Notes of the Week.

The Kabul Rescues.

Apart from the actual rising, the course of events in Afghanistan offers opportunity for congratulation all round. The rescue by aeroplane of the foreign women and children in Kabul, first those who are British subjects and subsequently the nationals of other countries, stands as a fine achievement on the part of the Royal Air Force, not altogether lacking an aspect of romance, although a mere matter of routine for the members of that Force. At the same time it is to the credit of the Afghan Government that it availed itself readily of the help proffered by Great Britain, and allowed no feelings of false pride nor international shibboleths to prevent it from having the heavy responsibility resting upon Afghanistan lightened by the successful evacuation of part of the foreign community. For once in a way, moreover, outside action taken in a country evoked, apparently, none of those international jealousies which usually mar such proceedings. After the rescue of the British women and children Great Britain was asked to carry out the evacuation of those of other countries, and it is not likely that either foreigners in Afghanistan or their home Governments will affect to discover in this action subtle designs on the part of *la perfide Albion*. It is left to Soviet Russia to try to cover up the failure of her plans by attributing the outbreak of the revolt in Afghanistan to British intrigue; but on this occasion even the authors of the insinuations will not be deceived into imagining that their allegations are believed even by any responsible Afghan.

The Progress of the Outbreak.

As far as Kabul was concerned, the tide of the revolt had already been driven back before the aeroplane rescues could be effected. According to the latest reports the Afghan capital has now been freed from immediate embarrassment, and in view of the climatic conditions the advantage should remain with the King's forces for some time to come, even if the revolt has not been effectually mastered with the failure of the insurgents to hold their own. Information regarding the general situation in the country, however, is meagre. If there is any truth in the

reported demands of the Shinwaris, who started the trouble in the Jalalabad region, it is evident that their insurrection had as much to do with King Amanullah's reforms as with the payment of taxes. The Shinwaris are said to take exception to the dispatch of Afghan students, whether female or male, to continue their education abroad, and to demand that no foreign Legation should be permitted to remain in Afghanistan. Without covering the whole ground, their conditions clearly seek to undermine the King's reform movement; which may be said to have started with his unsuccessful attack in India in 1919, when he was deprived of the annual subsidy previously paid by Great Britain to the Afghan ruler and received in its place the right to conduct the foreign affairs of the country himself, establishing Afghan Legations abroad and accommodating foreign Legations in Kabul. It is unlikely that the Shinwari demands will be granted. If, therefore, wintry weather imposes a truce between the loyal forces and the insurgents, King Amanullah will be accorded a useful respite for reflexion on his future policy. By placating the mullahs and by reducing the pace of his reform movement to the limitations of his people, he may yet win through; and if it be true that he has had to leave his army unpaid, or with its pay in arrears, in order to press on with his reforms, the security of his own position will be enhanced, if he is called upon to dispense less in payment of innovations that so far have only goaded his subjects to insurrection. The fate of his predecessors ought to have warned him that the *sine qua non* for any reforming ruler in Afghanistan is the unquestioning loyalty of an armed force strong enough to protect the person of the Monarch and to keep all insurrection at a distance from Kabul.

The Crisis in Yugoslavia.

The resignation of Dr. Koroshetz's Ministry has an indirect bearing on the trouble between Belgrade and Zagreb. When the leader of the Slovene Clericals was placed at the head of the Government with the sanction of the Serbian Radical Party, it was hoped, no doubt, by the latter that he would help to moderate the wrath

of the Croat Peasant Party or at least would serve as a buffer between that wrath and the Radical masters of Yugoslavia. Dr. Koroshetz, however, would seem to have submerged any individuality he may have had in his eagerness to accept the chief office at the hands of the Radicals. The hopes entertained elsewhere in Yugoslavia that the appointment as Prime Minister of the leader of one of the "Prechanski" (non-Serb) parties would conduce to a better feeling between the various units of the Tripartite Kingdom have not been realized; for Dr. Koroshetz has not even been able to introduce a better régime in Macedonia, and, far from advancing the cause of unity in Yugoslavia, has failed even to satisfy his own Slovenes. His fall has been brought about by the refusal of the Davidovitch Democrats to co-operate any longer in a Government which was content to mark time at a grave crisis in the country's history (even the Skupshchina murderer has not yet been brought to trial), and refused to take any steps towards healing the breach between Zagreb and Belgrade. To a certain extent, undoubtedly, the Davidovitch Democrats are couching a lance on behalf of the Croats; for while it is a convenient mode of expression to speak of the conflict in Yugoslavia as being between Serbs and Croats, it is more accurate to describe the issue as between the old reactionary forces represented by the Serbian Radical Party, who have made an alliance with the Crown, and the modern school of thought championed by the Croats, but also subscribed to by many enlightened Serbs. Thanks to the organization of the Radicals and to the personal prestige and capabilities of the late M. Pashitch, the party's veteran leader, they have contrived until recently to identify Serbia with their own cause, and the struggle has, therefore, come to be regarded as one between Serbs and Croats. Fortunately for Yugoslavia the line of cleavage lacks this clear demarcation, and the action of M. Davidovitch and his Democrats, although the personal element may enter into it, signifies that the Serbs too are beginning to throw off the Radical yoke, which has been so largely responsible for the regrettable state of affairs that has prevailed in Yugoslavia since the War.

The Policy of the Croats.

At the moment of writing it is not clear what solution will be found for the ministerial crisis in Yugoslavia. Dr. Koroshetz is credited with a readiness to reform his Cabinet from the three Parties left in it after the withdrawal of the Democrats, namely, Radicals, Bosnian Muhammadans and Slovene Clericals. Such a solution would not be calculated to advance a settlement of the trouble between Zagreb and Belgrade. Advantage, it might be supposed, would be taken of Dr. Koroshetz's resignation to appoint a Cabinet of Affairs for the holding of free elections, in which every effort should be made to induce the Croats to take part. They would, indeed, sacrifice much of the sympathy that they now command, if they were to persist in their refusal to co-operate with Belgrade on any terms. Even the constitutional changes that they insist upon must be introduced by constitutional means, and to this end there must be a Constituent Assembly duly elected for the purpose. The Croat Peasant Democrat Group will have secured its point that it would have nothing to do with the Skupshchina in which members of the Peasant Party were murdered; to carry its boycott still further will serve neither its own interests nor the interests of the country.

Communism in Bulgaria.

The combination of Soviet Russia's persistency and the dour stubbornness of the Bulgarian character has endowed Communism in Bulgaria with an unexpected vitality. It was supposed in many quarters that Dr. Tsankoff's Government had exaggerated the evil, or that its methods of suppression were being unduly prolonged, and one of M. Liaptcheff's duties was to temper justice with mercy and practical common sense in dealing with Bulgarian Communists. He has been frequently charged by Dr.

Tsankoff's followers with adopting too mild a policy against the Communist danger, but his disclosures in the *Sobranie* last week suggest that the Government has been allowing the Communist tortoise to put out its head to some purpose. The Bulgarian authorities have seized large quantities of Soviet correspondence as well as Soviet funds that have entered Bulgaria, and M. Liaptcheff was able to declare that his Government now had documentary evidence of the association between the Bulgarian Communist Party and Moscow. In spite of the fact that the word Communist in Bulgaria inevitably conjures up memories of the outrage of 1926 in the Old Cathedral of Sofia, it is to be hoped that the present Government will not allow itself to be girded into any measures against the persons arrested outside the ordinary procedure of the law. Bulgarian suffering has been Moscow's opportunity; many of those who have succumbed to Soviet bribes are inhabitants of the earthquake provinces, probably with genuine grievances of which the circumstances of the State preclude redress. For offences against the law they will have to be punished, but it is to Bulgaria's interest that they should not be transformed into martyrs nor, if possible, into permanent enemies of the social order. Probably no country is being more thoroughly "worked" by Soviet Russia than Bulgaria, and for this reason she is entitled to a measure of sympathy from her neighbours who are well aware of the danger to which they too are exposed from Russian Communism.

The "Jewish National Home."

Whatever the Revisionist Zionists may be said to lack, no one can accuse them of lack of energy. They have youth on their side and, compared with the sober and practical work of the Zionist Organisation, their programme positively scintillates. The trouble is, however, not their sincerity or enthusiasm, but the impracticability of their ideas. At the Congress which they held in Berlin last week, they not only indulged in their customary criticism of the official Zionists, particularly of the Weizmann-Marshall agreement by which non-Zionists are to be represented on the Jewish Agency which works in co-operation with the Administration of Palestine, but they also boldly advocated—what Colonel Wedgwood has for some time been advocating in this country—the conversion of Palestine into a Dominion of the British Empire. In the achievement of this end, several other things were implied, according at any rate to Mr. Jabotinsky, such as a Jewish majority in Palestine, the postponing of representative institutions until such time as the Jews should be in a majority in Palestine, the creation of a Jewish legionary force, and the constant and universal adoption of the idea of a "Jewish National State." If no other people than the Jews were concerned in the realisation of this programme, it might be considered very attractive. In the circumstances, however, it is so removed from reality as to be put entirely out of court. For one thing, the majority of the Jewish people has resolved now to forgo the dream of a militant "Nationalism" in Palestine. For another thing, the Arabs of Palestine would never consent to such proposals. And for a final thing, the Mandatory Power is not forgetful of its international obligations to Palestine. Viewed in the longest aspect, it may be good from the Jewish point of view to have the Revisionist Zionists within the Zionist movement, trying as they must be at times, but to suppose that their ideas have the slightest chance of being realised is to pursue a will-o'-the-wisp.

Syria and a Monarchy.

A certain popular English newspaper announced last week that, subject to the consent of the League of Nations, Syria was to become a monarchy. It even went so far as to name the lucky monarch, Prince Adil ben Ayad. The effect of this exclusive announcement was, however, rather spoiled by the comprehensive statement that "the French mandated territory of Syria, like the neighbouring British

mandated territories of Palestine and Iraq, will become a monarchy." The inhabitants of Palestine have for long been wondering what was the precise nature of their governance, but it had probably not occurred to them previously that they enjoyed a monarchy. As a matter of fact, of course, this announcement of Syria's "King" was merely a serving up of propaganda that had appeared in French papers weeks ago. M. Henri Ponsot, French High Commissioner, who has just returned from Paris to his charge, is not given to publishing his plans in advance. Certainly he will not be influenced by any propaganda in favour of this or that loyal or disloyal friend of France. That there is much to be said in support of Syria's having a monarchy is admitted, but, as we have more than once indicated, all appearances go to show that the Mandatory Power will conserve a Republic in Syria, at any rate for the present. The number of disappointed, would-be monarchs is legion, but the day is gone when a King might be imposed on an unwilling Syria. The movement in favour of a monarchy in Syria, to be successful, must come from a majority of the people themselves. No one, of course, is better aware of that fact than the High Commissioner himself.

Good News from Arabia.

Syria, however, must hold decided second place to the Arabian Peninsula as the place of unreliable rumour. For hardly had the ink dried on the horrific tales of revolts in the Hijaz against the Wahhabis, of tribal raids on the frontiers of Trans-Jordan and of Iraq, of the activities of the Royal Air Force, and so wontedly on, than official news came from Riyadh that the Wahhabis have decided to maintain peaceful relations with the British mandated territories! This is rather sad for the hard-working and imaginative journalists in Jerusalem and Basrah, but it is always thus that Truth dispels Legend. The plain fact is, as we have always insisted, that King Ibn Saoud is determined to remain friendly with Great Britain; and those who insisted that he had lost control of his outlying tribes, who would, despite him, attack the British or the Iraqis and Trans-Jordanians, have now cause to ponder their words. This great tribal conference at Riyadh seems, in fact, to be a landmark in the history of King Ibn Saoud, for it definitely sets the seal of tribal approval on the enlightened policy which the Wahhabi leader has been pursuing towards his neighbours. From every point of view in Arabia the results of this tribal conference in the capital of Najd are heartily to be welcomed. As for the circumstantial reports of rebellion in the Hijaz, they have vanished into the desert air. Possibly the circulators of them will be impressed with their folly when the numbers of this year's pilgrimage to the Holy Cities are known. For, as our Jidda Correspondent pointed out some weeks ago, unless equally stupid rumours are set about, the *Haj* of 1929, the culminating day of which is expected to fall on a Friday, may well eclipse all records. It is particularly gratifying to witness that British official faith in the integrity of King Ibn Saoud and also in his ability to manage the affairs of his great Dual Kingdom is justified.

The Alexandria-Ramleh Railway.

A controversy that has been in progress in Egypt for several years has been brought to a head, if not to an end, by a judgment of the Alexandria Mixed Court of First Instance to the effect that the Egyptian Government and the Alexandria Municipality had acted legally and entirely within their rights in determining the concession given in 1860 to the Alexandria-Ramleh Railway Company. The Government's decision to annul the concession was taken as long ago as 1919, on the ground that, although the Company was discharging its duties in a satisfactory way, the Municipality was deriving no financial benefit from a concession which brought in large profits. As the Municipality is not in a position to raise the money required to buy out the concessionaire company, it will be obliged to throw the concession open to tender

on terms that will allow the city of Alexandria to derive some pecuniary gain from a lucrative undertaking. As soon, therefore, as the amount of the compensation to be paid to the old company has been settled, this step will be taken. In this connexion a warning to the municipal authorities may be permitted against the system of allowing successful tenderers to secure within a few years by means not uncommon in the East a substantial modification of the original terms in the concessionaire's favour. From such a modification in the case of another public service the Alexandria Municipality is believed to have lost a considerable sum annually for many years. Although the Alexandria-Ramleh Railway Company is nominally a British Company, it is, as a result of the transfer of shares to Belgian holders, for all practical purposes Belgian. When the new concession is thrown open to tender it is to be hoped that, in view of the predominant character of British interests in Alexandria, this important public service, which is capable of considerable expansion in the near future, will return into British hands, to the advantage of British industry.

Persian Reforms.

The Westernising movement in Persia is proceeding at a wise pace, for the Persians, who have a national genius greater than that of their Sunni neighbours, can more easily than other Muslims take from the West that which they need or think is good, and, so to speak, "Persianise" it. It is instructive, therefore, to contrast the speed with which reforms are being made in Persia with that attempted in Turkey or Afghanistan. The Teheran Majliss has just passed an Act restricting the wearing of turbans to Muslim dignitaries and theological students, and making compulsory the wearing of European dress and Pahlavi hats with peaks. This may sound a little simple to advanced Europeans, but anyone who knows Persia will realise that the Shah, who is certainly directing this reform, is proceeding wisely in this all-important measure of external appearance. It is not usually recognised, by the way, that the movement to wear European dress does not imply that that dress must be made in Europe. On the contrary, Persian manufactured cloth is rigorously encouraged. All Government servants, for example, have to wear Persian-made garments when at work: in their own time liberty is wisely given to them to wear other clothes. There is little probability that the essentially Western reforms made by the Shah will cause trouble in Persia. Trouble, if trouble were unhappily to

THE NEW GREECE.

There can be no doubt that since the success of M. Venizelos at the last general election a new spirit has settled upon Greece. The country, wearied of the bickerings and personal jealousies of its politicians, which had produced a condition of stalemate not only in politics but also in the economic sphere, has welcomed the advent to power of a man who knows his own mind and is determined to get things done. The success of M. Venizelos recalls the ease with which General Pangalos also established his authority in the country, only to lose it with the same rapidity because he was unequal to his task and failed to realize that the Greeks were in a mood to submit to any amount of discipline, provided only that it were accompanied by good government. In the matter of discipline the present régime has nothing to learn from General Pangalos's dictatorship, as the work of the Chamber during the first two months of the parliamentary session has clearly shown. Thanks to his substantial majority, M. Venizelos has been able to introduce an entirely new atmosphere into the proceedings of that body. It is not the first time that an Opposition has been overwhelmed by force of numbers, but it is an unusual experience for a Government majority in Greece to be called upon to toe the line without being able to make its acquiescence a matter of bargaining. One innovation of the current session has been that the daily proceedings have begun at a fixed time and not when it suited the convenience of a sufficient number of deputies to collect in the Chamber. A curb has also been placed on the capacity of deputies to hold up the programme of the session by innumerable questions and interpellations, with the result that a creditable amount of legislative work has been accomplished. Now that they have been introduced to the better system, both sides of the House would appear to appreciate its advantages. On the day when the Chamber rose for its Christmas vacation M. Venizelos was able to pay a tribute both to his supporters and to the Opposition. The latter, he declared, had brought their criticisms to bear on the various legislative measures without fractious antagonism, and with the object of enabling the Bills to leave Parliament in as perfect a condition as possible.

Among the more notable enactments of the present Greek Parliament have been the measures creating a Senate and a Council of State and the settlement, at least for the time being, of the police-gendarmerie controversy. Behind the creation of an Upper Chamber and a Council of State lies the desire to save the Greek people from themselves, or from their politicians. The success of the former will depend on the ability of the country to produce representatives who will rise to their responsibilities as a revisionary Chamber, and will not merely duplicate the traditions and practices of the Lower House. One of the strongest arguments used to justify the additional expense of a Council of State was the necessity of establishing some control on the abuse of parliamentary power. The Council's duties will be mainly judicial, and it is intended to serve as a court of appeal from the acts

of administrative tribunals. Friction between police and gendarmerie has been one of Greece's administrative troubles ever since the introduction of a British mission to train a police force for the larger towns. The gendarmerie appear to have resented the disciplined efficiency of the new police, and have pulled political strings with varying success to secure the total abolition of the police or a substantial curtailment of their powers. The new measure seeks to define the authority of each force more clearly than has hitherto been done. It was noticeable during the debates that several speakers even on the Government side favoured the abolition of the police and the creation of a single force responsible for the maintenance of law and order throughout the country. Probably no other measure introduced by the Government has caused its followers more heartburnings, and it required an emphatic declaration of the Government's intention to silence the critics of the Bill. While using all the authority that his large majority gives him, M. Venizelos has shown, both inside Parliament and outside it, that he accepts limits to his dictatorship. Bills have been modified in their passage through the Chamber, and the proposal to use the National Theatre as a Senate House had to be abandoned in the face of popular opposition, in favour of the more economical method of allowing the Senate to use, at least provisionally, the Parliament building in the morning, while the Chamber occupies it for the rest of the day.

It must be many years since Greece has witnessed such a crowded session and since a Greek Government has had so many administrative achievements to its credit in such a short time. Fate, it so happens, has not been particularly kind to the country during the past year, as the earthquake that wrought such havoc at Corinth in April was followed in the summer by the dengue epidemic which proved as serious a handicap to the Administration as it was to the business world. It is due in part to the dengue outbreak, but still more to the political complications preceding M. Venizelos's advent to power that the Budget for 1928-29 comes up for discussion by the Chamber a year late. The delay has had the advantage for the Government of enabling it to gauge the financial situation in the light of actual facts instead of on the basis of estimates. With the help of a foreign loan and a drastic reduction of expenditure the Budget is expected to balance, and M. Venizelos has now to frame a fiscal policy which will enable him to give effect to an extensive programme of reform. Fortunately for Greece he is able to enlist the help of foreign capital for the big productive works of which the country stands badly in need. The whole system of direct taxation is now under investigation, and an attempt is to be made to evolve a policy which will meet the needs of agriculture, while doing justice to industrial development. The Government's programme calls for a prolonged period of peace, both within and abroad. To this end additional powers are being sought to combat Communist activities, and M. Venizelos has already given ample evidence of Greece's desire to be at peace with her neighbours. An understanding has been reached with Italy, and another with Bulgaria is on its way. M. Venizelos has known how to take advantage of Yugoslavia's internal distractions, and settlement with that country is likely to conform more with Greece's views than with Yugoslav aspirations. Greek relations with Turkey are still in an indeterminate stage, but the points at issue are financial and technical rather than political. It may be necessary for the Athens Government to keep a sharp watch on its local administration in Western Thrace, in order that the Turks may have no justification for complaints against the Greek attitude. The tradition needs to be established that only the most capable officials are sent to frontier posts in order that the international questions with which they have to deal may be in the best possible hands. So long as outlying districts are regarded as the destination of those who cannot command favouritism at headquarters, Greece will always run the risk of friction with her neighbours.

*The Near and Middle East

From Our Own Correspondents.

Cairo, December 15.

Diplomatic Banquets.

Dr. Hafez Afifi Bey, Minister of Foreign Affairs, gave a banquet on Tuesday last, in honour of the High Commissioner and Lady Lloyd, at which were also present his colleagues of the Cabinet, with the exception of the Premier, who was still indisposed, Tewfik Pasha Nessim and Ahmed Hassanein Bey of the Palace, the Under-Secretaries of State, Mr. and Mrs. Hoare and the Residency staff and leading British officials and residents. The following evening Dr. Hafez Bey was host to the Diplomatic Corps, with whom he invited, in addition to the senior Egyptian officials, the leading foreign residents. Both the banquets, which were given at the Semiramis Hotel, were followed by dancing which was kept up until quite a late hour.

Turkish Military Mission to Afghanistan.

The Turkish military mission, which King Amanullah has engaged to act as instructors to the Afghan Army, passed through Egypt this week on its way to Kabul. It is under the direction of General Kiazim, sub-chief of the Turkish General Staff at Angora, who distinguished himself during the War and is married to the sister of Enver Pasha. The Mission was received by the King, to whom it was introduced by the Turkish Minister, General Moheddine. A reception was given in its honour at the Turkish Legation, which the High Commissioner and the Diplomatic Corps attended, and it was entertained to luncheon by Lord Lloyd, the Foreign Minister, acting for the Premier, who was indisposed, and Prince Mohamed Ali.

The Aswan Dam.

The international commission consisting of Messrs. Binnie, Cooper and Grunere, who were engaged to report on the heightening of the Aswan Dam, are to be commended for the dispatch with which they have accomplished their task. They arrived in this country only on November 7, and their report was in the hands of the Government within a month of that date. What undoubtedly facilitated their work was, first, the dispatch of an official with the principal documents to meet them before their embarkation and to accompany them on their journey to Egypt, so that they were already primed with the main facts of their task before they got here. And secondly, their arrival at Aswan coincided with the eve of the closing of the sluices for the filling of the reservoirs, which enabled them, within the space of a few days, to see both the upstream and downstream faces of the dam. The Commission has reported that from the constructional point of view it approves of the heightening of the dam, which, it says, could be done to a height above that pro-

posed by the Government, but it recommends that this be carried out according to a scheme which it has drawn up and which it prefers to those submitted to it. The submission of this new scheme is an unexpected development, and the Ministry of Public Works is considering what it should do in this respect.

The Coptic Community.

The dispute in the Coptic community over the election of a Patriarch has been ended, and the vacancy caused a year ago by the death of the veteran Kyrillos V. has now been filled. The matter was settled only by the intervention of the Government, which, finding the rival factions could not come to any agreement, issued, in the terms of its powers, a Royal Rescript ordaining that the election of Coptic Patriarch should be made by a general assembly, consisting of all the metropolitans, bishops and heads of convents, the members and substitutes of the General Council of the community, with the addition of some forty-eight notables mentioned by name. In due course Amba Youannes, the candidate of the Church, was elected by an overwhelming majority.

There has, of course, been some criticism of this action on the part of the Government. But all said and done, it is difficult to see what else the Egyptian authorities could have done. The community, it was abundantly clear, would never have come to an agreement in the matter of the election of the Patriarch, and since this state of affairs could not be allowed to last indefinitely, it fell obviously to the Government, which has the rôle of arbiter in such matters, and was fully aware that it would be impossible to content all parties, to take what it considered the best means to assure the most satisfactory result. To judge by the small amount of criticism the election has aroused, it would appear that the result has satisfied the majority, the opinion of which in such cases must prevail. Incidentally, the election of the Patriarch should hasten the appointment of a Bishop to Addis Ababa, where Ras Tafari is still awaiting the religious ceremony of coronation.

At the same time, however, as it has intervened and imposed, so to speak, a settlement of the Patriarchal question on the community, the Government has given satisfaction to the laity in the matter of the Coptic Wakfs which lay at the back of the dispute over the election of the Patriarch. The Premier has issued a decision instituting a special Commission, composed of the Patriarch and representatives of the community and of the Church. This Commission will have for special task the control of the administration of the various Wakfs, which will still be administered by the superiors of the convents to which they are attached; the verification of its accounts and the establishment of the annual budgets of each Wakf; and the decision orders that the administrators of all Wakfs must deposit in a bank indicated by the Commission all surpluses of funds which cannot be operated upon without the special consent of that body. Henceforward, therefore, the clergy will not be able to squander and misuse

the funds coming from these important trusts about which there has been so much just complaint.

The Shakespearean Season.

Mr. Robert Atkins and his Shakespearean troupe have now ended their visit to Egypt, having played for a month at the Royal Opera House in Cairo and a fortnight at the Mohamed Ali Theatre in Alexandria. There has been a certain amount of criticism, and, among others, the students do not appear this year to have been as pleased as they were last winter. I myself do not, however, pretend to be a dramatic critic, and I cannot say whether the adverse comments, made mostly by those claiming to be experts on Shakespearean drama, have been well founded or not. I am merely an ordinary playgoer, who know what I like, and I appreciate good dramatic fare when it is placed before me, particularly out here, where it is a treat to have any such fare at all. I feel that I am but expressing the view of the majority when I say that the reappearance of such players as Messrs. Duncan, Yarrow, and Trouncer, Miss Stella Arbenia and Messrs. Brember Wills, and Robert Atkins would give the greatest pleasure next winter.

Where, however, there is good ground for criticism—and this undoubtedly accounts for the poor houses often seen, particularly in Cairo—is in regard to the prices charged. Compared with last year, and making allowances for the additional three performances given this year, the subscription worked out at over 27 per cent. higher than the previous season. For this increase there is, indeed, no valid excuse, and its application has had for result that the object for which this venture was launched has not been attained. That object was educational and political, i.e., to make the English language in general, and Shakespearean drama in particular, better known to the local population. Bearing this in view, the Egyptian Government assured Mr. Robert Atkins against any loss and guaranteed a minimum profit, obviously to enable the performances to be given at prices which would draw the local public as during last year. The poor houses recorded, which have been almost entirely due to the high prices charged, cannot possibly be regarded as meeting the object or the intention of the Government's venture. Had a more reasonable tariff been drawn up, all who wanted could have seen the plays—numbers were prevented by financial considerations—and it is not at all improbable that the Government would not have been called upon to make good its guarantee to the extent that it has this year. It is to be hoped that next year some closer attention will be paid to this all important side of the question.

Cairo, December 22.

The Tropical Medicine Congress.

As I write these lines the International Congress of Tropical Medicine and Hygiene is ending. As yet no details are available of the results of its deliberations, but it will certainly prove to have been as successful in achievement as it has been from the social and ceremonial point of view, for no gathering such as this of the most eminent men the world possesses in the medical profession could fail to be productive of good results. The inaugural sitting in the Opera House, which took place in the presence of King Fuad, the High Commissioner and the Diplomatic Corps, was a very brilliant affair, as were the reception held that evening at the Palace, the ceremony of laying the foundation-stone of the new Hospital and Medical School to take the place of the present building of Kasr El Aini, which took place the following morning, and the receptions given at the Residency and the Italian and French Legations in honour of the Congress. Great interest was attracted by the conferring of the degree of LLd. *honoris causa* on King Fuad by the State University, the first degree which the Faculty of Law has conferred since the reconstruction, the ceremony of investiture of Dr. Aly Bey Ibrahim with the honorary F.R.C.S. by the President of the College, Sir Berkeley

Moynihan, who was assisted by one of his predecessors, Sir Holburt Waring, and the conferring of honorary degrees of the Medical Faculty on leading foreign members of the Congress—which took place this morning.

Medical and Surgical Exhibition.

In connexion with this Congress an exhibition of medical instruments and drugs had been organised in the grounds of the Royal Agricultural Society at Ghezira. It was opened by the King on the first day of the Congress. In addition to the commercial side there were most interesting exhibits by the Public Health Department of Egypt demonstrating the progress made in hospital and public health organisation and where the needs for further development lie. As an exhibition, however, it was disappointing, particularly in regard to British participation. In fact, one might go so far as to say that British industry was by no means properly represented there. Let this not be misunderstood as any reflexion on the few firms who had the enterprise to have their own shows. All credit is due to Messrs. Parke Davis and Co., May and Baker, Down Brothers, Baird and Tatlock Ltd., Balliere Tindall and Co., Watson and Sons Ltd., and the Medical Supply Association Ltd., Jeys Sanitary Compounds Co., Ltd., and the Shell Company, for the initiative they displayed. But when one considers that there were in all over sixty stands, which were mainly held by German, American, and Swiss firms, and when one bears in mind the part which British industry plays in this branch, it will be conceded that one is justified in regarding this as a glaring omission to take advantage of the great opportunity which this exhibition presented for bringing British activities in the manufacture of medical necessities, drugs and instruments before the unique gathering of experts from all parts of the world which this Congress produced.

Congestion in the Mixed Courts.

Considerable discontent has existed for some time in commercial circles, which after all are the ones that chiefly suffer, in regard to the delays and congestion of business in the Mixed Courts. This congestion and these delays are partly due to increased litigation, owing to the increase in population and to the more rigid enforcement of municipal laws; partly they arise from the licence allowed by the Bench to the lawyers in the matter of postponements owing to counsel's not being ready to take the case; and partly the unsatisfactory manner in which the Mixed Benches are organised is responsible. To take the last first, there are, so to speak, no spare Judges who can fill the places of colleagues who fall ill. All the Judges are allotted to particular chambers at the outset of the judicial year, and if any one of the three who, for instance, constitute a Court in the lower jurisdiction, falls ill, the whole chamber is paralysed. For example, this year, owing to two Judges being ill, one of the chambers in Alexandria has had to be suppressed altogether. Obviously some better system than this should be followed, and some spare Judges should be available. In regard to the delays due to counsel, the Bar and, indeed, the Bench are themselves alive to this, and there is reason to believe that a tightening up will take place in the near future.

In the matter of increased litigation it may be pointed out that since the inception of the Courts there has been very little addition to the Mixed magistrature, certainly nothing in proportion to the increase in the volume of cases of every description now brought before this jurisdiction. When, as is foreshadowed in the Egyptian Government's letter to the Powers, we are to add so considerably to the work of these Courts by transferring to them criminal jurisdiction in matters such as White Slave traffic, drugs traffic, adulteration of foodstuffs, trade frauds, and so on, it is surprising to find that in the Egyptian proposals there is nothing of the nature of an increase in the magistrature beyond an additional chamber in Appeal, which is due to a quite different cause. The fact is that, although it derives a considerable income from the Mixed Tribunals—something like one million every year—the Egyptian Government has always treated them very niggardly, and only latterly has it been brought to a proper conception of the position held and the great work done by those Courts. The Appeal General Assembly has repeatedly reminded the Egyptian Government of the unsatisfactory position and pressed for additional Judges. Hitherto the Egyptian Government has turned a deaf ear to these representations, but it is to be hoped, that it may be regarded as a sign of its recognition of the justification for the warnings of the Appeal Court, that it has now decided to create three new judgeships in first instance, and that when the limited transfer of jurisdiction takes place, the Egyptian authorities will agree without dispute or argument to the further increase in the magistrature which that addition to the work of the Tribunals will necessitate.

Lord Lloyd at Alexandria.

The meeting at Victoria College, which the Premier, Mohamed Mahmoud Pasha, with whom the High Commissioner and Lady Lloyd were to be on the platform, was to address on Tuesday last on the subject of British education in Egypt had to be postponed, owing to his illness. (One is glad to be able to report that he has now recovered and will resume duties early next week). Lord and Lady Lloyd, notwithstanding their alteration in plans,

travelled down to Alexandria that day according to arrangement in order to attend the Ball in aid of the British Benevolent Fund, which the ladies of the community organise every year at Claridge's Hotel. It was an eminently successful function; over 750 were present.

Belgrade, December 27.

The Political Situation.

Although in Belgrade business proceeded almost as usual while the Western world was celebrating its Christmas, newspapers appeared regularly, shops were open and most people were at work, there was a temporary lull in the political storm which has been raging here so long. This was due to the absence of the Premier, Father Koroshetz, who went to Liubiana for Christmas Day. Now that he has returned, it is expected that the crisis which appeared certain to follow the meeting of the Democrat Club last Saturday and the conveyance of its decisions to Dr. Koroshetz by M. Liuba Davidovitch personally, will begin.

The Democrats' demands are briefly these:—The Civil Service should be thoroughly overhauled, unqualified and corrupt officials should be ruthlessly dismissed, and those who have offended against the law should be tried and punished without exception, whatever their rank or whatever their relations. Legislation dealing with the questions of peasant indebtedness, the suppression of corruption, and Dalmatian agrarian reform should be passed immediately, while the Finance Committee is preparing the Budget and before this is submitted to Parliament. Everything should be done to make possible the speedy renewal of negotiations with Zagreb.

M. Davidovitch visited Dr. Koroshetz on Sunday and communicated these demands to him, with the intimation that, if they were not accepted, the Democrats could no longer accept responsibility for the work of the Government. It is noticeable that the demand for the withdrawal of all Army officers occupying positions as Veliki Jupan, which had been considered one of the main sources of dissatisfaction among the Democrats was not included in the demands communicated to Dr. Koroshetz, although in his speech to the Democrat Club M. Davidovitch was reported to have spoken quite strongly on this matter, declaring that neither he nor his party could accept the change of policy implied by the appointment of Colonel, now General, Voyin Maximovitch as Veliki Jupan of Zagreb, about which they had not been previously informed. He declared that, while Colonel Maximovitch was a good man and a trustworthy officer, these qualities were not sufficient for a civil servant occupying so important a post in the most sensitive part of the country, and that the appointment was not in keeping with the policy Dr. Koroshetz had promised to follow, of dealing with Zagreb correctly, in strict obedience to the laws, in a spirit of reconciliation and without provocation.

Dr. Koroshetz and M. Voukitchevitch were greatly annoyed at the implication of these demands that their Government had been corrupt and had not strictly carried out the laws of the land. It was widely believed that Dr. Koroshetz would at once hand to the King the resignation of his Cabinet. In answer to the Democrats it was stated on behalf of the other party groups in the Government that, since Dr. Koroshetz came into office,

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.

74, Grosvenor Street W.1

E. H. Keelling,
Hon. Sec.

he had no evidence of corruption or inefficiency in the Civil Service and such odd cases of this as were discovered were at once strictly punished. The legislation demanded by the Democrats dealing with peasant indebtedness and Dalmatian agrarian reform could not be passed at present, simply owing to the lack of the financial resources necessary for the carrying out the plans which the Democrats put forward. An Act dealing with the suppression of corruption was unnecessary and would have a damaging effect on the reputation of the country. The Radicals were even stronger than the Slovenes in their condemnation of the attitude of the Democrats and their refusal even to consider the granting of their demands. It appeared certain, therefore, that either the Democrats would resign, thus precipitating a Government crisis, or the whole Cabinet would resign. There was a meeting of the leaders of the Four-Party Coalition this morning, at which the whole matter was thoroughly thrashed out. No definite decision seems to have been reached, and it is said that further conferences will be held to-morrow. There are rumours of the conclusion of some sort of agreement which would allow of the continuance for yet a little while of the present Government, but no details are available concerning the basis on which such an agreement could rest. The King has been ill, suffering from a slight cold which forced him to keep his room for the last week, and this is expected also somewhat to delay the definite beginning of the crisis.

It is believed that in case of the breaking up of the present Government, Dr. Spaho, leader of the Bosnian Muslims, will remain faithful to M. Voukitchevitch and Dr. Koroshetz, and that they will form a three-group coalition of Radicals, Muslims and Clericals to try to pass the Budget for 1929-30 and other urgent legislation, and to prepare the ground for a sincere agreement with Zagreb. But, if the Democrats and the Serbian Peasant Party put up a strong opposition, it is considered doubtful whether the three-group coalition could work, especially considering the possibility of the Radicals opposed to M. Voukitchevitch joining the Opposition. It is even suggested that the Peasant-Democrat Coalition in Zagreb might be tempted "out of spite," as a Belgrade paper puts it, to send a sufficient contingent of its followers to Belgrade to defeat the Government. The present situation is very vague and chaotic, and there is a strong feeling on all sides that any change which clearly defines the position of the various groups and their plans and desires will be for the better.

The Exhibition of British Art.

The exhibition of modern British Art in Zagreb was opened by Mr. H. W. Kennard, British Minister in Yugoslavia, and was enthusiastically welcomed by the Zagreb Press and public. Before leaving for Zagreb it was remarked that Mr. Kennard conferred with the Prime Minister, Dr. Koroshetz. While in Zagreb Mr. Kennard received M. Pribitchevitch and M. Matchek, the Zagreb leaders, and heard from them a detailed exposition of their views on the political situation. This action of the Zagreb leaders "in attempting to take advantage of an exhibition of a purely cultural nature to make political capital" was strongly condemned by one section of the Belgrade Press. On his return to Belgrade Mr. Kennard at once visited Dr. Koroshetz again, and it is even suggested that his conversations with the Belgrade and Zagreb leaders may be not without considerable political significance, inasmuch as, while it is recognised that as Minister of Great Britain he would not dream of intervening in a purely internal dispute, such as this, yet as a keen well-wisher of the Yugoslav people he might act unofficially as a mediator.

Preparations are now being made in Belgrade for "Three Weeks of British Culture." The exhibition of modern British Art now being held in Zagreb will be transferred to Belgrade towards the end of January, and will be installed in the magnificent "Palace of Art," recently opened in the Mali Kalimegdan. Lectures on

English literature and art will be given in the University, and the National Theatre will produce a number of English plays by classical and modern authors.

GREECE.

Athens, December 17.

A Scandal.

A searching inquiry undertaken by the *Hestia* (a paper which performs invaluable services to the public by exposing abuses, by drawing the attention of the authorities to needed reforms, and by championing movements that deserve championing), has done much to explain why Athens is the most expensive capital in Europe. The information on which its figures are founded was supplied by a semi-official Institution, "The Piræus Commercial Exchange," which, among other activities, supplies companies like the Ulen Company, institutions like the Evangelismos Hospital, and even regiments with goods of the first necessity. It is able to do this at prices thirty to forty per cent. cheaper than if the goods were bought in the usual way. The reason for the high prices is that these goods are "cornered" on their arrival at the Piræus by a few individuals, who sell them to the shopkeepers at grotesquely large profits: hence the swollen prices at which the goods eventually reach the consumers. The following figures, of which the accuracy is incontestable, speak for themselves.

Dutch potatoes are bought by the merchants on arrival at Piræus at 3 dr. the oke, a price which includes the Customs dues, charges for storage etc., (at the official rates). They are sold in Athens at 7 dr. the oke. In other words, for every ton (1 ton equals 780 okes) the merchants pay 2,340 dr., the consumers 5,460 dr.—a difference of about £8. The wholesale merchants and the retailers between them thus more than double the price of a staple article of diet, before it reaches the consumer, and it is not the retailers who get the lion's share of these profits.

Similarly (the article proceeds), the modest herring which all over the world is considered one of the cheapest forms of food, has ended by becoming in Greece almost an article *de luxe*, thanks to the cupidity of one or two large importers who have monopolised the trade.

The figures for the herring are as follows: price at the Piræus (including tariff, storage, etc.), 17 dr. the oke; price in Athenian shops 28 dr. the oke. Since the shopkeepers do not get more than two or three dr. profit the oke, it follows that the merchants make the exorbitant profit of 8 dr. the oke. From official statistics for the first five months of 1928, it is calculated that approximately 780,000 okes are imported annually into Greece. It is easy to estimate the profits made by the one or two merchants who have monopolised the import.

Similarly with other articles, sugar, coffee, etc.; but, in these cases, it is the State which is partly responsible, owing to the enormous duties which have been imposed.

Spiro Matsoukas.

To turn to a less gloomy subject, a remarkable figure in Greek life has just passed away in Spiro Matsoukas, poet and patriot. He represents a type of Greek, fortunately not rare, who stands at the opposite extreme to the above-mentioned merchants of the Piræus. Before the Balkan Wars he went up and down America collecting money from his countrymen for the Greek Navy. During the Balkan Wars he fought as a private and found a special vocation in composing and reciting martial songs. After the Balkan Wars, in which he was wounded, he devoted himself to founding and organizing and collecting for "The White Cross," the object of which is to provide dowries for girls whose brothers have been killed or disabled in war. He had enormous success and two thousand girls have thus been enabled to marry. He died quite suddenly, and was given a very splendid public

funeral. He lived on a small pension which had been voted by Parliament.

General News.

The excavations in the sea, if the expression may be pardoned, near Cape Artemision have produced two more bronzes; one, part of a galloping horse, the other a naked infant. While the horse, like the magnificent Poseidon found in the same place a few months ago, is pronounced by the experts to be of the fifth century B.C., there is some doubt about the dating of the infant. The excavations will be continued next spring.

There are sure indications that the obsolete abominations, which has been sometimes referred to in these letters, viz., the dog-cart and its accompanying institution (or "home") where dogs are kept without food or water until reclaimed or done away with, will soon be things of the past. Again thanks to *Hestia*, public attention has been aroused, and the matter has been brought to the notice of the Prime Minister, who, as well as Madame Venizelos, was horrified to learn about the existing conditions. The success of the whole movement to secure better treatment of animals will, of course, depend on securing the support of the schoolmasters, who alone can instil humane ideas into the minds of the rising generation.

CYPRUS.

Nicosia, December 10.

The King's Illness.

Deep anxiety is widely felt and expressed on account of His Majesty's illness. Bulletins are published in the Greek papers.

The Governor's Health.

Sir Ronald Storrs being laid up, and temporarily incapacitated from carrying on his duties, Mr. R. Nicholson, Colonial Secretary, has taken over the administration, Lt.-Col. Beattie, Assistant Secretary, acting for the latter.

The Swedish Archæological Mission.

Further excavations have recently brought to light interesting objects of the Stone Age, and remains of pre-historic dwellings. The people of Lapithos, in the north of the island, near which village much work has been carried out, recently invited the members to a reception, in order to express the great appreciation of the inhabitants. Speeches were made by the Mayor and Mr. Sévères, Member of Council for the district. The chief of the Mission replied, cordially thanking Cypriots for their help and good will, during their operations, the aim of which has been to trace remains which illustrate the early history and colonization of the island.

A Disease-Carrying Insect.

There is good reason why compulsory burial of goats, sheep, and other animals, which have died in the fields, should be strictly enforced; though cows and vultures may be losers. Among other reasons is the fact that anthrax is sometimes conveyed by an insect somewhat resembling a flying ant, but covered with small hairs, which frequents carcasses. The insect called in Greek *sphalangi*, which is dreaded, was believed by Cypriots to cause disease by its bite, or sting. But Dr. Williamson, while District Medical Officer, at Larnaca, a few years ago, proved

conclusively that it carried anthrax from dead animals, when settling on an abrasure, or exposed surface.

A New Archdeacon.

During a recent visit of Canon Newham and Mr. Buxton, Chaplain at Nicosia, to Jerusalem, the latter was ordained an Archdeacon. He succeeds the Venerable Archdeacon Beresford Potter, who for many years resided at Nicosia, but who lately retired for reasons of health. His departure has been much regretted.

General News.

Amongst recent deaths has been that of Mr. N. Nikopoulos at the age of 92. He was father of the late Mr. G. Nikopoulos, who founded, and for years very ably edited, the Nicosia paper, the *Phoné tes Kyprou* (the Voice of Cyprus). Both were highly respected in Nicosia.

It appears that a number of Cypriot teachers, who migrated to Athens, and adopted Hellenic nationality, are unable to find employment, and are in some distress. They have approached M. Venizelos, who had promised to interest himself on their behalf.

STAMPS.

The following items of information are taken from *The Times*:— Among early historical stamp issues in foreign countries will be one marking the millenary of Tsar Simeon of Bulgaria, originally planned for last year, but postponed on account of the unsettled state of the country.

A special issue of birthday stamps will be made in Egypt in February, when Prince Farouk will reach the age of ten.

Persia will shortly issue nine new stamps for aerial postage and Turkey will have new stamps for ordinary postal purposes.

The special stamps issued in Egypt on December 15, on the occasion of the International Medical Congress in Cairo, are now being used. They comprise two denominations only, and are off-set printed by the Survey of Egypt in large, upright, rectangular format. The 5 milliemes brown reproduce an ancient sculpture of Im Hotep, the Egyptian god of medicine, and the 10 milliemes red-brown a portrait of the Viceroy Mohamed Aly Pasha, under whose reign was founded the Medical School of Cairo 100 years ago. These stamps will remain in circulation until next March 15, after which the stocks remaining on hand will be destroyed.

Special stamps have been issued in honour of the coronation of Ahmed Zogu as King of Albania. The formal proclamation of Ras Tafari as King of Abyssinia was also marked by the issue of a special stamp.

OBITUARY.

The death is announced from the Lebanon of His Beatitude Gregorius IV., the Greek Orthodox Patriarch of Antioch. He was born at Abei, Mount Lebanon, in 1853. His career was a most notable one, for throughout the years of political change between 1907, when he succeeded to the Patriarchal Throne at Antioch, he succeeded in keeping the admiration of all creeds in his Patriarchate. He lived at Damascus, and was buried there.

We regret to announce the death of Mr. W. E. Drakeford, who for some years past had been Cairo correspondent of certain English newspapers. For a short time after the War Mr. Drakeford was the Constantinople Correspondent of THE NEAR EAST.

The death is announced of Sir William Maxwell, a distinguished journalist, who accompanied Kitchener in the march on Khartoum and was present at the battle of Omdurman. He also described the Kaiser's tour in Palestine and Syria. Among many other distinctions, he was attached to H.Q. Staff in the Dardanelles Expedition.

The death has occurred of Major Francis Francis, formerly war correspondent for *The Times*. He tried to get into Plevna with Major Burnaby in the Russo-Turkish War. In Tripoli, later, he served with the Turkish forces against the Italians. Major Francis was an excellent linguist, and had a considerable command of Turkish.

The third Congress of Zionist Revisionists, under the leadership of M. Vladimir Jabotinsky, opened in Vienna last week.

The Government of Palestine has been informed that at a recent Conference in Riyadh, the capital of Najd, the Wahhabi authorities decided to maintain peaceful relations with Iraq and Trans-Jordan. The Conference confirmed the full sovereign rights of the Wahhabi King and his control of policy. A special issue of the Mecca newspaper *Umm al Qura* is reporting the proceedings in detail.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 6.

The Boycott Again.

When the fact had been almost completely forgotten that there was a "national" boycott of the Statutory Commission, who should come out to revive it, with a great beating upon a big drum, but Pandit Motilal Nehru. In a statement published yesterday he has said:—

"We have had a little too much of the Simon Commission and the methods of terrorism which follow in its train. The recent happenings at Lahore and Lucknow have demonstrated brutal and wanton assaults committed by the police on national workers and other peaceful citizens, and are condoned and justified by the Government. . . . The most painful part of it is that these happenings have not had the least effect on those who have deliberately defied the declared will of the nation by co-operating with the Simon Commission or are insulting the people of the country by giving parties of welcome to the Commission. I think the time has arrived not only to stiffen the boycott of the Commission, but also to deal suitably with all those persons who are in any way concerned with the Commission or with the terrorism employed to suppress the movement."

And what heroic measure does Pandit Motilal Nehru propose? Mark you, he must deal, he thinks, even with those "concerned with the terrorism," the Executive Government and the police, to wit. Listen, therefore:—

"I, therefore, appeal to all national news agencies and nationalist newspapers . . . to refrain from publishing accounts of the proceedings and evidence given before the Simon Commission. . . ."

Now Pandit Motilal Nehru is up before the examiners, to put it so, for a certificate of fitness to exercise great authority in the new India that is being shaped; he is up in his own behoof and, as a proxy in behoof of others. The examiners are Sir John Simon and his colleagues immediately, but less directly they are the British Parliament and the British electorate. They are ourselves, that is. Therefore we may and must closely examine the quality of this man and his co-adjutors.

To begin with this word of "terrorism." It is true that the police have had to push back the leaders of crowds pushed forward from behind, or the leaders of unauthorised rehearsals of anti-Commission processions, and the like, and that there have been some *lathi* blows, with broken heads and other bruises. But I believe it is also true that hardly a soul has been so hurt as to have to spend a day or two in bed. Even the Lala Lajpat Rai, old man though he was, between the time of his being bruised at Lahore and the day of his death, was able to make railway journeys, take part in political deliberations, be interviewed, and so forth. So of the rest: they could put in their punctual appearance at a political or other function of the following day or days. To use the word "terrorism" in speaking of such affrays is Pandit Motilal Nehru and his like all over. I am not reflecting on their characters as men of physical courage. Not that at all. What I have in mind is their intelligence. What they would have to use, were India theirs to govern, would be their intelligence. One wonders that they do not themselves see that more clearly.

Pass now to another unintelligent abuse of language. The "declared will of the nation" was not for any boycott; the declared will was a divided one. Many were for boycotting the Commission, but many were not. Many are still for boycotting the Commission, but those who were opposed to that measure at the beginning are now still more opposed; some who were for it at the beginning are now against it. Thus, the very day after the publication of the Pandit's statement, comes this message from Lucknow: "The British Indian Association, consisting mainly of *taluqdars* of the United Provinces, is understood to have changed its views on the boycott of the

Simon Commission. The Association has sent a memorandum, and its representative is to be examined on the conclusion of the official evidence. . . ."

The childishness of the attempt to make their setting themselves against the evidence of their senses—these tell them that the business of the Statutory Commission is all-important—appear wise statesmanship, has affected even one ordinarily as clear-headed as Mrs. Besant. She has addressed a letter to the *Leader* of Allahabad, in her capacity as President of the Indian Journalists' Association. "As Editor of *New India*, Madras," she writes in this letter, dated the 3rd, "I myself decided last night that we would not print the reports of the sittings of the Simon Commission after our issue of Saturday, December 8." "Necessary criticism and comments," Mrs. Besant says in another part, "can be written from reports in the English-edited papers." That is to say, she will not give the reports for her readers to read, but she will read them herself in other peoples' newspapers. Is that not childish? She will criticise the proceedings for the benefit of her readers, but she will not publish the reports of those criticised proceedings. She will stop reporting the proceedings—but not until five days' water has gone under the bridges.

St. Andrew's Day Dinner.

The annual St. Andrew's Day Dinner in Calcutta is our equivalent of your Lord Mayor's Banquet. The Governor of Bengal, in proposing the toast of the King-Emperor, gave fitting expression to the great sorrow that the news of His Majesty's grave illness had brought to India, speaking of the anxiety with which the receipt of the bulletins had been awaited. There is, as I write, still cause for anxiety, but not, it is hoped, such grave cause as earlier in the week. The Governor passed on to our labour and political troubles, that "sea of troubles" through which he has been called upon to steer. The disturbing feature of the many strikes that have been witnessed, he said, was that they were started before a definite grievance had been put forward, or any serious effort made to find a solution by negotiation, and in some cases the assistance was sought and obtained of men known to be ill-disposed towards peace and order, and not concerned in the industry in question. Some power, added the Governor, should be available to deal swiftly and effectively with those whose proved purpose is solely to foment trouble. That brings one back to "nationalist" India. Its claim is that it should be entrusted with the government of the country, while it refuses to shape the power which it would have perforce to use itself to maintain order, if that were made its responsibility.

Sir Jagadis Chandra Bose.

As one who has followed at near hand the career of Sir Jagadis Chandra Bose since a day when he was still only Professor Bose, and a member of the staff of the Presidency College, when the Bose Institute was a thing still to be born, I may add a word of mine to those public and private congratulations that have been called forth by the eminent physicist's attainment of the age of seventy years. Sir Jagadis Chandra is a vigorous man still, and fittingly "celebrated" his birthday himself by lecturing on his discoveries in plant physiology. The Bose Institute now attracts scientific men from the Continent of Europe, and that is one measure only of the success of its founder and inspirer. The hope of all is that he may see many more fruitful days.

Calcutta, December 13.

The King-Emperor.

The grave anxiety caused by the King-Emperor's serious illness hangs over us like a dark cloud. Last mail-day there was more hope in the air, and on men's lips when they met; but that hope was strained by the graver intelligence of the bulletins of the week-end. The more hopeful report of yesterday afternoon's bulletin has been received everywhere throughout India as lightening the

pressure of public anxiety, but that anxiety is still felt as very heavy.

The Statutory Commission.

There has been some very plain speaking this week. First, before the Statutory Commission itself, in session at Lucknow, by Khan Bahadur Masud-ul-Hassan, the spokesman of a Muslim deputation representing the local Council, the Aligarh University, and other bodies. The fundamental safeguards which this deputation would have embodied in the Parliamentary Statute, that no Legislature in India or local body should have power to interfere with are :—

- (1) Representation by separate electorates and the maintenance of the present proportion of Muslims in the Provincial Legislatures;
- (2) Separate electorates in local bodies;
- (3) Representation in the administration of these bodies in accordance with the proportion of representation in the local bodies;
- (4) The protection of the Urdu language and the instruction of Muslim children in Urdu, provided that they form a certain proportion of the population;
- (5) The exercise of religious rights provided that the laws of the State are not affected thereby;
- (6) Grants-in-aid to Muslim institutions in proportion to their representation in each body.

Asked these questions by the Chairman : "Khan Bahadur, what do you contemplate for the future of this country of India? Do you contemplate a future in which Muhammadan members shall be elected to look after Muhammadan interests and Hindu members to look after Hindu interests, or do you look forward to a time when there shall be some citizens elected to look after the interests of the citizens?" the spokesman of the deputation replied that he thought the future must be left to look after itself. Asked by Dr. Shaafat Ahmed this question : "What would be the policy of the Muhammadans if their demands for safeguards are not granted?" the Khan Bahadur replied : "We shall ask His Majesty's Government to take away even the existing Reforms." On Sir John Simon's referring him to the memorandum, where they stated that, if their demands were not granted, their community would determinedly oppose all rearrangements of the existing Constitution, the Khan Bahadur said that they would not only do that, but would ask that for the present the Reforms be stamped out.

The other plain speaking has been on the subject of the anti-Commission demonstrations of "malevolence and hate," especially the demonstration at Cawnpore, and the non-reporting of the proceedings of the Commission in the "nationalist" Press. That speaking has not been confined to the United Provinces, but has been general, if specially distinct and emphatic in Calcutta.

Bombay's New Governor.

The Bombay Presidency has said good-bye to its Governor of the last five years, Sir Leslie Wilson, and has welcomed the new Governor, Sir Frederick Sykes. The proceedings on these occasions are ceremonial, and the speeches are expected to be in keeping with the spirit of the ceremony. That is so, yet there need be no doubt that Sir Leslie Wilson's parting words were spoken with full sincerity :—"I do not trust myself to say much, but I am using no idle words when I say that we bid you all farewell with hearts overflowing with gratitude for all the friendship which is so typical of India and her people." In reply to an address presented by the Corporation of Bombay, the retiring Governor referred to "the one matter of dispute" between the Government and the Corporation, namely, the question of the Government contribution towards primary education. There being only one such matter to refer to was proof of the general harmony that had prevailed between the two bodies

throughout the Governor's term. One may wish the new Governor as happy a fortune.

Bombay Mill Strike Riot.

Very unfortunately for Sir Frederick Sykes, almost the first thing to happen is a riot in Bombay arising out of a clash between the police and mill hands on strike, involving the death of nine men, three constables and six strikers, and injuries to others. The report has just come, and is no more complete than a first report of such a matter can be. There is the fear that some of the injured men may die. There may be graver trouble, too, if the bad feeling spreads.

The Sarda Canal.

The Governor of the United Provinces, in opening the Sarda canal, described as the longest canal system in the world, said : "No longer will the waters of the Sarda pour down to the sea in prodigal waste. Trained, harnessed, and controlled, they will spread themselves through the villages of Oudh, bringing to its people a golden vision of security and prosperity for the future." It is a relief when one can turn from the spectacle of the welter of politics in India to such solid achievements as the completion of the Sarda canal places to the credit of the administration of the United Provinces. As is well known, there are great canal projects being carried out in the Punjab. The Sarda canal system will not for long hold the proud position of being the longest in the world.

The State and Industry.

The attention of all those interested may be drawn to the comprehensive survey by Mr. A. G. Clow, of the Indian Civil Service, of the Government policy and action with regard to industry in India. It was prepared for the Statutory Commission, and has now been published. It deals with such important matters as the conversion of the War-time Munitions Board into a Central Department of Industries, the cottage industries of India, including spinning and weaving, the purchase of stores on Government account, technical education, fiscal policy, labour representation in the Legislatures, labour questions, and recent labour legislation. It is only an historical narrative, or only that in the main; for the writer's views are sometimes expressed, and many have reference to the future, and what it may hold of good for India.

H.M. Stationery Office has published as a Blue Book (price 5s. 3d.) "Indian Constitutional Reforms: Views of Local Governments on the Working of the Reforms, dated 1927."

The Viceroy has abandoned the idea of making a tour through Eastern Bengal and Assam, and will, therefore, return to winter in Delhi earlier than had originally been proposed.

The Rev. W. A. H. Parker, formerly an Army Chaplain in India, has been instituted by the Bishop of Norwich to the rectory of South Pickenham, Norfolk, on the presentation of Mr. J. S. Moreton.

Mr. W. T. Layton, Editor of the *Economist*, left London on December 27, embarking in the P. and O. mail steamer *Ranchi* at Marseilles for Bombay. He will join the Indian Statutory Commission in Calcutta in his capacity as Financial Assessor, and will return to England with the Commission at the end of April.

Mr. Krishna Pandalai has been appointed Chief Judge of the Court of Small Causes, Madras, in the place of Mr. Justice Muthiah David Devadoss, retired. Mr. H. D'A. C. Reilly, I.C.S., and Rao Bahadur Chittoor Vaithilinga Ayyar Anantakrishna Ayyar, Advocate-General for Madras, have been appointed Judges in the High Court at Madras, to fill vacancies created by the increase of the permanent strength of the Court.

The enthronement of Mgr. Joaquim Rodrigues Lima as Archbishop of Bombay took place on Christmas Day, when his Grace delivered a message from the Pope. The ceremony marked the final passing away of the Portuguese Padroado régime (or right of ecclesiastical patronage), under which the many thousands of Roman Catholics in this Presidency have lived for three centuries and more. This transfer of episcopal authority to the Propaganda Mission means the end of the long-standing religious dissension which has hitherto divided the Roman Catholics of Bombay into rival camps.

NOTES OF THE WEEK

(Continued from page 3.)

come, would arise from Oriental methods, such as the mode of enforcing conscription, the manners of local Governors, the treatment of the tribes by the central authority, and so on.

INDIAN NOTES.

The Indian National Congress.

The forty-third session of the Indian National Congress opened at Calcutta on December 29, with Pandit Motilal Nehru as President. Judging by the telegraphic reports, it would seem to be clear that at the present time the Congress is even less "national" in character than it was when it met at Madras in 1927. At that time the President complained that it was not being properly supported by Muslims, Sikhs, Parsees, Christians and others. And now it appears that even the Hindus of one province—Bihar and Orissa—are not represented. Nevertheless there was the usual big crowd, the delegates numbering about twenty thousand. The President urged the acceptance of the report on constitutional changes, with which his name is associated, and which asks that India may be accorded Dominion status in the British Empire. He said that, although he wanted full independence, he was not against Dominion status if India could get it before it had lost all attraction. He would sever the British connexion with India as it exists to-day, but he would not be opposed to such a connexion as exists between Great Britain and the Dominions. For some months past the extremists have made it clear that this attitude is much too mild for them. They are clamant in their demand for complete independence, and they have really carried their point with the Congress, which adopted the so-called compromise resolution suggested by Mr. Gandhi. According to this resolution Dominion status will be accepted if it is granted by the British Government within twelve months, that is to say by the end of 1929. This is obviously not a compromise at all; and the adoption of such an utterly impracticable resolution must tend still further to disunite the Congress and to destroy such influence as it still exercises. The All-India Muslim League also held its annual conference at the end of December. But the League, too, is divided, as that section of its members which is led by Mr. Jinnah declined to attend. Similarly it is reported that the All-India Liberal Federation, which met at Allahabad the other day, could not come to unanimous conclusions. The position indeed seems to be that there is no Indian political organisation which is sufficiently united to give a clear lead. There is nothing but noise and confusion, and the existence of such a state of affairs is of itself ample justification for the impartial investigation which is being undertaken by the Statutory Commission.

Sir Leslie Wilson.

Sir Leslie Wilson has recently returned to England after his five years' tenure of the Governorship of Bombay. His genial personality, his unfailing good-humour and his ready interest in affairs that affect the multitude, particularly those concerning sport, brought him early popularity. This popularity, as our Calcutta Correspondent bears witness, he retained unimpaired to the end of his appointment—an achievement by no means to be despised or deprecated in these days in India, when so many critics are ready to use any excuse to attack those in authority. It used to be an axiom, at least in India, that the first duty of a Government is to govern, but it is open to doubt now whether this is any longer the primary obligation of the Governor of an Indian Province. Sir Leslie Wilson is the happy possessor of a very considerable political flair, and it was, doubtless, by intent that he allowed his Indian Members and Ministers a free hand, so that any unpopular or unsuccessful action was, to an extent unknown in previous Governorships, identified with the Government of Bombay, and not with the Governor personally. Yet this absence of personal intervention had in particular cases an unfortunate effect. Sir Leslie Wilson undoubtedly succeeded to a *damnosa hereditas* in the Bombay Back Bay scheme, with its costly accompaniments of development in Salsette and in the north of Bombay Island. But a courageous facing of the difficulty, and a bold cutting of the losses which were in the long run inevitable, would have done much to retrieve the situation and to prevent the continuation of the long-drawn-out muddle. Similarly as regards the Bardoli agitation, it may be allowed that the Bombay Government was hampered by misleading reports from its local officers, and by the failure of the Government of India to check the vagaries of the President of the Legislative Assembly. It may further be agreed that it was Sir Leslie Wilson's personal tact and adroitness that enabled a settlement to be reached by way of compromise. Yet it can hardly be doubted that the settlement so arrived at was in substance a defeat for the Government on a vital point in its administration: a defeat, moreover, which is bound to embarrass future Governors. On other questions, also, such as the movement for the separation of Sind, the Governor appeared more skilful in avoiding or postponing decisions than in taking measures to meet the grievances that were the subjects of complaint. It is, however, something to have avoided positive errors in a difficult time, and this must be ascribed to the political flair, already referred to, of Sir Leslie Wilson; and, as we have already suggested, it is no mean advantage to have been, in the language of Surtees, "an amazing popular man."

It is stated that the Rev. Samuel A. N. Mercer, Professor of Semitic Languages and Egyptology at Trinity College, Toronto, hopes to obtain permission of the Abyssinian monasteries to examine and photograph ancient manuscripts of the Bible held in their possession since the seventh century and never before allowed to be seen by foreigners.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

GREAT BRITAIN AND EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir.—Permit me first to thank you for your courtesy in publishing my somewhat long letter on Egypt and Anglo-Egyptians relations.

I should like to reply to certain of your notes upon this letter.

(1) the points (a), (b) and (c) which I made were not subject to the present régime but subject to the history of the past few years and based upon constitutional government being in existence. I will leave for the future to prove my contention that for better or for worse patriotism is too fiery a particle to remain quiescent beneath the best of good guidance on internal reform, unless its energy has first been quenched in the satisfaction of independence. (A great deal could be written on the difficulties of internal reform while the four Reserved Points remain in existence.)

(2) Any form of Egyptian government, be it Wafd or Dictatorship, which causes delay in settlement of Anglo-Egyptian differences must be "detrimental."

A state of irritation unattended is likely to lead to inflammation. As no solution can be arrived at without a constitutional government, it is obvious that the present Dictatorship, unable to deal with the question, means delay and consequently—in the future—the differences will be less amenable to the Doctors, "Reason" and "Moderation," when the wound has become inflamed and the basic constituent of their medicine, "Goodwill," has been lost.

I have striven to suggest and to point, once again, as many before me, the real and only way to an Anglo-Egyptian alliance. I suffer from no personal animosity of any description against any party or politician in Egypt, especially not against Mohamed Pasha, who is a personal friend. I think the Editor has been unnecessarily quick to interpret in my letter a direct attack on the Prime Minister. In resorting to irony he will not advance the cause of Anglo-Egyptian relations, which I am sure he is equally as keen as myself to see established upon an early, secure, sincere and lasting base.—I am, etc.,

December 28.

R. GORDON CANNING.

[The contention of the Egyptians who approve of the action of the present Government would seem to be on the following lines:—

(a) For six years all attempts to conclude an Anglo-Egyptian alliance were thwarted in Parliament.

(b) This attitude of Parliament was dictated by a handful of vocal extremists against whom even Zaghloul Pasha could assert his influence and political wisdom only tentatively and gradually.

(c) When Zaghloul Pasha died it became apparent that the negation of constitutional government entailed in the domination of the majority by a minority would become aggravated and might easily lead to an open breach between Egypt and Great Britain, with the inevitable result that Egypt would lose for a considerable period the exercise of constitutional government.

(d) In these desperate circumstances the desperate remedy of a temporary suspension of parliamentary institutions was resorted to, in the belief that when resumed, constitutional government would be found capable of application in Egypt as it ought to be applied, and is applied elsewhere.—Ed.]

The Roumanian Chamber on December 28 began the debate on the Roumanian Budget for 1929, which is estimated to show a surplus of nearly £48,000.

THE "BRITH-SHALOM" ASSOCIATION'S PROGRAMME.

We have received from the Secretary of the Peace Association, Jerusalem, the following communication:—

"So many inaccurate statements on the activities and aims of the Brith-Shalom Association have recently appeared in the Press that we feel obliged to publish the following authentic declaration on the Association's programme.

"(1) The Brith-Shalom Association is based on the belief that the problems produced by the establishment of a Jewish National Home, combined with the juxtaposition of Jews and Arabs in Palestine, have to be solved by mutual understanding. This is no easy task: but the more it is postponed the more difficult the solution will become. There is a danger that the enmity that exists between Jews and Arabs on account of differences in language, history, and customs, will lead to continual friction, and confirm both peoples in the assumption that they must be perpetual enemies. It might then be too late for a solution of the problems of juxtaposition on the basis of mutual understanding. In these circumstances, future generations in Palestine would not devote their best energies to productive work for their own race, but waste them in inter-racial warfare. The Brith-Shalom Association aims at preventing such a development of the two peoples, and particularly at inculcating in the youth the conviction that it is possible to find ways and means of enabling Jews and Arabs to lead their own national lives undisturbed in Palestine. The Brith-Shalom Association aims at preventing the present ephemeral antagonism and hostility from being regarded as an essential and perpetual state of affairs. All disputes and conflicts still unsettled at present should be regarded in the light of the belief that both peoples will meet one day for peaceful co-operation.

