with regard to Palestine, and by its obvious anxiety to avoid saying anything that could lead to discord between the two Allies. The French Press, one is bound to say, has not shown the same delicacy of feeling. On the contrary, there has been a persistent and long-continued propaganda in favour of what is called *La Syrie Intégrale*, which, being interpreted, always means French Palestine. This propaganda has unfortunately been allowed to gain a long start, and if it had not been for efforts first made in this publication judgment might have gone by default. The present situation is a serious one, and calls for plain speaking. The official policy of the British Government is for the establishment of a national home for the Jews in Palestine—that is, of a Jewish Palestine, for there is no other rational interpretation of the wording of the promise. The official policy of the French Government is much less clear, but so far as public utterances have gone, there is no reason to suppose that it is hostile to the British policy. All the more reason, therefore, why notice should be taken of the private societies conducting a campaign against what we firmly believe to be British interests no less than Jewish rights. If their efforts have no official backing, so much the better; if they have, then there is everything to be gained by perfect frankness and by a clear understanding of the British position.

The following is an uncompromising statement against the propagandists:—

The programme declares that "Palestine forms an indivisible part of the Syria which is bound to France by ties of secular friendship." Here the cloven hoof is revealed at once. The friendship between France and Syria is secular, and does not base itself primarily, at any rate, on grounds of sentiment or of religion. The objects presumably of the society are therefore primarily secular, and to be regarded as part of French Imperialistic schemes. Regarded merely as a conflict between British and French secular aims, the question of Palestine presents no difficulty. For France to dispute the trusteeship of Palestine with England is in effect to dispute England's trusteeship of Egypt. The secular argument for a British mandate in Palestine is based entirely on the British position in Egypt. A mandate in Palestine is in fact necessary, as things are, for the defence of Egypt. France can show no such solid claim as that, and English people will do themselves great injustice and inflict immeasurable harm on their future position in the East if they do not stress the argument of Egypt. It is at the heart of the whole matter.

An incisive article concludes thus:—

Foreseeing the failure of their propaganda against the Jews, the "Friends of the Holy Land" ask that if Palestine is not to form part of Syria (that is to say, if it is not to be French), it should be independent (that is to say, there should be no British trustee). What does this alternative of an independent Palestine mean? It means the whole project of a Jewish state in Palestine will be prejudiced from the start. The burden of independence would be too great for the Jews to carry, and the result would be intervention and future partition. And thus these "Friends" appear finally as the advocates of partition. They set out by arguing for an indivisible Syria, and they end by asking in the alternative for a divided Palestine. Palestine may well pray to be saved from such friends.

Venetia and Armenia.

The Rome correspondent of the *Morning Post*, in an article published on March 31, states that Signor Luzzatti is "specially interested in Armenian affairs" by reason of the fact that he is a native of and deputy for Venetia. The connection is made clear in the following passage:—

Considerable interest is being shown in Italy, alike in Governmental and in Vatican circles, in the fate of the Armenians. This feeling is traditional and historic, for it will be remembered that Italy contains one of the most interesting Armenian settlements, that on the island of San Lazzaro, in the Venetian Lagoon, where Byron studied the Armenian language as mental gymnastics, and came to the conclusion (expressed in the preface to his Armenian grammar) that "the satraps of Persia and the pashas of Turkey have alike desolated the region where God created man in his own image." But few of the many British tourists who have visited that delightful island are probably aware that it owes its selection for an Armenian refuge to the famous Armenian divine, Mekhithar of Sivas, who, in 1708, founded a monastery at the then Venetian colony of Methone, or Modon, in the extreme south-west of the Peloponnese. When, however, seven years later, the Turks captured Methone, he fled to the hospitable Republic of St. Mark, and was allowed by the Venetian Government to erect a new monastery on the island of San Lazzaro. From the printing press of that monastery books in various languages have been diffused throughout the Armenian world.

The Egyptian Disorders.

The remedies proposed in the Press for dealing with the unrest in Egypt are almost as numerous as the causes assigned to it. For instance, Dr. L. Haden Guest, M.C., writing in the *Daily News and Leader*, has the following words:—

Nationalism in the sense of Irish nationalism or French nationalism does not exist in Egypt. The word really indicates that small group of educated Egyptians, Turks, and other non-Europeans who resent our domination of the Egyptian Fellaheen, and who wish to get rid of us and establish a state on the old Eastern pattern. But, at any rate, these "nationalists" are of the same blood as the Fellaheen, for the most part, and, what is infinitely more important, of the same religion. The religion of Islam is, in fact, a kind of "nationality" of its own, not of country, not of race, but of opinion. And the wealthy nationalist and the poverty-stricken Fellah can both unite on the common platform of their faith against the usurping and "infidel" foreign oppressor. This united movement, the economic grievance of the Fellaheen, and political aspirations of the small "nationalist" group, being welded into one by the fire of a fanatical religious belief, is a really great danger, because it may, and probably already has, spread to Palestine, Arabia, Syria, Turkey, and possibly even to India.

He very decidedly supports the idea of a change in the composition of the governors of Egypt, and concludes his article thus:—

Nothing will be done without a drastic and complete change. The men on the spot have created the trouble, and cannot be trusted to cure it. Light, a searchlight on Egyptian affairs, is what is wanted at once, and no "firmness" of military authorities can give us any confidence unless it is acting on knowledge gained impartially by men sent from England for the purpose.

What the Government should do is to dispatch a small commission to Egypt at once, with wide powers to inquire and to act. That commission should contain a large proportion of Labour leaders, and they should go by the quickest aeroplane and sea route that can be devised. The Executive Government must act. Let there this time in our history be decision. It is not Gordon's head that is to-day in danger; it is the honour and prestige of the British Empire in the East.

We have quoted Dr. Guest's views, and shall content ourselves with the comment (which doubtless many of our readers will make), that we should have thought that there were in existence already a sufficient number of Commissions.

A very different line of thought is seen in the *Glasgow Herald*, which, in discussing the repression of the outbreak, says:—

It is earnestly to be hoped that in the execution of these repressive measures an adequate proportion of real Nationalist agitators has suffered rather than ignorant and, for the most part, innocent fellaheen. With the former it is impossible to have much sympathy, since it is quite obvious that they have been entirely unscrupulous in their attempts to thrust down the throats of the British Government demands which are probably more unreasonable than any ever formulated by a party pretending to speak in the name of a country like Egypt. Our record in respect to Egypt will bear close examination, and, if it is not altogether blameless, it does not for an instant justify the assumption of such an attitude as that taken up by the Nationalists, first in putting forward, and, latterly, in trying to enforce the adoption of their preposterous programme. In any case, those who seek to attain their ends by violence cannot complain if violence is used to prevent them from gaining the upper hand.

FOR THE ARMENIANS.

In an appeal for the Armenians the Rev. F. E. Hoskins, writing from Beyrout on February 20, calculates that over one million souls have perished through the massacres of 1896 and the most recent one. The surviving Armenians, he says, are enduring terrible sufferings, especially through lack of clothing and medicine. He points out that the temporary stoppage of commerce has left nearly all in debt, and that the country is in extreme desperation. Relief and missionary workers are already striving to re-establish industries, and to care for the orphans; and the writer hopes that the future may be better than anything seen in past mission work.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of February 14 there appeared two letters, both of which contained inaccuracies. The Cyprus deputation makes much of the fact that some prominent members of the Moslem community were interned at Kyrenia for a considerable period, and from this the deputation advances the theory that the Moslems of Cyprus are disloyal. For the sake of argument, let us suppose that the interned men were guilty, the deduction that the Moslem community is disloyal is nevertheless unsound. As a matter of fact, nothing was ever proved against the prisoners, and they were discharged—to use a judicial expression—without a stain on their character.

The other letter asserts that in 1915 the British Government *willingly* offered to cede Cyprus to Greece. Sir Edward Grey certainly offered to hand over the island *forthwith*. But the haste with which the offer was made rather implies unwillingness. The proposed cession, when considered on its merits, was revealed as a bribe pure and simple.

I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus,
March 14, 1919.

TO THE EDITOR OF THE "NEAR EAST."

Sir,—There are many proposals afloat on this subject now. If the welfare of the island and its people is the chief thing desired, we venture to suggest the following course of action:—

First, abolish the Tribute. This was always an injustice. If Turkey took £92,000 annually from Cyprus, that was no reason for perpetuating the anomaly. Although since 1907 £50,000 has been contributed by England, the remaining £42,000 is more than the island can bear if she is to progress. A small payment in recognition of British protection would be fair, and would not be resented. The Cyprus Convention with Turkey stated that the payment to Turkey was to be made by England, not Cyprus.

Secondly, take a step forward in opening higher Government offices to natives, not to imported Greeks. Surely a Cypriot (Greek or Turk) has some right to rise, if proved worthy, to higher office in his own land. At present his nationality is an absolute hindrance to such an ambition. If you want to make a man trustworthy, trust him.

The native Greeks, were these two conditions carried out, would be much happier than under the Government of Greece, a country too far off, and too weak and too poor to defend Cyprus against invasion, or to further her development.

Thirdly, to avoid nepotism, and give a wider range to the action of the Governments of both countries, it certainly would be an advantage to connect Cyprus with Egypt by making the High Commissioner of each country the same person, with a Lieutenant-Governor under him. This would give more scope to both countries, and enable officials to be moved from one to the other.—I am, etc.,

A FRIEND OF CYPRUS.

Nicosia, Cyprus,
March 6.

"ITALY AND YUGOSLAVIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow space in your valuable journal for the following—not merely to explain the Yugoslav point of view, but the point of view of all who respect justice and truth?

The reason given by Signor Virginio Gayda in your issue of March 20 for Italy's refusal to accept arbitration is incorrect, the true reason being the fear that the arbitrator would be just, and that his decision would deprive Italy of plunder and the conquest of territories populated by Serbs, Croats, and Slovenes, who, after centuries under the Austrian yoke, to-day see the first rays of liberty and independence shining upon them, and will never submit to any human power which would place upon them even heavier chains than they have hitherto borne.

With regard to Italian sacrifices, we all know that the Allies took up arms against the Central Powers because of their greed of conquest, and for the liberation of oppressed nations. Who were these oppressed nations but the twenty-six million Slavs under Austria-Hungary? The principles of the Allies were most noble and just, and it reads rather strangely when Signor Gayda, an Italian, accuses Italy of such a monstrous crime as having entered into the struggle and sacrificed hundreds of thousands of her noblest sons in order, with their blood, to seal the fate of people of other nations. The writer states that Italy alone fought the final war against Austria. This is rather amusing. It resembles the tale of a man who boasted of stopping a train running at twenty-five miles an hour, who, when asked how he did it, replied: "I lay across the lines, and the engine-driver, noticing me, stopped the engine." Signor Gayda, when making such a naïve assertion, could not have reflected that everybody has followed with interest all that has happened on all the fronts, and all know that there were two hundred thousand British troops in Italy, and that it was the British soldiers who broke the Austrian lines on the Piave front, which lines had previously been declared impregnable by the Italian Generalissimo; and this was achieved only after the Bulgarian defeat, which compelled Austria to withdraw troops from the Italian front for the East.

With reference to Italy's "year of war against the whole armed forces of the Austro-Hungarian Empire," Signor Gayda does not state the size of the forces, which consisted of between five and six millions at the beginning of the war, of whom the Russians accounted for over two and a-half millions. The Serbians, with their small armies of three hundred thousand, likewise accounted for four hundred thousand. This leaves, say, three millions, of whom at least five hundred thousand were left to guard the Russian front and the Balkans, consequently there were only about two and a-half millions on the Italian front against five millions two hundred and fifty thousand Italians. Well, there is nothing for Italy to boast or to complain of, and Serbia, who is not ungrateful, will thank those to whom thanks are due.

Signor Gayda also states that the Italian claims in the Adriatic are to Austrian territories. Now Croatia, Dalmatia, and Slovenia have been inhabited by Slavs, Serb Croatians, and Slovenes, different names, but all one people, since 620 A.D.; therefore this was Slav country under Austrian rule until last year, and is now united to Serbia, just as the Sicilians have thrown off the yoke of the Bourbons and united with Italy.

The statement that the Croats and Slovenes fought strenuously against the Allies is also a misrepresentation. True, against Italy they did their best, because they knew Italian aims. But after the disastrous Italian defeat, they were informed by means of pamphlets that Italy had no desire to conquer their country, and they could choose their own future; whereupon they immediately deserted and surrendered to Italy in tens of thousands; which step they soon regretted, for they surrendered on condition that they should go to the Salonika front to fight with their brother Serbs against their common enemy, but they are still kept as prisoners in Italy.

I should also like to draw the attention of the Italian writer to the fact that not less than one hundred and fifty Croats and Slovenes have fought in different Allied forces against our enemy in Russia, Roumania, France, and Serbia, amongst the Canadians, Australians, and New Zealanders, and there are still three thousand on the Murman front. I shall be pleased if Signor Gayda will give us the figures of Italians, formerly Austrian subjects, who have fought on the side of the Allies.—I am, etc.,

D. JANITSCH.

Polpuerro, Lyncroft Gardens, N.W.,

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

NEAR EAST BOOKSHELF.

EMPHASISING THE OBVIOUS.*

Now that Bulgaria has been soundly beaten in war, it was inevitable that someone should take up the task of killing the Bulgarians with his mouth. The work has been done painstakingly and effectively by M. Victor Kuhne. The Bulgarians are nothing if not thorough. They are industrious workers; they are stubborn fighters; they are whole-hoggers in politics and in hatred, as friends and as foes. Consequently when they found themselves at war against Serbia on the side of the Germans, they could say nothing good enough for the Germans, and do nothing bad enough to the Serbians. Hopelessly elemental, no doubt; but it all took place in the Balkans, where they are wont to talk of "going to Europe," and where customs and methods in the field are not modelled on those of Mayfair or Boston drawing-rooms. For the conscientious compiler, therefore, who makes a study of Bulgarian newspapers and other publications during the war, it is an easy task to pile Pelion on Ossa in the matter of damning evidence regarding Bulgarian "megalomania, chauvinism, brutality, and baseness," and if anyone is interested to know what a bad case the Bulgarians in their Press have made out against themselves they will find it set forth in "Bulgaria Self-Revealed." From the preface written by M. Auguste Gauvain, formerly Minister Plenipotentiary of France, it is to be inferred that more than one of the Entente Powers contrived to be represented in Sofia by a diplomatist who cordially hated, and made no attempt to understand, the people to whom he was accredited. To what extent this circumstance influenced Bulgaria's attitude in the war will never be known, but it is evident from the character of Ferdinand of Coburg that he has had the satisfaction of venting his spite for various diplomatic lapses scored up in a vindictive memory against the Entente.

The Bulgarians thus being what they are, what is to be the attitude of the right-minded nations towards them? Are they to be classed with the professional criminals, such as Germany is, or are they fit subjects for a penitentiary in the hope that they are capable of being reformed and of becoming useful members of the Balkan community? The reader will answer the question according to his inclination. The wise student of Balkan affairs will refrain from arming himself with a whitewash brush, for if he condones the "stab in the back" of 1885 he must overlook the counter-stab of 1915; if he picks out the terrible excesses of the last three years he must examine their predecessors over two generations in the same part of the world. Those who know the most about them are inclined to say the least; but they are consumed with a keen desire to be able to write in the year 1919 the word *Finis* at the close of the ugly chapter in regard to which the Great Powers share some of the responsibility attaching to the junior perpetrators.

BOOKS RECEIVED.

"Through Eastern Windows." By A. J. Marris. (London: Religious Tract Society. 3s. 6d. net.)

"Les Massacres d'Armenie." By Rene Pinon. (Paris: Payot et Cie. 5 frs.)

We have received the second number of the *Balkan Review*, edited by Mr. Crawfurd Price. It contains interesting matter on the problems of peace as they concern the Balkans. Anatole France (in an article translated from *L'Humanité*) and the Editor both write in defence of the Greek claims in Asia Minor; but to the Italian claims in the Adriatic the Editor is opposed, and stresses the point that "Italy's security lies in the friendship of Yugoslavia, not in its enmity."

The "Bulletin" of the School of Oriental Studies, London Institution, contains several papers of strong interest. Perhaps the one that will appeal to the widest circle of readers is Professor D. S. Margoliouth's "The Russian Seizure of Bardha'ah in 943 A.D.," which contains much curious information culled from the Arabic chroniclers. It seems to show that the Russian character has not changed greatly in the last thousand years, and that such change as there has been is not necessarily improvement. Sir George Grierson, K.C.I.E., contributes a paper (or the first part of a paper) on "Indo-Aryan Vernaculars," and Mr. J. D. Anderson writes on "The Sounds of Bengali." A lecture delivered at the School by Mr. J. Withers Gill on "Hausa Speech, its Wit and Wisdom," provides some interesting reading; and other contributions are: "Swahili Poetry," by Miss Alice Werner; "Notes on the Nestorian Monument at Sianfu," by Lionel Giles, M.A.; "A Hindu 'Paradiso,'" translated by L. D. Barnett, M.A.; and "Further Poems by Po-Chü-i," translated by Arthur Waley. The "Bulletin" also contains several valuable reviews of books, and it is in all ways a production on which the School of Oriental Studies may be heartily congratulated.

* "Bulgaria Self-Revealed." Documents collected by Victor Kuhne. (London: Constable and Co., Ltd. Price 4s. 6d.)

NEWS IN BRIEF.

Sir William Vincent states that a considerable increase in the salaries of Indian Civil servants is likely, owing to the increased cost of living

Messrs. Yarrow and Co., Glasgow, have presented to the Imperial War Museum a model of a small Tigris gunboat constructed by them.

Last Thursday, at Buckingham Palace, the King inspected a detachment of the Indian Labour Corps, under the command of Captain H. C. Clogstoun, Labour Corps, who are on short leave from France.

Reuter's correspondent at Delhi telegraphs that the Indian Gaol Commission, which is about to be appointed to sit in England, will pay a visit to the United States. It is reported that Sir Evelyn Ruggles-Brise will be the chairman.

General Victor Dousmanis, formerly a member of King Constantine's entourage, has been sentenced to five years' imprisonment as an accomplice in the murderous attempt on the editor of the Athenian journal, *Nea Hellas*, three years ago.

The Ceylon papers report that a movement is on foot to send Suriyagoda Sumangala, Chief Priest of the Mount Lavinia Temple, to Oxford University to qualify as a lecturer on Oriental Science and Philosophy.

Prince Othman Fuad Pasha, who claims to be a son of the ex-Sultan of Turkey, Abdul Hamid, and was for about eight months in command of Turkish forces in Tripoli, has surrendered at a French frontier post. In conformity with the armistice terms, he has been handed over to Italian troops.

A Government of Burma resolution issued recently states that steps are to be taken to lay out on definite and suitable lines the Mandalay Palace gardens in accordance with suggestions made by the Director-General of Archæology in India, who also recommended that a committee of persons specially interested in the subject should be placed in charge of the operation.

The Indian contingent of competitors for the "Inter-Theatre of War" athletic championships, to be held at Aldershot in April, has just arrived in this country. All Imperial troops, they comprise teams for Association football, boxing, and cross-country running. In the Egyptian cross-country team several native Indian runners will be included.

Reuter's Delhi correspondent, writing on March 10, in a message delayed in transmission, says:—The Government of India's views on the Montagu-Chelmsford reform scheme were despatched to England last week after consideration of the local Governments' opinions and views. The Southborough Franchise Committee's reports are expected to leave at the end of March.

At the Marylebone Police Court, on March 26, before Mr. d'Eyncourt, Yassa Sudks, 23, an Egyptian medical student, of Maida Vale, was charged with having failed as an alien to notify the police of his change of address, or to obtain an identity book. He pleaded that when he attended at Bow Street Police Station he was told that he need not register as he was a British subject. The defendant was fined 40s. on each charge.

A Reuter's message from Delhi announces that the All-India Moslem League has elected eight delegates to proceed to London in connection with reforms. They are mostly younger men belonging to the Pan-Islamic school. The Rajah of Mahmudabad has resigned the presidency of the league, Wazir Hoosain has resigned the secretaryship, and Dr. Ansari Mohammed Ali, who is still interned, and Abdul Bari have also resigned.

An address on "Jerusalem During the War" was given at the Church of St. Mary-the-Virgin, Aldermanbury, last Tuesday, by the Rev. A. S. Hichens, formerly Canon and Sub-Dean at St. George's Collegiate Church, Jerusalem. He said that the behaviour of the Turk and of the German finally turned the populace towards the British, and that they most earnestly hoped we should win the war.

A Reuter's message from Rome, dated March 27, says:—Reports have been received here from Durazzo, Berat, El Bassan, Scutari, and other Albanian centres of imposing demonstrations in favour of the unity and independence of Albania, claiming the return of national territories subjected to Greece and Serbia, and strongly condemning the actions of Essad Pasha. Messages were sent to Baron Sonnino, President Wilson, and Turkhan Pasha.

Three Roumanians and two Serbians were recently stranded in Colombo. They arrived by a steamer which had on board 400 Italians, Serbians, Roumanians, Armenians, and Czecho-Slovaks, who were returning to their native countries. Most of these men had seen fighting on the Russian front and were invalided to Vladivostock, from which place they were going back to their countries. The three Roumanians and the two Serbians went ashore, and on going back to the harbour they found the steamer steaming out of port.

According to a telegram from Tangier, an enthusiastic mass meeting of several thousand members of every class comprising the Spanish colony in that town took place at the Teatro Cervantes on March 26. After eloquent speeches demanding the inclusion of Tangier in the Spanish zone of Morocco, an address was drawn up and solemnly carried in procession to the Spanish Diplomatic Agent in Tangier, requesting that any alteration in the present local *régime* should not be carried out without previously consulting the Spanish colony in Tangier, that Tangier should be included in the Spanish zone of Morocco, and protesting against the assertion made in certain newspapers that the Spanish colony in Tangier is opposed to the inclusion of the town in the Spanish zone

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. April	1919. March.		1337. Rejeb	5679. Nissan
4	22	Friday	3	4
5	23	Saturday.....	4	5
6	24	Sunday	5	6
7	25	Monday	6	7
8	26	Tuesday	7	8
9	27	Wednesday	8	9
10	28	Thursday	9	10

H.H. the Agha Khan has left London for Paris.

Lord Sinha has become a Vice-President of the League of Empire.

M. Robert Naville is leaving Paris next Monday, April 7, for Belgrade.

The Maharaa of Cooch Behar and party arrived last Monday in London from India.

M. Danielopol, the Roumanian jMinister at Washington, arrived in London on March 31 from Paris.

Madame Capsambelli, the wife of the Greek Minister at The Hague, arrived in London on Sunday from Holland.

Reuter's messages report that Admiral and Lady Jellicoe arrived at Bombay on March 14, and left for Delhi the following day.

Essad Pasha, President of the Albanian Government, accompanied by the Minister for Foreign Affairs, is now in Paris on business.

The marriage of Miss Elizabeth Asquith with Prince Antoine Bibesco will take place at St. Margaret's, Westminster, on Tuesday, April 29.

Prince Christopher, the youngest son of the late King George of Greece, has renounced Greek nationality in order to become a Danish subject.

We understand that Miss Gertrude Bell, lately Assistant Political Officer, Baghdad, is at present in Paris in attendance on the Peace Conference.

Dr. M. Micic, of the Yugoslav Committee, has arrived in London from Paris. The object of his visit is to bring to a close the work of the Committee in London.

It was recently announced that Commdr. Talbot, Naval A.D.C. to M. Venizelos, was instrumental in saving the Greek Premier from drowning during the war.

It is understood that M. N. Misu, the son of the Roumanian Minister in London, will compete in the Covered Court Lawn Tennis Championships at Queen's Club next week.

Mr. Chas. James Weir, I.C.S., of Moorcroft, Cobham, and of Morthoe, Devon, formerly Chief Secretary and member of the Revenue Board of Madras, left property valued at £3,279.

Prince Sourtzo gave a dinner in honour of the Queen of Roumania in Paris on March 30, the guests including M. Bratiano, M. Venizelos, M. Briand, Marshal Foch, and General Berthelot.

General Sherif Pasha has resigned his representation at Paris of the Liberal Turks, and has been appointed President of the Kurdish Delegation defending the claims of the Kurds only at the Peace Conference.

The marriage arranged between Major Arthur Ridings, Royal Marine Artillery, and Mollie, widow of Captain Herbert Brand, H.L.I., and Indian Army, will take place at St. James's Church, Spanish Place, Manchester Square, at 12.30 on April 3.

The marriage took place on March 26, at St. Matthew's Church, Denmark Hill, of Captain Norman Ingerfield Graham, Indian Army, youngest son of Mr. and Mrs. Wm. Graham, of Newcastle, Northumberland, and Helen Dunbar Bowman, elder daughter of the late Mr. John Dunbar Bowman, of Broughty Ferry, Scotland. The Rev. O. S. Ward officiated.

At a meeting of the Royal Asiatic Society to be held at 22, Albemarle Street, on April 8, at 4 p.m., Dr. Stephen Langdon will read a paper on "Gesture in Prayer in the Religion of Babylonia and Adjacent Lands." The lecture will be illustrated by slides. After the lecture a special general meeting of the Society will be held for the purpose of electing the Rev. A. H. Sayce as Honorary Vice-President of the Society.

The engagement is announced between Hugh Kynaston Briscoe, I.C.S., of Cuttack, Orissa, India, youngest son of Sir John Briscoe, Bt., Bourn Hall, Cambridgeshire, and Noël, second daughter of Mr. and Mrs. John E. Worrall, Langstones, Oxton, Cheshire.

The *Egyptian Gazette* states that Mr. Shearer, Principal of the Higher School of Agriculture, is shortly being transferred to a high post at the Ministry of Agriculture, and will be succeeded by Mr. Cartwright, Inspector of Agriculture in Gharbieh Province.

Queen Alexandra gave her patronage to the Serbian matinée which was given last Friday at the Palladium in aid of the Royal Horticultural Society's War Relief Fund. The net result of the entertainment is that £1,000 will be handed over by the committee.

A marriage is arranged, and will shortly take place, between Major Henry Thomas Rendell, D.S.O., only son of Mr. and Mrs. T. H. Rendell, of Slough, and Evelyn Feltrim, only daughter of Lieutenant-Colonel C. G. F. Fagan, Indian Army (retired), and Mrs. Fagan, of Beaconsfield, Bucks.

Miss Vivian Edwards, whose name is familiar to many of our readers, will give a song recital on April 4 in aid of the Manchester Y.M.C.A. Reconstruction Fund, at the Houldsworth Hall, Deansgate, Manchester. The programme will include Armenian, Greek, and Serbian Folk Songs.

The engagement is announced of David Malyon Allan, lieutenant, R.A.F., son of Alan Leslie Allan and Mrs. Allan, 27, Hollingbourne Gardens, West Ealing, and New Zealand, and Florence, daughter of the late Mr. G. M. Ogilvie, I.C.S., and of Mrs. Dundas, wife of Captain L. L. Dundas, C.M.G., R.N.

On March 27 the Queen of Roumania, accompanied by Princess Marie, and attended by Madame Jean Procopiu, Madame Simone Lahovary, and Captain Sir Charles Cust, Bart., R.N., specially attached, was present at a luncheon given at the Mansion House by the Lord Mayor of London and the Lady Mayoress, in honour of her Majesty.

The engagement is announced between Mr. Charles J. Nevile, third son of the late Mr. R. H. C. Nevile, of Willingmore Hall, Lincoln, and Muriel, second daughter of the late Right Hon. Sir Nicholas R. O'Conor, G.C.B., formerly British Ambassador at Constantinople, and Lady O'Conor, of Dundemot, Roscommon, and 29, Chester Square, S.W.

Bishop Montgomery has been asked by the relatives of the late Bishop Lefroy, Metropolitan of India, to undertake a record of his life. Bishop Montgomery would be grateful if anyone who has important letters of the Bishop will grant him the loan of them. All documents will be returned in due time. They should be directed to him at Morton's Tower, Lambeth Palace. S.E.1.

On March 31 Princess Marie Louise presided at the Royal Automobile Club at a meeting in connection with "Slavo Day, 1919," in aid of the Funds for Disabled Serbian Soldiers, promoted by the Hon. Mrs. Evelina Haverfield and Sergeant-Major Flora Sandes. The Serbian Minister, M. Yovan M. Yovanovitch, was unfortunately prevented from speaking by indisposition.

At Marlborough House, on March 27, Queen Alexandra, in her capacity as President of the British Red Cross Society, presented to the Queen of Roumania the gold medal of the society in recognition of her war work. The medal bears the following inscription: "To her Majesty the Queen of Roumania, in recognition of her devoted and unselfish services in the relief of suffering during the war, 1914-1919."

Princess Ileana of Roumania, who was unable to leave with the Queen of Roumania on Saturday, has, states Reuter's Agency, been seriously ill, with a high temperature. Her malady has now been diagnosed as influenza, and on Monday morning the doctors in attendance at Buckingham Palace expressed the hope that, should no complications arise, her Royal Highness will be able to leave London in about ten days' time.

Our Malta Correspondent writes (March 19).—Rear-Admiral Sir E. S. Alexander Sinclair has just arrived. Admiral the Hon. Sir Somerset A. Gough Calthorpe, G.C.M.G., K.C.B., C.V.O., has left Malta for the East in his flagship, the Superb. He is expected to be absent for six weeks. During the absence of Lieutenant-Colonel C. R. Savile, D.S.O., the duties of A.A. and Q.M.G. are being carried out by Lieutenant-Colonel A. G. Norris, R.G.A.

A marriage will take place at All Saints' Church, Marlow, on May 3, between Major C. E. Sladden, D.S.O., M.C., 9th Worcesters, son of J. Sladden, Esq., Badsey, Evesham, and Alice Amelia (Mela), elder daughter of the Rev. A. E. and Mrs. Brown Constable, and granddaughter of the late Colonel Charles Brown Constable, of Cheltenham, and Wallace Craigie, Dundee, J.P., D.L., Forfarshire, and of Mr. J. Wall, of Cheltenham, and Lucknow, India. No invitations. Friends are welcome at the church.

APPOINTMENTS, PROMOTIONS, &c.

M. Kimon Collas, Secretary to the Greek Legation, has been transferred to Washington.

Gholam Hussein Khan Ferid-es-Saltaneh has been appointed honorary Attaché to the Persian Legation.

The Secretary of State for India in Council has appointed Mr. Charles Ambrose Storey to be Assistant Librarian at the India Office in place of Mr. Alexander George Ellis, retired.

The King has granted to the following officials of the Egyptian Ministry of the Interior authority to wear the Insignia of the Order of the Nile conferred on them by the Sultan of Egypt in recognition of valuable services rendered by them:—First Class: J. Haines. Second Class: A. Granville, C.M.G., M.R.C.S. Third Class: A. F. T. Atchinson, J. E. Creswell, M.B.E., M.R.C.S., M. Moberly, D.S.O. (Miralai Maurice Moberly Bey). Fourth Class: F. H. Butler, E. V. Oulton, M.B., M.R.C.S., B. C. Paxton (Kaimakam Basil Charles Paxton Bey).

The King in Council has approved the issue of Letters Patent constituting a High Court at Lahore for the Provinces of the Punjab and Delhi, in place of the existing Chief Court of the Punjab. His Majesty has also approved the appointment of the following to be the first Judges of the new Court:—Chief Justice, Sir H. A. B. Hattigan, barrister-at-law. Puisne Judges: Mr. W. Chovis, I.C.S.; Mr. H. Scott Smith, I.C.S.; Rai Bahadur Shadi Lal, barrister-at-law; Mr. W. A. le Rossignol, I.C.S.; Mr. L. H. Leslie-Jones, I.C.S.; Mr. A. B. Broadway, barrister-at-law.

Among the names of those mentioned for valuable services in connection with the military operations in Arabia are:—Commander D. G. Hogarth, G.M.C., Major K. Cornwallis, D.S.O., and Captains T. Guillaume and T. Mackintosh, of the Arab Bureau; Lieutenant-Colonel T. E. Lawrence, C.B., D.S.O., Major Sir L. O. F. Slack, K.B.E., C.M.G., Captain H. Garland, and Lieutenant L. Bright (officers attached to the Egyptian Army); Colonel J. Falconer, Egyptian Civil Service; Mr. J. W. Harrison, Mr. J. G. Matthew, and Captain C. McKey, Sudan Civil Service; Dr. J. E. Creswell, Miss M. B. James, and Mr. R. C. Cowling.

OBITUARY.

SEC.-LIEUT. W. HARTY.

A correspondent writes:—Sec.-Lieut. William Harty was born in Constantinople on November 3, 1896. On the outbreak of the war he had to leave Turkey, and took refuge with his parents in Greece, where he became attached to the Commercial Intelligence Section of the British Legation in Athens. In January, 1917, he came to London, having decided to join the Army, notwithstanding that, as a British subject domiciled abroad, he was not liable to serve. He joined the Artists' Rifles O.T.C. in April, 1917, and after receiving a training as a private in the camp at Gidea Park, and as an officer in the Cadet School at Pirbright, he obtained his commission as a second lieutenant in the King's Shropshire Light Infantry. In April of the same year his battalion was ordered to France, when it rendered such services that the President of the French Republic, in acknowledgment of its "dash and gallantry under very difficult and critical conditions," bestowed upon it the Croix de Guerre (Palm en Bronze). On September 30, 1918, Lieut. Harty was killed at Aubers Ridge by the bullet of a German sniper, while leading his platoon at the head of his men. He was hit in the head, and death was instantaneous. So passed away, in his twenty-second year, "Willie Harty," whom to know was to love. He will be missed from among the British community of Constantinople, by which much sympathy is felt for the bereaved parents. He was buried with full military honours in the Communal Cemetery at Bethune on October 1, 1918, and the pioneers of his regiment put up a cross to his memory.

In communicating the sad news of his death to his sorrowing parents, his major wrote: "He was a splendid young fellow, and much loved by both officers and men. He will be a very great loss to the battalion, and you may very justly feel proud of him."

VICE-ADMIRAL HERBERT LYON, C.B., R.N.

Our Malta Correspondent writes (March 19):—The greatest regret has been awakened throughout the whole island by the death of Vice-Admiral Herbert Lyon, C.B., R.N., which has taken place at Righi Hospital. Whilst in his position as Commodore of the Escort Base, he made many friends, and was deservedly popular. What adds to the poignancy of the event is that the late Admiral had just finally retired, and was to make Malta his home.

On March 6, John M. Calvocoressi died at Constantinople in his seventy-fifth year.

The Bombay correspondent of *The Times* reports the death from heart-failure of Lieutenant-Colonel J. G. Hojel, M.B., C.I.E., of the Indian Medical Service, who throughout the war has commanded the Lady Hardinge Hospital for Indian troops in Bombay. *The Times* adds that Colonel Hojel joined the Indian Medical Service in 1888 and was appointed resident surgeon of St. George's Hospital at Bombay in 1895. In 1906 he was appointed to the Gokuldar Tejpal Hospital in Bombay, and, during the war, in addition to Lady Hardinge's Hospital, he commanded the Gerard Freemen-Thomas War Hospital. He was created C.I.E. in 1917.

Major-General Sir Francis H. R. Drummond died, on March 27, at the age of sixty-one. In the Afghan War of 1878-80, he served with great credit at the Jugdalluck Pass and at Kabul. He was mentioned in despatches and received the medal, with clasp. Sir Francis held the Afghan Order of Honour, and became a C.B. in 1908.

Major-General Francis William Ward, C.B., died last week, aged seventy-eight. He entered the Bengal Artillery in 1857, and attained the rank of major-general in 1895. He served during the Indian Mutiny, in the North-West Frontier of India campaign, 1863-4, and during the Afghan War, 1879-80. For some time he was colonel and staff commanding R.A., Punjab. General Ward married in 1862 Alice, daughter of the late General S F. Macmullen, Bengal Cavalry.

On March 29 the death occurred of Brigadier-General E. R. Courtenay, C.B., C.M.G. Born in 1853, he entered the Army as a subaltern in the 20th Hussars. After being adjutant of this regiment for five years, he exchanged to the 11th Hussars, of which he was in command from 1896 to 1900. General Courtenay saw much active service. In the Zulu campaign of 1879, in the Sudan expedition of 1885-6, and in the fighting on the North-West Frontier of India, he served with great distinction. In the European War General Courtenay served from 1914 to 1917, and had been Deputy Adjutant-General of the Second Army Central Force, and on the General Staff. For his last work he received the C.M.G.

Reuter's Rome correspondent states that Prenk Bib Doda, chief of the Mirdite clan and Vice-President of the Provisional Government at Durazzo, has been assassinated by the adherents of Essad Pasha. Prenk was the son of Bib Doda, a very warlike chief who gained renown in the Crimean War. He did not, however, inherit his father's characteristics, and preferred political intrigue to fighting. For 28 years he was a captive in exile with the Turks, and when in 1908 he returned to Albania he was too broken in spirit to make use of that enthusiasm with which his State was prepared to welcome him. To the end a mere intriguer, he failed entirely to win or hold the regard of any section of the Albanians except the Mirdites, and was much under the influence of Primo Dochi, the Abbot of Mirdita.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

THURSDAY, APRIL 3, 1919.

THE CONFERENCE AND THE EAST

Time was when President Wilson and possibly others pictured to themselves the world in council drafting the conditions of peace that were to mark the end of the war. When invitations were issued to the Paris Conference a judicious discrimination was exercised; neutral States were excluded, and a distinction was recognised between belligerent countries and those that had merely broken off relations with the Central Powers. A further division followed, with the concentration of executive authority in the hands of the Council of Ten; but the process of narrowing responsibility did not end there, and now the more fateful decisions rest with a Council of Four. Unless these are able to bring about an early peace they are likely to be confronted with the general desire that they should in turn yield place to the ideal number for rapid decision and quick action—a committee of one. Unfortunately this tendency towards unification has not yet been applied to the settlement of the affairs of the East, although a welcome departure has been made in the appointment of General Mangin to the supreme command of the Allied military forces in Eastern and South-Eastern Europe. In Russia itself all the evils of divided counsels and divided commands are apparent. At a time when the Allies need most to present a united front against the Bolshevists, the Japanese Government is forced to admit that the Allied Commander-in-Chief in Siberia, General Otani, can count upon exercising effective command only when his plans are consonant with the principle of American national policy. Little wonder that the Red Army of Bolshevism is reported to be making serious headway, while the Ten or the Four in Paris are still undecided whether they should ignore it, parley with it, or suppress it. With regard to the Balkans, the same policy of drift appears to have prevailed. In all their earlier statements of war aims or peace terms the Allies were careful to lay down certain guiding principles; but they have taken no steps to ensure that these principles should be enforced with the transfer of the liberated countries to Allied rule. Italians and Yugoslavs, Serbians and Montenegrins, Roumanians and Serbians have been left to quarrel amongst themselves, and practices have been freely resorted to which could find no justification outside the German code of fair dealing in peace or war. By a liberal distribution of Allied Missions in the disturbed countries an outward semblance of peace has been secured; but the policy of trusting to a settlement evolving itself appears to find more favour than the dictation of equitable terms which would hold the balance even in the common interests of all concerned.

To Constantinople has been accorded the peculiar honour of probably the most bizarre experiment in heterogeneous control ever devised. Four High Commissioners, British, French, Italian, and Greek, are installed in the Turkish capital; but room is also found for two Commanders-in-Chief, one French, the other British; the former nominally supreme in Turkey in Europe, while exercising his authority through his British colleague, and the latter in command in Asia Minor. It is not suggested that the officials in question with their different staffs have not made the best of the situation; but it can hardly be claimed for the system that it is ideal even as a temporary expedient, or that it reflects credit on the master mind which created it. Yet there was a strong case for the immediate introduction in Constantinople of a regime that would compare favourably with the administration of the Committee of Union and Progress under its German overseers. The inhabitants have suffered much from misgovernment, an oppressive bureaucracy, and the profiteer. They would have been impressed by a strong paternal rule that gave them security and justice, relief from exactions, and simple regulations on which they were expected to model their daily existence. It is possible that they have all these things; but the methods by which they are attained must confuse those whose intentions are good, while they afford an unrivalled opportunity for those who make it their business to fish in troubled waters. The multiplicity of authorities cannot fail to add to the difficulties of each, however resolved they may be to allow nothing to affect their cordial co-operation. It is, moreover, far from certain that they can impose the same self-denying ordinances upon their own nationals. If the report be true that the concession hunter has found his way to Paris, he is not likely to be kept altogether out of Constantinople. He may find no scope for his capital at the moment, but there will be ample scope for the patriotism that will prompt him to see a better future for Turkey and for himself, if his own Government has a paramount voice in the ordering of the country's destinies. Herein lies the occasion for intrigue, in which there will be many Turks ready to take a hand. Thus, the system which the Allies have devised for the temporary government supplies its own machinery to help to make that government impossible.

The obvious determination of the Council of Four to hasten the dictation of peace terms to Germany gives rise to the fear that, to achieve this end, they may be willing to delay the final settlement in the East. If the dispatch of a Commission to Syria is persisted in, that settlement may be postponed for several months longer. But the dangers of delay are not confined to the East alone. Political exigencies require the British Government to accelerate demobilisation; but it is unjust to the naval and military authorities to ask them to reduce their strength in the Eastern Mediterranean when the situation is becoming almost daily more and more precarious. That an attempt to introduce Bolshevism into Turkey should be made is by no means improbable; but even if there is no danger from this quarter, it is evident that the divided character of the Allied control in Constantinople and its failure to carry conviction into many parts of Asia Minor are encouraging certain undesirable elements of the Turkish population to reassert themselves. This at least would seem to be the explanation of the outrages still perpetrated on non-Turks. It is not difficult to see how the anomalous position on the Bosphorus arose; but the explanation does not justify the retention of a system inherently bad. In the draft Covenant of the League of Nations the Allies have pronounced against joint international control, and in any given territory there is to be only one mandatory Power. This system combines responsibility with authority. The present state of affairs in Constantinople eliminates both. The authority of each Power is restricted, and there is the inevitable incentive to evade responsibility, whether by leaving decisions to others or by looking to others to incur burdens that one seeks to avoid for oneself. A mandatory Power has its whole duty clearly before it, and has no excuse for shirking it. Nothing is more calculated to undermine the prestige of the Allies, and especially of Great Britain, in the East than the perpetuation of a policy that is administered without conviction and that lends itself to the intrigue which has always proved the curse of these lands. For this reason, if for no other, there should be no further delay in the settlement of the problem presented by Constantinople and Asia Minor.

THE ARABS OF NORTH AFRICA.

The Arabs of Arabia were discussed in an article that appeared in THE NEAR EAST of February 8, 1918. It is now proposed to consider those of Africa, but at the very outset the difficulty must be faced that the great mass of the Arabised natives of Algeria and Morocco, the so-called Arabs of almost every anthropologist from the time of Broca onwards, present little or no evidence of Arab blood, and are to be regarded not as Arabs, but as Arabised Berbers. Such at least is the conclusion of MM. Bertholon and Chantre, and although an important reservation may have to be made, there seems little doubt that the majority of these so-called Arabs are no other than Berbers, who, adopting the Arab language and Arab ideas, have become more thoroughly Arabised than their Berber-speaking brethren. There is, of course, historical evidence that considerable groups of Arabs migrated towards Western Mediterranean lands in the first few centuries after the Hegira, but at the present day it seems that they have been absorbed into the general population, and that there is no generally valid method of distinguishing their descendants. This result might have been expected, seeing that the immigrants, if of the North Arabian type, would be long-headed and of medium stature, and so not readily distinguishable from the mass of the North African population.

Probably the conditions which prevail in Algeria and Morocco do not apply, at any rate with the same force, to parts of Tunisia; and there can, I think, be little doubt that Tripoli stands on a different footing. Apart from the littoral belt, the greater part of the country east of Tunis is desert or poor steppe, with an annual rainfall varying from three inches or less to ten inches, and only exceptionally attaining the latter figure. When in a sparsely inhabited area such as this are found groups of pastoral or semi-sedentary folk, such as the Aulad Ali, calling themselves Arabs, living the life of Arabs and claiming descent from Arab ancestors, there seems to be no sufficient reason to suppose that they are not predominantly of Arab blood. So far then as our present knowledge goes, it would seem the nomads or semi-nomads west of the Nile Valley stretching to Tunis are predominantly Arab, but even here it must be observed that the oases, at least in part, constitute an exception. Thus the measurements and photographs of men of Kharga Oasis published by Hrdlicka show that its inhabitants are, for all practical purposes, Egyptians, differing in no essentials from the inhabitants of the Nile Valley. The question naturally arises how far have the African Arabs maintained the physical characters of the tribes from which they have sprung, *i.e.*, have they undergone any considerable modifications in their new surroundings? No general answer can be given, but in the case of the Arabs of the Nile Valley, it seems that they have not. The evidence in favour of this view is too intricate to permit of a rapid summary, but it may be stated that measurements taken by different observers in Lower Egypt and its western marches, in Upper Egypt and in the Sudan (Kordofan), show a general agreement which is the more significant when it is remembered that the Aulad Ali, the strongest nomad tribe on the western border of the Delta, claim to be descended from the very tribe (the Beni Okba) to which the Kababish, the proudest and richest Camel Arabs of the Sudan, trace their origin.

It should now be possible to appreciate the significance of certain brachycephalic skulls from the ancient Arab graveyard near Abassieh, in the neighbourhood of Cairo. Their form is but an expression of the roundheadedness of the inhabitants of Southern Arabia persisting in new localities to which they had migrated. In other words, the burial ground near Abassieh was the last resting-place of a family or clan from Southern Arabia. If this explanation be accepted, the smaller group of roundheads from a Tripolitan burial may be explained in the same way, though there is nothing, so far as I am aware, to show that these skulls are of mediæval date. And it may then be asked, how far are the "islets" of short roundheads found along the North African littoral, and even inland, susceptible to this explanation?

In considering this matter it must not be assumed that the same influences have been equally in action throughout Northern Africa, alike inland in the Kabyle hills and in the coastal zone. With regard to the latter, it must not be forgotten that for a period of 200 years from the end of the fifteenth century onwards, the North African coast was the adopted home of the Barbary pirates, who, at the height of their power, were so strong that, though occasionally defeated by the Christian Mediterranean Powers, they were never broken. Moreover, it is known that the island of Gerba, with a predominantly roundheaded population, was one of their strongholds. Yet even if the Turkish pirates recruited from all over the Levant exerted some influence on the head form of the littoral, their dominion did not extend inland, and they could have had no part in producing the brachycephaly of certain mountain tribes of Kabylia. Further, the photographs published by Bertholon and Chantre in their great work show that Armenoid noses occur in a certain number—not, it is true, a large one—of Algerines, natives of districts remote from the coast, and this would seem to point to Arab influence. Again, the average stature in Tripoli, Tunisia, and Kabylia points in the same direction, while certain historical considerations are in its favour. The conquerors of Spain came from North Africa, and so large a number of the invaders were of South Arabian origin that the Yemenite party in their new country were able to carry on the tribal wars of their old home on a considerable scale. It seems safe to deduce from this that at least a part of the Arab colonisation of North-Western Africa was due to settlers from South Arabia, reinforced, no doubt, by a proportion of Southern Arabs or their descendants, when the Arabs were driven out of Spain. On the physical side the suggestion in favour of the North African brachycephals being the descendants of Arabian immigrants is supported by the observations of Bertholon and Chantre. These authorities note that the heads of the African brachycephals are not globular, as are those of European roundheads (the Alpine race of Central Europe); that the anterior part of the skull is less developed; that the occipital region is flattened; and that the cranial vault is often very high—all characters which suggest the influence of Asiatic rather than of European roundheads. Yet the fact that tall, longheaded blondes, undoubted descendants of the Nordic race, occur in the Atlas Mountains, and that representations of blonde, fair-haired, light-eyed Libyans are found in Theban tombs dating to the second millennium B.C., show that Northern Africa has been influenced by an essentially European stock. And if barbarians from the far north could colonise the Atlas, there is no reason why the roundheads of mid-Europe should not also have played a part. We may indeed presume that both European and Asiatic roundheads have contributed to the population of the southern shore of the Mediterranean, and that the blood of both runs in the veins of at least some of the "Arab" tribes of Northern Africa.

C. G. S.

INDIAN SOLDIERS' BOARD.

With the object of safeguarding the welfare of Indian soldiers after their release from military service and assisting the families of those still on active service, the Government of India have established an Indian Soldiers' Board. Sir George Lowndes, K.C.S.I., has been appointed president, and the new board will work in connection with the Army Department of the Government of India, and advise on all questions affecting the interests of Indian soldiers and non-combatants and their dependents.

THE WOES OF ARMENIA.

The Armenian Delegation in Paris, of which M. Aharonian is president, has just addressed an urgent Note to the Peace Conference respecting the present alarming state of Armenia, where, according to the latest reports, famine and disease are decimating the people. It is urged that to remedy an insupportable state of things the Allies should facilitate the transport of grain from the Northern Caucasus by way of sea to Batum and thence by railway to Erivan, the capital of the Armenian Republic. Also that the return of the refugees to the Armenian provinces formerly under Turkish rule be permitted, so that the soil may at once be brought under cultivation. To this end the Armenian Republic places its regular army at the disposal of the Allied Command, should the troops of the Entente not be available for the necessary occupation. The organisation of a sanitary service to combat the diseases now prevalent is also mentioned as being of immediate necessity.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Roumanian Army. March 27.

Mr. HARMSWORTH, replying to Colonel WEDGWOOD, stated that the Roumanian Army had crossed to the north of the River Maros, but they had no information as to the revision of the line of demarcation between Hungarians and Roumanians. The situation which had arisen was at present being discussed in Paris.

Syrian Central Committee.

Mr. CECIL HARMSWORTH, in answer to a question by Mr. MOSLEY, asking for the component elements of the Syrian Central Committee and their claims to represent Syrian opinion, said the Committee in question was under the chairmanship of M. Chekri Ganem, and its council was composed of an Orthodox Greek, a Moslem, a Greek Melchite, a Maronite, and a Hebrew. He understood that the Committee claimed to represent a number of other Syrian and Syrian Lebanese committees and associations in the United States, Europe, Australia, and Africa. The Committee's claim to represent Syrian opinion was contested by various Syrian bodies, both in Syria itself and in other parts of the world.

Albania. March 28.

Major JAMESON asked the Secretary of State for War whether the Peace Conference proposes to apply the principle of self-determination to Albania?

Mr. C. HARMSWORTH: In delimiting frontiers in South-Eastern Europe the delegates at the Peace Conference are in all cases endeavouring to ascertain and carry out the wishes of the populations concerned.

Affairs in Egypt. April 1.

Colonel WEDGWOOD asked the Prime Minister what steps were being taken to send out a Commission of Inquiry to Egypt to inquire into the causes of the recent rioting; and would such an inquiry be authorised to inquire into the treatment of the Egyptian fellaheen who enlisted for service as well as into the causes of Moslem unrest.

Mr. HARMSWORTH replied that the attention of the Government for the present must be concentrated upon the establishment of law and order in Egypt, and he was unable to state whether a Commission of Inquiry would be despatched or not. He should like to make it clear that his Majesty's Government intended to institute at the earliest possible moment the fullest inquiry into the causes and extent of the disturbances.

Colonel WEDGWOOD asked whether it was possible to re-establish law and order in a country if the authorities did not get down to the root causes accounting for an outbreak.

Mr. CECIL HARMSWORTH: We must restore law and order before we can get on with the inquiry.

Topics in Parliament.

The subjoined headings are those given in the Official Report.

UKRAINE.—ROUMANIA: Destruction of British Property.—CONSTANTINOPLE: St. Sophia Church.—RUSSIA.—EGYPT.—SERBIAN ARMY: British Mechanical Transport.—AFGHANISTAN.—RUSSIA. (March 25.)

INDIA: Civil Service Kabul. Mohammedans (Newspaper Comments). Rowlatt Commission Bills. Steamship Accommodation.—ARMENIA: Food Shortage.—CAUCASUS: British Mission.—NEAR AND MIDDLE EAST: Special Sub-Commission. (March 26.)

TIFLIS: Pay of British Troops. (March 27.)

INDIA: Uncovenanted Services (Pensions).—EGYPT: Enlisted Fellaheen (Medical Service). Commission of Inquiry. CONSTANTINOPLE (Postal Facilities).—EGYPTIAN EXPEDITIONARY FORCE. SALONIKA FORCE. OCCUPIED ENEMY TERRITORY (Agricultural Work).—INDIA: Civil Servants (Homeward Passages).—EGYPT: Ministry of Health. Surplus Army Transport. (March 31.)

EGYPT OF THE FUTURE.

In the course of his presidential address to the African Society last Friday, Sir Harry Johnston said that now that the Germans were driven out of Africa and Western Asia there were signs of native discontent with the rule of European Powers. What would Egypt be in the near future? Never again an appanage of Turkey. Egypt proper ought gradually to be educated, and educate itself to reach the status of an independent Mediterranean kingdom. But the Sudan to the south of Egypt must remain still longer under British control, because it was inhabited preponderatingly by negroes, and could not be trusted to the sons, grandsons, and great-grandsons of the Egyptian and the Turkish Pashas. For the safety of the British Empire and of the League of Nations we should have to occupy indefinitely the Sinaitic Peninsula and defend the Suez Canal: but with these reservations—once we were assured that Egypt had become too modernly educated to give way to religious fanaticism, persecution, dishonesty, or waste in finance, we should not be eager to continue our military occupation or our control of the internal government.

The Greek Generalissimo Paraskevopoulos, accompanied by his General Staff, left Salonika on March 30 for Constantinople, with a view to conferring with General Franchet d'Esperey as to the future action of the Greek Army.

ALLENBY and his Crusaders in Palestine.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

A correspondent points out that there is no unwillingness on the part of traders to enter the Levant markets, and that it is the exchange question which is the main hindrance to the resumption of trade. "The difficulty," my correspondent adds, "is for the Turk to get exchange on London to pay for goods he has bought here. This uncertainty naturally makes people inclined to hang back. One of the reasons for the lack of exchange is that there is considerable difficulty in obtaining permits on this side to import goods from Turkey. Therefore it would be to the interest of the British exporters to get the restrictions on imports from Turkey removed, thus enabling the Turkish merchant to pay for his imports of British goods by his export of the merchandise that he has in hand."

***

The recent visit of Queen Mary and the Queen of Roumania to the Sonic works at West Drayton, where Mr. George Constantinesco is elaborating his inventions, has brought the work of this inventor into prominence. A Roumanian by birth, and now a naturalised British subject, Mr. Constantinesco has achieved fame by the Sonic system of transmission, which is briefly a method for obtaining energy by the to-and-fro motion of particles of liquid. This system rendered possible what is known as the c.c. sychronising gear, which greatly contributed to the British supremacy in the air, since, by it, it became possible to fire as many as 2,000 bullets a minute through the propeller.

***

A six per cent. loan for 75,000,000 drachmæ (£3,000,000) will, I understand, be issued in Greece on April 15. This loan, which will be repayable in 1939, will be issued at 95 per cent., and the service of the loan will be secured on the surplus of the revenues assigned to the International Financial Commission and of the Customs' receipts of the ports of Corfu, Patras, Vola, Salonika, and Kavalla. National Defence bonds will be accepted for the new loan at 101 per cent.

***

The report of the Department of Statistics in India on India's trade in 1917-18, which is only now available, throws valuable light on the extent to which the growing demands of the Allies gave a great impetus to industry, and stimulated the export of commodities of vital importance. The pre-war average of manufactured goods in the export trade of 24 per cent. had increased in the year under review to 31 per cent., a fact which speaks volumes as to the change which has taken place. The shortage of shipping and the restrictions on trade had the result that India, which before the war held the second place in the Empire's trade, had to give place to Canada. The value of India's overseas trade in merchandise was Rs.393 crores, or rather less than the previous year, and made up of imports Rs.150 crores and exports Rs.233 crores. The effect of the continued rise in values in this trade may be estimated from the fact that if the prices of the previous year had obtained the value of the imports would have been Rs.122 crores, and of the exports Rs.216 crores.

***

One effect of the war was to increase India's trade with other parts of the British Empire. In the pre-war quinquennium the share of the Empire was 53 per cent., and this had risen in 1917-18 to 57 per cent. Another feature is the remarkable increase in India's trade with Japan and America. In the year under review the total trade with Japan gives that country second place to the United Kingdom. In this case the increase has been mainly in imports, which, as compared with the pre-war average, have increased by 400 per cent., the corresponding increase in exports being 103 per cent. Trade with Japan consisted as to imports of matches, metals, silk manufactures, and glassware, and as to exports of raw cotton. The value of the trade with the United States was double what it was in the pre-war period, and half of the imports consisted of iron, steel, and mineral oil. Finally, it may be noted that in regard to the frontier trade reference is made in the report to the increase in importance of the Shan States in the production of lead and silver.

***

I understand that Sir Adam Block has arrived in London from Constantinople.

***

The reports of the Eastern banks for 1918 all show results of a most satisfactory character. Thus the net profits of the Chartered Bank of India amounted to £409,221, as against £402,795 in 1917, and £381,200 in 1916, and the carry forward was £167,260, making a total of £576,261, of which £84,000 was absorbed by the interim dividend. Out of the disposable balance of £492,484 it is proposed to pay a final dividend at the same rate as the interim declaration and a bonus of 25s. per share, making 20¼ per cent. per annum, free of income-tax, as against 19 per cent. in 1917., and 17 per cent. in 1916, to place £100,000 as before to the reserve fund, making it £2,100,000, and to carry forward a balance of £168,483.

***

The National Bank of India made a net profit of £403,635, as against £353,139 in 1917, and £297,474 in 1916, and to this has to be added £139,828 brought forward, making the total £543,464. The interim dividend accounted for £100,000, and it is now proposed to pay a further dividend at the same rate, making 20 per cent. per annum, free of income-tax. The reserve fund is raised to £1,550,000 by the addition of £200,000, and the balance left to be carried forward is £123,464.

The net profits of the Imperial Bank of Persia amounted to £83,136, as against £85,066 for the previous twelve months, and £54,170 for 1915-16. The dividend is again 8 per cent., free of tax, and £30,000 is again placed to the reserve, making that fund £220,000. £5,000 is allocated to bank premises account, as against £10,000 the previous year, and the carry forward is £27,388, an increase of £3,100 on the previous figures.

***

With the results of the working of the line during the war not available, the report of the Ottoman Railway from Smyrna to Aidin naturally conveys a very inadequate survey of the company's position. There is a debit balance, owing principally to interest charges, of £631,900, as against £448,100 the previous year. As regards the outlook, the line is now in the hands of the British military authorities, and the members of the Smyrna staff, it will be remembered, left England at the end of February to take over the working of the line. For the resumption of traffic, rolling stock and materials and capital to meet current expenditure will be needed, and in this connection it may be noted that it is expected that expenses will exceed receipts for some time, which will readily be understood in the circumstances. The council have prepared for the necessary expenditure by raising £140,000 by a banker's advance at 6 per cent., secured by the deposit of £100,000 4 per cent. and £100,000 5 per cent. debenture stocks (the unissued balances of these stocks), and as the available borrowing powers are thus exhausted, it is pointed out that if further capital is required the shareholders may be asked to sanction the creation of new capital.

***

A general investigation of the fibre resources of India is now being conducted by Mr. Finlow, fibre expert with the Government of Bengal. During the war the necessity of developing the fibre resources of the Empire was made very clear, and naturally India offers a most promising field for research. None of the fibre crops of India, apart from jute and cotton, have so far been exploited from the industrial standpoint, and the possibilities of the other crops cannot be compared with those of the crops mentioned. Still, in some cases they possess valuable qualities, as was pointed out in the report of the Indian Industrial Commission, and their utilisation should not be a matter of great difficulty.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

CYPRUS IN 1917-18.

Continuance of War Time Prosperity.

The White Paper on the Cyprus Blue Book for 1917-18, which has just been issued, shows that the marked prosperity of 1915-16 and 1916-17, has been more than maintained. In that year the revenue was the highest on record and the collection of taxes satisfactory, indications which, it is pointed out, prove that the Island is steadily progressing, and that its inhabitants are becoming, generally, more prosperous. The main factor responsible for this gratifying state of affairs has been the exceptional demand arising out of war conditions for the products of the Island, which has enabled merchants, farmers, and stock-breeders to obtain excellent returns for their goods. The military authorities in Egypt and Salonika, for instance, have been ready purchasers of Cyprus products, and special efforts have been made in the Island to meet their requirements by increased production. As regards the continuance of the Island's present prosperity the question obviously depends on whether it will be found possible to replace markets due to the war by other and more permanent outlets for trade. Whether this can be done or not is a question that only the future can decide, but this much can be said, that if it is possible the administration, which has so successfully guided the Island's destinies during the war period, will find ways and means of doing so. Before turning to the results of the year it remains to be noticed that in the period under review the rising cost of living had an increasing incidence in the Island, and came to press very heavily on Government officials and people of fixed incomes. This was met as regards officials by an increased war bonus, and, generally, by arrangements for the manufacture of a cheap loaf from grain issued from the Government grain stores, and by tariff prices for most foodstuffs.

Finances and Trade.

The revenue less the Imperial grant in aid amounted to £498,460, as against £332,584 in 1916-17, and £363,692 in 1915-16, hitherto the highest revenue recorded. It was thus £165,876 in excess of the figures for the previous year, but it includes £75,267 13s. on account of tithe grain of 1916-17, but against this there is 1917 grain of the estimated value of £55,000, which is not included as it had not been disposed of by the end of the financial year. The increase in revenue was, it may be mentioned, widespread, as no less than thirteen of the nineteen heads of revenue showed an increase on the figures for the previous year, the principal increases being under Customs, tithes collected by Revenue Department, tobacco duties, forest revenue, and railway. The local expenditure, not allowing for the share of Cyprus of the Turkish debt charge, was £382,598 as against £318,378 in the previous year, and including everything there was the very satisfactory surplus of £73,062.

The value of imports during 1917 was £958,168 an increase of £388 on the figures for the previous year, while the exports totalled £787,922, an increase of £79,476. In both imports and exports the trade was mainly with the United Kingdom and other parts of the Empire. Thus of the imports the United Kingdom and British Colonies were responsible for £839,887 or 86.8 per cent. of the total, while the United Kingdom took exports worth £108,293, and the figures for British Colonies were £374,343. Italy came second in the list of importing countries with imports valued at £33,971, while in the list of exporting countries Greece and France with £137,584 and £130,987 respectively both pass the United Kingdom's total.

Industries.

During the war mining activities have been restricted in the Island, but it is thought that the industry possesses considerable possibilities. The exports of the Cyprian Mining Co.'s asbestos mine at Amiandos in 1917 amounted to 21,386 cwt. of the value of £14,072 against 25,812 cwt. of the value of £14,661 in 1916. Owing to it being impossible to obtain explosives in the prevailing conditions the Cyprus Mines Corporation had to limit its work at the Skouriotissa copper mine. During the year 1,881 tons of terra umbra to the value of £3,746 were exported as against 4,702 tons, valued at £7,821, in the previous year; 490 tons of gypsum, valued at £319, were also exported.

The wine industry, which is of considerable importance, has received a great impetus owing to the good prices obtainable. The exports during the year were 1,309,440 gallons of ordinary Cyprus wines, valued at £76,538, and 14,568 gallons of the heaviest desert wine known as Commanderia, valued at £1,913. There were also exported 128,587 gallons of vinegar, valued at £2,550 and 92,169 gallons of spirit, valued at £22,173. As a result of the demand for Cyprus wines there has been an extension of the vine area and a number of new vineyards have been established.

Agriculture.

Useful work was again carried out by the Department of Agriculture, and among other things several varieties of cereals and other plants obtained from England, South Africa, New Zealand, and elsewhere were tried on the experimental plots of the Department.

The olive oil extracted from the olive crop of the last year was insufficient for the Island's requirements, and the hope is expressed that in the near future there will be a great increase in the number of olive tree plantations, as there are many suitable areas available, so that the local requirements may be met, and an export trade also developed. Potato growing was stationary owing to the lack of new seed and to the tendency on the part of agriculturists to turn to tobacco cultivation. The bee-keeping industry continued to develop, and the same must be said for sericulture.

The revenue of the Forest Department amounted to £59,624, as against £27,182 in 1916-17, two-thirds of the amount being obtained from the timber and fuel supplied to the military authorities. An additional saw mill was erected during the year, and the quantity of timber cut at the saw mills amounted to 101,221 cubic feet, roughly the same as in the previous period.

The gross earnings of the Cyprus Government Railway were £27,866 as against £19,914 in 1916-17, and £15,785 in 1915-16. Working expenses also increased from £16,608 to £20,748, but the excess of receipts over working expenses rose from £3,306 to £7,118. The practice of the previous year of mixing wood fuel with coal to save the consumption of coal was again carried out as far as possible.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director, Commercial Intelligence, Calcutta, dated March 20 (received March 26):—

General rain at Chota-Nagpur. Local in Orissa and Mysore. Rain required in Assam and unirrigated Punjab crops.

Second wheat forecast acreage 23,733,000 (February forecast gave 23,472,000. Last year this time 34,469,000).

Bombay cotton market fairly steady. Fully good Broach April-May delivery quoted at 477 rupees. Piece goods market very quiet. Calcutta jute, gunnies market steady. Rice no change.

Modasa Dungarpur Railway Survey by Guzerat Railway Co., Ltd., sanctioned 44 miles Metre Gauge Railway.

Reuter's Agency learns that arrangements have been concluded by the British Government for the opening of credits with Roumania for the purchase of immediate necessities, especially railway material. A complete equipment for 150,000 men will now also be sent.

OUTLOOK IN MOROCCO.

Question of Exports.

(From Our Own Correspondent.)

Tangier, March 14.

There has been no visible effect on the markets yet of the liberty to re-export imported goods. A few bales of cotton and a small quantity of wooden matches were reshipped to England recently; some wooden matches were also consigned to Algiers, but quotations are nominal, as no sales are being effected. Permission to re-export from the French zone has not yet been granted, though it is hoped it will be before long. The authorities are still taking stock, as they wish to make sure that five months' supply is retained in the country. I don't think they need have any fear of re-exports taking place to such an extent as to reduce the reserve below this margin, as the existing stocks appear to be too large, and the possible markets too scarce.

Most articles of this country's produce may now be exported; wheat, barley, and maize, which are by far the most important, are excepted, even the 1919 crop is bespoke by the Intendance. Naturally, this has caused severe disappointment to British exporters. There is an idea that cereals may be exported from Algeria without restriction, and if this be so, the question is asked, Why should the same things be requisitioned in Morocco?

Future of Tangier.

Everyone is anxiously awaiting the decision of the Peace Conference on the subject of Tangier, and are wondering just what is the meaning of a "special status, with French preponderance." Meanwhile, the little flutter in land which I mentioned has quietened down without a great deal having changed hands. When the rumours of the change of influence in the Spanish zone were at their highest some local speculators turned their attention to land at Larache and Alcazar, but the owners had also heard the rumours, and, intending to make the most of it, raised their prices extravagantly, especially round Alcazar, but I have not heard of any sales resulting.

There is still a very considerable quantity of imported goods lying in the Customs stores; warehouse rent is accumulating and increasing someone's loss. A case regarding some of these goods was tried in the British Consular Court recently; the goods arrived at Gibraltar before the slump in prices, but for some reason did not reach Tangier until after that unhappy event. The consignee refused delivery, and pleaded they were not according to sample, and the decision was in his favour. I am told the shipper has appealed.

The British Mission.

The British Commercial Mission's report on the prospects of agriculture in Morocco seem rather more discouraging than, it is thought here, is altogether justifiable. Those who may be thinking of trying agriculture in Morocco should certainly not give up the idea without obtaining all possible information and studying the possibilities seriously.

Mr. Mulock, head of the Mission, left here for England via Gibraltar on the 13th inst.

EGYPTIAN MARKETS.

Damage During Disturbances.

The Egyptian Markets, Ltd., has received the following cable from the general manager in Egypt:—"Report received of eight markets damaged and stocks robbed, but information incomplete; several markets officially closed; are working markets with native staff only where communication is possible." No further communication has come to hand, either by letter or cable, with reference to the rising in Egypt.

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

JAFFA TRADE NOTES.

(From Our Own Correspondent.)

Jaffa, March 8.

Jaffa Vice-Consulate.

It was a great pleasure to see safely back at Jaffa Mr. N. H. Fiani, the former British Pro-Consul, who, until the rupture of relations between Great Britain and Turkey, had charge of the British Vice-Consulate at Jaffa. Mr. Fiani worked with great devotion and zeal for British interests until the last moment, when the Turkish authorities had him arrested and interned at Jerusalem. Later he was sent to Nazareth and Tiberias, and finally was exiled to Konia, in Asia Minor, whence he has returned after an absence from Jaffa of over four years. Doubtless, now that Mr. Fiani is available, there will be little delay in taking advantage of his valuable services, his long experience, and his thorough knowledge of the country and its inhabitants.

Sufferings During the War.

No part of Palestine has probably suffered more financial and economic damage in this war than Jaffa. The city was depopulated and the inhabitants dispersed in Syria and Anatolia as exiles and refugees, where they suffered greatly at the hands of the Ottoman Government, being regarded as traitors, and as they had no money and living was extremely dear a large number of them died of hunger. Those who returned bear traces of their experiences.

Before the Turks evacuated Jaffa they reduced a large part of the city to ruins, and when the British troops occupied the place in November, 1917, they found it in a most pitiful state.

Jaffa has begun to flourish under the new régime, and the inhabitants are beginning to forget the great suffering and hardships they have endured in the war under the old régime. They are very grateful to Great Britain and the Entente.

Future of the Port.

It goes without saying that the future will see many important developments at Jaffa. To take the harbour, for instance. Jaffa is a leading port and commercial centre of Palestine, and as such it needs must have a good harbour and quay for the ships. Before the war a British company was trying to obtain the concession for the construction of a harbour at Jaffa from the Ottoman Government. It is the wish of the population that the O.E.T.A. should bring into effect this scheme of constructing the harbour.

The provision of a water supply is of great importance to Jaffa. It is not that water is scarce, but that the means are lacking. We have the Aujah river, one hour from Jaffa, which could supply the city and district with water for drinking purposes and for watering the orange groves. Here, also, is a question which calls for the attention of the O.E.T.A. What is needed is the construction of a large reservoir for the water of the Aujah river, as by that the city could be supplied with water not only for drinking purposes, but also to provide power for electric light and tramways.

Commerce and agriculture are the chief features of Jaffa. As an agricultural centre many things are lacking, notably machines for tilling the ground and for harvesting, etc. Also, the country being poor, financial help is necessary to make the improvements that are required.

EMPLOYMENT PROBLEM IN MALTA.

(From Our Own Correspondent.)

Malta, March 13.

There is what may be termed national concern in Malta regarding the economic future of the Island. The various labour battalions are being demobilised and discharges on a big scale are expected from the dockyard. The authorities seem unable to grapple with the situation, although a committee to deal with immediate emigration has been formed and seems to be acting at a quicker rate than is usual.

Strong feeling is expressed against the local capitalists who do not encourage local industries by investment. A quiet demonstration occurred the other day by which the demand for the local management of financial affairs was brought to the fore. Broken glass has been the only result up to the present.

EGYPTIAN STATE FINANCES IN DECEMBER.

(From Our Own Correspondent.)

Cairo, March 7.

During the month revenue amounting to £E2,225,673 was collected, and the expenditure came to £E1,821,681. For the nine months, revenue totals £E20,931,843, and expenditure £E17,270,955 against £E17,088,271 and £E13,732,346 respectively a year ago. There is therefore an increase in revenue for the nine months of £E3,843,572, and in expenditure of £E3,538,609, and the surplus of revenue is now £E3,660,888, compared with £E3,355,925 at the end of December, 1917.

The principal items of revenue during the month were land tax, £E465,211; customs, £E322,893; tobacco dues, £E186,575; railways, £E651,744; judicial fees, £E143,354; whilst the main items of expenditure were irrigation, £E92,454; railways, £E360,734; ghaffirs, £E146,912; war office, £E264,966; war gratuities, £E114,629.

Compared with the corresponding nine months of 1917, the main increases under revenue are customs, £E1,109,262, about 50 per cent. on last year's figures; tobacco, dues £E251,030; excise, £E213,277; railways, £E1,652,000, about 45 per cent. on 1917; telephones, £E147,027, these did not appear in last year's accounts; ghaffir tax, E155,965; miscellaneous receipts, £E235,549; sale of land, £E139,164. The chief item showing decrease was sale of Domains' produce, which fell by £E117,712, a hint of what will take place in the near future in all budgets dependent on prices of agricultural products. Under expenditure, the chief increases during the nine months have been railways, £E948, 146; telephones, £E99,557; ghaffirs, £E127,511; war office, £E479,463; war gratuities, £E620,483; and extraordinary expenditure in connection with the war, £E391,306.

ADDRESS TO THE QUEEN OF ROUMANIA.

The following address was presented to the Queen of Roumania on behalf of the British-Roumanian Chamber of Commerce:—

On behalf of the council of the British-Roumanian Chamber of Commerce, formed in 1917, with the object of promoting "the extension and development of trade, commerce, industry, shipping and transportation pertaining to the United Kingdom or the British Empire and Roumania," we venture to offer our respectful greetings, on the occasion of your Majesty's first visit as Queen of Roumania to this country—the land of your Majesty's birth. We desire to convey the assurance of our profound sympathy to his Majesty the King of Roumania, your Majesty and the Roumanian people in the unexampled trials endured by reason of loyalty to the Allied cause in the great war; of our admiration for the sacrifices thereby sustained; and of our fervent hope that the blessings of an assured peace will shortly be attained in the fullest measure. We look forward with every confidence to the time when the friendly relations, always existing between the two countries—tested under most adverse conditions until the hour of victory—will be still further cemented by a closer intercourse, by the achievement of common aims and the development of an era of economic progress in their mutual interests. In furthering these objects the British Roumanian Chamber of Commerce will cordially co-operate with the Roumanian people and their rulers.—Bessborough, chairman of the council; H. Locke, honorary treasurer; and Charles E. Musgrave, honorary secretary.

THE F.B.I. ATHENS EXHIBITION.

Major Kennard, the Commissioner to Greece of the Federation of British Industries, who is shortly to be established permanently in Athens, has been touring the country giving manufacturers the benefit of his experience. A reference in his address to the coming exhibition is given below :—

I would point out to you that the exhibition which we propose to hold will be in its way unique. Big exhibitions of various kinds have been an almost common annual event in all parts of the world in pre-war days, but I think I am right in saying that this exhibition of British industries will be extremely practical. It will be a purely *selling* exhibition. I venture to assert that every exhibitor who can guarantee immediate, or at all events quick, delivery of bulk to the samples which he exhibits, will not only pay his expenses, but will make a very large and immediate profit without undue expense or risk. Further than that, he will have the comfortable feeling that he is doing his bit for his country in the great economic war upon which we are now embarked.

We will hold this exhibition on such a scale that it will attract all classes of buyers, not only from Greece but from many or all of the Balkan States and the Levant. As I said before, all these countries need everything, and need it at once. The Greeks have plenty of money, and—born traders that they are—they are longing to turn it over, and they *want* British goods. Are you going to supply them? I should like to see British products in every shop and every home in the Near East. It is up to you manufacturers to bring about this very desirable state of affairs. To show you that the Greeks themselves have a similar feeling, I may tell you that I brought with me from Greece an offer from a Greek gentleman to put up the sum of £40,000 towards the erection of a depot for purely British goods in Athens, on the understanding that it would be organised and run by Englishmen.

Remember that in arranging this exhibition the Federation has no axe of its own to grind; its one and only object is to promote the interests of its members, and, through them, the interests of British industries as a whole. I have studied the conditions, and, although I frankly confess that I started as a pessimist, I equally frankly confess that I have returned to this country a real optimist as to the possibilities for British trade in the Near East, using Greece and our exhibition as a stepping-stone.

COMPANY RESULTS, Etc.

Anglo-Egyptian Oilfields share registers will be closed from April 4 to 17 inclusive.

The annual general meeting of the Egyptian Delta Land and Investment Company, Ltd., will be held at Cairo on April 10.

The recent issue of 1,150,000 £1 Dunlop Rubber Company 7 per cent. "C" Preference shares has been fully applied for.

Warrants for the interest in respect of the 4 per cent. debenture stock of Barsi Light Railway Company, Limited, due on April 1, have been posted.

The directors of the Assam Railways and Trading Company have declared an interim dividend of 2 per cent. on the "B" stock, payable on 31st inst. to holders registered 26th inst.

The directors of the Assam Oil Company have declared a final dividend for the year 1918 of 3½ per cent. on the preference shares, payable on 31st inst. to holders registered 26th inst.

Hope Tea.—A second interim dividend on account of 1918 of 10 per cent., less tax, has been declared, making a distribution of 20 per cent. to date, the same as a year ago, payable now.

Messrs. R. Raphael and Sons announce that the coupons and drawn bonds of the Piræus, Athens, and Peloponnesus Railway 4½ per cent. bonds, due April 15, will be paid on and after that date at their office, Austin Friars House, E.C.

Inclusive of Rs5,55,283 brought down, the accounts of the Bank of Bengal for the half-year ended December 31 show an available balance of Rs28,60,167. After providing for a dividend and bonuses amounting to 17 per cent. per annum, the same as for the second half of 1917, adding Rs5,50,000 to reserve fund, and transferring Rs50,000 to gratuity and pension fund, there remained Rs5,60,167 to be carried forward.

Alliance Bank of Simla.—Balance-sheet at December 31 :—Liabilities.—Capital paid up, Rs87,56,200, reserve funds, Rs50,00,000; deposits and current accounts Rs11,75,23,135; sundry liabilities, Rs8,25,400; dividends payable and credit to profit and loss Rs7,36,614. Total, Rs13,28,41,350. Assets.—Cash in hand and with other banks, Rs1,81,12,425; bills discounted, loans, cash credits and demand advances, Rs7,88,22,426; bank premises, etc., Rs61,72,135; Government securities, Rs1,70,94,564; other investments, Rs1,26,39,799. Total, Rs13,28,41,350.

TENDERS INVITED.

Tenders are invited for the supply of 250,000 old rails, two metres long, in connection with boundary pillars required for this year's survey of Egypt. Tenders will be received at the offices of Sir A. L. Webb, K.C.M.G., Inspecting Engineer, Queen Anne's Chambers, Broadway, Westminster, S.W.1, up to noon on April 25, 1919. A copy of the specification and the conditions of tender may be seen at that office.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 10 were £E10,298, making the total for the year £E350,919. The corresponding figures for the previous twelve months were £E8,613 and £E266,364.

Cox's Shipping Agency (in connection with Messrs. Cox and Co.) have removed from 16, Bishopsgate, E.C., to 4, Corbet Court, Gracechurch Street, E.C.3.

ENGINEERING NOTES.

Undeveloped Marble Quarries.

In view of the existing demand for high-class and coloured marbles for building and decorative purposes, a few notes on some rare marble quarries that exist in Thessaly may be of considerable interest to enterprising British firms who may be in search of such quarries. As is known, some of the beautiful vert antique marbles that adorn the interior of the famous church of St. Sophia in Constantinople were brought from Thessaly. The reason that the quarries from which they were extracted have remained unknown or neglected in later years, may be attributed to the fact that under the Turkish rule that province was for centuries rendered impossible for any kind of enterprise. Twenty kilometres from Larissa on the north slopes of the chain of mountains at the foot of which winds the river Pinios, there are some large quarries of vert antique marble, very rare, and which on account of its beautiful appearance is much sought after. The green colour is due to the ophites which form the base of all these mountains. The extraction of these marbles is rendered easy for there are some superior seams on high level, the incline of which is from 35 to 40 degrees, and the extracted blocks can be rolled down into the plain of Pinios, there to be embarked on river barges which will take them to the sea. The transport to Salonika or to the Piræus is also very easy by the Piræus-Larissa-Salonika Railway, as the district roads are in good condition for transport to the nearest station to the quarry. A quarry was worked in ancient times at a spot offering more facilities for transport, but it would be preferable to open a trench to the west of the old works at the contacts of the river windings, and as the marbles in that spot are virgin it can be realised that success in extracting some large blocks of marble of good quality would not be difficult. There is no lack of workers in that district as very competent miners and quarrymen can be found near the spot, and only some special men and personal direction would be required to carry out the work.

A Cotton Harvester.

The cotton harvester is a new machine which is designed to carry the human picker and the bag in which he places the cotton as he picks it. The inventor claims that after the opened cotton has been picked there is a large quantity of unopened bolls remaining on the stalks. In these there is much cotton that can and should be saved as there is good market for it. It is impossible to pick and save the unopened bolls by the old method because of the weight of the bolls, and the picker is unable to drag the heavy sack on the ground. With this harvester all the unopened bolls can, it is claimed, be saved; the work is easy for the picker, and is done rapidly. The cotton saved in two days' work will, it is said, more than pay for the machine.

"One-Man" Tramcars.

Tramways, as a rule, are not paying concerns in the East. The cost of working them is often higher than is the case in Western Europe or elsewhere. Probably the new "one-man" tramcars would prove suitable to reduce the cost, if adequately employed, for these cars reduce the ratio of operating costs to receipts and permit more cars to be kept in operation on a shorter headway. The seating capacity is twenty-nine to thirty-five passengers (three-fourths that of two-man cars), but 25 to 50 per cent. more cars are operated. The latest one-man car weighs about 400 lb. per seat, compared with 700 to 1,200 lb. per seat in two-man cars. The safety equipment is arranged so that doors will not open until the car has stopped; the car will not start until doors are closed; power is cut off, brakes applied, and the track sanded directly the dead-man's handle is released. The brakes and doors are actuated by compressed air. Experience in a number of American towns, ranging from 21,000 to 400,000 inhabitants, shows that one-man cars make higher schedule speed and consume only half as much energy per car-mile as in the case of two-man cars, and reduce the accident rate very appreciably. About 700 modern cars of this type are now in use in America, and it is estimated that at least 30,000 could be applied advantageously. In view of the extensive schemes for the construction of new and the reconstruction of old tramways in Roumania, Serbia, Greece, Turkey, Egypt, and further east, the respective Governments would do well to communicate with competent British firms on the subject, or, still better, these firms should make known their existence to these and other Governments.

Electric Fans.

A large quantity of electric appliances for domestic use were annually exported from Germany to the Near and Far East. In this class of goods it must be admitted that cheapness was more responsible for the commercial results than either the quality of the goods or the energy of German manufacturers or merchants. The idea has prevailed in the Eastern markets that British electric appliances were rather expensive, and in the absence of efforts on the part of British manufacturers to prove the contrary, German goods were more readily bought. Germany is not in a position to replenish those markets with cheap goods, and there is a very large opening for electric appliances of all kinds, and especially for fans for the forthcoming hot season. America, Italy, and Japan are, it is said, rapidly preparing large stocks which they mean to push by all possible means in the Eastern markets. Circulating and ceiling fans of British manufacture should have a preference and meet with a ready sale if properly pushed. A fan, with its steady, cooling effects, in a room in summer is a blessing, which only those who have lived in the East can appreciate. The "punkah," which is a ceiling fan, gives a fixed direction of breeze spread over a considerable area, and owing to its relatively large size and the places in which it is used, its appearance is of considerable importance. The usual number of blades is four. Their width is from 6 in. to 12 in., and they sweep out a circle of 40 in. to 60 in. diameter. The speed is about 200 revolutions per minute. It is this slow speed which constitutes a great difficulty in design. Were one at liberty to design a motor of the required power without any restrictions as regards speed, one would naturally design it to run at about 3,000 revolutions per minute. As it is, it has to be designed to run at less than 10 per cent. of this amount. Gearing down is hardly permissible. Efficiency must be sacrificed to reliability, appearance, silence, and small size. The motor may be supplied with either direct or alternating current. There are many splendid punkahs on the English market which could compete with any of the best foreign designs; but, strange to say, they are little known even in the places where British manufacturers are entitled to expect a good sale.

INTERNATIONAL AND BALKAN TRADING CO., LIMITED.

We are able to give further particulars of this company, brief reference to which was made in a previous issue. The directors are Mr. Ross Smith, managing director of Grecian Marbles (Marmor), Ltd.; Mr. John McDowell Barbour, head partner of John McDowell Barbour and Co., engineers, of the Piræus; Mr. John Mackechnie, banker; and Mr. L. W. Farrow, senior partner of Sissons, Bersey, Gain, Vincent, and Co., chartered accountants. The directors have decided to extend the organisation considerably, and are proceeding to Greece at an early date to make the necessary arrangements. The company will have representatives at Athens, the Piræus, and Salonika, and further offices will be opened at Bucharest and Belgrade. The company will deal in machinery—notably engines, tractors, and agricultural machinery of all kinds, motor-cars, motor lorries, and marine and stationary petrol engines. It will also trade in engineers' accessories, food supplies, woollen goods, and fabrics of all kinds. Insurance and banking will also be undertaken, as well as steamship agencies. It is understood that the capital will shortly be increased.

The pre-war customs tariff will be levied in Serbia as from April 1.

The revenue of Ceylon for October—the first month of the new financial year—amounted to Rs4,979,108 as against Rs6,065,183 in the corresponding month in 1917.

The current issue of the *Empire Mail* fully maintains the high standard achieved by this well-known journal. The contents include leading articles on "How to Meet Bolshevism" and "A 'Transitional' Trade Policy"; the subject of "Housing in its Bearing on Industrial Unrest" is dealt with by Lord Morris (late Prime Minister of Newfoundland), and another informative article is one on "Manufacturers and Credit Facilities," by Mr. George H. Stock.

NEAR EAST MARKETS.

Sudan Produce.

The C.E.B. report for January states that during the month 430,344 kilos of hashab gum, of the value of £14,154, was exported via Port Sudan. Exports via Halfa amounted to 21,122 kilos of bleached gum, of the value of £831, 89,959 kilos of hashab gum, of the value of £2,960, and 32,152 kilos of talk gum, of the value of £798.

13,448 kantars of gum were sold in El Obeid market, as against 18,077 kantars in the same month last year, at an average price of £1,137 m/ms per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 6,905 kantars, as against 5,946 kantars last year. At Um Ruaba 5,631 kantars were sold, as against 3,283 kantars in the same month last year. The average price was £1,140 m/ms. per kantar.

Cotton Crop Prospects.

Red Sea Province.—Tokar: The Agricultural Inspector reports that measurement shows that some 30,000 feddans are under cotton, of which about 20,000 have been well watered. The east wind referred to in the December report continued to do much damage during the first half of the month. Moderate rain fell on 14th, light on 22nd, and very heavy on 26th, and did much to improve the prospects of the crop. In spite of this, the damage done by wind probably means that the figure of 31,000 kantars (315 rottles) given in December's report as the probable amount of the crop, is too high, and 25,000 would seem a safer estimate. There should be sufficient labour for picking, which should become general about the middle of February, and the market will probably open at the end of February or beginning of March.

White Nile Province.—Experiments with American and Sakellaridis seed on the river and in the valleys between the goz lands gave unsatisfactory results. The soil seems to lack the necessary richness.

Kassala Province.—The Kassala crop will be a good deal smaller than last year, as many of the people who cultivated cotton last year have concentrated all their energies on growing dura this year. The earlier sown cotton is already ripe, and the first picking has commenced; the first market will be held about the middle of February. The Gedaref rain-grown American cotton crop is somewhat smaller than was at first anticipated.

Bombay Cotton.

A final memorandum on the cotton crop of the Bombay Presidency, including Sind and Native States, for the season 1918-19, states that the total area under the early as well as the late varieties of cotton amount to 3,758,600 acres in British districts, and to 2,391,100 acres in the Native States, the total thus being 6,149,700 acres, 30.7 per cent. below last year's area and 11.3 per cent. under the decennial average.

The export of ground nuts has been prohibited from French West Africa, except those shipped by the Administration for the account of the French Ministry of Supply.

SHIPPING INTELLIGENCE.

Cunard's New Capital.

At an extraordinary general meeting of the Cunard Steamship Company at Liverpool on March 31 a resolution was adopted to increase the capital of the company to £6,000,000 by the creation of £1,500,000 new ordinary shares of £1 each. The chairman, Sir Alfred Booth, said the proposal was simply to provide additional capital, which was required to turn the reserve fund into shares.

The Cunard War Record.

The Cunard Steamship Company has just issued an account of its activities during the war. At the outbreak of war the Cunard fleet consisted of twenty-six sea-going steamers, with a tonnage of some 330,000. Of these ships fifteen were lost, with two exceptions, by enemy action. Of ships acquired subsequently, eight were lost. They comprised 56 per cent. of the fleet's total tonnage. In addition, seven of the ships chartered by the company were lost, making a total of thirty-two. In this way 650 seamen laid down their lives in the national cause.

Cunard liners served as armed cruisers, transports, hospital ships, and carried men, munitions, and food to and from all parts of the world, steaming 3,500,000 miles. They transported just under a million soldiers and sailors, over ten million tons of foodstuffs and cargoes, and 100,000 tons of fuel oil for the Navy were carried in their double bottoms. In addition, the company, during the last two years, undertook the management of nearly 400 ships other than their own. Nearly 500,000 American soldiers were brought to Europe by Cunard vessels, being 40 per cent. of the total carried in British ships from America. Most Cunard officers belonged to the R.N.R., and, in addition to those serving on Cunard ships, they were to be found on warships in all the seven seas. Upwards of 1,500 of the sea-going staff joined the Forces; and the company's chief offices contributed over 500 men to the Army and Navy and Flying forces of the Allies. Their honours include one V.C. and over sixty other decorations.

But to provide men and ships was not enough. Cruisers, transports, seaplane ships were fitted out for the Government; American howitzers were assembled; gun-beds, artillery wheels, parts for submarines and mines were manufactured. In July, 1917, the company commenced construction and managed for a time, on behalf of the Government, what was then the biggest aeroplane factory in England, employing thousands of hands. In 1915 they started a shell factory, from which nearly half a million shells were turned out.

There were many other activities, such as the work of the great engine, furnishing, and catering departments. Perhaps the magnitude of the Cunard Company's labours will be best appreciated when it is stated that over and above all this immense war activity reconstruction and development plans have been carried so far that the Cunard services, with those of its associated companies, now form a close network linking up every continent. They extend to India, Australia, and New Zealand, and include, of course, most of the chief ports of Europe and North America.

COMPANY NOTES & REPORTS

Anglo-Egyptian Oil.

The directors of Anglo-Egyptian Oilfields, Ltd., have resolved to pay an interim dividend of 15 per cent., less income-tax, on the "B" shares in respect of the year 1918. The arrears of interest on income bonds and of dividend on the preference shares, also dividends on the "A" and "C" shares, in accordance with their respective rights, will also be paid. These dividends will be payable on 4th instant, and warrants will be posted as soon as possible after that date.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended September 20 last states that the profits, after making provision for expenses of management and general charges, income-tax, excess profits duty and bad and doubtful debts, amount to £83,137; £24,240 was brought forward, making £107,376, and after deducting £4,988, the amount due to the Persian Government in terms of the concession, there is left £102,388. This the directors have appropriated as follows:—First interim dividend for the year, at the rate of 3s. per share, paid June 18, free of income-tax, £15,000; transfer to reserve account, £30,000; to bank premises account, £5,000; second interim, being final dividend, at the rate of 5s. per share, paid December 30 last, free of income-tax, £25,000; carried forward, £27,388. Meeting, Cannon Street Hotel, E.C., 7th proximo, 12.30 p.m.

Chartered Bank of India.

The report of the Chartered Bank of India Australia and China for the year ended December 31 last states that net profit, after providing for all bad and doubtful debts, amounted to £576,483, inclusive of £167,261 brought forward. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £84,000, leaving £492,483. The directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of 25s. per share, making 20½ per cent. per annum for the year, free of income-tax; to add £100,000 to the reserve fund, which will then stand at £2,100,000; to add £25,000 to the officers' superannuation fund; to write off premises account £40,000, and to carry forward £168,483. Dividend and bonus will be payable on and after 16th proximo. Meeting, 39, Bishopsgate, E.C., 9th proximo, 2 p.m.

Mercantile Bank of India.

The report of the Mercantile Bank of India for the year ended December 31 last states that the net profits, after providing for bad and doubtful debts and including £58,432 brought forward, amount to £239,544. The directors have added £50,000 to the reserve fund (making £700,000), £10,000 to the officers' pension fund, and written £15,000 off freehold banking premises. They now recommend a final dividend on the "A" and "B" shares of 8 per cent., less income-tax, making 14 per cent. for the year, leaving £85,794 to be carried forward. Meeting, Winchester House, E.C., 4th proximo, noon.

Tunis Tramways.

The receipts of the Tunis Tramways amounted to 4,642,778fr. last year, against 3,834,464fr. in 1917. Working expenses were, however, much higher at 3,603,254fr., against 2,738,934fr., and the profits show a slight decrease at 1,039,527fr., against 1,095,530fr. The net profits amounted to 626,102fr., out of which is being paid a dividend of 4fr. net, the same as last year. This distribution will absorb 550,347fr.

Sudan Gold.

The report of the Sudan Gold Field Company for 1918 states that 20,880 tons of quartz were milled, yielding 11,248 oz. of bar gold, an average of 10.8 dwt. per ton. 15,025 tons of sands treated produced 1,021 oz. of gold, an average of 1.4 dwt. per ton, and 1,535 tons of slimes dealt with gave 150 oz. of gold, an average of 2 dwt. per ton. The total production of bar gold was 12,419 oz., or 11,248.299 standard oz., of a realised value of £43,945. To this has been added the difference between the realised and estimated value of the gold for December, 1917—namely, £15—and other receipts amounting to £114, bringing the total revenue up £44,074. Expenditure on revenue account was £45,411, leaving a balance of expenditure of £1,337. From the previous year £1,649 was brought forward at credit of profit and loss. To this is added refund of deposits in respect of excess profits duty, £12,048, making £13,697. Deducting balance of revenue account for 1918, £1,337, income-tax £2,447, depreciation of buildings, machinery and plant, etc., less amount received under insurance claim, £3,170, written off surface and mine works £2,000, a balance remains of £4,743 to be carried forward. Liquid cash assets at December 31 show a net sum of £7,834. For the first time since 1910 the working of the mine has resulted in a loss, which, although small in amount, is to be regretted. The contributing causes have been a continuous shortage of labour, seriously accentuated for some time owing to a severe outbreak of influenza, abnormal working costs, and the less productive character of the reefs in the stoping areas, with a consequent reduction in the output of gold. The installation of a slime treatment plant, capable of dealing with 1,500 tons of current and accumulated slime monthly, which was in progress at the date of the last annual meeting, was, owing to unavoidable delays, not finally completed until December last. The trial run proved satisfactory, inasmuch as an extraction of 90 per cent. of the gold contents of the slime, estimated at some 2 dwt. per ton, was reached. The operation of this plant will, it is expected, result in a substantial addition to the gold otherwise recovered from the mill and sands plants. The profit accruing from this source, however, will be much less for the time being than would be the case under ordinary conditions, due to the high prices which have to be paid for materials required in connection with cyanidation. The development work during the year has been on a very restricted scale, and almost entirely confined to Garland's section. This arises from the continued shortage of labour. Meeting, 6, Queen Street Place, E.C., 9th proximo, 3 p.m.

Great Western Tea of Ceylon.

The report of the Great Western Tea Company of Ceylon for the year ended December 31 states that the profit amounted to Rs.114,054; Rs.20,621 was brought forward, which, with Rs.3,166 surplus proceeds of last season's crop, makes Rs.137,841. The directors recommend a final dividend of 12 per cent., making 20 per cent. for the year, and to carry forward Rs.21,041.

THE ANGLO-EGYPTIAN OILFIELDS, LIMITED.

NOTICE IS HEREBY GIVEN that at a Meeting of the Board held this day it was resolved to PAY an interim DIVIDEND of 15 per cent. less Income-tax, on the "B" shares of the Company in respect of the profits for the year 1918.

The arrears of interest on Income Bonds and of Dividend on the Preference shares, also Dividends on the "A" and "C" shares, in accordance with their respective rights, will also be paid.

These dividends will be payable on the 4th April, 1919, and the dividend warrants will be posted as soon as possible after that date.

The SHARE REGISTERS will be CLOSED from the 4th to the 17th April, inclusive.

By Order of the Board,
J. Y. KENNEDY, Secretary.

EGYPTIAN COTTON.

Ration System Abolished.

The Board of Trade make the following announcements in regard to Egyptian cotton:—Any registered orders for Egyptian cotton which have been placed with the Cotton Control Commission in Alexandria prior to March 31, 1919, can be cancelled at the option of the purchasers if and in so far as they have been unfulfilled for a period of five months from the date of application to the Commission. Any registered orders which may be placed with the Commission after March 31, 1919, can be cancelled at the option of the purchasers if and in so far as they have been unfulfilled for a period of two months from the date of application to the Commission. The system of rations for individual British spinners has been abolished, and there is therefore no restriction on the quantity of Egyptian cotton which any British spinner or merchant may purchase.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

The prospects in the market are no worse, and in certain quarters the tone appears to have been rather better this week. The feeling is growing that after the dull state of affairs which has now existed for practically six months buyers will be compelled before very long to place orders on a freer scale. Prices in manufactured goods are now steadying somewhat. A good deal of interest has been taken by Egyptian cotton spinners and merchants in the official announcement by the Board of Trade relating to operations in Egyptian cotton. The system of rationing has been abolished, and it is now possible for orders placed with the commission which are late in being completed to be cancelled. Operations in Egyptian yarns continue restricted, and owing to lack of support prices continue to favour buyers. The purchasing of cloth for Egypt is being checked by the uncertainty as to trading conditions abroad, and until things are more settled there is no probability of trade of importance being done. Scattered sales have been put through for Persia and Turkey. Shippers of piece-goods to India have shown increased interest in prices, and some speculative purchasing has been reported in light fabrics such as dhooties. The big firms, however, have not yet enterel the market. Useful lines have again been booked for China in a variety of cloths. Rather more activity has been mentioned for South America, chiefly in printing descriptions. It is said that a few more looms are being started in Burnley and district. The stoppage of machinery in Blackburn is still on a very large scale. In view of the depression in American yarns the decision to adopt short-time working in the mills has caused no surprise, and it is hoped that the policy decided upon will be a means of bringing relief. Only small lots have been sold in shipping yarns. Interest has been taken in inquiry for China in numbers which have not been dealt in for four or five years back.

Mr. Hogg, Mr. Ironside, Sir F. Currimbhoy, and Sir G. Chitnavis, in a note of dissent to the report of the Excess Profits Select Committee in India, urge that any excess over £6,000,000 should be refunded.

ECONOMICS AND FRONTIERS.

Trade Avenues in the Balkans.

"In defining international boundaries," says H. K., in an article on "The Changed Balkan Question" in the *Yorkshire Observer*, "nationality and self-determination must, of course, be the guiding principles. Economics, however, have to be taken into the reckoning, and sometimes strategic points cannot with safety be ignored. As Mr. Balfour lately remarked, 'It would be poor statesmanship to so arrange frontiers as to permit of the strangling of new States at their birth.' The remark is as applicable to the Balkans as to the newly emancipated nationalities of north-eastern Europe. . . Free ports, free waterways, and freedom of transit over railways—in other words, equality in the use of trading facilities—must certainly play a large part in the ultimate settlement of the Balkans. One of the hardships of Turkish rule arose from impediments placed in the way of commercial intercourse and exchange. Usually the Turk levied toll on the most necessary traffic.

"Trade routes in the Balkans must be dealt with on the same comprehensive scale as territorial adjustments. The downfall of Austria has changed the whole aspect of the Adriatic question, and, however the controversy between Yugo-Slavia and Italy ends, it is unthinkable that the new united Balkan kingdom should again be cut off from the sea. The freeing of the port of Fiume would appear to be essential to the commercial prosperity of Yugo-Slavia, Czecho-Slovakia, and Hungary. Now that the Dual Monarchy is ended the Danube River is bound to become an international highway of enhanced importance and value, especially with the Dardanelles out of the hands of the reactionary Turk. With Russian Imperialism removed from the Black Sea, and the Straits opened —presumably internationalised—Roumania looks forward to a period of increased prosperity. Likewise, of course, does Serbia foresee the development of her Danubian trade. . . . The nature of the stranglehold which the Central Empires kept of the commerce of the Balkans may be realised when it is remembered that they controlled the ports of the eastern shore of the Adriatic, the Danube, the Dardanelles, and to a large extent, the principal railways. The commercial release of the Balkans is indispensable to national liberation. The States must cease to be economically dependent on the Central Empires. That consummation may best be effected by giving to all the fullest possible rights of access to the sea.

"Given political equality and tranquility, the economic advancement of the Balkan States would seem to be assured. The western impression that the peninsula is poor and unfertile is a delusion. It is a land of little money and great natural resources. Recovery ought to be rapid. The Balkan peoples, with the exception of Roumania, are peasants with holdings of their own. War does not involve the same measure of disintegration among agricultural communities as in a highly organised industrial State. Their land, from which they draw their sustenance, may be devastated; it cannot be destroyed. In due season it will bear crops again. It is interesting to reflect in passing that the soil is in peasant occupation by virtue of Turkish Imperialism having swept away the native ruling classes and substituted foreign landlords, who, in their turn, were driven out, letting the peasants into possession."

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been less doing this week, and prices in a general way have shown a tendency to weaken in view of the rather disquieting reports appearing in our press with regard to the political unrest in Egypt. The result of all this has been to keep off the market prospective buyers who are hoping to get in at lower prices, and, on the other hand, nervous holders have to make concessions in price if they wish to sell.

Amongst Government stocks, Egyptian Unifieds have remained very firm, and are only ¼ easier at 92⅞, whilst the 3½ per cent. Loan has also lost a like fraction at 77⅞.

In Bank shares there has been some selling of Nationals, with the result that the price has dropped ⅝ to 21⅝. Agriculturals have been comparatively firm, and are only 1-16 easier at 6 11-16. Anglo-Egyptian Banks are ⅛ down at 15⅝.

In Railways, Delta Lights are ¼ easier at 8⅛.

Amongst Land descriptions, Aboukirs have remained a firm spot round 28s., but Béhéras are ¼ down at 13¼. Delta Lands have receded 6d. to 15s., and Foreign Trusts 3d. to 15s. 3d. Gharbieh Lands and Sidi Salems are both 1-16 lower at 2 11-16 and 2¾ respectively. There has been a fair amount of profit taken in New Egyptians, with the result that the price has receded 1s. to 25s. 6d. Union Foncières are also ¼ down at 3⅝. Exceptionally, Sudan Plantations have been active, and a strong market, and are closing 5-16 higher at 5 15-16. United Egyptian Lands have been a firm spot all the week, and at to-day's meeting the various resolutions for the reconstruction of the company were passed unanimously.

In Miscellaneous shares, Markets are rather quieter at 28s. Salts have remained a firm spot round 3, but Khedivial Mails are ¼ lower at 5⅝. Khedivial Mail Prefs. are unchanged at 4⅛ x.d.

In Greek securities the 1881, 1884, and 1890 Loans are 1½ points higher at 72½. Fundings recovered the whole of the dividend deducted at 66 x.d. Current bonds are 1 point down at 95. The Rentes Loan has been strong, and is closing at 58 x.d., a rise of about 2¼.

Oil Shares.

Among active features in the market have been Anglo-Egyptians B, which closed at 93s. 9d., after being up to 95s., and Burmahs, which after touching 9¼ dropped the fraction. Roumanian Consols have been weaker at 15s. 6d.

ROUMANIAN BANK NOTES.

The following communiqué has been issued. The British Government has been requested by the Roumanian authorities in this country to state that it has come to the notice of the Roumanian Government that the enemy are circulating bank notes issued by the "Banque Generale Roumaine," which, in view of the fact that the plates are now in possession of the enemy, can be printed in great numbers. The Roumanian Government protests against these proceedings, and wishes this protest to be made public, as it does not recognise the notes issued by the Banque Generale Roumaine.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LTD.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to te ms of business, &c., apply to the HEAD OFFICE:

BASILDON HOUSE, MOORGATE ST., LONDON, E.C.2.

AUTHORISED CAPITAL - -	*£600,000*
PAID-UP CAPITAL - - - -	*£485,580*
RESERVE - - - - - - -	*£85,000*

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	**£856,000**
RESERVE - - - - -	**£190,000**
Reserve Liability of Shareholders	**£1,000,000**

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Anwaz, Bunder Abbas, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd.
Agencies at Busreh and Baghdad

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

REMITTANCES TO SERBIA

Remittances to Belgrade, Uskub and Monastir can now be effected through

THE BANQUE FRANCO-SERBE

27, THROGMORTON STREET, E.C.2.
Telephone: 1110 London Wall.

BANK OF MADRAS

Capital (Fully Paid up) - -	**Rs.75,00,000**
Reserve Fund - - - -	**Rs.52,00,000**

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Accounts or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

BANK OF BENGAL.

Capital, Fully paid up	**Rs.2,00,00,000**
Reserve Fund	**Rs.1,04,00,000**

NOTES OF THE WEEK.

From Paris this week comes the news that the Greek territorial questions have been practically settled, and that the southern frontier of Bulgaria has been laid down on general lines. Unless, therefore, present intentions are modified, it is to be expected that the Treaty of Peace will give the northern littoral of the Ægean to Greece, but Bulgaria will have an outlet to the sea on this coast through Kavalla, Dedeagatch, or Salonika. The choice of the port is apparently to be left to the Bulgarians, who, under this agreement, are to be guaranteed full liberty for trade communications. Such an arrangement, it is obvious, is a compromise between the original Greek claims, which demanded the whole coast line without any concessions, and the claims which were put forward before the war by Bulgaria, based on the principle of nationality.

In recording this decision the correspondent of *The Times* pays a tribute to the moderation of M. Venizelos, who has agreed to Bulgaria receiving an outlet on the Ægean Sea. It is a matter of common knowledge that the Greek Premier has made a great impression on all the members of the Conference. He has shown a statesmanlike grasp of the problems of the Near East, and it is, perhaps, unfortunate that he has not had a larger part to play in the deliberations in Paris. With regard to Bulgaria, he will be well aware that the present decision is based on the events of the last three years, and is not strictly an equitable one—that is to say, it would not have occurred to any member of the Balkan League in 1912 to propose it as a settlement of the claims of the different States. Since that date, however, Bulgaria has made war on Serbia and her Allies, and has been defeated. The penalty for this action is embodied in the terms of peace that will seemingly take from her the stretch of the coast line on the Ægean that was given her in 1912.

The proof of the wisdom of this decision will be supplied by the future. The Great Powers ought to have only one aim in regard to the Balkans, and that is to effect a peaceful and lasting settlement. If this is to be achieved by the means proposed, well and good. On the other hand, if the Powers place any credence in the reports of Bolshevism in Bulgaria or in the intentions attributed to the Bulgarians of designs upon Roumania, they have adopted a fairly safe method of aiding and abetting the unrest. We trust, however, that the Bulgarians will adopt a philosophical attitude towards the verdict. No territorial adjustment one way or the other is likely to hold back a country that has it in itself to forge ahead. Bulgaria will gain far more in the next few decades by living at peace and in friendship with her neighbours than by perpetuating the enmities of the past. The mineral wealth of the country and the industry of its inhabitants are greater assets than any territory that the country may lose, provided always that unfettered access is provided to the Ægean Sea.

The announcement that General Mangin was to go to South-East Europe, to assume the command of the Allied forces there, was followed almost immediately by the announcement that he was to do nothing of the kind. As no explanation of this change of plan has been vouchsafed, it is impossible to comment upon it with profit. We can only hope that such changes will not serve further to hearten the Bolsheviks. It is not surprising, however, to learn that Roumania, with the Bolshevik menace nearer at hand than it is in Paris, is beginning to experience some of that sickness of heart which comes, proverbially, from hope deferred. Her anxiety is rendered graver by observing symptoms in Bulgaria which appear to threaten an outbreak of Bolshevism in that country in the immediate future. It is probable that the alarm is groundless. The reports that have caused it may be spread by those who wish to see Bulgaria hopelessly committed to folly. But even so the plight of Roumania is sufficiently bad to call for the promptest action on the part of the Entente. Her sufferings, her war record, and her comparative modesty in putting forward her claims entitle her to better treatment than she has thus far received.

The melting away of the Turkish army in Asia Minor—such a process cannot be called demobilisation—has been attended by much looting and disorder, as was to be expected. This appears to have provided Italy with an excuse for landing a force at Adalia "to protect Italian subjects." On March 29 two companies of sailors occupied the town, but they have since been replaced by Bersaglieri and other troops. A semi-official statement issued by the Italian Government says that the landing was effected at the request of a number of distinguished Moslems. If measures of the kind were actually necessary, Italy would certainly have resented their being taken by any other Power. Since pre-war days she has taken a lively interest in Adalia and the southern portion of Asia Minor, to which, it is perfectly well known, she considers herself entitled in the case of any division of Turkish territory. The claim, such as it is, rests upon the old and now discredited "pegging out" methods pursued before the war. It is

Digitized by Google

therefore a heritage of an evil system, and it is difficult to see how it could possibly be justified before any tribunal such as the League of Nations. That it would find any support from the natives of the region concerned is not to be conceived. In her present mood, however, Italy appears to attach no importance to considerations of this kind.

Before the war, it will be remembered, travellers to Jerusalem sometimes brought home tales of unseemly squabbles, and even, occasionally, of actual fights, between the adherents of rival sects in that city. Unfortunately, the war has not removed the spirit of rivalry, as might have been hoped. From high places there have already come several expressions of opinion regarding the liberation of the Holy Land and the guardianship of the holy places that savour strongly of a fanaticism not to be ignored. Now, the Rome correspondent of *The Times* reports the existence of "a certain nervousness in the Vatican in regard to an alleged proposal to entrust the principal Christian monuments of Jerusalem to the Greek Orthodox Church." The same message also refers to strong pressure being brought to bear in favour of the French Lazarists at the expense of the Italian Franciscans, "who have hitherto had a special position in regard to the holy places." The fact that such reports and rumours are abroad already is in itself sufficiently painful when we recall the spirit in which the British advance in Palestine was watched and the exalted sentiments expressed at the time of General Allenby's entry into Jerusalem. If nothing else will serve to allay the nervousness referred to above, the suggestion that Moslem guards should be provided for the monuments might have some effect. Talaat Bey, it may be remembered, at the time when the Turks were driven from Jerusalem, suggested that Europe would have to call them back for this very purpose.

Egyptian news is better, though reports of the early disturbances, which continue to come in slowly, seem to show that the outbreak was of a much more serious character than was realised at first in this country. Perhaps the most satisfactory item of news is that General Allenby, so long ago as March 31, gave it as his opinion that the time had come "when responsible Egyptians, with the interest of their country at heart, should submit to him a statement showing what steps they consider necessary to restore tranquillity and content." This referred to a promise he made in an address to the Notables on March 26, to inquire impartially into all grievances; and as the Special High Commissioner is not the man to let the grass grow under his feet, we may reasonably hope that progress has already been made towards "tranquillity and content." It is pleasant to note that many reports refer to the loyalty of the native police and other minor officials. On the other hand, the native Government officials in Cairo embarked upon a three days' strike, to prove to Lord Curzon that they are not in fact out of sympathy with the Nationalist movement. It is suggested that intimidation has had much to do with the bringing about of this strike, which, after all, was probably not nearly so inconvenient to the authorities as the strikers hoped. The Cairo cab-drivers very soon returned to their work, but the native barristers appear still to be enjoying their idleness.

The more closely the matter is observed the more evident does it become that the half-settled Bedouin constituted the most dangerous factor in a disturbing situation. Here and there they remained loyal and rendered useful service, but on the whole they have demonstrated clearly that they require a severe lesson. They will doubtless get it in due time, and meanwhile aeroplanes and armoured cars are proving to them that modern inventions render the desert a less secure place of refuge than, from their point of view, it used to be. The true, Desert Arab appears to have behaved well; but the attitude taken up by the fellaheen provides a puzzle which has tempted many people to look for solutions of it. In some quarters it is suggested that the high prices of food have driven the Fellah into the arms of the agitators; in others, that our soldiers have earned his contempt by their familiarities with him; while a third group of solvers suggest that the conscription of men for the Egyptian Labour Corps was the beginning of the trouble. Numerous other solutions of the mystery have been suggested, but at present it is impossible to say which, if any, of all the suggestions is correct. The very human document describing the outbreak at Beni Suef, which we publish this week, shows that, whatever made him so, the Fellah has been in a very ugly mood indeed.

The Pope, it is announced, has received a letter from Lord Curzon thanking him on behalf of the King for his successful intercession with the Ottoman Government on behalf of British officers who, taken prisoners by the Turks, were by them condemned to death. The officers in question undoubtedly had a narrow escape, and had it not been for the fact that the wife of one of them was in Italy at the time and appealed to the Pope for help as soon as she heard of her husband's peril, there would probably have been another crime for Turkey to answer for. The officers referred to, were in Baghdad when war broke out between Turkey and Great Britain, and were made prisoners by the Turks; but were subsequently set at liberty by Jemal Pasha, who had known one of them in former years. No parole was demanded from them; and eventually they returned to Mesopotamia, and were again captured, this time after going through the siege of Kut. The Turks tried hard to obtain evidence that they had "broken their parole," but not even Turkish ingenuity could do that in face of the facts. The two officers, who were transferred first to Mosul and then to Constantinople, were, however, subjected to exceptionally rigorous treatment. Their captors, acting apparently on German instigation, "examined" them over and over again; and finally, failing to find any just excuse for venting their wrath upon them, trumped up a charge of conspiracy so complicated that even the prisoners failed utterly to understand it. And on this charge, it appears, they were in due course found guilty, sentenced to death, and would have been executed but for the Pope's intervention.

Such, very briefly, is the story. It is bound up with that of other prisoners from Kut and of the British ladies and children who were taken prisoners at Baghdad and thence sent on to Mosul. It is not an entirely depressing story, thanks to the courage displayed by our countrymen and countrywomen; while if the Turkish authorities exhibited a desire to gratify the petty spite of their German allies rather than to treat their prisoners with consideration, many instances of genuine kindness shown them by individual Turks and Arabs are mentioned by various members of the party of captives. In some cases these acts of benevolence involved those who performed them in a certain amount of risk, and at least one official appears to have been disgraced by his Government on account of his friendliness to and care for the unfortunate British ladies and children. It is to be hoped that when the reckoning with Turkey is made these acts will be remembered and adequately rewarded, just as it is to be hoped that the infamous deeds of other Turks in that region will in time be brought home to them—and suitably requited.

As the time approaches for Parliamentary discussion of Indian constitutional reforms the need becomes more apparent for some organised expression of the great mass of middle opinion which undoubtedly exists in this country. At present the Right and the Left are vocal, but the Centre is dumb, and politicians without first-hand knowledge of the subject naturally infer that there is merely a clear-cut issue between the Indo-British Association on the one hand and the British Committee of the Congress on the other. The truth is that a large and important mass of opinion lies between these extremes; many men who know India well, and think that the strong wine of the Congress would be most injurious, think also that the cold water proffered by

Digitized by Google

the Association is equally unsuitable in existing circumstances, and the impending discussion would gain greatly in reality and in value if this attitude was prominently brought before the public.

Something may possibly be effected in this direction by the small committee which has now been formed in the House of Commons with Sir J. D. Rees as chairman and Mr. T. J. Bennett as honorary secretary. The members of this group are apparently not committed either to the Chelmsford-Montagu scheme, or to any of the various unofficial alternatives, but stand by the announcement of August, 1917, and are disposed to co-operate in the passage of a Bill on those lines, and that is, we take it, an attitude which commends itself to the bulk of middle opinion. At the same time it must be recognised that the group committee as at present constituted is somewhat lacking in weight, and the attainment of its objects might be considerably facilitated by the organisation of opinion outside as well as inside the House of Commons. We should like to see also a corresponding body in the Lords, where the Right is at present very much in evidence.

The forecast of the report of the Indian Cotton Commission, which appeared in a recent issue of *The Times*, indicates that no great or revolutionary measures are contemplated, and that the recommendations are likely to follow the lines justified by the experience gained during the last decade. A large scientific staff, increased expenditure on irrigation, control of the ginneries to minimise fraudulent and injurious practices, provision of sound seed, and the organisation of the market so as to secure price for quality—all these measures may almost be described as obvious, and most of them are already in practice on the limited scale permitted by skeleton cadres and inadequate Budgets. The appointment of the Commision will, however, be amply justified if its labours result in the provision of more men and more money; those are the essential needs if India is to gather the full harvest of the admirable spade-work which has been done since 1905.

It is noteworthy that Lancashire continues to lay special stress on improvement in the quality of Indian cotton. English spinners have no desire for the coarse product which used to go in such quantities to Germany, and is now taken largely by Japan; they want India to grow fibre equal to the standard grades produced in America, and they want this fibre to come to England raw, to be worked up here, and to be returned largely to India in the form of clothes. India agrees with Lancashire in wanting to produce better cotton, but she does not accept the remainder of the programme; she aspires rather to make her own clothes from her own raw material, to dispense with Lancashire's services as far as possible, and ultimately to regain the position she once claimed, when, according to the traditional account, " everyone from the Cape of Good Hope to China " wore the products of Indian looms. We are not disposed to venture a conjecture as to the prospects of these conflicting ideals, but the conflict itself is of sufficient importance to be borne in mind.

As things stand at present, an increased supply of better cotton is not likely to promote industrial harmony. Competition between Lancashire and India is now effective in regard to only a small range of goods, but with finer raw materials available the range of competition is certain to extend, while the question of protective duties will assuredly be forced to the front in the more representative political bodies which will soon be in existence in India. The International Labour Office is likely, therefore, to have its hands full, and the question whether Indian local conditions permit of the application of the " conventions " arrived at by that body will provide some delicate problems for the contemplated Department of Industries, but such considerations as these cannot be permitted to affect the work immediately in hand—the enabling of the Indian peasant to make the greatest possible profit out of his principal money-bringing crop.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 25.

The Wave of Insurrection.

Since my last letter the agitation which so suddenly swept over Egypt after the arrest of Zaghlul Pasha and his colleagues has developed into a general insurrection. Reports have been received from all parts of the country showing that the same spirit of lawlessness is everywhere animating the people, who have continued to attack and destroy Government property and vent their fury on all Britishers. Serious disturbances have taken place in the northern part of the Delta, in the Behera, in the Fayoum, and in Beni-Suef and Assiut Provinces. At Damanhur, the Mudir, who attempted to remonstrate with the rioters was badly injured by them, and the disturbance had to be quelled by the troops. (I am glad to be able to say that the latest news of Halim Pasha shows that he is on the high road to recovery.) At Rosetta, Damietta, Port Said, Mit Ghamr, Mansura, Zagazig, Zifta, to mention only some of the places, disturbances more or less serious have been recorded during the past week, and in almost every case the assistance of the troops has had to be called in. At Mansura the infuriated mob tore down the escutcheons of the British and French Consulates; Zifta, according to the last reports, was in the hands of the insurgents, who had hoisted the Turkish flag; Mit Ghamr was reported to have declared its independence, but the Government police were guarding the public buildings; whilst at Kom Hamada the authority of the Sultan of Turkey was proclaimed. To add to the troubles in Lower Egypt the Bedouin from the western desert flocked in and invaded the Behera Province, looting and pillaging wherever they went.

Cairo itself has been to all intents and purposes quiet. On Tuesday last it was announced that a demonstration very much larger than that of the previous day was going to take place in spite of the prohibition of the authorities. The latter took very elaborate precautions to ensure that any attempt to disregard the orders should be severely punished. A strong force of troops was posted at the most important points with machine guns, and instructions were given them to stop any attempt to make a demonstration. The organisers, recognising that the authorities meant business, wisely decided to abandon their project. On the same day the Cairo *Arbaggis* struck work, and we had the extraordinary experience of being able to walk the streets without being hailed by a single cab, though in view of the cessation of the trams the absence of horse-vehicles was very inconvenient. The strike was, however, not of long duration, and on Saturday last the *Arbaggis* resumed plying for hire. From inquiry it transpired that they were intimidated into ceasing work, but that

they plucked up courage to defy the agitators when they found that the strike allowance made to them was barely sufficient to pay for the fodder of their horses or for their own food.

A Feminine Demonstration.

The only other event of the week in the capital worth mentioning, and then only because of its humorous side, was the demonstration attempted by the women of Cairo. They had asked permission to proceed through the streets of Cairo in the same manner as the Azharites had done on Monday, but this had been refused them. Nevertheless, at 10 a.m. about four hundred native women, mostly of the better class, assembled outside the house of Saad Pasha Zaghlul. They were soon "attended" by some British soldiers, who good-humouredly prevented them from moving down the streets in a body, and finally convinced them that they could not possibly carry out their intention. No force was used. The Tommies looked upon it more as a joke than anything else, and their efforts were as much directed towards protecting the ladies from the importunities of the rabble which began to collect as soon as the news of the demonstration got about, as to preventing the good dames from emulating their misguided menfolk. There is reason to believe that this feminine demonstration was intended as camouflage for another student and Azharite manifestation, it being thought that the presence of the women would baulk any efforts at stopping the demonstration. Fortunately the quiet determination and good humour of those entrusted with the task of preventing the demonstration frustrated this attempt at evading the prohibition. Beyond these instances and the fact that several attempts have been made to cut the railway between Embaba and Bulak Dakrur, which are the first stations on the Upper Egypt line almost parallel with the capital, nothing else has taken place in Cairo district, which is quite quiet, but is still patrolled by troops.