"(2) The Brith-Shalom Association conceives Palestine as a bi-racial State, both peoples enjoying completely equal rights, both being factors of equal strength in determining the fate of the country, regardless of which race is in the majority. As the rights justly acquired by the Arabs should not be diminished by a hair's breadth, so should recognition be given to the rights of the Jews to develop without hindrance their particular national life in their ancient homeland, and to allow the greatest possible number of their fellow-Jews to participate in this development. The Jews who, through the Bible and the Prophets, made Palestine a starting-point of the civilisation of the world, have never ceased to yearn for Palestine during their prolonged dispersion and have prayed daily to return. Millions of Jews set all their hopes for the future of their people on the establishment of a Jewish national centre in Palestine. This centre will become a reality only if the Jewish population in Palestine develops numerically to such an extent that its cultural achievements will reach a standard inspiring respect. But the growth of the Jewish population, whether it becomes the majority or not, must never result in a change in the constitutional position. Both races must enjoy equal rights for all eternity: neither must be master and neither servant.

"(3) The question that arouses the greatest interest at present and which will be of the utmost importance for the future development of Palestine, is the question of representative Government. The attitude of the Brith-Shalom Association towards this question is that an increasing participation of the people in the administration of the country is desirable. The details of such a participation as well as the administrative and legislative questions which it should affect, can be settled only by common negotiation. It is possible that at first such negotiations will lead to no results, as the gulf of distrust between both races is still too wide. In such a case negotiations would have to be recommenced later. But our continual readiness to negotiate must be clearly understood. The Arab people ought to know that we are prepared to co-operate with them for the development of self-government in Palestine, as soon as guarantees are forthcoming that the path to our national goal will not be barred thereby.

"(4) At present the Brith-Shalom Association speaks only on behalf of a small group of people. In addition, it realises the fact that its efforts for peaceful understanding between Arabs and Jews cannot bear fruit overnight. The goal is a distant one. The Brith-Shalom Association endeavours both by written and spoken word to spread enlightenment on this subject and gradually to lead both peoples to a new conception of the problems arising from juxtaposition. A basis will thus be created for future negotiations between the representatives of both races.

"The Brith-Shalom Association hopes that its appeal will find an increasingly ready response from either people and will lead them to joint labour for the good of the country dear to both."

THE "BRITH-SHALOM" ASSOCIATION.

Jerusalem, December, 1928.

M. Henri Ponsot, French High Commissioner for Syria, arrived at Beyrout on December 26 from Paris via Palestine.

The Air Ministry announces that as the result of an accident south-west of Khartoum to a Fairey III. F. machine of No. 47 (Bombing) Squadron on December 26. Flying Officer Arnold William Alexander Ricks, pilot of the aircraft, and the passengers, Captain James Charles Doyle, Aeronautical Inspection Directorate, and 82899 Sergeant Charles Leonard Long, were killed.

PERSONAL AND GENERAL

TO-DAY

January 3, 1929 (New Style).
December 21, 1928 (Old Style).
Rajab 21, 1347 A.H. of the Muslim Calendar.
Tebet 21, 5689, of the Jewish Calendar.

Lady Strathcona and Mount Royal left London on December 27 for India.

Sir Edwin Luytens left London on December 27 to join the Ranchi at Marseilles for Bombay.

Sir Leslie and Lady Wilson arrived last week at Glebelands, Wokingham, from Government House, Bombay.

The Hon. Mrs. Levy left 45, Lowndes Square on December 27 for a stay of about two months in Egypt.

The Hon. Mrs. Adeane and Mr. Michael Adeane arrived in Egypt last week on a visit to Lord and Lady Lloyd at The Residency, Cairo.

The Maharani of Cooch Behar and her son, the Maharaja Jagaddipend Narayan, left Marseilles on December 28 in the P. and O. liner Ranchi for Bombay.

Sir Archibald Boyd-Carpenter, M.P., and Mr. Samuel Samuel, M.P., left London on December 27 for Egypt, joining the s.s. Ranchi at Marseilles.

The Hon. Harold Nicolson has resumed his duties at the British Embassy in Berlin, after a stay of some weeks at Long Barn, The Weald, near Sevenoaks.

Belgrade University has conferred honorary degrees on M. Auguste Gauvain, Herr Hermann Wendel, and Professor Robert W. Seton-Watson.

Lord Dewar, who has left England for Egypt, embarked on December 28 in the s.s. Ranchi at Marseilles for Port Said. The Hon. David Smith is a passenger in the same vessel to Bombay.

Earl and Countess Grey and the Ladies Mary and Elizabeth Grey, who are on the way to India, left London on December 27 to join the P. and O. s.s. Ranchi at Marseilles for Bombay.

The residence of the Persian Minister in London is now 11, Princes Gate, S.W.7 (Telephone, Kensington 6916). The offices of the Legation are at 10, Princes Gate, S.W.7. (Telephone, Kensington 3341).

M. Dimitri Stancioff, former Bulgarian Minister to the Court of St. James's, and Mme. and Mlle. Stancioff have arrived in England from Bulgaria to stay with Sir Kay and Lady Muir at Whilton Lodge, Northamptonshire.

NEWS IN BRIEF.

The 1st Battalion of the King's Regiment was moved last week to Egypt from the Sudan.

The Queen of the Belgians is expected to arrive in Egypt towards the middle of this month, and will visit Luxor and Aswan.

The King of Bulgaria has granted an amnesty to 200 prisoners, including several political offenders.

According to a Basrah message, the British Resident in the Persian Gulf is reported to have accepted an invitation of King Ibn Saoud, who is visiting Hasa territory, to meet him at Ojair, opposite Bahrain Island.

It is reported from Belgrade that Signor Galli, Italian Minister in Belgrade, called on the Yugoslav Minister for Foreign Affairs, Dr. Marinkovitch, on December 25. He informed the Yugoslav Minister that the Italian Government had communicated the texts of all the Conventions concluded (the Nettuno Conventions and the Belgrade Convention of 1925) to the League of Nations for registration.

Air post stamps for India are in course of preparation for use in the impending London-Karachi air service.

Flight-Lieutenant March, of No. 2 Indian Wing, R.A.F., was killed in a motor-car collision on the Risalpur-Nowshera road on December 30.

The Persian Majlis has passed an Act restricting the wearing of turbans to Muslim ecclesiastics and theological students and making compulsory the wearing of European dress and Pahlavi hats with peaks.

Owing to shortage of big aeroplanes in India, three R.A.F. machines capable of carrying 15 to 18 passengers left Baghdad recently for Karachi, in connexion with the evacuation of foreign residents from Kabul.

Mgr. Neophytos, Metropolitan of Vidin, has been re-elected for four years, as from January 14, to the Holy Synod of the Orthodox Church of Bulgaria, of which body he has been a member for the last ten years.

Arthur, first Baron Carnock, P.C., G.C.B., G.C.M.G., K.C.I.E., G.C.V.O., of Cadogan Gardens, Chelsea, S.W., died on November 5, aged 79, leaving property of the value of £9,131, with net personality £8,796.

Two Royal Air Force bombing squadrons—No. 11 from Netheravon and No. 39 from Bircham Newton—sailed in the transport Nevasa from Southampton on December 29 for Risalpur, North West Frontier, to bring the strength of the Indian Air Force up to eight squadrons. Each squadron totals twelve officers and seventy men, and they are the first complete squadrons to leave England since the War. Squadron Leaders P. H. Cummings and H. V. Champion de Crespigny are the respective commanders. There are 300 other airmen for Iraq and Aden on board the Nevasa.

THE WEEK AT HOME

London, Tuesday Morning.

Sales.

Christmas is over, and the sales are here. It was a quiet Christmas on the whole, for the improvement in the King's health came late, and the weather was not inspiring. In the circumstances, however, the nation counts itself lucky that it was able to spend the time as it did.

And now, with the New Year, we have the event which grows in importance every year: I mean the sales. How women, after buying all kinds of extravagant presents for Christmas, have the heart to indulge in another orgy of spending so soon afterwards, has always puzzled me. But of the fact there is, unhappily, no doubt. The pursuit of the "bargain" is one of the most remarkable psychological phenomena of our generation. And how quickly the big stores are to seize on it! For months beforehand they must have prepared for these sales of superfluous stock. Because no sooner was Christmas over than advertisements appeared appealing to kind purchasers to relieve the shops of 1928 goods!

The Anglican Church.

The Church of England has been left in a most unenviable position consequent upon the second rejection of the Revised Prayer Book, and subsequent actions by certain Bishops have not made the situation any more easy to handle. Before the end of the present month, however, the Bishops have to come to some decision, which will be communicated to the Church Assembly for its spring session that begins on February 4.

Certain factors in the situation, such as the pronouncement by the Home Secretary against the "illegal" action of the Bishops in countenancing the Revised Prayer Book after Parliament had rejected it, and the virtual disobedience or at least the non-acceptance of the Bishop's wishes by the clergy of certain dioceses (notably London) I have already chronicled. The last move, however, was taken by Dr. Hensley Henson, Bishop of Durham, who not only advocated Disestablishment, but also urged the most frequent use possible of the rejected Book.

London's New Racecourse.

I should have thought that London had enough racecourses in Alexandra Park, Sandown Park, Hurst Park, and Kempton Park. But a proposal is on foot to establish yet another, in the north-west. A site near Roxeth, by South Harrow, has been selected, and a large area is said actually to have been purchased for the purpose.

What is equally interesting, however, is the reported intention of the promoters to establish a Polo Club there. Now a Polo Club does not exist, I think, in North London, and there is little doubt that so healthy a pastime would prove immensely popular. Other things which are in the minds of these enterprising promoters are the establishment of a golf club there (which we could probably well do without) and the running of pony races there under the auspices of the Pony Turf Club. Pony racing in London should be great fun.

Roads and Trees.

One of the chief æsthetic problems in connexion with the new arterial roads concerns the question of trees. No road can be beautiful without trees, but the question is: Which trees should be planted? The question is not quite so simple as it sounds. For instance, exotic trees surely should be barred; nor can the tree which suits a country lane always be fitly used for a great road devoted to motor traffic.

Now at four crossways on the Kingston by-pass road, Lombardy poplars have been planted, and the Watford and Barnet by-pass roads are being similarly treated. This is for a warning to motorists. But already other trees have been planted. On the Kingston by-pass, for example again, the trees planted include Turkey oak, black poplar, birch, hawthorn, crab-apple, horse chestnut, white poplar, maple, beech, flowering cherry, and tulip. Here, therefore, there is abundant variety, and a real effort to make the roads beautiful.

One naturally wonders why the elm has not been planted. The reason is that it is considered too dangerous. Similarly with the familiar plane tree of the London streets; its leaves are so big that they might cause skidding.

Wild Birds in Norfolk.

England is not commonly looked upon as a home of wild birds. But there are certain favoured places in which immigrants freely move and have their being. Of these perhaps the best is Norfolk.

A report has just been issued by the Wild Birds' Protection Committee of the Norfolk and Norwich Naturalists' Society in which are recorded the observations made at such spots as Breydon, Cley, Salthouse, Blakeney Point, Scolt Head Island, and the district of the Broads. The past season, with all its sunshine, was of course, peculiarly favourable for reproduction, but it is gratifying, all the same, to know that never before has such a large colony of terns nested at the Far Point at Blakeney.

One most interesting point in this report concerns the widely entertained opinion that the duck population of the Northern Hemisphere is diminishing. Norfolk emphatically contradicts this notion. The 1927-28 season was the best for ducks of all species known for very many years. At Cley and Blakeney thousands of mallard and widgeon could be seen passing westwards in November and December, and farther south in the country, in the Ranworth district, there has been a progressive increase in the number of the ducks obtained. Obviously, therefore, the sportsman coming home on leave need not despair of getting good sport.

The Twenty-Four Hour System.

Discussion has been engaged during the last few weeks upon the feasibility of the Railways' introducing the twenty-four hour system into this country. The advantages of the Continental system, to which during the War we in France adapted ourselves with supreme ease, are obvious; but that fact is not the final consideration with the English, who love to keep their peculiarities, such as exist in coinage, or weights and measures, and rather distrust the nice logic and perfect finish of "them furriners."

This particular reform, however, has one advantage which many suggested reforms lack: it involves no mental effort. Even the least mathematical of us can realise that 14.30 means half-past two in the afternoon.

Book Reviews

A DANISH ARTIST IN SIAM.

"FRIENDLY SIAM." By Ebbe Kornerup. Translated from the Spanish by M. Guiterman. Illustrated. (London: G. P. Putnam's Son, Ltd. 10s. 6d. net.)

This is the kind of book that must be allowed to speak for itself. So, although space is scanty, a few short quotations, taken almost at random, will tell more of what the reader may expect than could a long review.

Here is one:—

As I was sitting on my bed putting on my socks the door opened and a well-built young man came in and greeted me in English. "Good-evening, sir," he said; "I am your friend. I speak English very well."

This was Tim.

My friend Tim, whom I now saw for the first time.

Here is another:—

One day we left Nakon Sri Tamaraj in a long car, drove through the tin country and right through the forests with all their monkeys and gaily-coloured birds, and went to Ronpiboon.

Or take this:—

The river is the life of the place; canoes, sampans, yawls, motor-boats, ferries, steamers, and sailing-ships swarm in the yellow water, beda floats by on its way down to the sea. Houses on pontoons flat by the green banks, an island stands in the middle of the stream. Children bathe and splash about all among the traffic, rice-mills grind away, saw-mills cut up logs, and rafts made of planks bound together drift by with airy leaf-huts on them, and a fire, and a half-naked Lao—such is Pak-Nam-Po.

Or this one from his account of Bangkok, which did not take his fancy so much as the countryside:—

We often drove round paying calls; it was part of the game. If nobody was at home, we would delightedly drop a couple of cards into the box at the gate. Sometimes he cheated a little. If we saw a man on the way and knew that now he could not be at home, we would drive to his house at once and leave cards, or we would ask a friend to take ours with him to places where the plate said Out. In spite of this, we went round often enough, got out, walked up steps into a drawing-room, introduction, tea in one hand, a plate cake in the other . . . then a great deal of small-talk about this, that, and the other, good-bye . . . and on to the next house. How extraordinarily unimportant, how wearisome, how unreasonable.

The reader will have gathered from these extracts that the book is written by an impressionist artist. The point really is that he is an artist in impressionism and that he shows throughout a complete understanding of, and sympathy with, the people of all classes and the scenes which he so delightfully puts on paper. Very seldom does he dive far below the surface, but one cannot rise from reading his book without feeling that one knows Siam intimately and that it is a "friendly," lovely and interesting country. This, we take it, is what he wanted to bring about, and he has succeeded. There is nothing of the Siamese Handbook here, but something far better. He gives one no idea how long he stayed in Siam or when he went there, though one rather gathers that his visit was a recent one. He saw nearly every corner of the country, and travelled on foot, on horse-back, on a bicycle, in a bullock-cart, canoe or houseboat with the same satisfaction as he used a *train de luxe*, motor-boat, motor-car, steamer or aeroplane, when the more comfortable form of locomotion was handy and happened to suit him. Whether he spent the night under a tree, in a Prince's house or at a modern hotel appears to have been all one to him. In fact, he is young, enthusiastic, and of the right temperament to see things with enjoyment. His translator has entered into his spirit.

We wish all publishers would give as good value for the money they ask. There are no fewer than 75 quite excellent photographic illustrations which really illustrate the text. If we may be allowed one little grouse, it is that we are tantalised by the delicious coloured picture on the jacket, and wish that the author had given us more of his own brush-work between the pages.

C. S-W.

TWO NOVELS ABOUT INDIA.

"THE STORY OF HASSAN." Englished by John Anthony. (London: Nisbet, 7s. 6d. net.)

"A PRINCE IN CHAINS." By Lady (A.) Scott. (London: Hutchinson, 7s. 6d. net.)

This story of a Muhammadan boy in the Punjab, whose father is a petition writer and whose mother is a beautiful and spirited Hill woman, is written, as an autobiography, with an assumed naïveté which allows the amusing display of an impudent wit. Even pleasanter than the main narrative are the short stories which are introduced into it, all of them in the Eastern manner, except two. These two Hassan hears from the English soldiers, with whom he lives for a time in the position of regimental mascot. They are delightfully neat and pointed, and the people in them have as great and, as displayed by Mr. Anthony, as diverting a lack of truthfulness and honesty as those in the Eastern tales.

Lady Scott describes her Kumana, a Native State, vividly. Her background seems very real and has a subtle charm. Against it she moves her figures, English and Indian, with efficiency, and the result is a readable novel of present-day India. J. B. AINSLIE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—We can quite understand your reviewer's exasperation on discovering that the maps had been omitted from the copy of this book which he was reading. This omission, which was due to a printer's error, was not discovered until after the early review copies had been sent out. We have now rectified the mistake, and all copies of the book at present on sale do contain the maps which were referred to in the descriptive paragraph of the book.—We are, etc.,

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Outlook for 1929.

The outstanding feature in the Near East at the close of the past year was not the progress that had been made in reconstruction, though that in several of the countries was considerable, but the fact that the later part of 1928 witnessed developments which are full of hope for the future and enable one to regard the prospects for 1929 with much great optimism than would otherwise be the case. In Roumania the change of Government has been all to the good, and in the Maniu Administration it is evident that the country now has a Government which can be depended upon to follow the course best calculated to promote the development of the country. The steps already taken, such as the preparation of modifications of the Mining Law and the economies shown in the Budget estimates, have done much to restore the confidence in Roumania abroad which was so seriously disturbed under the Bratianu régime, and it is anticipated that the long delayed loan, which is so vital a matter for Roumania, will be a *fait accompli* before a month has expired. In Greece, too, the consequence of a new Administration has been an increase of confidence abroad, an indication of which is to be found in the important loan which was recently concluded. In this country the works of development in hand or in train are numerous, and M. Venizelos has made it evident that the utilisation of the country's resources by the carrying out of the great reclamation schemes is to receive the fullest attention. The principal development as regards Bulgaria was the issue in November of the second Refugee Loan for an amount increased by £500,000 to meet the expenditure in connexion with the recent earthquake disaster. Bulgaria's lot since the War has been to plough a lonely and very difficult furrow, and this new loan, apart from its material value in placing at her disposal funds which should enable her to make the refugees a helpful asset to the country, should have had the effect of removing the feeling of isolation. Of Turkey it would be possible to write much or little, but here, too, the year has ended on what may be trusted is a hopeful note. At long last the Ottoman Debt has been settled, and if the agreement is carried out in the spirit it will do much to restore confidence in Turkey and will pave the way for the financial assistance of which Turkey is in need. For Yugoslavia alone the past year has been one of almost unmixed disappointment, and as a result of internal developments the Stabilisation Loan which looked a certainty in the spring is now a thing of the future.

Jaffa Oranges and Competition.

The real problem in regard to the Jaffa orange trade is not the extension of the area under cultivation, but the provision of adequate marketing facilities, and this question has for some time been receiving the most careful attention. One all-important point is the maintenance of

the quality of the fruit; then there are the questions of packing and grading, which are very important in supplying distant markets. The unique quality of the Jaffa is its great asset, and fully explains why the search for new markets is meeting with success, but these new markets must be kept and developed, and that can only be done by ensuring that each consignment reaches the market in perfect condition. Thus, and only thus, can the Jaffa hold its own in markets where the competition from other orange growing countries is always growing more severe. Close at hand are two orange producers—Cyprus, whose oranges are believed to rival the Jaffa, and Syria who in the years 1925 to 1927 exported 417,000 boxes of oranges. The chief competitors of Palestine at the moment are, however, Spain, Italy, America, and South Africa, and of them, of course, Spain is by far the most important. Out of every hundred oranges consumed in the United Kingdom roughly 81 come from Spain, while the figures for Palestine are 10. Italy, whose export of oranges is now about three and a half million cases, trades chiefly with Central Europe, and in view of the fact that her production is constantly increasing it is obvious that she will be a serious competitor in that field. This season, as already pointed out, Palestine orange exports will total about 2,000,000 cases, which is about the same as in the previous season, but the rapid increase in the area under cultivation makes it certain that figures for subsequent years will be far in advance of this total, and that, of course, will keep the question of markets very forcibly in the foreground.

The Yugoslav Budget.

Details of the Yugoslav Budget estimates for the ensuing year shows that revenue and expenditure balance at 12,158,672,782 dinars, which represents an increase in the expenditure of 399,233,112 dinars. Among the most notable increases in expenditure are 198,934,764 dinars under the heading of the Supreme Government Executive, 121,125,385 dinars for the Ministry of War 125,180,911 dinars for Forests and Mines and 73,816,237 dinars for Communications. On the present basis of expenditure the Army and Navy account for 33 per cent. of the Budget, pensions and allowances for 13 per cent., state debts for

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

1 per cent., and education for 10 per cent. The fact that one-third of the expenditure is for defence in one form or another may justly occasion some comment, but it will no doubt be explained by the fact that Yugoslavia is bordered by so many States. The increase in the expenditure for the War Ministry, incidentally, is for the purchase of submarines and the improvement of aviation. The revenue includes the sum of 274 million dinars on account of German War reparations, this being the first time that this item has figured in the Budget. Next year's estimates, it must be emphasised, have been effected by the poor harvest of Yugoslavia this year, but that is not an explanation of the increase in expenditure which has appeared to be an almost constant feature in the finances of a number of countries since the War. The way to further prosperity is by economy, but that is a lesson which, as we in this country have only too good reason to be aware, Governments find it very difficult to grasp. It has been said indeed that every Administration since the War has been gambling on a trade revival, and there may be something in that.

The Greek Carpet Industry.

The view that the new Greek carpet industry, after a period of rapid development, is now really beginning to lose ground, is not subscribed to by those who are in the closest touch with it. The managing director of one of the carpet companies, whom I saw this week, was inclined to take a distinctly favourable view of the prospects for the industry provided that adequate attention is paid to its organisation. As he justly pointed out, it is a very remarkable achievement to raise the value of the export trade in carpets from £50,000 in 1922 to several times that amount—a result which illustrates very plainly the extent of Turkey's loss when the refugees departed. As to the point that there has been a tendency for refugees engaged in carpet making in Greece to leave their employment with a view to obtaining better wages in France and elsewhere, he explained that this applied to the small foreign section of the refugees—Armenians, etc.,—who had occasioned a certain amount of trouble, and among whom Communism had shown itself. The result was that the Greek authorities, realising that they had to deal with a small number of individuals who would not be content with the steps which Greece was taking to provide them with a livelihood, naturally modified their treatment of them to some extent, and it is some of them who have deserted the industry and have gone to another country.

A Comparison with Turkish Conditions.

I raised the question whether conditions in Greece were less favourable than they were in Turkey as regards the manufacture of carpets. I was assured that the position was exactly the same, and that Turkey could look for no advantage in this respect which would enable her to regain the lost ground. Where, however, there is ground for criticism, I was told, is the tendency that has been in evidence to concentrate the small carpet factories in the vicinity of Athens. It is desirable that these should be distributed over the country, in Thrace, for instance, thus enabling the manufacturers to produce their carpets much more cheaply than they could near Athens. I also referred to the necessity for the importation into Greece of materials for carpet making. The answer was that all imports are free, and that Turkey too, in pre-War days,

had to import cotton for her carpets. The industry is, of course, the object of particular care on the part of the Greek Government which, with the co-operation of the great carpet companies is endeavouring to place it on a firm foundation. The rôle of these companies is not only to take the finished product, but also to guide the activities of the small carpet manufacturers. "Without any assistance," said my informant, "the small manufacturer would produce on his looms carpets of the patterns which he used when he was in Turkey. But fashions change in carpets as they do in clothes, and if the manufacturer were allowed to pursue his own course he would simply produce goods which the European and American markets do not want. The result would be that he would speedily come to the conclusion that carpet making is not a paying concern—for him at any rate—and he would utilise his looms in some other direction. Here is where the carpet companies come in. They know the trend of fashion in the carpet markets, and they supply the latest designs for the manufacturers who are thus assured that what they are producing is really required. Then there is the question of supply and demand. Manufacturers are not in a position to keep their fingers on the pulse of the world market; hence the need for advice to prevent an undue surplus or the reverse which are everyday occurrences in regard to other commodities."

COMMENTATOR.

BULGARIA'S TRADE IN OCTOBER.

Bulgaria's trade in October amounted in value to 622 million leva for exports and 642 million leva for imports, there being an adverse balance on the month of twenty million leva. The export trade was hampered by the fall in the price of cereals on the international market. The tobacco exports were also much below the level of the same month in the previous year. The exports of this commodity in the three months, August, September, and October were as follows (in million leva):—92, 43, and 80. These totals compare with 134, 234, and 174 for the corresponding months of 1927, and the difference indicates very plainly the effect on Bulgarian trade of the unfavourable position with regard to tobacco.

SHIPPING AT THE PIRÆUS.

Particulars of the shipping at the Piræus in November shows that the arrival of vessels comprised 651 steamers and 466 sailing vessels, while the departures were 647 steamers and 481 sailing vessels. Of the steamers arriving 216 were from abroad, their tonnage being 354,864 out of a total tonnage of 501,843, while of the departures 221 steamers were destined for foreign ports, their tonnage being 357,082 out of a total tonnage of 498,876. Of the steamers arriving 503 were Greek, while 497 of the steamers departing flew the same flag. Italy occupied the second place in both arrivals and departures, while in each case the British flag was third.

The imports during the month consisted of 143,055 tons of commodities and 70,821 cattle. Of the goods 5,065 tons were in transit, while of the cattle 60,551 comprised local trade. Coal was the principal import from Great Britain during the month, the amount being 36,617 tons, while the United States was prominent in the supply of wheat and motor cars. The export trade amounted to 33,502 tons of commodities and 9,256 cattle.

The Roumanian Customs receipts for the first ten months of the current fiscal year totalled 5,964 million lei, as compared with 7,933 millions in the corresponding period of 1927.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 10 amounted to £E11,621, making the total from April 1 £E224,249.

The Survey of Egypt

Its Origin and Development.

Egypt, one of the most ancient civilised countries in the world, unique in its geographical position, has been interested in methods of land measurement from very early times. In order to comprehend the reasons for this evident interest, it is necessary to realise what the land of Egypt is. Picture a country, practically rainless, consisting of a narrow strip of alluvial soil bordering a mighty river, hemmed in by arid and impenetrable deserts, supporting a dense population (the very existence of which depends upon the food grown on the soil), cut off from neighbouring peoples by the desert barrier on either hand and the sea to the north, and one has the conditions under which Egypt existed for thousands of years.

Anyone who has traversed the valley of the Nile and viewed its teeming population, with the barren desert standing guard on either hand, must realise the measure of interest naturally concentrated upon the soil by its rulers and inhabitants. To a visitor, the sharp limit between alluvial soil and barren desert is striking in its analogy to life and death. The annual inundation of the silt-laden waters of the Nile provides the life, and where the level of the flood water reaches, there begins the arid desert, devoid of the means of supporting a highly organised community.

The Earliest Land Registration.

Thus from the very beginning of historical time in Egypt agricultural land was intensely valuable, and the importance of accurate measurement was fully realised. The ancient monuments of Egypt depict land measurers at work, and the famous Palermo Stone mentions the stretching of the (measuring) cord at the foundation of a temple. It appears that about 3000 B.C. registration of titles to land was practised. Thus the property of a nobleman named Methen, living in the Third Dynasty (2980-2900 B.C.), was recorded on the walls of his tomb at Saqqara, and it is there stated that the land was duly registered in the royal archives as belonging to him.

In the course of centuries the science of irrigation developed, increasing the productivity of the land, thus enhancing its value and bringing in its train a denser population, until at the beginning of the nineteenth century, the first ruler of Modern Egypt and founder of the present dynasty, Mohammed Ali Pasha, instituted in 1813 a survey of the cultivable lands and fixed the unit of area at a "feddan," which is practically one English acre. From this time until the dawn of the present century successive efforts were made to continue the survey of the country in order to establish a basis of taxation for revenue purposes.

The rapid changes in land values, brought about by the development of intensive irrigation during the nineteenth century, rendered a re-assessment of the land-tax imperative, and in 1898 it was decided to carry out this re-assessment based on a large scale survey of the cultivable lands of the country.

The Survey Department.

This decision brought into being the Survey Department of to-day. Questions of space do not permit us to enter into elaborate details of the scientific and technical achievements of the Department during its 30 years of existence, and we hesitate to weary the reader with statistics which can be found in the detailed reports published during the period under review.

It is sufficient to state that the inspiration and en-

thusiasm of the band of workers charged with the task of carrying out the original survey has persisted until to-day, when the Department equals any Survey Department in the world. The time allotted for the Cadastral Survey was ten years, and during this period there was carried out the measurement and mapping of the whole of the cultivated area, comprising some 12,000 square miles of territory (roughly two-fifths of the area of Ireland). Maps were published on a scale of 1/2,500, which is equivalent to 25 in. to one mile.

At the commencement of this large scale survey it was realised that the most urgent need was a reliable triangulation, which would ensure the positions of a series of points being accurately known so that the land-measurements might be controlled. The preliminary was the computation of the field observations by an independent computing staff, under the direction of a trained mathematician, thus ensuring a strict control of the work and the maintenance of a reasonable standard of accuracy.

As time went on the technical methods employed were constantly improved, until, in 1907, it was possible for the first time to base a map of Egypt on a connected triangulation carried out from Damietta in the north to Wadi Halfa in the south, a distance of some 652 miles. Once the staff necessary for the Revenue Survey had been organised and trained so that a sufficient area could be dealt with annually, the very urgent matter of providing topographical maps for the Irrigation and other Government Departments was taken in hand.

A provisional map on a scale of 1/10,000 (6.3 in. = 1 mile) was commenced in 1901 by a small staff, which, together with the staff employed on triangulation, became the nucleus of the Topographical Survey Office. The 1/10,000 maps were used as a basis for the smaller scale general topographical map on a 1/50,000 scale (1.3 in. = 1 mile). Detailed surveys of towns were also undertaken by this branch of the Survey.

It will be gathered from this brief outline of the activities of the Department, in the first few years following its foundation, that they quickly developed from the original task of carrying out a Revenue Survey, to the provision of other types of maps required by the various technical services of a modern state.

A Landmark.

The completion of the Cadastral Survey in 1907 marked a turning-point in the history of the Department. Until this was done, the necessity for speed in the execution of the work, provided reasonable accuracy was maintained, was the ruling factor, and made the introduction of better or more economical methods out of the question, if these involved any danger of the output being reduced below the immediate needs of the moment.

Attention was, therefore, turned to the improvement of methods and the training of staff to cope with the end in view of making the standard of accuracy as high as possible to meet the needs of a modern Government Survey. Whilst the Cadastral Survey of the Nile Valley was in progress, the study of the Desert regions had not been neglected. The decision of the Government in 1896 to undertake a geological reconnaissance of the whole country led to the formation of the Geological Survey which became a branch of the Survey Department when the latter was instituted.

The area of Egypt, including the Peninsula of Sinai, is approximately 350,000 square miles, of which roughly 98 per cent. is desert. The Geological Survey had thus a wide field of exploration for which no reliable topographical maps existed. It was, therefore, necessary

 Contractors to British, American, French and Italian Admiralty

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

from the outset to combine geological with topographical reconnaissance, and the scope of the work, limited as it was by financial considerations, was restricted to the study of the mineral resources of the Eastern Desert and the Oases of the Libyan Desert. Shortly afterwards these researches were extended to Sinai.

A great impetus to the study of the economic resources of the deserts was given in 1905 when a wave of mining speculation began to sweep over the country. Demands for leases to prospect for and to exploit the vast stores of mineral wealth, especially gold, believed to exist in the Eastern Desert, were made by concessionaires. The Geological Survey had by this time reconnoitred certain parts of the deserts in considerable detail, and had produced a number of maps on fairly large scales; but the areas thus explored, though in themselves large, comprised but a small proportion of the total area of the deserts.

These maps being the result of reconnaissances rather than surveys were based on no general framework, hence they were of little value for the proper location and demarcation of leased areas. Accurately fixed positions of a number of points were even more essential than detailed topographical maps, and at this date, with minor exceptions near the Nile Valley, not a single point existed in all the 350,000 square miles of desert, whose position was known with sufficient precision to be of service in demarcation-operations.

Desert Mapping.

The first requirement was a net-work of reliable triangulation over the Eastern Desert, and by great good fortune the triangulation chain of the Nile Valley for the revenue survey, had advanced sufficiently for some of its stations to be used as starting points for the desert triangulation. From that date onwards the geological examination and topographical mapping of the deserts proceeded apace. During the years intervening between 1907 and 1914, the scope of every branch of the Department had greatly increased and improved. The triangulation network had been completed over the whole of the cultivated area, and extensive triangulation work had been carried out in Northern Sinai and along the Mediterranean littoral, as well as in other desert-regions.

Precise levelling of the cultivated area was carried out to meet the needs of the Irrigation Department in this direction. Resurveys of large areas for cadastral purposes were done. The topographical map of the Delta and Nile Valley on a 1/50,000 scale was completed and revised and the major portion of the same area published on a 1/10,000 scale. A general geological map on a 1/1,000,000 scale supplemented by another on a scale of 1/2,000,000 was published in 1912, which presented in concrete form the results of the activities of the Geological Survey in the examination of the structure of the country.

The period 1914-1919 was of necessity one of dislocation to routine work, but desert topography at least received a great impetus. The years subsequent to the War were occupied in overtaking the leeway occasioned thereby, and this has been carried out with great credit, in view of the mass of network demanded from the Department.

To-day the Survey of Egypt is very possibly one of the finest equipped Departments of its kind in the world. Modern scientific methods are everywhere in evidence. A modern system of fiscal survey is now in operation, whereby the limits of every individually owned plot of land is indicated on the ground by permanent boundary marks, and clearly detailed in the title deeds relating thereto. This system of registration of titles to land will solve most of the difficulties experienced in the past, which have arisen from inaccurate descriptions of the position of holdings, and which more often than not, made it absolutely impossible to identify or locate a man's holding by reference to the deed, after the lapse of a few years. In this connexion it must be understood that the cultivated area is practically devoid of natural boundary-marks.

It has been truly stated that in no other country in the world have such immense changes been made to the surface of the land as has been the case in Egypt, during the past few decades.

This lack of stable boundaries, coupled with the very high value of the land, has been fully realized by the Egyptian Government which has allotted the sum of £E3,000,000 for the carrying out of this most important and necessary work of introducing a modern system of land registration. The benefits which will accrue to landowners by this reform are obvious, and it is of interest to note that no such method of registration of title exists in England.

The task facing the Survey Department, which has been charged not only with the work of fixing boundary marks and carrying out the Survey, but examining all deeds and investigating claims on the ground, where necessary (and that is often the case), is of the first magnitude. To consider the question of survey alone; the work is now being carried out on a scale of 1/1,000 (63.4 in. = 1 mile), whereas the previous revenue survey was done on a scale of 1/2,500 (25 in. = 1 mile). The accuracy achieved by mapping on this larger scale ensures very much greater precision in the graphic recording of measurements, but it involves at least 7 times the number of map sheets to cover a given area. It can be realised that years must elapse before the whole cultivable area of the country can be surveyed with this precision, but "Rome was not built in a day" and the steady progress now being made augurs well for future stability in matters relating to the occupation of land and the multitudinous operations connected therewith.

The introduction of the 1/100 scale for the basic map of the country has led to a revision in the sequence of the scales of the topographical maps of the country, hitherto 8.3 in. to one mile, and 1.3 in to 1 mile.

To begin with, the 1/1,000 scale is much too expensive to publish, therefore the original maps are reduced by photographic means direct to a 1/5,000 scale (roughly 12.5 in. to 1 mile). In this operation no redrawing is necessary, thus eliminating draughtsmen's errors. These maps are being printed and published for the use of landowners in identifying their property and kindred purposes.

The rapid increase in the provision of suitable roads and the development of motor transport in recent years, rendered the existing small scale topographical map (1.3 in. to 1 mile) too large for use with modern transport. The scale of the new map was therefore fixed at 1/100,000 (approximately one half-inch to the mile). The modern methods of map reproduction employed by the Department enable the same amount of essential information to be shown on this scale as on the previous 1/50,000 map, with the obvious advantage of fewer sheets to a given area. This advantage has been increased by changing the shape of the map sheet to a more suitable "format."

Scale of Measurements.

The scale of 1/25,000 (2.5 in. to one mile) has been selected for the intermediate topographical map series, as being a logical interval between the 1/5,000 published cadastral map and the 1/100,000 general topographical map. Furthermore, the relief of the cultivated area, at half-metre contour intervals, was previously mapped on 1/25,000 scale for the use of the Irrigation Department, therefore this valuable information has readily been introduced on the new series.

This radical change in the scale of the standard cadastral and topographical map series published by the Department provided the opportunity for revising the system upon which the sheet limits of each map series was based. The new system enables map sheets of the standard series to be uniform in size, and numerical references in the margins of the sheets provide an exact means of locating the position of any town or rather topographical feature on any of the scales concerned, because the sheet

numbers themselves are part of the numerical reference scheme.

Immediately these points were decided, work was commenced on the preparation of a new topographical map of the Delta, Suez Canal Zone, and Nile Valley as far south as Aswan on a 1/100,000 scale, and within a comparatively short space of time the work was completed and an up-to-date map has been produced, showing rail, road, and water communications.

The production of the new 1/25,000 scale map was undertaken concurrently with the 1/100,000 scale map, and sheets covering the western and northern Delta are published. The preparation of the sheets of the remaining portion of the Delta is being actively carried out, as this map series is of very great value to the Irrigation Department.

(To be continued.)

ROUMANIA'S OIL INDUSTRY.

The production of crude oil in Roumania in November was about 380,000 tons. The figures for the leading companies were (in tons):—Steaua Romana, 63,418; Astra Romana, 61,976; Creditul Minier, 36,657; Sirius, 32,616; Rom. Americana, 31,821; Phoenix Oil, 29,504; Concordia, 27,401; Petrolul Romanese, 18,158; I.R.D.P., 17,885; Colombia, 15,572; and Foraky Romaneasca, 11,243.

Roumania's oil exports in October amounted to 249,670 tons, as against 207,443 tons in September and 197,182 tons in the corresponding month of last year. The principal countries to which the oil was exported were (in tons):—England, 57,818; Germany, 24,051; France, 21,123; Austria, 19,450; Egypt, 17,891; Greece, 17,868; Yugoslavia, 17,454; Hungary, 15,626; and Italy, 10,574.

The Central Office of the Zionist Organisation announces that Dr. A. I. Kastelianski has tendered his resignation of the position of Economic Adviser to the Executive, which he has held since July, 1926.

The number of emigrants from Yugoslavia from January 1 to August 1, 1928, totalled 14,380, an increase of 645 on the total for the corresponding period of the previous year. The number of returning emigrants for the same period was 3,398, as compared with 2,881 for the same period of 1927.

From February to the beginning of October 201 flights were made on the passenger air line between Belgrade and Zagreb, the number of travellers carried being 1,322. It is anticipated that next spring the Belgrade-Zagreb line will be extended to Salonika at the one end and to Maribor and Vienna at the other. It is further proposed to link up Belgrade with Montenegro.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

†ASSYRIA	...	Jan. 11	†TUSCANIA	...	Feb. 12
*ELYRIA	...	Jan. 29	*CASTALIA	...	Mar. 1

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

INCREASE IN GREEK IMPORTS.

The figures for Greece's trade for the first ten months of 1928 show an increase in the tonnage of the imports and a decrease in that of the exports. The imports totalled 1,928,904 tons of the value of 10,216,541,000 drachmæ as compared with 1,859,283 tons of the value of 10,326,607,000 drachmæ for the corresponding months of 1927, while the exports amounted to 509,305 tons of the value of 4,231,588,000 drachmæ as compared with 511,029 tons of the value of 4,469,621,000 drachmæ. For the period Greece has an adverse trade balance of 5,984,953,000 drachmæ, as against one of 5,856,986,000 drachmæ for the same period of 1927. It may be pointed out that there has been an almost constant tendency in recent years for this adverse balance to increase.

Shipping Intelligence.

SUEZ CANAL TRAFFIC.

The figures for the Suez Canal Traffic for October show that the improvement recorded during the previous months of 1928 has continued. The net tonnage of the transits amounted to 2,601,000, which is a record for October in any year, and represents an increase of 149,000 tons on the figures for October, 1927, which were the previous record. The increase in the tonnage was entirely in the outward direction, the north to south movement showing an increase of 178,000 tons, while in the homeward traffic there was a decrease of 29,000 tons.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, January 10).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 9).

British India Line.—S.s. Mulhera for Colombo, Madras, and Calcutta (London, January 12); s.s. Warfield for Bombay and Karachi (London, January 19).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool January 19, Glasgow and Swansea January 18); s.s. Bothnia for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 19, Swansea January 22).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. Quennmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26). (The first sailing of the season to the Danube ports of Galatz and Braila.)

P. and O. Line.—S.s. Razmak for Bombay (London, January 18); s.s. Novara for Calcutta (London, January 19).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 10); s.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, January 19).

Ellerman and Papayanni Lines.—S.s. Trentino for Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool January 5, Swansea January 5); s.s. Lesbian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool January 5, Swansea January 10). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 1.

The tone of the Stock Markets in the past broken week has been cheerful, prices all round being inclined to rise, though the volume of business was naturally small. The outstanding feature was the extraordinary activity in the new Ford shares, which, under the stimulus of American purchases, rose to a very substantial premium.

The past year has amply fulfilled the forecasts made a year ago that 1928 would see activity and strength in the Stock Markets. According to the *Bankers' Magazine* Index of Security values there has been an increase of 3.8 per cent. in the market value of 365 representative securities, fixed interest stocks being higher by 1 per cent. and variable dividend securities by 8.1 per cent. Home railway ordinary shares, rubber, tea, brewery, and certain mining are prominent exceptions to the general upward movement. The year's rise in security values as a whole follows, it should be noted, a similar rise in 1927. It is difficult to foretell what the next few months may have in store. For the immediate future much depends upon developments in Wall Street, where the feverish activity shows signs of abatement.

National Savings Certificates.

The National Savings Certificate is designed to make a special appeal to the small investor, and its attractiveness, combined with effective publicity, has resulted in total sales since its inception of over 887,000,000 certificates, representing a gross investment of over £695,000,000, of which £500,000,000 still stands to the credit of investors. Two new schemes have recently been prepared whereby employers and employees throughout the country may combine in the purchase of certificates. Both plans presuppose the existence of a voluntary Savings Association in the firm in question, managed by representatives of employer and employee. In the first plan the worker agrees to subscribe a fixed weekly sum to accumulate to an agreed total. The employer undertakes to make up his savings to that total, and if the employee dies before accumulating the agreed amount the full sum will be paid

to his legal representative. The risk the employer thus bears will be covered by various insurance companies at quite reasonable rates. The second plan involves no insurance element. The employer agrees that when the employee has bought an agreed number of certificates he will add another. Both schemes should appeal to enlightened employers who can afford a small additional expense on a form of welfare work which should have distinct "business" as well as personal possibilities.

Bank Dividend Prospects.

It will not be long now before the banks are announcing the results of their operations during 1928, and declaring their dividends in respect of that year. The interim dividends for the first half of the year were in every case unchanged, but this does not necessarily mean that earnings for the first six months of 1928 were as high as those for the corresponding period of 1927. Bank rate, which governs other money rates, has been $4\frac{1}{2}$ per cent. throughout 1928, but for the first months of 1927 it was 5 per cent., so that the average rate for 1927 was higher. Moreover, judged by the usual indices, trade has been less active this year. On the other hand, the banks' advances have increased, and their profits will have benefited from the great increase in acceptances. Whether or no there has been any slight change in earnings is, however, of minor importance. The financial position of the leading banks is extremely strong, and their large reserves, disclosed and internal, enable them to maintain regular dividends. There is little prospect of any departure from this policy this year. Although the return is not generous, often being no better than is obtainable on British Government stock, shares in the leading British banks are eminently suitable for the genuine investor. Apart from a steady income, holders of bank shares benefit from time to time from opportunities to subscribe for new capital on bonus terms.

Goldsmiths and Silversmiths Company.

It is not necessarily the companies which are referred to most frequently in the news columns of the financial papers or the City pages of "dailies" which are the best investments. It is most frequently the shares which are most subject to speculation which receive such attention, and in fact such shares are often subject to frequent and considerable variations in price. They are, therefore, unsuitable for the genuine investor. On the other hand, shares which regularly pay small, unsensational but satisfactory dividends and which are fairly stable in price usually attract little notice. The Goldsmiths and Silversmiths Company is well known for its premises in Regent Street, London, and has been established for many years. Although in a business of this nature, earnings must be expected to vary from time to time; the company has paid a steady dividend of 6 per cent. on its ordinary shares for the last three years. Its shares have not fluctuated much in value, but show a gradual upward tendency. A return of £7 13s. can be obtained on the ordinary shares on current prices, which are nearly the highest of the year, while on the 5 per cent. cumulative preference the yield is £6 18s. per cent.

The ninth Trade Fair at Liubliana will be held from May 30 to June 9 inclusive.

A Bucharest message states that the Chamber has passed the Roumanian Budget for 1929. M. Popovitch, the Minister of Finance, made a statement in which he said that a fresh reduction of 600,000,000 lei had been made in the Estimates which had been submitted to Parliament, thus fixing the figures of the Budget at 37,700,000 lei. M. Popovitch declared that strict economy would be necessary and that fiscal sacrifices would have to be made. This, he said, was due to the financial mistakes of previous Governments, especially to the policy of revalorisation, the delay in obtaining a loan and in bringing about stabilisation. The Minister went on to announce new taxes and appealed to the patriotism of the nation to surmount the financial crisis.

BANKING IN YUGOSLAVIA.

In the December issue of the *Belgrade Economic Review* Dr. Ivo Belin has an interesting article on Yugoslav banking in 1927, from which we take the following :—

Before the Union there was no Yugoslav banking, as an organised unity, to speak of. Not only had the Serbian banks no contact with the economic life of that part of Austria-Hungary which now forms part of this State, and the banks of those parts none with Serbian business, but also there was no connexion between the banks and the business life of the various parts of the old Monarchy which were peopled by Yugoslavs. The Yugoslav banks in Austrian territory had no branches among, or business with, our people in Croatia and Voivodina, nor did those carry on any transactions with business men in Austrian territory. How difficult it was made for our banks to set up in Bosnia and Herzegovina need hardly be mentioned.

Hence before the Union our banking was disjointed and lacking in any proper contact. Naturally in such circumstances it was clearly difficult to make of our banks strong or large institutions which, with the means entrusted to them, would be a decisive factor in the country's economic life. Banking in the parts belonging to the old Monarchy was largely dependent on the large banks of Vienna, Budapest, and also Prague. The small confines and poorly developed economic activity, as well as the lack of liquid capital in pre-War Serbia made very unfavourable ground for the creation of large and powerful banks.

It was only with the Union that banking gained a new lease of life. The narrow provincial borders were removed and a wide field of unhindered work over a territory of 12 million inhabitants was opened. Only lately, since the liberation and union have those processes which have long been noticeable in the life of other nations been able to show themselves here.

The process of concentration in banking is now making enormous strides. In countries with large and wealthy business life, there is appearing, instead of a large number of small or medium banks, a small number of large ones, which by the amount of their resources and the sphere of their work are far ahead of all the rest. By opening many branches and taking over already existing banks they are endeavouring to collect under their own influence the greater part of the economic activity of their countries and to extend the sphere of their work and interests even beyond the national borders.

The concentration which began in our banking after the Union is not yet completed—it is, indeed, only in its first phase. Owing to the variety of economic conditions in the various provinces and also to political factors, the process of concentration in our banking will take longer than in other countries and will never give the same results as elsewhere, where no more than four or five banks direct the entire economic life of the country.

At the end of 1926 we still possessed 672 joint stock banks; surely a record number. The number was not proportionate to the population nor to the amount of business activity. These 672 were distributed thus :—Serbia and Montenegro, 307; Croatia and Slavonia, 143; Voivodina, 127; Bosnia and Herzegovina, 71; Dalmatia, 13; Slovenia, 11.

The concentration of banking here is far from having reached the phase which it has attained in other advanced countries. We still have too large a number of banks which have little or no importance for any greater economic activity.

Nor do our leading banks represent such economic units as they do in other countries. The chief reason, it is true, lies in the fact that our economic activities are not yet very largely developed, and without large business there can be no large banking.

To show the level of development of our banking it is sufficient to state that the total balance of one Belgian, Dutch, Swiss or Swedish bank, that is of one bank of any of the larger nations, is larger than that of all our banks together. Thus there is a large scope of expansion ready for our banking and a very large field of work. Nevertheless after the War, especially in recent years, there has been a tendency to concentrate in our banking.

We already see the main outlines of the coming concentration of our banking as well as which banks will be the leaders of the banking world. Among the first must be mentioned the First Croatian Savings Bank and the Serbian Bank of Zagreb which work exclusively with home capital. The first-named has now deposits of 1.5 milliard dinars and 50 branches, and is thereby the greatest bank. The Serbian Bank, after taking over the Adriatic and Danubian Bank and some others will become even stronger and improve its position. The Yugoslav Society of Banks has just finished one great stage in taking over other banks, and now by the amount of its share capital takes the first place, and in the scope of its business comes immediately after the First Croatian Savings Bank. It is foreign capital which is primarily interested in this bank—British, Belgian, Austrian, Hungarian and Italian, Czech capital is invested to a large extent in the Yugoslav Bank. The General Yugoslav Banking Association was formed by the nationalisation of the branch of the Wiener Bank Verein, with the participation of Belgian and Swiss capital. In the immediate future it will take over also the Land Bank for Bosnia and Herzegovina, and by that and the number of its branches will take an enviable place, among our banks.

These are five of the chief banks. In addition the Liubliana Credit Bank will also continue to play an important part, as well as the Credit Institution, the Croatian General Credit Bank, the Bosnian Industrial and Commercial Bank and some of the large Belgrade banks. Some Belgrade banks make the mistake of not maintaining branches at all and they are very reserved in their business. In consequence comes the abnormal result that on the Belgrade money market it is non-Serbian banks which predominate.

As soon as stabilisation of the dinar is carried out and economic life gains a new impulse, the strengthening of banking will also proceed faster. This strengthening will take place primarily through the large banks. . . although the future lies in the hands of the large banks, and although these alone can do much to quicken business and especially through large modern enterprises, there has appeared of late a growing danger from state and semi-state institutions.

GRECO-BULGARIAN COMMERCE.

Trade relations between Greece and Bulgaria have developed considerably in the past few years. Thus in 1927 Bulgaria exported to Greece commodities of the value of 980,264,521 leva, taking in return commodities to the value of 94,633,631. In the first half of 1928 Bulgaria's exports to Greece amounted in value to 350,018,330 leva, while Greece's exports to Bulgaria amounted in value to 45,922,918 leva. From these figures it will be seen that while the Greek exports were keeping up to the average in 1928, Bulgaria's exports were showing a decline.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

The output of the Anglo-Egyptian Oilfields for the week ended December 28 was 5,000 tons.

Engineering Topics

By G. B. B.

Sewage Lifting Plant.

One of the most interesting features in connexion with the new super-power station at Longford, Coventry, is the patent pneumatic sewage lifting plant in which the pneumatic ejectors are of the patent tandem floatswitch design, where the ejectors' bodies, or receivers, are constructed as integral parts of the cast-iron tubing of the underground chamber in such a manner that the ejectors are superimposed, which results not only in increased efficiency but also in great economy of construction. This plant, supplied by Daniel Adamson and Co., Ltd., of Dukinfield, the owners of the patents, is so designed that the sewage itself is made to perform four functions. It turns the power on as soon as required, turns it off when the work is done, governs the amount of power used, and takes care that at no time is any power wasted. This means that the power is not switched on until there is some sewage to pump, and that the moment the required amount of sewage has been dealt with, the power is turned off. The amount of energy taken is only as much as is necessary to balance the weight of sewage on the ejector, and there is no expanding back from high pressure to a working pressure.

Pre-cast Concrete Work.

In the manufacture of pre-cast concrete blocks and other products the quality of the cement used should not be lower than that laid down in the British standard specifications, and for general working it may be said that the better the cement the better the product. All cements used for this class of work should have a capacity for setting with a fairly slow setting time, so as to allow of the material being properly mixed and placed. It should possess the maximum strength required after a sufficient hardening period, and it should be perfectly sound, so that the finished product does not possess any weak points. In most cases the use of a rapid-hardening cement is an advantage, as then the products can be turned out of the moulds more quickly, which are then ready for another charge. It is a little curious that there is still some confusion of thought between what is meant by "quick-setting" and "rapid-hardening." The former quality in a cement means that it stiffens up quickly after being mixed with water and sand, but it does not necessarily mean that the product will harden quickly after it is once set. Rapid-hardening, on the other hand, does not mean that the cement will set quickly; it merely means that once the cement is set, the hardening process is effected much more quickly than with the slow-hardening ordinary brands.

Another point which arises in connexion with cement for pre-cast work is that of fine grinding. The value of this is now recognised, as the finer the cement is ground in the first place, the greater is its power of binding together the sand and aggregate. Coarse particles in cement are practically the same as aggregate, and their value is very little, if any, more than ordinary sand. It may be pointed out that the degree of fineness to which the cement is ground has no effect upon the contraction and expansion of the resulting concrete after it has set. One important fact, however, is that the ratio of weight of dry cement to its volume varies with the fineness of grinding, and this is especially worth remembering when the cement is being measured by volume and not by weight. Tests with finely ground cements, as Mr. J. Singleton-Green pointed out at the conference of the Institute of Quarrying, indicate that there is no retrogression in the compressive strength of the concrete after ten years, and it may therefore be assumed that the usual increase of strength with age will take place.

Instead of having to be cured for three weeks before dispatch, as is the case with pre-cast cement products when ordinary cement is used, when rapid-hardening cement is used products may be removed from the moulds in 24 hours and used within four days. Obviously there is considerable economy in labour, storage space, and plant, and many manufacturers are taking advantage of this by using a rapid-hardening cement almost exclusively.

A Universal Roller.

A new type of road roller has just been introduced, under the name of "Marshall-Universal," designed to meet the needs of those engineers who have to carry out road work. It has adjustable axles, which enable it to be set for surfacing waterproof roads of the modern type, of any width and of any degree of camber. A further feature is that this roller is able to make a rapid reverse, so as to avoid resting and so depressing the road surface when changing direction. The roller has three rolls, one in front and one on either side. The driving rolls are cylindrical and are carried on the outer ends of two half-axles, which in turn are pivoted, so that they can be inclined to any degree of "crown" needed for the transverse sections of the road. A simple mechanical means of adjustment will give an inclination of the axles from level to one in 24, and the amount of transverse inclination is shown by an indicator. Two speeds are provided, giving $1\frac{1}{2}$ and 3 miles per hour in backward and forward travel, and the gear teeth are machined from solid cast steel blanks. The weight of the roller is equally distributed transversely, but a preponderance of weight longitudinally is given on the driving rolls. The centre of gravity of the whole structure is low and the roller is made in weights from 8 to 10 tons empty, and individual weights can be increased by water ballast in both rear and front rolls.

ADVANCE CATALOGUE OF BRITISH INDUSTRIES FAIR.

We have received a copy of a special advance overseas edition of the catalogue of the London Section of the British Industries Fair, 1929, which is now being issued to 10,000 business men in Europe, North America, South Africa, and the eastern coast of South America, including all those buyers who have notified the Department of Overseas Trade of their intention to attend the Fair. By this publishing feat, which has only been made possible owing to the keenness of British manufacturers to participate in the Fair, trade buyers in cities as far apart as Constantinople, Cape Town, and Vancouver will be able to receive a copy of the Fair catalogue before commencing their voyage to England. The catalogue, apart from containing descriptive entries of the exhibits of more than 1,200 British manufacturers, embodies a complete classification of all those exhibits by trades and indexes in nine languages, enabling foreign buyers easily to trace the goods in which they are particularly interested. Enclosed with this 700 page catalogue is an advance list of some 700 firms exhibiting at Birmingham Section, which takes place concurrently with the London Section from February 18 to March 1.

The letters and parcels arriving and departing from Fort Dunlop reached a record figure during 1928. A total of 5,590,800 letters and 81,090 parcels was handled. Of these, 19,890 parcels were received and 61,200 sent. The inward mail ran to 1,621,800 and the outward, including receipts, invoices, advertising distribution, and ordinary correspondence was 3,978,000, or 13,000 per working day.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 20, state:—

Since our last report the futures market has been much quieter, but the tone has remained firm. The week's summary of price movements is as follows:—Sakellaridis: January, 38.24 dollars, 0.25 dollars down; March, 38.73 dollars, 0.25 dollars down; May, 39.02 dollars, 0.15 dollars down; November, 38.95 dollars, 0.30 dollars up. Ashmouni: December, 22.72 dollars, 0.33 dollars down; February, 23.07 dollars, 0.37 dollars down; April, 23.51 dollars, 0.31 dollars down; June, 23.95 dollars, 0.27 dollars down; October, 24.30 dollars, 0.48 dollars down.

Sakel.—No new feature of interest has developed in the market this week. We have had a succession of quiet markets, and the greater part of the business transacted has been of a professional character. The open speculative bull position must be of fairly large proportions, and the operators interested do not seem to have sufficient courage for the moment to increase their holdings, inasmuch as experience has taught them that the higher prices are forced up the less they can count on the commercial support required to maintain the market at the point attained.

The relative strength of the Sakel market is principally due to the fact that hedge sales against spot cotton have dwindled to insignificant proportions these last few days. There still remains a fair quantity of cotton up-country, but it is generally strongly held, and moreover, so heavy is the accumulation of stocks in Alexandria, that it cannot, for the time being, be ginned and sent down here.

There has again been nothing encouraging in the demand from spinners this week; some business has certainly been put through, but sellers have undoubtedly had to make heavy sacrifices in price to obtain it. With the holiday season close at hand, any change in the situation is hardly to be expected in the near future. We therefore maintain our opinion that the present prices of Sakel are at levels at which even a very moderate amount of liquidation on the part of the bull clique would suffice to bring about a material reaction.

The Sakel/Uppers straddle March/April this week stands at 1,522

points, against 1,516 points last week and 731 points at this time last year.

Uppers.—The fluctuations recorded this week have been only of minor importance, but the heaviness to which we have alluded in recent reports still prevails. Trade demand has fallen off considerably, this being due, to a certain extent, to the more exacting demands of holders of cotton and the disinclination of buyers, at least for the time being, to meet their ideas.

The Ashmouni/American (February/March) straddle this week stands at 287 points, against 322 points last week and 763 points at this time last year.

The week's receipts amount to 263,794 kantars, against exports 169,644 kantars; the stock in Alexandria stands at 3,444,635 kantars.

Spot.—The past week has been a dull one at Minet el Bassal, and with the approach of the holidays demand from abroad has decreased still further, the week's turnover being distinctly poor. Sales amount to about 15,100 bales, of which we estimate 6,600 bales Sakellaridis, 6,350 bales Ashmouni and Zagora, 1,300 bales Pilion, 550 bales Nahda, and 300 bales other varieties.

Sakellaridis: Has met with slightly more demand than last week, but only a very moderate business has been done, in which all styles have shared. Spot differences are without much change. A great deal of cotton is offering for sale, but good lots of really sound cotton are not too plentiful.

Asmmouni and Zagora: Demand has fallen away a great deal, and not very much cotton has been for sale recently. These two facts have resulted in a turnover which is only the half of last year's business, although all grades have been dealt in. Spot differences are generally slightly dearer.

Pilion: Has met with a very fair demand, in spite of the mediocre quality of the cotton at present on offer, and a fairly good business has been done. Spot differences are generally slightly dearer.

Other Varieties: In Nahda a good business has been done. Spot differences are distinctly dearer. A fairly good business has been done in White at about last week's differences, and a small trade has taken place in Maarad.

Up-country: There has been very little doing in the villages this week; in the first place, the bulk of the crop has already been marketed, and, secondly, cotton remaining in the villages is either not offered for sale at the moment or, when offered, does not easily find takers on account of the lack of available warehousing space in Alexandria. Demand for new crop sowing seed is increasing. In the Delta, Nahda is in great favour, at the expense more particularly of Zagora.

NEWS FROM ALL SOURCES.

Mr. Maurice Bernhard Baron has accepted an invitation to join the Board of the Amalgamated Tobacco Trust.

The Greek Budget for the year 1928-29 balances at 11,140,652,333 drachmæ. The Public Debt accounts for 26½ per cent. of the expenditure and the Army and Navy for 20 per cent.

It is reported that a group of Dutch tobacco companies have offered a loan of £5,472,080 to the Yugoslav Government and another loan to the City of Belgrade for concessions in regard to the Yugoslav match and tobacco monopoly.

In virtue of a recent Roumanian Decree the export duty on sheep, ram, lamb, goat, and kid skins has been fixed at 6 lei per kilogram, and sugar beet may now be exported from Roumania without permit and without payment of export duty.

The Bulgarian Ministry of Agriculture has authorised the Banque d'Agriculture de Bulgarie of Sofia to purchase 10,000 harrows, 1,000 drilling machines, and 5,000 reapers. Half the harrows and 1,000 reapers must be of Bulgarian make.

On the termination of the Secretary of State in Council of India's contract with the Burma Railways Company on December 31, 1928, the management of the £1,250,000 Burma Railways Three per Cent. Debenture stock is being transferred to the Bank of England. Stamp duty will be payable as heretofore in respect of transfers of the stock, but no fees will be charged by the bank in respect thereto. The general practice of the bank with reference to the transfer of stock and the payment of dividends, etc., will be applicable to this security.

The capital of the Bank of Athens is to be increased from Dr.72,000,000 to Dr.100,800,000 by the issue of 288,000 new shares of Dr.100 to Dr.550 per share. Shareholders are to have the right to subscribe: (1) firm and irreducibly for two new shares in respect of every five shares held, by the deposit of Coupon 57 in proof of rights, Dr.200 to be paid on or before January 22, Dr.200 to be paid between March 16 and April 5, and Dr.150 to be paid between May 10 and 31; and (2) reducibly for further shares not exceeding in number the amount already held, payment in full to be made on allotment. The new shares are to participate for all dividends in the years 1929 and following and carry Coupon 59 and upwards.

Company Meetings.

LAND BANK OF EGYPT.

A Prosperous Year.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting at Alexandria on December 4:—

The year 1927-28, the results of which we present to you, has been marked by the continuance of our mortgage activity. Just as last year, we have issued a block of bonds for an amount of £E500,000 at a price of 95 per cent. and bearing interest of 5 per cent. That issue was taken firm by the National Bank of Egypt, to which we give our sincere thanks for its valuable support. There has been no need for a public offer, as the National Bank guaranteed distribution among its clients. Thus the confidence which the Land Bank enjoys in the leading financial circles is once again emphasised.

Our mortgage investments have risen from £E4,396,284.511 to £E4,652,928.412, including £E88,071.676 due by purchasers of land expropriated. The amount of our debt to bondholders, calculating the 4 per cent. bonds at the rate of the stabilised franc, stands at £E2,944,189.008, leaving a large margin of guarantee on mortgages. We have carried out this year 28 sales and 389 loans for a total amount of £E802,166.297. Our arrears have risen to £E503,964.962, of which £E198,773.721 relates to arrears properly so called, and £E305,191.041 applies to the current year. It is necessary to point out here, moreover, that the new season which has opened, with the quality of the crop and the high prices obtained for cotton, has given much better results than last year, from the point of view of the receipt of annual payments, and that the position in this respect improves from day to day. Our property account has varied little. It stands at £E54,231.665, as against £E51,412.581 last year. Our efforts are directed to reducing it as far as possible.

After having carried out the various amortisations deemed necessary, and made such provision as an administration prudent and solicitous for your interests believes that it ought to submit to you, the net distributable profit stands at £E211,311.083, as against £E200,574.522 last year. Your Board proposes in consequence to raise the dividend to 14s. 6d. for the ordinary shares and to £E8 for the founders' shares, and the distribution will be carried out in the manner in which it has been done since the general meeting of 1924.

In the first place, once the statutory deduction of 5 per cent. for the ordinary shares is effected, each of the categories having rights will receive 5 per cent. on the amounts carried to their credit after the amortisations effected in the past four years; then the dividends and ordinary percentages will be paid according to the order and the proportion laid down in the statutes of the company.

The favourable decision in the case regarding our 4 per cent. bonds, and the stabilisation of the French currency, enable us to anticipate now a more rapid paying of the profits accruing from the redemption of our 4 per cent. bonds, so as to reduce the period of repayment of each of the accounts, a period fixed by you in 1924 at a maximum duration of 40 years, but capable of being diminished when the circumstances and the financial conditions of our business shall permit a distribution in advance. Your Board propose then to fix the period for the repayment of these profits at ten years, the sums allocated to this payment proceeding, as has always been the case, from the capital returned on our mortgage loans.

The position of the various accounts after the previous payments have been deducted is as follows:—Reserve, £E87,691.051; board of directors, £E74,852.123; ordinary shares, £E465,746.522; founders' shares, £E199,605.653; £E827,895.349. The period which your Board proposes leaves every facility for the continuation of the policy of prudence which we have followed as well as the necessary elasticity for our Treasury, and permits the regular development of our business.

If you adopt our proposals, each ordinary share will receive in the form of a bonus 4s. 10d., which, added to the ordinary dividend, will give a total distribution of 19s. 4d. The founders' shares on their part will receive £4, plus the ordinary dividend of £8, or in all £12. We continue thus to realise and to carry out successfully the financial programme which we submitted to you in 1924, and which you unanimously adopted. Your Board is convinced that you will

adopt its views and thus approve, as in the past, its policy of prudence which takes care of and defends your legitimate interests.

At the beginning of the past year we asked M. Théodore Zarifi to take the place among us which was occupied by his father, the late M. Périclès Zarifi. You will certainly ratify this appointment, which assures to your Paris committee the continuation of the well-informed co-operation of this family of financiers, who have had so important a part in the foundation of our company and in the development of its prosperity.

Your Board has the agreeable duty of thanking in your name the staff of the bank, which carries out with a zeal and a devotion which have never been lacking a task which each year becomes more important.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, deferred interests, etc., have been £E409,140.624. The service of the bonds, general expense, fiscal taxes paid or due to the French Government, and various amortisations we propose to you, which stand at £E36,691.843, absorb a total sum of £E197,829.541. The profits to be distributed amount to £E211,311.083. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E163,779.833. On that balance there has to be deducted, in conformity with the decisions of the general meeting of December 2, 1924, the interest at 5 per cent. on £E827,895.349, profits carried forward on the 4 per cent. bonds. The interest falls to the various categories as follows:—Reserve £E4,384.552, the directors £E3,742.606, ordinary shares £E23,287.326, founders' shares £E9,980.283, £E41,394.767, leaving to be divided £E122,385.066. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £E12,238.506, and 10 per cent. goes to the board of directors £E12,238.506, £E24,477.012. Of the balance £E97,908.054, 70 per cent. to the

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent
on application to
the Secretary*

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

ordinary shares, £E68,535.638, to which has to be added the amount brought forward from the year 1926-27 £E2,749.139. In addition the share accruing from interest on profits carried forward £E23,287.326, making £E94,572.103. We propose to you to give out of this sum to the 195,000 shares 9s. 6d. per share, £E90,309.375, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. 6d. per share. The carry forward of the shares will thus be £E4,262.728. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. 6d. per share. The 30 per cent. belonging to the founders' shares represents £E29,372.416. Further, their share of the interests arising on the amount brought forward £E9,980.283, to which has to be added the amount brought forward from the year 1926-27 £E695.160. We propose to distribute a dividend of £8 on each founders' share, and to carry forward £E1,047.859.

By drawing on the capital recovered on the mortgage loans we propose to you to distribute to the amount of 10 per cent. the profits carried forward realised on our 4 per cent. bonds. The ten per cent. amounts to £E82,789.534 and is allocated: To the reserve £E8,709.105, board of directors £E7,485.212, ordinary shares £E40,574.652, founders' shares £E19,960.505; £E82,789.534. The ordinary shares will have thus £E40,574.652, plus the carry forward from the previous year £E285.108; £E40,859.760, or 4s. 10d. per share, £E45,946.875, with a carry forward of £E912.885. The founders' shares will have £E19,960.505, plus the carry forward from the previous year £E209.247; £E20,169.806, or £4 for each founders' share, £E19,500, with a carry forward of £E669.806.

The Resolutions.

The general meeting unanimously (1) approved the accounts and balance-sheet for the year ended September 30, 1928, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors and fixed the dividends as follows:—(A) A distribution of 14s. 6d. for each ordinary share: that distribution, in conformity with the decision of the general meeting of December 2, 1924, includes, besides the ordinary dividend of the year, interest at 5 per cent. on £E465,746.522, profits carried forward, realised on the 5 per cent. bonds. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay a final settlement for the year 1927-28 of 9s. 6d. per share. (B) A distribution of £8 on each founders' share: that distribution, in conformity with the decision of the general meeting of December 2, 1924, includes, in addition to the ordinary dividend of the year, interest at 5 per cent. on £E199,005.651, profits carried forward, realised on the 4 per cent. bonds. It was resolved to carry forward £E4,262.728 for the ordinary shares and £E1,047.859 for the founders' shares. (3) By deduction on the capital recovered on mortgage loans, the meeting decided to amortise, up to one-tenth, the profits carried forward realised on the 4 per cent. bonds, which will result in a supplementary distribution of 4s. 10d. for each ordinary share, with, on that tenth, a carry forward of £E912.885, and of £4 on each founders' share with a carry forward of £E669.806. (4) Re-elected MM. R. Labryère, R. Ismailun, and M. Salvago, the retiring directors, and ratified the appointment as director of M. Théodore Zarifi. (5) Nominated as auditors, MM. Georges Mazet, Franz Sofio, and Joseph Desvernois.

Messrs. Doxford and Sons, Sunderland, have obtained a contract for two cargo vessels of 1,050 tons each for Yugoslav owners.

The Yugoslav State Railway authorities are inviting tenders for the supply of 500 locomotives, 500 passenger cars, and 1,500 vans and trucks.

ASSOCIATED COTTON GINNERS OF EGYPT..

The following is the report of the directors, with statement of accounts as at August 31, 1928, submitted to the shareholders at the twenty-third ordinary general meeting held at Alexandria on December 21:—

We have pleasure in placing before the shareholders for their approval our twenty-third annual report together with the audited accounts to August 31, 1928.

The quantity of cotton ginned in our factories during the year 1927-28 was 441,129.57 kantars, against 844,827.38 kantars in 1926-27.

During the season ended August 31, 1928, we did not steam press.

The following are the results to August 31, 1928:—

Factories profit	£E	11,618
Less: Sundry repairs and renewals in the factories		1,440
		10,178
Add: Profit on Insurance Department		903
		11,081
Less: Expenses and management at head office	£E	4,725
Insurance premiums		2,961
Sundry expenses		1,525
Commissions		58
Interest		256
		9,525
		1,556

Less: Depreciation on buildings and machinery	8,160
Depreciation on steel hoops	5,889
	14,049
Leaving a loss of	12,493

We have therefore to deal with the following amounts:—

Amount brought forward from last year	18,385
Loss as per August 31, 1928	12,493
Balance, which your Board propose to carry forward	5,892

We have completed the installation of an economical Diesel motor of 500 h.p. at our ex. Choremi Factorq, Kafr-Zayat. This motor has worked in a satisfactory manner from the beginning of this season, and the power it develops is sufficient for the number of gins, which this factory can actually use.

The existing steam engine will be kept in reserve for any eventuality and also in case the factory has to work the full number of 180 gins.

We have restored the two existing floors and built an additional storey to one of our houses at Zagazig. This house has been rented for a period of five years to two of our important clients ginning at this factory.

We have built an office and dwelling house at the Barrage Factory in order to accommodate an important client of this factory.

In view of satisfying our clients we have installed in three of our factories Simons machines for the fumigation of cotton seed.

In conformity with the Ministry of Agriculture's "arrêtés" we have also installed 7 machines for the fumigation of cotton waste and sweepings at the factories.

In order to stabilise ginning rates at Kafr-Zayat your company and the other factory owners of this town have concluded an arrangement for a period of four cotton seasons.

If the result of this season are not satisfactory, it is due to adverse circumstances impossible to foresee. In fact, the total quantity of the crop of Lower Egypt was, according to the Government's report, 3,742,800 kantars, against 5,570,300 kantars in the previous season. The ginning factories working during the past season in Lower Egypt were 101, and the company ginned 11.78 per cent. of the crop of Lower Egypt. In this respect we deem it necessary to draw the attention of the shareholders to the fact that these results were only possible owing to the quantity of cotton ginned in our factories by the founder firms who are bound by contract to the company, and although their quantity was not so large as usual this season, nevertheless it formed a large proportion of the total quantity of 440,000 kantars.

The company not having steam pressed for four consecutive seasons, your Board has decided to sell a part of the stock of steel steam press hoops and to depreciate the balance.

At the last ordinary general meeting, held on December 22, 1927, a number of shareholders expressed a wish to see the company undertaking advances on cotton. Your Board, however, did not think it admissible to follow this suggestion owing to the risk attached to these financing operations.

Mr. T. S. Richmond retires from office by rotation and is eligible for re-election.

You are now asked to approve and adopt the report and balance-sheet for the year ending August 31, 1928, as presented.

You have also to appoint auditors for the ensuing year and to fix their remuneration. Messrs. Russell and Co. offer themselves for re-election.

THE DRIED FRUIT MARKET IN 1928.

Messrs. J. C. Houghton and Co., of Liverpool, in a review of the dried fruit market in 1928, state:—

In reviewing the course of events during the past season, two factors stand out prominently. It has to be recognised that the dried fruit trade has undergone a radical change, due to the development of production in the southern hemisphere. In old times when we depended almost entirely on the Mediterranean countries for our supplies of currants, raisins, sultanas and figs, a long spell of absolute inactivity during the summer months was followed by a period of great animation as new fruit came to hand from Greece, Smyrna and Spain.

Supplies then came to markets which were bare, and had been so for many weeks, so that an intensely strong demand prevailed, and any sign of advancing prices accentuated the almost feverish anxiety to lay in stocks. Now, however, that Australia and South Africa have seriously entered into competition with the older producing countries, all that has changed. Currants, raisins and sultanas being obtainable in plenty throughout the summer, there is no excitement over the arrival of new fruit, no rush to buy, and we pass from what formerly was a period of calm into the so-called "season" with nothing to denote a sudden change. The other factor to which we have referred in our opening paragraph, is that, while supplies from Spain and Turkey were on a decidedly reduced scale, this was fully offset by the particularly large crops in California, which followed on a substantial carry-over from the previous crop. These factors are mainly responsible for the unsatisfactory and disappointing conditions which have prevailed. Buyers have felt all along that they had no need to lay in supplies, because they could get what they wanted whenever it pleased them to do so, and were not apprehensive that values would go higher.

Currants.

The season opened with the arrival of s.s. Hatasu towards the end of September, and although overland samples of new crop fruit were available weeks before the steamer arrived, they received very scant attention from the buyers. This attitude continued after the arrival, and very little interest was shown. Some progress was made in cleaned varieties: Gulf 56s., Small 55s., Patras 54s., Amalias 52s. to 53s., Pyrgos 51s., Vostizza 64, and Small 62s. October failed to justify the hope that we would witness a heavy trade; buyers seemed settled in the policy of confining their purchases to the narrowest limits. Further arrivals, per s.s. Lesbian, Bactria, Roumelian and Polo, comprising an excellent assortment, failed to stimulate demand, prices easing as the month advanced. Sales were Pyrgos 49s. to 49s. 6d., Amalias 50s. 6d. to 51s. 6d., Patras 51s. to 53s., Gulf 54s. to 56s., Vostizza 57s. to 64s. November saw the s.s. Bothnia, Etrib, Mardinian, Bosnia and Algerian arrive with cargoes which included a good and varied selection, but quite failed to stimulate any activity, and trading continued of a disappointing character, there being apathy and lack of confidence. The distributing trade was undoubtedly nervous of falling prices, holders showing great anxiety to liquidate. Values show a decline on the month, most noticeably on the finest qualities of Vostizza. Sales were: Pyrgos 47s. to 47s. 6d., Amalias and Patras 48s. to 49s. 6d., Zante 48s. 6d. to 49s. 6d., Gulf 52s. to 56s., Vostizza 53s. to 62s., Finest 68s.

The publication made by the Central Currant Office, reiterating its obligation to purchase any quantity offered of 1928 crop at 3,500 drachmæ per 1,000 Venetian pounds and remaining in force until August 1 next, has certainly had a beneficial effect on the market and, although December witnessed no material improvement in the demand, the tone has nevertheless been rather steadier. Buyers, however, see no reason to depart from their policy of purchasing from day to day.

Closing quotations: Pyrgos 46s. 6d. to 47s.; Amalias

and Patras 47s. 6d. to 49s.; Zante 47s. 6d. to 48s. 6d.; Gulf 50s. to 54s.; Vostizza 52s. to 60s.

Sultanas.

Smyrna.—With declining c.i.f. quotations for shipments of new crop, it was not surprising that overland samples of 1928 yield, afloat per s.s. Hatasu, received very scant attention from buyers. A little business was put through on samples on the basis of 52s. to 53s. landed terms, and although shipments were light and the estimates of the exportable quantity available were below 35,000 tons, the trade continued to confine purchases to the narrowest limits. Further steamers arrived during October but quantities were quite insignificant as compared with what the market is accustomed to. Nevertheless they were more than sufficient to meet requirements, and with c.i.f. quotations daily on a lower basis, buyers exercised extreme caution in their commitments. Sales were: Medium Qualities 48s. to 52s., Good 54s. to 58s., Fine 60s. to 64s. In the early days of November more activity was witnessed, and the small stock on hand was quickly disposed of, but later arrivals (although small for this season of the year) were greater than needed to meet demand, and the article lapsed into a state of extreme quietude. A large proportion of arrivals was against c.i.f. sales, and this made buyers indifferent to spot parcels on consignment. Sales were: Medium Qualities 40s. to 42s. 6d., Good 50s. to 52s., Fine 56s. to 62s. We close the year with reports of stronger advices from Smyrna, and very little fruit now remaining for export.

Cretans.—Overland samples of very bright coloury fruit for August and early September shipment attracted attention at 72s. to 82s. 6d. landed terms, and the demand continued right up to the close, for good parcels showing colour, at 61s. to 80s.

Greeks.—Good coloury fruit of the new crop commanded attention, and sales out of the first steamers were at 58s. to 62s. and a few special lots at 65s. to 72s. Small shipments arriving during October were disposed of at 60s. to 68s., and up to 75s. and 80s. for best coloury lots. During November shipments were light and sales ranged: Ordinary Qualities 40s. to 42s. 6d., Better Grade 60s. to 65s., Fine 70s. to 80s.

Figs.

Opening prices of new crop Genuines at 21s. to 22s., c.i.f. September, 20s. C.i.f. October shipment attracted a little attention, but no weight was disposed of. Upon arrival of s.s. Hatasu with the first new, business in skeleton cases was recorded. Large boxes 58s. to 80s., small boxes 72s. 6d. to 76s., Locoums 90s. to 140s., bags genuines 34s., choice 42s. With further arrivals a slight falling off in demand was experienced, best quality selling readily, but inferior parcels being difficult to place. Large boxes 52s. 6d. to 80s., small boxes 67s. 6d. to 82s. 6d., Locoums 90s. to 135s., pulled 45s. to 52s. 6d., bags genuine 32s. to 36s., choice 38s. to 40s. Demand fell away as season advanced and little progress was made with declining values. Closing quotations were:—Large boxes 46s. to 80s., small boxes 62s. 6d. to 70s., Locoums 85s. to 100s., pulled 42s. 6d., bags genuine 29s. 6d. to 32s., choice Prima 28s. to 33s.

The traffic receipts of the South Indian Railway Company for the week ended December 1 amounted to Rs.12,31,163, making the total from April 1 Rs.4,12,33,457.

The Chartered Bank of India, Australia, and China announce that an agency of the bank will be opened at Dairen (Manchuria) on January 7.

The Aga Khan, the Gaekwar of Baroda, the Maharaja of Nawagar, and General Gouraud, Military Governor of Paris, who is visiting India in a private capacity, arrived in Bombay on December 28. General Gouraud, after staying for two days in Bombay, left for the South, whence he is proceeding to Calcutta, Delhi, and the frontier before returning to France in February.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Sinking of Artesian Well, Etc.—The Egyptian Ministry of the Interior invites tenders for the sinking of an artesian well and the supply of centrifugal pumps, filters, etc. January 21. (D.O.T.)

Pumping Machinery.—The Egyptian Ministry of the Interior invites tenders for the supply of pumping machinery, filters, and accessories. January 31. (D.O.T.)

Cables and Transformers.—The Ministry of the Interior, Local Commissions Section, Cairo, invites tenders for the supply of transformer kiosks, electric cables, and accessories required for the extension of the electrical supply of Mit-Ghamr Power Station. January 27. (D.O.T.)

Notes of the Week.

The Yugoslav Crisis.

Confronted with the Croat resolve to be satisfied with nothing less than a federal system of government as the final solution of the national crisis and with the equal determination of the Serb Radicals not to be party to such a solution and to do all in their power to prevent it, King Alexander has cut his Gordian knot by proclaiming on January 6 autocratic government in Yugoslavia. The Constitution is abrogated, the Skupshtina is dissolved and a Ministry has been appointed to govern by Decree. The new Prime Minister is General Petar Žhivkovitch, an official of the Royal Household, and Commander of the Guards Division, whose name has frequently been mentioned in connexion with the formation of a "business" Government outside political parties. He has associated with him five Serb Radicals, three Bosnian Radicals, three Croats, a Serb Democrat, a Slovene, Dr. Koroshetz, the late Prime Minister, and a Montenegrin. All county and district councils have been dissolved, and their place is to be taken by Royal Commissioners, political gatherings will require to be authorized by the police, and the authorities are empowered to take action at their discretion against chauvinistic national or confessional associations. A dictatorship complete in all its ramifications has been established, and the ground is thus cleared to enable the country "to get on with its work." It remains to be seen how the new Government will interpret this part of its functions. As a beginning it has given it to be understood that it is opposed to rivalries and jealousies between the different branches of the Yugoslav people; but a bigger constructive work awaits it, and the country will presumably want to see what policy the Government brings to bear on the big questions of the day before indicating its attitude towards the new order. Finance constitutes, perhaps, the most important problem. Yugoslavia is in urgent need of a large foreign loan. The distracted conditions of the country have prevented its conclusion; but it remains to be seen whether foreign financial interests will consider the unity that a dictatorship imposes to offer the stability that investment on a large scale expects.

Italy and Yugoslavia.

One effect of the change of Government in Yugoslavia will almost inevitably be to postpone any definite step in the settlement of Italo-Yugoslav relations on a new basis. When the question of the renewal of the Treaty of Rome was raised with the Italian Government by the Yugoslav Minister in Rome, Signor Mussolini is understood to have pointed out that he would prefer to have the relations between the two countries settled on a more comprehensive basis. The Treaty of Friendship and Cordial Co-operation between Italy and Yugoslavia that was signed in Rome on January 27, 1924, made provision for certain eventualities which were not likely to happen within the five years of its duration, but did not provide for the establishment of friendship or cordiality between the two peoples or their Governments. Its renewal on the same terms in the spirit in which it has been observed would reduce treaty-making to a greater farce than it is at times already, when a craze for paper agreements of no practical purport exists among certain countries. Signor Mussolini, therefore, will be well advised to insist that, if Italy and Yugoslavia are to sign any further treaty, an attempt should be made to invest it with real value. The negotiations for such an instrument, it is to be hoped, will in themselves have the effect of clearing the atmosphere. In spite of Italian assurances Yugoslavia has not been able to rid herself of an uncomfortable feeling in regard to Italy's intentions in the Balkans. All that wears an anti-Italian aspect in Yugoslavia is traceable to this feeling, and if Italian assurances were for once backed up by some definite measures calculated to reassure Yugoslav opinion, it would not be long before the relations between the two peoples were satisfactory, if not actually, cordial.

Mutual Tension.

The first step towards the removal of the tension between the two countries is that each should endeavour to understand the other's point of view. The Italian case against Yugoslavia, it may be supposed, rests on the anti-Italian attitude of the people, as shown by a

prone to demonstrations and anti-Italian rioting, and on the Yugoslav Government's obvious unwillingness to acquiesce in Italy's policy towards Albania. In regard to the latter time is serving to bring about its own solution. The Yugoslav Government has no ground for protesting against economic penetration so long as it is not used as a stepping-stone to the occupation of Albania. If, therefore, Italy is able to give satisfactory assurances on this point, Albania should cease to be a bone of contention between the two countries—the more readily because Yugoslavia knows, or should know, that, provided that her own relations with her Balkan neighbours are correct, any attempt on the part of Italy to occupy forcibly Albanian territory would bring all the Balkans in league against her. As for anti-Italian hostility in Yugoslavia, it is bound to die down as the fear of Italian aggressiveness is allowed to subside. The Yugoslav case against Italy rests in part on the conception of Italian policy as deliberately aimed at the downfall of Yugoslavia. Less is now heard of Italy's design for the political isolation of Yugoslavia, as it is realized that reasonable friendliness on the part of the Yugoslav Government will secure it, equally with Italy, the friendship of Balkan States. A more potent element in Yugoslav misgivings, however, is the long sequence of agreements that Italy is held to have extracted out of Yugoslavia by taking advantage of the latter's inferiority in the matter of diplomacy, preparedness for war or economic strength. This grievance centres in the history of Fiume and the Nettuno Conventions. Some idea of the bitterness in regard to the latter can be formed from an article that is published elsewhere in this issue. Their recent ratification by a Rump Parliament in Belgrade has re-opened the sore, as it is supposed that, directly or indirectly, Italy contrived to press home her advantage at a time when Yugoslavia was hopelessly divided against herself. It will be for Signor Mussolini to decide now whether the benefits that it was sought to secure for Italy from these Conventions are not more than outweighed by the fact that they tend to form a permanent obstacle to the establishment of good relations between the two countries.

More Shining Armour

The cause of good relations between Italy and Yugoslavia will not be furthered, if many Serbian colonels rush into print after the manner of the one who is alleged to have produced a pamphlet urging the intensification of Yugoslavia's military preparations. It may be that this particular lucubration, although it has only recently been discovered by Italy, dates from a period when sabre-rattling was more popular among Serbs as a whole than it is at present. Even if it were an entirely new publication, it would be thought that Italians could afford to treat it with the contempt that it deserves, however anxiously it might be regarded by Yugoslavia's Balkan neighbours. From time to time in the past Serb military officers have sought to testify to their zeal and patriotism by advocating a brand new suit of shining armour for the one country in Europe which stands to benefit most by forgetting, at least for a decade, that there are such things as armies and wars. In Zagreb a suggestion emanating from Belgrade that the obligation of military service should be extended from the age of fifty to that of sixty years will tend to confirm the opinion of the hopelessness of trying, in an age of economic competition, to build up a modern State which is to be directed by Serb mentality. The proposal to increase the number of Yugoslav Ministries, which is already seventeen, to eighteen will be regarded as another indication of the lack of political sense from which Serbia suffers. There could hardly be a more inopportune moment, from the point of view either of the internal or of the external situation, for such a pamphlet to appear. If the writer is a serving officer of the Regular Army, he would hardly be allowed to publish it without explicit authority, and it will be argued both in Yugoslavia and in surrounding countries that such authority would come from quarters where the

actual reins of political power are held. If he is on the retired list, prompt disavowal may do something to reassure nervous neighbours.

A Ministerial Change in Bulgaria.

There is a distinctly artistic touch in the decision of the Bulgarian Government to appoint General Volkoff, Minister for War, as Bulgaria's representative with the Fascist Government in Rome. General Volkoff has been known to be anxious for some time to resign his post; but neither he nor the Government was disposed to yield to outside interference in such a matter. Rightly or wrongly, his presence in the Cabinet was supposed to serve as an encouragement to Macedonian revolutionaries, and the question of his resignation became acute when the British and French Governments made their well-meaning, but in the circumstances ill-advised, representations in Sofia regarding Macedonian activities. That crisis, however, was overcome, in a manner which revealed Bulgaria's spirit, without the resignation of General Volkoff, and M. Liaptcheff's Cabinet has remained in being long enough to avoid the charge that he effected changes in it at the behest of others. In Bulgaria it will always be believed that the British and French Governments acted at the prompting of one of Bulgaria's neighbours; hence the artistry of General Volkoff's appointment to Rome. It is, however, not always politic to indulge in international affairs the natural inclination to get one's own back. Bulgaria has her own internal difficulties, without going out of her way to lead her neighbours to imagine that there is something in connexion with which they must retaliate. There can be no permanent solution of the Macedonian question until a definite and lasting improvement in the existence of the Macedonians in Southern Serbia coincides with the elimination of those who on Bulgarian soil make their grievances an excuse for a terrorist campaign.

The Macedonian Problem.

The Macedonian Revolutionary Organization, which is responsible for the terrorism that has characterized the struggle of the Macedonians for their rights, is as a rule, so inaccessible to argument, that an attempt in its Press organ, published at Geneva, to explain and justify its actions, may be regarded as a welcome symptom at this stage of the Organization's history. *La Macedoine* bases its remarks on an article that appeared in *THE NEAR EAST AND INDIA* of December 6, in which the folly and fatuity of the Organization's method of conducting its campaign were emphasized. It does not wish the world to suppose that there is any change of policy in the Organization, if its efforts for the moment are directed to murdering fellow Macedonians instead of Serbs, as its "tactics" are always liable to be adjusted to the needs of the time; but it is obviously sincere when it contends that only acts of terrorism serve to keep the Macedonian question before the attention of Europe. That is at best a half-truth. While the outrages for which the Organization is responsible may keep the question prominently before Europe, they effectually impair the prospect of an early settlement, and we are prepared to give Macedonian patriots credit for wishing at heart to bring about a solution of the complex Macedonian problem. It may be true that without the *komitaji* exploits and outrages Europe might have been less acquainted with the grievances of the Macedonians, but it is the essence of common sense, not to mention statesmanship, to know when the desired object has been attained, and not to continue to follow after an end already gained when another goal has to be reached, calling for an entirely different avenue of approach. Europe is perfectly well acquainted to-day with the Macedonian problem, and needs no further murders nor outrages to inform it regarding the state of affairs in that region. What it does need, and has sought in vain for the last few years, is a sufficiently long period of peace in Macedonia to enable it to bring pressure to bear in the right quarter for an amelioration of the lot

of the Macedonians. So long as the outrages continue, its hands are tied; for it cannot call upon any Government to surrender to force. The Macedonian Revolutionary Organization persuades itself that terrorism is merely its method of replying to persecution; the Serbian authorities are equally convinced that what is called persecution is merely the adoption of methods of self-defence against terrorism. Who is to decide where the evil started? Even the leaders of the Organization recognize their inability "to break a Serbia armed to the teeth." Why not, therefore, leave the ground open to other methods that can attain the end in view?

Preliminaries to a Solution.

The Macedonian Revolutionary Organization affects to believe that it has explored all legal methods and has proved them to be unavailing. It greatly deceives itself. Whenever it may have adopted such a method, examination would probably show that the move has been shortly preceded or followed by some gross outrage, hopelessly stultifying the "legal" procedure. The Organization and *La Macedoine* take credit for the formal declaration made in 1924 that the revolutionary struggle would cease immediately, if certain conditions that the Organization laid down were fulfilled. Both the leaders and their organ appear to have been naïve enough to expect such an offer to be accepted by return of post. If during the last four years not a single outrage had been committed in South Serbia, they would have some justification in complaining at the delay in a reply to their offer; but the first murder that followed it was equivalent to a cancellation of the offer, and it is ingenuous to refer to it to-day. Acceptance of any offer entails some form of negotiation or conference. Rightly or wrongly, the attitude of every Belgrade Government has been that it will not meet in conference men personally responsible for murders of prominent Serbs or outrages on Serbian soil. In Macedonia this may seem superfluous squeamishness, but it is for the Organization to reckon with it; and, as far as we are aware, it has not been at pains to appoint leaders who are free from the Serbian ban. This is a point which is apt to be overlooked in the councils of the Organization. One reason why the grandiose scheme of a "Macedonia for the Macedonians," as contemplated by Gladstone, is no longer practical politics lies in the fact that all Macedonians capable of directing an autonomous Macedonia appear to have become Bulgarian subjects, leaving for future Macedonian "citizenship" only those who rely upon murder and outrage to win them prominence in Macedonian councils. For those who have supported abroad the Macedonian cause this development constitutes a pathetic disillusion. If common sense is yet to prevail, *La Macedoine* might make a start by displaying as a map of Macedonia territory bearing some relation to the realities of to-day—territory which might conceivably be regarded as entitled to a measure of local self-government. Salonika, the second port in Greece, must not be included in it.

Education in Turkey.

The death of Neĵati Eyy, Turkish Minister of Public Instruction, is a severe loss to the cause of education in the country, as the late Minister had thrown himself whole-heartedly into the work of his Ministry, and much of the success attending the spread of education has been due to his efforts. Only last summer he had undertaken a European tour, in order to study educational methods in different countries. Educational statistics in Turkey have recently begun to deal in large figures. In themselves they may be a little misleading, as it is evident that Turkey does not yet possess a sufficient number of trained teachers to staff adequately all the schools that, it is claimed, are opened or in process of being opened. The rapid spread of education, however, is the order of the day, and as a start has to be made practically from the beginning—with over eighty per cent. of the population

illiterate—no very high standards of tuition is called for at first. Stress is being laid on the opening of "popular" or primary, schools, and now, with compulsory attendance between the years of sixteen and forty, figures of school attendance will attain large proportions. It is to be hoped, however, that the Turkish authorities will not grasp at the shadow and miss the substance. Educational statistics are impressive only when the standard or standards behind them are known. Turkey will do better to concentrate on building up at the beginning an efficient cadre of teachers than to shorten training courses in order to send out half-baked teachers to occupy school buildings that are being so hurriedly erected.

A Turkish Plot.

Plots in Turkey have a way of being serious matters for the plotters, although they may fail to impress the foreign onlooker with their seriousness. The latest to exercise the Turkish authorities and public is no exception to the rule. A great flourish of trumpets heralds the first discovery, and all manner of important people are alleged to be implicated. Great efforts are made by the Turkish Press to live up to this high-pitched start; but, as the authorities usually maintain complete silence on the subject, the task is a difficult one. A daily bulletin, however, appears to be expected, and it generally takes the form of recording the comings and goings of officials supposed to be concerned in the inquiry, together with such "revelations" as the imagination of the chronicler suggests, always with the announcement that strict secrecy is being maintained by the authorities. In the present instance the plot is alleged to hinge on the presence in Angora of the Turkish wife of an Egyptian doctor, carrying a revolver, and a cryptic letter addressed to her by her brother. Numerous arrests followed in Brussa, Constantinople, and Sivas, but whether they have any direct connexion with the alleged woman conspirator has not been revealed. As on previous occasions when a dramatic reform has been introduced in Turkey, so now with the enforcement of the Latin script, a plot is announced. It may be that the discovery of a plot is regarded as the most convenient counter-stroke to a certain unwillingness in some quarters to be hustled into modern methods. To credit the possibility that any movement should seriously embarrass a régime as securely seated in the saddle as is to all appearances that of Mustapha Kemal Pasha would be a slight on the Republic.

THURSDAY, JANUARY 10, 1929.

THE YUGOSLAV DICTATORSHIP.

In abrogating the Yugoslav Constitution dissolving the Skupshtina and establishing government by Decree, King Alexander has taken a step that has long been threatening and had been made by recent events almost inevitable. The main point in doubt was whether he would head the movement or whether in taking shape it might pass him by. Fortunately for the prestige of the Crown and for the unity of Yugoslavia the King appears to have taken charge of the situation, and the country promises to be spared the possible political aftermath of a *coup d'état* from below. Few will challenge the accuracy of the diagnosis of Yugoslav affairs that accompanies the King's Proclamation to his people. "My expectations," His Majesty declares, "and those of my people that the evolutions of our internal political life would bring about order and consolidation within our country have not been realized. Both parliamentary life and the political outlook generally have become more and more negative, and both the nation and the State are to-day suffering from the consequences of this condition of things. All useful institutions within the State and the development of our national life have been jeopardized. Such an unhealthy political situation is not only prejudicial in internal life and progress, but also to the development of our external relations as well as to our prestige and credit abroad. Parliamentary life . . . has always been my ideal, but blind political passions have so abused it that it has become an obstacle to all profitable work in the State. . . . Instead of developing and strengthening the feeling of national union, Parliamentarism as it has developed has begun to provoke moral disorganization and national disunion." As in the case of Egypt, the working of democratic government led Yugoslavia into a political morass in which the people were floundering without any prospect of being able to extricate themselves by normal constitutional means; and, also as in the case of Egypt, it would be folly to condemn the country to indefinite prolongation of this fate, from a slavish adherence to shibboleths and because constitutional government has proved more successful in other countries.

The establishment of a dictatorship in Yugoslavia, however, must be regarded as a means to the solution of a concrete problem and not as the solution itself. If, as King Alexander points out, the union of the people and the unity of the State were threatened, it was for very definite reasons. Chief among the causes were incompatibility of temperament as between Serbs and Croats, or more strictly speaking between Serbian Radicals and the non-Serb inhabitants of the Kingdom, and the determination of the Radical Party to retain political power in its own hands. It would, therefore, be more correct

to say that parliamentary institutions as conducted under the highly centralized system of government introduced and maintained by the Serbs had failed Yugoslavia than that the Yugoslav people are incapable of adapting constitutionalism to their needs. The distinction should be kept carefully in mind at the present time in Yugoslavia. All the different territorial units constituting the Southern Slav Kingdom are familiar in greater or less degree with constitutional forms of government. It was, therefore, to be expected that, when they became merged into a single political entity, they would pursue a course of normal development under parliamentary institutions. When, however, the time arrived for framing a Constitution, the Serbs, under the masterful leadership of Pashitch, were unable to contemplate any system that did not provide for a single directing force at the centre of things in which all administrative authority to the smallest detail would be concentrated. The Croat conception of a Kingdom of the Southern Slavs, on the other hand, demanded a partnership on equal terms and refused to accept for Croatia and the Croats a position of permanent inferiority. During the lifetime of Stepan Raditch the issue between the two peoples was in part obscured by the idiosyncracies of the Croat leader; his inconsistencies and irresponsibility prevented the Croat attitude from being taken as seriously as it deserved. With his death, in the tragic circumstances that led to it, there has been a closing up not only of the Croat ranks, but also of the non-Serb elements as a whole in the country. A stage had been reached at which it was impossible for Serb Radicals and Croats to work parliamentary institutions together any longer. The Croats demanded the introduction of a federal system with separate parliamentary government for each unit; but until the last moment the Serb Radicals refused to agree, and a state of tension had been reached in which civil war was not an impossible outcome.

It is to meet and to solve this state of affairs that King Alexander has considered himself obliged to abrogate the Constitution and to suspend parliamentary government. What the Serb Radicals who held the machinery of Parliament and of government in their hands refused to do, the King now undertakes in direct co-operation with the people to carry into effect. Only this intention and its faithful and speedy fulfilment can justify the dictatorship. To many impartial onlookers it may be a matter of regret that King Alexander did not intervene at an earlier stage, not to suspend the Constitution, but to make full use of the prerogatives and prestige of the Crown to bring together the two warring elements among his people. A judicious distribution of Royal favour as between Croats and Serbs, as between Zagreb and Belgrade, might have moderated Serb aggressiveness and made for greater tolerance on the part of the Croats. The opportunity, however, has now passed. The union of the people and the unity of the State have to be maintained, and although a dictatorship may offer a short cut to this end to-day, it is unlikely to fit in permanently with the characteristics of the Southern Slav people, and will not of itself instil good will as between the different sections. Until Serb and Croat are able to work together, a federal system of government would seem to be indicated for Yugoslavia; and as Serb politicians refused to allow such a system to be introduced, the dictatorship can justify itself by carrying into effect what is clearly required in the interests of the country.

Cairo, December 29.

Kasr El Aini.

The Tropical Medicine Congress came to a conclusion with a soirée at the Heliopolis Palace Hotel, which over two thousand guests attended. It was a very brilliant affair, but really too crowded, even in that palatial building, for it to be as enjoyable as some of the other smaller entertainments in connexion with this Congress have been. The organisers of the Congress are to be heartily congratulated on the success with which the programme has been carried out. The delegates are unanimous in their admiration of the arrangements made for their comfort and for the business part of the Congress, which from that point of view has been eminently successful. They were very much struck with the progress made in preventive medicine and hygiene and are confident that, when the new buildings have been completed, the Hospital and Medical School will rank amongst the foremost of their kind. But until they are completed the embargo laid on the School of Medicine by the Royal Colleges of Surgery and Medicine in the matter of the eligibility of the Egyptian graduates for British degrees will have to remain.

There is no question of the good training work that is being done, and, if the British medical authorities had not had the experience of the past to guide them, they would probably have decided to recognise Kasr El Aini again forthwith. But they remember that the reorganisation, which they had recommended, although promised, was persistently delayed and that it was not until they actually withdrew their recognition that steps were taken to proceed with the scheme of rebuilding in connexion with which the foundation stone was laid by King Fuad last week. They feel, no doubt, and very rightly too, that if they removed the embargo to-day dilatory tactics might again supervene and the reorganisation of Kasr El Aini, which is essential to the proper training of Egyptian doctors, be retarded, and that the best way of speeding up the work is by refusing to entertain any idea of recognition until such time as there is satisfactory evidence that the reorganisation is being seriously taken in hand.

The English Mission College.

Prize-day at the English Mission College was held this year in the theatre of the American University by kind permission of Dr. Watson, the Dean, and his committee. The High Commissioner again made the distribution and in his speech congratulated Mr. and Mrs. Martin on the continued success which was attending their venture. He said that the College was doing very valuable work, particularly in inculcating British ideas and principles into the pupils, and that it was deserving of every support. Mr. Martin in reply stated that but four years ago they

had only twenty-four pupils in a few rooms, whereas to-day the College was the largest school in Egypt, with over three hundred pupils, and this month they had taken a third building to start a domestic science branch for girls and a laboratory for boys. The College is about to make an appeal for funds to enable it to meet the ever-pressing requirements of additional pupils and to safeguard its position by buying the premises, in which so far it has been housed under lease. In view of the good work it is doing, to which parents of every class, nationality and religion testify, it is to be hoped that it will receive from the public the assistance which it certainly deserves.

The Seif Ed Dine Affair.

The news that the Parquet had decided to refer Mustapha Nahas Pasha, leader of the Wafd, Wissa Wassef Effendi, Chairman of the late Chamber of Deputies, and Gaafar Fakhry Bey, deputy, to the Bar Disciplinary Council, came as somewhat of a surprise, as it was believed that the question in which they were implicated had been filed by the Parquet. Evidently the responsible authorities are of opinion that the actions of these lawyers infringed the etiquette and traditions of the Bar, even though they may not have been guilty of anything bringing them within the common law.

The accused lawyers were briefed in the case brought against the Royal Chancery Court by the mother of Prince Seif Ed Dine for the return of his estate, which went into Chancery when he was put into a mental establishment in England some twenty-five years ago. The Prince escaped from Ticehurst in 1926, and doctors in Constantinople, where he is now in residence, have attested that he is quite sane. Nahas Pasha and his colleagues are accused of taking exorbitant fees, out of all proportion to the work, of having made a contract whereby they would be paid the bulk of these fees only if a successful issue resulted from the action, and of having maintained their connexion with the case in spite of the fact that they subsequently filled important positions of trust in the Government Service. The case will, it is expected, come on for hearing early in January. They will, however, not appear, as some London papers have said, before the Bar Council, but before a special disciplinary court appointed for the purpose every year by the Native Court of Appeal, which consists of the President or Vice-President of that Court, three Counsellors of the Court of Appeal and a member of the Bar Council. There is, therefore, every guarantee that politics will not influence the decision of this Court.

A Loss to Journalism.

The already small band of journalists who in Egypt represent the London Press has been further depleted by the death of Mr. W. E. Drakeford, Correspondent of the *Daily Telegraph*, which occurred on Christmas Day. Mr. Drakeford had been for some time in indifferent health, but had pluckily stuck to his work even to the extent of adding to his labours by deputising for sick colleagues. There is no doubt that he paid the penalty of his constant

readiness to help a comrade even at his own personal expense, and that the strain told on an already debilitated constitution. For, when on the previous Saturday he was suddenly taken so ill that an immediate operation became necessary, he was not able to stand the shock. Mr. Drakeford's death is a serious loss to British journalism in Egypt, for he possessed a facile pen, pleasing style, keen sense of humour and accurate judgment, together with a capacity for taking pains, which did honour to the great profession to which he belonged. By none will he be more missed than by his colleagues, whom he was ever so willing to assist.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 20.

The European Association Dinner.

There has been more plain speaking, this time by the Viceroy at the annual dinner in Calcutta of the European Association. After speaking of the loyalty to the King-Emperor as shared by Hindu and Muslim, Brahmin and non-Brahmin, Punjabi and Madrassi, British India and the Indian States, he said: "It is not difficult to forecast what must be the reaction upon British opinion of the assertion of independence as the goal of a great political party, by persons who would claim the title of responsible politicians. Those in Great Britain who sympathise most warmly with the ideal of India attaining at the earliest possible moment the status of any of the other great Dominions of the Crown, will find the ground cut from under their feet, if British opinion ever becomes convinced . . . that so-called Dominion status was only valued by India as a stepping-stone to a complete severance of her connexion with the British Commonwealth."

The Viceroy's Warning.

Lord Irwin went on: "From the point of view, therefore, alike of the effect upon Indian unity and public opinion in Great Britain, I can feel no doubt that the demand for independence must do an irreparable injury to India's cause, and sadden the hearts of the wiser of India's sons and friends. Is it too much to hope that on an issue of this kind, which is too grave to be resolved by verbal formulas or mental reservations, those who can appreciate the implications and issue of such a policy should in unequivocal terms warn their countrymen against it?" And earlier he had said: "Indian Nationalists have constantly attacked, condemned or misrepresented those whom they alleged through excessive caution to be adopting an unfriendly attitude towards India's aspirations. I make bold to say that the most bitter and confirmed reactionary would never have it in his power to inflict one-tenth of the damage upon India's cause that it is likely to suffer at the hands of its false friends, who would guide it towards the morass of independence."

The Boycott and the Mob.

The Viceroy also touched upon the unmannerly and would-be violent demonstrations against the Statutory Commission, saying: "I am sure that all sober-minded citizens of India must have witnessed with regret, and will condemn, the continued attempts to conduct unmannerly and offensive demonstrations against the Commission and their Indian colleagues. I can understand the attitude of those who, following the hitherto established tradition of boycott, prefer to hold themselves rigidly aloof from the Commission's investigation. . . . But to substitute for this policy of abstention the procedure of noisy and dangerous public demonstration against the chosen representatives of Parliament and their colleagues is to exchange what might have been a dignified protest of responsible persons for the methods of disorderly disturbance of a mob." The Viceroy did well to mention the Com-

mission's Indian colleagues each time; for they have more to suffer than Sir John Simon and the other Englishmen.

Set Orations.

It is open to doubt whether there is not too much of the set oration about such a speech as Lord Irwin's at the Calcutta dinner. The set oration from one side, an oration full of words of Latin origin, rather diminished in force by much use, is answered by the set oration from the other side, and the end of it all is the question: "Which do you think made the better speech?" No one pays much attention to what either side has said. A Viceroy who would say in the homely vernacular, or better still in the language of Swift, what exactly would make independence a morass might live to hear his speech quoted a month after its delivery. If he could only name names, instead—as if he had his gloves still on and always had them on—of using such phrases as "those who would claim the title of responsible politicians," he might hear himself quoted a year later. I began with a word about plain speaking. Much of the speaking of the past month has been plain enough, but it has not had bite enough in it.

Associated Chambers of Commerce.

A speech with much more bite in it, one obviously prepared with great care, was delivered on Tuesday by Sir George Godfrey at the Conference of the Associated Chambers of Commerce, in support of a resolution against a danger with which we are threatened, the danger of discrimination of a racial or communal character against commercial and industrial interests in India. Sir George was not content to confine himself to the somewhat empty phrases that are customary, but drew a picture, based on wide reading, of the industrial and commercial India of pre-British days. In effect he said: "Look on this picture and on that"—the picture of the merchant of Mogul days and Mogul Governors, when "the only way to keep anything was to appear to have nothing," and the India of to-day, with its jute, tea, oil, cotton, and other flourishing industries. India has given birth to Sankaracharya and Ramanuja, but where have been her Arkwrights, Watts, and Stephensons? Let there, then, be no more vain talk, said Sir George, in other words, of foreign exploitation of India, and still more let there be no discriminating legislation. In Mr. Haji's Coastal Traffic Bill we had an example of what might be attempted, and what more and more will be attempted, if a check is not placed on that line of activity.

Law and Order.

There have been a number of important pronouncements during the week on the subject of Law and Order, among them being the speech of Mr. Gavin Jones at the Annual Conference of the European Association. There are three alternatives, but against each of them there are objections. The alternatives are (1) to transfer the Police to the Central Government; (2) to entrust Law and Order to a Minister responsible only to an autonomous legislature; (3) that Law and Order should be the portfolio of the Governor of the Province, who should have the right to certify expenditure, and should appoint a permanent Secretary to answer the criticisms of the Legislature. In Mr. Gavin's view, the first alternative is impracticable, and the second dangerous. There remains only the third, which must be adopted, let the theoretical objections be what they may.

The other pronouncements were those of Mr. Swain before the Statutory Commission, and Sir Malcolm Hailey, speaking in the United Provinces. They are both worth the study of anyone interested in the question.

The Railway Standing Finance Committee of the House of Assembly, in the course of its meeting at Calcutta, agreed tentatively to a programme of capital expenditure in the next financial year of 27.20 crores of rupees (£20,400,000).

KANTARA: THE BRIDGE OF THE EAST.

The name Kantara means simply a bridge, and it occurs in hundreds of places in Egypt and Palestine; but to the larger world there is but one Kantara, the station on the Suez Canal where, in fact, there is no bridge of iron or stone, or even of boats. The name goes back to centuries before the Canal was cut, when the waters of the lagoon of Tineh stretched over the desert; and here through the long ages has been the bridgehead between Asia and Africa, across which the caravans of humanity have passed since the beginning of history. Here, according to some of the latest critics, the children of Israel passed out of the Land of Bondage; and here more certainly the Persians, the Macedonians, and the Romans passed along the road of conquest. Here in the 19th century Napoleon plunged into the desert with his wonderful 10,000, to set up an Eastern Empire; here Ibrahim Pasha, Viceroy of Egypt, led his forces to wrest Syria and Palestine from the Turkish overlord; and here the British Army had its base from 1915-1918, when it passed from the defence of Egypt at the Canal to the redemption of the Arab lands from Ottoman misrule. It is on the road which passes through Kantara from Egypt to Syria that there exists the only line of wells and springs in Sinai which makes it possible to march an army.

To-day the Suez Canal, with its narrow stream separating two continents and uniting two worlds, is crossed by a ferry on the site of the old road from the Delta to

of an Officer of the Frontier District Administration; and the Officer has no sinecure, for his subjects are as cosmopolitan as those of a great capital city. Almost daily the place is passed by pilgrims of the world who wish to visit Palestine. You may find there one day a Muslim Hajji returning from Mecca and Madina back to his home in Syria or Iraq, or, if he comes from India or the Far East, completing his holy round by a visit to Jerusalem, the third most sacred city of Islam. Another day you will find a Christian pilgrimage passing to the Holy Land by way of the Philistines; and on any and every day you will find Jews coming from or going to the national home of their people and prattling in Hebrew.

Kantara is the portal of Palestine; and it is the seat of a kind of Condominium. It is the Government of Palestine which manages the railway on the eastern bank of the Canal, although the territory across the Sinai desert as far as Rafa is within the confines of Egypt. Again, the Police and the Customs House Officers are of Egypt; but the Immigration Officer, whose scrutiny every traveller must pass, is of Palestine; and all the notices on the eastern bank of the Canal appear in the three official languages of Palestine—in English, Arabic, and Hebrew. For at Kantara the prophecy of Isaiah is realised: "*In that day there shall be a highway out of Egypt to Assyria; . . . and Israel shall be the third with Egypt and Assyria—a blessing in the midst of the land.*"

N. B.

The Bridge that spanned the Suez Canal, north of Kantara, during the War.

the Desert over which the merchants and pilgrims passed with their camels. That road is superseded, or at least supplemented by the ironway which leads to Jerusalem and Haifa. The railway was laid by the Egyptian Expeditionary Force in 1916 and 1917, when Kantara was the greatest single depôt on all the war fronts and had camps to accommodate 250,000 soldiers. The hordes have passed; the camps are deserted; the hundreds of miles of metalled roads are now sanded up; the places of entertainment stand gaunt and derelict; but the railway runs on, and outside the station there is a board with a simple legend: "Sinai Railway: for Palestine, Trans-Jordan, Iraq, and Asia." The railway, indeed, is not yet completely connected to all those countries or to Europe, because there is a stretch between Haifa and Tripoli of Syria which has to be passed by motor car; but you can now take a through journey from Calais to Cairo broken only by the passage of the Bosphorus and that short stretch on the road.

There are a few other melancholy survivals at Kantara of those populous days of the Great War—desolate churches of the different denominations and a military cemetery with its thousands of graves, carefully tended by the War Graves Commission. One place of worship remains open and is constantly used. It is the Mosque which existed before the War and is still the place to which the Arab resorts for prayer on his wanderings. There is also a house of the Government at Kantara which has survived from before the War. It is the seat

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARAB TRIBES IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the report in your issue of December 13 dealing with the lecture of Mr. Bertram Thomas "The South-Eastern Borderlands of Ruba al Khali," held at the Royal Geographical Society, in which he speaks about the most interesting question of the existence of remainders of a non-Arabic population in the southern parts of the Arabian Peninsula (a question discussed already several times in your esteemed journal), you mention my name. You write: "Dr. Rathjens, a German adviser to the Imam Yahia of the Yaman, supported him (Mr. Thomas) on the score of types (of Hamitic character) which he had seen farther west." Since this assertion is only right as far as it refers to my acquiescence in the scientific opinion of Mr. Thomas, but wrong as far as it refers to my being an adviser to the Imam, I take the liberty to add some words on this matter.

(1) The distinction between Semitic and Hamitic peoples is very old and is originally made in the Bible. In the last years it has become doubtful to me whether it is possible to adhere to the principal difference between the Semites and Hamites and to speak still of two different races, or whether they ought to be taken as two great groups of one single race. When making a distinction between two races, one has to keep apart the anthropological habitus and the language. Having acquired within the last decades a greater knowledge, especially of the Hamitic languages of northern-eastern Africa, one may say that though these languages differ lexicographically from the Semitic languages, they have grammatically a great resemblance, and from the anthropological point of view even one who has seen many Semitic and Hamitic types knows that it is very difficult indeed to make general distinctions.

If, however, one insists upon making the group-distinction of Semites and Hamites, the language is, as I said before, certainly not decisive for the appertaining of a people to one of these groups. For instance, the Abyssinians who speak a Semitic language, are, as

THE NETTUNO CONVENTIONS.

Although the Nettuno Conventions between Italy and Yugoslavia, which were signed on July 20, 1925, have played a prominent part in discussions of the relations between the two countries of recent years, there would seem to have been a reluctance on both sides to publish the text of the different documents. Possibly their number and the rather prosaic nature of their contents have provided an adequate excuse. The result, however, has been to leave foreign opinion at a loss to explain how it was that the Conventions came to be signed, if Yugoslavia found herself obliged to refuse for so long to ratify them. An article in the *Belgrade Economic Review* by Dr. Pero Mitrovitch, Secretary of the Zagreb Chamber of Commerce and Crafts, affords some indication of the attitude of Yugoslav business men towards the Conventions and accounts for much of the distrust that is felt, at least in Croatia and Slovenia, towards Italy. Though necessarily an *ex parte* statement, the article will be found of interest.

Dr. Mitrovitch begins by pointing out that the Nettuno Conventions do not stand by themselves, but constitute the last links in a long chain which binds together the most varied public and private interests of Yugoslavia and Italy and their citizens.

The list of the Treaties, Agreements and Conventions between Yugoslavia is as follows:—

1. The Rapallo Treaty, November 12, 1920.
2. The Brion Convention on Adriatic Fishing, September 14, 1921.
3. The Rome Conventions on Legal Assistance, April 6, 1922.
4. The Santa Margharita Conventions, October 23, 1922.
5. The Fiume Agreement, January 27, 1924.
6. The Pact of Friendship and Co-operation, January 27, 1924.
7. The Rome Conventions, April 26 and August 20, 1924.
8. The Trade and Shipping Treaty, July 14, 1924.
9. The Nettuno Conventions, July 20, 1925.
10. The Belgrade Conventions, October-November, 1925.

The Nettuno Conventions for the purposes of the article are divided into five groups, as follow:—

- (a) Agreement supplementing the Rome Agreement on Fiume and its trade, dealing with railway and other services, together with a protocol "by which the development of the port of Sushak is prescribed in every direction, except as a transit station for timber."
- (b) Conventions and Agreements on the execution of the Rome Agreement on Fiume. (Ten are enumerated.)
- (c) Agreement concerning the application of Clause 9, of the Rome Agreement. "To this Agreement is added a protocol concerning signatures by which the right of carrying on the profession of lawyer by Italian citizens in Dalmatia has been smuggled through, for in Clause 49 the Conventions for general agreement made no mention of lawyers."
- (d) Conventions and Agreements on questions which refer mainly to the execution of the Peace Treaty—debts, contracts, public insurance, etc.
- (e) Agreements regarding matters affecting Serbian Orthodox communities in Italy, and frontier matters.

In addition to the above twelve diplomatic notes were exchanged on July 20, 1925, between Signor Mussolini and the Yugoslav Minister in Rome containing explanations dealing with certain clauses in the Conventions.

Dr. Mitrovitch continues as follows:—

We may declare *a priori* that the fundamental principle on which these Conventions are based in the main, namely, the principle of reciprocity, offers no guarantee of

principle that important questions will be rightly solved. Whatever the relations between a stronger and a weaker party concluded on the principle of reciprocity, they must end in victory for the strong and defeat for the weak. This is physical law. The political and economic structure of Italy and her development in trade, commerce, industry, banking, shipping, etc., far surpass the political and economic structure of Yugoslavia, which on the principle of reciprocity must draw the poorer cards in this shuffling of obligations and rights. The inequality of the positions on the basis of these Conventions is the more striking in view of the fact that they are to be applied to the economically weakest parts of the Kingdom, namely, the Dalmatian and Croatian coasts. Together with this goes the fact that Italian capital has already taken deep root in all the chief industries of Dalmatia. The utilisation of the water power of the Krka and Gubavitza on which depend the illumination and electrical supply of all the trading and industrial concerns all over Dalmatia; the production of cyanide and carbide in the factories of Shibenik and Dugi Rat near Omish; the greatest Dalmatian cement factory with a yearly output of over 40,000 trucks, and the greatest Dalmatian coal mine at Promina are all in the hands of Italian capital, which will not let go at any price these greatest Dalmatian sources of economic wealth. Our industries and our capital in Italian territory are either non-existent, or else so small as to bear no comparison with Italian investments in Dalmatia. As far as the Croatian coast is concerned, it cannot be said that this represents a goal of Italian penetration, but nevertheless Sushak as a port is watched with jealous eyes from the Italian side, lest it should injure the interests of Fiume. The disproportion between the technical capacity of the Sushak and Fiume ports is so great as to require no mention. Matters being so, therefore, the principle of reciprocity was absolutely indefensible, at the very least in the Conventions concerning economic and labour questions.

By the Treaty of Rapallo and the Rome Agreement of January 27, 1924, Italy came into possession of Fiume, Zadar and the islands of Lastrova and Palagruz. The last three were obtained actually by the Rapallo Treaty of 1920, and Fiume only years later after all the happenings which are so well known, by the Fiume Agreement. All the struggle and effort of Italy to obtain and add to her territory the port of Fiume would be hardly comprehensible if regarded simply from the point of view of the supposed defence of her national and economic interests, unless we understand under the term of self-defence the prevention of development on the part of her neighbour. By its geographical position and the construction and capacity of its port, Fiume was and still is the only normal route for Yugoslav overseas transport. None of the more southerly Adriatic ports (Shibenik, Split, Dubrovnik and Cattaro) could represent any danger to Italy, because they were and are still insufficiently connected with their hinterland and not adequately constructed. Therefore Fiume must at any price be removed from the sphere of interest of the young economic life of Yugoslavia which, after the unification, would certainly put forward its whole strength to emancipate itself from dependence on other States, and in this case from dependence on Trieste. Through Fiume the door to the world would be open to Yugoslavia, and moreover by the possession of Fiume Yugoslavia would be rid of one great anxiety and of a task which for a long time must remain impossible of fulfilment, namely, the construction of her own large port on the Adriatic. This is why Italy determined that *de facto* or *de jure* Fiume must not get into Yugoslav hands. This is why she used every means to obtain the revision of mutual obligations arising out of the Rapallo Treaty, in which were guaranteed the "complete freedom and independence of the State of Fiume" by both parties, who promised to respect them eternally. Italy feared the independence of Fiume, because it could see in that independence no guarantee that the doors of a free Fiume port would be inaccessible

to Yugoslavia. This is why the Rome Agreement of 1924 came about, by which the independent State of Fiume was erased from the map and its territory divided between Italy and this country, in such a way that Italy gained Fiume with the whole port, and Yugoslavia only the small Barosh dock, which had been constructed for the transport of timber. This is the present port of Sushak.

Even this, however, did not satisfy Italy. She knew that in taking over Fiume she was undertaking a considerable burden on her State finances, since the annexation took away the wide and extensive hinterland in which Fiume had drawn ever since its foundation. There was also the fear that Sushak might extend and develop, at least sufficiently to take over the whole overseas trade of Yugoslavia. Some means, therefore, had to be found by which Fiume should be secured as far as possible the unimpaired continuance of her old functions as the outlet for the Danubian States. The Rome Agreement was concluded "for the purpose of establishing cordial relations between the two States, for the general good of both nations" "desirous of securing in the most convenient manner the life of the city of Fiume and the economic development best corresponding to its interests" as the introduction to the agreement runs. (It is strange that the same desires were not extended to the city of Sushak and to the economic development best answering to its interests.) The whole idea of the regulations of the Rome Agreement and its stipulations regarding traffic contained in the Nettuno Conventions are based on that fundamental idea, which is most successfully realised in every respect, and in all their consequences. The lease of the Thaon de Revel dock for fifty years at an annual rent of one gold lira, the right of lease excluding every possibility of expropriation allows only the use of the warehouses and other installations; the organisation of an international joint railway station at Fiume, in which a Yugoslav delegation of railway officials has to have its headquarters and, together with the Italian committee, manage the line connecting the station with this country and the Thaon di Revel dock and port of Barosh (Sushak); the management of traffic in the Thaon dock and the Fiume central station, arranged in such a way that our officials do all the technical work, while all the management and jurisdiction is retained by the Italian railway and Customs authorities; the right of controlling the goods traffic in the Thaon dock by the Italian authorities; the abstraction from the leased dock of any character of a Yugoslav national port and the retention for the Italian flag of the right of coasting trade between that dock and Italian ports; the absolute exclusion of the use of our port labour for loading, unloading and transloading within the dock; the regulations concerning tariff parity for Fiume and Sushak with the aim of preventing the development of Sushak as a trading centre; all these are details and obligations which aim pre-eminently at favouring the interests of the port of Fiume and Italian business. All this is so arranged and agreed as if it did not concern us, and as if we had no interests of our own involved, namely, that our trade and commerce making use of those routes should be free, unhampered and safe. The impression is that we had no real idea what we should do with Sushak and that we did not dream that the use of the Thaon dock under the stipulated provisions meant the favouring of a foreign port at the expense of the life of our own. Especially injurious to us are the regulations of the Nettuno Conventions which deal with the organisation of work in the Thaon di Revel dock and the setting up of the management of the public warehouses. In these our hands are altogether tied, since in all these matters we have to act according to the dictates and wishes of the Italian traffic management. Thus, for instance, it is agreed that public warehouses can be set up in the Thaon dock with the consent of the Italian authorities, and that all legal and manipulation rates and tariffs, except labourers' wages, must be fixed by agreement between the management of the public warehouses in the Thaon dock and the management of the public ware-

houses in the other part of the Fiume port, so that the public warehouses in the Thaon dock are subject to all the legal regulations which are in force at Fiume. Thus we are deprived of all rights of jurisdiction in the arrangement of trade in the dock and subjected to Italian trade policy, which, there is no question, would be exclusively directed to favouring Fiume at the expense of Sushak and our other Adriatic ports. Had the Italian Government succeeded also in forcing through in these Conventions its plan regarding the financing of transit through the dock leased by us by means of a joint bank—the matter on which the negotiations broke down and which caused two of our delegates, MM. Kukic and Figatner, to retire—our capitulation would have been complete in every respect. The action of these gentlemen and the unanimous protest of our business men, who learnt in time of this Italian scheme, prevented this worst evil.

By the Pact of Friendship and Cordial Co-operation with this country, by the Convention on settlement and the consular service, the Fiume Agreement, the Conventions on Zadar and trade in the frontier zones, the agreement on Frontier estates and the agreement on labourers and lawyers, Italy secured for herself and her citizens complete freedom for quiet, but for us disastrous penetration on the Adriatic coast, and thence into the whole Balkan Peninsula. On the basis of the principle and rights of reciprocity the citizens of both States can freely enter, travel, stay and settle on the territory of both contracting parties, and also carry on freely trade, industry or any profession, in so far as national citizenship is not made a condition of such occupations by the State concerned. In practice these privileges are enjoyed only by Italians, since our subjects have not and may not demand anything in Italy. There are no industries of ours to be encouraged in Italy, whereas the entire industrial life hitherto developed in Dalmatia is in Italian hands.

As regards the acquirement of property and the use of immovable property in the zones under 50 kilometres from the frontiers, exceptions are made and the regulations limited by the laws of the contracting State (Clause 4 of the Settlement Convention) in so far as these concessions do not affect immovable property inherited *ab intestato*, or property *ex testamento* inherited by persons who might have inherited it *ab intestato*. On the example of Italy, which, by the Decreto-Legge published in the *Gazzetta Ufficiale* of July 21, 1924, No. 170, put the erection of all kinds of buildings in the frontier zone under the direct control and permit of the territorial authorities, we desired, a year later to make use of the same right (which by the Convention of settlement belong to both sides), and our Government made purchase by foreigners dependent on the permit and authorisation of the Minister of Army and Navy and the Minister of Interior (cl. 94 Law of Budgetary Twelfths for April, May, June and July 1925) and extended this provision by the Financial Law for 1927-28 to the right of possession and use of immovable property. But, as is well known, under diplomatic pressure of the Italian Minister at Belgrade the Government was forced to annul this regulation and to abolish it by clause 355 of the Financial Law for 1928-29.

In contrast to this we must not forget that the Agreement concerning Frontier Property of the Nettuno Conventions gives Italian optants in Dalmatia the right to purchase, possess and make use of immovable property without any limitations or exceptions. Through these Dalmatian optants, who are also favoured in every other respect by the Conventions, Italy can carry on unhampered an expansionist policy and obtain possession in a legal way by sale and purchase of as much of the eastern Adriatic coast as is necessary for further successful penetration into the Balkans.

By the supplementary agreements to the Nettuno Conventions which correct Appendix E of the Treaty on Trade and Shipping, regulations are worked out in detail concerning the use of water power for electricity and industry in the frontier zones to an extent of 10 kilometres.

from the frontier. These measures protect the Italian frontier zone to a far greater degree, for they make possible its industrialisation in the near future with the electrical power produced on our side, at the expense of the electrification of the industries in our own frontier zone. This agreement specially affects the strengthening of the economic position of Zadar, whose industrial development it aims at securing at any price, and which it wishes to make the marketing centre for the whole of northern Dalmatia at the expense of Shibenik by means of transport facilities and roads.

The same supplementary agreement modifies the earlier provisions of the Agreement of Rome as regards the frontier trade with Fiume, and the provisions of the Santa Margharita Conventions as regards the frontier trade with Zadar. In every respect these modifications are made to the advantage of Fiume and Zadar, so that each of these will be able to attract as large a number of buyers as possible from our frontier zone. This is clear from the list of products in which the Agreement makes trade in the frontier zone free from Customs and other dues. In drawing up this list our experts certainly forgot that on the Italian side of the frontier zone lie two well developed commercial centres—Fiume and Zadar.

The fear of our sceptics has also proved well founded that the Agreement on Labourers was made exclusively to the advantage of Italian subjects, since the growing emigration of Italian labour is a generally known fact. Italy throws out into the world annually several hundred thousand workers, and it is only natural that this human material should be primarily directed to the parts where Italian capital is already invested and whence the emigrant can most easily maintain connexions with his home. From this point of view Dalmatia is most attractive to Italians, whereas on the other hand our workers have no chance in Italy.

Again the Agreement regarding workers also favours Italian rather than other foreign workers and officials, for while the rules of the employment of foreign workers allow the right of settlement to foreigners who have been in employment in this country from June 14, 1922, this Agreement gives the same right to all Italian workers who were actually employed here between January 1, 1920, and January 1 1925. After the coming into force of the Nettuno Conventions they can, by this agreement, extend their service here *ex lege*, without any special permit.

The supplementary Agreement on Customs control and fishing in the waters of Fiume and Sushak allow the right of fishing to the subjects of both States in the territorial waters of the old free State of Fiume, excluding a zone of one sea mile along the coast reserved to home citizens. This reciprocal privilege, however, cannot be used by our fishers, because they have not the necessary motor fishing boats or fishing tackle. Moreover the Agreement opens the door widely to wholesale smuggling from Fiume into our territory by sea, for under the harmless pretext of fishing Italian ships may move in our territorial waters unhindered at any time of day or night.

Fishing matters between Italy and Yugoslavia were settled by the Adriatic Fishing Convention (the so-called Brion Convention) of September 14, 1921, while the Free State of Fiume existed (on paper), but when the Rome Agreement erased it from paper the question of fishing in the Fiume waters was also left open and was finally settled to our disadvantage by the Nettuno Conventions.

Dr. Mitrovitch then deals with the agrarian question in Dalmatia as it is affected by the Nettuno Conventions and arrives at the following conclusions:—

"It is evident, therefore, that our State could in its sovereign capacity have passed a law of agrarian reform for Dalmatia before the ratification of the Nettuno Conventions and can do so also now after their ratification. Only by this Convention the Law cannot be applied to Italian subjects until our Government makes agreements with Italy concerning the *mode* (not conditions) of settling and paying compensation to Italian subjects in accordance with the law. It is not a question, therefore, of some

social or civil and legal principles prejudicial to our State sovereignty, but simply a *manner* of fixing and paying the compensation for expropriated lands provided for by law."

The article concludes with a reference to the protection of minorities on both sides of the territorial frontiers of the contracting States.

Clause 9 of the Rome Agreement, it points out, says: "The Yugoslav minorities in Fiume should enjoy the régime enjoyed by the Italian minorities in Dalmatia on the basis of existing international obligations." The Agreement on the application of this clause (Nettuno Conventions) worked out this matter in detail and the same rights are extended to our subjects in Fiume as by the Convention for general agreement are recognised to Italian subjects in Dalmatia."

This, therefore, is at first glance quite a loyal Convention concluded on the basis of absolute reciprocity. We do not know, however, why the grant of protection to our subjects in Italy is limited just to those in Fiume, and not to those in other cities and parts of Italy. If this were so, then there might be room for talk about loyal reciprocity in this matter. As things are, the position is ludicrous.

According to the details agreed upon the minorities of both sides (those in Fiume and Dalmatia) may:

- (a) Remain in residence where they were before;
- (b) Have the right to make free use of their language with all the privileges arising from the same. Thus, they may use their language in dealings with the local judges and State political, administrative and financial bodies except the Customs;
- (c) Have the right to the free holding of church services;
- (d) Have the right to open schools and manage the same, as well as other cultural, humanitarian and social institutions, etc.

On paper this all seems very nice, but we have reason to fear, when we remember the Fascist methods of treating national minorities in general in Italy, which are generally known to Europe, how this will be put into practice.

Mohammed Pasha Mahmoud, the Egyptian Prime Minister, is progressing rapidly in his convalescence after his attack of paratyphoid fever.

The population of Belgrade at the end of 1928 was 339,208. There were 60,000 more males than females. In 1910 the population was only 85,900.

The French Government has informed the League of Nations of the ratification by Belgium and Egypt of the Protocol concluded at Geneva in 1925 prohibiting the use of poison gas and other forms of chemical warfare.

INDIAN NOTES.

The Right Line.