In Upper Egypt.

From Upper Egypt, however, the news continues to be very disquieting. Last week I reported the affair at Wasta, where the station was sacked and the train very much damaged, and one Englishman was killed and the rest of the Europeans narrowly escaped with their lives. At Beni-Suef the British colony and the officials appear to have had an exceedingly anxious time, and I refer your readers for further particulars to the extract from a letter received from one of the party, which I send herewith. At Minia the lives of all the English people were threatened, and it was only the decision to concentrate in one house that saved them. In the Fayoum a determined attack was made by the mob and Bedouin, but was fortunately repulsed, with a loss of over four hundred to the attackers. At Assiout things appear to have been comparatively quiet up to the end of the week, when a large body of armed Bedouin and Fellaheen was reported to have appeared at the west end of the barrage, and a severe fight was going on when the last news came to hand. South of Assiout the situation appears to be fairly satisfactory, with the exception of Deyrut, where a violent fight is going on between the people themselves. Practically all the Europeans in Upper Egypt have been evacuated, some to Wadi Halfa and the rest to Cairo by water. It is exceedingly difficult to say whether any have lost their lives, but it is believed and hoped that the only cases are the Englishmen at Wasta and the nine Britons who were murdered in the train from Luxor.

The latter incident seems to have been a very gruesome one. The men in question, who comprised eight members of the British Army and Pope Bey of the Prisons Department, left Luxor by the night train, the only other passenger being an Egyptian official. The train was stopped at Deyrut by a crowd of natives, who stoned the first-class compartments and attacked the passengers with *naboots*. After a while the train was allowed to go on, and another attack was made at Deir Mawas. The men, who, presumably, had no firearms, were all done to death, and their bodies, when the train arrived at Minia, were found in the guard's van, stripped of every stitch of clothing. The Egyptian official had not been touched by the mob beyond being bound. So far it has not been possible to identify the murdered officers and men, and it will only be possible to ascertain who they are by a process of elimination. Stern reparation will, of course, be exacted for this outrage; and it is understood that sufficient information is available to implicate three villagers. In this case the victims were unarmed men, but there have been several cases during the last fortnight where men on duty have been attacked and murdered in Cairo and other parts.

Punitive measures have already been started in various directions, one is glad to say. Certain Bedouin encampments in Western Behera, the inhabitants of which had looted the cultivated area, have been visited by aeroplanes and severely bombed; to others, armed car patrols have given their close attention. Again, in other parts policing troops have been quartered on certain offending villages, the inhabitants of which have been ordered to provide for all their wants. Armed columns have been sent into the districts for the purpose of restoring order, of rounding up and punishing offenders, and of providing the civil authorities with whatever protection may be necessary. These columns will penetrate into the remotest parts of the country, and they should in a very short time quell all the disorders and bring the rioters to their senses.

Need for Drastic Action.

There is no question but that the situation calls for the firmest and most drastic action, and it has been with very great satisfaction that we have learnt this morning of General Allenby's appointment as Special High Commissioner, with full powers to restore law and order and maintain the British protection over Egypt and the Sudan. Whilst condign punishment must be meted out to the rioters and insurgents in the provinces, who have been guilty of acts of violence unprecedented in the annals of Egypt, the responsibility for all this Bolshevist wave must be brought home to the members of the Zaghlulite Committee who encouraged and organised the agitation and arranged for its financing. A severe lesson must also be given the Bedouin who have not had the excuse of political aspirations such as the Egyptians themselves might possibly plead, but who have taken the opportunity of this insurrection to gratify their lust for loot and rapine. Considering that these tribes have always received special consideration at the hands of the Egyptian Government their action merits the severe punishment which they are about to receive.

TRAVEL TROUBLES IN PALESTINE.

The following extracts are from the account of an overland journey from Jerusalem to Beyrout made by one of the workers of the Syria and Palestine Relief Fund at the end of January:—

The actual feeding and clothing relief being completed in Jerusalem and other towns in Palestine, the committee decided to move northwards to the Lebanon district, where help is most urgently needed. The conducting of the animal and wagon transport was entrusted to me, and I started on January 22, 1919, on a trip overland to Beyrout, with nine Arabs as drivers. Many of the experienced native travellers and muleteers said it was quite impossible to get through in the winter months owing to the absence of properly made roads; and the muddy marshes, they said, would be quite impassable. But the task had to be done, and with the feeling that the cause was a good one and trusting to Providence to be kind to us, we set off at 9. Some of the animals had never been in harness before and gave a good deal of trouble at the start, the mules kicking and refusing to move, but with perseverance they were induced to take to the collar, and we got over a very rough bit of road, or, rather, mountain side path—for the first few miles of road was up for repairs. At about 3 p.m. we came across a carriage-load of natives on their way to Nablous who had met with a terrible accident. Their carriage, horses, and passengers had tumbled over an embankment about six feet deep—one man had his spine broken, a child was unconscious, and others badly injured. We picked them up in the wagons and took them to the nearest resting place, Khan Lubban, where we left them in charge of the innkeeper and promised to have an ambulance sent for them the next day, which was kindly done by the P.M.O. of Nablous.

This caused us a considerable delay, and the night came upon us while we had nearly five hours' journey ere we reached Nablous. To make matters worse the road was all churned up and we could not tell which was road and which was ploughed fields. Consequently I rode my horse in advance in order to pick out the more solid track, and the wagons followed after me. We had much difficulty in passing through a muddy part where the bridge was broken down. At length we arrived at Nablous at 10.30 p.m., all feeling fairly tired.

PROGRESS AT ES SALT.

(From a Correspondent.)

Cairo, March 18.

The work of reconstruction undertaken by the British in Palestine is familiar to readers of The Near East, but it may be of interest to them to have a few local items of news extracted from the Arab Press, some of which indicate a movement from within towards progress. Thus, at Es Salt the local authorities, realising the importance of education as a fundamental factor of progress, formed a commission and sent invitations to the notables and representative persons among the inhabitants to a big meeting to discuss the subject. At this gathering speeches were made which so stirred the audience that a sum of £720 was collected there and then.

Save for a few cases of robbery, originating with some Bedouin of the desert, and ably dealt with by the local chief of police, order may be said to be firmly established.

Thanks to the generous assistance of the Red Cross, which sent to Es Salt large quantities of roof and door timber from Damascus, the returned emigrants have practically completed the repairs to their houses. The British authorities have also helped much in relieving distress by the distribution of wheat among these emigrants, General Allenby having ordered several motor lorries to be devoted to the transport of grain from Amman Station to Es Salt. The military have also distributed 250 mules among the emigrants to help them take up anew the cultivation of their fields.

Already a commission has been formed for studying and reporting upon the question of loss and damage sustained by the inhabitants of Es Salt, consequent on the emigration that followed the first British attack and withdrawal.

A sign of the times is that in the general movement towards educational reform the Arab woman is not lost sight of. The Literary Club of Jerusalem arranged for a cinematographic show to be given, at its own expense, for the benefit of Arab ladies. The selection of the films was judiciously made to suit the taste and upbringing of Arab women, and the organising committee of this maiden fête was composed of ladies belonging to the leading families of Jerusalem. Speeches were delivered bearing chiefly on the education of the women of the East.

MACEDONIAN PLEA FOR AUTONOMY.

We have received from the Conseil-Général des Sociétés Macédoniennes en Suisse the copy of a telegram which they have forwarded to the representatives of the Allied Powers at Paris, with the request to publish it.

After referring to the Council's telegram of December 19, 1918, and the memorandum of January 11, 1919, requesting the Peace Conference to apply the principle of self-determination to Macedonia, the telegram goes on to state that the population of Macedonia, having fought more than forty years for deliverance from the foreign yoke, protests energetically against any projected dismemberment of their country. Such dismemberment, it is urged, can only be a repetition of the fatal fault committed by the Treaty of Bucharest of 1913, whereby the Macedonian population was treated like a herd of cattle. The overwhelming majority of the Macedonian people earnestly desires the creation of an autonomous State, placed under the protection of one of the great Allied Powers and with an internal administration similar to that of the Swiss Cantons. Such administration (the telegram adds) would bring with it a durable peace for the Balkans, and it is the only way of assuring the economic and spiritual development of all Macedonians without distinction of faith or creed. The motto of the Interior Revolutionary Committee during the past quarter of a century, "Macedonia for the Macedonians," is not only highly popular among the Macedonian people, but is their only guiding principle. Moreover, the autonomy of Macedonia was formally recognised by Greece, Serbia, and Bulgaria in the ultimatum to Turkey in 1912. The message concludes by calling the attention of the Conference particularly to this recognition, and begging that it will not cast into slavery and mourning an entire innocent nation, which has paid heavily for its aspirations for liberty.

Reuter's Rome correspondent, writing on April 6, states that the Pope has received a letter from Lord Curzon thanking him very sincerely in the name of King George for his kind intercession with the Ottoman Government on behalf of Major Cree and other British officers belonging to the Mesopotamian Army, who were taken prisoners by the Turks and condemned to be shot as *francs-tireurs*, but whose sentences were repealed through the kind offices of the Pontiff.

NEWS IN BRIEF.

Haj Thami Glaoui has been promoted Grand Officer of the Legion of Honour.

At Mitrovitza, 45 miles west of Belgrade, a new bridge is being built over the River Save into the new Yugoslav territory.

A Lloyd's telegram from Patras, dated April 4, reports that the British transport "El Kahira" is ashore in Patras Bay; weather fine.

The rates of postage on parcels for Greece have been reduced and are now :—For parcels not over 3 lb., 2s. 4d.; not over 7 lb., 2s. 8d.; not over 11 lb., 3s.

The Greco-Armenian Committee opposes the recent appeal made by Indian Moslems to Mr. Balfour, as Foreign Secretary, for the preservation of the Turkish Empire.

The gallery at the British Museum containing collections of Early Christian Art has been rearranged. The Buddhist section includes the fine pottery statue of a Lahan, or apostle of the Tang Dynasty.

Reuter's Delhi correspondent, in a delayed message, states that Sir Mohammed Ali Jinnah has resigned from the Viceroy's Council as a protest against the passing of the Rowlatt Bills. Rao Bahadur Sarma Garu had previously resigned, but has withdrawn his resignation.

A very interesting song recital was given at the Houldsworth Hall, Manchester, on April 4, by Miss Vivian Edwards, a singer who knows the Near East well. Miss Edwards sang extremely intelligently and convincingly twenty-four songs, including Serbian, American, and Greek songs.

The War Office published on April 7 a list of the names of officers, ladies, warrant officers, non-commissioned officers, and men who have been brought to notice for gallant service rendered in connection with the military operations at Aden during the period from August 16, 1917, to January 31, 1918.

In a message delayed in transmission Reuter's Delhi correspondent states that in response to the Viceroy's recent appeal on behalf of the Imperial Indian Relief Fund the Maharaja of Mysore has given one and a-half lakhs of rupees and the Nizam of Hyderabad one and a quarter lakhs of rupees. About twelve lakhs of rupees have already been received from the Indian Princes.

The Postmaster-General announces that postal packets addressed to any part of Turkey-in-Europe and Turkey-in-Asia can now be admitted to registration. It is recommended that correspondence for Constantinople, whether registered or unregistered, should be addressed "Poste Restante, British Army Post Office, Constantinople." Correspondence so addressed must be called for by the addressees.

A Pontifical celebration of the Serbian Orthodox Liturgy took place at St. Augustine's, Queen's Gate, South Kensington, last Monday, in the presence of Bishop Bury, the English Bishop for North and Central Europe. The Mass was conducted by Bishop Zeremsky, Vicar to the Patriarch of Karlowitz, and amongst the other clergy present was the Greek Prelate of Cyprus. Bishop Bury, in a short address, offering welcome on behalf of the whole English Church, said we were living in great days, especially for the Yugoslavs, and the English Church hopefully and confidently gave them good wishes for the future.

The Berne correspondent of *The Times*, describing the extreme difficulty of travelling in Central Europe, states :—The Bulgarian delegates to the International Socialist Conference held at the beginning of February were only able to leave for home on March 29. They are attempting to reach Bulgaria through Italy. Another party of Bulgarians who left Berne three weeks ago tried to travel to Bulgaria through Austria-Hungary, but were overtaken by the revolution at Budapest and detained there. A third party who essayed to reach Bulgaria through Germany were similarly overtaken by the Bavarian revolution and similarly detained at Munich.

The Secretary of State for India in Council has decided to nominate five Indian gentlemen for cadetships at the Royal Military College, Sandhurst, to enter in August next, with a view to obtaining permanent commissions in the Army. A qualifying examination will be held in Simla, but candidates in this country will not be required to proceed to India for examination, but will be interviewed by a Selection Board at the India Office. Candidates must be under nineteen years of age on July 1 next and must pass the medical examination prescribed by the War Office for admission to the Royal Military College. Candidates in this country should apply to the Secretary, Military Department, India Office, for the necessary form of application, which must be sent in not later than May 15.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

LENIN'S EASTERN DREAM.

By J. CLIVE ROOME.

The high priest of Bolshevism in Russia is said to be training Indian, Chinese, and Japanese acolytes in his doctrines, to send them out later as evangelists of his creed. Whether these disciples of Lenin will succeed in spreading Bolshevism broadcast in Asia is, however, very much open to question. The greatest obstacle in the way of Bolshevism in Asia lies in the Asiatic temperament itself. Asia has passed through its Bolshevist stage, and realises the defects of Bolshevism more clearly than Europe or America. The overthrow of each despot in Asia has been followed time and again by the establishment of Bolshevist rule in one form or another, only to be uprooted in its turn by the iron discipline of a powerful autocrat. Latterly, in China and Persia, the rule of a masterly oligarchy has been given a trial under the nomenclature of a Republic in place of the autocracy of a despot. In India, the communal system of the Hindus at one time was more Bolshevist in character than Lenin's doctrines, but it crumbled away, leaving the oligarchy of Caste supreme. Bolshevism is no revelation, at least as far as Asia is concerned. It is, therefore, unlikely that Asia will succumb to its doctrines when its preachers begin their propaganda.

Of all the countries in the world, those with a large Moslem population are the least likely to pay heed to Bolshevism, and, as it happens, Moslem States bar the way of approach to India for Russian Bolshevists. Before they proselytise among the Indians they must, if Bolshevism is to be a political force, first convert the Moslems of Samarkand, Bokhara, Teheran, and Constantinople, and the conversion must be complete, not merely a matter of lip service, or a temporary one dictated by the greed of loot. Islam stands as a mighty antagonist of Bolshevism, and yet offers all that even Lenin can offer to its adherents. The mental achievements of the Islamic peoples in the South of Russia may be almost negligible, but their conception of Islamic democracy is profound. There is no freedom that Bolshevism can give them which Islam denies. Moslem paternity is more real in actual practice than the philosophic ideal of the French Revolution: there is more genuine Communism in Islamic countries than even in the books of Communist philosophers. Islam, moreover, is the only religion in the world that expressly places the Sultan on the same level as the beggar in the community, from a legal point of view, without any personal rights over and above those enjoyed by the poorest among his subjects. In a community reared on such traditions, and accepting them without any mental reservation as articles of faith, the prospects of Bolshevism gaining adherents are not very promising.

In Persia, however, Bolshevism may perhaps find a few supporters, not because of its teachings, but because the intellectual Persian is always willing to give any new idea a trial and is, more or less, in a spiritual revolt against Islamic dogmas. Moreover, there is in Persia an element dissatisfied with the existing political conditions, which may, in its despair, clutch at Bolshevism "as a drowning man clutches at a straw." The bulk of the population is, however, solidly against political or religious upheavals, and will not support Bolshevism.

India does not present fruitful soil for the propagation of Bolshevist doctrines. To her these doctrines make no appeal on account of their novelty. One has only to follow the historical course of the social evolution of the Hindus to realise that at one period of their history they accepted Communist ideals as the highest good, only to abandon them as impracticable in the light of experience. They gave Communism as fair a trial as, later on, they allowed to Individualism. Their social organisation has assimilated, what may be called, the workable doctrines of both; so that while the Hindus recognise communal obligations in some directions unintelligible to others, they also allow the individual a freedom which, in some cases, amounts almost to license. Bolshevism has little to offer to the Hindus in India either as a philosophic or as a political system. In fact, politically it is diametrically opposed to the ingrained ideals of the Hindus.

The only response to its teaching Bolshevism is likely to meet in India is from the Untouchables; but even the Untouchables, in spite of the low place accorded them in Hinduism, are Hindus in thought. They are, moreover, negligible politically, not only on account of their numerical inferiority, but also because of their backwardness. They are just beginning to realise how British rule has placed the fruits of life within their reach; and they are not likely to throw them away for the shadow of Bolshevism.

In Japan and China the whole tenour of life for centuries has been in a direction opposite to that of Bolshevism; and Lenin's disciples are not likely to be hailed in these countries as prophets. While disbelieving in the possibility of Bolshevism gaining a firm foothold in India, Persia, China or Japan, one cannot entirely ignore its capacity for serious mischief. It makes its direct appeal to the discontented mind, and bases it on the allurement of materialistic gain; and in the East, as in the West, there is discontent and selfishness. It provides the irresponsible politician with a ready means of mustering the forces of disorder in any country at his command, and for this reason is acceptable to those Indians who now claim Lenin as their *guru*. To crush the movement, even at its birth, the people in India and the other countries in Asia should be taught exactly what Bolshevism means.

THE STORY OF KUT.

Speaking on April 2 at the Fly Fishers' Club, Major-General Sir Charles Townshend said that his force in Mesopotamia advanced 300 miles and fought three battles—the last one a very desperate one, and they had to retreat upon Kut. They retreated over ninety miles, with the Turkish Army on their heels, but his disciplined veterans never faltered. He did not lose a single man, did not leave a wounded man behind, and did not lose a single gun, and in the retreat he turned round and wiped out the whole of the Turkish advance guard of 10,000 men. He described the terrible days of the siege, when his men were dying of starvation at the rate of twenty-five a day, and he could not get reinforcements. Finally he had a wireless from the Commander-in-Chief in Mesopotamia: "I cannot relieve you; make the best terms you can."

THE . .

Balkan Review

Edited by CRAWFURD PRICE.

February issue is completely sold out. March number, now on sale, includes among other items:

A REMARKABLE SERIES OF BULGARIAN WAR CARTOONS

HOW AUSTRIA WILLED WAR (The Serbian Minister)
THE ROMANCE OF SAINT SOPHIA (Rev. J. A. Douglas)

PRESS ON THE NEAR EAST.

The Jews and Palestine.

The February issue of the *Menorah Journal* is largely composed of discussion on the proposed Jewish State in Palestine. In an article entitled "Jewish Hopes at the Peace Table" Mr. Julian W. Mack thus summarises the aspirations of most thinking Jews :—

Two rights : justice for the Jewish people as a whole through the re-establishment in Palestine of a national home for the Jew; justice for the Jew in all of those lands of eastern Europe and the newer countries that are to be recognized at the Peace Congress—justice for the Jew in those lands in which justice has heretofore been denied to him.

But though the writer has high hopes of the fulfilment of the long dream of the Jew, he sees that his suggestions cannot be realised in a day. He says :—

We do not want an independent State for the Jewish people in Palestine *at this time*. And why not? Because at this time the Jews form only one-sixth of the population, and an independent State under such conditions would be both impracticable and undesirable. We are entirely content that the land shall now be placed by the League of Nations under the trusteeship of Great Britain, with the obligation there to lay the foundations of and, by proper land and immigration laws and administration, to promote the development of the Jewish Commonwealth. Only when the Jews shall be in the majority will they be ready for the Jewish Commonwealth.

In another and very interesting article, "Is a Jewish State Desirable?" by Sir Charles Walston, sympathy is expressed for the views and efforts of those who are fighting for the Jewish cause, but support is withheld. The writer says :—

I object to the formation of a Jewish State, because it must needs be theocratic and racial in character. History has proved to me that theocracy, the translation of the supernatural world of religion into the practical life of politics, has been most disastrous and degrading to human society, degrading to religion as well as to politics. Moreover, religion, when taking this outer tangible form in life, must needs develop into sectarianism *à outrance*. On the other hand, a State built up upon the idea of race must engender that form of antagonism within its body which is the enemy of all humanitarian charity, and which is the cause of all the evils in modern anti-Semitism. *A priori* I am opposed to all that keeps human beings apart, to all separatism. The reasons for separate corporateness must appeal to the sense for what is universally reasonable and good, and must be tested by their final conformity with the universal welfare of human beings as such. This I recognise in human communities in the idea of a nation, which means the inhabitants of a State.

Islam and the War.

In the March number of the *British Empire Review* Mr. Roland L. N. Michell, C.M.G., thus begins an article called "The Attitude of Islam" :—

The war has put all Moslem nations, more or less, to the test, and has settled in its course a few questions regarding which some doubts existed. The first related to the effect which Turkey's entry into the struggle would have upon the more powerful and homogeneous communities.

He then discusses the German attempt to bring about a Pan-Islamic movement against the Entente :—

Considerable regret was felt in Britain for the people of Turkey; for it was clear that the "suicidal folly" which betrayed the nation and Islam at Constantinople was the act of the self-styled "Committee of Union and Progress," *i.e.*, the corrupt, pro-German, Enver clique, which controlled the army, and consequently the Sultan and his people, as clearly seen by the best men of the Ottoman Empire. The reply was prompt and decisive. The action of Turkey was universally denounced, and it was realised that there were but two alternatives: either the Germanisation of Turkey or, should the Allies prevail, the ruin and further dismemberment of the Ottoman dominion.

But the writer points out that many Moslem leaders condemned the action of Turkey. After referring to the attitude of other Moslem nations, he continues with this informative paragraph :—

One matter of considerable interest related to the Senussi bodies in North Africa. Some years ago alarmists drew pictures of the vast armed forces and latent power of the Senussi Sheikh, who only awaited the right moment to strike a spark which would kindle all the northern countries into a blaze of fanaticism that would sweep all Europeans out of the continent. The Sheikh was no doubt a "dark horse." But the Senussi were no friends of the Turk. Their aim was to drive the semi-infidel Ottomans out of Africa. "The Turks and the Christians," they said, "are all one; we will destroy them all together." For a time it appeared that Sheikh Ahmed's policy was to maintain friendly relations with Egypt and Great Britain, just as his father had refused to join the Mahdi and his "dervishes." Turco-German intrigue and gold, however, brought about an apparently half-hearted movement, which confirmed the views of those who were sceptical as to the fighting qualities of Senussi warriors, when opposed to modern arms. They learned a lesson from British troops. An agreement was arrived at between Britain and Italy in the summer of 1916. The Allied forces in North Africa suffice to keep the tribes in order. According to the latest accounts the Senussi desire to be on friendly terms with both France and Italy.

He concludes with a discussion on the Khalifate, and says that "there can be little doubt that the question will be settled satisfactorily."

"Servants of India."

In the April number of the *Asiatic Review* there is an interesting article by Mr. G. K. Devadhar on "Mr. Gokhale's Servants of India Society and Its Work." In a laudatory description of this society, he thus sets down the points of the scheme :—(1) To create a deep love of the motherland; (2) to organize the work of political education; (3) to promote goodwill among the different communities; (4) to assist educational movements, especially for women and the backward classes; (5) to promote industrial development; and (6) to elevate the depressed classes.

The British in the Middle East.

The *Army and Navy Gazette* prints some strong words on the necessity of British development of the Middle East. After stating that the British Army and Navy have been the pioneers in material progress in this region, especially in Mesopotamia, it urges us to make certain for ourselves what we have brought into the sphere of possibility.

Our soldiers and sailors have not only won this territory, as well as Syria and Palestine, by their valour and leadership, but they have in a few years laid a solid foundation for their conquests. Never again will our diplomacy in the Middle East be hampered by adverse economic considerations. The aid given by our Allies in these military and administrative triumphs was very small. They are almost entirely due to British, Australian, and Indian Armies, so that the sacrifices incurred by the complete victories, which carried the flag to Baghdad, Jerusalem, and Aleppo, were borne by the British Empire, whose prestige never stood higher in Asia. In these circumstances we have a right to expect that on naval, military, economic, financial, and political grounds our paramount position in Mesopotamia shall be recognised. To allow any foreign Power to reap where we have sown at such cost would be a betrayal of our interests so humiliating as to be incredible. On the Tigris we are, and on the Tigris we remain. But more is required to safeguard our position, for if Mesopotamia is on the flank of India, Palestine is on the flank of Mesopotamia, and that again on the flank of Egypt. From the fact that Colonel Lawrence is returning to civil life it is evident that he is satisfied as to the future of our Arab Allies, in serving whom so well he has served his country. Consequently the safety of Egypt on the north-east is probably secured. But with France in Syria, Greece in Asia Minor, and, perhaps, America in Armenia, we are not likely to go to sleep in Mesopotamia as we did for so long in the last century. In defiance of its own avowed principles the Conference is carving up purely Turkish territories, and we are consenting parties. But if rival Western Powers are to fall heir to Ottoman territories are they as likely to promote peace in Asia Minor as Turkey under proper tutelage? We have earned the right to a preponderating say in the settlement of the Middle East, and it is to be hoped that our delegates to the Peace Conference are making the utmost of our advantage.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Egypt. April 2.

Mr. HARMSWORTH (Under-Secretary for Foreign Affairs), in reply to Earl Winterton, said: There has for some time past been considerable delay in the transmission of telegrams from the East, including Egypt, due to the partial breakdown of the Mediterranean cables. In a telegram dated March 28, received yesterday afternoon at the Foreign Office, General Allenby reported that the Delta was practically quiet. Cairo was quiet also. In Upper Egypt the area north of Assiout as far as Mellawi was still somewhat disturbed, but 146 European civilians at Assiout were safe. The Fayoum had been cleared of the bands of Bedouin who had made inroads there. A force despatched from the Sudan had arrived at Luxor on March 26, and reported that all was quiet. A telegram dated April 1 was received at the Foreign Office this morning, in which General Allenby states that twelve columns are operating in Upper and Lower Egypt. No incidents are reported anywhere, except an attack on a construction train near Mazghouna, in Middle Egypt. There were a few casualties on both sides, but now all is quiet. In a further telegram dated yesterday General Allenby reports that the Sudan is unaffected, and that he is in touch with the force from the Sudan, which has arrived in Upper Egypt.

The Queen's in Mesopotamia. April 4.

Mr. EDGAR HORNE asked the Secretary of State for War whether it is the case that the 1/5th Queen's Royal West Surrey Regiment has left Busreh for home, having transferred 280 men and nine officers to the 1/5th East Surrey Regiment; whether 190 of these men enlisted in 1914 and 1915 as volunteers; whether they have already spent three hot weathers in Mesopotamia and one in India; and when it is proposed they should return home?

Mr. CHURCHILL: The 1/5th Queen's Royal West Surrey Regiment is being reduced to a cadre, but so far orders have not been issued for the cadre to return home. Personnel surplus to cadre establishment will be absorbed into other units affiliated to the same record office, to be either sent for dispersal in the normal manner if eligible for demobilisation or to be retained if not eligible.

Egyptian Situation. April 8.

Mr. HARMSWORTH, in reply to Mr. Albion Richardson, said that General Allenby, Special Commissioner in Egypt, had, in the exercise of his discretionary powers, issued the following proclamation:—

"Now that order has been in a great measure restored, I declare, in agreement with his Highness the Sultan that there are now no restrictions on travel, and that Egyptians who wish to leave the country will be free to do so."

It was understood that the Ministry had in course of formation a deputation of Ministers to visit this country in response to an invitation twice extended to them by his Majesty's Government.

Riots in Delhi.

Mr. HARMSWORTH, replying to Sir J. D. Rees, said the Secretary for India had received the following telegram from the Viceroy of India, dated March 31, regarding the riots in Delhi:—"Some rioting occurred in Delhi on Sunday, March 30. Many shops closed in sympathy with passive resistance movement against the Rowlatt Bills, and some of mob entered railway station with object of compelling sweetmeat sellers to stop business. Station staff failed to eject mob. Police were called for and arrested one man who was forcibly rescued outside station. Mob stoned police, and military had to be sent for. Owing to threatening attitude of mob military were compelled to fire in Queen's Gardens and again somewhat later on in the day near Clock Tower, in Chandni Street. Total casualties as far as can be ascertained, 5 or, possibly, 6 killed, and 16 others wounded and now in hospital. All quiet Monday morning, though large crowds remained in the streets. Most of the shops except those in Chandni Chowk and large bazaars have reopened. Military remain on duty in station. No further details have yet been received at the India Office. The Viceroy reported a few days later that there had been no trouble elsewhere.

Babylonian Antiquities.

Mr. FISHER, Minister of Education, replying to questions by Sir Martin Conway, said: It was decided last autumn to restrict archæological operations in Mesopotamia during the winter of 1918-19 to preliminary measures for the preservation of certain specified sites. This work has been entrusted to a trained architect, attached to the Civil Administration for the purpose, acting under the advice of an archæologist sent out by the British Museum. The Secretary of State is aware that researches were carried out by German archæologists in Mesopotamia before the war. Over 90 cases of antiquities, ready packed for despatch to Europe, were recovered by the British forces at Samarra. These cases, together with certain other items recovered in Baghdad, are now at Busreh awaiting the results of expert examination. The question of their ultimate disposal has not yet been decided. The late General Maude issued a proclamation in May, 1917, declaring antiquities, objects of historical interest, etc., to be the property of the Administration of the occupied territories, and prohibiting all unauthorised removal or destruction.

Topics in Parliament.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE PROBLEM OF INDIAN LABOUR.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am rejoiced to read your leading article on this subject in your issue of February 21. It is quite time that the attention of the people of Great Britain should be directed to this question.

I have recently had an opportunity of studying it on the spot, and of inquiring into the causes of Indian discontent.

Do people in England realise that India has a population of 325 millions? And that in a territory about half the size of Australia, with its four and a-half millions! Also do they realise that the Indian people, under our beneficent rule, are prohibited from emigrating to any of our colonies, except as indentured labourers? I fancy now that form of emigration has been stopped by the Indian Government, for very good reasons; consequently, the Indian may be said to have no outlet for the expansion of his energies, or for the increase of his wages. At present there are 4,200 Indian labourers in British Columbia, but the Government of that country has only allowed two wives to accompany these 4,200 men. One may imagine the disastrous consequences. Is it any wonder that Indian wages are so low? In Ceylon an Indian coolie receives 8d. a day; about the same wage is paid in the Malay Straits, and about the same in China; while on the American Continent the labourer never earns less than 12s. 6d. a day.

I read very carefully the report on recent Indian sedition; but while it rightly pointed out the criminal character of many methods used nothing was said as to the real cause or cure of the widespread unrest. An opportunity is now open to provide a cure. If white countries won't allow free Indian immigration, the British Empire can at least provide, with the aid of the League of Nations, an outlet for the surplus Indian population—in the Euphrates Valley and in German East Africa. The latter country could hold 100 millions—and it has seven million natives.

If Great Britain does her duty to her own dependency, then we may hope that the allied nations will consider the case of China and Japan, with their teeming populations of over 300 to the square mile. But our own Empire demands our attention, and Indian unrest will cease, not by giving power to a limited class, who would not care much for the interests of the labourer, but by ourselves seeing that the Indian has scope for his legitimate ambition to improve his condition.—I am, etc.,

BERESFORD POTTER,
Archdeacon in Cyprus.

Vicarage, Nicosia, Cyprus, March 15, 1919.

SOUTHERN ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The following telegrams have been sent by the Albanians of America to their delegates in Paris to protest against the claims of M. Venizelos:—

"Boston.—The following resolution was unanimously passed by the Holy Council of the Albanian Orthodox Church of America on March 16 and signed by the Russian Archbishop Alexander, by Albanian native clergy, and by 124 Orthodox Christian delegates, natives of South Albania now residing in United States and Canada. The undersigned clergy and laymen, representing fifty-two Albanian churches and communities of the United States—Boston, Lynn, Peabody, Quincy, Brockton, Taunton, Worcester, Outhbridge, Springfield, Fitchburg, Hudson Malboro, Framingham, Natick, etc. (names follow), and representatives of the Roumanian Church, all of them natives of South Albania, assembled in Convention for the purpose of election of Albanian Orthodox Bishop, and under the Presidency of His Grace the Russian Archbishop Alexander, protest with indignation against absurd allegation of M. Venizelos that Orthodox Albanians of Southern Albania favour union with Greece. We Christian Orthodox Albanians, faithful followers of the Church of Christ, appeal through your Excellency to Peace Conference for the restoration of Albanian independence and unification of all Albanians, Orthodox, Moslems and Catholics, under one flag, the illustrious banner of the Soldier of Christ, George Castriota Skanderbeg, and with ethnical frontiers of Albania including the districts of Tchameria and Kossovo in accordance with the demands submitted by delegates of the Albanian provisional government." Signed Kol Tromara. Signatures of 129 others follow.

Shorter telegrams to the same effect have been received from the fifty-two districts. This shows that where the Orthodox Albanians are at liberty to speak freely there is no doubt as to what they wish, and that that wish is not incorporation with Greece.—I am, etc.,

M. G. DURHAM,
Hon. Sec., Anglo-Albanian Society.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—By the Greek papers published in the island an argument is being used that is not quite reasonable. The statement is that the Moslems need be under no apprehension of illiberal treatment at the hands of a Greek Government. No one supposes they need be, but that is not the point. The Moslems object to coming under Greek control in any shape or form. That is their attitude.

I must ask pardon for obtruding myself again, and I am only induced to do so because those in England who, from residence, have known the island, are silent.—I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus, March 24, 1919.

THE QUESTION OF THE DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of March 7 the writer of your Roumanian Notes touches on "The Question of the Dobruja." He states that owing to a "curious omission from the Armistice terms imposed upon the Bulgarians . . . the Dobruja remained for a time under Bulgarian occupation." As a matter of the United States—Boston, Lynn, Peabody, Quincy, Brockpoint, as it reads: "Immediate evacuation of the occupied territory *in Greece and Serbia.*" The Allies in allowing the Bulgarian administration to continue in Dobruja simply conformed to the agreement between Bulgaria and her allies, according to which Bulgaria's position in the province was unaffected. As soon, however, as the break up of the Central Powers took place, the Allies considered themselves free to restore the Roumanian authorities, as before the war.

Whether it was a "regrettable misunderstanding" that Dobruja was not handed at once to Roumania the Allied troops in occupation can best testify. One fact at any rate was made apparent, and that is that the Bulgarian population, mostly women, children, and old men would not have allowed the return of the Roumanian authorities if it were not for the intervention of the Allied troops, who were moved to tears at the touching scenes.

Dobruja, according to history, traditions, and geography, is Bulgarian. Economically it is more essential to Bulgaria than to Roumania. This was made patent in 1913, when the districts of Varna and Rustchuk had their commerce brought to a standstill.

But the most important reason why Dobruja—the "Third Bulgaria. Economically it is more essential to Bulgaria than the Mother Country is that were Roumania once on the other side of the Danube she would be always gravitating southward, and thus create causes for future conflicts in the Balkans, as has been the case ever since she took possession of that province. Before then the relations between Bulgarians and Roumanians were most neighbourly and friendly. It was the late and far-sighted King Carol who, in 1878, in protesting to the Russian Emperor, wrote that "the friendship of a people is more precious than a piece of territory." With the Bessarabian ports, the Danube internationalised, and free commercial access to Constantza, Roumania's most serious objection is fully met.

Roumanian statesmen of the type of Take Jonescu have always argued that Roumania is not a Balkan State. If that is so, the Danube is the safest, most natural, and traditional southern Roumanian boundary line.

The question settled, the ancient friendship between Roumania and Bulgaria would be renewed, and the two countries reunited within their ethnical and natural confines would be the greatest guarantee for Balkan and European peace.—I am, etc.,

CONST. STEPHANOVE.

Berne, Switzerland, March 25.

BULGARIA AND AUSTRIA.

The *Journal des Debats* recently published the text of two secret treaties between Austria and Bulgaria. In the first treaty (September, 1914) Austria guarantees independence and territorial integrity to Bulgaria, which promises to take action in the event of Austria's being attacked by a State bordering on Bulgaria (meaning, of course, Roumania). In the second (September, 1915) Austria gives to Bulgaria territories in Serbia in Macedonia and in Serbia itself.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

An officer who has recently returned from Egypt tells a most amusing story in connection with a native servant. This servant was very desirous of leave, and taxed his cunning brain to think of reasons for application. Spurning such effete inventions as the death of his grandmother or the birth of a daughter, or a host of impossible business reasons, he hit upon a most ingenious plan. He said he was wanted by the authorities on a charge of murder: could he have a week's leave to satisfy the wishes of the officials? Whether this reputed murderer's application was successful we are not told, but at any rate the probable effectiveness of it is high, and it would, I am certain, have been welcomed by many during the war as a ground for release from the weariness of fighting.

***

Some years ago, when Khartoum was reported to have added a second lawyer to its population, I ventured to hint in as delicate a manner as possible that the fact might not be an unmitigated blessing. To-day it seems to me that in the news of disturbances in Egypt there has been at any rate one pleasing item: the strike of the members of the native Bar at Cairo, and the calm way in which it was received by the authorities. The Commander-in-Chief issued a proclamation which, to put the matter briefly, made it possible for the Courts and the public to get along quite nicely without the lawyers. I only hope the "strike" will last long enough to show the public how much better off they are without the "help" of the legal gentlemen, who in that case are like to find their occupation, like Othello's, gone. If only we could have a similar strike here it would be hailed with delight by ninety-nine per cent. of the population. With the *bacillus brawlicus* and the *bacillus rowdicus* so active, we may do so yet. Meanwhile, we can, in this respect, only envy Cairo.

My references to poultry keeping in Mesopotamia, and my criticisms of the Irakian fowl as an article of diet, have reminded a correspondent of an incident which seems to show that those regions are not favourable to the preservation of strict honesty, though I am free to admit that the evidence on the point is not conclusive. However, judge for yourselves. A party of archæologists were at work on a site in Babylonia, and though they had plentiful stores of tinned (or "canned") foods, they found it difficult to get as much variety as they would have liked in their diet. Mutton they obtained easily, and of excellent quality, from a flock of carefully chosen and carefully fed sheep of their own, and the fowls served up to them were at least young and comparatively plump; for the caterer of the party gave thought to these things, and as a result his companions called him blessed. But, as I have said, it was felt occasionally that a change from mutton and fowl would be welcome. And one evening it came. Returning from work, the hungry scientists and artists were greeted by the savoury smell of cooking goose, and in due time the bird appeared on their table—to their agreeable surprise. "Where did it come from?" they asked. For their palates soon told them that it was no wild bird, but a pleasingly fattened one. The caterer, a man of unimpeachable honesty in his own country, looked pained when they suggested this. "How *could* it be anything but wild?" he asked. "Do you know of anyone who keeps geese near here? Besides, the Arab who sold it to me assured me that he shot it this morning." Then he changed the conversation quickly. Well, to cut a long story short, the party had four more geese in the next fortnight. And as they were picking the bones of the last one, the caterer remarked sadly: "Do you know, it has just occurred to me that these may have been tame geese after all. The Arab told me quite positively that he would never be able to get us any more; and I hear that old Hajji Hussein"—the sheikh of a village some little way off—"is bewailing the robbery of all his geese. . . . He used to have five, poor old fellow!" As I remarked above, the evidence is not absolutely conclusive, but——. And the story is true.

NEAR EAST BOOKSHELF.

DR. ELSIE INGLIS AND SERBIA.*

Among the women who have won a lasting fame in this war, no name stands higher than the subject of this memoir. Serbia has had examples of what British women can endure and suffer for the benefit of humanity more than any field in the war, and amid their efforts the splendid work of the Scottish Women's Hospital stands conspicuous. This very intimate biography traces the origin of this leader's force of character through several generations and follows her development through every stage until the war found her a well-forged instrument for a work requiring very special qualities. Born in India, the daughter of an Indian Civil Servant, Elsie Inglis was educated under the care of a peculiarly affectionate, sympathetic, and broad-minded father. Her medical studies were spiced by many a contest with the authorities in Edinburgh and Glasgow over the rights of women students, and it is only in the nature of things that in the acute controversies which just preceded the war over the question of Women's Franchise she was in the forefront of the movement. The outbreak of war brushed this all aside, but the same spirit of prejudice remained heavily entrenched in official circles, so that when Dr. Inglis in September, 1914, offered the services of herself and women colleagues to the War Office, "the historic sentence was uttered, 'My good lady, go home and sit still.'"

"The recognition so stupidly refused by her own country" (which, one may remark, has completely changed its official attitude now) "was joyfully and gratefully given by the French, and later the Serbian A.M.S. and Red Cross."

From this refusal arose the Scottish Women's Hospitals, whose fortunes it is impossible here to follow. They went out one by one to France, to Belgium, to Serbia, to Corsica, and Russia. The history of this splendid movement has yet to be written in full. In the organisation of the movement Dr. Inglis was one of the chief leaders. But she was not content merely to organise and stay at home. The story of the doings of the unit she herself took to Serbia, their great work at Kragujevatz, their capture by the Germans and enforced return home, is recounted here in a series of vividly written letters. Not content to desert the Serbians in their hour of deepest need, she again organised a unit, which she took out via Archangel and Odessa, to assist the Serbian Army with the Russians. The adventure of that unit was thrillingly told in "With the Scottish Nurses in Roumania," by Miss Fitzroy, reviewed here some months ago. Here we get further light on the desperate nature of this adventure. One cannot wonder that it wore Dr. Inglis out completely, so that when at length—in suffering and utter prostration—she again reached our shores November 25, 1917, it was but to "cut her moorings" for ever.

Her name will be an inspiration to many of the rising generation of women doctors, and it is proposed to perpetuate her memory by endowing a hospice in Edinburgh as a training centre for women medicals and a hospital in Serbia, to be run by the Scottish Women's Hospitals, in which Serbian nurses will be trained. This memoir should greatly assist this fund.

ANCIENT EGYPT.

Lecturing before the Egyptian Exploration Fund (on March 28 at Burlington House), on Egypt during the period 1580-1447 B.C., Dr. Aylward M. Blackman said that until the end of the feudal period Egyptian civilisation had been allowed to develop without foreign interference. Then the country fell under the rule of the Hyksos, whose empire extended from the Euphrates to the first cataract of the Nile, and whose capital was at Avaris in the Delta. Of this line was King Apophis, under whom, according to tradition, Joseph became "wazir" of all Egypt and brought Jacob and the tribes of Israel into Goshen. A Semitic ruler would welcome such Bedouin settlers, for the more he could Semitize the Delta the more easily he could maintain his hold on the country round about his capital. A struggle for independence was begun under the Theban kings of the Seventeenth Dynasty, and was continued and brought to a successful conclusion under Ahmose I., founder of the Eighteenth Dynasty; and when Egypt finally emerged victorious she had become a military State, and her civilisation had entered on a period of magnificence previously undreamt of. After expelling the Hyksos from Avaris, the Egyptians pushed on and wrested the whole of Palestine and Syria from them; then they turned their attention to the south and reconquered Lower Nubia. In the course of this expedition a battle was fought in which the Egyptian king (Thutmose I.) killed the Nubian chief with his own hand. The official inscription engraved on the rocks at Tombos, just above the third cataract, described the result of this expedition:—"He hath overthrown the chief of the Nubians; the negro is helpless, defenceless in his grasp. There is not a remnant among the woolly-haired who come to attack him. The barbarians fall by the sword; their stench fills the valleys. The fragments cut off from them are too much for the birds carrying off their prey to another place." Thutmose returned to Egypt with the body of his victim hanging head downwards from the prow of his ship. A little later came Queen Hatshepsut, who spent her reign in architectural works, restoring the temples that had been ruined since the Hyksos' occupation, and in commercial enterprises. One episode of her reign was the sending of an expedition to Punt—now Somaliland. The fleet of five ships sailed down the Nile and along a canal which, running through the Wady Tumilut, connected the Nile with the Red Sea. The Egyptians were received with friendliness, and returned with their ships loaded with "marvels of the country of Punt, all goodly fragrant woods of God's-land, heaps of myrrh-resin, live incense trees, ebony and ivory, gold, cinnamon wood, incense, eye-cosmetic, baboons, monkeys, dogs, skins of the southern panther, and natives with their children." This queen was succeeded by her half-brother, Thutmose III., great both as a soldier and a statesman. During the latter part of the reign of Hatshepsut, northern Syria, backed by the great kingdom of Mittani, across the Euphrates, had practically disclaimed her rule. Thutmose put down the revolt in a series of campaigns carried on during the summers of seventeen years. Like the other Egyptian rulers, he did not treat his prisoners with severity. He took the sons of the conquered Syrian dynasts and had them brought up and educated at his court. Thus they learned to appreciate and understand Egyptian ways, and when the time came for them to succeed their fathers they went to the principalities as loyal subjects of the Pharaoh.

SOME RECENT WILLS.

Lieutenant-Colonel Sir Mark Sykes, sixth Baronet, M.P., who died on February 16, has left £20,000, "so far as can at present be ascertained."

Mr. George Pringle Rose, C.I.E., of Tilthams, Godalming, late of the Public Works Dept., India, for many years managing director of the Hyderabad Deccan Mining Company (Limited), left property valued at £13,485.

Dr. Thomas Buzzard, M.D., F.R.C.P., of Grosvenor Street, W., who was surgeon on the British Medical Staff during the Crimean War, and who died on January 1 last, aged eighty-seven, left a fortune of the value of £194,595.

1919. April	1919. March.		1337. Rejeb	5679. Nisan
11	29	Friday	10	11
12	30	Saturday.....	11	12
13	31	Sunday	12	13
14	April. 1	Monday	13	14
15	2	Tuesday	14	15
16	3	Wednesday	15	16
17	4	Thursday	16	17

Lord Barrymore has left for the Continent.

Lieutenant-General Sir Philip Chetwode, Bart., has left for Egypt.

Lord Hardinge of Penshurst returned to London from the Continent on Saturday.

A Reuter message states that Sir James Meston is leaving India for England on April 26.

Lady Oranmore and Browne, who has recently undergone an operation, is progressing favourably.

Mr. Justice and Mrs. Marten have arrived in town from Bombay, and are staying at the Langham Hotel.

M. Némanya Voukitchévitch, First Secretary to the Serbian Legation at The Hague, arrived in London on April 3 from Holland.

Colonel A. W. Sheen, having relinquished his appointment as consulting surgeon to War Hospitals, India, has returned to 23, Windsor Place, Cardiff.

Sir Roper Lethbridge, of Exbourne Manor, Devon, Conservative M.P. for North Kensington, 1885-92, left unsettled property of the value fo £6,566.

Mr. and Mrs. A. L. Saunders, on their return from India, have taken 40, Ovington Square, S.W.3, which will be their address in future. (Telephone, Kensington 2,302.)

Our readers will find in our advertisement pages particulars of the lectures on "Allenby and His Crusaders in Palestine," which will be given in the week before Easter.

Lady Marling, the wife of the British Minister to Copenhagen, left London on April 4 for Denmark. It will be remembered that Sir Charles Marling was recently H.M. Minister in Persia.

The engagement is announced of Harley Cecil Crump, only son of L. C. Crump, I.C.S., Judicial Commissioner, Sind, and Sybil, younger daugther of H. T. Gordon, of Parkfield, Harrow-on-the-Hill.

The Queen of Roumania and Mrs. Wilson visited on Saturday the Franco-American workshop at Paris for wounded soldiers established by Mr. William Nelson Cromwell, the American lawyer.

Sir John and Lady Lavery are going to Tunis very soon with the Baroness d'Erlanger, to stay out there with the latter's brother, who is an artist. In the autumn they will be going out again to Tangier.

The marriage took place on March 15 at Jullundur, India, of Major Reginald H. Anderson, 11th Lancers (India), to Ellison Janet, second daughter of the late Robert Jameson Torrie, 1, Glenfinlas Street, Edinburgh.

M. Yovanovitch, who has been during the last three years Minister to the Court of St. James, has retired from the Serbian diplomatic service. Mme. Yovanovitch will continue to act as President of the Serbian Red Cross.

The engagement is announced of Captain (Acting Major) Harold Gordon Canny Laird, D.S.O., 101st Grenadiers, Indian Army, second son of Lieutenant-Colonel R. M. Laird, R.A., and Gertrude Gwendoline, only daughter of the late Mr. T. J. Taylor Rea, L.D.S., R.C.S., Queens Elms, Belfast, and of Mrs. Rea, Dyffryn, Cheltenham.

The marriage took place on March 27, at the Parish Church, Bowness-on-Windermere, by the Rev. F. B. Greenwood, C.F., brother of the bridegroom, assisted by the Rev. E. J. Nurse, of Basil P. Greenwood, of Cairo, second son of Mr. and Mrs. R. H. Greenwood, of Bankfield, Kendal, and Deborah Mucklow, younger daughter of Mrs. Mucklow, of Elton, Storrs, Windermere.

The engagement is announced between Captain Ronald George Seaburne May, the Sherwood Foresters, son of the late Mr. G. S. May, I.C.S., and the late Mrs. May, and Jaquetta May, younger daughter of Mr. and Mrs. J. L. Fletcher, Holmwood, Hythe, Kent.

At Brompton Parish Church, Captain L. A. Leapingwell, M.B.E., R.E., second son of Colonel A. H. Leapingwell, I.M.S. (retired), and Mrs. Leapingwell, was married on April 1 to Ellen Augusta, younger daughter of J. Edward Hall, the Grange, Leamington.

The Queen of Roumania, Reuter's Agency learns, will leave Paris on her return home early next week. Princess Ileana, who has been ill at Buckingham Palace, has so far recovered that it is hoped she will be able to leave in a day or two in time to accompany her mother to Bucharest.

It is announced that under the provisions of the rule of the club, which empowers the annual election of "persons of distinguished eminence in science, literature, the arts, or for public service," the committee of the Athenæum have elected Sir Percy Cox, G.C.I.E., K.C.S.I., British Minister at Teheran.

The marriage took place on April 5, at St. Paul's Church, Upper Norwood, S.E., between Edgar Cumbo McWilliam, eldest son of W. C. McWilliam, Esq., of the Egyptian Civil Service, and Ethel Mildred Cole, B.Sc., eldest daughter of Mr. and Mrs. W. G. Cole, 5, Anerley Park, Anerley, S.E.20.

A marriage has been arranged, to take place early in November, between Reginald Norman Marsh-Smith, Indian Police, son of Capt. and Mrs. Marsh-Smith, of The Hall, St. Nicholas-at-Wade, Thanet, and Kate Winnifred Ellen, only daughter of the Hon. Mr. Pert, I.C.S., and Mrs. Pert.

A marriage took place on March 15, at Bareilly, India, between Walter George Banister, A.M.I.C.E., eldest son of Mr. G. H. Banister, C.B.E., M.I.C.E., and Mrs. Banister, Monks Croft, Barrow-in-Furness, and Elsie May, youngest daughter of Mr. and Mrs. David I. Lamb, 6, Playfair Terrace, St. Andrews, Fifeshire.

A marriage has been arranged, and will shortly take place, between Henry Percy Chevallier Skingley, eldest son of the late Henry Skingley, of Wakes Colne Hall, Halstead, Essex, and Dorothy Ellen, only daughter of C. Constantinidi, of Sutton, Surrey, and formerly manager of the Imperial Ottoman Bank in Cyprus.

A marriage has been arranged, and will shortly take place, between Captain Charles Manners, D.S.O., 104th (Wellesley's) Rifles, younger son of the late Colonel Manners, Royal Scots, and Mrs. Manners, and Maisie, eldest daughter of Mr. John J. Calder, of Ardargie, Forgandenny, Perthshire, and 45, South Street, W.

A marriage has been arranged, and will take place shortly, between Captain Robert P. Mahaffy (late Devonshire Regiment), barrister-at-law, second son of the Provost of Trinity College, Dublin, G.B.E., and Evelina, third daughter of the late Hon. Conrad Dillon, of 47, Oakley Street, Chelsea. Captain Mahaffy has just returned to England after two years' special service in the Sudan.

The engagement is announced of Wilfred F. H. Watson, Egyptian State Railways, of Ballingarrane, Clonmel, County Tipperary, eldest son of the late Lieutenant-Colonel S. Watson, Royal Artillery, and the Hon. Mrs. Watson, and Evelyn Irene Hamilton, only child of the late Arthur J. H. Wills and Mrs. Macculloch, and niece of Brigadier-General and Mrs. Curteis, of 9, Southwell Gardens, S.W.

As blindness is so prevalent a disease in the East, our readers will naturally regard with sympathy any effort made to succour the blind in our own land. Such an effort is being made on Easter Monday, April 21, when at 2.30 p.m. a concert will be held at the Central Hall, Westminster, in aid of St. Dunstan's Hostel. The concert is being organised by Mrs. E. Davidson, of 17, Park Avenue, Willesden Green, N.W.2, and tickets for admission are 12s., 10s. 6d., and 8s. 6d. (tax and tea included).

The marriage was celebrated on March 22, at St. Luke's, Richmond, by the Rev. F. L. Powys Maurice, R.D., vicar of Kimbolton, assisted by the Rev. G. H. Dix, of Major Archibald George White, 126th Baluchistan Infantry, attached 130th K.G.O. Baluchis, son of Col. G. A. White, late Commanding 1st South Lancashire Regiment, to Gertrude Mabel, daughter of the late H. A. Hallett, M.D., of Kimbolton, Hunts, and Mrs. Hallett, The Avenue, Kew Gardens.

The marriage took place on March 31, 1919, at the Church of the Holy Name, Bombay, by the Rev. Father Bennett, between Captain Arthur W. B. Gompertz, Indian Army, eldest son of Richard L. D. Gompertz, Indian Telegraphs Dept. (retired), "Elmwood," Kimbolton Avenue, Bedford, and Enid, third daughter of Rowland H. Coombs, M.D., D.L., J.P., of "Redburn," Rothsay Place, Bedford.

APPOINTMENTS, PROMOTIONS, &c.

Dr. Koitch, the First Secretary to the Serbian Legation in London, has been appointed Chargé d'Affaires.

The dignity of a Pecrage has recently been conferred upon the Right Hon. Sir Robert Chalmers, G.C.B., who from 1913 to 1916 was Governor of Ceylon.

General Hadjitch has been appointed Minister of War and Marine for the Kingdom of the Serbs, Croats, and Slovenes, in place of General Rachitch, who has resigned on account of illness.

The King has granted permission to the following to wear the decoration of the Order of the Nile, as mentioned, bestowed upon them by the Sultan of Egypt:—First Class: Major (temp. Major-General) Sir L. O. F. Stack, K.B.E., C.M.G., Sirdar of the Egyptian Army and Governor-General of the Sudan. Second Class: Capt. F. Burges, Major A. Cameron, Major (temp. Lieut.-Colonel) R. C. R. Owen, C.M.G. Third Class: C. P. Browne, Major H. C. Smith, Capt. C. McKey, K. C. P. Struve. Fourth Class: Major C. A. Barker, W. R. G. Bond, Majors S. M. Castle, A. Craufurd, R. N. Dobson, and D. A. Fairbairn, R. E. F. Fawkes, T. E. Fyers, Capt. (temp. Major) J. L. Garstin, E. G. S. Hall, Major (temp. Lieut.-Colonel) R. S. Hart, D.S.O., Capt. H. F. C. Hobbs, H. H. King, Major P. G. W. Maynard, D.S.O., Major D. Mills, A. C. Parker, Major (temp. Lieut.-Colonel) J. H. Pattison, D.S.O., Major C. W. W. Sandes, Capt. S. M. Saunders, R.A.M.C., A. Smith, Capt. B. H. H. Spence, M.B., M.A.M.C., Major (temp. Lieut.-Colonel) D. H. Thorburn, D.S.O., G. E. Warder, Capt. E. G. Warren. Fifth Class: J. A. Bristow-Jones, S. Evans, J. W. Heyward, W. R. J. Hiscock, F. S. Sillitoe.

The King has granted the following officials of the Egyptian Ministry of Public Works authority to wear the Insignia of the Order of the Nile of the classes indicated against their respective names, which decorations have been conferred upon them by the Sultan of Egypt in recognition of valuable services rendered by them:—First Class.—Sir Murdoch MacDonald, Adviser and Under-Secretary for Public Works in Egypt. Second Class.—Mr. A. M. Adamson, Inspector-General of Irrigation, Lower Egypt. Third Class.—Mr. J. O'Sullivan, Inspector, Irrigation Department, Egyptian Ministry of Public Works; Mr. A. B. Buckley, Inspector, Projects Department; Mr. F. P. Watson, Inspector, State Buildings Department. Fourth Class.—Mr. FitzR. H. Darke, Director of Works, State Buildings Department; Mr. H. E. Hurst, Inspector, Physical Service; Mr. A. M. Alcock, Director of Works, Cairo City Service; Mr. F. B. Jacomb, Director of Works, Irrigation Department; Mr. P. H. East, Director of Works, Sudan Irrigation Service; Mr. C. C. Edgar, Chief Inspector, Antiquities Department. Fifth Class.—Mr. P. Robertson, Chief of Office, Sudan Irrigation Service; Mr. W. Hennings and Mr. J. Johnstone, Foremen Mechanics, and Mr. W. P. Hughes, Mechanic, Irrigation Department; Mr D. Luker, Mechanic, Sudan Irrigation Service.

OBITUARY.

The death is announced of Major E. D. S. Bennett, 60th Punjabis, while on Staff duty at Delhi.

The death is announced on April 5, at 71, York Mansions, S.W., of Knightley Grey Burne, late Burma Commission, aged 71 years.

The death is announced on April 5, at Whimple, Devon, of Lieut.-Colonel Kellow Chesney, late 18th Lancers, Indian Army, second son of the late Sir George Chesney, R.E., aged fifty-seven.

Major-General Charles William Dun, late of the Madras Army, died on April 3 at his residence, at Parkstone, Dorset, in his ninety-fourth year. He was engaged in Sangor and Nerbudda in 1843, and in the Chinese Riots at Singapore in 1854, and retired in 1876.

The death occurred on April 7, at a nursing home, of Alexander R. H. Murray, N.W.P. and Oudh Police, and Captain, Indian Army Reserve, beloved only son of the late General A. H. Murray, late Bengal Artillery, and of Mrs. Murray, Elm Cottage, Camberley.

Mr. Arthur Forbes, C.S.I., who has died at Lymington, Hants, at the age of seventy-five, entered the Indian Civil Service (Bengal) in 1867. He was a member and secretary of the Opium Commission, for which he received the thanks of the Government of India and of the Secretary of State, and was later officiating Commissioner of Excise, Bengal, and Commissioner of Dacca, Patna, and Chota Nagpur. He retired in 1902.

Colonel Thomas Cadell, V.C., C.B., has died at Edinburgh, in his eighty-fourth year. He joined the 2nd European Bengal Fusiliers (now the Royal Munster Fusiliers) in 1854, and served throughout the Indian Mutiny campaign, and was afterwards employed in the operations against the Bheels. He afterwards entered the Political Department, and held various appointments in Central India and Rajputana, and for thirteen years was Governor of the Andaman and the Nicobar Islands. Colonel Cadell won the Victoria Cross during the Mutiny when he was a lieutenant. He rescued a wounded bugler of his own regiment under a most severe fire, and on the same day, accompanied by three men, he rescued, again under a heavy fire, a man of the 75th Regiment, who was severely wounded.

Colonel Albert William Hazel was killed on March 24 whilst on duty in Upper Egypt. Formerly Mr. Hazel was an inspector in the Ministry of the Interior, and for his useful work in that office received the Order of the Medjidieh and the Order of the Nile. During the war he was placed in charge of the recruiting of native labour in Cairo, and in that capacity gained the rank of lieutenant-colonel.

Lieutenant-Colonel George Stevens Nash, R.M.L.I., died last Saturday morning. He entered the Royal Marine Light Infantry in 1859, and 1860 to 1864 saw active service. He was in Syria during the Druse and Maronite fighting, and in Athens during the rebellion against King Otho. He served in the Zulu war, and in 1884-5 took part in the defence of Suakin, the capture of Tamer, and the reconnaissance to Handouh, for which he was awarded the Queen's medal and clasp and the Khedive's Star. He retired in 1890.

Major-General Herbert Charles Borrett, C.B., died at his residence at Reading last Friday, at the age of 77. He joined the old 4th Foot in 1858, becoming adjutant eleven years later and colonel in 1885. He served with his regiment throughout the Abyssinian Expedition of 1867-8, and was present at the action of Arrogee and at the capture of Magdala, for which he had the medal.

It is announced that Lieutenant-Colonel Hyla Napier Holden, D.S.O., 5th Cavalry, Indian Army, was killed in action on October 6. Colonel Holden passed into the Army through the Militia, was gazetted to the Oxford and Bucks L.I. in 1892, and exchanged into the 5th Bengal Cavalry in 1894. He was A.D.C. to Lord Curzon from 1899 to 1900. He took part in the Mohmand campaign. Later he was attached to the Jodhpur Lancers, and accompanied them to France. In 1918 his regiment was sent to Egypt, and it was near Aleppo that he was killed. Colonel Holden received the Kaisar-i-Hind Medal, and was appointed an Esquire in the Order of St. John of Jerusalem in England.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

THURSDAY, APRIL 10, 1919.

INDECISION AT PARIS.

It was a cynic who declared that the fog of war was bright sunshine in comparison with the fog of peace, but it does, unfortunately, seem to be the fact that the end of secret diplomacy has intensified the secrecy at some cost to the reality of the diplomacy. A week or two ago, while the world waited impatiently for news of the terms to be imposed on Germany, it was informed that the elder statesmen of the Allies had been discussing the question of cable communications; in another month, when the Balkans show some legitimate desire to learn their destiny, they must be told that the triumphant leaders of the world's democracy are engrossed in the designs of postage stamps. When the Conference began it was announced that territorial boundaries were unimportant in the new world; when it ends—if it ever does end—it may have discovered that a little more attention to realities and a little less devotion to the contemplation of a millennium that has no actuality in the world as we know it to-day might have saved time and trouble in the postponed settlement. Mr. Lloyd George has indeed promised to return by Easter with a treaty of peace in his pocket; but scepticism is rife, not merely as to the date, but as to the scope of the treaty. If it deals, as is expected, merely with Germany, the Allied statesmen will have succeeded in performing in five months what need not have taken more than five weeks; but there will still remain the settlement, perhaps not less important for the future peace and security of the world, of the rest of Europe and of Asia Minor. Regarding these latter matters no details have yet been announced. It is certainly stated that complete agreement exists on all points, but the child has yet to be born who would be deceived by this assurance. The Polish question, which is vital to the future of Europe as a whole, is still open, as the indecision of the Allies over the problem of Danzig—in which the compromise they agreed to was in effect a recognition of the German attitude—and the sudden arrival of M. Paderewski in Paris sufficiently attest. The Adriatic question is still open, and when Italians and Yugoslavs refuse to meet in the same room, openly denounce each other as enemies, and flood inoffensive English homes with a daily increasing deluge of propagandist literature, it can hardly be maintained that agreement, far less cordiality, exists over this problem. The Conference has still to deal with the not less knotty questions of the Balkan States, and here it has apparently made no real progress whatever towards a definite settlement. It has assembled the experts and heard their reports, but here, as in other cases, it appears to find discussion more easy than decision. The facts are there, the deductions are there, but the will to give final form to those deductions is too clearly lacking.

Unfortunately, much the same paralysis appears to have overcome the Conference in its dealings with Bolshevism. After the failure of its invitation to Prinkipo had amused the whole world, the sudden spread of Bolshevism to Hungary very naturally alarmed the Conference, and it despatched General Smuts to Budapest. Now General Smuts has the mind of a soldier and a statesman, and he has done admirable work in the war. But unless he has been given plenary powers—and there is no indication that he has been given anything of the kind—he has been sent merely as an observer; he must observe, and make his report in Paris, where there will once more be delays and divergences of opinion as to the method of dealing with the plague. Meanwhile the proclamation of a Soviet Republic and the spread of Bolshevism are announced from Bavaria. There are numerous other disquieting signs that cannot be ignored. Bolshevism is increasing its hold in South Russia, Roumania is threatened, and the Allied garrisons in Odessa are in danger, yet it is suggested that assistance cannot be sent to either. The plea of impotence is, on the face of it, absurd from the victors in the war; and its absurdity is only made more manifest by the news that the Berlin Government are openly negotiating a treaty of alliance with the Russian Bolshevist Government. It would appear that while the Allies are discussing a League of Nations the enemy are forming one—and of the purpose of this rival League there can be no doubt whatever. It is not to regenerate the world, but to plunder the world. The one certain result of the war is that Germany has sacrificed her sea ambitions, and with it her colonial aims; the occasional demands for the restoration of the German colonies have evoked no response in Germany since the surrender of the German fleet. But that fact has merely led Germany to reverse her policy; instead of expansion westwards, she is now contemplating expansion to the East. It is full of significance that the one matter in which she puts up a firm front to the Allies, and succeeds in deceiving them over, is the Polish question; the contemplated alliance with Russia is intended to rivet the chains on Poland in perpetuity; her intrigues in the Ukraine, the centre of Russian wealth, are evidently done with a purpose; and from the Ukraine the road is open to Roumania and the Black Sea.

It is high time that the statesmen in Paris recognised the trend of events. Two sides can play at making a new world. It cannot be said that our efforts have so far been very successful, for a sudden chill seems to have descended upon the prophets of a League of Nations, and the Conference, which began by ignoring boundaries, now finds its attention, somewhat late in the day, obsessed by questions of boundaries; but meanwhile the Germans appear to be pursuing a definite aim in the reconstruction of their foreign policy, and that aim, when carefully examined, implies nothing less than the attempt to restore their hegemony over the East and the Near East. If the plan is to be thwarted, the Conference must bestir itself and grapple with facts in a more resolute spirit than it has yet shown. It would, for instance, be satisfactory to learn that it had faced the Fiume difficulty squarely, and intended definitely to solve the problem rather than leave it to solve itself. The Syrian question, again, calls for prompt handling, and since the precedent of acting upon second thoughts has been established in the case of General Mangin, it should not be impossible for the Commission of Inquiry to be recalled, if it has actually set out. It is admitted that the Conference was summoned to thresh out thorny problems, but the complaint of the peoples concerned is that after two months of discussion most of the questions are in reality no farther advanced towards solution than they were at the beginning.

THE TROUBLE AT BENI-SUEF.

(From Our Own Correspondent.)

Cairo, March 25.

With regard to the trouble at Beni-Suef, referred to in my letter, the following extract from a letter received from one of the British officials who took part in the defence of the town may prove interesting:—

The affair commenced on Wednesday, the 12th. at the Courts, with the announcement that, in accordance with the Cairo Advocates' Order, the Bar had decided to ask for an adjournment of the cases. This the Court agreed to, but when the last case was called the demonstration was so serious that the judges had to take into their room for protection the one advocate who had refused to strike with the rest. A mob of 500 or more howled for this advocate outside the court. Eventually they were calmed down by an official. On Thursday similar demonstrations took place, and that afternoon an Effendi went down to one of the *ezbehs* and roused up the Fellaheen. Two hundred of them came out with *naboots*, but were dispersed by the *Mamur*. Friday there was a slight demonstration of the schoolboys. On Saturday morning there was a great uproar outside the court, and a procession with two banners appeared, headed by young Effendis and students, especially Azharites, who have been very active throughout; behind whom came a solid phalanx of Fellaheen in white, 300 to 500 strong, waving a forest of great *naboots*, and evidently out for blood. The writer watched it for some time from the roof; but they stopped and howled at him, and eventually he retired, it being obviously foolish to provoke them. Meanwhile they had invaded the court, smashed some windows, and ordered the officials to stop work under peril of being beaten. They also asked for the Assize Court Judge, Mr. MacBarnett, and were told that he had left.

The crowd had now gone off in the direction of the Mehkemah El Shariia; and their subsequent history is as follows:—

They crossed the canal and moved past (towards?) the Survey Offices. There they looted, doing great damage to plans and papers. They then moved west towards the Judges' houses. The Assize Judge's house first attracted them. They again asked for him, and not finding him, proceeded to destroy the place. They reduced everything to matchwood, glass doors, window-panes, furniture, destroyed all papers and looted practically everything. They did the same to the Native Judge's house and belongings. He locked himself in his room, but they went upstairs, and he came out and spoke to them. They did him no harm. They then went across to the English Judge's (Mr. Verner's) house, where Mr. and Mrs. de Wasme (his father- and mother-in-law) were, and smashed the ground floor. Seven *Ghaffirs*, who were there, bolted like sheep, but a police sergeant stood his ground and persuaded them not to go upstairs and to let the de Wasmes alone. They then went to the Irrigation Office, and did some damage there, but not much, and returned to the town.

The leaders were certain Effendis in European dress, especially one wearing a white waistcoat, and, it is said, the Fellaheen came from Beni-Haroon. Meanwhile Mr. MacBarnett had gone down into the square and joined Mr. Cobbe (the Interior Inspector), who was with the English officer and the Punjabis who had taken post on the square. (These had been sent for on Thursday, the last day communication with Cairo was open.) They had one Lewis gun. Cobbe was worried to know what had become of the crowd, so Mr. MacBarnett went in search of them and spotted them crossing the railway by the footbridge and on the west road. They also, he thought, must have crossed by the railway crossing. Mr. MacBarnett reported to Mr. Cobbe, and presently they were i nevidence advancing up the main road towards the Mudiria Square. As they refused to retire, a volley was fired over their heads without effect. It was then found that they were advancing by a parallel line threatening to take us in the rear. This advance continuing, they were again fired at, and this time a boy was killed. They continued to hold the end of the street and were very menacing. Presently they advanced again, and this time a native Syrian, or Copt, named —— ——, fired a revolver at them from a window of his house, and shot a Bedouin Omda. This had serious consequences later on. The crowd promptly fired this man's shop, and the troops cleared the street with the Lewis gun, and got the fire engine, which succeeded in checking the fire. Up to this time the total killed by the military was about four, and several wounded. It was now one, and, things seeming quieter, the writer returned to his house, which he found in the state described. He had a scratch meal with the de Wasmes, and after lunch it was decided to evacuate all women and children, and concentrate in the three houses near the military camp. This was done with the help of cars. The writer was out with the soldiers in the afternoon, but about 4 p.m. forty Bedouins came over, armed with guns, to avenge the Omda. They were looking for the man —— who shot him, and not interested in the original quarrel apparently beyond looting shops. They burnt this man's mill and looted a number of shops, but the most serious part of the business was that the English officer was severely wounded and more men hit. As he was the only man who could talk to the Indians, the position was very serious. Mr. Cobbe, therefore, about 6 p.m. asked Mr. MacBarnett to try and open communication with the Fayoum by car, with the idea of obtaining reinforcements. He gave him a letter explaining the situation, and Mr. Graeme (the Survey Inspector) and he started at 6.30 p.m. They reached Fayoum without event at 8.10 p.m.—twenty-nine miles.

The officer in charge was unable to supply them with an English officer, as he was alone, the other officer having been sent to Wasta with fifty men. He, however, offered them a Lewis gun and more men. They commandeered the Irrigation car, and after some difficulty got it going, and returned to Beni-Suef, arriving about midnight. The morning of the 16th a train from the South arrived, bringing eighteen ladies and about thirty officers and men on leave. After some hesitation, it was decided they should stay there. An aeroplane passed overhead about 9.30 a.m. and dropped a note asking them to report to Cairo, but no means were then available.

The writer understood an attempt had been made to get through by the east bank of the river telephonically and a battalion asked for; but this did not seem quite certain. The Wasta Bridge was reported destroyed, the line removed at Beba, and telegraphic communications cut at Maghagha. Looting of the town went on freely on the afternoon of the 16th.

17.3.19.—A party with Messrs. Cobbe and Clowes reconnoitring towards the native judge's house, which was being destroyed, nearly fell into a trap, and were shot at by Bedouin. The fire was returned, and about nine killed. Bedouin in to get —— ——, alleged to have shot their Omda. Greeks have taken refuge in Choremi's factory. Steamers have not arrived, and no news of help from Cairo. Rumours of attack of villages of Beni-Haroun and Tasmant. Our positions are going stronger, but have authorised the colonel to withdraw from town—force too small to divide. —— ——* and two sons have been arrested and lodged in Markaz Prison. This has pleased the crowd, and Mamur says no attack now likely.

18.3.19.—Quiet night. Mamur said he routed out 500 Bedouin and sent them across the river. Some had Mausers. Demonstrations this morning in streets. Telephone again cut, Lahun and Wasta. Fighting at Wasta; thirty natives said to be laid out. Villagers of Tasmant came in deputation this morning, but no conflict. News just in of murder of nine officers on Luxor train at Minia. Bodies stripped and thrown out. Our relief has arrived, and we are sending about ninety-seven men, women, and children off to-night to sail at dawn.

The letter closes with the following P.S.:—"Make people understand it's a case for root and branch action. The country is rotten from top to bottom, and all this has been organised. Have you arrested the rest of the gang who are working it from Zaghlul's house in Cairo? There must be the bitterest lesson."

THE EASTERN LEAGUE.

The Eastern League, composed of English and Indian ladies, has now been demobilised, after four and a half years of service in making garments and providing comforts for Indian troops on active service. No fewer than 35,210 articles of clothing have been sent to Indian soldiers and prisoners of war. At the concluding meeting the Hon. Lady Fremantle, the president, made commemoration presentations to Messrs. Whiteley, who lent a room to the League, to Mrs. P. L. Roy and Mrs. Bhola Nauth, the hon. secretaries, and to Mr. A. Chuckerbutty, the hon. treasurer. Certificates were presented to other workers. Arrangements have been made for the foundation of two scholarships for the sons of sepoys in India, in memory of Lady Hayes Sadler and Lady (Seymour) King, who were respectively president and hon. treasurer until they died in the autumn of last year. £100 has been subscribed for the purpose and another £100 is required. The address of Mr. Chuckerbutty is 34, Hurlingham Court, Ranelagh Gardens, Putney, S.W.

The Serbian Press Bureau at Belgrade issues the following:—"According to advices from Salonika, the Albanian leader Alit Leche and his followers, with some of Essad Pasha's troops, encountered a body of Italian troops at Bultchitza and threw them back to the other side of the Tchafa Buli Pass, which was occupied by the Albanians. One Italian was killed and two wounded. The Albanians took twelve prisoners and two machine-guns."

* The man who is alleged to have shot the Omda.—Ed.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Egyptian Budget for 1918-19, which provided for a revenue of £E22,900,000, and an expenditure of £E23,250,000, established a record, but these figures have been far surpassed in this year's Budget, which shows the revenue at £E27,300,000, and the expenditure at £E28,850,000, a deficit being left of £E1,550,000, as against one of £E350,000. Items of special interest in the Budget are the provision of £E1,000,000 for the settlement of claims in connection with the recent disorders, and the provision of a credit of £E6,967,651 for a Ministry of Communications, which will cover railways, telegraphs, telephones, Post Office, ports and lights. The items from which increased revenue is anticipated are Customs and Excise, £E1,697,000; railways, £E750,000; interest on funds, £E928,000; and judicial fees, £E179,000, while on the expenditure side the main increases expected are for survey, £E139,889; public health, £E147,421; irrigation, £E849,574; State buildings, £E272,957; railways, £E799,161; ports and lights. £E419,774; and war gratuities, £E941,000.

***

In normal conditions, leaving out of account the sum allocated to meeting damage during the disturbances, it is extremely probable that once again it would have been proved that the Estimates were framed on much too cautious lines. Thus for the first nine months of the past financial year the revenue amounted to £E20,931,843 and the expenditure to £E17,270,955, giving a surplus of £E3,660,888. What is likely to happen in the current year cannot now be foreseen. It is, however, known that considerable damage has been done during the disturbances; but it is believed that it may be a matter of months before its exact extent has been estimated; in the same way, its incidence on the country's prosperity must for the moment be a matter of conjecture. I see that correspondents have not hesitated to state that Egypt's prosperity has been shattered. That is certainly an extreme view, but at the same time there is no getting away from the fact that what has happened is bound to have a very marked effect on conditions in the immediate future.

***

I learn that there is a very good opening in Mesopotamia for waterworks. In Baghdad the waterworks have been restored and extended with very beneficial results, and outside that city waterworks will be required in at least half a dozen towns, notably in Mosul, Kerbella, Nejef, Busreh, Mohammerah, and Koweit. Their construction offers an excellent opening to British contractors, and I trust that some of them will not fail to take advantage of it.

***

I hear that economic conditions on the east coast of the Adriatic are deplorable just now, unemployment being general and commerce non-existent. There is also the difficulty that at Fiume and elsewhere communications inland have broken down. What are required there are settled conditions, which will permit the renewed growth of industry and commerce.

Commenting on the economic situation in India, *The Times* Bombay correspondent states that although the failure of the autumn crops last year was perhaps the most widespread ever known, the results cannot be compared in intensity with the similar failure which caused the famine of 1899-1900. The situation, he points out, has been greatly relieved by a good north-east monsoon in Southern India, and by frequent rain since January throughout Northern and Central India, and the outturn per acre of the winter crops is generally well up to normal and, in parts, above. "Much distress is undoubtedly inevitable in Western, Central, and Southern India," the correspondent adds, "but, provided the next monsoon is normal, neither the people nor cattle will suffer to anything like the same extent as in 1900. The difference between the present conditions and those of 1900 is best illustrated by the following figures. In the middle of the current month of March the total number of persons receiving State relief on works or gratuitously was only 208,000. On March 17, 1900, the number was nearly 5,000,000. Improvement in the general prosperity and the higher wages obtainable account for the smallness of the distress compared with 1900. Other signs show increased resisting power of the population. Ordinarily such a monsoon failure would have brought rupees flowing into the Treasuries and causing the Government serious anxieties to meet sterling remittances. Despite the prodigious coining in recent years, the absorption of rupees continues. Savings banks deposits show great and continuing increases, aggregating in February three and a-half times the normal."

***

At the series of meetings of the United Egyptian Lands, resolutions were carried unanimously approving of the scheme of reconstruction. Under the scheme the assets of the company will be taken over by a new concern, which will have a nominal capital of £350,000 in 5s. shares, and the Mortgage Company of Egypt is to be granted a first mortgage on the properties in Egypt of the present company, which will be repayable in thirty annual instalments. The refusal of the Treasury's consent placed the realisation of the scheme in danger, but a further application after the armistice was entertained, and the Mortgage Company, which had throughout acted in a most generous spirit, readily arranged a fresh agreement with the company.

***

That remarkable profits were made by jute concerns last year may be seen from a comparison of the results of the Titaghur Jute, the Victoria Jute, and the Samnuggur Jute companies. The profits of the Titaghur Jute Company amounted to £969,200, as against £353,800, those of the Victoria Jute Company to £594,700, as against £232,400, and those of the Samnuggur Jute Company to £1,021,100, as against £353,100. Most of these profits went to the Government in the shape of excess profits, but all three concerns were able to make a considerably higher declaration. Thus the dividend of the Titaghur Jute Company is increased from 40 per cent. free of tax to 70 per cent. less tax, that of the Victoria Jute Company is increased from 35 per cent. free of tax to 60 per cent. less tax, and that of the Samnuggur Jute Company is raised from 35 per cent. free of tax to 50 per cent. less tax. Now that the war is over the profits of jute companies will be on a much smaller scale; certainly they are not likely to approach the level reached in the last year of the war.

***

My readers will be interested to learn that two of the small tractors which did such useful service in hauling heavy weights behind the front have arrived in Karachi.

***

At the general meeting of the National Bank of India, the chairman made an interesting reference to negotiations last year with a London bank. They were approached, he said, to know if they would be open to consider an arrangement with a leading London bank on the basis of the purchase of their shares at a price to be agreed upon. The bank was to retain its identity under the same board of directors and the same management, but two of the purchasing bank's directors were to have seats on the National Bank of India board and two of the latter's directors were to join the board of the former. Protracted negotiations resulted in an offer being made which the directors considered they would be justified in submitting to the shareholders, but the Treasury veto put an end to the scheme. The chairman referred to the feeling of satisfaction among many of the bank's best customers that nothing had come of the proposals. "We were also not without indication," he added, "that many of our largest shareholders also shared that feeling and were not displeased to know that the National Bank of India was to continue on the old lines."

***

The Alexandria Municipality has arranged with the banks for the issue of a new loan of £E500,000. The loan, which is to bear interest at 5 per cent., will be issued at a small discount.

PORT WORKS AT CEUTA.

History of the Scheme.

Considerable interest is being shown locally, says the Acting British Vice-Consul at Tetuan in a recent report, in the development of the harbour works at Ceuta. The question has grown in importance as the result of the construction of the Tetuan Railway, and the competition which is anticipated from other Moroccan ports—particularly in the French zone. A writer in the *Norte de Africa* recently reviewed the importance, both political and commercial, of Ceuta, and gave the following details of the history of the port improvement scheme. The Committee of the Port Works was founded in 1904, and the project approved in 1906. Work actually commenced in 1910. The works are being executed on behalf of the Spanish Government. The management is in the hands of the committee, presided over by the Military Governor of the fortress. The works have been handed over to an association of contractors. The estimated cost is 21,000,000 pesetas, of which 11,500,000 were obtained by the issue of shares and 8,000,000 are to be borrowed—permission having been conceded by Parliament in December, 1916. There is also to be reckoned a small subvention from the Government, the exact amount of which is not known.

The intention is to construct a port with a surface of 107 hectares, divided into an inner and an outer port. The inner port contains 50 hectares, the outer 57 hectares. Half of the docks will have a depth of 10-20 metres the other half four to ten. It is intended to construct, as soon as possible, big depot stores. These depots will have a ground floor and two stories above, and will be covered by a large terrace. They will be 80 metres long by 16 metres. Goods will be unloaded by the port cranes direct into each storey and on to the terraces. The latter will also serve for drying damaged goods, as is at present done at Marseilles. Work began in September, 1910, and should be over on December 26, 1920. It is considered, however, that it will not finish on that date, but that the depots at any rate will be completed.

Equipment.

The quarries for the stone used are at Benzu, 7½ kilometres from the port. They are connected with the port by a railway of one metre gauge and a total extent of over 14 kilometres. The rolling stock consists of six locomotives and 113 wagons. The plant for extracting stone consists of a compressed air perforator, six electric and three steam cranes of an average power of 100 tons. The employees number about 400. The electrical works belong to the port works. They are situated about four kilometres from Ceuta on the Benzu road. They furnish the motive power and lighting to the stone quarries, to the repair shops and port works. The force is 800 h.p., and they transmit a motive force at 4,400 volts. The machinery is composed of two Diesel engines, "a quatre temps" of 200 h.p. each, and a concentrated steam motor, Bellis-Morcom, of a surface condensation of 450 h.p ("condensacion de superficie de 450 h.p."). The staff consists of six persons.

For the discharging of the wagons two "titans," a sort of large horizontal crane, of English manufacture, are employed. One of these "titans" can unload twenty wagons, carrying ten tons, per hour. The hands employed on each "titan" are one mechanic and two men. Blocks of "hormigon" are used (a mixture of sand, lime, and cement, or "carbonilla," the proportions being, it is understood, three parts sand to one of lime and one of cement or "carbonilla"), The port works have a complete installation for making blocks of this material, but since the commencement of the war the manufacture has been stopped owing to the high prices of lime, cement, etc. At the commencement of the war the port works were obliged to transform their repair shops, as it was found to be impossible to get the spare parts necessary for the numerous pieces of machinery employed. These repair shops include at present:—(1) A foundry for casting new pieces; (2) a carpenter's shop for making the necessary models; (3) a complete modern outfit for effecting repairs and for finishing off the casts made in the foundry. In these shops a Diesel engine was cast and made recently for a 900-ton sailing vessel built at Ceuta. All the bollards, which weigh 1,200 kilos, were cast at the foundry. Stones transported from Benzu quarries to scene of work from September, 1910, to end of December, 1918, amounted to 2,847,000 tons. Total expenses from September, 1910, to December, 1918, have been 14,000,000 pesetas, of which 9,500,000 were spent before the war. While awaiting the construction of the goods depots, merchandise is deposited provisionally on the quay, and is preserved from damp by being placed on wooden chassis and from rain by tarpaulins.

SHIPPING INTELLIGENCE.

The Atlantic Transport Company, the Cunard Steamship Company, Messrs. Furness, Withy, and Co., and Frederick Leyland and Co., Ltd., announce that the additional 5 per cent. charged on all freight and charges made payable abroad in the United States by all steamers sailing on and after February 1, 1916, will no longer be collected.

Swedish Morocco Line.

The first steamer of the Swedish Morocco Line of Messrs. Sandström Stranne and Co., Ltd., leaves Gothenburg this month for Tangier, Casablanca, Mazagan, and Saffi. Swedish exporters have lost no time in taking advantage of this service, and it is reported that already applications have been received for more than half the space in the second steamer.

The Transatlantica Italiana line of Genoa has just decided to increase its capital from 30 million lire (£1,200,000) to 100 million lire (£4,000,000).

The R.M.S.P.'s War Work.

Many and varied tasks were carried out during the war by the Royal Mail Steam Packet Company's steamers. Some fourteen of its vessels were employed as troopships, while five steamers saw active service in what has been described as the most "glorious failure" in the annals of the Empire's history—the Dardanelles—two of them, the "Aragon" and the "Arcadian," being employed as naval and military headquarters. Unhappily these vessels were both sunk later with heavy loss of life while in troopship service in the Mediterranean. During the critical period of the spring of 1918, the company's vessels rendered great assistance in bringing over the American troops. Eight vessels were equipped as hospital ships, and of them the "Asturias" was torpedoed by a German submarine, 45 lives being lost.

Six steamers went out as armed merchant cruisers, and of them mention must be made of the "Arlanza," which was mined in the White Sea, and was blocked in the ice there for many months before she could be salved and brought home, and of the "Alcantara," which, in a deathless combat, sank the German raider "Greif." Of modest armament, and taken by surprise, the "Alcantara" fought her more heavily armed opponent until both vessels went down. Four steamers were sunk by German raiders early in the war, two of them by the notorious "Moewe," while five were torpedoed and sunk by German submarines. Many fights took place between the company's vessels and German submarines. The "Parana" and the "Carmarthenshire," among others, fought particularly brilliant engagements, in each case discomfiting the pursuing U-boats. The "Parana's" action lasted one hour and ten minutes, while in the case of the "Carmarthenshire" the submarine kept so far out of range that the gun's crew removed the stop from the elevating arc of their gun, thus enabling them to increase their range and score a hit. It is stated that it is practically certain that two of the company's mail steamers each succeeded in sending a German submarine to its doom.

Of the staff of the company, 3,098 joined the forces, and of this number 183 made the supreme sacrifice. Honours won by members of the staff include two O.B.E.'s, six D.S.O.'s, nine M.C.'s (one with bar), eight D.S.C.'s, one D.F.C., and five D.C.M.'s while there were 23 mentions in despatches.

ITALY AND THE NEAR EAST.

The Italian Minister of Transport has arranged a weekly service of ships from Taranto by Gallipoli, Corfu, Patras, Piræus, Rhodes and return, for the account of the State, through the Puglia Steamship Company, for passengers and freight.

The imports of matches into Algeria before the war rose to 335 metric tons valued at £8,400. During the first ten months of 1918 there were no imports of this commodity, and Algeria instead exported 283 tons of matches, valued at £51,066.

THE BONDHOLDERS' REPORT

Turkish Finances.

A feature of special interest in the report of the Council of Foreign Bondholders, which has just been issued, is the fresh light that is thrown on Turkey's financial position. We give below some extracts from the report.

Greece.

In 1917 the gross receipts from the revenues directly assigned to the bondholders under the arrangement of 1898 were 47,785,091 drachmæ, against 60,056,960 drachmæ in 1916, and the receipts from which the plus values are derived were 33,523,091 drachmæ as compared with 34,229,960 drachmæ. The total receipts of the International Financial Commission under all heads were 66,342,115 drachmæ in 1917, against 86,183,924 drachmæ in the previous year. The net amount available in 1917 for increase of interest and amortisation in 1918, including balance from the previous year, was 8,077,568 francs, against 8,414,735 francs in 1916, and out of this sum, as anticipated in the Council's last report, the distribution in 1918 by way of increased interest was 22 per cent. of the original interests to the first and 24 per cent. to the second and third groups, and, by way of increased sinking fund, 14 per cent. to the first and 12 per cent. to the second and third groups. In 1918 the receipts from which the plus values are derived amounted to 36.264,900 drachmæ, as compared with 33,523,091 drachmæ in 1917, and the distribution in 1919, by way of increased interest will be 26 per cent. of the original interest to each of the three groups, and, by way of increased sinking fund 14 per cent. of the original interest to Groups I. and III., and 16 per cent to Group II.

Turkey.

The Council are glad to report that in November last Sir Adam Block, the representative of the English and Dutch bondholders, was able to return to Constantinople and resume his duties as a member of the Council of Administration of the Ottoman Public Debt. The German and Austrian delegates left Constantinople at the end of last year. The Debt Council's report for the financial year 1915-16 was received in January, 1919, together with a draft of the report for 1916-17. From these documents it appears that the receipts of the Debt Administration in 1915-16 on account of the Unified Debt and the Lots Turcs were insufficient by £T138.692 to provide for the Debt Service. This deficiency was made good from the reserve fund, but repaid to it during the following year. As regards 1916 17, if the figures given in the draft report are substantially correct, there was a considerable improvement, and a surplus of nearly £T600 000 was anticipated. In the case of 1917-18 the accounts are not yet closed, but it was expected that owing to the higher prices of commodities and a larger yield from the stamp and tobacco revenues, there would be a surplus of approximately £T2,000,000. For 1918-19 a surplus of the same amount was anticipated.

According to information furnished to the Council it appears that during the war interest on the Unified Debt had been paid to subjects of the Central Powers, but the amount so paid, viz., £T380,514 (representing less than 6 per cent. of the total interest payable in the eight half-years from March, 1915, to September, 1918, inclusive), showed the smallness of the holding of Unified Debt in Germany and Austria. The amount during this same period remaining to be paid in Paris and London was £T5,500,885. During the war sinking fund operations had been practically suspended owing to the high quotation of Unified Bonds and Lots Turcs in Constantinople, due to the depreciation in the currency and the interruption of relations with France and England. Nearly all the funds collected by the debt council during the three years 1915-16, 1916-17, and 1917-18 on account of the Unified Debt and other loans whose revenues are administered by the Council, had been remitted to Germany and Austria. The total balances to the credit of the Debt Council in various banks in November, 1918, were stated to amount to about £T13.600,000 of which nearly £T6,000.000 had been invested in German Treasury Bills issued as security for the Turkish paper currency. The amount of paper money in circulation in Turkey was about £T160,000.000 and at the end of 1918 the Turkish gold pound was equivalent to between 450 and 500 piastres of paper money. From the foregoing it appears that while there has been collected by the Debt Council during the war sufficient funds to pay the holders of the Unified Debt, the position of exchange has rendered impossible any immediate distribution to them. The pre-war debt of Turkey was reckoned at about £T165.000.000. At the end of 1918 the total liabilities of the Government (exclusive of the Egyptian Tribute Loans) amounted, so far as can be estimated, to about £T530,000.000.

Tables included in the report show an estimate of the general debt of Turkey at August 31, 1918, and of the amount outstanding, the gross and net receipts from the Ceded Revenues for 1915-16, 1916-17, and the provisional total for 1917-18, and the balances to the credit of the Ottoman Public Debt on November 25, 1918. The general debt is estimated at £T311,034,831 and the amount outstanding at £T305,173,836, including Turkish paper money in circulation November 30, 1918, of the value of £T154.581.400, and a floating debt of £T116.385.463, comprised of old floating debt £T5,000.000, military requisitions (law July 14, 1914) £T25.000.000, advance from Germany in gold £T8.689,094, advance from Germany in gold for first paper money issue £T4.409,415, advance from Germany in silver £T2,321,273, advance from Germany in Turkish pounds £T16,560 774, advance from Germany in marks £T22,237,637, advance from Austria-Hungary in gold £T57,546, advance from Austria-Hungary in gold for first paper money issue £2,109,724, and military material £T30,000,000. The item for military requisitions, it is pointed out, does not include indemnities due to foreign companies, railways, ports, mines, foreign subjects, private individuals, etc., which it is estimated may reach £T55,000,000.

The total net receipts of the ceded revenues are estimated for 1917-18 at £T4,050,806 as against £T2,755,446 for 1916-17 (which period owing to the introduction of the Gregorian calendar contained only 352 instead of 365 days), and £T2,018,683 for 1915-16. Details for 1917-18 are not available. Finally the table of bank balances to the credit of the Ottoman Public Debt on the date mentioned shows :—At current account in Constantinople £T1,365,236, in Berlin £T400,131, in Vienna £T122,812, in Paris, London, Rome, and Milan £T196,123—£T2,084,302; deposits at one month's notice: in Berlin £2,098,345; deposits withdrawable at fixed dates between January 2 and March 18, 1919: in Constantinople £T1,741,326, in Vienna £T568,425—£T2,309,751; deposits withdrawable after peace: in Constantinople (three months after peace) £T200,000; in Berlin (six months after peace) £T1,150,000—£T1,350,000, making a total of £T7,842.398; and lastly deposits of German Treasury Bonds maturing between August, 1918, and May, 1919—in Berlin £T5,752,500.

INDUSTRIES IN MALTA.

(From Our Own Correspondent.)

Malta, March 19.

Interest in Malta is now centred on the annual question of the establishment of local industries; just now it is the cultivation and production of tobacco which is attracting special attention. Whether the suggestion matures or not will remain to be seen. The idea is not a new one for *N. rustica* was once extensively cultivated in the island, and furnished the tobacco from which was made the famous snuff (tabac ta Sant Antrim), large quantities of which were imported by France and Italy; whilst Havana and Virginia were cultivated some years ago with encouraging results. At the present time the "weed" is grown in a small way in both Malta and Gozo, and on a rather important scale at Krendi. The Agricultural Department points out that the soil of the island is particularly suitable for the chief varieties of tobacco. But apathy is a decided characteristic of the Maltese, and it is to be feared that nothing will come of the suggestion, excellent though it is, and badly as local industries are required.

An acquisition of oil-bearing land has been made by the New Crosby Oilfields, Limited, at Messila, in Algeria, and development work will commence at once.

Mr. Blunt, manager of the Anglo-Egyptian Bank at Alexandria, has resigned, and Mr. C. W. Green, sub-manager, has been appointed to succeed him.

ENGINEERING NOTES.

Accurate Information Required.

In view of the systematic efforts which Continental and American engineering firms are making to secure the largest possible share of the engineering trade in the Near East, the suggestion for more accurate information regarding the real conditions and trade prospects in those markets is not inopportune. Inaccuracies on such points are not only misleading but often disheartening to practical manufacturers and merchants who are attempting to enter a new market. Accurate information as to the conditions in the Near East; the immediate prospects of trade there, the definite openings for the disposal of machinery, or engineering or mining enterprises, is most essential now for the promotion of British trade in those markets. This information will encourage the activities of British manufacturers and contractors who contemplate business in those regions; whilst conflicting information, based mostly on pre-war conditions, or gathered from irresponsible sources, not only fail to convince the well informed British manufacturer, but tend to discourage even preliminary attempts to work in such, apparently, "undeveloped" markets! In the meantime the better informed Continental and American manufacturers, who were almost at the heels of the conquering army, are capturing the German trade in the Near East and are obtaining certain large contracts, which might have been reserved for British firms. With more adequate and reliable information at hand, British manufacturers should be able to hold their own against any competition in the Near Eastern markets as they do in others. But the information must be furnished in time, or else in the circumstances it may be of little or no use.

Salonika's Industries.

In a recent report on the industrial establishments in Greece, it was stated with reference to the mechanical industries in the province of Salonika that the number of these was "unimpressive," and probably for that reason no figures were given. Yet Salonika itself is considered an industrial centre in the Near East, and is characterised as such in the British Consular reports. In the town of Salonika there are eight soap factories, one flour mill, two iron foundries, two ice factories, two breweries, three cotton-gin factories, one tobacco factory, electric works, gas works, one tannery, one macaroni factory, three wool-spinning factories, two brick-making factories, two slab and tile factories, and various other workshops. Then there is the town of Vodena, with about 13,000 inhabitants, which possesses two cotton-spinning mills, one tannery, one cement factory, and several workshops for silk, red cayenne, etc. The splendid waterfalls of Vodena produce the motive power for these factories; and there are already several schemes and proposals for utilising these falls by modern methods, with a view to producing greater power, thus enabling the establishment of more factories and a large electric station. Then Drama, with over 12,000 inhabitants, has two rice-mills, eight sesame-oil mills, two tanneries, and two sawing mills. Niaussa, with 11,000 inhabitants, has three cotton-spinning mills and one worsted goods factory. Verria, which is near the river Bistritza, and has 14,000 inhabitants, possesses two cotton-spinning mills, five sawing mills, twenty-six flour mills, two rice mills, three weaving factories, eleven wine and cognac factories, nine sesame-oil factories, and other small-power industries. Kavalla, with 24,000 inhabitants, the centre for the export of tobacco, has eight liqueur factories, one macaroni factory, five soap-making factories, one ice-making factory, and other smaller-power industries. Considering that the province of Salonika has not had yet the opportunity of developing its industries in accordance with the Greek Government's plans, it is not correct to characterise the above factories as "unimpressive" in number.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

After many months of depression, there are now signs of an improved state of affairs in the Lancashire cotton industry. During the past week demand has been on a distinctly larger scale, and business of an encouraging character has been done. Some sections have not yet participated in the bigger turnover, but, owing to freer operations and the hardening tendency in American cotton, yarn and cloth quotations have gone against buyers. A good deal of interest has been taken in the official announcement relating to Egyptian cotton. It is said that the scale of prices for the various types will not be altered during the current season, ending on July 31 next. Users of Egyptian cotton are very harassed by the uncertain outlook relating to prices. Quotations in Egyptian yarns have been firmer than for some time back, with rather more inquiry. Very little has been done in piece goods for Egypt. Some reports from the other side are a little better, but it is feared that the disturbances have not yet come to an end, and in the circumstances trade on a free scale cannot be expected. A fair amount of business, however, has been about for the outlets on the Levant. A substantial turnover has transpired in light fabrics such as dhooties and jaconets for India, and we seem to be near the point when increased activity will take place in grey shirtings for Calcutta. A healthy demand has again come through for China, and several manufacturers have been enabled to extend their engagements, especially producers of fancies. A little more inquiry has been about for South America. Manufacturers are slow to start more machinery, but here and there a few more looms are now running than a week or two back. Extensive buying has occurred in some American yarns at hardening rates. Spinners believe that they have turned the corner towards better times. Inquiry on broader lines has been met with in yarns suitable for India and the Near East.

SMYRNA-AIDIN RAILWAY.

The directors of the Ottoman Railway from Smyrna to Aidin announce that a telegram has been received from Smyrna since the half-yearly meeting of March 28, which states that the railway was taken over from the Turkish Government on February 1, and that it is now being operated under a British officer commissioned by headquarters, Constantinople. The whole line is open for traffic, although locomotives, etc., are in bad condition. There is a considerable amount of goods awaiting transport and the return of normal conditions.

SERBIAN MINES AND FORESTS.

H.M. Minister at Belgrade states that the new Serbian Minister of Mines and Forestry is taking steps to place under the central control of the Ministry at Belgrade the various administrative departments of a kindred nature which have, up to now, been working at Zagreb, Sarajevo, Ljublyana, Splot, and Novisad. Until the new organisation is completed the administration of mines and forests is to be carried out by Special Commissioners appointed from Belgrade.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated April 3:—

Unsettled weather in North-Western India. Light rain in Punjab and parts of Bihar and Orissa and Central Provinces. General rain round head of bay. Rain wanted in Assam and Bengal.

Bombay cotton market irregular. Fully good broach, April-May delivery, quoted highest 503 rupees, lowest 345 rupees. Piece-goods market improving. Calcutta jute market firmer, sellers asking 11 rupees 8 annas to 12 rupees. Jat fours gunny market slight improvement. Mills agreement for four days from working extended into September. Rice market, no change.

Dated March 27.

Local showers in the Punjab, Burma, Central Provinces, Bihar and Orissa, Bengal. (This may possibly help the fodder situation.) Elsewhere rain much needed.

Wheat in the Punjab is average to good. (The area under wheat in the Punjab is 3,500,000 acres less than last year.) Better tone is prevailing in the Bombay cotton market, fully good broach being quoted at Rs.487. Piece goods market weaker. In Calcutta gunnies quiet, jute firm, rice unchanged.

The export of pearls has been permitted to all except enemy countries and a few adjoining enemy countries.

On March 20 £120,000 telegraphic transfers on London (Calcutta £20,000 and Bombay £100,000) were applied for and allotted.

EXPORTS TO MOROCCO.

H.M. Vice-Consul at Tetuan states that exporters to Morocco should avoid transhipment at Gibraltar. He points out that fragile goods, such as glassware, earthenware, etc., arrive in a broken condition, due to rough handling during transhipment, and this quite apart from the loss of time and often the loss of goods in transit.

The president of the Board of Trade has decided to change the title of the War Trade Department to the Department of Export Restrictions.

SALE BY AUCTION.

THE CYPRIAN MINING COMPANY, LTD.

NOTICE IS HEREBY GIVEN by the Receiver appointed under Cyprus Law No. 14 of 1917 that the business and all the property movable and immovable and all other rights and assets of the above mentioned enemy company which is engaged in the production of Asbestos at Amiandos, Troodos, Cyprus, will be sold by public auction at the Government Offices, Nicosia, Cyprus, on Tuesday, May 6th, 1919, at 12 noon.

The assets of the Company consist, inter alia, of building and plant at Amiandos, and approximately 204 acres of land. The Company also holds two mining leases, each dated November 1st, 1908 (amended by two deeds each dated December 6th, 1915), by which the Government granted to the Company the exclusive right for the period of 50 years to mine asbestos within a portion of the Troodos forest in consideration of the royalties therein prescribed. This period was extended to 99 years by an indenture dated 27th June, 1911. Copies may be inspected at the Office of the Receiver, Government Offices, Nicosia, Cyprus, or the Crown Agents for the Colonies, Millbank, London, S.W.1.

The assets mentioned above, and the benefit of the said deeds, will be transferred by the Receiver to the purchaser freed and discharged from any right or liability of the Company.

The Sale will be subject to condition that the purchaser shall be a British subject, and that the property shall be kept under British control.

COMPANY MEETING.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

A Year of Steady Progress.

The sixty-fifth ordinary general meeting of the shareholders of this company was held at the bank premises, Bishopsgate, London, on April 9, the chairman, Sir Montagu Cornish Turner, presiding.

The Chairman said:—The report and statement of accounts which we have the pleasure to submit to you to-day will, I venture to think, meet with your full appreciation and approval. Remarks have been made that our net results show very little improvement on those of the previous year. That is correct, but the fact must not be overlooked that the amount paid for excess profits tax tends to increase, that our staff has increased, and that our charges on general account do not diminish. As you can understand, establishment expenses are bound to increase even in normal times with an expanding business such as ours. At our last meeting one of the shareholders very truthfully remarked that the dividend paid was not out of proportion when the fact was taken into account that our reserve fund so largely exceeded the capital, and that in paying a reasonable dividend we only give back to shareholders the interest on the profits left undrawn by them in previous years. I wish to emphasise this point because in some quarters comments are made on so-called excessively high dividends paid by banks. These dividends have been won by careful and justifiable husbanding of resources in the past. As you are aware, the first payment on account of the new issue of shares was made on March 1 last, and I am glad to say that the new shares already stand at a substantial premium, and that this premium has increased since the issue of our report—a very satisfactory judgment on the part of the Stock Exchange and the public on the financial condition of this bank.

Future Trade Prospects.

Now that labour troubles in this country seem to be in course of settlement we may reasonably expect an increased output of all commodities, in spite of shorter hours. With peace assured and confidence re-established, we trust that business with the East and Far East will recommence with renewed vigour, and with Capital and Labour working for the common good this country should maintain its position in the world of commerce, in spite of active and energetic competition on the part of our friends in America and Japan. It is patent to all that unless this country is prepared to develop new and increased energy and enterprise—unless we can have the output of commodities required by other countries supplied promptly and at moderate prices—we cannot hope to hold our own in any part of the world trade. With the vast increase of wealth and of the mercantile marine in America and Japan, and with the mighty energy displayed by the industrial classes in those countries, we must recognise that we shall have to face a competition more active, more developed, more widespread, more highly organised than we have ever had to face before. We can meet this competition fully and without fear provided Capital and Labour are united in their efforts and all Government restrictions are withdrawn. At the moment our trade in this country and in the East is much handicapped by the restricted supply of tonnage, and we cannot hope for a very marked improvement until the transport of troops to their homes has been brought to an end. In spite of our domestic troubles in this country, I cannot help feeling that future trade prospects are good, and as a natural sequence business in the banking world should not, so far as we can see, fail to benefit by a return to normal conditions. Competition will have to be faced on a much wider scale than hitherto experienced, but we can regard it with equanimity.

As regards our staff, I gave last year the list of those who had joined his Majesty's Forces up to that date, and I now wish to record the fact that out of our total staff 199 men actually served during the war. Of these, ninety-two received commissions, to eighteen were awarded various honours in the Navy and Army, and thirty-six brave men gave up their lives for their country—a record of which this bank may well be proud. I am glad to say that several of those serving in the forces have been demobilised in the past three months, and we have been able to send out to the East a number of those who were training for an Eastern career previous to their joining up at the commencement of the war. The men in nearly every case seemed delighted to return to civil life, and were quite prepared to sail for the East without delay, and so relieve their fellow workers, whose leave has been long overdue. I would take this opportunity of publicly thanking those members of our staff in the East and Far East who have bravely held on to their posts out of loyalty to the bank, despite the fact that in many cases their health suffered. I would also like to assure them that the directors and managers have done their utmost to help in the way of providing relief to the staff, but it has been quite impossible to obtain the men who were quite fitted for the work required of them in the East. I need hardly say that both the home and the foreign staff have received financial help to assist in meeting the increased cost of living. That extra cost of living has been experienced not only at home, but, I might say, universally in the world.

India's Absorption of Silver.

The great demand for and the short supply of bar silver has been one of the features of the past twelve months. In his financial statement, Sir James Meston, the present Financial Member in India, remarked on the fact that no less than 120 crores of rupees had been absorbed in India during the period April, 1915, to date, and had it not been for the arrangements made with the United States of America (thanks to the able advocacy of the Lord Chief Justice, Lord Reading, assisted by Sir James Brunyate), the shortage of silver coinage in India would, at one time, have reached a most serious point. The fact is that not only in India, but in other countries, silver coinage has been hoarded to a very considerable extent, and this has brought about the problem of how to supply current coinage in silver-using countries with the acknowledged shortage of supply of bar silver in the world. It is interesting to note that in India small notes of the value of 1 rupee and 2½ rupees each have been issued with some success, and up to the present time the value of one rupee notes in circulation amounts to nine crores and of 2½ rupee notes to over two crores. I would suggest the possibility that notes of low value such as 2s. 6d. and 5s. might be successfully issued and used in this country.

The Accounts.

Turning to the figures of the accounts as now presented, we have, I think, every reason to congratulate ourselves on the steady progress shown under all headings, and in order that the true comparison may be arrived at, I would take this opportunity of drawing your attention to the explanations I made when we last met in April, 1918. I then stated that, owing to serious delays in arrival of the mails, we had to resort to our old method of grouping "en route" items under a separate heading, with the result that the figures against our bills of exchange and Treasury Bills had to be entered as £4,337,903 5s. 1d., instead of £14,377,903 5s. 1d., and those against bills payable as £583,360 16s 8d., instead of £4,173,360 16s. 8d. Having this in view, it will be seen that our totals now aggregate £47,604,548 2s. 1d., as against £39,716,432 12s. 1d. on December 31. Our current accounts now stand at £20,942,723 18s. 4d., an increase of £1,593,378 3s. 8d. over 1917 closing figures, whilst our fixed deposits show an increase of £4,141,749 6s. 7d. over our previous yearly figures, which is a most gratifying feature of the continued confidence reposed in us by our home and eastern friends. Healthy increases are also shown in the totals outstanding under the heading of bills payable—viz., £913,801 11s. 2d.

Turning to the other side of the account, our cash position would appear to be down against our 1917 figures by £2,199,084, but this is accounted for by the fact that we have made full use of the opportunity presented by the medium of Treasury Bills. Our bills of exchange outstanding show an increase of £7,866,791 13s. 3d., which fairly reflects the progress of export trade in the respective spheres in which we operate. Bills discounted and loans also show a healthy increase of £2,491,547. Turning to our profit and loss account, our net profits for the past twelve months were £409,221 7s. 10d., against £402,795 13s. 1d., and the result, I need hardly say, would have been much larger had it not been for the very large impost we had to meet on account of excess profits duty. We purpose placing £100,000 to reserve, thus raising that fund to £2,100,000, to add £25,000 to officers' superannuation fund, and to write £40,000 off bank premises account, and we recommend a final dividend at the rate of 14 per cent. per annum, together with a bonus of 25s. per share, equal to 20½ per cent. per annum, free of income tax, and to carry forward £168,482 11s. 1d., against £167,261 3s. 3d. for 1917. I feel satisfied that you will consider this a very satisfactory record, and one which reflects great credit on the management and staff at home and abroad. He then proposed that the report and balance-sheet be approved. This was seconded, and, after replying to two or three remarks from the shareholders, this was unanimously agreed to.

The chairman then moved that a final dividend at the rate of 14 per cent. per annum, together with a bonus of 25s. per share, making 20½ per cent. per annum for the whole year free of income tax, be declared, which, having been seconded, was unanimously passed.

Sir Montagu C. Turner and Mr. Lewis Alexander Wallace, directors, retiring by rotation, were re-elected, as were also the auditors, and votes of thanks to the members of the staff at home and abroad, of whom the chairman spoke very highly for the efficient manner in which they had carried out their duties under the exceptional circumstances of recent years, and to the chairman for presiding, closed the proceedings.

VERDE ANTICO MARBLE.

In regard to the paragraph in Engineering Notes in THE NEAR EAST of April 3 on "Undeveloped Marble Quarries," Mr. Ross Smith, managing director of Grecian Marbles (Marmor), Ltd., writes as follows:—Verde Antico marble is probably the most beautiful of all green marbles; very fine samples are seen in many of the world's finest cathedrals, churches, palaces, and of late years commercial institutions have also secured considerable quantities. It may interest your readers to know that we have quarries a few miles from Larissa, which have been worked for many years, except during the period of the war. These quarries, which were rediscovered by the late Mr. W. Brindley, F.R.G.S., were worked by the ancients. Within a few weeks work will again be renewed, and a fair quantity will be ready for the market at an early date."

KHEDIVIAL MAIL S.S. COMPANY, LTD.—Holders of Ordinary shares who desire to include their shares in those to be offered at £6 per share on the terms of the Circular to Shareholders of 17th March, 1919, should send their authority forthwith to Mr. Hugh Reeves, 42, Old Broad Street, London, E.C.

The signatories to the circular wish to notify that as every effort has been made to communicate direct with the Holders of Bearer Shares they cannot undertake to include in their list any shares which are offered after 17th April.

NATIONAL BANK OF EGYPT.—At the Ordinary General Meeting of the National Bank of Egypt, held in Cairo on the 24th March, 1919, a DIVIDEND of £1 per Share was DECLARED PAYABLE on the 27th March, 1919, for the year ended 31st December, 1918. Coupon No. 25 will therefore be payable forthwith.

Forms for listing coupons may be obtained at the National Bank of Egypt, 6 and 7, King William Street, London, E.C. 4.

DIRECTORS' REPORT.

(Presented at the Sixty-fifth Ordinary General Meeting, 9th April, 1919.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended December 31st last.

These show a net profit, after providing for all bad and doubtful debts, of £576,482 11s. 1d., inclusive of £167,261 3s. 3d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £84,000. The amount now available is therefore £492,482 11s. 1d., and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of Twenty-five Shillings per share, making twenty and a-quarter per cent. per annum for the whole year, free of Income Tax; to add £100,000 to the Reserve Fund, which will then stand at £2,100,000; to add £25,000 to the Officers' Superannuation Fund; to write off Premises Account £40,000, and to carry forward the balance of £168,482 11s. 1d.

Sir Montagu Cornish Turner and Mr. Lewis Alexander Wallace, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 16th April.

By order of the Court,
A. S. HEWETT, *Secretary.*

COMPANY MEETINGS.

NATIONAL BANK OF INDIA.

An Excellent Balance Sheet.

The ordinary general meeting of the shareholders of the National Bank of India, Limited, was held on April 7 at the Wesleyan Hall, Bishopsgate, E.C., Mr. Robert Campbell (the chairman) presiding.

The General Manager (Mr. Chalmers) read the notice convening the meeting and the auditors' report.

The Chairman said: Ladies and gentlemen, we meet to-day under better auspices than during the last four years when we were under the influence of the great war with all its possibilities and uncertainties. Among other reasons for thankfulness we are glad that the cessation of hostilities is allowing the return to us of a good many of the members of our staff who had volunteered for service during the war. Although we willingly gave every facility to those of our staff who desired to join the Forces, we have nevertheless suffered a good deal of inconvenience from this cause, not so much so in the London office, although the strain was pretty severe there also, but we were able to a large extent to fill the vacancies by engaging very capable lady clerks, whose valuable services I now desire to acknowledge. It was at our Eastern branches that the pinch was chiefly felt. We had great difficulty in keeping up the necessary supply of trained officers for the East, and our furlough arrangements have been virtually suspended for the last four years, with the result that our men have in many cases been kept out for eight or nine years without a change, to the detriment both of their health and their efficiency. These difficulties have been met with the utmost loyalty and devotion on the part of the whole staff, for whom no words of praise and appreciation can be too strong. As demobilisation proceeds we hope soon to get back to normal conditions, but the melancholy part remains that many of our best young men will never return. Of the 187 members of our staff who joined the service from first to last no fewer than 37 have made the supreme sacrifice It is sad to think that these fine young men, each one with a promising future before him, have been cut off in their prime, and our sincere sympathy is due to their sorrowing relatives. We felt it our duty to have a memorial service to their memory, which was held on February 15 in the church of St. Helen and St. Martin Outwich. The Bishop of Willesden officiated and delivered an admirable address, and the whole service was most impressive. We are also having a mural tablet placed in the London office, on which will be inscribed the thirty-seven names, and when this is ready we propose to have it photographed and to send a copy to the family or the nearest relative of each one. I am sure this will be highly appreciated by their friends, and I trust that for many years to come it may serve to perpetuate the memory of our comrades who have fallen in the great war.

At our extraordinary general meeting on January 21 last, I explained the reasons which made an increase in our capital desirable, and the steps we proposed to take for that purpose. I shall therefore not repeat them here. I shall only say that payment for the new shares is coming in quite satisfactorily, and in our next half-yearly report we expect to be able to say that they have been fully taken up, with the result of an addition of £500,000 to our paid-up capital and £300 000 to our reserve fund. This will immensely strengthen the bank's position and increase the security we are able to offer to depositors and the public.

Amalgamation Negotiations.

You are all aware that last year there was much discussion in financial circles on the question of bank amalgamations, and that some very important schemes of that character were carried through with the consent of his Majesty's Treasury. I think you must also have heard, at least, it was common knowledge in the city, that this question was at one time not unlikely to come very closely home to ourselves. While these movements were in progress and all sorts of rumours were in the air, we were approached to know if we would be open to consider an arrangement with a leading London bank, a bank of the very highest standing, on the basis of a purchase of our shares at a price to be agreed upon. The idea was that the National Bank of India should retain its identity under the same board of directors and the same management, but that two of the purchasing bank's directors should have seats on the National Bank of India board, and two of the latter's directors would similarly join the board of the former. This was too important a proposal to be turned down without full consideration, and we replied that without committing ourselves to anything we were open to hear what price they were prepared to offer for our shares, so that if we considered it quite adequate we might submit it to a special meeting of our shareholders to accept or reject as they might decide. The result was some protracted negotiations, resulting in their making an offer which we considered we should be justified in submitting to you. I do not feel at liberty to disclose the price offered without the consent of the other side, but I may say that the report of these negotiations sent the price of our shares up to £62 10s. This was the highest price they touched, but that figure is considerably below the price we were offered.

We were accordingly prepared to call a meeting to submit the offer to our shareholders to accept or reject, but before we got that length the Treasury intervened and vetoed the transaction. The proposal therefore fell to the ground, and your directors were freed from all responsibility. Here I am bound to say that when it became known that the scheme had fallen through there was a general feeling of satisfaction on the part of many of the bank's best customers that the National Bank of India was not to be absorbed or to become merely the adjunct of a powerful London institution, and we received many expressions of feeling to that effect—a welcome testimony to the cordial relations subsisting between the bank and its customers. We were also not without indication that many of our largest shareholders also shared that feeling and were not displeased to know that the National Bank of India was to continue on the old lines. I have only to add that the negotiations between the two banks were conducted on both sides with the utmost courtesy and goodwill, and it is a pleasure to know that although no business resulted the friendly feeling still remains.

The Accounts.

With regard to the accounts, I am sure you will agree that the balance-sheet now in your hands is again a satisfactory one, any important changes being in the right direction. Our deposits now amount to £27,517,000, an increase of £2,832,000 as compared with the previous year, and our discounts and advances together show an increase of £3,973,000, which means that our resources were fully employed, the result of which is also reflected in our profit and loss account. The net profit for the year is £403,635, as compared with £353,139, an increase of £50,496. These figures I think reflect the utmost credit on the management both at home and abroad, and, indeed, on the whole staff. While maintaining our dividend of 20 per cent. for the year free of income-tax, and making other usual appropriations, we are enabled to add £200,000 to the reserve fund, as compared with £100,000 in 1917, and we carry forward the substantial balance of £123,465, as against £139,828 brought in. This large addition to the reserve fund is especially welcome and confirms what I indicated at our meeting in January when I expressed my confidence that when the accounts to December 31 were made up we should be able to place this large sum to reserve and still carry forward a good balance. The £200,000 added to the £300,000 premium on the new shares brings the addition to the fund up to £500,000, raising it to £1,850,000, while our paid-up capital will be £1,500,000.

As regards the current year, the prospects so far are fairly good. India's trade has been very prosperous of late, and her chief industries have been doing well. Unfortunately, there has been scarcity and even famine in some districts owing to the partial failure of the monsoon, but the Government has the situation well in hand, and the usual relief measures are in full operation. I shall now move the adoption of the report, which I shall ask Mr. Williamson to second, and there will then be an opportunity for any questions or remarks. The resolution I move is: "That the report of the directors and statement of accounts for the year ended December 31, 1918, be received and adopted; and that a dividend for the six months to December 31, 1918, at the rate of 20 per cent. per annum, be paid on the shares of the company registered at this date, the same to be payable, free of income-tax, on and after April 8, 1919."

The deputy chairman, Mr. Robert Williamson, seconded the resolution, and there being no remarks from shareholders, it was put to the meeting and carried unanimously.

On the motion of the chairman, seconded by Mr. Williamson, Mr. Robert Miller was re-elected a director of the bank.

The chairman next proposed the re-election as a director of Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., who, he stated, was away on Government business in Mesopotamia, but they were expecting him back in a week or two. Mr. J. N. Stuart seconded the resolution, which was unanimously carried.

The chairman then proposed the re-election of Mr. Alfred Simson as a director. The resolution was seconded by Mr. Robert Miller and unanimously agreed to.

On the motion of Mr. J. R. Hatherly, seconded by Mr. F. Wicks, Messrs. Cooper Brothers and Co. were re-elected auditors for the ensuing year, and Messrs. W. A. Browne and Co. were also re-elected auditors, on the motion of Mr. C. E. Thomson, seconded by Mr. E. Pinhey.

Mr. J. Irwin-Davis said he had much pleasure in proposing the following resolution:—"That a vote of thanks be given to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year." He remarked that their honoured chairman, through illness, was unable to preside at the last annual meeting, and he was sure they were all very pleased indeed to see him looking so well that day and occupying his usual place. With such a report as they had in their hands he need not say anything as regarded the success of the efforts of the chairman and his co-directors during the past year. That report spoke very eloquently, and he had very much pleasure in asking them to pass the resolution.

Mr. Russell B. Reid seconded the resolution, which was carried unanimously.

The Chairman: I desire on behalf of my colleagues and myself to return you our sincere thanks for the cordial manner in which the last resolution has been received, and I only hope that when we meet again next year we shall have an equally good balance-sheet to place before you.

Mr. H. H. Nelson said that he had grown considerably older since he first attended these meetings, and proposed the resolution which he had to repeat to-day. He was almost inclined to think that he ought to get a gramophone and make his speech into it, because every year he had much the same thing to say in proposing a vote of thanks to the general manager and the staff for a record of splendid work and for the excellent manner in which they had performed their duties in the service of the bank in circumstances which recently had been by no means easy, and which promised in the future to tax the great ability which they were fortunate in having among their managers in this institution. Their bank was well placed in India, and had an excellent reputation there; its representatives were always popular, and were well looked up to by all those with whom they did business. He then moved a hearty vote of thanks to the general manager and the staff for their valuable services to the bank during the past year.