In welcome contrast to the mere "verbal formulas or mental reservations" of the speakers at the end of the year gatherings at Calcutta, Delhi and Allahabad is the very carefully thought-out evidence which the British Indian Association and the Upper India Chamber of Commerce submitted to the Simon Commission at Lucknow last month. The Association is the official organization of the taluqdars of Oudh, and it represents the landed interests of nearly two-thirds of the area of that Province. On the other hand, the members of the Upper India Chamber are chiefly Europeans, representing the great industrial and commercial interests which are centred at Cawnpore. Both the Association and the Chamber supported the establishment of provincial autonomy, subject to the reservation that law and order should be in the hands of the Central Government. Similarly they favoured bicameral legislatures in the provinces. There is, they said, a real necessity for Second Chambers competent to exercise powers of revision. This expression of opinion is in line with what was expected by the authors of the reforms of 1919 when they framed their proposals. They restricted their scheme to single Chamber legislatures because they thought that the delay which would be involved in passing legislation through two Houses would be excessive. But at the same time they anticipated that the need for revising Chambers would be felt; and they proposed, therefore, that the periodic commission should consider the question. In most countries where democratic institutions are firmly established there are upper and lower houses; and it is not surprising therefore that there should be a demand for a similar system in the Indian provinces. Moreover, as was to be expected, the demand comes from minorities, for the representation of minority interests is more likely to be effective in an Upper House than in a single Chamber legislature. And then again it may be anticipated that men who would be valuable as legislators, but who would hesitate to face the turmoil of an election for a popular Assembly, would consent to serve in an Upper House. The Upper India Chamber also criticised the existing electorates as being insecure foundations for the legislatures. And it put forward an interesting scheme which would be mainly on the basis of indirect election. Beginning with the panchayets, or village committees, the Chamber recommended that these bodies should be made more

representative. Every adult male in a village might be empowered to vote in a summary manner for members of the panchayet. The next step would be the establishment of electoral colleges; and of these colleges the lowest grade would be the members of the panchayets. These members would elect—not necessarily from among themselves only—the members of the district boards. This arrangement would, of course, have application to the rural areas only. In the urban areas, where education is more widely spread, and where the elective system is better understood, direct election to municipal boards, which is at present the practice, would continue. District Boards and Municipal Boards, when once elected, would be constituted electoral colleges for the election—again not necessarily from among themselves—of members of the Legislative Assembly and of the principal Lower Houses. In addition, other properly constituted bodies—associations, chambers of commerce, workmen's unions and so on—would be empowered to elect members. The Upper India Chamber considers that communal election must be accepted in India for a long time to come. But it believes that a communal system correctly based on population would not be difficult to frame in conjunction with such a system of indirect election as that suggested. Although there are, of course, objections to a system of indirect election, it certainly seems to us that the Upper India Chamber has formulated a scheme which is worthy of the fullest consideration. The unsatisfactory character of the electorates is one of the weakest spots in the existing Constitution.

A Fine Heritage.

The appearance last week of a new Indian Government sterling loan draws attention to the remarkable progress which the country has made since the period of post-War difficulties, and to the immense opportunities for the further development and expansion, of industry, trade and communications, which still exist. The proceeds of the latest issue are designed to finance railway capital expenditure, of which, as is well known, a very large amount is incurred annually in this country by the Indian administration, and to pay off Bills issued last year for similar purposes. The Indian State Railways constitute one of the largest commercial organisations in the world. Their capitalisation is over £500,000,000, and the working profit from the system (about £29,000,000 in 1927-28), which is arrived at after paying all expenses of working, is sufficient to meet the interest charges on the capital involved and leave a handsome residue (over £8,000,000 in the same period) as net gain to the Government. In addition to this magnificent property, the Indian Government has nearly £100,000,000 invested in other profit-earning enterprises, such as irrigation works, posts and telegraphs, and harbour and hydro-electric schemes. All these undertakings, like the railways, are debited in the accounts with the interest charges appropriate to the amount of capital involved. The balance of the public debt, which may be regarded as unproductive, amounted in 1927-28 to about £110,000,000, and it can be seen that the interest on this amount was more than covered by the net gain on the railways alone. This balance of "unproductive" debt is liable to continual reduction through operation of sinking funds and similar provisions, and in the last five or six years there has been an actual reduction of about 33 per cent. Enormous as is the volume of India's external trade—and in 1927-28 the exports of merchandise amounted to £245,000,000—it is estimated that the volume of the internal trade is many times greater. There is thus a vast potential field which is waiting to be opened up as communications develop and as industrial and agricultural processes are improved. The stabilised rupee has now been in operation for a considerable time, but in a country like India, with its vast area, over a large part of which the financial and commercial organism is in a comparatively rudimentary state, it takes time for conditions to adjust themselves completely to the new equilibrium between Indian and

world prices. There are signs at the same time that this process of adjustment is now far advanced and its practical completion should give a new and permanent fillip to India's world trade. Meanwhile the more settled condition of trade is reflected in State finances. In the five years ending with 1927-28 the Central Government, in spite of reductions of taxation and the total remission by the end of that period of £7,000,000 per annum previously contributed by the Provincial Governments, has been able to show revenue surpluses aggregating £9,000,000, and the Budget for the current year again provides for a small surplus. These surpluses are arrived at after making a substantial annual provision for the reduction or avoidance of debt. Moreover, the accounts of the railway organisation are now kept separate from the general accounts of the Government, and the railways do not have to surrender the whole profits of each year to be engulfed in general revenues, but are enabled to build up their own reserve fund, which at the end of 1927-28 already amounted to £12,000,000, and, according to the Budget estimate, is expected to be increased during the current year by a further £2,500,000.

The New Sheriffs.

The results of the time-honoured English ceremony of "pricking" names for the office of Sheriff of the three Presidency towns are of more than ordinary interest this year. In Bombay, where representatives of the Hindu, Muhammadan, Parsee and European communities are selected in turn, Mr. N. V. Mandlik gives place to Sir Reginald Spence, one of the best known and most widely respected members of the European mercantile community in the Western capital. A prominent Freemason and Honorary Secretary of the Bombay Natural History Society, the new Sheriff was, for a short time, member for one of the Bombay Presidency constituencies in the Legislative Assembly, but social and philanthropic work has invariably made a greater appeal to one whose services have been freely at the disposal of the organiser of every good cause. His activities on behalf of the Bombay Education Society are outstanding in this connexion. Mr. Unsud Dowla, who succeeds Mr. B. E. G. Eddis as Sheriff of Calcutta, is a member of the old Nawab family of Oudh and also prominently connected with various education and charitable institutions. A trustee of the All-India Shia College and the Shia Orphanage at Lucknow, he is also honorary Secretary of the Matlabrug Educational Society. Mr. Unsud Dowla, who is a member of the English Bar, was the first Deputy Mayor of the Calcutta Corporation under the new Act and is still a member of that body. In Madras the European Community is again ably represented in the person of Mr. R. J. C. Robertson, the popular managing-director of the well-known firm of P. Orr and Sons.

The Council of the Anglo-Indian Association, London, have elected Sir Cecil Walsh, K.C., as President of the Association for the year 1929, vice Mr. A. B. Kunning, M.B.E., who has retired after a five years' tenure of the post. Sir Cecil Walsh was President of the Anglo-Indian Association at Allahabad for several years and has always taken an active interest in the Domiciled Community of India.

THE COUNTRY LEAGUE.

In connexion with the visit of the members of the Statutory Commission, and the Committee of the Central Legislature to the United Provinces, the Executive Committee of the Country League organised two social functions for the purpose of welcoming the distinguished visitors. The first function was a Garden Party on Monday, December 3, at the residence of Mr. C. T. Allen, C.I.E., at Cawnpore. A very large number of guests were present at the function. Mr. J. P. Srivastava, M.Sc., M.L.C., Chairman of the United Provinces Provincial Committee, and Mrs. Srivastava were the host and hostess on this occasion.

The second function was a Reception to meet His Excellency the Governor and Lady Hailey, Sir John Simon and Lady Simon, the members of the Indian Statutory Commission, and the members of the Central Committee at Lucknow on December 6. The house of Sirdar Nihal Singh, M.L.C., one of the Founder Members of the Country League, was very kindly lent for the occasion and a large and representative company was present.

The welcome accorded by the Country League—which is a political Association for stakeholders in India—and accepted by the distinguished visitors is significant of the desire firmly held by the solid body of land and property owners who, irrespective of race and creed, have banded themselves together on a common platform, to combat the forces of disruption which would overthrow the established constitutional Government. The League presents the united front of many different individuals holding a vast extent of property, who are pledged to support the British Imperial connexion which they believe to be best for the welfare of India and of her people.

Members of the Country League spared no pains to make the visitors feel that there is a solid body of conservative stakeholders actively supporting measures for the welfare of India, and a great deal of friendliness towards the Country League's endeavours was unrestrainedly shown. In spite of many pressing engagements, His Excellency the Governor, Sir Malcolm Hailey, stayed much longer at the Reception than was thought possible. Subsequently Sir John Simon addressed the following letter to the General Secretary of the Country League:—"I would like on behalf of my colleagues, as well as for myself, to express our gratitude to the President and Members of your League for their great kindness in entertaining us at an evening party during our stay in Lucknow. We all enjoyed ourselves very much, and carried away with us from Lucknow very pleasant recollections of your hospitality, as well as of the beautiful house and kind courtesies of Sardar Nihal Singh."

In addition to the guests of honour, the following were among the guests who attended the reception:—The Honourable Nawab Sir Muhammad Ahmad Said Khan, K.C.I.E., of Chattari; the Honourable Mr. G. B. Lambert, C.S.I., I.C.S., and Mrs. Lambert; the Honourable Maharaj Kumar Major Mahijit Singh and Maharaj Kumar Rani Mahijit Singh; Mr. E. A. H. Blunt, C.I.E., O.B.E., I.C.S.; Mr. J. C. Donaldson, M.C., I.C.S., and Miss Donaldson; Mr. W. S. Cassels, O.B.E., I.C.S., and Mrs. Cassels; Mr. C. W. Gwynne, C.I.E., O.B.E., I.C.S.; Mr. T. Sloan, I.C.S., and Mrs. Sloan; Mr. C. R. Peters; Mr. R. I. S. Dodd, C.S.I., Mrs. Dodd and

INDIAN TRADE TENDENCIES.

The better India's products are known and the higher prices they can secure, the greater and more economical will be her command of the goods which she requires but cannot as yet produce for herself. In other words, the more the United Kingdom buys of Indian goods the greater will be India's ability to increase her purchases from this country.

Although, therefore, the primary function of the Indian Trade Commissioner in London is to promote the sale of Indian goods in overseas markets, particularly those of the United Kingdom and the Continent, his work has a dual importance. In the past India's export trade prospered largely because she held a practical monopoly in certain classes of tropical or semi-tropical produce. Today conditions are rapidly changing in this respect, and if India is to retain or improve her position the altered circumstances affecting the demand for her products in Great Britain and other Western countries must be carefully and continuously studied.

Mr. H. A. F. Lindsay, the present incumbent, is fully alive to the very important part that has to be played in this behalf by the overseas trade representatives of the Indian Government. In the course of many visits paid during the two years (1926-27 and 1927-28) covered by his latest report to the principal trade centres of the United Kingdom and the Continent—in France, Belgium, Austria and Hungary—he has enjoyed unique opportunities for observing developments that are daily growing more complex in character and far-reaching in effect.

The information assembled, with the result of Mr. Lindsay's observations, in the valuable analysis of modern trade tendencies in the fourth chapter of his report has, moreover, the additional advantage of being capable of general application. And the subsequent hints of practical measures by which India can utilise tendencies which show every sign of becoming, if not permanent, at any rate deep-rooted, should afford useful guidance to all who are anxious to develop new trade connexions in the markets concerned.

With extensive areas being brought under cultivation, the growth of indigenous industries and the replacement of natural by synthetic products, the need for new and larger markets for Indian exports, Mr. Lindsay points out, is insistent. To guide the Indian exporter in attacking fresh fields, he discusses the outstanding post-War changes and developments as affecting the demand for India's products.

His main conclusions are that instability of prices, the most serious problem, is decreasing; that tariffs and other trade barriers are at the same time hindering the return of confidence; that the small stocks now carried tend to increase price variations; that the brunt of instability falls on the cultivators; that rationalisation has brought a demand for synthetic substitutes; and that the attention paid to quality is much greater than before the War.

Discussing the application of these points to Indian trade, Mr. Lindsay says:—

"A characteristic feature of the European and American trade in raw hides is that the hides produced in these countries are chiefly by-products of the abattoirs, and that supplies, therefore, vary not in response to fluctuations in the demand for leather so much as to fluctuations in the demand for meat.

"For years after the War the price of hides was low, owing partly to the existence of considerable War stocks and partly to the maintenance on a war scale of national demands for meat. War stocks of hides have now been liquidated and the demand for meat is declining in some countries, while in other countries it is shifting from beef and veal to pork and other cheaper classes. This decline is due to continued unemployment in Europe and increasing unemployment in America.

"As a result the supplies of hides on the world's markets are falling and prices are rising. The demand for Indian hides on the Continent, particularly in Germany and Italy, is increasing. There is also a good demand for skins in the United States of America and for tanned hides and skins in the United Kingdom.

"This trade could undoubtedly be stimulated if measures could be taken to avoid defects in the flaying of hides. A wide margin exists between the prices offered for good and bad hides, since cuts and other irregularities render a hide unsuitable for high-quality goods. The prices offered for Indian hides and skins would be appreciably higher if by demonstration or other suitable measures the standard of flaying in India could be raised."

Dealing with gums and resins, Mr. Lindsay pays particular attention to shellac:—"Shellac is now exposed to considerable competition from synthetic products, not only as a material for the manufacture of gramophone records, but also as a basis for insulating and other varnishes. The advantage claimed for synthetic shellacs is that they can be produced to any quantity at a standard quality.

"Nevertheless, natural shellac is in many ways superior to synthetic, both as a surface for gramophone records and as an insulator for electrical purposes. There is little doubt that natural shellac would be able to hold its own with synthetic rivals if it could be manufactured in recognised grades suitable for the different uses to which it is eventually put."

India is consuming every year more and more of her own production of oilseeds and vegetable oils, the report says. Exports of cottonseed have declined, and the same tendency is so pronounced in the case of copra that India is now, on balance, an importer rather than an exporter of copra and cocoanut oil.

William Thomas Webb Baker has been appointed a Judge of the High Court of Judicature at Bombay in the place of Sir Louis Charles Crump, who has retired.

The Marquis de Vogüé, Chairman of the Suez Canal Company, on January 5 handed to King Fuad a sword of honour for which French friends in Egypt had subscribed on the occasion of King Fuad's election as a member of the Institut de France.

Lieutenant-Colonel Frederick Curtis has been appointed to command The 19th King George's Own Lancers in succession to Lieutenant-Colonel H. F. Whilby. Originally in The Green Howards, Lieutenant-Colonel Curtis transferred to the Indian Army in 1908 and was posted to his present regiment at Amballa. Major A. H. Brooke, M.C., has succeeded him as second-in-command of the 19th Lancers.

General Kiazim Pasha and the other officers of the Turkish Military Mission for training the Afghan Army are reported to have entered Afghanistan by way of Kandahar.

The Presidium of the Central Executive Committee of the Soviet Republics has ratified conventions between the Republics and Turkey on the settlement of border disputes, and simplifying the formalities relating to the crossing of the border by people living close at hand and the grazing of cattle on frontier pastures.

Book Reviews

CURZON'S LATTER YEARS.

"THE LIFE OF LORD CURZON." Vol. III. By the Earl of Ronaldshay. Illustrated. (London: Ernest Benn Ltd. 21s. net).

There is no sign of weariness on the part of the author in his "task which, if a pleasure, has nevertheless not been wholly free from difficulty." The third volume of this colossal work is as freshly and carefully written as the first. The material has been well chosen, and the treatment is both artistic and informative. There is absent, of course, the unity which lent such special interest to the accounts of the Indian Viceroyalty. The interests dealt with are manifold and various, all of them of importance and all of them examples of Lord Curzon's marvellous energy and thoroughness. But they are necessarily dwarfed by the account of his political activities, especially as Foreign Secretary and a disappointed candidate for the post of Prime Minister. Lord Ronaldshay takes this disappointment very tragically, and seeks no deeper solution than the fact that he was a Peer, while it was necessary to have a Commoner as Premier. It is curious that it does not seem to have occurred to him that there were perhaps other and better reasons, and that the King was perhaps showing his usual good sense and knowledge of men in preferring Mr. Baldwin. To us it seems clear that, by "turning him down," the King retained for the country a brilliant Foreign Minister who was temperamentally quite unfitted for the higher position.

It is naturally to his tenure of that office and specially to his conduct of the negotiations with and concerning Turkey that a reader of *THE NEAR EAST AND INDIA* will turn. The chapters concerned with these events strike us as the best in the volume. They bring out the extreme difficulties under which he had to work. Mr. Lloyd George was not the least of them, and it seems only too probable that the maddening vagaries of France, Italy and Greece were largely the result of feelings caused by unwise interference on the part of that too active statesman. It is certain that Lord Curzon was blamed for events with which he had no concern. His essential views never changed. Turkey was to be turned out of Europe entirely, but was also to have undisturbed possession of Anatolia, without these "spheres of influence" of Greece, France and Italy of which we heard so much at the time and which were treated with such scant respect by Mustapha Kemal Pasha. Further, he was fully convinced that all this had to be done at once. We all know how the fatal dawdling ended, and the fact that it did not end much more disastrously is due to the work of Lord Curzon under almost impossibly difficult conditions at Lausanne. The fact is that he was left to do the best he could with the result of the mistakes of others, and he came out of the ordeal with the greatest credit to himself and to his country.

It is a just summary of one side of the man to say that "the goal at which he ever aimed can be described compendiously as achievement—the bringing of things to a conclusion, the multiplication and the accumulation of bundles of acts of accomplishment, across whose respective dockets might be written with a flourish of satisfaction, *res gestæ*." These bundles were numerous and the contents of most of them of the greatest importance. But there were other sides to him. "No one who served him . . . was ever permitted to perform his . . . task in peace." With few exceptions, his subordinate colleagues, while respecting his intellect and energy, did not love him and few got much credit for their share in the accomplishment. "The respect and recognition of his countrymen—these were the things which, above all else, he craved." In other words, he was largely an egotist who did great things, but whose motives for doing

them were perhaps often short of the highest on account of the intrusion of self. But, when all is said, he was a man of very unusual intellectual stature whose power of drive, ambition and patriotism achieved much for the Empire. His reputation will, we believe, increase as time dims to the eyes of posterity the too obvious faults familiar to his contemporaries.

C. S-W.

ABOUT THE TIBETANS.

"THE PEOPLE OF TIBET." By Sir Charles Bell. Illustrated. (Oxford University Press. 21s. net).

Sir Charles Bell's earlier book on "Tibet Past and Present," told us of the past history of the country, of its present political conditions, and of the events which brought them about. Our readers will, we hope, have some recollection of the welcome which we gave to it at the time, and of our pleasure in hearing that a second, and cheaper, edition had appeared. This is another instalment, and deals with "the life of the people in their own homes." A further instalment is promised, dealing with the difficult subject of Tibetan religion, and no doubt many more subjects will be found to fill a fourth volume.

If all are as good as the first two, they will be welcome. In this one we are introduced to all ranks of Tibetan society, and are allowed to make their acquaintance with the leisureliness and intimacy which are essential for enjoyment. The result is that we close the book, feeling that we have been privileged to learn much of a people hitherto practically unknown to the ordinary man of culture, and, further, that this people is well worth knowing, very human, very far indeed from being uncivilised, deeply religious without gloom, and singularly adapted to the circumstances in which it lives. It is sad to be told that it is slowly dying out, and we can only hope that the breath of Western civilisation which is now reaching the Tibetans may give them new vigour without destroying their native virtues.

It is, perhaps, a pity that the title of the book does not make it clear that Sir Charles is writing of the people of the so-called "Central Tibet" which is really the central part of the South), and Sikkim. We hear but little of the inhabitants of the East, towards China, or of the mysterious North. What we are told makes it fairly clear that they are very different from the folk with whom our author deals. As in his first book, Sir Charles Bell has provided illustrations both liberally and wisely.

C. S-W.

MAR YABHALLAHA III.

"THE MONKS OF KUBLAI KHAN." By Sir E. A. Wallis Budge. Illustrated. (London: Religious Tract Society. Price 12s. 6d. net).

Our readers will remember that, some little time ago, we had the pleasure of introducing to them a book by Professor Montgomery, of the University of Pennsylvania, containing his translation of that portion of the Syrian Life of the 13th Century Nestorian Catholicus, Mar Yabhallaha III. dealing with the embassy undertaken, on behalf of the Il Khan, by Rabban Sawma.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to **THE SECRETARY.**

We expressed our regret at the time that the whole "Life" had not been translated, so that we might follow the Catholicus in the tragic events of his latter years after having seen him in the days when all went well with him and with the Nestorian Church. It seems that, all unknown to one another, the American Professor and Sir Wallis Budge were simultaneously engaged at the same task. Sir Wallis, however, not only translates the whole book for us, but also adds a very useful introduction dealing with the history of the Il Khans and of the Nestorian Church, and gives us some very interesting illustrations.

This story of events in the Middle East at the time of our Edward I. is of great interest, and loses nothing by the method of narration. Two Vighur monks, the future Catholicus and his friend, Rabban Sawma, wandered from Pekin to Baghdad. The former became head of the Nestorian Church and the latter was destined to travel all over Europe, but died before the worst of the great calamities arrived. The former, as Mar Yabhallaha, ruled the Church from the time of Hulagu Khan's son and successor till the accession of his great-grandson, with whom the dynasty practically perished. While the kings were powerful enough to enforce their commands, all went well enough with the Church, even if the reigning monarch might be inclined to Islam. But, with central authority declining, and the Kurds of that day being as the Kurds of to-day, persecutions became more and more common and more and more ferocious till the Church, as far as Mesopotamia, Persia and China were concerned, was practically wiped out. The only comfort one gets from the history is that the wily old Catholicus managed to die in his bed of old age. The Christians, who owed their power at Baghdad to the ferocious Hulagu Khan, were destroyed by his descendants. To us Westerns, the account of Europe in the 13th century by the Vighur monk is, of course, the most interesting part of the book. C. S-W.

EDUCATION IN PALESTINE.

On January 2 Mr. Humphrey Bowman, Director of Education under the Palestine Government, gave a lecture on "Education in Palestine" to the members of the Anglo-Palestinian Club.

A report of this lecture will appear in our next issue.

THE NEW YUGOSLAV CABINET.

The new Yugoslav Cabinet, which was formed on January 6, is constituted as follows:—

General Petar Zhivkovitch	...	Prime Minister and Interior.
M. Ouzounovitch (Radical)	...	Deputy Prime Minister.
Father Anton Koroshetz (Slovene Clerical)	...	Communications.
D. Voyislav Marinkovitch (Democrat)	...	Foreign Affairs.
Dr. Stanko Shverlyuga (Croat)	...	Finance.
General Hajitch	...	War.
M. Bozho Maximovitch (Serb Radical)	...	Education.
M. Sveta Savkovitch (Serb)	...	Public Works, Posts and Telegraphs.
M. Matya Drinkovitch (Dalmatian Croat)	...	Commerce and Social Welfare.
Prof. Otto Frangesh (Croat)	...	Agriculture.
Dr. Milan Sershkitch (Radical)	...	Justice.
Dr. Vrish Krul (Bosnian Serb)	...	Public Health.
Dr. Tugomir Alaupovitch (Bosnian)	...	Public Worship.
M. Lazar Radivoyevitch (Bosnian Croat)	...	Agrarian Reform and Forests.

It is reported from Palestine that the High Commissioner, Sir John Chancellor, has promised to consider the request from a delegation of the Arab Congress for the constitution of a Representative Assembly for Palestine.

The death is announced, at the early age of thirty-four years, following an operation for appendicitis, of Nejati Bey, Turkish Minister for Education. The Prime Minister, General Ismet Pasha, will take over the Portfolio of Education for the present.

Telegrams from Egypt report that a fight took place at the turn of the year between the Camelry of the Frontier District Corps and a marauding Badawin band in the desert south of Cairo. The marauders had tried to raid a survey camp and were driven off by members of the Corps. With the help of a Royal Air Force aeroplane they were subsequently located twenty-five miles from El Wasta, and patrols were sent out to round up the band.

PERSONAL AND GENERAL

TO-DAY

January 10, 1929 (New Style).
 December 28, 1928 (Old Style).
 Rajab 28, 1347 A.H. of the Muslim Calendar.
 Tebet 28, 5689, of the Jewish Calendar.

Lord and Lady Castlemaine will leave London to-morrow (Friday) for Egypt.

Field-Marshal Viscount Allenby will sail to-morrow from Marseilles for Egypt.

Lord and Lady Swaythling leave 8, Grosvenor Crescent this week for Egypt.

Lord and Lady Greville will join the P. and O. s.s. Maloja at Marseilles on January 18 for Egypt.

Sir Malcolm Hailey, Governor of the United Provinces, and Lady Hailey arrived in London from Bombay on January 5.

Mr. and Mrs. Philip de Laszlo have left for Egypt, and will be absent until the end of February.

Sir Ian Malcolm will leave London on January 13 for Egypt, and will be away for about eight weeks.

Mirza Ahmad Khan Ardeshir, First Secretary of the Persian Legation in London, has returned to Persia to take up an appointment in the Foreign Office in Teheran.

The Maharao of Kutch, who last week left Bath after a stay at the Grand Pump Room Hotel, will join the s.s. Ranpura at Marseilles to-morrow on his return to India.

The Hon. Mrs. Adeane, who has been on a visit to Lord and Lady Lloyd in Cairo, is expected to arrive at 1, Dean Trench Street, Westminster, about January 13.

Captain Sir Edward Midwinter, Controller of the Sudan Government's London Office, was a passenger by the P. and O. s.s. Chitral from Marseilles *en route* for Port Sudan and Khartoum.

Sir Hardman and Lady Lever and Sir Alexander and Lady Bicket joined the P. and O. s.s. Chitral at Marseilles on January 3 for Egypt. Sir Arthur Du Cros was among the passengers for Port Sudan.

Sir Aldo Castellani, one of the directors of the Ross Institute and Hospital for Tropical Diseases, has received the degree of M.D. *honoris causa* from the Royal Egyptian University of Cairo for his work on tropical medicine.

Sir Denison Ross, Director of the London School of Oriental Studies, accompanied by Lady Ross, left London on January 5 for an extended tour in the Middle East. During an absence of three months, he will visit Egypt, Palestine, Syria, Iraq, Persia and Turkey. The visit to Persia is being undertaken at the invitation of Timur Tash, Chief Court Chamberlain to the Shah, who has requested Sir Denison Ross to advise the Teheran Government on the modernisation of the Persian educational system. As one of the foremost linguists of the day, particularly well versed in Oriental languages and literatures, Sir Denison Ross will find himself at home with the many educationists who in the different countries are engaged in the work of bringing public education in the East up to date.

OBITUARY.

Major-General Francis Ventris, C.B., Colonel of the Essex Regiment, who died on January 4 at his home at St. Leonards at the age of 71, entered the Army in 1875. His first war service was with the Nile Expedition of 1884-5, when he was mentioned in dispatches and was made brevet lieutenant-colonel. He also served with the Egyptian Field Force in 1885-6. After passing the Staff College in 1890, he was A.A.G. in India from 1895 to 1897, and Brigadier-General, Bombay, from 1897 to 1902.

NEWS IN BRIEF.

Chile has officially recognised the new régime in Albania.

The Turkish Grand National Assembly last week ratified the agreement for the repurchase of the Anatolian Railway and branch lines.

A commercial treaty which was signed on December 31 in Vienna between Austria and Yugoslavia, comes into force this week.

The Aga Khan suddenly left Bombay for Europe on January 6, under medical advice, after one week's stay in India. Before reaching Europe the Aga Khan will recuperate in Tripoli.

According to Reuter's Basrah correspondent the Arabic papers state that Great Britain agrees to hand over the Iraq railways to the Iraq Government on payment of 78 lakhs of rupees (£585,000 sterling). The money is to be paid in instalments over twenty years.

The Turco-Hungarian Treaty of neutrality, conciliation, and arbitration was signed in Budapest on January 5 by Dr. Walko, Minister for Foreign Affairs, and Behij Bey, the new Turkish Minister to Budapest.

According to a Bucharest message the Polish Foreign Minister on January 3 informed the Roumanian Foreign Minister that the Soviet Government had invited the Polish Government to sign a separate protocol to the Kellogg Pact, making the Pact at once binding.

A commercial aeroplane on the Paris-Constantinople service crashed in a fog and caught fire near Chalons-sur-Marne on December 31. M. Assoland, the pilot, was slightly injured. The machine and freight were destroyed. There were no passengers.

Two hundred and sixty delegates, representing ten countries, including Poland, attended the opening in Warsaw on January 1 of the Conference of the Society of Jewish Youth. M. Vladimir Jabotinski, leader of the Zionist Revisionists, was among those present.

The Air Ministry announces that, as the result of an accident on January 2 at Hinaidi, Iraq, to a D.H.9 A machine, of No. 55 (Bombing) Squadron, Pilot Officer Raymond Russell Carroll, the passenger in the aircraft, was killed, and the pilot, Pilot Officer Colin Edward Victor L'Estrange Feasey, was injured.

According to a Reuter's Belgrade correspondent it is announced that as the magisterial inquiry into the shooting of Croatian Deputies in the Skupstina on June 20 last has been finished, the Deputy, M. Punisha Ratchitch, is committed for trial on the charge of wilful murder of the Deputies, MM. Bassarichek and Paul Raditch. Two other Deputies—MM. Yovanovitch and Popovitch—are also committed on the charge of complicity.

The Bulgarian Government has, according to a statement in the *Deutsche Allgemeine Zeitung*, applied for a reparations moratorium in consideration of the damage wrought by the 1928 earthquake. In a memorandum accompanying the application a list is given of the losses suffered, which are shown far to exceed all estimates hitherto published. The destruction comprises 304 State buildings and hospitals, 400 schools, 243 churches, and 735,512 private buildings. The loss of revenue due to the earthquake is estimated at 435 million levas (about £650,000).

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Reorganisation in Roumania.

In the brief space in which it has held office, the new Roumanian Government has certainly gone far to justify the confidence so freely placed in it abroad on account of the known policy of the National Peasant Party. Unfortunately, as we have good reason to know from experience in other countries, politics on which an election is won are apt to be obscured in the hour of triumph, and the electorate is not unfrequently placed in the trying position of watching the introduction of measures of which it disapproves and on which it has never had an opportunity of passing an opinion. The Maniu Government, however, secure with its immense majority at the polls, is devoting itself solely to the interpretation of its clear-cut policy, the nature of which I have already discussed in these columns, and there seems no ground for apprehension that it will be tempted to indulge in any chimerical schemes such as have proved so tempting to governments in other countries. Roumania's vital need, if I may be allowed to borrow a word for the nonce, is for rationalisation in government, and that the Maniu Administration promises to carry out. In a statement issued to the Press last week, M. Maniu was able to point to a most remarkable and encouraging record of work in the brief period which has elapsed since the elections. The Budget has been passed together with a series of financial laws intended to meet the deficit on the past year and to assure a balance on the Budget for 1929. It would have been possible, M. Maniu pointed out, to have achieved Budget equilibrium by the reduction of expenditure and by a re-arrangement of the incidence of taxation. These things, however, could not be carried out in a moment; hence the decision to meet the position by the imposition of new taxes calculated to yield 2,000 million lei. M. Maniu looks for a substantial surplus on the Budget, and points out that there will now be no obstacle to the carrying out of the Government policy of a stabilised exchange and a foreign loan.

Foreign Capital in Roumania.

In the statement M. Maniu also laid stress on the Government's policy of opening the doors to foreign capital for the exploitation of the natural resources of the State and for the needs of private enterprise. With this object in view the Government proposes to revise with the least possible delay the Mining Law, the Commercialisation Law and other laws. As I have already recorded the preliminary steps have been taken with regard to the revision of the Mining Law. Professor Madgearu, the new Roumanian Minister of Industry and Commerce, appointed a Commission consisting of technical experts who have no connexion with any of the oil enterprises to prepare the necessary measures. The Commission will begin

its work this week, and it is intended that the Bill modifying the Mining Law will be introduced to Parliament on February 1. Representatives of the "Association of Oil Industry" and of mining interests will be consulted in regard to the Bill which it may be hoped will be so framed as to meet the justifiable claims of foreign oil interests in Roumania.

The Indian Loan.

For some time a new Indian loan has been regarded as a foregone conclusion, and the substantial issue made last week, therefore, occasioned no surprise. It is just a year since the issue of the last Indian loan, which was for an amount of £7,500,000, and last week's issue of £10,000,000 was made on almost identical terms. The stock also carries $4\frac{1}{2}$ per cent. interest, its dates for maturity are the same, and the only difference is that its price was 91 as against 91½ a year ago, a change which reflects the unsatisfactory monetary conditions here which render comprehensive conversion operations out of the question at the moment. The £10,000,000 loan has been raised with three purposes. Last summer the Indian Government raised £6,000,000 in London on six months' bills, and these mature at the end of next month; then £3,000,000 is required for the purchase of the Burma Railways Company Ltd., which was taken over as from December 31 last, while the balance of the loan is required for expenditure on the railways in India. The loan yields £4 18s. 1d. per cent., or allowing for the premium on redemption at the furthest date £5 2s. 7d., which makes it an attractive security.

The Constantinople Loan.

The record of negotiations with the Turks in the past few years has not unnaturally created a most unfavourable impression abroad. The recent ratification (albeit with reservations) of the Ottoman Debt Settlement by the Grand National Assembly at Angora, seemed to afford a definite indication that the Angora authorities were at long last really desirous of arriving at a settlement of

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

outstanding questions, and, as I pointed out at the time, provided the agreement is carried out in the spirit, it will go far to improve Turkey's financial standing in foreign countries. The favourable view taken of the ratification was heightened by the news that at the instance of the Turkish authorities, negotiations had been initiated over the Constantinople loan question. Unfortunately the latest information suggests that these negotiations have been pursuing the course with which we became so familiar over the Turkish debt settlement, and while the bondholders have shown a conciliatory attitude, it would appear that something like a deadlock has been reached. The fact that a local loan is here concerned as opposed to national loans does not alter the issue in the slightest. The revenues allocated to the service of the loan have been more than sufficient to meet it, but they have been diverted to other purposes, and, if, as one is entitled to assume, the purpose of this Fabian policy over the negotiations is to extract the last possible concession from the long-suffering bondholders, it cannot fail to have an adverse effect on Turkey's credit and will go a long way to undo the good effect created by the ratification of the Ottoman Debt agreement. As I have frequently emphasised in these columns, it is essential for Turkey to obtain foreign assistance, and it would be a wise act on her part to make a speedy and generous settlement of the Constantinople loan default.

Another Banking Fusion.

The tendency for the amalgamation of banking institutions which has been so much in evidence in Yugoslavia in the past year is now also to be noticed in Bulgaria, where the amalgamation has taken place as from January 1 of the Banque Balkanique and the Banque Franco-Belge de Bulgarie. The capital of the new institution will be 150,000,000 leva, and the board of directors will include representatives of the Banque Belge pour l'Etranger, the Oesterreichische Creditanstalt, the Hungarian General Credit Bank, the Wiener Bankverein and the Banque de l'Union Parisienne. No doubt this amalgamation will be followed by others in Bulgaria, for it is beginning to be recognised in the Balkans that developments arising out of the War have curtailed the utility of relatively small banking institutions.

The Banking Year.

Whatever the past year may have been for trade in general it has certainly not been an unsatisfactory one for the banks, judging by the results which have already appeared. The Midland shows a net profit of £2,656,554 as compared with one of £2,554,650 for the previous year, and maintains its dividend at the rate of 18 per cent. which has been paid for the past twenty-five years, this time on an increased capital. Then Lloyds Bank made net profits of £2,528,143, as compared with £2,475,674, and the proposed dividend is at the customary rate of 16½ per cent.. No doubt the explanation of these successful results is to be found in the fact that while a number of the staple industries of the country remain in the throes of a profound trade depression there are many new and relatively new industries which have been enjoying a period of remarkable prosperity. One need only instance

the gramophone, artificial silk, and motor industries. Very shortly now we shall be having the meetings of the "Big Five," and it will be specially interesting on this occasion to see what the chairmen have to say with regard to the general trade outlook. I shall be surprised if they are not very guarded in their utterances, for while in certain directions the position has certainly shown signs of improvement there appear to be few indications as yet of that real revival of trade which will set the industries of the country on their feet and enable the absorption of a great number of the unemployed. We have had too much optimism since the War, but we can always look to the bank meetings to correct undue expectations, and if the careful surveys of the chairmen should prove for once to underestimate the favourable possibilities of the situation no one is likely to complain.

German Trade Enterprise.

It is not without interest to note that Germany is now devoting great attention again to the Indian market. In a supplement recently issued by one of the German papers stress is laid on the fact that Germany is a great customer of India, and it is urged that "commercial co-operation" between the two countries is eminently desirable. The reason for the interest now shown in the market, apart from the fact that the East has always been the goal of German political and commercial policy is, of course, the fact that trade conditions in India are steadily, indeed, one might say rapidly, improving, and it is clear that in the near future the Indian market will present unique opportunities for trade enterprise. As an example of the openings that will exist we might instance the great orders which are to be placed shortly for railway material. Germany hopes no doubt to obtain a considerable part of these orders, and it is to be hoped that British manufacturers will be sufficiently alive to the position, and that they will succeed in holding their own in a market where British goods have every reason to be thoroughly appreciated. This development on the part of German commercial penetration is only one example of the attention now being paid by the Teuton to Eastern countries. In Turkey, for example, German influence is again commencing to be felt, while the activity of the leading German banks in some of the Balkan countries is reminiscent of their pre-War activities.

The Jaffa Orange Trade.

As has been the case in regard to every commodity, the War brought about changes in regard to the markets for Jaffa oranges. Before the War the Turkish market absorbed the inferior grade of Jaffas, and it was partly because, in the resumption of trade after the War, these lower grade oranges were included in consignments to the United Kingdom that the reputation of the Jaffa began to suffer. The Turkish market also favoured the largest sized oranges, and it will surprise many people to know that in the recent report of the Palestine Fruit Commission it is stated that the English market does not favour large fruit. What authority there is for that statement I cannot imagine. No doubt the price of the largest oranges has a restrictive effect on the market (though it must be pointed out that no Jaffas are cheap as orange prices go), but it

is my experience, and no doubt it is that of many others, that if Jaffa oranges are sought the preference is for the large fruit. It has always seemed to me that there is something singularly unsatisfactory about a small orange, and one of the attractions of the Jaffa is that a really small orange cannot be found on the market, while the thick and easily removable rind makes the peeling process quite a pleasure.

A Tourist Campaign for England.

We have become so accustomed in this country to the advertising of tourist resorts abroad that it is only natural that we should have lost sight of the fact that we possess attractions for the tourist quite as potent as are to be found on the Continent or further afield. With the trade position as it is it is an obvious outcome that we should seek to exploit whatever resources we have which have hitherto been neglected, and the movement which is being inaugurated to attract tourists to this country is on that account to be highly commended. But I think it would be as well not to place too great hopes upon it. As things are, and without a concentrated publicity campaign, we do receive large numbers of visitors every year from the United States and elsewhere, and I doubt very much whether we can hope to compete with places which have pleasanter climates and, shall I say, more social attractions than we can offer. It seems to me that it needs some development like the Channel Tunnel to bring the swarms of visitors which those responsible for the movement desire. There is a possibility now of this project being carried out in the course of a decade or so, and then, no doubt, the foreigner will be here in his thousands, but by that time the trade position will have improved and the need for what may be called a tourist season will not be so obvious.

The Wine Industry of Cyprus.

It is interesting to note that in recent years there has been a very pronounced tendency to extend the cultivation of the vine in Cyprus. The Island does a large export trade in grapes, but its wine and spirit industry is also very important and is indeed becoming increasingly so. In 1927 the value of the exports of wines was £55,976, of which £505 represented the exports of the well-known Commandaria wine, while that of spirits was £2,747. The value of the export of grapes and grape products for the year was £159,058, and if allowance is made for the large consumption of vine products in Cyprus itself, it can well be realised why the cultivation of the vine is proceeding apace. It may be mentioned in passing that Cyprus is now producing a port which, it is hoped, will find a satisfactory market in this country.

Rubber in 1929.

We have now had a few weeks of the arrival of the surplus stocks of rubber from the East, and the stocks at London and Liverpool have commenced what will probably be an almost continuous upward movement for a prolonged period. Prices neither of the commodity nor of the shares have been adversely affected, however, by this process, which is by way of being a curious paradox. The steady and sometimes rapid decrease of stocks over several months saw both the markets weak and hesitating, but now that the stocks are increasing a much more confident tone is in evidence. The explanation is, of course, very simple. So long as the dead weight of unexported stocks was, so to speak, hanging over the market it exerted an unduly depressing influence, for it is always the unknown that is most terrifying, and now that the period of unrestricted production has arrived it is realised that in all probability these stocks are not the incubus that they were thought to be, and that it is quite possible, given developments on the scale of those in the past year, that in a few months the market will have no more of the unwelcome

arrivals than are needed to maintain adequate stocks in this country. Hence the growing firmness in the market for the commodity.

COMMENTATOR.

COFFEE FROM THE SUDAN.

The current issue of the Bulletin of the Imperial Institute contains a report on a sample of coffee received at the Imperial Institute in February last. The sample was stated to represent Abyssinian coffee cleaned by hand at Khartoum, and it was desired to learn its quality and market value in comparison with the Brazilian product. The coffee was submitted to brokers in London, who reported that it was slightly below the usual standard of Abyssinian coffee received in the United Kingdom, but should be worth at the present time about 95s. to 97s. per cwt., landed in London. These prices compare with 105s. to 107s. per cwt. for average quality Superior Santos and 80s. to 82s. per cwt. for Superior Rio. The market for this coffee in the United Kingdom was stated to be as a rule comparatively small except on a firm market. It was pointed out, however, that there is a demand for it on the Continent, and the brokers were of the opinion that 4,000 tons per annum could be absorbed without difficulty, and they expressed willingness to find purchasers for any shipments that might be forwarded. Attention is drawn to the point that the use of cleaning and sorting machinery would ensure a better product, and that it would be advisable to employ these methods if it is decided to export the coffee on a commercial scale.

NEWS FROM ALL SOURCES.

On January 1 the Syrian pound became the only legal tender currency in Syria.

France and Greece have extended a provisional commercial agreement (which expires to-day) for one month.

The output of the Anglo-Egyptian Oilfields for the week ended January 4 was 5,030 tons.

The traffic receipts of the Suez Canal Company from December 29 to 31 amounted to 2,300,000 francs.

The production of the Cyprus Asbestos Company for December was 787 tons, as compared with 358 tons for the corresponding month of 1927, making the production for 1928, 16,297 tons, against 11,200 tons for 1927.

It is reported that negotiations are in progress between the Banque Belge pour l'Etranger and the Banque de l'Union Parisienne, with a view to the absorption by the Bucharest branch of the former institution of the Banca Commerciale Romana which is affiliated with the Banque de l'Union Parisienne.

The Indian Tea Association (London) announces that the quantity of tea entered for export to the United Kingdom, taken from the Calcutta and Chittagong Customs daily entries, was for the second half of December 9,690,000 lb., against 10,054,000 lb. for the same period last year. The total from April 1 to December 31, 1928, was 229,727,000 lb., against 242,589,000 lb.

The report of the Shahdara (Delhi)-Saharanpur Light Railway Company for the half-year ended September 30, 1928, states that the total capital expenditure to the close of the half-year was Rs.48,80,380, plus Rs.1,27,917 on stores, etc., or Rs.50,08,297 in all. The gross earnings during the half-year were Rs.5,08,689. During the corresponding period in 1927 they were Rs.4,82,047. The net profit was Rs.94,520, against Rs.86,870; with a balance brought forward of Rs.5,11,684 the total is Rs.6,06,204. The directors recommend a dividend of Rs.6 per share, at the rate of 12 per cent. per annum, free of tax.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

The Survey of Egypt

(Continued from page 24).

Town Mapping.

The great increase of the urban population in recent years has brought in its train extensive building operations and modern town planning schemes, and the need for up-to-date maps has assumed very great importance. This need is being met by the complete revision of the existing map sheets of Cairo, Alexandria, and certain other large towns, which includes new surveys of the large residential suburbs which have been built in the vicinity.

To facilitate important schemes for urban development, and in view of the very high value of land in certain towns, it has been found necessary to carry out all new town survey street by street on a scale of $1/200$ (1 in. = $5\frac{1}{2}$ yards). The accuracy of the work is controlled by special triangulation points at intervals of about 500 yards. These street surveys are being used as the basis for the preparation of the standard town map series on scales of $1/1,000$ and $1/5,000$. The survey of some 32 towns on this system has now been completed.

At the present time the Survey Department is charged with the valuation and acquisition of all areas and buildings required for State purposes. Systematic demarcation of all areas of the public domain (that is, irrigation channels, main roads, cemeteries and antiquity sites) has been taken up and is now in progress.

This outlines very briefly and in general terms the major activities of the Department in work dealing with the vitally important alluvial portion of the country.

Air Survey Work.

The possibilities of air survey methods have not been overlooked, and questions connected therewith are now being studied, but the application of such a method to the special conditions required in this country demands very considerable investigation before any decision can be reached. The work of the Desert Survey staff is advancing the knowledge of the Desert regions with considerable rapidity. The production of a detailed map of the whole country on a scale of $1/500,000$ has proved of inestimable value in placing on record, with the highest possible accuracy, all existing data available at the time of publication.

The results of all new exploration are being incorporated, and it is remarkable how small are the portions of the older explorers' work, which still remain unsuperseded by the more accurate delineations of our own times. But in justice to the pioneers it must be noted that their cartographical efforts, though ceasing to serve as data for the present-day maps of Egypt, have been of great utility in the organisation of the modern surveys.

To-day the motor-car is exclusively employed as a means of transport in the Desert Survey operations now being carried out, the advantages of mobility thus provided being of extreme value as a factor in the speed by which work can be carried out in these inhospitable regions. The most important work in hand is the mapping of the recently discovered Qattara Depression, situated in the northern part of the Libyan Desert, its easternmost limit lying about 130 miles to the west of Cairo. The Desert Survey is also engaged on the triangulation and preparation of a map on a $1/100,000$ scale of the Red Sea coastal region, from Suez to the southern frontier of Egypt. This takes in a strip of country extending from about 5 to 12 miles inland all down the coast, and by including all the more important areas in which industrial mining operations are carried on, will meet the most pressing cartographical needs in this district.

The mapping of the desert regions along the edge of the Nile Valley is also being undertaken and the information is being incorporated on the standard $1/100,000$ scale

topographical map sheets which normally only depict the detail included within the limits of cultivation. This information is of value in connexion with projects for finding and exploiting useful minerals in proximity to the Nile, and for showing clearly the relationship of desert lines of communication with those of the Nile Valley. The question of the discovery of new sources of water supply in the desert regions in the south-west of Egypt is being actively pursued and an expedition is now at work. The establishment of useful wells in this extremely arid region will be of extreme value to the exploration of this area, of which little at present is known.

The present extent of desert survey exploration can be summarised as follows:—Approximately 17 per cent. of the area is covered by triangulation, 20 per cent. has been topographically mapped on a triangulation basis, 24 per cent. has been reconnoitred or surveyed without triangulation. Of unexplored territory, the major portion lies in the Libyan Desert, and amounts to some 546,000 square kilos (210,000 square miles), or about 50 per cent. of the whole desert area of the country. The reason for this is that the cost of desert survey operation can only be incurred on the grounds of economic necessity. Hence the Sinai Peninsula is now completely explored and about 80 per cent. of the Eastern Desert has likewise been dealt with.

Large scale maps have been made of the larger oases of the Libyan Desert, and a new detailed survey of the cultivable portion of the Kharga Oasis on $1/10,000$ and $1/25,000$ scales is now being carried out by the topographical Survey Office, and a number of sheets on both scales will shortly be published.

The results of the present knowledge of desert topography have been published this year (1928) in the form of an orographical map on the scale of $1/1,000,000$, which forms part of the Atlas of Egypt, the production of which was commanded by H. M. King Fuad I, for presentation to the International Geographical Congress held in Cambridge in July last year. This map is a valuable contribution to geography, because it presents for the first time an accurate picture of the country as a whole, with surface relief indicated by means of contours and colour layers. The varied characteristics of the country are thus brought out with great distinctness. The mountainous regions of the Sinai Peninsula and the desert lying between the Nile Valley and the Red Sea form a striking contrast to the comparatively low elevation of the desert to the westward of the Nile. The extent of both regions emphasizes with graphic force the area of cultivable land, in a manner which no bald figures could achieve.

The Geological Survey.

The recent explorations carried out by the Geological Survey have added very considerably to the knowledge of the geological structure of the country. The Sinai Peninsula, in particular, has been mapped in detail, and the character of the Egyptian area bordering the Red Sea has been determined with considerable accuracy. The reason for this is due to the mineral wealth known to exist in these regions and the discovery of petroleum, phosphates and manganese in quantities sufficient to justify commercial exploitation.

Systematic geological examination is proceeding in other areas of economic importance using the topographical maps of the Desert Survey Office as a basis. The orographical $1/100,000,000$ scale map was used as a basis for the topography. Comparison with the previous map, which contained large expanses of country marked "unexplored," brings out very clearly the extent to which the geological knowledge of the country has increased

during the intervening years.

Like the orographical map, the Geological Map is a very real contribution to the science with which it deals, because never before has the geological structure of Egypt been depicted with such accuracy, based as it is upon the results of years of effort and scientific examination. The Geological Museum exhibits extensive collections of Egyptian Minerals, fossils, and rocks and on the economic side are shown the principal minerals, etc. Its fossil collections are highly representative, and in so far as the vertebrates of the Faiyum are concerned, absolutely unique. The igneous and metamorphic rocks are a very representative series, having been collected from every portion of Egypt and Sinai where they occur.

The Reproduction Office.

Finally mention must be made of the work of the Departmental Reproduction Office, the normal functions of which are the fair-drawing and publication of all maps issued by the Department. A high standard of excellence has been attained by taking advantage of new methods of working, and it can safely be said that the Department possesses one of the finest photo-lithographic plants in the world, equipped as it is with the most recent types of machinery and photographic apparatus. The quality of the maps published are a sufficient indication of the methods employed.

The equipment consists of spacious and well lit drawing offices; a photo-process office provided with cameras which can produce negatives measuring 45 in. by 35 in. and the necessary apparatus for preparing printing surfaces of the same dimensions, together with equipment for producing printing surfaces from tracings without the intervention of the cameras. This plant, primarily designed for map reproduction, is supplemented by apparatus for reproduction by photogravure and the ordinary half-tone processes.

The printing offices, of which there are two, are equipped with lithographic machinery of the latest patterns and a full range of machinery designed for producing postage stamps and kindred work by the photogravure process. The quality of the maps and other classes of work produced can readily bear comparison with the output of any office of its type.

Stamp Designing.

A radical development in the work of the Department is that it has been called upon to produce all the postage and revenue stamps required by the Government. This involves the designing, reproducing, printing and manufacture of a class of work which is fundamentally different from the technicalities involved in map reproduction. The series of special stamps produced to commemorate the various International Congresses which have met in Egypt during the past few years have been an interesting con-

tribution to philately, and the quality of the work has met with favourable comment from specialists in Europe.

This is a brief outline of the major activities of the Survey of Egypt to-day, and the indications are that its activities will extend, owing to the rapid development of the country, and the need, which modern progressive conditions are imposing upon Egypt, for the solution of problems coming within the wide scope of the Survey.

NEWS FROM ALL SOURCES.

The Roumanian Loan negotiations are being resumed in Paris.

It has been decided to increase the capital of the Banca Moldava from 70,000,000 lei to 100,000,000 lei.

It is reported that a loan of £200,000 has been offered to Yugoslavia by Blair and Co., of New York.

The traffic receipts of the South Indian Railway Company for the week ended December 8 amounted to Rs.11,83,010, making the total from April 1 Rs.4,24,16,467.

The Union Brewery Co., of Laibach, made a net profit for the year ended August 31 last of 1,925,001 dinars, and a dividend of 7 dinars per share is being paid.

Net new life business completed by the Royal Exchange Assurance during 1928 amounted to £2,497,676, being an increase of £274,152 over that completed during the preceding year.

It is understood, says a Cairo message, that the Russian Textile Company has arranged to purchase 35,000 kantars of cotton from the Egyptian Government's stocks. So far the price has not been made known.

Lloyds Bank, Ltd., announce that they have received funds to meet payment of Coupon No. 38 of the Montenegro Five per Cent. Loan, 1909, due on January 1, 1929, and also for the payment of Coupon No. 17 due on July 1, 1918.

The Hart Accumulator Co., Ltd., Stratford, London, have received a contract for a battery of two hundred and forty-five 13-plate "STE" type cells, to be installed in the electric power station of the Sudan Government at Port Sudan.

Imperial Airways, Ltd., have arranged a merger of interests with the Cobham-Blackburn Air Lines, Ltd., for the operation of air services in Africa, and, in particular, for the establishment of the route from Egypt to Cape Town.

The Banca Commerciale Italiana opened a branch office at the Piræus on January 1. A branch is to be opened at Athens in the spring, and the bank is credited with the intention of opening altogether about ten branches in Greece.

In carrying out the operation of the sinking fund of the Bulgarian Seven per Cent. Settlement Loan, 1926, for the half-year ended December 31, 1928, bonds amounting to £9,900 have been purchased, withdrawn from circulation and cancelled.

The Pirelli General Cable Works, of Southampton and Eastleigh, has secured the Egyptian Government's contract for the manufacture and installation of a telephone trunk line between Alexandria and Cairo. The value of the contract is £193,000.

The Royal Exchange Assurance announces the following appointments at head office as from January 1:—Mr. Arnold Gathercole, assistant manager, trustee and executor department, to be assistant secretary. Mr. Henry O'Brien to be assistant manager trustee department.

Forbes Forbes Campbell and Co. has been registered with a capital of £325,000, in £1 shares, to acquire the business of Forbes Forbes Campbell and Co. (incorporated in 1904), to adopt an agreement with the said old company and A. Whitworth and Sir Malcolm N. Hogg, its liquidators, and to carry on the business of bankers, East Indian, Colonial, and general agents, etc. The Board of the new company will be constituted as follows:—Mr. Colin F. Campbell (chairman), Sir Malcolm N. Hogg (managing director), Lieut.-Col. J. S. Forbes, Messrs. Ronald G. Campbell, Donald S. Campbell, and Vincent A. Grantham.

An extra-ordinary meeting of the Near East Petroleum Company has been called for January 14 to consider resolutions authorising a rearrangement of the capital. It is proposed to subdivide each of the 150,000 shares of £1 into ten shares of 2s. each. The issued shares will be called Ordinary shares and the unissued shares will be styled Preferred shares. The Preferred will be entitled to two-thirds of the profits available for dividend until they have received dividends in the aggregate amounting to 100 per cent., and thereafter will receive a dividend of 20 per cent. These shares will be offered in the first instance to the existing shareholders.

Motors and Motoring.

By G. B. B.

Across Australia.

I hear that the extraordinary performance of Mr. P. W. Armstrong, who recently crossed the Australian continent, from Perth to Sydney, a distance of 2,900 miles in 196 hours, has been repeated. Mr. Armstrong carried out his first feat on a Triumph super-seven car. Terrible weather conditions prevailed throughout the run and the roads were exceptionally bad—indeed, Mr. Armstrong states that in several places, they were non-existent—but in spite of all difficulties, the car finished the journey in perfect condition, the only replacement called for being a new fan belt.

The return journey, Sydney to Perth, has now been made, and Mr. Armstrong has cabled to say that the car behaved perfectly, the engine never even faltering, and no chassis or body trouble being encountered. As Mr. Armstrong is 65 years old, I think he, as well as the car, deserves congratulating on the feat. A well known Australian motor factor, who went with him on this return trip, wrote to Mr. Armstrong after he had reached Perth. This is before me as I write and so I can quote verbatim: "I wish to record to you my greatest thanks for opportunity afforded me of crossing Australia with you in the little Triumph 7 h.p. car. When accepting the invitation I did so with the thought at the back of my mind: 'Well, I am in for a good tossing about and a pretty uncomfortable journey.' But I thought, if you can stand 3,000 miles to Sydney in eight days, surely I can stand it. At the completion, I assure you, I got the shock of my life. The comfort of the little car is astounding. Also the steering is good, the narrow track being rather an advantage than a hindrance. Further, the engine is a marvel, as it never missed a beat through the journey and the staying power is very pronounced." That seems a pretty good testimonial to the Triumph car, which, by the way, is a Coventry production made by a firm who have built up for themselves so fine a reputation for motor cycles.

Traffic Congestion.

A certain writer on motoring subjects has been referring to traffic congestion in London, and seems to attribute it to, of all things in the world, "the poor man's motor; the ubiquitous and 50 per cent. superfluous motor bus!"

To put it plainly, that is simply nonsense. The London Traffic Combine, as it is familiarly called, has not built up its gigantic and magnificently managed business by running superfluous omnibuses. The writer continues: "These vehicles are the principal cause of London's growing traffic problem. If it could be proved that the number in service is necessary for the transport of millions of Londoners who use them, one would have little to say. But there can be no doubt that except at the rush hours of morning and evening, there are far more buses on the streets than are required. . . . The position in London is becoming so serious that the motor omnibus question demands immediate revision."

As a matter of fact, so far as road room is required, two motor buses take up as much road room as three small cars, of which many contain only a driver, while the buses in the slack times probably average a dozen passengers. Which means that in motor buses, twenty-four people are riding in a road space that would be taken up by three people driving small cars. My observation goes to show that not only is the small car a prolific cause of London's traffic congestion but is actually a nuisance in crowded London streets. There, the authorities and all concerned are doing their utmost to move large numbers of people as quickly and as economically as possible and into the midst of their ordered and considered efforts come hosts of small cars, each taking up as much road room as two-thirds of a motor bus and yet

only carrying one or two people. I think that's an aspect of the situation that some motorists have not considered.

A Traffic Indicator.

My attention has just been drawn to the Eural traffic indicator and horn operator. The latter is a useful and easily handled little appliance, when fitted, as it consists of a couple of concentric rings which are placed concentrically with the steering wheel rim and are so connected up to the horn circuit that contact is made and the horn sounded every time the rings are touched. For the traffic indicator, these rings are combined with two others, one outside and one inside. Both operate a rear "stop, right and left" signal, as one indicates a right turn, the other a left turn and a touch of the brake pedal indicates "stop." The price of the attachments is very reasonable, and they can be easily fitted to any car.

An elbow-shaped horn has just come to my notice, which does not take up as much room as the usual pattern and which can be fitted on the front or the dash, under the bonnet or on the front of the scuttle outside. Known as the Delco-Remy No. 19, this horn has a rather deep-pitched note; is of the vibrating diaphragm type, consumes little current and is supplied wound for six or 12 volt circuits.

An Ariel Achievement.

The long-distance endurance tests perpetrated by Ariel machines seem to be never-ending. Within the last few months there have been, first the 10,000 mile test under A.C.U. observation, and secondly, the trans-Canadian trip by Mr. J. G. Oates. Now comes news of a circuit of Australia which has just been completed by Mr. G. Munro, riding a 500 c.c. solo Ariel motor cycle.

Interviewed en route, Mr. Munro said his main difficulty was in obtaining water. He had no trouble with petrol, for he had made arrangements for that. But he was short of water. At one spot the local policeman asked him what his reserve supply of water was and, on being told 1½ gallons, said: "You might as well sign your death warrant."

Mr. Munro's motor cycle was, of course, a novelty to the aborigines, who called it a "piccanniny motorcar." One night he pulled in alongside a survey party who had a lorry. Next morning some natives came in, and the surveyors told them that the lorry had had a foal. The news soon got round and they came miles to see the new foal!

The gross production of crude oil of the Phoenix Oil and Transport group of companies for December was 29,236 tons.

A message from The Hague states that the Treaty of Commerce and Navigation concluded last July between Holland and the Turkish Republic has been voted by the Chamber.

Sir Eric Geddes, Chairman of the Dunlop organisation, has left London on a business visit to Australia and Singapore. Although the tour will occupy four months, Sir Eric's actual stay in Australia will be eight days only.

BRITAIN'S BID FOR OVERSEAS MARKETS.

The introduction of new designs and adaptations of machinery and tools to meet the special needs of overseas markets will, it is revealed by discussions at the Birmingham Chamber of Commerce, form one of the most important features of British manufacturing industry in the coming year. These developments, which extend to many trades of widely different character, are largely the result of personal investigation of Dominion and foreign markets by the principals of firms during the past six months, affording clear evidence that the British manufacturer has come to realise that it is essential to visit his markets abroad.

Among important exhibits which, in the opinion of the respective manufacturers, will make a particular appeal to overseas buyers at the 1929 Birmingham Fair are the following: plantation tools; power transmission systems to solve special problems; refrigerators specially adapted to conditions of tropical countries; rust resisting steels in sections and bars; switchboard materials of special interest to countries where slate is not easily obtainable; oxygen cutting machines; heating systems for overseas; harrows and rakes adapted for tractors, horses or bullocks; fire-proof building materials; safes and strong rooms; wringers and mangles which fold into tables; public lighting equipment; controls of temperature for factory plant; oil lamps and stoves with patent burners; heavy transport harness; scales and weighers for special purposes; wired glass with electrically-welded square mesh; washing apparatus; road construction; special paints; guns and rifles for special overseas requirements; electric vacuum cleaners; metal frame chairs and stools for hot climates; lubricating oils for all climates; small fires which "do the work of two large ones."

ROUMANIA'S OIL PRODUCTION.

Roumania's oil production for the first ten months of 1928 amounted to 3,370,000 tons, as compared with 3,031,372 tons for the corresponding months of 1927. This production was shared as follows among the chief companies:—Astra Romana, 580,813 tons; Steaua Romana, 524,449 tons; Creditul Minier, 448,600 tons; Phoenix Oil, 331,362 tons; Rom. Americana, 316,093 tons; Sirius, 295,325 tons; Concordia, 162,239 tons; Colombia, 157,839 tons; Petrol Romanesc, 141,075 tons; I.R.D.P., 132,662 tons;

Letters of allotment of the Greek Government Six per Cent. Public Works Sterling Loan of 1928 should now be lodged with Hambros Bank, to be exchanged for scrip certificates.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

†ASSYRIA ... Jan. 11	†TUSCANIA ... Feb. 12
*†ELYSIA ... Jan. 29	*†CASTALIA ... Mar. 1

*First class passengers only. Specially low fares. †Calls Port Sudan.

†First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

MESSAGERIES MARITIMES.

An illustrated volume has just been issued by the Messageries Maritimes in commemoration of the seventy-fifth anniversary of their incorporation as a transport company. The volume is in three parts, which deal respectively with the first fifty years of the company's history (this section is reproduced from a brochure issued to mark the fiftieth anniversary), the next twenty-five years, and the celebration last year of the company's seventy-fifth birthday. The company has been closely linked with the fortunes of France from the Crimean War onwards, but the events of the past twenty-five years have made that, of course, by far the most notable period in its history. In the volume is summarised the part played by the ships and the personnel of the company in the Great War, and the development of the company's activities since 1918. A worthy souvenir of the occasion the brochure will be read with interest by those who are familiar with the ships of this line.

BULGARIA'S SUGAR PRODUCTION.

The production of sugar in Bulgaria in October and November, amounted to 17.8 million kilos as compared with 25.3 million kilos. for the same months of 1927, a decrease of 7.5 million kilos. On the other hand the internal consumption rose during this period, but there was a great decline in the export trade which amounted to only 90 tons as against 993.2 tons for the corresponding period of the previous year.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, January 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahrona for Calcutta (Birkenhead, January 24).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 23).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, January 12); s.s. Warfield for Bombay and Karachi (London, January 19).

Cunard Line.—S.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool January 19, Glasgow and Swansea January 18); s.s. Bothnia for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 19, Swansea January 22).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 12); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26). (The first sailing of the season to the Danube ports of Galatz and Braila.)

P. and O. Line.—S.s. Razmak for Bombay (London, January 18); s.s. Novara for Calcutta (London, January 19).

Prince Line.—S.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, January 19).

Ellerman and Papayanni Lines.—S.s. Egyptian for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, January 17); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 24); s.s. Polo for Algiers*, Patras, Smyrna, and Constantinople (Liverpool, January 26); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona, Venice, Trieste, and Fiume (Liverpool February 2, Swansea February 7); s.s. Mardinian for Algiers*, Piræus, Syria*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool February 9, Swansea February 9). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 8.

There has again been a good tone in the Stock Markets during the past week, which was broken on Tuesday by the holiday on New Year's Day, and generally there has been a fair amount of activity. British Government securities and other high-class investment stocks were inclined to be a little bit easier on the flotation of the ten millions loan by the Government of India, but declines were very small. A feature was the rally in home rails, in spite of a batch of rather disappointing traffic returns. The dividend outlook is not particularly bright, but prices of the majority of the junior stocks have for a long time past been standing at very low levels. Some of the banks have already announced their dividends, and, as anticipated, these show no change, though the District Bank is making a centenary distribution of bonus shares. The return of Bankers' Clearings for the year 1928 showed that all records were broken, the immense volume of cheques and bills handled by the Clearing House being due mainly to financial activity in the City of London. The profits of Barclays Bank, the first to issue its figures, show, however, a slight decline in comparison with 1927.

A Few Recent Issues.

As a result of the general marking down of prices in the Stock Markets which followed the end of the "selective" boom in the autumn, several recent issues of sound merit are now obtainable at prices slightly below those at which they were issued. While there was never a general slump, it will be remembered that prices were generally affected, and this depressing tendency was accentuated by anxiety caused by the King's illness. Investors who were not at the time of issue in a position to buy stocks which interested them may find it worth while to look up the current quotations, for in many cases sound investment securities can still be bought at comparatively favourable prices. A few examples may be given. The Birmingham

Corporation $4\frac{1}{2}$ per cent. stock can be obtained at half a point below the issue price of $97\frac{1}{4}$. Two foreign Government stocks also stand at quotations below the prices at which they were issued. The Bulgarian $7\frac{1}{2}$ per cent. Stabilisation Loan is quoted at $1\frac{1}{2}$ discount on the issue price of 96 and the Greek 6 per cent. Public Works Loan, issued at 89, is at $1\frac{1}{2}$ discount. As regards British industrials, Baldwin's 6 per cent. debentures are a sound investment and worth consideration although they are now quoted at 100, which is higher than the issue price.

Some Shipping Preference Shares.

The second half of 1928 was a rather more favourable period for shipping companies than they have recently experienced. An upward movement in freights was visible and more ships were employed than has been the case of late. It remains to be seen whether the revival is of more than a temporary nature, but that shipowners themselves are optimistic is evidenced by the number of orders for new vessels which have been given to shipbuilders. It must not be forgotten that world tonnage is still in excess of requirements, but on the whole British shipping has the advantage of being comparatively modern. It is, therefore, not unreasonable to anticipate that shipping will in the main show a steady improvement in the future. The ordinary shares of the most successful companies generally discount future possibilities, but some of the prior charge and preference stocks are worthy of the investor's attention. The Cunard Company's 6 per cent. Cumulative Second Preference give an income of £5 17s. per cent., and the 6 per cent "A" Cumulative Preference of the R.M.S.P. return £6 14s. per cent. On the $4\frac{1}{2}$ per cent. Cumulative Preference shares of the Union-Castle Company, of which, however, few shares are available, the yield is £6 4s. per cent.

Discount Companies.

The dividend announcements of the London discount companies for 1928 are now appearing. The past year should have proved satisfactory for discount companies, for on the whole market rates were steady, and although their margin of profit between short loan rate and discount rate was smaller than in 1927, the volume of business was probably considerably greater. Nevertheless, the dividends of the three big companies—Alexanders Discount Company, the National Discount Company, and the Union Discount Company—are all unchanged, as they have been for some years. In the case of the first and last companies, however, the dividends are paid on a larger capital than a year ago, and the increase in the carry forward is also greater than for 1927. As suitable securities for the genuine investor, the shares in the discount companies have much in common with those of the banks, with the additional advantage of a larger yield. Both classes of institution pursue a steady dividend policy, and both aim at building up very substantial reserves. In other ways, too, their finances are, as would be expected, on a very sound basis. The Ordinary shares of Alexanders give an income of £5 7s. per cent., while on their 6 per cent. Cumulative Preference £5 4s. per cent. is obtained. The National's "A" shares return £5 8s. per cent., and on the "B" shares the yield is £5 12s. per cent. A return of £5 2s. per cent. is obtained on the Ordinary shares of the Union Discount Company.

An Athens message states that the official discount rate is to be reduced from 9 to 8 per cent.

A Cairo message states that the Egyptian State Railways have reduced the quantity of colliery-screened steam coal for which they invited tenders on October 12 from 380,000 tons to 200,000 tons. The adjudication will be made on January 17.

Roumania's exports in 1928 reflected the adverse agricultural conditions of 1927. In the first six months of 1928 Roumania's cereal exports totalled only 925,750 tons, as against 2,583,590 tons for the same period of 1927. The exports of maize fell from 1,500,000 tons to 454,000 tons, while the live stock exports amounted to 103,623 head as compared with 280,099 head in the first half of 1927.

SIR CHARLES MACARA.

We regret to announce the death, which took place on January 2, at his residence in Hale, of Sir Charles Wright Macara, Bart., in his eighty-fourth year. Born on January 11, 1845, at Strathmiglo, where his father was the Free Church Minister, Sir Charles Macara was educated locally and at Edinburgh, and then, at the age of seventeen, he entered the warehouse of a Scottish merchant in Manchester, thus commencing an association with the cotton county which was to lead him ultimately to the highest positions concerned with the organisation of the cotton trade. In 1875 he married Marion Young, granddaughter of the founder of the firm of Henry Bannerman and Sons, cotton spinners, manufacturers, and merchants, of Manchester, and first cousin of the late Sir Henry Campbell Bannerman. Five years later he joined this firm as managing partner, and under his guidance it rapidly developed. When it was converted into a limited company he became managing director, and at the time of his death he was chairman and joint-managing director. It is in connexion with the great organising work that he did for the cotton trade that Sir Charles Macara is best known. He was foremost in the movement towards the end of the 'eighties to form a cotton employers' association for Manchester, and later in its extension to the present Master Spinners' Federation. On the occasion of the cotton dispute in 1892 he took the lead in bringing about the Brooklands Agreement, which for twenty-one years regulated negotiations between employers and employees. From 1894 to 1914 he was President of the Federation. Essentially a practical man, Macara lent the whole weight of his advocacy to schemes that he was convinced would be of benefit to the country and to Lancashire. Thus he was strongly in favour of the scheme for the construction of a ship canal to Manchester, and was also an ardent advocate of the development of cotton cultivation in the Empire. Early in the War he emphasised the necessity for making cotton contraband of war. Since the War he devoted much attention to bringing his views before the public on leading questions of the day. In 1921 he published his "Recollections." It may be recalled here that a Supplement on "Cotton Growing in the Sudan," published by THE NEAR EAST ON May 23, 1913, contained a long interview with Sir Charles Macara, in which he showed his keen appreciation of the possibilities offered by the Sudan for the production of cotton. One passage from this interview may be quoted here:—

"There is no doubt in my mind, and evidently there is none in Lord Kitchener's, that here we have an exceptional, quite an exceptional proposition. The geographical situation of the Sudan, half-way between East and West, speaks highly in its favour, as do the climate for cotton growing and the transport facilities. Viewed from this point, the Sudan offers attractions that are possessed by no other country, not even Nigeria, Uganda, and other districts, which, for reasons that need not be gone into here, have had the priority of expert attention, in spite of their remoteness from the market."

Sir Charles Macara was created a baronet in 1911. Lady Macara survives him, and he is succeeded in the title by his only son, Mr. William Cowper Macara, a director of Henry Bannerman and Sons. The funeral took place on January 5 at St. Anne's-on-Sea.

HOW TO DO BUSINESS IN EGYPT.

It is a common mistake to stigmatise Egypt as being a bad or impossible market (says the *Journal of the British Chamber of Commerce of Egypt*). Difficult it may be, but it is one that requires both cultivating and educating. There is a population of over 14 millions, which, owing to the spread of education, is becoming alive—slowly it may be, but the speed is accelerating owing to the progressive policy of the present Ministry—to wants which it never experienced before during the 5,000 years of its historic existence. There are already signs that that great stumbling-block to British trade, the inherent desire of

the Eastern to buy cheap and to neglect quality, is beginning to be overcome. There can be no doubt that the Egyptian honestly believes that British goods are best, just as he believes that an Englishman's word can be relied upon. If anyone doubts the latter, let him go to the bazaars in Cairo, where, if he be an Englishman, even if he is unknown to the seller, he can purchase goods to any reasonable amount without paying for them on the nail. Nowhere in England will a stranger be trusted as he is in Egypt—i.e., if he be an Englishman—and the bazaar merchants state openly that they are seldom cheated as a result of such trust. This, of course, is only given as evidence of the local mentality towards things British. Many other instances can be cited by those who live in the country—the commonest thing being the extraordinary and child-like faith of even educated Egyptians both in the Englishman's integrity and in his ability to help them even in the teeth of the opposition of their own countrymen. British goods in Egypt, therefore, start with a strong prejudice in their favour. The seed has been sown, and if properly tended is bound to bear fruit. More often than not, of course, the Egyptian does not know the origin of what he buys—he insists that it shall bear some definitely recognisable mark, but beyond that he usually does not go. It is, however, a noticeable fact that many of the common commercial frauds consist in the false marking of goods in order to deceive the buyer into believing they are British. That in itself is evidence to show the value placed on British goods in the Egyptian mind. We believe that if the British goods sold in this country were more systematically pushed as being British, the sales would go up enormously. The Egyptian will, of course, go on buying cheap stuff, but he will be torn in two directions when he does so, and eventually buy more British, if he gets value for his money. We therefore strongly urge all representatives and local agents of British goods to insist, as far as is possible, that the merchants and retailers with whom they deal shall make a special point of calling the attention of their customers to the fact that the goods they are selling are British.

COMPANY NOTES AND REPORTS.

SOUTH BEHAR RAILWAY.

The report of the South Behar Railway Company states that after paying a dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1927, a balance remained of £4,358, which, with the amount received from the Secretary of State for India for the half-year to June 30, 1928, and other receipts, less interest on Debenture stock and sundry other outgoings, left £13,875. An interim dividend at the rate of 5 per cent. per annum was paid on July 16 last, leaving £4,385 to carry forward. Adding £15,000 received from the Secretary of State for India for the half-year to December 31, 1928, and other receipts, less interest on Debenture stock and sundry outgoings, there remains £13,983. The directors recommend a dividend at the rate of 5 per cent. per annum for the half-year to stockholders registered on December 31, 1928, leaving £4 493 to be carried forward.

LLOYDS BANK.

The directors of Lloyds Bank, Ltd., announce that, after payment of all charges and expenses, the annual contributions to the provident and insurance fund and to the staff widows' and orphans' fund, and making full provision for rebate, income tax, bad debts, and contingencies, the available profit for the past year is £2,528,143. To this has to be added £485,780 brought forward, making a total of £3,013,923. Interim dividends were paid for the half-year ended June 30 last at the rate of 16½ per cent. per annum on the "A" shares, equal to 1s. 8d. per share, amounting, less income tax, to £958,197, and at the maximum rate of 5 per cent. per annum on the fully-paid "B" shares, equal to 6d. per share, amounting, less income tax, to £28,746. £300,000 has been placed to the staff super-annuation fund, and £250,000 to bank premises account. After making these appropriations, the directors have decided to recommend dividends on the "A" and "B" shares at the same rates, amounting together, less income tax, to £986,943, for the past half-year, leaving £490,037 to be carried forward.

The adjourned eighty-ninth annual ordinary general meeting of the Ionian Bank, Ltd., will be held at the offices of the company, 25-31, Moorgate, E.C.2, on January 23 at 11 a.m. The transfer books will be closed from January 14 to 24, both days inclusive.

ECONOMIC CONDITIONS IN BULGARIA.

The British-Bulgarian Chamber of Commerce is now issuing regular reports on conditions in Bulgaria. The following extracts are taken from the latest report, dated December 31 :—

General Situation.

On the eve of Christmas and New Year there is to be observed the customary revival of trade. This year, owing probably to better monetary conditions prevailing for some months, buying appears to be more active, especially in the textiles, footwear, and mercery trades. Prices of foodstuffs, both local and imported, remain high and there is to be observed some abstention from purchasing, especially on the part of the town population.

The Chamber voted a Law regulating the financing of the irrigation scheme for Southern Bulgaria. The Government is authorised to contract with the Agricultural Bank a loan of 165,000,000 leva, the proceeds of which, taken in conjunction with special taxation revenue affected to the purpose, will go to cover the necessary expenditure.

Development of agriculture and of land production in general is becoming more and more the principal pre-occupation of economic discussion and of new legislation in course of preparation. Trade connected with the needs of agriculture and land exploitation remains active. Tractors and other machinery are expected to reach important selling totals in the coming year. The year 1928 proved on the whole a tolerably good year to importers of agricultural machinery. Tractors of American make are gaining considerable ground throughout the country.

Money and credit conditions continue easy. For the needs of import trade there are perhaps more credits available than it would be safe to grant. Banks, both in Sofia and in the provinces, are becoming more and more liberal in the extent of facilities and in the terms offered. Foreign exporters would therefore do well to follow more closely the position of their customers and to check the reports on their files at more frequent intervals. The British-Bulgarian Chamber of Commerce is specially organised to renew status reports and to undertake any investigation or study of conditions of any particular trade or firm in Bulgaria.

Financial Items.

The American dollar, the pound sterling, and the French franc, during the month of December have retained a steady rate of exchange of 139,674.45, and 544.30, respectively.

On December 7 the notes in circulation amounted to 4,325,204,635 leva, and on December 15 to 4,215,466,398 leva.

Receipts of the State Treasury for November show a decrease as compared with October and an increase as compared with the month of November, 1927. In November the regular receipts amounted to 677,515,000 leva, while in October they were 819,472,000 leva.

Receipts of the State Treasury from April to the end of November aggregate 4,775,091,000 leva, while during the same period of the last Budgetary year they amounted to 4,518,446,000 leva. There is consequently a decrease in the present Budgetary year of 256,625,000 leva.

The receipts of the Bulgarian State Railways show a slight decrease as compared with October, and an increase as compared with November, 1927.

Receipts of November were 110,200,000 leva, as compared with 129,100,000 leva for October and 100,410,000 leva for November, 1927.

Imports and Exports.

The trade balance during November is closed with a deficiency of 102,000,000 leva, while during October the deficiency amounted to only 20,000,000 leva. The exports during November amounted to 37,246 tons for 597,245,000 leva, and there were imported 39,310 tons of goods valued

at 699,410,000 leva, while during October there were exported 38,876 tons for 622,103,000 leva, and merchandise imported amounted to 37,808 tons for 641,851,000 leva.

The following table shows the most important exports in November as compared with those for October :—

	November.	October.
Wheat	1,548 ...	963 ...
Rye	3,960 ...	4,899 ...
Barley	2,950 ...	1,920 ...
Maize	4,359 ...	1,755 ...
Beans	173 ...	478 ...
Tobacco	2,325 ...	878 ...
Charcoal	978 ...	2,417 ...
Eggs	606 ...	1,317 ...
Fodder	690 ...	2,808 ...

The balance of trade during the first eleven months of 1928 is closed with a deficiency of 756,000,000 leva, while during the corresponding period of last year it was closed with a surplus of 391,000,000 leva.

The exports amounted to 340,026 tons for 5,844,488,000 leva, and the imports aggregated 329,969 tons for 6,600,129,000 leva, while during the corresponding period of last year there were exported 434,411 tons for 6,100,605,000 leva and the imports amounted to 287,615 tons for 5,709,415,000 leva. Exports have decreased by 94,385 tons for 256,177,000 leva, while imports have increased by 42,353 tons, valued at 890,713,000 leva.

The most important export items, expressed in tons, during the first eleven months of 1928, as compared with the same period of last year, are shown below :—

	1928. Tons.	1927. Tons.
Wheat	20,331 ...	37,554 ...
Rye	20,276 ...	17,686 ...
Barley	34,528 ...	74,230 ...
Maize	42,026 ...	120,246 ...
Tobacco	20,495 ...	23,744 ...
Eggs	10,402 ...	12,878 ...
Fowl (number)	624,980 ...	750,715 ...

Of the goods exported during the first eleven months of this year, the largest decrease as compared with the same period of last year is to be noticed in : Maize, 78,220 tons for 267,442,000 leva; barley, 39,710 tons for 258,458,000 leva; wheat, 17,222 tons for 139,302,000 leva; eggs, 1,876 tons for 94,750,000 leva, etc., while the only increase is in the export of cocoons by 393 tons for 131,697,000 leva.

New Issues of Capital in 1928.

According to official information the issue of shares during the first nine months of 1928 aggregated 255,125,000 leva, as against 199,442,000 leva during the same period of last year, the increase during 1928 being 55,683,000 leva.

TRADE OF THE PIRÆUS.

There was a considerable development in the export trade of the Piræus in November which is to be attributed in the main to the approach of the winter season. The exports amounted to 39,502 tons as compared with 29,451 tons in October, increases being recorded in the principal articles of export. On the other hand imports fell from 181,917 tons in October to 138,050 tons, which was due mainly to a large decrease in the imports of wheat.

The liquidators of the Burma Railways Company, which returned to State management as from January 1 last, have decided to make, on January 15, a payment at the rate of £110 per £100 stock, being a return of the capital in full, together with a first distribution of £10 per £100 stock on account of surplus assets.

It is reported that the contract for the supply of thirteen self-propelled steam rail cars for service on the Egyptian State Railways has been awarded to the Birmingham Railway Carriage and Wagon Co., Ltd., of Smethwick, with whom the Yorkshire Patent Steam Wagon Co., Ltd., of Hunslet, Leeds, will be associated as the builders of the engine and boiler units.

Near East Markets

PALESTINE ORANGE EXPORTS.

The Empire Marketing Board reports that between December 18 and the end of that month seven vessels carrying together 166,000 boxes of Jaffa oranges sailed for various United Kingdom ports; all are due to arrive by the middle of January. Total direct shipments to the United Kingdom up to December 30 amounted to 387,000 boxes, as compared with 425,000 boxes at the corresponding date last year. Direct shipments to the Continent amounted to 64,000 boxes, as compared with 45,000 boxes last year. Transshipments have totalled approximately 57,500 boxes, while 65,750 boxes have been despatched by rail via Kantara up to December 22. The total quantity consigned by sea and rail in the present season has therefore reached some 575,000 boxes.

NEW ROUMANIAN CUSTOMS TARIFF.

The new Roumanian Government has announced its intention to proceed immediately with the establishment of an import tariff which will be in harmony with the interests of all producing and consuming classes in the country. The Ministry of Industry and Commerce is now collecting information as to the wholesale and retail prices abroad of various industrial products of the principal manufacturing countries, and the export prices of these products, and as to the prices of the same products in Roumania. It is expected that the new Customs Tariff will be ready next spring.

THE IVORY MARKET IN 1928.

Messrs. Hale and Son, in their ivory report for 1928, state that there was a good demand throughout the year and prices on the whole fluctuated within a small compass, with the exception of billiard ball ivory, prices for which advanced in April and October. In the latter month, with strong competition, billiard ball pieces and centres advanced £20 to £30 per cwt. for the larger sizes. In April a fine lot of billiard ball centres sold at £180 per cwt., but this price was exceeded in October, when as much as £196 per cwt. was paid. The year opened quietly, and at the January auctions prices ruled in favour of buyers, soft tusks, which were in larger supply, declining £5 to £7 per cwt., hard being also rather lower. At the subsequent sales in April and July prices showed little change for both soft and hard, but in October soft was sometimes a little dearer and hard steady to £2 to £3 per cwt. lower.

The quantities catalogued have been rather less than those offered the preceding year, with the exception of West Coast African and Congo, which was rather in excess. The deliveries from the warehouse after each sale have been consistently good. The present stock is small, 54½ tons. The market is in a sound position, and we anticipate a good demand during the coming year. At the prices now ruling and with moderate supplies, we expect present values to be maintained.

Abyssinian.—6½ tons only were catalogued of this description throughout the year. These met a good demand, variations in prices being as in other soft descriptions.

Egyptian.—The quantity catalogued has been small at each sale and under that of the preceding year, viz., 23 tons against 32½ tons in 1927. As in other descriptions prices have fluctuated within narrow limits for both soft and hard. The principal imports have been the soft description. In January 5½ tons were catalogued. Soft was £5 to £7 per cwt. lower on the average, hard steady to £2 per cwt. lower, ball scrivellos £2 to £4 per cwt. lower, ordinary scrivellos rather higher. In April 4½ tons were offered. Soft was firm to £1 to £2 per cwt. higher, hard brought previous rates to a little easier, ball scrivellos were £5 to £10 per cwt. higher, soft scrivellos were steady, and hard dearer. In July 6 tons were catalogued. Soft was firm, occasionally a little dearer; hard, only a few lots were catalogued, which brought about previous rates; soft scrivellos were steady and hard firm; ball scrivellos were steady. In October 7 tons were offered. Soft large and medium tusks were firm to occasionally £2 to £3 per cwt. dearer. Hard were steady to £2 to £3 per cwt. lower. Soft scrivellos were £2 to £5 per cwt. higher and hard were much dearer. Ball scrivellos were £5 to £10 per cwt. higher.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Public Services.—The Sofia Municipality invites tenders for an installation for the supply of steam, water, bath, heating, ventilating, and laundry systems for the Municipal Bath, the buildings for which were recently erected. January 28.

EGYPT.

Aerial Ropeway.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of an aerial ropeway at Sollum. February 28. (D.O.T.)

Mail Bags, Etc.—The Egyptian Postal Administration invites tenders for the supply of approximately 46,300 mail, parcel, and letter bags and jute sacks as specified. March 11. (D.O.T.)

Clothing, Etc.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of: (a) Clothing and equipment; (b) tarbushes and tassels; (c) boots for guards required for the year 1929-1930. March 1.

Mild Steel Round Bars.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for mild steel round bars; steel files; hard drawn copper line wire; vacuum brake rubber fittings; baskets; zinc sheets steel equal angles; pitchpine wood; stationery articles; electrical wire and cable; zinc ingots.

Mild Steel Plates, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of steel, mild, plates, ordinary steel; mild, bar, angle and flat, rivets, bolts, and nuts required for the Government Workshops, Bulaq (January 9); crockery required for the Government Workshops, Bulaq, Cairo (January 14); and for the supply and erection of aerial wire ropeway at Sollum, February 28.

Fuel Wood, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of fuel wood to the Egyptian Army at Sollum, March 25; and for the supply of cocoa nut oil to the Ministry of War. March 27.

Sinking of Artesian Well, Etc.—The Egyptian Ministry of the Interior invites tenders for the sinking of an artesian well and the supply of centrifugal pumps, filters, etc. January 21. (D.O.T.)

Pumping Machinery.—The Egyptian Ministry of the Interior invites tenders for the supply of pumping machinery, filters, and accessories. January 31. (D.O.T.)

Cables and Transformers.—The Ministry of the Interior, Local Commissions Section, Cairo, invites tenders for the supply of transformer kiosks, electric cables, and accessories required for the extension of the electrical supply of Mit-Ghamr Power Station. January 27. (D.O.T.)

Disinfectants, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of disinfectants for medical and general purposes, required for the period of one year commencing from May 1, 1929, February 10; bedsteads, iron, required for the year 1929-1930, February 10; pure alcohol, medical brandy and rum, sherry wine and malaga wine, required for the period of one year commencing from May 1, 1929, February 10; dressings, cotton and mackintosh, required for the period of one year commencing from May 1, 1929, February 10; drugs, required for the period of one year commencing from May 1, 1929. February 17.

INDIA.

Metal Sleepers and Fittings.—The Railway Department, New Delhi, invites tenders for the supply of metal sleepers and fittings. January 30. (D.O.T.)

TURKEY.

Cotton Machinery.—A company is being formed in order to develop the cotton industry in Turkey. It is the intention to erect a large factory in the neighbourhood of Constantinople, principally for the weaving of "Cabots," and the necessary machinery is to be purchased abroad. (D.O.T.)

Crushing Machines.—A Turkish firm is desirous of purchasing machines for crushing and drying valonea acorns. (D.O.T.)

Motor Patrol Boats.—A report has been received from the Commercial Secretary at Constantinople (Colonel H. Woods, O.B.E.) as to the possible requirements of the Turkish Customs Administration with regard to motor patrol vessels. Further particulars can be obtained by interested British firms upon application to the Department of Overseas Trade. Reference No. A.X. 7207 should be quoted.

YUGOSLAVIA.

Copper Plates, Etc.—A firm in Sarajevo is desirous of receiving quotations from British firms for the supply of copper plates and discs of various diameters and thicknesses. (D.O.T.)

Mining Winches.—H.M. Consul at Sarajevo reports that a local firm is calling for tenders for the supply of two mining winches. January 23. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 2:—

Egyptian Futures.

Sakel Contract.—Although a fortnight has elapsed since our last report, this period has been much cut into by the holiday season, so that only eight trading sessions have to be commented upon herein. During the majority of these a very quiet tone has prevailed and unimportant price movements recorded; the tone, however, has been very steady, and in spite of the lack of outside interest some hedge selling of distant positions has been absorbed without affecting the level. Trade support has again been very moderate, and even the relative cheapness of the local stock has failed to attract business of other than retail proportions. Margins in the fine count section continue most unsatisfactory, and the majority of concerns still using Sakels are anxiously awaiting the marketing of the coming Sudan crop, which, it is hoped, will be offered at a favourable basis compared with the ruling prices demanded in Egypt. Alexandria continues to show a firm tone, Novembers especially being in demand; as the corresponding local month is freely offered, purchases can be effected here at 40 points discount with the overseas market. This appears an attractive basis to commence putting on the straddle, as plenty of opportunities should occur during the summer of reversing the operation at a considerably narrower difference. For the immediate future probably evenly balanced markets will be experienced with a continuation of the present restricted price movements in evidence. Should values, however, through any unforeseen reason, work to higher levels, we would recommend conservative commitments on the "short" side, as the position, both here and in Alexandria, appears to be over-bought.

Upper Contract.—We have experienced a series of quiet markets in this department since we last wrote, the majority of transactions again consisting of transfers by straddle interests of near holdings into the later summer months. Spot houses have taken advantage of the handsome premiums forced by the above operation to switch on their hedges. The heavy tenders anticipated to-day did not materialise, only 1,300 bales being declared.

Trade demand has been quiet, but spinners are beginning to show increasing interest in the local stock, as cotton can be purchased here below the basis demanded by shippers. American staple premiums appear to be hardening, and this should later help our contract, although for the immediate future values will probably be held in check by the weight of cotton still to pass into trade channels.

Egyptian Spot.

Rather quiet conditions have ruled in this department, and the sales have averaged just over 200 bales per diem for the eight business days which we are reviewing. Fresh features have been entirely absent, and values are practically identical with those ruling when last we wrote. Many mills of course close their books at the end of the year, and this has also contributed to the general atmosphere of calm which has recently been noticeable.

Sakel at about 11½d., 16½d./17½d., and "100 on" has received some attention, with here and there an odd inquiry for the Good to Fine cotton. The demand for Uppers at from 11½d. to 12½d. has been fairly well maintained, but business in the better qualities has been painfully slow in maturing.

The stock of Egyptian cotton in Liverpool on the 28th ult. was returned as 39,000 bales, a low figure for the time of the year. It is expected in some quarters here that this stock will be considerably augmented before the end of January by shipments of Upper for tendering purposes. To-day, the first tender day, 26 dockets appeared.

Pilion has been in fair request at from 13d. to 15d., and inquiries for the lower grades of Nahla cotton have also been received. Sudan Sakel has suffered from neglect, but a rising interest is being displayed in the New Crop, first shipments of which should arrive here next month.

C.i.f. business has been very quiet and forwardings to spinners for the week ending the 28th ult. were returned as 4,928 bales Egyptian and 1,670 bales Sudan. Estimated spot sales (eight days), 1,700 bales Egyptian and 400 bales Sudan. Quotations of Sakel unchanged, those of Upper and Pilion two points lower. F.G.F. Sakel to-day, 19.35d. F.G.F. Upper to-day, 12.20d. F.G.F. Pilion to-day, 12.83d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 27, state:—

Since our last report the futures market has only been open for three days, on account of the Christmas holidays, and price fluctuations have been very small. The week's summary of price movements is as follows:—Sakellaridis: January, 38.20 dollars, 0.04 dollars down; March, 38.83 dollars, 0.10 dollars up; May, 39.21 dollars, 0.10 dollars up; November, 39.16 dollars, 0.21 dollars up. Ashmouni: February, 23.09 dollars, 0.02 dollars up; April, 23.51 dollars, unchanged; June, 23.95 dollars, unchanged; October, 24.32 dollars, 0.02 dollars up.

Sakel.—During the three days on which we have been open this

week the market has been absolutely colourless, the business done being mainly confined to some professional transactions and transfers of January into March. The position on the whole remains about as described in our last week's report; the speculative long interest, finding itself already overloaded with contracts, is reluctant to engage itself further, and as, on the other hand, there is an absence of any serious selling, prices are more or less stabilised at about 38 dollars for January.

The latest news received from the Sudan as to the progress of the Gezira, Tokar, and Kassala crops is satisfactory, and unless the unexpected happens at the last moment the production should considerably exceed that of last year. In the present state of things, any new rise in Sakel prices seems to us very improbable; rather do we look for a reaction which will bring the market down to a level more in line with what spinners can afford to pay, and it will be the extent of their response which will regulate the course of prices for Sakel during the next few months.

The Sakel/Uppers straddle (March/April) this week stands at 1,532 points, against 1,522 points last week and 749 points at this time last year.

Uppers.—In this market also there is nothing new to report. The tone has, perhaps, been slightly firmer but without affecting prices. With the present very reasonable difference between Uppers and American, coupled with the persistence of a fairly good trade demand for Uppers, we cannot but have an optimistic outlook for prices of this variety.

The Ashmouni/American straddle (February/March) this week stands at 287 points, against 287 points last week and 773 points at this time last year.

At the third December tender, dockets for 3,000 kantars were issued, bringing the total figure of December tenders up to 12,000 kantars.

The week's receipts amount to 278,769 kantars, against exports 168,426 kantars; the stock in Alexandria stands at 3,554,978 kantars. The official figures of arrivals and exports for the period September 1 to December 19 are as follows:—Arrivals: Sakellaridis, 1,574,802 kantars; Ashmouni and Zagora, 2,977,239 kantars; Pilion, 302,770 kantars; Various, 222,959 kantars; Scarto, 57,000 kantars; total, 5,134,860 kantars. Exports: Sakellaridis, 916,403 kantars; Ash-

mouni and Zagora, 1,717,639 kantars; Pilion, 130,808 kantars; Various, 79,153 kantars; total, 2,844,003 kantars.

Spot.—This has been a short week due to the Christmas holidays, and Minet el Bassal has been very quiet. Sales for the three business days amount to about 6,300 bales, of which we estimate 1,900 bales Sakellaridis, 3,900 Ashmouni and Zagora, 300 bales Pilion, 100 bales White, and 100 bales Nahda.

Sakellaridis: Demand is very poor and only a small business has been done. Spot differences are generally unchanged.

Ashmouni and Zagora: Have met with a very mediocre demand and a poor turnover has resulted. Spot differences are without change.

Pilion: A small business has been done at last week's spot differences.

Other Varieties: A moderate business has been done in White and Nahda. Spot differences are unchanged for White and rather dearer for Nahda.

Up-country: Transactions in spot cotton have been negligible; on the other hand, there has been a certain amount of activity in new crop business. In some districts the preparation of the land for next crop has commenced.

The newspaper *Siassa* states (says a Cairo message) that the Egyptian Government is examining a proposal from Mr. Henry Ford that he should construct at his own expense a macadamised road, 250 kilometres (155 miles) long, anywhere in Egypt, and undertake its upkeep, in exchange for which the Government would allow Ford cars to enter Egypt free of duty. At present, pending the enforcement of the new tariff law in 1930, an eight per cent. *ad valorem* duty is paid on Ford cars.

REORGANISATION OF THE BULGARIAN RAILWAYS.

M. Boykoff, director-general of the Bulgarian Railways, in a statement made to the Press, stated that from the sum of £1,250,000 allocated from the proceeds of the recent loan for communications, the following among other material would be acquired for the railways:—20,287 tons of rails, 1,400 bridges, 59 passenger carriages, 74 goods trucks, and 46 vans. Further 30 million leva would be utilised for the needs of the ports. Tenders are to be invited shortly for the material.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for December was 64,430 tons.

The value of Yugoslavia's imports for the first ten months of the year was (in million dinars) 6,580, while the total for the exports was 5,233. Exports during the month of October totalled 161,054 tons, of the value of 778 million dinars, as against 143,055 tons and 723 million dinars in October, 1927.

Yugoslavia's sugar output for the current season is estimated at about 130,000 tons. Home consumption requires about 80,000 tons, so there will be a surplus of between 40,000 and 50,000 tons available for export.

Notes of the Week.

Reaction in Afghanistan.

The conservative forces in Afghanistan have proved too strong for King Amanullah, and he has had to admit defeat. The first news that he had come to an agreement with the Mullahs and Nobles for the withdrawal of most of his reforms suggested that Afghanistan could, after all, lay claim to having made sufficient progress to allow a Sovereign who had inaugurated his reform movement with such overwhelming zeal to retrace his steps by consent and retain his life and Throne. King Amanullah, however, decided that he could not trust his people to this extent; without waiting for pressure or worse, he has resigned the Throne in favour of his elder brother, Inayatullah Khan, and has left Kabul by aeroplane for Kandahar, where Queen Surriya has been since December. Thus ends for the present at least an interesting stage in the history of Afghanistan. Credit must be given to King Amanullah for having developed a zeal for reform in the midst of difficult surroundings, and it is a misfortune for his country that he did not display greater discretion in the attempt to lead his people along the path of progress. The visit to Turkey at the end of his tour in Europe last year was the immediate cause of his undoing, as it led him to mistake the outward trappings of reform for the real substance.

King Inayatullah.

If the arrangements made by King Amanullah before his hurried flight hold good, he will be succeeded by his eldest brother, Inayatullah Khan, whom he ousted from the succession ten years ago on the strength of his position as Governor of Kabul, with control of the army, at the time of the murder of Ameer Habibullah. From the fact that Inayatullah Khan accepted the usurpation and remained on good terms with his brother it may be inferred that he possesses a generous share of tact and adaptability, which may serve him in good stead in the present critical position. It is too early, however, for any outside observer to gauge the new course of events in Afghanistan. If the Mullahs and the Nobles, who have recovered their authority, are content to have on the Throne a Sovereign

who will accept their advice, the country may be spared a serious upheaval. That most of the ex-King's reforms will go by the board must be expected, but as they had not penetrated below the surface, the change will make no real difference. Under King Amanullah Afghanistan secured her independence, and her foreign relationships presented no special feature that will call for modification, whoever may be in power in Kabul. The past decade will at least have set the minds of progressive Afghans working in a sound direction, and, although the cause of reform may have experienced a setback, the real interests of the country, in view of the indiscreet attempt to force the pace, may not in the long run suffer from that circumstance.

The Soviet Contribution.

At first sight it might be doubted whether the Soviet *canard* that the revolt was stirred up by Colonel T. E. Lawrence was up to Moscow's best standard of intrigue. The statement was eagerly swallowed in Germany and France, but can hardly have made much impression in Afghanistan. It will have been resented by the people who were carrying out a successful revolt on their own, and it cannot have impressed King Amanullah, who will have had other means of determining what the British Government's attitude towards Afghanistan really is. When British policy is based wholly on the maintenance of peace, it is difficult to understand why disturbances on her Indian frontier should be to her advantage; moreover, if a conflagration had to be started on India's borders, it would be expected that someone more proficient in local dialects than Colonel Lawrence would have been selected for the sinister purpose. The British Government, however, has paid Soviet intrigue the compliment of discovering Colonel Lawrence, in the person of Aircraftsman Shaw, still at his post at the moment when he was reported to be leading the Shinwaris, and of sending him home to England. In the meantime Sirdar Mahomed Omar Khan, an exiled Afghan prince on parole in India, has left his home in Allahabad and is missing. It would be quite up to Moscow's standard to spread a report about an alleged

British agent, if it were anxious to cover its own tracks in another direction. Such chickens, however, have a way of coming home to roost. Afghanistan was, perhaps, the last country in the world which still made a parade of retaining faith in Soviet Russia, and it will be of interest to watch how the recent events have affected Moscow's prestige in Kabul.

The Yugoslav Dictatorship.

The province of a Dictatorship being to dictate, the new Government in Yugoslavia has lost no time in requiring, under drastic pains and penalties, everyone in the country to mind his own business and to get on with his work. Up to the present General Zhivkovitch's Ministry has not found time for much more than the necessary precautions to ensure that there shall be no interference with its self-imposed task. It has been made clear, however, that this task is, in the first place, to reform the finances, legislation and administration of the country, and only afterwards, when this work is done, to deal with the constitutional future of the Southern Slav Kingdom. There can be little doubt that this is the right way to set about a complicated problem. From the negotiations which preceded the *coup d'état* it would appear that the Croat proposals were rejected because they would have entailed a confederation of States, rather than a federal system. If importance attaches to this distinction, it is evident that the Croats will have to modify their views before a constitutional régime can be restored. Their proposals, we may infer, took on such a sweeping character as a result of Croatia's unpleasant experience of Serb administration. Now, if that administration under the guidance of the Dictatorship is to be reformed out of all recognition, the Croats will not need to detach themselves so completely from it. The duty of the new Government, therefore, is shown to be so to conduct the administration of the country during the term of the Dictatorship that it shall be regarded no longer as Serb, but as Yugoslav. To this end there must be a radical departure from the policy identified with the name Serb, which was inaugurated by the forcible absorption of Montenegro and went on to practise terrorism in Macedonia. If it is to carry out its task thoroughly, the Dictatorship should aim not at forcing the different peoples to forget that they are Croats, Serbs, Montenegrins, Slovenes, and so on, but at inspiring them with the conviction that Yugoslavia supplies a higher idea and ideal. For the time being all particularist tendencies must be submerged to enable the Dictatorship to show what its conception of Yugoslavia and Yugoslav administration entails.

A Contrast in Dictatorships.

In every country there are well-meaning people who are convinced that only when they are in office can the State prosper and the people have the Government that it needs. This is the attitude of the inner circle of the Egyptian Wafd to-day, and so strongly do the members hold to the belief, that they thought it worth while to send the General Secretary of the Wafd to England to convince the British public of the truth of it. In matters of this kind, however, the people of Great Britain are inclined to adopt a philosophic point of view. They are accustomed to changes of Government, and experience has taught them in their own case that there is generally some good point in every Government, if it is sought for carefully. There are no signs at present that the Wafd leaders have started to look for the good points of Mahmoud Pasha's Government; but they will now have opportunity to compare a dictatorship as it is understood in Yugoslavia and the régime that they call a dictatorship in Egypt. In both countries the parliamentary system had run riot to the prejudice of good government; but whereas in Yugoslavia the trouble merely concerned two or more parties of the State, in Egypt the attitude of the parliamentary majority was in danger of provoking a serious quarrel with another country. The new Ministry in each case has decided that the suspension of Parliament is an essential basis for starting a clean and progressive administration. In matters of detail, however, Egypt has everything in her favour as compared with Yugoslavia, and the measures adopted by the two Governments are instructive. In the Balkan State the new order has at once made itself felt in every walk in life; the whole conduct of public affairs has been modified. In Egypt a much milder régime exists. Newspapers may be warned or suspended for offences actually committed; in Yugoslavia they have been suppressed for having political views of their own. The Egyptian Lawyers' Association holds its annual meeting in Cairo to "protest vehemently against the *coup d'état* carried out by the present Ministry and against the suspension of the constitutional régime," and elects only Wafdists to its Council, thereby proving that the Government makes no attempt to interfere with the holding of personal opinions or with matters that have no bearing on public order and the safety of the State. In Yugoslavia the penalty for any act directed against the new régime, as well as for any form of propaganda in favour of a change of régime, is death. It is well for Egypt that the new order could count on the whole-hearted support of the nation and did not feel called upon to set such a high value as the Yugoslav Dictatorship did on the opposition that it was likely to encounter from the displaced few.

Egypt and the Nile Waters.

In the ordered progress to which Egypt now appears to have settled down under the new régime there would be no occasion for outside observers to enter into such political discussions as are still continued in the country. As a result, however, of the changed attitude of the Wafd, which, after holding the view that Great Britain must not be allowed to concern herself in Egyptian affairs, is now seeking British intervention in the purely domestic matter of the form of government adopted by the country, and has even started a paper in England in order to propagate Wafdist denunciations of the present régime, it seems right that the average British opinion on Egyptian affairs of public interest should be made known. There is, after all, no clash of principles in Egypt, but merely disagreement as to the methods to be employed to gain an end which both parties have in common. Believing politics to be of paramount importance and good administration a secondary consideration, the Wafd would have allowed the deadlock in Anglo-Egyptian affairs to occupy its attention indefinitely to the exclusion of the most pressing needs of the country. It was apparently willing that Parliament should continue to turn out laws by the score—ninety-nine in three months was its last

record—regardless of their subsequent fate, and it considered this often purposeless, where not actually mischievous, activity as a special virtue. Thus it happens that one of the first duties of the new régime is to carry into effect laws passed by its predecessors, but left stranded, because the details of administration and administrative efficiency were removed from the limelight. Nearly three years ago—in March, 1926—the Nile Waters Commission presented its findings to the Egyptian Government on the question of the distribution of Nile water as between Egypt and the Sudan. Owing to the rôle allotted to the Sudan in the Wafd clamour against Great Britain, no Government dependent on Wafd support dared to accept formally these findings, but raised no objection to the findings being acted upon, provided that it was spared the onus of ratifying them. Accordingly, Nile water has been distributed on the proposed basis, as far as it has applied, and no question has been raised. This unbusinesslike proceeding, however, was unsatisfactory and could not be continued indefinitely, if the Gebel Aulia scheme was to be taken in hand. As part of its programme of public works, with special reference to irrigation, Mahmoud Pasha's Government is now able to take up the question of the report of the Nile Water Commission on its merits—a course that was impossible during the Wafd's dominance over Parliament.

Education in the Sudan.

The publication of the Report and Accounts of the Sudan Memorial College at Khartoum serves to call attention to one of the most important features of British rule over backward countries—the education of the native. Conditions in the Sudan are favourable to the problem, in so far as it has been approached with a clean slate and with the experience gained in many other countries as a guide. A wise principle that has been laid down, one which, it is to be hoped, will be adhered to, in spite of increasing difficulties, is that native education should not be allowed to outstrip the capacity of the country to provide employment for the educated product. In the Report for the year 1927 it is stated that only 53 boys were available for Government employment that year, although 129 were required. This year, however, the scheme for the expansion of the College comes into force, and the numbers will have been increased from 370 to about 500. The annual output of the full Secondary course is expected to be 90, and steps are being taken to increase this figure to 120. Even these figures suggest that care is still exercised in preventing any too rapid output of natives who, having passed through the Gordon College course, are unlikely to find any immediate demand for their services. That the danger exists is indicated by the passage in the Report which states that at the end of 1927 there would be fifty boys leaving primary schools who would not be able to enter the College or to find employment in less important posts in the Government. Almost inevitably the goal of any native who goes to school, certainly of everyone who enters Gordon College, seems to be to secure a Government post. The cure for this idea must come with the opening up of the country by non-official enterprises, the most striking instance of which in the Sudan is provided by the Gezira scheme. Side by side with Gordon College, with its engineering, scientific, accountancy, clerical and teachers' sections, the Sudan has its Kitchener Memorial School for Medicine and the Wellcome Tropical Research Laboratories; there is room for an institution to promote more directly the spread of agricultural knowledge among peoples who are dependent on the soil for their livelihood.

INDIAN NOTES.

Sir Basil Blackett's New Post.

Although the two latest examples are not, of course, upon exactly the same plane, the nomination of Sir Basil

Blackett as Chairman of the Cable Communications Company, which will effect the merger of cable and wireless interests, adds another name to the already long list of those who have found reward in the City of London for conspicuously successful service in India. In the proposed appointment—although approved by the Imperial Government, with the concurrence of the Dominion authorities, the nomination has yet to receive the endorsement of the Marconi interests—the former Finance Member has undoubtedly found a task worthy of his steel. Whether the selection will allay the misgivings of the Legislative Assembly, which fears that the consolidation of interests will be more likely to enhance than reduce the existing rates, so far as India is concerned, has yet to be seen. That Sir Basil, who told a Press representative that the appointment was particularly welcome to him as it would enable him to maintain his close connexion with India, has himself little fear upon that score is evident from his description of the function of the new body. "An inter-Imperial public utility service is how, I think," he added, "the function of the new company can best be described. It is designed to secure to the public at the cheapest possible rates both the secrecy and other advantages claimed for the cables and the cheaper rates at which wireless services can be supplied to the public, having regard to the smaller amount of capital which is believed to be required to be sunk in providing such services as compared with the capital required for cables." "The whole scheme," he concluded, "is an earnest of the determination of the British Empire to approach its modern problems in a spirit of solidarity and with vision, and to apply the most recent discoveries of science to the service of the Empire as a unit."

A New Departure.

When early in 1928 the Government of India announced its intention of sending a small Trade Mission to Africa and the Near East to explore the possibilities of the markets in those territories for the products of the Indian cotton mills, we welcomed the proposal on several grounds. The development of the export trade is a matter of as much importance to the Bombay industry as to our staple Lancashire industry, and the collection of adequate and first-hand information respecting actual market conditions is obviously the first essential to progress. The Mission, consisting of the very capable Director-General of Commercial Intelligence and the Secretary of the Bombay Millowners' Association, together with a representative of one of the leading firms in the trade, was admirably chosen for the purpose in view. After visiting Bushire, Basrah and Baghdad, the Mission proceeded by the desert route to Palestine, Syria, Constantinople and Egypt. A comprehensive survey of the prospects in the Union of South Africa and in the East African Dependencies completed a programme, originally intended to include also visits to Burma, the Straits Settlements, the Dutch East Indies and Ceylon. According to the Mission's report, to which our Calcutta Correspondent refers in his letter this week, the Levant and South Africa offer the greatest possibilities for development. At the same time Dr. Meek and Mr. Maloney point out several directions in which the existing trade connexions with Persia, Iraq and East Africa—the principal markets for the products of the Bombay mill industry—can be improved and strengthened. Of necessity a considerable part of the report is devoted to particular ranges and styles of cloth in which Indian competition is likely to prove most effective, but the formation of a joint selling syndicate is also proposed. Hitherto no serious organised effort has been made to cater for the export trade, and the future of the proposed combine, which it is suggested should have a paid-up capital of Rs. 10 lakhs, with guaranteed credits up to Rs. 50 lakhs, will be watched with interest in this country.

YUGOSLAVIA'S QUO VADUNT?

The lapse of little more than a week is not sufficient to remove the big question-mark that the establishment of a Dictatorship has written across the affairs of Yugoslavia. As was to be expected from the fact that General Zhivkovitch is the power behind the Throne, there are to be no half-measures in connexion with the introduction of the new order. The law for the Defence of the Realm is severe and comprehensive. The death penalty is imposed for any act directed against the existing régime, as well as for any attempt, whether organised in Yugoslavia or abroad, to change the régime. Persons who have knowledge of any such attempt and do not inform the authorities are made liable to twenty years' imprisonment. By imposing a ban on any organisation of a "confessional or tribal" character, the new Law aimed a blow at several political parties and at their Press organs. The Central Committee of the Radical Party at once suppressed its own paper, but Zagreb newspapers found themselves within the clutches of the Law for publishing Dr. Matchek's denial that the new Cabinet had the approval of the Croats, and the day's issue was confiscated. The Peasant-Democrat Coalition has tried to assert its right to exist on the ground that it is not a regional or chauvinistic organisation, but a Yugoslav party comprising Serbs, Croats and Slovenes. This line of reasoning, however, has been countered by an order that all political parties must present to the police an application for authorisation, and that any party without such authorisation is illegal. If opinion abroad is at a loss to gauge the full inwardness of the Dictatorship, the Yugoslav people would seem to be equally in the dark. The first flood of endorsement and congratulation was impressive and evidently sincere; second thoughts have suggested reservations, which in the case of Croatia would seem to amount to complete disillusionment. The suspension of the hated Vidovdan Constitution pointed to the King's intervention as an act wholly in favour of the Croat point of view, and Croatia hastened to congratulate itself and King Alexander. Things, however, are not to move as quickly as Zagreb imagined, and the question arises whether Croats and other sections of the Yugoslav people will be wise enough to suspend judgment and refrain from kicking against the pricks until the new Government has had more time to make its purpose clear.

The severity of a dictatorship is usually proportionate to the opposition that it encounters. King Alexander and his advisers, however, were resolved to take no risks and did not wait to see how their action would be received. Their plans were clearly made with a view to coping with all emergencies, and it may be that the warm support that the *coup d'état* secured at the outset will have served, as far as the Yugoslav people are concerned, to throw the stern character of the Dictatorship into stronger relief. From the smoothness and rapidity with which the new

order was established it is evident that the details had been well thought out and preparations carefully made, and we must conclude that the Dictatorship has other objects in view than the ending of a parliamentary deadlock. To judge from the measures so far taken, King Alexander and his advisers must have argued that the state of Yugoslavia was far more rotten than was implied by the mere failure of Serbs and Croats to co-operate in the Skupshtina. Their purpose would seem to be to overhaul the whole administration, which, under the party strife and political jobbery that have passed in Yugoslavia as government during the last ten years, has been a reproach to the country. In view, therefore, of the lengths to which political hostilities had been carried, there may be something to be said for a drastic suppression of every form of political activity; for if any loophole were left, the politician and the Press could be relied upon to make the most of it. Under the terms of the law for the Defence of the Realm the stage is thus cleared for the reformers; politics have been removed out of the way, and the lime-light can be focussed on the improvement of the administration. The task is necessarily a big one, as the evil habits of the last decade have sunk deep into the body politic, and the Dictatorship cannot well be blamed for refusing to fix a time-limit to its operations.

Before any sound opinion can be passed on the merits or demerits of the Yugoslav Dictatorship more time must be allowed to King Alexander and his Ministers to prove themselves. So far, inevitably, the repressive acts of the Government have been prominent, and, if there is a Serbian ring about these, credit must be given to those in authority for knowing better with what they have to deal than the outside observer does. In his Proclamation to his people King Alexander identified himself with them as against the politicians who had subordinated the interests and well-being of the country to their own selfish ends. The people, therefore, may be expected to watch closely how far the policy of the Dictatorship continues to distinguish between the rank and file of the nation and a comparatively small section represented by the inner circles of political clubs. The distinction may be hard to maintain in the early stages when it is a question of drawing the fangs of the political leaders and trying to find a dividing line between their hangers-on and those of the Yugoslav people who would prefer to be left to go about their own business without being drawn into the vortex of party politics. Some idea of the problem with which genuine reformers in Yugoslavia have to cope may be found from the fact that under the political system hitherto in vogue even the pettiest business affair of a citizen in a remote corner of the country may have no chance of being carried through, unless he undertakes a journey to Belgrade and dances attendance on Members of Parliament and officials. If, therefore, the enthusiasm which the change of Government first evoked is to be maintained or rekindled, no time must be lost in indicating to the country the constructive policy that it is proposed to introduce. The person of the Sovereign, it may be supposed, will be directly associated with every act that is done under his name. King Alexander's responsibility, therefore, is great, and it will devolve on him to see that his agents do not allow the exercise of power to obscure their view of the end that he has undertaken to achieve. That end is threefold, the unity of the country, good government and progress. All these are possible while the nation is held in subjection, but unity is of little value, unless it is based on the free will of the people. There has been abundant evidence that the Vidovdan Constitution would not work, and it has had to be forcibly abrogated, because successive Belgrade Governments refuse to modify it. A federal system of government yet remains to be tried, and there is no reason why it should not prove successful, for it promises to promote the unity that the Vidovdan Constitution could not supply. In the meantime the Dictatorship has it in its power to lay well the foundations of good government and material progress.

*The Near and Middle East

From Our Own Correspondents.

Belgrade, January 7.

The Coup d'Etat.

The crisis begun four days before the Orthodox Christmas was ended with a speed and in a manner which surprised no one more than the very politicians who began it.

Dr. Matchek and M. Pribitchevitch, the Zagreb leaders, came to Belgrade at the King's invitation to confer on the matter of the settlement, not only of this particular crisis, but also of the longstanding dispute between Belgrade and Zagreb. They advised the King that no solution was possible without the dissolution of the present Skupshtina, the radical revision of the Vidovdan Constitution and the appointment of a non-party Government to conduct free elections for the Constituent Assembly. Dr. Matchek's suggestions for the revision of the Constitution would have made Yugoslavia a replica of the old Dual Monarchy, Belgrade and Zagreb being joined only in a personal union. M. Slobodan Yovanovitch, the well known Professor of History and Constitutional Law, was called to the Palace on Saturday afternoon to give an opinion on the legality of Dr. Matchek's proposals, and declared that they would create not a federal State but a confederation of States. The leaders of all other political parties in the State absolutely refused to accept the Zagreb leaders' proposals.

Belgrade was excited and uneasy. Among the journalists constantly assembled before the Presidency of the Government, whence the Palace gates could also be watched, rumours were spread that the Four-Party Coalition was to be resurrected, that a three-party one was to be formed, that a Civil Service Government would be formed under General Hajitch, or that the solution was to be postponed until after the Orthodox Christmas. But no hint of the truth was received until in the evening when a statement was issued from the Palace to the effect that the consultations just completed showed complete incompatibility of views between the various parties and groups, and differences which even extended to questions of State organisation. "Therefore it is impossible to find any parliamentary solution which would guarantee the complete unity of the nation and the State."

The most amazing thing about what immediately followed was the complete secrecy with which it was all planned and carried through. It was obvious to all assembled at the gates that new Ministers were arriving at the Palace, that priests had been called in to administer the oath, that a new Government had been formed, but for hours after its formation no one outside knew its exact composition. Still less were they prepared for the King's Proclamation posted everywhere throughout the city and sent by telegram to all *Veliki Jupani* and other local officials and by special courier into the most remote parts of the country, early in the morning of Christmas Eve. The Proclamation, as is well known throughout

Europe now, annulled the Vidovdan Constitution, and placed all power, legislative and executive, in the hands of the King. It explained in a detailed and well-worded statement the reasons which made this step inevitable, the growth of corruption, the subjugating of national interests to personal, party or tribal interests, the failure of Parliament to accomplish even a tithe of the urgent work demanded of it during the last ten years. It promised the speedy creation of those institutions and that organisation of the State best suited to the needs of the nation.

The New Ministry.

This Proclamation was followed immediately by the publication of the list of members of the new Government led by General Petar Zhivkovitch, Commandant of the King's Guard, a shrewd, intelligent, energetic officer with a deep sense of duty and a great love for King Alexander. The other members were influential public men not too deeply involved in the corruption which had embroiled so many of their colleagues in former Governments, and experts appointed for their special knowledge. The new Minister of Finance, for example, is Dr. Shvrlyuga, a Croat who was President of the Zagreb Bourse and Vice-President of the newly formed Yugoslav Union Bank, which is closely connected with various Austrian and British financial houses. The new Minister of Agriculture is a Croat, Dr. Frangesh, who was Professor of Agriculture in Zagreb University, while the Minister of Forests and Mines is M. Lazar Radivoyevitch, who, as President of the Parliamentary Commission of Inquiry, showed up the corruption which had been practised in his department by seven different Ministers of different parties and tribes.

Shortly afterwards new laws were promulgated by Royal Decree modifying the previous laws dealing with the King's powers, the Defence of the Realm, the Press and other matters. These gave the Government complete and absolute power, and made it possible for all parties whose programmes aimed at changing the present system of government or whose names indicated a tribal or religious basis to be suppressed, and placed the Press under the complete control of the police. Later new laws were published bringing the Law Courts under the direct control of the Government, establishing a special Supreme Court to deal with certain offences under the Defence of the Realm Act, reorganising the State Finance Control Committee, and so on.

The Reception in Croatia.

In Zagreb the news that the hated Constitution was annulled, the "blood-stained" Skupshtina dissolved, and a non-party Government formed, was received with greatest enthusiasm. The list of Ministers and the new Defence of the Realm Act was not known when Dr. Matchek declared himself delighted with the change which gave the Croats all they had agitated for. Liking the old Constitution to a waistcoat which had been incorrectly buttoned, he said: "The waistcoat is now unbuttoned. It remains only to button it up correctly." The next day, when the list of new Ministers was known, he is said to have expressed a certain amount of disbelief in the non-political nature of the Government owing to the inclusion of Dr. Koroshetz, M. Ouzounovitch, M. Maximovitch and M. Marinkovitch, well-known party politicians. The mass of the Zagreb people remained enthusiastic, claiming that the change was essential and that the new laws, however they might affect the political party to which they belonged, were necessary to give the Government the power essential for the carrying out of its great aims, a clean sweep of the old corrupt system, and the building up of a new Constitution, guaranteeing equality of citizenship in all parts of the country.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

The Government's Plans.

The Government's plans include the unification of the laws throughout the country, the gradual unification of administration and, when the machinery necessary to its smooth working has been prepared, the building up of a new Constitution. It is suggested that the new Constitution may inaugurate a system of government by four bodies, a Parliament, Senate, Economic Council, and a body of experts for drafting laws on matters decided upon by the Parliament. But it is insisted that until the Government's programme of unification and purification has been completed, and that means two or three years at least, the present régime will remain. It is said that a council of experts to investigate economic matters may immediately be formed and that gradual steps will be made towards the unification of the State; for example, the two districts of Slovenia may first of all be united under a governor who may take the rank of Minister as in Roumania.

The Government asks, however, that it should be judged not by political theories, not by the statements it may make nor the programmes it may produce, but by the actual work that it accomplishes. In regard to foreign policy it is generally accepted that the appointment of M. Marinkovich as Minister of Foreign Affairs, was intended to show that the new Government would continue that policy of peace which was inaugurated by the ratification of the Nettuno Conventions.

Cairo, January 5.

The Ramleh Railway Dispute.

On New Year's Day the Ramleh Railway dispute entered upon a new phase. The Egyptian State Railways administratively took possession of the lines and the rolling stock and assumed responsibility for running the system for account of the Alexandria Municipality. It may be useful to recapitulate the history of this dispute, which has existed for nearly ten years and has aroused considerable local attention.

The Alexandria and Ramleh Railway Company exploit the tram service to Ramleh, the most important residential suburb of Alexandria, under a concession granted in 1860 by the Government, but transferred by it in 1919 to the Alexandria Municipality. Under that concession the State had no participation in the profits—which is contrary to custom. To rectify this the Government, taking advantage of the terms of the concession, which, while fixing no time limit for the concession, gave the Government the right to cancel it at any moment on payment of an indemnity, recently ordered the Municipality to cancel the concession and call for tenders for the exploitation of the line on a profit sharing basis. Tenders were in due course received, but the Government could come to no decision owing to the political and personal intrigues which intervened. More recently still the Government called in Mr. Spencer, General Manager of London United Tramways, to report on the question. His report has been received, but in the meantime the Government decided to take over the line itself on January 1, 1929, and ordered the Municipality to advise the Company to this effect. The Company protested that this could not be done until

the question of compensation had been settled and brought the present case to test the Government's right.

On December 29 last the Alexandria Mixed Court of First Instance decided that the Mixed Tribunals have no jurisdiction, as the Municipality's decision is an administrative act taken in accordance with law. The Company has, of course, lodged an appeal, but in the meantime the Government has put into execution its decision to take over and exploit the line pending a call for new tenders and the granting of a new concession to the applicant who offers the most advantageous terms. But before tenders can be called for, the amount of compensation due to the Company must be settled, and this may take some time and may lead to further litigation.

This case has brought into strong relief the serious situation resulting from the application of administrative law in Egypt and has come, in fact, as an opportune warning to the Powers on the eve of the proposed reforms in the Mixed Tribunals. The latter could not do otherwise than decide within the limits of the competence allowed them by the "règlements." But as things stand in consequence, these Courts are no longer the complete barrier against arbitrary administrative acts that they were thought to constitute.

Incidentally, it is interesting to note that this case has taken but barely six weeks from the first issue of the writ to the Court's judgment. This is a striking contrast with the average time taken to obtain a decision in the lower courts, which is in the neighbourhood of six months, and indicates what can be done if the Courts and parties show diligence. There is no doubt that a good deal of the dissatisfaction felt in commercial circles in regard to the delays in the Mixed Tribunals could be avoided if the Courts and Bar decided, as in this case, to put an end to the dilatory tactics which are a characteristic of Mixed Court procedure.

The Egyptian Nationality Law.

The new law on Egyptian nationality has not yet been promulgated, although it was officially stated, six weeks ago, that its signature by the King was imminent. I understand that some important questions connected with the Mandated Territories, Cyprus, and the Dodecanese have arisen, and that the delay is due to the need to consider the effect the new law would have in respect to those areas.

The Swiss Commercial Treaty.

The *Journal Officiel* contains the text of the commercial Treaty concluded by Egypt with Switzerland. The Treaty accords to all products, with the exception of leaf-tobacco, of Switzerland and of the Principality of Liechtenstein, so long as it remains bound to the Swiss Federation, the most-favoured-nation treatment. The Treaty can be denounced by either party on three months' notice being given. Switzerland gains no economic advantage from this Treaty, which merely confirms the treatment that that country has hitherto enjoyed under the French commercial convention. It is not clear why at this practical juncture, when the Customs tariff is on the eve of radical reform, Switzerland should have sought to have a commercial convention of her own with Egypt, but there is reason to believe that it forms part of the project, long

cherished by Berne, of establishing direct diplomatic relations with Cairo.

Absent Guest Dinner.

For the sixth year in succession what is known as the Absent Guest Dinner was held on December 28 at the Anglo-American Y.M.C.A. with the High Commissioner in the Chair. The dinner, which consists of lentil soup, bread and cheese and water, is held in order to provide funds for a meal for a large number of destitute persons in the East End of London, the difference between the cost of the Cairo dinner and the amount paid for his ticket by each diner going to meet the cost of the London meal which is organised by old members of the Cairo Y.M.C.A., who act as waiters. Over 130 guests sat down in Cairo and simultaneously some 350 destitute folk assembled for their meal in the Church Army's Hall at Lambeth. Speeches were delivered by Archdeacon Swann, and Lord Lloyd, and the evening ended with an excellent amateur concert. It was announced that after the cost of the Cairo-London dinners had been met there would remain a balance, which will be used as a fund to help British subjects in Egypt in need of financial assistance.

Jerusalem, January 3.

Peace Work in Jerusalem.

A tolerably accurate gauge of the peace of Palestine is an abundance of news about lack of peace in the Arabian Desert. The reason is simple. Jerusalem's sanctity produces an exaggerated crop of press correspondents, professional and amateur, who are called upon to justify their existence somehow, and few days pass without the local Press recording some real or invented incident beyond Trans-Jordan which, with slight adaptation, responds to the western newspaper-readers' appetite for more "sheikh stuff."

The actual news from Palestine for the last few months boils down to very little more than the Wailing Wall episode and its aftermath—a small episode with a terrific aftermath (which is the essence of things Palestinian); the arrival of a new High Commissioner; the transfer of a local Hebrew daily paper into the hands of the "Revisionists"; an attempted emulation of Mustapha Kemal Pasha and the Latin alphabet; and the redemption of Tel Aviv from the power of a Labour municipality.

The Wailing Wall affair now remains in a condition "awaiting solution." The Jews disliked the "White Paper" intensely and, generally speaking, feel that they have received an undeserved and unsympathetic rebuff. The Muslims have strengthened their position by proving their own direct and "tangible" religious interest in the actual Wailing Wall site, and its specifically Muslim sanctity arising out of *al-Burak* (the strange animal on which the Prophet rode from Mecca to the Aksa Mosque; there is an interesting picture of it in Sir Thomas Arnold's new book on Muslim paintings); and by making it the station of a Muezzin. The Muslims and the Jewish authorities are busily engaged in putting together whatever historical and documentary evidence there exists concerning Jewish access to the Wall.

The High Commissioner.

Sir John Chancellor, the new High Commissioner for Palestine, duly arrived on December 6, since when he has been busy visiting various points in the country and receiving the inevitable delegations representing the multitudinous interests of the inhabitants. So far he has escaped blame from any side, and shown a quick interest and comprehension of the problems which it is innocently supposed that he can solve.

"Revisionism."

The *Doar ha-Yom* is a daily Hebrew morning paper which used to cater, in the main, for the "Palestine Jew" as opposed to the new type of European settler. It cultivated the interests of the Sefardi Jews and likewise voiced the views of the second generation of Palestinian Jews, who had borne the distinctly heavy burdens of practical Zionist achievement within Palestine before the days of the Balfour Declaration and before the days of "Zionism made easy"—the era of organised and heavy subsidising of Palestinian Jewish effort. It is a generation which felt itself isolated from the post-War Zionists and somewhat neglected in the newer and distinctly easier scheme of things when, in their opinion, theirs were the past experience and proved enthusiasm and labours which were better fitted to build up the new Palestine than the more theoretical and idealistic enthusiasm of the newcomers. And now this paper has passed into the hands of the "Revisionists" led by Mr. Vladimir Jabotinsky, who is also its new editor. "Revisionism" is a movement "made in Europe," an attempt to hark back to the "maximum interpretation of the Balfour Declaration," and an attempt to instil into Zionists a contempt for the half-measures and compromises of present Zionist leadership. One good result of publishing an organ of the movement from the very centre of the Zionist experiment may be that the Revisionist leaders will come to see with their own eyes that the present "backsliding Zionism" is a measure of necessity, temporary or permanent, arising out of actual conditions within the country, and argues neither ill-will on the part of British officials nor a feebleness of will in the responsible local Jewish leaders.

Hebrew in Latin Characters.

Mr. Ittamar Ben Avi—the son of Ben Yehudah, the creator of modern spoken Hebrew—who had edited the *Doar ha-Yom* since its appearance some ten years ago, has turned his activities to the English weekly paper, *The Palestine Weekly*; and to this he has had the courage to add a Hebrew supplement in Latin characters. He believes that the marked repugnance of the local Gentile to learn Hebrew will thus speedily be overcome, and that, like Turkish, Hebrew will come to rank among the less impossible of modern civilized languages, and so serve to give the Gentile world a glimpse of the great cultural creations that shall arise out of the new spiritual centre of Jewry. Naturally there is much scepticism.

Tel-Aviv.

As was to be expected, the higher property qualification newly imposed by the Government on the municipal voters of the Tel-Aviv township has resulted in the defeat of the local Labour group, which has managed or mismanaged Tel-Aviv's affairs during the past two years. The very nominal property qualification which had been in force before Government intervention enabled "the left" to control quite a half of the votes and to dominate the split "centre" and "right" parties. As a result of the elections of three days ago "the left" has gained only a third of the seats in the municipality; so that Tel-Aviv will again become "bourgeois" and "reactionary," and will again have as its Mayor, Mr. Dizengoff, the "Maker of Tel-Aviv"; and gradually, perhaps, shake off the reproach of bankruptcy which Mr. Amery so publicly cast upon this "first purely Hebrew town since the Temple was destroyed!"

Sofia, Delayed.

A Royal Warning.

On the presentation of the Reply to the Speech from the Throne it is the King's custom to deliver to the parliamentary delegation a speech which, as it does not carry with it the Government's endorsement, constitutes a pronouncement of the personal opinion of the Head of the State in the presence of the representatives of the people. As a rule these pronouncements, which afford the Sovereign an opportunity of saying what he thinks of the situation, of making useful statements or of formulating suggestions full of good sense for the economic or political development of the country, have hitherto been characterised by a note of reserve, being restricted to the expression of a few generalities and a few paraphrases of the principal ideas actually embodied in Parliament's reply to the King's Speech. On the occasion of the ceremony which took place a week ago, however, King Boris made a departure from his usual practice and in the presence of the deputation from the *Sobranie* uttered a warning which has not failed to produce an effect. The innovation served to confirm the impression created at the time of the last Ministerial crisis, that the King is abandoning the reserve that he has imposed upon himself for the first decade of his reign, which has been marked by great upheavals as a result of a disastrous war. Without any apparent connexion with the ceremony of the submission of the Reply to the Speech from the Throne or with the Reply itself, King Boris recalled the consultations which he had had in September with the leaders of all the political parties, and emphasised the fact that he had found in all of them without exception "side by side with their patriotism an exalted appreciation of the fact that the real salutary way for the success and the peaceful development of the country is that laid down by our fundamental law." King Boris went on to say: "Let us congratulate ourselves, then, that we are moving in this sense with an ever greater assurance and that the precepts of the Constitution and the traditions of parliamentarism are becoming more and more the fundamental directing principles of our political life. I do not doubt that the representatives of the nation, who are in direct touch with the people, will encourage them in this spirit and will support them in their noble aspiration towards economic progress and cultural achievement, by means of which they will forge for the best their future destinies."

The King's remarks, which were certainly not made without intention and for that reason are the more striking, have provoked very varied commentaries. They have been subjected to a most minute analysis with a view to discovering the hidden meaning and also to determine to whom they were in particular directed. According as the commentators belong to the Government or to the Opposition, they endeavour to find confirmation for their point of view, the Opposition being convinced that the King's speech was in the nature of a reproof to the Government for not observing scrupulously the provisions of the Constitution, the Government supporters retorting that the reproof, if reproof were intended, was directed rather against certain parties of the Opposition, who in their recent deliberations have shown that they were ready to sacrifice the Constitution and the established order. It is idle to attempt to decide what measure of truth there is in these necessarily partisan commentaries. The King clearly had in view those who are minded to

put on one side the principles of the Constitution; and these are to be found both in the Opposition camp and on the Government side, the former always on the look out for an opportunity of upsetting the Government by force, and the others calling for protection against this potential danger by the stamping out, equally by forcible means, of the irreconcilable enemies of the present order. It is a struggle between the subversive elements of the extreme Left and the Fascist elements of the extreme Right, the Cabinet under the leadership of M. Liaptcheff and supported by the political parties of the Centre holding a middle course between the two extreme currents. It is evidently to this struggle that the King would like to see an end put in replacing it by competition in the sphere of "economic progress" and "cultural achievement."