Colonel A. Fitzgerald Watt, D.S.O., said that he had had the pleasure of attending the annual general meeting of the National Bank of India for an unbroken succession of many years—perhaps not quite so many as the proposer of the resolution, but still a great many years—and he always left the meetings with an ever-increasing sense of the great debt of gratitude the shareholders owed to the general manager and the staff for their indefatigable efforts on their behalf. It was with feelings of congratulation and relief that they met on that occasion with the

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance-sheet with the Books in London and the certified Returns from the Branches. We have obtained all the information and explanations we have required. In our opinion such Balance-sheet is full and fair, containing the particulars required by the Regulations of the Company, and is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

dreadful shadow of the past four years removed, and in the hope of an early return to the blessings of peace. But this happy state of affairs could not blind them to the great difficulties which had been encountered and overcome during the war, not only on the field of battle but also in the world of commerce, and it was due to the magnificent efforts which had been made in both those spheres that we were now rejoicing in so thorough and complete a victory. The chairman, but for his characteristic modesty, could have told them a great deal more of the many difficulties with which the management and staff of this bank had had to contend during the past four years. The strain of working under very trying and unnatural conditions, with a sorely depleted staff, the difficulties of communication between this country and India, and the great uncertainty of the financial situation since the outbreak of the war, were only some of their troubles. He thought he might safely say that with such a balance-sheet before them they had ample and eloquent proof of the triumphant manner in which all these obstacles had been overcome. With so able a general manager and so excellent and loyal a staff, the shareholders could face with absolute confidence the future that lay before the bank. It was entering with increased capital and powers into the new era of the world's commercial history which had been brought about by the war, and he was sure they might be perfectly satisfied that their interests would be safeguarded in the future as they had been in the past, and that the National Bank of India would continue to maintain the high position it held among the great banking institutions of this country. He had much pleasure in seconding the proposition that a very hearty vote of thanks should be accorded to the general manager and staff for their valuable services to the bank during the past year.

The Chairman: I have much pleasure in putting that resolution to the meeting. We may congratulate ourselves on possessing an excellent staff. The last four years have been a very severe trial of its efficiency, but one and all have risen to the occasion splendidly, and I am sure it will be very gratifying to the whole staff to know that their services are so highly appreciated by the shareholders.

The resolution was cordially adopted.

The General Manager: On behalf of my colleagues I beg to thank you, gentlemen, for your very kind appreciation of our services. I shall have much pleasure in informing the home and foreign staff of the vote of thanks you have just passed. I can only say that we have done our best, and that we shall continue to do so in the future.

The proceedings then terminated..

IMPERIAL BANK OF PERSIA

Services during the War.

The twenty-ninth ordinary general meeting of the members of the Imperial Bank of Persia was held on April 7, at the Cannon Street Hotel, under the presidency of Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman.

The Manager and Secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen, you have been told in the report that since we last met, Mr. Charles Greenway, the chairman of the Anglo-Persian Oil Company, has felt compelled, owing to the pressure of work elsewhere, to resign his seat on the board. Mr. Greenway's knowledge of Persia, his great ability and wide business experience, made him a most valuable colleague in the administration of the affairs of the bank, and I feel sure you will all join with us in heartily regretting his resignation. As his successor we have elected to the board Mr. E. A. Chettle, who is a partner in the firm of Messrs R. G. Shaw and Co. and a director of Messrs. Strick, Scott, and Co., the agents in Persia of the Anglo-Persian Oil Company, and I am confident we shall derive great assistance from his co-operation.

As you know, Persia and the staff of this bank in Persia, have had their small share in the great struggle. The Persian border districts have been four times invaded, and have suffered much from pillage and rapine at the hands of the Turks. Our officers also have on many occasions had to assist in the protection and to provide for the safety of our branches against armed attack. Moreover, from the beginning of the war it has been the duty and privilege of the bank to provide the very large financial requirements of the British and Russian troops who have been sent from time to time to protect the country. I am glad to say that on no occasion has this bank failed to meet the demands made upon it by the British, Russian, and Indian Governments, and this very creditable result, of which I think we may reasonably be proud, has been due in the main to the great ability and resource and the constant vigilance displayed by our chief manager, Mr. Wood, and his branch managers. You will be glad to know that the value of their work has been recognised by the Government.

In Persia itself we could hardly expect the year to pass without some exciting incidents. Perhaps the most important was the withdrawal of the Russian troops in the summer and the gradual substitution of British forces from Mesopotamia on the line from Kermanshah, through Hamadan, to the Caspian at Enzeli, as a protection against an advance of the Turks. Early in March, before the arrival of the British troops, a party of Persian malcontents calling themselves the Jungalees, stirred up, I believe, by Bolshevist propaganda, attacked Resht, and captured the British Consul and our bank manager, Mr. Oakshott. After a period of imprisonment in the rebel camp Mr. Oakshott was released, but later on a second attack was made. There was some sharp fighting around the bank; many of our books and papers were destroyed, and our treasury was only saved by the timely arrival of some Gurkha troops. The branch was not reopened until last February. I may mention that Mr. Oakshott was asked by the British Minister to act for a time as Vice-Consul, and the British Minister has written to our chief manager stating that he greatly appreciates the valuable services Mr. Oakshott has rendered.

In June the Turks for the second time attacked and occupied Tabriz, and our branch there was closed for some months, but our books and treasury were safely removed in time. In the same months disturbances arose at Shiraz, the headquarters of General Sir Percy Sykes and the Persian gendarmerie, who are known as the South Persian Rifles. I am very glad to see that Sir Percy Sykes is present with us to-day. Later on the unrest culminated in the investment of the town and cantonment by a large force of rebel tribesmen led by Sowlat ud Dowlah, the chief of the Kashgais. All communication with Shiraz was cut off for more than two months. Sir Percy Sykes has spoken to me in the warmest terms of the services rendered by our manager, Mr. Ferguson, and also by Mrs. Ferguson, during the difficult and anxious time of the investment. The only other event I need mention is that during the year the Indian Government pushed on the Quetta-Nushki railway across the Baluch desert to the borders of Seistan, so that the eastern frontier of Persia has now direct railway communication with India. This can hardly fail to have a favourable effect in the future on our trade with Persia and to increase the importance of our branch in Seistan.

New Branches.

It is interesting to note here that Persia is one of the countries which will end the war without an inflated currency. Apart from the ordinary note issue of the bank, which has, in fact, fallen off in amount since 1914, the Persian Government has made no attempt to increase the paper currency. During the year we opened a branch of the bank at Bunder Abbas, which has become the chief port of supply for the Southern Persian Rifles. We also obtained permission from the military and political authorities to open an agency at Baghdad. The chief avenues for British trade with Persia will be in future the new railway to Seistan, the ports of Bunder Abbas, Bushire, and Mohammerah, and the old trade route via Busreh and Baghdad to the Persian frontier at Kanikin, now also provided with a railway. With branches or agencies at all these places, the bank will be in a position to take full advantage of any developments that may follow the coming of peace.

Turning next to the accounts, I think in the circumstances the statement we present to you is one you may regard with much satisfaction. You will see that in the balance sheet the totals of our assets and liabilities show a marked increase over the figures of previous years—namely £7,716,747, as compared with £2,650,870 in 1916 and £4,350,536 in 1917. This is mainly owing to temporary expansion on account of the war and to the large business we have been doing on behalf of the British and Indian Governments connected with the military requirements. The profit and loss account calls for little remark, as the figures do not differ greatly from those of the previous year. We pay the same dividend as last year—namely, 8s. a share, free of tax—and carry forward £27,388 3s. 10d., as against £24,277 6s. 10d. brought in. I only desire, in conclusion, gentlemen, to bring to your notice the excellent work done by our staff, not only in the past year, but throughout the war, under the most difficult circumstances. I will now move the following resolution:—"That the report presented be adopted, that the accounts to September 20, 1918, as rendered, be accepted, and that a final dividend of 5s. per share, paid free of income tax, on December 30, 1918, be and is hereby confirmed."

Mr. V. A. Cæsar Hawkins: I have very much pleasure in seconding the resolution.

General Sir Percy Sykes: When I landed at Bunder Abbas I had practically no staff, or a very small one, and Mr. Taylor, whom I took up with me to reopen the bank, took over the onerous task of running our accounts and helped us in every way. Mr. Ferguson's services were invaluable, and I literally mean that. Mrs. Ferguson opened her house and took in my sick officers two by two, and the boon thus conferred on them was very great indeed. One point which Sir Hugh Barnes omitted to state was that I had three officers of the bank serving in the Persian Rifles—namely, Captain Butters, Captain Williams, and Captain Weldon. They all greatly distinguished themselves, and my very last act on leaving Shiraz was to write a letter to the Imperial Bank, desiring it to be sent to London, pointing out how very valuable their services had been. There was no claim we could put in—there was nothing we could ask Mr. Ferguson to do that he did not do.

Mr. Michael: All our assets are in gold, and I should like to ask if there will be any difficulty in meeting the deposits in silver?

The Chairman: There is no difficulty at all in meeting the deposits in silver in Persia. It is very gratifying indeed to us to hear from Sir Percy Sykes such a very cordial testimony of work done by our officers in Persia, and I am sure that when they read the report of this meeting it will be a great satisfaction to them and some reward for the efforts they have made. I may say, as regards Shiraz, that I do not know what would have happened but for the brilliant lead of Sir Percy Sykes and the officers under him. We have not received the accounts from Hamadan and Sultanabad owing to the disturbance of the postal services.

The resolution was then put to the meeting and carried unanimously.

On the motion of Colonel Sir A. Henry McMahon, G.C.M.G. G.C.V.O., K.C.I.E., seconded by Mr. David Gubbay, the retiring directors, Sir Hugh S. Barnes and Mr. W. A. Buchanan, were re-elected.

Messrs. Kemp, Sons, Sendell, and Co., chartered accountants, were reappointed auditors to the company on the proposal of Mr. V. H. Smith, seconded by Mr. Chance.

Mr. Vere H. Smith then moved a vote of thanks to the directors, and to the staff in London and Persia. He hoped that the board would take special pains to send out to the staff in Persia an expression of their thanks on this side. The resolution was seconded by Mr. Michael, and was carried unanimously, and an acknowledgment by the chairman concluded the meeting.

UNITED EGYPTIAN LANDS.

Reconstruction Scheme.

An extraordinary general meeting of the United Egyptian Lands, Limited, was held on April 2 at Winchester House, Old Broad Street, E.C.2, at which, on the motion of Mr. Sidney S. Lamert, the chairman, seconded by Mr. Reginald Tayler, the resolution altering the articles of association, passed on the 17th ult., was unanimously confirmed as a special resolution.

A further extraordinary general meeting was then held for the purpose of considering and, if thought fit, passing resolutions providing for the reconstruction of the undertaking. The Secretary (Mr. W. H. Stentiford) having read the notice convening the meeting,

The Chairman said the directors are putting this scheme forward—we thoroughly approve of it, and hope it will go through unanimously—but, as you know, it is the committee's scheme. I think the best method of submitting it for your approval will be for me to ask Mr. Davenport, who has gone all through the thing, and knows it thoroughly, to propose it.

Mr. James Davenport: I will now move the first resolution, namely, "Resolved, that the scheme of reconstruction of the company, which has been submitted to the meeting, and for purposes of identification signed by the chairman of the meeting, be, and the same is, hereby approved." I find that it is now over two years since, at a very critical stage in the affairs of this company, a meeting was held in this building, and on my proposal the committee was formed. I see from the report of the meeting held at that time that I expressed the opinion then that, while we were absolutely in the hands of the Mortgage Company of Egypt, we were in the hands of an honourable corporation, directed by men of high reputation, and I expressed the view that that company had not the slightest desire to take any unfair advantage of the shareholders of this company. Well gentlemen, it is always nice to have one's prophecy turn out correctly. Throughout long, complicated, and exceedingly tedious negotiations the committee, and especially I myself and my friend, Mr. Newcomb, on whom the principal negotiations at that time devolved, have received from the Mortgage Company of Egypt nothing but the very greatest consideration, the very greatest courtesy, and the very greatest assistance. And before I leave this somewhat personal aspect of the matter, may I also say how greatly the committee appreciate the capable and willing assistance we have at all times received from Mr. Citti, the company's managing director in Egypt, and from Mr. Stentiford, our secretary in London.

When the committee had been constituted, obviously their first duty was to negotiate with the Mortgage Company of Egypt with a view to delaying the foreclosure proceedings, and arriving with them at an acceptable scheme of arrangement. Conjointly with these negotiations, the committee thought it necessary to ascertain more exactly the real position of the company's assets in Egypt, and at considerable inconvenience, and at no small personal risk, Mr. Citti came to London. The result of our interviews with Mr. Citti was that the committee were confirmed in their view that there were tangible assets of this company of value far in excess of the amount of its indebtedness, which it was their duty to endeavour to preserve for the benefit of the shareholders. It was, therefore, with a feeling of considerable satisfaction that in November, 1917, we were able to complete an arrangement with the Mortgage Company of Egypt. Unfortunately, however, the Treasury Committee on New Issues vetoed the scheme. On November 11 last we had the great news that the German nation had finally and irretrievably collapsed. We immediately renewed our application to

(Over 80 Branches in the Near East).

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Digitized by Google

the Treasury for permission to carry through the scheme, and at the same time again approached the Mortgage Company, who again showed us every consideration and desire to help Our perseverance met this time with its reward, and concurrently therewith the Mortgage Company entered into a new agreement on almost identical lines to that which by effluxion of time had expired. The agreement with the Mortgage Company provides that this company shall be reconstructed as an English company, with its board in England, and that the new company shall acquire the whole of the undertaking, property, assets, and liabilities of the present company. And it is an essential condition of the agreement that the new company shall be provided with a sum of not less than £40,000 of additional capital. The new company is to grant to the Mortgage Company a first mortgage on all the properties in Egypt of the present company, repayable in thirty yearly instalments (including amortisation), with interest at the rate of 7 per cent. per annum. The scheme which we now present and recommend for your acceptance provides that the new company shall have a nominal capital of £350,000, dividend into 1,400,000 shares of 5s. each. Of these shares, 38,829 are to be allotted as fully-paid and will be available for discharging certain of the liabilities of the existing company. Of the balance, 1,361,171 will be available for issue, credited as paid up to the extent of 3s. 9d. per 5s. share. This is the number of shares requisite to enable every holder of the existing company's ordinary shares to apply for and to take as of right two shares of 5s. each, credited as paid up to the extent of 3s. 9d per share, in respect of each existing 10s share, and to give each deferred shareholder the right to take one new share of 5s. credited as paid up to the extent of 3s. 9d., for each existing deferred share.

Dealing with the position of the company under the reorganisation, Mr. Davenport said: On the liability side we shall have the 900,000 shares of 5s. each, representing when fully paid up a capital of £225,000. To that is to be added the loan from the Mortgage Company of Egypt, which is now down to approximately £85,000, and which on payment of £5,000 will stand at £80,000. We should therefore have capital liabilities of, say, £305,000. Now, on the asset side, we should first have the cash arising from the reorganisation, which on the basis of 900,000 shares when fully paid up would amount to £56,250. From this we must deduct the expenses of the reorganisation, which we might take at £10,000, and must also deduct the £5,000 to be paid to the Mortgage Company. We should therefore have £41,250. Then we have the amount due to the company on the land which has been sold on the deferred payment system. From the latest advices this amount is now the very useful figure of £96,000. Then we have, first, the agricultural land, and, secondly, the Rodah Island property. Mr. Citti has recently sent home to us a rough valuation of the agricultural land. This valuation works out at £70,000. We have, therefore, in these three items total assets of approximately £207,000, against the capital liabilities of £305,000. This leaves us with the Rodah Island property, on which, as I have said, it is difficult, if not impossible, to put a price at the present moment.

The motion was seconded by Dr. Gerald T. Moody, and the Chairman then invited questions or comments, but as no one rose to speak, the resolution was put to the meeting and carried unanimously.

On the motion of the Chairman, seconded by Mr. Reginald Tayler, resolutions 2, 3, and 4 were also carried unanimously.

Separate meetings of the holders of the ordinary and of the deferred shares were afterwards held, at which resolutions were passed giving effect to the scheme.

The Chairman announced that there would be a further meeting held on the 17th inst. for the purpose of confirming resolutions 2, 3, and 4.

COMPANY RESULTS, Etc.

Tramways de Galatz.—The directors have not found it possible to present the accounts at the general meeting.

Compagnie hellénique d'electricité.—The general meeting will be held at the company's offices at Athens on April 12.

Société hellénique de vins et spiriteux.—The general meeting will be held at the company's offices at Athens on April 11.

The ordinary general meeting of the Caisse Hypothécaire d'Egypte will be held at the company's offices at Brussels on April 15.

Banque d'Orient.—A dividend of 7½ drachmæ per share has been declared for 1918, as against 3¼ drachmæ for the previous year.

The directors of the National Bank of Egypt have declared a dividend of £1 per share for the year ended December 31 last. Coupon No. 25 will be payable forthwith.

The Bank of England are prepared to receive the coupons due April 15 on Egyptian Preference Bonds; the necessary lists can be procured on application at the dividend pay office.

Bombay Electric Supply and Tramways.—Directors recommend dividend on ordinary shares at rate of 14 per cent. for half-year ended December 31, together with a bonus of 2 per cent. for year, payable 16th inst.

Société des ports marocains de Mehedza-Kenitra et Rabat-Sale.—This company is making an issue of 53,932 bonds of 500 francs each at 5 per cent., free of all taxes, present or future, at the price of 445 francs, redeemable at par in 61 years.

The Bank of Athens announces that coupon No. 12 for dividend on the shares of the National Bank of Greece for the second half of 1918 amounting to drachmae 160 per share, will be paid at the London office, 22, Fenchurch Street, E.C.

Egyptian Delta Light Railways.—The directors announce that the company's property in Egypt has suffered somewhat and the traffic been interfered with in consequence of riots in some districts. Full details are wanted owing to difficulties of communication.

The receipts of the Egyptian Markets, Ltd., for the week ended March 13 were:—Cattle markets, £1,293; general markets, £546; total, £1,839; total for year, £20,369. The figures for the corresponding week in 1918 ended March 14 were:—Cattle market, £692; general markets, £434; total, £1,126; total for year, £12,998.

TUNISIAN MANGANESE DEPOSITS.

Remarkable progress has been made with the development of manganese deposits in Tunisia during the war. In 1907 and 1909 the production was respectively 820 and 815 tons. From 1,460 tons in 1915 the production rose in 1916 to 2,027 tons, of the value of 101,370 frs., and to 5,800 tons in 1917.

The consumption duty on alcohol in Morocco has been increased from 300 francs to 600 francs per hectolitre of pure spirit.

ON 'CHANGE.

THROGMORTON STREET, Wednesday.

(FROM OUR OWN CORRESPONDENT.)

Our market has again this week been under the influence of the unsettled political conditions in Egypt, and movements in prices have been somewhat irregular. Whilst here and there there has been some recovery, in other directions there has been some slight decline where some nervous holders have been inclined to press stock on the market. The most recent advices from Egypt seem to indicate that the situation is now well in hand, but so far no authentic news is available as to any damage that may have been done to agricultural interests; and, until something definite is known as regards this, one cannot look for any revival in the market.

In Government stocks, Egyptian Unifieds and Egypt 3½ per cent. prefs are both ¼ down at 92½ and 77½ respectively. In the former, only small business is passing, but quite a fair line changed hands in the latter security.

Amongst Bank shares, Nationals jumped up ⅜ to 22 cum. div. on some demand from Egypt, and are closing at 21 x.d.; whilst Agriculturals, after improving ¼ to 6 13-16, close only fractionally firmer at 6 23-32. Both Agricultural Prefs. and Land Banks are in demand round the current level; but practically no business is passing, owing to the lack of sellers.

In Railways, Delta Lights are ¼ easier at 8, no doubt on the reports of damage done to the line.

In Land shares, Aboukirs have been a firm spot, and are closing 3d. better at 28s. 3d. Allotments are quoted about unchanged at 4⅜ x.d. Behéras are ¼ down at 13, but there is some demand from Egypt for the preference shares at near the current price. Delta Lands are unchanged, and there is a small business passing. New Egyptians, after improving 1s. to 26s. 6d., close 6d higher at 26s. Sidi Salems and Union Foncieres are both 1-16 easier at 2 11-16 and 3 9-16 respectively on some small local sellers. A feature has been the renewed demand for Sudan Plantations, which have had a very active week, and are closing 1¾ higher at 7 11-16.

Amongst Miscellaneous shares, some business was done in Alexandria Waters at 12, and Salts and Sodas have also changed hands round 3. Khedivial Mails have remained quiet and unchanged. Anglo-Egyptians B, after receding at one moment to 3 17-32, are closing 3-32 up at 4 25-32.

Amongst Greek securities, apart from a drop of a point to 57 in Greek Rentes, there is no change to report.

ASSAM-BENGAL RAILWAY DEBENTURES.

The directors of the Assam-Bengal Railway Company, with the sanction of the Secretary for India, offer to the holders of the £300,000 debentures, maturing 13th instant, the option of renewal on the following terms:—Period, two years; rate of interest, 4½ per cent.; price, £99 15s. (¼ per cent. discount). A commission of 5s. per cent. will be allowed to brokers and other agents. This offer will remain open until noon on 10th instant, and debentures for renewal must be lodged at the offices of the company, Bishopsgate House, 80, Bishopsgate, E.C.2, before that time.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

NOTES OF THE WEEK.

Events in Egypt give furiously to think. There have been surprises at every turn, and no room must be found in connection with the future affairs of the country for anyone who is too old or too stereotyped in his ideas to benefit by experience. A bold course has been taken, but it is attended by many pitfalls. The disturbances and outrages that have cost many lives, both British and Egyptian, were directly associated with the arrest and deportation of Zaghlul Pasha and the three other prominent Nationalists. General Allenby, on being given plenipotentiary powers, rescinded the order that banished the four Pashas to Malta, and virtually invited the Nationalists to send their deputations to France and England. The celebrations that followed this concession quickly degenerated into excesses as fatal as those which characterised the initial outbreak, and more lives have been lost in Cairo. Egyptian officialdom made holiday, and in so doing countenanced proceedings that were openly hostile to the British, even when not actually taking part in them.

In the circumstances there was some excuse for the extremists in their imagining that they were about to win all along the line; but by failing to improve the occasion otherwise than by fresh riots they have supplied further evidence that their aims are merely destructive, and can bring no advantage to Egypt. It is for the British authorities, therefore, to show that the concession to the Nationalists was inspired not by fear, but by a sense of justice that is only to be found among the strong-minded. A blind eye may be turned towards "mafficking" in London; in the East the indulgence could not possibly be expected to exhaust itself in a comparatively harmless display of exuberant spirits. It was a mistake to allow the "celebrations" in Cairo to continue until they degenerated into the worst outrages; for only by an unmistakable display of strength on such a point could the recognition be secured for the magnanimity of the concession made in acknowledgment of a misguided policy.

Ugly, however, as the situation in Egypt has been, there is no need for a panic over it. The return to power of Hussein Rushdi Pasha is for the moment of good augury. He was not directly associated with the Nationalist leaders, although he supported their request to be allowed to send a deputation to England. On the other hand, he stands for a more liberal measure of self-government than the Egyptians have yet been given, and there is no reason why a workable solution of the problem should not be evolved in consultation with him which will secure his approval. The mistake made before was to prepare a Constitution without reference to moderate Egyptian opinion, until the draft was complete. A new policy in Egypt will have to be entrusted to new men, for if the British Government decides to place its confidence in Rushdi Pasha, it cannot ask him to co-operate with those who could not of their own accord recognise his merit, or at least the significance of his views in the political evolution of Egypt.

The proceedings of the Plenary Session of the Peace Conference on April 11 make it possible at last to state definitely how India stands in regard to the international regulation of labour conditions, and at the same time indicate the reason why the India Office so long maintained an attitude of reticence on a question of such vital importance to the industrial future. The general scheme of procedure provides that a "draft convention" or a "recommendation" framed by the International Labour Conference must be submitted to the Legislature of each nation which is a party, and that if a particular nation refuses to adopt it the matter may be brought in the last resort before the League of Nations, which body might, or might not, take coercive action against the nation in question. Lord Sinha made it clear in his speech that this position was not acceptable to the Indian representatives; they had watched, he said, "the building up of this convention with some misgiving, fearing that allowance would not be made for India's peculiar conditions," and, as our readers are aware, that fear was shared by competent authorities in this country. "Happily, however, their misgivings were banished by the amendment announced by Mr. Barnes referring to countries having special labour conditions differing from those of Western countries," and the speaker concluded by saying that he and his colleagues "gladly and whole-heartedly accepted this Labour Convention with the amendment referred to."

The words of this important amendment are as follows: "In framing any recommendation or draft convention of general application, the Conference shall have due regard to those countries in which climatic conditions, the imperfect development of industrial organisation, or other special circumstances make the industrial conditions substantially different, and shall suggest modifications, if any, which it considers may be required to meet the case of such countries." As Mr. Barnes said in the discussion, this amendment indicates that the idea of uniformity had to be abandoned

Digitized by Google

in consequence of the different degrees of industrial development. It was precisely this idea of uniformity, expounded as it was with vigour and directness, which gave cause for alarm, and its definite abandonment is a statesmanlike proceeding. The representatives of India must, we imagine, have had fairly hard work to secure the introduction of the amendment, and they deserve the cordial congratulations of the country. It is, of course, impossible to forecast the actions of a body which has not yet actually come into existence, but if we may assume that it will remain faithful to the ideas expressed in its constitution the special conditions prevailing in Indian industry should receive adequate consideration, and the Indian Legislatures should not be brought into active conflict with the International Conference.

An official *communiqué* issued in Paris on April 14 announces that the Peace Conference has decided to give the Adriatic question preference over other questions for he ime, in he hope of reaching a settlement in the immediate future. This is excellent news, and if the official optimism be justified by events, a great step in the right direction will have been taken. It would, however, be satisfactory to know that Roumania's claims and, more especially, her urgent requirements in the way of material assistance, were to be dealt with equally promptly. It is not surprising that a deputation of leading Transylvanians has, through the Entente Legations at Berne, drawn attention to the dangerous situation on the Transylvanian frontier, and to the apparent desertion of Roumania by her Allies. It is difficult to fathom the ultimate intentions of the "Big Four" and of the rest of the Peace Conference, and its members have only themselves to blame if complaints such as this of the Transylvanian deputation should multiply. It may not be the fact, but it undoubtedly looks as if those who make most noise, who adopt an intransigent attitude whenever they fail to obtain their own way, receive preferential treatment over quieter suitors with more urgent claims on the consideration of the Conference.

General Smuts returned unsuccessful from Budapest. The only satisfactory thing about his mission would seem to be his refusal to allow Bela Kun to keep him dancing attendance at Budapest indefinitely. The news of his failure coming at the same time as that of the fall of Odessa hardly tends to increase confidence in the methods pursued in Paris, and the reticence of the Council of Four is regarded unfavourably in most quarters.

The abandonment of Odessa is a bad business, look at it as we may. It deals a heavy blow at Allied prestige, and provides the Bolshevists with great quantities of arms, ammunition, rolling stock, and general stores. It is understood to have been decided upon in consequence of the difficulty of provisioning the city owing to the shortage of available tonnage. Having regard to the moderate estimates of the city's requirements in the matter of food and stores, and to the large number of ships that used to call at the port every month in pre-war days, it is difficult to accept this explanation as the sole motive for the withdrawal. Be that as it may, the garrison was withdrawn westward, with the intention of joining up with the Roumanian army on the Dniester. According to a Bolshevist report, dated April 12, the Roumanians on the Dniester have been forced to retreat "after a fierce encounter."

In spite of Bolshevism and its menace, the promise of improved communications with South-East Europe, made by M. Claveille, the French Minister of Public Works, on March 19, is being made good. A mail train for Bucharest and Belgrade left Paris on April 8, and the new Simplon-Orient Express was inaugurated on Tuesday. The latter service is intended to supplant the old Orient Express, and in some quarters it has been suggested that it is likely to be supported on political grounds by the Entente Powers and their subjects. It is to be hoped that this may prove to be the case, and as far as the Governments of the Entente are concerned it almost certainly will be so. But the average traveller when choosing his route is more likely to consider how quickly and how comfortably he can reach his destination than to be swayed by any sentiment. In this respect the new express is starting level with the Orient Express, and if any rivalry develops it should be well able to hold its own.

The Kaiser may or may not be made to stand his trial, but some of his Turkish dupes and accomplices have been arrested, and a few of them have already met with richly-deserved punishment. Kiamil Mahmud Pasha, who was Governor of Yozgat when the massacres and deportations took place in that district, has been publicly hanged in Stamboul, the most Turkish quarter of Constantinople; and at least one of his most active lieutenants has been sentenced to a long term of imprisonment. Other prominent Turks who have been brought to book are Khalil Pasha and Avni Bey, who were arrested together on April 3. The latter is an ex-Vali of Angora; the former, who is much the bigger man, commanded the Turkish forces in Mesopotamia against General Townshend. To give him his due, when Kut fell the Pasha won golden opinions by his courtesy and the fair promises he made regarding the treatment of prisoners and sick and wounded. He had previously expressed warm admiration for those who attempted to carry relief to Kut on the s.s. "Julna." But his acts appear to have assorted ill with his promises and professions. He is now accused of Armenian atrocities, and our own Government is bent on ascertaining whether he is responsible for the ill-treatment of the Kut prisoners. The hope expressed in these columns last week seems likely to be fulfilled.

We publish to-day a letter from a correspondent on the question of the Dobruja, which will doubtless be perused with interest and a certain sympathy by many of our readers. For it is studiously moderate in tone, and, without pretending to convey any fresh information on the subject, it shows how the present situation in regard to the Dobruja was brought about, more or less deliberately, by the Great Powers which acted purely in their own interests and regardless of those of the two little States most intimately concerned. The extracts from Roumanian sources quoted by our correspondent seem to us to do credit to their writers. But, after all, the question, if any question there be, will not be answered by considering what was the state of affairs yesterday or the day before yesterday. It is hardly likely that any impartial observer would deny that the Dobruja has been very largely Roumanianised since it was given to Roumania, or that Constantza is really essential to Roumania's prosperity, while Bulgaria—especially in view of Greece's agreement to grant her a port on the Ægean—can quite well do without it.

A dispatch from Lieutenant-General Sir William Marshall, covering the operations of his force in Mesopotamia from October 1 to December 31, 1918, was published last Friday. Its chief interest lies in the fact that it describes the "last battle to be fought in this war by a Turkish army," as the General puts it. This battle, it will be remembered, extended over four days, and its closing scene was enacted in the neighbourhood of Kalat Sherghat, the ancient Ashur, where General Ismail Hakki finally surrendered in person. The British General, by the way, shows a generous appreciation of his opponent and his troops, noting that they offered "a stubborn resistance . . . in accordance with what one might have expected" from them. For the rest, the despatch tells much the same tale as others dealing with the Mesopotamian theatre of the war. We find the same difficult ground, the same impossibility of deceiving the enemy on occasion owing to the exigencies of transport, the same temporary immobilisation of units in order to provide pack transport, the same fighting and marching to the last ounce that was in the troops, the same necessity to call on them for fresh efforts, and, happily, the same fine response. We ob-

Digitized by Google

serve also that the fighting men seem to have had to take into account difficulties which they might have been spared by better management. Mesopotamia will probably go down to history as the finest example of "muddling through" provided by this war, but for the men in the field it has been a glorious muddle.

Incidentally, General Marshall's dispatch contains much interesting information on other things that have happened in Mesopotamia besides the fighting. "From small beginnings, when Fao Fort was captured on November 6, 1914, the ration strength of the force when Mosul was occupied had grown to some 420,000, including labour battalions." One hundred and fourteen thousand square miles of Turkish territory have been conquered and occupied. Busreh can now be ranked as a thoroughly up-to-date port, capable of berthing twelve ocean-going steamers, and unloading 6,000 tons a day with the aid of electric cranes. And to mention only one other point on which the British may unreservedly congratulate themselves, the refugee camp at Bakuba has saved the lives of thousands of Armenians, Assyrians, Nestorians, and Jelus, who have been cared for in a way beyond praise—as we know from other sources than General Marshall's dispatch, which makes only the most modest reference to the subject.

NEAR EAST TRAIN SERVICES.

A Reuter's message from Paris dated April 10, announces:—"The first trans-Continental mail train for Bucharest and Belgrade, in charge of an officer of the Transport Service, left here on April 8. Arrangements have been made with the Italian military authorities for the passage of the train over the section of the railway line between Laibach, Agram, and Semlin."

The International Sleeping Car Company announced that the new Simplon-Orient express would leave Paris on its first journey on Tuesday. The train is to run daily via Dijon, Vallorbe, Lausanne, the Simplon Tunnel, Milan, Verona, Venice, and Trieste. At Vincovci the train is divided, one section, on Sundays, Tuesdays, Thursdays, and Saturdays, going via Verciorova to Bucharest; and the other, on Mondays, Wednesdays, and Fridays, direct to Belgrade, and eventually to Nish, Sofia, and Constantinople.

DID YOU SEE

ALLENBY'S LETTER?

Then you will be glad to hear that the Medical Unit he cabled for has arrived and is tackling the distress in Damascus and the Lebanon.

EMIR FEISAL *says:*

"Thousands have died, and still they die. We do all we can for them, and they die still."

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 31.

Arrival of General Allenby.

General Allenby arrived here by cruiser from Taranto on March 25, being received at the station by the civil and military authorities, his Excellency Said Zulfikar Pasha representing H.H. the Sultan, the ex-Ministers, the Diplomatic Corps, and the senior British officials. His Excellency drove direct to the Residency, where he immediately entered upon his new duties. The High Commissioner lost no time in picking up the threads of the situation, and the next day (Wednesday) he summoned a meeting of Notables at the Residency and addressed them as follows:—

"I have been appointed High Commissioner for Egypt by His Majesty the King, and it is my desire and duty to assist in bringing to the country peace, quiet, and contentment. My intentions are:—(1) To bring the present disturbances to an end. (2) To make careful inquiry into all matters which have caused discontent in the country. (3) To redress such grievances as appear justifiable. It is you who can lead the people of Egypt. It is your duty to work with me in the interest of your country. I cannot believe that any one of you will not assist me in every way, and I am prepared to rely on you to set to work at once with a view to calming the passions now let loose. After quiet has been restored I feel confident that you will trust me to inquire impartially into all grievances, and to make such recommendations as may seem to be desirable for the content and well-being of the people of Egypt."

On Thursday an appeal signed by the chief Notables of Egypt, most of whom had been present at the Residency meeting, was issued to the Egyptian nation. This appeal called upon the people to avoid all disorders and not to go beyond the limits of the laws, and it asked the Notables and upper classes to use their influence with the people, to abstain from acts of offence and to take all measures they could to prevent anything being done which might prejudice the country. Among those signing this appeal, which has been disributed all over the country by aeroplane, were the Rector of El Azhar, the Grand Mufti, the Coptic Patriarch, the members of the late Cabinet, and most of the Independentist leaders.

The Situation in the Provinces.

Meanwhile the situation has undergone improvement—at any rate, as far as the provinces are concerned. The mobile columns—which have been sent out, and additions to which are being made almost daily—have touched every important point in the country, and are assisting the civil authorities to restore order. The country has been divided into military areas, and British officials having knowledge and experience of the people have been attached to each area to assist the officer in charge with advice. As a result of this there have during the last two or three days been no incidents of importance to report in Lower Egypt; while in Upper Egypt the improvement, although very much slower, is certainly perceptible.

According to the latest reports, relief parties had pushed as far as Luxor, where all was well. Information from Assouan was good, the narrow-gauge line from Luxor to Assouan being protected by the Arabs of the district. All the foreign residents from Upper Egypt have been evacuated, either to Cairo or Wadi Halfa, with the exception of those from Assiut, the first batch of whom are expected in Cairo to-morrow. The relief of Assiut took place none too soon, it appears, for the defenders were being very much harassed. The trouble started on the 23rd. Until then things had been fairly quiet, and with the exception of a monster demonstration by the pupils of the local schools, which was prevented by the firmness of the officer in command of the small British detachment stationed there, no incidents had occurred beyond a little rowdiness in the town. On the 22nd news was received by the local authorities that an armed band was collecting, and that an attack on the town might be

Digitized by Google

expected. As the defence force was too small to protect everything, it was decided to abandon the military forage factories and concentrate in a position which would defend the residential quarter and the Barrage. Defence works were, therefore, hurriedly put up to protect the approaches, and the civilian and European population, whose numbers had been increased by additions from the South, were concentrated behind the defences.

On the morning of the 23rd the expected attack took place, and the rebels managed to break through one of the barriers, and fired on the troops. This attack was repulsed, as also were several others made during the day, in each case with heavy casualties to the enemy. The next day similar fighting took place, two seaplanes, which appeared opportunely from the North, assisting in the defence of the city. The defenders, who had been putting up an excellent fight, were by this time being hard-pressed, but the relief force, which had been sent up by river, managed to reach Assiut on the 25th, and thus readjusted the situation. On its way up the force, under Brigadier-General Huddlestone, encountered a certain amount of resistance, especially between Deirut and Assiut. The river banks were lined with snipers, who had to be dispersed with machine gun and rifle fire. At one point a hostile gathering was observed, and a landing was effected, several of the rebels being killed or captured. The Deirut district, which always had a bad reputation, was the one in which the attack was made on the officers on the train, and it was whilst passing through this district that Lieut.-Colonel A. W. Hazel, O.B.E., of the Ministry of the Interior, who was accompanying the party as political officer, was unfortunately shot through the head by a sniper from the river bank.

As the country is swept by the troops, so repairs to the communications are being undertaken. Thus, in Lower Egypt the main lines are working, and it has been possible to organise a regular (though reduced) daily service between Cairo, Alexandria, and Port Said. In Upper Egypt, however, it has not yet been possible to run any trains, and in any event it will be some time before goods traffic on any scale will be practicable. Mails for Upper Egypt are being transported by aeroplane, and telegrams are either sent by wireless or via Port Sudan.

The Situation in Cairo.

While the situation in the provinces is rapidly improving, that in Cairo still gives rise to some little anxiety. Although things are quiet outwardly, there is an undercurrent of excitement. The more violently inclined extremists and the Azharites are trying their level best to keep the flame of unrest burning. Their latest subject is Lord Curzon's speech, in which they object to his reference, first, to the Protectorate, and, secondly, to the loyalty of the Egyptian officials. A movement has been set on foot to get the Egyptian officials to strike at least for three days as a protest, and as a proof that, contrary to being loyal to British, they sympathise with the extremists. Intimidation is being freely resorted to to get the officials into line and to make the shopkeepers close as a sign of sympathy with the movement; and at the moment of writing there appears to be every prospect of this strike materialising. There is also strong excitement in Al Azhar, and much talk of demonstrations, whether the authorities agree or not.

Morums Oriental Stores

Head Office:
60/3 Aldermanbury, Cambridge House, London, E.C.

CAIRO Ataba-el-Khadra Boulac Street. ALEXANDRIA Mohamed Aly Square.

TANTA, MANSURA, ASSIUT.

JERUSALEM. — JAFFA.

This would all appear to be a supreme effort on the part of the extremists to make themselves heard abroad. They realise that they have shot their bolt; their scheme for "staggering humanity" so as to call attention to their grievances has failed; there are ample forces now in Egypt to suppress any disorders and maintain British prestige; General Allenby has made it perfectly clear in his address to the Notables that before everything else he intends to end the present disturbances, and, whatever they may say, the extremists must know that he means what he says. They have, however, made up their minds to a final effort, and by every means at their disposal are beating up reinforcements in the shape of Government employees, shopkeepers, students, and Berberins. There will possibly be active opposition to the authorities and hostile acts during the next few days, when the strikes, etc., are to materialise, but these will be of short duration and will meet with the punishment they deserve.

EGYPTIAN MINISTRY.

On April 10 the Foreign Office issued the following statement:—

General Allenby has reported that a new Ministry was formed yesterday [April 9], composed as follows:—

HUSSEIN RUSHDI PASHA*	President of the Council
YUSUF WAHBA PASHA*	Finance
ADLY YEGHEN PASHA*	Interior
ABDEL KHALEK SARWAT PASHA*	Justice
GAAFAR WALY PASHA	Wakfs
AHMED MIDHAT YEGHEN PASHA	Agriculture
HASSAN HASSIT PASHA	Public Works and War

(* Member of the late Cabinet.)

For the present Rushdi Pasha will take the Ministry of Education.

General Allenby states that the Ministry has been well received.

ARMENIAN RED CROSS FUND.

We have received the 1918 report of the Armenian Red Cross and Refugee Fund. The committee of this excellent institution is now able to communicate with Transcaucasia. It points out that help now is needed there more than ever, and pleads that, since Armenians have earned the gratitude of the civilised world, their services should be recognised. Special appeal is made for contributions, more helpers, and clothes.

The destroyers Shark, Lieutenant in command, S. S. Bonham-Carter, D.S.O., and Sheldrake, Lieutenant in command, F. P. Champion de Crespigny, have arrived at Chatham from the Mediterranean.

A request made by the British Political Officer at Mosul through the Civil Commissioner for a male missionary to be sent to look after the temporal and spiritual welfare of the people is interpreted by the Church Missionary Society to mean that restrictions imposed by the British Government on missionary enterprise in the Baghdad region are being relaxed.

The General Council of King George's Fund for Sailors have allocated the sum of £2,500 to the Alexandria Merchant Seamen's Home, Egypt. The Home, as it exists at present, is not able to provide adequate means of meeting the requirements of sailors during the time they are at the Port of Alexandria, and the Committee in Egypt, of which his Majesty's Consul-General is President, have issued an appeal for a sum of money to carry out certain extensions and improvements.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, April 1.

Queen Marie's Reception.

An event calculated to cause no little satisfaction in Roumania is the splendid reception reported to have been given to Queen Marie on her arrival in England. It is more—it must be more—than a mere courtesy offered to a foreign sovereign—more, even, than a mere recognition of personal dignity sustained unswervingly through days of bitter trial. The warmth of welcome extended to Queen Marie is surely intended to reach the hearts of her people. What she has suffered all have suffered with her. Not to the physical pain do we refer, nor the sickening hunger, the frost-bitten limbs, the ravaging epidemics; but rather to the moral anguish, the fluctuating hopes and fears, the cruel disillusions, the paralysing sense of impending calamity, the panic of imminent defeat, the indignity of servitude. . . . The awakening has come from the hideous nightmare. What has been must remain a closed book to those not actually concerned; yet it is well that public recognition should not be lacking. Whoever has been an eye-witness of what the people of Roumania have suffered and *done*, can offer you the assurance that you need not fear to overdo things.

Finis Hungariae.

The advent to power of the Socialist, Kun Béla, at the head of a Soviet Government, signalises the official introduction of Bolshevism in the heart of Hungary. This is an event the importance of which is incalculable. Unless the spark of anarchy is rapidly stamped out, it will spread into a conflagration of savagery unparalleled by anything that has yet been seen either in or out of Russia. A report comes from Transylvania to the effect that forty British aeroplanes have made their appearance above Budapest, distributing leaflets warning the Government that they will proceed to shell the capital unless the Hungarian troops are withdrawn behind the neutral zone, which begins at the demarcational line passing through Arad and Oradea Mare. This news is balm to the Transylvanians, who, it will be remembered, in spite of the exasperation provoked by the recent massacres organised by Count Karolyi, held their hand and refrained from retaliation. But their patience has been sorely tried. It were indeed well that the Allies should cease dallying with their enemies. A change of attitude in this direction would be much approved among certain small peoples, who cannot ignore the fact that the customary system involves, among other things, some injustice to friends and allies.

Budapest Bolshevism.

I annex a letter which indicates that the Bolshevist movement in Hungary is not of quite recent date. Karolyi, by his resignation, merely allowed it to break out. The letter throws interesting light on Hungary's amiable intentions regarding her neighbours; but the fact that nothing unusual or disquieting has occurred in Roumania since the complicated and apparently systematically organised machinery, referred to in the letter, has been put in action, is sufficient evidence that the seed of Bolshevism is not likely to flourish in the soil of this country. My opinion agrees with that of most people I have talked with on this subject—namely, that the Roumanian is entirely hostile to Bolshevist influences. Indeed, no conditions favourable to its outbreak are discernible. The rumour obtaining in England some time ago, of which we have only recently heard, to the effect that revolution had broken out in Roumania, belongs, of course, to the realms of phantasy—of Hungarian phantasy, very likely. It was no doubt a case of the wish being father to the thought. At present it looks as though the incendiaries of Budapest, far from producing the much-desired conflagration in their neighbour's house, had but contrived to set fire to their own dwelling. The following is the letter referred to. It emanates from the well-known Bolshevist leader Kagan, and speaks for itself. It is addressed to an agitator named Konitz, here in Roumania, on whose person it was found:—

What is happening in your part of the world I don't know. The only echo that has reached us has stirred the feeling of revolt of us who spare neither energy nor life in our pursuit of fomenting social revolution in Ardeal (Transylvania) and, it is understood, in Roumania. . . . We in Budapest are working with feverish energy. Let us present you a modest summary of our recent doings:—(1) The organization of a Roumanian communist group in Budapest, with branches in Hungary, Ardeal, and Banat. (2) Intense propaganda in all parts inhabited by Roumanians. (3) Incendiary manifestos for the Roumanian army in Ardeal. (4) Publication of a weekly journal, *The Red Standard*, the copies of which number tens of thousands. (5) Explicative and explicit pamphlets. (6) A school of agitators. (7) Organization of a congress of all Roumanian socialist factions. (8) Meeting of a congress here on December 13 and January 1, in which, after a lively debate, our tactics and programme were adopted by a majority of 11. (9) The constitution, as an immediate sequel to the congress, of the "Roumanian Communist Federation of Austria, Hungary, Ardeal, and Banat," the prime object of which is social revolution in Roumania. (10) Establishment of relations with the Spartacists of Germany (Valerius Marcu is expected here, too). (11) Sending agitators to Bukovina and the prospect of forming a Bukovina group. (12) Very shortly you will receive the visit of a good and stalwart comrade, Munteanu, with instructions from Moscow and from us.

My correspondence with comrade Racovsky has resulted in our comrade V. Popovici being sent here on a special mission. He is now in Vienna with the brothers Hoppe, whence he returns to Budapest. There are also funds for you here, you need only send a delegate to take charge of them. You can send me a detailed reply through bearer of these lines.—With communist salutations. (Signed) Kagan.

Budapest, January 23, 1919.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

A Question of Nationality. April 8.

Answering Colonel Wedgwood, who asked whether an Egyptian was a British subject and should enjoy in this country and in India the rights and privileges of British citizenship, Mr. Cecil Harmsworth said: The answer is in the negative. Persons who are recognised by the Egyptian Government as Egyptian subjects are, however, like natives of other British Protectorates, entitled to the good offices of his Majesty's representatives abroad.

Situation in Abyssinia. April 9.

Major O'Neill asked the Under-Secretary for Foreign Affairs whether there had recently been a revolution or *coup d'Etat* in Abyssinia.

Mr. Harmsworth: I have received no confirmation of the reports regarding a revolution in Northern Abyssinia, which appeared recently in the Press, and to which the hon. member doubtless refers. I have, however, telegraphed an inquiry on the subject of his Majesty's representative. The general situation in Abyssinia has not materially changed since the present régime came into force in 1916.

Inspector-General of Police, Bombay. April 10.

Lieutenant-Colonel Sir Gilbert Wills asked the Secretary of State for India whether the retirement of the inspector-general of police of the Bombay Presidency is due to take place during the present month; whether the appointment is about to be bestowed upon a member of the Indian Civil Service; and whether there are several police officers of twenty years' service and upwards in that force?

Mr. Fisher: The answers to the first and second questions are in the affirmative. As regards the last question, it is well understood that the Local Government may select for the post of inspector-general of police the officer in its judgment best fitted for the appointment whether within the Police Department or outside it.

The Trouble in India. April 14.

Mr. Montagu, Secretary of State for India, in answer to Colonel Wedgwood, said: I regret to say there have been further riots—slight riots—at Lahore and at Ahmedabad, where the city telegraph office has been burned, and at Amritsar, where the telegraph office and other buildings have been destroyed. There has been some loss of life, including Europeans. I propose to publish the contents of the telegrams which I have received this evening. In answer to a supplementary question, Mr. Montagu added that he did not think, in the present disturbed condition of the world, these riots could be attributed to any one cause.

Topics in Parliament.

Egypt: Citizenship.—Proclamation Issued. Prisoners of War: Turkey.—India: Rioting at Delhi.—Mesopotamia and Palestine Operations (Despatches).—India: Steamship Accommodation. (April 8.)

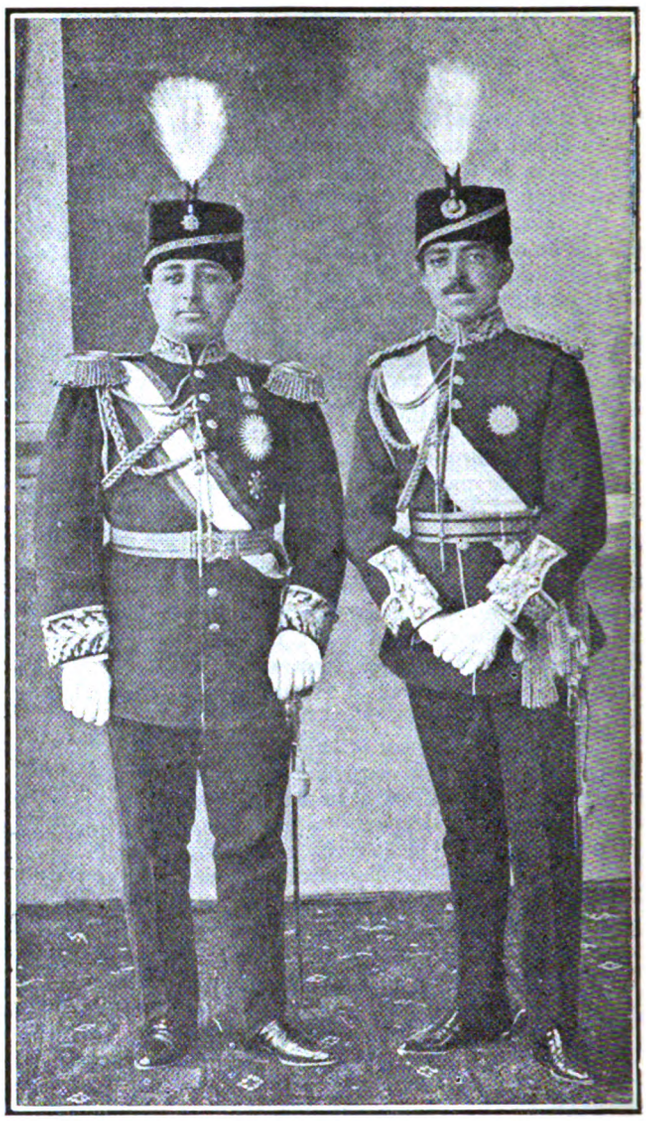
THE AMEER OF AFGHANISTAN.

By the kindness of a correspondent we are enabled to reproduce photographs of the new Ameer of Afghanistan, of his father (the late Ameer), and of Inayat Ullah Khan, the elder brother of the new sovereign. We give also a genealogical table and

THE LATE AMEER OF AFGHANISTAN,
Habib Ullah Khan, Siraj-ul-Millat wa ud-Din.

AMEER ABDUR RAHMAN KHAN
Married Gulrig, a slave girl from Wakhan | Married | Bibi Halima

- Ameer Habib Ullah Khan (born 1872).
  - Married a stepdaughter of Naib Salar Ameer Mohammed Khan (4th Queen).
    - Inayat Ullah Khan (born 1888).
  - Married a slave girl
    - Hayat Ullah Khan (born 1890).
  - Married a stepdaughter of Shahgassi Mohammed Sarwar (1st Queen).
    - Aman Ullah Khan (born 1890).
- Sirdar Nasr Ullah Khan (born 1874).
  - Married a daughter of Sirdar Ibrahim Khan (3rd Queen).
- Sirdar Mohammed Omar Khan (born 1889).
  - Married a daughter of Sirdar Mohammed Yusef Khan Barakzai (2nd Queen).



some extracts from Angus Hamilton's book, "Afghanistan," which are of much interest at the present time.

In spite of his amiability, Habib Allah does not possess a very secure seat upon his throne, the intrigues of the Queen-Mother and the jealousy of his brothers disturbing his position. . . . Nasr Ullah Khan and the Queen Dowager, Bibi Halima, wife of the late Ameer (Abdur Rahman) and the mother of Sirdar Mohammed Omar Jar Khan, are the stormy petrels in the Afghan sea of domestic politics. . . .

It is more difficult for the Ameer to assail the position occupied by Nasr Ullah, who was appointed commander-in-chief of the Afghan army in the early days of Habib Ullah's accession. Little attempt, therefore, is made by the Ameer to curb the masterful will of his brother. . . . Nasr Ullah Khan is not, perhaps, the most reliable prop to the policy of his brother, since he aspires to the throne for himself; and there is no doubt that when opportunity offers he will make a bid for it.

Of the queens Hamilton says:—

The child of Yusef Khan, Ulia Janiah, is known in the intimate circle of the harem as the Hindustani Queen. She is a woman of education, charm and accomplishment. . . . The woman now filling the position of chief queen is the mother of Aman Ullah. . . . She strikes an interesting contrast with the daughter of Yusef Khan. She is a woman of ungovernable passions, wilful, domineering and capricious.

THE NEW AMEER OF AFGHANISTAN,
Sirdar Aman Ullah Khan (on right of picture), and his elder brother, Sirdar Inayat Ullah Khan.

Ultimately there is some prospect of a struggle for the throne taking place between the uncle (Nasr Ullah) and the nephew (Inayat Ullah). Each is a young man; but although time may not temper their discretion, it does lie within the power of Habib Ullah to place the rights of his son beyond the reach of this particular candidate.

THE QUESTION OF THE DOBRUJA.

(*To the Editor of* THE NEAR EAST.)

Sir,—In THE NEAR EAST of March 7, under the headline "Roumanian Notes," the question of the Dobruja is touched upon by your correspondent, who asserts that even "from the fourteenth century the Wallachian princes extended their rule over the Dobruja," and that "from the geographic and economic point of view the Dobruja is an integral part of the whole system of the Roumanian State." With the exception of Prince Mircea I. (1386-1418), who for a quarter of a century extended his rule over part of Dobruja, no Wallachian prince has ruled over the right bank of the Danube for any length of time. A glance at the map of the Balkan Peninsula is enough to satisfy any unprejudiced mind that Dobruja is geographically a part of Bulgaria. Up to 1878, when it was annexed to Roumania by the Berlin Treaty, the Danube formed the boundary between Turkey, Bulgaria, and Roumania respectively. By the Sultan's charter, which instituted a Bulgarian church administration in 1870, under the name of the Bulgarian Exarchate, the whole country between the Balkan mountains and the Danube, from Nish to the mouths of the Danube, was included in the Exarchate as essentially Bulgarian. The Constantinople Conference of 1876, a prominent member of which was the late Marquis of Salisbury, made no question of Dobruja being part and parcel of Bulgaria, but included it in the autonomous Bulgaria it tried to create. Your correspondent says that Dobruja "ethnologically, before its incorporation into Roumania (1881), was a veritable museum of races." It was no more so than some other parts of Turkey. The population of Dobruja was composed chiefly of Turks, Tartars, Bulgarians, and Lipovans (Russian immigrants), while the Roumanians, along with the Greeks, Armenians, and Jews, formed a negligible minority. The trade of the country was pre-eminently in

Digitized by Google

the hands of the Bulgarians. Along the Black Sea coast, as, *e.g.*, in Constantza or Kustendji and Mangalia, as well as in the interior of the country, as in Babadag and Medjidieh, there were no Roumanians at all.

It would be a mere waste of time and space to enter into a discussion of Roumania's historic right to Dobruja by disturbing the ashes of pre-Christian Scythians, Daco-Thracians, and Roman colonists which your correspondent evokes. Present-day Balkan problems are not to be settled on such evidence. It is much more to the point to evoke undeniable facts which are a matter of common knowledge and contemporary history. The Berlin Congress decided to annex a part of Dobruja to Roumania in 1878 not on any historical, geographical, or ethnological ground, but simply because the late Russian Tsar, Alexander II., was determined to reannex to Russia that part of Bessarabia which he had been forced to cede to Roumania by the Paris Treaty of 1856. Roumania had to be compensated for the loss of Bessarabia. If right and justice had guided the Berlin Congress in its decisions, this compensation should have been made in Transylvania or the Bukovina, where Roumania had indisputable rights, but, of course, Austria-Hungary would not listen to any such proposition. Bulgaria was then a Turkish province, recently liberated by Russia, whose political and territorial constitution was to be determined by the Berlin Areopagus. Bulgaria had no voice whatever in the matter, and so the Congress decided to sever from Bulgaria Dobruja, which only two years before had been officially recognised by the European Conference of Constantinople as part of Bulgaria, and give it to Roumania. Exactly the same procedure was followed in the cession of the districts of Nish and Pirot to Serbia.

The desire of the Russian Emperor to exchange Dobruja for Bessarabia was greeted with general indignation and disapprobation in Roumania. The Roumanian Senate and Chamber of Deputies unanimously voted on January 26, 1878, against the exchange; while the Roumanian Government in its memorial of March 9, 1878, to the European Powers, strongly protested against it. On April 11, 1878, Cogalniceano, Roumanian Minister of Foreign Affairs, writing to the Roumanian Minister at London, enclosed copy of a dispatch sent to the Roumanian Minister at St. Petersburg, in which he said that "the legislative bodies and the country are against an exchange of territory with Russia," and urged that the chief territorial claim of Roumania against Turkey is the restitution of the mouths of the Danube, which, although restored to Roumania by the Paris Treaty of 1856, were taken away from her by the Protocol of January 6, 1857 (Blue Book, 1878, Turkey No. 30). These declarations Cogalniceano solemnly repeated before the Plenipotentiaries at the Congress at its tenth sitting (Blue Book, 1878, Turkey, No. 39). In a declaration signed by forty-six members of the Roumanian Chamber of Deputies, protesting against the decision of the Berlin Congress, we read: "After having heard the reply of the Government, the Chamber, rallying to the unanimous vote of the national representatives of January 26, 1878, protesting against the dismemberment of the country by the taking of Bessarabia by Russia, and considering that every annexation of territory on the other side of the Danube is contrary to the interests of Roumania and would be a cause of complications and troubles in the future, does not accept the annexation of Dobruja to Roumania at any price and under any title." In his book on "Dobruja" (1878), Locusteanu, a member of the Roumanian Chamber of Deputies, writes: "We do not wish to take Dobruja. From the standpoint of geography and ethnography it is separated from Roumania by the Danube and its arms, and the majority of its population is alien to our race and our religion. Politically, such an annexation would constitute a bad example of injustice and plunder, and would be a cause of discord between Bulgaria and Roumania." In his "Rambling Recollections" (1908), the late Sir Henry Drummond Wolff reports that a prominent Roumanian confessed to him that the majority of the population of Dobruja was Bulgarian, and that geographically it formed part of Bulgaria.

The Roumanian press was no less explicit on the subject. *Telegraphul*, the organ of the then Premier, Bratiano, in its issue of January 28, 1878, wrote: "The ignoble proposition is made to us to commit treachery towards our brethren, and to exchange them for a population which is alien to us and will always look upon us as its conquerors. We do not want any of these conquests beyond the Danube, because they will be only a source of constant quarrels between Roumanians and Bulgarians." The same paper, of March 18, 1878, in an article dealing with the subject, says that the Dobruja will one day serve as a pretext for another "Bulgarian question," that Bulgaria will surely claim back what is its own, and that "the principle of nationalities and the principle of national boundaries, all will speak in favour of the Bulgarian aspirations." *Romanul*, organ of the well-known publicist C. A. Rosetti, and President of the Chamber of Deputies at the time, declared that "if the Roumanians have helped to liberate the Bulgarian people, which for centuries has been under the Turkish yoke, it was not for the purpose of taking away a part of its paternal heritage." *Steaua Romaniei* (April 23, 1878), a prominent paper of Jassy, in discussing in a long editorial the Dobruja question, gave various reasons why Roumania should refuse to exchange Bessarabia for Dobruja. Among these reasons the following deserve special notice: (1) Geographically and ethnographically Dobruja forms no part of our territory; being on the other side of the Danube, it constitutes a prolongation of Bulgaria, and is inhabited for the most part by Turks, Tatars, Bulgarians, and very few Roumanians." (2) "Dobruja will be in the future an open sore, a motive of discord between Roumania and Bulgaria, which will be continually and successfully exploited by those who are interested in seeing us at loggerheads and dragged into a war." (3) "By taking Dobruja, a country to which we have no right, either historical or by right of conquest, we shall justify and consecrate the spoliation perpetrated upon us in 1775 by Austria and in 1812 by Russia. It seems to us that these reasons are strong enough to forbid us from extending ourselves on the other side of the Danube. Hence, it would be to Roumania's own interest to refuse flatly any territorial aggrandisement whatever on the other side of the Danube."

The natural boundary, as these Roumanian statements of forty years ago acknowledge, is and should be the Danube. Before the unjust and unwise decision of the Berlin Congress, the feelings between the Roumanians and Bulgarians were most friendly. Roumania was the place of refuge where thousands of Bulgarians, unwilling to bear Turkish persecution and oppression in their own country, found freedom and safety. The Bulgarian Revolutionary Committee, whose object was the political emancipation of Bulgaria from Turkish rule, had its seat at Bucharest. The various attempts at insurrection in Bulgaria originated in Roumania, and were principally carried out by bands of insurgents organised and equipped on Roumanian territory. For all this the Bulgarian people had good reason to be grateful to Roumania, and they were. But the annexation of Dobruja to Roumania produced a revulsion of this feeling, probably just the thing that was desired by one or two of the Powers which framed the Berlin Treaty. Roumanian appetite developed in eating. It has been an open secret ever since 1878 that Roumania, not satisfied with what she had got, desired to extend her territorial acquisitions in Bulgaria as far as the river Kamtchia, so as to include within its boundaries the quadrilateral—Varna, Shumla, Rustchuk, and Silistria—a region where Roumanians are non-existent. The spoliation of Bulgaria by Roumania in 1913 by the Treaty of Bucharest was a step forward in the execution of this plan. Geographically, Roumania is not a Balkan State. In fact, Roumanians themselves have considered it derogatory to their country to have it classed as a Balkan State. In his "Diplomatic History of Serbia During the Time of the Serbian Wars for Liberation and Independence, 1875-78," published in 1896 at Belgrade, the late Ivan Ristitch, the most prominent Serbian statesman, commenting on the non-participation of Roumania in the Serbo-Turkish war of 1876, says (Vol. II., p. 163): "We can understand the absence of Roumania on the battlefield; they then acknowledged that they had no interest whatever on the right bank of the Danube, and generally in the Balkans." Roumania has no more right to Dobruja than Bulgaria has to territory across the Danube, because, forsooth, more than 100,000 Bulgarians live in Roumania, and towns like Giurgevo, Ploeshti, Braila, Galatz, and some others are peopled largely by Bulgarians or their descendants, as Charles Vogt, former Chief of the Cabinet of the late King Carol of Roumania, fully acknowledges in his "L'Europe Orientale" (pp. 448-451). On the right bank of the Danube Roumania has been and will be an intruder, with potentialities of future mischief making. As Dobruja is an open, undulating country, devoid of any proper boundary, Roumania will always cherish the desire and bide her time to extend her acquisitions farther to the west, under the pretext of rounding off and better securing her possessions. She will be, as she has been, a standing menace to the security of Bulgaria.

The Berlin Congress forty years ago committed, *inter alia*, two great wrongs. It wronged Roumania by depriving it of Bessarabia, and it wronged Bulgaria by severing Dobruja from it. If by restoring Bessarabia to Roumania the present Paris Conference will right the one wrong, it should right the other wrong, too, by restoring Dobruja to Bulgaria, where it properly belongs. It ought not to be difficult to secure and guarantee to Roumania an outlet to the Black Sea, to which she is entitled, by way of Constanza. Bulgaria will be the last to oppose such an arrangement; but to sanction the unjust decision of the Berlin Congress and hand over to Roumania a large tract of territory which really belongs to Bulgaria, merely for the sake of giving her a port on the Black Sea, would mean the perpetuation of an injustice and a state of things fraught for the future, as it has been in the past, with heartburnings and dangers.

I need not dwell upon the question of the Bulgarian territory seized by Roumania in 1913, upon which she had no right, moral or legal. *Punch*, by a characteristic cartoon at the time, representing the action of Roumania as pure and simple robbery, hit the nail on the head. But the root of the evil lay in the decision of the Berlin Congress forty years ago, when it pushed Roumania, contrary to her will, on the right side of the Danube. But for that decision Roumania would not have felt justified or inclined to commit another act of depredation on Bulgarian land. It is up to the Paris Conference of to-day to remove the evil and restrict Roumania to territory which by right and natural boundaries belongs to her, namely, the left bank of the Danube.—I am, etc.,

S. P.

PRESS ON THE NEAR EAST.

Cromer, Gorst, Kitchener.

The April number of the *Fortnightly Review* contains an extremely interesting article by Sir Malcolm McIlwraith, K.C.M.G., on "Three Egyptian Proconsuls." He points out the fact that Egyptian administration has been subject to vicissitudes and fluctuations, and illustrates this by describing the regimes of (1) Lord Cromer, (2) Sir Eldon Gorst, and (3) Lord Kitchener.

Of the first period the capital feature was the concentration of the threads of government in the hands of one man. This process, says the writer, could not be entirely smooth.

These conditions inevitably involved a corresponding and continuous struggle with those forces which resented what they perhaps not unnaturally considered as unwarrantable encroachments on their own powers and prerogatives, and which resisted his authority by active opposition or passive obstruction. The Native Ministers of those days were not—with one or two striking exceptions—men of first-rate ability, and were therefore, for the most part, content to leave the conduct of affairs to their British coadjutors. There were, however, from time to time, more especially in the early period of his administration, trials of strength between the more daring spirits among them and the masterful British representative. The main and the most powerful source of opposition, however, throughout this period, was the Khedive, Abbas Hilmy, himself.

Though giving full credit to Lord Cromer for the financial transformation and material development of Egypt, the writer easily sees the weakness of such personal rule. He says:—

There can be little doubt that this system of Government, which tended with time to become more and more absolute, played directly into the hands of the political agitators and led eventually to the rapid spread of that spirit of nationalism and anti-Christian sentiment which is always latent in Oriental communities under European dominance.

In 1907 Sir Eldon Gorst endeavoured to inaugurate a new policy—a policy of carrying on the administration with the support of, and in collaboration with, the Khedive. The results, however, were far from satisfactory.

In point of fact, hardly anything was done, and administration degenerated into mere routine. Scarcely any new schemes of any kind were undertaken, the British administrators (who had been instructed to keep as much as possible in the background) waiting, like ostriches with their heads in the sand, for the Egyptians to take the initiative—a spectacle which, if sometimes irritating, was not devoid of humour. The period was, therefore, one of general stagnation and administrative sterility.

Sir Eldon Gorst had, however, much courage and tenacity of purpose; and the reasons for his failure are enumerated without blame. First, his policy was in its execution "too sudden, too ostentatious, and too artificial." Secondly, he had inherited from the previous regime violent political excitement and unrest. And, thirdly, "his period of office coincided with a time of acute financial depression, following on an epoch of unprecedented buoyancy and outward brilliant prosperity."

Of Lord Kitchener's administration the appreciation is illuminating. His defects are not concealed by the story of his well-known merits.

Lord Kitchener had strong views of his own in almost every field of administration—financial, legal, medical, and the rest—and frequently insisted on their execution in spite of strong protests. Indeed, he not infrequently totally disregarded the Adviser concerned, and sometimes derived his inspirations from obscure and wholly irresponsible sources.

Sir Malcolm has an amusing story in connection with the famous "Homestead Exemption Law" of 1912, and the Greek financiers' evasion of that simple measure. But he places to Lord Kitchener's permanent credit the institution of "Cantonal Courts." The article concludes with an attempt to estimate the three years of Lord Kitchener's administration.

He evidently desired to prove that his administrative talents were no less remarkable than his military genius, and to a large extent he may be said to have succeeded. His greatest defect as a civil administrator—if a word of criticism be permissible—was what can only be described as a positive passion for despatch at any price.

But these defects were far outweighed by his untiring industry and his whole-hearted devotion to the task in hand.

NEAR EAST BOOKSHELF.

THE SPIRITUAL SIDE OF HISTORY.*

Sir Andrew Wingate's book upon the "Spiritual Side of History" covers a wide ground. It is an attempt to answer the question which many thousands of thinking men have been asking these last four and a-half years: "Why does God permit this tragedy of death and suffering?" Everybody must find his answer, or half answer, or do what probably most do—put the question aside as insoluble. The author of this book is happy in finding an answer to his satisfaction, and undoubtedly, as the mature reflection of one who has thought upon God's ways during a long life, his views are well worth our consideration, though perhaps only a small minority will accept them as a whole. This volume differs from other books on somewhat similar lines in its wider general interest and its greater appreciation of the broad facts. The first "book" upon the "Path which led to War" is a valuable and scholarly summary of political facts, which, though recounted again and again these last years, have seldom been presented in a most convincing form. The thread is taken up again in Book III., dealing with the "Effect of the War on the Nations." Some of this seems a little out of date to-day, as, for example, the effect of the war on Russia, which has proved a tragedy of unplumbed depth, not hinted at here. With regard to Germany—where, too, political upheavals have apparently occurred since these pages were penned—Sir Andrew Wingate remarks: "Probably Germans are not aware that long after the war they and their children will find themselves up against shocked humanity. Not only in Europe and America, but in India, China, Japan, and even in wildest Africa, Germans will be regarded as deficient in elementary morality—as having outraged the world's sense of decency. With victory behind them, such a position might be brazened through. But defeated, there will be wailing and gnashing of teeth."

With regard to the rest of the book, which deals with the restoration of the Jews to Palestine, their conversion, and many allied things connected with prophecy, it would be out of place here to attempt criticism. As the ideas of one who has served the Empire in important posts, has seen the world and read widely, and who is at the same time a sincere student of the Bible, this work cannot fail to receive respectful attention. There is a careful synopsis of the events of the war as an appendix, which is a valuable table of reference, and the illustrations from photographs taken in Palestine and Mesopotamia are well chosen.

THE DODECANESE.

We have received "The Dodecanese," an illustrated brochure in which Dr. Skevos Zervos, the representative of the Dodecanese at the Peace Conference, sets forth the claims of these islands. Historically, the writer says, the Dodecanese are incontestably Greek, and to aid him in proof of this statement he reproduces some extremely fine photographs, which, as he says, are the most truthful of all witnesses. After a brief sketch of the geography and the geology of the islands, they are shown in the Homeric and classical periods. Then it is told how the science of medicine was developed, especially under Hippocrates, after whom came the glory of the Alexandrian School. But the proud independence of the Dodecanese fell under Rome, and until the partition of the Roman Empire they endured great sufferings. As the Byzantine Empire decayed the Dodecanese were plundered by all kinds of raiders, and eventually passed into the hands of the Knights of St. John of Jerusalem. But with the oncoming of the Turks these islands were destined for a long spell of religious tyranny, until in 1821 they were once more taken to their mother, Greece. Their history, however, was not yet finished, for they came under the protection of Great Britain, France, and Russia, and from 1835 to 1912 they were nominally subject to Turkey. After that came the Italian domination, from which the Dodecanese hope most fervently to escape. For their filial love for Greece is insatiable.

In Messrs. Longmans, Green and Co.'s April List, "The Story of King Constantine," by J. Selden Willmore (price 2s. 6d. net) is announced.

Macmillan announce the second impression of "Folk-Lore in the Old Testament" (3 vols., 37s. 6d. net), by Sir J. G. Frazer.

The Oxford University Press have published two books on India by Vincent A. Smith, C.I.E., "The Oxford History of India" (12s. 6d. net), and "Indian Constitutional Reform" (3s. 6d. net).

Williams and Norgate announce "Mestrovic," which is a collection of sixty-eight plates in Collotype. Dr. M. Curcin has edited the various contributions which make up the book. (Price 42s. net.)

*"Palestine, Mesopotamia and the Jews: The Spiritual Side of History." By Sir Andrew Wingate, K.C.I.E. (London: Alfred Holness. 5s. net.)

THE CARAVANSERAI.

In the *Balkan Review* for March there are some cartoons reproduced from the Sofia *Je Sais Tout*. These cartoons, drawn originally in the period October, 1917, to September, 1918, are obviously not reproduced for the purpose of stimulating British love for Bulgaria. On the contrary, they are, in their Teutonic crudeness, their fanciful representations, and sometimes disgusting jests, given to us who know the end of the war in order that we may compare the German with the Bulgar. The first caricature (October, 1917) shows the Entente paying homage to the god Baal, while the Central Powers are honouring the goddess of Peace. England is shown holding in her right hand a bowl of incense and having round her left arm a serpent. And America, in civilian attire, is being attracted to the human sacrifice for the sake of the dollars which she may thence obtain. The whole thing is supposed to be a representation of the various combatants' feelings at the time of Germany's reply to the Papal note.

***

In the second picture (March, 1918) England, easily disguised as an octopus, is seen in the sea of failure, floating, with her Allies entwined in her tentacles. Russia is walking (for the sea is shallow!) away tearfully and perplexedly. On the cliffs, seated in uncomfortable and very insecure positions, are the Central Powers, sword in hand, and eyes on their victims. As if they would not strike when their opponents were down! No more true is the fourth figure (May, 1918), which shows the Central Powers going to a wedding, with guests, bouquets, babes, and what not, while the Entente are attending a funeral. Dark irony pervades this picture, which is better done than the majority. For the bouquets were of withering flowers and the babes of peace still-born; whereas when the Entente's funeral procession (true enough temporarily) reached the church they found that he they had thought dead lived, and so were able to rejoice. Finally, I may mention one other picture, which delightfully illustrates the ignorant simplicity of the Central Powers. Hindenburg is seated with one hand on a chess-board. The board has only forty-nine squares, and has pieces of one colour only. Obviously if Hindenburg is to checkmate his opponent (who is not there) he must employ rules known only to himself! But besides playing chess he is with his left hand about to pull down a trap on unsuspecting France and Italy. England is shown prostrate, expelled from Russia's threshold, and the panorama before Hindenburg's eyes is one of certain and imminent confusion for his opponents. Truly a heavenly prospect! It was, however, too powerful a vision to be seen by any but Bulgarian eyes.

***

My attention has been called to a remarkable feature of the Cairo demonstrations, which was reported, I think, only by the correspondent of the *Sunday Express*. The correspondent referred to writes (or cables):—" . . Limousine cars, camels, sheikhs riding richly caparisoned mules were all draped alike with Egyptian flags." This seems to indicate a novel fashion, and I should much like to see a venerable sheikh draped with Egyptian flags, or even one flag. Now, had it been the mules——!

Colonel Sir Courtauld Thomson has arrived home from Egypt.

M. Stavridi, the Greek Consul-General, has left London for Paris.

On April 6, Mrs. E. N. St. J. Dickinson gave birth to a daughter.

Princess Ileana has left Buckingham Palace to rejoin the Queen of Roumania in Paris.

Lord Barrymore has left for Fota Island, Queenstown. Lady Barrymore has gone to France.

Miss Gertrude Lowthian Bell had the honour of being received by the Queen on April 11.

Lady Beatrice Pretyman and Miss Pretyman have returned from Egypt, and are now at Orwell Park.

After Easter the lectures at the Royal Institution will include two by Sir Valentine Chirol on the Balkans.

On April 12, at 12, Grenville Place, S.W., London, the wife of Sir Francis Hugh Stewart, C.I.E., gave birth to a son.

On April 15, at 34, Stanford Road, the wife of Lieutenant-Colonel A. P. Trevor, Indian Army, gave birth to a daughter.

Princess Helena Soutzo, the wife of the Secretary of the Roumanian Legation in Paris, arrived in London on April 10.

Ismail Sirri Pasha, formerly Minister of Public Works and of War in Egypt, has been appointed to the Suez Canal Board to replace Artin Pasha.

Mr. Montagu, chairman of the Finance Commission of the Peace Conference, returned to London on April 9. Sir James Dunlop Smith is also back from Paris.

On April 9, 1919, at Dilkusha-Glenageary Hill, Kingstown, the wife of Acting Lieut.-Colonel R. G. S. Gregg, R.A.M.C., gave birth to a son.

The Emir Feïsal was received by M. Clemenceau in Paris on April 14, and is, accompanied by Colonel T. E. Lawrence, returning home by way of Rome.

The marriage arranged between Mr. Charles Nevile and Miss Muriel O'Conor will take place on Easter Monday, at the Brompton Oratory, at 10.30.

Mr. J. W. Crowfoot, the Director of Education, Sudan, left Khartoum on March 17 for Egypt, whence he is proceeding to England on leave.

Bimbashi H. Y. E. Haggett, Second Inspector, Nuba Mountains Province, has arrived in Khartoum on his way to England, where he intends to spend his leave.

On April 11 at Bushey Lodge, Teddington, May Evelyn, the wife of Stephen Gaselee, of Magdalene College, Cambridge, gave birth to a daughter.

At Queen's Club, in the Men's Singles of the Covered Courts Lawn Tennis Championship, Mr. N. Misu played extremely well, and only just failed to reach the semi-final.

Her Highness the Begum of Bhopal has generously offered Rs. 50,000 to be devoted to the Imperial Indian Relief Fund in response to His Excellency the Viceroy's appeal. The offer has been gratefully accepted.

The infant son of Viscount and Viscountess Broome was christened at Barham Church, near Canterbury, on April 9. The sponsors were General Sir William Birdwood, Vice-Admiral Sir R. F. Phillimore, and the Marchioness of Salisbury.

Prince Nicolas of Roumania, attended by Lieutenant-Colonel Arion, the Roumanian Military Attaché, after staying for a week with the Duke of Beaufort, proceeded on April 10 to Plymouth, on a visit to Lady Beatrice Pole-Carew.

The marriage was celebrated on April 10, at St. Philip's Church, Kensington, London, W., between James Murray Pittendrigh, of Colombo, Ceylon, and Agnes Mary, youngest daughter of the late Mr. and Mrs. W. A. Lyddon, of Weston-super-Mare.

An engagement is announced between Captain C. B. Lochner, M.C., attached 31st D.C.O. Lancers, I.A., son of Mr. and Mrs. C. A. Lochner, of Northgate House, Totnes, Devon, and Theodora, daughter of Mr. and Mrs. J. A. Edsell, of Plevna, Sandown, Isle of Wight.

His Excellency Monsieur Yovan Yovanovitch, upon relinquishing his appointment as Envoy Extraordinary and Minister Plenipotentiary from the Kingdom of Serbia, and Madame Yovanovitch had the honour of being received by the King and Queen on April 12.

The engagement is announced between Captain William Collis Spackman, I.M.S., eldest son of Dr. and Mrs. H. R. Spackman, Penn Fields, Wolverhampton, and Audrey, second daughter of the Rev. and Mrs. Harold Smith, Himley Rectory, Dudley.

The King has granted permission to Mr. H. E. Brian, B.A., Senior Professor, Cairo Military School, and Mr. C. H. Page, O.B.E., to wear the Insignia of the Order of the Nile (3rd Class) conferred on them by the Sultan of Egypt in recognition of valuable services.

Colonel A. T. Wilson (Officiating Civil Commissioner at Baghdad) had the honour of being received by the King at Buckingham Palace on Monday, when his Majesty invested him with the Insignia of a Companion of the Order of the Indian Empire and of the Distinguished Service Order.

The *Sudan Times* reports that Sir Edgar E. Bernard Pasha, K.B.E., C.M.G., the Financial Secretary, left Khartoum on March 17 for Cairo, whence, after a brief stay, he proceeded to England. His visit to this country is connected with the interests of the Sudan and the irrigation projects of the Gezira.

The marriage was celebrated on April 12 at St. Peter's, Bournemouth, by Rev. E. Judkins, between Major John Lillingston Carr, Royal Berks Regt., son of Rev. E. S. Carr, of Palamcottah, S. India, and Great Gain, Northwood, Middlesex, and Constance Ruth, only daughter of the late Samuel Smith, of Firshill, Sheffield, and Mrs. Smith, of De Crespigny, Bournemouth.

On April 10 Queen Alexandra visited the West-end Depot of the St. John Ambulance Association at 35, Park Lane. The Countess Grosvenor has handed over her house since 1914 to the St. John Ambulance Association, and in remembrance of this the workers presented her with a cheque for £1,000 to endow a bed in the St. John Ophthalmic Hospital in Jerusalem.

The marriage of Captain M. H. Stephens, R.A.F. (late R.N.A.S.), youngest son of Mr. J. Stephens, Toronto, Canada, and Marjorie, younger daughter of the late Mr. Alexander Finn, late H.B.M. Consul-General for Chile, and Mrs. Finn, of 2, Park Road, Richmond, Surrey, will take place very quietly, owing to mourning, at St. Matthias's Church, Richmond Hill, on Saturday, April 26, at 2.15 p.m.

Lady Methuen laid the foundation stone of the King George V. Memorial Hospital for Merchant Seamen at Malta on March 27. The King has given his patronage and support, and both Queen Alexandra and the Duke of Connaught, as well as his Majesty, have sent donations. But an endowment fund is absolutely necessary. Contributions will be gratefully acknowledged by Field-Marshal Lord Methuen, Corsham Court, Wiltshire.

As will be seen from the notice in our advertisement columns, the Mesopotamia Comforts Fund is now closed. It has done admirable work in an admirable way, and the committee and all concerned with its working may be unreservedly congratulated. Its end is as sensible and businesslike as its beginning: it closes with a balance in hand of over £9,000, and this sum is to be handed over to the Hospital for Tropical Diseases. This disposal of the surplus will surely meet with the approval of the Fund's supporters, as will the stipulation attaching to the gift, that there shall be a Stanley Maude Memorial Ward for soldiers and sailors, in which preference shall be given to soldiers and sailors who have served in Mesopotamia during the war.

APPOINTMENTS, PROMOTIONS, &c.

M. Jean Caraja, the newly-appointed Secretary to the Greek Legation, entered upon his duties on April 10.

It is understood that Mr. H. W. Pike, I.C.S., Commissioner of the Fyzabad Division, contemplates retiring from the Indian Civil Service.

Mr. S. R. Hignell, is to officiate as Deputy Secretary, Government of India, Finance Department, in place of Mr. Jukes, who is proceeding on leave.

M. Gavrilovitch has been nominated Serbian Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James. He was Minister at the Vatican, and is a member of the Serbian Peace Delegation.

The King, on the recommendation of the Secretary of State for War, has approved the appointment of Lieutenant-General Sir F. Ivor Maxse, K.C.B., C.V.O., D.S.O., to be G.O.C. the Northern Command. Sir Ivor Maxse has seen service in Egypt, the Sudan, South Africa, and very notably in the European War.

OBITUARY.

The death has occurred on April 13 of Lord St. Oswald. Rowland Winn, second Baron St. Oswald. He was born in 1857, and succeeded to the title in 1893 on the death of his father. Joining the Coldstream Guards, he served in the Sudan Expedition of 1885, retiring in 1893.

Major-General Charles Pulteney Forbes, late commanding the 2nd Batt. Leinster Regiment, died at Reading on April 11, in his seventy-ninth year. With the expedition into Arabia in 1866, he took part in the operations against the Foodhli Arab tribe and the destruction of Shugra.

Lieutenant-Colonel Heathcote Plummer, late of the Royal Fusiliers, died at Long Melford, Suffolk, on April 11, at the age of eighty. In the Crimean campaign he was present at the siege and fall of Sevastopol and received the medal and clasp and the Turkish medal. He was afterwards actively employed in the campaign on the North-West Frontier of India, taking part in the expedition against the Wazeerees, the forcing of the Burrara Pass, and the burning of Makeen, and received the medal with clasp.

NEWS IN BRIEF.

Bolshevists report that at Teheran, Persia, the Bolshevist mission has been put under arrest.

The Post Office will now accept parcels for transmission to Roumania by sea and to Greece by sea or via Italy.

The Postmaster-General announces that postal packets of all kinds (except parcels) addressed to Bulgaria can now be admitted to registration.

A Madrid telegram states that as a result of recent military operations in the Spanish zone in Morocco Raisuli's force has been dispersed and his camp has been occupied.

The correspondent of the *Morning Post*, writing from Constantinople on April 9, states that the first Cabinet crisis during the present Administration has ended in the resignation of Jemal Bey from the Ministry of the Interior.

Reuter's Allahabad correspondent reports that Pandit Madan Mohan Malaviya has resigned his membership of the Viceroy's Council owing to the Government's attitude in connection with the Rowlatt Bills.

The Eastern Telegraph Company's cable through the Sea of Marmora, which was completely destroyed during the war, partly by the Turks and partly by British submarines, has been finally relaid and commenced work.

The English public school which is shortly to be opened in Belgrade, is the first step in a definite campaign on the part of educated Serbians to develop British influence in all that concerns education in their own country.

The Government of Bombay have appointed a Passage Committee at Karachi to deal with priority certificates for passages to Europe for residents in Sind and also for residents in Mesopotamia, the Persian Gulf, Khorassan, Seistan, and Persia.

Reuter's Berne correspondent, writing on April 14, reports that the Roumanian Press Bureau have announced the discovery by the Roumanian authorities of the existence of a far-reaching Bolshevist conspiracy with headquarters at Clausenburg (Transylvania).

The correspondent of *The Times*, writing from Cairo on April 5, states that a Court of Inquiry has now been opened on the death of Mr. Dykes, the State Railway Official. It is also known that Mr. Walter Davies, a contractor for architectural material, has been murdered in Cairo.

At the Central Hall, Westminster, on April 14, Mrs. Fawcett presided over a meeting to appoint a committee to co-operate in this country with the Poona Sera Saden (Home for Service by Women for Women). Mr. G. K. Devadhar, the hon. general secretary of the organisation, outlined its activities in ministering to the needs of the women of the Deccan.

The Yugoslav Parliament that is now sitting at Belgrade has decided to erect in the Kossovo Plain, where the Yugoslav troops were crushed in 1389 by the Turks, a great monument, to be called the Temple of Kossovo. The object of the monument is to celebrate the Yugoslav union, and its sculptor will be the Dalmatian, Ivan Mestrovic.

A memorial bearing twenty-five signatures, mostly of travellers and writers on Balkan questions has been addressed to President Wilson, urging on him the desirability of creating an autonomous Macedonia. The signatories are apparently (with two exceptions) all British or American. Among them are Messrs. James D. Bourchier, H. N. Brailsford, Charles and Noel Buxton, Miss Durham, Mr. Aubrey Herbert, Mr. Henry Nevinson, and Sir Edwin Pears.

In the discussion on influenza at the clinical meeting of the British Medical Association on April 10 Major Norman White declared that in October and November, 1918, India was in the throes of an epidemic in many respects without parallel in the history of disease. In a few months in the British Provinces alone 4,933,132 deaths occurred out of 230,000,000 inhabitants. The Central Indian States lost 6 per cent. of their population and one State lost 44.7 per cent. Villages were wiped out and many others lost half their population. Terrible scenes occurred; such scenes had never been witnessed before.

From Armenian sources Reuter's Agency learns that the news from Transcaucasia continues to be of a most disquieting character, indicating that the condition of the Armenian population is desperate. Enver Pasha, who joined the Tartars in Transcaucasia after his flight from Constantinople, is known to be hatching further plots against the Armenians. Famine and epidemics are reaping a rich harvest in the country, the stock of medical necessaries is exhausted, and many doctors have died. The situation implies the decimation of the only existing compact mass of Armenians by Turco-Tartar attack and the cutting off of communication between the Erivan Government and Turkish Armenia, thus preventing the return of Armenian refugees to their homes. Armenians hope that the British command in Transcaucasia will intervene in time.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

PLAYING WITH FIRE.

The news of a day of riot and disorder in Delhi, followed by more serious lawlessness at Amritsar and elsewhere, has not been without effect on the minds of that large section of the public in this country, who, without claiming any detailed knowledge of the tortuous movements of Indian politics, are yet determined that Imperial responsibilties shall be met in the spirit as well as in the letter, and are disposed to approve of any measures facilitating the advance of India to an honourable place in the commonwealth of nations. Little importance was attached in these quarters to the threat of passive resistance against the legislation recommended by the Rowlatt Commission: the findings of that body, the strongest judicial tribunal of modern times, were accepted as conclusive, the scope for passive resistance appeared to be negligible, and memories of similar short-lived movements nearer home were suggestive of burlesque rather than of tragedy. The idea that the protest originated by a few well-meaning enthusiasts might, under sinister influences, develop speedily into a display of mob-violence in the heart of the Imperial capital would have been scouted as fantastic, but the details of the disorders which have been received in this country during the past two days are undoubtedly influencing this important section of opinion, and men are asking whether the current views of Indian questions do not need to be revised: is the country yet ripe for even the aspiration towards responsible government, or should such matters be quietly put aside until more definite progress has been made in establishing the Rule of Law, the indispensable condition precedent for the development of a self-governing and self-respecting nation?

Such questions can scarcely be answered off-hand, but in order to approach them it is essential to realise that the Rule of Law is in India a very modern phenomenon. A slight acquaintance with the copious but little-studied records of the sixteenth and seventeenth centuries suffices to establish the proposition that before the British era lawlessness was the dominant characteristic of the more active elements of the population; the tendency could indeed be temporarily repressed by a strong administration, enforcing a despot's will by violent measures and by punishments of almost incredible ferocity, but the slightest relaxation of the central authority was followed by a renewal of the old disorders, and once again the highways were unoccupied and the travellers walked through bye-ways. The main ethical justification of our presence in India is the change which has been wrought in this respect. Individual dissatisfaction is no longer necessarily synonymous with revolt; rebellion, with all its romantic and tragic trappings, has been transformed into an infraction of the Penal Code, a prosaic matter, to be dealt with in accordance with settled laws and precedents; and the progress already made has been so great that ordinary Indian politicians, a body of men deplorably ignorant of the history of their country, already act on the assumption that Law is seated firmly on the throne. We wish that it were possible to share their serene confidence, but the evidence to the contrary is too strong. Such occurrences as the riots in Bombay and Cawnpore, the widespread lawlessness in Bihar, the recent terrible tragedy at Katarpur, and now the sudden violence at Delhi and other points show that in city and country alike the old fires of lawlessness still smoulder, and may at any moment be fanned into a blaze: the work already done has been great, but it is far from being complete, and many years must elapse before the King's Peace acquires that assured stability which it now possesses in the West. In this environment the idea of passive resistance necessarily bears a sinister aspect: Englishmen may view it with more or less tolerant contempt, but in India at the present juncture it is nothing less than a sin against the Motherland, and those well-meaning enthusiasts who advocate it incur the very gravest responsibility. They ignore the fact that, in the ears of their hearers, the word passive counts for nothing, but resistance comes with the sound of a well-remembered trumpet-call: playing with fire, they kindle passions which are always too near the surface, and they at least will have no valid reasons for complaint if the resulting blaze should reduce to ashes the paper constitutions by which they set such store. Without going so far as to anticipate that particular catastrophe, we may at least recognise that the recent demonstrations have done much to strengthen the position occupied in this country by the Extreme Right, and have diminished *pro tanto* the prospects of early constitutional reforms.

We do not, however, think that recent activities in India afford sufficient grounds for postponing the first steps on the long road leading to responsible self-government. Their true significance is to be found rather in the warning they convey that there must be no weakening of authority in the years which lie immediately ahead. India need not assimilate completely the primary idea of government before she begins to learn how to govern herself, but it is essential that the earlier study should be continued during the more advanced course, so that by the time responsible government comes, it may be able to rely on a more stable spirit of obedience than as yet exists. We have had occasion before now to comment on the unwise attitude adopted, or forced upon, the Moderate Party in this respect; the men who are anxious to press forward steadily towards reform would have been better advised to concentrate their attention on this fundamental need, but since they have chosen a different attitude the undivided responsibility must rest upon the British Administration with the British people at its back. It is possible indeed that events such as those to which we have alluded may in the long run serve a useful purpose by recalling to the Administration those primary duties which have of late been overshadowed by more showy, and perhaps more congenial, activities. It would be tedious to refer to the long list of cases in which the Governments of Lord Minto and Lord Hardinge subordinated the maintenance of law and order to what it has become the fashion to call political considerations, but the fact cannot be overlooked that a somewhat similar attitude has been adopted on occasion by the Home Department under the present regime. The prolonged delay in finding the money which was admittedly essential to the efficiency of the overworked and underpaid police is a striking instance of this attitude: the leeway is, we are glad to see, now being gradually made good, but the fact that provision was allowed to fall so far behind needs almost suggests that the authorities were influenced by the current but mistaken idea that India can afford to run risks. Of almost equal significance, though on a somewhat different plane, is the handling of the Rowlatt legislation out of which the present troubles have arisen. Adequate measures were introduced in the Legislative Council, and were then progressively whittled down, apparently in the vain hope of conciliating an opposition which—apart from any question of sincerity—was inevitable on merely tactical grounds, and which remains as vocal and as virulent as if the necessary laws had been passed in their entirety. We trust that this incident may prove to be the last of its kind. The introduction of responsible government represents a political experiment of unexampled magnitude. England is committed to the attempt, and is thereby bound to take every measure which can conduce to its success. The first condition of success is the stabilisation of the Rule of Law, for without the assurance of internal peace the failure of constitutional reform may be regarded as certain, and that consideration alone should suffice to restore to the administration that firmness of purpose which has of late been too little in evidence.

A MIRACLE AT JERUSALEM.

(By Our Cairo Correspondent.)

The "Miracle of the Holy Fire," which is performed in the Church of the Holy Sepulchre on Easter Eve, is a ceremony of great antiquity, though its origin is not at all clear. The earliest record of it is believed to be a reference made by the monk and traveller Bernard in A.D. 867, but it is currently said that it existed even in Constantine's time. As to its meaning, the versions differ. Some say that it is intended to represent the phenomena when Christ gave up the Ghost, and that the Holy Fire comes down from Heaven whilst the Patriarch is praying in the sanctuary and lights the lamp which had been extinguished on Good Friday. Others state that in the time of the earliest Christian Kings of Jerusalem a shortage of oil took place on Easter Eve, but that the lamp was miraculously re-kindled by fire from Heaven, and that the same miracle has taken place regularly ever since. Yet other authorities affirm that it is not a miracle, but merely a ceremony intended to be symbolical of the continuation of the light in the world despite the death of Christ. Whatever the true origin and meaning may be, the conditions under which the ceremony is performed combine to make it without parallel in any other Christian country.

In past years the "Miracle" usually gave rise to most disorderly scenes and much bloodshed. This was due to the fanaticism of the pilgrims, especially the Russians, and to the religious jealousy existing amongst the Eastern Churches. At one time the Latin Church also participated, but it has ceased to take any part in the actual ceremony, and contents itself with a formal procession round the various chapels in the afternoon. The main dispute is between the Greek Orthodox and the Armenian Churches. The others, the Coptic, the Abyssinian, and Syriac, being minor communities, have comparatively small status, but they invariably endeavour, though always unsuccessfully, to establish a precedent for a claim to more active participation in the actual ceremony, by manœuvring for a place in the Holy Sepulchre building when the Greek and Armenian Patriarchs enter the Sanctuary. The service is conducted by the Greek Orthodox Church, which has the preponderant share in the area sacred to the Church of the Holy Sepulchre, but the Armenians claim for their representative the right to enter the Holy of Holies with the Greek Patriarch to receive the Holy Fire.

At the psychological moment, therefore, when the Greek Patriarch entered the Inner Sanctuary, the Armenian always tried to follow, or even precede, him, and a fight usually occurred between them. This dispute spread to their subordinates and partisans on the threshold of and outside the Sepulchre, and a battle royal ensued, the clergy of both sides being trained athletes, and a gang of professional fighters, disguised as lay workers, being included in the procession. But whilst a good many broken heads resulted from this scuffle, the main human damage was done when the Miracle had been performed and the torches were being handed out from the Sanctuary, each Church trying to be the first to get the lamps in its chapel lit from the Holy Fire and to send the torch on to the various shrines in the country, notably to Bethlehem, whilst the crowd, especially the pilgrims, fought to light their tapers from the passing torches. The religious frenzy of all concerned knew no limit. Men threw themselves on top of their neighbours in order to get nearer the torches, regardless of the consequences. So intense was the competition that adherents of one Church, if they could not light their own tapers extinguished those belonging to rival communities, and these manœuvres naturally increased the brawling.

The fighting and disorder have always been so acute that the Turkish Government made a practice of posting about 600 Moslem troops in the Rotunda; but this did not prevent bloodshed, as fights used to occur between the crowds and the soldiers. Last year, under the British regime, every effort was made to reduce to the minimum these disgraceful scenes. The heads of the various communities were exhorted to exercise restraint and to use their influence in the same direction amongst their adherents, and it was decided not to employ any troops, but to post a few police in the building, with instructions not to resort to force under any circumstances whatsoever.

For the better understanding of what follows, it should be explained that the Holy Sepulchre is situated in a rectangular building placed in the centre of the Rotunda of the Church of the Holy Sepulchre. This building faces due east, and the entrance to the Sepulchre itself is through a little inner chapel called the Angels' Chapel, which has in its centre part of the stone rolled away by the angels from the entrance to the Tomb. There is a clear space of about ten yards all round between the walls of the Rotunda and the Sepulchre building, and each sect has its principal chapel just off the Rotunda. On the north and south side of the outer wall of the Angels' Chapel are the holes called the "Fire Holes," through which the officiating prelate passes out the torches lit from the Holy Fire. The crowd assembles on the floor of the Rotunda and in the many passages leading off it, and spectators gather in the three tiers of galleries running round the dome.

The ceremony was timed to start at noon. By eleven o'clock the Rotunda was well filled. In the quadrangle outside the main entrance to the church a crowd had assembled, and was going through the sword and other dances, which are customary on all great occasions in Oriental countries, and which always tend to work up the excitement of the lookers-on as well as the performers. European notables and officers began to arrive at about this time, and they were shown to the first gallery, which was reserved to them. The two upper galleries, the highest one directly under the dome, were packed with women and children of all the communities. A little before noon the Governor, Colonel Ronald Storrs, C.M.G., appeared and took his seat on the special dais set up for him at the foot of the steps leading up to the entrance to the Holy Sepulchre building. He was followed by his staff, who were accommodated on either side of the passage from the Greek Orthodox Chapel to that building, which it faces.

The dancing outside having come to an end, the participants now came surging in, shouting, singing, and clapping their hands. They pushed their way to the north side of the Holy Sepulchre building, where the Greek community always takes up its position. (The Armenians are stationed on the south side, and the Copts, Syriacs, and Abyssinians on the west.) This new addition to the crowd caused a great deal of agitation and excitement, the direction of the congestion was towards the "Fire Holes," it being everyone's desire to get into the front rank so as to be among the first to light a candle as the torches passed by.

There was a certain amount of movement among the Armenians round the "Fire Hole" on their side, but it was as nothing compared with the frenzied excitement of the Greeks. Backwards and forwards, right and left, surged and swayed the crowd on the north side. Little more than the heads and arms of the people could be seen from above, and their numbers were added to every minute by more pressing in from the outside. The people, who numbered in all about 5,000—mostly men; there were very few women—were packed like sardines, and relief was only afforded to the densest part on the north by pressing part of the crowd round to the west or Syriac-Coptic end. The relief was, however, only momentary, for after a short while back would come the pressure, and the surging and swaying would start afresh. From time to time a man would manage to raise himself and stand on the shoulders of another, where two or three would hold him up, and whence he would direct the chanting, which, notwithstanding the density of the crowd, was freely indulged in. During these chants, some of which sounded very weird, there was loud clapping of hands, and the sight from above of the sea of arms raised above the heads of the crowd—they could not clap in the ordinary way—was most extraordinary.

At about 12.15 twelve banners made their appearance at the Greek Chapel end. They depicted various incidents in the life of our Lord, and bore traces of the rough handling they had suffered during the scuffles on previous similar occasions. A passage down the middle of the Ambulatory was cleared with some difficulty, but considering the excited state of the crowd there was remarkably little disorder. Meanwhile a heavy bell was tolling, but the din in the Rotunda was so great that it merely sounded like a dull boom in the far distance. The rising of the Governor and his staff next showed that the procession had started. The banner bearers—the right to bear them belongs to certain families in Jerusalem—moved forward. In their wake came eleven little white-surpliced choristers with the choir-

master, Greek monks in black dress and cowl, a score of lay workers, who looked as if they could give a good account of themselves in any "scrap," next the clergy in very finely embroidered robes of a light hue, and then, in most gorgeous raiment, the Patriarch, the Venerable Archbishop of Mount Sinai, supported by two priests, preceded by two thurifers, and followed by more clergy with a banner. Just as the procession entered the Rotunda the sun came shining through the dome, slantwise into the north-east side, leaving the whole of the south and west in deep shadow, and making a most striking effect. Slowly the procession made its way round the Rotunda, while the clergy and choristers alternately intoned chants.

Three times the procession passed through the crowd. No untoward incident had so far occurred, if one excepts the attempt made by the Coptic and Syriac representatives to get within the Sepulchre enclosure instead of waiting, as prescribed by usage, on the threshold to receive the "Holy Fire" from the Greek Patriarch when he emerged from the Sanctuary. The attempt, of course, failed, and they were tactfully but firmly moved out to their proper position.

When the procession passed the entrance to the Holy Sepulchre for the third time an Armenian Archimandrite made his appearance, and with the Greek Patriarch entered the precincts, while the receptacle for the "Holy Fire" was passed up through the crowd, and a priest from either community took up his position at either Fire Hole in order to receive the torch from within and take it to the chapel belonging to his community. The Greek Patriarch was divested of his vestments, and white cloths were bound round his wrists. Then the seal which had been placed on the Sepulchre earlier in the morning having been broken, he entered the Angels' Chapel with the Armenian Archimandrite. Meanwhile the crush round the Fire Holes increased. Nevertheless some semblance of a lane to the exit was maintained, to enable the priest to get into his chapel and send the torch on to Bethlehem and other shrines. One or two over-excited devotees jumped up and shouted out a chant, but gradually an expectant hush fell upon the entire crowd gathered round the Sepulchre.

Suddenly a terrific peal of very unmusical church bells was heard—an intimation that the Miracle of the Holy Fire had once more been performed—and the dome resounded with strident shouts and terrific clapping of hands. A few seconds more and a torch appeared at each "Fire Hole," where it was seized by the waiting priests, who rushed as best they could through the crowd out of the Rotunda. Other torches began to appear, and then pandemonium was let loose. Men wrestled and fought like tigers to get their candles lighted, the old dodge of extinguishing the lights of adherents to rival churches was resorted to, and the unfortunate torch-bearers had a very rough time of it; the dome re-echoed with the shouts of the crowd, and the terrible bells, clanging overhead as if they would never stop, added to the din. It was indeed an amazing spectacle.

The lights on the roof of the Holy Sepulchre were then lighted, and soon the Greek Patriarch and the Armenian Archimandrite emerged in order to proceed to their respective chapels. At this point occurred what was perhaps the most dramatic incident in the whole ceremony. The Archimandrite was carried off on the shoulders of several stalwart Armenians, who quickly forced a way through the crowd to the right, but the Patriarch, although he had merely to walk about one hundred yards straight ahead, did not fare so well. Barely had he put his foot outside the threshold of the Holy Sepulchre building than he was pulled to the right and the left by ardent devotees, who in their frenzy tried to tear off portions of his raiment to keep as talismans. The poor old man looked as if he would fall to the ground, which would have meant serious injury, if not death, before he could be extricated. Quick as thought the Governor sprang down from his seat, threw himself in front of the Patriarch as a protection and a support, and made a way for him right through the crowd. Colonel Storrs' action showed courage and presence of mind, and it made a deep impression.

For some little while yet the tumult continued in the Rotunda, but it gradually subsided as the crowd succeeded in lighting its tapers; and, the sun having gone in, the effect of these hundreds of waving lights was very fine. About a quarter of an hour after the conclusion of the ceremony a new procession began to form. Strictly speaking there were three separate processions—those of the Armenian, Coptic, and Syriac Churches—but the space in the Rotunda is so restricted that the three actually merged into one and made a very picturesque spectacle, the yellow of the Syriacs, the orange red and green of the Copts, and the white embroidery of the Armenians showing up very well in the half light. The din, however, got steadily worse, for each procession sang it own chants in its own tongue. The communities made their tour of the Rotunda without incident, and the Governor and his staff departed, leaving the representatives of the three Churches to perform their respective rites in the Holy Sepulchre.

MESOPOTAMIA COMFORTS FUND FOR BRITISH TROOPS.

By net proceeds of Alhambra Concert		1,399 18 11	
			£67,902 8 2
By interest on investments and deposit			965 5 1
By net amount of insurance recovered against total loss, being full value of same			7,397 3 6
			£76,264 16 9

SCHEME FOR DISPOSAL OF BALANCE.
MEMORIAL TO SIR STANLEY MAUDE.

The Fund is now closed, and the Committee desire to express deep gratitude for the public support which they have unfailingly received.

IT IS PROPOSED, WITH THE CONCURRENCE OF THE CHARITY COMMISSIONERS, TO HAND OVER TO THE GOVERNING BODY OF THE HOSPITAL FOR TROPICAL DISEASES, THE SURPLUS FUND OF ABOUT £9,000, WITH A STIPULATION THAT THERE SHALL BE A "STANLEY MAUDE MEMORIAL WARD" FOR SOLDIERS AND SAILORS, PREFERENCE TO BE GIVEN TO MEN WHO HAVE SERVED IN MESOPOTAMIA DURING THE GREAT WAR.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Conflicting news continues to appear regarding the position of the Roumanian oilfields, the latest statement being that, owing to the shortage of materials required for the work of reconstruction, the output of petroleum is restricted. Naturally materials are required for the oilfields, and in view of the facts it is at least probable that some limit has been set to production, but, if so, it is not for the reason mentioned, but because, pending the development of the export trade, there is nowhere to put the oil. At any rate, it is known that in January every receptacle for oil was full, and some of it was going to waste.

***

The past year was one of continued progress for the Chartered Bank, and at last week's annual meeting Sir Montagu Turner was able to give to the shareholders a most gratifying record of the bank's position. He pointed out that there had been a steady advance under all headings, and that the net profits of £409,221, against £402,795, would have been much larger had it not been for the very large impost that had to be met on account of excess profits duty. In view of the difficulties with which the Eastern banks have had to contend during the war, the results achieved by the Chartered Bank are little short of remarkable, and it is not surprising that encomiums were bestowed upon the management for their able direction of the bank's business.

***

A feature in Sir Montagu's speech of special interest was his reference to the trade outlook, in which connection he laid emphasis on the competition that is to be expected from America and Japan, "a competition more active, more developed, more widespread, more highly organised than we have ever had to face before." This competition, he believes, can be fully met, given unity of effort on the part of capital and labour, and provided all Government restrictions are withdrawn, especially in regard to the export of goods. "In spite of our domestic troubles in this country," he added, "I cannot help feeling that future trade prospects are good, and as a natural sequence business in the banking world should not, so far as we see, fail to benefit by a return to normal conditions."

***

Bulgaria's financial position was reviewed by M. Daneff, the Bulgarian Finance Minister, in introducing his Budget last month. The country's war debt, it appears, amounts to about £400,000,000, including such items as invalid pensions, etc. As in the case of Turkey, Germany gave considerable financial aid to Bulgaria, and M. Daneff explained that the requisitions made by Germany upon that country, as well as the losses caused by the unfulfilment of treaty obligations, would be placed against the debt owed to Germany. What these items may be estimated at remains to be seen, but it seems fairly clear that, leaving the question of a possible indemnity out of account, compared with her debt of £35,150,000 in 1914, and of £46,299,308 in 1915, Bulgaria will be faced with a very serious financial burden. The only other point that calls for notice in the Budget is that to meet expenditure the land tax, indirect taxes, and Customs duties are to be doubled, and there is further to be taxation of war profits and confiscation of illegally acquired wealth.

***

In the course of a speech on "The War and Indian Trade," at Dacca last month, Mr. Findlay Shirras pointed out that the deplorable waste of resources involved in the absorption of the precious metals had been strikingly brought out during the war. In the five years ended March, 1918, gold was absorbed in India to the extent of Rs. 81 crores, or more than one-half of the world's production in an ordinary year. In the same period the net imports of silver were nearly twice the world's annual production, while from April, 1914, 200 billion oz. of American silver had been and were coming to India. "There is no justification for this continuing waste," said Mr. Shirras, "and unless it is checked and the hoarded coins restored to circulation, Government may be forced to consider the whole basis of India's currency and exchange policy. But that is not all. If this country had not this ingrained fondness for the precious metals, and if in place of taking silver from America had preferred credits at 5 per cent. per annum, we should have received in interest alone Rs. 300 lakhs (£2,000,000) —sufficient to pay the cost of Public Instruction in Bengal for more than twelve months. We should be much better off if we imported goods in preference to the precious metals. If the metals are hoarded in the form of jewellery, etc., they are put to non-productive uses; if they are absorbed, then prices tend to rise, and this brings in its train a host of difficulties."

***

The adulteration of cotton in India by mixing and watering has been, unfortunately, only too prevalent in the past. It is, therefore, the more regrettable to learn of the extension of this practice to an area in Bombay Presidency, which, until last season, had been immune from it. According to a contemporary, mixing is being introduced among this cotton, which normally amounts to about 80,000 bales, in a most determined manner in order to take advantage of the temporary opportunity of making higher profits. The only result of the continuance of this practice will be that the market for this cotton will be spoilt, and the cultivators will suffer. Unfortunately, the cultivators fail to see this, and have the idea that if only they grew inferior cotton they would themselves obtain the profits now going elsewhere, and so it is said that they have taken to sowing inferior seed. It need scarcely be said that this development, and the practice that has led to it, must be stopped, and it is to be hoped that the report of the Cotton Commission, shortly to be published, will provide a remedy.

***

The opening for motor-cars in Egypt ought to receive special attention from British motor manufacturers in the future. Before the war little attempt was made by firms in this country to introduce their motor-cars to Egypt, with the result that, as in other instances, the trade went to other countries. In the last few years, however, British makes of cars have become known and appreciated in Egypt, and the outlook is distinctly favourable for a judicious campaign by British manufacturers. In this, as in other cases, however, time is of importance, for it is not to be expected that other countries will long neglect such a promising field. Therefore, British manufacturers will be well advised to make arrangements without delay to enter this market.

***

The exceedingly difficult nature of the task with which the Imperial Bank of Persia has been confronted during the war will have been clear to all who have followed developments in that country. On many occasions the officers of the bank, Sir Hugh Barnes pointed out at last week's general meeting, had to assist in the protection and to provide for the safety of the branches against armed attack. The past year had its difficulties, like those which preceded it, and in the circumstances the results achieved must be regarded as particularly satisfactory. Equally gratifying is Sir Hugh's statement that during the war the bank on no occasion failed to meet the demands made upon it by the British and Russian Governments in respect of financial requirements for the troops sent from time to time to protect the country.

***

I quoted a letter from a correspondent recently in which emphasis was laid on the point that exchange is the main hindrance to the resumption of trade with the Levant. This difficulty is the subject of reference in a forcible letter to the Board of Trade from the president of the Manchester Chamber of Commerce, in which the writer, giving some examples of the effects of restrictions on trade, says: "In Turkey and Bulgaria, to which exports are permitted, since there is no exchange the difficulty is only pushed back a step. In order to bring about exports, in view of the exchange difficulties, firms naturally endeavour to arrange for a balancing import, but that is forbidden."

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
LIEUT.-GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
P. NAVILLE, Esq.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

THE EGYPTIAN BUDGET.

Increased Estimates for Revenue and Expenditure.

(From Our Own Correspondent.)

Cairo, April 1.

To-night's *Official Journal* publishes in a special supplement, which will surely become historic, the Budget for the new financial year, which started to-day. Usually the annual Budgets are promulgated towards the end of March, and the delay this year has been due to the present political situation. That situation is also responsible for the fact that the Budget is not promulgated in the form of a decree signed by the Sultan, but in that of a proclamation by General Allenby as Commander-in-Chief of His Majesty's Forces in Egypt, in which he orders the fixing of the estimates for the year 1919-20 according to the Budget drawn up by the Finance Committee, and authorises all Ministries and Departments of State "to act under this Proclamation in the same manner in all respects as if the Budget for the year 1919-20 had been approved and put into force in the manner prescribed by law."

The revenue is fixed at £E27,300,000, and the expenditure at £E28,850,000, as compared with £E22,900,000 and £E23,250,000 in 1918-19. There is thus an estimated deficit of £E1,550,000, as against one of £E350,000 the previous year. The Finance Committee, in its usual note, points out that the Budget was originally estimated to balance at £E27,850,000 (with a deficit of £E550,000), which thus exceeded the Budget for 1918-19 by as much as it, in turn, exceeded that for the preceding year. In view of the recent disorders, however, a sum of £E1,000,000 was inserted as a first and uninformed estimate of the cost of claims and liabilities thereby arising, and the Budget, therefore, stands at the higher figure mentioned above, with a deficit of £E1,550,000, which will be taken from the Reserve Fund.

Chief Increases.

On the revenue side the main items are direct taxes £E5,572,000, Customs £E4,200,000, tobacco dues £E2,350,000, Excise £E407,000, Judicial fees £E1,660,000, railways £E6,750,000, telegraphs £E200,000, telephones £E200,000, Post Office £E375,000, State domains £E856,000, ghaffir cess £E853,000, interest on funds £E2,062,000, military exemption fees £E150,000, miscellaneous receipts £E700,000, extraordinary receipts £E540,000. The chief increases are in Customs £E1,374,000, tobacco £E550,000, Judicial fees £E179,000, railways £E750,000, interest on funds £E928,000, miscellaneous receipts £E129,000, and extraordinary receipts £E392,000.

The chief items under expenditure are H H. the Sultan's Civil List £E413,465, survey £E418,135, State domains £E376,276, education £E685,203, public health £E674,626, Interior £E551,362, prisons £E318,123, mixed Courts £E314,181, native Courts £E432,798, irrigation £E2,638,230, State buildings £E433,085, agriculture £E208,884, railways £E5,594,669, Post Office £E382,257, ports and lights £E620,841, police £E663,829, ghaffirs £E875,473, War Office £E1,499,624, Public Debt £E4,605,272, war gratuities £E1,505,000, extraordinary expenditure in connection with the war £E400,000. The principal increases are:—Survey £E199,889, education £E106,570, public health £E147,421, irrigation £E849,574, State buildings £E272,957, railways £E799,161, ports and lights £E419,774, war gratuities £E941,000.

Ministry of Communications.

The great innovation in the new Budget is the creation of the much-talked-of Ministry of Communications. The new Ministry will comprise the railways, telegraphs, telephones, posts, ports and lights, and harbour works. The inclusion of the main roads and bridges, mechanical transport and inland water transport is under consideration; whilst it will take cognisance of all questions connected with aviation, pipe lines for oil, ropeways, and seagoing Government ships. The total revenue of the new Administration is estimated in the Budget at £E7,696,000, and its total expenditure at £E6,968,000; consequently it will be far and away the most important in the whole Government from the point of view of spending and collecting, excepting, as regards the latter, the Ministry of Finance itself.

Effect of the Disorders.

The Finance Committee draws attention to the fact that although the revenue for 1918-19 was fixed at £E22,900,000, the actual receipts up to February 28 have reached the figure of £E24,451,000. But for the recent events, it considers that the total revenue for the year would probably not have fallen short of £E27,000,000. The revenue estimates for the current year, it points out, have been framed in a spirit neither of rashness nor of excessive caution. They represented the figure which, as far as could be judged, the revenue was likely to produce; and the anticipated increases are mainly based on the expectation that the general prosperity of the country would continue. As the Committee adds, it is impossible to foresee what the effect produced by the recent disorders will be, but any resulting deficit will have to be met from the Reserve, to which the budgeted deficit is already debitable. The extra expenditure involved in repairs, etc., of the damage done will probably be covered to a certain extent by the economies which will be made in new works, which will not, one imagines, be undertaken until the existing damage is made good and the country's revenues have recovered any leeway they may lose in the meantime.

THE COTTON INDUSTRY.

Hopeful Outlook.

Sir Charles Macara in the current issue of the *Textile Recorder*, reviews the present position of the cotton industry in this country, and, as will be seen from the extracts we give from his article, he takes a fairly optimistic view of the situation.

"In emerging from the present unprecedented struggle, England's cotton spindles and looms," he points out, "remain unimpaired by the war. During the ten years before the war her spindles were increased by 12,000,000, an increase in excess of the total number of spindles possessed by India, China, and Japan collectively, and also in excess of the total number of spindles in Germany, Russia, or France, although all these countries for nearly a century have been spinning and weaving cotton by power with machinery mostly supplied by England. Unless there is inexperienced or obstructive legislation, or want of friendly co-operation between the organisations of capital and labour, this immense advantage at a time when the markets of the world are depleted of cotton goods assures full employment for Lancashire's staple industry, although this industry, so far as the volume of trade is concerned, has suffered most severely through the war, nor could this be otherwise in the case of an industry which has to import all its raw material and export over three-quarters of its manufactures.

Foreign Competition.

"Statements are appearing in the Press indicating on the part of both writers and speakers undue concern regarding the effect the war is likely to have upon the future of the British cotton industry. Many of these statements are made, I am convinced, by men who have not studied the history of our greatest manufacturing industry. . . . Some little time before the outbreak of war the Japanese Government announced their intention to abolish, after a certain period, all night work in the cotton mills of Japan. The immediate result of this announcement was the placing of orders in England for machinery so as to keep up the production. A certain quantity of this machinery has been delivered since 1914, and when the great Lancashire textile machinists were turned on to the making of munitions, quantities of second-hand machinery were purchased and shipped with considerable difficulty to Japan. Together these items have increased the cotton-spinning machinery in Japan from under two million spindles before 1914 to about three million spindles at the present time, and this total, compared with the 144 million cotton spindles in the various cotton manufacturing countries of the world, is insignificant. Japan has to supply her own population with cotton goods, and has for her neighbours the densely-populated countries of India and China. It is estimated that these two countries contain about half the population of the globe.

The United States.

"Recently I noticed a paragraph in the Press dealing with a syndicate with a capital of £20,000,000 which, it was stated, had been formed in the United States for the purpose of supplying England with cotton goods. So far as cotton-spinning machinery is concerned, the United States possesses about half the number of spindles there are in England, and the climate there makes the demand for cotton clothing for the 100,000,000 people of the United States much greater proportionately than is the case in England. Statistics show that before the war the United States exports of cotton manufactures amounted to about 5 per cent. of the production, whereas of the production of the 57,000,000 spindles and dependent machinery in England over 75 per cent. was exported.

"As I have already said, one fortunate circumstance for the English cotton industry in this connection is, although we did not appreciate it at the time, that we put down twelve million new spindles in the ten years before the war. The enormous advantage we possess in machinery becomes more apparent when we consider the effects of the war in regard to its production. During the war the works of the textile machinery makers were largely turned on to the manufacture of munitions, and it will take a considerable period before they can get back fully to their ordinary industry. The first work, when they do get back, will no doubt be to restore the machinery of our Allies destroyed or damaged in the war. Merely to replace destroyed or worn-out machinery throughout the world will take a long time, during which the cotton industry in this country will have an opportunity of increasing its output to possibly what it was in the year preceding the war. Moreover, since the outbreak of war, the cost of cotton machinery has increased by something like 250 per cent., a formidable handicap to new undertakings in countries which might wish to enter into competition with England. Notwithstanding that England has supplied most of the cotton spinning and manufacturing countries of the world with machinery, these countries are all customers of England for the beautiful fabrics which the inherited skill of generations enables her to produce, and which are appreciated in all parts of the world."

THE DISTURBANCES IN INDIA.

In connection with the disturbances in India we are glad to learn that the report that the agent of the Chartered Bank of India, Australia, and China at Amritsar (where the premises of that bank and of the National Bank of India are reported to have been burnt) was killed is unfounded. The European staff of that bank at Amritsar is safe and well. Unfortunately both of the representatives of the National Bank of India at Amritsar lost their lives. Both had been many years in the service of the bank, and one of them had been with it for twenty-five years.

The London offices of the Eastern Co of Petrograd, have been removed to 8, Bucklersbury, E.C.4.

Imports of goods received at Hamadan in October included (in tons) loaf sugar 109, crystal and soft sugar 420, tea 73, cotton piece-goods 210, kerosene 98, matches 26, soap 17, metals 20, spices 24, tobacco and cigarettes 27, dried fruit 110, and leather and hides 10, out of a total of 1,389 tons. Of these imports 879 tons came from Baghdad and Kermanshah, and 147 tons from Resht and Kazvin.

Professor H. E. Armstrong, Ph.D., LL.D., D.Sc., F.R.S., will give a lecture before the Indian section of the Royal Society of Arts on May 15, on "Soil Deficiencies as affecting growth, and the value of crops in India and other parts of the Empire." Other lectures to be given in the near future include one on "Aerial Transport as affecting India," by Brig.-Gen. Lord Montagu of Beaulieu, C.S.I., and one on "Indian Salt Manufacture," by Mr. Sandford J. Kilby.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Tuesday.