Sofia, January 9.

General Volkoff.

The proclamation of the Dictatorship in Yugoslavia makes a singular contrast with the complete eclipse of the military power in Greece and with the upset of the dictatorial régime of the Liberals in Roumania—both being replaced by popular Governments which have triumphed brilliantly at the legislative elections. It contrasts especially with the development of the situation in Bulgaria where, in accordance with the directions recently issued by King Boris, demanding the re-establishment of and strict respect for constitutionalism, the last and most important of the conspirators of 1923, namely General Volkoff, organiser of the anti-Agrarian and anti-Communist *coup* of June 9, has disappeared from the political scene. This removal of General Volkoff is a definite sign of the "normalisation" of the situation created by the *coup d'état* of June 9, 1923, and the return of strict constitutional methods.

Leaving the Ministry of War, General Volkoff will henceforward represent Bulgaria at Rome, where he has many friends. However, the Bulgarian Government has pointed out to the foreign representatives at Sofia that the sending of General Volkoff to Rome signifies no change in Bulgarian policy. That remains as it has been several times explained in the *Sobranie* by MM. Liaptcheff and Bouroff, that is to say, fundamentally pacific and unswervingly loyal towards all countries, particularly towards the neighbours of Bulgaria.

The diplomatic mission is only a simple moral satisfaction accorded to General Volkoff at the end of his military career.

The Ministerial Situation.

General Volkoff, as is known, had an uncompromising enemy in the person of M. Tsankoff, his chief civilian collaborator in the night of June 8-9, 1923, and to the fall of whom he contributed powerfully later on, at the beginning of January, 1926. The friends of M. Tsankoff tried to get their revenge in provoking the ministerial crisis of last September, with the aim of eliminating General

in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

Volkoff from the Government; but their plans suffered a complete check, the King refusing to inflict the wished-for humiliation on the Minister of War. As a consequence of this *démarche*, M. Liaptcheff proceeded to a minute examination of the situation, and, clearly defining his position as against his rivals, replied that he could not accept any ministerial changes, and that he himself preferred retirement to allowing himself to become the instrument of personal ambitions. It is believed that this answer will put an end to the controversies over the question of some modification in the composition of the Government.

Reclamation Works on the Danube.

The consolidation of the internal situation, to which the stabilisation loan recently concluded has powerfully contributed, is manifesting itself in a series of public works which are to be begun in the spring.

Among these works, the most characteristic and also the most beneficial will be those which ensure the defence and the cleansing of the lower portions of the Bulgarian bank of the Danube, in the regions of Vidin-Vidbol, Svish-tov-Beleni, and in the valley of Kara Boaz, between the mouths of the Isker and the Vid, where several thousands of hectares of exceptionally fertile land, hitherto regularly swamped by the Danube floods, will be protected by the construction of dykes along the river, and will be able in consequence to be used for agriculture. One section of this area will be given to refugees not yet established. For this reason, the amount necessary for the execution of these works, of which the programme has just been sanctioned by the International Danube Commission, in its last session at Vienna, will be furnished from the Refugee Loan.

CYPRUS.

Nicosia, January 2.

The King's Illness.

In accordance with directions from the Greek Archbishop, prayers for His Majesty's recovery have been offered in all the Churches of Nicosia on, and since, December 16. The Abbot Kyrillos and the fathers of the famous monastery of Chrysoriotissa, in the Papho District, have offered prayers for the restoration of the King's health.

A Government Libel Charge.

General interest has been aroused over a case which has come before the Court at Nicosia. A Greek who was convicted of murder and hanged was defended by M. Kyriakides, a Limassol advocate, who, convinced of the man's innocence wrote to four newspapers, stating that the accused had been unjustly condemned and ruthlessly executed. His letters were held to contain a libellous charge against the Administration, the Law Officers of the Crown, and the Judges. An action for libel was instituted against him and the four papers. The accused were defended by a large array of advocates, headed by M. A. Artemis, who made an able speech. After a long and patient hearing, the defendants were all acquitted, and the decision has caused the greatest satisfaction, "British justice," being—as, indeed, it always has been—loudly applauded. M. Kyriakides was received, on his return to Limassol, with the greatest enthusiasm, and entertained at a banquet by a local club. M. Kyriakides has been for many years a highly respected member of the Legislative Council, and of the Greek community. He has practised for a long period in Limassol. He has not, however, had the legal training which so many of his colleagues have enjoyed during late years, including not a few who have been called to the Bar in London and taken degrees in foreign countries.

Trade with Egypt.

That Cyprus has failed to take advantage of existing markets near its shores, especially that of Egypt, has long been a reproach. Cyprus has, of course, been greatly handicapped by want of adequate communications and the retarding influence of previous unprogressive Governments; but a characteristic national inertia, which ignores the benefits of co-operative effort, has been also to blame. This is fully admitted by the island Press. The *Phoné tes Kyprou*, of Nicosia, once more calls attention to neglected opportunities, and points out that Cyprus products could successfully compete with those of Crete, Greece, Palestine, and other countries in many ways. To take examples, grapes from Crete fetch more than four times the price of those from Cyprus. A large trade in poultry and eggs could be easily developed.

The Legislative Council.

The Acting Governor, Mr. Nicholson, has presided at meetings. The Budget for 1929 has been passed by a majority of one vote—the casting vote of the President—(13 to 12), the Turkish members voting with the Government. The Greek elected members, at the close of the debate on the estimates, left the Chamber in a body, to mark their dissatisfaction.

The Olive Tree Trouble.

The proposal to tax all olive trees to provide funds for fighting a serious pest having met with loud outcry from owners, a committee has been formed, including the Bishop of Kition and the Director of the Land Registry, Mr. Watts, to consider the situation and make suggestions. No decision has yet been reached, but it is considered that wild, ungrafted trees will be exempted. General opinion seems to be that the cost of the campaign should not fall on the owners. To fight locusts a general tax was imposed on all classes. The present depression renders it undesirable that any fresh burden should be placed on agriculturists.

The Cape-Cairo tour of a flight of the Royal Air Force, which has for the past three years been a routine training exercise, will leave Cairo on February 12, a flight of No. 45 Squadron having been selected for this operation. The usual routine, *via* Khartoum, will be followed, and field operations will take place in co-operation with the 4th King's African Rifles at Jinja, with the 3rd K.A.R. at Nairobi, and with the 2nd K.A.R. at Taborah. The flight (four machines) will arrive at Cape Town about March 14, and will then proceed, *via* Durban, to Pretoria. From Pretoria to Khartoum it will be accompanied by a flight of the South African Air Force. The R.A.F. flight is due to return to Cairo about the end of April, after a flight of about 11,300 miles.

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, December 27.***Afghanistan.**

The news from Afghanistan will have been fully cabled to your side as it has been telegraphed to Calcutta; so I need not enter into it; but a word may be said to recall how often Calcutta must have waited, with more anxiety or with less, for news from beyond that North-West Frontier. It is not quite a hundred years since a former Calcutta resident, Miss Emily Eden, Lord Auckland's sister, was saddened by terrible news from Afghanistan. One mentions Miss Eden and not the Governor-General of that day; for it is in her book, "Letters from India," that we now read of those times. It is a book that should be more read in Calcutta, or wherever there are persons interested in the life of the English in India. Much has changed in the ninety years that have passed, but there are things that never change, and they are the same.

The All-Parties Convention.

After the one voice of the Viceroy, preaching patience and moderation, the many voices of the All-Parties Convention, not all preaching moderation and patience, and the more "vex" National Congress is to follow. Before the voices all fall silent again for a space, many more than myself will have been made to think of "and the herd ran violently down a steep place into the sea"; that is, unless those prevail in the Congress, who are preaching something that is at least like moderation; unless those prevail, who are for Dominion Status as India's goal, and who know, if they do not proclaim their knowledge, that the time is far from ripe for any full measure of that status.

The Issue.

The issue is Dominion Status or Independence. Those for Dominion Status, of the Congress, are Pandit Motilal Nehru, Mahatma Gandhi, Mr. J. M. Sen Gupta, and Mrs. Besant; of Muslim leaders, the Maharaja of Mahmudabad and Sir Sayed Ali Imam, with many adherents bearing names well known, and with the support of such as Sir C. P. Ramaswamy Iyer, the spokesman of the National Liberal Federation. Those for Independence are Mr. Srinivasa Iyengar, Pandit Jawaharlal Nehru, Mr. Subhas Chandra Bose, with a large following of like-minded youth. Mahatma Gandhi was to hold aloof, being now so old, but he was pressed by Pandit Motilal Nehru, the new President of the Congress as well as the chief author of the famous Report, to come and help to avert disruption in the Congress.

The Mahatma's Compromise.

Space does not permit the Mahatma's speech to be given here in full, but I may draw attention to it as a thing worth reading and study, for the subtle wisdom of its unwisdom (there is no other word for it) and its rare sincerity. Space hardly permits either of his resolution being given in full, but it must be:—

"This Congress having considered the constitution recommended by the All-Parties Committee, welcomes it as a great contribution towards the solution of India's political and communal problems and congratulates the Committee on the virtual unanimity of its recommendations, and whilst adhering to the resolution relating to complete independence passed at the Madras Congress, adopts the constitution drawn up by the Committee as a great step of political advance, especially as it represents the largest measure of agreement attained among the important parties in the country; provided, however, that the Congress shall not be bound by the constitution, if it is not accepted on or before December 31, 1930, and provided further that in the event of non-acceptance by the British Parliament of the constitution by that date, the Congress will revive non-violent non-co-operation by

advising the country to refuse taxation and every other aid to the Government."

Mr. Iyengar's Logic.

The weight of logic would appear to be against the Mahatma and on the side of Mr. Srinivasa Iyengar. He says:—

"The new resolution is unworkable and will lead to very considerable disagreement. If there is to be non-violent non-co-operation, I do not see why we should wait till 1930. The resolution is contradictory because in one and the same breath it supports the Nehru Committee's recommendations and repudiates that support by saying that, if Dominion Status is not granted by the British Parliament, the Congress shall not be bound by this constitution. Every one in the Congress knows that neither the Simon Commission nor the British Parliament is going to give full Dominion Status. Pandit Motilal, both in his speech at the A.I.C.C. meeting at Delhi and in his statement to the Press, has made it clear that there is not the slightest chance of Dominion Status being granted to India by the British Parliament or by the Simon Commission within 1930. Therefore, while the resolution purports to support the constitution, it virtually rejects it, but postpones the formal rejection to 1930." Which is not worth any one's doing? Truly it is not.

Either the All-Parties Conference will be disrupted, or the National Congress will be; but, if the latter is the event, what is left of the Congress will carry on under the same name; there are boys growing up to join it, and there will be the same game to be played.

Indian Exports to the Near East.

Attention may be drawn to the Report of the Government of India's Trade Mission to the Near East and Africa, the work of Dr. Meek and two others. No mere summary of it could be of much value to any one, except as an index-finger, and those engaged either in the export trade of India or the import trade of the Near East and Africa will need no such pointing. The document appears to be one of considerable value.

The Viceroy's Cup.

Brilliant weather favoured the Calcutta races yesterday, when the Viceroy's Cup was won by the Aga Khan's *Astre d'Or*, in the presence of the Viceroy, the Governor of Bengal, the Nizam of Hyderabad, and an immense crowd. Between 12 o'clock and 12.30 the Red Road and the Casuarina Avenue presented the appearance of a city, the well-to-do population of which was fleeing out of the city at one side before an army of invaders should enter it by the other. Never, to all appearance, such a head-long rush to get out of the streets into the open; but it was only fashionable Calcutta, eager not to be late for the first race. When an Eastern city is of a mind to enjoy itself, it sets about it with a will.

Mr. H. Y. V. Jackson, Assistant General Manager (technical) of the Anglo-Persian Oil Company at Abadan, died there on January 12 after a short illness. Mr. Jackson was a native of Manchester.

Dancing under the British flag, states a message from Karachi, slaves of the Sultan of Muscat's territory at Gwadar, Persian Gulf, celebrated their release from slavery on New Year's Day, when a ceremony was held at the British Agency.

To meet the Chairman, Sir Harcourt Butler, and the members of the Indian States Inquiry Committee, the President and Council of the East India Association are holding a *conversazione* at Caxton Hall, Westminster, on Monday, January 21, from 4 to 5.30 p.m.

The King has been pleased to approve the appointment of Raja Ragendra Narayan Bhanja Dev, O.B.E., of Kanika, to be a Member of the Executive Council of the Governor of Bihar and Orissa, in the place of Maharaja Keshav Prashad Singh, C.B.E., of Dumraon, who has requested His Majesty's permission to resign his seat with effect from January 18, 1929.

BRITISH INDIA AND THE STATES.

On more than one occasion of late reference has been made in *THE NEAR EAST AND INDIA* to the question of how the views of the Indian States Committee are to be co-ordinated with the findings of the Statutory Commission. The problems which these two investigating authorities are examining are so closely related as to make it essential that they should be considered together. But as to how this is to be done no indication has been so far given by the Government. And, as a Parliamentary correspondent pointed out the other day, the Secretary of State's answer to Lord Olivier's inquiry did not greatly help matters. At the same time Lord Peel's description of the problem as "difficult and complex" is indisputably correct. The evidence which is being submitted to the Simon Commission shows conclusively that the problems relating to British India are sufficiently "difficult and complex." And the evidence which the Standing Committee of the Chamber of Princes has put before the Butler Committee is equally conclusive as regards those problems which concern the Indian States.

There is, however, this difference to be noted. What the politically-minded classes in British India want has been made clear as a result of the intensive political agitation of recent years. But the nature of the difficulties that the Indian States wish to be investigated is not nearly so well understood. It would seem, however, from the statement which the Standing Committee has drawn up that these difficulties have reference, first, to what is described as the disregard by the Government of India of the treaty rights of the Princes, and, secondly, to the injuries which are said to be inflicted upon the interests of the States by the existing fiscal system of British India.

The Princes contend that notwithstanding their Treaties and Engagements the relationship in which they stand to-day to the Government of India is different from the relationship in which their predecessors stood to the East India Company. There has been, they maintain, a gradual curtailment of powers which, they had imagined, were for ever safeguarded by the Treaties. In particular they refer to minority administrations. Their complaint is that the British authorities, whenever a minority has given them an opportunity, have set up in the States institutions modelled upon those of British India. These are, the Princes say, as alien to the sentiments of the people of the States as they are unwelcome to their Governments. It was for the discussion of this grievance that the Chiefs Conference was summoned by Lord Hardinge in 1916. No solution was, however, arrived at by the Conference; and the Princes then hoped that the reforms which Mr. Montagu was proposing to introduce would help them. But the Chamber of Princes, which was a part of the Reforms scheme, was to them a disappointment. For it failed to give them any real influence in the settlement of matters vitally affecting their States. The Standing Committee supported this part of its case in an interesting historical sketch of the evolution of the relationship between the States and the British from the time of the earliest extant treaty, which was signed in 1723 by the Raja of Travancore and the head of the East India Company's factory at Anjengo.

The other part of the Princes' case, namely, that which has reference to the fiscal questions at issue between the States and the Government of India, is dealt with by the Standing Committee in a comprehensive note. These questions are too numerous and too complicated to be summarised here. But the object which the Standing Committee has in view is to show that, in their opinion, "the peoples of the Indian States are at present subjected to a considerable burden of taxation for which they receive no return and for which there can be no justification." The Standing Committee fully recognises how essential it is that the recommendations of the Indian States Committee shall be linked up with those of the Statutory Commission. It claims that before legislation for British India can be undertaken by Parliament the opinions of

the States must be ascertained in regard to the effect upon them of the proposals for British India, and also as to the constitutional machinery best adapted to insure harmonious co-operation between British India and Indian India in the future.

A speech made by the Nawab of Bhopal at a banquet given in his honour by the Bhopal State Council on his Highness's return from London last week is of particular interest in the foregoing connexion. After paying an appropriate tribute to the efficient manner in which the administration of the State had been carried on during his protracted absence, his Highness replied at some length to criticism of the consultations between the Indian Princes and their representation to the Butler Committee.

The Standing Committee of the Chamber of Princes, he declared emphatically, had made no proposals which would adversely affect the rights of State subjects, nor had they put forward any scheme that would enhance the powers of the rulers beyond those which they had always possessed. Similarly, his Highness contended they had made no proposals prejudicial to the welfare or political development of India. The most important point under consideration was primarily a legal one, namely, whether the treaties of the States were made with the British Crown or with the Government of India for the time being. Whatever the decision might be on that point, it would not take away any of the rights of the subjects of the States, nor would it empower the rulers in any way to act against the interests of their States. "The Princes and their Governments contend that those treaties are with the British Crown, and we hold that any rights acquired thereunder cannot be assigned to a foreign Government, nor can they be transferred even to an agent of the British Crown without our approval and consent."

With regard to the second of the terms of reference to the Committee, his Highness similarly contended that the existing financial and economic relations with British India deprived the States of certain revenues in which they were entitled to participate. "In claiming to be reimbursed these sums, the rulers are acting in the interests of their States and their subjects who will get the benefit of them either in additional administrative amenities, which at present have to be deferred for want of funds, or in the form of reduced taxation." In conclusion his Highness subjected to critical examination the plea for complete democratic government in the States submitted by the deputation claiming to represent the conference of subjects of Indian States, particulars of whose representation to the Butler Committee have already appeared in *THE NEAR EAST AND INDIA*.

After finally reputing the suggestion that the States were hindering the progress of India towards self-government, his Highness concluded: "I have made these remarks in sincere and cordial fellowship, in token of which I add that the Princes will be prepared wholeheartedly to co-operate and to bring their States into line with British India in any honourable settlement which will conduce to the welfare of our Motherland and the good of the Empire. Within the Empire there is true freedom for all, and within the Empire we intend to remain in the peace which it has brought to India, and in steadfast loyalty to the Crown."

Mr. Srinivasa Sastri, the retiring Agent of the Government of India in South Africa, was entertained at a farewell banquet by Europeans in Johannesburg on January 10.

Brevet Lieutenant-Colonel Oswald H. Radford has been transferred from the 4th Battalion, 13th Frontier Force Rifles to command the 10th Battalion of the regiment. His post of second in command has been taken over by Major C. M. S. Manners, D.S.O., M.C. Lt.-Colonel Radford was adjutant of the 57th Wilde's Rifles, with whom he served in the Zakka Khel and Mohmand operations in 1908, and was also in France and in Afghanistan. He was commandant of the School of Instruction in India at the end of the War, and later served as D.A.Q.M.G. Lieutenant-Colonel E. B. L'Estrange, administrative command, is transferred from the 11th Battalion, 2nd Bombay Pioneers, to the 11th Battalion, 15th Punjab Regiment.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARAB TRIBES IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your promptness in referring my letter of November 22 to Mr. Thomas before his escape to Maskat has enabled him in your issue of December 13 to satisfy something of a curiosity which is more widespread than, perhaps, he imagines among the many who were not privileged to hear him at Oxford and elsewhere last autumn. If only a few specimens of his non-Arab tongues had found their way into the report of his lectures normally accessible to exiles like myself, I should, perhaps, have been content to await the further development of his theme before commenting on it. But I should not like Mr. Thomas in any way to misunderstand my position, and, as he still leaves a loophole for my scepticism, I must crave your indulgence for another letter on the subject.

That non-Arab elements occur sporadically in easily recognisable groups, not only in South Arabia, but elsewhere in the "Island of the Arabs," can scarcely be denied by one long resident in the Hijaz. That some such groups have "a tradition of African origin" is equally undeniable, e.g., the Bani Khadhir and the black freemen population of so many oases of Najd. That some such groups retain traces greater or smaller of their mother tongues is evidenced by the case of the Sulaib. And the connexion between South Arabia and the island of Socotra is a well-known fact; while I may mention that Dr. Rathjens (surely Mr. Thomas is mistaken in referring to him as "a German adviser to the Imam Yahya of the Yaman") when at Jidda last winter suspected, if I did not misunderstand him, a Hamitic origin for various elements ordinarily regarded as falling into the category of typical Semites. Indeed Dr. Rathjens almost seemed to suggest that the Semites might be a branch of Ham, which may or may not be true, but is very disturbing!

I should, perhaps, have put my case somewhat differently, had I seen the words now quoted by Mr. Thomas, most of which are admittedly non-Arabic; but Mr. Thomas himself states the case between us quite uncompromisingly. The real issue is whether the aboriginal population of South Arabia was Semitic or Hamitic or, in other words, whether the tribes visited by Mr. Thomas are the remnants of a Hamitic race resident in those parts from the earliest times, or the residue of a subsequent wave of invasion. Mr. Thomas admits that their languages are Semitic (though not Arabic), but, taking various other considerations into account, he believes that in these tribes, in all or in part, we have "Hamitic racial survivals" and that "they are . . . survivals of some early peoples quite palpably distinct from the known Semitic types of Arabic-speaking Arabs."

The language test admittedly fails Mr. Thomas in his Hamitic theory, and, if the language test, which alone provoked my challenge, is of crucial importance, and if Mr. Thomas is prepared to admit that his tribes are survivals of an ancient Semitic stock, coloured by later Hamitic influences, I have no bone to pick with him. I assume that the present deserts of Arabia were one of the cradles of the human race coeval with the early beginnings of mankind in Central Asia and in the Saharan belt or, in other words, that humanity germinated in Arabia independently of any contact with east or west. Be that as it may, from the dawn of history Semitic culture has dominated the Arabian Peninsula. Until, therefore, the contrary can be proved I can see no reason for supposing that there was no connexion between the aboriginal population of Arabia and the Semitic culture and language which has dominated the scene of its activities since the earliest known times. And, if my

premises are correct, it would seem that the aborigines of Arabia were Semites, whose language has in the ordinary course given birth to many tongues, some dead and others still living, including Arabic. It would also seem to follow that all non-Semitic elements, including languages, found to-day in Arabia are the result of later invasions or visitations from foreign parts; and one would expect to find partial support for this conclusion in the language of the invading element, which would naturally adopt local words for things perhaps new to it. In some at least of Mr. Thomas's score of Arabic words I suspect that such support is forthcoming, but one will suffice. What, for instance, is the local word for the plant named by him *Rimram*? If it is *Rimram*, as I suspect, I suggest that the non-Arab tribes got it from their Arabic-speaking predecessors. If it is something else, Mr. Thomas might safely have used the local word without fear of nonplussing me or anyone else, or he might have added in brackets the words "Boraginaceous plant," as he does *mutatis mutandis* in the case of *Tishgaut*.

In conclusion, I may say that I shall look forward with great interest to seeing something like a comprehensive account of Mr. Thomas' remarkable journey.—I am, etc.,
Cairo, January 2, 1929. H. Sr. J. PHILBY.

KASR AL AINI.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The British community was much interested in the history of Kasr Al Aini related during the recent Congress of Tropical Medicine and Hygiene here, and was particularly proud and pleased to note the long list of British doctors, surgeons and nurses who had contributed since the early days of the Occupation towards reviving the work done by Clot Bey, and making Kasr Al Aini continue as an institution of mark in the medical world.

But old residents like myself were surprised, and, let me add, somewhat hurt, to find in this long list, which included a number of lesser lights, no mention of such men as David Beddoe and Llewellyn Phillips, both curiously enough Welshmen, who certainly played a part in the medical renaissance of Egypt entitling them at least to honourable mention alongside those cited in the Dean's paper on the history of Kasr Al Aini. Both of them are, alas! no longer with us, but their work and the traditions they represented, which contributed greatly to the regeneration of this institution, live on after them in the many pupils who passed through their hands and who to this day speak of them with emotion and grateful appreciation. It would have been but a graceful act if men, who, like Beddoe and Phillips, played for long a notable and useful part in the life of the British community in general and in the medical history of the country in particular, had received just a mention, if only to show that their contemporaneous colleagues, many of whom are still at the School of Medicine, recognise the value of their work and continue to bear them in affectionate memory.—I am, etc.,

Cairo, December 24.

AN OLD RESIDENT.

INDIAN HISTORY IN RETROSPECT.

"AN INDIAN COMMENTARY." By G. T. Garratt, I.C.S. *retd.* (London: Jonathan Cape. 7s. 6d.)

This study of Indian conditions raises hopes, from the evident care with which it has been prepared, that it may be taken as an instructive and impartial guide for the readers personally unacquainted with India. These hopes are, it must be feared, doomed to disappointment. In the first place, there are too many errors of fact. To quote some taken at random, Lord Mayo was not the victim of the Wahhabi movement; Sir Curzon Wyllie was not bombed; and to speak repeatedly of "Lord Bentinck" savours more of the intelligent foreigner than of an educated English writer.

These may seem small points, but as Mr. Garratt mentions the Service to which he belonged, presumably to attach authority to his views, he might be expected to attain the accuracy within the reach of the ordinary civilian. More important are the limitations of the author's own experience. He seems unable to appreciate the Muhammadan standpoint, and his curious failure to understand the importance of the district work of the civilian seems to indicate a lack of acquaintance with the best side of the administration that must have existed even within his own period of service.

The most serious defect of his book, however, as an impartial study of the effect of British rule in India, is his constant disparagement, if not distortion, of the actions of the British in India. This is best illustrated in his account of the Mutiny. No one can deny that, in the heat of retaliation, many regrettable acts were done by the British troops, enraged by the murder of women and children in circumstances of the utmost treachery and brutality. But Mr. Garratt fails to indicate that these acts were confined to the comparatively limited area of Oudh and the then North West Province. There is little to support his statement that the civilian revolt extended far outside Oudh. The assertion that it included the Mahrathas who followed Nana Saheb cannot but be misleading to those who do not know that this means only the small personal retinue at Bithur. Mr. Garratt must be well aware that the great Mahratha chiefs of Central India, and the Mahratha nation, remained absolutely loyal; and he himself states that the Mutiny had little effect in the Deccan. Mr. Garratt states that "Nadir Shah sacked Delhi, so did the English," but he fails to state that it had been far more effectually sacked by the mutineers, and that the moneyed classes everywhere welcomed the return of the British forces.

A similar inclination to follow the inferior type of Nationalist historian is found in Mr. Garratt's resuscita-

tion of the entirely forgotten act of a Deputy Commissioner in the Punjab more than fifty years ago, and his curious statement that the assassination of two English ladies was "an unpremeditated murder," apparently because the bomb was intended not for them but for a mere male official. A similar bias against his own countrymen is shown by the remarkable, and to those acquainted with the history of Land Revenue prior to British administration, ridiculous, assertion that "the coming of the European turned the lowly scribe into the petty tyrant of the fields," and the opinion that "the Pax-Britannica indirectly contributed to the unhappy lot of the outcaste and the ryot."

There is, in fact, throughout the book too much indication of the clever, if disgruntled, young civilian whose views have not been accepted by the doubtless less brilliant men in high places. Such obvious defects are, however, no reason for failing to consider Mr. Garratt's suggestions for the future. His panacea for provincial administration is division into smaller provinces. However desirable this may be in theory, he fails, we think, to appreciate the dislocation of business and educational interests, which are centred in the large towns which would serve several of the proposed Provinces. We may sympathise with him in his dislike of communal representation; but he is singularly unhappy in suggesting that communal protection would be unnecessary in small provinces such as in Kanara and Sind. The Muhamandans in the former, and the Hindus in Sind (the latter very vocally), believe that they do need such protection.

Mr. Garratt hardly deals adequately with the very difficult question of the Indian States. His suggestion that the smaller States should be compulsorily sequestered would certainly be a more cynical act than the instances of dishonesty which in other places he alleges the British to have committed. Nor can his enunciation of the security question be thought satisfactory. He considers a field force unnecessary, because the Punjab can defend itself against the north; so doubtless believed Indian rulers from Porus onwards, but unfortunately the invaders from Alexander to Ahmad Shah thought otherwise. Mr. Garratt would reduce the European troops and would group them round the sea ports: surely hardly an inducement to security in the north. He has, however, failed to bring his information up to the date reached for other parts of the book, and it is misleading to suggest that the military Budget absorbs from one third to one half of the revenue; the latest figure would be about 28 per cent. but that includes many items which in other countries would come under other heads.

It would not be fair to judge Mr. Garratt's book by such suggestions as that Baluchistan should come under the Colonial Office, or that the pay of High Court Judges should be reduced to Rs. 3,000 per mensem, when it is already impossible in Bombay and Calcutta to get leading Indian lawyers to accept the post on Rs. 4,000. Mr. Garratt does recognize that the chief obstacles to industrial development are the dishonesty of indigenous management and the inertia of the worker; and, in the case of agriculture, the still greater inertia of the cultivator. He has a vague hope that independence will in some unexplained manner remove or lessen these obstacles: as he says, the effects of a foreign occupation are subtle and devastating; and he quotes Ireland and Turkey as having regained with independence their youth and ambition.

It is, perhaps, too soon to judge whether in those countries achievement will exceed disillusionment. Mr. Garratt, however, appears to lay far too little stress on the effect of the Indian climate; even if the dead weight of Hinduism can be lightened, the climatic conditions will remain the same. But, however little we may agree with Mr. Garratt's views, we may at least thank him for an interesting study.

DIPLOMATIC HISTORY

Volume V in the series British Official Documents on the Origins of the War, edited by G. P. Gooch, D.Litt., F.B.A., and H. Temperley, Litt.D., F.B.A., is now ready. Devoted entirely to the Near Eastern question 1903-1908, it is exceptionally valuable for the light it throws on the second major international crisis of 20th century European diplomacy. The collapse of the Ottoman Empire, the Young Turkish Movement, rival railway schemes, the annexation of Bosnia, are among the many topics. Minutes by King Edward VII add special interest to a volume full of unprinted, hitherto confidential matter.

A GUIDE BOOK TO IRAQ.

"MAPS OF IRAQ. WITH NOTES FOR VISITORS." Published by the Government of Iraq. Price 5s. 6d.

Under a modest title the Government of Iraq has issued a publication which will be eagerly sought after by everyone contemplating a visit to Iraq or desiring information regarding that country. The emphasis on the maps is justified by their excellence and practical usefulness, and may also have been designed to forestall criticism on the part of anyone who, setting out to purchase a guide book, finds himself, or herself, confronted with a publication of the familiar blue-book or large foolscap size. Certainly, the form shows off the maps at their best; and, after all, Iraq hardly provides the sight-seeing material that calls for constant reference to the guide book. The "Maps with Notes," accordingly, can be studied at leisure, and referred to at intervals.

Here is, indeed, information on Iraq, past and present, if not in anything resembling any known nutshell, at least within a very thin compass. Twenty-two large pages suffice for a "potted" history of the country, a synopsis of the Constitution and Administration, and all the information that the intelligent visitor requires before he settles down to a fuller study of Iraqi affairs. Adequate space is given to the subject of going to Iraq and of going about when there, and the reader is not exposed to any attempt to make the worse appear the better cause. Arab taxi-drivers are "resourceful and drive fairly well"; roads are "indifferent, and yet, possibly on account of absence of cross roads, a higher rate of speed can often be maintained than in Europe." The traveller is even warned that, as there are no corridor trains, the restaurant car must be boarded at one station and left at another. Interesting descriptions of the journey to Iraq by air and by car across the desert are given, and one passage under River Transport may be quoted as an indication that the official compilers are not oblivious to the picturesque.

"Historically, the fascinating story of Noah and the building of his ark to save himself and his family and livestock from the floods is borne out by actual conditions now; a type of boat made watertight by the application of the local Hit bitumen or pitch, as was Noah's boat, is widely used in Iraq to-day; and the annual floods of the rivers are of a nature which make it advisable for any dweller in the Plain either to ring himself inside a circular bund or dyke, or to provide himself with an ark or boat of some sort. In this connexion it is of interest to note that it is conclusively proved that the local shipwrights to-day turn out exactly the same class of boat as the yards of their forebears turned out 5,000 years ago; the proof of this is evident from the recent excavations at Ur of the Chaldees, where Mr. Woolley discovered a silver model of a boat of a peculiar shape, of which thousands of identical design are to be found on the Euphrates at the present day."

Other sections deal with antiquities, the Holy Cities and the Development of Oil Resources, as well as with State affairs, such as Medical Facilities, Education, Agriculture, the Police and Army. Last but not least, is a section with the ominous heading "Government Regulations for Ladies Travelling in Iraq"; but let it be added that, apart from the preliminary condition "that they undertake to keep in close touch with the local authorities in Iraq and to agree to any restrictions over their movements in Iraq which the local authorities may consider advisable," provision is made for their movements whether unaccompanied or accompanied. "A lady is deemed to be 'accompanied' when at least one European or American member of the male sex is travelling with her."

The maps are five in number—four road maps dealing respectively with Northern, Upper Central, Lower Central and Southern Iraq, and the fifth showing the whole region between the Mediterranean and Caspian Seas with the trans-Desert routes.

At a dinner given by the American Ambassador at Angora on January 10, Mrs. Lindbergh, who was the guest of honour, was presented with the medal of the Turkish Aviation League in brilliants, to take to American to her son, Colonel Lindbergh, who is the third recipient of the medal in brilliants, the only other holders being Mustapha Kemal Pasha and Ismet Pasha.

THE DORSET YEAR-BOOK.

For the benefit and delight of Dorset men the world over is issued each year, under the auspices of the Society of Dorset Men in London, a very admirable Year-Book, which, we hasten to add, has nothing to do with statistics and dull facts, after the manner of most year-books, but is a glorious compilation of prose and poetry, with a music-score ("Men of Dorset") to boot. Mr. Stanley I. Galpin is the Honorary Editor, and this year he publishes his own reminiscences of Thomas Hardy, as well as a contribution on "Alice in Dorsetland." The volume is full of good reading matter, with excellent illustrations. It is impossible to imagine that any Dorset man who knows of it should be without the Year-Book, which can be obtained for 2s. 6d. (by post, 3s.) from the Hon. Secretary of the Society, 174, Gresham House, Old Broad Street, London, E.C.2.

THE "EAST" OF CINEMA-LAND.

In a Super-Cinema, as is the Capitol, one expects a Super-Production, as film language has it. This indeed describes "Secrets of the East," which was being shown last week. The programme divides the audience into "intelligent" and "ordinary," offering to the former "a philosophic study," to the latter "a sheer slice of gorgeous entertainment." We advise the intelligent to be content with the ordinary "patron's" fare, for if they bring too much intelligence to bear on the subject they will find themselves wondering where cinema-land learned its geography and gained its knowledge of architecture. A wonderful medley of styles and climes is unrolled in breathless succession; but it all comes right in the end—even to the hippopotamus in the sea—when it is found that Ali the Cairene Cobbler has had a dream, and that the "Secrets of the East" are in fact the "Revelations of the Cinema." If a chance offers to see the film, take it. Philosophy or no philosophy, it is both gorgeous and stupendous.

It is announced from Shtip that Kroleff, who shot General Kovatchevitch there last year, was executed on January 12.

Colonel Gladstone Millner, who was one of the pioneer officers of the Salvation Army in India and Ceylon, died on January 8.

The Egyptian Cabinet has unanimously decided not to allow the Wafd to hold the congress it recently decided to summon to "discuss acts of dictatorship."

Signor Grandi, Italian Under-Secretary for Foreign Affairs, left Brindisi on January 11 for Athens, where he is returning, on behalf of Signor Mussolini, the visit paid in the autumn by M. Venizelos.

Specialists from Vienna who have examined the King of Albania, who has been indisposed for some time, report that his Majesty is suffering from the results of overwork, combined with insufficient exercise and too much smoking.

The representatives of the bondholders of the Ottoman Debt met in Paris on January 14 to fix the date of payment of the first coupon under the recent agreement with the Turkish Government, which was ratified by the Grand National Assembly at the beginning of December.

Castings have been taken of a number of the more important objects in metal and other substances found at Ur. Some of the originals will be sent to Baghdad and others to Philadelphia, but, with the help of reproductions such as these, it will be possible for each museum to make its collection fully representative by the addition of copies.

A British squadron is due to arrive at Phaleron Bay to-morrow (January 18) and remain till January 29. It consists of five battleships (Royal Oak, Ramillies, Resolution, Valiant, and Royal Sovereign), the second destroyer flotilla, the repair ship Assistance, and the aircraft-carrier Eagle. Three cruisers (Cardiff, Calliope, and Ceres) will be in the Gulf of Volo from January 19 to 29; the battleship Queen Elizabeth will arrive at Corfu on January 18 and is due to leave on January 30; and the cruiser Cairo, with the first and fourth destroyer flotillas, at Astakos on the Akarnanian coast, also during the same period.

EDUCATION IN PALESTINE.

[Owing to the illness of our representative, we have had to delay the insertion of the following report of Mr. Bowman's lecture upon "Education in Palestine."—ED.]

Mr. Humphrey E. Bowman, Director of Education in Palestine, lectured to the Anglo-Palestinian Club on January 2, at Jews College, Guilford Street, W.C., upon "Education in Palestine," with Professor Graham Wallas in the Chair. The Chairman, in introducing the lecturer, remarked that the last time he had met him was upon the Mount of Olives, where, he remembered, a troop of Boy Scouts was in camp, and he was struck by the fact that every boy appeared to think Mr. Bowman his personal friend!

The lecturer began his address by noting the disposition of everyone, expert or not, to criticise upon the subject of education. Criticism certainly was welcome, provided that it were informed. But he quoted a saying that "Education is a question upon which in the East the whole world draws knife."

Turning to the subject of education in Palestine in particular, he first gave a brief historical sketch of previous attempts at education. In Turkish times there was little or no system of national education in Palestine. In 1913, however, there was an attempt made by the new Turkish Constitution to provide it, and on paper a scheme that was by no means without merit was drawn up. The War, however, intervened, and checked all progress. Before the War, there could be said to exist, roughly, three kinds of schools in Palestine. First, there were the Government schools in the town, in which Turkish was the medium of instruction, and which were attended only by Muslims. Secondly, there were the missionary, Church, or community schools for Christians. And lastly, there were schools for Jews, founded by the *Alliance Israelite* (the medium of which was French), by the *Hilfsverein* (the medium of which was German), and by the Anglo-Jewish Association. In addition to these, so to speak, non-Zionist schools, there were institutions directly under the auspices of the Zionists. In 1914, for instance, there was a dispute regarding the Technicum at Haifa over the question whether German or Hebrew should be the medium of instruction; the day was finally won for Hebrew. The *Vaad ha Hinnukh* (Board of Education) was founded and continued its activities during the Great War. By 1918 the Zionists had about forty schools thus controlled.

After the War there could, naturally, be little done for some time. During the "Military Administration" of 1918-1920 the educational problem was still unsolved. With the establishment of the Civil Administration in 1920, however, the policy laid down was for the Mandatory Power to assume the educational responsibilities of the Turkish Government, and Government schools formerly administered by the Turks were taken over. Owing largely to the insistence of Sir Herbert Samuel an attempt was made to introduce education into the Arab villages. The system was for the village to provide the building, and the Government to provide the teacher—all instruction now, of course, being in the language of the inhabitants, viz., Arabic. The number of village schools taken over or opened since 1920 was 265, or, roughly, half the number ultimately required. In the towns, the schools had increased and had been improved, particularly in the

facilities given to girls' education. Training colleges had been established with gratifying results. For example, the Men's College, which in 1920 had 30 students, now had 80; and the Women's College, which in 1920 had 26 students, now had 64. Students where they could paid for this training, and there was a progressive development of the curriculum.

Mr. Bowman then examined the non-Government schools, and explained the system of the Government grant-in-aid to them. However small the Government contribution might have been, it did signify contact. Of the Jews in particular, he showed how their claim to greater official support had resulted in 1927 in an increase to £20,000 a year. This figure was arrived at after most careful investigation, and was based on the proportion of the Jewish population to the population of the whole country. Summing up the position of education, he said that a dual national system was now recognised; a system for the Arabs, organised by Government, and a system for the Jews, organised by the Palestine Zionist Executive. The lecturer incidentally paid a great tribute to the patience and endurance shown by the Zionist teachers when they were in arrears of pay.

Mention was made of the Kadoorie Schools. The bequest had been equally divided between Arab and Jewish schools. For the Arabs an agricultural school was to be founded near Tulkeram—and no better project could have been started; while for the Jews an agricultural school was to be inaugurated on Mount Tabor. Mr. Bowman here inserted his belief that it was better to train up the sons of agricultural labourers, whether Arabs or Jewish, into becoming better farmers than to induce them to drift to the towns to become clerks or "men about town."

The meeting had unfortunately started late, so that the lecturer had to omit what he had intended to say upon such questions as Higher Education in Palestine, the new Education Ordinance, the Hebrew University, and so on. But in concluding he was able to hint at the ideal animating those responsible for the Administration of Palestine. It was, he said, the training of character that was the goal of their efforts; all scholastic education were worthless without character. For his part he looked forward to the time when the Arab and Jew would be working side by side, not so much for the good of the Arab or Jew, as for the good of the country in which they lived and which they served. Not in this generation, perhaps, would this dream be realised, but by the present generation's children.

The subsequent discussion revealed a disposition to think that the basis of the Government's grant to Zionist education should have been the number of Arab and Jewish children actually attending schools. The lecturer explained that, whereas among the Jewish colonies, child education were almost a hundred per cent., among the Arabs the demand was just as great, but the facilities were fewer. A question upon the Hebrew University drew from the lecturer the opinion that the Jews had been very wise in starting in a small way on Mount Scopus, and in concentrating on scientific research. The Chairman inquired whether the example of Mustapha Kemal had provoked any reaction in Palestine, but Mr. Bowman thought the tendency among Muslims in that country was to regard the Ghazi's innovations as undesirable. Professor Graham Wallas put another question: "Was there not a danger in imposing an agricultural outlook upon a boy who might, say, be a Spinoza, an Einstein, or a Weizmann?"

To this, Mrs. Eder, in moving a vote of thanks, replied. She supported the lecturer's view upon the desirability of bringing up the young Jewish colonist to an agricultural life; the Spinoza, the Einstein, she said, would in any case come through. Mrs. Eder also reminded her Jewish audience that the Arabs of Palestine must be raised to a higher level, quoting Mr. H. G. Wells to the effect that the higher section of a country inevitably sinks to the level of the lower portion. Miss Sylvester Samuel seconded the vote of thanks.

School of Oriental Studies, London Institution

January 4, 1929 (Old Style).

Shaaban 5, 1347 A.H., of the Muslim Calendar.

Shebat 6, 5689, of the Jewish Calendar.

Sir William and Lady Thom sailed from Tilbury on January 11 in the P. and O. s.s. Maloja for Port Said.

Lord and Lady Castlemaine left Langham House, Ham Common, on January 11 for Egypt.

Sir John and Lady Mullens left England on January 11 for Egypt, and will be away for three or four months.

Sir Ian Malcolm has left London for Egypt and the Sudan. He expects to be back in England about the middle of March.

Sir Walter and the Hon. Lady Buchanan-Riddell arrived at Marseilles on January 11 in the P. and O. s.s. Kaiser-i-Hind, from Bombay.

Sir Berkeley Moynihan, who has been attending the centenary celebrations at the School of Medicine, Cairo, returned to London on January 11.

Sir Robert and Lady Watson Smyth and Miss Mary Watson Smyth left Camberley on January 10 for Egypt, where they will stay till the end of March.

Mr. J. Chaker, General Manager for Egypt and Palestine of the International Wagons-Lits Co., has been made a Chevalier of the French Légion d'Honneur.

Sir John and Lady Cadman left London on January 10 to join the Ranpura at Marseilles for Bombay. Among other passengers on the same ship are Sir Charles and Lady Wright.

Nashat Pasha, the newly appointed Egyptian Minister to Germany, who recently returned to Cairo, from Teheran, leaves Egypt at the end of this month to take up his duties at the Egyptian Legation in Berlin.

The Maharao of Kutch, who took part in the conferences of members of the Standing Committee of the Indian Chamber of Princes, left London on January 10 on his return to India, embarking at Marseilles on the Ranpura for Bombay.

Lt.-Col. G. M. Spencer-Smith, D.S.O., who succeeds Lt.-Col. W. L. Y. Rogers, D.S.O., in command of the 2nd. Brigade Horse Artillery, has arrived in Egypt, accompanied by Mrs. Spencer-Smith. They have taken up their residence at Abbassia.

Field-Marshal Viscount Allenby, who left London on January 10, for Egypt, represented the King and Queen at the Memorial Service for the Grand Duke Nicholas of Russia, which was held at the Russian Church (St. Philip's) Buckingham Palace-Road earlier in the day.

Mr. Gerald Holgate Selous, recently British Consul at Casablanca, in Morocco, arrived at Basrah early this month to reopen the British Consulate there, which has been closed since November, 1914.

In celebration of the birthday of Queen Marie of Yugoslavia Belgrade was on holiday on January 9. Thanksgiving services were held in all the churches, the King and Queen, members of the Government, and leading public officials attending one held at the Belgrade Cathedral, at which the Patriarch Dmitri officiated. The afternoon was devoted to public concerns. A grand ball and reception were given at the Palace, and there was also a torchlight procession in the evening.

NEWS IN BRIEF.

Two policemen were shot dead in different parts of Sofia on January 10 while calling on suspects to show their identity cards.

General de Bigault du Granrut has been appointed Commander-in-Chief in Syria in succession to General Gamelin.

European servants of the Afghan Government have been permitted to proceed from Jellalabad to Kabul via Kandahar.

The resignation of General Volkoff, Bulgarian Minister for War, and his appointment as Minister to the Quirinal were gazetted in Sofia on January 10.

A message last week from Tryn, on the Yugoslav frontier, stated that three Bulgarian peasants who had been visiting relatives across the frontier were killed by Serbian frontier guards.

The Yugoslav Prime Minister, General Zivkovitch, is reported to have recalled General Maximovitch, the principal Government representative in Zagreb, for opposing the instructions of Belgrade.

M. Tsouderos, Deputy Governor of the Bank of Greece, who recently underwent a serious operation, is now convalescent and expects soon to be entirely restored to health.

Owing to differences of opinion among the Ministers in regard to the Budget, M. Kotta, Albanian Prime Minister, handed his resignation to King Zogu on January 11.

The third annual pilgrimage to the Holy Land, organised by the Catholic Association will this year be led by the Roman Catholic Bishop of Salford. The pilgrims will leave London on April 29, and will travel to Jerusalem by way of Egypt, spending a short time in Cairo. In Palestine they will be the guests of the Franciscans, the official custodians of the Holy Places.

A Central News message from Cairo reports that Government survey officials engaged in work near Mersa Matruh, west of Alexandria, report that they have discovered the existence of petroleum. The Egyptian Government is taking measures to ascertain the extent of the deposits.

It is reported that King Zogu of Albania will be crowned in April at Croia, the birthplace of the great Albanian hero, Skanderbeg. In order that this coronation ceremony should be a really historic occasion, King Zogu is said to have offered to purchase from the Austrian Government the sword and helmet of Skanderbeg himself, which are preserved in one of the Viennese museums. The helmet has a beautifully-worked goat's head in solid gold on its crest, and the two-handed sword weighs between 5 and 6 lb.

Conversations began in Cairo last week between the British and Egyptian Government in regard to the acceptance by the Egyptian Government of the findings of the Nile Waters Commission, which reported on March 23, 1926. Mr. Hoare, of the Residency at Cairo, and Mr. More, Sudan Agent, are representing the British Government, and Hafez Afifi Bey, Minister of Foreign Affairs, and Ibrahim Fahmy Bey, Minister of Public Works, the Egyptian Government.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslav Loan Outlook.

Considerable confidence is placed in the new régime in Yugoslavia in circles in Great Britain concerned in the development of trade between the two countries. Particular satisfaction is felt at the appointment to the Ministry of Finance of Dr. Stanko Shverlyuga, whose influence in the banking world, it is thought, should be an important factor in helping to bring about the much desired loan. It is not anticipated that the new régime will entail any change in Yugoslavia's financial policy, for there is no reason why it should. It has not been the financial policy of the country but the political differences which have hindered developments, delayed the loan, and generally produced chaos. No doubt it will not be possible, as in the case of Roumania, to continue the old loan negotiations, but once it is clear that the political atmosphere is stable it should be a comparatively easy matter to initiate new negotiations, for Yugoslavia is economically in a strong position. Her currency has, for a long period, been stable, and as far as that factor is concerned the only real need for a loan is to provide a safeguard against a sudden break in the exchange which may be unlikely, but which has, none the less, to be taken into consideration. Like Roumania, the loan is primarily needed for purposes of development, notably for railway construction so that Yugoslavia will have an adequate outlet on the Adriatic for her produce.

The Economic Position of Yugoslavia.

It says much for the inherent strength of Yugoslavia's position that the poor harvest of 1927 and the failure of the important maize crop last year have not had a more serious effect than has been the case. Inevitably, of course, there has been a marked decline in purchasing power, and this has been one of several factors which have tended to restrict business relations with Great Britain. In the period immediately following the War it looked as if a considerable trade was going to grow up quickly between the two countries. Cotton goods were imported by Yugoslavia from Great Britain on a large scale, but this trade was soon checked by the competition of Italy and other countries who were able to undersell Lancashire. The Yugoslav peasants wear a special kind of cotton cloth, and the only hope of competing in this particular line is by quoting strictly competitive prices. As Yugoslavia is now making a good deal of this cloth herself the market is no longer what it was. Reparations have also had a restrictive effect on the market as regards such commodities as engines, rolling stock, etc., for Yugoslavia's requirements in these respects have been mainly filled by deliveries from Germany. It is clear that we must await an improvement of the conditions in Yugoslavia before there can be any great opening for British trade, but when the improvement comes there are several

promising directions for business activity. I would instance, for one, lorries. The roads in Yugoslavia are extremely bad, and it is clear that until they have been reconstructed there can be no great opening for motors, for motoring in Yugoslavia is too much of an adventure to have any great element of pleasure about it. But commercial lorries are in another category. Then there must shortly be a great demand for agricultural machinery, and here too a little enterprise on the part of British manufacturers should be well repaid.

Some Prospects for Yugoslavia.

While agriculture is Yugoslavia's great standby, the country has important mineral resources—it has, for instance, one of the largest copper mines in the world. These resources are so far in the main undeveloped, and it seems probable that in this direction, when the country is in a position to attract the necessary capital from abroad, there will be important developments in the future. Then, like practically every country, Yugoslavia has her eye on the tourist traffic, and there seems no reason why in the course of time the spring should not see an increasing number of visitors on the Adriatic coast. The scenery is wonderful, and there is plenty to attract the tourist in the shape of Roman and other remains, but at present the facilities are certainly quite inadequate for any great influx of visitors. Before Yugoslavia can aspire to cater for the Western tourist there will have to be a great improvement in the hotel accommodation generally, and a number of new hotels will have to be built. It will mean a considerable expenditure, but it will be worth it in the long run if the result is that Yugoslavia is able to depend on a considerable tourist traffic every year.

Flax Production in Cyprus.

Before the War Russia was the principal cultivator of flax, which sufficiently explains why there is a shortage of this commodity at the present time. The present position has given a unique opportunity to other countries to develop flax growing, and in the efforts to develop the

resources of Cyprus the possibilities of the product have not been overlooked. Cyprus exported flax on a very small scale before the War, the figures for 1909 being 140 tons, while the world's average production of fibre for the period 1909-1913 was 750,000 tons. Mr. W. J. Megaw, Flax Expert of the Ministry of Agriculture of Northern Ireland, has been studying the question of the flax industry in Cyprus, and a conference was held recently at Nicosia, at which the leading flax growers were present, when Mr. Megaw gave a survey of the position. He expressed the view that large areas in the Island are quite suitable for the production of flax, but pointed out that the conditions are not altogether favourable for the production of a very high-class flax such as produced in Belgium. It is satisfactory to know, however, that he is satisfied that flax can be produced of a quality to compete with the best Russian, and that it can be produced very cheaply. Before the War Russia's exports of flax to the United Kingdom amounted to about 60,000 tons, and it is estimated that the possible production of Cyprus would be 30,000 tons of fibre if flax is planted on an area of 500,000 hectares, which represents ten per cent. of the arable land. As flax is a good paying crop, it may be assumed that every effort will be made to extend its cultivation in the Island.

Westminster Bank.

A satisfactory statement is forthcoming from Westminster Bank Ltd. for the past year. The net profits are £2,683,471 as compared with £2,641,338 for the previous year. The dividends on the £20 shares and the £1 shares are the same as before, but the allocations are slightly different, the bank premises account receiving £275,000 as against £200,000, while the rebuilding account receives £100,000 as against £150,000, while the carry forward is £552,196 as compared with £535,063. The results of all the Big Five are now available, and they have made it evident that whatever the past year was for industry in general, it was by no means an unsatisfactory period for the banks.

Tourist Exhibitions.

This summer will see something novel in the way of exhibitions in this country, for an Ideal Holiday Exhibition is to be held at the Royal Agricultural Hall from June 20 to July 3. This exhibition is one which has a special interest from the point of view of the Near East which contains within its limits some of the principal tourist resorts in the world, and I shall expect to see the Mediterranean region loom very prominently as a setting for an ideal holiday. A moment's thought will show indeed that the Near East offers scope for a long series of such holidays. Besides Egypt with its incomparable attractions there is Palestine which can be fittingly combined with an Egyptian tour. Then Cyprus, which has a charm peculiarly its own, is now blossoming out as a tourist resort, while the Syrian authorities are anxious to deflect a part of the tourist stream to a country where, like Palestine, there is much to interest. Further afield, for those who have a little more time, there is the Sudan, while nearer

home there is Greece with its abiding interest to students of the classics, not to mention more particularly the other Balkan States. In the circumstances it will be surprising if the exhibition has not a distinctly Near Eastern tinge.

Ionian Bank.

The announcement was forthcoming some months ago that the directors of the Ionian Bank had decided to close down the Constantinople branch of the bank on account of the unfavourable conditions in Turkey. In the light of this development the reduction in the net profits for the year ended August 31, 1928, shown in the report, which has just made a belated appearance owing to the delay in the receipt of accounts from the Greek branches arising from the recent epidemic of dengue fever, will occasion no surprise. The decline is comparatively small, from £61,080 to £53,680, and it is satisfactory to know that apart from Turkey the business has undergone expansion. It may be assumed that in present conditions the bank will lose very little by curtailing its activities in Turkey, while developments in Greece in the past year offer every prospect of the expansion of business in that country.

A Rubber Revival.

My note of last week on the rubber situation was extremely timely, for it coincided with the development of marked strength in the market for both the commodity and the shares. The chief reason for the sharp rise in the price of the commodity was simply that there was heavy buying by both America and the Continent, but a contributory cause, of course, was the fact that stocks have not been increasing here to the extent that was anticipated. I only refer to the subject this week to utter a warning that it must not be assumed that the movement last week is the beginning of the real advance that is expected in due course. It is merely a preliminary, and fluctuations must be looked for in the coming weeks, but it is a plain indication of how things are likely to go once it is evident that stocks have reached their highest point of increase.

COMMENTATOR.

A sub-branch of Barclays Bank has been opened at the P. and O. Steam Navigation Company's general offices, Tilbury Docks.

The annual report of the Agent-General for Reparation Payments has been published by H.M. Stationery Office.

Nearly 6,000,000 kantars of Egyptian cotton were ginned up to December 31, including 1,773,345 kantars of Sakellaris, states a Cairo message.

It is announced that Sir Charles S. Addis and Sir Basil P. Blackett have agreed to act as British deputy members of the Committee of Experts to frame proposals for the final settlement of the Reparations question.

The efforts of the Cyprus Agricultural Department to obtain tobacco growing families from Greece and Turkey for settlement in Cyprus have been unsuccessful up to the present, and it has now been decided to appoint instead experienced growers from Smyrna and other centres to act as tobacco instructors.

18, OLD BROAD ST., LONDON, E.C.2

The Economic and Industrial Development of Egypt.

THE DOMINANT POSITION OF AGRICULTURE.

The history of Egyptian industry is connected mainly with the future. Egypt is an agricultural country, and less than 5 per cent. of its exportable goods are manufactured products. Over three-quarters of the population depend entirely on agriculture, and at least 15 per cent. more are engaged in pursuits ancillary to agriculture. Matters cannot continue long on this footing. There is an absolute limit to the amount of land that can be brought under cultivation in the country, and yet the population threatens to increase beyond measure, and beyond the power of the land to support it. It is the Malthusian Theory working out in practice. Some statistics on this point will drive the lesson home.

There have been censuses in Egypt at different periods since 1882, and they are now taken at regular decennial intervals. The resulting figures and increases per thousand per annum have been as follows :—

1882	...	...	6,831,131	...	—
1897	...	...	9,734,405	...	23.9
1907	...	...	11,287,359	...	14.9
1917	...	...	12,750,918	...	12.3
1927	...	...	14,168,756	...	10.4 (approximate figures).

Thus the population is increasing at a rapid rate, but this rate shows signs of slackening off. There can be little doubt that the physical cause of this slowing down of the increase is the pressure of the means of subsistence. A general exodus is in progress from the country districts to the towns, as the statistics of the following sample localities show :—

Locality.	Population.	Rate of increase per mille.
City of Cairo	1,064,567	34.0
City of Alexandria	573,063	28.3
Province of Menoufia	1,105,191	2.8
Province of Minya	837,404	9.6

Thus the rate of increase in the towns is much greater than in the provinces. The country people are crowding into the towns, where incidentally the rate of mortality is much heavier than the rural rate. This state of affairs points to a shortage of means of living in the country; in other words, to a deficiency of agricultural produce.

For this deficiency there are two remedies: either to increase the cultivable land, or to increase the yield per unit of area. The Government is fully alive to the seriousness of the situation, and is trying by all means to alleviate it. Here is to be found the reason for pushing on the great irrigation works and drainage schemes that will place more land under crops, and here is also the inspiration for the Ministry of Agriculture, which is trying to teach the cultivator to make more out of his land. Both remedies for the social ailment are thus in use, but a cure can be but slow. When it is effected, the population, in the opinion of the statisticians, will probably have again overtaken means of subsistence. The remedy lies in industry. Egypt is fated to become more and more an industrial country, either herself producing goods that she now imports and using the economic foreign balance to buy food or producing exportable goods that are not now manufactured here, exporting them and thus again paying for the extra food.

EXISTING INDUSTRIES.

Only a passing reference is necessary to the industries of transport, the largest in the country, building, clothing, furnishing and pottery, which exist for and through local needs. They are not of a nature to develop an export trade, though they are tending more and more to

replace imported foreign goods or help, by Egyptian. Their further development along these lines deserves and is receiving careful study. Egypt possesses in abundance all the materials for making high-class Portland cement at prices which compare favourably with foreign products. Consequently the production of Portland cement, which was nil twenty years ago, is 50,000 tons to-day, and two new works are in course of construction. There is no doubt that Egypt could supply the whole of her requirements not only in average quality cement, but also in the best Portland cement, and, if electric power should be forthcoming from Aswan or elsewhere, in quick-setting cement. She would thus be able to supply the Eastern markets, in regard to which her position gives her special advantages.

The chief industries now established in the country are cotton spinning, weaving, cigarettes, sugar manufacture and refining, distilling, tanning, dyeing, and rug making.

Cotton Spinning.

During 1927 some 4,000 tons of silk, cotton, cotton and linen yarns were imported into the country, of a total value of over £E700,000. The Filature Nationale d'Egypte (founded in 1912) is, so far, the only factory in the country for spinning cotton yarns. It provides employment for 14,000 hands. The spinning of woollen and linen yarns is done throughout the country by the villagers, who use hand spindles. Not an uncommon sight is to see the *bowabs* (native concierges), watchmen on the Nile and basin banks during the flood, herdsmen and others who have much idle time on their hands spinning the coarse native wool, which is afterwards woven into native rugs or mantles. The spinning industry is capable of great expansion in Egypt, and a new company with a capital of £E500,000 has been recently created under the auspices of Bank Misr for spinning and weaving cotton.

Weaving Industry.

This industry is carried out all over the country, but the majority of the workshops are small and fitted only with hand looms. The only weaving workshops in Egypt fitted with up-to-date machinery are the silk factory at Damietta and the Filature Nationale d'Egypte at Alexandria. There is a weaving school at Mehalla for training students. The approximate number of looms employed is 24,000, turning out over 30,000,000 yards annually and providing employment for about 8,000 hands. The silk tissues of Damietta and of Mehalla-El-Kobra are well known for their delicacy and exquisite designs. The weaving industry also is capable of further expansion.

Cigarettes.

Egyptian cigarettes enjoy a world wide reputation. No tobacco is grown in the country, but it is imported chiefly from Turkey and Greece. The chief characteristic of the Egyptian cigarette is its blending, in which long practice has developed a high degree of skill. During the year 1927 Egypt imported over 7,000 tons of tobacco. There are many cigarette factories in the country which are fitted with the very latest type of machinery, and although the cult of Virginian tobacco has affected Egypt's export trade, she has not given up all hope of regaining the premier place that she once held in connexion with cigarette smoking.

Sugar Manufacture.

The Société Générale des Sucreries et de la Raffinerie d'Egypte was founded in 1897 by a fusion of two pre-

(Continued on page 77.)

Branches throughout the World.

viously existing companies, one for the manufacture of the raw sugar, and the other for its refining. At first the present company worked under difficulties, but after reconstitution in 1907, and especially during and since the War, it has been run on profitable lines. The plant is capable of refining over 100,000 tons of sugar annually and of giving employment to 20,000 Egyptians. One of its chief difficulties is to secure an adequate supply of raw sugar, for which purpose supplies have sometimes to be brought from Java.

Brick and Tiles.

There exists one important factory in Upper Egypt employing over 1,500 persons. It manufactures red and wire-cut bricks, hollow bricks, floor and roofing tiles, sanitary ware and artistic pottery.

Alcohol.

There is near Cairo a large factory producing alcohol and capable of an annual output of 11,000 tons, all of which is consumed in the country. This establishment is equipped with the most modern plant; it employs as raw material the molasses from the sugar refinery, and is organised so efficiently that practically no waste product is allowed to leave the factory.

Tanning.

The tanning industry is carried on in all parts of the country and there are some 200 tanneries in all. Most of these are far from being up-to-date, but the Government has engaged a British expert to study the whole industry and to report upon it.

Dyeing.

Practically every village throughout the country has a dye-house, but the methods are very primitive.

Rug Making.

Considerable numbers of rugs and *kleems* are manufactured. The chief rug-weaving centres are Cairo, Fua, Beni-Suef, Minia and Assiut. The industry is showing progress, and students at the Trade Schools are now taught the art. Much is being done to perfect design as well as technique.

Among other industries may be mentioned brewing, soap making, inlaid work, rice hulling, paper making, perfumery, copper and brassware.

THE MINING INDUSTRY.

The principal minerals mined in Egypt are petroleum, manganese iron ore, phosphate, gold, lead, zinc, peridots, salt, sulphates and carbonates of soda, iron oxide, ochres, and clay. There is also an extensive native quarrying industry which supplies local needs for road-making and building. Petroleum is refined locally, while manganese iron ore, and phosphates, a part of which is ground in Egypt, are exported in a raw state. The native pottery industry is extensive, and efforts are being made to develop the local pigment industry by the export of the raw material. Gypsum is manufactured into plaster on a large scale. Other minerals also occur, but so far have not been found in deposits of economic value permitting their profitable extraction. These are nickel, copper, chromite, talc, beryl-emerald, turquoise, amethyst, sulphur, barytes, celestine, sulphate of alumina, sulphate of mangnesia, nitrate shale, and molybdenite.

Of the total area of Egypt, which is approximately 1,000,000 square kilometres, about 870,000 square kilometres consist of desert, for the most part waterless and devoid of vegetation, and it is in this desert area that the mineral resources of Egypt are to be found.

So far as the better known minerals are concerned, Egypt cannot be described as highly mineralised, but in the enormous area available and still largely unprospected it is more than possible that some of the lesser known minerals exist, whose application to commerce in the near future, in this age of rapid progress, may be

important. Exploration and development have been retarded owing to the great distances of the known deposits from one another and from the Nile, but of late years considerable progress has been made, more particularly in the districts bordering on the Red Sea and the Gulf of Suez, which afford a natural means of transport the lack of which in the interior has militated against mining development. The advent of the motor car, however, is now leading to the opening up of communications in the desert. Local interest in mining has been small in recent times and the capital and organisation of existing enterprises have been mainly supplied from foreign sources. During Dynastic times mining was carried on intermittently by the Egyptians, principally for gold, for thousands of years, and was continued by the Ptolemaic Kings and later on by the Arabs until about 1300 A.D., after which date mining was neglected until the time of Mohammed Ali Pasha (1805-1848). During this dormant period in Egypt great progress had been made in Europe in the practice of mining, metallurgy, and geology, with the result that during the nineteenth century various expeditions were sent to Egypt to investigate the ancient mines.

During the closing years of the century the general outburst of speculative activity which took place led to the division of the whole uncultivated area of Egypt into a number of huge concessions which could scarcely be explored, much less exploited. The Egyptian Government finally recognised that the concession system did not conduce to the development of a mining industry, and decided to replace it by one of general prospecting rights with powers to lease restricted areas. During the ensuing quiescent period, a regular system of licensing and leasing on up-to-date principles was gradually brought into force. This has evolved during the last twenty-five years, side by side with the growth of the mining industry, into

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent
on application to
the Secretary*

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

a scheme of control founded on practical experience of the peculiar needs of the industry in this country. The policy followed throughout has been designed to encourage and facilitate the exploration for and development of the potential mineral resources of Egypt, and the influx of foreign capital and expert knowledge, by the granting of terms as generous as possible compatible with the safeguarding of the interests of the State.

Mining development in general was seriously retarded by the Great War, but the production of petroleum on the Hurgliada Field continued during the War period, and the oil from this source proved a valuable asset. Moreover, during the War, a large amount of prospecting for petroleum was carried out, in the course of which over 30,000 feet of boring for oil was accomplished, but with very little success. Geophysical examination is now proceeding, from which it is hoped that valuable information may be obtained regarding the geological structure of areas possessing surface features similar to those of the existing oilfields.

The statistics given below show that the production of minerals has materially improved, especially in the case of petroleum, phosphate and manganese. Interest, both local and foreign in prospecting is also showing signs of revival and should ultimately prove of benefit to the industry, provided that the general conditions prevailing in the country allow development to continue its normal course unhindered.

MINERAL PRODUCTION OF EGYPT.

Year.	Phosphate rock. Tons.	Petroleum. Tons.	Manganese iron ore. Tons.	Gold fine. Oz.	Nitrate shale. Tons.	Ochre. Tons.

GOVERNMENT POLICY.