Prices in the market during the past week have hardened. Bullish sentiment has prevailed in New York and Liverpool, and, owing to the recent larger turnover in yarn and cloth, spinners and manufacturers are more difficult to deal with than for a long time back. There is little new to be said as to the outlook for Egyptian cotton supplies. In view of prices being controlled and the basis artificial, users are not inclined to purchase with any freedom. Rather more inquiry has been met with in Egyptian yarns, but operations have been patchy. In cloth for Egypt no improvement in the demand can be recorded. There is considerable uneasiness as to the position on the other side. Manufacturers of piece goods suitable for India have met with a considerable demand. Dhooties, mulls, and jaconets have again moved off on an encouraging scale, and more has been done in grey shirtings for Calcutta and Bombay, especially in certain well-known makes. Healthy support has again been given by China and several minor outlets of the Far East, such as Java and the Straits Settlements. Certain kinds of bleaching cloths are now sold nearly six months ahead. No particular activity can be recorded for South America. Lancashire manufacturers continue to start more looms, and employment for weavers is undoubtedly improving. American yarns are distinctly dearer on the week, and an encouraging turnover has transpired. Ring beams are much stronger than a little time ago. Although buying has been rather irregular, some improvement has transpired in the offtake in shipping yarns for India and Mediterranean outlets.

The United Provinces Government propose a considerable increase in the excise duty on liquor and drugs.

EXPORTS TO THE NEAR EAST

Yugoslavia, Montenegro, and Albania.

The Government, after consultation with the Allied Governments, have decided that the exportation to Yugoslavia, Montenegro, and Albania can now be permitted without licence of all goods not included in lists A and B of prohibited exports except the articles constituting list D.

In the case of barbed wire and implements for fixing and cutting same, camp equipment, articles of, and their component parts, clothing and equipment of a distinctly military character, electrical appliances, adapted for use in war and their component parts, military wagons of all descriptions, and harness or horse equipment of a military character—which are forbidden solely on account of the military use to which they can be put—export licences may be issued by the competent authorities of the United States, France, Great Britain, and Italy, if the evidence is clear that the shipments are destined for civil purposes.

The Comité de Blocus de l'Orient (address, 27, Rue de Constantine, 7ème Arrondissement, Paris) will be the competent body for granting authorisations covering the same articles exported from any other country. For the other articles included in list D export licences may in special circumstances be issued, and intending exporters should apply for information to their War Trade Department, who will consult the appropriate authority.

SUEZ CANAL RECEIPTS.

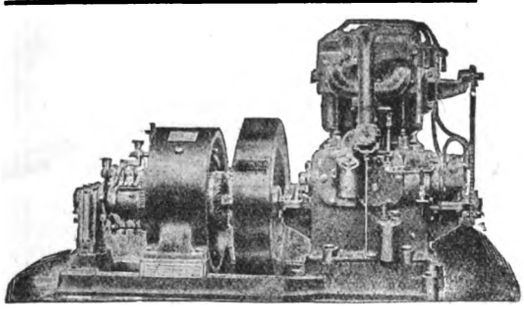
The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—March 24, 25, 26, 27, 28, 29. 30. and 31. 3,080,000 francs against 1,176,000 francs. April 1, 2, 3, 780,000 francs against 450,000 francs.

TRADE WITH SOUTH RUSSIA

In connection with the evacuation of Odessa it is desired to draw the attention of traders and others concerned to the fact that, although Odessa is a very important port, owing to its extensive discharging, loading and storage facilities, the actual volume of trade which it has been possible to do since the recent reopening of the Black Sea to trade has been less than in the case of other Russian Black Sea ports, particularly in the matter of the export of Russian products. The hinterland behind Odessa in Allied occupation has always been extremely limited in extent, while a very large area is served by the ports of Novorossisk, Tuapse, Poti and Batoum. Novorossisk in particular has very valuable trading potentialities, owing to the richness of the districts which it serves in Russian products exchangeable for imports into Russia, while it is also a source of supply for General Denikin's volunteer army.

According to the latest information available, the four ports of Novorossisk, Tuapse, Poti, and Batoum may be regarded as secure.

Arrangements were made in advance for the immediate transfer, should occasion arise, of the British Consular representatives in Odessa to Novorossisk, where attention will be paid to the question of the provision of port facilities. Conditions at Batoum appear, from a recent telegraphic report from his Majesty's Consul at that port, to be not unsatisfactory. The substance of the report will be published in the *Board of Trade Journal* this week, and particulars will also be supplied on application to the Department of Overseas Trade, Russian and Scandinavian Section, Sunderland House, Curzon Street, Mayfair, W.1.



The death took place at Valletta on March 26 of Mr. Thomas Corlett Smith, of Messrs. Thomas C. Smith and Co., steamship agents and merchants, Malta.

ENGINEERING NOTES.

The Port of Haifa.

A telegram from Alexandria states that the British authorities in Palestine are giving serious consideration to the question of the improvement of the port of Haifa, and that if the present plan is followed the jetty alone will cost more than £2,000,000. Haifa is an important town on the Bay of Acre, at the foot of Mount Carmel, with 12,000 inhabitants. It is one of the principal ports of Palestine. The Germans, in recent years, were showing special interest in the port of Haifa, regarding it as a centre of considerable importance for future commercial developments in the Near and Middle East.

During the last few years before the war the attention that was being paid to the growing of cotton in the districts around Haifa and the Jordan Valley had created possibilities for the use of machinery on a large scale, especially steam ploughs, for opening up large tracts of land needed for this special kind of cultivation. Inquiries regarding the different systems of ploughs and machinery were very numerous, and catalogues and specifications from British and foreign firms have been obtained, but, apparently, with little or no practical results.

German Enterprise in Palestine.

This new development did not escape the attention of German engineering firms, and the question was dealt with in a practical way. A German firm with great enterprise sent a complete ploughing outfit to Haifa, consisting of an oil tractor and a six-share plough. Two competent mechanics were sent in charge of the machinery, and were to conduct a series of trials. This practical step was taken by the firm as an advertisement, and had also in view the testing of the machinery in order to ascertain how far it would satisfy local requirements. The experience gained by the technical men in charge would be turned to useful account, and the firm would be able to construct machinery thoroughly adapted to suit the conditions of the country. The experiments according to reports at the time, were followed with keen interest, and further trials would have been carried out but for the war. The field for trade in agricultural machinery in that region is now well prepared, and it will be the fault of the British engineer manufacturer if his Continental and American competitors forestall him there and succeed in reaping the benefit.

Greek Railway Improvements.

In view of the proposed linking-up of the Greek and European railway systems in Macedonia, according to reports from Athens the Greek Government has sanctioned the construction of certain works and other improvements on the Piræus-Athens-Larissa and Salonika railway, which will cost 35,000.000 francs (£1,400,000). The work has already begun, under the supervision of a competent staff of Greek and European engineers. A number of short tunnels, the length of which in all is about 1,300 metres, and eight or ten bridges, each 10 metres in length, are being constructed to improve the section between Athens and Larissa; while the bridges between Papapouli and Tapsin, on the Larissa-Salonika line, will be made of iron and re-inforced concrete, at an expenditure of 4,000,000 francs (£160,000). These bridges, it is estimated, will require 1,000 tons of iron, and will be constructed in Greece with the exception of two, one for the River Bistritza (Haliakmon) and one for the River Kara-su (Navroneri), which have been ordered in Europe (the country is not mentioned). Four hundred large houses will be built along the line for the railway officers, attendants, and workmen; also workshops and engine-sheds at the Piræus, Lianocladi, and Larissa. M. Venizelos is particularly interested in the completion of all these works, taking an active part and supervising the orders given for the necessary materials. As regards the material it is stated that the Greek Government will buy the railway material belonging to the British Headquarters in Macedonia, which a committee of experts has already gone to value, whilst large quantities of iron and implements for the works are being sent from France. Offers for the supply of railway passenger-wagons at reasonable prices were made (it is stated) direct to M. Venizelos from Canada; whilst sleeping and dining cars will be sent in due time by the respective companies. In the meantime the reconstruction and repairs of the Serbian railways, so badly damaged or destroyed in the war, are progressing. The trains run now as far as Uskub, and it is hoped that within a month or two the remainder of this line will have been repaired, and thus, the union of the Greek and European railways will be effected.

Telephone Installations.

In connection with these developments it may be mentioned that the Swiss Government recently suggested to the Greek Government that a Swiss expert electrical engineer should be placed at the disposal of the latter for the telegraph and telephone installations on the new railway system. The Greek Government accepted the offer with thanks, and the Swiss engineer is shortly expected to arrive in Greece for the establishment of new and the renewal of old telephonic communications. That includes the installation of double telephone lines, the procuring of the respective new apparatus and appliances, the installation of electric safety signals on the Athens-Larissa and the Athens-Peloponnesus railways, and the procuring of the necessary instruments, etc. In view of the fact that through Greece many of the neighbouring Eastern districts obtain similar goods, it may be questioned why British manufacturers or Trade Associations are losing such opportunities, and are allowing their competitors to establish themselves in markets the value of which they seem to recognise.

Small Electric Plant.

A reason for the slow progress made in the use of electricity in rural and country districts is the fact that electric supplies are generally controlled by large companies or corporations which confine their operations to towns and places more or less thickly populated. Thus rural communities, country houses, farms, and factories, which happen to be situated beyond the reach of large electric centres are compelled to adhere to old-fashioned methods of lighting, such as oil-lamps, candles, or, if available, locally manufactured impure coal gas. This position can easily be altered by the employment of a small electric lighting plant. It appears, however, that many people believe that the installation of a small independent plant to generate electricity is a very expensive undertaking, and that it is a complicated and unreliable mechanical arrangement; but that, of course, is quite erroneous. Since the introduction of the internal combustion engine, the means of producing electricity conveniently and at a comparatively small cost have been greatly developed, and the advantages of the electric light can now be secured by private residents in rural districts, farmers, or manufacturers at a small capital outlay, and power may be produced more cheaply than if the current were taken from a public electric supply.

Use of Small Plant.

What is wanted is a small lighting plant of modern design, which can be fixed in a spare room, coach-house, barn or shed, and so that the power, in addition to providing light, can be utilised for cooking, heating, charging accumulators for motor cars, or for light-power work, such as pumping water, driving a churn, a chaff-cutter, or ventilating fans in the house. There are several plants in the market, all of which claim one or other special feature and points of efficiency. In the choice of a plant buyers at home have the advantage of investigating the merits or demerits of each system on the spot; but those abroad should obtain expert advice, and, in the latter case, as such experts would probably be also abroad, it is advisable that British manufacturers and shippers should advertise as explicitly as possible the merits of their plant, giving an opportunity to foreign buyers to communicate with them. The Near East is still virgin soil so far as small electric lighting plants are concerned, and, with the Germans out of that market, at present at least, there is a great opportunity for British manufacturers to secure business if they act promptly. The demand generally for electric appliances is great throughout the East, and it is not likely to be overlooked by the Japanese and Continental manufacturers, who are now eager to meet the requirements of those markets.

At the annual meeting of the Rangoon Trades Association Mr. J. Donald was re elected president for the ensuing year.

COMPANY MEETINGS.

NATIONAL BANK OF EGYPT.

The nineteenth annual general meeting of the National Bank of Egypt was held on March 24 at the head office of the bank in Cairo, Mr. F. T. Rowlatt (the governor) presiding.

The Chairman said:—Gentlemen, we have the pleasure of submitting to you the balance-sheet and profit and loss account for 1918. The net profits amount to £693,851, against £519,250 for the preceding year, and we propose to dispose of them in the following manner:—To the statutory reserve, £69,385, which, with £47,336 odd transferred from the special reserve, will bring the former to £1,500,000; to the special reserve, £267,336 to bring it up to £500,000; to the payment of a 10 per cent. dividend, £300,000; and to carry forward £106,635, including £49,505, the carry forward of the previous year. In comparing the results, we have to bear in mind that at the end of 1917 we had to depreciate securities by £33,665, so a better comparison is £693,851 net profit this year against £552,915 for the preceding year. We think, gentlemen, these figures can be considered quite satisfactory.

As was the case during the last two or three years, large sums of money, owing to the war, have been spent in Egypt. The bank note circulation has consequently expanded, and deposits with the bank have considerably increased. On the other hand, the bank's expenditure has been heavier. A considerably larger staff has been necessary to cope with the work. The cost of living, and articles generally, have remained very high. The expenses consequently have increased by £56,000, which are almost entirely accounted for under the headings of bank note expenses, salaries, bonus to the staff, and stationery. We feel certain that, under these circumstances, and considering the happy result of the year, you will have no objection to the special bonus of £8,000 to the staff, published in the report.

The bank note issue on December 31, 1918, amounted to £E46,000,000, against £E30,800,000 on December 31, 1917. The maximum issue during the year was that reached on December 30, namely, £E46,100,000, as compared with a maximum issue of £E30,800,000 on December 31, 1917.

The minimum issue touched in 1918 was £29,200,000 on August 23. The bank note issue has been called upon last year to meet the requirements of a larger field. I allude to the currency requirements of Palestine and beyond. The stability of the Egyptian exchange with London, and the nature of the security behind the notes, has no doubt carried them further than Palestine. As you are aware, the bank note issue is under the double control of the Egyptian Government Commissioners and the Bank.

As I mentioned above, the prosperity of Egypt has tended to swell the volume of our work. The total of the balance-sheet on December 31, 1918, amounts to £E34,866,627, as compared with £E28,024,000 on December 31, 1917. The Government securities, amounting to £E14,800,000, are represented as to £E14,000,000 by British Treasury Bills, Exchequer Bonds, and National War Bonds. Government securities, bills of exchange, money at call and short notice on the London market, bankers' accounts, and cash form a total of £E23,000,000. Our advances to the Cotton Seed Board and the Cotton Control Commission with the respective guarantees of the British and Egyptian Governments, amount to £887,000 and £6,760,000, and are included under the heading of "Advances on Merchandise."

I am certain, gentlemen, that on this occasion, our first meeting since the armistice, we have in our heart feelings of deep gratitude to the Army and Navy. Foremost among civil measures taken was that of the Cotton Control Commission, which came into force on August 1 last, for the purchase of cotton in Alexandria and other Egyptian ports on the basis of $42 per cantar for fully good Sakellarides. The authorities have thus secured for the cultivators a very handsome price, whereas slow shipments and other circumstances might have had a bad effect on a market price. We are glad to say that in this matter we have been able to assist in a marked degree, both financially and otherwise.

The following table shows the annual imports and exports of Egypt from August 31, 1913:—

	Imports. £E		Exports. £E
1913-14	28,325,693	..	32,646,806
1914-15	15.327.835	..	22.642:780
1915-16	27,545,340	..	29,887,393
1916-17	30.095,371	..	44,587,950
1917-18	47,285,226	..	48,019,952

These important figures are, of course, largely due to high values, but the marked decrease in the balance of trade in favour of Egypt is partly due to the fact that on September 1, 1918, there was still in Alexandria awaiting shipment a stock of 1,106,000 cantars of cotton, worth, say, £7,500,000. Also in the value of imports figure several millions of pounds for account of the Army or due to its presence in Egypt. So that the difference between imports and exports of, say, £1,000,000 is really very much less than the real trade balance in favour of Egypt. Since September 1 last to the end of December the value of the imports exceeds the exports by about £5,000,000, but, on the other hand, the stock of cotton in Alexandria on December 31 was probably worth £25,000,000. In these circumstances the tendency of the note issue has been to fall. It is now £E44,200,000, against £E46,100,000 on December 30.

The cotton crop of 1917 turned out to be approximately 6,300,000 cantars, but owing to the restricted area last year the 1918 crop is not expected to exceed 5,250,000 cantars. Cultivators, however, have received such good prices, not only for their cotton, but for all other produce, that they are in a very prosperous condition, and repaying the mortgage companies who have a superabundance of funds. It is to be noted that damage done by the pink boll worm is, on the whole, less than last year. So the Government measures, which a year ago, as mentioned in our last report, were having beneficial results, have continued to reduce the pest.

The opening up of Palestine and Syria under new conditions, and now connected by rail with Egypt, is already beginning to have effect in developing relations, commercial and otherwise, between Egypt and those countries. Egypt is on the great sea route between East and West, and it would seem highly probable that a large transhipment and re-export business will grow up in this country. For the last nine months the imports into Egypt from Palestine amount to £E66,000, and the exports from Egypt to that country to £E279,000. For the months of November and December together the imports and exports were £E33,000 and £E94,000 respectively.

The chief imports from Palestine were:—Fresh fruits, £E35,000; soap, £E20,000; wines and oil, £E10,000. The chief exports to Palestine were:—Rice, £E84,000; ground nuts, £26,000; sugar, £E24,000; animal food products, £E21,000; sesame, £E14,000; cotton textiles and clothing, £E24,000.

The value of the external trade of the Sudan in 1918 again shows a large increase as compared with previous years. Imports during the year came to £E4,024,000, and exports, including re-exports, to £E4,210,000, as compared with £E3,102,000 and £E3,729,000 respectively during 1917. The total turnover in trade has, therefore, increased by over 20 per cent., and the balance of trade in favour of the Sudan for 1918 is £E185,802. The progress made during the last five years is remarkable.

The value of exports (including re-exports) in 1918—viz., £E4,210,304, exceeds that of 1917 by the sum of £E433,206, and is the highest on record. The following table, giving the quantities and values of certain important exports in 1918 and in 1913, the last normal year prior to the war, show the great impetus given to the export trade of the Sudan during the five years in question:—

Articles.	Unit or weight.	1913. Quantity.	1913. Value.	1918. Quantity.	1918. Value.
			£E.		£E.
Gum	Tons	15,129	371,528	16,348	638,765
Dura	,,	2,080	21,716	54,984	692,134
Cattle	Units	10,532	74,664	39,205	516,920
Sheep and goats	,,	99,174	97,059	208,805	651,257
Ground nuts	Tons	719	9,198	2,646	67,529
Dukhn	,,	7	80	14,234	177,233
Charcoal	,,	420	1,286	6,556	64,075
Beans, dried, etc.	,,	191	1,602	4,607	122,326

The increase in the livestock trade and cereal export is considerable, the export of cattle has quadrupled, and that of sheep and goats more than doubled, whilst the export of dura, dukhn, dates, ground nuts, etc., has increased in an even more remarkable manner.

Other important articles of export from the Sudan are:—Cotton, £E279,000; sesame, £E160,000; untanned skins, £E172,000, while in the imports are included: Cotton fabrics, £E1,116,000; sugar, £E593,000; coal, £E333,000; metals and metal manufactures, £E140,000; sacks, £E164,000; tea, £E140,000; tobacco, £E107,000; coffee, £E98,000.

The returns show that trade with Egypt has undergone important developments since 1913. The Sudan now consumes Egyptian cane sugar instead of Austrian beet sugar, whilst Egypt is relying on the Sudan for her supplies of meat, which she used to obtain from Serbia, Syria, etc., and she looks also to the Sudan to supply any shortage in her own production of certain cereals such as dura, sesame, etc. This interdependence is expected to continue after the war. In conclusion, gentlemen, if the present unfortunate incidents do not continue, I think one is justified in looking forward to a prosperous future in Egypt and the Sudan; but during the transitory stage from war to peace conditions, while various industries are feeling their way to settling down again, we would be wise to act cautiously in respect to commercial prices.

Again this year we have to add to our roll of honour and express to the families of Mr. G. L. Lusena and Mr. C. Mancini our most sincere sympathy. In the death of our old friend and colleague, Mr. Joseph I. Aghion, of Alexandria, the bank has lost one of its original directors who for twenty years has given us his sound and valuable advice. H. E. Boghos, Pacha Nubar, Sir Joseph Saba Pasha, and Mr. M. C. Salvago go out of office this year, and as they offer themselves for re-election I am certain, gentlemen, that you cannot do better than to reappoint them on our board of directors. Finally, we wish to tender to the sub-governors, managers, and staff the expression of our sincere satisfaction with the result of their labours during 1918.

EASTERN BANK.

The ninth annual general meeting of the shareholders of the Eastern Bank, Limited, was held on April 9, at the registered offices, 4, Crosby Square, E.C., the Rt. Hon. Lord Balfour of Burleigh, K.T., the chairman of the company presiding.

The Secretary (Mr. R. Carter) read the notice convening the meeting and the report of the auditors, the directors' report being taken as read.

The Chairman: Gentlemen, you will, I hope, agree with me that the year has been a successful one. The net profit, including the amount brought forward, as you will have seen from the report, is £84,805 15s. 2d., and, after deducting a sum of £22,500, the amount required to pay the interim dividend of 3s. per share in October last, there is a sum of £62,305 15s. 2d. left at the disposal of your directors. We now propose to pay a final dividend for the year at the rate of 3s. per share, less income-tax at the rate of 5s. 9d. in the £, making 7½ per cent. for the whole year, to place a sum of £20,000 to the reserve fund, which will then stand at £110,000, and

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

Digitized by Google

to carry forward the balance of £19,805 15s. 2d. to the next account. The figures of the balance-sheet again show an increase. Our paid-up capital now stands at the round sum of £600,000, the small amount due last year on account of calls unpaid having been collected immediately communication with Belgium was restored. Our reserve fund stands at £90,000, and with the addition now recommended will be £110,000. Current and deposit account balances show an increase of nearly three-quarters of a million, which is good. Turning to the profit and loss account, our gross profits are £23,000 more than was the case last year. Charges are again higher, chiefly under the head of salaries, but under present conditions this result is inevitable. In Mesopotamia we have made good progress, and a branch of the bank has been opened at Hillah—a town on the Euphrates, which may become a great centre of the wheat-growing district. A branch line connects it with the railway from Baghdad.

I have now to move the adoption of the report and accounts.

Mr. J. S. Haskell seconded the motion.

No questions being asked the resolution was put to the meeting and carried.

The Chairman then moved that a final dividend of 5s. per share, less income tax at 5s. 9d. in the £, be declared, which, having been seconded, was unanimously passed.

Mr. J. Leigh Wood and Mr. Emile Francqui, the retiring directors, were re-elected, as were also the auditors.

A cordial vote of thanks to the chairman and the other directors, the local staff and the staff in Mesopotamia, proposed by Sir George Forbes, K.C.S.I., and seconded by Colonel G. R. C. Westropp, C.B., concluded the proceedings.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, dated April 12:—

General rain in Assam along the Bengal Orissa Coast, Berar, and North Hyderabad. Local in the north of the United Provinces, Bihar, Central Provinces, and Upper Burma.

Jute.—Recent rains have favoured jute sowings.

Wheat.—The final revised all-Indian acreage is 23,294,000 acres. (In 1918 the acreage exceeded 33,800,000 acres.)

Bombay cotton market is firm. Fully good Broach April-May delivery 467 rupees. Piece goods are slightly improving.

Jute market firm, with more jute offering. The Hessians market shows some revived interest.

Telegraphic Transfers.—On April 3 £25,000 on London were applied and allotted in Calcutta, and £100,000 in Bombay.

During February 170,000 tons of rice were shipped from Burma to India.

The Bengal Chamber of Commerce at the instance of Mr. Shirley Trencarne is founding a trust fund for the relief of cases of distress among the members of the chamber, their employees and dependents. Mr. Trencarne started the trust with one lakh of rupees.

L'UNION FONCIERE D'EGYPTE.

Messieurs les Actionnaires sont convoqués en Assemblée Générale Ordinaire pour le Mercredi 14 Mai 1919 à 4 heures de l'après-midi au Siège Social, 4 rue Fouad ier, Alexandrie, en vue de délibérer sur l'ordre du jour suivant:

1e. Rapport du Conseil d'Administration.
2e. Rapport du Censeur.
3e. Approbation du bilan de l'exercice.
4e. Renouvellement partiel du Conseil d'Administration 1919-1920.
5e. Jetons de présence.
6e. Election du Censeur et fixation de son indemnité.

Tout Actionnaire possesseur de 5 actions au moins a droit de prendre part à l'Assemblée Générale, à condition d'effectuer le dépôt de ses titres, au plus tard, trois jours avant la date de la réunion dans un des Etablissements ci-après désignés:

En Egypte: dans une des Banques établies à Alexandrie ou au Caire.
En France: auprès de la Société Marseillaise de Crédit Industriel et Commercial et de Dépôts.
En Angleterre: auprès de la Banque Belge pour l'Etranger, 2, Bishopsgate, Londres, E.C.

N.B.—Le dépôt des titres en France et en Angleterre doit être effectué à temps afin que les pouvoirs parviennent à Alexandrie 3 jours au moins avant la date de la réunion.

(Over 80 Branches in the Near East).

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

COMPANY NOTES & REPORTS

Ransomes and Rapier.

The report for 1918 states that the result of the year's working, including balance brought forward, shows disposable balance of £39.574, after fully providing for all outgoings, depreciation, interest on debentures, directors' fees, etc. Directors propose dividend of 7½ per cent. on ordinary, free of tax, to set aside as extra remuneration to directors £1.254, to place to reserve £5.000 (making £40,440), and to carry forward £24,228.

Bengal Dooars Railway.

The report of the Bengal Dooars Railway for the year ended September 30 states that the capital expenditure amounted to £5.691, most of which was incurred on account of the Chalsa Matelli Branch construction, which was opened for traffic on June 10 last. The work of construction was not quite completed owing to scarcity of labour, and the Secretary of State for India has extended the date for completion to 31st instant. Gross earnings were Rs.17,39,666, against Rs 17,64,760, and working expenses Rs.7,35,488, against Rs.7,45,409, net earnings being Rs.10,04,178, against Rs.10,19,351. The percentage of working expenses on gross earnings was 42.27, against 42.23. Net earnings in sterling (less Indian income-tax) amounted to £62,761, against £63,709. Earnings from coaching amounted to Rs 4,07,628, a decrease of Rs.28,145. The total amount received on account of goods traffic was Rs.12,88,005, an increase of Rs.3,812. The amount at credit of net revenue account is £58,860. The directors have placed £8,000 to reserve fund, bringing it, with interest, up to £153,067, leaving £30,360. It is proposed to pay a final dividend of 3½ per cent. on the ordinary stock for the year and a bonus of 2 per cent., both subject to income-tax, and to carry forward £28,860.

Mysore Gold.

The report of the Mysore Gold Mining Company for the year ended December 31 states that 293,186 tons of quartz were crushed, from which were recovered, by amalgamation, 127,536 oz. of bar gold, an average of 8.7 dwt. of gold per ton; 568,635 tons of tailings and slimes were treated for a yield of 66,127 oz. of bar gold, an average of 2.3 dwt. per ton. These represent a total production of 193,663 oz. of bar gold (equivalent to 174,300 oz. fine) of a realised value of £739,193. This amount was subject to deductions for royalty, etc., of £39,829. Adding interest on deposit account and investments, rebates on freights, rents, etc., aggregating £9,003, the total at credit of revenue account is £708,367. Expenditure was £443,846, profit being £264,521. Adding the amount brought forward, plus £941 received as dividend on shares held in the Kolar Mines Power Station, and £5 written off outstanding dividend account, the total at credit of profit and loss is £271,328. Deducting interim dividend of 2s. 6d. per share, paid on October 12, 1918, £76,250; additional remuneration to directors and managers under articles of association, £1,525; income-tax, £77,630; amount written off expenditure on capital account, £51,576, and donations to war funds, etc., £436, there is left £63,911, in respect of which a final dividend for 1918 of 2s. per share (less income-tax at the rate of 5s. 9d. in £) was declared on 6th instant, payable on 2nd proximo. This will absorb £61,000, leaving £2,911 to be carried forward, subject to royalty payable to the Mysore Government on the final dividend, etc. Meeting, Cannon Street Hotel, E.C., 10th proximo, 12.30 p.m.

COMPANY RESULTS, Etc.

The ordinary general meeting of the Agricultural Bank of Egypt will be held at Cairo on April 29.

British Burmah Petroleum—Second Mortgage debenture stock transfer books will be closed from 18th to 30th instant, inclusive.

Notice is given that the annual general meeting of the Bank of Athens will be held at the head office in Athens on May 10.

The directors of the Egyptian Delta Land and Investment Company announce a dividend for the year ended December 31 last at the rate of 6d. per share.

The Bank of England are prepared to receive the coupons due May 1 on Egyptian Unified bonds; the necessary lists can be procured on application at the Dividend Pay Office, 3, Princes Street, E.C.

Furness, Withy.—Dividend on the ordinary shares at the rate of 10 per cent. per annum for quarter ending April 30 (6d. per share), free of tax, the same as a year ago.

The Egyptian Bonded Warehouses Co. made a net profit on the year's working of £E39.501. The dividend is P.T.80, and £E10,000 is carried over to the extraordinary reserve.

The coupon due May 1 next on the Five per Cent. First Mortgage Debentures of Thomas Cook and Son (Egypt) will be paid by the London County, Westminster, and Parr's Bank, Temple Bar Branch, on that date.

In 1918 the Societe Hellenique des Vins et Spinteux made a net profit of 4,592,787 drachmæ, or 1,312,303 drachmæ more than in the previous year. The dividend is 24 drachmæ per share as against 20 drachmæ for 1917.

At a Court of Directors of the Royal Exchange Assurance, it was decided to recommend the General Court, to be held on April 30, to declare a further dividend of 8 per cent., less income-tax, making 14 per cent. less income-tax for the year 1918.

The directors of the Peninsular and Oriental Steam Navigation Co. announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income-tax) and an interim dividend at the rate of 12 per cent. per annum on the deferred stock (free of income tax) for the half-year ended March 31 last. Warrants will be posted on May 14.

The report of Battalagalla Estate for the year ended December 31 last states that the accounts, after paying fixed charges, show a balance of £4,208; £3,941 was brought forward, which with refund excess profits tax account, 1917 (£703), gives a total of £8,852. It is proposed to pay a further dividend of 15 per cent., free of income-tax, making 20 per cent. for the year, and to carry forward (subject to excess profits duty), £4,001.

The directors of the Eastern Extension Australasia and China Telegraph Company announce that it will be impossible to present the balance-sheet and accounts duly audited during May, when it has been usual to hold the general meeting. They have decided to make a fourth dividend payment of 3s. per share, together with a bonus of 4s. per share, making a total distribution for the year of 8 per cent., free of income-tax.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has again been very little doing in the market this week, most people preferring to wait until the situation in Egypt becomes clearer. Meanwhile the market has been at the mercy of small transactions, which have affected values disproportionately. On the whole, however, it can be said that although some prices are lower the undertone of the market at the close is rather better, the general opinion being that the trouble in Egypt is now practically over.

In Government stocks Egyptian Unifieds are ½ lower at 92, but there is practically no stock about. Egyptian 3½ per cent. Prefs. have remained a very firm stock, and are quoted to-night unchanged at the ex div. price of 75¾.

Some business has been done in City of Alexandria Bonds at 84¼.

In bank shares Nationals have dropped ⅝ to 20⅜ on some small sales on an unwilling market. Agriculturals are also slightly easier at 6⅝, and Anglo-Egyptian Banks have fallen ⅛ to 15½. Land Banks have remained firm with buyers about, but no sellers.

In land descriptions Aboukirs have dropped 9d. to 27s. 6d., and Allotments are ¼ down at 4⅛. Delta Lands have receded 6d. to 14s. 6d. The last-named company has just declared a dividend of 6d. per share as against 4d. paid for the last few years. Gharbieh Lands have dropped 3-16 to 2½, at which prices some business was done. New Egyptians are 1s. lower at 25s., but transactions have only been on a small scale. Sidi Salems are ⅛ lower at 2 9-16, after changing hands as low as 2½. In Sudan Plantations there has again been a good deal of activity, and the shares after being as high as £8 have relapsed sharply on profit taking, closing 1-16 lower at 6⅝. Union Foncières are also fractionally easier at 3½. In United Egyptian Lands there has been a good deal of support round the current prices.

Among miscellaneous descriptions some business has been done in Alexandria Waters round £12, at which price there are still buyers. Anglo-Egyptian Oilfields have further advanced ⅜ to 5 7-32. There has been some weakness in Egyptian Markets, which are closing 1s. 6d. lower at 26s. 6d. on some pressure to sell. Khedivial Mails closed ⅛ down at 5½.

In Greek Securities there has been very little doing, and there are no changes in prices to report.

SAILINGS TO THE MEDITERRANEAN

We understand from Furness, Withy, and Co., Ltd., Royal Liver Buildings, Liverpool, that their well-known and old-established Johnston Line of steamers, trading from Liverpool, Swansea, and Antwerp have already recommenced their regular service to the Piraeus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, having in fact already despatched several steamers. Arrangements have been made to place on the berth all the steamers that the trade is likely to require. Merchants here and in the devastated areas of Greece, Roumania, and Serbia, in particular, will no doubt appreciate the advantages accruing to them through the resumption of this service.

Greece proposes to denounce the commercial treaty with Norway as from March, 1920.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

Mr. Lloyd George's eagerly awaited statement regarding the proceedings of the Peace Conference was made last week in the Commons on the motion for the adjournment of the House. If anyone hoped for a definite pronouncement as to the future of Fiume, the situation in Turkey, or the measures taken (or to be taken) for the assistance of sorely pressed Roumania, he must have been disappointed. The Prime Minister declared that the Conference had not wasted any time, and he defended the decision to maintain strict secrecy regarding the terms to be offered to Germany, on the ground that to disclose them prematurely could benefit nobody but the enemy. But he dwelt at some length on the situation in Russia and the policy of the Allies towards Bolshevism in that country and elsewhere, and his declaration that, "if Bolshevism attacks any of our Allies it is our business to defend them," is satisfactory as far as it goes. It is to be hoped that we shall not neglect this part of our business in South-East Europe or elsewhere. It is also a great point gained to have the British Prime Minister recognise that this country cannot in future ignore the Balkans, as Mr. Lloyd George did in effect when he declared: "It was the quarrels of small States that made the great war. The difficulties of the Balkans, I believe, disturbed Europe and created the atmosphere of unrest which began the trouble which aroused the military temper, and I am not sure that they did not excite the blood lust in Europe." At the risk of emphasising the obvious, we may express the hope that Europe will not again allow its peace to be disturbed by the Balkan States.

Whether Europe and America—as we must surely add—have learned the lesson it is yet too early to say, but when the world is told where the future boundaries in South-Eastern Europe are to run we may have a chance of judging. For in all probability the demarcation of those boundaries will satisfy none of the States concerned, and if present indications are to be trusted, we may confidently expect a chorus of protests from all directions. Then we shall see whether the lesson has been learned or not. If Europe and America make it clear at once that their decision must be accepted, even though their solution of the centuries-old problem may not be quite perfect, there will be a reasonable prospect of peace in the Balkans at last, and the Balkan League will be almost within sight again. But if the professional trouble-makers on the spot and their enthusiastic friends in Europe and America are to be allowed to resume their former activities, as they are only too ready to do, we must inevitably expect a return to the old agitation-cum-massacre days.

Showing the same great spirit that she displayed throughout the war and at the time of her worst sufferings at the hands of the German conquerors, Roumania has fallen upon her Bolshevist enemies and has dealt them a heavy blow. According to reports that reach this country from Austria, the Roumanians have advanced into Hungary, and have penetrated at least as far as Grosswardein on a front of about seventy miles. The Bolshevists showed but little stomach for fighting, and the only serious opposition that the Roumanians encountered was put up by Szekler troops, who are sufficiently anti-Bolshevist in their sympathies to fire upon Bela Kun's forces when they ran away in face of the enemy. Upon the whole, the Bolshevists in South-East Europe have not had much to congratulate themselves on during the past week. Bela Kun and his associates in Budapest have received a letter from Mr. Balfour demanding the fulfilment of an agreement into which Kun entered, and its receipt and its firm tone appear to have caused them much perturbation. And at Sebastopol the French are reported to have recaptured at the point of the bayonet part of the defensive system which the Bolshevists had previously secured. The world is war-weary, no doubt, but it is to be hoped that it is not yet too weary to deal faithfully with Bolshevism and all who profess it, and help from the Entente will surely be forthcoming to enable the Roumanians to take every advantage of their success.

The authorities in Whitehall have acted wisely in issuing prompt and reasonably detailed information regarding the serious disturbances which have occurred in some parts of India, and the result has undoubtedly been to steady public opinion in this country; pessimists are, it is true, occasionally heard to suggest that something is being kept back, but the ordinary man is inclined to accept the official *communiqués* as presenting a substantially accurate view of the position. Its interpretation is a different matter, and the views which one hears are obviously coloured by the predispositions of the speakers, so that while one school draws from Ahmedabad and Amritsar arguments in favour of hasty, if not hysterical, reforms, another regards the same facts as justifying an indefinite postponement of the projects now in hand. Between these extremes lies

Digitized by Google

the large body of middle opinion, which, as we said last week, considers that reforms should proceed, but on lines which shall, at all costs, ensure the maintenance of law and order.

No one who has read carefully the official announcements can have failed to observe that the authorities find a direct causal connection existing between the disorders and the agitation directed against the Rowlatt Bills. We do not for a moment dispute this conclusion, but at the same time it is right to point out that the causation, though direct, is not immediate. At one end of the chain we have the agitation conducted by prominent politicians of the extreme left; at the other, we have organised rebellion; but the intermediate links are still hidden from our view. It is obvious, however, that secret organisations have been at work, taking their cue from the known agitators, but selecting the scene of action and inflaming the passions of the people, both in town and country, until the smouldering fires of lawlessness have blazed up, and for the moment some parts of the country have relapsed into the condition which not very long ago was normal.

Such secret organisations are familiar to every Indian administrator, and the methods of nullifying their activities are "common form." The "intelligence" branch of the Administration must be efficient, and then the psychological moment for action must be seized. When these conditions are realised, an outbreak of lawlessness is averted, and the public commonly remain ignorant that one more crisis has been successfully met. On the other hand, open disorder usually indicates either that the intelligence branch has for once failed, or that the psychological moment for preventive action has for some reason been missed, and experienced Administrators are already scrutinising the published reports for any information bearing on the questions: whether one or both of these causes have been at work; did the Government know that rebellion was being organised; was there a failure to act on the information received; and, if there was a failure, to what is it to be attributed?

On these questions the reports throw little light, but attention is being directed to the possible relationship between the scenes of disorder and changes in the *personnel* of the Administration. Apart from Calcutta, which in these matters stands by itself, trouble has so far been practically limited to Delhi, Bombay, and the Punjab. Delhi is getting a new Chief Commissioner; Bombay has recently lost one of the best Governors who ever ruled, and his successor is still untried; while Sir Michael O'Dwyer was actually saying farewell to the Punjab at the time when the disturbances arose. The arm of coincidence is as long in India as elsewhere, but nevertheless these facts are in some quarters regarded as suggestive, indicating that the disorders have been very carefully located in those provinces where there was the best prospect of finding the Administration temporarily off its guard, and it is certainly noteworthy that up to the present time "resistance" has remained "passive" in the United Provinces, normally the most attractive part of India to the seditious agitator, but at present ruled by a strong Lieutenant-Governor seated firmly in the saddle.

It is not perhaps too early to say a word regarding the immediate outcome of these disturbances. Retribution must undoubtedly fall heavily on the men who have been guilty of murder and other specific crimes, but such action alone will not meet the case. The offending communities must be punished as a whole in accordance with the immemorial practice of the country, though not, we are glad to think, by the indigenous methods, and it is satisfactory to be assured that attention is already being given to the more lenient substitutes recognised under British rule—the enforcement of communal responsibility and the location of punitive police. Lastly, it is to be hoped that on this occasion the organisers of rebellion may not be permitted to escape. As we showed last week, the Rule of Law has been weakened of late years in India, and its re-establishment depends much more on the punishment of these active organisers than on the execution of their misguided and deluded dupes.

No news of any fresh outbreak of violence on a large scale has been received from Egypt, and to that extent the situation may be said to have improved. But it remains extremely unsatisfactory. On his return to office Rushdi Pasha appealed to the nation to preserve order and to the Government officials to resume work, in view of the removal of restrictions upon Egyptians leaving for Europe and of the creation of the new Cabinet. To all intents and purposes, however, his appeal fell upon deaf ears. The trouble-makers failed utterly to understand General Allenby's generous treatment; and though they ceased from train-wrecking, murder of Englishmen, and other methods by which they had previously sought to gain their ends, they showed at once that they regarded themselves as having won a victory. More than one correspondent testifies to the insolence of their bearing towards the Ministers who consented to receive them; and the demands they put forward were sufficiently absurd and impossible to show that they had been completely carried away by their "success."

The first of the demands referred to was that Zaghlul Pasha and his associates should be declared by the Egyptian Government as officially representing the Egyptian nation; secondly, the creation of the new Cabinet was not to be taken as implying the acceptance of the British Protectorate; thirdly, Egyptian soldiers and police should replace British as patrols in Cairo and for the maintenance of public security. Subsequently there was added to this modest programme a demand for the institution of "a Mixed Commission" to inquire into British administration in Egypt and for a general amnesty. It is to be hoped that under no circumstances will any amnesty at all be granted. Those who have led Egypt into folly should be made to pay the price of their unscrupulous self-seeking. The Egyptian Fellah will understand that; so will the Bedawi. The Committee of Notables, who put forward the demand for the "Mixed Commission," would be helped along the road towards common sense if they were told quite bluntly that the mere suggestion of any such "inquiry," even in these days of conferences, leagues, and fine phrases, is positively insulting to the Power that has done so much for Egypt. Fortunately, they are unlikely to receive encouragement from the quarter to which they are reported to have looked for it with some confidence.

It is possible to doubt the wisdom of appointing a Commmission to investigate the Syrian question on the spot rather than having it settled on broad lines on evidence already available in Paris. But since such a Commission is to be, it is satisfactory to learn that the British representatives upon it are to be Sir Henry McMahon and Commander D. G. Hogarth. The former, it is true, gained his experience of the East chiefly in India, but in Egypt he had every opportunity to acquire first-hand knowledge of the Nearer East, and the unselfish devotion he showed for his country's interests and his highly developed faculty of observing for himself unite to make him an excellent choice for his present position. Commander Hogarth will be an invaluable coadjutor, for he has a knowledge of Near Eastern countries and the problems attaching to them which is probably unequalled and is certainly unsurpassed. If the other members of the Commission are of the same high attainments and level as the British representatives, its chances of doing work of real value will certainly look brighter than we had heretofore ventured to expect. It is to be hoped, however, that our own representatives will not be hampered by instructions given them by those whose lack of true interest in the Orient should make them chary even of offering advice. Such things, it is rumoured, have happened before, and may happen again.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, April 9.

The Demarcational Zone.

Reports of acts of cruelty and abuse committed by the Hungarians in the proximity of the demarcational zone continue to come in. So-called Bolshevism is running riot among the Magyar population of those parts, and it is the Roumanians who suffer the brunt of their savagery. Robbery and assault in broad daylight, and even assassinations, are events of hourly occurrence, and particular zeal is manifested in the "removal" of teachers and of such who are known to be supporters of Roumanian national ideals. It is to be hoped, now that Roumanian troops both from the Kingdom and from Transylvania—for the Directing Council has decreed a general mobilisation in this country—are advancing towards the demarcational zone, that some sort of order will be established in the near future. Meanwhile, there is great misery in the disturbed regions, and innumerable families have left their hearths and homes to seek refuge in the interior.

The Jews of Transylvania.

On March 28 a meeting of the Transylvanian Jews established in Bucharest took place, with the object of determining what attitude they were called upon to adopt in face of the new situation created by political events. The outcome was the unanimous approval of the following motion:—"The Transylvanian Jews established in Bucharest, assembled this 31st day of March, 1919, adhere with all their heart and with lively satisfaction to the programme comprised in the Act of Union of Transylvania with the Kingdom of Roumania voted at Alba Julia on December 1, 1918, it being their conviction that the dispositions relating to liberty of nationalities; to the use of the maternal tongue in teaching, administration, and justice; to proportional representation in parliament and government; to guarantees of equal rights; to cultural, religious, and political autonomy, as well as to the unconditional liberty of the Press and of associations, correspond entirely with the liberal and democratic principles at present in vogue." The motion was warmly supported on the grounds that the principles enunciated in the Act of Alba Julia were conceived in a most liberal and equitable spirit, and that Jews regard the noble initiators of this Act as guarantors that the ideas set forth will find their actual realisation in fact. A union with Roumania conceived in this spirit could not but be applauded with enthusiasm and joy.

It was further proposed that the Jews living in the provinces should be urged to adhere to this motion, and that pressure should be exercised among the Jewish communities of Ardeal (Transylvania) in order to obtain their support of the programme formulated in the Act of Union of Alba Julia. It was further remarked that in Ardeal there had never existed any real hostility towards the Jews, and that the apparent anti-Semitism of the Roumanians was solely directed against those who made common cause with the Magyars.

April 13.

Bolshevism, Genuine and Counterfeit.

It is rumoured, possibly without much foundation, that the Roumanian troops, at least those from the Kingdom, are about to be withdrawn from the Transylvanian danger zone, where they are to be replaced by Allied troops, and concentrated on the Bessarabian frontier. Whether the news is true or not, the facts remain that the Allied forces have evacuated Odessa, and that the attitude of the Russian Bolshevists is somewhat threatening. The general impression is that the danger from this direction could assume much more serious proportions than anything that might come from Hungary. The Hungarian revolutionary movement, in spite of its alleged identity with Russian Bolshevism, turns out to be a bad imitation, partly the outcome of social defects, partly trumped up with a view to embarrassing the task of the Entente. The authors of the movement suggest the hypothetical case of a man who, having through his own fault placed himself in a false position with regard to his comrades, has recourse to the bottle with the hope that his companions will follow his example, a common state of intoxication levelling the differences that have arisen between them. What is actually occurring in Hungary is a purely local phenomenon, expressive of the state of discontent arising from the issue of the war, and those mistakes which preceded and contributed to its outbreak. These mistakes were partly social, and in the main due to the absence of the true democratic spirit, and partly political, as illustrated by Hungary's attitude towards the foreign nationalities living on her territory. Meanwhile, to judge from the scanty information here at our disposal, it would seem that from the military point of view the Hungarian movement is too disorderly to demand extensive military precautions on the part of Roumania; while regarded as a social danger, it is deprived of all power of contamination by the facts that, on the one hand, it lacks that ideologic foundation which gives such life-power to the Russian movement; and, on the other, the Roumanian organism, to borrow a medical simile, is entirely refractory to, and unreceptive of, the special virus which is playing such havoc with her neighbour's constitution.

JAFFA NOTES.

(From Our Own Correspondent.)

Jaffa, March 25.

Visit of General Money.

On Friday, the 21st inst., Major-General A. W. Money, the Chief Administrator Occupied Enemy Territory (South), arrived from Jerusalem on a short visit to Jaffa. Major Postlethwaite, the Military Governor of Jaffa, introduced to his Excellency the chiefs of the various communities and the members of the Administrative Council. The Chief Administrator expressed his pleasure at meeting them, and said that his earnest wish and hope was to see them all continuing to live peacefully together and working hand in hand for the welfare of the country. General Money then proceeded to the Town Hall, where Major Postlethwaite introduced to his Excellency Assem Bey El-Said, the amiable and efficient Mayor of Jaffa, and the members of the Municipal Council. The Mayor, in his welcoming speech to the Chief Administrator, expressed the good feelings of the population towards the just government of Great Britain, and declared the assurance of her good intentions towards his country.

Then our popular Governor, Major Postlethwaite, told General Money that the Municipal Council of Jaffa had unanimously decided on calling one of Jaffa's avenues King George Avenue. General Money expressed his pleasure, and said that personally he fully concurred with the unanimous decision and that he would submit the matter to his Majesty the King through the Foreign Office.

CYPRUS IN 1917-18.

(From Our Own Correspondent.)

The High Commissioner's annual report on the Blue-book for 1917-18, again very brief, gives a condensed *résumé* which tells of continued prosperity; but this, it must be remembered, is partly due to war conditions, and it is desirable to look beneath the surface and to see what real progress, if any, is being made in the condition of the island and of its agricultural population.

The continuance of martial law threw extra work on the police, but led to no trouble. The public health was good, and a decrease in malarial complaints is partly attributable to the continued application of the measures recommended by Sir Ronald Ross. The work of the medical department continues to be excellent. As regards leprosy, which still lingers in the island, but is regarded as in process of being stamped out, it is of interest to note that there is no sign of disease among the children born in the "Leper Farm." They are all taught trades, and as soon as they are old enough they go out to earn their living. The Government Analyst has continued his excellent work, and there has been a marked reduction in adulterated foods. No less than 1,322 samples were analysed, adulteration being detected in sixty-four kinds of articles.

The agricultural survey is somewhat disappointing, inasmuch as no noticeable advance seems to have been made in those branches in which some marked development ought already to have been accomplished. The forward movement inaugurated under Sir Hamilton Goold Adams has not yet borne the fruit that was looked for. Progress in almost all directions has been on a microscopic scale, or at best can only be described as in a "hopeful" stage, with a view to future realisation. It would, however, be quite unfair to attach any blame to the Agricultural Department, in which it is not lack of zeal and hard work but want of funds and encouragement that are the causes of stagnation.

Reports of recent years pointed to the probability of a very large and remunerative development of potato culture; but instead of this we find that matters are stationary, owing to inability to obtain new seeds. Whatever obstacles the war may have caused, no time should now be lost in pushing forward this industry, for which Cyprus is so well adapted. The briefest allusion is made to tobacco and to the high prices which have been hoped for owing to the closing of various sources of supply; but no information is given as to the actual situation or prospects. This omission may be supplemented by stating that the outlook is far from encouraging. The results of last year's planting, at almost all altitudes, and in all soils, show that, although the crops have been abundant in leaf, the quality is not such as to commend itself to outside markets. Without pronouncing definitely against the possibility of success when better methods of culture and curing are available, it may be said that the efforts have been so far a failure. Possibly the new company that is being formed at Limassol may proceed on the only lines that can give any hope of success—viz., patient and exhaustive trials in what is the present experimental stage.

Olive cultivation, which should unquestionably be pushed forward over large areas, still makes but trifling progress. Slow growing as the tree is, the Government should encourage it by all means in its power. Oil and olives are among the chief articles of food, but the days when the exportation which is hinted at will take place are still far distant.

While good wine prices have led to some increase in vine cultivation, the warning of last year that inflation will not be maintained at its present level still holds good. The vine pest, which, by the way, appears under a new name (*Zygiena ampelophaga*), has been combated in the usual fitful and haphazard fashion by the villagers, whose apathy and fatalism are still far too conspicuous. Experiments continue to be made in respect of various cereals, but we do not seem to get any further in results, and there is but little, if any, progress in the antiquated methods of harvesting and winnowing.

The campaign against locusts has been carried out as hitherto by the Government "with satisfactory results"; but there is complete silence as to details, figures, localities, etc., which is regrettable, as all information regarding what is one of the most interesting and important operations of the agricultural year would be of value in other countries visited by this formidable plague.

Progress is reported in the preparation of sultana and other raisins; but no details are given, and there is nothing to show whether the progress is such as to hold out hope that these articles are likely to commend themselves to the British market, in which they have failed so far to win a place. Model orchards and vineyards have been laid out, but whether villagers are at last following the lead we are not told. Unfortunately, as regards the Agricultural School at Nicosia, parents are said to be reluctant to send their boys there, although practical as well as theoretical teaching is given. The Department has endeavoured with its limited resources to meet the complaint of Cypriot farmers that, whereas an ounce of practice is worth a ton of theory, they have had scarcely anything in the way of actual demonstration in the arts of husbandry.

The decrease in goats and increase in sheep continues, the figures being, as compared with the preceding year, 190,000 goats as against 193,854, and sheep 253,000 as against 249,598. It would be well for the forests and for agriculture if the decrease of goats were more rapid.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Troopships. April 15.

Colonel Yate asked the Parliamentary Secretary to the Shipping Controller how many troopships homeward bound from Australia will be diverted via India; how many prize ships will be made use of for the conveyance of passengers from India during the month of May; and for how many passengers will accommodation be thus provided in addition to that provided during April?

Colonel Wilson: The number of troopships homeward bound from Australia diverted via India and expected to make May embarkation there is seven, and the accommodation available for ordinary passengers is about 1,000 first-class and 250 second-class. Information as to the accommodation in the prize ships at the disposal of the Indian Government is not available here.

The Disturbances in India. April 16.

Mr. Montagu, Secretary for India, replying to a request made by Sir J. D. Rees for further information with regard to the recent disturbances in India, said:—I have little to add to the information that has appeared in the Press. In the Bombay Presidency riots occurred on the 12th inst. at Virangam, where a mob attacked and burnt down the railway station, and other acts of destruction are reported. Troops were dispatched from Ahmedabad, and order has now been restored. Bombay City is reported to have been quiet since the 11th inst.

Troops in Mesopotamia.

In reply to Colonel Wedgwood, Mr. Churchill said:—The strength of British white troops in Mesopotamia on the following dates was:—On November 11, 1918, 95,000; on March 15, 1919 (last return available), 61,000. The number which left that country between November 11, 1918, and March 15, 1919, was 34,000. Under the regulations at present in force, the main qualification for demobilisation is length of service, and it is further provided in the regulations that a proportion of each draft sent home for dispersal shall include men who have had the longest service overseas. Men are being brought home as rapidly as circumstances permit.

Appointments in Egypt.

After stating that affairs in Egypt had improved, Mr. Cecil Harmsworth (Under Secretary for Foreign Affairs), asked by Captain Ormsby-Gore whether General Allenby had recently appointed General Clayton, chief political officer in Palestine, and Colonel Storrs, Governor of Jerusalem, to posts in Egypt, and who had filled their places in Palestine, said:—I understand that both these officers are at present in Egypt, but I have no information as to their having received any appointment there, and the question of filling their places in Palestine has not therefore arisen.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE QUESTION OF THE DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The explanation given by your correspondent, M. Stephanove, that the Allies, in allowing the Bulgarian administration "to continue in Dobruja, *simply conformed* to the agreement between Bulgaria and her allies" appears to be derived from the domain of pure phantasy. No one could imagine that the Allies, when imposing the armistice upon the treacherous Bulgarians, were going "simply to conform" to the agreements between their enemies. Furthermore, M. Stephanove would have it understood that, as long as the Central Powers were strong enough, their arrangements in the Near East were respected by the Allies, and that only when the Lion was dying they "considered themselves free to restore the Roumanian authorities (in Dobruja)." I am very sorry to have to say it, but M. Stephanove is crediting the Allies with very "Balkanised" principles of policy and chivalry. As to the arranged reception which "moved to tears" the Allied troops of occupation, the Roumanian Government possess a long list of professors, lawyers, judges, journalists, as well as of ladies who came from Sofia and other Bulgarian towns just to play the rôle of Bulgarian peasants in the Dobruja. It was like being at the cinema to find in the remotest villages of the Dobruja mayors who addressed the troops in the correct English and peasant women "lamenting in the tongue of Voltaire"!

"Dobruja," says M. Stephanove, "according to history, traditions, and geography, is Bulgarian." This is simply an affirmation which cannot stand even when made by M. Stephanove. This is no place for an academic discussion, but History—not that written by the Bulgarian chauvinists—will teach M. Stephanove that she has in store no important arguments for the Bulgarian claimants to the Dobruja. Even the quintet of Sofia professors, Messrs. Tschirkoff, Miletich, Zoneff, Ivanoff, and Romanski—representing the Bulgarian chauvinism in science—are extremely pessimistic about the Dobruja being Bulgarian. They published in "Petermann's Geographische Mitteilungen," 1915 (map 44), an ethnographic map which shows that the Bulgarians in Dobruja are in a minority (no more than 16 per cent.), and Professor Tschirkoff said bitterly: "To believe that there are more than 50,000 Bulgarians in Dobruja—out of a total of 350,000—would mean very seriously to mislead ourselves." He finds, however, another argument for claiming Dobruja, as well as Macedonia, namely, that the Bulgarians are the least numerous among the Balkan peoples, and thus they must absorb the elements of the neighbouring nationalities and get stronger. This is, at least, the most sincere argument—the argument of the wolf—so far brought forward by the Bulgarian scientists.

M. Stephanove is wrong when he believes that the commerce of Varna and Rustchuk was brought to a standstill because of the annexation of Dobruja to Roumania. The cause was quite a simple one. Bulgarian commerce took the way towards the Ægean Sea as being the shortest route between Bulgaria and Europe. If Constantza were dependent on Bulgarian commerce only, it would become a deserted port in a very short time, being of no use for the Bulgarian export and import, because it is situated very far to the north, and the transport of the goods into Bulgaria would cost from three to four times more than from any southern port.

The arguments concentrated in the letter of your correspondent "S. P." are to be found in nearly all the Bulgarian pamphlets of propaganda on the question of the Dobruja, and I am very glad to have the opportunity of dealing with them (I know myself of no less than fourteen such pamphlets) :—

1. Mircea the Great, Prince of Wallachia, who for a quarter of a century extended his rule over Dobruja—as "S. P." recognises—concluded a treaty of peace with the Turks (1411) recognising the sovereignty of the Sultan; and according to this treaty the Turks were responsible for the integrity of the Principality of Wallachia. Later on, when the Wallachian Princes revolted against the rule of the Sultan, the latter was obliged to send expeditionary forces against them, and, conquering Dobruja, appointed a Pasha, with residence at Matschin (Macin) as Governor of Dobruja. The Turks conquered Dobruja from the Wallachians not from the Bulgarians, affirms Zinkenstein ("Geschichte des Osmanischen Reiches," Hamburg, 1840). The Bulgarian Exarchate, alluded to as instituted by a Sultan's charter—in fact, by the Patriarch of Constantinople—extended its religious power only nominally and for a short time (1870-1881) over Dobruja, and was caused partly because just some years before the Roumanian Church severed its relations with the Patriarch and proclaimed itself autonomous. Thus, the Roumanian Church could not extend its authority over a province, being at that time (1870) a part of the Ottoman Empire. After all, since the time of Mircea the Great (1386-1418) no Bulgarian ruler extended his power over Dobruja for any length of time.

2. Impartial ethnologists and scientists of universal reputation, as G. Léjan, M. F. Mirkowitch, Prof. F. Bradaska, Mackenzie and Irby, H. Kiepert, Elisée Reclus, etc., are of an opinion quite contrary to that of "S. P."; and they all state that the Bulgarians in Dobruja were in a poor minority. Their scientific works are to be taken into account as much as the confessions of an anonymous "prominent Roumanian," made to the late Sir Henry Drummond Wolf.

3. A glance at the map of the Balkan Peninsula is enough to "satisfy not only the unprejudiced mind"—as "S. P." says—but even the most prejudiced one that economic geography could not reckon Dobruja as a part of the economic system of Bulgaria, which extends itself far on the south. Dobruja could only be prosperous as the open road of Roumanian trade towards the sea, and from the descriptions of the French and British military missions during the Crimean War one can easily understand how poor the province was before its incorporation into Roumania. Even the Germans who tried to found a colony in Dobruja lamented over "Die Deutschen Exil in Skyteulande" (Bernhard Schwartz). I do not know what kind of trade was that which was "pre-eminently in the hands of the Bulgarians," and I wonder if any statistical data concerning it could be produced. What I do know is that Roumania was exporting nearly two million tons per year through Constantza only! And that fact is of great importance for European progress.

3. I quite agree that the present-day Balkan problems are not to be settled otherwise than on the basis of facts imposed by reality. Therefore I cannot understand the endless quotations from the Roumanian newspapers and from all sorts of books of forty years ago made by "S. P.," with boundless patience, so as to prove that some Roumanians refused to accept the Dobruja when given to Roumania by the Congress of Berlin. Nearly all these protests were made against the methods of Tsarist Russia in rewarding the Roumanian soldiers who had fought beside the Russians at Plevna by robbing their home. But after all, could "S. P." produce any Bulgarian protests from that time against the cession of Dobruja to Roumania? One could see from the Memoirs of King Carol, as well as from the Protocols of the Congress of Berlin, that the leading circles in Roumania and the representatives of the Great Powers fully realised what a capital importance Dobruja has for the development of Roumanian trade.

4. I am astonished that such an argument as that taken from the book of Ivan Ristich, that "Roumania being absent on the battlefield (1875-1878) acknowledged that she has no interest in the Balkans," could be brought by a scholar, since it is generally known that Roumania took her place of honour on the battlefield at Plevna (1877). King Carol commanded the Russo-Roumanian force, and their victory brought the liberation of Bulgaria from the Turkish yoke.

I am very glad to find that "S. P." fully recognises that the various attempts at insurrection in Bulgaria "originated in Roumania, and were principally carried out by bands of insurgents organised and equipped in Roumania," and I am sure that there are many honest Bulgarians who, having experienced the generosity of the Roumanian people, would not let them be discredited by legends of their rapacity.

The leading Bulgarians who try to create, at any price, a question of Dobruja and to make the Bulgarians believe that that province has any importance—national or economic—for the future progress of their country are the real enemy of the vital interests of the Bulgarians, and prevent the long-desired Balkanic Alliance from being realised.—I am, etc.,

THE WRITER OF THE NOTE IMPUGNED.

SURNAMES FOR PERSIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It may be strange to an average Englishman, but it is the fact, that there has been no "surname" in Persia. Business houses in England who have dealings with Persia and Persians are aware of it, and no doubt have found it very difficult to keep indexes of the names of their clients. For in Persia every man has his distinct name, and some merchants sign, in addition to their names, those of their fathers and grandfathers, also the name of the town they have hailed from. Thus :—

"Ali, son of Baghir, son of Cassem, Darabi," which is as if one were to write in English :—

"Arthur, son of Bertram, son of Charles, of Durham"!

This week, to my surprise and satisfaction, I received an official newspaper, *Iran*, from Teheran, dated December 23, 1918, in which there is a proclamation that, according to the new laws and regulations, every man is obliged to register a "surname" for his family, and in the same paper, amongst the well-known family list whose heads have already registered their "surname" is my elder brother (H. M. Sadik "Hariri"), who has duly registered our late father's (H. Mehdi "Hariri") commercial title, and the telegraphic address "Hariri," which belonged to our late father during the last fifty years or so.

It is very refreshing to know that the twentieth century has brought a fresh reform and alteration even to the laws of the Medes and Persians.—I am, etc.,

REZA DE MEHDI "HARIRI."

6, Winter Gardens Terrace, Southport, April 8, 1919.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

I read a short time ago in the *Egyptian Gazette* of the arrival at Alexandria of some 2,000 Maghrabis, who had been detained in Syria and Asia Minor during the war. Now the Maghrabis have (as the *Gazette* reminds its readers) for many years supplied Egypt with most of its "magicians" and fortune-tellers; and they figure in those rôles in most of the public storytellers' tales—as students of Spitta Bey's "Contes Arabes" will remember. It is, therefore, not surprising to learn that one of them, questioned by a *Gazette* man, said that, if they remained in Egypt, several of them "would take up the profession of fortune-tellers and magicians." But it is fortunate that the whole 2,000 do not contemplate doing so. Even Egypt would find that a tax on its powers of belief—and payment. Or would the prices of "spells" come down with a rush?

***

During the war we suffered many changes, but few were more intimate and widespread than our enforced change of diet. Things unheard of, things unguessed at, things unrecognisable—all were eaten at the painful feast of necessity. But surely an item which I have extracted from the menu of a Cairo hotel touches the bottom when it describes the soup course as one consisting of "tripe and legs," for which incidentally the precipitous price of six piastres is charged! Now the most poisonous soup that I have ever seen is the war-time "potage communal" of the Belgian peasant,—a concoction which would quench many thirsts but never appease a hunger—but the thought of "tripe and legs" nearly curdles the blood. I suppose that the beverage is wholly suine; but possibly the hotel manager thought fit to make the novelty more delicate by adding to the tripe the "disjecta membra" of some other animal.

***

In a recent message to the *Daily Chronicle*, Mr. Constantine Brown has given a most gloomy picture of Constantza, the famous Roumanian town. The war has terribly ruined this historic place, and among its numerous tragedies was the removal by the Bulgarians of the statue of Ovid. My readers need not be reminded that the Dobruja was once the home of the Getae, and a Roman province, and that Ovid was sent into exile to Constantza, then called Tomi. Bitter was the lot of the Roman poet in being placed among barbarians in a frontier town, where, as he says, eternal strife was the rule. And even now, after more than nineteen hundred years, his sculptured memory goes a-travelling! In this restless part of Europe his wandering greatness seems doomed to many metamorphoses; for events in this region will never cease, and its final settlement one cannot even rudely divine. What Ovid said of himself (in his "Tristia") may with truth be applied to the country in which he said it:—

Totque tuli terra casus pelagoque quot inter occultum stellæ conspicuumque polum.

***

A correspondent of *The Times*, writing recently on "Sport in Mesopotamia," has some amusing stories of how our troops there whiled away some leisure hours. Naturally conditions of sport for the soldiers were far different from those which I, while there in the softer and less exciting times of peace, enjoyed. But to read of "Gazelle-Hunting by Motor-car" upsets violently this natural thought. "O tempora, O mores!" It is, I confess, with the old-fashioned satisfaction of a "laudator temporis acti" that I read that the chase with petrol did not always meet with happy results. To hunt gazelles with motor-cars and aeroplanes must have been tremendously furious fun, but for me the old, more human, ways of sport! This correspondent also describes his efforts to bring down the "sporting old bustard," and remarks on its cunning. Now the hardest thing I knew in this country was to capture the francolin, which flies at wonderful speed very close to the ground. But the rare difficulty of hitting him is less than the divine joy of eating him, for he is, I am sure, the food of those gods who preside over shooting. Else why should they grant him to us so seldom?

***

As a sincere admirer of Islam, and because I have several Moslem friends, I have been trying hard to understand how it is that so many Moslems cherish feelings of respect and admiration for the Sultans of Turkey. Unless we are woefully misinformed by the authorities, the Sultans of Turkey do not fulfil, and never have fulfilled, one of the most important conditions attaching to the Khalifate: they certainly do not belong to the tribe of the Koreish. And there are other reasons why one might be pardoned for expecting to find the Moslem world quite uninterested in their fate. Yet as a matter of fact it is quite obvious that the Turkish Sultans have somehow managed to secure a very warm place in the hearts of many Indian and other Moslems. It is puzzling, and all the more so when we recognise—as we must—that the feeling was largely the creation by Abdul Hamid, who, whatever his virtues may have been, was hardly a promising figure to secure such widespread homage.

***

Yet Abdul did somehow manage to get himself favourably viewed not only by Indians, who were far enough removed not to see for themselves what his rule meant, but also by some Arabs, who actually suffered under that rule. I remember one of the latter telling me a little story about the Red Sultan. It was to the effect that the Shah of Persia visited him, and at the meeting of the monarchs the Shah appeared loaded with rings and jewels, but "the Sultan was dressed in a black coat, and had no jewels at all on." And the odd part of it was that the simplicity appealed to my Arab friend, and that he obviously thought that Abdul had scored off his visitor—and was glad of it. Truly, your Oriental is a puzzle at times.

PRESS ON THE NEAR EAST.

Zionism in America.

In an article called "Why Most American Jews Do Not Favour Zionism," by Julius Kahn, in the *New York Times Magazine* of February 16, reasons are set down against the creation of a Jewish homeland in Palestine thus:—

First—It creates a divided allegiance, as between our country and its Stars and Stripes and Zion with its white flag with the blue star. The Zionists, even in this country, are bent upon following their flag. The real American Jew knows but one flag, the Stars and Stripes. The American Jew sings "The Star-Spangled Banner" as his national anthem. The Zionist sings "The Hatikvah" as his.

Second—The Zionist doctrine is in conflict with our own free institutions. The Zionists believe in the foundation of a Government which shall embrace both Church and State. That is not in keeping with the trend of modern statecraft anywhere. In that respect Zionism is decidedly reactionary. Besides, the Jews of Palestine are a small minority of the population. Will the other people who live there consent to domination by this minority?

Third—There is the practical objection—against the huddling together in a confined territory of enormous numbers of the Jewish people. As everyone knows, Palestine is small; it could never support the millions of Jews who live in countries where Jewish persecution is a matter of common occurrence. That huddling together has had a baneful effect in Russia, Roumania, Galicia, and Poland. The result would be a continuance of these disadvantages in the proposed new home.

Fourth—The greatest danger to the Jews in all those countries where they are on an entire equality with every other class of citizens is that, with the establishment of a separate Jewish State, they would be looked upon as aliens where to-day they are respected citizens. They would frequently be told to go to their own country, Palestine, by those agitators and fanatics who have a hatred of the Jew in their hearts. In fact, I have had a number of letters recently which stated the opinions of the writers. They suggested that it would be a good thing if the country got rid of the Jews.

Mr. Kahn continues with a claim that "the Jew is always willing to give his life to the country in which he finds a home," and he explains in facile words that the hard perseverance of the Jew is a characteristic forced on him by persecution. He insists that most Jews wish to live and die in the country wherein they now are; and instead of a new Jewry he suggests the abolition of all restrictions (where such exist) upon Jews.

The Jews should be permitted to settle in any part of any country without hindrance or molestation. Their neighbours everywhere would find them kind and considerate citizens of the country, the city or the community in which absolute civil and religious freedom was given to them. The Jew is as public-spirited and as benevolent toward the unfortunate of every creed as any class of people on the face of the earth. All he wants is a fair opportunity. He needs no especial favours. Given equal opportunity, he does not in any way or at any time become a burden on the country which emancipated him.

King Ferdinand of Roumania.

A correspondent of *The Times* recently had an exceedingly interesting interview with King Ferdinand of Roumania. He points out how King Ferdinand is essentially suited to the new epoch, how much he has already done for his people, and how much faith he has in his country. Particularly his faith in the Entente was unquenchable. But now that the war is over he sees that the lack of regular contact of the Allies with Eastern Europe may bring about very difficult situations.

Digitized by Google

Especially does his Majesty fear that the growth of Bolshevism has escaped the sufficient consideration of the world's peacemakers. "Do they realise what the position of Roumania is?" he asks. "We are a little island at the end of Europe, surrounded by mortal enemies everywhere, but, unless our resistance is efficient, it is the life of Europe itself which is menaced. At one of the most critical moments of my reign, at the moment of the German invasion, I telegraphed to my Allies in London and Paris, and my messages reached their destination some three months later. To-day conditions are hardly better. Our one great wireless station has been destroyed, and, deprived of every means of communication with the interior, my people are at the same time unable to express to their Allies their dangers or necessities." The King of Roumania, in common with all the Roumanian leaders and those Allies who have lived long in the country, is convinced that the Roumanian peasants are averse to all Bolshevist instincts, but that no small people represents in itself a sufficient barrier against so great a danger.

But his ultimate hopes are great.

"As to the future, I am very hopeful. Once the danger of Bolshevism is removed, our new frontiers established, and hostilities have ceased, our country is bound to stride forward rapidly. The peasants, who numerically and morally form the greatest part of the population, deserve everything and are capable of everything. Their conduct during the hardships of war was beyond all praise. They never gave up, and they were never downhearted. With those reforms which I hope to live to see, sound education, universal suffrage, and co-operation of labour, wherever it is practicable, Roumania must very soon take that place which the character and industry of the Roumanian people and the inexhaustible riches of her soil predestine her to. The dependence on and the exploitation by Germany must cease for ever. Nor would I willingly see any other country take the place which Germany usurped here before. Although it is so young a nation, the Roumanian people must be taught to develop themselves. That is the best solution."

One of Our Prisoners.

We have all heard a great deal about the bad treatment of British and Allied prisoners in Germany; but there have been few opportunities of learning how our Turkish and Arab prisoners fared in India, or how they regarded their captivity. An article in the *Basrah Times* of February 7 gives us such an opportunity, for it sets out the experiences of Sayyid Ahmad Effendi of Mosul (who before the war was practising as an advocate at Busreh), while a prisoner of the British. The Effendi was interviewed by a representative of the *Basrah Times* after his return from more than four years' internment, and he spoke in the highest terms of his treatment throughout that period. The following are extracts from the article:—

Three days after the British occupation of Basrah, Sayyid Ahmad Effendi was taken, with other persons, for internment on board a steamer, which was anchored in the Shatt-al-Arab. The party was composed of Sobhi Bey, the Wali of Basrah, seventy-six officers, including four of the rank of lieutenant-colonel, and 1,000 soldiers. Sobhi Bey, Sayyid Ahmad Effendi, and the officers were comfortably accommodated in first-class berths, and, from the moment of their nominal incarceration, were treated kindly and respectfully throughout the voyage to Karachi. Here, continued Sayyid Ahmad, they received the first pleasant surprise which augured well for the future. They only remained in the Sind port for a day, but arrangements were made by the British authorities that merchants of all descriptions should visit the boat and the prisoners were given all facilities for the purchase of those articles which would add to their comfort.

. . . The journey was then continued to Bombay, where the boat anchored for three days. Here again the prisoners were given access to merchants and vendors of all classes of goods, and those who, unlike Sayyid Ahmad, had never visited *Urbs Prima in Indis* were impressed by the admirable view, where, confronted on one side by the buildings of the modern town, and flanked by the islands of Elephanta and Oran, they had, if not the freedom of landing, perhaps the more healthy benefit of a naturally artistic and essentially salubrious setting.

It was at Bombay, said Sayyid Ahmad, that he and his friends began fully to realise the courtesy of their captors, whose desire seemed to mitigate the prisoners' enforced lack of freedom as much as possible. The party was here met by Colonel Baldock, who made a great impression on all by his kindliness. As an instance of this, Sayyid Ahmed relates the fact that this officer authorised Sobhi Bey to take charge of the party and deal with them until Rangoon was reached. It is interesting to mention, further, that Sobhi Bey's sword was returned to him. The effect of this humane and courteous treatment—quite unexpected and, perhaps, somewhat inexplicable to some of the prisoners—can only be realised by one who witnessed the sincere emphasis with which Sayyid Ahmad related what were to him admirable instances of leniency—the instance, he added, being the first step in a lesson which they might learn by a study of the British example.

. . . Upon arrival at Rangoon, another port where the wonders of strange architecture, new customs, and new peoples compensated in some way for the involuntary journey, the party was met by Major Wilson and Lieutenant Mackenzie, who superintended their transference to river boats. Of the treatment extended to them by these officers, Sayyid Ahmad is again emphatic in his praise. During the five or six days' journey up river to their destination at Thaetmyo the boats stopped at intervals of about five hours, and at these halting-places some of the prisoners were allowed ashore to make purchases. On arrival at Thaetmyo, the party was rejoiced to find that to each individual was assigned a bedstead, a small table, and four chairs. Here the interned lived in comfort and happiness for a year, and Sayyid Ahmad mentioned that the arrangements for their accommodation and the regularity of their meals combined to supply a mode of life better than that to which they had been accustomed in their own land. Sobhi Bey was still allowed to exercise his control over the party, and they were admitted freely into the city without escort, and were able to meet and converse with the inhabitants. Parties of the Turkish soldiers were daily allowed to go to the river to bathe, and everything conducive to hygienic surroundings was encouraged.

It is evident from Sayyid Ahmad's narrative that after a year's sojourn in that quaint Burmese station he was loth to continue his travels in exile. But it was decreed that some of the party should be transferred to India, and, after another protracted voyage by steamer and railway, Samarpur, near Rampur, was reached, where another internment camp became the temporary home of these victims of the vicissitudes of war. However, the days of captivity in this new sphere were no more irksome than they had been at Thaetmyo, and to the interned, amongst whom, it may be incidentally mentioned, were included Jews, Armenians, and Greeks, was extended that hospitality which they always enjoyed during their exile. In a large camp, containing about 6,000 men, life under new circumstances was passed without any incident occurring through which the slightest imputation of unjust or unfair treatment could have been imagined by the most irreconcilable. Here, again, the upright character of a lieutenant-colonel in command impressed itself upon the interned community. In bidding them farewell, he wished them to forgive him for any neglect which might have unwittingly occurred during the period of their subjection to his administration. In the minds of the interned, said Sayyid Ahmad, there was no knowledge of any such neglect. Life under such circumstances compares magnificently with the stories of how prisoners have been treated by our opponents.

Sayyid Ahmad Effendi was interested in studying the people of Burma and India, whom he had seen happy in the prosperity of a just rule, and expressed the opinion that they appeared to him imbued with a feeling of gratitude to the British for their upright methods of dealing. It is difficult to those of us who have always known such an order of things and consider it to be a normal state of affairs to realise the impression which it might make on a stranger, but we wish to convey clearly in these lines the standpoint of a member of the community who has seen administration in Iraq in peace-time and the treatment of prisoners in an enemy country in time of war.

It is to be hoped that Sayyid Ahmad Effendi and his fellow-prisoners will act as agents in disseminating the truth regarding our treatment of our prisoners, which has been most grossly misrepresented to the Turks and Arabs by our enemies.

"Clive, Warren Hastings, and their Biographers," by Sir Sidney Low, in the *Edinburgh Review* (April).

THE KING AND MESOPOTAMIA.

The King, who last week received Lieut.-Colonel A. T. Wilson, Acting Civil Commissioner in Mesopotamia, heard with pleasure of the steps which had been taken to repair the ravages of war in districts recently occupied by the Turks and to promote the welfare of Mesopotamia in general by restoring irrigation, improving communications, providing medical assistance in the large towns, and encouraging education in indigenous institutions through the medium of the Arabic tongue. His Majesty expressed confidence in the future prosperity of Mesopotamia and in the progressive spirit of its inhabitants.

FRENCH EXPANSION IN AFRICA.*

The creation of a French empire in Africa is an epic of modern history parallelled only by the growth of British influence in India. The area involved is, indeed, considerably greater for, while our hegemony in India extends over 1,803,000 square miles, no fewer than 4,368,000 are subject to France's beneficent sway. The story of her expansion south of the Mediterranean is ably told by M. Paul Caffarel, who bore a conspicuous part in the process. France was still bleeding from the wounds inflicted by her struggle with Prussia when a group of far-seeing statesmen determined to gain in Africa some measure of compensation for the loss of prestige and territory in Europe. At their instigation a swarm of adventurers set forth to explore the innermost recesses of the Dark Continent, and military expeditions followed in their footsteps, which sometimes ended in disaster but more frequently in brilliant success. Thus, in less than half a century a population approaching 50,000,000 received the blessings of civilised government. Stupendous were the difficulties of the enterprise. The climate of Central Africa is unsuited to the European's constitution; distances are vast, the inhabitants either savages of low development or red-hot fanatics. At home the colonial party had to contend in Parliament and the Press with a noisy faction resembling the "Little Englanders" of yore. European rivals arose in their path at every step. While Bismarck ruled the German Empire he encouraged French expansion in Africa, in order to distract his neighbour's attention from dreams of *la révanche;* but the ex-Kaiser pursued a contrary policy. By dint of truculence and deceit he contrived to wrest valuable gains from France. Italy intrigued against her in Tunis, Spain in Morocco, Belgium in the equatorial regions. Nor were British statesmen free from blame. For many years prior to the consummation of the Entente they displayed jealousy unworthy of a great colonial Power, which culminated in the famous Fashoda incident of November, 1898. It is now admitted on all sides that Lord Kitchener's tact and patience averted a fratricidal struggle between the protagonists of European civilisation. M. Caffarel explodes the theory once widely held in this country that Frenchmen are inferior colonists. His narrative proves that we are deeply indebted to French Africa as a school of generalship. Had it not been for the experience gained in that region by Joffre, Mangin, Gouraud, Gallièni, and a host of energetic subordinates, the issue of the world-war might have been widely different. Our author ends his fascinating record with a suggestion which deserves attention from the Peace Conference. It relates to Mauritius, geographically and politically an appurtenance of Africa, which was wrested by Great Britain from France in 1810. M. Caffarel asks whether, in the approaching redistribution of the world's surface, his countrymen "may not be allowed to hope for an act of international courtesy which would bring about a retrocession imposed by Nature, history, and political economy."—F. H. S.

A WOMAN IN WAR.†

Before the war Miss Macnaughton was known to many as a light and pleasing novelist; but in this book are shown, in addition to her amusing side, the serious aspects of her character. From her aunt's voluminous diaries her niece has here collated those dealing with her war work at home, in Belgium, in Russia, and on the Persian front. It is the rather pathetic record of her last efforts (for she died from the effects of Russia and Persia) which here concern us. Her experiences in the Caucasus are particularly interesting, and the diary in this part is quite well done. She is perfectly frank in setting down her opinions. She is convinced, for instance, that Russia did not take the war seriously, that Armenians are an ungrateful and greedy set of people, and that it is Persian temperament that baffles Persian reform. The book is full of notable little thoughts and observations; and if we say that it is neither racy nor profound, we do not desire in the least to minimise the worth of its noble author, whose works for the cause of humanity were at all times beyond praise.

* Notre Expansion Coloniale en Afrique, de 1870, à nos jours." Paula P. Caffarel. (Paris: Felix Alcan, 1918. 5fs.)

† "My War Experiences in Two Continents." By S. Macnaughton (London: John Murray. 10s. 6d. net.)

GREEK MEETS GREEK.*

Into a tale of the feud between two Greek and rival collectors of sculpture, Mr. Guy Thorne has contrived to introduce a series of recurrent impossibilities. His book is neither an extravaganza nor a fantasy: it is merely a cinematographic reel of sensational events. We are shown London in a light that never yet has shone upon it; and the fulsome adulation and description of Greece do not enable us the better to understand that country. The heroine and hero fail utterly to win attention; the wiles of the villain are clearer than daylight; and the only character that does appeal belongs to a comedian whose watchword through a very successful life is the title of one of Miss Marie Lloyd's songs.

BOOKS RECEIVED.

"His Daughter." By Gouverneur Morris. (London: W. Collins, Sons and Co., Ltd. 6s. net.)

"A Brief Record of the Advance of the Egyptian Expeditionary Force under the Command of General Sir Edmund H. Allenby, G.C.B., G.C.M.G., July, 1917-October, 1918." (Cairo: The Palestine News.)

"The Problem of the Pacific." By C. Brunsdon Fletcher. (London: William Heinemann. 10s. 6d. net.)

"La Tradition Chevaleresque des Arabes." By Wacyf Boutros Ghali. (Paris: Librairie Plon-Nourrit et Cie.)

BOOK NOTES.

Through the firm of Murray, "Cecil Spring Rice: In Memoriam," by Sir Valentine Chirol, will shortly appear.

Also through Murray, "In Kut and Captivity with the Sixth Indian Division," by Major E. W. C. Sandes, M.C., R.E., is announced for early publication.

Through the firm of H. K. Lewis, Sir James W. Barrett, K.B.E., C.B., C.M.S., has published a record of "The War Work of the Y.M.C.A. in Egypt" (10s. 6d. net).

Readers of THE NEAR EAST will doubtless be interested to know that Mr. D. Mitrany has written the first number of "The Clare Market Review Series," published by the London School of Economics and Political Science.

From the House of Cassell comes H. M. Hyndman's "The Awakening of Asia" (7s. 6d. net).

"The Whale Oil Guards," by J. J. Kennedy, D.S.O., C.F. (Dublin: James Duffey, 5s. net), is a record, frankly amusing and inevitably sad, of the 53rd Australian Battalion in Egypt and France. But the major part of the book deals with France, and therefore does not much concern us.

Although "The Ethiopian Saga," by Richmond Haigh (London: Allen and Unwin, 5s. net), has been sent to us for review, it does not, unfortunately, lie within the province of this journal to deal with it. Suffice it to say, therefore, that it is an uncommonly well-written book, and one surely destined to endure.

Wm. Heinemann has published "The Singing Caravan," a Sufi Tale in Verse, by Robert Vansittart (6s. net).

The report of the *Zionist Organisation* has the following announcement:—Contributions to the Jewish National Fund in January and February, 1919, have amounted to frs. 236,742. From England was received £2,705; Germany, M.96,529; Austria, K.50,222; United States of America, $2.634; France, frs. 11,468; South Slavonic Lands, K. 44,491; Belgium, frs. 15,010; Greece, frs. 10,950; Holland, fl. 2,890; Switzerland, frs. 7,406; Palestine, E.P. 14,640; Sweden, kr. 2,383; Argentina, pes. 957; White Russia, M.2,608; Norway, kr. 1,097; China, $300; Australia, £45; Denmark, kr. 720; Egypt, E.P.6,652; Canada, $80; Tunis, frs. 241; South Africa, 10s.

* "Doris Moore." By Guy Thorne. (London: Ward Lock and Co.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. April	1919. April.		1337. Rejeb	5679. Nisan
25	12	Friday	24	25
26	13	Saturday.....	25	26
27	14	Sunday	26	27
28	15	Monday	27	28
29	16	Tuesday	28	29
30	17	Wednesday	29	30
May 1	18	Thursday	Shaaban. 1	Iyar. 1

M. Stavridi, the Greek Consul-General, has left London for Paris.

The Queen of Roumania and the Princess Ileana left Paris on April 16 in the Orient Express.

The marriage of Mr. Richard Dalbiac and Miss Kathleen Simpson took place on April 23 at Coonoor, India.

M. Constantinidi, Secretary to the Greek Legation at Washington, arrived in London on April 20 from New York.

Mr. King Lewis, Director General of the Customs Administration, arrived at Alexandria on March 31 on his return from Palestine.

Messrs. V. R. Woodland and A. W. Skrine, the former from Kassala and the latter from Gedaref, have left the Sudan for England, on leave.

Lord Oranmore and Browne, who left London for Castle Macgarrett, Co. Mayo, last week, is returning with Lady Oranmore and Browne this week.

The Greek Minister has left London for Paris. M. Polychroniadis, First Secretary of the Legation, is acting Chargé d'Affaires during his absence.

Colonel Georges Ostoïtch, Military Attaché to the Serbian Legation, with Mme. Ostoïtch and Mlle. Ostoïtch, arrived in London on April 18 from Rome.

The marriage arranged between Captain John Thomson-Glover, 35th Sikhs, and Miss Cicely Phyllis Summers will take place on May 1, at Froyle Parish Church.

Owing to the serious illness of the Provost of Trinity College, Dublin, the marriage of his son, Captain R. P. Mahaffy, with Miss Evelina Dillon is postponed.

Mr. Francis Culling Carr-Gomm, of The Chase, Farnham Royal, Bucks, and Chester Square, formerly of the Madras Civil Service, left property valued at £68,492.

Mr. Henry Charles Wenden, C.I.E., M.Inst.C.E., of Summerhill, Horsell, a director of the Great Indian Peninsula Railway Company, left property valued at £9,939.

The King has given permission to the Archbishop of Canterbury to wear the insignia of the First Class of the Order of Saint Sava, conferred by the King of Serbia.

The *Sphinx* confirms the report of the murder, in the recent outbreak at Wasta, of Mr. A. T. Smith, Locomotive Superintendent of the Egyptian State Railways.

Mr. C. C. Garbett, C.I.E., I.C.S., who administered the Military Agricultural Development Scheme in Mesopotamia, 1917-18, has arrived in London from Mesopotamia on sick leave.

The Bishop of Southwark will officiate at the marriage of Prince Antoine Bibesco, First Secretary of the Roumanian Legation, and Miss Elizabeth Asquith, daughter of Mr. Asquith, which takes place on April 29 at St. Margaret's, Westminster.

We much regret to learn that, according to the *Sphinx*, Lieut.-Commander Trumper, R.N., the famous cricketer, who is hon. secretary in Egypt of the Palestine Exploration Fund, and whose little booklets dealing with historical sites in Palestine are well known, has had to go to hospital to undergo an operation.

The marriage was celebrated on April 19, at the U.F. Church, Bombay, by the Rev. R. M. Gray, M.A., between Captain (Acting Major) S. L. Thompson, 113th Infantry, Benares, second son of Mr. and Mrs. Lionel Thompson, Worthing, and Gwynett, only daughter of Mr. and Mrs. Monerief Dick, 72, Holland Park, W.11.

Bimbashi L. L. Bright, 9th Sudanese, and Bimbashi H. Garland, M.C., Department of Ordinance, have been awarded the 4th Class of the Order of the Nile.

The marriage of Captain Ian McEwen, 2nd Seaforth Highlanders and R.A.F., and Amethe, daughter of the late Donald Smeaton, C.S.I., M.P., took place at Shere Church on April 23.

The engagement is announced of Captain H. G. Sandercock, M.C., London Regiment, attached R.A.F., to Marjorie Jean, youngest daughter of Mr. and Mrs. George Walker, of Heliopolis, Cairo.

The marriage took place on April 16, at St. Margaret's, Westminster, by the Rev. Canon H. F. Westlake, between Lieut.-Col. S. F. Newcombe, D.S.O., R.E., and Elsie Chaki, of Constantinople.

Lieutenant-General Sir Philip Chetwode, D.S.O., has decided to dispose of his Oakley estate in Staffordshire and Shropshire, including the hall and park, and embracing a total area of 2,400 acres.

In the *London Gazette* of April 22 were the names of officers and men who have been awarded decorations and medals for services on the Mediterranean Station between February 1 and November 11, 1918.

Dr. Mishitch, the representative of the President of the Jugo-Slav Committee, who has been visiting London for the purpose of winding up the work of the London Committee, left town on April 18 for Dalmatia.

The *Sudan Times* reports that Mr. E. N. Corbyn, Assistant Civil Secretary for the Sudan Government, left Khartoum on March 15 for Dueim to take up his new appointment as Governor of White Nile Province.

Arrangements have been made at King's College for a course in Roumanian and Roumanian Literature to be given by M. Marcu Beza, of the University of Bucharest. The course will commence on the 30th inst.

Colonel Lord Edward Herbert Gascoigne Cecil, K.C.M.G., D.S.O., late Grenadier Guards, Financial Adviser to the Egyptian Government, of Great Wigsell, Bodiam, Sussex, son of the late Marquess of Salisbury, left property valued at £10,059.

Major F. Bailey, of the Indian Political Department, who was sent to Turkestan on a special mission last year, and was detained at Tashkent by the Bolshevists, has since succeeded in escaping, but his present whereabouts are not definitely known.

The engagement is announced between Lieut. Ronald J. Holmes, R.A.S.C., son of Mr. and Mrs. J. A. Holmes, of Aldershot, Hants, and Kathleen, daughter of Mrs. E. Giles and the late Mr. Walter Giles, late Governor of the Civil Prisons, Cyprus.

An engagement is announced between Harold Alfred MacMichael, D.S.O., of the Sudan Civil Service, eldest son of the late Rev. Charles MacMichael and of the Hon. Mrs. MacMichael, and Nesta, elder daughter of Canon and Mrs. Stephens, 104, Belgrave Road, S.W.

On April 21, at the Oratory, Brompton, Mr. Charles J. Nevile, third son of the late Mr. R. H. C. Nevile, of Wellingore Hall, Lincoln, was married to Miss Muriel O'Conor, second daughter of the late Right Hon. Sir Nicholas O'Conor, formerly British Ambassador at Constantinople, and of Lady O'Conor.

The Paris correspondent of the *Morning Post*, writing on April 18, reports that M. Cambon, Chancellor of the French Legation at Bucharest and son of the French Ambassador in London, has arrived at the Roumanian capital, and is replacing the Count de Saint-Aulaire, the French Minister there.

An engagement is announced between Major (Acting Lieut.-Colonel) Harold J. H. Dayson, 82nd Punjabis, youngest son of the late Dr. F. A. Dayson, J.P., of Dartmouth, and Mrs. Dayson, of Torquay, and Marjorie, only daughter of Major and Mrs. Garraway, 10, Cornwall Road, Bedford.

The engagement is announced between Major W. F. Haynes, XXI. Punjabis, son of the late Lieut.-Colonel J. W. Haynes, 42nd Highlanders, and of Mrs. Haynes, Sowerby, Thirsk, Yorkshire, and of Helen Russell, daughter of Mr. J. R. Middleton, I.C.S. (retired), 24, Douglas Crescent, Edinburgh.

Under the auspices of the Central Asian Society, 22, Albemarle Street, a lecture will be given on May 7, at 4.30 p.m., by Lieut.-Col. G. S. F. Napier, on "The Caucasus Front and Western Persia." The Rt. Hon. Lord Curnock, P.C., G.C.B., will take the chair. The lecture will be illustrated with lantern slides.

A marriage has been arranged between Lieut.-Col. Hugh Castle-Smith, 12th Foot (Suffolk Regiment), attached Egyptian Army, A.D.C. to H.H. the Sultan of Egypt, eldest son of Mr. and Mrs. Castle-Smith, late of Netherhall Gardens, N.W., and Maude Ellefred, only daughter of Sir Frederick Evans, K.C.M.G., K.C.V.O., C.B.E., Colonial Secretary, Gibraltar, and Lady Evans, 57, Wetherby Mansions, S.W.

APPOINTMENTS, PROMOTIONS, &c.

M. N. Voukitchevitch, who has been appointed First Secretary to the Serbian Legation at The Hague, left London on April 18 for Holland.

Lieutenant-Colonel M. McL. Porteous, Indian Army, has been appointed temporary Brigadier-General whilst in command of an area in India.

Professor C. J. Hamilton, who recently filled the Minto Chair of Economics at the Calcutta University, has gone to Berhampur as Principal of the College in that city.

The Pope has appointed the Rev. Felix Couturier, of the Dominican Priory, Woodchester, Gloucestershire, as Apostolic Visitor to Egypt. Father Couturier has for some years been Assistant Principal Chaplain to the E.E.F.

In the *Sudan Times*, it is announced that Major H. C. Maydon, 12th Lancers; Captain F. C. Roberts, V.C., D.S.O., M.C., the Worcestershire Regiment; and Lieut. G. C. R. Leecroft, M.C., Nottinghamshire and Derbyshire Regiment, have been taken on the strength of the Egyptian Army, with the rank of Bimbashis, and posted to Camel Corps, Equatorial Battalion, and 11th Sudanese respectively.

OBITUARY.

The death occurred on April 9, in India, of George Thomas Barlow, C.I.E., Chief Engineer, U.P., aged fifty-five.

The death occurred on April 19, at Meadowbank, Fortrose, of Colonel John Macdonald Smith, aged eighty-one, late Indian Staff Corps.

The death occurred on April 17 of Lieut.-Colonel Harry Levita. Colonel Levita served in the Sudan Expedition in 1885, and had the medal with clasp and the bronze star.

The death occurred on April 6, at Rohtak, South Punjab, after forty years' service, of Rev. Henry Chichele Carlyon, of the S.P.G. and Cambridge Mission to Delhi, aged seventy.

Colonel Albert Seagrim, late Bengal Staff Corps, died on April 21, in London, in his ninety-first year. He served in the Crimean Campaign of 1854-5, when he received the medal with clasp.

Colonel Miles Charles Seton, late of the Hampshire Regiment, has died in London in his eighty-first year. He served in the China War of 1860, the Afghan War of 1879-80, and with the Burmese Expedition of 1885-6.

Colonel Henry Sullivan Jarrett, C.I.E., has died, in his eightieth year. He served during the Indian Mutiny in 1858. He took part in the campaigns on the North-West Frontier of India, and accompanied the second Eusofzai Expedition of 1863 as aide-de-camp to Sir Neville Chamberlain and Sir John Garvock. Later he became Assistant Secretary in the Legislative Department of the Government of India.

Colonel Henry Marsh Pratt, C.B., late of the Indian Army, died on April 16, in his eighty-first year. He went out to India in 1856, and he had not been there long when the Mutiny broke out. For his part in that campaign he received the medal. He served in the Afghan War of 1878-80, when he fought in several actions and took part in the march from Kabul to the relief of Kandahar. For his work in that war he was twice "mentioned" and received the medal with four clasps, the bronze star, and the brevet of lieutenant-colonel. In the Hazara Expedition of 1888 he commanded a column, was again "mentioned," and was rewarded with the C.B., together with the medal with clasp.

Colonel Sir Arthur George Hammond, V.C., K.C.B., D.S.O., of the Indian Army, died on April 21. Born in September, 1843, he received his first commission at the age of eighteen, and reached the rank of colonel in 1890. His first campaign was the Jowaki Expedition of 1877-8, for which he had the medal with clasp, and he fought in the Afghan War of 1878-80, when his gallantry earned him the Victoria Cross. His next service was with the Hazara Expedition of 1888, when he received the D.S.O. and a clasp. Two years later he was appointed A.D.C. to Queen Victoria and received his colonelcy. He next commanded a brigade in the Hazara Expedition of 1891. Again he was "mentioned," this time being rewarded with the C.B. and another clasp. In the Isazai Expedition of 1892 he again commanded a brigade, and three years later was with the Relief Force in Chitral. His last active service was with the Tirah Expedition of 1897-8, when he commanded the Peshawar Column, receiving mention in despatches once more, together with two clasps. Sir Arthur married, in 1886, Edith Jane, daughter of Major J. H. Wright, of the I.C.S., and had one son and two daughters.

NEWS IN BRIEF.

Kali Nath Roy, editor of the *Tribune*, is the name of the Indian editor who was recently arrested at Lahore.

The Calcutta Corporation has decided to extend the municipal franchise to women on the same qualifications as that applying to men.

The monitor Abercrombie, Captain Rice, the first British warship to pass through the Dardanelles after the armistice, has arrived at Devonport from the Mediterranean.

From the *Busreh Times* we learn that owing to the introduction of the Arabic illustrated weekly magazine *Mirut ul 'Iraq* it has decided to discontinue its *Weekly Pictorial Supplement*.

The matinée in aid of the Samaritan Free Hospital for Women, Marylebone, organised by Mrs. Edward Nash, and held at the Merchant Taylors' Hall, resulted in the hospital benefiting by £1,140.

American Red Cross relief work in Aleppo, Aintab, Marash, and other districts north of Jerusalem is being handed over to the American Committee for Armenian and Syrian relief, together with supplies valued at nearly £80,000.

The *Egyptian Gazette* states that in Khartoum, owing to measures taken by the authorities, there have been very few cases of influenza, and that most of those who had caught the disease have now returned to their ordinary occupation.

The *Bengalee*, in reporting a case in which a local train conductor was concerned, said:—"With salt tears trickling down his weather-stained cheeks he reported the matter to the Bhowanipur thana." The *Englishman* comments:—"We understand that weather-stained cheeks are being worn now in the best tram conducting circles."

Some time ago, says the *Ceylon Observer*, a Sinhalese villager of Rakwana found a blue sapphire, weighing 1.020 carats. He was told that it was not worth much and to sell it if he got up to Rs. 100. The man sold it for Rs. 80 to two men, who now want Rs. 30.000 for it. Those who have seen the stone describe it as unique, peacock blue and extremely lustrous, although still uncut.

FIUME AND ADALIA.

In spite of the preference accorded it by the Peace Conference, the Adriatic question made no progress, and at the beginning of the week it became clear that it might well bring about a serious crisis. President Wilson on Monday withdrew from the discussion of the problem in order that those who were responsible for the Treaty of London might have an opportunity to undo without assistance the harm done by that unhappy pact. Unfortunately, the step failed to bring about the desired result, for the Italians maintained their stiff and unyielding attitude. They showed, and at the time of writing continue to show, not the slightest inclination to abandon any of their demands based upon the Treaty of London, while at the same time they invoked the principle of self-determination with regard to Fiume. Their delegates took up the attitude that Italy was well within her rights, and let it be understood that the whole country was solid behind them in their stand to secure the stipulated pound of flesh. In the circumstances argument appeared to be quite useless, and the question seemed—and still seems—to have reached a stage of absolute deadlock. On Wednesday President Wilson issued a statement on the subject, which concluded with an eloquent appeal to Italy to abandon the Pact of London and all its arrangements, and "to exhibit to the newly liberated peoples across the Adriatic that noblest quality of greatness, magnanimity, friendly generosity, the preference of justice over interests." It would appear, however, that the appeal fell flat, for the same evening the Italian delegation gave out a Note that, "As a result of the declaration by President Wilson on the Adriatic question, the Italian delegates have decided to leave Paris to-morrow." The telegram which conveyed the news added that several of the delegates had actually left that evening. Almost the only ray of hope on the subject coming from Paris is the information that Mr. Lloyd George, who appears to have accepted the rôle of chief mediator, has been having private conversations with Signor Orlando and M. Clemenceau, and that informal negotiations have been resumed between the Italians and the Yugoslavs.

In connection with Italy's attitude towards this Adriatic question it is of interest to note that she has formally announced her intention of establishing a naval station with headquarters in the Dodecanese, with powers extending over the Dodecanese and the coast of Asia Minor, from the Gulf of Skalanovo to Adalia and beyond. It seems natural to suppose that this precise moment has been chosen for making this announcement either on the principle that one may "as well be hung for a sheep as for a lamb," or for the purpose of having something else to bargain with in dealing with her Allies. It will be remembered that Italian marines were landed at Adalia on March 29, and that they were a few days later replaced by Bersaglieri and other troops. The landing was semi-officially explained as made "at the request of a number of distinguished Moslems," but it was generally regarded as a move on Italy's part to secure a firm footing on the southern coast of Asia Minor, to which she has for some time regarded herself as being entitled in case of the break-up of Turkey. The Gulf of Skalanovo lies opposite the island of Samos, within easy reach of Aidin, and it would seem that Italy intends to exercise—or hopes to exercise—control over some two hundred miles of coastline. Her claim to do so, if any claim she can be said to possess, must rest entirely on understandings and arrangements of the kind that have made endless troubles in the past, as they are, indeed, actually making at the present moment. As to the Dodecanese, she can hardly hope to retain the islands permanently, save at the cost of constant watchfulness and an unpopularity that will certainly do her far more harm than her occupation of the islands can possibly do her good. It is thus, surely, a case of the game not being worth the candle. Her conduct in this region is indeed difficult to understand to-day, though it would have been very easy to explain it in the days before the war.

At the moment, however, we are concerned with her attitude in regard to Asia Minor and the Dodecanese only in so far as it may affect her attitude towards the settlement of the Adriatic problem. In regard to that, it is at least quite easy to understand her sentiments and even her present conduct. In the past the feeling of insecurity regarding the Adriatic must always have been both trying and humiliating to the Italians; and that they should have formed the resolve early in the war to do everything in their power to make sure their mastery of that sea is quite easily understood. Moreover, if they choose to stand firm by their rights under the Treaty of London it is difficult to see how France and Great Britain can possibly deny them those rights or refuse their aid in securing them; and it is understood that such aid would, in fact, be forthcoming. But Italy's insistence on these things argues a certain lack of faith in the ability of the future League of Nations to achieve its purpose, and in this respect the Italian attitude must have caused some resentment in those who pin their faith to the League and its power to bring about better conditions in the new world that is to be. Thus we find President Wilson in his statement practically washing his hands of the Pact of London and all its influence, while Italy bases four-fifths of her claims on that pact; and accordingly we reach a situation that reminds us of the irresistible force meeting the immovable mass. It is impossible to avoid feeling sorry for Italy in the position in which she finds herself, but it is equally impossible to give her claims any moral support. It is to be hoped that Paris may yet find a way out of the difficulty, although the prospects certainly do not look bright. If President Wilson's appeal fails utterly, and it becomes necessary to strike a bargain, it will probably be found that, in spite of all her protests, Italy may finally accept the American view regarding the Adriatic, provided that she receives "compensations" in Asia Minor. That would not be an ideal solution of the difficulty, but it would perhaps be the most satisfactory one short of Italy's rising to a height which at the present moment she seems incapable of attaining.

THE CENTRAL ASIAN SOCIETY.

By LIEUT.-COLONEL A. C. YATE
(*Hon. Secretary, Central Asian Society*).

Students of history are well aware of the obscurity which veils the origin of many institutions which have made their mark in the world. It occurs to me, therefore, to record here briefly the circumstances which gave birth to the Central Asian Society; and it is to Colonel Sir Francis Younghusband and Sir Edward Penton that I am indebted in the first instance for the information upon which this exordium is based. For, although I was an original member of the society, it was not till 1905 that I left India for good. When we consider what the term "Central Asian Question" meant in the last quarter of the nineteenth century, we may wonder that it was not until the twentieth century, when the "Middle East" was already dawning, that the Central Asian Society began its corporate existence. "The fact that there was no suitable association for the discussion of the political aspects of Central Asian problems" had for some years been fermenting in the mind of Major (as he then was) F. E. Younghusband. Towards the end of 1900 it came to his knowledge that Dr. Cotterell Tupp, late of the Indian Civil Service, likewise entertained the idea of founding a society for the study not only of geographical, economic, social, and scientific, but also of political questions affecting the territories situated between Eastern Europe and India. A meeting took place between Major Younghusband and Dr. Tupp—a meeting at which Colonels Sir T. H. Holdich and Algernon Durand were present. It was then decided to form a society and to approach the Royal Asiatic Society for the favour of the use of their rooms.

The first meeting took place in those rooms on December 13, 1901, when General Sir T. E. Gordon presided, and was elected president for the ensuing year, Major Younghusband being hon. secretary, and Dr. Tupp hon. treasurer. Among the members of council then appointed I find Major-General Sir Edwin Collin and Sir Evan James. It was decided to hold the meetings on the first Wednesday in each month of the lecture season (October to June) at the rooms of the Royal Asiatic Society, and on January 15, 1902, the first lecture was given by Mr. H. F. B. Lynch on "The Persian Gulf." Major Younghusband being then unexpectedly ordered back to India was succeeded as hon. secretary by Mr. Edward Penton, who continued to fill that office until the beginning of the late war. From 1914 to 1918 the Central Asian secretariat was in the able hands of Miss Hughes, the secretary of the Royal Asiatic Society. In a leaflet dated May 28, 1903, Mr. Penton placed on record the eleven lectures delivered before the society in the first seventeen months of existence, among the lecturers being General Sir T. E. Gordon, Mr. A. R. Colquhoun, Mrs. Archibald Little, Lord Ronaldshay, Mr. T. Gibson Bowles, and Mr. (now Sir) George Macartney, on subjects ranging from Persia to the Pacific. My collected copy of the society's publications starts with the papers read during the session of 1903-4. I find no record of the publication of the lectures of the period January, 1902, to May, 1903. Probably the society's funds did not, so early in its career, admit of expenditure for printing. In November, 1901, the society numbered thirteen members, in January, 1902, thirty, and in May, 1903, ninety-seven. The publication of the journal then commenced, and the expense was then more easily met with ninety-seven members than it is under post-war conditions with about 140.

From 1903 onward to the present time the society, with a membership gradually on the increase, has steadily pursued the aims for which it was founded. The evidence of that is to be sought in the personality of the lecturers themselves, and in the public importance of the subject-matter of the papers read, and of the discussions that ensued. At this moment it will not be out of place to review those papers and discussions in their relation to the incidents of the late war and the situation of the present hour. When Sir Valentine Chirol in 1906 addressed the society on "Pan-Islamism," Abdul Hamid was still seated on the Ottoman throne, and yet even then we find M. de Wesselitsky, while disclaiming for the Moslems of Russia any Pan-Islamic tendency, and not even hinting at "Pan-Turanianism," remarking that "there is a literary Pan-Turkism, an attempt to create a literary language for all the Musulmans of Russia of Turco-Tartar race common to them with the Turks of the Ottoman Empire," and "it seems to me that Pan-Islamism might become a very real danger if Musulmans felt themselves unfairly treated by Christians." In this war we have seen Islam go through this ordeal, and, as the outcome thereof, to use Lindsay Gordon's phrase, "two things stand like stone," one that Islam has rallied to the British Empire, and the other that, while Sunni Turkey fell foul of its professed best friend. Germany, over the Black Sea fleet and the Caucasus, Shi'a Persia, after coquetting and intriguing more or less all round, is now posing pretentiously before the Peace Conference in Paris. When in January, 1912, Professor Margoliouth lectured on this self-same topic, viz., "Pan-Islamism," he showed clearly that the Young Turks entertained ideas of Pan-Islam propaganda, and argued that it was under European protection that "the most favourable conditions possible existed for the propagation of Islam." At both these lectures the Central Asian Society had the good fortune to listen to the views on this subject of Mr. Ameer Ali, always an impressive and attractive speaker, views which have very recently led to friendly, but none the less definite differences of opinion between him and Sir V. Chirol. If Professor Margoliouth is right, then the Memorandum addressed by H.H. the Aga Khan, the Rt. Hon. Ameer Ali, Sir Abbas Ali Baig, and others, quoted in *The Times* of March 25, and sympathetically if critically commented on in THE NEAR EAST of March 27, misses its mark.

Not unnaturally Persia has figured largely in the lecture list of the society. In the first twelve years of its existence "Persia" was the theme which inspired the pen of no less than fifteen lecturers, among whom may be mentioned Lords Lamington and Ronaldshay, Sir Percy and Miss Ella Sykes, Professor E. G. Browne, Mr. Lovat Fraser, General Sir T. E. Gordon, and Mr. H. F. B. Lynch. The importance of the subject seems also to justify a mention of the lecture given by me in February, 1911, on "The Proposed Trans-Persian Railway." When preparing that paper I had a conversation with M. Timiriazeff, president of the Russo-British Chamber of Commerce, and towards the close of 1911 I attended a very interesting gathering at Paris of Russian and French promoters of that railway. Subsequent writers on this and cognate topics, such as Mr. Evans Lewin, and M. G. Demorgny, both of whose books appeared in 1916, refer to this lecture as still the recognised authority. Personally, when I reawaken my reminiscences of the whole affair, I am devoutly thankful that the Anglo-Franco-Russian scheme of 1912 for a Trans-Persian railway came to nothing. When it is at some future time constructed it should be in a greater measure under British control. In May, 1902, Lord Ronaldshay had told the society all about the Nushki-Seistan route; in 1916 Sir Hugh Barnes, writing in the *Indiaman*, urged the Government of India to build the Nushki-Seistan Railway, and in February, 1919, Colonel Webb Ware, in an admirable lecture, enhanced by a long and lucid speech from Sir Hugh Barnes, told a crowded audience how India had just connected itself by rail with Persia. Thanks to that connection, and to Brigadier-General Sir Percy M. Sykes and the troops under his command, Kirman was purged of Hun propagandists, and Bolshevism was checkmated on the Trans-Caspian Railway.

The recent tragic events in Afghanistan remind us of the close ties which unite that kingdom to India. It was in 1900 that Mr. John Murray, subsequently a member of the Central Asian Society, brought out the Ameer Abdur Rahman Khan's autobiography, and in 1907 Sir Mortimer Durand selected that same potentate—a ruler whom Sir West Ridgeway once classed among the greatest men of his day—as the subject for his lecture. As one who had been in Kabul with Sir F. Roberts, and instrumental in placing Abdur Rahman Khan on the throne, and in 1893 the head of a mission sent to him by the Viceroy of India, no one was better qualified than Sir Mortimer to speak of an Ameer who inaugurated in 1880 a rule and policy at Kabul which has aided us in this momentous war. The death of the Ameer Habib Ullah is to be deplored, and might well have been made by the Central Asian Society an occasion for demonstrating and publicly recognising the boon which forty years of stable government in Kabul has proved to be for the British Empire. If there is a Society that knows Afghanistan it is the Central Asian. All the Trans-Caspian territory and the Khanates are at this moment at a loose end, and a "mandate" is wanted to gather them into that fold which recognises Great Britain as its shepherd. Men, however, throw away their chances. Afghanistan is no mean instrument, and her patience merits reward. Russia must be coerced, says Sir George Buchanan. The compress which tightens from Archangel, Omsk, the Volga and the Don may tighten too from Kabul and Herat.

As may be supposed the Baghdad Railway has been well discussed within the "Central Asian" walls, by none more effectively than by M. Chéradame in May, 1911; and, indeed, the fertile topic of railways converging on India has been dealt with there by Colonels Picot and Beresford, Mr. Lynch, Mr. C. D. Black, and others, while Mr. Percival Landon, Mr. F. D Harford, Mr. A. Boddam Taylor, Mr. E. T. A. Wigram, Mr. Demetrius Boulger, and Sir Thomas Holdich, have made us familiar with Mesopotamia. Two bulwarks of the Indian Empire, Baluchistan on the west, and Burma on the east, were respectively dealt with by men who had ruled them, viz., Colonel C. E. Yate and Sir Frederick Fryer, while India's power for offence and de-

Digitized by Google

fence found able exponents in Sir Edwin Collen and Sir Thomas Holdich. Chinese Turkestan drew old memories from Sir Thomas Gordon and Sir Henry Trotter, while Sir George Macartney favoured us with his more recent experiences On Asiatic Turkey and Asia Minor we heard the late Sir Mark Sykes, Mr. W. J. Childs, and Sir W. M. Ramsay, and with China, Mongolia, Japan, and Siberia we spent some pleasant and instructive afternoons. Commander O. Locker-Lampson and his armoured cars, ranging from Archangel to Erzeroum, held an audience spell-bound, and finally Mr. J. O. P. Bland, with General Sir Edmund Barrow, who was Sir Alfred Gaselee's Chief of the Staff at Peking in 1900, in the chair, paved the way for the restoration to China of the astronomical instruments taken away from Peking by the Germans in 1900, and since then kept at Potsdam. It was my old friend, Colonel E. St. C. Pemberton, R.E., an ex-councillor of the Central Asian Society, who on December 11, 1900, in the discussion which followed Mr. Bland's address, brought forward the question of making Germany disgorge. He had seen the instruments at Potsdam about 1907, and again later seen the desolate sites on the walls of Peking. The subject was well ventilated at that meeting of the Central Asian Society, and not in vain. Suffice it to mention that *The Times* of December 12, 1918, took especial notice of what General Barrow and Colonel Pemberton had said on the 11th to the "Central Asian" meeting, and strongly endorsed their view that the instruments ought unquestionably to be restored. As I write, *The Times* of March 19 lies before me, and says: "The German Government has decided to return to China the astronomical instruments which were transported from Peking to Germany in 1900. Negotiations have been opened for the shipping of the intruments to China."—*Wireless Press* (through the wireless stations of the German Government).

A very able journalist, who has attended all our lectures for years, wrote very recently to me: "In my opinion, the society is more alive to-day than ever before," and this success for China bears this out. During the eighteen years of its life the society owes its success to an able series of chairmen of Council: Sir T. E. Gordon, Sir F. E. Younghusband, Sir V. Chirol, Lord Lamington, Sir Alfred Lyall, Sir T. H. Holdich, Lord Ronaldshay, Sir Mortimer Durand, Sir Henry Trotter, and finally Lord Carnock. The honorary president of the society is the Earl Curzon of Kedleston. Illustration by lantern slides has accompanied most of the lectures, and in this connection the services of Mr. Simpson, of the Royal Geographical Society, have been most helpful.

The war just concluded has introduced thousands of male and female subjects of his Britannic Majesty to Asiatic countries which under ordinary conditions they never expected to visit. It is hoped that many of these will join the Central Asian Society on their return to England, and thus bring double grist to the Society's mill—the grist of brain for the lecture-field and the grist of funds for the production and maintenance of a "Central Asian Journal" such as the Society may regard with pride.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The present economic position in Roumania is the subject of a long and vivid letter which appeared in *The Times* this week from "Three Englishmen" at Constantinople, who were in Roumania from December 10 to March 7, in which special emphasis is laid on the extreme need of our Ally for immediate assistance in the shape of food and other necessaries, and also on the total lack of manufactured articles in the country.

***

As regards the food problem, the writers state that "the distribution of the few necessaries of life to be found in some districts is rendered practically impossible by the absence of coal to run the few remaining railway engines, the difficulty being increased by the shortage of horses and the bad state of the roads." During their stay there was officially an issue of bread twice a week, but in practice it sometimes amounted to a bi-monthly issue of black bread. They further add that it is literally true that people have died in large numbers from starvation, and that, except for the wealthy, life was almost impossible. In Constantinople, where they went from Roumania, they found a reign of plenty, white bread in abundance being "hawked" in the streets, and the shops being full of food, and they add, with some justice, that a neutral, ignorant of the circumstances, would mistake victor for vanquished. "We fully realise that ships with flour have been sent to Roumania," they continue, "but these have been totally inadequate to supply the needs of the starving population."

***

I am glad to see that the writers laid great emphasis on the intense desire on the part of Roumanians for commercial relations with Great Britain. This aspect, which has been the subject of constant reference in these columns, cannot be given too much attention. "Commercially, it cannot be too strongly insisted on," they write, "that England has an opportunity which will probably never occur again. The overwhelming desire of commercial men in Roumania to-day is to transfer their business connections from German firms to English, but, should the present apathy on our part continue, the market will certainly be won by a more enterprising competitor. This country will repay any investment a hundredfold, but were it merely a barren land surely we owe it a moral obligation of assistance. The immediate need of Roumania is foodstuffs and coal, the supply and distribution of which should be wholly in British hands."

***

The most interesting feature of this year's financial statement for Burma is the attention that is being given to the development of the province. Thus £873,000 is being devoted to public works, most of it for the improvement of communications—a modest beginning, in the words of the Finance Member, "of the enormous task of equipping the province with a proper system of roads." As showing the nature of the task, it may be mentioned that its completion will require rather more than six times this year's expenditure on public works. In addition to the allotment for public works a scheme is being prepared for the conservation and improvement of the network of waterway in the delta. Apart from projects of development chief interest in the financial statement attaches to the record estimate of the revenue from the forests of £900,000. In her forests Burma has a unique source of wealth, and while the war has resulted in a special demand for timber, it is believed, and no doubt rightly, that the work of reconstruction will occasion an even greater demand. With some significant exceptions Burma's great natural resources outside the forests are as yet undeveloped, owing to difficulties of various kinds, mainly the absence of communications. It may not be too optimistic to regard the road-making scheme now projected as indicating the speedy approach of a time when such handicaps will no longer be present.

***

I am interested to learn that Montenegro has established a commercial bureau in Paris under the title "Office Central Montenegrin du Commerce en France," to give Allied and neutral merchants and manufacturers all the information they may desire regarding the external trade of Montenegro. The objects of the bureau, I am informed, will also be (1) to develop trade between France and Montenegro, (2) to give assistance to Allied and neutral manufacturers desirous of creating industrial enterprises in Montenegro, and (3) to negotiate with the authorities of the country on behalf of Allied or neutral financial groups who desire to obtain concessions. The director of the bureau is M. Alexandre Kapétanovitch.

***

The initiative shown by Montenegro in this enterprise is most praiseworthy, but I am afraid I cannot say the same in regard to the choice of a capital for what is evidently intended to be—for the time at any rate a commercial information office for all the Allies and neutrals. French interests in the Near East, I am well aware, are very considerable, but so are those of Great Britain, and I do not know that there are any special commercial or other ties between Montenegro and France which entitle our Ally to an advantage over us in this respect. Apart from that, London, from every point of view, offers the greatest scope for a bureau of this kind, and if Montenegro wishes to obtain the best results from this method of furthering trade development it would be certainly advisable to open a similar office here.

***

The evidence which comes constantly to hand in respect of the intentions of foreign competitors regarding the Near East markets suggests very forcibly that British traders will have to show much more enterprise if they are to take advantage of the openings that are now to be found in that part of the world. In recent weeks numerous references have been made in these columns to contracts for constructional work and the supply of material which have gone to countries less in a position to supply the requirements than Great Britain, to the activity on the part of competitors in opening trade bureaux in leading centres of the Near East, and to preparations in general for establishing a permanent foothold in these desirable markets. These and other indications of like nature serve to emphasise my remarks on previous occasions as regards the severe nature of the competition with which British merchants and contractors will presently find themselves confronted. I say "presently" advisedly, because if they take time by the forelock and enter the field now, when the competition from abroad is only developing, they will be able to make their position impregnable, for the merit of British goods and British workmanship may safely be trusted to withstand any subsequent attempts to oust us from these markets.

***

A number of amendments were introduced by the Select Committee on the Indian Excess Profits Bill, among the most important being the proposal that the profits assessed in 1913 and 1914, or, in other words, the two pre-war years, might be selected as the standard profits. Two other alternative methods of assessing the standard profits were also given, and the committee stated that the options proposed were wide, and they felt that they had gone as far as possible in that direction. The question of the treatment of hard cases naturally received special attention. The committee made it plain that depreciation of assets includes the cost of replacement, and they provided that an appellant might have his case disposed of either by the chief revenue authority or by a board of referees, consisting of three, or in difficult or important cases, of four persons, two of whom would be non-officials with adequate business experience. It was further proposed that a board of special referees might be appointed by the Governor-General in Council to inquire into the circumstances of those businesses in regard to which there was a *prima facie* case that the Act would operate in an unfair manner. Finally, a concession was made as to the method of arriving at profits in the accounting period, making it optional for a concern whose year ended before March 31, 1919, to have its accounts made up to that date when the accounting period would be considered to be twelve parts of the months in the whole period.

BRITISH MERCHANTS IN MOROCCO.

Annual Meeting of Chamber of Commerce.

(From Our Own Correspondent.)

Tangier, April 10.

The fourth annual general meeting of the British Chamber of Commerce for Morocco was held in the Chamber's rooms on March 26. Mr. G. F. Moore, vice-president, presided. The Chairman, in opening the meeting, said he was sure everyone present would regret the absence of their president, Kaid Sir Harry Maclean, who was unwell. He then gave a hearty welcome to the visitors, especially Mr. R. S. Hunter, vice-president of the Morocco Merchants' Association and delegate of the Chamber to the Imperial Council of Commerce. The secretary, Mr. L. J. Brown, having read the notice convening the meeting, and the minutes of the previous meeting having been read and confirmed, the chairman then read the annual report.

The speaker reminded the members that the Chamber had been formed during the war, that much, if not most, of its work had been in connection with conditions arising from the war, and that this, being their first general meeting held under other than war conditions, marked an epoch in the Chamber's history, for with a final and definite settlement of the political situation in Morocco, which they all expected shortly, the work of the Chamber would take more of the character of that usually undertaken by Chambers of Commerce. Looking back to the meetings of the founders of the Chamber, none of whom had any experience of the work of such institutions, the diffidence they had all felt in undertaking such serious responsibilities, their anxieties as to the possibility of success, and the very modest beginning of the Chamber without any outside help, either financial or otherwise, he thought they might all feel gratified at the work which had been done.