The Egyptian Government is keenly alive to the necessity of encouraging existing local industries and also of helping new industries. In 1920 a Department of Commerce and Industry was started to deal with such questions. A Consultative Committee, whose members include industrialists, merchants, and officials representing the Department chiefly concerned with trade and industry, has been formed to advise and assist the Department of Commerce and Industry. European experts in rice hulling and handling, tanning, furniture making, dyeing, and glass making are being engaged to report on ways and means of improving these industries, which already exist. A permanent Exhibition of Arts and Crafts is attached to the Department of Commerce and Industry and contains examples of most of the important industries in the country. The Egyptian Government has further exempted certain articles of local manufacture from

export and quay duties, and in cases of new industries being initiated it considers, when application is made, the exemption of import duties on machinery, etc. The Government has deposited money with the Bank Misr for the purpose of contracting loans to applicants engaged in local industries. One of the great difficulties in the development of trade and industry is the apathy and lack of enterprise shown by the Egyptian people themselves. The Prime Minister, when Minister of Finance, stated that, whilst the Government was willing to help, it could never take the place of the expert or capitalist in trade. It was doing its utmost to train the younger generation, so that they would be able to take their place in the trade and commerce of the country.

A strong committee was formed in 1927, under the chairmanship of Ismail Sidki Pasha, to investigate the requirements of the country in respect of technical education, and the Government is ready to take the most strenuous steps to carry out the findings of this committee.

Finally, the Government is seizing the opportunity of the elaboration of the new Customs tariff; designed primarily to replace the existing unscientific and non-economic Customs Law by a scientific tariff, to make it also play a part in rendering assistance to infant industries of which the country stands so much in need.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, January 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahronda for Calcutta (Birkenhead, January 24).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 23).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, January 26); s.s. Dumana for Bombay and Karachi (London, February 2).

Cunard Line.—S.s. Bantria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. (This steamer will also call at Volo if sufficient inducement.) (Liverpool February 16, Glasgow and Swansea February 15; s.s. Bosnia for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, February 16, Swansea February 19).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26) (the first sailing of the season for the Danube ports of Galatz and Braila); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23).

P. and O. Line.—S.s. Razmak for Bombay (London, January 18); s.s. Novara for Calcutta (London, January 19); s.s. Kaiser-i-Hind for Bombay (London, February 1); s.s. Burdwan for Calcutta (London, February 2).

Prince Line.—S.s. Indian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, January 19); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 22); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, February 9).

Ellerman and Papayanni Lines.—S.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool January 24, Glasgow February 11); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool February 2, Swansea February 7); s.s. Mardinian for Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Calamata (Liverpool February 9, Swansea* February 9). *Subject to sufficient inducement.—Cargo taken on through Bill of Lading to:—Algiers ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient ports.

The production of Hamilton's Oil Concessions (Roumania) for December was 5,210 tons.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*Elysia ... Jan. 29 *Castalia ... Mar. 1
*Tuscania ... Feb. 12 *Britannia ... Mar. 15

*First class passengers only. Specially low fares. †Calls Port Sudan.

†First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 15.

Although arrangements in connexion with the past account, which covered a period of three weeks, occupied a good deal of attention, business on the Stock Exchange during the past week was quite brisk and the tone fairly cheerful in nearly all departments. A better tendency in some of the foreign exchanges was responsible for an improvement in the gilt-edged market and the absence of a rise in the New York Federal Reserve Bank's rate on Wednesday, coupled with slightly easier money rates in New York, was not without its effect. The early closing of the lists for the cash portion of the New Zealand loan was also a bull point. Home rails were a little harder, in sympathy with gilt-edged stocks, while activity in the industrial section has continued unabated, prominent features being Mond Nickel, Imperial Chemical and the gramophone and tobacco groups. Rhodesians and tin shares, after their recent burst of activity were somewhat less firm. A rise in the price of rubber has brought a sharp advance in share prices in a market which is short of supplies.

There are signs of further activity in the new capital market, and preparations are being made for a number of industrial flotations while an issue by a Corporation in the Midlands is spoken of as imminent.

Rhodesian Copper Share Boom.

The outstanding feature of the mining department of the Stock Exchange just lately has consisted in the activity in the shares of companies interested in copper-mining in Northern Rhodesia. On the one hand, there are the mining concerns, such as the Bwana M'Kubwa, the Roan Antelope and the N'Changa; on the other, the finance concerns interested, such as the Anglo-American group, and more especially the two newly-formed undertakings, the Rhodesian Selection Trust and the Rhodesian Anglo-American. As examples of the price advances,

Bwanas have touched 18s. and N'Changas 41s. 3d. as against 4s. and 9s. at one time last year; while the new finance shares, which were quoted from the start at high levels, have gone still better. The buying responsible for the more noteworthy gains has in the main come from the other side of the Atlantic, it being the evident determination of the Americans to maintain their dominating position in the world's copper industry by securing a large participation in the future Rhodesian production. It may prove that many have paid dearly enough. Up to the present results from the only producer of the group—the Bwana—have fallen sadly short of expectations.

Two New Trustee Issues.

The many investors who favour "safety-first" investments have had two opportunities already this year of applying for new issues of "trustee" securities. The first new capital issue of 1929 was an offer by the Indian Government of £10,000,000 of 4½ per cent. stock redeemable 1958-68. Although the new stock was issued at 91, which is rather below the current price of similar Indian stock, the underwriters were left with 23 per cent., but the opening quotations were only about 1-16 discount. The new loan is to be used for capital expenditure on Indian railways, the purchase of railways in Burma, and repayment of £6,000,000 of India Bills maturing in February. Budget surpluses which have been received since 1922-23 have been used to repay unproductive debt, so that it is now estimated that interest on the whole unproductive Indian debt is now covered by the surplus net revenue from the Indian railways. At 91 the new stock gives a flat yield of £4 18s. 11d. per cent., and a gross yield, allowing for redemption, of £5 os. 7d. per cent. The second trustee issue was that of New Zealand Government 4½ per cent. inscribed stock, repayable 1948-58; £7,000,000 of this stock was offered for cash, and £12,510,000 in exchange for New Zealand 4 per cent. stock, which will mature in November. Holders of the maturing stock are offered £104 5s. of the new stock for every £100 of their holdings. The cash proceeds of the issue are to be allocated entirely to productive purposes. At the issue price the new stock would give an income of £4 14s. 9d. per cent., or a yield of £4 16s. 5d. per cent. allowing for the profit on redemption. This issue was so popular that the cash portion was over-subscribed on the first day on which applications were received.

"Marketability."

Things are not always what they seem, in the realm of finance, as elsewhere, and on the question of marketability appearances are often particularly deceptive. It is, therefore, the more necessary for the investor to probe beneath the surface. The importance of marketability is often pointed out, and, it may be mentioned, it is particularly important for the small investor that his investments should be readily realisable, if need should arise, at a moment's notice. It is for this reason that the ordinary investor should never purchase securities which are not dealt in on British Stock Exchanges. Certain details relating to marketability, however, called for further comment. When it is stated that a company has, say, 1,000,000 shares outstanding it does not necessarily follow that there is a free market in those shares. For instance, another company may hold the overwhelming proportion of shares for purposes of control, with the result that the "free" supply of shares—that is, the number in the hands of the ordinary investor—may be so limited as to make the market in the shares distinctly narrow. Information on this point will be given by any good broker, or it can generally be obtained from "The Stock Exchange Official Intelligence," which may, as a rule, be seen at a public library. Again, in the case of Government and municipal securities and debenture stocks the investor should, when the security has been in issue some time, ascertain whether the market has been unduly narrowed by the operation of a sinking fund. This information may also be obtained from "The Stock Exchange Official Intelligence."

Engineering Topics

By G. B. B.

Vacuum Power Oil Lamp.

I was particularly interested in the paper read by Major Scott-Snell on the vacuum power oil lamp, before the Society of Engineers a few days ago. He and his father realised some years ago that there would be a large market for a paraffin oil lamp of the pressure-fed type if only the hand-operated pump could be eliminated and the process of working made automatic. Their idea was to make use of the waste heat from the mantle so as to make it the source of energy, and the paraffin itself—by alternately turning it into vapour and condensing it—as the means of suction and delivery from the reservoir of oil to the burner. Their difficulty lay in the fact that the heating and cooling positions were naturally fixed, which meant that the heat could not be allowed to act merely on the out stroke and then be removed to allow the vapour to condense. Means had to be discovered by which vapour could be formed in one part of the apparatus, and automatically removed to another to condense, whilst the vapour generator must be so governed that it ceased to function until condensation and a consequent refilling by partial vacuum had taken place. Eventually this was achieved by so designing the pump—which has none of the usual features of a pump, such as pistons, cranks, flywheels, etc., and in fact consists of nothing more than a fluid circuit to which are attached an inlet and outlet valve—that vapour could be collected in the generator up to a certain amount, and as soon as that point was reached, the hydrostatic balance which previously existed was upset. This caused the vapour to be transferred to a cool section, acting as a condenser, whilst the generator was temporarily put out of action by being flooded with cold oil. This point was thoroughly and clearly explained in the paper, and this was necessary, in that the action makes commercial use of some principles which have not previously been utilised, and Major Scott-Snell described two types of the lamp, the first being a “one-stroke cycle” type for comparatively low pressures, and the other a “two-stroke cycle” type which is capable of delivering oil gas at a pressure of about 40 lb. per sq. in.

The Main Incentive.

The main incentive to the investigation was the desire to eliminate the hand-pump, but with success in this direction came one great advantage and many minor ones. In any liquid pumping system in which the reservoir is open to the atmosphere, and is placed at a level lower than that of the inlet valve, the service pipe must always be under a partial vacuum. Consequently any damage to the service which would admit air, so forming an explosive mixture, would result in the contents of the pipe being

driven back, out of harm's way, into the reservoir. This is the direct opposite to what would happen under a pressure system, for in that method any leak caused by external damage would allow the oil from the reservoir to be driven out. It will be realised that in the event of the damage to the system being caused by fire, this would almost certainly be a serious matter, as the oil contents of the reservoir would be sprayed, in a fine or large jet as the case might be, on the fire.

Since pressure is used at the burner, there must always be some oil under pressure. But whereas in a lamp of the pressure type the whole of the supply is constantly under pressure, in a vacuum pattern lamp, with a pump having a periodicity of about 20 seconds, no more than a very few cubic centimetres of oil need be kept continuously under pressure. The puncturing of the pipe in which this is contained must, by the nature of the design, automatically extinguish the light, so that it is by no means an easy matter to imagine circumstances in which lamps of this type could possibly become a source of danger.

Road Surfacing.

A series of seven British Standard Specifications for asphalt road surfacing has just been issued, and these should do much to assist both engineers and contractors alike in obtaining good results in practice. The specifications, it is true, have been based largely upon existing forms drawn up by the Institution of Municipal and County Engineers and the County Surveyors' Society in consultation with the Asphalt Roads Association and the Ministry of Transport, but a good deal has been added that is both new and valuable. The specifications deal with the degrees of thickness necessary for certain materials, the gauges of the various constituents and their proportions, as well as with methods of mixing, transportation, and laying.

Business Methods.

There is no doubt that the improvement in business methods and the adoption of efficiency systems has resulted in increased leisure for business men, and it has been said, with more than a little truth, that if an engineer to-day has to keep his nose to the grindstone, it is a sure sign that his business is not being managed as well as it might be. The complaint used to be made by critics a few years ago that some of our big and old-established businesses would be certain to go to the dogs, because the young men who had succeeded their fathers in the management were taking long week-ends and going off shooting or golfing. As a matter of fact, provided the business is scientifically run, and efficiently and adequately staffed, the directing heads can be away for comparatively

long periods without the business suffering in the slightest. It has been said that any engineering business that "can run itself" can only run itself downhill, but that certainly is not true, if the staff is efficient. There should be always available one or more men who possess both ability and initiative to act in cases where instant and perhaps momentous decisions have to be made, but such occasions are not always happening. I think it may be taken that if a man has an engineering business that he cannot leave in order to obtain ample time for recreation, his business is either far too big for him to handle, or else it is not being handled in the best possible way.

The production of the British Burmah Petroleum Company for December amounted to 40,338 barrels.

During 1928 Yugoslavia exported about 40,000 tons of bauxite from Dalmatia. It is anticipated that there will be a substantial increase in exports during the current year.

COMPANY NOTES AND REPORTS.

ROHILKUND AND KUMAON RAILWAY.

The report of the Rohilkund and Kumaon Railway Company for the year ended September 30, 1928, states that the net earnings amount to Rs.37,85,358, against Rs.35,62,731 for 1927. The company's share is Rs.15,82,375, against Rs.14,84,198. The actual rates of exchange were above book rate, namely, 1s. 4d., and after adding the gain in remittance, namely, £11,443, and other miscellaneous receipts, the net receipts are £128,450, against £121,994. After providing for income-tax, interest on Debenture and Preference stocks, interim dividend and bonus, contribution to provident fund, and making other adjustments, including £10,000 on account of the Secretary of State's share of the surplus profits, the directors recommend a final dividend of £6 per cent., together with a bonus of 5 per cent., on the Ordinary stock, subject to tax at 2s. 3d. in the £, carrying £32,681 forward. The dividend and bonus will represent a total distribution of 18 per cent. per annum, against 16 per cent. The working expenses amounted to Rs.33,61,779, or 47.04 per cent. of the gross earnings, against Rs.34,53,331, or 49.22 per cent., for the year ended September 30, 1927. Carriage and wagon expenses decreased by Rs.2,47,295 owing to less repairs and renewals of vehicles and locomotive expenses by Rs.90,971, mainly due to lower expenditure on fuel. Arrangements have been made with the Secretary of State for the provision by him of funds for any new extensions of the railway system worked by the company between the present time and 1932. The necessary contract to give effect thereto is now under preparation. Another contract is also under preparation to provide for the adoption of a uniform rate of 1s. 6d. to the rupee in accounts and transactions of the company in substitution of the variable rate of exchange at present prescribed under the existing contracts.

BENGAL AND NORTH WESTERN RAILWAY.

The report of the Bengal and North Western Railway Company for the year ended September 30, 1928, states that the net earnings of the joint undertaking amounted to Rs.2,25,02,003, against Rs. 2,29,20,646 for 1926-27. The company's share is Rs.1,27,08,558. The rates of exchange were above that of 1s. 4d., the book rate, and adding gain in remittance, namely, £100,837, the net earnings for the year are £948,074, against £954,316 in 1927, when the gain in remittance was £94,276. After providing for income-tax, interest on Debenture and Preference stocks, interim dividend and bonus, contribution to provident fund, £35,000 for the sinking fund for the redemption of capital in 1982, £25,000 to reserve account, £30,000 to contingency fund, and making other adjustments, the directors recommend a final dividend of 7 per cent., together with a bonus of 3 per cent. on the Ordinary stock, subject to tax at 2s. 2d. in the £, carrying £200,933 forward. The dividend and bonus represent a total distribution of 19 per cent. for the year, against 18 per cent. Arrangements having been made with the Secretary of State that he shall provide funds for any new extension of the railway system worked by the company between the present time and 1932, the necessary contract has been executed to give effect thereto. Another contract is also under preparation to provide for the adoption of the uniform rate of 1s. 6d. to the rupee in the accounts and transactions of the company in substitution of the variable rate of exchange at present prescribed under the existing contracts.

NATIONAL BANK OF EGYPT.

Position at November 30, 1928, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000; Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E15,490,345; Egyptian Government, £E19,422,875; Sudan Government, £E174,833; Mixed Tribunals, £E1,869,008; bankers' accounts, £E378,215; cheques and bills payable, £E225,767; sundry other accounts, £E2,276,683—£E45,468,351. Assets: Government securities and securities guaranteed by the Egyptian Government, £E20,419,812; sundry securities, £E504,467; advances on merchandise, £E5,479,807; advances on securities, £E5,861,160; advances otherwise secured, £E1,576,602; sundry other advances, £E1,212,836; bills of exchange, £E4,267,983; local bills discounted, £E569,487; buildings and furniture, £E249,705; money at call and at short notice, £E877,500; bankers' accounts, £E345,759; sundry other accounts, £E1,489,297. Cash: Notes, £E1,857,297; gold, £E505,280; silver, nickel, etc., £E251,359—£E2,613,936—£E45,468,351. Issue Department: Notes issued, £E33,300,000—£E33,300,000. Gold, £E3,339,570; *British Treasury Bills, £E13,310,430—£E16,650,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, National War Bonds, and British War Loan, £E15,150,000—£E16,650,000—£E33,300,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

The death has taken place of Mr. Stephen Paget Walter Vyvyan Luke, of Newbury, Berks, in his 84th year. He was formerly Deputy Director-General of the Indian Telegraph Department and was a director of the Calcutta Electric Supply Corporation.

Near East Markets

CYPRUS TRADE IN NOVEMBER.

The value of the imports of Cyprus during November was £145,189, nearly £15,000 over the quinquennial average, but some £37,000 below that for the previous month. The decrease affected nearly all commodities. Exports also declined from £163,000 in October to £112,000. The continued hold up of carob shipments was the main contributory cause, but nearly all items show a decrease.

Compared with the corresponding period of 1927, imports for the eleven months ended November 30, 1928, show, at £1,634,000, an increase of £183,920. Exports decreased by £89,670 to £1,321,000. Shipping was slightly below the average.

THE JAFFA ORANGE SHOW.

The third Jaffa Orange Show will be held at the Exhibition Hall, Tel-Aviv, from February 21 to 24. This Show, which is of importance to all interested in the famous Jaffa orange, be they growers, merchants, or brokers, is organised by a committee, the chairman of which is the District Commissioner, Major Campbell. Over sixty classes will be open to competition, and in addition to the usual citrus fruit sections, bananas, winter vegetables, and flowers will be exhibited. For those who have not yet been to Jaffa the Orange Show might form an excuse, if one were needed, for testing the wonderful climatic conditions and beauty of the early spring in that region.

CYPRUS CROPS.

The following report has been issued on Cyprus crops in December:—

Abundant rains have fallen and large areas have been sown with wheat. The price of wheat for local consumption is kept steady owing to the large imports of flour. Local stocks have diminished heavily, and prices vary between 8s. and 10s. per bushel.

The germination of early sown barley has been very satisfactory, and the crop promises to be good. Owing to the early growth of pasture grasses the local demand for green feeding barley has been less than usual. Prices are steady at 3s. 4d. per bushel. No stocks of oats are available for export.

The new crop of potatoes is excellent in quality and quantity. Export has begun, chiefly to Greece and Egypt. The price is £5 10s. per ton. Offers are good, but the demand is rather poor.

Apart from purchases by the recently established local factory, there is a steady export of carobs. The price is from 26s. per Aleppo kantar, or about £6 per ton.

This year's crop of cotton is now being ginned and baled for export. The price for seed cotton is 3s. 11d. per stone.

The export of oranges from Famagusta has begun. The stock is below the average. There is a good demand, but growers are expecting higher prices. The Jaffa type brings 35s. per 1,000, round oranges 15s. per 1,000, and mandarines 10s. per 1,000. The price of all citrus fruits tends to rise.

The price of raisins, which had dropped to 1s. 5d., has recently risen again to 1s. 8d. per stone, notwithstanding the lack of demand in foreign markets.

The prices of wines are improving steadily. Export to Egypt and France has begun. It is probable there will be a larger demand from France for Cyprus wine, especially for wine with body and colour.

The Turkish Government has decided to reduce the Customs duty on imported flour from £T110 to £T36 a ton.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 20 amounted to £E11,503, making the total from April 1 £E235,752.

The Empire Marketing Board reports that the total direct shipments of oranges from Palestine to the United Kingdom up to January 4 amounted to 438,000 boxes, as compared with 450,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to 64,000 boxes, as compared with 66,000 boxes last year. Transshipments have totalled approximately 57,500 boxes.

NEAR EAST MARKET REPORTS.

The January issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

Cotton prices during the month under review have been firm, with an advancing tendency. It would appear that certain speculative operators are of the opinion that the Sakellarisid crop is short and that a substantial advance in prices will occur. In fact, at one time, the quotation for March contracts rose to a premium of 40 points on November, which was a clear indication of the feeling of the speculative section of the market. High prices and substantial premiums over Uppers and American cottons have caused the demand for Sakellarisid to slacken, and spot sales have fallen off considerably. On the other hand, the demand for Uppers continues strong and the large crop is gradually being disposed of, owing to the relatively attractive prices of that variety compared with Americans. The movement of cotton in the Interior was rapid for a time, but it has since decreased. The ginning factories are full, and if space were available in Alexandria there would have been a much heavier movement in the Port. As it is, factories have had to stop ginning in some cases, until the pressure eases in Alexandria.

The cotton seed market has been very steady, but prices have sagged a little, owing to continued heavy arrivals. The local mills have been working full time and have found ready markets for oil and cakes. The demand for cotton goods has been satisfactory, and owing to the steadiness of the cotton market, quotations have been well maintained, the tendency remaining firm. The stock of Manchester goods continues to decrease, there having been a good demand during the period, with prices unchanged. The sugar market has shown irregularity, and prices have been influenced partly by the better position in producing markets and partly by the heavy arrivals in Egypt. Business, however, was active for local consumption and export, and existing stocks are, therefore, considered normal. The demand for flour has been satisfactory, but owing to large arrivals prices declined, and the tendency, at the moment, is undecided. It is reported that fairly large shipments are afloat. There was a better demand for American flour. Although spot supplies of imported rice were good, holders were not pressed to sell, and the market was quiet, with little business being transacted. Egyptian rice was in fair demand and prices have been steady. The cabots market showed no special feature, and owing to a lack of demand for export, business was dull. Supplies were moderate, but holders were disposed to grant concessions, and spot quotations were lower than in the Kobe market. The gunnies market has been active, with prices steady, the demand being chiefly for onion and cereal bags. Business was also done in 3 lb. bags for August/September 1929 delivery. The stock of cereals has decreased, except in the case of maize, which has been affected by arrivals of the new crop.

The Sudan.

No noticeable change in the general situation occurred during the period under review, and markets have not yet shown real activity. The Port Sudan market is temporarily neglected, the natives having turned their attention to cultivation in Tokar and Kassala. Arrivals of gum have commenced, and although the crop cannot yet be estimated with any accuracy, it is believed to be normal and of good quality. Business has been transacted at 40s. per cwt. for natural and at 41s. 6d. for cleaned, c.i.f. United Kingdom. The sesame crop is reported to be of very good quality and better than that of last year. Quotations are £E18½ for White, and £E18 for Red per ton delivered Port Sudan. The groundnuts crop shows a

FOREIGN EXCHANGES.

Warsaw	Zlotv to £	25.22½	43 3/16—7/16

decided improvement over a year ago, and present prices range between £E15½ and £E16 per ton, c.i.f. United Kingdom. There is no change to report in regard to dura, and exports of this commodity will not be possible. The import market is stated to be good and there has been a satisfactory demand for Japanese cabots at Medani and Port Sudan, because of a shortage of stocks. The cotton crop is said to be proceeding satisfactorily, and the prospective yield of Sakel in the Gezira is estimated at 475,000 kantars, in Tokar at 55,000 kantars, and in Kassala at 55,000 kantars.

Palestine.

Little change has occurred in trade conditions in Palestine. During the latter part of the period under review, heavy rains were experienced all over the country, six inches having fallen in Jerusalem alone, and it is expected that the winter crops will be favourably affected. The prospects for the orange season are satisfactory, and it is anticipated that the rain will increase the quality of the fruit and hasten its ripening. Direct shipments of oranges to the United Kingdom, so far, amount to 180,632 cases, and transit shipments via Egypt to 39,895 cases. Until recently prices were considered low, but an improvement was then observed, the demand having increased and higher quotations being realised. The rise in prices may have been affected by the closing of the Brazilian season and by the decision of local exporters to cease shipments between December 5 and 15. Latest quotations are 11s. to 16s. per case, with an average of 14s. 6d. New markets opened in Germany and Holland appear to be developing well. Business in Colonial goods has been normal with prices fully maintained.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended December 20:—

Arrivals of old crop gum from November 21 to 30 amounted to 5 tons only, as against 16 tons last year, and since then have ceased altogether. The total of the Kordofan crop for the season 1927-1928 remains, therefore, higher than that for the season 1926-1927 by about 2,780 tons, or 20 per cent.

Arrivals of new crop gum in Kordofan Stations (including Tendelti) amounted from November 21 up to date to 804 tons, as compared with 628 tons for the same period last year.

Prices.—New Crop: Taking the El-Obeid market as the standard, the market opened on November 21 at about 4d. per cwt. less than the closing price of the previous day. From that date up to December 3 the market was firm, prices fluctuating within the limits of about 6d., after which they gradually fell, the total fall amounting on the 20th to 1s. 10d. per cwt., as against the price paid on November 21. Demand as shown by our sales was generally good.

Stocks: As already pointed out in our previous reports, old crop stocks are virtually exhausted, and this is borne out by the Customs figures of the exports during November, when only 531 tons were exported from the country—the smallness of the exports being explained not so much by lack of demand from overseas as by the fact that there was no more old crop stocks available, whilst it was, of course, too early yet to make it possible to ship any new crop gum.

Mr. Walter Shakespeare, of the Ceylon and Eastern Agency, has joined the board of directors of the National Bank of India.

Sir Joseph Burn, F.I.A., general manager of the Prudential Assurance Company, has been elected to a seat on the board of the Trade Indemnity Company.

A Constantinople message states that the Turkish Government has invited Dr. Schacht, the President of the Reichsbank, to visit Angora, for the purpose of drawing up with M. Vissering, of Holland, the statutes of the new State Bank.

The Rt. Hon. Sir Lawrence Hugh Jenkins, K.C.I.E., of Marchwood Crescent, Ealing, W., at one time Chief Justice of Calcutta and a member of the Judicial Committee of the Privy Council, who died on October 1, aged 69, left £23,761 (net personalty £22,815).

Abdullah Hamid Bey, the Turkish poet, and Vassif Bey, at present Ambassador to Moscow, have been elected deputies in the Turkish Grand National Assembly in place of the late Minister of Education, Nejati Bey, and Behij Bey, the former Minister of Public Works, now Minister to Budapest.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

BULGARIA.

Public Services.—The Sofia Municipality invites tenders for an installation for the supply of steam, water, bath, heating, ventilating, and laundry systems for the Municipal Bath, the buildings for which were recently erected. January 28.

EGYPT.

Dressings, Cotton and Mackintosh Cloth.—Tenders are invited for the supply of dressings, cotton and mackintosh cloth required by the Department of Public Health for the year 1929-30. February 10. (D.O.T.)

Drugs, Etc.—The Egyptian Department of Public Health invites tenders for the supply of drugs, etc. (i.e., proprietary articles, drugs and chemicals, galeicals and packed articles) required during the year commencing May 1, 1929. February 17. (D.O.T.)

Cooling Tower, Etc.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of a cooling tower, elevated tank, supporting structure, piping connexions and centrifugal pump. February 16. (D.O.T.)

Wood Naphtha.—The Egyptian Customs Administration invites tenders for the supply of 135,000 kilos of wood naphtha (wood spirit). March 15. (D.O.T.)

Aerial Ropeway.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of an aerial ropeway at Sollum. February 28. (D.O.T.)

Mail Bags, Etc.—The Egyptian Postal Administration invites tenders for the supply of approximately 46,300 mail, parcel, and letter bags and jute sacks as specified. March 11. (D.O.T.)

Clothing, Etc.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of: (a) Clothing and equipment; (b) tarbushes and tassels; (c) boots for guards required for the year 1929-1930. March 1.

Mild Steel Round Bars.—The Egyptian State Railways, Telegraphs and Telephones, invite tenders for mild steel round bars; steel files; hard drawn copper line wire; vacuum brake rubber fittings; baskets; zinc sheets steel equal angles; pitchpine wood; stationery articles; electrical wire and cable; zinc ingots.

Fuel Wood, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of fuel wood to the Egyptian Army at Sallum, March 25; and for the supply of cocoa nut oil to the Ministry of War. March 27.

Sinking of Artesian Well, Etc.—The Egyptian Ministry of the Interior invites tenders for the sinking of an artesian well and the supply of centrifugal pumps, filters, etc. January 21. (D.O.T.)

Pumping Machinery.—The Egyptian Ministry of the Interior invites tenders for the supply of pumping machinery, filters, and accessories. January 31. (D.O.T.)

Cables and Transformers.—The Ministry of the Interior, Local Commissions Section, Cairo, invites tenders for the supply of transformer kiosks, electric cables, and accessories required for the extension of the electrical supply of Mit-Ghamr Power Station. January 27. (D.O.T.)

Disinfectants, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of disinfectants for medical and general purposes, required for the period of one year commencing from May 1, 1929, February 10; bedsteads, iron, required for the year 1929-1930, February 10; pure alcohol, medical brandy and rum, sherry wine and malaga wine, required for the period of one year commencing from May 1, 1929, February 10; dressings, cotton and mackintosh, required for the period of one year commencing from May 1, 1929, February 10; drugs; required for the period of one year commencing from May 1, 1929. February 17.

TURKEY.

Crushing Machines.—A Turkish firm is desirous of purchasing machines for crushing and drying valonea acorns. (D.O.T.)

INDIA.

Metal Sleepers and Fittings.—The Railway Department, New Delhi, invites tenders for the supply of metal sleepers and fittings. January 30. (D.O.T.)

Imports of ploughs into Yugoslavia are exempt from Customs duty up to March 13 next.

The tax on eggs exported from Roumania has now been fixed at 50 lei per 100, to apply uniformly for the whole of the year.

A Cairo message states that the existence of important oil strata is reported from Mersa Matruh on the western desert. Survey Department officials working on the site are said to have come across indications of petroleum.

The traffic receipts of the South Indian Railway Company for the week ended December 15 amounted to Rs.11,61,809, making the total from April 1 Rs.4,35,78,276. For the corresponding periods of the previous year the totals were Rs.12,08,093 and Rs.4,40,18,438.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 9:—

Egyptian Futures.

Sakel Contract.—We have experienced a quiet and somewhat featureless week in this market, and trading throughout has been of a light character. Speculative interest, either for local or Continental account, has been very restricted for some little time; in addition, recently, trade support has been a negligible factor, so that it is not surprising that values during the last few seasons have begun to develop a gradually declining tendency. Whilst it is true that the statistical position of Sakels on the basis of last year's consumption figures is strong, it must be borne in mind that the premium of our cotton over other varieties has been sustained at a very high figure since the commencement of the season; in fact, under the ruling trade conditions prices have been prohibitive to the majority of spinners. Thus consumers by force of circumstances have never been heavily committed, and in contrast to previous seasons have, by the utilisation of other growths, been able to take up a neutral attitude. These facts do not appear so far to have been realised in their full significance by holders in Egypt, where a considerable "bull" account has been built up on the assumption that sooner or later forced buying will eventuate. Judging from the course of values in Alexandria during recent sessions, opinion on the subject appears to be becoming more divided, and, provided the present favourable prospects of a good Sudan crop are realised, sentiment in Egypt may readily swing right round. Only a limited amount of selling of new crop positions has been in evidence here since we last wrote, and the Liverpool/Alexandria November positions have closed in the neighbourhood of about 30 points. As mentioned in our recent reports, purchases here at 40 points or more discount with the overseas market should constitute a profitable straddle, and we would advise those interested to leave limits in hand, as it is essential in an operation of this character to be in a position to act promptly. Whilst the ruling level shows a substantial decline from values in force towards the end of last month, we consider there is a margin for a further reduction and would still counsel moderate commitments on the short side.

Upper Contract.—This option is not commanding the interest shown during the months of November and December; straddle interests appear to be content with their outstanding commitments, and spinners are in process of digesting their earlier heavy purchases. Transactions recorded during the week have been for unimportant quantities, and little alteration in values has occurred. For a long view we still think purchases in the neighbourhood of to-day's level will prove reasonable.

Egyptian Spot.

There is little change to report in spot conditions, and the average daily sales remain at the (apparently stabilised) figure of just over two hundred bales. Fluctuations in the price of Uppers and Pilon have been very evenly balanced, with perhaps a slight tendency towards lower rates in sympathy with the decline in American contracts. A small but steady business has continued in these two growths, with trading in Pilon somewhat restricted owing to the limited stocks available here. Uppers have been a more open market, but interest has once again been centred on the cotton at from 25 off to 25 on contracts.

Sakels have been a distinctly easier market. Future contracts have shown weakness, and the premium of well over 800 points which Sakels still maintain over American contracts appears grossly exaggerated in view of the poor trade outlook. There is no doubt that spinners of Egyptian cotton are going through a very lean period at present.

The inquiry for Sakel has been chiefly for cotton at from 100 off to 25 on, and there has not been quite so much interest displayed in the very low grades as has recently been the case. As usual, the higher grades (Good and above) have suffered from neglect. Business in Sudan cotton has been quiet. Forwardings to the trade were returned last week as 8,596 bales Egyptian and 1,731 bales Sudan.

Estimated spot sales, 1,500 bales Egyptian and 200 bales Sudan. Quotations of Sakel show a net decline of 55 points, and those of Pilon and Upper are 5 points lower. F.G.F. Sakel to-day, 18.90d. F.G.F. Upper to-day, 12.78d. F.G.F. Pilon today, 12.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 3, state:—

Since our last report the futures market has been more active, but the tendency has been rather weaker. The week's summary of price movements is as follows:—Sakellaridis: January, 37.35 dollars, 0.85 dollars down; March, 37.92 dollars, 0.91 dollars down; May, 38.35 dollars, 0.86 dollars down; November, 38.28 dollars, 0.88 dollars down. Ashmouni: February, 22.77 dollars, 0.32 dollars

down; April, 23.17 dollars, 0.34 dollars down; June, 23.57 dollars, 0.38 dollars down; October, 24.0 dollars, 0.32 dollars down.

Sakel.—The market this week has not shown the firmness to which we have become accustomed recently. After an undecided beginning, the market reacted sensibly on some long liquidation, induced by the decline in New York and the depressing effect of heavy tenders against January on the first delivery date. It is reported that the whole of this first tender is being taken up by one export house, but as it is expected that similarly heavy quantities will be tendered on the two remaining January delivery dates, there is much speculation as to what will become of these tenders if the export house in question decides not to receive them.

The demand from spinners has again been extremely poor, and the latest reports received from textile centres are unanimous in condemning the present high levels as unreasonable and in expecting that Sakel will be taken in continually diminishing quantities during the balance of the season if these levels are upheld. Against the first January tender, dockets for 27,750 kantars were issued.

The Sakel/Uppers straddle (March/April) this week stands at 1,475 points, against 1,532 points last week and 790 points at this time last year.

Uppers.—The decline in New York had its reflection on this market, but the reaction was not so pronounced as in the case of Sakel. The technical position of this market is undeniably strong, as the trade is the principal holder of the long position, while for Sakel the same position is chiefly in the hands of speculative interests.

Trade demand has been moderate, but we believe this to be due, to some extent, to the effect of the holiday period which has only just closed.

The Ashmouni/American straddle (February/March) this week stands at 299 points, against 287 points last week and 76 points at this time last year.

The week's receipts amount to 222,297 kantars, against exports 183,205 kantars; the stock in Alexandria stands at 3,594,070 kantars.

Spot.—During the past week the market at Minet el Bassal has been open only four days, due to holidays, but a rather better business has been done. Sales amount to about 14,300 bales, of which we estimate 5,600 bales Sakellaridis, 7,700 bales Ashmouni and Zagora, 600 bales Pilon, and 400 bales other varieties.

Sakellaridis: A somewhat improved demand has appeared and a fair business has resulted, covering all grades. Spot differences are generally without much change.

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

Ashmouni and Zagora: Have met with rather more inquiry and an improved turnover has resulted, in which all grades have shared. Spot differences are generally unchanged, with the exception of the grades below Fully Fair, which are rather dearer.

Pilion: A fairly good business has been done. Spot differences are unchanged except for Good Fair, which is somewhat dearer.

Other Varieties: A good business continues in Nahda, and spot differences are rather dearer except for the lower grades, which are unchanged. In White a retail business has been done. Spot differences are a trifle dearer. A few bales of Fouadi have also changed hands.

Up-country: The movement of cotton is growing smaller, but stocks in the factories are still fairly large. It now looks as if the crop is likely to be slightly larger than the figure we anticipated, and will, in all probability, reach about $7\frac{1}{2}$ to $7\frac{3}{4}$ million kantars, of which about $2\frac{1}{2}$ million kantars will be Sakel.

The Roumanian export duties on timber and live stock have been abolished.

The boards of the Eastern and Associated Telegraph Companies have nominated Sir Basil Phillott Blackett, who retired last year from the office of Finance Member of the Executive Council of the Governor-General of India, to be the Chairman of the proposed Communications Company, which is to take over certain cable and wireless services from the Government in the United Kingdom, the Pacific Cable Board, and the Cable and Marconi Companies.

GREECE'S MERCANTILE MARINE IN 1928.

In the course of the past year the number of Greek steamers was increased by 24 of a total tonnage of 161,950. At the beginning of 1928 the Greek mercantile marine consisted of 504 steamers of 1,111,050 tons and 726 sailing vessels of 58,684 tons. Of the steamers 371 of 1,010,269 tons were cargo boats, 119 were passenger vessels, their tonnage being 75,625, and three of a total tonnage of 23,725 were Atlantic liners. At December 31 last the shipping consisted of 528 steamers of 1,273,000 tons and 723 sailing vessels of 58,638 tons. Of the steamers 404 of 1,196,655 tons were cargo boats, 115 of 76,328 tons were passenger steamers, while the number of liners was unchanged.

The address of the Bank of Roumania has been changed to 73-70, King William Street, E.C.4.

Mr. W. F. Vaughan Scott, lately Commercial Secretary for Chile, has been appointed to succeed Mr. R. M. A. Turner, O.B.E., as Commercial Secretary at Athens. Mr. Vaughan Scott has already proceeded to Athens to take up his new duties.

Notes of the Week.

The Dictatorship in Yugoslavia.

The initial excitement aroused by the establishment of the Dictatorship in Yugoslavia is passing, and up to the present, so far as can be ascertained, the more general attitude of the country is a feeling of relief at the respite from political quarrels. Due allowance has to be made for the censorship of the Press, and, no doubt, among members of political clubs the new régime is anathema. A Government, however, that requires its Civil Servants to be civil and to regard themselves as servants of the public must clearly have some good points about it. If General Zhivkovitch is able to convince the Yugoslav people that he is really cleaning up the administration and improving it, before political "homesickness" seizes them, there will be more readiness to employ years rather than months or weeks as the suitable unit for measuring the length of the Dictatorship. So far the strictly non-party attitude of the Government appears to have been above challenge. The presence in the Ministry of leading members of certain parties, particularly Serbian, has attracted comment, but the members concerned are emphatic on the point that they were required to serve as individuals and not as representatives of their parties. Apart from measures bearing on the details of administration, the Government has not yet been identified with any special policy. During the week M. Kumanudi, until recently Mayor of Belgrade, was appointed Minister of Posts and Telegraphs, and Deputy Minister for Foreign Affairs, to act in the latter capacity for M. Marinkovitch, who has been granted two months' leave abroad for health reasons. Even if M. Marinkovitch's health had not prevented him from undertaking serious work, there would have been a tendency on the part of the new Government to find its feet at home before grappling with foreign problems. Almost inevitably its first concern must be Yugoslavia's financial position, but various foreign questions call for early attention. The Italian Pact of Friendship expires on January 27. As, however, Signor Mussolini has suggested the advisability of placing any agreement between the two countries on a wider basis, a brief hiatus between the old and the new treaty would be of no great significance. There is a tendency on the part of the Yugoslav Press to stress the

fact that, as Yugoslavia's foreign policy has always been strictly one of friendship towards all countries, there is no call for any modification. The fact, however, is that foreign policy, which has been essentially Serbian, needs to be as carefully overhauled as the Serbian Civil Service, which has been warned by General Zhivkovitch against "uncivil and inhuman bearing" and told that it must be "patient and polite." Of Yugoslavia's Balkan neighbours not one has had reason to be impressed by any excess of friendliness on her part, and all are rather wondering at the present moment whether the Dictatorship is to entail yet more Serbian sabre-rattling on an intensive scale, or will respond more definitely to the Croatian complex.

Censorship of the Press.

The newspaper question is likely to present difficulties to the Yugoslav Government. As far as any generalisation is justified, it may be said that the Press of the different Balkan States reflects, if possible in an aggravated degree, the worst characteristics of the political life of the Peninsula. As there is a tendency to have too many political parties, so there are far more newspapers than can be justified by the requirements of the country or by the financial success of many of the publications. Each party considers it necessary to have its own organ, and, as the formation of parties is determined more by the whims of individuals than by any desire to uphold certain definite principles, the function of a newspaper in the Balkans often becomes restricted to the denunciation and abuse of political opponents. In Yugoslavia the censorship has made short shrift with the purely party organs. The newspapers that have survived show distinct signs of improvement from a journalistic point of view, as a result of having to tread warily in political matters. In eliminating mere political abuse from the Press the Dictatorship has undoubtedly rendered a service to the country, and it should not exceed the capacity of the Belgrade Government to devise regulations which differentiate between the expression of honest political opinion and constructive criticism on the one hand, and on the other hand captious fault-finding or abuse. The future prosperity of Yugo-

slavia can be assured only if the Government of the country rests broad-based upon the people's will, and that will must be the resultant of many currents of opinion. It will be better to let those currents find their own channels until a main stream is evolved, and not to dam them up at the source.

Italy as Mediator.

Both in Turkey and in Greece, which he has visited in close succession, Signor Grandi, Italian Under-Secretary of State for Foreign Affairs, has been received with a flourish of trumpets, a full programme and grandiloquent speeches. In each country it seems to have been taken for granted that Signor Mussolini's emissary was specially charged with the duty of acting as mediator between the Turkish and Greek Governments. Not much enthusiasm is displayed by either for the Italian rôle, but this may be due more to the settled conviction of each country that its point of view is right and admits of no compromise, than to failure to recognise Italy's disinterestedness. In spite of protestations both by Turkey and by Greece of friendliness towards Italy, the impression is conveyed that neither country can banish from its mind all recollections of the past. Italian designs on South-west Anatolia are not forgotten, and in Greece it requires a great effort of mind and, unswerving loyalty to M. Venizelos not to mention Corfu and the Dodecanese, when reference is made to the Italo-Greek friendship. In view of the present attitude of Italy these lingering memories of earlier Fascism are unfortunate, as there is constant need in South-Eastern Europe for the friendly mediation of a third party to remove the suspicions, often unfounded, of neighbouring States or to minimise their tendency to exaggerate differences of opinion. Even though an immediate settlement of outstanding points between Turkey and Greece should not be reached as a result of Signor Grandi's visits to Angora and Athens, it will have been helpful to both countries to listen to the friendly advice of a third party.

Plots and Progress in Turkey.

Fortunately for the Republic Turkish justice is stronger than Turkish nerves. A woman with a grievance journeys to Angora with the idea of gaining the ear of the President—a far greater tribute to Mustapha Kemal Pasha than the fulsome eulogies of a sycophantic Press; she is arrested by the police, a plot is "discovered," and all her friends and relations are imprisoned. A month later all are liberated, with the explanation that they had been arrested on a charge of having acted contrary to the law, of which they have been acquitted. Not for the first time the judiciary of the Republic has had to come to the help of Public Security officials who are apt to see a plot at every street corner, and it is of interest to find that in the present instance the right of arrest on such a vague charge as that of acting contrary to the law, without an intimation as to the clause of the law alleged to have been infringed, is being challenged by at least one newspaper. Independence on the part of the judiciary would seem to be having the effect of encouraging the Turkish Press to think for itself. It is still a dangerous practice, as some newspapers have recently found out, to refer to "plots" before the officials have committed themselves too far to back out of their "discovery"; but there is a growing tendency, clearly in the interests of the Republic, for newspapers to be less satisfied that what is Turkish is essentially perfect. One paper, roused by the economic stagnation in the country, has had the hardihood to point out that successful business calls for experts to conduct it, and to suggest that such experts are not available in sufficient numbers in Turkey. In connexion with the formation of a State Bank, the Turkish Government had asked the head of the Deutsche Bank in Berlin for a report and his advice. As his duties on the Reparations Commission will not allow him to go to Turkey, Herr Schacht has now been requested to nominate a German expert in his place.

The Crisis in Iraq.

The crisis that has overtaken the political situation in Baghdad was not unexpected, for, although the Majlis was postponed last month in order that a concentrated effort might be made to get the Military and Financial Agreements subsidiary to the Anglo-Iraqi Treaty signed, no close observer of the situation could well have supposed that either the High Commissioner or the Iraq Prime Minister would sensibly retreat from positions previously and constantly adopted. Over the various financial matters in dispute—the railways, the Port of Basrah, and so on—the issue is one not so much of principle as of detail; but in regard to the Military Agreement a vital principle is at stake. The chief British authorities have upheld the view that the imposition of conscription—which is the policy advocated by King Faisal and by the various Prime Ministers who have held office in Baghdad—would not only be a mistake but is also impracticable. Certain Iraqi statesmen, on the other hand, maintain that if Iraq is not to be allowed to be responsible, according to the terms of the Treaty, for her own defence, it is no part of her duty to pay anything towards the expenses of keeping the Royal Air Force in Iraq. Recently, however, there appears to have been a disposition on the British side to express willingness that Great Britain shall provisionally continue to pay for the whole upkeep of troops in Iraq. But this is not enough for Sir Abdul Muhsin, who seems to be convinced that agreement between his Administration and the British Authorities is now impossible. Hence his resignation. At the moment of writing it looks as though King Faisal were endeavouring to keep the present Cabinet in office until the arrival of the new High Commissioner, Sir Gilbert Clayton, in the hope that he may be bringing with him fresh instructions from the Colonial Office, or may himself form a new estimate of the situation. In any case the stipulated time for finality to have been reached in these military and financial matters has already gone by.

The Extended Jewish Agency.

For better or for worse the co-operation of non-Zionists with Zionists in what is called "the up-building of Palestine" is likely to become a fact, for it is hardly to be doubted that the next Zionist Congress will endorse the recent arrangements and the arrangements that are now in process of being made for the representation of Zionists and of non-Zionists upon the extended Jewish Agency. How this attempt to enlist the whole of Jewry—or at least a greater part of Jewry than was hitherto supporting the Palestine experiment—in the establishment of a Jewish national centre in the Holy Land will work out it is impossible to foresee. If Zionists of the minority group, such as Dr. Stephen Wise, are to be believed, the Weizmann-Marshall pact is fraught with intolerable dangers to the soul of Zionism; majority Zionists, on the other hand, are convinced that the agreement implies the salvation of Palestine. To the impartial observer the most interesting feature, perhaps, is the modification which has overtaken the practices of the Zionists. It is true that co-operation with non-Zionists was long ago envisaged, but surely it is the bitter experiences of the last three years in Palestine which have made the rank and file of Zionists now resolve, and with such approach to unanimity, to work hand in hand, and on equal terms, with those Jews who had previously seen Palestine only or mainly as a place for the alleviation of the lot of a certain, not very large, number of their co-religionists or fellows. The ideals of the Zionists may have remained unchanged, but the historian will indubitably mark the present moment of changing the methods of realising those ideals as a turning point in the long story of the Jewish people.

The Labour Question in Palestine.

How the labour question in Palestine is to be solved is more easily answered by those observers who have faith as well as sight than by those who have sight alone. The

disparity between the minimum wage for which it is possible for the native Arab to work and that which will satisfy the new Jewish colonist is a factor never absent for very long from the social or industrial life of Palestine. It troubles the Government; it troubles the Arabs; and it troubles the Jews. In connexion with the angry demonstration which took place at Petach-Tikvah just before Christmas, for instance, the Jewish Farmers' Federation of Judea and Samaria have recently issued a firmly worded declaration, addressed to the Jews of Palestine and to world Jewry, to the effect that they will not truckle to the demands of those Zionists who use physical force as a means to attain their ends. Apparently these farmers believe that there is an organised attempt at the destruction of farmers in the Jewish colonies, and if the Jewish labourers bind themselves together, so will the farmers themselves. Thus there would appear to be in process of being reproduced in Palestine some of the worst features of "Capital and Labour." Economics is a stubborn thing; if the Jewish farmer wishes to employ the cheaper Arab labour, who shall say him nay? The Jewish labourer, comes the answer, the labourer whose aim it is rather to build up a nation in Palestine than to enable profits to be made. Then who shall provide the employment? Can work indefinitely be found the motive of the organiser of which is not profit? Month by month the idealism of the new colonist is faced with such questions as these, and although answer may be postponed so long as funds come into Palestine from Jewish circles outside, a response there must be some day. In the meantime the wisest course would appear to be to drop talk of "minimum wages" and the rest of the terms familiar to highly organised communities, and to take from enterprises in Palestine what is economically extractable. It would appear quite impossible for the Administration or for anyone else definitely to lay down that such and such a wage shall be paid to such and such a labourer, but rather to proceed from hand to mouth, with the gradual tendency, probably, for the Arab level to approximate the higher Jewish standard. For if the lot of the Arab in Palestine does not improve, neither can that of the minority in Palestine, that is, the Jews. The future of both communities lies in their co-operation.

Persia's Slow Reforms.

Compared with the speed at which reforms are advertised in certain other Islamic countries, Persia's rate of progress may appear to be slow. But to the Occidental observer Persia in this respect is but showing her superior wisdom. To take only the matter of clothes, for instance. Before imposing the decree that European garments (that is, garments made not in Europe but in the European style) and the *Pahlavi* hat should be worn, in the towns, by next *Now Ruz* (March 22) and in the villages, a year later, the Shah wisely allowed a discussion in the Majlis at Teheran. In Turkey, of course, opposition in the Angora Assembly to the Ghazi's decree was, simply, not allowed. But Persia has more independence and less discipline (not quite the same thing) than her North-Western Sunni neighbour, and in allowing the case for the conservatively-minded to be put in the Majlis, the Shah not only did honour to the Teheran Assembly, but showed wisdom in himself. On the whole, one is inclined to think that Persia may yet prove herself to be the wisest mentor to those Islamic peoples who may wish to partake of Westernisation, for she appears to understand how to limit the chances of reaction.

INDIAN NOTES.

Plain Speaking.

A plain, straightforward statement of the case for the European merchant and industrialist in India has been overdue for a long time. We are glad therefore to see that Sir George Godfrey, the President of the Bengal Chamber of Commerce, did not hesitate to speak out

clearly and definitely at the recent meeting in Calcutta of the Associated Chambers. It is altogether wrong that the reckless accusations of exploitation which Indian politicians never weary of bringing against European commerce should be allowed to pass unanswered. For they have no solid basis of fact, as was proved without difficulty by the President, who also exposed the legend of the past commercial and industrial glories of India. It is true that hand-loom weaving has declined in India just as it has declined elsewhere. It is also true that wooden sailing ships, such as were once built in India, have had to give place to steel steamships in the East as well as in the West. But it is ridiculous for Indian politicians to assert, as they constantly do, that the power-loom, and the steamship, were introduced by the British for the express purpose of destroying Indian industries. The truth of the matter is that the Indian has been asleep while others have been up and doing. India's principal industries as they exist to-day have consequently been created and developed by the British. Jute, tea, coal, oil, shipping, are all industries for which British capital and enterprise are responsible, cotton being the only large industry which is predominantly Indian. Except as regards cotton the Indian has failed to march with the times, and even now he still holds back notwithstanding all his protestations. He does not like the risk which necessarily attaches to new enterprises. But when other hands have built up an industry and the risks have been successfully faced then Indian capitalists clamour for expropriation in what they call the national interest. In these circumstances it is not convincing for them to accuse the British traders of being concerned solely with their own interests. That the British trader is concerned in looking after his own interests is obvious. At the instance of Sir George Godfrey the Chambers unanimously passed a resolution claiming that the Indian legislatures should not, by legislation or taxation indicating discrimination of a racial or communal character, imperil the existence or development of any commercial or industrial interests in India. This is an entirely sound view, and we think that the Chambers are right in defining their attitude so clearly. The work which the European commercial community has done and is doing in India has benefited alike the inhabitants of the country, the Indian exchequer and the community itself. By deeds and practice the British trader is a national in India; and, although he is quite willing to work on friendly terms with the Indian business man, he refuses to submit to legislation or taxation which will injure both his own and India's interests.

THURSDAY, JANUARY 24, 1929.

THE AFGHAN CAULDRON.

Although it may not be quite fair to say that Afghanistan is reverting to type, the present state of affairs in the country offers a more familiar picture than that of a modernised Afghanistan solidly united under the leadership of an enlightened and progressive ruler. After rapid fluctuations, the position appears to have become momentarily static, with the victorious ex-brigand Bach-i-Saqao in control of Kabul, under the title of Habibullah Ghazi, and King Amanullah at Kandahar, where he is said to be engaged in rallying the tribes of southern and western Afghanistan to his standard. Over three hundred miles separate the two towns, and in spite of the fact that King Amanullah's journey by car took only two days, the distance, particularly at this season of the year, should preclude any immediate development in the relative fortunes of the two rivals, apart from personal mishaps to one or the other. There are clearly too many unknown factors in the situation to enable King Amanullah's strategy to be gauged at its true value as yet. Certainly his dash to Kandahar and the immediate raising there of his standard suggest that his capitulation may not have been so incontinent as it seemed at first. He must have had an early inkling of the weakness of his position when he agreed to the evacuation by air of the women and children of the foreign Legations and sent Queen Surriya to Kandahar. If at the same time he made up his mind that northern Afghanistan was lost to him and that his only chance lay in the south, his subsequent actions would seem not to have lacked a measure of Oriental shrewdness. First his reforms and then his Crown were thrown to the "wolves," and he himself escaped with the idea, it may be, of being able to put up a better fight another day. The programme did not display much consideration for his unfortunate brother, left behind to take up at considerable personal risk the attributes of kingship, which, though lawfully his in the first instance, had been usurped ten years previously by Amanullah. Fate, however, has been kind to Amir Inayatullah, for he has contrived to escape from a false position, and, taking passage in a British aeroplane, with the consent of Habibullah Ghazi, he has been conveyed safely to India.

The Afghan arena would now seem to be set for a duel between Habibullah Ghazi and King Amanullah. The action of the former in accepting the mediation of the British Minister in Kabul between himself and the Amir Inayatullah, and in according the deposed monarch a safe conduct to leave Kabul, marks him as above the ordinary standard of Afghan fighters. He is credited with a force of fifteen thousand armed men, on whom he has imposed some measure of discipline, and it may be presumed that he now possesses any new artillery that King Amanullah had collected in or near the capital. Habibullah Ghazi promises, therefore, to prove more formidable than a mere brigand adventurer, however humble his origin. If the report be true that the Shinwaris have sent a deputation to Kabul, it is evident that they too consider it expedient to take the new power in the land seriously. It remains to be seen, however, whether the circumstance of a common antagonism to King Amanullah that has

brought them together will lead the Shinwaris to accept Habibullah Ghazi as their liege lord. The two main factors in determining the attitude of the tribesmen may be expected to be the decision of the Mullahs and the ability of the new Ruler to become possessed of funds. In regard to the latter point King Amanullah may now be of opinion that he made an over-hasty bargain, when he accepted the complete independence of Afghanistan as a substitute for an annual British subsidy, with its accumulated arrears. As it is unlikely that the Kabul exchequer is in a very flourishing condition, Habibullah Ghazi will be handicapped at the outset in one important respect. Whether King Amanullah at Khandahar will be much more favourably placed must also be open to doubt, and thus the probability increases of both parties taking advantage of enforced military idleness, while engaged in an effort to consolidate their respective positions. Unfortunately this state of affairs leaves the way open to international complications. The treaties concluded by King Amanullah with Persia, Turkey and Soviet Russia, that were designed to create a Central Asian *bloc*, have no bearing on the new situation in Afghanistan, and it is unlikely that either the Shah of Persia or the Turkish President will feel called upon to help King Amanullah out of troubles of his own contriving. Soviet interest in developments in the country, on the other hand, may not prove so dispassionate. Moscow, to judge from its allegations regarding Great Britain's hand in the shaping of Afghan events, must have been momentarily displeased by the challenge to King Amanullah's authority; but unrest in any country is too closely identified with its stereotyped programme to offer it serious embarrassment. Habibullah Ghazi will have started his campaign with a native distrust of all foreigners; he has, however, discovered the usefulness of the British in relieving him of complications in Kabul by the evacuation of the Amir Inayatullah with his entourage, and if he is encouraged to look to the north for what he lacks for the consolidation of his position, Afghanistan may yet receive a far more insidious setback in her political development than would be entailed by the mere abolition of King Amanullah's reforms.

Whether a new dynasty is founded in Kabul or King Amanullah recovers his throne, it is certain that Afghanistan will have to tread more cautiously the stony path of reform. In the light of what has happened it becomes the greater mystery that King Amanullah could have persuaded himself that he could carry through in his own country at the pace that he chose to set innovations that even in a well-disciplined Turkey have been received with a strong under-current of resentment. Whatever developments may be in store, Great Britain's main interest in the country remains constant, that there should be sufficient authority in Kabul to keep the frontier tribes at peace for the sake of the smoothness of Anglo-Afghan relations. The degree of friendliness that the ruler of Afghanistan may show towards Great Britain and India over and above this minimum requirement is less crucial, but not unimportant. In spite of fantastic charges the honesty of the British attitude has been clearly vindicated by the course of events. Whoever has dominated Kabul, in the kaleidoscopic changes of the past weeks, appears to have recognised in Sir Francis Humphrys, the British Minister, a trustworthy arbitrator, counsellor and friend. With the internal quarrels of Afghanistan the British Government has nothing to do, but it is prepared to stand by to help the Afghans to avoid becoming embroiled with foreign Powers through ignorance or lack of self-restraint. King Amanullah had not honoured Great Britain with the gushing friendship that he had shown Angora, Moscow and Teheran, but he was observing a correctness of attitude that sufficed so long as his people remained quiet. When his troubles came, he had no reason to complain of the warmth of British friendliness, and whoever rules in Kabul will find that, so long as he can keep his people from disturbing the peace on the Indian frontier, he has a disinterested friend in Great Britain.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, January 11.

Parliament.

Parliament, which was opened by the King in State on November 1, was prorogued by royal *iradah* for forty-five days, in order that no Parliamentary duties should interfere with the Ministers' concentration on the negotiations over the Military and Financial Agreements subsidiary to the Anglo-Iraq Treaty. The Speech from the Throne at the opening of Parliament referred to the "perfect accord existing between Iraq and H.B.M.'s Government, to the improvement in law and order throughout Iraq, and to the country's brighter financial position." Yusuf Effendi al Suwaidi was elected President of the Senate, and Abdul Aziz Beg al Qassab of the House of Deputies.

Parliament reassembled on December 22, its first task being to draft a reply to the King's Speech. The practice of making the reply a very brief and general one was attacked by a Baghdad deputy, who proceeded to attack the Government on every point raised in the Speech and to complain of several important omissions, notably of any reference to conscription. The advisability of more detailed treatment of the problems before the Government, in both Speech and Reply, was discussed with some heat at the second session, but the short reply of the drafting committee was finally passed by a large majority. Parliament is impatiently awaiting the Government's report on the progress of the Treaty negotiations, which are being conducted secretly. The Minister of Education closed the debate by a speech in which he assured the House that, although no results could yet be announced, the Government had never failed to defend the interests of Iraq and to claim her rights.

The draft Budget Law for the Fao Dredging Works for 1929 was passed, providing for a further sum of Rs.22,96,500 for deepening the channel of the Shatt al Arab so as to facilitate the passage up to Basrah of big ocean-going steamers. Several deputies protested against this expenditure as being likely to benefit only the A.P.O.C., which Company was undertaking the work in agreement with the Government of Iraq.

An accusation against the Government of employing forced labour for building bunds and roads was answered by the Minister of Interior, who said that he had investigated the cases reported, and was prepared to punish the officials concerned.

The King's Tour.

His Majesty returned to Baghdad on December 11 after a very successful tour of the southern liwas, in the course of which he visited Kut, Amara, the Muntafiq and Basrah. He was accompanied by the Ministers of Interior and of Irrigation and Agriculture, whose posts were filled during

their absence by the Prime Minister and the Minister of Finance respectively. King Faisal travelled by special train except from Basrah to Ur on the return journey, when he went by air.

Najd Raiders Again.

A party of raiders numbering about 130 camelmen were sighted by aeroplane on December 29 in the neighbourhood of the Najd frontier, south of Salman Post. The raiders fired on the airmen, who replied with bombs, driving them off. Three men and twelve camels were left behind by the raiders—probably men of the Mutair tribe—but no further casualties were inflicted as the aeroplanes have specific orders not to continue pursuit across the border into Najd.

Six hundred families of the Mutair are reported to have lately taken refuge in Iraq, owing to alleged disagreements between their shaikh, Faisal al Dowish, and King Ibn Saud.

A raid into Iraq territory on the part of Persian tribesmen is reported from the Amara liwa, 1,500 sheep having been carried off from a section of the Bani Lam. One Iraqi was killed, and three wounded.

Communications.

Travelling by air from Baghdad to Cairo is becoming more and more popular, so much so that the Imperial Airways service in December was duplicated. A record trip from Basrah to Baghdad was made on November 17, when the City of Jerusalem did the journey in just over two hours—more than an hour less than scheduled time. The air liners are said to have been very little affected by the heavy storms which prevailed over Syria and Trans-Jordan during November.

Civil aeroplanes flying to Baghdad have lately become so numerous that the British Government has found itself unable to continue to allow the use of its R.A.F. aerodromes in Iraq. This has caused a temporary suspension of the experimental flights of Dutch aeroplanes via Iraq to the Dutch East Indies.

The Iraq railway authorities are continuing to improve the train service in the matter of speed. Instead of running special mail trains, they are accelerating the ordinary services. In future a daily fast train will run in both directions between Baghdad and Basrah and between Baghdad and Kirkuk.

The Nairn Transport Company is about to launch a new type of six-wheeled Pullman car on the desert route.

An interesting step in Iraq's development of communications is the opening of a long-distance telephone from Baghdad to Kirkuk—about two hundred miles. It is hoped before long to link up the capital with the other big towns.

General News.

The exceptionally dry weather of this winter is causing great anxiety to the agricultural community. Heavy rains early in November, coming just at the end of the ploughing season, gave hopes of excellent crops, but no

more rain has fallen since that time, and a change of weather is now anxiously awaited.

An epidemic of small-pox during November and December is now well in hand, a vigorous vaccination campaign having been carried out by the medical authorities.

The Turkish delegates to the Permanent Frontiers Commission have arrived in Mosul for the fifth meeting of the Commission.

Cairo, January 12.

King Fuad Academician's Sword.

When King Fuad was in Paris two years ago, among the honours conferred on him was the Fellowship of the *Institut de France*. Regarding this as an ideal opportunity to give expression to the lively sympathy and friendly relations which have always existed between France and Egypt, a number of Frenchmen resident both in France and Egypt agreed to present to King Fuad the Academician's sword, which he would have to wear whenever he attends meetings of the *Institut*. This past week a deputation consisting of M. Gaillard, the French Minister, the Marquis de Vogue, President of the Board of the Suez Canal Company, M. Miriel, President of the Board of the *Crédit Foncier Egyptien*, M. Rene La Bruyère, and others, waited upon King Fuad at Abdin Palace, and presented him with his sword, which is a magnificent piece of work carried out by Falize, and a golden book containing the signatures of all the subscribers. Both the Marquis de Vogue, who made the presentation, and the King made speeches testifying to the good feeling between the two countries, and the deputation afterwards had the honour of lunching with King Fuad.

The Premier.

The Premier, Mohamed Pasha Mahmoud, whose return to work was delayed owing to his illness having been diagnosed as paratyphoid, has now completely recovered, and is attending to business in his house in anticipation of the meeting of the Council of Ministers to be held under the presidency of the King on Monday. He intends to remain a few days in Cairo to deal with the arrears of work that have accumulated during his absence, and will then go to Aswan for a week or so to recuperate. It is to be hoped that the Premier will not be compelled to delay long his return to office, for there has been a noticeable slacken-

ing in control in the direction of affairs during the past six weeks, and even staunch friends of the present régime have been beginning to complain.

The High Commissioner.

The High Commissioner and Lady Lloyd are leaving on the 23rd for the Sudan, where they will make a tour which will bring them back to Cairo at the end of February. Lord Lloyd who, it may be recalled, is High Commissioner not only for Egypt but also for the Sudan, should pay a visit to the latter part of his jurisdiction once a year. His last visit was in 1927, when he inaugurated the Sennar Dam. Last year he was prevented by the political situation in Egypt, and as a result there is a great deal for him to attend to when he gets to Khartoum.

Nashat Pasha.

Hassan Nashat Pasha, the newly appointed Egyptian Minister at Berlin, has arrived in Cairo on his return from Kabul, where he obtained the signature of King Amanullah to the Treaty of Amity with Egypt. Nashat Pasha was about the last foreigner to leave Afghanistan by the ordinary route, and already when he was in Kabul there were ominous rumours of serious trouble among the tribes. His arrival in Cairo was, of course, the starting point for various rumours connecting him with the development in the local political situation. But I have his authority for saying that he has not had the slightest intention of taking any part in local politics or accepting any post in Egypt, but that he wants to get away and take up his duties in the German capital as soon as possible.

The Suez Canal Company.

This week the Comte de Serionne handed over to the Baron de Benoist the post of Agent Supérieur of the Suez Canal Company in Egypt. M. de Serionne is being relieved of his duties at his own request for reasons of health, owing to the operation he had to undergo two years ago when his leg was amputated. The news has been received with widespread regret. M. de Serionne will be remembered not only for the conspicuous success with which he has filled the post during these long years, but also for the prominent part he has played in the social and intellectual life of Cairo. At one time no gathering or entertainment was complete if he did not take part in it. His improvisations, happy in their mingling of culture with humour, were listened to with delight by all, and his speeches sparkled with the *bon mots* which are one of the gifts of the great nation to which he belongs. To him it may be remembered fell the honour of addressing, on behalf of the foreign communities, a farewell to Lord Cromer on the occasion of the memorable meeting at the Opera House which preceded his departure in 1907. It is a consolation to know that M. de Serionne and his wife, who has wonderfully seconded her husband in the accomplishment of his duties, are not leaving us altogether, and that they intend to take up their abode every winter here.

M. de Benoist is not unknown to us, for he has for several years filled the post of Chief Assistant to M. de Serionne and on occasions has acted for him. He has acquired the confidence and esteem of all who have come

into contact with him, and the Suez Canal Company have made an excellent decision in selecting him to direct their affairs in Egypt in succession to M. de Serionne.

Instructions to Legations.

The Ministry of Foreign Affairs has just issued to its Legations and Consulates a circular giving them comprehensive instructions in regard to the preparation and submission of reports on the political, economic and commercial development of the countries to which they are accredited. An interesting part of this circular is that dealing with cultural matters. The Minister lays particular stress on his desire that the representatives of Egypt should familiarise themselves with the culture of the country where they are stationed. They are directed particularly to interest themselves in questions of literature and art, of history and geography, and they are to address monographs periodically on the tendencies of modern education, historical and literary publications concerning Egypt, the latest historical and geographical works of a general interest, communications made to learned bodies and to academies, and generally on the artistic and literary development of the people.