Whilst believing that perhaps their most noteworthy work had been their memorial on British interests in Morocco, he thought the work of the Chamber and of their secretary when in England had had a good deal to do with the noticeable increase in the interest taken by the British Government, manufacturers, and merchants in trade with Morocco. He also thought that the Chamber had materially helped to dispel the uneasy feeling regarding the future of British trade in Morocco which had been evident for some time, and that it had also helped in establishing a better sentiment regarding British interests in the country, and wider recognition of their right of existence and extension.

British Trade Commission.

The Chairman then referred to the two commissions of inquiry which had been examining on the spot the conditions and prospects of British trade in Morocco—the first, non-official, consisted of the Hon. W. Cozens-Hardy, K.C., and Mr. W. B. Harris; the second, appointed by Government, comprised Mr. E. H. Muloch, of H.M.'s Consular Service, and Mr. L. N. Barker, of the Board of Trade. The committee had drawn up at short notice a report for the use of the Government commission in their work, and the members had been present at one or two committee meetings. An interim report by this commission on agricultural prospects for British settlers in Morocco had recently been published, but it was generally thought that the commission had taken a rather more pessimistic view than the conditions altogether justified, and had laid more stress on the difficulties than on the possibilities, and it was hoped that no one who had thought of trying agriculture there would give up the idea on this report alone without carefully studying the matter.

Mentioning some of the special subjects which had occupied the attention of the committee, the speaker referred to the promise made by the Manutention Marocaine of Casablanca that the rule limiting the free warehousing days would be applied in a liberal spirit. Questions regarding Habous lands again came before the committee. He believed that now most, if not all, British interests in the matter had been satisfactorily dealt with—a great deal of the credit for this being due to the Acting British Consul at Casablanca, Mr. Rabino. It was quite otherwise with the application of the increment tax. The British Government had not agreed to the year fixed by the French authorities as the basis for valuation. The Protectorate authorities had instructed their officials not to legalise any transfer of property on which the tax had not been paid, so British landowners could not effect sales without paying tax on a valuation the basis of which had not met with the approval of their Government.

The want of system in valuing for import duty had been discussed many times by the committee; other bodies, especially in the French zone and the newspapers there, had been complaining this last year of want of system by the Customs authorities. These complaints would be much minimised if the interpretation of *ad valorem* had a consistent application in all the ports, even though that interpretation might not be universally accepted. A matter in which the Chamber had been useful, especially to Mogador members, was in obtaining through the sympathetic action of H.M.'s agent an increase in the quantity of almonds allowed for import into England. This had not only helped holders of stock, but materially assisted native producers and aided British imports into the port. The hopes that free export of Moroccan produce would be allowed once the war ended had not been realised; restrictions on some articles had been gradually removed, but cereals were still requisitioned for France; not only 1918 stocks, but this year's harvest, were bespoke by the Intendance. Action had been taken by the committee, but so far without success.

Sugar Supplies.

The situation as to the import of Egyptian sugar into the French zone was somewhat obscure; the authorities very wisely took steps to assure as large a supply as possible of an article so very essential to the natives, and though the supply was necessarily limited, much more sugar, proportionately, had been available in Morocco than in France. Maximum prices were fixed, and though the ration was as large as possible, it had been, and was, far below the quantity ordinarily required by the natives. In view of the limited supply available and the large demand for more, some merchants since the Armistice turned their attention to Egyptian sugar, but found the cost would not allow of its being sold profitably in Morocco at the maximum fixed for French sugar. The executive committee inquired whether, if it should prove possible to bring sugar from Egypt, the authorities would desire to control it and fix prices. They were informed that they would, and it was understood that the maximum price now ruling would apply. It was admitted that it might have been difficult to find the transport from Egypt, but it was believed a means could have been found; the uncertainty about the maximum price had rather caused interest to slacken, but further information regarding this point had been asked for.

The fact that the more sugar they could obtain the more the natives were content, and that the wider the sources of supply the less the drain on France, would, it might be thought, have led the authorities to encourage and assist every effort to bring in Egyptian or other sugar; as had just been shown, it could not compete with French sugar, as it would be dearer, and it would not be a case of exploiting consumers, for they could still obtain their necessary supply of French sugar, and would naturally only buy the higher-priced article for extra supplies; indeed, even if this sugar could be sold more cheaply its importation might be expected to be welcomed for the relief it would give to France. Further than this, the more free the sale of sugar the larger the consumption of tea and coffee, and this would help to steady prices of these commodities, and be of great assistance to all holders of stocks. It was hoped that the question would be cleared up before long.

Appointment of Agents, etc.

Reference was then made to the number of applications the committee received to recommend agents, and their difficulty in finding suitable firms who were not already fully engaged. The committee advised British firms to send out their own representatives, or that several firms should combine to send out an agent. The chairman then mentioned the necessity of good and regular shipping services, the still bad state of the road tracks between Tangier and the French zone, and gave a short outline of some of the causes of the present commercial crisis in Morocco. He also spoke of the steps taken by the committee to obtain permission to re-export surplus stocks of British goods, which had met with success at Tangier, and a promise had been made that under certain conditions prohibition of re-exportation of these goods from the French zone would be withdrawn. The committee were anxiously looking forward to the time when, freed from restrictions and from disputes with labour, British manufacturers would be able to see just how they stood and to fix their prices, though no doubt these would be subject to reductions as the supply of raw material became more normal. To retain the Moroccan market cost would have to be reduced to the minimum, and all concerned, manufacturers, labour, railways, and steamship lines, would have to do their utmost to arrive at the lowest possible figure.

Speaking of the equality of treatment of British goods, the chairman said that this equality must not end at the Customs House. They did not ask for favoured treatment, but (referring especially to imports) wanted the same equality of opportunity as anyone else. The vice-president concluded his report by recording his personal thanks to Sir Herbert E. White, H.M.'s Agent and Consul-General, for the sympathetic way in which he had always received and examined the various matters which he had been delegated to bring before him on behalf of the Chamber.

The report, as also that of the hon. treasurer, which showed a satisfactory balance, were duly adopted. After the election of auditors and the re-election of the three retiring members of the committee—Messrs Chappory, Moore, and Russi—the chairman proposed a vote of thanks to the president, Kaid Sir Harry Maclean, K.C.M.G., who always took such great interest in the work, he pointed out, and had especially done so much to advance the proposal to establish a British school at Tangier. This was seconded by Mr. W. B. Harris, and was carried by acclamation.

Mr. R. S. Hunter, in proposing a vote of thanks to the chairman, said he thought it was to be regretted that the Chamber of Commerce and the Morocco Merchants' Association had not been established years ago. He hoped their work would continue and meet with success, as from what he had seen during his visit the country was never so ripe for all sorts of British enterprise. This proposal was seconded by Mr. Cheshire (of Messrs. Lever Brothers), and was duly carried.

Mr. Penry Cooper, district manager of the Bank of British West Africa, proposed, and Mr. David Macleod seconded, a vote of thanks to the secretary, Mr. L. J. Brown, whose work, Mr. Cooper said, was highly appreciated by the members on the coast, where his visits were always most useful and welcome. The vote was carried with hearty applause. This ended the business of the meeting, but the chairman took the opportunity to refer to the question of a British school at Tangier, which he recommended to the generous consideration and support of those present.

TRADE ENQUIRIES.

An English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

RUMANIAN, now trading in London, possessing considerable business experience, thoroughly acquainted with business conditions, requirements of Rumania and Balkans, excellent connections, good organiser, intends to proceed to Rumania shortly for the purpose of REPRESENTING British manufacturers and exporters of general merchandise.—Will those interested write to Box No. H4, care of The Near East.

THE SUDAN BUDGET.

Further Increase in Estimates.

(From Our Own Correspondent.)

Cairo, April 1.

Details of the Budget of the Sudan Government for the current year have just been made public. Revenue and expenditure have been estimated to balance at £E2,685,000, there being, as usual, no provision for a surplus or a deficit. This represents an increase of £E430,000 on the figures for 1918, and of £E879,000 on those of 1917.

The principal heads of revenue are provincial receipts, which include royalties, land date and traders' taxes, £E690,850; finance department, £E541,600; posts and telegraphs, £E106,650; railways and steamers, £E1,233,700. These represent increases of £E72,400 in provincial receipts, £E138,600 in finance department, £E16,650 in posts and telegraphs, and £E172,700 in railway and steamer receipts.

Under expenditure the principal items are: Provinces, £E521,659; finance, £E259,453; public works, £E116,046; posts and telegraphs, £E121,457; railways and steamers, £E1,019,332; the main increases being £E21,113 in provincial expenditure, £E31,423 in finance, and £E21,756 in railways and steamers.

The increase in the provincial receipts is again due to improved internal economic conditions, as well as to the raising of the various forms of taxation which constitute the sources of income in the various districts. Every province shows an addition to its budget, such increases ranging from £E700 in the case of Berber to £E16,700 in that of the Red Sea. The rise in the receipts of the finance department is due to the fact that the Sudan Government is now itself importing all the sugar required by the country. Hitherto sugar was imported through the intermediary of wholesale agents, as well as middlemen from Egypt, where a special arrangement had been made with the Société Général des Sucreries with regard to the f.o.b. price and the maintenance of supplies. It was found, however, that wholesale agents profiteered in an exorbitant manner without their profits being taxable in any way, so the Sudan Government stepped in and arranged with the Société that all sugar sent to the Sudan should be bought by the Government, who would undertake to resell it to the local middlemen for disposal in the country at the same prices as have recently been in operation. Thus the price to the people remains the same, but the profit made out of them goes to the Government Treasury, and so assists in the matter of meeting the increased expenditure without adding to the burden of direct or indirect taxation. The expansion of the "Public Services" departments is also due to the improved internal conditions.

As regards the expenditure, the increase in that set down under the provinces is due to normal expansion, and is pretty generally distributed over them all. The increase in the provision made for the railways and steamers is, of course, due, as in the preceding year, to the cost of fuel and of renewals and repairs. It has been found necessary to increase the allowance made for war gratuities and travelling facilities on account of war conditions. This year an amount of £E230,000 is provided for this purpose in the Budget, as against only £E45,000 in 1918.

The authorities at the Residence-General in Morocco are considering the question of holding a great economic exhibition analagous to that of Rabat in connection with the organisation of a fair at Marrakech in October.

A petition of Sir Richard Redmayne, K.C.B., and others, asking for the grant of a Royal Charter incorporating "The Imperial Mineral Resources Bureau," has been referred to a Committee of the Lords of the Council.

THE SMALL CAPITALIST IN MOROCCO.

(From Our Own Correspondent.)

Tangier.

According to an interview which was published recently in a paper devoted to Morocco, a member of the British colony at Casablanca is stated to have advised a man who possessed a capital of £800, and who asked advice as to what he should do in Morocco, to return to England. British opinion here is that the advice was bad. The capital was certainly not large, but if the owner had commercial experience and was a worker he could have secured some good British agencies, and his £800 would have helped him to eke out his commissions until they became enough to keep him. He might even, when things became more normal, have made small shipments of produce, though, of course, he could not do this in the present state of affairs; or he might have obtained buying commissions for produce and worked through the banks. There are many British manufacturers looking for agents, and although a large proportion of the goods offered are new to the country, an energetic man with £800 capital should be able to work some of them up to good results.

PRINCE LINE.

The Prince Line announce the resumption of their pre-war service of steamers from Middlesbrough and London to the Mediterranean ports, the first sailing being that of the Merchant Prince, loading in the Tees about April 22, for Malta and Alexandria.

The death took place at Liverpool, on April 15, at the age of fifty-three years, of Mr. J. M. Stamper, formerly the secretary and manager of Messrs. Thos. and John Brocklebank, Ltd., who had been associated with the Brocklebank Line for upwards of thirty-five years.

ENGINEERING NOTES.

Machinery for Brussa.

Brussa is a very important agricultural and commercial district in Asia Minor. The population of the province is over 1,500,000, mostly agriculturists engaged in the production of cereals, wines, fruits, etc. The manufacture of carpets, silk goods, and tapestry is a special industry of this district. Brussa, the capital, with a population of over 75,000, lies sixty miles south of Constantinople, having Mudana as its seaport in the Sea of Marmora. The use of modern agricultural machinery and implements has been spreading steadily in recent years in the region of Brussa. American manufacturers were the chief gainers by this, and before the outbreak of the war they were exporting to this district a good number of threshing machines and reapers annually; while France and Greece were sending ploughs. It has been estimated that the province of Brussa could take 800 to 1,000 ploughs a year. In the year preceding the war 260 mowing machines of American manufacture and 1,570 ploughs of Greek pattern were imported. British manufacturers seem to have overlooked this market, although British goods generally, and especially machinery, have been highly appreciated there. Before the war a firm in Brussa kept in stock a few agricultural machines and implements of British origin, but the prices of these goods were so high that little business could be done. British manufacturers should pay special attention to this market, which is also an acknowledged distributing centre for other fertile and naturally wealthy districts in the interior.

Small Light Plough.

It is often said that a drawback to the employment of the English plough in the East is its weight. This may be correct in some cases, where very small animals are available, but it is well known that in Thessaly, Macedonia, Asia Minor, Mesopotamia, and other agricultural districts, where the soil is often heavy and difficult, British-made ploughs are used and preferred, although, in some cases, the price is higher than those of foreign construction. It is often the fault of the local agent, who as a rule is a commercial man and not an agriculturist, or the buyers' inadequate way of ordering direct or through merchants in England, if ploughs or other implements are sent which, either in size, weight or design, are occasionally found unsuitable for the purpose required. Buyers may be quite sure that if their orders are properly defined, any British maker will be able to supply them with suitable implements. There are light ploughs, made in Scotland, Ireland, and the north of England, which could meet the requirements of the Oriental farmers in every respect, but apparently makers do not trouble to bring them to the notice of these farmers. It should interest agriculturists in the East to know that not only the ordinary light-weight type of plough, but even a very small plough, can now be obtained in England at very reasonable prices. This new plough had the distinction of being the smallest implement of the kind at a recent show. It is well adapted for colonial use, and is suitable for small holders, market gardeners, and horticulturists. Its weight is said to be only 50 lb., whilst it will plough 6 in. deep by 8 in. wide.

A Useful Road Roller.

Macadamised roads are in general use throughout the Near East, and as the use of road rollers is most necessary for their proper construction and maintenance the possession of these rollers is highly valued by all progressive municipalities. The price of the ordinary steam-roller is, however, an item which prevents many municipalities and contractors from acquiring this road-making equipment; while the lighter types of rollers drawn by animals are more or less inadequate for general work and high roads. It will be, therefore, of interest to such municipalities and contractors in the East to hear of a novel road roller which is propelled by an internal-combustion engine, and is fitted with a tank for carrying water for sprinkling roads, etc., and a receptacle capable of containing about 15 cwt. of tarmac for small repairs, such as pot-holes, etc. The roller is also fitted with a belt pulley for stationary work. The engine is started on petrol, and after warming up is run on paraffin. The maximum speed is about three miles per hour, but when the engine is rolling a road the required speed will not exceed 1½ mile. The whole arrangement is well thought out, and will appeal particularly to those who require an efficient road roller, which, when not required for such work, can be employed for pumping water, or driving any kind of stationary machinery. The weight of this automobile roller is, when light, 6 tons, and in working order 8 tons.

Italo-American Co-operation.

According to recent reports from the Near East, there is already evidence of American and Italian co-operation in those markets, which is probably connected with the recently announced Italo-American industrial and economic agreement. For this a committee was constituted about the time of the armistice, and has since directed its efforts to strengthening and improving the economic and industrial relations between Italy and the United States. It will seek to eliminate undue competition amongst producers, to promote the sale of non-competitive goods in the two countries on a reciprocal system, to develop Italian industries with American and Italian capital, and, by the same agencies, to utilise the natural resources and public undertakings in Italy proper and her colonies. The movement has the support of the Society of Italian Agriculturists, shipping federations, metallurgical, machinery, electricity, and other leading associations. The effect of such a combination is obvious. Apart from other commercial and economic advantages, Italy will be able to develop her engineering industries, and she will be in a position to produce manufactured goods at cheaper rates, thanks, to a great extent, to the utilisation of enormous water-power, and more favourable labour conditions. When it is also remembered that Italy can depend on the support of the Italian element which is to be found in all branches of industry and commerce in the Near East, it will be realised that she will prove a very formidable competitor in the future.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

A firm tone has prevailed in the market during the past week, but business to some extent has been upset by the Easter holidays and many buyers and sellers have been rather slow at getting to work again. Certain features in the situation give cause for anxiety, but the belief that current prices are not unreasonable is still prevalent, and buyers who have orders to place are afraid to delay. Private advices relating to the new Egyptian crop are generally healthy and there is every expectation of a much larger yield than during the current season. Merchants and users are still wondering what will happen at the end of July. Inquiry in Egyptian yarns has broadened somewhat, but business has been patchy, there being more done in certain qualities than in others. Stocks have recently appeared in some directions, and lower prices have been taken in order to keep down supplies in first hands. Nothing better can be said as to the demand in cloth for Egypt. Although the troubles are said to be over a feeling of uncertainty exists. Shippers are undoubtedly missing the opportunity of buying at the bottom. The turmoil in India has adversely affected cloth business for that part of the world. Something has been done, however, for Calcutta in grey and white shirtings. Bleaching cloths continue to be sold for China, Java and Singapore. A steady demand has been met with in printing cloths for certain minor outlets. Home trade buyers are now showing more activity. American yarns have hardened in quotation with a steady demand. Numerous producers have recently been enabled to reduce stocks at the mills to a considerable extent. In export bundles India has given rather increased support.

INDIAN COTTON COMMITTEE'S REPORT

A Reuter message states that the report of the Indian Cotton Committee recommends the establishment of a permanent cotton committee at Bombay, with the Agricultural Adviser to the Government as President. The main functions of the committee would be to act as advisory body to the Government and the trade on all questions. It would work through provincial committees. The report further submits proposals for the removal of obstacles to permit cultivators to grow long staple cotton and so enable it to compete with the short staple variety.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—April 4, 440,000 francs, against 330,000 francs; April 5, 6, 720,000 francs, against 240,000 francs.

COMPANY MEETINGS.

EGYPTIAN ENTERPRISE AND DEVELOPMENT.

The following is a translation of the report of the directors submitted to the annual general meeting held in Cairo on March 31 last :—

Gentlemen,—We beg to submit to you the balance-sheet for our fourteenth year, ended December 31, 1918.

We record with very great regret the death of our colleague M. Ernest Rolin, which took place at Castets-des-Landes, France, on July 17 last. M. Rolin was one of the founders of the Egyptian Enterprise and Development Company, and in him the company loses one of the most active members of the board of directors. You will, of course, desire to join us in rendering homage to his memory, and in expressing our deep sympathy with his family and with our colleague M. Léon Rolin.

Agricultural Lands.

The minor development works which we undertook last year on certain parts of the Bercache estate have contributed to increasing the yield and the value in rent. The approaching conclusion of peace, with the return of normal conditions, it may be hoped, will lead to the resumption of the various irrigation projects whose survey or execution was interrupted by the war; and among these projects the conversion of the west part of the Guizeh Basin concerns the company most directly. This project, already decided on in principle before the war, would give immediately a much higher value to all the lands in that region. Some offers to purchase our lands reached us in the course of the year. We refused to entertain them, holding that a sale at present prices would mean the loss to the company of the benefit of a measure which has long been awaited, and which is, perhaps, on the point of realisation.

Building Lands.

There is no change to record under this heading. Our view of the future of building lands in general has not altered, and we consider as justified the figure at which those of the company are set down in the balance-sheet.

Business in Turkey.

Up to the date of closing the accounts we were without news of the properties which the company possesses in Constantinople and Syria. Some information more or less precise has since reached us regarding certain of these properties, but it only conveys a very imperfect view of the position. We hope that one of us will be able shortly to visit them to make the necessary examination, and to take on the spot such measures as the circumstances dictate. There is every reason to anticipate that this real estate will benefit greatly by the changes which are on the point of taking place in the status of the territories where the properties of the company are situated.

Portfolio.

The shares of the Gharbieh Land Company, which are quoted on the Bourse, have benefited in 1918 by a new rise of 9-16 as regards the ordinary shares, and of 7-32 as regards the "part de dividende." They stand in the balance-sheet at the price of December 31 last. Shares not included in the official list of the Bourse remain at the same price as in the balance-sheet of 1917.

Land Purchased.

This account decreased by £E6,614.350, including £E545.174 annuities in arrears.

Various Debtors.

This account includes rent in arrears, advances to cultivators, interest not collected, and divers debts of which a part is guaranteed by the deposit of shares.

Gharbieh Land Company.

The position of this company continues to improve, and the results of the past year are even better than those of the previous year. The increase of its debt is due to the fact that the sale of its cotton not commencing until very late this year, it was only able, up to the time our accounts were closed, to refund us a very small portion of our advances of 1918. This increase is, therefore, only temporary; it will entirely disappear when the Gharbieh Land Company has completely realised its cotton sales.

Koubbeh Gardens.

This account diminished in 1918 by £E1,550.549.

Contingencies Account.

A part of this account was utilised in 1918 to liquidate or redeem certain suspended accounts, legal obligations, uncertain or irrecoverable debts, etc., for which reserves had been made in preceding years. There remains a disposable balance of more than £E43,000, which we consider sufficient to meet all redemptions or depreciations which it might eventually become necessary to make.

Bank Credits.

This account decreased in 1918 by £E5,807.184. We only received the accounts from our bankers in Belgium a few days ago for the years 1915 to 1918. These accounts raise certain points which will necessitate an exchange of explanations, the result of which it is impossible to decide in advance. But we have in our reserve fund the means to meet such contingencies as we may be called upon to meet.

Profit and Loss Accounts.

The net profit for the year amounted to £E14,327.004, and includes the increased value of the shares of the portfolio, which are included in the official list of the Bourse. The debit balance of the profit and loss account, which in 1917 was £E134,520.484, is not to-day more than £E120,193.480. We hope soon to be furnished with the views of our Belgian shareholders regarding the reduction of capital, to which we referred briefly in our last report. If they agree to this reduction we shall call an extraordinary general meeting, as soon as circumstances allow, to decide on this question in accordance with Articles 45 and 46 of the Statutes.

H.E. Mansour N. Shakour Pasha's term of office will expire, and he is eligible for re-election according to the terms of the statutes.

We propose to re-elect M. Guido Lévi as deputy auditor for the year 1919.

Report of the Auditors.

Gentlemen,—We beg to inform you that we have compared the balance-sheet with the books and documents, and certify that we have found them in order. The shares constituting the directors' qualifications are in order. Owing to difficulties of communication with Belgium, we have not been able to assure ourselves of the existence up to December 31, 1918, of 2,000 Kafr-el-Dawar shares, 25,989 Koubbeh Garden shares, and 5,000 Gharbieh Land Company shares. For the same reason we could not ascertain from the solicitor of the company in Turkey whether the properties at Constantinople and Beyrout were free of any charges at the date of the balance-sheet. In the absence of our colleague, M. Jules Rolin, M. Guido Lévi, deputy-auditor, has signed the present report. With the above reservations we certify that the balance-sheet is in conformity with the accounts and statutes of the company.

(Signed) F. H. Russell, Auditor.
G. Levi, Deputy-Auditor.

Resolutions.

The following resolutions were passed unanimously :—(1) The balance-sheet and the accounts for the fourteenth year, ended December 31, 1918, and discharge is given to the directors. (2) Resolved to transfer the debit balance to the profit and loss account, viz., £E120.193.480. to the new current year's account. (3) Re-election of H.E. M. N. Shakour Pasha as director. (4) Re-election of M. Jules Rolin as auditor. (5) Re-election of M. Guido Lévi as deputy-auditor for 1919. (6) The fees of the auditors for the year 1919 is fixed at £E150.

COMPANY NOTES & REPORTS

Cunard Steamship.

The directors regret they are unable to issue annual report and accounts as at December 31, 1918, until later in year. Dividends on preference have been paid to December 31, and directors recommend dividend of 10 per cent., less tax, on ordinary (including shares recently issued on capitalisation of reserve fund) and on Government share. Dividend will be payable May 5. Directors propose to adjourn meeting to a date to be fixed later, when the report and accounts will be submitted. Meeting, Cunard Building, Liverpool, April 30, at 11.

Compagnie Algerienne.

At a recent meeting of the Compagnie Algerienne the accounts for the 1917 operations were approved and a distribution of 57.50 francs against 54 francs for the preceding year agreed upon. The report states that the agricultural season, which has just come to an end in Algeria and Morocco, has been one of the best that North Africa has experienced for more than thirty years. The increased price of cereals and the yield, which was very much higher than the average, have enabled farmers to obtain extremely satisfactory results, despite the fact that the cost of cultivation has doubled and even trebled during the past four years.

Ooregum Gold.

The report of the Ooregum Gold Mining Company of India for the year ended December 31 last states that the yield of gold per ton milled shows an increase of 4.9 grs. At the cyanide works there was a decrease of 3.4 grs. per ton. There was again a slight improvement in the total extraction of gold, the quantity left in the final residue averaging 1.73 gr. per ton lower than in the preceding twelve months. The total return of fine gold amounted to 89,631 oz., a decrease of 1,056 oz., and realised £380,220, from which was deducted £21,383 for royalty payable to the Mysore Government, leaving net £358,837. Including £7,170 for interest, rents, and sundry receipts, the total income amounted to £366,007. Working costs aggregated £222,225, profit being £143,782; £3,778 was brought forward after payment of balance dividend for previous year, which with £1,268, the dividend on the Kolar Mines Power Station shares, makes a total at credit of profit and loss of £153,828. Interim dividends of 2s. per share on the preference and 1s. per share on the ordinary shares, paid on October 26, absorbed £48,799, and after charging income-tax (£12,701), depreciation (£15,000), expenditure on circular shaft (£9,472), Kolar Gold Field prospecting department (£796), donation to British Red Cross (£105), transfers of £5,000 and £1,000 to reserve, and insurance and contingency funds respectively, a balance of £60,956 remains, out of which the directors recommend the distribution of £54,116 as a final dividend for the year of 1s. 6d. per share on both classes of shares, payable on 16th proximo to holders registered 18th instant. The total distribution for the year amounts to £102,193, representing 3s. 6d. per share, or 35 per cent., on the preference, and 2s. 6d. per share, or 25 per cent. on the ordinary shares. The reserve and insurance and contingency funds are raised to £100,243. The continuance of war conditions led inevitably to higher costs, the increase amounting to £22,973, and the rise in the rate of exchange on remittances to India accounts for a large proportion of this sum. On capital account £10,222 was laid out on buildings, machinery, and plant, and £9,472 expended on the sinking of circular shaft. The sinking of this shaft has been regularly carried on since August, and up to the end of the year it had been deepened 260 feet to a total of 332 feet from surface. Development work in the mine amounted to 7,763 feet. The reserves of ore at December 31 last were computed at 392,690 tons, a decrease of 22,093 tons. In October influenza of a very severe type broke out on the field, and remained for two months, considerably disorganising labour.

AGRICULTURAL BANK OF EGYPT ANNUAL MEETING to be held in Cairo on Tuesday, 29th April, 1919. It is proposed to recommend a dividend of 8s. per share on the ORDINARY SHARES and £40 per share on the DEFERRED SHARES.
17th April, 1919.

Digitized by Google

COMPANY RESULTS, Etc.

The directors of the Agricultural Bank of Egypt recommend a dividend of 8s. per share on the ordinary shares and £40 per share on the deferred shares.

Ural Caspian Oil Corporation.—Extraordinary general meeting will be held at Winchester House, E.C., to-day at noon.

The transfer books of the Burma Railways Co., Limited, will be closed from May 1 to May 14 inclusive for the preparation of the half-year's dividend warrants.

The net profit of the Banque d'Orient for 1918 was 5,270,749 drachmæ. A dividend of 7½ drachmæ, as against one of 3 drachmæ, will be proposed at the next meeting.

The directors of the Anglo-Egyptian Bank have declared an interim divdend of 5s. per share, free of income-tax, for the half-year ended February 28, payable on June 2.

The numbers are published of eight 4 per cent. "Latur Extension" debentures of the Barsi Light Railway Co., Limited, which have been drawn and will be payable at £103 per £100 debenture on June 1 next, with interest to that date, at the Mercantile Bank of India, Limited, 13, Gracechurch Street, London, E.C.3.

INDIAN INTELLIGENCE.

Railway Surveys.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated April 18 :—

Widespread rain in Assam and North-West Frontier Province. Light rain in parts of Bombay, Central Provinces, Burma, Bihar and Orissa. Local in Bengal and Kashmir. More required by North Bengal and Assam. Gingelly yield Madras estimated 28 per cent. below last year.

Bombay Cotton Market firm. Fully good Broach quoted May 488 rupees, July-August 497 rupees. Piece Goods Market very quiet. Calcutta Jute and Gunny Markets no change.

Surveys have been sanctioned of Metre Gauge Railways between Nandanpur and Gabsera by Bengal State Railway, Pochagar and Dinapur, Kissengunge and Nakourd (21 miles), Pirgunge and Bochagunge (eight miles) by Darjeeling-Himalayan Railway Extensions Company, Karad (in South Bombay) to Chiplumulva (202 miles) by Madras and Southern Mahratta Railway. Reconnaissance survey has been sanctioned from Hardwar to Karnyprayag (84 miles) by the Hardwar Dehra Railway Company, and the survey for a light railway from Akhaura to Birendranagar (fifteen miles) by the Assam Bengal Railway. The construction of a narrow gauge railway between Parasia and Khairsadoh in the North-Western Railway system has also been sanctioned.

DEVELOPMENT OF EMPIRE RESOURCES.

The current number of the *Bulletin of the Imperial Institute* (London : John Murray, 2s. 6d.) contains a comprehensive article on the Empire's trade in wool in its relation to the woollen trade of the world. The total amount of wool produced is estimated at about 3,000,000,000 lb., of which almost two-fifths is contributed by British countries, Australia alone producing nearly one-fifth. Of the 460,000,000 lb. of imported wool used in this country before the war, more than three-quarters came from British sources. Nevertheless, as is pointed out, Germany was actually using more Australian and South African wool than this country. It is interesting to note also that the total consumption of wool in Germany was greater than in this country, but it was chiefly of the inferior kinds. During the three years before the war this country was exporting woollen manufactures of the average annual value of £27,000,000 sterling. Since then the growth of the industry has been remarkable. The average annual value of the exports of woollen manufactures has increased to over 36½ million pounds, and at present nearly twice as much wool is being used by the weaving industry as in pre-war times, and nearly the whole of it comes from within the Empire. The article includes an account of the production of wool within the Empire and in foreign countries, and full particulars are given of the trade in woollen goods of the United Kingdom, the chief European countries, the United States, and Japan.

The same issue contains an informative article on the manufacture and industrial utilisation of paper yarns, which during the war were so largely used in Germany for fabrics of various kinds owing to the scarcity of jute and cotton. The manufacture of cordage and fabrics from paper yarn has been carried on in this country, but it appears unlikely that any extensive development of the industry will take place here so long as ample supplies of jute are obtainable at a reasonable price. The section devoted to an account of recent investigations conducted at the Imperial Institute includes a second report on samples of rubber prepared in Ceylon in order to ascertain the best methods of preparing plantation rubber of the quality required by manufacturers; a report on the value of Indian tea seed as a source of oil; and a report on minerals from Rhodesia, including a general summary of the mineral resources of that country.

A NEW SOURCE OF TURPENTINE OIL AND ROSIN.

Turpentine oil and rosin are already being produced on a commercial scale in India by the distillation of pine resin. A new source of supply, which, though comparatively small, may be valuable, especially for Indian use, has now been found in Indian frankincense, or olibanum. This material is obtained by the natives by making incisions in the stems of *Boswellia serrata*, a tree widely distributed throughout the dry zone forests of Central India. The resinous substance which exudes from the cuts contains a kind of turpentine, a resin and a gum. Investigations of the methods of separating these constituents in a marketable form, as to their commercial uses and value, and on the methods of tapping the tree, have been conducted since 1912 by the forest authorities in India, in co-operation with the Imperial Institute, the results of which have been published recently in a paper by R. S. Pearson, Forest Economist, and Puran Singh, Chemical Adviser at the Forest Research Institute, Dehra Dun.

The general conclusion reached, based on the results of numerous trials carried out in India and in this country by the Imperial Institute, is that the turpentine oil is equal to good quality American turpentine oil, and that it could be used in place of the latter in the manufacture of paints and varnishes. The Imperial Institute has also reported that the rosin would be quite suitable as a substitute for pine rosin (colophony) in the manufacture of varnishes, being equal in value to grade "G" of American rosin.

The decree forbidding the exportation of castor-oil seeds to France, her colonies and Allied countries or neutrals, has just been rescinded.

An agricultural exhibition, organised by the Horticultural Society of Tangiers, will be opened on May 4, and will include four principal sections.

A Paris contemporary states that in order to maintain closer contact with the Casablanca region the French Resident-General in Morocco has installed a permanent office at Casablanca under the direction of M. Le Fur.

The report of the Rani Travancore Rubber Company for 1918 shows a profit of £14,300. Balance brought forward, after payment of excess profits duty to December 31, 1917, is £12,312, making £26,612. It is proposed to pay a dividend of 6 per cent. and to carry forward £8,112.

The report of the Poonmudi Tea and Rubber Company for 1918 states that net profit amounts to £5,962; the addition of £2,296 brought forward makes £8,258. The directors propose a final dividend of 7½ per cent. (making 10 per cent.), to put £500 to reserve, and to carry forward £2,428.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

There has been very little doing this week, owing to the Easter holiday. In a general way the market has continued in rather a nervous condition, in view of the unsettled state of affairs in Egypt, and most prices, where altered, are again lower, although the business done has been altogether of a trifling nature. The decline in values is due to the unwillingness of dealers here to put stock on their books until they see some kind of better news from Egypt and a renewal of enquiry from that quarter.

In Government stocks Unifieds have dropped 1½ to 90½, there having been some pressure to sell. The 2½ per cent. Prefs. are quoted nominally ¾ lower at 75, but there has been no business.

In Bank Shares, Nationals are ⅜ down at 20, Agriculturals have receded 3-16 to 6 7-16, and in Anglo-Egyptian Banks there is also a fall of ⅜ to 15⅛.

Amongst Railways, Delta Lights are ¼ down to 7⅞.

Land Descriptions are also easier here and there. Aboukir shares have dropped 6d. to 27s., and there has been a similar decline in both Delta Lands and New Egyptians. Exceptionally, Allotments have been enquired for, and are ⅛ firmer at 4¼. There has also been some small demand for Behéras round 13. Egyptian and Foreign Trusts have also dropped 6d. to 14s. 9d., and United Egyptian Lands are 3d. lower at 2s. In Sudan Plantations there has again been a certain amount of activity, with an easier tendency, and the price closes a ¼ down at 6⅜.

Amongst Miscellaneous shares, Markets are 6d. easier at 26s., but, on the other hand, Alexandria Waters has been a very firm spot, and the price is ⅛ higher at 12⅛. Anglo-Egyptians B, after business up to 5¼, are closing rather quieter, on profit taking, at 5 1-32nd.

Amongst Greek Securities, the only change to record is a drop of 1 point in the Rente Loan to 56.

The report of the Madras Electric Tramways (1904), Ltd., for the year ended December 31 shows a gross profit of £31,697. After debiting interest and London office expenses, making provision for debenture stock sinking fund, and transferring £10,000 to depreciation and renewal account, there remains £14,444; £3,957 was brought forward, making £18,400. The directors recommend a further dividend of 4 per cent. on the ordinary shares, making 8 per cent. for the year, free of income-tax, to transfer to general reserve fund £3,000, and to carry forward, subject to excess profits duty (if any), £4,820.

The report of the Dimbula Valley (Ceylon) Tea Company for 1918 states that the net profit earned was £24,035. It is proposed to pay a final dividend of 10 per cent. on the ordinary shares, making 15 per cent., and carry forward £5,179.

The report of Rangoon Para Rubber Estates for the year ended December 31 last states that the net profit amounted to £7,499; £1,593 was brought forward, making £9,093, which the directors propose to carry forward, subject to manager's commission and bonus to staff.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams : "Trabanque, London."

CAPITAL : Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

On Monday, at a Plenary Session of the Peace Conference, the League of Nations came into actual being. A committee, to be nominated by the Powers represented on the Council, is to prepare an agenda for the first meeting of the Body of Delegates and plans for its permanent home; and its first Secretary-General has been appointed, in the person of Sir James Eric Drummond. Wisely, the Covenant of the League has been so drafted as to allow a very great degree of elasticity, and there is plenty of room for gradual expansion in almost every direction. This is all to the good, for experience teaches that a Constitution which is of slow growth is likely to prove more sound, better balanced, and more workable than one which emerges complete in every detail from the study of those responsible for drawing it up. The sponsors of the League evidently recognise that, if it is to live and to flourish it must, when all is said and done, depend upon the goodwill of its members rather than on any compulsory powers accorded to it, and they have drafted the Covenant accordingly. As it stands, the strength of the League would appear to be more moral than physical; and that is a fact which will be viewed with very different feelings by different nations. But with the passing of time the power necessary to make its will felt will certainly accrue, if the League be found worthy of being trusted with them. For the present, we may accept it as a thing admittedly imperfect, but by no means more imperfect than the system which it aims at superseding.

However short the League may fall of fulfilling the hopes of those who have been looking to it to secure the instant advent of the Millennium, it cannot fail to achieve one good purpose: the bringing together once a year of representatives of the various nations adhering to it. The value of such an opportunity to exchange views openly and freely can hardly be over-estimated. Perhaps the banning of all secret treaties is less calculated to arouse universal enthusiasm, even though the world is at the present time receiving a painful lesson in the danger of such pacts. But as far as the Near East is concerned, it will hardly be questioned that in the past frequent meetings of and perfectly frank discussion of differences by the statesmen of the Balkans would have removed many dangers that have since materialised to the great loss of the States concerned. Similarly, a secret treaty has played a terribly tragic part in estranging two of the Balkan States that should have remained good friends. Possibly, however, a cynic may urge that in the Balkans the great danger of a secret treaty lies, not in its secrecy, which is unlikely to be observed long in that region, but in the difficulty of interpreting its terms aright. To this the retort is obvious: the meetings of statesmen referred to will provide the best possible opportunity for clearing away any misunderstanding before it has had time to rankle.

An excellent illustration of the evils produced by the old style of Balkanic statesmanship — or what passed for statesmanship in the Balkans—is provided by the unsatisfactory state of our knowledge of what is actually happening with regard to Montenegro. According to a telegram circulated by the Serbian Press Bureau, the Montenegrin Great Skupshtina on April 20 adopted a resolution declaring King Nicholas and his dynasty to have been dethroned and the union of Montenegro with the kingdom of the Serbs, Croats, and Slovenes to have been accomplished. The Great Skupshtina—the message adds—having "now terminated its labours, was then dissolved, amid cheers from all parts of the assembly." If the Skupshtina could be regarded as undoubtedly representing the Montenegrin people, this announcement would, of course, be accepted as final, and the union, which in itself would appear natural enough, would be regarded as closing a romantic page of history, in which one of the most picturesque figures in Europe loomed large. Unfortunately, this is not the case. The authority of the Skupshtina just dissolved has been repudiated by King Nicholas and his ministers, and though there may be no "possible doubt whatever" about the present standing of the Black Mountain and its people, it would take a singularly plausible Grand Inquisitor to convince the average Englishman of the fact. In the circumstances, we can only repeat what has been written more than once in these columns: that while it may be the destiny of Montenegro to be absorbed into Yugoslavia, the Allies should see that the union is carried through in accordance with the principle of self-determination.

Signor Orlando, on his return to Rome, has been received with an enthusiasm which cannot be denied; and it is clear that, with the exception of the official Socialists, the whole of Italy, from the King down to the humblest of his subjects, has adopted the official view regarding Fiume and the Adriatic question as a whole. No good purpose would be served by ignoring this fact; nor will it avail much to inquire whether the practical unanimity in Italy is spontaneous, or whether it has been brought about by propaganda. The essential point is

Digitized by Google

that Italy refuses to give way: the emphasis with which she finds it necessary to repeat her refusal and her lavish use of what may be called stage effects really add little, if anything, to the awkward situation created by the refusal itself. We decline to believe that it will prove impossible to find a way out of the difficulty without resorting to an appeal to arms. Indeed a fresh war over this problem of the Adriatic is unthinkable. Some solution must and will be found. It is to be noted that Signor Orlando, in his speech in the Italian Parliament, was at pains to impress on his hearers that the Allies of yesterday must not to-day suffer the alliance to be broken off; and though he declared that he could not "at this difficult moment . . . determine in what form and by what means the end can be attained," the determination to attain the end—that is, conciliation—is fortunately apparent beneath the surface of the muddy waters. In plain words, a bargain will probably have to be struck, and, as we indicated last week, it would not be surprising to find that "compensations" for disappointments in the Adriatic were to be found in the Levant, or *vice versa*.

In connection with the trouble over the Adriatic, it is a little curious that Fiume should be so generally regarded as the only possible port for Yugoslavia. Putting political considerations aside for the moment, there is, for instance, Sebenico, which from the mariner's point of view is a much more desirable harbour than Fiume, being easier of access, and free from the visitations of the terrific winds that trouble the northern port. The Yugoslavs, who are not a nautical people, may well be pardoned for being unaware of these facts, if unaware of them they actually be, but we believe that most master mariners acquainted with the Adriatic will endorse the opinion set forward above. There remains the question of connections with the hinterland, and here it must be admitted that there can be hardly any comparison between Fiume and Sebenico as they stand to-day. That, however, is not to acknowledge that such a state of affairs must necessarily continue. To alter it would be a costly matter, no doubt, but it would be far less costly than another war.

The latest news from Egypt is as satisfactory as could be expected, but the very serious character of the disturbances from which the country has been suffering becomes more clear as fresh details of the disorders reach us. We publish to-day some particulars of these occurrences sent us by our Cairo Correspondent, which throw an unpleasant light upon certain aspects of them that have been overlooked, or kept in the background heretofore. From these and other accounts it becomes clear that the makers of trouble have had material to work on that was more adaptable than was generally believed. Fortunately, fanaticism, though not entirely absent, has not been able to make itself felt, at any rate in a direct fashion; the leaders of the movement having shown no little skill in contriving to give it the appearance of developing along "national" lines. It seems to be highly probable, however, that this comparative efficiency in direction is actually due to outside influence, and as our Correspondent suggests, indications point to Turkey, or Turkish agents, as playing an active part in the business. To connect Turkey with the idea of efficiency is no doubt startling at the first blush, but in the field of intrigue the Osmanli was ever an accomplished performer, and it must be remembered that lately he has had the benefit of German guidance.

The most important factor in bringing about an improvement in the situation has been, almost certainly, the employment of sterner measures, calculated to convince the agitators that such leniency as was shown towards them before was not in any way due to weakness. These steps include the creation of summary military courts and military courts to deal with offences committed during the disturbances, and among the powers granted to these bodies is that of inflicting fines up to ten pounds (Egyptian) or of having an offender whipped or flogged. These arguments are likely to appeal to the "rough" in Egypt as forcibly as they do to his fellow in other countries. Further, the military courts are empowered to try—and, if necessary, to punish—foreigners and foreign-protected subjects, and to deal with cases that are too serious to be adequately treated in the summary courts. In so far as this measure will enable the authorities to mete out justice to many highly undesirable folk who usually shelter themselves behind "foreign protection" it is likely to prove a veritable godsend to Egypt. Another step towards the restoration of more normal conditions is the termination of the Government officials' strike, under pressure of a threat that they would lose their employment if it continued.

On April 21 Rushdi Pasha tendered his resignation, and on the following day the Sultan accepted it. The Cabinet, which had held office for a fortnight only, had had no opportunity of showing what it was worth, its chief business having been to receive deputations of agitators, strikers and mischief-makers of all kinds, and endeavour to persuade them to see reason and act reasonably. In that thankless task the Ministers appear to have displayed some courage, and to have borne outrageous treatment at the hands of their countrymen with commendable patience. But their failure to stand by the country in its hour of need must disappoint their friends, and can hardly strengthen Egypt's claim to be ready for self-government on Western lines. Whether the resignation was in any way connected with the recognition of the British Protectorate over Egypt by the United States it must be left for the future to tell us. It is possible, however, that there was some connection between the two events; for the announcement of the American recognition was made to Sir Edmund Allenby by the United States Minister in Cairo on April 22. It undoubtedly came as a great blow to the "Independence" party, who, forgetting Mr. Roosevelt's plain words on the subject, had contrived to persuade themselves that America would champion their cause, and that such demonstrations as they have been indulging in would favourably impress President Wilson. How mistaken that view was may now have been brought home to them by the official Note announcing America's recognition of the Protectorate, in which any effort to obtain the realisation of the Egyptian people's aspirations by a resort to violence is specifically deprecated.

The news which reaches this country from India continues to give us glimpses of the operation of a carefully organised campaign against authority; but the positive information available is not yet sufficiently full to discourage theorists, and during the past week we have heard frequent suggestions that the disturbances must be attributed to interference from outside, from Russia, from Germany, or elsewhere. Such interference is, of course, quite possible; but at the same time it is well to bear in mind the scientific principle of economising hypotheses: nothing has yet been reported which India could not have acomplished without external assistance, and to scour the civilised world for possible disturbing agencies may obscure the hard facts of the situation, facts which must be faced and reckoned with if the measures now in preparation at Whitehall are to eventuate in a stable and progressive commonwealth.

Let us recall some of these elementary facts. Practically all the cities of India, and not a few of the villages, contain in normal times a dangerous population sufficient in numbers to produce local and temporary anarchy, even if the rest of the inhabitants should hold aloof; while apart from the dangerous classes—the criminals, the failures, the loafers, and the rest—there are even larger numbers whose passions can easily be aroused when times are not normal, as the present times are not. Just now there is widespread economic stress: the Indian Moslem world is in an agony of apprehension, the reasonableness of which is beside the present question; and, if we are not mistaken, the supporters of oligarchic ascendancy are feeling that their cause is almost lost. Many "interests" have of late been im-

Digitized by Google

pelled to resent the exercise of authority, while authority itself has been somewhat discredited by the events of the last decade. In a word, India has been unusually full of dry tow, which could be fired by any casual spark, even though the spark might be struck by a saint.

No one who counts would dream of suggesting that Mr. Gandhi meant to start a conflagration; he has now recognised that his action has unfortunately contributed to that untoward result, he has called on his supporters to rally to the side of authority, and his name may fitly drop out of the discussion—one more saint whose ignorance of the world has led to a disastrous under-estimate of its capacities for evil. The other disclaimers which have been published stand on a somewhat different footing: when people who have for so long claimed a monopoly of knowledge of Indian politics admit that a movement originally favoured by them has been corrupted by "unscrupulous elements," they assert their moral rectitude at the expense of their reputation for political insight, and the world will be fully justified in refusing for the future to take them at their own exaggerated valuation. The moderate leaders condemned passive resistance, and thereby showed some appreciation of the actual position: the extremists who at first supported that movement have at any rate forfeited their claim to interpret the attitude and the sentiments of the country.

Meanwhile very little information is reaching the public regarding the momentous deliberations in progress on the question of Indian constitutional reform. Some indication of their tendency may perhaps be found in the hint given by *The Times* that the "dyarchy" may have to be adandoned as unworkable, and some simpler alternative chosen, but what that alternative may be, and whether simplicity is attainable in such a matter, are questions on which no light has yet been thrown. Incidentally, we may suggest that the application of the term "dyarchy" to the official proposals is not altogether exact: it fitted the Curtis scheme accurately enough, but Lord Chelmsford and Mr. Montagu provide for at least three authorities, the Government acting as a whole in addition to its two semi-independent branches, and if language is to be extended to fit the facts we should surely speak rather of a "triarchy."

The appointment of Dr. Foss Westcott as Bishop of Calcutta and Metropolitan of India and Ceylon is in itself admirable, and should be welcomed with as near an approach to unanimity as is attainable in Anglican circles at the present time. The name of Westcott is a great asset, but the new Metropolitan is very much more than the son of his father, and his long tenure of the see of Chota Nagpur has demonstrated his capacity for even higher office. His administrative gifts were thoroughly tested not long ago, when it became necessary to provide for the welfare of the numerous enemy missions located in his diocese, and we believe the statement to be justified that through his efforts the good features of these institutions were safeguarded, while their dangerous elements were effectively displaced. Under his guidance the interests of the Church in India should be safe.

The sequel to the murder of the late Ameer of Afghanistan is given in a message sent to *The Times* by its Simla correspondent. He reports that at a public durbar at Kabul on April 13, Nasr Ullah Khan, brother of the Ameer Habib Ullah, was found guilty of instigating the murder, and was sentenced to imprisonment for life. A colonel who was accused of actually committing the crime has been executed, and a Court page has been sentenced to imprisonment for life for complicity. The correspondent adds that the news indicates that the new Ameer holds a strong position, "as the small number of persons punished suggests the exercise of marked restraint." As far as it is possible to judge at this distance, Aman Ullah Khan does, in fact, appear to have played a very straight game and to have shown real force of character.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 7.

The Political Situation.

The situation has undergone a dramatic change since I wrote my last letter. It may be as well if, for the purpose of record, I deal with events as they have happened during the past week. As already mentioned, a general strike of Government officials in protest against Lord Curzon's speech was decided upon. Owing to a misunderstanding, the strike started in some administrations on Wednesday, but it became general on Thursday, no work being done in any Government offices. Postal deliveries were suspended, and the telegraph and railway services were run by the military, with the assistance in the latter case of British residents. On the same day a serious collision took place on Abdin Square between the mob and the troops, in the course of which Mr. Dykes, an official of the State Railways, who had been seconded for service in connection with supplies and the police, was killed—it is believed by shots fired from the Palace Barracks—and a number of casualties were inflicted on the mob. It was not until late in the afternoon that order was restored. From that day no hostile gatherings of any importance have taken place; the only form of demonstration being funeral processions organised by the agitators, in which a large number of officials, students, and sympathisers of all classes took part.

The strike of Government employees, which was intended to be a three-day one and started on Thursday, has not ended yet. On Saturday a meeting was held in the Ibn Tulun Mosque, at which a decision was taken to continue the strike indefinitely until such time as Egypt had obtained her independence. The next day the approaches to the Ministries were picketed by the directing committee to prevent any officials attending at their offices. It should be mentioned that the senior officials did not approve of this decision, their view being that the three-day strike had attained the object of calling attention to the solidarity of the native officials with the independence movement, and that the continuation of the strike would serve no useful purpose, but would, in fact, be an unnecessary aggravation of the state of affairs. A meeting was accordingly held on Sunday afternoon, when efforts were made to get this point of view adopted by the opposition; but the latter rejected it. In the end a compromise was effected, in the sense that instead of a strike for an indefinite period the Government employees should absent themselves from work every Monday as a protest until their country had received independence. To-day, therefore, there is again stagnation in all Government offices. Meanwhile reports have shown that complete control has been secured in the provinces, where so far no further incidents of any importance have occurred, and where railway communication on the main lines has been re-established from the ports to Assuan, the last link on the Upper Egypt line having been repaired two days ago.

Two Proclamations.

Last evening the Sultan issued a proclamation to the nation, in which, after stating that he had desired to address these words to his beloved people ever since their national aspirations had been brought to his attention, he assured them of his great love for Egypt and of his keenest desire to assure the well-being and prosperity of his people, and called upon them to assist him to attain this end by refraining from the demonstrations, which had latterly led to regrettable incidents, to maintain complete calmness and serenity, and to attend, each of them, to their customary duties.

To-day this has been followed by a proclamation from the Special High Commissioner. This says:—

> Now that order has been in great measure restored, I declare, in agreement with his Highness the Sultan, that there are no restrictions on travel, and that Egyptians who wish to leave the country will be free to do so. Further, I have decided that Saad Pasha Zaghlul, Ismail Pasha Sidky, Mohammed Pasha Mahmoud, Hamad Pasha El Basel, shall be released from internment and be given similar freedom of movement.

On the contents of this pronouncement becoming known, Cairo—or, rather the Egyptian portion of

Digitized by Google

Cairo—went mad, and as I write these lines the outburst of frenzied joy continues, and the streets are filled with crowds of every class and condition, waving flags, branches of trees, beating drums, and shouting "Long live Egypt!" "Long live Liberty!" "Long live Independence!" "Egypt for the Egyptians!" etc.

The early departure of the mail prevents me from recording the comments of the various communities and the real effect which General Allenby's decision has had on the Egyptians.

CAIRO, April 14.

The Week's Developments.

In my last letter I mentioned briefly the outburst of delirious jubilation which followed the publication of General Allenby's Proclamation. Cairo has never witnessed such spectacles as took place during the early part of the week. As soon as the news was known crowds quickly gathered in the centre of the city, flags of every description made their appearance everywhere, and vehicles of every variety packed with shouting natives, *effendis*, students, and Berberines, all equally excited, were careering all over the place, whilst those of the tramcars that were running were taken by assault, and could but very slowly make any progress owing to the extra weight of the people, who scrambled on the roofs and hung on to the sides as best they could. The most remarkable feature of that first afternoon was the passage of a huge crowd before the Sultan's private palace, shouting "Long live Egypt!" "Long live Independence!" "Egypt for the Egyptians!" etc. Each one of them waved a branch torn from the trees in the streets—in certain parts the onslaught on the young trees was so great that not a single one has been left standing—and the effect of this moving forest of waving branches was quite indescribable. Rejoicing was kept up until late at night, and was resumed early next day, when enormous demonstrations were organised both in the morning and the afternoon.

Ugly Demonstrations.

Unfortunately, what started as a peaceful demonstration ended in bloodshed. It is officially stated that the origin of the trouble lay in the fact that among the flags waved by the populace were old Egyptian ones (showing the Crescent and the Star), which were mistaken for Turkish flags by the British soldiers, who resented their appearance, and, trying to snatch them away, came to blows with the demonstrators. While it is quite possible that they mistook the flag—and, as one party of Tommies told me, they objected to having flaunted under their noses the "rag" against which they had fought by men whom they had protected from the horrors of war—at the same time there is no doubt that the people themselves offered serious provocation both by word and by gesture. The crowd at certain points behaved most disgracefully, and as a result of its brutal attacks two British soldiers were beaten to death on Abdin Square, a British officer was dangerously wounded outside the Continental Hotel, and four Egyptian members of the Cairo police and fire brigade were killed.

The next day the funeral of the four last-named victims took place, and the demonstrators, recognising the mistake made in these attacks, attended *en masse*, ostensibly as an act of reparation. This may have satisfied them, but it certainly did not deceive anyone else; for the funeral procession developed into nothing less than another political demonstration. Delegates from every section of the population participated, with the addition of the rabble and a crowd of Azharites, the fanatical excitement of whose gestures and cries, whenever they passed any Europeans, was sufficient to give one furiously to think. Indeed, looking at the procession as it passed, one felt that it only needed one spark for the whole gathering to burst into a flame of fanaticism and run amok in the city. Fortunately, the funeral went off without incident; but it is a matter of regret that one has to record that attacks on British soldiers continued, and those on Armenians and Greeks became more general.

As regards the attacks on British soldiers, these seem to have been directed particularly against men found walking alone. In this connection during the four days (8th to 11th) eight other ranks were murdered and four officers and fifteen other ranks were wounded owing to individual attacks, as distinct from casualties due to collision with the mob. As regards the attacks on Armenians, a systematic search was made for inhabitants of that nationality, and complete lists were drawn up for each street. On Friday, however, the extremists realised that things had perhaps gone too far, and that possibly their cause might suffer from a continuation; and addresses were therefore delivered in the mosques enjoining the people to refrain from murderous attacks, and not to molest the Armenians, while visits of apology for the recent "regrettable incidents" were paid by Egyptians to the Armenian notables. The fact that these attacks on British soldiers and Armenians have ceased since the pronouncement of these addresses would certainly confirm the impression that they were premeditated, organised, and inspired from certain political quarters. It is not improbable that the discovery that the Committee for the Investigation of the Armenian Affairs was in Egypt led the Extremists to cease their attacks on that element of the population.

On Friday morning the members of the Independentist Committee who had obtained permission to leave the country in virtue of General Allenby's Proclamation proceeded to Port Said and embarked on a French steamer for Europe. They will call at Malta, where they will pick up Zaghlul Pasha and his three companions. Care has been taken to make it perfectly clear that they do not go to Europe as a delegation of the Egyptian nation, but that they go each in his private capacity, and as such will be received by whatever authorities care to meet them. There was a large crowd to bid them farewell, but everything passed off in orderly fashion.

The New Cabinet.

Meanwhile, as a natural and logical consequence of General Allenby's Proclamation a new Cabinet has been formed. Negotiations had been in progress for some days, and it was expected that the Proclamation would be immediately followed by the publication of the decree announcing the formation of the new Cabinet. This announcement, however, was not made until Wednesday afternoon, when, together with the decree constituting the Cabinet, was published the correspondence exchanged between the Sultan and the new Prime Minister, Hussein Rushdi Pasha. The latter in his letter accepting office pointed out that it was only in view of the present difficulties and in the hope of being able to find a solution which would content the whole country that he had undertaken the task entrusted to him.

The Prime Minister takes the Portfolio of Education, but only temporarily. It is understood that he has assumed this post in view of the present difficulties with the students, which it is hoped his personal influence will overcome, and that as soon as the atmosphere has been cleared a Minister will be appointed for Education. The reason why Rushdi Pasha has decided to be Prime Minister without portfolio is that the Presidency of the Council nowadays has assumed proportions and entails duties and preoccupations

which make it impossible for the holder satisfactorily to direct another administration simultaneously.

Yussef Wahba Pasha and Abdel Khalek Saroit Pasha retain their former posts as Ministers of Finance and Justice respectively, whilst Adly Yeghen Pasha takes the important Portfolio of the Interior, where it is generally considered that he should prove a success. Three Ministers are not reappointed—Ismail Pasha Sirry (Public Works, War, and Marine), Ahmed Helmi Pasha (Agriculture), and Ahmed Ziwar Pasha (Wakfs). Of these the best known is Sirry Pasha, who has held the same Portfolio since 1908, and who has taken a useful and prominent share in the Public Works activities of the country. There are thus three new Ministers, Gafar Wali Pasha, who is promoted from Under-Secretary of State for the Interior, where he has shown marked ability, to Minister of Wakfs; Ahmed Midhat Yeghen Pasha, who, after a short career as Governor of Alexandria, becomes Minister of Agriculture; and Hassan Hassib Pasha, who for many years was a Provincial Governor, and recently in receipt of the O.B.E. for his excellent work during the war, is promoted from Mudir of Gharbia to Minister of Public Works, War, and Marine.

It was expected and hoped that the announcement of the formation of a Cabinet headed by Rushdi Pasha would be followed by the return of the officials to their work and the cessation of activities on the part of the lawyers, the students, and the Azharites. But such has not altogether been the case; the officials formulated certain conditions, subject to the acceptance of which they said they would return to their posts; and the students and other elements maintained their hostile attitude in support of them. The Cabinet sat all day Thursday, Friday, and Saturday to consider these demands, and on Saturday evening the President of the Council issued an appeal to the nation calling upon the population, including officials, to return to its normal occupation now that Egyptians had been authorised to travel and a Cabinet had been formed which intended to devote itself to the service of the country, was imbued with the sentiments of the nation, and appreciated at their proper value the national aspirations; and pointing out the grave responsibility which the strikers incur by persisting in their strikes. The answer to the appeal has been from the side of the officials a reiteration of their demands, acceptance of which they insist on *in toto*, and a declaration that if any action is taken against any of the strikers they will continue their strike until such time as the action in question is remedied. Here the matter remains for the moment; but it is obvious that something will have to be done to put an end to what is becoming an intolerable state of affairs.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The Legislative Council was opened on April 1. A short speech was delivered by the Acting High Commissioner, Mr. M. Stevenson. After expressing the regret felt at the loss of Sir John Clauson, the late High Commissioner, and the profound thankfulness and acknowledgment of the immense debt which the island owes to all sections of His Majesty's forces and those of his Allies for its immunity from the horrors of war, the speaker referred to the report of the Commission appointed in 1917 to inquire into the causes and effects of indebtedness in the island, and to advise what remedial measures are needed for the relief of the poorer classes.

As a result of this report (which has been printed in English, Turkish, and Greek) four Bills are to be submitted to the Council this session—viz., to prevent usury, to amend the law as to dealings between traders and farmers, for the relief of insolvent farmers, and to amend a civil procedure law of 1885. In addition to the usual Appropriation Bills there is a further list of about eighteen others, which includes one to restrict temporarily persons who may engage in business connected with certain non-ferrous metals and metallic ores, one to amend the Cyprian Mining Company, Limited, Law, one to regulate quarries and excavations, and one for the laying of pipes for the purpose of conveying oil.

The present session should be a favourable one for rapid legislation, and it is greatly to be hoped that the proposed Acts for the benefit of the rural population will at last bring a large measure of relief to the agricultural class that has so long suffered from the grinding exactions of money-lenders as their most serious foe.

EXPLORATION IN CENTRAL ARABIA.

Lecturing before the Royal Geographical Society on April 28 Mr. H. St. J. B. Philby described a journey he made in the southern part of the Nejd during May and June of last year. His journey was southwards from Riyadh, the capital of the Wahabi country, to the extremity of the country and back again by a different route. Riyadh itself he described as a walled city of some 12,000 to 15,000 souls, situate in an oasis. It was built of clay without regard to symmetry, and, besides its lofty embastioned walls, contained only three buildings of any importance. Of these one was a fort, the second a mosque, typical for the country—i.e., with a flat roof and short minaret—and the third was the palace of the ruler. Eastwards of Riyadh the desert sloped gradually downwards from an elevation of 2,000 ft. to the shores of the Persian Gulf. Westward the plateau of Tuwaiq extended another twenty miles, rising in a gentle slope another thousand feet, and ended in a steep escarpment, which fell some four hundred feet or more to the western plain. The Tuwaiq, flanked by sand deserts, presented a formidable barrier to an invader from the west. Through it ran the Wady Hanifa, main drainage artery of the country, and on its broad back were clustered the oases which gave the Arabs a respite from their nomad life. Travelling southwards, Mr. Philby reached the town of Kharj. There was, he said, a strong local tradition that the Wady had once been much more thickly populated than now, but that a double scourge of locusts and plague had ruined the oases. Such a theory, while it would account for the sorry state of some places, would not account for the survival of others; and a better explanation was ready to hand. Was it not possible that the Wady had in times past been the scene of one of those devastating floods of which we had accounts from other parts of Arabia? Such a flood would have poured down the narrow channel mercilessly sweeping before it the rich settlements lying in its path, but sparing those it could not reach on account of their greater elevation.

One place which Mr. Philby visited he described as an oasis covered with date palms, where the resident population consisted entirely of people of negro extraction. The absentee owners were a Bedouin tribe, who avoided the cramped life and sickly climate of the valley, and only visited the place once a year at the time of the date harvest to collect their rents. Another oasis, Qurain, was a kind of stud farm. At the time of Mr. Philby's visit there were some fifty animals in the spacious courtyard—stallions, mares and young stock, and even an occasional mule and camel. Each animal was tethered to a stone manger piled twice a day with lucerne. The single groom in charge confessed that he never exercised or groomed the animals, and that the stalls were only cleared of refuse when this became absolutely necessary. Yet the animals seemed none the worse except for a curious ailment attributed to a germ brought in with the lucerne, and which attacked the white parts of their skins, but otherwise did not affect them. At Dilam, a walled town of 7,000 or 8,000 inhabitants, Mr. Philby witnessed a funeral. The local custom, he said, is to dig the grave about five feet deep for a man and a little more for a woman. A raised ledge is left on either side of the body to prevent the whole weight of the earth resting on it. The body is dressed in a complete suit of white, covering every part, except that a small aperture is left over the face of children. If the grave is for a man, when it is filled in, a tiny stone is placed at the head and another at the foot. In the case of a woman a third stone is placed midway between the other two.

THE NEW ROUMANIA.

(From Our Own Correspondent.)

Bucharest, April 9.

Transylvania's Act of Union.

On December 1, 1918, the Constituent Assembly of the Roumanian people of Hungary proclaimed unanimously at Alba Julia the union of Ardeal, Banat, and the Roumanian districts of Hungary with the mother country. This union was proclaimed by the unanimous votes of the 1,280 delegates, representing twenty-seven departments. Over 100,000 Roumanians, gathered together without the historic citadel, acclaimed the Act of Union. The text of the Act is as follows:—

I. The National Assembly of all the Roumanians of Transylvania, Banat, and Hungary, constituted by the lawful representatives assembled at Alba Julia on December 1, 1918, decrees:—

The union of all these Roumanians, and of all the lands inhabited by them, with Roumania. The National Assembly proclaims especially the inalienable right of the Roumanian nation to the whole of the Banat as bounded by the rivers Muresk, Tisa, and Danube.

II. The National Assembly reserves a provisional autonomy for the above-mentioned territories, pending the assembly of the Parliament to be elected on the basis of the universal vote.

III. In connection with these resolutions, as fundamental principles governing the creation of the new Roumanian State, the National Assembly proclaims the following:—

(1) Complete national liberty for all nationalities (inhabiting the above territories). Each nationality shall educate, administer, and judge itself in its own language, through agents chosen by itself; and each nationality shall obtain the right of representation in the Legislative bodies and Government of the country in proportion to the number of individuals constituting the said nation.

(2) Equal rights and full, autonomic, confessional liberty for all religious confessions of the State.

(3) Introduction, in the fullest sense, of a pure democratic régime in every branch of public life: universal suffrage (direct, equal, secret) by communes and by proportion, for both sexes of 21 years, for representation in communes, departments, and Parliament.

(4) Complete liberty of the Press, liberty of association and assembly, free propaganda of all thoughts and convictions common to Man.

(5) Radical Land Reform. By the reduction of large estates the peasant will be in a situation to acquire at least as much ground (plough-land, pasture or forest) as he and his family can cultivate. The guiding principle of this agrarian policy consists, on the one hand, in the promotion of a social levelling; on the other, in the increase of production.

(6) Industrial labour to receive the same treatment as in the most advanced States of the West.

IV. The National Assembly expresses its desire that the Peace Congress shall create the community of free nations in such a manner as to assure justice and liberty for all nations, great and small, and that war shall in the future be eliminated as a means of regulating international relations.

V., VI., VII. Messages of salutation to other States, etc.

VIII. The National Assembly expresses its gratitude and admiration for all the Allied Powers who, by their brilliant struggle carried on with unparalleled tenacity against an enemy prepared for war during many decenniums, have saved civilization from the clutches of barbarity.

IX. For the further management of Roumanian affairs in Hungary, Transylvania, and Banat the National Assembly resolves that there shall be constituted a great Roumanian National Parliament, which shall have entire authority to represent the Roumanian nation anywhere and everywhere, before all the nations of the world, and to take such steps as shall be dictated by the needs of the nation.

Some Statistics of Transylvania.

Ardeal (or Transylvania), Maramuresh, Crishana, and Banat, representing the territory included between the River Tisa (Teiss) and the Carpathians, occupy a surface area of 137,427 square kilometres, of which, from the ethnical standpoint, 118,000 square kilometres are Roumanian. This territory had, according to the last census, 1910, a population of 6,300,000, of which Roumanians form the absolute majority. Such corrections of the official Magyar statistics as it has been possible to make since then—for these statistics, of course, tend to reduce the actual number of Roumanians while exaggerating that of the Hungarian elements—would point to the Roumanian population between the Tisa and the Carpathians as numbering approximately four millions.

A little over one-third of the soil of Ardeal is ploughed, one-third forests, the remainder being used for other purposes. According to recent official statistics, three-fourths of the rural property belong to the inhabitants, while two-fifths are the property of the State, communes, different establishments, churches, schools, and other institutions. The number of rural homesteads amounts to more than a million. One-third of the owners of these have either no land or less than half a hectare, and are consequently obliged to seek employment as agricultural labourers. If we add those who own ½ to 2½ hectares (1-5 jugars; one jugar being a little more than half a hectare) we obtain a total of 50 per cent., which means that one-half of the peasant homesteads have insufficient land attached to them.

Small property (2½ to 50 hectares) represents 48.66 per cent. of the total land. The large property (over 500 hectares), with a total area of two million hectares, is concentrated in the hands of a few individuals, who scarcely represent one-thousandth of the total number of agriculturists. There are only thirty-five large Roumanian landowners, while seventy own estates of intermediate size. The remainder, who constitute the great majority, are either small landowners or owners of homesteads without any land.

The principal cereals cultivated are wheat (over 35 per cent.) and maize (32 per cent.). Before the war the harvests represented a value of over one milliard kronen. Also before the war no less than 67,000 hectares were devoted to the cultivation of the grape, while four million hectares represented the extent of timber land. There were 6,282 kilometres of railways, 47,000 kilometres of roads, and 12,000 kilometres of telegraph and telephone lines. Industrial enterprise has received a relatively wide development. There are over 500 factories of every variety. The number of artisans of all descriptions amounts to 300,000. Mines, quarries, and mineral waters constitute one of the chief sources of the wealth of Translyvania.

Saxon Resolution of Adhesion to Roumania.

Of all the populations of non-Roumanian nationality who become incorporated in Great Roumania the most advanced in every sense are without doubt the Saxons, who have adhered to the union of Ardeal (Transylvania) with Roumania. In the assembly held at Mediash on January 21 they voted the following resolution:—

"Events of world-wide range and importance have created a new situation in the districts in which the Saxon people of Transylvania elected its national home 800 years ago. King Ferdinand of Roumania, by the decree of December 27, 1918, assumed complete dominion over Transylvania. That section of the population of Transylvania and of the districts inhabited by Roumanians which is numerically the most important declared in the National Assembly of Alba Julia the adherence to Roumania of all the regions of Transylvania inhabited by Roumanians. This adhesion of national territories is clearly determined by considerations of an ethnographic character.

"Taking these facts into consideration, and convinced that by virtue of these an ancient ideal finds its realisation and a historic event of universal importance its fulfilment, we, the Saxon people of Transylvania, availing ourselves of the right of nations to dispose of themselves, declare our adhesion to the kingdom of Roumania, and address to the Roumanian people our fraternal salutations and cordial congratulations on the realisation of its national ideals. In taking this step the Saxon people of Transylvania recognises not only the evolution of historic events of world-wide scope, but the natural rights of the Roumanian people to national unity and the foundation of its State as well, and expresses at the same time its immutable hope that the Saxon people and its leaders will place its hereditary virtues at the disposal of the Roumanian people, and will be guided in its relations with the Roumanian people by those sentiments of friendship, abnegation, and justice of which the Saxon people has given evidence in the course of centuries.

"The Saxon people once had a constitutional autonomy of which, in spite of solemn and legal assurances, it has been dispossessed.

"The Saxon people is convinced that the new Roumanian State will offer it and will recognise its claims to all the requirements of its existence. It was affirmed categorically besides in the National Assembly of Alba Julia that every people should have the right to guide itself, to administer its property, to judge itself in its own language and through its own representatives, as well as to be represented proportionately in the legislation and administration which guarantee the autonomy of Church and school and respect for the national liberties, political, economic, and cultural, of the different peoples. The Saxon people adheres to the resolutions voted at Alba Julia to the effect that guarantees should be claimed at the Congress of Peace that equal liberty will be assured to all nations great and small, and sees in this the pledge of lasting peace. The Saxons express their hope and their desire that the other nationalities of Ardeal may rally to this resolution. The Saxon people, conscious of the significance of this resolution, considers itself henceforward as an integral part of the kingdom of Roumania, and regards its sons and daughters as Roumanian citizens. It, therefore, prays the Almighty that this momentous step, which it considers its duty to take, may prove propitious and receive His blessing."

ROUMANIAN NOTES.

(From a Correspondent.)

In Transylvania.

Since Béla Kun established the proletariat dictatorship in Hungary there has been incessant fighting between the Roumanians and the Magyars. The Hungarian People's Commissaries issued a proclamation which runs:—"The Czecho-Slovak and Roumanian bourgeois bandits want to crush the Hungarian Revolution. We appeal to the Czecho-Slovak and Roumanian soldiers. Turn your weapons against your oppressors! We appeal to the Czecho-Slovak and Roumanian workers and peasants. Throw off the yoke of your oppressors, who, while strengthening their power and filling their pockets, have driven you into war with your brothers." They sent a great number of propagandists into Transylvania and supplied large sums of money for Bolshevist agitation. The Roumanian Government in Transylvania has discovered that the Hungarian banks in Kolozsvar (Chy), as well as in other towns on the borders of Transylvania, were giving financial support to the agitation against Roumanian rule. The Government was compelled to take energetic measures against the agitators, and searched the banks at Kolozsvar, and seized a large number of documents which prove that the Budapest Soviet has been fomenting this chauvinistic propaganda.

Magyar Provocations.

The Magyar chauvinistic propaganda has already produced its effects. It is now fully established that George Pop de Bareshti, the President of the Roumanian National Party, was murdered by Magyar agents sent direct from Budapest. Magyar regulars were sent into the so-called neutral zone in the Roumanian village Radaceu, where the family of Dr. Juliu Maniu, the President of the Roumanian Government in Transylvania, was living. The Magyars arrested the aged mother of Dr. Maniu, his sister, and a niece, tied their hands, and then marched them off on foot to an unknown destination. The other day came the news that the Roumanians had arrested the family of Béla Kun, the Hungarian Foreign Minister. They were compelled to take this extreme step to obtain the liberation of the arrested Roumanians and of the family of Dr. Maniu. Such occurrences make one feel that all discussions concerning the League of Nations and the European Brotherhood are nothing but empty words, and that we are still the sons of the old world, incapable of doing anything better than talking.

Congress of Socialists.

The Socialists from all the Roumanian countries decided to hold a congress in Bucharest on April 8 to discuss the organisation of a general Socialist compaign for the coming elections. The Social Democratic Party of Transylvania issued a manifesto declaring their indissoluble union with the Socialists of Roumania and Bukovina. V. Grigorovich, the leader of the Socialists in Bukovina, and one of the most prominent personalities in the Socialistic movement in the Roumanian countries, has arrived in Bucharest to discuss the general union of the Roumanian Socialist parties. The Socialists of Roumania were not so well organised, and very few of them were the followers of Rakovsky, a doctor from Dobruja, and now the President of the Soviets in the South Russia. Rakovsky was expelled some years ago from Roumania, and this is practically the commencement of his Socialistic career. During his exile he became acquainted with the Socialist leaders of various European countries, and contributed to some Socialist papers in Switzerland, as well as in Austria and Germany. Rakovsky owes his position to the stupid measures of the then Roumanian Government, who pushed him on his way by making him a martyr.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman—Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

THE PACT OF LONDON.

THE YUGOSLAV VIEW.

By Dr. Tresic' Pavitchic'.

You know that England and France are bound by the Secret Treaty with Italy in relation to the Adriatic question, and no doubt you cannot ask them to regard it as a mere "scrap of paper," as Germany did in another case. Let us look for a moment at the motives which led the various States to the war.

War was imposed on Serbia because she would not renounce her sovereignty. Russia came forward to protect Serbia and to prevent the Bosphorus and the Dardanelles from falling into German hands; France, because she did not wish to leave in the lurch her Russian ally; Belgium because she did not consent to break her neutrality at the expense of France; England because she had to punish Germany for violating international law; and the United States because they had to punish Germany for her crimes committed against humanity. All these nations entered the war from ideal motives, and the United States, whose entrance decided the issue, did not want any indemnity for themselves, and thus gave proofs of the highest altruism.

Italy bargained with both parties, and seeing that she would get more from the Entente brought to them the Pact of London to sign. At that moment the days were tragically dangerous, and the Governments concerned had not much time to consider whether every detail of it corresponded with natural laws, and especially with the principle of self-determination of peoples. Then the old diplomatic principles still prevailed. Besides, *primum est vivere, deinde philosophari*, and the Governments of the Entente had before them the problem of their existence, and therefore could not have been either quite free in or conscious of what they were doing when signing the treaty. In them the instinct of self-preservation was stronger than the principles of justice.

But Italy neither fulfilled her hopes nor her duties on the battlefield; nor did she keep the treaty, for she occupied Fiume, which she then regarded as not hers, and which she did not require for herself. And by that very treaty it was made impossible for her to justify all her hopes. By it she committed a crime against nature, and no such crime remains unpunished. She committed it by asking for Gorizia, which is purely Slav; by asking for a part of Carniola, where there are no Italians whatever to be found; for the whole of Istria, where the Slavs are in a great majority; and for more than half of Dalmatia, where, as is shown by the plebiscite made recently, only 2 per cent. are Italians, in spite of the terror caused by the Italian occupation. Therefore she had bad luck at Isonzo, and had to pay for her injustice with hundreds of thousands of her sons; being unable, for three years, with her army of millions, to fight some starving, barefoot, and poorly dressed regiments, who knew that they were fighting *pro aris et focis*.

The Treaty of London cannot survive, because it is not based on natural laws, but on a conflict with them; and natural laws will always be stronger than human ones. The sooner men bow before the former the better for them. In that treaty Italy asks a million of the best and the most cultured Yugoslavs to cut themselves off from their national body, and seeks to suffocate their national soul, to impose on them a foreign language, and to rob them of the remnant of their coast, thus making impossible all trade and economic development.

If the diplomatists of the old type who signed that treaty made a mistake, can it bind a modern diplomatist? Can it bind, for instance, Mr. Lloyd George, a modern, highly educated gentleman, moral to the backbone—in one word, one of our most ideal contemporaries, who is very capable of distinguishing human errors from natural laws, and who, with his keen mind, sees the ways of the historic progress and great laws which direct social development? Such a representative of the British people could not possibly allow the formation of a new Austria under the British protectorate, and through it the sowing of the seed of new wars. Is so much blood to have been shed and the ruin of so many trades and States to have been made, only to replace the old evil with a new one? To know the truth and to be unwilling to accept it is worse than sinning. It is no chivalry to stand by a treaty which is based on injustice; it is a crime equal to the German violation of Belgian neutrality. It is as wrong as breaking international treaties to stand by treaties made at the expense of some nation—treaties which are contrary to natural laws and to the interests of humanity, and which would no doubt be the source of new wars. Such narrow-

Digitized by Google

mindedness ought not to exist in English and French diplomatists. The retention of the London Treaty would be equally harmful to Italy, too, for it would bring her the hostile feelings of her subjects, which would cost her much economically, and perhaps bring her to war in the future.

By the Treaty of London the Dardanelles belong to Russia, but does Italy care whether this clause is fulfilled? Besides, the Treaty of London neither binds the United States nor ourselves, who never recognised it. We are convinced that President Wilson will fulfil his mission unhesitatingly to the end, for the good of humanity.

THE BALKAN TANGLE: A DREAM.

[The following notes are by a correspondent whose long acquaintance with the Near East lends them particular interest for many of our readers. The views expressed are, of course, the writer's. How far the dream will "come true" remains to be seen.—ED.]

The fire burnt low in the hearth; the low rumble of the city outside acted on the tired mind as a cradle-song; the dwindling light helped to bring sleep to the weary brain: and the Great Man slept. For months he had been trying to solve the problems of the Peace Conference, and the solution of many of them seemed as far away as ever. He was beginning to be discouraged. The public wanted a settlement; his colleagues wanted a settlement; he wanted a settlement. And yet there was no settlement. In his sleep his mind worked as during his waking hours; but, whereas for some weeks he had been concentrating upon the problems presented by Germany, in his sleep his mind appeared to enjoy relaxation by going over the eternal difficulties presented by the Balkans and Turkey. All appeared so easy, and he smiled at the manner in which obstacles melted away before the courage to come to decisions which, awake, was wanting in all the Delegates. It was clear to him that the weakness he and his colleagues had shown was in the desire they had of offending nobody. And in his dream the Balkan and Turkish questions were settled, and on the whole the settlement gave satisfaction, for it was based upon equity within the principle of the self-determination of peoples.

His mind followed the countries from west to east and settled each problem as it came to him. To Greece he declared should be given the Dodecanese and Cyprus; for were they not inhabited by Greeks, and were they not islands and the Greeks a maritime people? But otherwise there should be no change in the frontiers of that country. Albania should have the boundaries given her by the Treaty of London in 1912, and the United States should teach her to govern herself, applying among the wild tribes of the mountains the principle which has knit Switzerland together. Serbia would be one of the elements forming the new Yugoslav State; and in his dream the Yugoslavs and Italians on the one hand, and the Yugoslavs and Roumanians on the other, agreed with respect to boundaries. Fiume under the Yugoslav flag and Trieste under the Italian flag became the two great free ports of the Adriatic. Salonika under the Greek flag, Kavalla and Dedeagatch under the Bulgarian flag, also grew and flourished under the blessings of unhampered trade and freedom for all the world to buy and sell within their respective municipal areas. Macedonia, that pile of stones left over (according to tradition) when the Almighty finished the work of making the world, was left within the borders of Yugoslavia; and the Strumnitza triangle was cut off from Bulgaria, who was told that she must finally and for ever renounce her ambitions westward. Thus was she punished for her perfidy. Her schools and churches converted to Yugoslav schools and churches, the Macedonian, who is Serb, or Bulgarian, or Greek, would thus have an undisturbed opportunity of development.

Bulgaria—the Great Man moved restlessly in his chair. His sleep was troubled. Bulgaria had been false to her traditions—she had been responsible for much that was evil during the war. He smiled—the spirit of the future and not of the past came to the rescue: the Turks as a Government were to leave Europe, anyway. The breath of the Ægean was necessary to the health of Bulgaria. Her virile, hardworking people, left alone to develop within reasonable frontiers, would mean quiet in the "cockpit of Europe." And so the Great Man fixed the boundary along the Enos-Midia line, while Roumania, now joined to her compatriots in Transylvania and the Eastern Banat, declared her agreement to return the Southern Dobruja up to about ten miles south of the Constantza-Bucharest railway to Bulgaria. The pleasure at this voluntary offer by Roumania caused a wave of joy to pass over the face of the Great Man, and in his sleep a sigh of satisfaction escaped him as he realised that the spirit of the past was dying among politicians even as it was among the peoples.

Trouble appeared on his quiet face as his mind went eastward and southward of the Enos-Midia line. Constantinople, that conglomeration of races and peoples; Constantinople, the city of intrigues, of ——. A light seemed to come from somewhere. Constantinople had always been the happy hunting-ground of intriguers of all outside Powers. Let Constantinople become a State—a Republic. Rapidly in his dream the idea developed until a concrete scheme stood out clearly and burnt itself into his brain:—1. A Republic of Constantinople. 2. Its frontiers: Enos-Midia and Chilé, Ismidt, Brussa, Bali-Kissar, Dalian, opposite the island of Tenedos. 3. A President, elected by the inhabitants from three candidates offered by the League of Nations. 4. A chamber of ten Turks, eight Greeks, six Armenians, four Jews, four each Americans, British, French, Italians, Germans. The smaller nations with smaller colonies to have one or two members each. In each case the members to be elected by the respective colonies. 5. A Ministry selected by the President, but dependent upon the goodwill of the Chamber. 6. An American gendarmerie (10,000) to maintain order. Seven hundred and fifty to return to their homes each year, and 1,000 to be recruited each year from among the native inhabitants and incorporated in the American police. Thus in ten years the locally-recruited men of 10,000 would have 2,500 American officers, non-commissioned officers, and some men. In the following five years a further reduction of 2,000 to be arranged, and by the end of twenty years the whole gendarmerie to be a wholly local force. 7. All fortifications destroyed, and the city the greatest and freest city of the world. 8. The Palace of Dolma Baghtché to become the seat of the executive of the League of Nations, thus giving to the whole scheme that moral force which is the great feature of the Great Idea.

The map of Asia Minor came into the vision of the Great Man. The ghosts of the massacred called aloud for protection for their descendants. The proposal to give the western shores to Greece caused an expression of anxiety to come over the face of the Great Man. He saw the future troubled by the fact that thus the small Greek nation would have over a million Turks as their subjects; he saw eight or ten million Turks in Asia Minor tyrannising over the Greeks remaining under their yoke. He saw the eternal pressure of these million Turks scheming and intriguing, supported in their schemes and intrigues by outside influences. He could not understand, try as he would, the vision of the man who was leading his people to such a future. War, massacres, raiding bands from each side crossing the new boundaries, burning and pillaging—all these came up before him, and his sleep became troubled again. The Greek claims came rapidly under review, and he saw the same bloodshed and life of terror in Thrace, should these claims have been agreed to; and thanked God that sweet reasonableness had finally prompted the retention of the Ægean Coast as far as the Enos-Midia line by Bulgaria. Asia Minor—in his trouble he turned to that home of justice and liberty, and made a great appeal. His face flushed; he seemed to be filled with emotion; an expression of earnest entreaty pervaded his whole countenance. And then relief—America had agreed. She accepted the mandate. She would control Armenia and Asia Minor. She would encourage emigration. She would help, financially and in every way, the transfer of Greeks from Thrace, from the highlands of Asia Minor, from the Black Sea littoral to the western shores of Asia Minor. Likewise she would encourage and help Turkish emigration from Thrace and western Asia Minor to the highlands of Anatolia; and exchange of the same character would be assisted in every way across the borders between Armenia and Anatolia on the one hand, and between Armenia and Kurdistan on the other. In this way, under the careful guidance of wise rulers, would be set up homogeneous peoples, which before the term of the mandate was completed would be free of the various *irredenta*, and in the case of western Asia Minor would be truly ripe and ready to be joined up to the motherland. Wealthy, numerous, happy, these people would, with their brethren across the Ægean, truly continue the glory of Ancient Greece.

The Great Man slept quietly; the other portions of the Turkish Empire, Mesopotamia, Syria, Palestine, were to be guided to full independence under the mandate of France and England by mutual agreement, and did not cause him trouble.

He woke—the fire was nearly out—a cold chill struck him; but he was content, being still under the influence of his dream. And then with a shock he realised that it was but a dream; that he still had hours of battle before him; that the jealousies and intrigues of Paris, 1919, resembled those of Vienna, 1815. And he shuddered; for he realised that, if Paris in 1919 did not bring forth a better offspring than did Vienna in 1815, the peoples would not wait for the next war to clear the world of cant, but would do it now, in a form more terrible than even that of Lenin and Trotsky, and that the sacrifices of the last five years would have been in vain. He braced him, and went to the next Conference with great heart and determined courage.

W. G. M. E.

BRITISH VOLUNTEERS.

Large numbers of men now in India have voluntarily undertaken to remain during the continuance of the present unrest. There is, however, some anxiety among them lest their chances of employment on their return home should be prejudiced by this action, and it is hoped that employers, realising that these men have volunteered to remain from patriotic motives and in the interests of the Empire, will see to it that they are not subjected to the risk of unemployment on their return.

The men have asked that their case should be put before their fellow-countrymen, and the War Office does this with full confidence in the patriotism and sense of fair play of the men's employers.

In the rear of General Dënikin's Volunteer Army in the Caucasus Georgian levies have advanced towards Sochi and Gagri, on the eastern shores of the Black Sea, 160 and 140 miles south-west of Batoum, and have occupied the line of the Mekhadir River, 23 miles south-east of Sochi. General Thomson, commanding the British forces in the Caucasus, has taken measures to stop this advance and to bring hostilities to an end. This attack by the Georgians, which is attributed to Bolshevist agitation, appears to be entirely unprovoked, but it is stated that General Thomson's action has been successful in clearing up the situation.

ITALY AND THE YUGOSLAVS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of March 20, Mr. Virginio Gayda presented to your readers the Italian side of the Italo-Yugoslav problem. In order that they may form an impartial judgment, I beg you to allow me to answer Mr. Gayda from the Yugoslav standpoint.

Mr. Gayda took pains to explain in detail why Italy could not accept the proposed arbitration of President Wilson. But his arguments belong to the old school of diplomacy. He speaks of the "necessity to prevent enemies and rebels from resuming their intrigues," of Cyprus, Tunisia, and Malta, of the "interests of all countries," etc. Malta, Tunisia, and Cyprus have nothing to do with the Italo-Yugoslav question. The Peace Conference has to deal with and decide regarding the territories for which the war was fought and won. Malta, Cyprus, etc., forming parts of Allied territory, cannot be drawn into the discussion at this moment. They may form subjects for deliberations of the League of Nations at a later date, but now to try to bring them into the discussion means that every argument is good for a bad case. And Italy's case is certainly bad if she, with unrelenting stubbornness, refuses to accept: 1. The plebiscite; 2. The neutralisation of the Adriatic; 3. The arbitration of President Wilson.

It is evident that Italy's case has no leg to stand on, and for that reason she clings to the Pact of London as a drowning man clings to a straw. If the claims embodied in the Pact of London cannot stand the test of the plebiscite or of Mr. Wilson's arbitration, that means that they are unjust. If "strategic fears" cannot accept the neutralisation of the Adriatic, that means that they are unfounded. Even one hundred signatures set to a treaty cannot make right what is wrong. And even a plain man can see that the sanctioning of the London Pact will cause a future war.

But what is the Pact of London in substance? A bargain. Italy first negotiated with Austria; then she turned towards the Allies, who, hard pressed, believed that with her help the war would be ended soon, and agreed to what Baron Sonnino demanded. But Italy brought no decision; the London Pact proved futile; Italy was forced to fight for life, as were England and France. A new power was needed to bring about a decision. That power was Mr. Wilson and his principles. Mr. Wilson undermined Austria-Hungary and decided the issue of the struggle. The Pact of London prolonged the war, imperilled the victory. Wilsonian principles won the war. How can the Pact of London hold good any longer? How can Italy expect the fulfilment of the promise contained in the Pact, if she did not fulfil her promise of deciding the issue? What Italy did not, America did. Consequently the peace must be concluded in the spirit of those great principles which brought victory to the Allies and freedom to the oppressed nations.

But let us be more explicit. Mr. Wilson should decide between two Allies—Italy and Serbia. Italy fought to free her brethren from the Austrian yoke; so did Serbia to free Serbians, Croats, and Slovenes. If Italy sacrificed 500,000 in dead, Serbia sacrificed 1,300,000, in a population of 5,000,000. Mr. Gayda says that Croats and Slovenes fought four years against Italy and Serbia. Technically that is true. But against whom fought 800,000 Austrian-Italians? Also against Italy, Serbia, and the Entente. Now, I should like to know, according to what principle Mr. Gayda demands that Croats and Slovenes who want to be—who have already—united with Serbia, should be considered as enemies, and Austrian-Italians as friends. Mr. Gayda, as one well acquainted with Austria-Hungary, will not deny to 100,000 Serbians of North Dalmatia their Serbian nationality. Yet Italy wants them.

As to Croats and Slovenes fighting against Italy and Serbia, Yugoslavs have an eloquent answer which Italy cannot refute: among Yugoslav war prisoners in Italy, 50,000 of them announced their readiness to join their Serbian brethren and fight against Italy's enemy—Austria. It was the Italian Government which frustrated their ardent wish. Italy would not allow Dalmatians and Slovenes to fight against Austria, because they wanted to fight side by side with their Serbian brothers; which would have been a proof that they really wanted to "become a part of Serbia."

Mr. Gayda prefers to ignore the fact that Croats and Slovenes have already united with their Serbian brethren into the kingdom of Serbs, Croats, and Slovenes; that they have a joint government and a joint Parliament holding its sessions at this very moment. As a fit answer to Italian "doubts" whether Croats and Slovenes wish to be united with their Serbian brethren, I may quote the fact that all the political parties of the three branches of our race sitting in our Parliament united in one single address in answer to the Speech from the Throne. The United States of America have recognised our State; so have Norway, Greece, Switzerland, Poland, and Czecho-Slovakia. Italy, Serbia's ally, persists in refusing that recognition, and it is owing to her efforts that England and France continue to withhold theirs. Italy, a country which the principle of nationality brought into existence, is denying the same right to our nation!

In fine, let me say that all Italian "rights" to Yugoslav territories are mere masks under which hide base material aims. Italy wants Fiume not because it contains 15,000 "Italians," but because it is the *unique* port of Yugoslavia. English commercial circles should see to it lest they be shut out of every competition in Yugoslavia, so rich in natural resources.

By solving the Italo-Yugoslav problem on just lines, Italy and Yugoslavia can be not only friends, but even allies, united in common defence against German peril; otherwise they will be eternal enemies. Yugoslavs under guidance and leadership of Serbia can be either a formidable ally or a formidable foe. Croats and Slovenes are worthy brothers to Serbs. This war has shown what they can do. We desire to be friends of Italy, and Italy should desire that too. But we cannot be friends unless in possession of what a plebiscite or President Wilson—which for us means the same thing, so sure are we of our cause assigns to us and to Italy. We want fair play—that is all. Let the people themselves decide, or let Mr. Wilson be the referee, because there is no other way which could lead to a peaceful solution.—I am, etc.,

T. F. VUKITCH.

Belgrade, Serbia, April 2, 1919.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly give me, as a native of Cyprus, space to enlighten the readers of THE NEAR EAST on some facts relating to the future of that island?

First, I wish to deal with the reply of M. Alexander Callinicos in your issue of February 21 to a very admirable letter by your correspondent I can see nothing more "startling" than that any person living at Manchester, one of the best cities of the world, should advance himself as a champion of the Greek cause, and should advocate the cession of Cyprus by the British, without any original knowledge of the history, civilisation, and sentiments of its inhabitants. Emphasising the fact that Cyprus has never been rightly possessed by Greece, I would ask why Mr. Alexander Callinicos was unable to give us the name of that authoritative history to which he refers? He at least grants that Cyprus was not politically connected with Greece: what right, then, have the Greeks of to-day to demand a political annexation?

But, let us suppose that Cyprus had been possessed and ruled by Greece for many years; even then it must be known that the Greece of to-day is not the Greece of old, nor the population of Cyprus those that lived here before Christ. Who dares to say, without any ethnological and historical investigations, that the majority of the Greeks of Cyprus are the descendants of Odysseus and Plato? They are Greeks, not by nationality, but by religion. They have not reached such a high standard of civilisation as to have the right of "self-determination." Their civilisation and feelings are illustrated in their publications of the last twenty years. The collections of *Phone*, *Elefteria*, *Patris* and others must be carefully read to see what infamous blasphemy is poured against their Moslem compatriots, even under the rule of the most humane government.

Perhaps there are a few exceptions, but these papers have for years educated Greeks to hate Moslems, so that to-day the greatest pleasure of many Greeks is to injure a Moslem. There are some Greek gentlemen, I am pleased to say, but the majority, especially of the villagers, are not sufficiently civilised to conceive of the natural rights of man, or to regard the self-respect of a Moslem. A few months ago I myself was insulted badly by a Greek guardian before the Statue of Venus, in the Cyprus Museum.

I shall not record the pitiful experiences of many Moslems, but I would request the Commissioners of the Peace Conference to investigate the real impulse of Greeks in seeking to dispose of the British administration. If they had the feelings of Greek nationality, first of all they would send their sons to Oxford and Cambridge to learn the meaning of "Liberty and Patriotism" in the original language of Socrates and Leonidas. Greeks, before demanding the annexation of Cyprus, must endeavour to have the humane feelings of Socrates, the justice of Aristides, and the language of Aristotle.

I cannot think that President Wilson has advised that every people, without restrictions and exceptions, should be given the right of "self-determination." He must surely know that this would turn the world topsy-turvy. What would America be to-day if the Indians were given the right of self-determination against the English colonists? Civilisation and education have widened with the dawn of colonisation. Every colonist is not a Stephano.

In these circumstances Great Britain should retain Cyprus, not only for political reasons, but *as her sacred duty* to guard the complete safety of thousands of Moslems who have been her loyal subjects consistently for forty years; and this surely *is not* "*Imperialism.*"—I am, etc.,

M. NEJMI BODAMIABIADE.

Paphos, Cyprus, March 24, 1919.

THE QUESTION OF THE DOBRUJA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly allow me to correct the following errors which occurred in my letter published in THE NEAR EAST of April 25? "Professor Ischirkoff" instead of "Tschirkoff." "In spite of the strongest protest made by the Patriarch of Constantinople" instead of "in fact, by the Patriarch of Constantinople."—I am, etc.,

THE WRITER OF THE NOTE IMPUGNED.

PRESS ON THE NEAR EAST.

Evil Spirits in the Orient.

In the *Moslem World* of April the Rev. George White, D.D., has written a curiously informative article on "Evil Spirits and the Evil Eye in Turkish Lore." The author, who writes from Marsovan, Turkey, knows well the Oriental mentality, the habits of which he describes plainly and fairly. At the commencement of his article he says:—

Turkish *jinns* of modern times differ from their cousins, the *genii* of Arabian Nights stories, in that they work only harm to men. Anatolians have no trouble with the belief in a personal devil and his demon legions, which is the background of what we find in the Gospels on this subject. To the ordinary people of the country, earth and air and sky are peopled with spirits malign as well as benign, and to neutralise the one is quite as important as to utilize the other.

Fear of the evil eye appears to be an ineradicable characteristic of the people, especially in Asia Minor:—

It becomes serious business to break, or better yet to avoid, the wiles of the *jinn* and the spell of the evil eye. One method, naturally, is to invoke the aid of saints and all good powers. The Moslem teacher, Solomon *Hoja*, after relating that the earth is full of *jinns*, said that to avoid danger when one goes out at night he should "read" constantly, at any rate he should read (that is, repeat sacred passages from memory) just as he leaves the house door, and particularly as he puts on his shoes. If he does so he is safe for that walk, especially if he also gently blows in different directions, for blowing the breath is very efficacious in warding off evil spirits, as also is spitting in any direction from which they may be feared. Amulets and charms are very powerful, and their use is all but universal.

Piles of small stones are often seen by the roadside, and passers-by heap them higher by adding a stone or two to secure "traveller's luck." One theory is that the pile of stones holds the evil spirits down, and prevents their doing harm to people from home. If by casting a small stone on a pile a wagoner may secure protection for a mile, it is a cheap form of insurance, when on any mile of the road a horse may sicken, the wagon break down, or robbers waylay the driver.

It is strange to read of the methods employed to ward off the evil eye:—

To keep the evil eye from a child, blue beads are put upon it; to avert it from a field, garden, tree, or threshing-floor, a skull of some animal is erected on a pole; to counteract its influence on a mill, a great placard with the words "wonder of God" is nailed to the roof; to protect a dwelling, a bunch of garlic or a pair of deer's antlers is fixed in a conspicuous place; to prevent milk from souring, bits of charcoal are laid upon it; to protect a camel, its saddle is made of a particular kind of wood; and so forward *ad infinitum*. People's notions and fears of the evil eye vary with their environment and the degree of their intelligence, but there is no marked difference traceable to religious connection.

I was once asked by a villager, whom I had never seen before, to tie a knot on a string he had wound around his wrist. It seems he had malaria, attributed it to some evil influence, and thought he might use me to bind the spell. His notion was, perhaps, not that I would hold an acceptable brief for him with the super-human powers, but that I, as a Christian, would be so *unacceptable* as to attract the evil being, and release him. I would thus render a service similar to that performed by a skull planted on a pole in a garden, whose unsightliness transfixes the evil eye, and leaves the tender plants to grow without harm.

Almost the whole life of many of these people is passed in bondage to fear. Hence the frantic and earnest expedients to gain the intercession and influence of beneficent spirits.

On the whole, the power most trusted, whether as a prophylactic against or as a remedy for the ill-effects of evil spirits or evil eyes, is "reading"—that is, reciting from some of the sacred books. If a sheep does not come in from its pasturage at nightfall, read to protect it. Then if a wolf pursues, it cannot catch the sheep; if it catches, cannot bite it; if it bites, cannot pull its teeth out; and the sheep will reach home dragging the wolf as its victim, or rather as the victim of the powerful reading. If the charm does not work—God knows best.

Christians of Asia Minor.

The Constantinople correspondent of the *Morning Post*, writing on April 22, says that much comment has been aroused in Christian circles by a speech by Dr. Gates, the Principal of the Roberts College, on the Armenian question. In this speech Dr. Gates said he was convinced that an independent Armenia was useless, and that though Turkey must be placed under the administration of a strong Christian country, she must remain an integral whole. The Greeks and Armenians view this attitude with alarm, but the correspondent knows well the consequences of breaking down the power of Turkey. He says:—

The delay of the Paris Peace Conference in fixing the terms of peace has given time to the Committee of Union and Progress to complete their arrangements. To my mind there is absolutely no doubt that if the terms of peace are not satisfactory to the Turks there will be a general massacre throughout the country. In Armenia, where the Turks, as the result of the war and its horrors, are at present in a large majority, the Armenians will be massacred to a man. Should the Conference give the vilayet of Smyrna to the Greeks a similar massacre will take place unless the Greeks are allowed to take adequate precautions for their defence. In Thrace, if that province should be assigned to Greece, the Bulgarians will immediately declare war with the sole purpose of exterminating the Greek population still remaining. The Committee of Union and Progress have made all the necessary preparations. Using the examples of Russia and Germany, two huge nations best known to the average Turk, their leaders, officers on the retired list, preach the doctrine of the division of all wealth. Coupled with this doctrine is the theory that the Christian races are the owners of wealth, and the result will be racial and religious massacres. The Turkish population is well armed.

The country, the writer continues, is infested with brigands, and the conscription of Christians continues. He concludes:—

In many villages the population are so terrified that they dare not cultivate their fields, with the result that unless something is done there will be a bad shortage in this year's harvest. Against brigands the Christians can do little. They are disarmed, and it would seem impossible to disarm the Turks. Only where the Allied troops are stationed is there any comparative safety of life or property. Such are the conditions of Asia Minor at the present time, and they will get worse and worse in the interior until a Mandatory Power is nominated, and till that Power can take such steps as will give security to the Christians of the country.

Article to Note.

"British Rule in Egypt," by Judge Erik Sjöborg (the Swedish delegated judge on the Mixed Tribunals of Egypt from 1913 to 1918). in *The Times* (April 30).

VICTORIA COLLEGE, ALEXANDRIA.

As many of our readers know, Victoria College has during the war been used as a hospital. It is now shortly returning to its normal use. Mr. Barker, the chairman of the committee, has received letters from Major-General R. H. Luce, D.M.S., E.E.F., and from Colonel T. B. Beach, A.D.M.S., Alexandria District. The first one states. "In handing back the Victoria College School to the managers after the four years it has been so generously placed at the disposal of the Army, I wish to convey to them our high appreciation of the generosity and sacrifice, not only of the managers, but of the parents of the students which this has involved. It has proved an admirable hospital, and has done splendid work, so that they will have the further satisfaction of knowing that their generosity has been of the utmost value to the sick and wounded soldiers who have passed through it."

The second runs: "I have much pleasure in forwarding herewith letter of thanks by the D.M.S., E.E.F., to all concerned in the loan of the Victoria College Schools to the Army Authorities for use as a hospital. It will probably be of interest to you to know that the total number of officers and other ranks admitted to the hospital has been 82,602."

EARLY CENTRAL ASIA.

At the School of Oriental Studies, London, on Wednesday, Sir E. Denison Ross delivered an address on the migrations in early times of the hordes of Central Asia. Investigation tended to show, he said, that the people of Central Asia originated nothing in the way of civilisation, but they assimilated well and developed what they got from others. Thus, those who settled in Persia were Hellenised after the conquest of Alexander. Later their descendants were Persianised and finally Turkicised. After experiences of this sort, some of these people would return to their original home; with the result that you found in Tartary the remains of vast literatures in languages which it had never been suspected had been written down at all, a most interesting development of art, and an extraordinary religious toleration—half a dozen different religions in one small town.

Speaking of the origin of the Turks, he said that we early heard of their ancestors, the Hsing-tu, settled around Lake Balkash. The Chinese wall, which had been built about 250 B.C., isolated the Chinese and drove westward the Turko-Mongolian hordes which had previously overrun the country. One result was the sacking of Rome by Attila, but the normal course of a horde was to cross the desert of Gobi, make its way by either the northern or southern road between the mountains of Central Asia, and settle in the more fertile country of Persia or Mesopotamia. In the sixth century we heard of the ancestors of the Turks under the name of Tu-kueh, when they rose to power which they retained until the eighth century.

Sir George Macartney followed with a few remarks, saying that he had lived a good many years in Kashgar; but that during the whole of the time he had heard nothing about the Tu-kueh or other early peoples that had been mentioned. The present inhabitants of the town know nothing about their origin.

The members of the Yugoslav colony in London have sent the following telegram to President Wilson:—"The Yugoslav colony in London congratulate you and thank you for your admirable manifesto to the Italian people, with whom the Yugoslav wish to live in sincere and permanent friendship on the basis of justice and self-determination of nations."

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

According to Tchicherin, one of the Russian Bolshevist leaders, Asia Minor is now the proud—or the reverse—possessor of Soviets of its own, and "a revolutionary committee has been appointed in Constantinople." Of course, it was bound to come, sooner or later; and my only wonder is that it did not come long ago. For the peccant Pashas, yearning for the Good Old Days of the Bastinado and Bakshish, must be very ready to welcome the Bolshevists and all their beastlinesses; though, as I have suggested before, the most case-hardened Pasha would probably jib at the average Bolshevist's nasty ideas about marriage. As to the "revolutionary committee" in Constantinople, I wonder which one the Bolshevist Foreign Commissary referred to. Enver and Co. used to call themselves a revolutionary committee, I fancy; but they have retired from business, with a snug little bit of profit, if accounts are true. And though there may be many adventurous souls who would be ready to take their place if only it could be done with safety, I do not find it easy to picture the Bolshis tumbling over one another in their anxiety to try conclusions with the Allied warships that are now ready to blow Constantinople to smithereens if that should become necessary. I am not surprised, therefore, that Tchicherin's statement is not endorsed by those in a position to know the truth.

***

A correspondent writes:—"What is all this scare about rabies? It is quite right to take precautions, but in the first instance the guilty ones are those who brought dogs over from the Continent and avoided the quarantine in some way or other. Now our poor English dogs have to suffer. But there is no need of any scare. I lived in Constantinople for half a century, and, as everyone knows, that was the city 'par excellence' for dogs. Hundreds were in the streets, ownerless, unmuzzled, never undergoing quarantine! Yet I may truthfully say the cases of rabies were very few, perhaps one or two every three or four years. Then the dogs were seized and shot. If any persons were bitten they were at once treated according to the Pasteur system, and I can recall only one fatal case of hydrophobia, which occurred over twenty years ago. I think that whilst persons who have been bitten by a mad dog are under treatment, they have to be careful not to touch cold water. The word hydrophobia itself implies a fear of water (*hydro:* water, and *phobos:* fear—pronounced 'fovos'). I believe I am correct in stating that patients being treated for this terrible disease will, once they touch water, develop madness and even bark and bite like a dog." My correspondent is quite right: there is no need of a scare. Yet I, who yield to no man in my love for dogs, support wholeheartedly an universal muzzling of dogs at the present time. And on this point I know I am at one with the vast company of dog-lovers in this country."

***

Lieutenant-Colonel S. F. Newcombe, D.S.O., who was married to Miss Elsi Chaki at St. Margaret's, Westminster, a fortnight ago, must be, I think, an Englishman of the type of Burton (Sir Richard) and Kitchener. That is to say, he must have the Orient in his bones, as some of us seem to have it; though not all of us who have it turn it to such good account as the gallant colonel has done. His adventures in Turkey as a prisoner of war make up a really romantic story, even as told in the Press; and his escape and his subsequent share in bringing about the armistice with Turkey put in the shade many a romance. How he came to be taken prisoner I do not remember. But unless I am very much mistaken he was just before the war engaged on the important survey of the Sinai Peninsula and the desert between Egypt and Southern Palestine. In the introduction to the P.E.F. Annual for 1914-15, "The Wilderness of Zin," he is referred to in glowing terms by Mr. (now Colonel) T. E. Lawrence, who has since so greatly distinguished himself with the Emir Faisal and our Arab Allies. Praise from Colonel Lawrence in such matters is praise indeed, and this is part of what he wrote of Colonel (then Captain) Newcombe:—"He was ambassador for all of us to Arab tribes and to Turkish officials, and managed both, leaving behind him a reputation which will smooth the way of any future English traveller in the desert. . . . Off by dawn with guides and instruments, he would return to camp at dark, and work perhaps till midnight, arranging and calculating and recording for the benefit of other parties." It was clear from what Mr. Lawrence wrote that Captain Newcombe was no mere routine soldier, and though he has had some bad luck, he has certainly justified the hopes of those who expected him to distinguish himself in the war.

CORSAIR.

NEAR EAST BOOKSHELF.

SIDELIGHTS ON THE WAR.*

In this small volume of "Recollections" Monsieur Take Jonescu shows that his journalistic sense is as strongly developed as his statesmanhip. He recognises the value of the personal element in public affairs, and he has collected here a series of sketches and conversations bearing on the war and in particular on Roumanian and Balkan affairs as linked with it. We are introduced to a number of interesting personalities belonging to the Central Powers—Prince Lichnowsky, Count Tisza, Count Czernin, Baron Banfy, Prince von Bülow—and to others, such as M. Venizelos and Talaat Pasha. In each case the author has a definite contribution to make to our knowledge of the subject of his sketch. Most of the chapters have already appeared in print in a Roumanian journal, but M. Take Jonescu has done well to collect them in book form (as a preface, he tells us, to a volume on the origins and events of the war), as many have a distinct historical importance. An uncompromising patriot, he has been an active agent abroad on behalf of his country, and without doubt has been able to disseminate in Great Britain especially a wider knowledge of the affairs of South-Eastern Europe.

A THREAD-BARE THEME.†

Here is a story, for those who are able to read it, of that kind of love which in modern times serves as the basis of most novels. The fate of an American athlete is moulded in turn by a spotless maiden, a low Cairo dancer, a common type of French girl, a most dashing (and titled, of course) English female, and finally by the European War. None of the inelegant words which the author wastes upon his hero can convince us that Frederick Dayton is anything but a worthless creature, pitiably and avoidably weak; and the lush sentences which are poured round the heroine are like syrup without pudding. Into the book are placed (obviously with a view to later editions) inexpert descriptions of a life about which many are prurient enough to read, but into which few are daring enough to enter. The rich Americaness, the poor Cairo dancing girl, the wicked, passionate Englishwoman—these types people meet daily in modern novels, but how many times in real life? The effects upon man's nature resulting from bumping up against the various and eternal types of the female of itself has never been a worthy theme, and it is now worn threadbare. And this book is merely the wrapping up of that theme in garments so shabby and disreputable that it is no fault of the author if parts are seen which were best left covered. Neither wit nor seriousness, neither information nor imagination, neither boldness nor discretion, is to be found in "His Daughter."

BOOK NOTES.

"The Oxyrhynchus Papyri," Part XIII., edited by B. P. Grenfell and A. S. Hunt, has recently been published by the Egypt Exploration Fund, Græco-Roman branch, at 25s.

The Columbia University Press of New York have published, at 6s. 6d. net, "Aram and Israel; or, The Aramæans in Syria and Mesopotamia," by Emil G. H. Kraeling, Ph.D.

M. Dupont, 4, Rue du Boulnoi, Paris, publishes for Le Conseil National de l'Unit Roumaine a study of "La Roumaine nouvelle et ses problemes Vitaux" ("The New Roumania and her Vital Problems"), an address delivered by Dr. Nicolas Lupu on February 23.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. May	1919. April.		1337. Shaaban.	5679. Iyar.
2	19	Friday	2	2
3	20	Saturday.....	3	3
4	21	Sunday	4	4
5	22	Monday	5	5
6	23	Tuesday	6	6
7	24	Wednesday	7	7
8	25	Thursday	8	8

The Roumanian Minister returned to London on April 29 from Paris.

Lady Evelyn Cobbold and Miss Pamela Cobbold have arrived at Claridge's Hotel.

Mr. W. Bevan, Director of Agriculture in Cyprus, is at present on leave in England.

The Greek Minister arrived at the Legation, 25, Knightsbridge, on April 28, from Paris.

Lord Dalmeny left England on May 1 for Egypt to serve on the High Commissioner's staff.

Prince and Princess George Bibesco arrived in London on April 25 from the Continent.

Brigadier-General Lord Montague, Adviser on Mechanical Transport Services in India, has arrived in London from India.

Sir William Brunyate, Judicial Adviser in Cairo, who has been seriously ill, left for England on April 25 with Lady Brunyate.

Lord and Lady Pentland left Madras for England on March 29 in the B.I. ss. Chindwara.

Prebendary Gough is starting shortly for Constantinople on a visit to the Army of Occupation. He expects to be absent for five or six weeks.

Field-Marshal Lord Methuen, Governor of Malta, expects to leave for England at any moment. General Plumer, who succeeds him, will arrive in June next.

The marriage of Sir Berkeley Pigott, Bart., 21st (Empress of India's) Lancers, and Miss Christabel Bowden-Smith took place on April 21, at the Catholic Church, Naini Tal, India.

Prince Nicholas of Roumania arrived in London on April 27 from Plymouth, where he has been visiting Lady Beatrice Pole-Carew. He was met by Lieutenant-Colonel N. Arion, Military Attaché.

The engagement is announced of (Temporary) Captain James Elmslie Henderson, M.C., R.A., Egyptian Civil Service, only son of the Rev. George Henderson, B.D., Monzie, Scotland, and Edith Mary (Maidie), elder daughter of H. Michael Elliott, Hallamgate Road, Sheffield.

The marriage was celebrated on March 8, at Patiala, Punjab, India, by the Rev. A. Douglas, between Neil Christian Gude, 21st Cavalry, F.F., elder son of Mr. and Mrs. P. Gude, Trondhjem, Norway and Eileen Frances, elder daughter of Lieut.-Colonel D. T. Lane, I.M.S., and Mrs. Lane, Patiala, Punjab, and Abbeyfeale, Co. Limerick, Ireland.

In place of Lieutenant-Colonel Lord Decies, Major Bryan Ricco Cooper, D.L., has been appointed to the post of Press Censor in Ireland. Major Cooper, who has an estate in County Sligo, served with the 10th Irish Division in Gallipoli and Serbia.

The *Egyptian Gazette* of April 4 reports that Mrs. Walter Davies, who is at present at the Anglo-American Hospital, Cairo, is stated to be recovering from the wounds inflicted by the two natives who attacked her at the same time that they brutally murdered her husband.

The marriage of Prince Bibesco and Miss Elizabeth Asquith was solemnised on April 30 at St. Margaret's Church, Westminster. Prior to this ceremony a service according to the rites of the Greek Church was held at the Greek Church, Moscow Road, Bayswater. The marriage was witnessed by many distinguished personages, especially being honoured by the presence of Queen Alexandra, Princess Victoria, and Prince Nicholas of Roumania. M. Misu, the Roumanian Minister, acted as best man.

The marriage was celebrated on April 3 at All Saints' Church, Cairo, between Wasey Sterry, C.B.E., Legal Secretary to the Sudan Government, elder son of the Rev. Francis and Mrs. Sterry, of Fort Hill, Barnstaple, and Renée Bonfils, eldest daughter of M. and Mme. Bonfils, of Brumana, Syria.

The *Egyptian Gazette* of March 29 reports that Judge Halton, Vice-President of the Native Court of Appeal, who is now on leave in England, has asked for prolongation of his leave as his health does not permit him to return and resume his work. It is stated that sick leave has been granted the judge on medical advice.

The marriage was celebrated on April 23, at Saltwood Church, Kent, by the Rev. Canon A. J. Galpin, D.D., Rector, between Lieutenant-Colonel Alec F. Inglis, E.E.F. (Major, 1st K.G.O. Gurkha Rifles), eldest son of the late Colonel D. W. Inglis, 35th Sikhs, and Mrs. Inglis, Kelvin, Hythe, and Anne Stirling, elder daughter of R. Houston, Esq., of Milliken Park, Renfrewshire.

The Honours List published on April 28 contains few names connected with the Near East, but among them we note the following:—Charles Greenway, Esq., who has through the war done splendid national service, notably in his capacity as chairman and managing director of Anglo-Persian Oil Co., Ltd.—in which capacity he was of great use to the Navy. He has received a baronetcy, as also has Sir John David Rees, K.C.I.E., C.V.O., M.P.

Shipping and trade are represented by Sir Kenneth Skelton Anderson, K.C.M.G., manager of the Orient Steam Navigation Company, upon whom has been conferred a baronetcy; and Sir Thomas Royden, Bart., vice-chairman of the Cunard Company, who is made a Companion of Honour.

Although Mr. Davison Dalziel is best known as an enterprising newspaper proprietor, he is also chairman of the International Sleeping-Car Company. For his public services a baronetcy has been conferred upon him. Among the knights created are Dr. William Ridgeway, Professor of Archæology, Cambridge Univresity, whose connection is rather with ancient than with modern Greece; and Mr. John Stavridi, the Greek Consul-General.

A correspondent writes:—The marriage took place on Saturday, March 8, at St. George's Cathedral, Jerusalem, of Lieut. G. Gustave Masson, O.E.T.A., only son of Mr. and Mrs. E. S. Masson, Adelaide, to Jessie Mary Busby, only daughter of Mr. and Mrs. Andrews, of Sydney, New South Wales. The bride, who was given away by Sister Taylor-Williams, looked charming in grey silk uniform, carrying a shower-bouquet of Star of Bethlehem. She was attended by Sister Kelman and Sister A. R. Wilson. The duties of best man were performed by Capt. R. E. Evans, M.B.E., R.E. The officiating minister was Capt. Rev. O. W. Birch, M.C., A.I.F., assisted by the Rev. J. E. Wright, Bishop's Chaplain. A reception was held at the residence of the Bishop's Chaplain, among the guests being Major-General Sir A. W. Money, K.C.B., C.S.I., Brig.-General R. Storrs, C.M.G., C.B.E., Major and Mrs. Tadman, Capt. and Mrs. Bennett, a considerable number of well-wishers from the Headquarters and Military Governor's Staff, and many other friends of the bride and bridegroom. The happy couple afterwards left for Jaffa.

A correspondent writes:—The news of the death of the gallant French airman, Jules Vedrines, will be heard with regret in Egypt, where he made many friends—and, perhaps, to be frank, a few enemies—after his celebrated Paris-to-Cairo flight. A forceful personality, hot-tempered, good-hearted and humorous, Vedrines was very much in the public eye during his brief stay in Egypt, and some of his encounters with those in authority were a source of much amusement to the general public. Vedrines generally had the laugh on his side, and any ill-feeling which his half-joking, half-truculent methods may have aroused will be forgotten now. I remember forming one of an unhappy but rather distinguished assemblage which waited in a crowded room on a hot Egyptian afternoon to listen to a lecture by the great airman on the subject of his flight from Paris. Time passed, the flies were busy, the atmosphere was stifling; Vedrines did not arrive. At last, when the lecture was some forty minutes overdue, we were suddenly addressed abruptly from the doorway and told to "Come out here, as it is too hot inside." It was Vedrines, and we followed him out meekly, without a protest, like so many school children! The open-air lecture which followed well repaid us for our sufferings.

APPOINTMENTS, PROMOTIONS, &c.

Mirza Mohammed Khan has been appointed Secretary to the Persian Legation in London.

Major F. Halliday, I.M.S., becomes one of the Civil Surgeons of Simla in succession to Colonel Sir James Roberts, who is to retire shortly.

The King has granted permission to Mr. Athelstan Riley to wear the Greek Order of George I., and to Mr. Vincent Drew the insignia of the Fifth Class of the Order of St. Sava.

Digitized by Google

Sir Ismail Sirry Pasha, ex-Minister of Public Works, has been appointed member of the Board of Administration of the Suez Canal Company, on behalf of the Egyptian Government, instead of the late Yacoub Pasha Artin.

The King has been pleased to approve the appointment of Mr. Justice Norman Cranstoun Macleod, Barrister-at-Law, Puisne Judge of the High Court of Judicature, Bombay, to be Chief Justice of the Court in succession to Sir Basil Scott, who is shortly to retire.

OBITUARY.

Colonel Frederick Ekins Lindoe, late Hussars and 81st Regiment, has died at Bath, aged seventy-seven. He served in the Afghan war, 1878-9, and was present at the capture of Ali Musjid.

Lieutenant-Colonel Sir Arthur Maxwell-Willshire died on April 26 at Elm Park Gardens, aged sixty-eight. He joined the Scots Guards and served in the Egyptian Expedition of 1882, taking part in the action at Mahuta and the battle of Tel-el-Kebir, for which he had the medal and clasp and Khedive's star.

Captain Henry D. Shortt, late of the Royal Navy, who has died at Southsea, served on the coast of Syria in 1861 in the Greyhound during the disturbances between the Druses and Maronites, and in the Wizard was stationed at Crete during the insurrection of 1866-7. During the Egyptian War of 1882 he was Staff-Commander of the Inconstant, receiving the medal and the Khedive's bronze star.

A correspondent writes:—"Deep regret has been caused in this country by the news of the death of Mr. G. T. Barlow, C.I.E., the eminent irrigation engineer, who was employed in a preliminary reconnaissance of the sources of water-power in India. Apart from high professional qualifications, Mr. Barlow was endowed with a freshness of mind and a width of outlook which enabled him to face and conquer the difficulties arising from new developments of irrigation policy, and these gifts had full play when he passed from controlling the snow-fed rivers of the North to devising methods for protecting the droughty tracts of Bundelkhand, where perennial streams do not exist, and the seasonal rainfall must be held up and stored for use in time of need. The same qualities marked him out for the pioneer work on which he was engaged during the past winter, and India has material as well as sentimental reasons for mourning his premature loss."

Sir John Jardine died on April 26 at Applegarth, Godalming. Appointed after examination to the Bombay Civil Service, he proceeded to India in 1864, and served in the Revenue, Judicial, and Political Departments, and in 1873 became Registrar of the Bombay High Court. A few years later he was appointed Secretary for the Treaty with Portugal, and Law Officer to the Indian Government. Afterwards, for seven years, he was Judicial Commissioner for Burma, and in 1885 Chief Secretary to the Bombay Government, holding the Political, Secret, Educational, Persian, and Judicial portfolios. Sir John's next appointment was as Judge of the High Court of Bombay, and for a few years he was Acting Chief Justice, until his retirement in 1897, in which year he was created K.C.I.E. For thirty years he was connected with Bombay University as Examiner, Fellow, Syndic, Dean in Arts, Dean in Laws, and Vice-Chancellor, and was President of the Royal Asiatic Society of Bombay in 1894. Sir John was the author of "Notes on Buddhist Law" and several works connected with Burma.

NEWS IN BRIEF.

An additional grant of £1,000,000 has been granted by America to Roumania.

Representatives of the Greek Government have arrived at New York to arrange for the establishment of credits.

British military permits are still necessary for all persons going to Turkey, Egypt, Palestine, Syria, and Mesopotamia.

Six hundred and ninety-eight well-to-do Russian refugees and some British residents of Constantinople arrived at Malta on Saturday.

Over 10,000 of the Armenian Deportees in Palestine have been repatriated through the assistance of the Armenian Relief Committee.

After visiting the French ports the Japanese Fleet will proceed to Greece, and will not return to Japan until after the signing of peace.

The Paris correspondent of the *Morning Post* writes on April 27 that M. Flondor, the Minister of Bukovina, has resigned from the Bratiano Cabinet.

All letters and other postal communications for British troops detained temporarily in India (including those who had embarked for repatriation from Mesopotamia) should be addressed care of O.C. Base, Post Depot, Bombay.

Reuter's Bombay correspondent, writing on April 26, states that the Governor of Bombay, Sir George Lloyd, with the sanction of the Viceroy, has ordered Mr. Horniman, editor of the *Bombay Chronicle*, to leave India for England. The Government is satisfied that Mr. Horniman is in a fair condition to travel, therefore a passage will be provided for him immediately.

A Taranto telegram states that the Emir Feisal left that port on April 26 for the East.

The Cairo correspondent of *The Times*, states that on April 25 General Allenby presided at a meeting at the Anzac Hostel, and gave an address in commemoration of Gallipoli day. Afterwards wreaths were deposited on the graves of Gallipoli soldiers in Old Cairo.

The *Pioneer* reports that in the Mysore Legislative Council on March 24 Dewan Bahadur G. S. Chakravarty, Financial Secretary to the Government, moved for leave to introduce a Bill imposing income-tax in Mysore State. He characterised the measure as one not only of financial necessity, but of financial justice.

Under the auspices of the Royal Geographical Society, the following lectures will be given in the Theatre, Burlington Gardens, at 8.30 p.m.:—On May 12, "Crete: Its Scenery and Natural Features," by Mr. A. Trevor Battye; and on June 16, "Tibitsi to Darfur," by Lieut.-Colonel J. Tilho (French Colonial Infantry).

A special meeting of Indians connected with the Ahmadia movement has been held in Star Street, Edgware Road, and has passed a resolution condemning rebellion and riot in India as a sin against the Sacred Law of Islam as interpreted by the Prophet Ahmad, the "greatest reformer of Islam." At the same time, the meeting recognised the need of political and social reform in India.

The War Office announces that British troops, including officers, who embarked for repatriation from Mesopotamia on and after the 3rd ult., and who in ordinary course would have arrived in England on May 11 and onwards, have been detained temporarily in India owing to the internal situation, but will be released at the earliest possible date. A diversion of mails has been arranged so that the men concerned may receive home letters in India.

The Constantinople correspondent of the *Morning Post*, writing on April 24, states that the first Government Conciliation Commission, headed by Prince Abdurrahman Effendi, fourth son of the ex-Sultan Abdul Hamid, has left for Brussa and the provinces. The object of these commissions is to get in touch with the local elements, preach goodwill and brotherhood, teach forgiving and forgetting, find out local requirements, and form a programme, which is later on to be given legal shape.

THE PROSPECT OF STABILITY IN THE BALKANS.

It is a commonplace of political geography that the world in general cannot afford to be indifferent to the conditions prevailing in the Balkan Peninsula, and even now, while a settlement of those conditions is being slowly and painfully hammered out behind the veil which screens the titanic Paris workshop from the public gaze, the question of the permanence of that settlement is perplexing the minds of men who are able to look a little beyond the happenings of the day. Assuming, as we are justified in doing, that the deliberations now in progress will result in a substantially equitable adjustment of conflicting aspirations and competing claims, what is the prospect that the adjustment will hold? Will the equilibrium be stable, or will it represent only a temporary balance of the disturbing forces with which the world has hitherto been compelled to reckon? The man in the street is already asking such questions as these, and if he is unable to find a satisfactory answer his difficulties must be attributed mainly to the unregulated enthusiasms of the authorities to whom he naturally looks for guidance. One might almost think that there is some peculiar element in the Balkan atmosphere which converts every visitor into a partisan; and when writers hailing from all parts of Western Europe present themselves as more Serbian than the Serbs, more Hellene than the Hellenes, more Bulgar than the Bulgars, or more Albanian than the Albanians, the ordinary man finds himself driven towards the conclusion that the Peninsula is inhabited by a small number of angels and a much larger number of demons, though he may be unable to determine which particular races come within either category.

The true significance of the facts is, of course, altogether different. Each race has peculiar attractions of its own, each has suffered terrible things in the past, and the union of affection and sympathy very commonly distorts the judgment of observers who know one race better than the others. The man who has no reasons predisposing him to espouse the claims of one particular nation does not hasten to divide the population of the Balkans into angels and demons, into white and black; he regards it rather as on the whole a fair sample of human nature, consisting essentially of men of like passions with himself, though the crust of convention may be thinner and the passions may lie somewhat nearer to the surface than is usual among nations which have suffered less. It follows that the questions we have stated can be answered with a reasonable degree of probability; it would be absurd to speculate on the actions of beings of a different order, but we can judge the Balkan peoples by ourselves, and can forecast their future acts by a consideration of what we ourselves should feel inclined to do. Let us, then, look at the facts from this standpoint. On almost all sides the greatest possible claims have been put forward. Some of them are incompatible in the strictest sense of the word, some are much better founded than others, but nearly all have been pressed by the claimants themselves, and by their enthusiastic supporters among other nations, with such insistent fervour that a refusal, however justifiable, can scarcely fail to wound. The material interests at stake are indeed important, but for the moment the question is rather one of *amour propre;* the partisans of each nation have pledged its honour, and in the light of that pledge the barest mountain spur may mean all that Jerusalem stood for to the Crusaders. In these circumstances it seems to us that the new settlement, provided it be substantially equitable, must inevitably give rise to general heartburning and disappointment among the nations most immediately concerned; it is highly improbable that the maximum demands of any single claimant can be met in full, and, whatever material advantages may be conceded, the sentiment of the moment will fasten rather upon what has been refused. In stating this conclusion we have no intention of imputing blame for an attitude which may not indeed be reasonable, but which is natural, and, to our mind, almost inevitable. Our object is to urge that the position must be faced by all who are concerned in the stability of the impending settlement—that is to say, by the Western world in general as well as by the leaders and the backers of the various Balkan nations. Disappointment must be expected, and such precautions as are possible must be taken to ensure that disappointment shall lead to nothing worse.

The duty of Western Europe at least is clear. The public must be prepared for outbursts of indignant protest, and must not allow the outlook to be clouded by any natural resentment. Great and lasting harm might result if the West were to conclude that the Balkan peoples are hopelessly irreconcilable, and that efforts to pacify them are necessarily vain; every allowance must be made for the facts on which we have insisted, and an attitude of patient forbearance must be sedulously maintained, so that nothing may be said or done to increase the difficulties of an undoubtedly difficult position. The maintenance of such an attitude is obligatory in particular on the declared partisans of individual nations; the disappointed elements will look eagerly to the West for any sign of encouragement to adopt an intransigent standpoint, and if that encouragement should unhappily be forthcoming the stability of the settlement might be seriously impaired. The Englishman or Frenchman or American who at this juncture should add fuel to the fire would be justly regarded an an enemy of the human race, and the world may surely demand that writers whose feelings are likely to overpower their discretion should, at any rate, remain silent during the critical time. The heaviest responsibility must, however, rest upon the statesmen and leaders of the Balkan nations; it is matter for profound satisfaction that statesmanship and leadership exist in Eastern Europe, and never will these qualities have a grander opportunity than in the years which lie immediately ahead. Time is of the essence of the problem. We have recognised that disappointment is to be expected at the outset; if that natural sentiment is fomented and encouraged to find expression in acts, then peace in the Balkans will remain a dream; but if a strong and clear lead is given in the direction of harmony and conciliation, it is not too much to hope that the wounds will gradually heal and that the advantages to be derived from an equitable settlement will become more and more apparent until a stable equilibrium becomes at last a fact. In a word, the future depends on wise leadership within and discreet forbearance without. It is impossible, however, to leave the subject without alluding to the dangers of interested intrigue, which may go far to nullify the effects of even the greatest leadership. In the past such intrigue has been endemic in the Balkans, and we may be confident that the old diplomacy will die hard if it dies at all. The expectation has indeed been held forth that one fertile cause of intrigue, the competition for the supply of munitions of war, will be definitely limited by international action, but in the past that cause has not stood alone, and we are as yet without information whether the Paris Conference will be able to dispose of the larger question and secure the complete exclusion of extraneous disturbers from the troubled waters of the world. We may, however, confidently anticipate that any measures of the kind will command the hearty co-operation and support of Balkan statesmen, who must realise the extent of the evil in the past and the gravity of the dangers which its reappearance would threaten to the future of the peoples whose destinies are in their hands.

THE POLITICAL SITUATION IN EGYPT.

(From Our Own Correspondent.)

Cairo, April 14.

The more one studies the facts, the more convinced does one become that the upheaval which has taken place in the country during the past month was organised. The Extremists may say what they like, but they certainly planned to dislocate the whole country, in the hope of thus bringing their demands to the attention of Europe; and, having aroused the hidden forces of violence, they must bear full responsibility for the excesses which it has inevitably produced. No section of the population has been left out; each has been prevailed upon from the standpoint from which its members could be the more easily aroused against the Government in general and the British in particular. Every opportunity has been seized to aggravate the situation and combat the British authorities—as, for example, the passage in Lord Curzon's speech referring to the manner in which the officials had stuck to their work—which was the signal for the organisation of a strike of Government officials.

Even to-day, when the great grievance of the restrictions imposed upon travelling has been removed, when not only have Egyptians been allowed to proceed to Europe, but their travelling has been facilitated by the abandonment in their favour of steamer berths already reserved for officials proceeding on leave, and when a Cabinet has been formed for the government of the country, the Extremists still continue their obstructive tactics and are coming forward with demands which are as unacceptable as they are inopportune.

For example, the Government officials have refused to return to their work unless: (1) Zaghlul is recognised by the British Government as being the delegation of the Egyptian nation; (2) the creation of the Cabinet is not regarded as an acceptance of the Protectorate; (3) public security in Cairo and the towns is entrusted to the Egyptian Army and the Egyptian police, and British military guards and patrols are withdrawn. These demands are unreasonable, since they are inconsistent with the existing state of affairs and run counter to the declarations of H.B.M.'s Government. That they should have been made indicates a complete lack of the sense of fitness of things, since it is obvious that a continuation of the political agitation, once the grievances which were the basis of the original agitation have been redressed, cannot possibly influence in their favour the opinion of the League of Nations; in fact, it is rather calculated to prejudice the world against them.

In this connection it is only right to point out that the reason why there is such solidarity of action between the various sections of the Egyptian population is not because they all agree with the demands made, but because they have been subjected to a deliberate campaign of intimidation. Numbers of the Egyptian officials had no desire to strike at all, and of those who favoured the strike, many considered that three days were sufficient to signify to the world their sympathy with the national movement, but they had been threatened, in their houses and on their way to work, by word of mouth and by letters, to such an extent that they dare not continue their duties however much they would wish to. Only the other day the officials of certain administrations who had returned to work were driven out of their offices by the more violent of their colleagues; the sitting of the Cairo courts had to be stopped, as lawyers intimated that if it continued the mob would come in and smash up everything; whilst the Cairo Post Office, valiantly trying to cope with the traffic, has repeatedly opened to the public, and as repeatedly has had to shut down again owing to the persistent attacks of the obstructionists on the staff working within.

The situation as regards the fears of the strikers has been aggravated by the appearance on the scenes of "The Black Hand," which by means of threatening letters and so forth has introduced a positive reign of terror into Egypt. This Black Hand is in reality nothing so serious as the dread American Camarilla from which it takes its name. Its appearance in Egypt is in reality but one more instance of the ill-effects of the cinematograph. Of late years films depicting the doings of secret societies have been screened with great frequency in Egypt; and, knowing as one does, the great popularity of the film with the students and other members of the younger generation of Egyptians, one has little doubt that the Black Hand in Egypt consists of a clique of students and lawyers who have seized upon this device as a means of intimidating their compatriots and, accurately calculating the effect, have succeeded in introducing a positive reign of terror which is now paralysing the whole country. Should the present Cabinet not be able to restore law and order and bring about a speedy resumption of normal business, it will be left to the military authorities to take the situation in hand. Whatever course they may decide to adopt will have been amply justified by the leniency and patience shown by them hitherto and the uncompromising and hostile attitude of the Extremist agitators.

Before leaving this topic I should like to draw attention to the fact that while the present disturbances have had a political origin, yet, as must inevitably be the case in a country like Egypt, they have to a certain extent assumed a fanatical character. There are many indications of this in the reports received from the provinces and in the events which have taken place in Cairo. The Azharites have been active in stirring up the fellaheen in the provinces, and have been prominent participators in the demonstrations in Cairo and Alexandria; inflammatory sermons have been delivered in the mosques; the attacks on the Armenians and Greeks, albeit it is alleged that they were started through an Armenian firing on the crowd, have been proved to have been organised and premeditated; and anyone witnessing the funeral processions which have passed through Cairo during the past week could no longer have any doubt in his mind as to the fanatical attitude of the uneducated masses towards Europeans. This is no alarmist view, but is the result of careful observation and investigation; it is, moreover, confirmed by many Anglo-Egyptian students of the Egyptian character.

In conclusion, I might add that there is a strong impression that the disturbances have not been altogether home-made; that, in fact, there has been some strong foreign influence at work behind the scenes. What that influence is time alone can show, but the fact that the murderous attacks were turned in such a systematic manner against Armenians and Greeks leaves in the minds of those who know anything about Near Eastern matters the unpleasant suspicion that the underlying influence has in part been Turkish, a suspicion which is strengthened by the knowledge that Turcophile sentiments have always been strong in Egypt and still are so in many circles to this day.

Turning now to British opinion on the situation, it must be admitted that General Allenby's proclamation announcing the removal of all restrictions in so far as travelling was concerned, and the liberation of the four pashas interned at Malta, came as a shock and a surprise to the British community. The latter had long been of opinion that a blunder had been made in handling the political crisis ever since it came into exist-

KING GEORGE.

KING OF SPAIN.

Digitized by Google

ence last autumn. Who it considered was to blame for the commission of the blunder is not so material as the fact that the mistake was recognised. Whilst, however, the community recognised the latter, it had possibly not made up its mind how or when the mistake should be rectified, and so the High Commissioner's decision in the circumstances came as a thunder-clap. No sooner was it known than a general chorus of criticism arose wherever one went. For the first two days this state of affairs persisted. Englishmen waxed very eloquent on the damage done to our prestige, and there was a general atmosphere of soreness. But saner views gradually began to prevail, and the matter came to be viewed more in its proper perspective. As one man said:—"If in the course of a campaign you find yourself five miles down the wrong road, it is surely obvious that the thing to do is to get on the right road as quickly as possible and not continue down the wrong one." It is now generally recognised that this is what General Allenby has done. He has rectified the mistake made, and by so doing has not only removed the great ground for grievance which had excited the Egyptians, but has at the same time put them in such a position that if they continue their anti-Governmental activities they will be entirely in the wrong, and any drastic action on his part will be amply justified by their attitude.

While sympathising very deeply with General Allenby in the very difficult and delicate task which he has taken upon his shoulders, and while being prepared loyally to assist him by every means in their power, nevertheless the British community feel the present position very acutely. They realise that serious mistakes have been made in the past, and they hope and trust that one result of the Commission of Inquiry will be that a repetition of those mistakes, which are errors as much of omission as of commission, will be made impossible in the future. They are, however, equally exercised in their minds as to the future situation in Egypt. They fear that the Home Government may go further as regards concessions than is justified by the circumstances, and they are specially concerned with regard to British prestige.

It is no exaggeration to say that at no time since 1882, not even at the blackest period of the war, has British prestige been at such a discount; and it will take years to restore it to anything approaching the height at which it stood under either the Baring or the Kitchener regime. Everything depends upon the manner in which the situation is handled. Any weakening or sentimental pandering to Utopian ideas cannot fail to react on British prestige. The measure of the respect in which it is held to-day is indicated by the frequent attacks on British soldiers by the Egyptians, and by the insults hurled at them even by little children. In any event it will be a long time before British officials will be able to go about the country as freely as they have done in the past; certainly no women will be able to live in the interior unless in the same town there is a strong British guard.

At the same time there is indeed no doubt that whether the Independentists succeed in their demands or not, and whether British prestige regains its position or not, Egypt has been put back at least forty years in her social and intellectual development; and her economic advancement has undergone a check from which it will take her a very considerable time to recover.

LORD MILNER FOR EGYPT.

Reuter's Agency understands that the Government has under consideration the dispatch of a special mission to Egypt, with Lord Milner at its head. This mission has no connection with the present trouble, but is to report to the Government at home as to what changes are necessary in the constitution of the Protectorate. It has not yet been definitely settled whether Lord Milner will go.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The outstanding feature of the Budget of 1919 is the reintroduction of the principle of Imperial Preference, which, by the most felicitous coincidence, it fell to the son of the great statesman who made it an issue of practical politics to enunciate. Briefly, existing duties on sugar, tea, coffee, dried fruits, tobacco, and wines, and a few other commodities are to be reduced in respect of articles of Imperial origin. Of the articles in question the case of sugar is of special importance. During the war there has been a development of sugar cultivation on a large scale within the Empire, but the future of the industry has been in doubt in view of the fact that before the war British sugar had to compete with the German product, which was subsidised, thus enabling sugar to be dumped in the British market. Either a subsidy or preferential treatment was a necessity for this industry, and the recognition of that fact in the Budget will be received with great satisfaction in India, Australia, the West Indies, South Africa, and Canada, the latest region within the Empire to take up sugar cultivation.

***

At the special meeting this week of the Khedivial Mail Steamship and Graving Dock Company the announcement was made that the offer of £6 per share had been accepted by the holders of rather over 60,000 ordinary shares. The offer was made, it appears, by the British Trade Corporation, which is prepared to include further shares in the transaction up to May 14. It will readily be understood that the Khedivial Mail would prove a most useful instrument in the working out of the plans of the Corporation for the revival of the activities of the old Levant Company, and this development cannot therefore be regarded as unexpected. In the short period of its existence the work of the Corporation has been such as to rouse the greatest hopes as to the results of its endeavours to further British trade interests in the Near East in the future, and on that account its action in regard to the Khedivial Mail is a matter for peculiar satisfaction, since under the direction of the Corporation it may be taken for granted that the services of this important shipping company would be developed to the best advantage.

***

The announcement by the Board of Trade at the end of last week that with a few exceptions all controls on internal trade exercised under the Defence of the Realm Act, either have been, or will be abolished by May 31, is a step for which all British manufacturers and traders have been waiting, so that without delay they may begin their preparations for trade expansion. As regards trade with the Near East, the importance of the decision lies in the fact that apart from other difficulties, such as exchange, British firms who have not hitherto entered the Near East markets and are desirous of doing so have been reluctant to take any measures in that direction because of the uncertainty of being able to give delivery of goods. They know their position now, and the immediate result, it may be hoped, will be that they will lose no time in making a bid for the Near East trade in their special commodities.

In the final debate on the Indian Excess Profits Act an amendment moved by Mr. Hogg, that if the total amount produced by the duty exceeded eleven crores a proportionate sum should be refunded to each person who had paid the tax, brought from Sir James Meston the promise that, if as the year went on their estimate was shown to be materially on the low side, the Government would reconsider the whole position, and see if it were possible to bring the position into accord with their present intention of raising six million pounds net. For the rest it remains to be noted that the trend of the speeches showed general agreement with the nature of the changes made in the measure by the Select Committee, one speaker, for instance, who declared himself an opponent of the principle of the Bill, thanking the Finance Member for the way in which he had met the representatives of commerce. In no circumstances could the Act be popular, but every attempt has undoubtedly been made to allay criticism, and to make it palatable to the business community.

***

I would draw my readers' attention to the announcement which appears elsewhere in this issue that trade catalogues on a number of specified imports are desired by the Chief Administrator, Occupied Enemy Territory Administration for South Palestine, who states that facilities to inspect them will be offered to interested parties in Jaffa, Haifa, and Jerusalem. It is to be hoped that an ample response to this suggestion will be made by firms who hope to do business in the future in this promising region. They are afforded a unique opportunity of bringing their goods by this means to the notice of importers, which should result in a satisfactory development of business there. The authorities are greatly to be congratulated on the enterprise shown in this step, which affords a further illustration that in the post-war trade struggle British traders will no longer be able to complain, as they did in the past, that they were handicapped by the lack of official assistance.

***

A similar opportunity presents itself in Greece, where catalogues are required from British manufacturers by the Air Department of the Ministry of Marine. It has been my experience that hitherto there has been a reluctance on the part of British aeroplane firms to enter the Near East markets, apparently because they believe that business is unlikely in that region. This demand for catalogues should serve to convince them that this impression is totally unfounded.

***

In submitting the final Budget figures to the Imperial Legislative Council, Sir James Meston stated that the estimated surplus had been reduced from £868,000 to £669,000, owing to an increase in famine relief. A sum of £33,000 had also been included in the Budget to form the nucleus of a new public health fund. In this connection Sir James said that the importance attached by non-official members to the necessity for strengthening the equipment of Government for dealing with epidemic diseases, such as the recent disastrous outbreak of influenza, was fully appreciated, and they considered it desirable to emphasise by a small initial grant the acceptance of the principle that their public health machinery should be developed. Great satisfaction was expressed by Sir James with the great increase in postal savings bank deposits in the course of a few months, which was the more striking at a time when a considerable part of India was suffering from scarcity.

***

It is doubtful whether the importance of having suitable agents in Morocco is as yet fully appreciated by British firms who wish to do business there. But it is really, of course, a most vital point, for the agent is the pivot of the selling scheme, and on his activity, enterprise, and knowledge of the market success or otherwise will largely depend. His co-operation in the past when British imports were not only restricted, but were also mainly confined to the articles in chief demand, was admittedly a matter of minor significance, but it will not be so in the future if British traders are going to play the part in the Morocco market that is expected of them. In the future it will be a question of finding outlets for new imports, of gauging the trend of local requirements, and of meeting and facing competition; and for this a satisfactory agent is an imperative necessity.

***

Algeria has not hitherto been very promising as a market for dyes. There is a demand there for dyes in connection with carpet-making, an industry carried on at three factories whose output has been from three to four thousand carpets a year. Dyes are also used by the natives for dyeing their outer garments, and other articles manufactured locally, and by Europeans in the country for dyeing cloths. In all three directions an extension of the demand is to be anticipated, and it might be worth the while of British firms to enter the market now with a view to the future. American firms, I believe, are showing some interest in it, a fact which carries an unmistakable moral.

***

My readers will be interested to know that the paper to be read by Professor H. E. Armstrong, F.R.S., before the Indian Section of the Royal Society of Arts on May 15, on "Soil Deficiencies in India," will also deal fully with the present position of the indigo industry.

COMMERCE IN ALEPPO.

Openings for British Goods.

(FROM A CORRESPONDENT.)

Whatever may be the decision of the Peace Conference as to the many problems arising out of the conquest of Syria and the defeat of the Turkish Empire, a brief study of the possibilities of increasing the trade between those countries and the British Empire may be of value. We may be sure that Germany, after a three years' "occupation" of Syria and Palestine, will have a cut-and-dried plan for her commercial "post-bellum" war. It is to be hoped that our Board of Trade have taken steps to propagate the knowledge we have acquired since our troops have occupied Northern Syria. The intending trader, if he is a novitiate in dealing with an Eastern population, composed as this is largely of Jews, Greeks, and Armenians, may rest assured that plums will not be found hanging on trees for the picking, and that he will have to get up very early to defeat the Eastern in a bargain. On the other hand, there are undoubtedly immense possibilities in the development of trade with such naturally rich countries. Before the war trade was largely limited by the lack of transport facilities, but now, with rail communication between Aleppo and Constantinople (thirty-six hours express), Aleppo and Kantara (fifty-four hours), Aleppo and Baghdad (shortly to be completed), no such drawbacks exist.

The Chamber of Commerce.

The Aleppo Chamber of Commerce was founded in 1884 by the Ottoman Government. It consists of a president, a vice-president, and ten other members. The Chamber is composed at the present time of six Moslems, two Jews, two Greek Christians, and two Armenian Christians. It is non-political, and the members are chosen by a meeting of twenty-five leading local merchants. The duties of the Chamber before the war were to keep a register of trades in the city and to supply the civil and military authorities with information about any trader applying for a Government contract. The Ottoman Government, the Government of the Vilayet, and the Army never made any contract with an Aleppo trader except through the Chamber of Commerce, and it was the duty of the Chamber to report on the trader's financial stability. Before the war traders paid no fee for registration, which was purely optional, and there was no penalty for non-registration. In the event of a trader not on the register getting a Government contract, the Chamber were allowed to charge him double fees for drawing up the contract. Private contracts were made between individuals without reference to the Chamber. Private individuals might consult the Chamber as to the financial stability of a trader, but the Chamber were not bound to give information. They always gave all possible help to the Government, the railway officials, and the Ottoman Bank.

Since the occupation of Aleppo the Chamber has, under powers given by the Arab Government, registered all trades in the city under the following categories:—

1st Class: merchant who can purchase goods to the value of £5,000-£10,000.

2nd Class: merchant who can purchase goods to the value of £5,000.

3rd Class: merchant who can purchase goods to the value of £2,000.

4th Class: merchant who can purchase goods to the value of £500-£1,000.

For this registration the Chamber receives fees ranging from £E2½ to £E½, and with this income it is hoped to develop the Chamber on European lines—*i.e.*, to draw up statistics and reports, and to supply local traders with all possible information as to new inventions and improvements, openings for trade, etc. The annual exports from Aleppo before the war amounted to nearly £1,000,000 sterling, and consisted of the following:—

Exports.

Wool.—The Aleppo district exports in peace time about 1,000 tons of wool. Most of this wool goes to France, Italy, and the United States. Small quantities are also sent to England.

Silk.—To France and Italy.

Carpets.—(From the interior) to America.

Hides and Skins.—Goat skins to France; skins of sheep and lambs to Austria; tanned hides to England.

Furs.—To Germany (Leipzig), Austria, and Constantinople

Offal.—Guts (sheep, lamb, and goats) to Austria (Trieste), and America for charcuterie.

Eggs.—Fresh eggs to France; preserved eggs to France and Germany.

Castor Beans.—(For manufacture into castor oil) to Italy.

Livestock.—Sheep and cattle to Egypt.

Cattle.—To Beyrout, Zahle, and Smyrna.

Grain.—Wheat and barley (but not in large quantities) to France, Italy, and Macedonia: also sesame.

Soap.—To Constantinople.

Butter.—To Constantinople and Egypt (500 tons a year). The Imperial Palace used to be supplied with 50 tons of butter a year from Aleppo district. The butter of Hadidie (near Homs) is the purest of all butter.

Cotton.—From the Idlib district to Italy, Greece, and Macedonia.

Gall Nuts.—(Noix de Galles) for tanning. to France and Italy.

Glue.—To Germany.

Gum Arabic.—It is reported that large quantities of this commodity have been bought for export to Germany, and are held by the Deutsche Orient Bank.

Liquorice.—To America and Italy In America this is used in the manufacture of tobacco. (Exported by MacAndrew, Forbes and Co.)

Pistachio Nuts.—1,200 tons a year, mostly to United States and Italy. Largely used for seasoning and confectionery.

Apricots.—To Damascus and America.

Nuts.—To France and Germany.

Almonds.—200 tons a year to France.

Antiquities.—To Egypt and America.

Imports.

The total annual imports before the war amounted to about 2½ million pounds, of which nearly a million consisted of Manchester goods. The following is a list of the goods imported and the countries which export them:—

ENGLAND.—1. Manchester Goods: Cotton (only water 16, 18, 20, 22, 24 are imported from Manchester); Yarn (only water 6, 8, 10, 12 are imported from India); Cotton reels and thread (Clark and Co.). 1. Textiles: Mercerised cotton and cotton glace, unbleached calico, shirtings, printed calico, madampolam. 3. Manufactured woollen goods (especially cloth) from Bradford. 4. Hardware Metals: tin and pewter; copper; ironmongery; galvanised iron; iron girders. 5. Drugs and Chemicals: Arsenic. The greater part of these commodities is imported from Germany. 6. Steel: (From Sheffield) cutlery; bicycles. 7. Agricultural machinery (very little German machinery is preferred). 8. Perfumery (Atkinson). 9. Chocolate. 10. Shoes. 11. Biscuits and confectionery.

FRANCE.—1. Objets de Nouveauté (blouses and ladies' wearing apparel). 2. Manufactured silks from Lyons. 3. Perfumery: Best quality. 4. Drapery, from Sedan, Lille, Roubaix and Turcoing. 5. Wines and spirits (Champagne, Cognac, Bordeaux, etc.). 6. Sweets and confectionery. 7. Manufactured leather, especially boot soles for ladies, of which large quantities are imported. 8. Drugs. 9. Wax (best quality). 10. Pianos. 11. Velvet. 12. Sugar from Marseilles. 13. Cheap jewellery. 14. Mirrors.

BELGIUM.—1. Firearms. 2. Iron girders. 3. Nails, wire, horseshoes. 4. Window glass and mirrors. 5. Wax and candles (cheap). 6. Stamped cotton goods. 7. Drill. 8. Mattresses.

ITALY.—1. Stamped cotton goods (Milan). 2. Silks (Como). 3. Macaroni (Naples). 4. Marble (Carrara). 5. Flannel goods and hosiery, underwear. 6. Hats (felt).

GERMANY.—1. Steel; Iron; Iron girders; nails; copper (all in very important quantities). 2. Drugs and chemicals (very large quantities). 3. Aniline dyes (large quantities). 4. Agricultural implements. 5. China and porcelain. 6. Cotton goods and cheaper kinds of cloth. 7. Cheap jewellery. 8. Pianos and musical instruments. 9. Catgut. 10. Patent leather shoes, box calf, etc. 11. Lamps. 12. Electric fittings and machinery of all kinds. 13. Mercery and hosiery. 14. Velvet. 15. Sugar (small quantity).

AUSTRIA.—1. Furniture. 2. Paper of all kinds in large quantities (stationery, cigarette paper, packing paper, etc.). 3. Stoves. 4. Matches. 5. Cloth (good and inferior qualities), and special cloth of poor quality for Bedouins. 6. Fez, felt hats. 7. China and porcelain. 8 Glasswars, lamp-glasses. 9. Shirting (large quantities). 10. Timber. 11 Sugar (large quantities).

CHINA.—Tea, buffalo hides, and raw silk.

HOLLAND.—Shirtings, wax candles.

SWEDEN.—Matches, pig iron.

UNITED STATES.—Petroleum, agricultural machinery (small quantity only), shoes, rubber.

RUSSIA.—Petroleum from Baku, sugar (large quantities), rubber, timber.

ROUMANIA.—Petroleum, timber.

Market for Agricultural Machinery

From a perusal of the above, the chief openings for British trade would appear to be Manchester goods and manufactured woollen goods, cloth and clothing, hardware, steel, drugs, and biscuits and confectionery. An important new market should be opened to British trade in agricultural machinery There is a very real demand there for light agricultural machinery, which would enable large areas at present uncultivated to be brought into cultivation. As soon as transport is available, it is to be hoped that British firms will be encouraged to send out experts to study the requirements of the country and if possible to send samples of light ploughing and reaping machines, with mechanics capable not only of driving the machines, but also of instructing the Syrian farmers in their use Efficient repair shops would be required in Aleppo and other centres for the repair and upkeep of these machines. At the present moment customs dues of 11 per cent. *ad valorem* are charged on all goods coming into Aleppo from outside the boundaries of Syria and Palestine. All goods imported into Syria by sea from Europe pay customs duty before they reach Aleppo, and are not subject to any further charge. It is certain that Germany will seek to renew her trade connections with this country the moment her hands are freed. During the war Germany had the field to herself, and we must not let the grass grow under our feet or we shall find ourselves forestalled by her commercial armies. Let not delay nor lack of enterprise lose this field for British trade won for us by the forces under General Allenby.

MINING PUBLICATIONS FOR SERBIA.

H.M. Vice-Consul at Belgrade reports that the "Direction of Collieries of the Serbian State Railway Board" at Senjski Rudnik desire to be put in touch with publishing houses in the United Kingdom which could supply English mining publications and literature such as those used at colleges where there are special courses for mining engineers. Communications should be addressed direct to the "Direction of Collieries of the Serbian State Railway Board" at Senjski Rudnik.

PASSENGER SERVICE TO EGYPT.

The Peninsular and Oriental Company announce that, under arrangement with the Government, they will until further notice maintain a weekly passenger service from Marseilles to Port Said. The Caledonia, the first steamer fixed to sail in the new service, will leave Marseilles at 5 p.m. on Wednesday, May 7. First and second saloon passengers will be carried, but the accommodation will be subject to the requirements of the Government.

ROUMANIAN OILFIELDS.

Information has been received from Professor J. Murgoci, expert adviser to the Roumanian Peace Conference Delegation on a recent visit to the company's London office, that prior to the evacuation of the country by the enemy the total production from the Roumanian oilfields had been restored to 75 per cent. of the pre-war total by the German organisation carrying out their development, and that certain of the properties belonging to Maisels Petroleum Trust were included by the Germans in their undertaking. Professor Murgoci stated that all outstanding debts on these properties were liquidated by the Germans during their occupation.

AIR ROUTES IN THE NEAR EAST.

Trade Development.

In the following interview Mr. Handley Page, head of the famous Cricklewood firm of aircraft manufacturers, discusses the development of air routes in the Near East and the value of aviation in relation to commercial enterprise:—

"Of what use is that to me?" says the business man laying down his morning paper with its account of a fresh flight to Egypt or India. He has read of machines carrying gangs of mechanics with their kit, complete engines and spare parts, and doing the trip with ease and reliability. He is being urged by trade experts in and out of trade journals to "look to it" and to "get there," and otherwise to show fresh commercial enterprise. He knows the transport systems of the world are in a sad state of disrepair; that, if he can get passports in the first instance it will take weeks, or perhaps months, for him or his travellers to get to the heart of the matter—to reach some distant market in Syria, Asia Minor, or the Balkans, for instance—and conclude actual business. So he reads and sighs. What can the aircraft industry offer him in the way of really reliable transport, and what will it cost him?

The actual shipment of the goods is of little importance compared with securing the order itself. Briefly, the aeroplane can help him to get that order in some far distant land, while it must leave the actual delivery of bulky goods to its slower but larger comrade, the steamship.

Stages to Egypt.

Competition is even now becoming keen in the countries on the route to India. My remarks, therefore, refer in particular to these countries. The departure of a representative to the East has hitherto been regarded as rather an impressive function, wherein the directors line the doorstep and wave farewell. There is no reason why it should continue to mean more than a week or two away. India is not to be gained in this time, but shorter services will first be opened, to be connected up later in an organised through route. Only those countries which have actually been covered, and are seen to be capable of intensive development by air, will be served in the initial stages. Those who followed the Handley Page flights to Egypt will have seen that the line taken was generally by Paris, Lyons, Marseilles, Rome, Naples, Otranto, South of Greece and Crete, to Alexandria or Cairo. This is in itself an illustration of the principle of small services being run first—*e.g.*, viâ Paris-Marseilles and Rome-Otranto, and being linked up into the complete chain of stages to Egypt.

A number of these stages are of great importance, but for the sake of example, the aerodrome in South Greece may be considered. Here the traveller for the Balkans, Turkey, or Asia Minor will alight and take his local line by air along subsidiary routes serving these countries. South Greece promises to be one of the most important junctions of world air routes, a point where even the Central Europe and Cape-to-Cairo lines must join when such are instituted. The development of Syria and Mesopotamia is also being most carefully considered. Beyrout, Damascus or Aleppo, Baghdad and Busreh form one day's work for a large commercial aeroplane, while Egypt would be connected up viâ Jerusalem. A great future is expected for the Tigris and Euphrates basin now that the country has been freed from the oppression of the Turkish yoke and its dilatory administration. While these routes are being perfected they are forming the foundation on which the line to India, and ultimately Australia, will be built up; so that *the countries concerned will never again sink to a secondary position in commerce.* On the contrary, it is to the interest of air transport firms to see that they prosper and flourish considering their certain importance in the future. Just as a new railway enriches the country through which it passes, so will it prove with airways.

The air transport manager, then, can offer high-speed journeys to the Near East in comfort and at a cost commensurate with land and sea travel. Passengers will be carried at a fare somewhat above present first-class rates, and this will include personal kit to the amount of the average suit-case. Considerations of baggage are not governed by weight so much as by space. Each passenger will be accommodated in an average space of 30 cubic feet, which approximates to the allowance in a railway carriage.

Too much prominence could hardly be given to the comfort of present-day flying in every stage. When seating is designed it will be arranged on the most scientific lines. Large windows will be a feature of air saloons, and will be kept clean! The fuselage will be heated so that it will prove unnecessary for passengers to emulate the Polar bear or return to the appearance of our simian ancestors. If a traveller must wait at an aerodrome, he will find it a pleasant and interesting experience compared with the changing at railway stations as they are to-day.

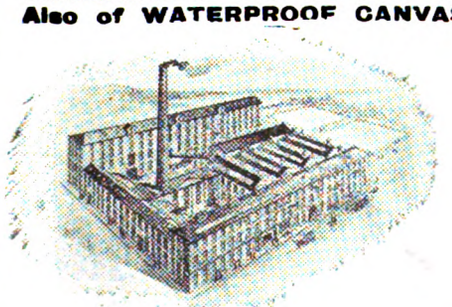
Cost of Journeys.

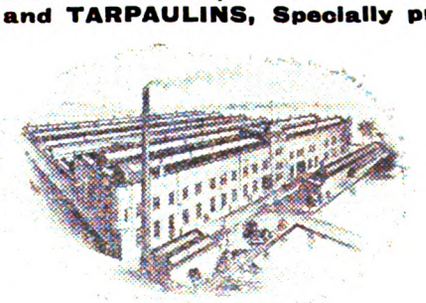
Consider the case of a firm's representative, or even its head, taking in person two cwt. of samples to Greece for distribution, either by himself or travellers with an intimate knowledge of the country. A ton of samples could accompany him if necessary. This journey is 1,650 miles by air, and can be covered by two days' flight, with a night in comfort at Marseilles or Rome. The cost would be £27 10s. for the passenger and his personal baggage at 4d. per mile, and £19 5s. for his two cwt. of samples at 2s. 4d. per ton mile. Considering the extra food, accommodation and odd travelling expenses incurred during the extra *time* of the same journey by land and sea, this will be seen to be much cheaper, at least twice as quick, and less tiring.

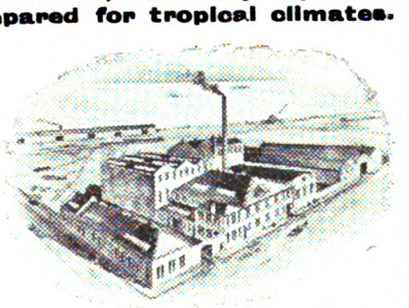
This is the aircraft organiser's offer to traders with the East. It is superfluous to dwell here on the openings for commerce in the Levant. Syria, and Mesopotamia. Every trade journal urges them. Greece, especially, is awaiting the Allied manufacturer with British quality to offer, and Serbia would welcome him with open arms. The prospective traveller by air need not worry about organisation of the service or ask what becomes of the aeroplane when he leaves it in Greece. The transport company sees to that. The only points with which he need concern himself are the reliability, safety, and comfort of the modern air-liners, and the fact that he can leave London, transact two days' business in Athens, and return fresh and untired—within the bounds of one working week.

But this cannot take place immediately Government restrictions are removed, nor even when their effect has passed away. Nor will the regularity of such a service immediately approach that of rail or steamship—no sane person would expect it to do so. Pilots have still a serious enemy in the weather, especially fog, and general organisation will take some time to complete. The examples quoted herein are such as can be reasonably looked for with our present equipment and experience, which is daily being augmented. True, there are obstacles; but business men will realise the immense advantages to be gained by such a saving of time, if they know that in the extremely improbable event of a breakdown goods and passengers will be diverted at once to the usual land or water routes.

Air Travel for Distances.







I have seen the Ipswich-India flight attacked on the ground that it took a month. As well attack a pleasure steamer agency for spending ten summer days on a 200 mile stretch of beautiful coast, when the steamer could do the distance in ten hours. A fortnight was spent in Cairo alone, and at no stage was there any attempt to eliminate delay or run to schedule. Another attack was on the efficiency of aerial transport, and showed that there were some trains an aeroplane could not beat on a sixty-mile journey; Again, it is not for such distances any more than the motor is for a call 200 yards down the street. The aeroplane is essentially a time-saver; the greater the distance, the more heavily it scores on this count. Long journeys usually mean many stages and consequent delay, whereas the slowest air-train to South Greece will stop at five points en route, involving less than one hour's delay. Undoubtedly this will mean much to the business man, but he must not expect perfection at once. To-day, when pen and tongue move perhaps too quickly, patience should be the text, the theme, and moral of every dissertation on this subject.

A special Government forecast gives the estimated out-turn of wheat in the Bombay Presidency, including Sind and Native States, as only 277,000 tons, against 926,000 tons, the final figures last year. The second forecast estimated the area at 1,178,000 acres, as against 2,880,000 acres last year.

In order to protect the interests of British exporters, a Serbian delegate has been attached to the Commission Internationale de Ravitaillement, who will supply information on the status and bona-fides of consignees in Serbia. United Kingdom firms desiring any information about Serbian firms should make an application direct to the Commission at the above address.

ENGINEERING NOTES.

In Search of Water.

The season is approaching when, in many districts of the Near East, the scarcity of water becomes very serious, and, in their efforts to mitigate the suffering of the people, responsible authorities experience an anxious time. Whole towns and villages depend on the rain water which is collected during the winter from the roofs of the houses, and stored in underground built-up cisterns, or else on wells averaging from 40 to 200 ft. deep, from which the water is drawn in the old patriarchal manner—with hemp cords and wooden buckets. Some municipal authorities and many landowners have recourse to artesian wells, and, indeed, there are many districts throughout the Near East suffering from scarcity of water which could have an abundance of it by the use of the artesian wells. But, unfortunately, authorities as well as landowners, instead of employing competent engineers or experts for the discovery of a water supply by mechanical or other means, often entrust ordinary mechanics with the work. These men, armed with some boring rods of very small diameter and of local construction, after many fruitless tests and laborious efforts, are sometimes successful in finding water, but more frequently, owing to their lack of knowledge in the employment of other technical means, the water cannot be brought to the surface, and, in their ignorance, they report a boring which perhaps struck an excellent supply of water, as unsuccessful. Such "unsuccessful" borings occurred in Northern Syria. They were closed and neglected for two or three years, until an American engineer, who was passing through the district, found that there was a good supply of water at the sites of the borings, and by employing a set of deep-well pumps secured a good flow of water for the district, and a good many orders for pumps and agricultural machinery for his firm.

There are now mechanical and other special means for finding water, which are employed with apparent success in this country, but, probably, nothing is known or heard of them in the Near East, or else the various municipal authorities, as well as the landowners and farmers, who spend annually large sums of money without satisfactory results, would have hastened to avail themselves of the opportunity.

For the inventors or makers of such mechanical or other reliable means for finding water there is a very large and most desirable field in the Near East, which they may be strongly recommended to enter.

Valveless Pumps.

In a foreign contemporary a commercial engineer who recently returned from the Near East says that there is a great demand for pumps and pumping machinery there, and that the demand will be greater as soon as peace is concluded. Ordinary second-hand, and in some cases nearly worn out, pumps are offered and bought at double the price (and sometimes more) that they cost when new. In mentioning this we would remind British manufacturers that rotary and valveless pumps are in great favour throughout the East. Owing to the scarcity of skilled mechanics and the climatic conditions, especially during the hot season, ordinary pumps with pistons, cylinders and valves are a source of trouble to owners who employ them in remote districts. When rotary pumps were first introduced in the Near East by Americans there was a rush for them, and makers began to establish depots for the sale or hire of these pumps in various districts. But the American, and later the German, designs proved unsatisfactory, whereas centrifugal or rotary pumps of British manufacture were found to be the best, and, in the long run, the cheapest. Firms who may intend to send out now or in the very near future consignments of pumps, especially to Palestine and Syria, should bear this in mind. In this connection it may be noted that the Americans, who have already studied those markets under the present conditions, are it is said, preparing the introduction of new designs of rotary pumps.

Rice Industry in the Near East.

Although the soil and climatic conditions in many districts in the Near East have proved quite adaptable for the cultivation of rice, comparatively small progress has hitherto been made in the development of rice cultivation into a popular and organised industry. This may be attributed to a certain extent to existing difficulties of transport, which deter farmers in distant or remote districts from raising a crop which will require cleaning and finishing in mills situated far away before it is offered in the market. Such mills are very few indeed in the Near East, and are engaged generally in the preparation of the rice produced in their respective localities. It may also be attributed to the belief that the establishment of a nice mill requires the outlay of considerable capital, a matter of great consideration, at least under pre-war conditions, to any enterprising industrialist or agriculturist in the Near or Middle East. Also, very probably, it is partly due to the fact that the majority of, if not all, the well-to-do landowners and farmers in the East are not aware of the existence of British-made rice-cleaning machines, each of which forms in itself a complete plant for the purpose. Such a machine is designed to produce on a small scale exactly similar results to those of the largest elaborate systems, which are composed of numerous separate machines, entirely in one automatic plant, and driven by one belt. It generally occupies little space, takes very little power, and is comparatively inexpensive in first cost. It is easily fixed in position, and no extra accessories are needed. Such machines are simple to operate, and require very little technical skill, as the rice is fed to the machine at the top through a hopper, and the finished cleaned rice comes out with a very small percentage of broken grain and little waste.

How the Rice Cleaner Works.

The process through which the raw rice goes is as follows:—It passes from the hopper through a regulating slide on to a shaking sieve separator, which takes away all impurities larger or smaller than the rice itself. It then drops into the sheller, composed of a pair of discs, which takes off all the husk or shells. As it falls from the sheller it is aspirated and all the husks removed. The rice is then elevated on to a further separator, which takes out any unshelled grains and returns them to the sheller, while the shelled rice passes on to a polisher by means of a second elevator. Here the rice is well scoured or rubbed until it has a very clean, white appearance. The rice is now ready for the market, and is of two grades—first quality whole, sound pure rice, and second quality, consisting of broken grains, about 14 to 20 per cent. These machines are suitable for estates of the average size in the Near East, and their introduction in those regions will undoubtedly conduce to the extension of rice cultivation, even to the remote but very fertile districts in the interior.

Machinery for Crete.

The question of supplying agricultural machinery and implements for the use of the island of Crete is, according to recent reports, one which is likely to increase considerably in importance in the very near future. In Candia and the neighbourhood oil engines are largely in use, and have been imported almost exclusively from the United Kingdom. It would be well, however, for British makers to extend their consideration to Canea and the district, where a similar class of engines is in use for pumping water and for operating corn mills and olive presses. A German oil engine was the first to be introduced, and before the war apparently maintained its hold on the market. In small accessories and parts the Germans paid great attention to local requirements, and established a remunerative trade. In the early part of 1914 efforts were being made to introduce into Crete from the United States motor-ploughs at prices ranging from £48 to £240. The implements and machinery required in Crete are chiefly of the simplest description, such as small ploughs suitable for ploughing on hillsides, other types of light ploughs, with wheels and shafts proportionate to the small native bullocks, mules, and horses, small harrows for clearing the fields of weeds, small drills, mowing and reaping machines, threshing machines, grain sorters, presses for forage and hay, and automatic windmills, with water pumps. The wine industry also has its requirements in the shape of presses, filters, and apparatus for pasteurising and for the distilling of pure alcohol. Hydraulic presses and filters of large and small capacities are also required for the oil trade; while there is a profitable business to be done in small cream separators capable of dealing with about 11 gallons of milk per hour, and there is a demand also for butter churns and cheese presses. Makers of agricultural tools, too, will find an opening for pruning shears, grafting knives, hatchets, scythes, sickles, spades, picks, and forks.

GREAT BRITAIN AND SERBIA

Future Trade Relations.

Mr. H. Kramrisch, Serbian Consul at Bradford, writes to THE NEAR EAST as follows on the development of trade relations between Great Britain and Serbia:—

Before the war Serbia was practically ignored by industrial and commercial circles in this country. Austria-Hungary was the main factor in the country's trade, and it was the endeavour of the Dual Monarchy to keep all the strings of Serbian business relations in her own hands, so as to make it impossible for Serbia to maintain and enjoy direct relations with other countries in the West.

The famous "Zollkrieg" (tariff war) between Serbia and Austria, brought about by the latter, produced a great alteration in Serbia's commerce. She was obliged to find new markets and look out for favourable outlets for her products. This was Germany's golden opportunity to capture that market, and she did it with her well-known thoroughness. She not only found a good field for Serbia's products, but an outlet for her cheap articles. There have existed all over Europe many prejudices and errors in regard to Serbia. These were created in the first place in the Austro-Hungarian Press, reproduced in Germany, and spread by her over the civilised world. From the point of view of the Hapsburg Monarchy, it seemed to be quite justifiable, as she had an interest in doing all in her power to discredit the Serbian nation in the eyes of the civilised world in order to preserve her trade monopoly. Whilst Germany helped Austria to discredit Serbia in the eyes of this country through the newspapers, she undertook propaganda on a vast scale in her own country with a view to convincing her own people of the advantages of Serbia as a market.

It is necessary that the business community in Great Britain should try to get better and more thorough information about Serbia than hitherto. This can be achieved by diplomatic and consular activities and through the medium of the Press. British manufacturers and export and import merchants should try and see for themselves in future conditions in Serbia, and should visit the country and form their own opinion. Henceforward, also, no publicity must be given to misleading reports, and merchants must not do business through agents only, but must send their own representatives in order to have first-hand information and knowledge of the country and of her people. If Great Britain intends to establish thorough economic relations in Serbia, it is essential to have the most direct communication possible between the two countries. A port on the Adriatic is of the most vital importance to Serbia for the direct export of her products to Great Britain and for the import of British manufactures. Finally, a railway line from the Danube to the Adriatic would free Serbia from dependence on the Central Powers.

The following figures published in 1911 will show what Great Britain has to do to capture the Austrian and German trade in Serbia:—The total imports in 1911 were valued at 115,424,000 francs, whilst the exports amounted to 116,916,000 francs. Of this the lion's share fell to Austria-Hungary, with 47,448,000 francs and 48,433,000 francs respectively. Germany followed next with 31,347,000 francs and 28,933,000 francs, and Great Britain was third with 9,524,000 francs and 87,000 francs. The balance was divided amongst other European States.

In trying to capture Serbian trade from Austria before the war, it will be admitted that Germany no doubt had sound reasons for her action, and in this connection we must ask ourselves the question: Where could be found the alluring richness of this small Balkan State? The answer is (1) In the products of the soil; (2) The enormous riches in minerals and coal hardly yet developed; and (3) The vast forests and orchards. To this must be added the growing wealth of the population, who are thrifty, careful, and industrious, and, therefore, good consumers of manufactured articles.

The economic activity of Serbia suffered for a while on account of unsettled political conditions. But the last few years before the Balkan war progress was taking place, and Serbia was being placed on a solid financial and commercial basis.

The Credit Question.

The Serbian merchants and peasants are trustworthy. The latter pay what has been advanced to them to buy implements and seed. In years of bad crops a peasant might be behind with his payments, but eventually he pays. The merchants have to ask longer credits because they are obliged to lay in large stocks and keep them for a while, and also have to grant credit to their customers. Bad debts are not numerous—in any case, not more than elsewhere, and in most unfavourable times failures not more than usual.

Whilst British houses, and especially banks, did not offer financial facilities to Serbian merchants, the Germans did, knowing that the majority could only pay their foreign debts twice a year, and for this she claimed full interest. An Anglo-Serbian Bank after the war would be of great assistance in the development of British trade with Serbia.

Regarding the customs duties, Serbia had to introduce a maximum and minimum custom's tariff owing to constant disagreement with her neighbour, Austria-Hungary. The maximum tariff applied to countries where Serbia had no special agreement or preferential duties, and *vice versâ*. This double tariff came into force at the end of February, 1910, and affected principally Austria-Hungary. In the case of some goods, especially clothing, millinery and articles of luxury, the maximum tariff meant an increase up to 250 per cent *ad valorem*, viz.: 200 per cent. against 150, or an increase of 100 per cent. of the material tariff.

Serbia offers to capitalists who wish to invest in industrial enterprises many concessions, viz.: (1) Free land and timber for building purposes; the minimum transport tariff on railways for bringing up all building materials; (2) The import of machinery and all the necessary implements duty free, also that of all raw materials and semi-manufactured goods, which cannot be obtained in the country; (3) Freedom from income-taxes for a period of ten years; and (4) A reduction of 25 per cent. on freight for all raw materials imported for manufacturing purposes, etc.

In conclusion, I would emphasise the fact that Serbia is a rich country, and offers British enterprise a wide field.

OVERSEAS TRADE.

To the Editor of THE NEAR EAST.

Sir,—We have heard and read a great deal recently about "reconstruction," "capturing trade," etc., etc., and of the steps that are being taken for this purpose by certain Government departments and industrial combinations, etc., etc., but so far it all appears to be a question of meetings, of forming organisations, etc., of action all on paper, but nothing concrete. Special mention is being made of the Near East, the Balkan States, Palestine, Mesopotamia—as if these countries were new and hitherto unknown and unexplored markets!

The few old-established British firms who were for many years the pioneers of commerce in such centres as Constantinople, Athens, Sofia, Smyrna, Beyrout, etc., and who, during the last four and a-half years, have been obliged, owing to war conditions, to suspend their businesses—some of whose members are now in this country, they being entirely conversant with all the requirements of the countries in question—have been endeavouring to arrange to resume their business operations once more, but have failed to obtain any facilities whatever from any of the Government departments. Meanwhile, it is a positive and undeniable fact that our Allies, neutrals, and others have not wasted their time in forming new departments or industrial combinations; but individual initiative has received from the respective Governments every encouragement, backing, and facility, thus enabling their steamship lines to be started, and shipments effected without hampering restrictions; also, their nationals who were already established in the afore-named centres have experienced no difficulty in procuring passports, but have been allowed, and even urged, to return without delay, so as to book orders and push their respective countries' commercial and other interests, whilst we are still "organising."

I may add that, apart from the question of trade, the French, Italian, and Greek schools in Constantinople, Smyrna, and elsewhere have been reopened, but we British, not profiting by the lessons of the war, appear still to prefer to "wait and see." Are we going to be "too late" once more?—I am, yours faithfully, S.

London, April 23.

The Hunslet Engine Co., Leeds, have on hand 26 one-metre-gauge locomotives for the Eastern Bengal Railway, while for the Nizam's Guaranteed State Railways Messrs. Kerr, Stuart, and Co., of Stoke-on-Trent, are to build two 4-6-0 locomotives.

THE DISTURBANCES IN EGYPT.

Economic Consequences.

(From Our Own Correspondent.)

Cairo, April 7.

It is to be feared that the economic effects of the past month's disturbances will be serious. The greatest amount of damage has been done to the railway and telegraph system, where the permanent way has been pulled up at various points over long stretches, the sleepers and telegraph poles have been taken off for consumption as fuel, the signalling and transmission apparatus have been smashed beyond repair, and a considerable amount of rolling stock and buildings have been burnt or destroyed. On the other hand, the people have interfered very little with the irrigation works, and only in a few places, and then to a minor extent, have the canal control works suffered interruption. At the same time, the interruption of railway communication, particularly in Upper Egypt, has necessitated the transport of relief parties by water, and since the levels of the river at this time of the year are too low to permit of the navigation of the steamers in question, it has been found necessary to release the water stored at Asiut and Aswan so as to raise the river to the requisite level. This will naturally mean that later on, when the crops will as usual require further water for irrigation, there will not be sufficient to supply free flow, and in view of the difficulty in transporting the fuel required to work the lifting machinery it is to be expected that cultivators will suffer considerably as a consequence.

To a certain extent, the damage done to the railway can be repaired locally, but the signalling and transmission apparatus cannot possibly be replaced locally, and it will take some considerable time to restore the system to the condition in which it was six weeks ago. It has in the past only been due to the modern mechanical contrivances for controlling traffic which have been introduced throughout the system that the railways have been able to handle the considerable amount of produce of every description, including cotton, produced in Egypt, but, as a result of the present state of affairs, it is very much to be feared that it will not be possible to move even the coming cotton crop in a satisfactory manner, and that a great portion will be left up-country. There is likewise bound to be difficulty in feeding the urban population, since the cereal stocks and the cattle from the Sudan cannot be transported, for, although railway communication has been re-established, it is as yet quite impossible to deal with goods traffic.

In what measure and for what period the effects of the recent disturbances will be felt must to a great extent depend on the length of time during which the existing excitement lasts, and the celerity with which the damage can be repaired, but, even allowing for the wonderful recuperative power which Egypt and the Egyptians possess, it is much to be feared that the consequences will make themselves felt in the social and economic life of the country for some considerable time after order is restored.

FOREIGN TRADE ORGANISATION IN SERBIA.

With the assistance and under the direction of the Belgrade Chamber of Commerce, says a British Consular report, Belgrade importers have formed nine "Associations" (Consortia), for the purpose of replenishing Serbia and renewing commercial relations with foreign countries. The associations are :—(1) Textiles; (2) iron goods, agricultural machines, and implements; (3) leather, material and implements for manufacture of boots; (4) colonial goods and provisions; (5) haberdashery, hosiery, fancy goods, and ready-made articles of clothing and footwear for town population; (6) ditto for rural population; (7) glass and glassware, porcelain and earthenware, paints and colours, and electro-technical articles; (8) books, paper and writing materials; and (9) drugs, medicines, etc.

Owing to the scarcity of money for purchases abroad, the Belgrade Chamber of Commerce has asked the Government that they should give to the merchants (importers), for their credits abroad, State guarantees through the National Bank of Serbia and its branches throughout the country. The State guarantee asked for and accorded for present requirements amounts to 100,000,000 francs (£4,000,000).

The purchase of goods, fixing the credits, etc., will be decided and carried out by a special committee composed of members of the Chamber of Commerce and members of the above-mentioned "associations." State and private papers of value (bills, shares, etc.), real estate, Serbian paper money, as also foreign paper money at the rate fixed by the Ministry of Finance, will be accepted as cover deposits for credits. Credits, without a deposit such as the above, but on the signatures of reliable and well-known persons, will only be issued to such persons (firms) who during and owing to the war have so seriously suffered as to possess nothing which could serve as a deposit.

Each of the above "associations" will depute two representatives to visit the markets abroad and conclude purchases for the importers concerned. Messrs. Svetislav Okanovitch and Jovan Jovanovitch, who represent the "Associations" of Importers of Drugs, Medicines, etc., have already left Serbia for that purpose. It is understood that similar "associations" will also be formed at Agram, Laibach, Serajevo, and Spalato, with branches in all the more important centres in the New Kingdom.

TRADE CATALOGUES FOR PALESTINE.

It is announced that the Chief Administrator, Occupied Enemy Territory Administration for South Palestine, desires to obtain as many catalogues as possible upon numerous import lines, all of which should find a profitable market in Palestine. Facilities for inspecting these catalogues will be offered to interested parties in Jaffa, Haifa, and Jerusalem, and it is conceived that they will tend in no small measure to the replacement of enemy importation by United Kingdom goods.

The main object is to draw inquiry; the question, therefore, of uncertain catalogue prices should not debar the sending of trade literature. Actual prices and delivery can be settled by correspondence with the manufacturers and gradual substitution of newer catalogues. Catalogues in the three principal languages of the country—English, French, and Arabic—are much appreciated, and were a great feature in the German pre-war trade propaganda.

The following are the principal imports required, and it is suggested that suitable firms should send their catalogues addressed to Headquarters, Economic Section, O.E.T.A., Jerusalem:—Agricultural machinery and implements, flour-mill installations, all kinds of motors, furniture, bedsteads, enamelware, pottery, glassware, lamps, stationery, hardware, ironware, articles of construction, book-printing and book-binding machinery and types, boots and shoes, drugs and chemicals, brushes for painting and household, travelling bags and necessaries, locks, musical instruments, typewriters, all kinds of tools, engines for petroleum and gas, and perfumery.

SUDAN TRADERS' TAX.

A special *Sudan Government Gazette* contains the text of an ordinance, to be known as the "Traders' Tax Ordinance, 1919," intended to amend the Traders' Tax Ordinance, 1913. It gives the Governor-General in Council the power from time to time, by notice published in the *Gazette*, to alter or amend the schedule of the rate of the tax, or to cancel any existing schedule and to bring into effect a new schedule. H.E. the Acting Governor-General issues an Order that the tax assessed for the current year should become due on April 30, and payable by two equal instalments, on April 30 and October 31, 1919. The schedule to the Traders' Tax Ordinance, 1913, has been cancelled, and a new schedule substituted. The new schedule divides merchants into three classes: the first class are those whose assessed annual profits exceed £E500 per annum; the second class are those whose profits exceed £E100, but do not exceed £E500; and the third class are those whose assessed annual profits do not exceed £E100. The first class pay at the rate of £E6 per cent. on the whole assessment.

NEAR EAST MARKETS.

Sudan Produce.

Gum.

The C.E.B. report for February states that the exports of gum during that month were, via Port Sudan, 2,144,953 kilos of hashab, of the value of £68,136, and 19,540 kilos of talh, of the value of £403; and via Halfa, 63,500 kilos of hashab, of the value of £2,018, and 32,249 kilos of talh, of the value of £674. 1,723 tons of gum were carried on the Kosti-El Obeid Railway, as against 1,189 tons in January.

Kordofan Province.—18,150 kantars were sold in El Obeid market during February, as against 14,598 kantars in the same month last year, at an average price of £E1.030 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 9,382 kantars, as against 4,638 last year. At Um Ruaba 6,685 kantars were sold during the month, at an average price of £E1,120, as against 5,158 kantars in the same month last year. At Rahad 4,321 kantars were sold during the month, as against 1,828 kantars in the same month last year. The price varied from £E1.050 to £E1,130.

Sennar Province.—Gum has come in well, and much energy is being directed to working the forests.

Upper Nile Province.—January and February.—The price of gum fluctuates between PT113 and PT125 per kantar; 39¼ kantars of hashab and 818 kantars of hashab were exported from Renk district in January and February respectively.

Cotton.

Red Sea Province.—Tokar.—The cotton presented a healthy appearance, and had recovered a great deal during the preceding few weeks, but it is difficult at the moment to say anything definite as to the probable amount of the crop. The cotton market is to open on March 15, and there is little doubt that the crop will be a very late one, and it is therefore to be hoped that good weather will continue into June to enable the cotton to be picked to the last, as was the case in 1918.

Kassala Province.—The Inspector of Agriculture reports that the crop, on the whole, is about three weeks earlier than last year. Cotton from the better districts is well up to last year's quantity, but there will be a slight falling off in the class on the whole. The total crop may be put at 18,000 kantars of 100 rottles.

Berber Province.—At Wad Hamid Basin cotton on the experimental area was looking extremely well, and the provision of shallow sakia wells should add a kantar or more to the yield per feddan. At Gendettu cotton has done excellently. Elsewhere cotton has been bad, though the company's land at Zeidab has given a yield above the average.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated April 25:—

General rain in Assam Lower and Deltic Bengal at Chota Nagpur, Kashmir, and Mysore. Thunder showers elsewhere. More required by Bengal and Surma Valley.

All India final Sesamum forecast revised acreage, 3,501,000; yield, 258,000 tons. (Last year, 4,023,000 acres and 333,000 tons.)

Bombay cotton market firm. Fully good Broach quoted, April-May delivery, 518 rupees: July-August delivery, 530 rupees. Piece-goods market, no improvement. Calcutta jute market firm. Gunny market very firm. Rice market, Government control price maintained, 4 rupees 14 annas.

Motor vehicles may now be imported into Ceylon subject to a duty of 7½ per cent. *ad valorem*.

The *Bulletin Officiel* of Morocco of March 17 contains a Dahir authorising the establishment of general warehouses at Kenitra. The rates charged will be those in force at the warehouses at Marseilles.

The Alexandria Municipal Delegation, at a recent meeting, discussed a proposal for the reconstruction of a quay on the bank of the Mahmoudieh Canal, to facilitate Nile shipping in Alexandria. The scheme was referred to the members of the Commission for study.

COMPANY MEETINGS.

CAISSE HYPOTHECAIRE D'EGYPTE.

The following is a translation of the report of the board of directors read at the general meeting held at Brussels on April 15 :—

"Since our statutory general meeting of April 16, 1918, at which we were unable owing to the difficulties of communication to present to you the balance-sheet and the profit and loss account for the year 1917, the armistice, concluded after the glorious success of our armies and those of our Allies, has permitted the gradual re-establishment of our communications with our offices in Paris and Cairo. In conformity with what was agreed upon at the meeting in question we have the honour to submit for your approval the balance-sheet and the profit and loss account for our fourteenth and fifteenth financial years combined, so far as it has been possible for us to bring them up to December 31, 1918, with the information already in our possession.

The transactions of the company have resulted in a total of 6,017,284 francs for interests, commissions and sundries, and the credit balance of the profit and loss account amounts to 221,979 francs against a debit balance at December 31, 1916, of 629,349 francs. In the course of the year 1918 46 new loans were arranged for an amount of 2,221,964 francs. The average value of current loans at December 31, 1918, stands at 40,453 francs. At the same date the percentage of loans on country securities was 78 per cent., and that of loans on town securities or both 22 per cent.

As regards the general outlook, Egyptian agriculture has benefited by two years of good crops sold at exceptionally high prices, which has placed in the hands of the cultivators considerable disposable sums and has enabled them to meet their mortgage obligations. Without venturing to forecast the economic situation which will develop for Egypt from the definite re-establishment of peace, it can be said that as regards cotton, in view of the exhaustion of manufactured goods throughout the world, the position will be maintained for some time yet. The position of the real estate market also shows a marked improvement. The high prices obtained for all produce has brought about an era of affluence for landowners, and has favoured the resumption of land transactions—a revival conduced to by the greatly increased value of good agricultural land in particular. With regard to moderate and poor lands, they are still suffering from the bad effects of the suspension of irrigation works, the carrying out of the vast programme drawn up by Lord Kitchener having been suspended since the outbreak of the war. It is in this class of security that we have suffered some disappointment.

Finally, the foreign trade of Egypt, which has increased to a remarkable extent, shows a steady predominance of exports over imports, which enables it to be said that a considerable surplus remains each year in the country. Thanks to these various favourable factors our company is freed from the anxiety which marked the first years of the war. The amount of arrears standing over has been reduced, thanks to the collections of 1917 and 1918, to satisfactory proportions.

As regards the "lands acquired by expropriation" they also begin to decrease. From 9,658,816 francs at December 31, 1917, they have been reduced, indeed, to 7,143,620 francs at December 31 last, and that descending curve will probably be further accelerated in the course of 1919. We find that in 1913 and 1915 the amount of securities redeemed was three times greater than that of the securities sold, while in 1918, on the contrary, the sales were three times greater than the redemptions. Here also the situation will end by becoming normal. The settlement of our landed property will involve, however, of necessity some loss. Granted the marked upward tendency in the value of landed property in Egypt, we have every cause to hope that the loss will be adequately counterbalanced by our profits on redemption.

Our mortgage investments have greatly decreased owing to the fact that since the outbreak of the war we have scarcely made any new transactions, while the receipts on annuities have been very active during the last two years. The repayments included in these annuities appear in our disposable funds and our provisional investments. Respecting the reinvestment of these funds in Egypt, it is necessary to wait for some time yet until the return of normal conditions makes possible the resumption of irrigation works and drainage schemes; that resumption will place at the disposal of cultivators considerable areas of land at present uncultivated, the outlay on which will necessitate new capital for which the cultivators will offer as security their lands already in full yield.

In addition to this, neighbouring countries like Syria and Palestine will offer new openings for mortgage loans as soon as their definite status has been decided. That field for enterprise was foreseen at the time when our articles of association were drawn up.

M. Frederic Jacobs, M. Jules Rolin, and M. George Eid, administrators, and M. le Comte de Bouthillier-Chavigny and M. Charles le Grelle, commissaries, retire in the course of rotation, and are eligible for re-election.

You will have to regularise, as far as is necessary, the offices of members of the board of administrators and of the commissaries, who have been prevented from acting by reason of their situation.

Our colleague, M. de Trincaud La Tour, asked us, in the course of the year, to relieve him of his duties as administrator, not being able, for reasons of health, to give us his active collaboration as he has hitherto done. We deeply regret his decision, which deprives us of his great business experience and of his most valuable assistance.

KHEDIVIAL MAIL.

An extraordinary general meeting of the Khedivial Mail Steamship and Graving Dock Company, Ltd., adjourned on March 10, was resumed on April 28 at Winchester House, Old Broad Street, E.C., Lord Ernest Hamilton, chairman of the company, presiding.

The Chairman said the meeting was adjourned in order to allow Mr. Reeves to secure the opinion of certain shareholders in Egypt.

Mr. Hugh Reeves said that at the annual meeting there was a considerable volume of opinion in favour of taking the opportunity afforded by the largely increased value of the assets to realise the property and distribute the proceeds among the shareholders. An extraordinary general meeting, convened to deal with the suggestion, was held on March 10, when the holders of 51,000 shares who desired realisation were present or represented by proxy. He then stated that a small body of shareholders had been formed, who had been approached by more than one possible purchaser of the undertaking or of the shares, and that the best prospect seemed to lie in the direction of one whose name he was now about to divulge. They, therefore, asked for an adjournment to enable shareholders to be asked for their authority to offer their shares for sale. The meeting was adjourned, and on March 17 a circular was issued stating that a powerful group might be prepared to give £6 for each ordinary share if a sufficient number—that is, a number representing voting control of the company—were offered at this figure, and recommending shareholders to do so. The circular stated further that if the transaction were completed the purchasers would pay the expenses of clerical work and a commission of 1 per cent. to himself, who had conducted these negotiations. The result was that offers to sell rather over 60,000 ordinary shares at £6 net each had been received. This enabled him to state that the buyers were the British Trade Corporation, the Governor of which had written that day that the 60,000 shares offered were sufficient, although he would prefer more. He, therefore, proposed to close the business on behalf of those shareholders whose authority to sell he held. Up to May 14 further shares could be included in the transaction on the same terms; beyond that date he could not make any definite promise. Treasury consent had been received to the remittance to Egypt of the purchase money of any shares sold by holders there. In reply to the chairman, Mr. Reeves said that the purchase of the ordinary shares offered would immediately be proceeded with, irrespective of whether or not more offers to sell were received.

As a matter of form, the resolution instructing the directors to realise the assets with a view to the ultimate liquidation set down for consideration at the meeting of March 10 was unanimously negatived, and the proceedings terminated.

COMPANY NOTES & REPORTS

Indian Electric Supply and Traction.

The report of the Indian Electric Supply and Traction Company for 1918 states that the surplus on the year's working in Cawnpore was £19,271 (against £17,767), and including transfer fees and exchange adjustment in England, the credit side of net revenue account shows a total of £20,674. London expenditure was £2,227 (against £2,217), and after providing £3,900 for debenture interest profit was £14,548; £685 was brought forward, making £15,233. The board have placed to reserve for depreciation and renewals £6,000; to debenture issue expenses, written off, £1,000; and recommend a final dividend of 5½ per cent., which, with the interim dividend of 2½ per cent., paid on November 19, 1918, makes the dividend on all shares issued prior to December 5 last at the rate of 8 per cent. for the year, and on all shares subsequently issued 5½ per cent. The balance carried forward is £1,171. A resolution will be submitted giving the directors power to pay an underwriting commission up to 10 per cent. on the issue of any new capital. Meeting, Orient House, New Broad Street, E.C., 6th instant, noon.

Barsi Light Railway.

An interim report of the Barsi Light Railway Company states that the net revenue for the year ended March 31 last, as advised by cable, amounts approximately to £37,000, compared with £28,000 the previous year. From this has to be met the interest on the Four per Cent. Debenture stock and the interest and sinking fund instalment on the Four per Cent Latur Extension Debentures, totalling £11,249. The directors have declared an interim dividend of 3 per cent., or 6s. per share (at the rate of 6 per cent. per annum), which will absorb £7,800. The restrictions on the through booking of traffic with the Great Indian Peninsula Railway via Kurduvadi Junction have continued, with little variation, throughout the year, but during the last three months the main line railway has been able to supply a larger number of wagons, and the traffic returns have considerably improved. The influenza epidemic caused much dislocation of business for a time, and passenger traffic has also suffered from the prohibition of the through booking of pilgrims to Pandharpur. Conditions generally are improving, though still far from normal. The reports on the probable quantities of produce in the district are not unsatisfactory.

LAND AND MORTGAGE CO. OF EGYPT,

The directors of the Land and Mortgage Company of Egypt state in a circular letter to holders of 4½ per cent. debentures that having funds available they are prepared to purchase outstanding 4½ per cent. debentures at a price not exceeding £90 for each £100 nominal, and holders who may desire to avail themselves of this opportunity of disposing of their holdings are invited to make a tender of the same. The price payable for the debentures, the tender for which may be accepted, will be paid on May 16, 1919, or so soon thereafter as the debentures shall be delivered to the company. It is added that the invitation to tender must not be taken to imply that the lowest or any tenders will necessarily be accepted by the company.

The official liquidator of the Amritsar Bank, Ltd., announces a fourth dividend of 4 annas in the rupee, making up the 16 annas.

DEMOBILISED BRITISH CAVALRY OFFICER (28), desires Employment in TURKEY—SMYRNA, CONSTANTINOPLE or Inland. Has had nine years experience timber trade, home and abroad, and has a thorough working knowledge of woodworking and constructional machinery. Used to outdoor life—good horsemaster and used to the management of men.—Apply Box H.6, NEAR EAST, Devonshire Square, London, E.C.2.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The prospects in the market continue brighter. A considerable inquiry has been dealt with, and numerous producers are now strengthening their position. The Government continues to remove restrictions upon trade and the activities of merchants are being freed in many ways. It looks as though Egyptian cotton will be the last article to be decontrolled by the authorities. Much uncertainty exists as to what will happen after the end of July. A good deal depends upon the course of values in the American staple. In the meantime producers are afraid to purchase with any freedom in Egyptian qualities. Some improvement is now showing itself in yarns made from Egyptian cotton and quotations are more firmly held. After being very quiet for several months demand in piece goods for Egypt is broadening and some fairly substantial contracts have been put through this week chiefly in standard makes. An extensive business has been offering for India in light fabrics such as dhooties, mulls and jaconets. Shippers to Calcutta after being slow for a long time are now purchasing larger lines. Operations in grey shirtings seem to be near at hand. Trade to some extent for China has been checked by the higher prices required by manufacturers. Some encouraging sales have taken place for Java and Singapore. Home trade buyers are now displaying more life. There has been a further increase in the amount of machinery running in weaving districts. Spinners of American yarns have now resumed production after the fortnight's stoppage. A fairly healthy demand has been met with, but some users seem to doubt whether producers will be able to maintain their recently improved position. An encouraging demand has come through in bundle yarns for India and in crops for the Continent, especially Holland.

BRITISH CATALOGUES REQUIRED FOR ATHENS.

H.M. Consul-General at Athens reports that a catalogue library is being formed in connection with the Air Department of the Ministry of Marine, and that they would be glad to receive catalogues from British manufacturers. In the case of any catalogue of goods not used by the Air Department, it will be transmitted to the Ministry of the Greek Government, which may be more immediately concerned. Catalogues should be sent direct to Commander J. Weston, British Naval Mission, Director of Technical and Equipment Section, Royal Hellenic Naval Air Service, Ministry of Marine, Athens.

Mr. P W. Monie, I.C.S., has been appointed Commissioner of Bombay Municipality for a further term of three years.

Messrs. Samuel Montagu and Co. state in their bullion circular that the net imports of gold into India on private account amounted in 1917-18 to £13,000,000, as against £9.000.000 in 1916-17, and £19,000,000 the pre-war average. The net imports on Government account in 1917-18 were valued at £3,493,000, as against a net export of £27,000 in the previous year, and of £477.000 the pre-war average, and consisted mainly of sovereigns.

NEW COMPANIES.

New Egyptian Companies.

A number of new companies have recently been registered at the Alexandria Mixed Tribunal, among them Victor Mizrahi and Co., with a capital of £E5,000 for general trade, and Charlton Eugenides and Co.. with a capital of £E5,000 for bourse transactions and brokerage.

Anglo-Canadian Association for Roumanian Traders.

A private company with the above title was registered on April 8, with a capital of £10,000 in £1 shares. The objects are stated to be to place, obtain or negotiate orders relating to the manufacture of goods, wares and merchandise, either as principals, agents or factors, etc.

Haynes Spanish and Moroccan Trading Co., Ltd.

A company with the above title was registered on April 17, with a capital of £50,000 in £1 shares. The objects are to acquire any concessions, grants and powers in Spain, Morocco, or elsewhere; to carry on the business of capitalists, merchants, brokers, shippers, etc. Subscribers are:—S. Davis, Brompton Avenue, Egremont, Cheshire, produce manager; F. M. Soulsby, 7, Marine Terrace, Waterloo, Liverpool, contractor. Manager, J. S. Haynes. Registered office, 37, Moorfields, Liverpool.

During February 32 joint stock companies were registered in India, with an aggregate capital of £3,000.000, among them the E. D. Sassoon United Mills, Bombay, with an authorised capital of £2.000,000, the object of the company being the spinning and weaving of cotton, silk, etc.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

Our market, after being rather weak and lower, is closing with a much better tone owing to the great improvement in the news received from Egypt, where it appears that during the recent troubles most of the land companies have sustained no damage, and that even in some cases where damage has been done it is of a trifling nature.

In Government stocks there has been some business round current prices, which are unchanged after being rather lower.

Bank shares were particularly weak at one time. Nationals dropped to about 19¾, but are closing to-night ¼ better than last week at 20¼ on a renewal of inquiry both from Egypt and the Continent. Agriculturals, which had receded to about 6⅛, are closing only 1-16 lower at 6⅜. Anglo-Egyptian Banks dipped under 15, but finished ⅛ up at 15¼.

In Railways, Delta Lights, after declining to 7½, are closing unchanged round 7¾.

Land shares were very weak at one time, but are closing with an improved tone. Aboukirs are 6d. lower at 26s. 6d., Beheras are ¼ down at 12¾, Delta Lands are 9d. easier at 13s. 3d., and Egyptian and Foreign Trusts have dropped a similar fraction to 14s. In New Egyptians the price, after being down to 24s., closes at 24s. 6d. Sidi Salems and Union Foncières are both 1-16 lower at 2½ and 3 7-16 respectively. Sudan Plantations are exceptionally firm, and are finishing 3-16 up at 6 9-16. United Egyptian Lands have been a firm spot, and have recovered 3d. to 2s. 3d.

In Miscellaneous descriptions Alexandria Waters have been in demand all the week, but no business has been possible, owing to lack of sellers. Anglo-Egyptian Oils, after temporarily weakening, are closing ⅛ up at 5 5-32. Salts and Sodas have dropped ¼ to 2¾. Khedivial Mails, on the change of control and the big sale of shares, have risen ½ to 6.

In Greek securities, apart from a further fall of one point in Greek Rentes to 55, there is no change to report.

PRICE OF GREEK CURRANTS.

The Food Controller has issued an Order revoking, as from April 14, 1919, the Greek Currants (Maximum Prices) Order, 1918, which prescribed the maximum price at which importers might sell Greek currants. The maximum retail price of currants remains controlled at 10d. per lb. under the Dried Fruits (Retail Prices) Order, 1918.

A telegram received by the Chartered Bank of India, Australia, and China from its Karachi branch states that the cash and records of the Amritsar branch are intact.

Chests containing Roumanian bank notes to the value of 30.000,000 francs (£1,500,000), taken by the Germans from Roumania, were stolen from the Julius Tower of the Spandau Citadel in the Spartacist disturbances at the beginning of March according to the *Zeitung am Mittag*.

The Board of Trade have received from H.M. Trade Commissioner at Calcutta copy of a notification issued by the Department of Commerce and Industry of the Government of India, and cancelling the notification dated July 22, 1916, prohibiting the importation of unset diamonds into British India.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LTD.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the HEAD OFFICE:

NOTES OF THE WEEK.

The preliminary terms of peace were presented to the German representatives on Wednesday, and by the time these lines appear in print they will be known throughout the world. At the time of writing, however, it has been possible only to glance through them. In the circumstances it would be unwise to attempt any detailed analysis, but certain points in the Treaty which stand out in bold relief may be briefly noted. As to the military and naval terms to be imposed on Germany it need only be remarked to-day that they will probably be regarded as adequate to secure the purpose aimed at. Germany's army, navy, and aerial forces are to be reduced to dimensions that will surely cause the militarists to rage, and we must expect violent protestations on this head from them and their supporters. Possibly the reduction of their navy may cause less heartburning among them than the very drastic treatment of their army and the entire elimination (after October 1 next) of their aerial forces. These things will be accompanied by a suitable limitation of armaments and a dismantling of fortifications, at least on the western frontier.

The adjustments on the eastern frontier, the question of Schleswig, and the solution of the Danzig problem all follow along lines that have been foreseen, and in any case need not be dealt with here. But the fate of the German colonies is certainly not without interest for the Near East, and more especially for the Moslem world. The ex-Kaiser's impudent patronage of Islam and his professions of interest in all Moslems were in marked contrast to Germany's treatment of the natives in her own colonies and her attempts to suppress the Moslem religion in those territories. The East, therefore, will experience no regret on learning that the German colonies are to be given up; and it is safe to add that very few Moslems will shed a single tear over "Hajji Wilhelm" and his fate. What that fate will be it is too early to say, but the Allies have publicly arraigned the ex-Emperor for "a supreme offence against international morality and the sanctity of treaties," and it is their intention to have him tried by a special tribunal of five judges, who are to be appointed by Great Britain, the United States, France, Italy, and Japan. Those of his subjects and his servants who have offended against the laws and customs of war, or been guilty of criminal acts against the subjects of Allied Powers, are also to be brought to book. The significance of the latter demand will not be lost in the countries of Germany's allies.

The infamous Treaty of Brest-Litovsk and that of Bucharest, from which the Germans in the day of their success hoped so much, will meet the fate they merit. They are to be considered as abrogated, and the Roumanian Government—and the other sufferers—are to receive back from the German Government all the plunder it secured under the treaties in question. Here, again, we may rest assured, Germany's allies, who only too readily followed her example in the matter of looting, will find little comfort in the announcement of the decisions of Paris. But if Bulgaria and Turkey decline to recognise the advantages of such a readjustment of ownership as this, Serbia and Roumania may be trusted to welcome it with natural enthusiasm; and assuredly there will be no sympathy to spare in Entente and associated countries for those who, having first backed the wrong horse, next endeavoured to insure themselves against loss by robbing the owner of the favourite and his friends. Turkey will also observe with considerable interest that Germany will now have to part with all the gold that she managed to acquire in her dealings with the Committee Government and the gerrymandered Council of the Ottoman Public Debt. This plunder, needless to say, is unlikely to find its way back to Turkey.

German intrigue has been active in all quarters of the globe, as, thanks to the war, all the world must now recognise; but nowhere, probably, has it been more active than in Morocco and—during recent years—in Egypt. With regard to Morocco Germany has followed, almost openly, a policy of brutal coarseness which seemed to aim—and probably actually did aim—deliberately at exacerbating French feeling. In Egypt her agents took more pains to do her dirty work secretly, but they were increasingly active; and there can be very little doubt that the present unrest on the banks of the Nile is to some extent directly and to a much greater extent indirectly, due to their activities. Incidentally it may be noted that they paid some attention to Tripoli and indeed to all the North African coastal region, where they thought their alleged sympathy with Islam might be turned to profit. But it was in Morocco and Egypt that they were most energetic, and, though their hopes in regard to both countries in the war remained unfulfilled, they had a certain measure of success. In future they will find it less easy to make mischief in these regions. By the treaty Germany recognises the British Protectorate over Egypt and renounces all the privileges that she enjoyed under the Capitulations and Agreements with Egypt. Similarly, she has to recognise the French Protectorate

Digitized by Google

in Morocco, to abandon all rights and privileges that she enjoyed in virtue of the Act of Algeciras of 1906 and of her Agreements with France in 1909 and 1911; while she regards as abrogated all the treaties and agreements between herself and the Shereefian Empire. The arrangements made for freeing Morocco from all traces of German influence appear to be singularly thorough in character.

Next to the terms of the Treaty in interest comes the explanation of how it came to be presented by a united body of the Allies rather than by one lacking the support of the Italian delegates. Signor Orlando and Baron Sonnino returned to Paris on Wednesday morning, and it is understood that a solution of the Fiume difficulty has been found. A solution of one kind or another was undoubtedly almost overdue when such an ardent friend of the Allies as Prince von Bülow felt that the time had come for him to venture an opinion on the subject. According to the *Giornale d'Italia*, this amiable gentleman declared categorically that Fiume, Sebenico, and Spalato were Italian towns, and added an expression of regret for President Wilson's mistaken view of the subject. If Italian statesmanship took alarm at this "friendly" backing, the Prince did not speak in vain. Be that as it may, the solution which is said to have been reached is: (1) That Fiume shall be placed temporarily under the administration of the League of Nations, Italy being made the League's mandatory; (2) that a port shall be constructed south of Fiume for the Yugoslavs, who until it is completed shall have the unrestricted use of Fiume; (3) that Italy shall renounce all claims to the hinterland of Dalmatia, and cease to regard herself as mandatory for the administration of Zara and Sebenico. Whether this be the actual solution or not, it is clear that the problem has passed out of the dangerous stage into which it had drifted last week; and the world, anxious for peace and not disposed to be too critical over such matters, will gladly forget indiscretions that have been perpetrated in connection with the matter, and give credit where credit is due for the escape from the muddle.

Bolshevism appears to be, if not actually at the last gasp, certainly not in a very robust condition. In the north the Bolshevists have suffered a defeat which has enabled the Allies to advance twenty-five miles, and their hold on Petrograd is said to be none too secure; while at Mariupol, in the south, they have suffered a very heavy defeat at the hands of the Kuban Cossacks. But it is from the Roumanians once more that Bolshevism has received its heaviest blow during the past week. Greek troops and French troops share the credit, but Roumanian divisions make up the bulk of the army that has been advancing so rapidly upon Budapest. On Monday King Ferdinand's troops were within forty miles of the Hungarian capital, and Bela Kun and his cronies were preparing to depart in haste, though they talked valiantly of resisting to the last breath. The Bolshevist leaders, as a rule, set such a high value on their breath for oratorical purposes that they have none to spare for the business of fighting, which they prefer to leave to their followers; and Kun and his chief associates will probably have shown their adherence to the principle of captains departing—in a hurry—at the hour of danger. At the time of writing the report that Budapest has actually fallen lacks confirmation, but it is obvious that the fall could not be long delayed. In any case, it is satisfactory to learn from a high military authority that the military situation in Roumania is now regarded as absolutely safe; and that after the occupation of Budapest the Roumanian Army will be ready to advance against the Bolshevists in any direction. The whole Roumanian nation deserves the hearty congratulations of the Allies upon its fine performance in circumstances of extraordinary difficulty. And in this connection we invite particular attention to the tribute paid by our Bucharest Correspondent to the magnificent qualities displayed by the Transylvanians.

Another chapter is added to the long tale of Armenian sufferings by a description of the sad plight of refugees at Igdir forwarded to *The Times* by its correspondent in that region. He reports that, even after the armistice, Turkish troops in the southern part of Russian Armenia removed and destroyed crops and food supplies, and left the country in a state of famine. As a result, the refugees at Igdir and elsewhere have been reduced to starvation, the supply of food being insufficient to keep more than a fraction of the population alive. The total number of refugees in Alexandropol, Igdir, Erivan, Nakhitchevan and the surrounding districts is placed at over 300,000; and it would appear that even the 3 ounces of rice which formerly constituted the daily ration of those in the Alexandropol district has now ceased, no supplies being available. The starving people are eating grass and clover, and—the correspondent reports—in some cases have been reduced to cutting up corpses for food. He has himself, he declares, "seen in the cemetery the remains of bodies dug up at night and partially consumed by starving people." The occupation of the Kars region by British forces will afford much relief by enabling the refugees from that region to return to their homes, which they have hitherto been prevented from doing by the Tartars; and the writer finds some comfort in the reflection that this will enable the restored population to sow crops. We can only hope that—to vary an old saying—it will not be a case of "while the grass grows the steed starves." But under the most favourable circumstances it is to be feared that relief can only reach the sufferers slowly, owing to transport difficulties.

Egypt has no new Cabinet yet, but appears to be getting on without one sufficiently well to make it possible that there will be no hurry about changing the existing state of affairs in this respect. There are admittedly certain difficulties attaching to such a situation, as our Cairo Correspondent has pointed out on more than one occasion; but General Allenby and his assistants will doubtless prove capable of coping with them. In view of all that has happened, it may be no bad thing to give the country an opportunity to see what men of action can do, if only for the sake of teaching it how far it has suffered itself to be misled by men who, though they may have the gift of speech, have certainly not shown themselves possessed of any qualities of statesmanship. Meantime, it is to be noted that General Allenby has made several important appointments to posts that could not in the interests of the country be left vacant. Thus, the machine of State will continue to work in spite of the self-seekers and agitators. When it is running quite normally once more will be the time to inquire into the root causes of the present trouble and, if feasible, to remove them.

For the sake of making the record of events fairly complete, some other incidents in connection with the Egyptian unrest must be briefly mentioned. The tramway strikers and railway strikers have returned to their work, but the students still show a preference for talk over work, and a determination to ignore the orders of the Special High Commissioner. They have addressed a rather ridiculous memorandum to Rushdi Pasha, "Regent for the Khedive, Abbas Hilmi," and they are behaving in general like a lot of not particularly bright schoolboys. It may well be that those responsible for the particular piece of folly just quoted are sincere admirers of Abbas Hilmi, Bolo's friend and patron; but we decline to believe that any but the ringleaders are bigger knaves than fools, and prefer to attribute the continuance of the "strike" to that sheer lack of balance which is, unfortunately, observable in so many Egyptians of the "student" class. In any case, if they persist in their folly they will suffer for it. General Allenby announced that unless by May 7 students returned to the Government colleges and schools in sufficient numbers to justify their being kept open, they would be closed, and that no student now registered will be admitted for examination this year unless he had returned by the date mentioned and attended regularly for the remainder of the session. A more serious note in connection with the disturbances

Digitized by Google

is struck by the issue of statistics of casualties in Cairo and district between March 10 and April 24. In that period there were killed, 15 Armenians, 74 Egyptians and 4 Greeks, and 37 Egyptians have since died; while the number of wounded is given as 344, the great majority being Egyptians.

The steady improvement in the situation in India can be seen in the wording of the official *communiqué*, and it is, perhaps, permissible to infer that the Rule of Law has now been restored, and that the inevitable period of retribution has begun. The frequent arrests of "religious" mendicants must be taken to indicate that men of this class, which probably comprises as many sinners as saints, have been the principal instigators of the revolt in the Punjab, but we are, naturally, still without information regarding the men who actually pulled the strings and mobilised this powerful body of itinerant agents, and we trust that the authorities will not rest till they have traced the evil to its ultimate source. Peasants, agitators, and organisers are, indeed, all guilty, but their guilt differs widely in degree, and it is the organisers at the centre upon whom the heaviest punishment should fall.

That the rebellion was founded essentially on an organised campaign of mendacity is made clear from the excellent results which have been obtained by placing the facts plainly before the people, and this circumstance must necessarily direct attention once again to the need for improving the existing system of publicity. In the Punjab a lie got a good start, and the authorities have had to hunt it down with mobile columns, and head it off by aeroplanes; such methods are, to say the least, cumbrous and expensive, and it is probable that their employment would have been unnecessary if the truth had got there first. That has always been a difficulty in India, and it becomes more and more serious as time goes on; changes are bound to increase in frequency, and effective machinery is wanted to tell the people what each change really means.

While the people remain illiterate, it is no use looking for help to the ordinary Press, for the obvious and sufficient reason that the potential circulation is too small to be worth striving for. That is the essential weakness of Indian journalism at the present day; the art has made great advances of late and now serves the cities tolerably well, but the masses of the people are not reached, and while "news" circulates only by word of mouth, everything depends upon the start. We have no doubt that the authorities have been too neglectful of this matter in the past. It is true that last year an organised publicity campaign was undertaken in connection with the war; it was in some cases marked by amateurism, but there are substantial successes to its credit, and we think the results of the experiment should now be carefully reviewed in order to see whether it is possible to lay down the lines of an organisation suited to ordinary times—not attempting to create opinion, but providing a solid basis of fact on which informed opinion may develop.

It is rather curious, by the way, that moderate politicians in India should be so anxious for a Mixed Commission of Inquiry into the recent disturbances. We hope that all the facts will eventually be brought out in the criminal courts, to which they properly belong, but supposing they were laid also before such a Commission, what good would result? The Rowlatt Commission is a case in point; the composition of that body was a judicious blend—its report disclosed to the public the ramifications of widespread and dangerous conspiracies, and politicians of all shades agreed to ignore its findings and dealt with the question as if no such report were in existence. What other result could be hoped for from an inquiry such as is now suggested? Indian public men must develop an appetite for hard facts before such an expenditure of time and money can be justified.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, April 14.

The Transylvanian Advance.

Since my last letter was posted there have occurred important events of a military character beyond the Carpathians. The Transylvanian Army has been mobilised, and the Roumanian troops have advanced westward beyond the region of the so-called demarcational line. I have been informed to-day that the advanced troops have actually reached the river Tissa, in the north. Though we are kept in ignorance of all details—for the public has to be content with an extremely meagre official *communiqué* in the way of information—it would appear that the troops have met with some resistance on the part of the Hungarian irregulars in the course of their otherwise rapid advance. There are a number of killed, including officers, and several hundred wounded, who have found accommodation in the Transylvanian hospitals, in spite of the disorganised condition in which these were left as a result of the war. The resolute measures adopted by the Roumanian Government and the "Directing Council" of Ardeal have given general satisfaction; for the degradations and atrocities committed by the pseudo-Bolshevist Hungarian Army had created a situation which was becoming untenable. The Transylvanians held their hand while their homes were being plundered and their relations transported, awaiting with exemplary discipline and forbearance the order of mobilisation. They have responded splendidly to the same, as was to be expected, and have generally behaved in such a way as to confirm the opinion that from them, and only from them, can issue that stimulus which is needed to call forth the sterling qualities latent in the Roumanian masses.

Reform of the Calendar.

We retired to rest on March 31, and, to the considerable satisfaction of many amongst us, woke up this morning to find that it was April 14. Nor have we been held for April Fools. It is a concrete fact that the Gregorian calendar has been introduced at last, and I think there will be few to raise the question whether the decree law in virtue of which the change has been effected is anti-constitutional or not. Up till now the New Style had been employed only in the postal administration, a modernisation which relations with foreign countries imperatively demanded. The increasing importance of Roumania, and especially the incorporation of Transylvania and Bukovina, where the Gregorian calendar is in use, have made its generalisation a necessity. Of course, the question of the advisability of introducing the change has been mooted before, but the project had never come to anything, for customs die hard, and here we were further hampered by the opposition of the Church. Indeed, even to-day this institution has remained faithful to the Julian calendar, pending the convocation of a General Synod of the Eastern Church. Until the latter has pronounced upon the matter we may presume that the festivals will be observed according to the Old Style, so that, unless the Church decides to come into line during the course of this year, we shall have to celebrate

the New Year before Christmas; and the adoption of the reform at a later date would have the curious result of causing Christmas to fall twice in one year. In view of these eventualities, it is to be hoped that the Orthodox Greek Church will not hesitate to waive all narrow considerations.

Gipsy Subjects of King Ferdinand, and—

After the adhesion of the Saxons to the new regime in Transylvania, followed by that of the Swabians of Banat, we now have that of the Gipsies of Transylvania. They have announced their intention of convoking a national assembly on April 27 for the purpose of proclaiming the adhesion of the Gipsy nation to the kingdom of Great Roumania. What the number of Gipsies amounts to in Transylvania and the other Roumanian provinces between the Carpathians and the river Tissa it is very difficult to say. They are notoriously numerous, and in the past served not only to regale the ears of their betters but to swell effectually the Hungarian statistics.

—The Use of Statistics.

It is needless to insist upon the efforts made by the Hungarian Government, indeed by successive Governments (for here they were dealing with nothing less than a national policy), to popularise the use of the Magyar language. It formed the most important part of the variegated system, known by the term "Magyarisation," applied in the provinces in which Magyars were in minority. The results proved totally unsatisfactory from their point of view, for they learned, after the expenditure of much labour spread out over many years, that you cannot "assimilate" a people by merely making the use of your language compulsory. None the less, this question of tongue became the mainstay on which they relied. In the compilation of the census of 1910 it was expected that the highest figures in favour of the Magyar element would be obtained by taking the maternal tongue as its basis. One of the questions asked, "Which is the language you speak with preference?" elicited a reply in many cases favourable to the Magyars. The non-Roumanian elements would have had nothing to gain and all to lose by the adoption of any other attitude. Designedly I say "non-Roumanians," for they had, and could have, no national pretensions of their own tending to autonomy. Yet, no doubt, the rule would apply in some degree to Roumanians as well, though probably only to those living in parts where they were more or less isolated, and where a man was marked if he gave proof of nationalist tendencies. In any case, pressure and intimidation were widely resorted to for the purpose of swelling the figures in favour of the Magyar element, by which errors amounting to many hundreds of thousands have been wilfully introduced. In the published statistical results the words "language of preference" were replaced by "maternal tongue." It is said that as using by choice the Hungarian tongue were entered "Gipsies, Jews, infants under two years, and the dumb!"

ALEXANDRIA MERCHANT SEAMEN'S HOME.

We have received an appeal from the Alexandria Merchant Seamen's Home, and are asked to make public the need for this most worthy institution. Everyone knows that Alexandria is the premier port of Egypt, and that the prosperity of the country has come about largely through the maintenance of sea-borne traffic. The numbers of seamen visiting the port increase, but the efforts to provide comfort for these fine men are very inadequate. It is desired that, when they land, these men shall find a real home, for the establishment of which donations are sorely needed. We have little doubt that the appeal will meet with success. Donations may be sent to the Honorary Treasurer, J. K. Clarkson, c/o Messrs. R. J. Moss and Co., 4, Rue du Telegraphe Anglais, Alexandria.

CYPRUS NOTES.

(From a Correspondent.)

Press and Public.

There is much speculation as to coming appointments, especially regarding the next High Commissioner, in spite of the feeling of uncertainty which prevails as to the fate of Cyprus. The office of Chief Justice, as well as that of at least two District Commissioners, is vacant. As the time of decisions by the Peace Conference respecting countries of the Near East approaches, greater interest is being taken in every telegram that arrives and in every report of the "Cyprus Mission" in London. The circulation of news throughout the island has become far more rapid, while the number of educated villagers increases very considerably year by year. In all the large villages and in groups of the smaller and more remote ones the schoolmaster or some other leading man enlightens the community at the church or the coffee house; and if political information does not reach the smallest hamlet it is not the fault of the Press. For here, in a population of less than 300,000, there are at least thirteen Greek newspapers; and how they all manage to exist is a marvel, especially as they print but few advertisements. Ten of them are weeklies under the following titles: *Truth*, *Liberty*, the *Fatherland*, *Voice of Cyprus*, *Herald*, *New Nation*, *Cyprus Echo*, *Age*, *Union*, and *Cyprus Guardian*. There are also one ecclesiastical and two satirical papers, the former of which is widely read. The Nicosia weekly, the *Voice of Cyprus*, heads the list with a circulation of 1,350 copies. The oldest paper is *Truth*, which appeared soon after the British occupation, and was very outspoken and anti-Government. Many of them have distinguished themselves by the ultra-patriotic and critical tone with which they discuss island affairs and grievances, both real and imaginary. The Cypriot wields a ready pen, just as he is an exuberant speaker. During the war the censorship has been exercised. Greek papers have not been allowed to leave the island, and this muzzling was presumably due to well-considered reasons. Most of the copies that left the island went to Egypt, where the Greek community includes a very large Cypriot colony.

Island Literature.

A list of island publications is published annually in the Government *Gazette*. Those of last year show some increase in the quality of the literary output. There is always a collection of ballads by village poets, who go from village to village reciting their works and offering them for sale "at popular prices." There are several amorous and military ballads, others describing the sensational murders of the year, the suicides of lovers—*e.g.*, "the tragic suicide of the handsome girl Rodothea Constantinou," and so forth. But the list includes more serious works, such as "A Complete Guide for the Tobacco Grower," a "Practical Guide for Silkworm Rearing," "A Cypriot Calendar," "An Art of Manual Work for Children," "General Principles of Agriculture" (price 8d.), and "Experimental Physics for Elementary Schools" (4½d.). A Turkish author publishes an "Anglo-Turkish Guide." All this shows a great advance in literary effort in the island. There is one Government publication, viz., "The Statute Laws of Cyprus for 1917." The Greek community proposes several authors of larger works, such as Mr. J. Kyriakides, author of the well-known Anglo-Greek Dictionary, and Mr. I. K. Peristiany, author of a portly history of Cyprus and other works on archæology.

Personal Notes.

Mr. A. K. Bovill, Principal Forest Officer, is acting as Director of Agriculture during the absence of Mr. W. Bevan on leave.

Dr. E. Corsellis, District Medical Officer at Limassol, acts for the Chief Medical Officer, Dr. Cleveland, while absent.

ENGLISH SPEECH IN EGYPT.

Speaking at the annual meeting of the Catholic Truth Society at Westminster Cathedral, on May 2, Cardinal Bourne said one result of the war would be an important extension of British influence. The work of the Catholic Church in Egypt had largely been done by French and Italian priests, but it was clear that in a short time English would become the prevailing language. The part that England had taken had made a great impression in the East and throughout the Balkans, and the Church should make use of English, too, in those countries where they were looking to England.

The *Pioneer* states that Muhammad Tarzi, editor of the Kabul newspaper *Seraj-ul Akhbar*, father-in-law of the Ameer Aman Ullah, has been appointed Foreign Secretary of Afghanistan. In Abdur Rahman's time he was a refugee in Syria.

THE NEW ROUMANIA.—II.

(From Our Own Correspondent.)

Bucharest, April 14.

Bukovina's Act of Union.

The General Congress of Bukovina assembled in the Synodal Hall of Cernovitz on November 28, 1918, and elected as its president M. Tancu Flondor, who read the following resolution, which was received with enthusiastic applause:—

The General Congress of Bukovina assembled this 28th day of November, 1918, in the Synodal Hall of Cernovitz, taking into consideration the following facts:—That from the foundation of the Roumanian Principalities Bukovina, including the ancient districts of Suceava and Cernovitz, has formed a part of Moldavia; that within the boundaries of this country are contained the ancient royal seat of Suceava, the royal tombs of Radautz, Putna, and Sucevitza, as well as many other relics of past Moldavia; that the children of this country, elbow to elbow with their Moldavian brethren, and under the leadership of the same rulers, have defended in the course of centuries the existence of their country against pagan invasion and all violation from without; that in 1774 Bukovina was reft by perfidy from the body of Moldavia, and annexed by force to the crown of the Habsburgs; that in the course of 144 years the Bukovinean people have had to support a foreign Government which ignored their national rights, and by unspeakable iniquities and persecutions strove to quench their spirit and stir up feuds with those peoples with whom they wished to live on terms of brotherhood; that in the course of 144 years the Bukovineans have been sacrificed on the battlefields of Europe, beneath a foreign flag, for the protection, glory, and aggrandisement of their oppressors, for which they had to endure as recompense the loss of their hereditary rights, the prescription of their language in public affairs, in the schools, and even in the church; that at the same time the native population was systematically impeded from availing itself of the riches and means of livelihood provided by the soil of this country, and dispossessed in large part of its ancient heritage; that, however, in spite of all these misfortunes, the Bukovineans, never losing hope that the day of deliverance, awaited with so much yearning and suffering, would at last come, never doubting that their ancestral heritage, cleft in twain by unlawful boundaries, would again be reintegrated by the reunion of Bukovina with Moldavia, and never losing faith that the great dream of the nation would one day be realised by the union of all the Roumanian lands 'twixt Dniester and Teiss to form a national unitary State—takes cognisance that this solemn hour has struck!

This day, when, after superhuman effort and sacrifice on the part of Roumania and of her great and noble Allies, the principles of justice and humanity, for all nations alike, have been enthroned throughout the world; when, in consequence of crushing blows the Austro-Hungarian monarchy has been shaken to its foundations and overthrown; when all the nationalities held by it in chains have gained the right of self-determination; the first thought of liberated Bukovina is directed towards the Kingdom of Roumania, with which we ever associated our hopes of liberation Wherefore we, the General Congress of Bukovina, embodying the supreme power of the country, and being solely and exclusively invested with legislative power, in the name of national sovereignty, resolve: That Bukovina, within its ancient boundaries extending to Ceremush, Colacin, and the Dniester, shall be henceforward unconditionally united with the Kingdom of Roumania.

Some Statistics of Bukovina.

Bukovina has a surface area of 10,441 square kilometres, with a population of 800,000, of which approximately 300,000 are Roumanians, the rest Ruthenians, Jews, Germans, Poles, Hungarians, and so on. Forty per cent. of the surface of its soil is covered with forests; the remainder is composed of cultivated land, gardens, pastures, vineyards, and so forth; 1,430 km. are said to be unproductive. Cattle and pig breeding have received a wide development, but the principal industry is woodwork. There are also salt, iron, and copper mines.

Amendment of Act of Union of Bessarabia.

On April 9, 1918, the Parliament of Kishinev unanimously proclaimed the union of Bessarabia with Roumania, reserving, however, her autonomy. In the meeting of December 9 of the same year the Assembly voted an amendment in the following motion:—

As a result of the union with the mother country of Bukovina, Ardeal, Banat, and the Hungarian districts inhabited by Roumanians within the confines of the Tisa and Danube, the Parliament of Bessarabia declares that Bessarabia renounces the terms of union stipulated by the Act of April 9, convinced as she is that in the Roumania of *all* Roumanians the purest democratic régime will prevail. The Parliament of Bessarabia, on the eve of the Constituent Assembly which will be convoked on the basis of the universal vote, annuls the other clauses of the Act of Union of April 9, and declares the unconditional union of Bessarabia with Great Roumania.

The above declaration received unanimous support.

Union of Bessarabia.

The remains of the enemy troops, utterly defeated on the banks of the Sereth, had helped to carry off a flashing victory over the Italians, whereby Roumania's successes were neutralised. Bolshevism was at its zenith. The Russian troops had thrown down their arms and left their Roumanian comrades to their fate, taking with them what booty they could. The enemy was advancing rapidly into Ukrainia, and Moldavia, battered, starving, ravaged by epidemics, would have been crushed as in a vice but for the acceptance of an inglorious peace imposed by an enemy devoid of chivalry. . . . Those early days of last year's spring were melancholy ones. Uttermost depression prevailed. Idealism had come by a sudden and violent death. Opportunism was justified.

It was this moment that Bessarabia elected to proclaim her unshakeable belief in the reality of her long dream of national unity exalted to the status of a moral and ethnical ideal. She demanded her union with the mother country. The abstract idea became crystallised in the world of fact. The event is of double significance. Bessarabia has, by her opportune and spontaneous act, imposed a debt of gratitude on the Roumanians of the Kingdom, the extent of which they have scarcely yet been able to realise. It is History's task to awaken them to a full consciousness of this indebtedness. From a wider point of view, the event has a profound psychological and ethnical significance, furnishing as it does an unanswerable reply to those who, both within and without the kingdom, averred with facile ignorance that the sense of race was dead among the Bessarabians.

The magnificent moral effect of Bessarabia's action, supported, be it said here, by the Transylvanian prisoners and refugees in Kishinev, cannot be overestimated. It was balm to the people of the Kingdom, and an encouragement to the States who yet remained to follow the example of Bessarabia. But, more than this, it was, and remains to this day and for all time, a splendid justification of Roumania's entry into the war offered to the world at an ideally opportune moment. Her fundamental motive was throughout the ideal of national unity. Like a beacon on a dark countryside, this ancient ideal had cast now a stronger, now a feebler light, but, as we have seen, it had never been extinguished; nor did it cease to serve as a rallying-point for the widely dispersed elements which to-day constitute the unitary state of Great Roumania.

Recent Statistics on Bessarabia.

Bessarabia has a surface area of 44,000 square kilometres, and a population of three millions, with a density of sixty-eight inhabitants to the square kilometre. Roumanians, numbering two millions, form the great bulk of the population, the remainder is composed of Russians, Ukrainians, Germans, Jews, Bulgarians, and a few French-speaking Swiss (Vaudois). Agriculture and cattle breeding are the principal occupations of the people. The different nationalities are represented proportionately as follows:—66 per cent. Roumanians, 9 per cent. Jews, 7 per cent. Ukrainians, 18 per cent. other nationalities.

MONTENEGRO AND SERBIA.

Sir Roper Parkington, Montenegrin Consul-General, is instructed to contradict authoritatively all the various rumours to the effect that the King of Montenegro has renounced his right to the throne and agreed to annexation of Montenegro to Serbia. Montenegro will be restored upon the same basis as Belgium and Serbia.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your last number of THE NEAR EAST you published a letter from a Turkish correspondent in Cyprus, referring to the question of the union of Cyprus to Greece.

It is hardly necessary to answer a correspondent who says, among other things, that "he can see nothing more startling than that any person living at Manchester should advance himself as a champin of the Greek cause!" and whose main argument against the cession of Cyprus to Greece is that the Cypriote Greeks are of no Greek origin!

But as the correspondent speaks about the future of the Turkish population of the island (i.e., the quarter of the population), I take the opportunity to repeat once more in the name of the population I represent, to my Moslem fellow-countrymen, that they may be absolutely sure that under the Greek regime, which, I understand, will soon be established in the island, the Turks will enjoy there an absolute equality of justice. The very fact that Turkish residents in Macedonia, Crete, and everywhere on the Greek territory have been appointed commissioners, have been elected mayors and also members of the Greek Parliament, is a proof of the broad views of the Greek administration and the liberal spirit of the Greek nation. If I am well informed, the Greek Cabinet will soon include among its members a Moslem.

To allay the apprehensions of Turcophils, alarmed at the idea of some hundreds of thousands of Moslems living under the Greek rule, Professor Andréades cites an interesting document signed by that same illustrious General, Franchet d'Espéry, who as a simple colonel visited Thessaly in 1910. He studied the Moslem situation with care, and published a detailed account in *La Revue du Monde Musulman* of January, 1911. The eminent soldier first praises the Greek population which, during the difficult periods of 1886-1897, never departed from the friendly attitude towards the Moslems. He dwells on the "excessively liberal" policy of the Greek Government; its respect for the faith, which went to the length of firing a cannon twice a day at the hour of Ramazan; its support of Turkish schools; and the privileged position of Moslems who, although electors and eligible for election, were relieved from military service; and Franchet d'Espéry could not refrain from contrasting this treatment with that meted out to the Greeks in Turkey. "General d'Espéry," observes Professor Andreades, "is writing of Greek administration before 1910. M. Venizelos had not then come into power. You know him well enough to be sure he will not be less generous, less tolerant, towards the Moslems, than were his predecessors." (F. R. Scatchard, in the *Asiatic Review*, April, 1919.) To hold such a conception of our duties towards the Moslem is a point of honour for us. The Moslems of Cyprus may feel absolutely certain about it.—I am, etc.,

DR. NIC. KL. LANITAS,
(Member of the Cyprus Legisl. Council).

2, Lancaster Street, W.2., May 6, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to the letters which have appeared in your paper on this subject, it may be well perhaps to emphasise the fact that the "Greeks" of the present day can lay but small claim, either in respect of language or of descent, to belong to ancient Greece, or Hellas.

I recollect an address given some years ago by the late Prince Leopold at the Royal Society of Literature, in which he referred to a paper by Sir Patrick Colquhoun on the subject of "Modern Greece as Considered as a Nationality." Sir Patrick pointed out that "the *patois* popularly called 'modern Greek,' and supposed by many to be a real language, is after all only a dialect of the ordinary commercial language of the Eastern Mediterranean which has gradually superseded the Italian, which was for so many years the chief medium of intercommunication. Since the establishment of the Greek Kingdom this jargon has been cultivated so as to become what it scarcely ever was before—a written language; the process whereby this result has been obtained being wholly artificial, words and expressions having been borrowed from classical authors and substituted for the Turkish, Italian, and other foreign words heretofore in use. The fact simply is that the ancient Greek or Hellenic population, never really very numerous within the old Greek area, became more and more adulterated as time went on, until it was so completely expunged that it may be safely stated that there is far less possible trace of it than of the Celtic race in Saxon England. The language is evidently that of an intrusive people who originally spoke another tongue, which they translated into Greek words, retaining at the same time their own idioms, grammar, and construction."

On the ground, therefore, of hereditary or ethnographical considerations, it would seem that the "Greeks" have no claims whatever to Cyprus, nor to any other extra territory in either Europe or Asia. Moreover, having regard to the present unrest in India and Egypt, and the number of our Moslem fellow-subjects in those countries, it would surely be most unwise to consent at this moment to any specially favoured treatment of Greece at the expense of the Mohammedans of Turkey.—I am, etc.,

CYPRIOT.

"MACEDONIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you kindly afford space in your valuable journal for the following?

The ex-King of Bulgaria was nicknamed "King Fox" in this country on account of Bulgarian diplomatic trickery, which was entirely placed to his credit, while the Bulgarian people and their political leaders were considered innocent and simple (but not by everybody).

"King Fox" has now retired from the diplomatic platform of Bulgaria, but the trickery continues—the last and most ingenious trick being "Autonomy for Macedonia." This is the Bulgarians' last trump in a lost game, and in playing it they are assisted by Bulgarophil Englishmen.

Have these gentlemen any conception of what would have been England's fate if this war had been lost? If they have, then let them remember that Bulgaria fought with our arch enemy for the ruin of England. Do they realise that if Bulgaria had remained strictly neutral the war would have been won at least a year sooner, and the lives of at least 100,000 sons of England would have been saved? Besides this, the horrible Serbian tragedy would have been avoided, likewise the ruin of Russia, and the sacrifices of our other Allies would have been considerably lessened.

It is really astounding that the treacherous Bulgarians, who betrayed Russia, the country to whom Bulgaria owed her liberation and creation, who were traitors to their allies the Serbians, traitors to the Greeks, and traitors to England and France, should now be championed by Englishmen!

Bulgaria merits severe punishment—a punishment as severe as that which would have been inflicted upon Italy by Germany and Austria-Hungary if they had won the war.—I am, etc.,

D. JANITSCH.

SERBIA AND MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Dr. Pavtchitch, in his article on the Pact of London in your last issue, speaks of "the terror caused by the Italian occupation of Dalmatia." May I ask him what he has to say about the terror caused by the Serbian Yugoslav occupation of her gallant sister country, Montenegro?

He complains of the Pact of London; will he try to vindicate the Pact of Corfu, in which, with no representative of Montenegro present, the Serbian Yugoslavs attempted to absorb Montenegro without the slightest reference to the wishes of her people? It is not for nothing that the adjective "infamous" has been applied to this Serbian Yugoslav Pact by the very people who now complain about the Pact of London!—I am, etc.,

ALEX. DEVINE.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

I am glad to say that I am a hero worshipper, and though my gallery of heroes is not quite so well filled as those of some of the modern papers—which seem to discover "heroes" by the dozen every day, for the purpose of inflicting their portraits and the portraits of their wives and children on a long-suffering public—it is by no means empty. Easily first, however, stands glorious Nelson; and his name in print will catch my eye and claim my attention at once. Thus, the other day, in looking over the pages of *The Times*, when I saw a paragraph headed "Nelson at Merton," I promptly proceeded to read it. It dealt with an entry in the Merton Parish Register, which is now in course of transcription, relating to the attendance of Nelson at the baptism of a nephew; and the register records that the baptism had been postponed for two years owing to the godfather's absence from the country for that period "on the King's business." This business, *The Times* explains, was the blockading of the French Fleet at Toulon, and the Admiral returned to his home at Merton for a month before sailing again on the cruise that ended at Trafalgar.

***

Now this has little bearing on the Near East, I am aware, and my apology for writing about it must be regarded as lying in my hero-worship mentioned above. But what I set out to record was the fact that another entry in the register referred to "relates to the baptism of a Nubian or Egyptian girl who was brought to Merton as a present for Lady Hamilton." Was the young woman referred to really Egyptian or Nubian, I wonder? And what was the end of her? Merton is, and doubtless was in those days, a damp, chilly kind of a place; and I suspect that Lady Hamilton's poor attendant did not withstand the rigours of its climate for long. If any reader can by any chance tell me more of this human "present," I shall be grateful. There is, by the way, on the Richmond Road, Putney, a public-house known as "The Arab Boy." This place acquired its title when it was owned and managed by an old seafaring man, who had as servant an Arab "boy," to whom he was greatly attached. If the young Arab was at Putney at the same time as the Egyptian (or Nubian) maid was at Merton, it seems to me that we should have a situation offering possibilities of an "Eastern romance" in the S.W. district. For Merton and Putney are within walking distance; though in these days, it is true, the degenerate youth usually makes the journey by bus. At any rate, I make a present of the idea to any enterprising author who cares to take it up!

***

In this country the colour and life of the Orient seem always to have possessed a great attraction. Englishmen are better able to appreciate and imitate an Oriental spectacle than to understand the Eastern mind, and with playwrights and playgoers especially this is so. I am prompted to write these words after witnessing Mr. Arnold Bennett's play "Judith," which has recently been produced at the Kingsway Theatre. The writing in the play, which is taken from the Apocrypha, is poor; but the setting, which depicts Judea and the Assyrians, is admirable. As an attempt dramatically to penetrate the Eastern mind, or through the Eastern mind satirically to stage Western ideas, Mr. Bennett's production is a complete failure; but the beauty of the colouring and the vividness of the life in which his agents on the stage move are dazzlingly fine. Is it, I wonder, that our love for the East is merely the common attraction to incomprehensible things, or is it that the old Eastern civilisation is more beautiful than ours?

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Situation in Egypt May 1.

Mr. HARMSWORTH, in reply to Captain Ormsby-Gore, said the Egyptian Cabinet resigned because it had lost authority. It was understood that, with the exception of the Ministry of Education, where a large number of officials were still absent, practically all Government officials had returned to work. Steps were being taken to bring those responsible for attacks upon persons and upon the property of the Egyptian State Railways and other offenders to trial. Captain ORMSBY-GORE also asked whether a Government Commission to inquire into the government of Egypt had been set up under the chairmanship of Viscount Milner; and, if so, what were its composition and terms of reference. Mr. HARMSWORTH: The question of the steps that may require to be taken in regard to the subject referred to is still under consideration.

King Nicholas.

Mr. CECIL HARMSWORTH, replying to Captain Ormsby-Gore, said: An assembly which met at Podgoritza last November announced the deposition of King Nicholas and the Union of Montenegro with Serbia. The decisions of that assembly have not been recognised by his Majesty's Government.

Archæological Research in Persia.

Mr. CECIL HARMSWORTH, Under-Secretary for Foreign Affairs, replying to Sir M. Conway, said: The French Government first obtained permission from the Shah in 1884 to carry on excavations on the ancient site of Shush, or Susa, in Southern Persia, and the work done by eminent French archæologists there during the past thirty-five years has materially contributed to the progress of historical research. The concession granted to the French Government on August 11, 1900, conferred the widest possible rights to the French in perpetuity, but the Persian Government recently upheld the view that these rights referred to "Crown Domains" alone, and a revision of the terms of the concession are believed to have been in contemplation. No protest was entered by his Majesty's Government. The French Government have from time to time waived their claims to exclusive rights in virtue of their concession, and have permitted British archæologists to undertake certain excavations in Persia, and their friendly attitude in this respect has prevented the monopoly from becoming a grievance from our point of view.

Topics in Parliament.

The subjoined headings are those given in the official Report.

MILITARY AWARDS AND DECORATIONS: Waziristan Expedition.—Defence of Kut-el-Amara. DEMOBILISATION: Employment of Indian and Coloured Troops. (April 29.)

INDIA: Reserve of Officers.—Industrial Commission.—Montagu-Chelmsford Report.—Police Pay.—DEMOBILISATION: Troops in the East. TROOPS IN THE EAST (HEALTH CONDITIONS). KANTARA CAMP, EGYPT. INDIA: Currency Notes.—Famine Conditions, Bombay.—Soldiers (Employment). (April 30.)

KANTARA CAMP, EGYPT. INDIA: Indentured Women.—Riots.—Retired Officers (Pensions).—Currency Notes.—Persons Interned. (May 1.)

SOUTHERN ALBANIA.—NAVAL AND MILITARY PENSIONS AND GRANTS: R.E. Officers' Widows (Indian Service). EGYPTIAN EXPEDITIONARY FORCE (May 5).

A supplement to the *Gazette* of April 30 contains a list of names of officers, ladies, non-commissioned officers, and men brought to the notice of the Secretary of State for War for distinguished and gallant services and devotion to duty in Egypt, Mesopotamia, and India.

In the House of Commons on May 1 Mr. Churchill stated, in reply to Lord Wolmer, that the approximate number of white troops in the Mesopotamian Expeditionary Force who are being retained in Mesopotamia through the hot weather of this year is 29,000.

PRESS ON THE NEAR EAST.

Education in Roumania.

The *Times* recently published some interesting statements in regard to Roumanian education, and the article shows that the present moment is itself an opportunity for British to take the place of German education in Roumania. It says:—

Though, however, it is chiefly on the physical and moral side that English education appeals to Roumania, there is also a marked increase of interest in English literature and thought. Before the war some of the masterpieces of English literature were known, but mostly by means of translations, for, except in Court circles and among those rich enough to have resident English governesses, a knowledge of the English language was not general. In the *lycées* it was very little studied, being an alternative to Italian or Greek in the senior years. Now it is proposed that English shall be compulsory in all *lycées*, and Roumania is asking for English graduates to fill the positions of English professors in her schools.

Various ways are pointed out in which England can help Roumania, chief among which are: (1) Englishmen to serve as professors of English in Roumanian universities; (2) trained and educated women as teachers in families; (3) a shop where English books are kept in stock; and (4) a larger English library for the general public. The need for governesses especially is great. The article concludes by stating that nearly all the English learned in Roumania will be through the agency of Englishmen or Englishwomen.

As English is now to be made a compulsory subject in all *lycées*, about fifty women graduate teachers will be needed for the girls' schools and one hundred men or women graduates for the boys' schools. The Board of Education has very kindly offered to choose these teachers by means of a committee, which shall contain a nominee of Roumania, and in the case of women teachers a representative of the Association of Headmistresses. As there are hardly any Roumanian teachers of English, the fact that English is to be learnt in all *lycées* means that practically every pupil will pass through the hands of an Englishman or Englishwoman. These teachers will be able to give the Roumanians the benefit of England's conclusions and dispel the idea that English education stands at a low intellectual level.

France and Palestine.

In the issue of *Palestine* for May 3 there are some frank words on the attitude and the future relation of France to the Jewish Palestine. The French Foreign Office, it says, attacked the idea and disbelieved the possibility of a British mandate and of a Jewish Palestine. But circumstances have made both these things certainties, and the French must revise their views of the Zionist movement, which hitherto they had thought to be mainly a commercial one.

There has been a tendency in France, and perhaps elsewhere, to misunderstand the Jewish relations with Great Britain. French statesmen have imagined that there is a pact between the Zionist leaders and the British Government, and that Zionism is subordinated to British political ends. Now, it is perfectly true that a Jewish Palestine fits in or harmonises with British interests as well as with British sentiments. It may be added that the most recent events in the East have for all far-seeing English public men emphasised this harmony, but the Zionist leaders have had in mind all the time one thing, and one thing only: the interests of the Jewish people. They have throughout been the servants exclusively of the Jewish people, and that now and always will be the guiding rule for the Zionist leaders.

It then points out how the old beneficence of France towards Jews has changed to a cold opposition. But it hopes ultimately for better relations between the two nations, and urges the mutual desirability of close relationship.

The Case of Armenia.

The current issue of *Ararat* comments vividly on the situation of the Armenian people. It says:—

The Council of Ten have decided to send out commissions to Asia Minor to study the problem on the spot. We do not question the wisdom of this decision, but we deplore its tardiness. Consummate statesmanship has been capable, in the past, of solving problems first and investigating them afterwards. "While the grass grows, the steed starves"; the proverb, as Hamlet said, is "something musty." Many small nations are cruelly stricken by the prevalent dearth of food: Belgians, Serbs, Roumanians, Czecho-Slovaks, Poles, and Syrians groan and travail together. But these people have, at least, the grim privilege of starving on their native soil. What of the expatriated Armenians, to the tale of hundreds of thousands? They had the temerity to take the side of the Entente—the *winning* side, be it remembered—and, behold! the Turkish "mohajjir" remains triumphant upon the hearth he has stained with the blood of its rightful owner and his wife and children. Cilicia, historically and ethnologically part of the Armenian heritage, happens to be the most fertile part; and it has a host of contending claimants, great and small. A people has been crucified: let their vesture be divided by the casting of lots—

"Like that vesture woven without seam
For which the dice rang on the Roman shield."

Let us now turn our attention to an aspect of the picture which, if not actually brighter, is at least less gloomy and obscure. A certain measure of work is being done, in the face of formidable difficulties, by the new Republic, whose seat is at Erivan. This infant Republic, not yet a year old, has had a stormy infancy; like Hercules, it had to grapple with more than one serpent while it was yet in the cradle. Let us hope that the analogy may be pursued further, and that as the Armenian Hercules waxes in thews and bulk, he may overcome the lions, hydras, and other miscellaneous monsters in his path.

Indian Troops' Procession.

The writer of "A Clubman's Notebook" in the *Pall Mall Gazette* of May 6 has made an excellent suggestion in connection with the procession in London of colonial troops. He says:—

I heard more than one friend who watched the splendid procession on Saturday ask why the authorities could not arrange a procession of Indian soldiers. Indians were in the firing line in France and Flanders while soldiers from other overseas parts of the Empire were still in training, and Indians have seen action in more theatres of war than people belonging to any other nation than the British. Some Indian soldiers are still left in France, and the Maharaja of Bikanir—a dashing cavalry officer—is in our midst. So an Indian khaki procession ought not to be difficult to arrange. Anything that we can do to show our warmth of feeling for the splendid help that they rendered to us during the most critical period of our history will be, I am sure, very much appreciated in India. Above all, it will prove to the Indian fighting classes that our interest in them continues unabated.

NEAR EAST BOOKSHELF.

INDIAN REFORM: POSTPRANDIAL VIEWS *

This reprint of the speeches delivered at the recent complimentary banquet to Lord Sinha contains no formal justification of its existence, but as the speeches were not worth reproduction on literary grounds, we may perhaps assume that it is a piece of political propaganda. As such it was well worth publishing, though we should have liked to be told something of the auspices under which it sees the light. The contents of the speeches can be stated very shortly. The Maharaja of Bikanir said a little about Lord Sinha and a good deal about the Indo-British Association; Mr. Montagu, as usual, defended himself vigorously against all and sundry; and Lord Sinha was, as might be expected, perfectly equal to the occasion. We fear that the symposium must have been somewhat dull, but perhaps the guests were cheered by Lord Carmichael, who wound up the proceedings with a humorous speech, the text of which is unfortunately not given.

TWO WOMEN. †

Readers of the Egyptian romances by Norma Lorimer will recall the descriptive ability exhibited in dealing with an Oriental setting. Excepting the brief semi-idyllic Japanese epilogue to the main theme of the book under review, the milieu in which Catherine Sterling and her friends live and move and have their being is London, and the period circa 1900-1905 A.D., at any rate before the day of the automobile and the taxi. Though the background is not so romantic as in "There Was a King in Egypt," yet it is suggested with a lifelike fidelity. Take, for example, the description of a day at Henley Regatta, which captures the very spirit and life of that pre-war carnival. The character drawing is remarkably good. Joan Gardner is a notable study of the shallow-headed, superficially clever, designing young woman. Catherine Sterling is of the opposite type, passionate, reserved, unselfish. No intelligent reader can fail to be interested in this strong and sincere novel.

* "The Insistent Claims of Indian Reform." Speeches at the banquet in London to Lord Sinha. (London: Philip Lee Warner.)

† "Catherine Sterling," by Norma Lorimer. (Stanley Paul and Co. 6s. net.)

BOOK NOTES.

In a pamphlet, published at 1s. net by P. S. King and Son, Baron A. Heyking deals with two subjects, "Bolshevism and Pusillanimity" and "The Baltic Problem." In the first he examines the dangers of Bolshevism, "the dry-rot of civilisation," and, in pointing out the impotence of Russia to save herself, he urges the intervention of the Allies. In the second, the matter is treated historically, and the claim for the autonomy of Esthonia, Livonia, and Courland is made out with plausible reason.

"Slavic Europe" (London: Humphrey Milford. 15s. net) is a selected bibliography in the Western European languages. The author, R. J. Kerner, has done his work most industriously and well. He does not claim that his work is exhaustive, but it is quite comprehensive, and, as far as we can judge, accurate. The book is satisfactorily arranged, well set out, and possesses an extremely good index. It is, in fact, a model of what such an effort should be.

"Three Anzacs in the War," by Lieut. E. A. Dunn (London: Skeffington. 6s. net), is a plain and not unusual recital of experiences in Australia and France during the war. The things recounted in this book are quite worthy, but make infinitely better conversation than reading.

"Jottings from the Front," by Kenneth E. Shaw (London: Allen and Unwin. 2s. 6d. net.), is a series of opinions (derived from experience in Gallipoli, Egypt, and France) on such questions as "Tommy's Religion," "The Padre," "Tommy's Pleasures." The book is rather preciously written, and with the common explanation and description of Army life, its vices and virtues; but the author endeavours to excuse himself for writing much that is trite and trivial on the ground that his book is for civilian edification.

"Judith: A Play in Three Acts," by Arnold Bennett, has been published by Chatto and Windus at 3s. 6d. net.

Mr. Heinemann has published "Bulgaria: Problems and Politics," by G. C. Logio. (10s. net.)

"Through Egypt in War Time," by Martin S. Briggs, has been published by Fisher Unwin at 21s. net.

Edmund Candler has published his "On the Edge of the World" through the house of Cassel. (10s. 6d. net.)

The American house of Macmillan have published at 4s. 2d. net "The Master of the Offices in the Later Roman and Byzantine Empires," by Arthur E. Boak.

BOOKS RECEIVED.

"Recollections and Reflections." By Coles Pasha, C.M.G. (London: St. Catherine Press. 8s. 6d. net.)

"The War Work of the Y.M.C.A. in Egypt." By James W. Barrett. (London: H. K. Lewis and Co., Ltd. 10s. 6d. net.)

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916)

Look at the Face in this Picture.

This woman was photographed as you see her; clad in a single garment—her husband's coat. Note the look of pain in the eyes and in the turn of the head.

COULD A LOOK APPEAL MORE POIGNANTLY?

If you wish to visualise the state over the greater part of Syria during the War, read Josephus: "Siege of Jerusalem." No horrors then were unparalleled in 1914-1918.

ALLENBY HIMSELF APPEALS FOR HELP.

He says:—
"The need is urgent. All possible help is needed."

In Damascus alone the distress is so great that the city could swallow up all the available resources of the Fund. The Lebanon and the North are as bad.

SEND CHEQUES PAYABLE TO SECRETARY,

110, VICTORIA STREET, S.W.1.

Chairman: Lt.-Col. SIR HENRY MacMAHON, G.C.M.G., &c.
Hon. Treasurer: J. F. W. DEACON, Esq.

JERUSALEM: S. & P.R.F., Jerusalem. CAIRO: St. David's Buildings, Cairo.

M. Také Jonescu has arrived in London from Paris.

Prince George Valentine Bibesco left London on May 2 for Paris.

Admiral Viscount Jellicoe left Bombay for Colombo on April 30.

M. Spalaikovitch, Serbian Minister to Russia, has arrived in London from Archangel.

The Roumanian Minister left London on May 2 for Paris to attend the Peace Conference.

M. Danielopol, the Roumanian Minister to Washington, arrived in London on May 5, from America.

Princess Marie, daughter of the Queen of Roumania, is to arrive in London this week.

Lieut. the Hon. Everard Feilding, R.N.V.R., has returned to 5, John Street, Mayfair, from Syria.

Mr. A. Nias, Director-General of the Imperial Ottoman Bank, has left London for Constantinople.

Mr. B. A. Melandrinos, the Greek Consul-General in Liverpool, is recovering from his recent illness.

M. Titulescu, formerly Roumanian Minister of Finance, arrived in London on May 1 from the Continent.

Admiral Beatty is shortly going on a cruise along the Italian coast, and is subsequently proceeding to Greece.

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation, left London on May 6 for Paris.

M. J. Gennadius, G.C.V.O., has been appointed by the French Government Grand Officer of the Legion of Honour.

Sir Ronald Ross has been made a Fellow of the Royal Society of Sweden (University of Upsala) for his research in malaria.

Captain Matilda Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation, returned to London on May 6 from Paris.

The Council of the Institution of Civil Engineers have awarded a Telford Gold Medal and an Indian Premium to Mr. R. B. Joyner, C.I.E. (Bombay).

A marriage has been arranged between Major W. H. Lang, 16th Cavalry, I.A., and Miss Gwyneth Bewley, daughter of the late B. M. Bewley Bey, of Cairo, Egypt.

Sir Prabashankar Pattani has returned from his visit to India, where he was associated with the Reforms Committees, and has resumed his duties as member of the India Council.

An engagement is announced between Captain P. W. Thorogood, Civil Service Rifles and Indian Army Reserve, and Dorothy, only daughter of Mrs. Pepper, Ivermore, East Twickenham.

General Sir James Hills-Johnes, V.C., G.C.B., D.L., J.P., of Dolaucothy, Llanwrda, Carmarthen, who served in the Mutiny, and who died on January 3, left £14,935, of which £14,561 is net personalty.

The *Egyptian Gazette* of April 16 states that Lieut.-Com. V. L. Trumper, who has been in hospital in Cairo undergoing an operation, is now convalescent, and expects to return to Port Said shortly.

Mr. J. G. Morris, late Deputy Assistant Financial Secretary to the Sudan Government, left Khartoum at the end of March for England, on his way to take up his new post of H.B.M.'s Consul at Teneriffe.

The *Tablet* says that Father Felix Couturier, O.P., of Woodchester Priory, who has been appointed Apostolic Visitor for Egypt, has had a most distinguished career as a chaplain with the E.E.F. in Palestine during the war.

The marriage of Miss Cicely Phyllis Summers, daughter of Mr. and Mrs. F. B. Summers, of Froyle Place, Alton, Hants, to Captain John Thomson Glover, of the 35th Sikhs, was solemnised at the parish church of Froyle on May 1.

General Raja Sir Hari Singh, Commander-in-Chief of the Kashmir Army, accompanied by Captain C. W. A. Arthur (Royal Artillery), Major the Nawab Kusru Jong of Hyderabad, and Major Hoshiar Singh have arrived in London from India.

The marriage was celebrated on April 28 at St. Nicholas, Thames Ditton, between Alexander Harry Henley, eldest son of Alexander Henley, 8, Woburn Place, Russell Square, and Dorothy, second daughter of the late Rev. Sydney S. Scott, Government Chaplain, Bengal, India.

The marriage took place on April 21 at Maymyo, Upper Burma, between Philip Christopher Fogarty, Indian Civil Service, son of the late Philip James and of Mrs. Fogarty, Glenoir, Galway, and Hilda Spenser, elder daughter of the Rev. Herbert and Mrs. Swithinbank, Wonston Rectory, Hants.

At the Oratory, Brompton, on April 30, Captain E. C. Lentaigne, D.S.O., 4th Gurkha Rifles, eldest son of the late Sir John Lentaigne, was married to Cecilia Mary, youngest daughter of the late Colonel C. T. Bunbury, Rifle Brigade, and Lady Harriot Bunbury, of Cotswold House, Winchester.

The marriage will shortly take place between Mr. Ernest Reginald Park, 1st (K.G.O.) Sappers and Miners, of Colombo, Ceylon, and Marguerite Adelaide, only daughter of C. Roberson Park, of 44, Woodstock Avenue, N.W.4, and granddaughter of the late Charles Park, of Minster, Isle of Thanet.

The marriage was celebrated on April 29 at St. Saviour's Church, Dartmouth, between Captain W. A. S. Grey, I.A., Burma Commission (retired), son of Lieut.-Colonel and Mrs. W. F. H. Gray, and Kathleen Mary, youngest daughter of Dr. and Mrs. Paulson, The Wilderness, Dartmouth.

The marriage took place at Salonika on April 28 of Brevet Major (acting Lieutenant-Colonel) Claude W. H. Taylor, D.S.O., Assistant Provost-Marshal, Salonika Army, and Royal West Kent Regiment, and Margaret Jameson, eldest daughter of Colonel and Mrs. H. W. Jameson, of Sunninghill.

An engagement is announced between Major E. F. Marriott, 12th Cavalry, of Mahaousa Madulkele, Ceylon, younger son of the late Major C. F. Marriott, 6th Dragoon Guards, and Mrs. Marriott, of 159, Fulham Road, S.W., and Gladys, eldest daughter of Mr. and Mrs. J. E. Adamson, of Durban, South Africa.

The thirteenth annual general meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, near Beyrout, will be held at 3 p.m., May 16, at Sion College, Victoria Embankment, E.C.4. The director, Dr. H. Watson Smith, who has just returned from Syria, will relate with lantern slides his experiences at the hospital.

The engagement is announced between Lt.-Col. Sir Norman Leslie, Bt., C.B.E., Central India Horse and Royal Air Force, Air Attaché to the British Embassy, Paris, only son of the late Sir Charles Henry Leslie, Bt., Indian Army, and Betty Elise, second daughter of Mr. J. T. B. Sewell, C.B.E., LL.D., and Mrs. Sewell, of 47, Boulevard Lannes, Paris.

The King has granted permission to wear the Serbian Order of Saint Sava (of the classes stated) to the following:—Class I.: The Duke of Portland, the Marquess of Crewe. Class III.: The Earl of Northbrook, Professor C. W. C. Oman. Class IV.: Mr. C. R. W. Adeane, the Rev. John Clifford, Mr. A. Maquarie, Mr. W. Ward. Class V.: Miss Lily F. Waring, Mr. F. F. Euren, Mr. W. Heal, Mr. W. G. Hooper.

The marriage was celebrated on April 2 at the old Cathedral Church of St. John's, Calcutta, by the Venerable W. K. Firminger, B.D., M.A., Archdeacon of Calcutta, between Vernon Foxwell, elder son of the late A. T. Gray, of Singapore and Manchester, and Mrs. Gray, of St. Annes-on-the-Sea, and Bertha Marie, only daughter of Mr. and Mrs. J. J. Meikle, of Calcutta.

The attention of our readers is drawn to a lecture which will be delivered by General Torcom (Chief of the Armenian Military Mission in London), at the offices of the British Armenian Chamber of Commerce, 1, 2, and 3, Oxford Court, Cannon Street, next Friday, May 16, at 3 p.m., on "The New Armenia." It may remembered that the General played a conspicuous part in the war, especially in connection with the military operations in the region of Erzeroum. General Torcom, it is understood, proposes to deal with his subject in three sections, viz., Old Armenia and the great war, Armenia during the war, and Armenia after the war. Readers interested are invited to apply to the hon. secretary of the chamber for tickets for admission.

On May 3 His Majesty inspected a party of Indian officers, non-commissioned officers, and men belonging to the Remount Department, under the command of Capt. H. O. Clogstoun, Labour Corps, who are on short leave from France, and also a party belonging to the Indian Army Military Tournament team from the Egyptian Expeditonary Force, under the command of Major H. V. Lewis, who have been competing in the army athletic meeting.

The marriage was celebrated on April 30 at St. Barnabas Church, Kensington, by the Rev. R. W. Odell, Vicar of St. Matthew's, Brighton, assisted by the Rev. H. H. Lowe, vicar of the parish, between Captain Brian Henry O'Donnell, 26th (K.G.O.) Light Cavalry, Indian Army, elder son of Lieut.-Colonel G. B. O'Donnell, late Indian Army, and Mrs. O'Donnell, of Brighton, and Dorothy Racster, only daughter of Mr. and Mrs. Racster Everitt, of 77, Addison Road, Kensington, W., late of Blundellsands.

Our readers may be interested to have some particulars of the author of the article "The Pact of London," which appeared in our last week's issue. Dr. Pavitchic, who is fifty-two years of age, has had a very full career, which has been devoted to the emancipation and elevation of the Serbo-Croatian people. Early in life he became famous as a lyric poet. In the Dalmatian Sabor and in the Austrian Parliament, of both of which he was a member, he has represented violent anti-Austrian views. For three years after the outbreak of the world war he was under the accusation of high treason. He was largely instrumental in persuading the Austrian Navy to mutiny. To him as much as to anyone is due the union of all Yugoslavs in one State under the dynasty of Karageorgevitch. Dr. Pavitchic is now in London in connection with the Peace Conference.

APPOINTMENTS, PROMOTIONS, &c.

M. V. Popopovitch has been appointed Secretary to the Serbian Legation in London.

Mr. L. C. Adams, I.C.S., has been placed on special duty under the Government of India in connection with the reforms scheme.

When Mr. E. A. Molony, Commissioner of Agra, proceeds on leave, Mr. W. H. Webb will act as Commissioner and Mr. S. H. Thompson will act as Collector of Agra.

The *Egyptian Gazette* states that Mr. E. H. Goschen, Controller of the Secretariat at the Finance Ministry, is retiring from the Egyptian Government service this year.

General Allenby has provisionally appointed Brigadier-General Sir George Bohun Macauley to be Controller of Communications pending the formation of a Ministry of Communications.

The Foreign Office announces that all vacancies in the General Consular Service have now been filled. No further applications can be considered for a period of six months. A few vacancies exist in the Levant and Far-Eastern Consular Services. Candidates must be between twenty-two and twenty-five years of age and unmarried.

OBITUARY.

The death occurred on May 1, at Dalreg, Hatch End, of Edward Forster Drake-Brockman, F.R.C.S., Lt.-Col. I.M.S. (retired).

The death occurred on April 13, at Cawnpore, India, of Ethel Hawthorne, widow of G. C. Winnington-Ingram, I.C.S., late Deputy Commissioner of Fyzabad.

Major H. H. Wigram, late Scots Guards, died in London on May 1. He served in the Sudan Expedition of 1885, when he received the medal with clasp and the bronze star

The death occurred on April 24, at Calcutta, of Frank Sandford Kerr, fourth son of the late John Kerr, LL.D., H.M. Inspector of Schools for Scotland, and of Mrs. Kerr, 15, Royal Terrace, Edinburgh.

The death of Sir John Pentland Mahaffy, Provost of Trinity College, Dublin, removes the figure of one who will be greatly missed. By our readers he will be remembered chiefly for his Greek scholarship and for his interests in Egypt.

Colonel James Douglas Lysaght, formerly of the Army Pay Department and the Royal Dublin Fusiliers, died suddenly on April 29 at Southsea, in his seventy-first year. He saw service with the Sudan Expedition in 1885, for which he received medals with clasps.

Colonel Henry Stephenson Clarke, who died at Wimbledon on May 1, fought in the Indian Mutiny campaign, and was present at Cawnpore and the final capture of Lucknow. Six years later he was engaged in the operations in the Umbeyla Pass, and shortly afterwards saw service with the Bhootan Expedition.

Major-General Henry Thomas Arbuthnot, C.B., died at Ramsay House, Shooters Hill, on May 3, in his eighty-fifth year. He joined the Royal Artillery in 1853, and served throughout the Crimean Campaign. He afterwards fought in the Indian Mutiny campaign, and was present at the siege and capture of Lucknow.

NEWS IN BRIEF.

The *Busreh Times* announces that combined Civil Post and Telegraph Offices have been opened at Badrah and Mendali, and Civil Post Offices at Anah and Zahko.

General Grazziani, who has replaced General Berthelot as head of the French Military Mission in Roumania, has arrived at Bucharest, and taken over his command.

A British post-office has been opened at Smyrna, and correspondence (which may be registered) of all kinds (except parcels) can be accepted for delivery *poste restante*.

It is stated in the *Palestine News* of April 10 that that journal has ceased to be an Army newspaper, and will henceforth be administered by the Oriental Advertising Company.

Following the recognition of the Siberian Government as the Government of Russia, the Serbian Government has decided to accept M. Standman as Siberian Minister in Belgrade.

Complaint is made in the Greek Press that the commander of the Allied troops in Bulgaria is giving ear to Bulgarian suggestions detrimental to the prestige of the Greek mission.

Reuter's Bombay correspondent reports that there were no demonstrations in Bombay on the occasion of the deportation of Mr. Horniman, editor of the *Bombay Chronicle*, who has been ordered to leave India.

On May 13, at 4 p.m., the Royal Asiatic Society, 22, Albemarle Street, is holding an anniversary meeting, over which the Rt. Hon. the Lord Reay, K.T., P.C., G.C.S.I., LL.D., is to preside. The object of the meeting is the election of officers, members of the Council, vice-president, and auditors.

From the *Daily Malta Chronicle* we learn that the officers of the French Naval Delegation were entertained to a Farewell Dinner at the Casino Maltese on April 13. The banquet was presided over by Professor G. Debono, M.D., and speeches were made by Dr. Ugo P. Misfud, M. Benoist D'Azy, and M. Louis Ledoalx, the French Consul in Malta.

On April 28, in the Great Hall of King's College, Strand, Mr. A. E. Henderson gave a lecture on Saint Sophia. In introducing the lecturer, Dr. Gennadius, Minister Plenipotentiary of the Kingdom of Greece, said that there were three reasons for the existence of wrong conceptions regarding Byzantine history. First, the bitter tradition of Rome, which conquered Greece but could not subdue Greek spirit. Secondly, the strife between the Church of Rome and the Orthodox Greek Church. And thirdly, the unfortunate incidents which occurred in the Crusades.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant, Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.

FRIDAY, MAY 9, 1919.

THE TERMS OF PEACE.

The terms of peace as made known to the world on Wednesday represent what may be called the Western aspect of a formidable problem. They appear to provide drastically enough for the destruction of German militarism; and less drastically for the reparation of damage done by the enemy and the payment of an indemnity. Whether the destruction of militarism will be permanent in Germany, whether, in any event, it will not rear its head elsewhere, and whether the payment of the tribute whose total sum is not yet calculated will be fully carried out in the long series of years allocated to that purpose, are matters about which only the foolish will dogmatise; the wise will watch the progress of events and the shaping of the new world before they prophesy. As regards the Eastern aspect of the terms, with which we are here more immediately concerned, it appears at first sight to be satisfactory. Germany is compelled to repudiate the Treaty of Brest-Litovsk, and the whole series of alliances and semi-protectorates which she built up from Turkey to Finland; similarly, she has to renounce all her oversea possessions, and formally to annul all those pretensions to Morocco which since 1905 have been the basis, not so much of a definite African policy as of a pin-prick policy against France. In this latter respect, however, the extra-European terms diverge sharply from the Eastern terms. In the former case it is decided what is to replace German dominion; in the latter it is not. Since the German colonies are to be administered by the victors over Germany, under the somewhat transparent mantle of the League of Nations, the possibility of any revival of the German colonial empire appears definitely to have vanished; from Africa she is excluded by England and France, from South America by the Monroe Doctrine, and the whole German policy of coaling-stations and naval bases by which she set such store in the years before 1914 therefore cease to have any meaning for the future.

Some aspects are far more nebulous. The Polish corridor is hardly likely to prove an avenue of peace, and the Allied statesmanship, which has hesitated long over this imperfect solution, can hardly congratulate itself or the Poles on the compromise. The Austrian terms are still unknown, but the problem is here more radical, since Austria has ceased to exist, and the real question is not altogether the matter of territorial boundaries, but the stability of the new States which will be erected in the place of Austria. On that matter, again, it is too early to forecast the future; but it must be frankly admitted that recent events have somewhat disillusioned those who anticipated that oppressed nationalities had none of the Chauvinism or Imperialism of their stronger neighbours, or that they cherished feelings of respect and cordiality for the other peoples who suffered similar disabilities. Nor is it likely that the enmities of which so much has been seen since last November will cease as soon as the definite boundaries and terms are announced. The Peace Conference, to judge from recent reports of its activities, seems, indeed, to have recognised this fact. The reported settlement—if one may use the word without abuse—of the Fiume difficulty, is a species of postponement and playing for time which does not always succeed where passions, as in this case, are strong. Nor does the problem of Fiume stand alone; it is indeed typical of the whole of the Balkans, where for the moment confusion reigns supreme, and society itself quite recently seemed threatened with dissolution by the Bolshevist invasion from Russia. It is an unfortunate fact that the leading Allied statesmen have no actual knowledge either of Russia or of Bolshevism, and that their experience of the Near East is equally to seek. In these circumstances there is no great reason to wonder that their statecraft is hesitating and contradictory, and that, assailed by a multitude of voices bidden to the council, months should elapse without the emergence of a definite policy.

The terms published so far are naturally silent as to the destiny of Turkey; yet in some ways the settlement of the problems which are connected with the Ottoman Empire are the most difficult, as success in dealing with them will be the most decisive test of the wisdom or the reverse of the statesmen in Paris. But of the fate of Constantinople no hint has yet been given, although there have been some disquieting hints of late that the Conference has again been contemplating that fatally easy and also finally unsatisfactory method of international control—a plan which secures the maximum of friction with the minimum of efficiency. The case of Armenia is, perhaps, typical of the rest of the Ottoman Empire; for here it is stated that the Conference, unable to make up its mind, has appointed a committee to examine the question on the spot, but, having appointed the committee, is still in two minds about dispatching it. This indecision and delay cannot be allowed to continue beyond a certain point without grave risk to the future prosperity of the regions concerned; the uncertainty of the present conditions is itself a danger, and it is not merely stultifies commercial enterprise and sound reconstruction, so long needed in Asia Minor, but it also may encourage the growth of dangerous political ambitions, which will be dangerous precisely because they are unpractical and impossible of permanent realisation or stability. This consideration applies to the whole of the Black Sea littoral, where government has practically abdicated, to Armenia, which has suffered so cruelly in the war, and which, in consequence, has the natural tendency towards the full independence which, however, her wiser men recognise she could not support; and it would perhaps also apply to the difficult and delicate position which has arisen in Syria, which in certain circumstances might become a permanent source of disquiet. There is a danger, of course, that these matters may be allowed to drift indefinitely; the danger, perhaps, not so much that Germany would seek her opportunity to recover her lost prestige in these regions—for Germany will have to construct her whole internal polity before she can attempt any successful expansion, and that must be a matter of years—but that the whole Ottoman countries will be allowed to drift nearer to anarchy. Great Britain and France, as the Powers chiefly responsible for Asia Minor, cannot permit that dangerous consummation, which would proclaim the bankruptcy of our statesmanship. We have become, as it were, the residuary legatees of the German estate in the East, and the legatees will be responsible at the bar of history for the use to which they put their heritage. On one matter at least there must be a clear understanding as quickly as may be; it is that Britain is answerable for the future maintenance and expansion of the Baghdad Railway. Our position as an Eastern Power demands this, to say nothing of its reaction on our Indian policy. It is evident indeed that the task before us will be a formidable one, and will entail a considerable increase of our already great Imperial responsibilities. Asia Minor is at present in somewhat the same condition as Egypt was in 1882. Whatever else may be said about our rule in Egypt—and the recent wave of unrest is no condemnation of the solid work of thirty years—it has brought material prosperity out of bankruptcy. That, and no less, will be our task in those parts of Asia Minor for which we accept responsibility; and we look confidently forward to the work, in the belief that our capacity for sound government and honest, constructive administration and bringing order out of chaos is as great as ever it was. But it is useless to burke the fact that the longer the inevitable decision is delayed the more difficult will the task become.

EGYPTIAN MEMORIES.

THE NIGHT JOURNEY OF MOHAMMED.

The night of the Prophet's miraculous journey from Mecca to Jerusalem, and thence to the seven heavens, is an anniversary very solemnly observed in all the large centres of Islam, generally on the 27th night of the seventh month, Rejeb, which, of course, begins at sunset on what is the previous day in our reckoning. The most interesting occasion in my own experience was at Cairo, the scene being an open court of the Abdin Palace, into which we passed through what was then the new entrance to the Khedive's harem. In this spacious oblong, overlooked on all sides by the windows of that portion of the palace, elaborate preparations had been made. At each end was pitched a handsome tent, lined with crimson cloth, the ground being covered with carpets. In one of these tents a number of silk-covered armchairs and sofas, reserved for the Khedivial party and guests, formed large semi-circles, lighter chairs being provided for other spectators. Handsome carpets were spread over the central space of the open court, and all round the walls, upon wooden frames, countless wax candles in glass shades were burning. The other tent was filled with persons privileged to attend. At its front corners two high poles were fixed, the upper portions of which were encircled with several rings of glittering lamps.

About 10 p.m. we entered, with two sons of the Khedive, one of them the present Sultan, then a boy of about eight. The Khedive himself was absent at Alexandria. Near us sat the grave-looking Azim Effendi, Sheikh of the Mevlevi ("whirling") dervishes, and a group of pashas and beys. As we entered a *Zikr* of Kadrieh dervishes was proceeding, their long black hair falling over their shoulders. It did not differ much from the performance to be seen every week at their Tekkieh in "Old Cairo" and elsewhere. These Kadris come from all parts of Islam, and many of them seemed to suggest in their character a blend between the fiercer fanatics of Asia and the more peace-loving sons of the Nile Valley.

At the close of this *Zikr* a company of Mevlevi dervishes moved quietly into their place. Their Sheikh rose at the same time with much dignity, and a Bey of the Court circle walked with him to his *seggádeh*, or seat of honour. His *khalífeh*, or deputy, recited a prayer. The dervishes then revolved through the eccentric orbits of their celestial dance, as they do every Friday at their Tekkieh in the Helmieh. It was accompanied by the soft, weird music of their flutes, which is said to transport their souls to the region of the heavenly spheres. When their circlings ceased, the *khalífeh* offered another prayer on behalf of departed saints of the Order, of their Superior, of the Sultan of Turkey, the Khedive, and of his family, and the dervishes then returned to their seats.

Next followed a *Zikr* of Moghrebi, or North African, dervishes, clad in various garbs, some—if not all—being of the Isawíeh Order. Their exhibition was most peculiar. It began with a movement common to several orders in Egypt. Those who can remember the standing jumps which accompanied Mackney's song of "The Perfect Cure" can realise exactly its character. Their Sheikh took a most energetic part in what followed, skipping about like an excited bird, clapping his hands, and inciting his followers to their utmost vigour. They constantly repeated the name of Allah, and as the *Zikr* proceeded tambourines and kettledrums were beaten, and the sound must have been audible far beyond the precincts of the palace. After a performance of rather tedious length, the Sheikh ran to the side of the Court, lit several torches, and handed them to selected dervishes, who proceeded to thrust them into their mouths. This was the introduction to a number of other fire tricks, of a not very high order. Some of the performers ran up and down on either side of the *Zikîrs*, with long torches, the flames of which, from where we sat, seemed completely to encircle their heads and necks. Meanwhile the Sheikh ignited a large faggot, one end of which was frayed out. This created a great blaze. Another dervish ran out of the group, and seizing the faggot, held it close to his breast, as he ran backwards and forwards, but making judicious use of such wind as was blowing. After some time he retired, apparently none the worse. The last exhibition was of a kind quite new to us. A dervish, enveloped in a spacious white robe of some transparent material, seized a blazing faggot, introduced it beneath the garment, and whirled himself round and round, while his robe filled out till it looked like a fire-balloon—or, as one of the young princes observed, like a huge *fanoûs* (lantern). This was by far the cleverest performance on the part of the Moghrebis.

A *Zikr* of saadieh dervishes which followed was comparatively uninteresting. It was essentially Egyptian, but there was no serpent-eating on this occasion, as is often practised by this snake-charming order. It included constant swaying of the body from right to left and back, with guttural panting and invocations of Allah. One or two of the *Zikrs* revolved, in imitation of the Mevlevis, for what seemed a very exhausting time. This strange and varied introduction brought us to the really religious part of the celebration.

Facing our tent at a short distance was a small daïs, and on to this stepped the Sheikh Ali Naïl, one of the foremost and ablest of the Cairo Ulema. He was professor of Arabic and sacred lore to the Khedive's family, and a man of genial and agreeable manners. It was now after 1 o'clock a.m. Opening a volume, he read an account of the Apostle's night journey, with comments. This ascension is interpreted in different ways by Moslems, the majority accepting it in a literal sense, while many regard it as a vision. In the Koran there is only one allusion (Surah xvii.) to the fact that the Prophet was carried, on the winged animal Burák, from the temple at Mecca to that at Jerusalem. During the apocalypse the rule of five daily prayers was ordained; the divine command originally prescribing fifty, and being modified on Mohammed's repeated intercession.

What struck one most, at the time, was the apparent incongruity of prominence being given, on so solemn an occasion and during the greater part of the time, to an exhibition of dervish *Zikrs*, some of them eccentric and even ludicrous. So popular have these *Zikrs* become that one can hardly picture any great religious service in Egypt without them. I spoke next day to Sheikh Ali Naïl, whom I knew very intimately, on the subject. He was very guarded in his reply. Many dervishes, he said, are good men; but there are many things which dervishes do that are not countenanced by the Ulema.

R. M.

The Madrid correspondent of the *Morning Post* reports that the Minister of War announces, as the result of the recent operations in Morocco, the complete submission of the warlike Anjera tribe and the occupation of their lands by Spanish troops. A military advance has also begun west of Melilla (Mediterranean coast), where no movement has been made for years, towards Tafersit, in the heart of the Riff. The first operation has been successfully carried out.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Provision is made in the Peace terms for the resumption by the Danube Commission of its pre-war powers, but henceforward only Great Britain, France, Italy and Roumania are to be represented on it. This change is eminently desirable, and nowhere will it be received with greater satisfaction than in Roumania. It is further provided that an International Commission is to be appointed to administer the whole Upper Danube from the point where the competence of the Commission ceases until a definitive statute is arrived at.

***

I see that the committee which has been investigating the industrial possibilities of Ceylon recommends the opening of brick and tile factories in the clay districts where wood fuel can be cheaply obtained. As regards the manufacture of cement, the committee states that limestone suitable for cement manufacture is to be found in abundance at Jaffna, but unfortunately there is the problem of cheap fuel. Stress is laid by the committee on the scope for the production of hydro-electric power in the island, and the Government is urged to complete the investigation on this subject without loss of time.

***

The case of sugar, to which I referred last week, is apparently one of the few instances in which the experiment in preferential duties outlined in the Budget is likely to be of immediate value. The supply of tea imported into this country, apart from that which reaches us from India and Ceylon, is to all intents and purposes a negligible quantity, and as the probable effect of reducing the consumption of China and Java teas would scarcely justify preference for the Indian and Ceylon product, one is forced to the conclusion that in this case the net result will be the reduction of the price of tea by a roundabout method. As regards dried fruits—the item which concerns the Near East in particular—I am informed that it is not thought that the preference will have very much influence on the trade. That is the view of the trade, but there is, of course, the very possible contingency that preferential treatment may encourage developments within the Empire.

***

The effect on India of this feature of the Budget will be small. If there was a shortage of markets for tea the preference would be a consideration, but on the contrary there is the practical certainty that as soon as conditions are normal India will have a new market for this product in Russia, while the war has helped to make the beverage popular in regions where it was previously little used. As regards sugar, India, as the largest importer in the world, is only indirectly affected. In the circumstances "Indiamen" will doubtless agree with the view expressed to me this week by a very prominent member of their fraternity as to the most interesting feature of the Budget. "The middle classes were unable to live before," he said, "but now millionaires will be unable to die!" Which, I think, puts the matter in a nutshell.

Particulars are now available regarding the small Greek loan of £3,000,000. It appears that the banks have applied for a third of it, and that support to the extent of another third was forthcoming from the Greek communities in America. At the present time there is so much money in Greece as the result of war conditions that I imagine that a loan of several times the amount could have been floated without any very great difficulty.

***

The future importance of Baluchistan owing to the extension of the Indian railway system to Robat on the Persian frontier, was emphasised by Mr. H. R. C. Dobbs, C.S.I., C.I.E., Revenue and Judicial Commissioner there, in a recent address to the Sardars of Baluchistan. Instead of being a desert country at the end of the world and leading to nowhere, Baluchistan, he said, had become the principal gateway between India and Central and Western Asia. He pointed out that everything needed by Persia must now be imported through India or from the Persian Gulf, and he urged the Sardars to encourage their young men to take part in the great and profitable traffic. They must take action quickly, he added, and secure their share of the new trade before others from outside Baluchistan gained complete control.

***

I see that the question of shipping facilities is being much discussed in Malta, and that attention is again being devoted to the possibility of forming a shipping company there for the establishment of daily services with the Continent. A solution of the problem would, I think, be most easily found in the circumstances if assistance were sought from a shipping firm with services in the Near East. It might not be impossible, for instance, for the Khedivial Mail to provide the facilities required.

***

In all probability the Americans will prove our most formidable commercial rivals in the Near East markets in the immediate future in such commodities as agricultural machinery, and their competition is the more serious because in many respects they are advantageously situated. It is well known that during the war the armies on the Salonika front cultivated large tracts of land with excellent results. The French Army, for instance, ploughed and sowed over 6,000 acres last year, the work being done by American agricultural tractor machinery. Of these machines the French Army there possessed in January, according to a recent American consular report, seventy machines that had been used, and fifty new machines. The tractors have been run and kept in order by experts, and the writer of the report refers with justice to their "magnificent introduction" to the country. It would certainly be difficult to imagine a better opportunity of bringing the merits of the machines before potential purchasers, and there is little doubt that the result will be that America will obtain a considerable proportion of Greek orders for this class of machinery.

***

But it was not that feature which chiefly interested me in the report so much as a suggestion regarding future developments. As there was the possibility that the war might continue for one or more years longer, the French were prepared for cultivation on a larger scale, and have had in view 74,130 acres immediately available for cultivation and another 49,420 acres which could be used given a small amount of drainage, all this only in the vicinity of Salonika. According to the writer the only hope of continuing what he rightly describes as an admirable work is the formation of a mixed company—a Franco-Greek-American company is suggested—which would have a charter from the Greek Government. The advantage of this, the writer says, would be that "a very rich country will produce enormous crops, the Greeks will learn modern agricultural methods, American machinery will be given a splendid opportunity in the Near East, and the Greek Government will derive a considerable revenue instead of practically nothing." This suggestion is, I think, interesting as showing that the Americans are very much alive to present prospects in the Near East.

***

British manufacturers of typewriters may be strongly recommended to pay attention to the requirements of Burma for this commodity. Burma's imports of typewriters are valued at from £3,000 to £4,000 a year, so that the trade is not an extensive one, though quite considerable enough to make it worth the while of British firms to cater for the market. The statistics of imports show that almost half the typewriters came from this country, but as a matter of fact it was a case of transhipment, and it is reported on good authority that 80 per cent. of the typewriters in use in Burma are American. This is not as it should be, and I hope British firms will see to it that in future years the balance of trade in this commodity is redressed.

THE CONSTANTINOPLE MARKET.

Support Required for British Trade.

(From a Correspondent.)

Constantinople.

It is not easy to know exactly what most interests readers of The Near East with regard to Constantinople, and that at present somewhat nebulous thing known as Turkey. However, I rather think that, just as to us the most thrilling topics of conversation (apart from the difficulty of getting servants who will not steal your plate and linen—particularly linen at present values) are the prices of various kinds of food, raiment and articles of first necessity, what people in England want to know—the business people that is—is how England is going to profit by her re-entry into the Constantinople market, and how to set about opening up trade relations.

This leads me at once to a very burning local topic, and I think I cannot do any better than say right out exactly what all thinking business men here are saying amongst themselves. The fact is that British trade is not receiving encouragement from the British authorities, whereas Americans are carrying all before them. A friend of mine, who is a member of both the British and the American Chambers of Commerce, tells me that it is amazing to notice the difference in procedure between the two bodies. He receives about twice a week a printed notice from the American Chamber telling him exactly whom to apply to to get goods shipped to America, giving him current American prices for Turkish produce of all kinds, telling him he can send commercial correspondence to America through the Chamber and with the greatest speed, and so on and so forth. But from the British Chamber what help or advice does he get? He attended the first meeting when most of the time was spent in discussing a not very profitable question as to whether or not the Allied Export and Import Permit Bureau should continue to work until the recommendation then being discussed for the unrestricted resumption of trade relations with Great Britain by all (irrespective of nationality) should be approved by the British Government. The next meeting did not accomplish much either, and there has been nothing whatever in the shape of giving out information, etc., to members.

Cable Delays.

The French have their own special bureau with 3,000 catalogues, and facilities for remitting money to France independently of the banks, and it is only British trade that is left to stagnate where it is not absolutely obstructed. No British trader can get a telegram through to London in less than fifteen days. The line is hard-worked, we know, by official messages and enquiries for the health and welfare of friends and relations, but a sane sense of proportion will show anybody that some business telegrams are of more value to the British nation now and in the future than a pious hope that "James" or "George" is well and happy in France. If a limit were set to each firm as to the number of words it could send a month, and if cypher were allowed (the key to be given to the Intelligence Dept.), and telegraphic addresses not rejected, as is now the case, time could be saved. In any event it is a crying injustice to British trade and a perfectly ridiculous situation that American and French trade—much as we wish them well as being that of Allies and good friends—should rejoice in facilities that Englishmen are unable to obtain.

The British community of Constantinople would applaud like one man if someone were to put in Parliament the simple question "Whether any, and if so what, facilities and encouragement are now being given by the British authorities in Constantinople to British traders, and also whether His Majesty's Government had given due consideration to the most crying need for immediate action in order to enable British trade in the regions now again opening out to resume its rightful place?"

Goods of All Kinds in Demand.

To return to the more general, but still exceedingly important, question as to how the British manufacturer and merchant can best push his produce on the Constantinople market at the present time, I must admit that, not being in England, I can give no hints as to how best to ship out. All the formalities that that operation requires must, however, be well-known to those interested; so I will only endeavour to give a few hints as to circumstances and requirements here. In the first place we want almost everything pretty badly, but chiefly things to eat, things to wear, and things to cook and "housekeep" with. Prices are appalling—even after allowing for the rate of exchange—as the annexed extract from a local paper shows very clearly. (The prices are per oke—about 2¾ lb.)

	Prices before the War.	Prices at the end of Feb. 1919.	Approx. Increase %
Bread	Pt. 1½	Pt. 50	4,000
Meat	Pt. 8	Pt. 160	2,000
Eggs (each)	Pt. ¼	Pt. 6	1,700
Suit of clothes..	£T3	£T40	1,333
Shoes	£T1	£T12	1,200
Petroleum	Pt. 1	Pt. 300	29,900
Sugar	Pt. 2½	Pt. 200	8,000

Things are a little better now in some directions (viz. American petroleum is now on sale at Pt. 70 the oke, bread is much reduced in price, and sugar is about Pt. 100), but matters are still very, very bad. The great thing to do now is to get the goods here, get the best rate of exchange possible for remittances (or better still, to my mind, keep the money here at, say, the Ottoman Bank in current account until the Peace Congress or someone settles the paper-money question) and get a satisfactory agent. The latter point ought perhaps to come first, for it is astonishing how before the war, when the British Chamber of Commerce had someone here who could give information on local firms, people in England appointed absolutely unsuitable persons as their agents with most unhappy results. I do not mean to say that the majority of British firms acted in this senseless way, but so many did that it seems necessary to caution all and sundry now against being led astray by a plausible letter and vague references. Firms must not appoint an agent they do not already know without first of all getting a report either from the Chamber of Commerce or from some reliable person here who will take the trouble really to make searching enquiries. It is not everybody who will undertake the trouble.

My advice then is that attention should be paid particularly to this last point, and that organised agitation should be made in England for Government support and facilities for telegraphic communication with Constantinople. Now is the time for British trade to strike its roots deep here, for with competitors like Brother Jonathan and his marvellously pushing organisation on the spot lost time can never be regained. It is really heart-breaking to see all the glorious opportunities passing out of our hands when a little effort, a little common sense, and a little recognition that it was British commerce that won the war, and that it must be backed up now in the opening trade war, are all that are needed.

Vidi.

RECONSTRUCTION IN SERBIA

From a Correspondent.

According to the *Trgovinski Glasnik* (Commercial Gazette) of Belgrade, of April 11, all the post office and telegraph officials in Serbia have been released from the Army and sent back to their pre-war duties. It is now expected that the postal and telegraphic service in that country will be in normal condition as soon as the telegraphic, telephonic and railway lines are repaired, which depends on the necessary material of which Serbia is still waiting the regular imports. In Belgrade itself the telephone lines are partially repaired, and the telephonic service in that town is resumed again.

Among the advertisements of the above paper appears the following: "Junior clerk wanted, with knowledge of French and *if possible English*, etc." The italicised portion speaks for itself.

ROUMANIAN OIL CONCESSIONS.

The Foreign Office states that the Roumanian Government has promulgated a decree, No. 1,104, dated March 8, 1919, by which all petroleum concessions, as well as other mining and quarry concessions, which were in force in November, 1916, and expire during the period of the war, or which shall expire prior to the conclusion of a general peace, or any drilling or mining obligations contracted during the war or during the period of occupation, are prolonged with their full rights for a period of six months from the date of the conclusion of peace. In view of the above decree all concessionnaires affected are required to declare by May 20, 1919, the nature of the concessions or drilling obligations which come under the purview of the above decree.

The *Sudan Times* states that the Railways and Steamers Department announces that the dining car service to Halfa is cancelled until further notice, and that there will be two dining car services weekly to Port Sudan instead, and adds that it presumes that the sleeping car service to Halfa continues as it is at present, *i.e.*, once a week.

OTTOMAN PUBLIC DEBT.

Sir Adam Block's Report.

There has just been published a special report by Sir Adam Block, K.C.M.G., on the Ottoman Public Debt for the years 1914-15, 1915-16, and 1916-17. The writer, whose experience and knowledge of the Turkish situation are unsurpassed, besides dealing with the years mentioned, also devotes attention to the general financial situation in Turkey at the present time, in which connection reference is made to the problem of the country's inflated and depreciated paper currency. But he refrains from an opinion as to the measures to be adopted to enable Turkey to finance the administration of the country and to pay its debt. "The problem," he points out, "is not merely a financial one. It is merged in the political question, and will have to be decided in accordance with the international and political combinations resulting from the Peace Treaty. The Allied Governments are in possession of the facts, and the decision rests with them."

Sir Adam returned to Constantinople soon after the Armistice and again assumed the Presidency of the Council of the Debt Administration, which throughout the war continued to administer the revenues assigned to the bondholders, though the Council being composed only of German, Austrian, and Turkish members, many of the measures taken were favourable to the Central Powers rather than to the bondholders in general. The Council is now composed of the French delegate, the representative of the Imperial Ottoman Bank, the Italian and Turkish delegates, and Sir Adam Block.

As regards the operations of the first three years of the war the report states that the gross receipts of the assigned revenues were in the year 1914-15, £T3,637,913; for 1915-16, £T2,868,156; and for 1916-17, £T3,632,692. The expenditure was, for 1914-15, £T739,825; for 1915-16, £T849,473; and for 1916-17, £T877,246. The net receipts were for 1914-15, £T2,888,088; for 1915-16, £T2,018,683; and for 1916-17, £T2,755,446. £T2,157,375 were required yearly for the service of the Unified Debt and Lottery Bonds. Allowing for this figure, there remained in 1914-15 a surplus of £T730,713. In the following year there was a deficit of £T138,692, and in 1916-17 there was a surplus of £T598,071.

As regards the deficit of 1915-16, the Turkish Government, by a law dated November 24, 1915, debarred enemy bondholders from encashing their coupons. Sufficient funds were in hand to pay German, Austrian, and Turkish coupons, and there was no need to realise the securities in the reserve fund to provide for other coupons, the fund being merely debited with the amount of the deficit. The Council, in conformity with Article 8 of the Decree Annexe, deducted £T44,383 from the 25 per cent. share of the debt in the surplus of the year 1916-17; £T27,909 was taken from the interest of the reserve fund, and £T29,000 and £T37,400 were taken respectively from the arrears of the Cyprus and Tumbeki revenues.

It is stated that the Council may be obliged to have recourse again to the reserve fund to provide for the payment of the coupons to the subjects of Entente Powers which have remained unpaid since the outbreak of war.

The position with regard to coupons held by Entente subjects is thus explained. In the first place they cannot be paid until Peace is signed; and, secondly, there is a most serious difficulty to be faced in the exchange conditions. The table given shows the amount still due on the Unified Debt and the amount paid in the last four years.

The report goes on to point out that the funds provided for the unpaid coupons exist, but that they are at present either in paper piastres in Constantinople or in paper marks in Germany. The rate of exchange cannot be foretold pending the result of commercial relations. The best way to deal with this question is under the consideration of the Council, and the loss of exchange will have to be included in the general expenditure of the administration. If then, as is unfortunately evident, the amounts already in hand do not suffice for the service of the coupons unpaid, the surplus of the Debt revenues (75 per cent. to Government and 25 per cent. to the Debt Council for the extraordinary sinking fund) will have to suffer. That is to say, the surplus of the last two years will only be fixed after deduction of all expenditure, and the loss of exchange will be included in that expenditure unless other radical measures are taken in the meantime to reform the currency and to stabilise the exchange. The Turkish Government have been informed that no surplus revenues will be paid to them until the coupons have been fully paid.

FOUR PER CENT. UNIFIED CONVERTED DEBT.

PAYMENTS.

The Ceded Revenues.

It was obvious that the effect of Turkey's participation in the war would be very pronounced as regards revenue, and the only doubt was as to the extent to which they would suffer. The effects of the war, the report points out, were already apparent in the last half-year of 1914-15. The loss of territory was one of the chief factors, but in parts of the country immune from invasion several other causes may be cited as contributing to the decline in receipts, namely the mobilisation of man-power, the interruption of agricultural and commercial operations, military requisitions on an unprecedented scale, and the ruin and extermination of the Christian population in many parts of the country. Finally there was the unrest arising from these causes. In Sir Adam Block's opinion it is a matter for surprise in the circumstances that the loss in revenue was not greater. The rise in prices is one reason, however, for the comparatively favourable results of two out of the three years in question, for where, as in the case of the silk revenue and the fisheries, the value of the commodity is taxed there has naturally been an increase in revenue. Then the Stamp Tax benefited by the increased commercial transactions due to the plethora of money caused by an excessive issue of paper currency, and the War Tax on Salt and Spirits also had its effect.

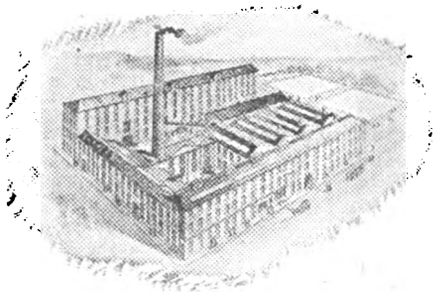
Surtax of Customs Duties.

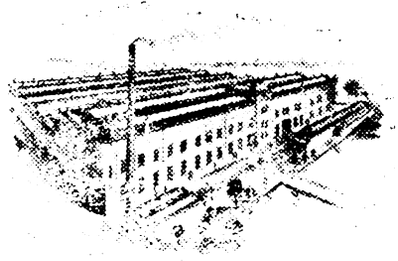
According to the Decree of Mulharrem, the Debt was entitled to any duty over and above 8 per cent. *ad valorem*. Up to May, 1915, when the duty was raised to 30 per cent., this was carried out, but then the Government requisitioned 15 per cent. of the tax in kind, and allowed the Debt Administration 7 per cent. of the 15 per cent. duty levied in cash, viz., the difference between the original 8 per cent. and 15 per cent. On September 1, 1916, when the system of *ad valorem* duty was replaced by a specific tariff, the Council proposed that the Government should take a gross sum based on the average of three years of the 8 per cent. duty and pay the difference to the Debt Administration. The Government decided, however, to pay the 50 per cent. of the total duty to the Debt Administration. The Council only accepted under reserve. In 1917 the Government went back on this decision, and only consented to pay the residue after deducting a sum equal to 8 per cent. of the daily receipts calculated on the value of the goods. This was again accepted under reserve, and as an alternative it was suggested that the basis of the calculation of the 8 per cent. should be the value of each article. The Government have not replied, and the matter is in suspense. The Council holds that without the approval of bondholders no arrangement which deprived the latter of their rights under the Decree can be thus arbitrarily imposed on the Council by the Government. The receipts for 1914-15 amounted to £T614,714, for 1915-16 £T212,165, and for 1916-17 £T281,283.

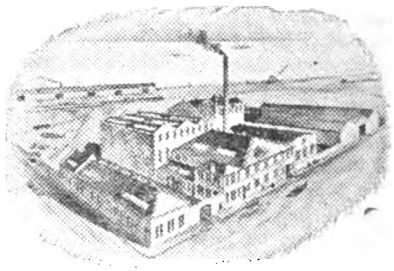
(To be concluded.)

GREEK ARBITRATION COURTS FOR TRADE DISPUTES.

Local courts of arbitration, selected from suitable members of the commercial community, are being formed in Greece for the purpose of acting as arbitrators in any disputes with foreign merchants which may be brought before them, says H.M. Minister at Athens in a recent report. The President of the Greek Chamber of Commerce of Athens states that this has been done in all the Greek commercial centres, with the object of choosing from amongst the commercial community a body of experienced men from which arbitrators are selected in case disputants wish to avail themselves of this means of settlement.







The local application of the scheme is described by H.M. Consul at Patras, where the Greek Government instructed the Nomarch of Achaia and Elis to call a meeting of all merchants and tradesmen paying a minimum industry tax of 200 drachmæ per annum, to elect 27 members to form a Court of Arbitration. This meeting was held on March 23 in the Commercial Club, under the presidency of a Judge of the Court of First Instance, and the 27 members who are to form the Court were elected by secret ballot. It is understood that the Arbitration Court's decisions will have legal validity. The Greek Government stipulated that out of the 27 members elected, not more than five should be of foreign nationality. Two British subjects were elected—one being the British Consul.

ENGINEERING NOTES.

Opportunities in the Near East.

The statement in a leading contemporary that British manufacturers are paying full attention to the trade possibilities of the Near East, and are endeavouring to take advantage of present opportunities to establish sound commercial connections in the Balkans and the Levant, is very satisfactory. But it must be remembered that these opportunities are not lasting, and, as has often been mentioned in these columns, Continental and American competitors are already showing great activity in the Near East markets, where before the war the commercial supremacy of Germany and Austria was beyond question. But although German and Austrian prestige is low to-day, it is not to be taken for granted that the Germans will long remain inactive; so, as our contemporary declares, "now is the golden hour for our manufacturers." This is also confirmed by Major Kennard, the Commissioner to Greece of the Federation of British Industries. Speaking at a meeting of engineers, manufacturers and others at Leeds, Major Kennard said that he had the good fortune to arrive in Greece at the moment when Greek commercial circles were thoroughly interested in the reports which had been received from the Greek commercial representatives in this country. The Greeks, he added, are to-day strongly Anglophile, and there is in the hands of private individuals a sum of 40 to 60 millions sterling in excess of anything which they have ever owned in past years. Greece is anxious to trade with us in preference to other countries, and asks that the supplies shall be at fair prices. He further pointed out that other foreign makes of goods already in the country have been declined in view of the prospective arrival of the British articles, and that it is unthinkable that such a willing customer should be neglected. He advised British manufacturers to get into immediate touch with the Greek trading community, and also to bear in mind that excellent though the trade openings are in Greece, they represent only a small proportion of the demands which will be forthcoming from the Balkans and the Levant when business is resumed under normal conditions. Sir John McLaren, who presided at the meeting, described Greece as a country with great potentialities, and said we might just as well avail ourselves of the trade offered by that market as leave it to the Germans, the Americans, and others. He was sure that there is a great opportunity for the iron and machinery trade, but more particularly for the agricultural engineering section.

Italian Competition.

We have referred on previous occasions to the economic and industrial arrangements that have been made in Italy for the development of her engineering industries, and also to the possibility that she will be able, under these arrangements, to produce manufactured goods at much cheaper rates than those ruling in this country. In this connection the possibility that Italy may prove a formidable competitor in the markets throughout the Near East must not, of course, be overlooked, for Italy's geographical position affords her a great advantage. But with a well-organised trade propaganda, and, in the case of the engineering trade, with more consideration on the part of British manufacturers for the particular requirements in those markets, there need be no fear of serious competition. For, as is well known, the highest opinion is held in the East of British goods, and especially of engines, machinery, implements, tools, etc. This is our greatest advantage against foreign competitors, and in view of this fact some unscrupulous firms have even gone so far as to imitate British trade marks in order to deceive buyers into ordering their inferior wares. We refer to this as a proof that cheapness is not always a point that attracts buyers, especially in the matter of choosing machinery, implements, tools, etc., for which good material and perfection in design, workmanship, durability, and simplicity in operation are most essential in the East, where skilful mechanics and means to effect repairs are not always available. As Oriental buyers have confidence that such qualities are characteristics of British-made articles, everything is in favour of British manufacturers. Given systematic organisation and adequate methods of dealing in those markets, they should re-establish the monopoly of the trade which they had but a few decades ago throughout the Near and Middle East, and which was unaccountably allowed to pass into the hands of the Germans. It is true that the attention of Italian manufacturers has been strongly attracted recently to the fact that it is to the Orient that the country will have to look for her trade expansion in an industrial sense, and that the regions which formed the Turkish Empire offer a specially profitable field for exploitation. And they may succeed if British manufacturers do not act promptly and adequately.

Constantinople Trade.

The machinery trade in Constantinople has not been such as one might have expected in such an important market. Thus, the value of agricultural machinery that entered that port in a normal year before the war was not more than £18,000, but, owing to the land improvements that were taking place at the time in the surrounding districts, it was believed that there would soon be an increased demand for all kinds of agricultural implements. The imports came mainly from England, Germany, and Austria, with America a good fourth; although America claims that part of the agricultural machinery shipped from the three former countries was of American manufacture, and that if all shipments were made direct, America would probably be first in the list. When the present political situation has been cleared there will be, undoubtedly, a great demand for tractors, ploughs, sowing, reaping and threshing machines for the rural districts; and gas and oil engines, electric motors, woodworking, machinery, tannery, milling, and bootmaking machinery, and a variety of small hand machines for local industries in Constantinople and neighbouring towns.

Electrical appliances and apparatus will also be in great demand, for electric light will not be, as hitherto, under restrictions. Private electric light plants, many of which are already installed in private houses, will be required for distant institutions, the numerous villas that are spread all along the coast of the Bosphorus, and the little fashionable islands in the Sea of Marmora. Telephones, which at present are more or less restricted, will be in general use, and the demand for the necessary appliances will undoubtedly be considerable. Electric lifts and cranes will also be required. Taking in detail the electrical appliances, electric bells were imported from Germany, also the greater part of wires, indicator boards, lamps, electric light fittings, etc. Of the whole of these items, Germany supplied 70 per cent., 20 per cent. falling to France and 10 per cent. to Belgium; while in the supply of telephone wire and cable the French were fairly active, some seven French firms participating.

Agricultural Machines for the Balkans.

It is announced that orders to the value of several thousand pounds are to be placed in this country for threshing machinery, tractors, and heavy types of agricultural implements needed in restoring agriculture in the devastated areas of the Balkans and in Poland. In certain cases the question of credit alone awaits adjustment, and when this is completed British firms will have, it is said, full order books.

Motor Mail Van for Persia.

More attention to the trade possibilities of Persia has often been advocated in these columns. The country, in spite of the political troubles that she has suffered in recent years, has lately shown a remarkable propensity for industrial progress. Inquiries for internal combustion engines, spinning and weaving machinery, and modern agricultural implements have been sent to American firms, while the Persian Government, according to recent reports, has given proof of its progressive spirit by the decision to motorise practically the whole of its mail service. For this purpose an order has been placed with the Fiat Company of Turin for 50 motor mail vans.

Cunard Continental Service.

The Cunard liner "Saxonia" arrived at Plymouth last week from New York, proceeding afterwards to France. This is the first call at Plymouth since the new Southampton-Cherbourg-New York service was announced.

The Egyptian Budget provides for a new post of Assistant Under-Secretary for Finance.

NEAR EAST MARKETS.

Exports of Sheep from Algeria and Tunis.

According to a report of the Marseilles Chamber of Commerce, quoted in the *Board of Trade Journal*, the North African Colonies of France, Algeria and Tunis, exported to France in 1909, 1,120,729 sheep; in 1910, 1,256,908; in 1911, 968,304; in 1912, 812,865; and in 1913, 1,286,935. This gives an average of 1,089,158 sheep per year. During the war the exports were:—In 1914, 711,126 sheep; in 1915, 1,176,412; in 1916, 861,695; in 1917, 659,136; and in 1918, 300,000. This gives an average of 741,673 sheep per year. Thus during the war there has been a deficit of 347,375 sheep imported per year. Estimating an average of 20 kilos net of meat per sheep, the deficit amounts to 6,947,500 kilos of meat which have not been imported, and have been left in Algeria, probably through the lack of means of transport.

It is stated that Morocco, moreover, can supply an appreciable quantity of livestock, cattle, sheep, and pigs. In view of this situation the Chamber has petitioned the French Government to suppress the requisition of North African cattle, in order to enable the colonies to prepare for the next season. Sheep abound in Algeria, and these measures, it is estimated, will tend to bring down the high cost of living.

Sudan Produce.

Kordofan Province.—148 ardebs of dukhn were sold in El Obeid market at an average price of PT240 per ardeb of 420 rottles (189 kilos). 102 ardebs of dura were sold in El Obeid market at an average price of PT240 per ardeb of 420 rottles.

Red Sea Province.—Tokar.—Assessment of dura and dukhn is nearly finished, and it appears that these crops are slightly better than had been expected.

Bahr El Ghasal Province.—January.—The grain crop in the west has yielded a surplus of 900 ardebs (600 at Raga and 300 at Deim Zubeir) over and above the requirements needed for the Western District during 1919. This surplus grain is being exported to the Central, where, owing to an indifferent harvest, the amounts collected are below requirements.

Kassala Province.—The total dura crop for the whole province is estimated at 134,570 ardebs, as compared with 177,540 last year.

Berber Province.—At Gendettu the wheat is very fair, though patchy and somewhat gnawed by crickets.

Halfa Province.—The wheat is good, and should all be harvested before thirty days. Some wheat has had to be cut before ripe to feed the cattle, as the same are very weak from lack of forage, due to the partial failure of the gerf crop and the big sagia lift with the present low state of the Nile.

NEW COMPANIES.

Lawrence and Mayo.

A private company has been formed with the above title with a capital of £20,000 in £1 shares, to take over the business of manufacturers of and dealers in optical, nautical, scientific, and medical instruments and appliances, carried on by S. S. Lawrence and L. B. Lawrence, as Lawrence and Mayo in the United Kingdom, India, and the Far East. Address, 19, New Oxford Street, W.C.1.

Lawrence and Mayo (Egypt).

A private company has been formed with the above title with a capital of £8,000 in £1 shares to acquire a business carried on in Egypt, the Sudan, and Palestine as Lawrence and Mayo. Address, 19, New Oxford Street, W.C.1.

In her journey home last week the Queen of Roumania successfully inaugurated the Orient Express.

The Committee of the Bourse at Alexandria has decided to close the shares market on Saturdays during the summer season.

The Austin Motor Co., Ltd., of Birmingham, are arranging to exhibit one of the Austin farm-tractors at the British Exhibition to be held in Athens in September.

Messrs. Thos. and John Brocklebank, Ltd., announce that Mr. A. B. Hughes has been appointed a director of the company as from April 30. Mr. Hughes will retain his position as general manager.

COMPANY MEETINGS.

Agricultural Bank of Egypt.

The report of the directors on the working of the bank for 1918-19, submitted to the shareholders at the sixteenth ordinary general meeting, held at the offices of the bank in Cairo on April 29, states:—

The directors report that the net profits of the bank for the financial year 1918-19, in accordance with Articles 40 and 41 of the Statutes, amount to £E874,184.404. From this amount there has to be deducted: The repayment of liabilities incurred in 1914, £E18,280.324; the service of the debentures, £E235,251.106; the provision for the reserve fund, £E30,162.875; the provision for the special reserve fund, £E13,238.949—£E296,933.254, leaving £E577,251.150, and there has to be further deducted: Dividend on preferred shares, £E48,750; commission to the National Bank of Egypt, £E18,087.528—£E66,837.528, leaving £E510,413.622, which is available for distribution as dividend on ordinary and deferred shares. The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent. per annum, £E120,900. The balance of £E389,513.622 is available to the extent of one-half, or £E194,756.811 for the ordinary shares and to the extent of one-half, or £E194,756.811 for the deferred shares. The amounts, therefore, available for dividend on the ordinary shares are as follows: Balance from the year ended December 31, 1918, £E235,792.200; interest for the year accrued on the above balance, £E11,789.610—£E247,581.810; for dividend at the rate of 5 per cent. per annum, £E120,900; further amount available, £E194,756.811; total, £E563,238.621. The directors propose to pay a dividend at the rate of 8s. per annum for the financial year 1918-19, amounting to £E193,440, and to carry forward the balance of £369,798.621.

The amounts available for dividend on the deferred shares are: Balance from the year ended December 31, 1918, £E189,064.190; interest for the year accrued on the above balance, £E9,453.210—£E198,517.400; further amount available, £E194,756.811—total, £E393,274.211. The directors propose to pay a dividend of £40 per share, amounting to £E78,000, and to carry forward the balance of £E315,274.211.

In deciding on the dividends we propose we have been guided by the same principles as those which led us during the last two years to recommend an increase in the amounts to be carried forward. The large net profits of the bank during the past year are in part due to the collections of arrears and receipts on sales of land, etc., which cannot be regarded as a normal source of income, and we are of opinion that we should ensure, as far as possible, a uniformity in the dividends to be expected in future years. It will be remembered that there existed in last year's accounts a charge of £E18,280 in favour of the general reserve fund on any collections that might be made of the arrears of the capital due in 1914-15. A sum exceeding this amount has been collected during the past year from these arrears, so that the general reserve fund, which was drawn upon at the end of the year 1914-15, has now been wholly reconstituted, in accordance with the Statutes. This sum of £E18,280 has been invested, with other sums, in the general reserve fund in British Government securities. This fund now amounts to £628,587, as compared to £E472,700, when it was drawn upon on January 31, 1915. We have not considered it necessary to increase the fund formed in past years for depreciation on investments, which at the beginning of the year stood at £E191,000. This provision would allow us to value all our Government securities on the general investment account at or below the market price on January 31, 1919, and ordinary shares of the Mortgage Company of Egypt at £1 10s. a share.

Arrears.

On January 31, 1919, the total arrears outstanding were £E151,326, against £E403,786 on January 31, 1918. Of the sum of £E151,326 in arrear, £E52,687 represent interest. No credit has been taken in the profit and loss account for any part of this sum, since, in accordance with the Statutes, only interest actually encashed can be included in the profits. The whole of the remainder—viz., £E98,639, representing capital overdue—has, as required by the Statutes, been deducted from the profit and loss account before arriving at the balance available for distribution. Consequently, any encashments made on account of the sum of £E151,326 will go entirely to the profit of the year in which they are effected. Up to March 15 the encashments since February 1, 1919, on account of the arrears of £E151,326 amount to £E20,000.

The sums collected during the past year from the annual instalment due and from the arrears of past years are, we consider, satisfactory. £E580,467 were collected out of the annual instalment of £E628,869 and £E300,862 from the arrears, making a total collection as regards these two items of £E881,329. Our encashments, therefore, exceed the annual instalment by £252,460, and the total of outstanding arrears is decreased by this amount. The prosperity which the war had brought to Egypt during previous years has continued, and, indeed, been largely added to during 1918. The high prices realised for all natures of cereal and fodder crops, and for the cotton crop under the arrangements made by the British and Egyptian Governments—to which we referred in our last report—enabled landowners not only to meet their annual liabilities with ease, but to repay a considerable amount of any arrears that may have been outstanding from previous years. The arrears of the bank, which in the first year of the war stood at £E1,394,546, have been now reduced to £E151,326, as compared with £E403,786 on January 31, 1918.

The total of loans exceeding £E1,000 each was £E151,300 on January 31, 1919. Our arrears on these loans were £E2,549, which had been reduced on March 15 to £E2,075.

Land Acquired.

The result of our land sales during the past year affords fresh evidence of the general agricultural prosperity of the country. The area of land which the bank found it necessary to acquire during 1918-19 was 435 feddans, as compared to 1,114 feddans in 1917-18, and we have sold 1,588 feddans, as compared to 3,646 with previous year; our land holding has thus decreased by some 1,153 feddans.

We hope to be able to sell gradually the 1,072 feddans remaining on our hands at satisfactory prices, but there is a considerable proportion of these lands which we can hardly hope to realise at the prices which they have cost us. The number of expropriations made by the bank during the year are as follows: Number of cases in hand on February 1, 1919, 2,220; number of new cases begun during 1918-19, 1,211—total 3,431. Cases settled, 2,164; balance, 1,267. Cases brought to expropriation, 218; balance pending on January 1, 1919, 1,049. In thirty-four of these cases of expropriation 186 feddans were bought in by the bank, and in 184 remaining cases 1,001 feddans were bought in by third parties.

As we mentioned in our report for 1917, the Mortgage Company was able to resume payment of interest on its ordinary shares capital. The dividend declared for the year ending on March 31, 1918, was at the rate of 8 per cent. per annum. Owing to the prosperous conditions of the country, the collections for 1918 have also been very satisfactory; instalments in arrear have been reduced by a substantial amount, but at the same time, as the necessity for borrowing has diminished, the output in new loans was smaller than the sums collected on the capital of outstanding loans. The company was, in consequence, in a position to repay the total amount advanced by the Agricultural Bank.

The loans outstanding on the London Stock Exchange at January 31, 1919, are reduced to £5,000.

We greatly regret to announce to our shareholders the resignation of Sir John Rogers, K.C.M.G., D.S.O., from the board of directors, owing to his having left Egypt. Sir John Rogers has been a director of the bank since its foundation, and we would take this opportunity of expressing our recognition of the active interest he has always taken in its working and of the valuable aid he has afforded to his colleagues on the board. We have good reason to hope that the majority of those members of our staff who have been absent on military service will be able to rejoin the bank during the present year, and we are happy to state that no serious casualties have occurred amongst them during the year 1918. The directors beg to thank the staff in the head office and in the agencies for their satisfactory work during the year.

COMPANY NOTES & REPORTS

Tunisian Phosphates.

The accounts to December 31, 1918, show a net industrial profit of 1,328,601 fr., against 1,019,132 fr. in 1917. The yield from investments, etc., was 1,346,000 fr., against 1,123,423 fr. The net profits amount to 2,462,739 fr., as compared with 1,190,960 fr. in 1917, permitting a dividend of 15 fr., equal to the previous declaration. The new scrip will receive 7.50 fr.

Compagnie des Wagons-lits.

Particulars of this company have been filed at Somerset House, pursuant to section 274 of the Companies (Consolidation) Act. The company was founded in Belgium in 1876, and the capital consists of 15,000,000 francs Preference and 53,750,000 francs Ordinary shares. The last balance sheet is dated 1913. The British address is at 20, Cockspur Street, S.W.1.

South Indian Railway.

The directors of the South Indian Railway Company have decided to pay on July 1 an interim dividend of 1¼ per cent. (or at the rate of 2½ per cent. per annum), less income-tax, from the surplus profits, in addition to the interest guaranteed for the half-year ending June 30 next—namely, 1¾ per cent., less income-tax, making a total distribution for the half-year of 3 per cent.

Egyptian Delta Land and Investment.

The report of this company for the year ended December 31, 1918, states that the sales during the year were 690 metres at Meadhi, about 5¼ feddans at Minet el Qamh, and about 3 feddans at Abou Hamad, all at good prices. The best sale of the year was that of the French Mills Karmous property at Alexandria, which left the company a net profit of £E21,297 on the book value as indicated in the last balance sheet. The directors deemed it prudent to carry forward the major part of this profit, and only to make use of a sum of £E2.650 odd, which, added to the working profits of £E5.251, enabled the recommendation of a dividend of 6d. per share.

P.P.K. Rubber.

The report of the P.P.K. (Ceylon) Rubber Estates for 1918 states that the balance at credit of profit and loss account, after writing 10 per cent. depreciation from machinery and buildings and including excess profits duty refunded, 1917, is £13.927. It is proposed to carry to reserve £3.000, to pay a dividend of 10 per cent., £8,500, to carry forward £2,427.

Travancore Tea.

The report of the Travancore Tea Estates Company for the year ended September 30, 1918, states that the net amount at credit of profit and loss account, including balance brought forward, and after providing for directors' fees and debenture charges, is £22,921. It is proposed to pay a dividend of 15 per cent. on the Ordinary shares, to place to redemption of debentures sinking fund £3,000, and to carry forward £6,509.

TRADE ENQUIRIES.

AN English firm established in Egypt, the Sudan, Palestine and Syria can export specialities of these countries, and wishes to represent maritime and fire insurance companies and shipping firms, and import English articles into these countries.—Apply, P. O., Box 1,344, Alexandria.

TURKEY.—Business gentleman proceeding early May to Turkey on three months' business trip would entertain business propositions of firms in United Kingdom wishing to do business with that country, especially in the way of import of produce, carpets, tobacco, etc., etc.—Write to Box H9., NEAR EAST, Devonshire Square, London, E.C.2.

TURKEY.—A firm of exporters in the City who have completed all their arrangements for resuming trade with Turkey, wish to hear of firms interested in exports to that country and imports to England. One of the partners is at present in Turkey and will gladly consider all business and agencies which will be offered. Please reply to Box H10, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

COMPANY RESULTS, Etc.

The Crown Agents for the Colonies give notice that the books of the Ceylon Government 3½ per cent. Inscribed Stock will be closed for the preparation of Dividends on the night of May 15, after which date the stocks will be transferable ex dividend.

Ceylon 4½ per cent. Loan.—The Crown Agents for the Colonies give notice that the half-year's interest, due May 15, on the above loans will be paid on and after that date. The coupons must be left for examination (between the hours of 10 and 3 o'clock, Saturdays before 1) three clear days prior to payment being made.

The Bank of England announce that, in order to prepare the dividends due on the undermentioned dates, the balances of the several accounts in the following Funds will be struck on the night of Monday, June 2, viz. :—Dividends due July 1, Eastern Bengal Railway £4 per cent. Irredeemable Debenture stock; Great Indian Peninsula Railway £4 per cent. Irredeemable Debenture stock; Scinde, Punjab and Delhi Railway Annuities, "A" and "B," 1958; South Indian Railway £4 10s. per cent. Perpetual Debenture stock. Dividends due July 5: India £3 10s. per cent. stock, 1931; India £3 per cent. stock, 1948; India £2 10s. per cent. stock, 1926. On and after Tuesday, June 3, the above-named Funds will be transferable ex-dividend.

The directors of the Caledonian (Ceylon) Tea and Rubber Estates have declared an interim dividend on the ordinary shares in respect of the year ending June 30 next of 5 per cent., less tax at 6s. in £, payable on 30th instant.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated May 3:—

Weather unsettled. Local rains north-western India, Lower Bengal, Hyderabad and Mysore.

Wheat forecast for all India 23,425,000 acres and 7,447,000 tons. (Last year first forecast of yield was 10,074,000.)

Bombay Cotton market irregular but fluctuations narrower. Fully Good Broach 519 Rupees. Local Piece Goods market dull. Manchester goods improved demand. Calcutta Jute market steady. Jat fours 12 rupees. Rejections 6 Rupees 8 Annas. Sowings nearing completion. Prospects encouraging in Jute goods market. Large business done sacking. Hessians considerably increased price.

ALEXANDRIA WATER COMPANY, LIMITED.

Notice is hereby given that the forty-first ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Offices, Alexandria, on Monday, the 2nd June, 1919, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to Act of Parliament.

Holders of share warrants to bearer desiring to attend or to be represented at the Meeting must deposit their share warrants in London before the 19th May, 1919, or in Alexandria before the 29th May, 1919, until after the Meeting, at Messrs. Barclay's Bank, Ltd., 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Ltd., Alexandria, or at some other approved bank in London or Alexandria.

Dated, Alexandria, the 15th April, 1919.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market as a whole tends to gain strength, and it has not been possible for buyers to operate on the same terms as a week ago. In some quarters the stiffer attitude of producers has checked progress, but there is very little belief in lower rates in the future. According to private advices, the prospects for the new Egyptian crop have been adversely affected by the disturbances, but there is still every probability of a substantial yield, given favourable climatic conditions later on. A little more buying is now taking place by Lancashire spinners. Egyptian yarns have attracted rather increased attention, but transactions of importance have not been frequent. In certain counts and qualities quotations have hardened. The larger inquiry in cloth for Egypt has been well maintained. Here and there manufacturers have been able to secure fairly substantial contracts in sized goods and miscellaneous fabrics of various kinds. The Indian markets have provided a larger demand, but leading buyers are rather slow in coming up in price. Grey shirtings, light fabrics and printing cloths have been sold for Calcutta, Bombay, and Karachi. A fair turnover has again transpired for China, Java, and Singapore. Manufacturers as a body are more difficult to deal with than some time back. American yarns for home use have not been very active, but a steady trade has been done at rather hardening rates. More trade continues to be reported in bundles for India, but cops for Holland seem to be a little quieter.

Cotton Mill Hours in Lancashire.

Negotiations continue to take place in Manchester between cotton employers and trade union officials on the mill hours question. The application of the operatives is for a reduction from 55½ hours as at present to 44 hours per week, with an advance in wages to compensate the workpeople for the loss in earnings as a result of the shorter week. In the first instance, the masters offered a week of 49½ hours, without any rise in wages. This proposal was not satisfactory to the leaders of the operatives. At the beginning of this week the employers offered a 48-hour week with an advance of 15 per cent. on standard list wages rates. The trade union officials said they were not in a position to agree to the proposal, but they promised to place the terms before a delegate meeting of workpeople to be held this Saturday. It is not likely that the offer will be accepted. It is pointed out by the trade union officials that it will be necessary for the employers to increase wages by about 32 per cent. on standard lists to meet the loss of earnings as a result of the reduction in working hours from 55½ to 48 per week. It is possible that a ballot of the workpeople will take place as to whether they should issue notices to cease work in order to press their demands. In trade circles, however, there is still hope of an amicable arrangement being come to by the two sides without any real crisis arising.

A branch of the Banco Hispano-Africano has been established at Ceuta.

Mr. Jean Theologis, manager of the Bank of Athens at Cairo, is to take up the management of a new branch of the Bank of Athens at Marseilles.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Thursday.

There has been a much better tone in our market this week, with a certain amount, however, of irregularity in prices. The improvement is due in great measure to the renewal of demand from Egypt.

In Government stocks, Unifieds are ¼ better at 89 xd., and some business has been done in Egypt 3½ per cent. Prefs. round the current level of 75.

In Bank Shares, Agriculturals are ⅛ up at 6½, after changing hands at 6 9-16. National Banks have been done as high as 20⅜, and close ⅜ higher at 20⅝. Anglo-Egyptians have also advanced ¼ to 15½.

Amongst Railways, Delta Lights have eased ¼ to 7½.

In Land shares a certain amount of business has been doing, with very little movement in prices, however, except in Sudan Plantations, which are closing 11-16 up at 7¼, after some dealing as high as 7½. United Egyptian Lands are somewhat easier at 1s. 10½d., so likewise are Egyptian and Foreign Trusts at 13s. 9d. and Gharbieh Lands at 2 7-16.

In Miscellaneous shares, Khedivial Mail Prefs. are ⅛ up at 4¼, and Anglo-Egyptian B are 5-32 higher at 5 5-16, after business as high as 5 7-16.

In Greek securities there have been a few transactions round the current levels. The Rente Loan is again half a point down at 54½, and Funding is 2 points down at 64. On the other hand, the 1914 issue is one point up at 84.

Mr. R. S. Macgregor, assistant general manager of Messrs. Lipton's, returned to Ceylon recently from Egypt.

NOTES OF THE WEEK.

As was to be expected, the Germans, official and unofficial, have been and still are protesting loudly against the Terms of Peace presented to them in Paris. Count Brockdorff-Rantzau in a note addressed to M. Clemenceau declared that the Treaty contained unendurable demands, many of which, in the opinion of the German experts, could not be carried out; and that it departed from the basis of peace agreed upon. The German delegates have also put forward proposals of their own regarding the League of Nations, labour legislation, and prisoners of war. The Allies replied promptly that they could not admit any discussion of the terms in their main outlines. The scene of protest then shifted to Germany, where politicians and people alike have been vociferously declaring that never were such iniquitous conditions put forward, and never, never will Germany accept them; a variant of the theme being that Germany will accept them, but will dishonour her signature at the earliest possible moment. The Germans would do well to recall the Treaties of Brest-Litovsk and Bucharest, and their threat that their terms were moderate in comparison with those which would be dictated later to France, Great Britain, and the other enemies of the All Highest. Count Brockdorff-Rantzau has addressed three more Notes of protest to M. Clemenceau, and further official protests in one form or another may be expected in the near future.

In the meantime interest is passing, temporarily at any rate, to the conditions to be offered to Germany's allies. The Austrian delegates have reached Paris, and it is understood that the terms to be offered to them are ready, although certain boundary questions will only be decided after plebiscites have been taken. There are some indications that the Austrians may once more play the part of second to their German allies. The announcement that Slatin Pasha will be attached to the Austrian delegation as one of the technical experts, in connection with prisoners of war, will have been received with mixed feelings in this country, where he had many friends before the war. His presence should help to make any negotiations that may be necessary run more smoothly.

Italy's interest in the settlement of accounts with Austria is, of course, a vital one, and it would be almost impossible to conceive of her delegates absenting themselves from any discussions on the subject. As a matter of fact, Signor Orlando has taken an active part in these deliberations. It appears, however, that this does not indicate that the Fiume-Adriatic difficulty has been bridged over, and if any real progress has been made with the bridge-building, the fact has been very successfully concealed from the world. Another point of friction between Italy and Yugoslavia may arise in connection with the disposal of the Austrian mercantile marine. It is reported that they had anticipated dividing the vessels captured in Austrian ports between them. Italy, however, endeavoured to make her agreement to this division contingent upon Yugoslavia's recognition of her claims to Fiume. The net result is that they will now only share equally with the other Allies in the division of the captured vessels. This disappointment, following on the trouble between them over the captured Austrian warships, may unhappily further embitter relations between the two countries.

British troops in the Dobruja have been replaced by Italian, and Italian troops have also been sent to Rodosto and to Burgas, for the purpose of maintaining order. This movement, it is explained, is "primarily due to the fact that British troops from the Dobruja have been sent to Asia Minor." The announcement caused some little excitement in certain circles which are not inclined to credit Italy with a superfluity of altruism, and which, while quite unaffected by anything that may happen at, or to Burgas, feel very differently regarding Rodosto. The British landing in Asia Minor, on the other hand, appears to have given widespread satisfaction.

The utterly unexpected has happened so often during the past five years that it can hardly be unexpected to find it happening again. And in regard to the Roumanian advance on Budapest it actually has happened. The Roumanian Bureau at Berne announced, in a message dated May 9, that the victorious advance of the Roumanian Army on the Hungarian capital had been checked, as the result of the intervention of the British and American missions. Bela Kun and his cronies have thus been spared the necessity of choosing between fighting to the last breath or making a hurried exit, and it is to be hoped that they feel properly grateful to whoever really is responsible for saving their face—or their skins. The rest of the world will hardly share their gratitude, and is much more likely to insist upon having an explanation of what on the face of it looks like a very gross blunder. That the Bolshevist position must have been enormously strengthened by this check to the Roumanians is quite obvious. That even the

Digitized by Google

Magyars will, and do, regret the turn of events would seem to be clear from reports that at Debreczin they organised demonstrations in honour of the collapse of the Bolshevist power when the army of law and order arrived. The effect upon the Roumanian Army itself, and on the Roumanian people, can hardly fail to be extremely depressing.

General Allenby has left Egypt for Syria, and the fact in itself is sufficient to show that the situation has greatly improved. The students maintain a stubborn attitude, and have indulged in further demonstrations, even risking an encounter with troops. They were, however, quickly dispersed, and have apparently acquired enough sense to realise that such manifestations are certain to gain them more hard knocks than fame. On the other hand, they have not yet learned that "passive resistance" quite frequently injures the passive resister far more than it injures the person, or persons, against whom it is directed. Thus on May 7, the date fixed for their return to their studies, the higher colleges remained empty, though the attendance at the secondary schools showed a marked improvement. The former establishments were therefore closed, in accordance with the Special High Commissioner's proclamation, and the net result will be that the students will lose a great deal of the education that they so obviously require. The most regrettable feature of these students' strikes is that they are indulged in by those to whom the country ought to be able to look for its future administrators and public servants. As our readers are well aware, education in Egypt was far from satisfactory before the outbreak of these disturbances. Recent events would seem to indicate that the fault lies almost entirely with the pupils rather than with the system.

Some light upon the methods employed to fan the flame of rebellion and to stir the students and others up to action against the British is afforded by the discovery by the Cairo police of printing presses where seditious literature was being produced. These were found, *The Times* Cairo correspondent reports, on premises belonging to a Dr. Ismail Sidky—not to be confused with Ismail Sidky Pasha, former Minister of Wakfs—who has been arrested. The existence of such instruments of propaganda and their apparently very successful employment by the agitators naturally suggests that counter-propaganda work in the interests of law, order, and sanity might have a very good chance of success among these Egyptian students, who are not naturally vicious, but are extraordinarily susceptible to appeals addressed to their emotional side.

Another satisfactory bit of news from Egypt is that all restrictions on travel have been removed, and that a normal train service has been resumed in Lower Egypt —measures which show that the authorities regard the situation as rapidly approaching a satisfactory stage. How far the calmer spirit that this implies is due to the failure of Zaghlul Pasha and his companions to secure support for their views in Paris, how far it must be attributed to the publication of the terms of peace presented to Germany, and the realisation of the full significance of those terms, remains to be seen. Probably both factors have contributed towards bringing about the very desirable change. If only the Egyptians would now settle down and turn a deaf ear to their would-be leaders and the agitators—who, by lending their countenance to such excesses as those of Deirut, have put themselves out of court once for all—they would find themselves travelling on the only road that is at all likely to lead them to a real independence.

The announcement is made that Major-General Sir L. O. F. Stack has been confirmed in his appointment as Sirdar of the Egyptian Army and Governor-General of the Sudan. This was one of the war appointments which have turned out complete successes, as is shown by the fact that the Sudan has remained tranquil throughout the troubles that have so disturbed its northern neighbour. Whether the fact that the appointment is confirmed at the present moment is to be regarded as having any particular significance we will not attempt to guess. But it is well known that there is a strong feeling in some circles that the relations between Egypt and the Sudan require readjustment; and it is possible that the question is, or will be shortly, under discussion.

So far as India is concerned, the centre of interest has shifted, and people who a few days ago were discussing the situation in the Punjab have had to turn their attention first to the Khyber and then to Whitehall. In regard to Afghanistan the general attitude is one of cautious reserve; the possibilities are so many, and the known facts so few, that even the youngest of the quidnuncs is for the moment disinclined to commit himself to a definite theory, and though he may scan the map of Asia from Constantinople to Kashgar, he will not put his finger on the precise spot where the origin of the trouble is to be sought. The brief reports of General Barrett's first activities are looked on as satisfactory, and the issue is awaited without too much anxiety.

As regards the contribution of Whitehall, we do not propose to insult the members of Lord Southborough's Commissions by expressing an opinion offhand upon the two reports which have just been made public. They bring us at last face to face with the hard facts which dominate the prospects of constitutional reform; they deal with a mass of controversial questions and of complicated details, and they call for careful examination before even a provisional judgment can be formed. We may, however, remark that the Franchise proposals, whatever their merits or defects, represent a very substantial advance; five million voters will not make India a democracy, but at present there are only 33,000, and we cannot at the moment recall any Western precedent for increasing the constituency one-hundred-and-fifty fold. The methods by which this change is to be effected, and the powers to be assigned to the new legislative bodies are subjects to which we shall return.

Perhaps the most striking of the numerous recent pronouncements on the political situation in India is a letter written by Sir Bampfylde Fuller, an authority who is entitled to be heard. Sir Bampfylde is no reactionary, though he is sometimes described as such by the back-numbers of the Indian Press, and his letter shows him in substantial accord with the view which has been urged in these columns, that reform must go forward notwithstanding the recent unfortunate events. He regards unrest as "the consequence of an extension of the idea of human dignity, an idea which Englishmen have sedulously propagated"; in other words, the ward is rapidly growing up, and the guardian must now do all that is possible to facilitate the transition from tutelage to adolescence. That, in our opinion, is the central fact of the present situation, and its dominance should not be obscured by occasional aberrations, however lamentable their immediate results may be.

Mrs. Besant's ardent partisans in India will, we fear, be disappointed by the judgment pronounced by the Judicial Committee of the Privy Council in her appeals regarding the forfeiture of her security. The case was argued as one of great constitutional importance, but the only question really at issue was whether the Executive had acted in accordance with the law, and this has been definitely answered in the affirmative. In England that would be the end of the matter, but Indians are sometimes bad losers, and we must expect that the eminent jurists responsible for this decision will share the fate of Mr. Justice Darling, whose conduct of the Tilak case has been abused from one end of the country to the other. Lord Haldane and his brethren on the Bench will not mind, but for the sake of India's reputation in this country we hope that on this occasion the criticisms may be marked by some sense of the fitness of things.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 21.

The Political Situation.

To-day is "Shem El Nessim," the national holiday, when every one who can do so leaves the cities and the towns and goes out into the country. Cairenes usually make excursions to the Barrage, Bedrashein or Helwan, but this year no such outings have been possible owing to the fact that the railways are at present restricted to Government and military requirements on account of the extension of the strike to the whole of the native personnel of the railways. As a matter of fact, whilst the general situation has improved in the provinces, where the military occupation is having a very salutary effect, and hostile and untoward incidents are now of very rare occurrence, the state of affairs in Cairo has become somewhat worse since my last letter, and the only feature which is more satisfactory is the state of the streets, but of that more anon.

As mentioned in my previous letter, the response to the Cabinet's appeal to the nation in general and to the Government officials in particular to resume their normal occupations and leave to the Cabinet the task of obtaining the greatest measure of satisfaction of the national aspirations was a declaration from the Strike Committee of the Government officials to the effect that they maintained their previous demands. On Tuesday, the 15th, the President of the Council issued a final warning to the officials that if they did not return to their posts the following day the responsibility for the consequences of the continuation of the strike would fall upon their shoulders. This warning was, likewise, without effect, the Committee throwing the responsibility back upon the Cabinet.

It may be as well to give an explanation of the reason why Wednesday was fixed in the above-mentioned warning. According to the Finance Regulations which contain the conditions of service under which an official is employed and the terms under which he can qualify for a pension, it is laid down that no man may absent himself from his work or from his residence without first having obtained official permission; that if he does absent himself without such permission he loses his pay for the period of such absence; and that if his abstention from work extends to fifteen days he is considered as having resigned, and his name is erased from the list of the permanent staff qualifying for pension. Some of the officials commenced the strike on the 2nd, the remainder followed suit on the next day. Wednesday, therefore, was the last day on which the former could return, and whilst losing their pay for the period of their absence, could still avoid forfeiting their pension rights. It was the hope of the Cabinet that this official warning would induce a large proportion to return to their offices. Only about 15 per cent. on the average of all the Government officials did so, however; in some administrations the percentage rose to 25 per cent., in others it dropped to zero. Clearly the officials, or, rather, the Committee of 54 which directs and is responsible for their attitude, intended to flout the Government, and equally clearly the time had come for an abandonment of the lenient attitude which had characterised the Government's treatment of the matter, and for the adoption of sterner measures.

A Last Chance.

However, the vagaries of the various calendars in use in Egypt have enabled the authorities to give the officials one more chance. As it happens, this year the Easters of the Western and Eastern Churches coincide. Easter Monday, according to our calendar, is Shem El Nessim or the national holiday of Egypt; and all these holidays fall within the Passover week of the Jews. This coincidence of religious festivals has meant that for one or other of the religions the last few days have been *dies non*. In the circumstances, therefore, it was decided to wait until the conclusion of this succession of holidays—viz., to-morrow—to see whether saner counsels might not possibly in the meantime prevail. In the event of such a change unfortunately not manifesting itself and the officials still abstaining from their offices, the long-deferred drastic action of the authorities will be taken.

Some Effects of the Strikes.

The abstention of the general mass of officials and their attitude towards those of their colleagues who endeavoured to resume their normal work, have considerably aggravated the economic situation. The state of the streets, which had not been swept for fifteen days, had become disgraceful and in the highest degree insanitary; but the Strike Committee did not concern itself in the slightest with this most serious feature; and as it was impossible to get the usual staff to do the work, recourse has had to be had to convicts, who now sweep the streets under the supervision of a British guard. Each watering cart is driven by an Indian, by whose side sits an English soldier with rifle and fixed bayonet.

The condition of things as regards the Post Office has become worse. For a time the Cairo Post Office managed to deliver some part of the mail at domiciles, but during this last week not only has it had to cease this service, but it has had to close its doors for long periods owing to the hostile attitude of the mob and officials towards those who were dealing inside with the public. It is now possible to obtain letters, but only with great difficulty and after waiting a long time in a queue. Then, as regards the railways, the committee disapproved of the few employees who still stuck to their posts; and as a result of intimidation practically all the Egyptian personnel has been forced to come out on strike. Consequently the Railways Administration has had considerably to curtail its services and restrict transport to military and Government requirements; the trains being run by British soldiers.

Leaving out of consideration the attitude of the committee in the matter of the railways and the post office, and admitting for the moment that if they wanted to make their strike effective it was only natural that they should wish to call out every man in those two administrations, nothing can excuse their attitude with regard to the streets of Cairo. They knew full well how much the health of their fellow-citizens depends on the cleanliness of the streets; the defection of the scavengers could by no means affect the power of their strike, and their blind persistence in an attitude which, if not counteracted, could not fail in the long run to jeopardise the lives of several hundred thousand people in Cairo alone is in itself but one more argument against the granting of any measure of independence to Egypt, since the very people who have been responsible for this decision would have an active part in the government of the country under a régime of Independence.

A Palpable Manœuvre.

A subtle move on the part of the committee to circumvent the proclamation against intimidation has been fortunately detected and counteracted. With the avowed desire to assist in maintaining peace and preventing disturbances, the committee, with a great flourish of trumpets, created a body called "El Bolice El Watani" (National Police), whose "official" duties were to patrol the streets, counselling the people to

calm and intervening on the side of peace in any altercations which might take place. There is little doubt, however, that this was but a disguise for a host of intimidators who, under the guise of preservers of the peace, would be able to continue the campaign of intimidation already initiated with such success among the public and tradespeople, and which a recent order from the G.O.C. was intended to repress. The authorities lost no time in intervening, and a military order was issued prohibiting the formation and the operation of this body.

We now await to-morrow, with more curiosity than real anxiety, to see whether the officials turn up once more at their offices. If they do not, then it is understood that as the Council of Ministers has been powerless to influence or enforce its authority over its subordinates, the Special High Commissioner will intervene with all the authority of his position. From every point of view it is indeed imperative that a term should be set to the present state of affairs in Cairo, and that the clique of intimidators and inciters to resistance to the Government should be given a stern lesson. For until the situation in the capital returns to normal, and the influence for ill that exists and exerts itself in every direction at present is eradicated, we cannot expect either the provinces to maintain as a permanent feature the outward peaceful condition which the presence of military forces compels everywhere to-day, or the country as a whole to resume its economic life which has been so far completely paralysed. It is as much in the interest of the Egyptians themselves as of the British Government, which is responsible for the maintenance of law and order in the Valley of the Nile, that this return to normal shall be as speedy and complete as possible.

LETTER FROM PORT SAID.

(From Our Own Correspondent.)

Port Said, April 30.

Port Said and the Unrest.

The unrest malady which has devastated other parts of Egypt has happily not been serious in Port Said, mainly owing to the prophylactic measures which the local authorities promptly applied at the outset. The disease is diagnosed as Germano-Bolshevism, complicated by a superimposed attack of fourteen-point Wilsonism. The sufferers from this distressing malady, of which the chief symptom is a strong desire to smash, loot, and kill, attempted to leave the native quarter of the town. The authorities were, however, prepared with preventive measures, which were so effective that there has been no further outbreak of the disease, though probably there will always be a latent danger till the carriers of the disease are safely hanged. Those who know Port Said will remember that a large, wide street separates the native from the European quarter, so the latter can be comparatively easily protected, though that may leave some Armenians in the native quarter exposed to the fury of the mob, who, judging by what has happened in other parts of Egypt, have learned their lesson well from the Germans and Turks.

Naval Changes.

H.M.S. Hannibal is now stationed here as guardship—a thing Port Said has not had for many years—and the presence of so large a number of naval officers will no doubt tend to improve the social amenities of the place.

Captain Betts, R.N., who has been acting during the war as Senior British Naval Officer, is leaving for home, amid many regrets, for his personal courtesy and official tact have almost eliminated the inevitable friction of a very difficult position.

A War Story.

Now that the war is more or less over, one can mention some of the efforts of Dame Rumour in the native bazaar here. One was that the ex-Khedive had landed on the coast in a small boat, and had asked the first coastguardsman he met to send a telegram for him to Cairo, handed him a five-pound note (a good one), and then returned to his boat. Some unromantic people said it was a yarn invented by a coastguard officer to stimulate the vigilance of his men. Be that as it may, the really weak point of the story is the fact that the Khedive did not ask for the 496 piastres change.

CYPRUS NOTES.

(From a Correspondent.)

The National Festival.

The "National Festival" has been celebrated with considerable enthusiasm throughout the island; the churches were largely attended, Greek flags were much in evidence, and a general holiday was kept by the Greeks. Athletic sports were held in some of the towns, and, as usual, patriotic speeches were delivered. Telegrams were despatched by the Bishop of Papho, who acts for the Archbishop during his absence in London, and by the Mayor of Nicosia (Mr A. Liassides) to the King of Greece, M. Venizelos, the British Prime Minister and the Archbishop of Cyprus.

The Legislative Council.

In the Legislative Council a motion was introduced by Mr. Egenios Zeno, the only Greek member who has remained in the island, that in view of the fact that the eight absent members could not return in time to take part in the proceedings of the Council this year, permission should be granted to them to absent themselves from all sittings during the present session. The proposal was strongly opposed by Irfan Bey and the two other Turkish members, who contended that the absence of two or three members might well be excused, but that it was quite foreign to the spirit and intention of the order under which the Council was constituted that practically the whole of the Greek representatives should absent themselves. Especially was the proposal undesirable, since the object of their absence was to work in England for a change in the political status of the Government and the island, and in view of the statement made last year by Greek members, one of whom openly expressed the hope that that would be the last sitting of the Council under its then existing constitution. "Supposing," said Said Effendi, "that 100 members of the House of Commons were to ask for leave of absence in order to proceed to the United States of America to work against the British Constitution, would such permission be granted by the House?" On the motion being put to the Council, it was supported by the votes of the official members, and was therefore carried. The Council is now dealing with the draft laws, the passage of which will no doubt be greatly facilitated by the diminution of its numbers.

Personal Notes.

The officer administering the Government has been visiting Limassol, Papho, and other ports in the west of the island, accompanied by the Auditor, the Principal Forest Officer, and Canon Newham, Inspector of Schools. The Greek papers comment on a visit to the island by Captain Pelly, R.N., to inspect the island harbours and roadsteads. He has visited Limassol, and examined the Salt Lake in the Akvotiri peninsula, and proceeded to Papho, with Captain Hardy, Naval Officer at Famagusta, and another officer who accompanies him.

Summer Prospects.

The hotels in the hills are preparing for the summer season. A prosperous season is anticipated at Mount Troodos, Platres, and other favourite haunts. Miss Young, of Nicosia, will probably open her camp again for visitors.

AFGHAN INROAD INTO INDIA.

The following statement, issued too late to be noticed in our last week's issue, comes from the India Office:—

Official statements have been issued from time to time on the subject of recent events in Afghanistan. The state of that country has given cause for anxiety for some time past, because it was hardly to be expected that the unrest consequent upon the murder of the late Ameer and the dispute over the succession would fail to react upon the North-West Frontier of India.

From reports received from the Government of India during the last few days it appears that apprehensions on this score have been realised. Armed bodies of Afghans, including apparently regular troops purporting to act under the orders of the Afghan Government, have crossed the frontier at several points in the neighbourhood of the Khyber [the pass leading from Peshawar to Afghanistan], and have occupied Bagh Springs, Tor Tsappar, and Spinatsuka [in the hills to the north of the pass, and about twenty-five miles from Peshawar] on the Indian side. Further movements of Afghan troops towards the frontier are also reported.

The Government of India are taking active steps to expel the intruders and to deal firmly with any developments that may arise. The troops detailed for this purpose have been placed under the command of General Barrett. It is anticipated that they will have no difficulty in carrying out their task. The attitude of the tribes on the British side of the border is reported to be satisfactory.

The Viceroy has addressed a strong letter of remonstrance to the Ameer, calling upon him to take immediate steps to restrain his subjects.

A later communiqué from the India Office states:—

Since the official statement was published on the 8th in regard to recent developments on the Afghan border, further telegrams have been received from the Government of India on the subject. On May 9 the Government of India reported that the Afghans were receiving large reinforcements and had advanced their positions to the heights of Ashrafai Khel, overlooking Landi Kotal. On May 10 the Government of India telegraphed as follows:—"On the morning of May 9 our advanced forces at Landi Kotal expelled Afghans from positions in vicinity of that locality. Aeroplanes co-operated and bombed Loi Dakka with good results. Enemy are still in position to the west about Khar Gali. Our casualties were slight. The section of the frontier adjoining the Khyber has never been demarcated. But Landi Kotal is indisputably on the British side, and in advancing to its vicinity the Afghans have committed a deliberate act of invasion, for which they had received no provocation whatever. Some unrest is reported in the city of Peshawar, where martial law was proclaimed on May 8. A number of arrests have been made, with good results.

POSITION IN INDIA.

The following telegram has been received by the Secretary of State for India from India, dated May 9:—

In the Punjab no further disturbances have been reported. Further "snowball" postcards, addressed to either Moslems or Hindus, or both, have been found. The circulation of rumours and agitation continues. An attempt by two students to stir up disaffection among the Jats of the Hissar district [in the Delhi district of the Punjab] is reported. Elsewhere quiet continues. No change in the Mahommedan situation. Indian agitators are stated, in a report received from Afghan sources, to have pledged themselves to attack on aircraft and mechanical transport and to incendiarism.

A PROHIBITION SCHEME.

The Maharaja of Bhavnagar, which is well known as the model State of Kathiawar, is taking measures for the abolition of the traffic in liquor in his territories. A few weeks ago he ordered the preparation of a scheme to be brought into force on Saturday, his forty-fourth birthday. The scheme provides for the State to become wholly "dry" within a given period. The Maharaja has approached the other States of Kathiawar with a view to obtaining their co-operation, since their close proximity constitutes a serious, though not insuperable, obstacle to effective separate action. Some other Indian States have taken partial action in the direction of restriction. The Begum of Bhopal, a devout Moslem, maintains a regulation making the sale of liquor to her Mahommedan subjects an offence under the Penal Code.

BRITISH RED CROSS.

We have received from the Joint Finance Committee the fourth annual report of the British Red Cross Society and the Order of St. John of Jerusalem. It is a wonderful record of a wonderful work. An idea of the immense efforts which this charity makes is gained from the fact that during the last year it spent £20,000 a day. Our readers will be interested chiefly by the story of the doings of the society in Egypt, Malta, Salonika, Italy, Corfu, Serbia, Montenegro, Roumania, and Mesopotamia. The financial side appears to have been managed very efficiently, as shown by these accounts; but the figures convey but an outlined idea of the worthiest of human efforts.

REFORM IN INDIA.

Lecture by Sir V. Chirol.

On May 10, at the L.C.C. Day Training College, Sir Valentine Chirol gave a lecture upon Indian reforms. If India, he said, was to come into line with all the nations of the British Commonwealth, there must be not merely reconstruction in that country, but actual construction. India's fine share in the war was not underrated in this country, and the serious troubles there during the last few weeks only showed that India was suffering, like the rest of the world, from the unrest arising from the great ordeal of a world war. These troubles must not lead us to forget how the peoples and princes of India responded to Britain's call. The Indian Army filled the gap in our Western fighting line during the critical winter of 1914-15, and India furnished the chief contingents for the expeditions to Palestine, Mesopotamia, and Syria. This country had not been slow to acknowledge its debt of gratitude to India.

The report of Mr. Montagu's mission, which formed the basis of a Government of India Bill to be submitted shortly to Parliament, had recommended a large measure of decentralisation. On the success of the new institutions would depend the gradual enlargement of the powers and responsibilities of the Indian Ministers and legislatures until they ultimately covered the whole area of provincial government and could be safely extended to the Government of India, which would then in due course cease to be responsible, as now, to the British Parliament, and attain to the position enjoyed by the self-governing Dominions.

How was it that the promise of such far-reaching reforms had not availed to stem the tide of unrest which began to assume once more very menacing proportions, even before the war came to an end, and had resulted in dangerous outbreaks of violence? The real explanation, he believed, must be sought, first, in the peculiar conditions which differentiated the structure of Indian society profoundly from the conditions of our own civilisation; and, secondly, in the history of the evolution of British rule in India.

The caste system was a formidable obstacle to progress on the democratic lines followed by Western countries, since it ran diametrically counter to all notions of the brotherhood of man or of equality before the law. British rule and the importation into India of Western education and the English language had created the new class, appropriately called in the Montagu-Chelmsford Report, the "politically minded class," and this country had undertaken to educate politically a fifth of the human race—no light task. On the one hand there was the conservative opposition of our own people, who had, on the whole, made very fine use of the power entrusted to them as representing a benevolent despotism, and honestly dreaded that power would not be exercised with the same impartiality and integrity by natives of the country subject to those influences of religion, race, and caste from which it is difficult for natives to emancipate themselves. On the other hand, we had to carry out the process of education in the face of a great deal of covert and sometimes open opposition from reactionary forces in the country, especially of Hinduism and of those who saw in Western civilisation a menace to the old order of things.

Whatever the difficulties might be, our position in India in many respects had never been stronger than at the present time. We had never been in a stronger position to rally the elements of Indian society whose interests were bound up with the maintenance of peace. The war had created an identity of interest and a community of sentiment never existing before.

Sir Valentine concluded his lecture by stating that one of the tasks which would have to be undertaken simultaneously with the granting of political power must be the creating of opportunities of education for all the classes from which electors would be drawn.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

MACEDONIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of May 9 Mr. D. Yanitsch describes "Autonomy for Macedonia" as an "ingenious trick." But if the Macedonians desire autonomy, why should they not have it—within the Yugoslav Federation? And why is it a trick?

It may be right to punish Bulgaria by excluding her from Macedonia, but it seems hardly fair to punish the Macedonians, especially if they are not Bulgars. If self-determination is desirable in Dalmatia, is it not also desirable in Macedonia, where over 300,000 Slavs are now subject to Greek rule?—I am, etc.,

A STUDENT OF BALKAN AFFAIRS.

May 11, 1919.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Of all the extraordinary objections made by different correspondents to your valuable paper as to Cyprus being restored to the mother country—Greece—none was more spiteful and unique in its peculiar way than the one made by the "Cypriot" in the last issue of THE NEAR EAST.

I think that when questions of universal importance are being discussed in the public Press, touching upon the future government of the majority of the people of this or that island or country, it is monstrous that now and then somebody should appear, in the guise of anonymity, to play with the feelings of such people. The world is now told by the "Cypriot" that the present-day Greek is anything but the descendant of ancient Hellas, and in order to support his argument he refers his readers to a paper read by Sir Patrick Colquhoun to a certain society.

Perhaps it is just as well that the letter of the "Cypriot" followed in the same issue of THE NEAR EAST the true and statesmanlike communication of Dr. Lanitis, who, from his position as member of the Cyprus Legislative Council, knows more about his people, both Greeks and Moslems, than the historians produced by occasional contributors to the Press. The people of Cyprus have expressed time and again their gratitude to Great Britain for the exemplary administration of the island for the last forty years; but it is now their desire to join the Motherland, and their prayers to attain this consummation are not likely to be frustrated, especially now that the map of the world is being reshaped.—I am, etc.,

GEORGE A. BURLUMI.

74, Gt. Tower Street, May 12, 1919.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—As a Greek Cypriot I consider it my duty to express my indignation at the letter of M. Nejmi Bodamiabiade which appeared in your issue of the 2nd inst.

The writer of that letter claims to have a thorough knowledge of history, yet he contradicts himself by saying that the Greek Cypriots are not Greeks by descent. Why, then, does he decline to mention what they are? At any rate, whatever M. Nejmi Bodamiabiade and his fellow co-religionists of the same mind as him may think or say about the future of Cyprus, history can neither be altered nor ignored.

The outstanding historical facts about Cyprus are that the few Moslems of to-day on the island are the descendants of the remnants of barbaric hordes who flooded the Near East, Cyprus included, and that the Greek Cypriots of to-day are the descendants of the ancient Greeks. The present situation proves it; they outnumber by far the Moslems, and their religion, language, character, and national conscience are of pure Hellenic type. Hence the right of the Greek Cypriots to be united with their mother country, the Kingdom of Greece.

Moreover, M. Nejmi Bodamiabiade says that if the Greek Cypriots have the feelings of the Greek nationality they should send their sons to "Oxford and Cambridge" to learn the meaning of "Liberty and Patriotism," as well as the justice of Aristides and the language of Socrates. I would point out to the writer that the Greek Cypriots, like their brothers throughout the world, are born with the instinct of these virtues, and therefore they are in a position to teach the same to other people.

The Greek Cypriots, in their thousands, have fought voluntarily during the Balkan wars under their national flag—the flag of their mother country, Greece—in order to contribute to the liberation of their brothers. What else is that than a genuine manifestation of their origin, national conscience, and ties of blood with their brothers at large?

Nevertheless, M. Nejmi Bodamiabiade and his fellow co-religionists can remain assured of their safety when the island will be united to Greece, because the Greek Cypriots are too civilised to cause any harm to their Moslem countrymen. Like the Moslems of the other Greek islands and provinces enjoying the same political rights as the Christians, the Moslems of Cyprus cannot be treated otherwise, and therefore the fears of M. Nejmi Bodamiabiade and others are without any foundation whatever.

We Greek Cypriots, relying upon British honour and justice, are looking forward with absolute confidence to the completion of the sacred duty undertaken by Great Britain since the liberation of our beloved island.—I am, etc.,

GEORGE TRIANDAFILLIDES.

In the letter of Dr. Lanitas, printed in our last week's issue, the proportion of the Turkish population of Cyprus was wrongly stated to be one-quarter of the whole. It should have been one-fifth.

Reuter's Calcutta correspondent says in a delayed message of April 17 that Sir Jagadir Bose, Professor of the Presidency College there, announces that he has discovered that plants perceive and respond to the long ether waves in wireless signalling.

ASFURIYEH.

THE

LEBANON HOSPITAL

For MENTAL DISEASES

Nr. BEYROUT, SYRIA.

The Director has brought back a report of the work of the Hospital during the past 4½ years of war conditions. Asfuriyeh has the unique distinction of being the only Christian Philanthropic Institution able to continue its work uninterruptedly through the war, though under extreme difficulty. Expenses have been and are very heavy. Much necessary repair work must be put in hand at once, with increased cost of labour and material. Also urgent needs, involving a large capital expenditure, for Water Supply, Drainage, Baths, and increased facilities to make the Hospital efficient and compact in every department.

The Committee earnestly appeal for £15,000, towards which a sum of £1,300 has already been raised.

WILL YOU HELP?

Large or small Donations will be gratefully acknowledged by the General Secretary, Miss A. M. GOOCH, Lebanon Hospital Office, 35, Queen Victoria Street, London, E.C.4.

Please make Cheques and P.O.'s payable to the Lebanon Hospital, and cross Lloyds Bank, Ltd.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

I have recently been reminded of a Gallipoli story—one of the few good stories produced during the war. An Australian infantry brigade was famous on the peninsula both for the number of prisoners whom it captured and for the goat which was its regimental mascot. Now, this goat (unlike the mascots of Welsh regiments) was little troubled by cleanliness, and consequently its approach could be scented from afar. The bodies of the Turkish prisoners were none too savoury; and a grand discussion arose on the question: Who possesses the more pungent odour, the goat or the Turk? The colonial passion for betting rose high; the love of discussion degenerated into blasphemous abuse; and the argument raged so fierce that it was decided to take the matter to the brigadier for him to decide. He, both a sportsman and a stickler for military etiquette, ordered the thing to be done according to regulations. So a hardened sergeant, whose "expensive" nose could have endured the vilest odours in Christendom, marched in the goat before the general. "Halt! Left T——." Enough: the general quite gallantly but promptly fainted! Next was marched in a Turkish prisoner. A sinking pause. Then the goat fainted. . . .

***

For a long time we have had little news of Turkey. It is interesting therefore for me to give a few details which I have collected from recent letters from Constantinople. Summer-time in Turkey commenced at sunset on April 10. It is curious to learn the recent changes which the defeat of Turkey has caused. For instance, the country casino of Balta Liman, on the Bosphorus, which opened for the summer season on April 13, is now named King George Park. Also Casino Osman Bey, at Chichli, is now named Paris Garden; and at both of these casinos British military bands are playing! What a change is there, my Sultan! And on April 11 the extremely joyful step was taken of abolishing German in Turkish schools, henceforth to be replaced by English and French. How deep and permanent these changes are I cannot tell, for the Turk is a pastmaster in the art of pleasing, and in the (enforced) practice of repentance.

***

Recently I saw an extract from an Egyptian paper, *Al-Bassir*, with a heading "Poverty-stricken Lawyers Unwanted." The glowing oxymoron of the first three words came as a great shock. Poverty-stricken lawyers! One might as well talk of "Wealth-endowed journalists"! When I was in the Army I remember seeing at a divisional concert a skit entitled "The Grasping Hand; or the Quartermaster-Sergeant"; and I thought at the time that the title could, with a little alteration, and with permanent truth, be applied to civil life. Be this as it may, it really does appear that, *incredibile dictu*, in Cairo there are lawyers who accept their clients' defences for so few piastres that they are a dishonour to their profession. "These lawyers," says *Al-bassir*, "belong to the old school, and have not profited by their long experience. Therefore they do not understand the spirit of the law. No wonder they have remained poor. . . . They do not accept bribes from the adversaries of their clients, or dissipate the money given them to pay the legal fees." Well, well; it is good to know that there are honest men in Cairo to-day; but 'tis a sad pass when a country has to depend on the honesty of its lawyers. I wonder if we shall ever have to depend on the truthfulness of politicians. If so, may the day be too far off for mine eyes to behold!

***

In lecturing before the Central Asian Society the other day, Lieut.-Col. G. S. F. Napier told a most amusing story of the Grand Duke Nicholas and Rasputin. It appears that when the Grand Duke had command of the army of the Caucasus the nefarious monk thought fit suddenly to honour General Headquarters with his presence, and, noting the absence of welcome, said to the Grand Duke: "Do you know who I am? I am Rasputin!" From his handsome height of six feet five inches the Grand Duke loftily replied: "Are you? Well, I am going to have you flogged this time, and if you come again I will have you hanged!" Rasputin was flogged, but unfortunately did not again visit the Duke, and so missed the excellent fate which was promised to him. Now, all my readers know that the Grand Duke was worshipped by the Russian Army, and probably he alone of all men could have done this thing to Rasputin. What a pleasing thing it would have been if Sir Douglas Haig had been given equal powers over persons similarly pestiferous! Should we not have joyed to read in the—whichever paper you read (with a few exceptions!) that this "military correspondent" and this humane politician had received the cat-o'-nine tails! But we do not conduct affairs that way in this country. They order these things better in Russia, which pursues many drastic paths, and not all of them wrong.

***

My colleague who is responsible for the "Personal and General" columns in this journal, is, notwithstanding the tremendous gravity of his task, a flippant fellow. Though by day he moves in a world of solemn austerity, recording duly and with Hansard-like impartiality the doings of the great, yet with the night his unburdened soul flies on lighter wings. The world of marriages and obituaries is not a gladsome one; and with the passion for joy my colleague wants these things altered. So nearly every night, he tells me, he prays for two things—the enforced celibacy of Indian Army officers, and the immortality of all those who took part in Indian or Egyptian campaigns. By making these things practical realities he thinks to rid this planet of much that is irksome to read and still more troublesome to write. Now he is, as you surely will have guessed, a bachelor, and therefore given to fond fancies. But do not blame his ignorance. For he will learn some day that both Love and Death, even in a hot climate, are inevitable, and that the Recording Angel has, duly and with Hansard-like impartiality, things very similar to marriages and obituaries, to set down.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Affairs in the Caucasus. May 8.

Mr. CHURCHILL (Secretary for War), replying to Lieut.-Commander Kenworthy, said: The British troops in the Caucasus have not been in action against the Georgians at any time. The situation is that Georgians attacked General Denikin's detachments on the Bzib River, south of Gagri, and drove them back beyond the Mekhadir River (north of Gagri), on which river they halted. This advance was made in spite of protests of the British Commander-in-Chief. The Georgians implicated were accompanied by local bandits and Bolsheviks. A threat of force, by the despatch of British troops to Gagri, has stopped any further action.

Lieut.-Commander KENWORTHY asked whether the Georgian Republic had plenipotentiaries attending the Peace Conference.

Mr. CHURCHILL: I do not know about that at all. All I know is that we are not allowing the Georgians to attack General Denikin's troops, neither are we allowing General Denikin to attack the Georgians.

British Troops in Eastern Europe.

Mr. CHURCHILL, in reply to Colonel WEDGWOOD, said: There are no British troops in Finland, Esthonia, Lettland, or the Ukraine. As regards Karelia, I do not think it advisable to give the figures as to the number of our troops at Murmansk. There is a small mission of twenty-five officers and other ranks in Roumania and Bessarabia, and a larger mission with General Denikin in South Russia. The total number of British, including Indian troops, in the Caucasus is 24,200, and in Siberia and with Admiral Koltchak there are about two battalions and the personnel of a strong mission.

Indian Steamer Accommodation. May 13.

Mr. MONTAGU, in reply to a question by Colonel YATE complaining of the travelling conditions in the mail steamer lately arrived from India, sick ladies and children being put in the third-class quarters down below, and first-class cabins being given to certain deputations of Indians coming to England to agitate on the subject of the proposed Indian reform scheme, said the reference presumably was to the steamship Ormonde. Among the 347 first-class passengers there were only six Indians. There were 607 second and third class passengers. He was informed that the third-class accommodation on the vessel was exceptionally good, and special efforts were made by the company to secure the comfort of the passengers. The company undertook that they should have the same mess and the use of the same deck as the second-class passengers, and their cabins were fitted with electric fans. He regretted that two children should have died on the voyage from pneumonia.

Topics in Parliament.

The subjoined headings are those given in the official Report.

DEMOBILISATION: India: Troops in India (Return Passages). (May 6.)

INDIA: Public Services.—Travelling Facilities. DEMOBILISATION: Long Service Men (Egypt and Palestine). PALESTINE FORCE: Married Officers and Men. OFFICERS' WIVES, EGYPT. LEPROSY, INDIA. INDIA COTTON COMMITTEE (Report). (May 7.)

DEMOBILISATION: Troops in India. KUT GARRISON (RECOGNITION). PRISONERS OF WAR, TURKEY (EXPENSES). INDIA: Montagu-Chelmsford Report. (May 8.)

INDIA: Currency Issue.—Constitutional Reforms.—Passage to England (Certificates). Mail Steamers (Accommodation).—Afghan Frontier. NEAR EAST (GERMAN AGENTS). BRITISH SOLDIERS (MACEDONIA) (May 12).

PRESS ON THE NEAR EAST.

Hydrophobia

In an article entitled "Kaisuli of the Hills," a correspondent to the *Times* has a gratifying story to tell of the adoption of Pasteur's methods for dealing with hydrophobia in India. He says:—

The problem of hydrophobia was probably more urgent in India than in any part of the world, when the Indian Government, through its wonderful medical service, seized opportunely on the splendid discoveries of Pasteur, and created one of his institutes on this beautiful eyrie in the hills. One shudders to think of the fate of those who were bitten by mad dogs in the old days. For hydrophobia has two great terrors attaching to it. One is the agonising nature of the disease itself; the other is its lingering and uncertain onset. The victim might go for months, living the while in such an epilepsy of apprehension that he often resorted to suicide to end the intolerable suspense, and as month after month crept on he would increase his hope that perhaps, after all, the ghastly malady might pass him by. Then one day would begin the menacing itching of the wound, the redness and soreness, the cramps in the throat; and in a day or two his shrieks and yells would be horrifying the station till they were ended by merciful death.

Constantinople and the League.

Although it has now been decided definitely that Geneva shall be the home of the League of Nations, the following, written by the Special Correspondent in Geneva of the *Daily Telegraph*, is still of interest:—

A memorandum, written by a gentleman of considerable experience in international affairs, and resident for many years in the city, has been submitted to President Wilson, setting out the claims of Constantinople, and suggesting a Constitution for the Republic which it proposes should be set up on the Bosphorus. It is understood that the President has been favourably impressed by the arguments set forth, as the proposals contained in the memorandum would not only settle the question of the seat of the Executive of the League of Nations, but would solve the difficulty of the future of Constantinople, a matter of some moment in view of the rival claims put forward for its possession. The memorandum, of which I have been shown a copy, proposes to set up a Republic of Constantinople, whose existence and independence would be guaranteed by the League of Nations. Its boundaries would be the Enos-Midia line, as fixed by the Treaty of London of 1913, the Black Sea from Midia in Thrace to Kilia in Asia Minor, a few miles east of the Black Sea end of the Bosphorus, and a line from Kilia, through Ismidt-Broussa, and the valley of Menderes to the Dalian, on the Mediterranean coast of Asia Minor, opposite the island of Tenedos. The proposed Republic would therefore include the Dardanelles and the Bosphorus, the peninsula of Gallipoli, and a strip of territory on the Asiatic shores of the Straits, and the Sea of Marmora.

The Government of the new Republic would consist of a President, elected in the first instance from three candidates nominated by the League of Nations, and a Cabinet composed of Ministers selected by the President, but responsible to an elected Chamber of Deputies. The Ministers must be members of the Chamber. The deputies would be elected on a limited suffrage which, in the present state of the population of the district, would give ten Turks, eight Greeks, seven Armenians, and five Jews, together with four representatives each for America, England, France, Italy, and Germany, and one each for Bulgaria, Roumania, and Serbia, and the other small European nations. No army would be maintained, but order would be secured by a police force of 10,000 men, all of whom, in the first instance, would be Americans. A certain number of these would retire each year, and be replaced by men recruited locally, so that at the end of fifteen years only 500 Americans, all officers and non-commissioned officers, would remain. These would eventually disappear, and the whole force would be recruited locally.

Afghanistan.

In a leading article called "A Menace to the Khyber Pass," *The Times* of May 8 thus comments upon the recent events in Afghanistan:—

It has been obvious throughout that the murder of the Ameer Habibullah had a much deeper significance than was at first suggested. The British Government could not say so publicly, and were naturally bound to accept and announce without free comment the explanations furnished them from Jalalabad and Kabul. But the whole episode of the assassination and of the subsequent struggle for the Throne contained strange and unusual features, and we are evidently far from knowing the whole truth yet. The proclamation issued by the new Ameer, Amanullah Khan, had an ominous ring. He claimed that Afghanistan should be "internally and externally independent and free"; this does not leave much room for the control of Afghanistan's foreign relations by the Government of India.

There were other straws also to show which way the wind was blowing. The article continues:—

We do not yet know how far the Ameer Amanullah is openly cognisant of the present violation of territory. Twice before in the last quarter of a century Afghan regulars have joined in an attack on the Khyber while the reigning Ameer maintained nominally cordial relations with Simla. But the situation is now very different from that prevailing at the time of the Tirah war and the more recent Zakka Khel campaign. Parts of the Punjab have been in open rebellion on a limited scale, and there is much political tension among Mahommedans throughout India. It may be that Amanullah, whose own position must be very insecure, is seeking the traditional way of keeping the Afghan tribes together. Most people forget that less than a century ago the Afghan kingdom extended to Peshawar and the Indus, that Lahore and Delhi were repeatedly raided, and that Afghan influence dominated Kashmir and Sind. More probably, however, the true origin of the Afghan outbreak lies outside the borders of Afghanistan altogether. Obscure influences are at work throughout the whole Mahommedan world, and all the secret wires run in the direction of Turkey. One of the mistakes of the Paris Conference is that in disposing of the Near East it has forgotten Islam. The present trouble at the western end of the Khyber may quickly vanish or it may mean the beginning of grave and dangerous events. Our own view is that if it is swiftly countered it need not trouble us very much.

Turkey: Reforms and Counter Reforms.

In the issue of April 6 of the *Eastern Spectator* of which the proprietor is Dr. M. Theotokas, and of which the editorial offices are at Galata, is an informative article on the secularisation of the Turkish State proposed by the Young Turks. The article opens thus:—

The efforts made by the Young Turks these last ten years towards the Europeanisation of this country are certainly not the least interesting part of their entire policy. Having adopted renovation for their watchword, they proceeded to abolish one by one the old Moslem institutions and to transform their country into what was their idea of a modern State. They did not confine themselves to the establishment of what was a sad travesty of parliamentary government; they proclaimed their desire to make certain reforms which affected the very foundation of the whole structure of the Turkish State.

But the exceptional opportunities created by the war are now at an end.

With the fall of the Young Turks, their entire policy of secularisation is abandoned. Not only have their plans been rejected by the Governments which succeeded them in office, but all of the so-called reforms they had carried through will be abolished. The policy of Moustapha Sabri Effendi, who is holding the post of Sheikh-ul-Islam in the Liberal Entente Government, is to undo the work of the Young Turks, and to revert to the old theocratic régime. It appears from the written statement he has made to the *Vakil* that he is a convinced opponent of secularisation. "I can never consent," he said, "to the separation of religion from the State, nor can I renounce the share of the Sheikh-ul-Islamate in the policy of the Government."

A corollary of the maintenance of theocracy at home is the pursuance of a policy of pan-Islamism abroad. On this point the Sheikh-ul-Islam appears to be equally convinced, though not as explicit as on the question of secularisation. "The experiments," he says, "which have been made until now in connection with the relations of Turkey with the Moslem world have furnished sufficient indications with regard to this matter." He goes on to amplify his meaning by giving an outline of the measures the Government intends to take in order to preserve the bonds uniting the Caliphate with the occupied regions. To this end the Government will endeavour to "bridge over the chasms that have opened, and to make reparation for the feelings that have been violated by punishing the guilty and resorting to certain other measures."

The Sheikh-ul-Islam's declarations mean, if anything, that the present Government will not pursue the policy of the Young Turks in the question of the relative position of temporal and spiritual power in the State. The attempt of the Young Turks to modernise the structure of the Turkish state, an attempt under which lay hidden many nefarious schemes against the liberties and the privileges of the non-Moslem elements, has now been definitely abandoned, together with the rest of their policy. For once reforms have not been welcomed, owing to the insincerity of the would-be reformers. Turkey is willing to follow Europe a long way, but there are certain matters in which a blind reproduction of European institutions is not advisable. In these matters, the Sheikh-ul-Islam thinks, she had best remain her old self.

A FEDERATED NEAR EAST.

Mr. P. W. Wilson, writing from New York in the *Daily News* of May 9, has a few interesting words on the American attitude towards Armenia and Syria. He says:—"There is strong opposition to accepting a mandate for Armenia, and influential American groups would prefer the whole Ottoman Empire placed under a British régime on the Egyptian model, with a view to ultimate autonomy of a Federated Near East. With regard to Syria, this involves the traditional claim of France, which on principle is rejected by American opinion as irrelevant to the human happiness of the populations concerned."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

NEAR EAST BOOKSHELF.

NEW HELLAS.*

We have here what is probably a condensed, semi-official presentation of the case for Greater Greece, which, for lucidity, compactness of material, earnestness, and apparent plausibility, constitutes a very eloquent essay. There is a preface by Mr. T. P. O'Connor, which is, to our thinking, quite unnecessary to the author's argument; and there is a large but not elaborate map.

It is not cynicism but compassion that compels one to admit caution when considering the claims of Near Eastern protagonists, but this claim for Greater Hellas is a very reasoned document. Its outstanding features are: (1) the solution proposed for the Asia Minor problem, and (2) a very serious indictment of Italy—so serious and apparently documented that it may account for the *mauvais quart d'heure* recently experienced by the Italian Delegation at the Paris Conference—an indictment that demands an answer. Dealing briefly with this latter point, we may summarise our author's case thus:—The Twelve Islands (Dodecanese) of which Rhodes is the pivot are retained by Italy, in spite of solemn promises; their inhabitants, nearly all Greek, have been deliberately starved, deprived of medical assistance, heavily taxed, driven to emigrate, and thus in many of the islands have been reduced by more than 50 per cent. The author reminds General Ameglio that he has herein faithfully copied the tyrannical edicts of the Austrians in Lombardy before Italy's own unity had been achieved. Under the principle of self-determination "Polybius" crushingly repudiates any possible Italian claim to the Dodecanese. On the question of Northern Epirus, if he is not quite so convincing, because here there are Italo-Albanian claims and intrigues, he is at least equally censorious, and launches the accusation that Italy has been in this matter traitor to France and England, her own Allies, and to Venizelist Greece, by secret arrangement with King Constantine—another black indictment needing refutation. It is, of course, only too well known that no love is lost between Greek and Italian; but we seem to detect the influence of Venizelos in the pen of "Polybius," and, through the words of the writer of this book, to hear the voice of a man whose honour, courage, and humanitarianism stand on an uncommon eminence. This tribute we ungrudgingly pay our author.

His solution of the Turkish problem opens with an adroit and sarcastic exposition of a difference between President Wilson's references to Turkey's future and Mr. Lloyd George's famous "Turkish homelands" reference; and he concludes that the one knew and the other did not that the homelands of the Turk are "somewhere the other side of the Caspian"—let us charitably say, anyway, nowhere near "Teschen." The solution, for which Turkish and Greek statistics are given, is the expulsion of the Turk from Europe, the erection of a mandatory Power for Constantinople and the great waterway, and the confining of any form of Ottoman rule to the provinces (vilayets) of Konia, Angora, Sivas, and Kastamuni, plus the *sanjaks* of Kiutahia and Afion-Karahissar detached from the vilayet of Brusa. East of this area to be Armenian, west of it to be Greek, and an exchange of populations to be solicited and encouraged. Finally, the Greco-Bulgarian rivalry seems to be fairly and succinctly stated, and "Polybius's" five accusations against Sofia, royal or popular, are worth attention. We promise our readers that they lack nothing in severity and scorn.

ARMENIAN PAMPHLETS.

We have received a number of pamphlets explaining the case and urging the claims of Armenia. They are as follows:—"Armenia," which is a collation of extracts from the Parliamentary Debates of November, 1918; "The Plight of Armenian and Assyrian Christians," a report of a public meeting held at Central Hall, Westminster, on December 4, 1918; "Impressions of Armenia," by Lt.-Col. the Hon. Walter Guinness, D.S.O., M.P.; "The 'Clean-Fighting' Turk," reprinted from the *Foreign Quarterly Review*, London, 1828, and from *The Times* of February 20, 1917; "The Tragedy of Armenia," by Henry Morgenthau, the late American Ambassador at Constantinople; "Constantinople: the Solar Plexus of the War"; "Armenia's Charter," a series of speeches by notable men; "The Future of Armenia," by Viscount Bryce, O.M., reprinted from the *Contemporary Review*, December, 1918; "The New Armenia," reprinted from *The Times*, December 31, 1918; "Greece and Armenia," by Simos Menardos; "The Armenian Church," by the Rev. Harold Buxton; "The Children of the Illuminator," by the Rev. Fr. Nicholai Velimcrovic, D.D.; "Armenia and the Settlement," by the Rev. Harold Buxton, reprinted from *The East and the West*, January, 1919: "The Christian Peoples of the East," a sermon by the Rt. Rev. Herbert Bury, D.D.; "The Armenian Trek," by C. L. Mcluer Stevens; "The Future of the Near East," by Colonel Sir Mark Sykes, Bt., M.P.; "The Armenian Question," by the Hon. Lt.-Col. E. C. Little, reprinted from the *Congressional Review*, March, 1918; and "The Armenians," by Emily J. Robinson.

*"Greece Before the Conference." By Polybius. With preface by T. P. O'Connor, M.P. (Methuen and Co. 5s. net.)

BOOKS RECEIVED.

"A Guide Book to Northern and Southern Syria." (Published by the *Palestine News*, Cairo. 20 P.T.)

"A Guide Book to Central Syria, Lebanon, and Phœnicia." (Published by the *Palestine News*," Cairo. 20 P.T.)

"Rumanian Grammar." By M. Beza. (London: Bank of Roumania, Ltd. 7s. 6d. net.)

BOOK NOTES.

A. and C. Black have published, at 2s. 6d. net, "Balkan Fancies and Other Poems," by Captain A. J. Mann.

Messrs. Longmans are shortly to publish "The Bengali Book of English Verse," selected and arranged by Theodore D. Dunn. A foreword to this anthology has been contributed by Sir Rabindranath Tagore.

Mr. John Lane has in preparation "Tales Retailed of Celebrities," by Sir Charles Warren D'Oyly. The volume is to be an illustrated and anecdotal history of Anglo-Indian life during the latter part of the last century.

At Geneva M. I. Grunberg has recently published "Les Juifs à la Conférence de la Paix." He summarises the well-known hopes of the Zionists and the familiar reasons which justify and prompt these hopes. It is remarked that there is no country which has officially denied approval of the Zionists' plans. The reality of Jewish nationality is then briefly proved; but the statement of Jewish solidarity is rather too bare to carry conviction. The author is well satisfied with the proposed tutelage of Great Britain, and concludes his pamphlet by demonstrating the reconciliation of a Zionist and a Swiss point of view.

THE CAUCASUS FRONT AND WESTERN PERSIA.

On May 7, before the Central Asian Society, at 22, Albemarle Street, W., Lieut.-Colonel G. S. F. Napier lectured on the Caucasus Front and Western Persia, describing his own experiences there while on the Staff of the Grand Duke Nicholas during the war. Although only a small region, he said, the Caucasus contained many races, and there were over forty distinct languages. As to religion, some of the people were Christian, others, mostly Tartars, were Mohammedan. Tiflis was picturesquely situated in a cup in the mountains, the river Kura running through the town. One could see there more outlandish costumes in half an hour than anywhere else that he knew of. But, for all that, there was great excitement the first time a kilt was introduced into the town. While he was in charge of the Caucasus Military Mission a young officer in the Black Watch came as his assistant, and they went together into a small curio shop in a side street. Looking up, Colonel Napier discovered that the window was a sea of faces, while the street beyond was packed with people anxious not to miss the strange apparition. Colonel Napier said that he paid his first visit to the Caucasus front in August, 1916. The train from Tiflis to Batoum was timed to start at 9.45 p.m.; it actually got off about 2 a.m. the next morning. When dealing with Russians, he explained, you must never expect anyone to be punctual. In time you got used to it, but a wait of four hours and a-quarter at night, in a hot and crowded station, with nowhere to sit down, was somewhat annoying. Batoum, which he reached the next morning, he found to be a fine, modern town, backed by hills on which ferns, bamboos and other tropical vegetation ran riot. There was a large tea estate in the neighbourhood. It was managed by a Chinaman, and produced enough tea to supply the whole of the Caucasus armies. Speaking of his various experiences in the country, Colonel Napier said that the last time he crossed the Caspian from Baku to Enzeli, he shared a cabin with Captain Gamali, the Cossack who rode through Pusht-i-Kuli with his squadron in May, 1916, and thereby established connection with our Mesopotamian force. Captain Gamali's toilet was of the simplest. When he entered the cabin at night, he pulled off his long boots and tossed them into a corner. Then he threw his sheepskin cap into a rack and lay down. Next morning he pulled on his boots, put on his cap and went on deck. From Enzeli one travelled by a small steamer, a tow boat and light railway to cover the short distance to Resht, the capital of the province of Gilan. Of this region Colonel Napier said that it would be very rich if properly developed. The sea was full of fish, and the land produced excellent fruit—especially apples and oranges—and good cigarette-tobacco. But most of the province was a tangled jungle infested by robbers known as Jangalis, under a chief of the name of Kuchik Khan. In Persia, the land of ups and downs, the vocation of robber had been described as the stepping-stone to the post of Governor, and Kuchik Khan practically ruled the whole of the province of Gilan, and ruled it rather well, according to Persian standards. He played the part of a modern Robin Hood, oppressing the rich, and securing the adhesion of the poor by remitting their taxation.

22	9	Thursday	22	22

Prince and Princess Antoine Bibesco are staying at Walmer Castle, Kent, for a few days.

M. Boeresco, the Secretary to the Roumanian Legation, left London on May 12 for the country on leave.

Lieutenant-Colonel N. Arion, the Military Attaché to the Roumanian Legation, has arrived in London from Paris.

The Maharajah of Bikanir and Lord Sinha arrived in London on May 11 from Paris, where they have been attending the Peace Conference.

It is understood that M. Kostich, the Serbian chess champion, has agreed to take part in the tournament which is to be held at Hastings next August.

Princess Christian has given her patronage to a performance at "the Old Vic" on the evening of Thursday, May 22, in aid of the Serbian Relief Fund.

We learn from the *Pioneer* that when Sir Stuart Fraser, the British Resident at Hyderabad, retires at the end of the year he will be succeeded by Mr. C. L. S. Russell.

Princess Marie, daughter of the Queen of Roumania, on May 12 visited Madame Misu, the wife of the Roumanian Minister. Her Royal Highness left London on May 13 for Ascot.

Captain William Leefe Robinson, V.C., R.A.F., of 36, Vineyard Hill, Wimbledon Park, who died on December 31 after returning from captivity in Germany on December 14, left £2,346.

Admiral Jellicoe has telegraphed to the Viceroy of India, expressing his most grateful thanks for the welcome accorded to the "New Zealand" and the assistance he received from all sides.

Miss Cornelia Sorabji, Adviser to the Court of Wards in Bengal, Behar, Orissa, and Assam, will address the members of the Halcyon Club on "India as a Field for Women Lawyers" on May 28.

Lady Stack, the wife of the Acting Governor-General, left Khartoum on April 18 for Port Sudan, whence Her Ladyship proceeds by the Khedivial steamer for Egypt en route for England.

Lieutenant-General Sir William Marshall, who was the General Officer Commanding in Mesopotamia, and is a member of a well-known Durham family, is to be offered the honorary freedom of Durham City.

A marriage has been arranged, and will shortly take place, between Major J. St. Aubyn King, Indian Army and R.A.F., and Jeanne, only daughter of Mr. and Mrs. W. E. Demuth, late of Nyasaland.

Sir Basil Zaharoff had the honour of being received by his Majesty on May 13, when the King invested him with the Insignia of a Knight Grand Cross of the Most Honourable Order of the Bath, Civil Division.

Miss Harriet Fanny Deck Nurnberg, of Onslow Villas, Weston Road, Bath, who left £19,028, gave, among other bequests, £500 to the London Society for Promoting Christianity among the Jews for work in Roumania.

Mr. David R. Pinkney, of Messrs. Thomas Pinkney and Sons, who retired from the position of Consul to Greece for Sunderland when ex-King Constantine showed his pro-German sympathies, has been reappointed to that position.

The marriage arranged between Captain Jack M. S. Gardner, Indian Army, third son of the late Rev. W. R. Gardner, vicar of Huntingdon, and Mrs. Gardner, of Hemingford Abbot, St. Ives, Hunts, and Violet, eldest daughter of Mr. and Mrs. H. Ringrose Jackson, of Hornsea, East Yorks, will take place at Hornsea Parish Church on June 3, at 2 p.m.

The marriage was celebrated on May 2, in Bombay, between Francis Joseph Binning, eldest son of the late Colonel Joseph Binning, C.I.E., and of Mrs. Binning, and Mabel Frances, only daughter of the late Hon. Francis R. Byng and of Mrs. F. Byng.

A marriage has been arranged, and will take place shortly, between the Rev. William Z. Jones, Hon. C.F., vicar of Baldersby, son of the late Dr. W. L. Jones, and Ruth Augusta, daughter of the late Colonel William Verner Ellis, Indian Staff Corps, Commandant, 14th Sikhs.

A marriage has been arranged between Captain R. H. Sheepshanks, D.S.O., 12th Cavalry, Indian Army, second son of the late Rev. T. Sheepshanks, of Arthington Hall, Yorks, and the Hon. Bridget Thesiger, third daughter of Lord Chelmsford, Viceroy of India, and Lady Chelmsford.

Lieut.-Colonel Sir Albert K. Rollit will take the chair at the lecture which General A. H. H. Torcom (Chief of the Armenian Military Mission) is giving on "The New Armenia" in the Council Room of the London Chamber of Commerce, 1, 2, and 3, Oxford Court, Cannon Street, E.C.4, on May 16, at 3 p.m.

The marriage arranged between Captain A. G. H. Dyce, Indian Army, son of Colonel G. H. C. Dyce, C.B., and Mrs. Dyce, and Evelyn, second daughter of the late A. J. Brown and of Mrs. A. J. Brown, Cheviots, Eltham, will take place on Tuesday, May 27, at the Parish Church, Eltham, at two o'clock.

Among the names of the new members admitted to the Royal College of Surgeons appear the following:—M. A. Keshvalu, Madras and University College Hospital; G. T. Mody, M.B., B.S. Bombay, Bombay and Bristol Universities; and S. C. de S. Wijeyeratne, University College Hospital.

The King's Indian Orderly Officers for this year, who have entered upon their duties, are Risaldar Kunda Singh, 21st Prince Albert Victor's Own Cavalry; Risaldar Hargyan Singh, 14th Murray's Jat Lancers; Subadar-Major Dalpat Singh; 6th Jat Light Infantry; and Subadar Fateh Singh, 24th Punjabis.

A marriage is arranged, and will take place in the autumn, between Duncan George Mackenzie, I.C.S., Political Department, Government of India, second surviving son of T. D. Mackenzie, I.C.S. (retired), of Kincraig, Exmouth, South Devon, and Kathleen Millicent Chandos-Pole, only daughter of the late Samuel Chandos-Pole and Mrs. Bankhead-Browne, Cecil Hotel, Simla, and formerly The Towers, Market Drayton, Salop.

In connection with the Czechoslovak Festival in London, concerts are being given at the Queen's Hall on May 26 (at 8.15 p.m.), on May 30 (at 3 p.m.), and on June 2 (at 8.15 p.m.); and at the Wigmore Hall on May 29 (at 8.15 p.m.), and on June 4 (at 8.15 p.m.). The whole festival is under the patronage of of their Majesties the King and Queen.

The annual dinner of the Gurkha Brigade will be held at the Trocadero on Thursday, June 12, at a quarter to eight o'clock. Applications for tickets should be made to the Hon. Secretary, Mr. H. M. Hales, Messrs. Henry S. King and Co., 9, Pall Mall, S.W.

The annual dinner of the Indian Political Service Dinner Club will be held at the Savoy Hotel, at 8.15 o'clock, on June 18. Members of the service wishing to attend are requested to apply to Mr. Austin Low, Messrs. Grindlay and Co., 54, Parliament Street, S.W.

The annual dinner of the Madras Dinner Club will be held at 8 o'clock on June 4 at the Trocadero. Gentlemen desirous of attending will please communicate with the Hon. Secretary, Mr. Austin Low, C.I.E., Messrs. Grindlay and Co., 54, Parliament Street, S.W.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary object of which is to help the Indian Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.,
Church House, Westminster, S.W.1.

APPOINTMENTS, PROMOTIONS, &c.

The Hon. Mr. C. M. Webb has been confirmed in his appointment as Chief Secretary to the Government of Burma.

It is stated that Major-General Sir L. O. F. Stack has been confirmed in his appointment as Sirdar of the Egyptian Army and Governor-General of the Sudan.

Mr. Churchill has appointed Lieutenant-General Sir Philip W. Chetwode, Bart., K.C.B., K.C.M.G., D.S.O., to be Military Secretary to the Secretary of State for War and Secretary of the Selection Board, in succession to Lieutenant-General Sir Francis J. Davies, K.C.B., K.C.M.G.

OBITUARY.

Dr. W. Beam died on April 15. Since 1904 he had been chemist to the Sudan Government.

Sir Hervey Bruce, Bart., who had gone to Morocco for the benefit of his health, died at Tangier on May 8.

The death occurred at the B.R.C.S. Hospital, Netley, of Colonel Edwin Beddy, 29th Punjab Infantry, in his 83rd year.

The death occurred on May 6, at Manorville, Westward Ho! of Colonel Charles John Pearse, Madras Staff Corps, aged 84 years.

The death occurred on May 4, at Simla, of Michael, second son of Quentin Q. Henriques, I.C.S., Montgomery, Punjab, aged six months.

The death occurred on May 9, in London, after an operation, of Henry Spearman Saunders, of 80, Philbeach Gardens, S.W., formerly of Ceylon, in his 79th year.

The death took place on May 8, in London, after an operation, of William James Maitland, C.I.E., of 18, Lennox Gardens, S.W., and Witley Manor, Godalming, aged 71.

Colonel Edward Campbell Davies, late of Ceylon, who has died at Brighton, was formerly in the Public Works Department of Ceylon. He retired in 1911 after thirty-three years' service. He had the Volunteer decoration, and in 1910 was nominated a Companion of the Imperial Service Order.

NEWS IN BRIEF.

Magyar authorities at Debreczin, in Transylvania, organised demonstrations in honour of the collapse of the Bolshevist régime when Roumanian troops arrived.

Professor Simos Menardos, in a lecture in Athens on English Universities, recommended, amid cheers, that Greek youth should in future have recourse to British centres of education.

A *Daily Express* correspondent, writing from Geneva, states that the crown jewels and all properties of the ex-King Nicholas of Montenegro have been confiscated in favour of Serbia, and that his lands have also been taken out of his possession.

According to a Paris report, the Bulgarian Ministry has been reconstituted under the Presidency of M. Theodoroff, who keeps his portfolio as Minister of Foreign Affairs, while M. Madjaroff and M. Pastukoff succeed M. Liupketeff and M. Montaroff.

Under Lieutenant W. Seaton, 113 of the Royal Bucks Hussars have returned from France. The Bucks Yeomanry took part in suppressing the Bedouin rising in Western Egypt, and in the campaign in Palestine. They served as infantry in Gallipoli.

A message from Belgrade states that the National Councils at Zara, Fiume, and Susak have sent telegrams to President Wilson, thanking him for his defence of the Yugoslav people, and demanding to be incorporated in the kingdom of Serbs, Croats, and Slovenes.

The Zionist Organisation, Palestine Office, Immigration Department, has already commenced the work of forming district centres for emigrants at Copenhagen and New York, of the organisation of an immigration centre in Palestine, and of preparing agreements with shipping companies.

The eighth annual report of the Distressed Indian Students' Aid Committee announces a contribution of £230 17s. 5d. from the King, which sum has been invested in the National War Bonds. During 1918 the amount of loans granted to thirty-eight students was £796 7s. 11d. from the General Fund.

An appeal is being made for £500 to keep the Crimean Memorial Church at Constantinople open until a congregation able to maintain the chaplain reassembles. The church is vested in the Society for the Propagation of the Gospel, but owing to other demands the Society can go no further than the ordinary Peace grant.

Reuter's Paris correspondent states that an Abyssinian Mission arrived in Paris on May 10. The Mission is bringing to the French Government congratulations on the victory of the Allies. It will also proceed to Belgium. Two similar Missions will shortly leave Abyssinia—one for Rome, the other for London and Washington.

The Belgrade *Pravda* (Easter number) announces that all professors of the Belgrade University have been urgently called to return from foreign countries to their regular duties; also that the Serbian students are returning every day in great numbers from their military positions to Belgrade to renew their studies at the university and other schools there.

Owing to the inability of the President to attend the adjourned general meeting of the Anglo-Roumanian Society, and to the absence abroad of several members who desire to take part in the discussion of the proposed amendments to the constitution, the meeting, originally fixed for May 13, has been postponed till a later date, of which notice will be given in due time.

The *Busreh Times* of March 20 states that the Military Governor has received from Mr. Joseph Smoutha the sum of Rs. 10,000 to be credited to the Maude Memorial Hospital Fund. It is purposed to push on with the erection of the new hospital as quickly as possible; but the sum in hand, just over three lakhs, will not nearly suffice for the construction of a hospital worthy of its name and purpose, and further large donations are required.

The *Busreh Times* of April 3 announces that a Combined Civil Post and Telegraph Office has been opened at Kifil; that of April 8 states that the Civil Post Office at Faluja has been converted into a Combined Post and Telegraph Office, and is open to inland telegraph traffic; that of April 10 states that Civil Post Offices have been opened at Dohok, Chamchamal, and Dhibban Railhead, and that the Civil Post Office at Qilaat Sikkar has been converted into a Combined Post and Telegraph Office, and is open to inland telegraph traffic.

FRIDAY, MAY 16, 1919.

THE "PLACID CONTENTMENT" OF THE INDIAN MASSES.

Among all the telling phrases which lend a savour to the Report on Indian Constitutional Reform, none has provoked so large a volume of acute, if occasionally also acrid, criticism as those which purport to depict the position of the masses of the peasantry, and no unprejudiced student will deny that ample scope for criticism exists. The writers express their profound belief "that nationhood within the Empire represents something better than anything India has hitherto attained; that the placid, pathetic contentment of the masses is not the soil on which Indian nationhood will grow, and that in deliberately disturbing it, we are working for her highest good." Surely, say the critics, that is impatient idealism run mad. Contentment is of itself a great gain, and before we stir up the passions of a few hundred millions of individuals, we are justified in asking for more solid reasons than the faith which possesses an administrator and a politician, however eminent in their respective spheres. Is this western ideal of the moment, this restlessness which we choose to dub progress, really the greatest ultimate good? Are we entitled to force it on a population as great in numbers as the total of its present adherents? Is it not possible that we ourselves may tire of it by the time it becomes fashionable in India? In a word, is the whole thing worth our while?

Such questions as these are not altogether easy to answer, and prudent men will prefer to approach the subject by an examination of the facts. Is it true, as the Report confidently asserts, and as its critics hastily assume, that the masses of the Indian countryside are placidly contented with their lot? Until that issue be determined, discussion of its bearing on politics is premature, and on that issue we find ourselves absolutely at variance with the writers of the Report. We maintain that profound discontent lies at the bottom of the ordinary peasants' mentality; in the present environment it rarely rises to the threshold of actual consciousness, and it may be easily overlooked by observers seated on the Himalayan heights, or even on such lesser elevation as the historic Ridge affords, but nevertheless it is there, and it constitutes one of the great dormant forces with which the world will some day have to reckon. The proof of this assertion must be sought in the experience of the men who know the peasant best. Has anyone ever met an individual peasant who could be truthfully described as contented? Do not the great majority regard life itself as an evil to be endured? The attitude which on a distant view suggests placid contentment is in fact a dour and steadfast submission to the inevitable; the peasant bends his neck to life as his oxen bow to the yoke, but a contented peasant is as rare as a contented ox, and both choose submission because they see no happier alternative within their reach. To talk of placid, pathetic contentment is to misread the facts: pathos, indeed, is not lacking, but neither contentment nor placidity is an important element of the problem. Nor can we wonder that the prevailing attitude should be that which we have indicated, for it is the only possible result of the experience to which the Indian peasant has succeeded by inheritance. The one feature common to all the various types of Hindu and Moslem rule was the ruthless and systematic exploitation of the masses by everyone who possessed, or even asserted, a claim to official countenance and support. The lot of the peasant was often made intolerable, as the records of constant rebellions show; at the best, it was tolerable, and nothing more. The towns lived upon the country, and the peasant paid for all. The mentality of the peasant of to-day is based essentially on that long and terrible experience. It is true that under British rule the grosser forms of administrative exploitation have come to an end, but while old grievances have been mitigated, new ones have arisen in their place; in the peasants' eyes, the towns still live on the country, and though lawyers and money-lenders may have succeeded to administrators, the change has not produced placidity or contentment in the minds of those who pay. The actual result is that the masses are no longer driven to rebellion, but they can easily be led in that direction as recent events have so plainly shown; and apart from such exceptional occurrences as the cutting of telegraphs or the destruction of railways, it is sufficient to recall the steady procession of violent crimes committed against money-lenders, rent-collectors, and other unpopular persons, crimes so sordid, and so common, as to be unworthy of mention in the cultured Indian Press. You may dream of placid contentment in Delhi, but you will not find it on the countryside.

On this view of the facts, it becomes unnecessary to discuss the moral issues which the critics have raised. There might, or might not, be sufficient grounds for disturbing a placid and contented peasantry, but in the absence of those qualities the question does not arise, and in its place we have to ask whether it is right to take measures which must speedily break down the attitude of submissiveness, which we have found to exist. We believe it to be right, but in any case we are quite sure that the attitude in question is breaking down; the peasant is already a little less submissive than he was, and the change once started is bound to progress, so that, apart from any ethical considerations, an adjustment of the constitutional machinery has become imperative. Englishmen, at least, have no cause to regret the change, for it is an inevitable consequence of the nature of our rule, and it has been directly fostered by some of our administrative activities. It is probable, indeed, that the future historian will date the new movement from Lord Curzon rather than Lord Chelmsford, for it was under Lord Curzon's orders that the masses first heard the gospel of self-help, the most powerful stimulant which could be applied to a depressed and submissive population. It has been preached widely during the last twenty years, and while the direct economic effects are as yet comparatively small, there is no doubt that the leaven is at work, that its operation is facilitated by the spirit of the time, and that the result will become more and more obvious as time goes on. Now it seems to us to be of the utmost importance to the whole future of India that by the time when the peasants become fully conscious that the remedy for their discontents lies in their own hands, they should be able to assert their claims within the constitution of the country. We grant that the struggle is likely to be acute and prolonged, if the privileged classes resist as they have resisted in other countries, but the worst that can happen in a Legislative Assembly is infinitely preferable to the alternative of a struggle outside its walls. To our mind this is by far the most powerful argument in favour of political change. The present position is one of unstable equilibrium; disturbing forces are already at work, and the resulting motion, when it comes, will have nothing in common with the ordered swing of a pendulum. It will resemble rather one of those mountain torrents which if left to themselves cause only devastation, but which may be so guided and directed as to be a blessing rather than a curse, and it will depend upon the measures shortly to be framed by Parliament whether the reviving energies of the Indian masses shall have reasonable scope within the law, or shall be diverted once again to the destructive courses which they have so often followed in the past.

DEVELOPMENT IN MESOPOTAMIA

(From a Correspondent.)

The Government has not yet lifted the war veil of secrecy that has been drawn over our doings in Mesopotamia. The Press has referred very little to the present condition of the country or to impending developments. In fact, most people seem still to associate Mesopotamia with war campaigning. This is a great mistake. For two years the main occupation of our forces in the country has been industrial and political rather than military. There has been some sharp fighting and some fine military leadership during this period, but the fact remains that the main military work was done before General Maude's untimely death. Few things make me more proud of the British type than the manner in which British officers and soldiers have turned their hands to the work of settlement. These men were mostly civilians before the war; then they got trained as soldiers, quite regardless of the front on which they would serve; by chance they found themselves in Mesopotamia; and when the fighting there was done they settled down to the task of organising and developing the country. Truly we are an adaptable race. The blood of John Nicholson and Cecil Rhodes flows in us still.

I sincerely hope that the Government will shortly issue information about the transfer from war to peace in Mesopotamia. It will make us proud to know the number of officers and men who volunteered and were fitted for administrative work in this largely savage country. And we ought to know of the work of the many Indians who have gone to the country. It is a year since I was in Mesopotamia, but I know fairly well what has been going on there, and it seems to me highly desirable that the public should know as well. A Commission is now out there arranging for the transfer from military to civilian control, and we may well hope for early publicity about the state of affairs.

One very hopeful sign is that the Government is making way for private enterprise to a very considerable extent. This will shock our Socialists, and perhaps Mr. Wilson Fox and his colleagues on the Empire Resources Development Commission. But the policy is sound nevertheless. Government has indeed done wonders in Mesopotamia since the dark days before the Mesopotamian Commission. But, as I pointed out not long ago in *United Empire*, these triumphs were achieved when the conscription of men, ships, and goods was the law of the land. It is essential for the welfare of the country that Government shall confine itself to the task of governing. Hence I rejoice that Government has sold many of its Tigris boats, wharves, and quays, the big dock at Busreh, and so on. The new company which, I understand, Lord Inchcape has formed in connection with the B.I. Steamship Company is far more likely to further commercial development than any official department. The first shipping on the Tigris was conducted by a private firm, Messrs. Lynch and Company, and the new concern (which has absorbed Messrs. Lynch) has a fine field of utility open to it. Personally I should like to see the Mesopotamian railways also handed over to a company, preferably with Government part control, as in the case of the Abadan oil works. But at present the railways are scarcely more than military feeding lines. There is still, I believe, no railway between Kut and Amara, and the line between Baghdad and Kut is only narrow gauge, and, according to the opinion of many, laid on the wrong side of the river. Government will probably have to finish the building of the essential railway system, and then will come the time for handing its working to an operating company. Probably the main line between Baghdad and Busreh will not follow the Tigris route of the existing military railways, but will take the Euphrates course. This will be bad for Amara and the other Tigris towns, but we have to remember that agricultural development will centre on the Euphrates rather than on the Tigris.

To what extent private firms are already pioneering in Mesopotamia I do not exactly know. The fact that for some months the wives of officers and civilians have been allowed to live in Busreh shows that the peaceful settlement of the country is already far advanced. Mesopotamia's drawback will always be the absence of relief in the hot weather. From the fierce heat of India's Punjab or Sind Desert refuge can easily be taken to the hills; but there is no hill between Baghdad and the Persian Gulf, and the Persian mountains on the east are not likely for some time to be sufficiently safe for the erection of hill stations, though I believe one has already been planned. But with the development of agriculture and the erection of permanent bungalows, even the damp heat of Busreh will be bearable in comparison with the conditions under which we lived.

There will be enormous demand for cloth and articles of clothing, and, of course, for all land and farming implements. For four years the local Arabs have been earning unprecedented wages. There must be a good deal of money hoarded among them, and the demand for cloth is likely to be considerable. When I had charge of 500 Arab coolies their main garment was Government sacks. Building materials will be needed on a big scale, and I hope that Government will sell its brick factories, so that the manufacture of bricks may be carried out on business lines. The difficulties caused by the fact that there is no natural stone south of Baghdad will probably solve themselves now that we control the country north of Samarra. It always seemed a miracle to me that our roads were as good as they were, seeing that all stone had to be imported. In all these developments Mesopotamia will have one great advantage—namely, the magnificent physique of the Arab. I once agitated hard to exchange 300 Indian coolies of a Labour Corps for 200 local Arabs, and found work much easier when I succeeded. Of course, the type of man in a Government Labour Corps is not a high one, but in India I have seldom seen such fine and strong men as the Arab of Mesopotamia. But I fear that he too has been somewhat demoralised by Government methods.

I sincerely hope that Government will see that British enterprise has preference throughout the country. Mesopotamia has levied a heavy toll of British lives. Thousands of our countrymen have come to understand the country, and both British capital and British labour (and in British I include Indian) ought to have special facilities up and down the country. To those firms who are thinking of entering the Mesopotamian field I would give the advice that they should get hold of men who have been out there. There is a big supply of British men of all classes who as officers, sergeants, or privates have worked successfully out there as soldiers. We all grumbled at the time, and professed to hate the country. But I know that many who (unlike me) have the pioneering and Empire-building instincts are ready to go back. It will be a thousand pities if we allow even our Allies to follow in the footsteps of our victorious armies in Mesopotamia to the exclusion of our own people.

C. W. M.

On May 8 the King inspected a party of Indian non-commissioned officers belonging to Divisional Ammunition Columns, Royal Field Artillery, under the command of Captain H. C. Clogstoun, Indian Labour Corps, who are on short leave from France.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The report of the Agricultural Bank of Egypt for the year 1918-19 throws an interesting light on the general agricultural prosperity of the country as the result of war conditions. Owing to the high prices realised for cereal and fodder crops and for the cotton crop landowners were not only able to meet their annual liabilities with ease but also to repay a considerable amount of any arrears that might have been outstanding from previous years. During the year under review, in which it is pointed out in the report that the prosperity of the previous years was largely added to, the arrears of the bank, which in the first year of the war amounted to £E1,394,546, were reduced to £E151,326 as against £E403,786 at the end of the previous year.

***

The net profits of the bank amounted to £E874,184 as against £E1,047,500 for 1917-18, and of this total the amount available for distribution on ordinary and deferred shares is £510,413. Of this, £120,900 is absorbed by the payment of 5 per cent. on the ordinary shares, and the balance, which is available in equal shares in respect of the ordinary and deferred shares, with the respective balances and interest from the previous year of £E247,581 as regards the ordinary and of £E198,517 as regards the deferred shares enables the payment of an additional dividend of 8s. on the ordinary shares and of £40 on the deferred shares. The balance carried forward to the credit of the ordinary shares is £E369,798, and in respect of the deferred shares of £E315.274. The reason why large distributions have not been made is due to the fact that the net profits of the bank during the past year were in part due to the collection of arrears and receipts on sales of land, etc., which, it is pointed out, cannot be regarded as a stable source of income, and the directors have endeavoured to ensure the uniformity of dividends in future years.

***

In the letter on "The Constantinople Market," published in these columns last week, our correspondent there briefly summarised the present position at Constantinople as regards the need for imports in the words: "We want almost everything pretty badly." That aptly sums up the situation in the majority of Near Eastern centres, as the result of war conditions, and indicates the great opportunity before British merchants and manufacturers, who, if they will only bestir themselves and enter these markets now, will be able to establish their trade firmly enough to withstand subsequent competition from other countries. In doing so they would be well advised to pay special attention to the Constantinople market, which, owing to its position, was before the war, and doubtless will be again, one of the great distributing centres of the Near East. The range of goods imported into Constantinople was very wide, including cotton and woollen goods, boots and shoes, ready-made clothing, hosiery, agricultural machinery, and pharmaceutical products, to mention only a few in the long list of commodities that were in demand.

The Agricultural Relief of Allies Committee commissioned an English agricultural expert in March to ascertain the condition of agriculture in Serbia, and his report, which has just been presented, states that the greatest damage done by the enemy was in the fertile region round Shabatz, which has been entirely denuded of agricultural implements, and where very few of the inhabitants remain, though they are gradually returning. The committee, acting on his recommendation that a gift of live-stock from this country would be of the greatest possible assistance to Serbia farmers, is arranging for the despatch of a large consignment of animals, among them a thousand head of cattle, many hundred pigs, and a large flock of sheep. The Serbian Government is undertaking the provision of shipping facilities, and it is understood that the animals will leave England in two steamers in the course of a few weeks.

***

Sir Adam Block, it will be noted, estimates that the service of the Turkish post-war debt will require £T20,706,293, out of a total revenue of about £T32,000,000, and expresses the opinion that Turkey will find some difficulty in re-establishing her finances on a sound basis. That will undoubtedly be the case, and the difficulty is accentuated by the depletion of the resources of the country through the war. The future depends, partly of course, upon the conditions in the Peace Treaty, and there is every reason to believe that the interests of the bondholders will be adequately protected in that document.

***

Persia unquestionably offers one of the most promising openings for the extension of British trade in the future, more especially because for the present, at any rate, there is less likelihood of competition than in many other centres. In the past Russia has been a very serious competitor, and Germany was also interesting herself in that field with the idea, as I have often emphasised, of eventually being in a position to exploit the country's important mineral resources. Such competition as there may be in the future will probably come mainly from Japan and India. The extension of the Indian railway system to Robat will naturally result in the gradual development of India's trade with Persia, but there is the fact to be borne in mind that the Persian market is very different from those in which Indian traders have hitherto been successful, and as regards Japan, an advantage lies in the fact that the Japanese are not able to produce goods equal to ours, and as the Persians know and appreciate British goods, they will certainly take them in preference if they can obtain them.

***

The effect of the war has been to leave the Persian market very short of stocks of all kinds of commodities, and the opening is consequently very great, and only a little enterprise on the part of British merchants and manufacturers is necessary to take advantage of the position. Of commodities for which there is always a ready demand, mention may be made of cotton goods of all kinds—for instance, calicoes, muslins and prints—woollen goods and boots and shoes of good quality. There is also a good opening for paper, pharmaceutical products, and similar things.

***

M. Moravatz, the head of the Yugoslav organisation, "Commerce Franco-Yugoslav," who is now in England, has issued an interesting statement on the trade position, in the course of which he says that the Yugoslav merchants have decided to sever all business relations with German manufacturers as far as possible. It is his hope, he explains, during his stay in this country, to find "real and stable competitors" for German goods in all the Balkan States, but especially in Yugoslavia. "I am trying to convince British manufacturers," he adds, "that they must help to the realisation of this our ambition, not only for our sake, but also for essential British and commercial and political interests."

***

There is considerable scope for the extension of British trade with Algeria at the present time, as the existing requirements of that market cover a wide range, and a number of schemes for development are in view in connection with the ports and communications, to say nothing of comprehensive plans for general constructional work, all of which will entail in due course extensive orders for materials of various kinds.

***

Mr. Burlumi informs me that since Greek currants have been decontrolled, and merchants have been perfectly free to trade, a brisk trade has been done at enhanced prices. There are, it appears, from 40,000 to 50,000 tons of currants in Greece, and the greater part is likely to be shipped to this country. The visible stocks here are absolutely nil, and the trade is therefore buying largely for immediate shipments from Greece at from 60s. to 70s. c.i.f. Liverpool.

OTTOMAN PUBLIC DEBT.

Sir Adam Block's Report.—II.

As regards the farmed revenues, the tobacco revenue for 1914-15 was £T887,229, for 1915-16 £T782,857, and for 1916-17 £T817,393. The company has not yet paid the share of the Debt in the profits for the three years (£T780,000), the reason being that no General Assembly has been able to meet since the outbreak of the war. The Government defaulted in respect of the return of the Reftie Dues, and are debtors to the amount of £T54,000, and they are debtors for £T254 in respect of the Bulgarian tribute for three years.

Regarding the fixed assignments, the Government defaulted in the case of the Cyprus revenue, and are debtors for £T308,992, and the position has been the same in regard to the Eastern Roumelian tribute and the Tumbeki Tax, the amounts in question being respectively £T330,796 and £T25,000.

At the end of the year 1916-17 the Turkish Government were debtors to the bondholders for a very considerable sum. The annexed table shows the situation of the fixed assignments and the sums still due for each year by the Turkish Government. The total amounts to £T719,042, and, in addition to the debt, various other sums have remained in the hands of the Turkish authorities, and have been diverted from their proper destination, amounting to £T270,894, making the total £T989,936.

TURKISH GOVERNMENT'S INDEBTEDNESS TO DEBT ADMINISTRATION.

At the end of the financial year 1913/14, the Government owed to debt for fixed assignments (Roumelian Tribute, Bulgarian Tribute, Surplus of Cyprus, Tumbeki Tax and Reftie) £T. 25,000.

	Roumelian Tribute.	Bulgarian Tribute.	Cyprus Surplus.	Tumbeki Tax.	Egyptian Reftie.
	£T.	£T.	£T.	£T.	£T.
Balance of Financial Year 1913-14	—	—	—	20,000	—
Financial Year 1914-15	114,019·74	100,000	130,000	50,000	18,000
" " 1915-16	114,019·74	100,000	130,000	50,000	18,000
" " 1916-17	114,019·74	100,000	130,000	50,000	18,000
Sum due by Government	342,059·22	300,000	390,000	175,000	54,000
Received on account	11,263·22	299,745.57	81,008.31	150,000	—
Sum due by Government at the end of 1916-17	330,796	254.43	308,991.68	25,000	54,000

The report states that there will be a very considerable surplus of revenue for the year 1917-18, the accounts of which have not yet been finally made up, and of which the Government would normally have received 75 per cent. The Government's share in the surplus will suffice to reimburse the amount due as above, and the council will pay no share of the surplus in future years to the Government until these accounts are settled. Meanwhile the council will endeavour in other ways to obtain a settlement of these claims.

Interest and Sinking Fund.

The interest *paid* on the Unified Debt was in 1914-15 £T857,494, in 1915-16 £T93,088. and in 1916-17 £T115,725. The amount applied to sinking fund was in 1914-15 £T216,341, and for 1915-16 and 1916-17 nothing. The amount applied to Lots Turcs was in 1914-15 £T389,188, in 1915-16 £T214,764, and in 1916-17 £217,932, and large balances were carried forward, leaving a balance at the end of 1916-17 of £T5,812,847. The Unified Debt at the end of 1916-17 stood at: Unified Bonds, £T36,799,840, and Lottery Bonds £T10,512,607—total, £T47,312,447, against original totals of Unified Bonds £T42,275,772, and Lottery Bonds £T15,632,548—total, £T57,908,320.

It is anticipated that the receipts for 1917-18 will far exceed those of the preceding year, and that the receipts of 1918-19 will also be satisfactory. Sir Adam Block points out that it is impossible to foretell the future of the finances of Turkey at a moment when its territorial limits are unknown, and that bondholders must now await the decisions of the Peace Conference. "I have no hesitation in stating, however," he adds, "that their interests will be adequately protected."

The Financial Situation.

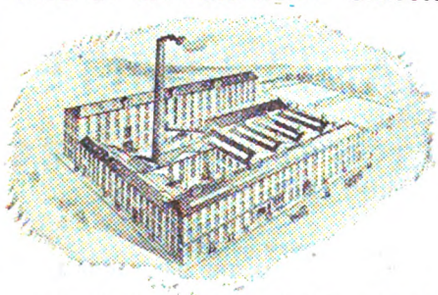
The general financial situation in the country at the present time is the subject of a brief survey in the report. The general Debt is shown at £T165,250,967 on March 1, 1915, and £E454,649,000 on August 31, 1918 leaving a difference of £T289,398,623. Deducting the Egyptian Tribute Loans there remains £T437,163,935. To the difference referred to of £T289,398,623 it is pointed out that there might be added a sum which cannot be fixed at present, but may attain very considerable proportions when Germany and the Entente Powers present the bill. It has been put as high as £T100,000,000.

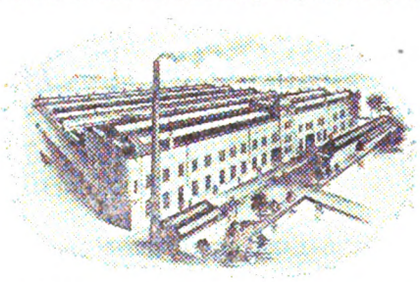
The annual service of the pre-war debt required £T8,048,281, and estimating the interest and sinking fund at 6 per cent. the New Debt, excluding military requisitions and supplies, would require annually £T12,658,012 making a total of £T20,706,293. The average receipt may be taken at a round figure of £T32,000,000 per annum, and this figure does not leave much margin for the State Administration. "The Paris Conference, whilst deciding the territorial changes necessitated by the war, will doubtless take into consideration the financial situation of Turkey," Sir Adam Block adds, "and, as the proposed political and territorial changes are to me unknown, it would be quite impossible at this moment to state how far Turkey, even under a reformed financial administration, will be able to meet its engagements. The great part, no doubt, of the debt to Germany can never be paid, and as Germany in the war has utilised the services of Turkey as a vassal and mercenary, it would appear but just that Germany's claims should be cancelled. But even then Turkey will find difficulty in re-establishing its finances on a sound basis."

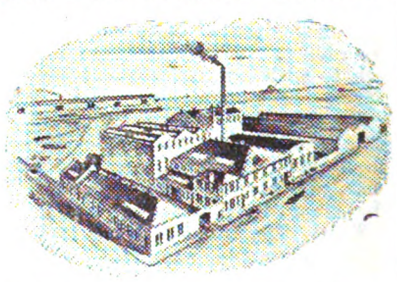
The effects of the war for Turkey, it is pointed out, have, in fact, been disastrous. The loss of population has been exceedingly great, and the resources of the country have been depleted, and it will take many years before the destruction can be repaired. However, in some parts of the country the peasant possesses more money than in the past, and despite the cessation of foreign trade, agriculture, the backbone of Turkey, has not suffered to a great extent, except where the populations have been deported and massacred but in the many districts where this has taken place the country has suffered a terrible set-back. The view is expressed that the economic outlook is generally therefore unfavourable, and it is remarked that since the Armistice the Government of the day have not yet shown that they are able to reorganise the Administration and to deal with the task of reconstruction.

On March 31 last the value of rupee notes under the denomination of Rs.10 in circulation in India was as follows:—Rs.5 notes, 929½ lakhs; Rs.2½ notes, 184½ lakhs; Rs.1 notes, 1,050½ lakhs. The value of notes despatched to Mesopotamia is Rs.1,512 lakhs, and 51 lakhs of one-rupee notes are now in circulation in British East Africa.

GREEK DEBT SERVICE.







The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to February 28, 1919. (New Style, January 14 to March 13, 1919):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Pireus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Feb.	1919	2,935,626	2,675,058
Do. do. do	1918	3,021,296	2,153,000
Estimated receipts for 2 months (Law of Control)		4,816,666	1,783,333
Actual do. do	1919	7,284,485	5,351,010
" " "	1918	7,589,480	6,312,000
Difference between estimated and actual receipts for 2 months	1919	+ 2,467,818	+ 3,567,677
	1918	+ 2,772,814	+ 4,528,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893.

GREEK COMMERCE AND INDUSTRY.

Review of the Post War Position.

Greece, after seven months' blockade and a long period in which the country was severely rationed, is quite without stocks of goods for export, with the exception of tobacco, currants, citrus fruit, skins, marble, a small quantity of olive oil and a fairly good stock of cotton goods, says the American Consul-General at Athens, in a report dated February 8.

The active war-time trade of Greece with Spain and Japan has already within the last two months fallen off greatly. Goods from these countries appear to be of inferior quality, and in many cases local merchants are refusing to take delivery of them; and an attempt is being made to re-export such of these goods as delivered. Some refusals to take delivery of Spanish goods are thought to be due to a drop of about 30 per cent. in the Spanish exchange, together with a falling off of freight and war-risk insurance rates, greatly facilitating imports from Allied countries. Goods which arrived aboard the Andreas, with the heavy freights charged by the Greek Government and war and marine risk insurance, cost the dealers about twice as much as goods brought in on the Themistocles, which arrived early in February. Most of the dealers are desirous of re-exporting these goods to protect themselves against losses.

In December, 1918, and January, 1919, laws were passed taxing incomes and profits on the stock exchange. According to a prominent financier of Athens these laws will seriously affect trade during the coming year. It is also understood that the Greek Government is considering the advisability of altering the import tariff, and has in fact denounced all its tariff conventions in preparation for these changes.

The Export Trade.

The only important growing crop at the present time is the citrus fruit crop. The quantity of these fruits is barely sufficient to meet the domestic requirements, and prices are comparatively high, tangerines and other oranges retailing at from 2d. to 4d. each in Athens, according to quality. Inasmuch as the quality is generally good it is thought that somewhat improved transportation conditions in Greece have contributed greatly to the scarcity. It is also reported that allied troops in Macedonia have purchased large stocks of such fruits.

No figures are available as to the stocks of farm products on hand. These, however, are said to be very limited, barely exceeding the domestic needs. At present, because of the food scarcity, there are embargoes on practically all food products. As conditions improve, exports of olives, figs, currants, nuts, and citrons may be expected to begin again in the regular channels.

The emery output has been controlled for several years by the French Government under arrangement with the Greek Government, and it is impossible to obtain figures at the present moment. The only two companies exporting magnesite are the Anglo-Greek Magnesite Co. (Ltd.) and the Société Financière de Grèce. The former has contracted with the British Government for its total output for six months following the signing of peace, while the latter is understood to have a somewhat similar agreement with the French Government. Their monthly outputs are said to be 5,000 and 3,000 to 5,000 tons, respectively. It is understood that the British Government is ready to allow the company whose output it controls to ship magnesite at times to other countries under special permit from the Ministry of Munitions. Besides magnesite, mines of lead, chrome ore, and marble are to be found in this district, but their production is of late very limited.

Since the beginning of the war lignite mines have been opened in Euboea, Peloponnesus, Attica-Boeotia, and Macedonia. Lignite has become an absolute necessity both for transportation and industries, replacing coal in large measure. During the months of December, 1918, and January, 1919, according to the statement of the Ministry of National Economy, the output of the lignite mines fell from 20,000 tons per month to less than 10,000, due to the prevalence of grippe.

During November, 1918, the Bank of Athens formed a company called L'Union Minière, with a capital of about £120,000, for the exploitation of mines in Greece. It is understood that as soon as mining machinery can be imported from abroad many mines of magnesite, iron, copper—and even gold and silver, it is rumoured—will be opened in Macedonia.

Timber Shortage.

There is and has been since the beginning of the war in Greece an alarming shortage of timber. Not only have all stocks been taken over by the Greek Government for the use of the Allies, but the former has issued permits for further cutting of timber, thus sorely depleting Grecian forests. It is stated that the Greek Government is seriously considering the advisability of refusing to grant permits for timber cutting for several years after the war. Prices of timber in Greece are exceedingly high—according to one statement attaining the figure of 1,000 drachmæ per cubic metre of inferior pine. Greece has never produced large quantities of lumber and has always been dependent upon neighbouring countries for its own needs of this article. It is thought that this is a propitious moment for American timber exporters to enter the field.

The only water-power developments in this district have a total horse-power of 1,700, of which 1,000 horse-power is used in the manufacture of calcium carbonate at Gorgopotamos, near Lamia. Several plans are being formulated relating to water-power developments, but as yet nothing has been realised. It is stated that there are undeveloped power sites in the Peloponnesus and in Macedonia, the latter in the Salonika district.

Industries in Greece were severely crippled during the war for want of fuel and labour. They have, however, during the months of December, 1918, and January, 1919, received a stimulus in the freeing of some coal and other fuel by the local Ministries and in the granting by the military authorities of long leaves of absence to mobilised men. Practically all industries in Greece are also suffering for want of raw material. This is due not only to the blockade and limited tonnage, but also to the action of speculators who entered the market as importers and brought in great quantities of unnecessary luxuries with the purpose of gaining large profits, so that raw material, such as iron in pigs and plates, steel, tin plates, etc., was only imported in very small quantities.

Openings for Machinery.

No new plants have been established to meet war-time needs, with the exception of certain small industries for the manufacture of an inferior motor fuel, sulphate of copper, and "staphidite" (an alcoholic beverage manufactured from the large stocks of currants that were deteriorating in the country). But since the signing of the armistice practically every industry and every capitalist has made plans for the establishment of new plants and the formation of companies.

No new railways or extensions are now under discussion, but, without doubt, large quantities of material of all kinds will be needed for the rehabilitation of existing lines as soon as deliveries can be effected. In general, conditions of railway traffic are bad, there is a serious lack of fuel, and equipment is worn out: while, because of reduced train service and troop and supply movements, the density of traffic has increased.

It is stated that M. Leonidas Embiricos, who has recently acquired the only private shipyard in Greece, is planning its enlargement, and that he has interested the firm of Cammell Laird and Co., Sheffield, who, it is said, will place 25,000,000 drachmæ (£965,000) in this scheme. Local financiers and shipowners in discussing the plan are inclined to be pessimistic, owing to the scarcity of technical labour and the high price of raw material, especially steel and iron. As far as the writer can determine, no vessels save small coasting craft have been delivered and no large vessels built in Greece. Several large orders have been placed with British shipbuilding yards recently.

It is stated that at least three of the large banks have lost heavily on credits opened for goods in Spain. This has been due to merchants preferring to forfeit their 25 per cent. of the value, deposited with banks, rather than take delivery of the goods.

THE PASSAGE PROBLEM IN EGYPT.

Lack of Accommodation and High Fares.

(From Our Own Correspondent.)

Port Said, April 30.

The burning question now is how to get a passage home, and the shipping agencies are besieged by applicants. However, most of the ships that pass through are already full, and those that have vacant berths are generally commandeered by the authorities. A particularly glaring case was related to your correspondent, and I have every reason to believe in the accuracy of the statements. A man had been promised berths by a shipping agent for himself and his family on a certain ship for a stated price. Two days later, when he went to pay the money, the agents told him that they were very sorry but that they could do nothing, as the authorities in Cairo had shut down on all the vacant berths that the ship would have on arrival. Next day this man, who had given in his name early in the year to the Government as wanting to get home, was informed by the authorities that berths had been allotted to him on this steamer on payment of a sum which was 12 per cent. higher than the shipping agent had asked for the same places. Presumably the shipping company were going to make a reasonable profit on the transaction, though the charge was only double pre-war rates, so the extra 12 per cent. is merely a monopolistic levy. However, that profit for doing nothing is quite reasonable compared to the super-profiteering of the authorities further East, who have recently charged passengers £80 for a passage from Bombay to Suez, and on top of that asked them to pay 5s. 6d. a day extra for messing. The hapless Anglo-Indian who used to growl about the P. and O. charge of £40 from Bombay to England will now look upon that much-maligned company as a philanthropic agency compared with the paternal Government. The French Government have attempted to ease the situation for their own nationals by allowing them to travel back to France on men-of-war, and on any French Government ship where room could be found or made. A request to the British authorities for a similar privilege has not elicited the courtesy of a reply.

An American Consular report states the citrus fruit crop in Greece during 1918 is estimated as follows:—Oranges, 49,000,000; mandarins, 51,000,000; and lemons, 35,500,000.

DEMOBILISED BRITISH CAVALRY OFFICER (28), desires Employment in TURKEY—SMYRNA, CONSTANTINOPLE or Inland. Has had nine years experience timber trade, home and abroad, and has a thorough working knowledge of woodworking and constructional machinery. Used to outdoor life—good horsemaster and used to the management of men.—Apply Box H.6, NEAR EAST, Devonshire Square, London, E.C.2.

ENGINEERING NOTES.

Engineering Trade in India.

The Indian machinery market needs special attention on the part of British engineer manufacturers in view of the increasing industrial activity in Japan, especially in the production of modern types of agricultural and industrial machinery, and of the systematic efforts of the Japanese manufacturers to introduce their products into that market. Of course, the Japanese are not the only competitors there, for there are the American and Continental manufacturers, who are also endeavouring to secure a firm footing in the Indian market, and who, by studying local requirements and assisting prospective native purchasers with much-needed and appreciated advice, gradually gain the latter's confidence and their own purpose. Their energies are not confined to the principal centres; they also extend to remote districts, which, apparently, are somewhat neglected by British manufacturers. The latter should bear in mind the important fact that while the Indian purchaser in and around the large centres has every facility for obtaining the articles he requires for any industrial purpose there is a strong and persistent tendency towards the creation of new industrial enterprises under modern methods in the more remote districts. Purchasers in such localities, while anxious to develop the resources of their country, and knowing perfectly well what they want to do, are in many cases without knowledge of where the plant required can be procured. The Government of India and some of the Provincial Governments have appointed officers to assist prospective purchasers with advice; but, valuable as this official assistance is, it is not sufficient; and British manufacturers must take an interest in this question themselves. For instance, when an inquiry from such sources comes through for a plant of machinery it is useless for a manufacturer to quote for a portion only. He should estimate for the whole thing, whether he makes all the appliances himself or not, as the purchaser is quite unable to piece together a number of estimates from a variety of sources into a practical whole. If, while in such perplexity he applies to, or is approached by a non-British manufacturer, the result is obvious. Such opportunities aid the efforts of the latter.

Brick and Tile Industry.

There is a good opening for modern machinery for the manufacture of bricks, tiles, slabs, water-pipes, etc., in India, and manufacturers of this machinery would be well advised to investigate the prospects there. The tile industry was first introduced into the southern districts of India in 1865 by the Basel Mission, the factories of which gradually developed, and run now on up-to-date lines, in which every modern invention finds a place, the whole machinery being driven by steam. There are now over twenty-eight tile-factories in Mangalore, the first home of the industry, among which the works owned by the mission and two or three other firms are reputed for the quality and quantity of their output, which includes side products of a variety of descriptions, but especially for their ornamental cement flooring tiles, which are very popular with the house builders. The annual joint output of three factories in roofing tiles is estimated at over Rs.100 lakhs, under normal conditions. The Indian-owned factories employ the bulk of the 2,000 or more operatives, who are seen every morning wending their way to one or the other of the many factories which occupy the two sides of the town, bounded by the river. About six of the Indian-owned factories are driven by steam, and produce tiles which are a decided improvement upon the article made by the old methods and baked in the old pattern firewood kiln. The annual output of roofing tiles ranges from thirty to forty millions, and depends upon the foreign market, the local sale being insignificant. This industry seems to be the only one which has not been affected by the war. Probably this fact is an encouragement to further enterprises, for it is announced that the establishment of modern brick and tile factories is contemplated in other parts of India.

Implements and Tools.

According to recent reports, it is evident that with regard to the trade in implements and tools generally in India the British position has not been seriously assailed. It is, therefore, recommended that British manufacturers should continue to supply their well-known lines, keeping the price as low as possible, in view of the competition of Japanese and locally-made substitutes and of the well-finished American specialities. In cutlery it may be said that the Indian market is waiting for the full resumption of British supplies. Here Japan and, to a smaller extent, America are the only countries which have made any progress towards occupying the place formerly filled by Germany in this trade.

Acetylene Searchlights.

There is a good market for searchlights in the shipping centres of the Eastern Mediterranean at the present time. Apart from the ordinary boats engaged in the Coast and the Ægean Island service, there are numerous private yachts and sailing ships which cannot with safety set out by night unless they possess a searchlight. It appears, however, that the apparatus best known and chiefly used in those regions is the electric searchlight, the cost of which is almost prohibitive for the class of service or private ships.

It may therefore interest the owners of such coasting boats, and others, to know that there are several types of searchlights of British construction which can be obtained at very reasonable prices. The acetylene searchlight will be found particularly suitable. The instrument is, as a rule, self-contained, and generates its own acetylene gas without any separate generator. It may be fitted either with a silver parabolic reflector or a glass-covered reflector. By means of a swivelling attachment the lamps can be moved instantaneously in any direction, all round the compass. An automatic generator is provided which, when charged with carbide, will supply the lamp for eight or ten hours continuously. On the other hand, the lamp can be used intermittently as required, gas being turned on and off at will. The prices vary from £8 for a complete outfit of about 1,000 candle-power, to £12 or £14 for one of 1,500 candle-power. Manufacturers of acetylene searchlights would do well to approach the shipping centres of the Eastern Mediterranean by advertising or sending representatives, although the use of acetylene gas is well known and extensively used in most parts of the Levant.

Engineering Possibilities in Persia

In previous engineering notes reference was made to the progressive propensities of Persia. Little is known, however, of the enormous possibilities that exist in that country as regards the development of the agricultural and other native industries and mining, in which engineering is bound to play an important part. Persia raises great crops of wheat, barley, rice, fruit, cotton, wool, gums and drugs; and the industries include the spinning and weaving of animal and vegetable fibres, enamelling metals, and carving. Her mineral wealth includes iron, copper, coal, lead, cobalt, sulphur, salt, asbestos, gypsum, and petroleum. Comparatively little is being done with these, apart from copper mining and boring for oil. The latter industry has already been discussed in these notes. Hitherto the use of modern agricultural and industrial machinery and implements has been very limited. In recent years Russia supplied her with considerable quantities of agricultural machinery and implements, but with the changes which the war has made Persia will be freer to choose the market for her purchases. A proper study of Persia's requirements in connection with engineering matters is most essential for the achievement of satisfactory results in the forthcoming competition for the trade, etc., of that country.

TRADE WITH TURKEY.

Our correspondent at Constantinople, "Vidi," whose first letter was published in last week's issue of THE NEAR EAST, is prepared to make commercial reports on business firms or individuals in Constantinople for subscribers to THE NEAR EAST desirous of opening up business with Turkey. Arrangements can also be made for the translation and printing in Constantinople of catalogues in Turkish and Greek. Unless the enquiry is particularly long or otherwise difficult no charge whatever will be made, and as regards the printing the net cost plus that of translation by competent Turkish and Greek translators will be the whole expense. Inquiries with reference to the above should be addressed to "Vidi," THE NEAR EAST, 1, Devonshire Square, E.C.2.

Reuter's correspondent at Simla reports that the prohibition of the import of coffee into India has been removed.

NEAR EAST MARKETS.

Crops in Asia Minor.

The following are extracts from the economic reports of the Imperial Ottoman Bank for the early part of the year:—

Mersina.

The condition of the crops has been very satisfactory. The area sown is greater than that of the preceding years.

The cotton and sesame harvests were very poor during the years 1917-18, owing to the lack of rain.

Since the armistice the rural population, which had diminished by about 65 per cent. during the war, has increased by about 15 per cent.

The stocks are amply sufficient to satisfy local needs, and there is a surplus for export.

Business transactions have been practically nil, communications by sea not yet having been re-established. With the resumption of these a great activity is expected, as much in exports as imports, in view of the disposable stocks of cereals and cotton on the one hand and the needs of the country on the other.

Rodosto.

Thanks to the rather abundant rains which fell during the month of November and up till the middle of December, cultivators have proceeded with the winter sowings of corn and barley under very favourable conditions. The temperature continuing propitious, the condition of the fields sown with wheat may be considered as very satisfactory, and the prospects for the next harvests are, for the moment, good, although the sowings of corn and barley are 30 per cent. below that of last year.

The sowing of onions is on a smaller scale than that of preceding years. The undecided political situation, in so far as it concerns our district, discourages several cultivators, who are content to work only the land situated in the zone of the town itself and neglect completely the large areas some distance from the locality. The condition of the live stock is satisfactory.

The export market is absolutely quiet. Our district continues to suffer the sad consequences of the war, and as long as the former leading commercial merchants of the town do not return, affairs will not improve.

Nevertheless, owing to the rather lively demand on the Constantinople market, a large quantity of corn and flour, valued at about £T20,000 has been exported during this month, thus producing for the few exporters appreciable profits. The only imports from Constantinople—colonial produce—are limited owing to the present exorbitant prices and to the strict needs of the district.

Adana.

The area sown with cereals is notably greater than that of the past season, and nearly reaches the area cultivated before the war. In spite of the lack of labourers, agriculture has benefited during the past year by the high prices fetched for cereals. Adverse circumstances, e.g., the marked fall in the price of cereals after the armistice, have led to the extension of the areas sown. The villagers, finding themselves unable, in fact, to sell their corn at high prices, have preferred to trust to the soil by sowing all the more as the impossibility of exportation would have prevented their keeping the cereals, which the climate of Adana only allows them to preserve for one season.

During the war agriculture has realised good profits; the villagers originally in debt have succeeded in reducing their debt. It is to be feared that they will soon suffer a crisis, agricultural expenses remaining the same, that is to say, high, while their crops will be sold probably at rather low prices, not enabling them to recoup themselves for their expenses.

Adalia.

Owing to the lack of labour, and the inclement conditions the area sown is 50 per cent. less than that of the past year. It is to be hoped that it will yet be possible to increase the sowings.

No business is being transacted in imports or exports. The lack of means of transport, and the exorbitant charges from Baladiz, the terminus of the Smyrna-Aidin line, to Adalia, and vice versa, of from Ps 15 to 18 per oke, compel importers and exporters to hold their hands.

There is no new industrial enterprise. The flour mills work regularly.

The price of a sack of flour of the first quality, which was £T9½, has risen to £T15 with a tendency to rise.

Angora.

The abundant rains that have fallen of late, coupled with exceptionally satisfactory atmospheric conditions, have favoured sowings, the work of which is actively pursued by farmers and villagers demobilised from the army. According to present indications we can count on a good harvest, much better than that of last year. Farmers, it should be mentioned, are contending against great difficulties, notably the scarcity of labourers, the shortage of domestic animals, and the high prices of seeds. Despite the deficiency of the last harvest, cereal stocks are more than sufficient to satisfy local needs. Large quantities of wheat and barley are in the warehouses by the railway stations, Eski, Chéhir, Angora, which cannot be exported at the present time to Constantinople because of the lack of communications.

Since the signing of the armistice business transactions have been restricted. The stagnation is principally due to the stopping of sending consignments by rail. The price of wheat and flour has fallen recently, but merchants holding large stocks are unable to profit by the relatively high prices of the capital. The need for money has become marked of late. During the last two months very active business has been done in rice. So much has been purchased here by the military authorities and some merchants that the price has risen to Ps.72-75 the oke which has not been reached since the outbreak of the war.

The flour mills of our town are unable to work normally owing to the lack of coal. The receipts of the Angora-Eski-Chéhir railway have been insignificant since the stoppage of goods traffic.

The weather has continued very favourable to agriculture during the early part of the year, during which sowings have taken place again. Moreover, the villagers have continued to prepare their soil for the summer sowings.

The export during the month under review has been less active than that of the preceding one, this owing to lack of sufficient stocks; in fact, on account of the fall in flour, there have been no arrivals from Bolou, Moudourniou, etc. The stock of potatoes is estimated at about 120 wagonloads.

Samsoun.

The tobacco crop has improved, compared to that of the preceding year, as appears from the totals—1918, kilos 2,580,000, against 1917, kilos 1,577,000. Production before the war was from 14 to 15 million kilos.

There is no business to report. Small quantities of tobacco are sent to Constantinople.

The revenues of the Treasury, in view of the present situation, have diminished considerably. Encashments are difficult. Salaries are paid regularly.

SERBIAN RECONSTRUCTION.

It is announced that the special post and telegraph officials' school will shortly be reopened.

In a special article in the *Trgovinski Glasnik* (Commercial Gazette) it is stated that a new Ministry has been created in the Yugo Slav State, the Ministry for Agrarian Reform. This paper says that agrarian reform is one of the most important reconstruction proposals to which much attention must be given.

In the south of Serbia near Uskub and Kossovo Field the new tobacco stock amounts to between 3 to 4 million kilograms. The Serbian Chamber of Commerce offered to sell this tobacco to the Monopoly, or to obtain permission to give licence to the growers and merchants to sell it for export.

M. M. T.

LANCASHIRE COTTON.

Market More Active.

(From Our Own Correspondent.)

Manchester, Wednesday.

The demand in the market has been active and inquiry has been on a large scale. Although business has been somewhat irregular there have been free operations in most sections and the position of spinners and manufacturers is stronger than a week ago. The mill hours question is still unsettled but most people expect the two sides to effect an agreement without drastic action on the part of the operatives being necessary. Lancashire traders are very keen on the proposed Government mission to the Far East and the authorities are being pressed to proceed with the matter. Very little information seems to be available as to the extent of any damage which may have been done to the Egyptian crop by the recent disturbances. It is feared that possibly the irrigation works have been injured in some districts. A larger acreage seems certain. More business has been done in yarns made from Egyptian cotton and prices are now hardening. In piece goods for Egypt there was a slight pause in business towards the end of last week, but during the last few days demand has re-asserted itself and free buying has occurred in numerous directions. An extensive trade has been done for India and China in both standard makes and fancies. Manufacturers have now much more work to go on with and there is less machinery standing idle in Lancashire than at any time this year. A healthy demand has been experienced in American yarns for home use at hardening rates. An encouraging turnover has been reported in yarns suitable for India and some special sales have been put through for China.

COMPANY RESULTS, Etc.

The directors of the Dekhari Tea Company have declared a dividend of 20 per cent. for 1918.

The directors of the Luskerpore Tea Company have declared a dividend of 8 per cent., free of tax, for 1918.

The directors of the Buxa Dooars Tea Company announce an interim dividend of 5 per cent.

The directors of the Chargola Tea Association have decided to pay on 31st instant a final dividend at the rate of 7 per cent. per annum, less income-tax, for the year ended November 30, on the preference shares.

Southern Punjab Railway.—The registers of the 4 per cent. cumulative preference stock will be closed from 19th to 31st instant, inclusive.

United Egyptian Lands (in liquidation).—The date by which holders of shares and share warrants who have not already claimed an allotment of shares in the new company (Egyptian Consolidated Lands, Ltd.) under the terms of the reconstruction scheme has been extended to 24th instant. Holders of shares and share warrants who desire to claim an allotment of shares must deliver claim to the National Bank of Egypt, 6 and 7, King William Street, E.C.4, on or before 24th instant.

The net profits of the Scottish Ceylon Tea Company for 1918 were £6,113. The directors recommend a final dividend on the ordinary shares of 6 per cent., making 10 per cent. for the year, and to carry forward £1,802, against £2,854.

The report of the Vellikellie Tea Company of Ceylon for the year ended December 31 last states that the balance at credit of profit and loss amounted to £6,760. The directors recommend a dividend of 10 per cent. on the ordinary shares for the year and to carry forward £3,235.

The report of the Craighead Tea Company for the year ended December 31 last, states that the balance at credit of profit and loss amounted to £6,656. The directors recommend a final dividend of 9 per cent. on the ordinary shares, making 14 per cent. for the year, leaving a balance of £4,226.

Digitized by Google

Suez Canal.— General meeting will be held in Paris on June 16. Holders of not less than twenty-five shares desirous of being present or represented must deposit their shares in London with Messrs. N. M. Rothschild and Sons.

The interest on the 6 per cent. debentures of the Aboukir Company, Ltd., due June 2, will be paid on and after that date on presentation of coupon No. 1 at the offices of the company, 134, Palmerston House, Bishopsgate, E.C.2. The outstanding 5 per cent. debenture bonds of the company falling due on June 1 (Sunday) will be paid on June 2.

An ordinary general meeting of the Cairo Electric Railways and Heliopolis Oases Company will be held at Cairo at 11 a.m. on May 20.

The report of the Rubber Estates of Ceylon to December 31 last states that the net profit amounts to £6,914; £4,516 was brought forward, making £11,430. It is proposed to place £1,000 to depreciation on plant and machinery, pay a dividend of 5 per cent., less income-tax, and to carry forward £4,305.

The directors of the British Darjeeling Tea Company announce an interim dividend of 5 per cent. (1s. per share), less tax.

The directors of the Mooply Valley Rubber Company announce an interim dividend of 6 per cent. (1s 2 2-5d. per share), less tax, payable as from 10th instant.

Coupons of the Persia Five per Cent. Sterling Loan of 1911, due May 15, will be paid at the Imperial Bank of Persia, or at their bankers, Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C.3.

The directors of Balmoral (Ceylon) Estates recommend a final dividend on the ordinary shares for the year ended December 31 last of 14 per cent., making 24 per cent., less tax at 5s. 9d. in £.

The report of the Ceylon Timber and Rubber Syndicate for 1918 states that profit amounted to £1,239; £3,543 was brought forward, less income tax £2,207, making £2,575. The directors recommend a dividend of 5 per cent., less income-tax, and to carry forward £195.

Subject to audit of the accounts for the year 1918, the court of directors of the Royal Mail Steam Packet Co. recommend the payment of the usual half-yearly dividend on the preference stock, and a balance dividend of 5 per cent., less income-tax, on the ordinary stock, making, together with the interim dividend paid in November last, a total of 7 per cent. for the year.

The report of the Fine Cotton Spinners' and Doublers' Association shows trading profits £893,659, after making provision for general depreciation and excess profits duty, and £152,431 was brought forward; £300,000 is placed to various reserves, while the ordinary share dividend cum bonus for the year is made up to 12 per cent. and £169,590 carried forward. The directors further recommend the withdrawal of £490,000 from the general reserve and distribute the same to existing ordinary shareholders at the rate of one new 5 per cent. preferred ordinary share for every five ordinary shares now held.

THE BRITISH INDUSTRIES FAIRS, 1920.

The *Board of Trade Journal* for May 8 contained an illustrated supplement dealing with the arrangements made by the Board of Trade for the British Industries Fairs of next year. The scope of the fairs will be largely extended, and they will be held simultaneously in London (Crystal Palace), Birmingham, and Glasgow. The three fairs are distinct from one another in regard to exhibits and trades.

The Secretary of State for India has informed Mr. Stewart, M.P., that the net amount of gold and silver imported into India since the commencement of the war is £21,400,000 of gold and 516,202,000 oz. of silver.

TRADE ENQUIRIES.

COMPANY NOTES & REPORTS

Roumanian Consolidated Oilfields

The Roumanian Consolidated Oilfields, Ltd., announces that communications have been received from Roumania to the effect that the managing director and a party, comprising some of the principal members of the staff, have arrived in Roumania. They have succeeded in recovering the company's title deeds, which are intact, and they have also succeeded in getting possession of the properties. Active operations have been resumed on the oilfields and, with the limited plant available, a small production is already being obtained.

Tramways of Alexandria.

A meeting of the Tramways of Alexandria Company was held on May 7, when the accounts for the years 1914-1918 were approved, and it was decided that the dividends falling to the first four years be payable on May 15 and that of 1918 on June 1.

Eastern Produce and Estate.

The report of the Eastern Produce and Estates for the year ended December 31 last states that the profit is £48,621, which added to balance brought in, including refund of excess profits duty (£7,484), makes £83,335. It is proposed to pay a final dividend on the ordinary shares of 11 per cent., making 15 per cent. for the year, to place to reserve against advances to coolies £5,000, to reserve fund (increasing same to £115,000) £5,000, to buildings and machinery £5,000, to staff pension and provident funds £2,000, and to carry forward £12,414.

India General Navigation.

The report of the India General Navigation and Railway Company for the year ended December 31 last states that after providing for all expenditure, depreciation and income-tax, there is a net profit of £139,463; £26,485 was brought in, making £165,948. Transfers have been made to debenture sinking fund £3,500, general reserve £14,095, for equalisation of dividends £10,000, to form the nucleus of a pension fund £20,000, insurance reserve £18,379, and to meet accumulated repairs £10,000. Dividends are proposed on the preference shares of 5 per cent and on the ordinary shares of 10 per cent., both free of tax, carrying forward £28,604. Interim dividends of 2½ per cent. on the preference and 4 per cent. on the ordinary shares have already been paid. The Mymensingh-Jagannathganj Railway has earned a profit of £23,423, against £23,961, and the Sylhet Lime Company has paid a dividend of 8 per cent. for the year. Meeting, Orient House, New Broad Street, E.C., May 28, noon.

NEW COMPANIES.

In the last half-year five joint stock companies, with an aggregate capital of 19 lakhs, were registered in the Holkar State, namely, the Central India Tile and Brick Works Co., Limited, capital Rs.5,00,000; the Central India Farming Co., Limited, capital Rs.5,00,000; the Central India Iron and Brass Foundry, Limited, capital Rs.2,00,000; the Industrial and Engineering Association, capital Rs.1,00,000; and the Central Indian Dairy Co., Limited, capital Rs.6,00,000.

Mr. Horace G. Hutchinson has been elected to the court of directors of the Royal Exchange Assurance, and consequently relinquishes his appointment as a local director attached to the West End branch.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Thursday.

Although business has only been on the restricted scale and there was some renewal of weakness during the early days of the week, the tone at the close was distinctly brighter, with indications that Egypt was again coming forward as a buyer.

In Government stocks there is no change to record in prices. There are buyers about round current levels, but sellers are scarce.

In Bank shares Nationals have receded ¼ to 20⅜ and Agriculturals ⅛ to 6⅜. Anglo-Egyptians and Land Banks have kept firm with some small business passing.

In Land shares, in spite of a very satisfactory statement at the Aboukir meeting, the shares are 9d. lower at 25s. 9d., after being down to 25s. Delta Lands, on the unexpectedly good report, and with the sale of the Alexandria French mills property at the excellent profit of over £21,000, have jumped up 1s. to 14s. 3d. Foreign Trusts have also improved 6d. to 14s. 3d. New Egyptians have been somewhat duller, and show a decline of 6d. at 24s. Sidi Salems are ⅛ down but rather nominal at 2⅜. Sudan Plantations have again been active, and close ½ up at 7¾. United Egyptian Lands have been subjected to some further selling on the eve of the reconstruction, and close 4½d. down at 1s. 6d.

In Miscellaneous shares, Alexandria Waters have been a feature and close ¼ higher at 12⅜, but sellers are exceedingly scarce. Salts and Sodas, after being ¼ down, close 1-16 lower at 2 11-16. Anglo-Egyptian B., after a large business, close ⅛ up at 5 7-16.

ANGLO-PERSIAN OIL.

Refinery at Swansea.

In the absence of Mr. Walter Long, Captain Pretyman last week laid the foundation-stone of the Anglo-Persian Oil Company's oil refinery at Skewen, near Swansea. Sir Charles Greenway, who presided at the luncheon, said that when they first conceived the idea of establishing a refinery in this country to deal with imported oil it was said they were committing a grave mistake, because it meant paying dead freight on a percentage of crude oil which was lost in the refining process. This, like many social axioms, was an absolute fallacy. It was far more economical to refine crude oil in the country where the products were to be sold. The loss in freight was a mere bagatelle compared to the advantages in other directions. One great advantage was that it provided employment for a large amount of British labour. In future the company would be known as "The National Oil Refinery, Limited."

Captain Pretyman said that this country might secure enormous advantages from the industry. The part which oil had played during the years of the war was really as nothing compared with the part which that product was destined to play in the future. The British Government now fully recognised its real interests in securing adequate petroleum supplies for the Empire. There was a time when the Empire nearly lost the advantages to be derived from oil, and but for the Anglo-Persian Oil Company securing a concession from the Persian Government the position during the years of war would have been a serious one.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—May 7, 8, 9, and 10, 1,690,000 francs, against 780,000 francs.

The Turkish fig crop in 1916 is reported to have been about 19,000 tons, 16,500 tons in 1917, and 18,000 tons in 1918.

Attention is drawn in an American consular report to the developing market in Colombo for earthenware and porcelain-lined sanitary bathroom installations.

Imports into British India in March increased by £2,897,000, whilst exports decreased by £2,366,000, as compared with last year.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NATIONAL BANK OF BULGARIA.

HEAD OFFICE IN SOPHIA.

ESTABLISHED IN 1879.

Capital, 100,000,000 Levs, Fully Paid. **Reserve Funds at December 31, 1918, 57,752,277,96 Levs.**

BRANCHES AND AGENCIES IN ALL CITIES OF BULGARIA.

The Bank effects the following transactions:—

1.—Executes the service of deposit treasury in the country and the treasury service of the State.
2.—Receives private deposits for fixed periods or on current account. 3.—Discounts commercial effects and allows quarterly loans.
4.—Collects country and foreign bills. 5.—Opens current accounts under deposit of merchandise, interest-bearing effects, stocks and shares, warrants, bills of lading, precious metals, bills, and at the guaranty of at least two persons.
6.—Buys and sells country and foreign cheques, etc. 7.—The Bank is entitled to the exclusive privilege of putting in circulation gold and silver banknotes. The telegraphic address for the Head Office: **Nationalbank**, and for the branches and the agencies: **Bank.**

IONIAN BANK, LTD.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844, and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all British and Allied firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the HEAD OFFICE:

BASILDON HOUSE, MOORGATE ST., LONDON, E.C.2.

AUTHORISED CAPITAL - -	*£600,000*
PAID-UP CAPITAL - - - -	*£485,580*
RESERVE - - - - - - -	*£85,000*

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	**£856,000**
RESERVE - - - - -	**£220,000**
Reserve Liability of Shareholders	**£1,000,000**

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bunder Abbas, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agencies at Busreh and Baghdad

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANK OF BENGAL.

Capital, Fully paid up	**Rs.2,00,00,000**
Reserve Fund	**Rs.1,61,00,000**
Reserve for Depreciation of Investments	**Rs. 25,00,000**

Head Office: Strand Road, CALCUTTA.

Branches: CLIVE STREET, PARK STREET, AND BURRA BAZAAR, CALCUTTA, AGRA, AKYAB, ALLAHABAD, BENARES, CAWNPORE, CHITTAGONG, DACCA, DELHI, HYDERABAD (DECCAN), JALPAIGURI, LAHORE, LUCKNOW, MOULMEIN, NAGPORE, PATNA, RANGOON, SIMLA.

Agency: ELPHINSTONE CIRCLE, BOMBAY.

Sub-Agencies: NARAINGUNGE and SECUNDERABAD.

Pay Offices:

CHANDPORE, SERAJGUNGE } Usually open from July to December.
PARBHANI (DECCAN) ,, November to March.

Current Accounts opened free of charge. **Fixed Deposits** received at interest.
Government and other Securities received for safe custody. Purchases and sales effected.
Interest collected and **Remittances** made.
Loans and Cash Credits granted. **Discount Accounts** opened and approved. **Mercantile Bills** discounted.
Savings Banks Deposits received and interest allowed.

Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches, Sub-Agencies or Pay Offices.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

BANK OF MADRAS

Capital (Fully Paid up) - -	**Rs.75,00,000**
Reserve Fund - - - - -	**Rs.52,00,000**

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Accounts or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

REMITTANCES TO SERBIA.

Remittances to Belgrade, Uskub and Monastir can now be effected through

NOTES OF THE WEEK.

Although the Austrian delegates have arrived in Paris—a little prematurely perhaps, since the terms are not yet quite ready for presentation—there is no sign that the Turkish delegates will be summoned in the immediate future, and the "Big Four" have evidently not settled the destinies of the Ottoman Empire so quickly as was at one time anticipated. Nor is it, of course, possible to disregard the fact that there may be legitimate differences of opinion, nor merely as to the destiny of this or that strip of territory, but as to the questions of high policy in Asia Minor, which may take some time to reconcile when they are at last seriously tackled. At the moment, however, the Conference does not appear to have thoroughly explored the ground.

While these grave matters are being debated, some interest attaches to the unofficial forecast of the *Echo de Paris* as to the terms to Turkey. According to this detailed account the Ottoman Empire is faced with extinction, both as a European and an independent State. It is suggested that of the European territories part will be conveyed to Greece, while the remainder will be formed into a new international State, with Constantinople as the capital. The character of this State is not more exactly defined, save to say that it will be administered under the mandate of the United States; France was offered, and, in the opinion of the journalist making the forecast, wisely declined the responsibility of the task.

As regards the Asiatic possessions, the writer suggests that Armenia is to make a nation under American protection; apparently with internal autonomy, but under the control of Washington so far as foreign affairs are concerned. Britain is to have her mandate over Mesopotamia and Palestine—the writer does not mention Arabia—while France obtains the whole of Syria, including Diarbekir and Adana and fractions of Anatolia. "Finally, Italy gets the district of Adalia and the protectorate of the Turks, who will make their new capital Broussa or Konia."

We give this forecast for what it may be worth; it is obviously in some ways an intelligent anticipation before the event has been decided, and it is quite obviously open to revision. It is at least possible that its publication was encouraged as a *ballon d'essai*, less for criticism in France—whose aspirations would be fully satisfied were the Peace Treaty framed on these lines—than for discussion in America. President Wilson has been defined as an autocrat with a time-limit, but he may probably desire to see American opinion more explicitly formulated before he makes so fundamental and irrevocable a change in the foreign policy of the United States as, according to this statement, he appears to have decided upon.

Nobody, of course, would suggest for a moment that the American assumption of responsibility for Constantinople and Armenia, should it take place, would be due either to ambition or to self-seeking; the post of guardian would prove anything but a bed of roses, and we doubt if it would be even indirectly profitable in any recognised sense of the word. The United States certainly contemplated no such outcome of the war, and probably nobody at Washington or elsewhere in the Republic foresaw anything of the kind two years ago. At the moment, too, the prevailing tendency in America appears to be to return to domestic affairs and to regard European intervention as a closed chapter in history—a chapter that was indeed inevitable, but a merely temporary addition to her proper responsibilities. This forecast, on the other hand, contemplates a permanent and not temporary assumption of foreign responsibilities, and that not only in Europe, but in Asia. It needs no prophet to foresee that the departure from precedent—and the United States is the very embodiment of political conservatism—will cause grave searchings of heart in the Republic.

The proverbial caution of the Father of the Republic will undoubtedly be invoked against "entangling alliances," and President Wilson may have hard work to convince his countrymen that the policy of his predecessor is out of date. Even if he were to maintain that a mandate under the League of Nations is neither an entanglement nor an alliance—a proposition that it would need some subtlety to demonstrate—the further suggestion that the responsibility for Constantinople should be divided between France, Britain, and the United States, which has been made in some quarters, finally negatives that idea. The triple responsibility for the administration of one of the historic storm-centres of the world would, in fact, involve the United States in a kind of permanent alliance with France and Britain.

For our part, however we may differ as to the wisdom of the details of administering Constantinople and Asia Minor—and on that matter very much might be said—on the major proposition of a permanent association between the three great Powers of the modern world not a word will be said in France or England. But we are by no means so certain of the attitude of America.

Digitized by Google

The appendix to the Peace Covenant, by which America and Britain bind themselves to go to the aid of France in the event of an attack by Germany, while accepted here as a natural outcome of the war and an obligation which honours us as well as our gallant neighbours, has excited much searching of heart in America; and while the League of Nations has been accepted in the States as in some sort a guarantee against future war, it is impossible not to notice that American opinion as a whole seems to be swinging back from the world-stage to what may be called, without offence, the local drama.

The United States showed a similar revulsion of feeling after the Spanish war; and while opinion there quietly accepts the possibility of playing the protector of Latin America, it seems by no means so certain of the advantages or the necessity of protecting Armenia or Constantinople. Current opinion there, so far as it can be judged on this side, seems either indifferent or hostile to such a consequence of the war. It is, very naturally, not fully instructed in either Near Eastern or Asiatic politics, and it appears increasingly aware of the serious domestic problems of reconstruction which it is called upon to face at home. The world will therefore watch with interest the outcome of President Wilson's policy.

Meantime, Greece, apparently impatient of the delays at Paris—which in this instance at least appears to be inevitable—has occupied Smyrna with the countenance and assistance of the French and British. The step, which follows and was perhaps suggested by the recent Italian landing in Adalia, appears to have been received with enthusiasm both in the port and in Greece itself; patriotic demonstrations, the ringing of church bells, and the blowing of hooters and sirens greeted the Greek troops on their landing, although a subsequent telegram states that a collision with the Turks took place which appears to have been serious, since 400 casualties were reported. Had it not been for the participation of British and French troops, it would have been assumed that the Greek action in this respect was but one more instance of the policy of staking-out claims which has been followed so frequently during the last few months by the Balkans and other countries, but the combined Allied action forbids such a supposition, and it is clear therefore that M. Venizelos, whose genius has been fully recognised by the representatives of the Great Powers at Paris, has succeeded in convincing M. Clemenceau, Mr. Lloyd George, and President Wilson both of the justice of the Greek claim to Smyrna and of the practicability of that policy of "Greater Greece" so intimately associated with his name—a policy which, but for his forceful and commanding character, could never have got from the realms of patriotic dreams to accomplished fact.

However much we may congratulate Greece in this fulfilment of her cherished ambition, it is a pity that the statesmen in Paris did not make some formal announcement of their policy in this matter. It appears to anticipate the Peace Treaty in decisive fashion, and its effect in Italy has not been too fortunate. It is indeed idle to suppose that the secular antagonism between Greece and Italy, which has been in evidence over a thousand years, would cease to exist at the present moment when the partition of the world is again being undertaken and rival claims are being fulfilled or disappointed; but the manner in which the destinies of the Levant are being settled has once again inflamed opinion in Italy, already uncomfortably alert and not too friendly to the judgments of Paris on account of the difficulties in the Adriatic.

Unfortunately the Fiume difficulty is not yet settled. Direct conversations have taken place between Italians and Yugoslav representatives at Paris without decisive result, and formulas appear to have been submitted to and revised among the Big Four without agreement. The rival propaganda continues with unabated zeal on both sides; as a proof of the heat which has been engendered it may be mentioned that the Italian propagandists are now suggesting that "international finance" is dictating the surrender of the port to the Yugoslavs," and hinting that German Bankers are covertly working for the latter; while the bewildering flood of ethnographical considerations and statistics of nationality continues to descend upon the public. *The Times* continues steadfast under its new editor in its advocacy of the Yugoslav case for possession, and advises Italy to give way in its own interests, but the invitation appears to have evoked no enthusiasm in the quarter for which it was intended.

The discussion in Parliament last week on the situation in Egypt did something to reassure the public, and the criticisms that were subsequently made in the Press can hardly be called very substantial. The root fact appears to be that a wave of unrest is spreading through Mohammedan countries at the present time. It is mainly due, no doubt, to the downfall of the Turkish Empire, which has caused ominous repercussion in Afghanistan as well as in Egypt; and it is also suggested in some quarters that Mohammedan opinion in India and elsewhere is not altogether satisfied with Mr. Montagu's attitude to Islam, and that in addition the rumours of a British evacuation of Cyprus have not been without effect in Egypt. Each and all of these matters may have played some part in fomenting the recent disturbances, but there are happily grounds for hoping that the worst is now over.

Even if they wished to do so—which they certainly do not—those responsible for the safety and well-being of the British Empire could not afford to ignore such manifestations of unrest within the Moslem world as those which have been visible of late; and it is satisfactory to find that the Empire's representatives at the Paris Conference have not forgotten the Moslem point of view—as was sometimes supposed. The Government of India, we are told, discountenances the application of the "bag and baggage" policy to the Turk, and the removal of the Sultan of Turkey from Constantinople is deprecated by many authorities, as being likely to have a deplorable effect in India. It is easy to argue that such sentimental consideration of the Sick Man is itself deplorable and entirely misplaced, as has been shown above. The fact remains that the sentiment is, obviously, there, and must be reckoned with. Of course, if the Turks were swept out of Europe, it would be, not because they are Moslems, but because they have shown themselves unfit to hold a key-position so important to the world's well-being as Constantinople. But it would be hard indeed to convince the Indian Moslems of that fact. An embarrassing situation thus arises. That a way out of the difficulty will be found is not to be doubted. In the meantime it is to be hoped that Moslem India will recognise that its sentiments, as well as its material interests, are matters of real concern to the Empire, and almost equally is it to be hoped that certain persons in this country who have been endeavouring to show—and with marked success—that the spirit of fanaticism is not yet extinct in Europe will have the good taste to keep silence.

The two Indian reports whose publication we noticed briefly last week stand on very different planes. That which deals with the Division of Functions among the various authorities is of interest mainly to the practical politician, who wants to know what powers he and his fellows can hope to exercise at the outset; the statesman, on the other hand, is inclined to pass lightly over these transitional arrangements and concentrate his attention on the Franchise Report, which is designed to lay the foundations of the new constitutional structure; he asks, first of all, whether the proposals will result in an oligarchy which must presently be dismantled, or lie on the road leading ultimately to democracy, and he is prepared to acquiesce in many anomalies and even some risks if he is assured that the general direction is sound. Statesmen, however, are in a minority, and we shall take the politicians' interests first.

Digitized by Google

The Report on Functions follows closely the lines laid down by Lord Chelmsford and Mr. Montagu, and we may say at once that the powers assigned to the new Legislatures and the popular Ministers are at least sufficiently important to make the scheme worth having; education, sanitation, economic development, and the rest, present problems and possibilities worthy of the best talent which India can supply, and afford an ample training ground for statesmen as well as for administrators. The machinery provided for settling difficulties between the two sides of the Government is, to our mind, less satisfactory; we have steadily insisted that the Provincial Governors would be overweighted under the original scheme, but the Committee have found it necessary to throw fresh burdens on their shoulders, and there is an element of truth underlying the flippant criticism which has reached us that, since eight provinces are affected, and there are only seven archangels, the new régime must start with at least one Governor too few.

Perhaps, however, it is unnecessary to discuss these and other details of the proposed dyarchy at present. The Report discloses, what was already common knowledge, that the dyarchy itself has been condemned by about half the provincial administrations, and that various alternatives have been put forward, which were not, of course, considered by the Committee, but will, nevertheless, have to be taken into account at Whitehall. Similarly it is useless to examine the financial proposals, because the Committee had not time to discuss the important modifications suggested by Sir James Meston, who may be trusted to see that they are not overlooked by the India Office. We cannot, therefore, regard the Report as the last word on the very complex subject with which it deals; within the limits set by the terms of reference it explores the ground thoroughly, but there is more to be said before Parliament can get to work.

The other Report, dealing with the Franchise, seems to make a nearer approach to finality. We examine its main features elsewhere, and here it must suffice to say that its provisions offer to the *élite* of the peasantry an opportunity of making their voices heard with effect in the Legislative Councils and on whatever subjects may be ultimately assigned to popular control. Whether the opportunity will be taken is a question which can be decided only by experience, but the offer at least constitutes a generous instalment of the policy laid down in August, 1917. Under existing conditions ministerial responsibility must in India mean responsibility to the peasants, who form the great majority of the population, and no real progress will be possible until the peasants begin to "take charge." If these proposals are adopted, they will enter the school of practical politics, even though they may be placed at first in the lowest form, and their subsequent promotion will depend mainly upon their own efforts.

The most controversial subject dealt with by the Franchise Committee was what is known as Communal Representation, and, as was generally anticipated, the scope of this institution receives a considerable extension. Apart from Moslems and Sikhs, whose claims had already been recognised, separate communal constituencies are to be marked off for Indian Christians, Europeans, and Anglo-Indians, or, in the alternative, these classes are to be represented by nominations. The non-Brahmins of Madras, who claimed similar recognition, unwisely put themselves out of court by refusing to offer evidence, but the Committee leave the door open for compromise, which is the most they could do in the circumstances, and, speaking generally, the whole question seems to have been handled with great fairness and discretion; nobody really likes communal representation, but communal differences are in India hard facts, and in our eyes the great merit of the Franchise Report is that it takes facts into account, and subordinates to them considerations of logical symmetry and theoretical perfection.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 29.

The Political Situation.

The situation has undergone a great change for the better since the date of my last letter (April 21). The Government officials have returned to their work, the Post Office and scavenging services have resumed their activities, the railwaymen are at their posts, and it has become possible to run more trains; while everywhere there are indications of a return of economic and commercial activity.

General Allenby's Proclamation.

The return of the officials was brought about by the issue of a Proclamation by General Allenby, in which he ordered them to return to their posts on the morning of the 23rd, and thenceforward punctually to fulfil their duties, failure to comply with this order entailing forfeiture of all pension rights and erasure from the list of Government officials. At the same time he informed them that none of them would be paid for the time during which they had been absent without leave. About 80 per cent. of the officials put in an appearance on the morning of the 23rd, and it is quite possible that the number would have been greater if the extremists had not intimidated them *en route*. Since then the staff at the various Administrations is for all practical purposes at its pre-strike strength, thanks to the order issued forbidding intimidation and the measures taken by the military authorities to afford protection to the officials who had returned to their duties.

Resignation of the Cabinet.

On the same day as the officials resumed their work the resignation of the Cabinet was announced. Rushdi Pasha had presented his resignation on the evening of the 21st, and the Sultan accepted it the following day; but although the resignation was rumoured, official confirmation was not forthcoming until the 23rd. The motive given by him for his resignation was ill-health, and, knowing that he has been ailing for some time, we must accept that as the true reason. At the same time, there is no doubt that his personal failure to settle the official crisis must have counted for something in his decision, and it is very much to be regretted that he did not see his way to carry on at any rate until the crisis had passed, for he must have been aware that the Proclamation of General Allenby—the terms of which were unofficially known the same evening as he presented his resignation—would materially influence the situation for the better. So far no new Cabinet has been formed, and from the fact that a Proclamation has today been issued empowering the Under Secretaries of State to act as Ministers in all administrative and legal

matters, it is to be assumed that the formation of a new Ministry is not contemplated in the very near future.

American Recognition of the Protectorate.

Shortly after the promulgation of General Allenby's Proclamation publication was given of a letter from the American Diplomatic Agent, announcing President Wilson's recognition of the British Protectorate over Egypt. Nothing could have been more opportune and more calculated to convince the officials of the utter futility of resisting any longer, and of the little sympathy they could expect from Europe with the line of action they had adopted. It is no exaggeration to say that no public declaration has of late years affected the "Intelligenzia" more deeply than did this pronouncement of the head of the American nation. Ever since Dr. Wilson first enunciated his fourteen articles and proclaimed the doctrine of the right of small nations to "self-determine," the "Intelligenzia" has relied, and has taught its followers to rely, on the President for out and out support of their claims for independence. Time and time again they have approached the local American representatives, directly and indirectly, although whenever those gentlemen have been persuaded to say anything—which was very rarely—it has never been in the direction of encouragement. In fact, had the "Intelligenzia" only been in the mood to receive them, hints have repeatedly been thrown out to them as to the impossibility of the United States supporting them in their movement, and certainly not in the manner in which they were seeking to attain their objects. If Dr. Wilson's decision has given them a shock by shattering their hopes they have themselves alone to blame. They thought that by engineering open revolt and destruction of property, public as well as private, they would enlist sympathy for their cause, but they have only found criticism of their actions and the affirmation of the very régimé which they aimed to get rid of.

The officials state that they returned, first, because the Cabinet had resigned, and had therefore shown that it was in sympathy with them in their demands, and, secondly, because they did not wish their country to suffer any longer from the stagnation of affairs brought about by their abstention from work. As a matter of fact they did not come to their decision until after they had heard of the imminent promulgation of General Allenby's Proclamation. The latter certainly sowed dissension in their midst, for numbers of them had no wish to wreck their careers in an attempt to obtain independence for their country; and the split was widened by Dr. Wilson's pronouncement to such an extent that the strike committee found itself forced to bow to the will of the majority. Whatever it was, however, that brought the officials back to work, it is eminently satisfactory for all concerned that they should have returned to their duties even at the eleventh hour, and that with them should have come some of the worst ringleaders; for the latter's precipitation in complying with the order, so as not to incur forfeiture of their rights to a pension, which their incitement of their followers had caused the latter to risk, can hardly fail to break the maleficent influence which they had contrived to exercise over the more moderate of their colleagues.

The only elements which are still standing out are the students and the tramway employees. As regards the former, the directing bodies of the various schools have issued notices ordering the students to resume their places at their respective colleges on the morning of May 3. As regards the tram workers, on more than one occasion it was thought that a settlement had been arrived at, but owing to the influence of the political agitators the men were induced to hold out. Now that the back of the political agitation seems to have been broken there is greater possibility of a settlement.

Al Azhar yet remains to be dealt with. The Azharites are still very excited and continue to preach active resistance. There is, however, every reason to believe that this incitement will fall on deaf ears, as the return of the mass of strikers and followers must make them less ready to resort to the extreme action which Al Azhar advocates.

Altogether, as I said in my opening paragraph, the situation has undergone a very marked change for the better. There is everywhere a much healthier atmosphere, although no doubt there is among the strikers and agitators still a certain amount of soreness and of irritability, due to a great extent to the fact that they have not attained their object, but have had to bow to the authority whom they had resisted. Nevertheless, the general resumption of normal activities is so much to the good, and in the circumstances it will in a great measure depend on the firmness with which the authorities continue to handle the situation whether or not we progress towards pre-strike conditions.

'Gallipoli Day."

Last Friday was "Gallipoli Day." In the morning a special service was held at All Saints' Church, and in the afternoon General Allenby presided at a meeting at the Anzac Hostel. The stage was beautifully decorated with floral wreaths destined for the graves of the Gallipoli heroes, and a very large audience attended. The programme included an address from General Allenby, a hymn, the reading of the lesson and the singing of the Recessional, and the proceedings terminated with the National Anthem and the Last Post. Afterwards the wreaths were placed on ambulances and transported to the British cemetery at Old Cairo.

GREECE.

(From Our Own Correspondent.)

Athens, May 1.

The First of May.

Greece has been awaiting—or perhaps it would be more correct to say that Athens and the Piræus have been awaiting—with some anxiety the advent of the First of May this year. Labour in this country as well as in others has been unsettled by the events of the last few years, and the success attending demands for increases in the daily wage had begotten a sense of solidarity among the trades unions which the facts of the case hardly justified. A movement for the celebration of May Day on recognised international lines was started. A general holiday for all workers was to be proclaimed, and the attempt in other quarters to insist upon the incongruity of April 18 in Greece being observed as May 1 was brushed aside. The actual history of the movement is a little obscure. Whoever originated the idea probably relied upon the natural popularity among the working class of a day's holiday, and hoped to turn the occasion to political account. But while a higher wage makes an instinctive appeal to everyone of whatever nationality, Greece is still a long way behind other countries in Europe in the political development of the Labour movement. Party politics here are still of the personal order; groups in the Chamber are ranged behind individuals, and do not conform to more or less permanent political theories. There are Socialists in the country, but they have not succeeded in forming a party of more than one member in Parliament. They have gained considerable encouragement latterly from the Labour unrest in the chief towns and ports of Greece, and a successful May Day would have considerably strengthened their position. From the course of events it would appear as if they had tried to force the pace unduly. The leaders of organised labour distinguish between trades unionism and Socialism, and they refused to be

stampeded for the benefit of the latter. The celebration of May Day caused misgivings in the ranks of those for whom it was ostensibly being arranged; a large number of trades unions backed out, and the Government adopted a firm line in regard to the proposal for a general holiday of all workers, including shop assistants, railway and tramway staffs, and electricians. It refused to allow communications to be interrupted throughout the day, or Athens and the Piræus to be in darkness. Of its own accord it authorised a stoppage of trams and trains between 1 p m. and 4 p.m. to enable the staffs, if they were so inclined, to attend a general *réunion* of workers in the country between Phaleron and Athens; but there were to be no processions or meetings in the city, and the electricians were to be back at work by 5 p.m.

The day, as far as the two towns were concerned, passed uneventfully, with no more inconvenience to the general public than was caused by the absence of waiters in a number of hotels and restaurants, and the non-appearance of the newspapers.

Political and Other Problems.

The Paris Conference is lasting too long for Greece no less than for other countries. M. Venizelos is too valuable a man to be able to be spared indefinitely from his place here, and there can be no doubt that the number of questions for which he is expected to find a solution is accumulating rapidly. The verdict of the Conference in regard to the Greek claims is naturally the first consideration, and the more favourable that verdict is the easier should M. Venizelos's task be. Greece, however, remains divided against herself, and no statesman can feel any satisfaction with such a condition of things or desire to see it indefinitely perpetuated.

But the problems with which the country are confronted are not only political. Greece has taken some strides forward in the last twenty years in the realm of material progress, but much ground still remains to be covered. There is now railway connection with the rest of Europe. To make the particular line more equal to the strain of traffic that it may be expected to have to bear, it has to be overhauled, some bridges strengthened and new ones built where temporary structures have hitherto been doing duty. The capital and its chief port also call for attention. Athens is still without an adequate water supply, and the Piræus harbour requires to be enlarged to be equal to its present-day rôle. The actual state of congestion there arising from the importation of more goods than can be handled and stored is a subject that calls for separate discussion in the commercial section of THE NEAR EAST. The Government, I understand, has very rightly decided that the Athens water supply claims first attention, and this time-honoured question now has a reasonable prospect of being settled on sound lines by the adoption of the Stymphalia scheme.

Another difficulty is the housing question. A large number of refugees have flocked to Greece from Southern Russia, and it has become necessary to pass a law that no one may occupy more than one house. In common with all the measures that have had to be enforced under the Venizelist régime it is most desirable that in this case also justice should be administered evenhandedly. There need be no anxiety about the future of the country if those who espoused the wrong cause are constrained to admit that penalties have been enforced without vindictiveness, and that there is no room for bitterness arising from a sense of injustice suffered.

ROUMANIAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, May 5.

Hungarian Atrocities.

We have already referred to the acts of brutality of which the Magyars have been guilty in the regions beyond and about the demarcational zone fixed between them and the Roumanians. The subject has since become a matter of history, though of such very recent history that the families of the victims have not yet had their sorrow tempered by time. Among the more known cases is that of the mother of Julius Mania, President of the Directing Council of Transylvania, and be it added, in parenthesis, one of the most able men and strongest of characters ever produced by the Roumanian nation on either side the Carpathians. This lady, who is 76 years old, was seized on April 16 by the orders of Bela Kuhn and transported. For some time nothing was heard regarding her destination, but it has since been reported that she is interned in Budapest. Another flagrant case is that of the lawyer Ciordash, one of the most stalwart of Roumanian nationalists, whose mutilated body was recently discovered near Oradea Mare.

The Roumanian Advance—

The advance of the Roumanian army through Transylvania and beyond has so far progressed since the subject was last mentioned that we can say to-day that it has attained the goal which it was supposed to be pursuing. The river Tissa has been reached, and in parts even left behind, as in the Tokay region. Roumanian, and even non-Roumanian, territory has been completely cleared of Bolshevism. It has been smart and thorough work, and not quite the simple walk-over that some believe, for the resistance offered by the Zeklers, if not really serious for troops as efficient as those called upon to overcome it, was in places of a determined character, and the Roumanian losses are not insignificant. Reports come from all points of the magnificent reception offered to the troops in the liberated localities, not only by the Roumanian populations, but in many instances by the steadier Magyar elements as well, who are more than relieved to exchange a régime of terror for conditions of law and order. Many functionaries and higher officials are swearing allegiance to King Ferdinand.

—Its Results.

The crushing defeat suffered by Hungarian Bolshevism all along the line has brought Bela Kuhn to reason, or at least to some approach to this state. Proposals of peace have ensued on the part of the Magyar Government, followed closely by a proposal of armistice. Both have been rejected, or rather ignored. But the refusal to treat with the present Government at Budapest, combined with the presence of Roumanian troops on the western bank of the Tissa, surely provides Bela Kuhn with matter for serious reflection. For the question, "Where will the Roumanian military action cease?" must present itself to his mind as it does to that of the Roumanian public, though on different grounds. Some people are of opinion that the troops have advanced quite far enough, and that by strengthening their positions behind the natural boundary offered by the Tissa they would secure ample safety to the country. This way of reasoning seems sound enough as far as it goes, but it may or may not have the defect of being short-sighted, according to the point of view adopted. If the army continues to advance then we shall be justified in inferring that the Government has decided to aim a death-blow at Hungarian Bolshevism by penetrating into its very heart. This would imply the adoption of a broad and far-reaching policy, which ought to establish claims on the gratitude of all Europe.

Scepticism Justified.

But the latter point cannot fail to awaken a measure of scepticism, for Roumanians fully realise that neither individuals nor nations are always judged according to their merits. It is a fact that the part played by Roumania in the war, the inordinately heavy sacrifices she has made, and the peculiarly difficult circumstances that have beset her path, have not met with due recognition or appreciation on the part of her great allies, whose attitude seemed to suggest at one time that it was her own fault if she had "bitten off more than she could chew." The recognition of her territorial aggrandisement in no way absolves the Entente of her obligations, for Roumania has taken nothing to which she was not entitled. She fought, among other things, for the liberation of provinces bearing a strongly-marked Roumanian character, and this object once attained, the latter joined up with the mother country, thereby following the course which national instinct pointed out as providing the strongest guarantees for the maintenance of their ethical and territorial integrity. So that in no case, assuming, of course, that the political ethics of the past have been dropped, need Roumania regard the recog-

Digitized by Google

nition of her territorial acquisitions as an acknowledgment of obligations incurred. On the other hand she would seem to be in her right, morally speaking, if she expected some return for the services rendered to the European community at unreasonably heavy cost to herself, services which, be it added in justice, she continues to place ungrudgingly at the disposal of civilisation. Such recognition might show itself by an immediate energetic effort to extricate her from the morass into which she has been driven, and in which she has floundered quite long enough.

CYPRUS NOTES.

(From a Correspondent.)

Greek Vessel Launched.

An event of local interest which has been looked forward to for some time, has recently taken place on the picturesque North Coast of the island, at Kyrenia, viz., the launching of a Greek sailing vessel of about 230 tons, built at that port. The owners are two Greeks, Demetrius Severis and Savas Kharalambou, who have both been generous benefactors of the town of Kyrenia. The ceremony was witnessed by a large number of Greeks and Turks. The High Commissioner, who was unable to be present, sent a telegram of congratulation and good wishes. The British officials from Nicosia included Mr. J. R. Holmes, President of the Court, and the Principal Forest Officer. The Bishop of Kyrenia performed the ceremony of consecrating the vessel, which was named "The Apostle Andrew." A blue cord was cut by Madame Severis, and the ship was launched amidst great enthusiasm, carrying the British flag in the stern and Greek colours at the bow. The Bishop in a speech alluded to the event as one "of political significance." This is the second vessel only that has been built in the island since the occupation, the other being a schooner built at Limassol in the early eighties, which, however, had but a short career. Times have changed mightily since classical times, when large fleets were fitted out in Cyprus, built of timber from the then vast forests of the island. Thus in 480 B.C. Cyprus sent 150 ships to join the fleet of Xerxes against Greece; and when Alexander advanced into Phœnicia the island sent 120 warships to assist him in the siege of Tyre.

The Museum.

When peace is established it may be hoped that fresh steps will be taken for the enrichment of the Cyprus Museum. The balance-sheet for last year shows that the fund has yielded but poor results. The receipts, amounting to £592, include a Government grant of £450, the latter only sufficing for the salaries (including bonuses) of the curator and watchmen (£448). In these circumstances little could, of course, be done either by excavation or purchase. Antiquities were bought for £52, and a balance of £22 only remains. The Museum, however, thanks to the work of classification by Professor Myres, of Oxford, now illustrates to a very interesting degree the arts, in pottery, glass, and metals, in the various periods of island history. In spite of the fully justified criticism of Professor Flinders Petrie, that the course of archæological work during the British occupation has been far from creditable, the collection is already well worthy of inspection by all travellers.

Miscellaneous.

Summer hours have been started in all Government offices. The work of the Legislative Council proceeds smoothly; and agricultural prospects in general are good.