The Postal Service.

The *Egyptian Gazette* in its week-end leader expresses a long-felt and oft-vented grievance in regard to the dilatory manner in which the Egyptian Post Office delivers its mails. More than once I have referred to this question, which agitates a very large portion of the public both in Cairo and in Alexandria. But in spite of assurances of immediate adjustments the ground for grievance still continues. The fault, however, does not lie with the Post Office, but with the system under which the public services obtain their annual budgets.

On one of the occasions when your Correspondent had expressed a complaint in this connexion, he was present, by special request, at an interview between the Minister

and the Postmaster-General, when the latter proved that over a considerable period he had pressed for an increase in postmen staff to cope with the great development in postal work, and that every time the control in the Ministry of Finance cut the item out of the budget on grounds of economy, although there was abundant proof that the Post Office was returning a handsome dividend on all the money it expended. On that occasion a formal promise was given that the extra staff asked for should be granted without delay. There is reason to believe that only part of that promise was kept, and the Post Office, which has an even greater volume of business to handle to-day, is even less in a position to handle it than it was then. Until the Finance authorities realise that the postal service is not a national, but an international question, and that it is a very peculiar business laying upon the authorities responsibility for providing the service covered by the postal fees which it receives under international agreement, this unsatisfactory state of affairs is likely to continue. But they may one day be suddenly brought up with a shock if a complaint is made to Berne and the Union orders an investigation into the question.

GREECE.

Athens, January 8.

The School at Spetsæ.

Reference has sometimes been made in these letters to the School at Spetsæ founded and endowed by M. Anargyros, a native of the Island. The aim of the school is to provide an education on the lines of an English public school, for the sons of well-to-do Greeks. From small beginnings the school, which had an English head-master and an English matron, was just finding its feet when a dispute between the headmaster and some of the Greek members of the staff has ended in notice of dismissal being given to the former by the Committee. The English

R. B. W. Holmes,
General Manager,
HAIFA.

matron at the same time has been given three weeks' notice. Since the causes of the dispute have not yet been made public, it would be premature to criticise. One can only hope that a scheme, full of promise, will not hastily be abandoned. The idea of the founder (who died suddenly a few days ago), was not to make Englishmen of Greeks, but to give Greek boys an opportunity of adding to their own estimable qualities just those good points which can be acquired only by an English public school training. To place the control entirely in Greek hands would be to defeat the object of the school's existence. It is also essential to its success that more Greeks with an English public school education should be represented on the Committee. M. Venizelos is known to be in full sympathy with the aims of the school.

Parliament.

Parliament is enjoying two months' holiday after one of the most memorable sessions in its history—memorable because of the work accomplished. The presence of M. Venizelos in the Chamber, though a severe strain on his nervous energy, has been of inestimable value.

He has known how to deal with signs of insubordination in his own party, and with attempts at obstruction on the part of the Opposition. The bad habits of former parliaments—unpunctuality and waste of time—have been eliminated and the whole tone of the House raised. Among Bills passed has been one determining the composition of the Senate, and defining the relations of the two Chambers; another defines the status and functions of the two police bodies—the gendarmerie and the city police respectively. The latter will have control in Athens, Piræus and Patras, and will be extended to Salonika; the former will be completely reorganised. It is of interest that in their case some of the recommendations made by Col. Ring have already been put into practice, with excellent results.

Macedonia.

Thus two outstanding questions which have been the subject of what seemed like interminable discussion for many years have been settled. Apart from the making of laws there has also been a marked speeding up in the work of the Government Departments. Ministers are sent touring the country to acquaint themselves with local needs, and Macedonia is receiving much-needed attention. The proposal to appoint M. Michalakopoulos Governor of Macedonia with special powers and a large measure of independence seems an excellent one. The special requirements of this flourishing and go-ahead province can only be dealt with satisfactorily by a Government representative on the spot with a free hand. M. Michalakopoulos has many of the qualifications for such a post.

Town-Planning in Athens.

In Athens, attention is being given—none too soon—to the necessity of a town-planning scheme for the new quarters, the haphazard growth of which involves serious problems of transport, sanitation and open spaces.

The Power and Traction Company.

The dispute between the Government and the Power and Traction Company is not yet settled. While in deference to popular outcry the Government would like to instal the reduced voltage, it does not like the idea of paying the indemnity demanded by the Company. To an outsider it seems that, as long as each individual householder is allowed to instal his own fittings, accidents are likely to occur, since he will consider cheapness before everything else, and the methods of local mechanics and electricians are casual. Unless the Company makes itself responsible both for the fittings and for their installation, it would seem better to have the reduced voltage.

What is safe enough in London, may not be safe in Athens, where conditions are widely different. On the other hand, there may be nothing in the outcry. All foreign enterprises in Greece go through periods of violent

unpopularity, which die away as quickly as they rise. The Ulen Company was for long regarded with venomous hatred, and every conceivable crime was attributed to it. Now it is quite popular.

Lake Copais.

Negotiations between the Lake Copais Company and the Greek Government for the transfer of the Copais Estate have been suspended to allow the Government to inspect the Company's plant, and so forth, and to study the conditions under which the State would itself take over the working. Should the transfer be effected, English people in Greece will have to regret the passing of an old-established concern, which will leave behind it a record of extremely valuable work and of a standard not easy to maintain.

Constantinople, January 8.

The Minister of Public Instruction.

Nejati Bey, the youngest Minister in the Turkish Cabinet and a personal friend of the Ghazi, died in Angora a few days ago at the age of 34—to the regret of all his colleagues, with whom, as with his subordinates, he was highly popular. He was accorded a funeral on strictly Western lines, and photographs appeared in the local Press depicting his grave covered with flowers. At a memorial service held in Smyrna at the "Turk Odjaghi" or Turkish Club, the portrait of the deceased was displayed on a catafalque draped with black crêpe—the first recorded instance of that material being utilised by Muslims as an outward and visible sign of mourning.

Nejati Bey would appear to have had no enemies. He was an active and enterprising Minister, imbued with ultra-modern ideas on the value of education on Western lines, and the Ghazi unquestionably found in him a trusty henchman while carrying on his vigorous campaign for the abolition of Arabic characters and the adoption of the Latin alphabet.

The death of this young and promising Minister has given rise to questions in the House of Assembly on the professional qualifications and merits of some of the leading Turkish medical practitioners whose names are household words in this country. This action is to be regretted, as there have been in the past, as there still are to-day, Turkish doctors who enjoy a European reputation, and who would have nothing to fear from comparison with their Western confrères. Nejati Bey's death would seem to have been due to neglected appendicitis—the operation having been performed after septicæmia and general infection had set in. But whether the fatal issue of his illness was due to faulty or imperfect diagnosis at the outset or to neglect on the part of the Minister himself, it would be foolhardy for a layman to say.

A motion for a parliamentary inquiry into the causes of the young Minister's death and of the responsibility attaching to his medical attendants was fortunately defeated.

Adoption of Latin Characters.

The mobilisation of troops in Turkey, in any war-like emergency, is accomplished to the beat of the drum. The election of deputies, municipal councillors and communal elders is accompanied by the same preliminaries. Religious

festivals, such as Ramadhan and Bairam, are ushered in by drum-beating night watchmen.

On the evening of December 31, New Year's Eve—once a purely Christian festival in this country, but one, on the other hand, in which Turkish upper social circles now participate to the full—the throbbing of drums resounded throughout the streets of the former Turkish Capital.

On this occasion, however, it was neither a declaration of war nor a religious festival. The night watchmen who were manipulating the drum sticks on behalf of the Government, were merely calling upon all good Turks to flock to the schools which were being opened the following evening—New Year's Day—for the instruction of the populace in the art of recording the Turkish language in the new characters.

The response, so far as it is possible for an outsider to judge, has been an enthusiastic one among the members of the younger generation, especially among the women-folk, but one's sympathy is touched for the uneducated old people, who, entirely illiterate even in the characters of their own century-old alphabet, are now struggling to comply with the order of the day.

Turkish governing circles, in a sense, are right. It is the future generation which counts, and the older, passing people will have gone their long way before the practical utility to the Anatolian peasant, as distinguished from the Constantinopolitan business man, of the Latin alphabet will have become the acid test of the forceful progressiveness in this matter of the Angora Government.

Greco-Turkish Relations.

Notwithstanding the visit to Angora of M. Diamantopoulos, President of the Hellenic Delegation to the Mixed Exchange Commission, following closely upon the official visit to Tewfik Rushdi Bey, Turkish Foreign Minister, of the Greek Minister to Turkey, it is not yet possible to record any palpable advance in the hoped-for improvement in the relations between Turkey and Greece.

Even if official and diplomatic dealings between the two countries are correct, without being cordial, the attitude of the Turkish Press towards Greece and of the Greek Press towards Turkey leaves very much to be desired. The Turkish papers accuse the Greeks of having captured their carpet trade, their tobacco-exports and much of their dried fruit industry. The Greek papers, on the other hand, evenom the situation by repeatedly accusing the Turks of bad faith in the matter of the illegal seizure of property in Constantinople and Thrace belonging to Greeks who have left Turkey temporarily.

It would be idle for a mere outsider to endeavour to arrive at a reasoned judgment on the merits or demerits of the cases put up by the newspaper litigants—but there can be little doubt that, if these periodical outbursts in Athenian and Angora papers—which lead only to friction and ill-feeling on both sides—could be censored or deleted, the diplomatists might have a very much better chance of bringing about an entente between Turkey and Greece on the lines of the Italo-Turkish Pact.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held to-morrow (January 25) at 8.30 to discuss "Yugoslavia." The meeting will take place at 125, Queen's Gate, S.W., by kind permission of Mrs. Charles Hancock, and the principal speakers will be Miss Edith Durham and Sir Edward Boyle, Bt. Captain E. N. Bennett will preside.

The British Chamber of Commerce in Egypt entertained Lord Lloyd, the High Commissioner, to dinner in Cairo on January 14.

The death is announced of Lieutenant-Colonel Sir James Wishart Thomson, K.B.E., of Quarry Court, North Berwick, who was Shipping Controller for India and the Far East during the War. He served in Egypt in 1915-16, was D.A.Q.M.G., Mesopotamia, in 1916-17, and A.O.M.G., Army Headquarters, India, in 1917. Then he returned home and did valuable service in the office of the Controller of Shipping, having charge of the section relating to India and the Far East.

AN AGRICULTURIST ON PALESTINE.

We have received from the Zionist Organisation in London a small pamphlet (price threepence), entitled "Report on Visit to Palestine, April, 1928, by Sir John Russell." Sir John Russell, who is Director of the Rothamsted Experimental Station, first visited Palestine, with Dr. John Orr, on behalf of the Empire Marketing Board, in April, 1927. A year later, and again on behalf of the Empire Marketing Board, he paid a second visit to the Jewish colonies.

Sir John was confirmed in his opinion that the "best line of development for the Jewish colonists will probably be fruit products and vegetables of special quality or earliness, distinctively marketed, since this gives the colonists the high prices necessary to maintain the close settlements at which they are aiming, besides furnishing scope for their power of organised buying and selling."

The amount of cultivable land in Palestine Sir John puts as follows:—Light land, irrigable (284,800 acres), 27 per cent.; Heavy land, irrigable (650,500 acres), 62 per cent.; and Heavy land, non-irrigable (117,800 acres), 11 per cent. He foresees the development of agriculture in the Jewish Colonies as:—Light soils: fruit, especially oranges, grapes, vegetables; Heavy soils, watered: fruit, especially bananas and grapes, sugar beet, sugar cane and cotton, and fodder crops; and Heavy soils, not irrigated: fodder crops and cereals for home consumption or conversion into animal products.

His general impression of the new colonies was favourable. He remarks that the purpose of the colonists is not to make money, but to make a nation; and he believes that the drift of young Jews in Palestine is from the towns to the country. "No other country now being colonised," he says, "can claim so good a record: everywhere else there is the universally deplored dislike of the young people for a country life."

BRITISH ART IN YUGOSLAVIA.

The exhibition of British art which has been organised in Yugoslavia through the enterprise of the Yugoslav Society in Great Britain, working in co-operation with the British Artists' Exhibition, of which Sir Joseph Duveen is the founder, appears from the catalogue which we have received to be admirably representative. An exhibition which includes among its oil paintings, water-colours, etchings, and sculptures works by such artists as Mrs. Vanessa Bell, Roger Fry, Augustus John, Neville Lewis, John Nash, Sir William Orpen, Ethelbert White, Rowley Smart, Edmund Blampied, Muirhead Bone, Arthur Briscoe, Francis Dodd, Miss Gertrude Hermes, Mrs. Laura Knight, James McBey, C. R. W. Nevinson, Walter Sickert, Frank Dobson, Epstein, Lambert—to mention but a few names which are either already eminent or which connoisseurs have already marked down as likely to be famous—can be truly be said to represent modern British art in all its forms.

The catalogue which has been published for this exhibition in Yugoslavia is most worthily produced—particularly in its reproductions of paintings and drawings. Certainly the Yugoslavs for their part have done their work well.

The exhibition, which opened on November 25 at Ljubljana, is, we are glad to note, having considerable success. At Zagreb, for instance, it was prolonged from January 16 to January 20 in order that University students and schools should have further opportunities of visiting it. Up to January 16 it was estimated that over two thousand people had visited the exhibition. Moreover, the Committee of the Strossmayer Gallery has already bought two pictures, and is arranging a special collection in order to be able to purchase a third.

On February 1 the Exhibition moves to Belgrade.

NEW ALBANIAN CABINET.

The Albanian Cabinet which fell on January 12 owing to disagreements among the Ministers on the subject of agrarian reforms and other internal affairs has been reconstructed under the leadership of M. Kostaq Kotta, the outgoing Prime Minister, as follows:—

M. Kostaq Kotta	...	Prime Minister and Interior.
Raouf Beg Fico	...	Foreign Affairs.
Abdur Rahman Beg Dibra	...	Education.
Hiqmet Beg Delvino	...	Justice.
M. Milto Tutulani	...	Finance.
Hoja Salih Vuchiterni	...	Public Works.
Musa Beg Juka	...	Agriculture and Forests.

The only changes are that Raouf Beg Fico, who was recently appointed Albanian Minister to Belgrade, becomes Minister for Foreign Affairs instead of Elias Beg Vroni, and Abdur Rahman Beg Dibra becomes Minister for Education instead of Jafar Beg Ypi.

The Turkish Ministry of Commerce has drafted a Bill, which is being submitted to the Grand National Assembly in Angora, for the introduction of the metric system in Turkey in June, 1929.

Colonel G. D. Ogilvie, Secretary of the Indian States Committee, which is considering the relations between the Indian Princes and the Paramount Power, has been appointed Resident in Kashmir. He will leave for India in February.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 3.

The National Congress.

On Monday the National Congress passed Mr. Gandhi's resolution by 1,350 votes against 973. The wording of it, or the latter part of it, had had to be pulled about to make it more acceptable to Mr. Srinivasa Iyengar and his followers, and after all, for all Mr. Gandhi's pleading or reasoning, Mr. Iyengar, who was to second it, left that to Dr. Ansari to do, and his followers voted against it. Those who voted for it voted for nothing that committed them to much; for what one set of phrases in the resolution establishes, succeeding phrases whittle away. So, at least, the thing appears to one's common sense. This is the resolution as finally worded. Let each one judge of it for himself.

"This Congress, having considered the constitution recommended in the All-Parties' Committee report, welcomes it as a great contribution towards the solution of India's political and communal problems, and congratulates the Committee on the virtual unanimity of its recommendations, and while adhering to the resolution relating to complete independence passed at the Madras Congress, approves of the constitution drawn up by the Committee as a great step in political advance, especially as it represents the largest measure of agreement attained among the important parties in the country.

"Subject to the exigencies of the political situation, this Congress will adopt the constitution, if it is accepted in its entirety by the British Parliament on or before December 31, 1929, but in the event of its non-acceptance by that date or its earlier rejection, the Congress will organise a campaign of non-violent non-co-operation by advising the country to refuse taxation and in such other manner as may be decided upon.

"Consistently with the above nothing in this resolution shall interfere with the carrying on, in the name of the Congress, of the propaganda for complete independence."

Facing Both Ways.

If ever men tried to face bothways, surely the 1,350 who voted for that resolution tried to do that. They "approved" of the constitution, namely, Dominion Status, recommended in the Nehru Report—ah, yes, but at the same time they adhered to the Madras Congress resolution regarding independence, which is not a supplement to Dominion Status, but a contradiction of it. If the constitution is accepted by the British Parliament, they will adopt what they are now careful to say they approve merely—ah, yes, but "subject to the exigencies of the political situation." "Consistently with the resolution," there shall be done—what cannot be done consistently with it. One wants not to be unsympathetic towards such as Mr. Gandhi and Pandit Motilal Nehru, especially after noting the courage of their Congress speeches; and one can share their wish that the Congress should not be disrupted; but the fact remains that for men there is no abiding in the attitude of facing both ways.

The Presidential Address.

One would like to have had the right to compel Pandit Motilal Nehru, not doubting his courage to do it, to appear with his Presidential speech before the Statutory Commission, and there be cross-examined by Sir John Simon. The Pandit set himself to answer three questions, the last being, "How can we reach our destination?" The first step, he said, was to set their own house in order, which included, among other things (1) popularising the communal solution agreed to at the All-Parties' Conference; (2) work among the untouchables; (3) a campaign against the social customs that retard national growth, more especially a crusade against the *purdah* and the other disabilities of women; (4) an intensive campaign against the drink and opium curse. The Pandit's first question had been, "Where do we stand?" The answer was given in such words as these:

"To have an adequate idea of the exploitation to which we have been subjected . . . it would be necessary to review the whole period of the British occupation of India. I shall content myself by reminding you of a few historical facts. . . . Besides maintaining the costliest civil and military services in the world at our expense, the solicitude of our trustees . . . has been mainly directed to the creation of markets in India for England's manufactures. It is a long story beginning from the days of the well-known barbarities committed on the Dacca artisans, and continued through periods of more refined spoliation till we come to the present-day powerful banking, commercial and industrial combines which are now successfully choking off indigenous enterprise."

A Pertinent Question.

All that might sound convincing to one who should hear no more, but we have heard more (in the answer to the question, "How can we reach our destination?"), and so our very pertinent question is: May not the British have done no more, in establishing their banking, commercial and industrial enterprises in India, than to have availed themselves of the opportunities that an India labouring under the disability of her untouchables, her *purdah*, and other weakening social customs, her drink and opium curse, was not able to use? If it was indeed so, and it cannot well be denied, would it not have been proper and truthful to say a word or two of those disabilities, when answering the question, "Where do we stand?" instead of making it appear that where India does stand is all the doing of the British?

The Communal Disability.

One does not accuse the Pandit of any lack of direct truthfulness, but only of not seeing and admitting the connexion between things. Immediately after painting that picture of India to-day that I have quoted, a picture in which all the blame is thrown upon England, the Pandit passed to this:

"Whatever the higher conception of religion may be, it has in our day-to-day life come to signify bigotry and fanaticism, intolerance and narrow-mindedness, selfishness and the negation of many of the qualities which go to build a healthy society. Its chief inspiration is hatred

of him who does not profess it, and in its holy name more crimes have been committed than for any professedly mundane object. Can any sane person consider the trivial and ridiculous causes of conflict between Hindu and Muslim, or between sect and sect, and not wonder how anyone with a grain of sense should be affected by them? . . . Religion as practised to-day (in India) is the greatest separatist force. It puts artificial barriers between man and man, and prevents the development of healthy and co-operative life. Not content with its reactionary influence on social matters, it has invaded the domain of politics and economics, and affects every aspect of our life. . . ."

Surely it is pertinent to ask whether there is not the closest of connexions between an India invaded by such destroying religious influences as the Pandit's own words describe, and this India in which most of the banking, commercial and industrial enterprises are those of the British? One's wonder is that a man of the Pandit's clearness of vision should not see such plain things.

The Liberal Federation.

My letter this week must be all politics; for I have still to deal with the Liberal Federation, and if I then finish with politics, as I must, I shall still have left important things unreported. The Liberal leaders, after taking their part in the All-Parties' Convention in Calcutta, left for Allahabad, where on Sunday their sessions began. The President, Sir Chimanlal Setalvad, then declared that "every reasonable mind should accept the goal of Dominion Status, which meets all national aspirations and carries with it the advantages of partnership with the most powerful Empire in the world." He put it mildly when he said that "it was out of place for those who wanted independence to join in drafting a Dominion Status constitution, and then to ask Parliament to grant it."

THE COMING DELHI SESSION.

When the members of the Central Legislature assemble for the forthcoming Delhi Session this week they will find a formidable volume of business awaiting their attention. In the case of the Legislative Assembly the members have only themselves to blame if the session proves unduly protracted on that account, for the reason is largely to be sought in the time lost at the last Simla Session over the Public Safety Bill controversy, which crowded out both official and non-official business and necessitated the postponement of even such urgent measures as the Trade Disputes Bill. Incidentally, as a result, also, the agenda of the Council of State is exceptionally light, the reason, of course, being that the Upper House is more or less a revising Chamber and has the minimum of such work to perform in view of the fact that the Legislative Assembly was unable to get through its legislative programme and accordingly had nothing to send on to the Upper House.

Apparently when the Assembly meets it will have about twenty-five Bills pending or for final disposal, of which ten are official measures and the remainder non-official. The ten Government Bills will more or less have to be disposed of, but the fifteen non-official Bills cannot be said to have much chance of reaching the Statute Book, as not more than three or four days—the usual allowance—are likely to be allotted for their discussion during the session.

Of the ten official measures only two have yet to pass the second reading, namely, the Plywood Industry (Protection) Bill and the Indian Penal Code Amendment, otherwise known as the Press Sedition, Bill. The latter, it was feared, would take up a great deal of the Lower House's time last session, but in view of the illness of Sir Denys Brav and the congested state of business generally, was finally left over for consideration at Delhi. That it will give rise to many interesting debates before the third reading stage is reached may be regarded as certain, and

if the Public Safety Bill, as now appears likely, is re-introduced, the two Bills will probably be the central feature of a crowded session. The result in neither instance can be considered a foregone conclusion, but in the light of subsequent developments a victory this time for the Government is not improbable.

The Plywood Industry (Protection) Bill is designed to give effect to a report of the Tariff Board recommending measures for fostering the development of the manufacture of plywood tea chests in British India. Enough time has now elapsed for the various interests concerned to make representations regarding its provisions, and when the Bill is again taken into consideration the Government and the Assembly will be in possession of much valuable criticism and suggestions.

There are in addition four official Bills which have also been circulated for public opinion and on which the local Government's views should be available during the session. Most important among them is, of course, the Trade Disputes Bill, whose provisions have already been discussed threadbare by the various public and private bodies concerned. The interests of labour will no doubt be staunchly defended by Mr. Joshi and Dewan Chamanlal and Sir Victor Sassoon can be relied upon to see at the same time that the employers' side is adequately presented, while Sir B. N. Mitra, freed from the cares of the Finance Membership, will insure that the scales of justice are evenly weighted. As a result it is expected that a workable measure will ultimately be evolved, for the question is one which can ill brook further delay, and the conflict of opinion is confined mainly to minor issues.

The Workmen's Compensation Amendment Bill was regarded by its official sponsors as largely non-controversial, but the opinion was by no means shared by many employers' organisations, and an interesting discussion may ensue on its second reading, though a Government victory in the end is practically assured. The Dangerous Drugs Bill, designed to centralise control over their sale and render uniform penalties for breach of the regulations, and the Bill to amend the Patents and Designs Act come in the same category.

There are three measures which have been committed to Select Committees. Both the Negotiable Instruments Amendment Bill and the Bill to amend the Code of Civil Procedure in respect of the execution of decrees and orders have now been over a year in that state and the Government is credited with the intention of pushing both through this session.

Reference has been made on several occasions in THE NEAR EAST AND INDIA to certain objectionable features of the Income Tax Amendment Bill, the oldest of all the pending measures. Originally introduced in January, 1927, Sir Victor Sassoon performed a notable service when he finally prevailed upon Sir Basil Blackett to circulate the measure in February of the following year for opinion. The commercial community has declared its views with no uncertain voice, and when Sir George Schuster re-introduces the Bill during the coming session considerable modifications will, it is hoped, have been decided upon.

Among non-official Bills there is Sir Hari Singh Gour's Hindu Law Inheritance Bill which, as amended by the Council of State, will be returned to the Legislative Assembly for ratification. The report of the Select Committee on Mr. Sardar's Child Marriage Bill has still to be presented to the Assembly. Five or six other Bills sponsored by private members have been circulated, and many divergent views expressed in regard to several of them.

Mr. S. N. Haji's Coastal Reservation Bill, which is the principal non-official measure debated last session, is still in the hands of the Select Committee. In addition, the same member's Deferred Rebates Abolition Bill, and Mr. Kelkar's Life Assurance Companies' Bill and Caste Disabilities Removal and Repealing Bill are also on the agenda, while no doubt many new official and non-official Bills will be introduced as soon as the session opens.

THE BURMA RICE TRADE.

(From a Correspondent.)

For the past twenty years or more Burma has complained of the injustice of its treatment by the Government of India in the matter of finance. In fact the movement for complete separation from India is sometimes directly attributed to this sense of financial injustice. And the assertion is probably true to some extent, although the demand for separation is largely based on wider considerations. Nevertheless the financial difficulty looms large, and the existing depression in the rice trade is accentuating it. Since the days of the old Customs Tariffs India has levied an export duty on rice. With this one exception all the earlier export duties were gradually abolished; and in fact between 1880 and 1916 the only one of such duties remaining was that upon rice. It is charged on all rice exported from India including, of course, Burma. But as it happens Burma is the only one of the rice-growing Indian provinces which has a large exportable surplus of the grain. The other exporting provinces, namely, Madras and Bengal, are together responsible for only about ten per cent. or less of the exports, the remaining 90 per cent., or so, coming from Burma. This means, of course, that the duty is in fact a tax on Burma rice. But the proceeds are not handed over to the province; they go to the Government of India, all customs duties being exclusively central revenues. The exports of rice from Burma are shrinking, as was pointed out not long since in *THE NEAR EAST AND INDIA*. Nowadays the position is by no means the same as it was formerly when Burma rice had very little competition to face. Certain of the countries of southern Europe are now large producers and some of the leading European consumers, such as Germany, Holland, and Italy are said to obtain a large proportion of their supplies from these sources.

Such being the present situation, it was not difficult for the Burma Chamber of Commerce to put before the recent annual meeting of the Associated Chambers at Calcutta a strong case for the abolition of the duty. The case was indeed so strong that the Chambers could not fail to be convinced; and they accordingly passed with complete unanimity a resolution recommending the immediate withdrawal of the duty. The Burma Chamber based its case on the ground that the tax is paid not by the consumer but by the producer, i.e., the cultivator. Sir George Rainy, the Commerce Member of the Government of India, who attended the meeting, seems to have been very sympathetic. But he expressed the opinion that the troubles affecting Burma rice are due to causes other than the export duty. He had made inquiries in Burma, he said, regarding the views of the cultivators, and there seemed to be some doubt among them as to whether they would actually benefit if the duty were abolished. It appears to the writer that if there is this doubt in the minds of the cultivators it would be wise for the Government of India to refer the question to the Tariff Board for examination. This would be in line with the views of the Indian Taxation Inquiry Committee of 1924-25, who suggested that an investigation by the Board should be an essential preliminary to any change in the duty. The Todhunter Committee favoured the duty on the ground that it had been levied for many years without any bad effects notwithstanding the fact that rice is not a monopoly of India. They said that the only countries which exported appreciable quantities of rice were India, Siam and Indo-China. The Indian share of the trade varied, they went on to say, between one third and one half; and, as Siam and Indo-China imposed export duties, the Indian tax did not handicap the producer. They added that the rate at which the Indian duty was levied was low and that, with the rise in prices, its weight had greatly decreased.

The conditions have changed materially since the Todhunter Committee wrote their report. Rice has now so declined in price that widespread economic depression has

resulted throughout Burma. During the past year average prices have been considerably lower than in the immediately preceding years. And it has been calculated that Burma will have received for this year's crop five crores of rupees less than for last year's crop. It is obviously the cultivator who has to bear this heavy burden. Burma rice is an inferior grain, and it will not stand the milling and dressing to which rice grown in other countries is subjected. It depends on its cheapness in comparison with its competitors rather than on its appearance; and, as has been mentioned above, it has nowadays to face severe competition from European producing countries as well as from Siam and Indo-China. The result is that Burma has to take whatever price the market is prepared to offer. Admittedly, the abolition of the duty might not remove all the troubles that afflict the Burma rice trade. But, if it is one of the factors tending to depress the trade, abolition could be scarcely other than beneficial. Then there is the question, which the Burma Chamber also raised, of the unfairness of the export duty as between Burma and the other Indian provinces. Here is an Indian Customs Duty which is paid to the extent of a crore of rupees by Burma, and to the extent of only about fifteen lakhs of rupees by the other provinces. The export duties on jute are similarly paid to an overwhelming extent by one province—Bengal. But jute is, after all, a monopoly article, and, being such, it is not an unfit subject for an export tax. But as the same cannot be said for rice the inequity of the existing arrangement as between the provinces is all the more glaring. It would seem to be high time that the Government of India took the whole question of export duties into consideration. The Fiscal Commission gave a clear lead when it recommended that export duties should be levied only on articles of which India has a complete, or at any rate a partial, monopoly; that in any case the rates should be low; and that an export duty should not be utilised for the purpose of protecting an industry.

THE LATE SIR CHARLES CLEVELAND.

THE NEAR EAST AND INDIA regrets to record the death at the age of 62, after a long illness, of Sir Charles Cleveland, the full story of whose work as the head of the Indian Criminal Investigation Department before and throughout the War has yet to be revealed. A fine sportsman—a double Blue and Rugby International, and a noted shikari—Sir Charles entered the Indian Civil Service, after the usual probationary period at Balliol College, Oxford, in 1887, and was posted to the Central Provinces. It was not, however, until his promotion to the coveted post of Inspector-General of Police in that same province that he found probably his true bent in the detection and prevention of crime, more particularly subversive and treasonable activities, and thereafter his preferment was rapid. In 1910 he was appointed Director of Central Intelligence at the headquarters of the Government of India and one of his earliest duties was to make arrangements for the police protection of the King and Queen on their visit in connexion with the Coronation Durbar the following year. The revolutionary and anarchical movement, notably in Bengal, kept him fully occupied until the War, when his resource, personal courage and administrative ability in circumstances of exceptional difficulty soon became a byword in secret service circles throughout the world. Created K.C.I.E. in 1912 and K.B.E. at the end of the War, Sir Charles on his retirement joined the Council of State of Jaipur. After his return to England three years ago he took charge for a short time of the Indian Section of *THE NEAR EAST AND INDIA* before he became interested in the cause of the independent London omnibus companies. His work in this connexion won for him an appointment as a member of the London Traffic Committee.

THE QATTARA POWER SCHEME.

In a Supplement devoted to Egyptian affairs that appeared with its issue of January 5 the *Morning Post* published an article on the scheme for the generation of power in Egypt by means of admitting the sea into the Qattara depression in the Libyan Desert. As this article supplies the fullest account that has been given so far of the Qattara power project, and as the project itself is of considerable importance to Egypt, in view of the need for the expansion of industry in the country to supplement the capacity of agriculture to provide for a rapidly increasing population, we are glad to have permission to reproduce it in these columns.

A new hydro-electric scheme for generating power by the continuous admission of sea-water from the Mediterranean with a considerable fall into a natural depression in the Libyan Desert, called Qattara, is now being carefully investigated by the Desert Surveys of Egypt, under the direction of Dr. John Ball. This depression is an enormous hollow in the northern part of the Libyan Desert, in which some 7,000 square miles lie below the sea-level. The eastern end of the depression approaches to within about 80 miles of Alexandria, 130 miles of Cairo, and 40 miles of the Mediterranean coast. Its deepest point is 440 feet below the level of the Mediterranean, and even the contour of 160 feet below the sea-level embraces an area of some 4,000 square miles. If a lake were to be formed within the depression with its surface at this last-named contour, it is easy to show that, on the

assumption of a mean daily evaporation of one-sixth of an inch from the lake's surface, sea-water might be passed continuously into the depression at the rate of some 40 million tons a day, with a total fall of 160 feet, without altering the level of the lake; and the energy for the falling water might be used for power generation. The water of the inland lake would, of course, gradually become more and more saline, since salt would be continually passing into it from the sea, while only pure water would be disappearing from it by evaporation; but the volume of water in the lake would be so vast, that it would require centuries for the accumulation of salt to become so great as to interfere seriously with the rate of disposal of the influx by evaporation.

Allowing for losses of energy in the conduits, generators, and transmission, it is estimated that a continuous net output of some 160,000 horse-power could be distributed in Lower Egypt by utilising the influx for power production. The total consumption of power at the present time in Lower Egypt for all purposes (railways, tramways, lighting, mills, etc.) is but a small fraction of the power obtainable from the Qattara Depression. Even on the most liberal estimate of the increased power-consumption which may be required for the above purposes during the next century, including pumping on a large scale for the reclamation of the two million acres or so of land as yet uncultivated in the northern parts of the Nile Delta, it is estimated that the carrying out of the Qattara Scheme would more than satisfy the demands, and would leave a surplus of power for the development of new industries in Lower Egypt. The scheme, if it can be carried out at not too high a cost, will, therefore,

meet two of the greatest needs of Egypt, namely a large increase in the cultivable land-area of the country, in order to accommodate her ever-increasing population, and a source of power within her own borders for the development of new industries. The Qattara scheme would, in fact, accomplish for Lower Egypt what the Aswan power-scheme is intended to do for Upper Egypt; the two schemes are complementary.

Whether the Qattara Scheme will prove to be economically practicable will depend, of course, largely on the costs which would be incurred in carrying it out; and these costs cannot be even approximately estimated until the results of the detailed investigations now in progress are known.

The sloping plateau which separates the depression from the Mediterranean, attains such considerable altitudes over most of its breadth of 40 miles, that the excavation of open canals to conduct sea-water into the depression is out of the question. The aqueducts will, therefore, have to be tunnelled for the greater part of their length; and one of the principal lines of investigation is that directed towards the ascertaining by trial borings of the exact nature of the rocks through which the tunnels would have to be driven. Simultaneously with the boring operations in the tract between the sea and the depression, detailed contour-surveys are being conducted both within the depression itself, to ascertain its exact content for different levels of the proposed lake, and in the tract between the depression and the Delta to ascertain the best route for the transmission of the power to be obtained.

It is hoped that within two years the investigations will yield sufficient data to enable the probable costs of the scheme to be approximately ascertained, and a judgment to be formed as to its economic practicability.

Major Gilmore has been appointed President of the International Quarantine Board in Egypt in succession to the late Major Thomson.

Locusts were last week reported to have appeared in threatening numbers in Trans-Jordan. They spoiled the crops at Aqaba and had reached the outskirts of Kerak.

A new batch of regulations has been published in the Yugoslav *Official Gazette*. According to these the former laws for election to the Skupstina, to the county councils, and to municipal councils are all abolished. The Royal Commissioner to exercise the powers of the dissolved Zagreb County Council is Monsieur Ouzorinatz, who was sent by the Military Governor, Brig-Gen. Maximovitch to close the county council on December 10.

THE WEEK AT HOME

London, Tuesday Morning.

"Apologia pro sua Influenza."

To any sharp-eyed readers who may have missed this page during the last two weeks I apologise for having been so fashionable as to catch influenza; and to those who have not I apologise for a personal explanation that takes up space.

Home Rule for the Scots.

The Liberals, as if in despair of their "new" ideas ever attracting the attention of the British public which doubtless they deserve, have just brought back a very old scheme, namely, that Scotland should have a separate Parliament. This declaration of policy was made at Dalkeith by Sir Herbert Samuel, after consultation with Mr. Lloyd George. It is, therefore, quite obviously an electoral dodge.

The organiser of the Liberal Party, who from his experience in Palestine ought to know something about the matter, made the quaint remark: "To deny national liberty is sheer oppression." It is not in my province to ask who are the more "oppressed," the Scots or the Arabs. But I certainly think that the Liberal Party will have considerable difficulty in convincing either Scotsmen or Englishmen that Scotsmen are "oppressed." If the Scottish nation, that section of it, I mean, which prefers to live in Scotland, wishes to have Home Rule, longs to bear the expense of a separate Parliament, is simply clamouring to manage its own affairs, and let the rest of the world go hang, why, by all means let it have it. But the Liberal Party is not so unchallengeable a witness to the existence of this desire for it to be accepted without further examination.

A time may conceivably come when Scotsmen and Welshmen and Cornishmen and Yorkshiremen for aught I know will assert that Whitehall knows nothing of what goes on outside London. If the Liberal Party is still in being at that blissful time, no doubt it will rush down representatives to the seceding areas and proclaim the essential justice of the separatist demand.

The Friends of Mr. Lloyd George.

No observer can go about the country and fail to notice the fact that Liberals are still hopelessly divided upon the desirability of maintaining Mr. Lloyd George in his present position in the Party. But if Mr. Lloyd George is losing supporters among the "Liberals," he is gaining them among the more rootless kind of Conservatives.

It was significant that upon the occasion of his birthday a few days ago both the Rothermere and the Beaverbrook Press went out of their way (or perhaps kept on it) to offer him congratulations. Into what precisely is going on in the minds of these two newspaper magnates I am not so foolish as to probe, but the ordinary man appears to be convinced that what they are aiming at is, first, the defeat of Mr. Baldwin's Administration, and secondly the return of Mr. Lloyd George to a position of holding the balance of power.

In rough figures, it could be done in this way. Limit the Conservatives to, say, 300 seats; the Labour Party to 250 seats; and give the Liberals 60 seats. The Conservatives would not hold office with a minority; nor would Mr. Ramsay MacDonald. But just give Mr. Lloyd George the chance!

All this calculation seems to me extremely wide of the mark, but one never knows—especially after influenza.

The Tories and Agriculture.

No party troubles overmuch nowadays in this industrial country about the agricultural vote, and it may be that Conservative Headquarters are not unduly alarmed at the violent criticism passed on them last week by the Farmers' National Union. But the farmers certainly did not mince matters.

They said that the Safeguarding of Industries policy should be extended to Agriculture, or failing that, that the revenue from Safeguarding duties should be used to subsidise arable farming, and that, unless immediate steps were taken to indemnify agriculturists in respect of statutory burdens placed on them since 1924, Conservative candidates need not expect their support at the next election.

Quite openly they suggested a transfer of political allegiance. "We have trusted the devil we know too long; we had better try the fellow we don't know"—that was the sort of sentiment expressed. The agriculturists' complaint is, I think, justified. But the sad part of the matter is that if they do decide to jump out of the frying-pan, they will certainly be in the fire. For if one thing in party politics is certain, it is that the Liberal and Labour Parties would consider the position of agriculture (despite their pre-election promises and proposals) as the least important problem of their national task. It is extremely doubtful whether agriculturists will ever again get financial support from the State, that is, while present ideas govern the parties.

A Bishop's Declarations.

It is perhaps unfortunate that a Bishop may not differ from his fellows without a Press "stunt" on the subject. Religious controversy is now exploited to the full as being one of the most readable subjects of "copy," and the competent journalist is now expected to handle theological matters as easily as he writes of cabbages and kings. (As a matter of fact, he does not.)

In any case, a pretty dispute is raging over some remarks which Dr. Furse, Bishop of St. Albans, let fall last week on the subject of the marriage of unbaptised or of divorced persons. In his diocese this Bishop resolutely forbids the marriage of persons in either category. This co-classification of unbaptised with divorced persons has sorely grieved certain consciences, and heart-burning over the matter is severe and, I should imagine, likely to be enduring.

There are, as far as I can discover, three kinds of comment upon this Bishop's action, which, whether designedly or not, has received very wide publicity. One is that he is right on both counts—Church law or intention must come before anything else. The second is that he is wrong on the first, but right in the second. And the third is that, since the Church of England is a State Church, he is wrong on both counts.

At present it appears to be not difficult to evade the obstacle which the Bishop and those who think with him have raised by a couple's removing themselves to a more tolerant diocese; but it is conceivable that the matter will come to a head, and that the legality or illegality of these declarations be finally determined. For the fierce, unquenchable spirit of English liberalism and toleration in religious matters has been roused; nor is the intense conviction of the necessity of tightening up the discipline in the Church much behind it, if at all, in expression and resolution.

The Oxford Preservation Trust.

I have referred in these columns before to the excellence of the aims and of the work of the Preservation Societies at Oxford and Cambridge. The Oxford Preservation Trust have just sent to me their second Annual Report (1927-1928), and it is exceedingly heartening to read in it (in the type and with the illustrations for which the Oxford University Press is unsurpassable) of the preservation of beauties already accomplished.

As is known, the Godstow Nunnery was presented (conditionally) to the University by Colonel Fennell, and the Hinksey property owned by the old Oxford Trust is safe. But the Oxford Preservation Trust has bought for public use "a wide stretch of the eastern side of Boar's Hill, from which can be seen an incomparable view of the City of Oxford." It has also secured, by Marston Ferry, 100 acres of meadowland along the banks of the Cherwell.

Above all, at least to those who were not educated at Oxford but have only stayed there, it has (with the generous help of Sir Arthur Evans) bought about twenty more acres on the top of Boar's Hill "in order to secure the view, dear to Matthew Arnold and enshrined in the *Scholar Gypsy* and in *Thyrsis*, looking over the Vale of the White Horse and the Wessex Heights."

The Trust now urgently desires funds to acquire the Headington estate (the background of Magdalen) and Wytham Woods. "If I ever become a rich man," one of the things which I should certainly do would be to help to preserve "this Oxford of the larger air." It is inconceivable that the sense of duty and responsibility will not be adequately awakened among her sons and residents.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

January 24, 1929 (New Style).

January 11, 1929 (Old Style).

Shaaban 12, 1347 A.H., of the Muslim Calendar.

Shebat 13, 5689, of the Jewish Calendar.

Captain Sir Edward Headlam arrived at Marseilles on January 18 in the P. and O. s.s. *Naldera* from Bombay.

Sir Herbert and Lady Baker joined the P. and O. s.s. *Maloja* at Marseilles on January 19 for Bombay.

Lord and Lady Greville left London on January 18 to join the *Maloja* at Marseilles for Port Said.

The Rev. C. A. Alington, Headmaster of Eton, arrived on January 16 at Plymouth from Egypt.

Miss Fardell left Marseilles on January 18 for Egypt, and will be abroad till April.

Colonel Sir Percival Marling, V.C., and Lady Marling arrived last week at the Grand Hotel, Helouan, where Sir Percival is recuperating from his recent serious illness.

Professor F. Ll. Griffith lectured on "Nubia, Pagan, and Christian," before members of the Egypt Exploration Society on January 23 at Burlington House.

The Hon. William and Lady Beatrice Ormsby-Gore returned to 5, Mansfield Street from Wootton House, Wootton, Bedford, on January 21.

Mr. and Mrs. Albert Van den Bergh left London on January 15 for Egypt. Mrs. Albert Van den Bergh will be away for about ten weeks.

Marchioness Curzon of Kedleston, who leaves for India early in February, arrived on January 21 at 1, Carlton House Terrace, from Hackwood Park, Basingstoke.

Dowager Queen Marie of Roumania, who has been suffering from a slight attack of influenza, has now recovered and was able last week to undertake the sea trip to Constantinople and back.

Mr. S. G. Vesey Fitzgerald has been appointed Lecturer in Muhammadan Public Law and Turkish Land Law at University College during the absence of Judge W. H. Hill at Constantinople as a member of the Mixed Arbitral Tribunal.

DEATH.

MAVROGORDATO: — On January 16, at Palazzo Donn'Anna, Posillipo, Naples, Alexander Stephen Mavrogordato, aged 69. Retired British Colonial Service; for 13 years Financial Assistant to the Government of Cyprus. Deeply regretted.

Sir Charles and Lady Nall-Cain have left for Paris, on the way to Egypt, Sicily, and Italy, and will be away from home for about four months.

Field-Marshal Lord Plumer and Lady Plumer left England on January 22 for San Remo, accompanied by their daughter, the Hon. Mrs. Anthony Orpen.

Sirdar Ikbal Ali Shah will deliver an illustrated address to the Central Asian Society upon "The Changing Face of Islam" on January 30, at 5.15 p.m. The lecture will be given in the Royal Society's Rooms, Burlington House, Piccadilly, W.1.

Lady Boyle will be At Home for the "Save the Children Fund" at 63, Queen's Gate, on Wednesday evening (January 30), to hear Lady Muir and Mrs. Henrietta Leslie, who have both recently returned from Bulgaria, speak on "Bulgaria To-day." A new series of slides will be shown, and Balbina Braynne, the Russian pianist, will play. Full particulars may be obtained from the Hon. Organiser, 7, St. James's Terrace, Regent's Park, N.W.8.

NEWS IN BRIEF.

A party of 150 members of the Italian Navy League, which has made a two months' tour of India, left on January 20 for home.

Signor Grandi, Italian Under-Secretary of State for Foreign Affairs, returned to Rome on January 18 from Athens.

The German airship *Graf Zeppelin* will, at the end of February or the beginning of March, make a flight to Egypt *via* Marseilles to Ismailia.

The appointment will shortly be made of M. Zhiki Lazitch, Assistant Minister of the Interior and a well-known expert on Macedonian affairs, as Governor of Skoplye, the capital of Serbian Macedonia.

After a few days' visit to Riga, the Persian Envoy to Moscow, Ali Kuli Khan Ansari, the Moshaver ul Mamalek, left for Berlin on January 16, having signed the Perso-Latvian Treaty of Friendship.

The conference of Roumanian and Hungarian delegates to discuss questions affecting Hungarian optants in Roumania opened last week at San Remo.

The Committee set up under the chairmanship of Sir Philip Hartog to report to the Simon Commission on Indian education will meet in Calcutta in March to sign the report.

Mr. Leith Ross, of the British Treasury, arrived in Cairo last week to discuss various financial questions outstanding between the British and Egyptian Governments, including the 1855 loan and the claim for supplies during the War.

EGYPT UNDER THE MICROSCOPE.

- "**THE BEGINNINGS OF THE EGYPTIAN QUESTION AND THE RISE OF MEHEMET ALI**" By Shafik Ghorbal. M.A. (London). With a Preface by Arnold J. Toynbee. (London: George Routledge & Sons, Ltd. 12s. 6d.)
- "**THE TRANSIT OF EGYPT**." By Lieut.-Colonel P. G. Elgood. C.M.G. (London: Edward Arnold & Co. 18s.)
- "**GREAT BRITAIN IN EGYPT**." By Major E. W. Polson Newman. Foreword by General the Rt. Hon. Sir J. G. Maxwell, P.C., G.C.B. (London: Cassell and Company, Ltd. 15s.)
- "**THE EGYPTIAN ENIGMA, 1890-1928**." By J. E. Marshall. (London: John Murray. 10s. 6d.)
- "**LE NATIONALISME EGYPTIEN**." By Mme. B. G. Gaulis. (Paris: Berger-Levrault.)
- "**THE EGYPT OF THE SOJOURNER**." By Gladys Peto. Illustrated by the Author. (London: J. M. Dent & Sons, Ltd. 5s.)

Napoleon's dictum that Egypt is the most important country in the world would seem to find confirmation in the appearance, almost simultaneously, in 1928, of half a dozen books devoted to its affairs. Whatever views may be held of the importance of Egypt in the world scheme, there can be no doubt as to its importance to the British Empire or as to the interest which it commands to-day. The history of the country has often been written, but one change follows another in rapid succession, and from the multiplicity of the views of contemporary historians posterity, it is to be hoped, will be able to arrive at the correct interpretation of causes and events to which the present generation is too near to be able to pass judgment upon them dispassionately.

The history of modern Egypt dates from the rise of Mohamed Ali, and it is appropriate that an Egyptian should be responsible for a treatise on that event, based on his own researches in British and French archives. Whether the Egyptian question, as the term is understood to-day, can strictly be carried back to the earlier years of the nineteenth century may be open to doubt; but Mr. Ghorbal's intention is clear. Mohamed Ali was the maker of modern Egypt, and was responsible for opening up the country, until then isolated under the rule of the Mamelukes, to European influences and enterprise. Its ultimate fate and its relations to the suzerain State, as the author points out, then became diplomatic problems of the first magnitude; but that phase of Egyptian history may be said to have ended in 1904 with the Anglo-French Convention, and the Egyptian question became an issue between Egypt and Great Britain. In its elucidation of the history of the time Mr. Ghorbal has produced a fascinating book, which, while having a value for all students of history, should prove of absorbing interest to Egyptians. It is impossible for the latter to understand the problems which exercise them so deeply to-day, if they cannot see behind them their proper background. The true setting is the whole period from 1798 to 1928, if, more particularly, the last fifty years. A characteristic of Mr. Ghorbal's book is its dispassionate presentment of the historical material that he has collected—so thoroughly is he detached from the passions and prejudices that enter into his field of study, as Mr. A. J. Toynbee points out in his Preface, that it would be difficult to guess from internal evidence the author's nationality. Mohamed Ali himself comes well out of this dispassionate analysis, having regard to his times and his task. Leaving him in 1812, Mr. Ghorbal writes:—

Mehemet Ali had established his power in Egypt and was henceforth free to turn the country into a vast personal estate. But in the exploitation—ill or well—of the estate, the inhabitants were transformed. They became homogeneous in serving one master, they

were drilled into soldiers and sailors and marched to victory against the Sultan, they were forced into schools and the production of wealth, they were governed and taught to expect and find security. Mehemet Ali made modern Egypt.

Those who read "Egypt and the Army" will know what to expect from Colonel Elgood's rapid survey of Egyptian history to the present day. He writes with a strong affection for the country, but with an intimate knowledge of its affairs, gained from long residence in Egypt. He is able to follow developments with a sympathetic understanding, which enables him to analyse them without prejudice. Of the events of recent years he writes as an observer on the spot, and it is this feature which makes his book so much more of a human document than Major Polson Newman's carefully compiled story of Great Britain in Egypt, for much of the contents of which he stands indebted to others as admittedly as he does for the title. It is useful to have the history of Anglo-Egyptian relations brought up to date, and in "Great Britain in Egypt" no important event of recent years is likely to have been omitted. If a contrast is required between the two writers, it is supplied in the treatment accorded in their narratives to Sir Eldon Gorst. Colonel Elgood describes the man and his policy as one who had worked with him and was able to probe the underlying motives of his policy. Less fortunately situated for his task, Major Polson Newman forms his judgment, as it were, at a distance. It is not necessarily a wrong judgment, but it lacks the conviction that the other carries with it. Both authors are dispassionate observers, and their conclusions are those of all who bring some measure of sympathy and understanding to bear on the Egyptian question of to-day. Major Polson Newman writes:—

An earnest endeavour has been made on both sides to bridge over the gulf separating the British and Egyptian standpoints, and both ends have actually been made to meet, but the structure was not strong enough to bear any pressure, and it gave way. . . . The old fantasies of extreme Nationalism still haunt the minds of Nahas Pasha and his colleagues, but fresh ground has been explored with considerable profit, and material now exists for settlement at some future date.

Colonel Elgood concludes his interesting work, which all politically-minded Egyptians would do well to study carefully, as follows:—

Doctrines and shibboleths of the past stand in the way of agreement, and until the Wafd discards them, or Egypt discovers a leader who will do so, Great Britain must submit to the existing situation with as much patience as she can command. But if the future is still uncertain, both countries can look back upon their past association with humble satisfaction. Especially may Great Britain, who has substituted in Egypt prosperity for poverty and ordered government for misrule, do so. Her achievement cannot be undone. The superstructure may shake, but the foundations will not move.

In "The Egyptian Enigma" a less optimistic note is struck. Mr. Marshall, lately a Judge in the Egyptian Court of Appeal, has allowed a tinge of bitterness to colour his account; he does not attempt to disguise the fact that he was out of sympathy with his surroundings. He found Egypt, when he first visited it, "in a state of dismal and disheartening confusion," and he left it last year in little better condition, in his opinion. He describes things as he found them, and often, when an opinion has to be formed of a wood, it is well to know something of the trees. Mr. Marshall was in close touch

with the trees; but does not appear to have been able to get away from them in order to study the wood in perspective. He is no believer in the saying that there's a divinity that shapes our ends, rough-hew them how we will; he is all for hard-and-fast policy which brooks of no turning to the right hand or to the left. It is, unfortunately, not always possible in international politics. "No one," he writes, "can shut his eyes to the fact that the policy of Egypt is now controlled by schoolboys and students, and will be so controlled for at least two generations. They were made use of during the revolutionary period of Zaghloul and the Wafd leaders, and now from being servants they have become masters." Yet almost before these words were in print the schoolboys and students are back in their proper place. It may be true that an important section of the future generation has been led astray; but it remains to be seen whether the damage done proves irreparable.

Britons who want to see themselves as some others see them should read Mme. Gaulis' "Le Nationalisme Egyptien." This French lady visited Egypt from the end of 1924 onwards. She seems to have taken up a permanent place at the feet of some Nationalist extremists and to have acted as a dictaphone for their wildest flights of imagination, abuse and inaccuracy; her own views, however, also find ample space. "England," she writes, "will never forgive us (the French) for having been the initiators of the liberalism that the whole of Islam professes to-day"; but she does not state whether the initiation took place in Morocco, Tunis, or Syria. A few quotations will convey an idea of the book. The motive for Great Britain in maintaining the *status quo* in the Sudan is as follows: "The possibility of making the valley of the Nile in Egypt completely barren (*stériliser complètement*), either by causing all the water to be absorbed by irrigation in Sudanese territory, or even by diverting the course of the river." And in another passage: "The cotton of the Sudan is to prosper at the expense of Egyptian cotton. Already the *fellah* has wind of the threat, already the water necessary to irrigate his fields is diminishing day and night." All such matters, however, are details in the general collapse of the British Empire, as Mme. Gaulis sees it, and her book is of a type which some French authors dealing with Near and Middle Eastern affairs seem to take particular pleasure in turning out.

We have left no space to do justice to Miss Peto's delightful little book, "The Egypt of the Sojourner." At last the reader will have respite from politics and be able to absorb the more attractive atmosphere of Egypt. Here is a running commentary on life in the country in all its varied aspects, ranging from the monthly budget of an average household to descriptions of temples or bathing at Ramleh. Miss Peto skims lightly over her subjects, and has as happy a gift of conjuring up a picture with words as with her black-and-white sketches. Anyone who has been to Egypt or thinks of going there should read this book.

FASCISM.

A SURVEY OF FASCISM. "Year Book of the International Centre of Fascist Studies, Lausanne. (London: Ernest Benn, Ltd. 7s. 6d.)

The International Centre of Fascist Studies is an Institute entirely supported by private subscription, which was founded last year by the well-known Swiss Professor, H. de Vries de Heekelingen, for the purposes of enabling students throughout the world to study in a purely scientific spirit the doctrines of Fascism, its achievements and aims.

The main work of this Institute consists in the publication in both French and English of a series of bibliographical and analytical card references, by which students may be enabled to document themselves on all aspects of the subject. These cards, in fact, which are of standard size, constitute a complete guide through the imposing mass of literature which has already appeared dealing with

Fascism and similar movements in all the principal languages. The Institute is Fascist only in the sense that it considers Fascism an extremely important phenomenon, which political students cannot afford to neglect, since it claims to contain certain universal lessons and to be the key to the solution of many of the evils afflicting society at the present day.

In addition to the card references the Institute is publishing a series of Year Books in French and English for the general reading public. The first of these books is now published under the title of "A Survey of Fascism," composed of a number of interesting essays written by some of the foremost exponents of the movement on the history of Fascism and the constitutional changes effected under Signor Mussolini's Government in Italy. It is the first book that has appeared in English which can justly claim to reveal exactly what Fascism is and aims at achieving.

"A Survey of Fascism" is a publication which may be warmly recommended to students of politics in the Near East and in India. Fascism lays down certain fundamental principles, but it lays particular stress on the need for each country to discover for itself the particular form of government best suited to its peculiar circumstances and characteristics. It insists that the adoption of no particular form of government can constitute of itself a sign of progress; in other words, that all governments are good, if they succeed in achieving the purpose of all governments—which is the moral and material welfare of the community taken as a whole. It does not claim that the particular form of government which Signor Mussolini is forging in Italy must needs be imitated by other countries. Nevertheless, there are undoubtedly important lessons to be learned from the Italian experiment, and in any case a study of Fascism should set minds thinking along new lines and free the ground from the prejudices which have become deeply rooted since doctrinaire liberalism gained its ascendancy over the minds of political thinkers. Fascism, indeed, may conceivably become the way by which the peoples of the Near East and of India may learn to work out for themselves new forms of government suited to their own peculiar needs. It is for these reasons that the publications of the International Centre of Fascist Studies may be considered to have a very special importance.

MAPS OF IRAQ.

The "Maps of Iraq with Notes for Visitors," which was reviewed in THE NEAR EAST AND INDIA last week, is obtainable (in England at 5s. 6d. and in Iraq at Rs.3/8) at The Bookshop, New Street, Baghdad, Branches of Messrs. Thos. Cook and Sons, The Crown Agents for the Colonies, 4, Millbank, S.W.1., Edward Stanford, 12, 13, and 14, Long Acre, W.C.2, and Sifton Praed and Co., Ltd., 67, St. James's Street, S.W.1.

"WORLD DOMINION."

The January issue of *World Dominion*, an international review of Christian progress, contains two articles which are in particular likely to interest students of Islamic countries: they are "Persians at Work for Persia," an account of how Persians themselves set to work to alleviate the sufferings of lepers near Meshed, and "Palestine To-Day," in which is related the attempt of Hebrew Christians to proselytise the Jewish colonists in the Holy Land. In this second article the possibility of establishing a Hebrew Christian Zionist colony is touched upon.

The Turkish National Assembly has passed the measure embodying Iraq's adherence to the Kellogg Pact.

The British Government has informed the Secretary-General of the League of Nations that Iraq has adhered to the Geneva Slavery Convention. This adherence came into effect on January 18.

Sir Ronald Storrs, Governor of Cyprus, who has been ill since December 4, has now sufficiently recovered to be allowed to travel. He sailed from Port Said on January 20 for home in the Rajputana, and expects to return to duty in March.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Trade Outlook.

At the meeting of Barclays Bank, Ltd., Mr. F. C. Goodenough gave a most interesting survey of the existing trade and industrial situation. On the whole the keynote of his address was a subdued optimism, and while we have yet to hear the views of the other bankers, who may perhaps differ from him in some respects, it may, I think, be assumed that the view is taken in the banking world that the outlook is somewhat more hopeful. We have had so many disappointing years—years which opened with hope and closed in depression—but it is undoubtedly the case, as Mr. Goodenough so appositely pointed out, that in the past year the country, to use his words, "got nearer to the facts." One can instance the combinations in various industries, and the programme for what is known as "rationalisation," and it has for some time been evident that this country is now holding its own better in competition for foreign contracts. Unfortunately trade is still handicapped by restrictions, and despite the resolutions passed at Geneva it is only too evident, as Mr. Goodenough says, that there are no signs of a reduction in the tariff barriers if taken as a whole. In isolated cases the position is improving, as in Roumania, for instance, but the gains in one direction have been counterbalanced by the introduction of new barriers elsewhere, and it is only too evident that at the present time the nations are not taking very decided steps in promoting the freedom of trade. It has to be realised, of course, that as a result of conditions brought about by the War the whole question simply bristles with difficulties. Discussing the effect on our trade of these barriers, Mr. Goodenough expressed the view that if our full pre-War volume of commerce is to be regained "steps must be taken to reorganise upon more economical and efficient lines many of our industries which are specially subject to foreign competition."

Sudan Trade.

While trade figures are admittedly not everything, they may be said to give a fairly good indication of a country's economic position, and it is impossible, comparing the statistics for the commerce of the Sudan for the first ten months of 1928 and the corresponding months of the previous year, not to come to the conclusion that the country has rapidly recovered from the effects of the late economic depression. The volume of trade for the period comes to

£E10,854,221, which represents an increase of £E1,045,825, and while the chief increase is in respect of exports, due, of course, mainly to the good prices obtained for the cotton crop, there is a very substantial increase also in public imports, which shows very clearly that there is an important increase in the purchasing power of the country. The one fly in the ointment is that the past season's dura crop has not been good enough to allow the removal of the restriction on the export of this commodity. To judge by past history, however, really bad dura crops only come at intervals, and favourable developments this year may bring the embargo to an end. The outlook for cotton is most promising. Estimates of the yield have varied, but it is probably that the output of Sakellaridis this season will be over 140,000 bales. If reasonable prices continue to be obtained, and of this there is little doubt, then the Sudan is likely to benefit more appreciably this year than it has yet from its staple crop. Naturally this will have its repercussion on the import market.

Roumania and the Loan.

It was possible that the Roumanian Government would decide in favour of a loan under the auspices of the League of Nations, but the new Government has evidently taken the view that a speedy conclusion of a loan was essential, and so has resumed the negotiations carried on by the previous Government, and it was reported this week that the agreement has been signed. One of the conditions of the loan is understood to be the modification of the statutes of the National Bank of Roumania, and, to judge from a Bucharest message it is possible that this stipulation may occasion some difficulty, but I do not think we need anticipate any considerable delay in the issue of the loan on this account. Apart from the loan question, which is of course the all-important factor in the economic recovery of Roumania, the Maniu Administration is showing in a number of ways that it is determined to waste no time in carrying out the comprehensive policy laid down at the "Parliament" of the National Peasant Party last summer. Thus it is pursuing an investigation into the decline of the export trade, a decline which, it may be added, assumed serious proportions last year owing to the failure of the 1927 harvest. The exports of wheat for the first nine months of last year only amounted to 16,101 tons as compared with 143,044 tons for the same period of 1927, while the exports of maize were only 453,411 tons as against 1,460,718 tons. Except for maize, the 1928 harvest has shown a great improvement, so there should be a considerable expansion in the exports of cereals this year. Harvest fluctuations, however, only

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratsa. It has also 86 agencies.

contribute one of several reasons for Roumania's poor export trade since the War, and it is satisfactory to know that the Government realises that here it has a fruitful field for its activities.

Turkish Debt Delay.

The events of the past few years have made it fairly evident that the act of payment is a painful proceeding for the Angora authorities. Last week a conference was held in Paris of the Council of the Ottoman Debt and the delegates of the bondholders, and a statement was issued pointing out that all steps had been taken relative to the application of the Accord of the Debt, and stating that it had been decided to insist on the Turkish Government giving instructions without further delay for the payment of the first coupon. As the funds for the payment of this coupon are available it is difficult to understand why there should be any postponement, but the reply which has been forthcoming from the Turkish Government raises the question of the reservation clauses and throws no light on the date of payment. It is not without significance as showing the lack of confidence felt in the policy of the Angora Government that more banks are now going to discontinue their branches in Turkey. Among them may be mentioned the Banque Belge pour l'Etranger, which has decided not to continue its branch at Constantinople. The policy of Turkey for the Turks is one with which all can sympathise, but no country to-day can afford to live in a state of isolation, and an attitude which affects the country's credit abroad and at the same time discourages foreign enterprise is one which will ultimately be found untenable. It is at least as essential for Turkey as it is for other countries to be able to approach the foreign money markets, and it is equally important that foreign enterprise should be encouraged.

Bengal and North Western Railway.

A year ago Sir Henry Burt was able to report record results at the meeting of the Bengal and North Western Railway, but for the past year there was a small decrease in the gross earnings. This occurred, Sir Henry Burt pointed out at this week's meeting, in both coaching and goods traffic, and was due to a falling off under these heads in the second half of the year. The partial failure of the monsoon affected the goods traffic in oil seeds and cotton, while the third class passenger traffic was lower owing to the marriage season having been unpropitious. The working expenses of the company increased by 0.9 per cent., and the percentage of working expenses to gross earnings was 38.90 as against 38.25. In this connexion Sir Henry Burt expressed the view that there must be a tendency in the next few years for working costs to rise on account of the adoption in India of the Washington and Geneva Conventions. No doubt, however, this will be offset by increased traffic receipts.

NEW MOTOR ROAD IN ARABIA.

Creditable information has been received which points to the construction in the near future of a good motor road from Ash Shehr to Terim, in southern Arabia, connecting with the present road from Makalla on the Gulf of Aden north-eastward to the minor port of Ash Shehr (says the American Vice-Consul at Aden in a recent report). This work, it is understood, is to be undertaken by the Sultan of Makalla with official British backing. Makalla is one of the leading Arabian sea ports, and taps the vast region called the Hadhramaut, at the base of the Arabian Peninsula.

Motor traffic is already conducted between the two ports, to a limited extent, over a beach road that follows the coast for about 35 or 40 miles in a north-easterly direction. From Ash Shehr a principal caravan route extends north-north-westward for about 850 miles finally reaching Riyadh. The last important city which this caravan route passes before it leads over the great uninhabited desert is Terim, on the upper border of the inhabited region of the Hadhramaut and about 150 miles from Ash Shehr. The road from Ash Shehr to Terim, therefore, will not only cut right across the comparatively fertile Hadhramaut, but will constitute an important link in the long caravan route to Riyadh.

Makalla depends in large measure on the Hadhramaut for its foodstuffs and other provisions. In addition, large quantities of various commodities pass over this route to Makalla for shipment to Aden and other ports of the vicinity. For example, in the neighbourhood of 1,000,000 lb. of tobacco valued at more than £450,000 are shipped annually out of Makalla destined for Aden alone. All of these considerations seem to indicate that the traffic over this route will create a heavy demand for motor transportation on completion of the new road.

Although at present there are no motor roads in Hadhramaut, other than the 40 mile stretch along the coast from Makalla to Ash Shehr, there are approximately 95 automobiles in Makalla. The opening up of 150 miles of new road should therefore create a large demand for more motor cars, busses, and lorries.

The Trade Indemnity Company recommends a dividend at the rate of 6per cent., subject to tax, for the year 1928.

It is announced that the Board of Directors of the Banque Franco-Serbe has decided to summon an extra-ordinary general meeting to consider a plan of reorganisation of the company. This will involve a reduction of the capital and a simultaneous increase thereof to its present figure of 20,000,000 frs. It is understood that the Ottoman Bank will take the lead in this reorganisation. The Banque de Paris et des Pays-Bas and the Société Financière d'Orient will give their support.

The Economic and Industrial Development of Egypt—II.

(Continued from page 88).

GOVERNMENT TRADING.

The Egyptian Government has in one or two instances entered into trading on its own account. Some years ago it erected and equipped at Suez a Petrol Refinery, employing about 100 hands. The resultant products are supplied to Government Departments and are not sold in the open market. The Government has also purchased large quantities of chemical manures for sales to cultivators at cost price. This has been done in order to insure that cultivators should obtain reliable materials. There is also a Government flour mill a few miles outside Cairo which caters for the requirements of various departments.

The Egyptian Government purchases by annual adjudication stores to the value of some £2,000,000. Notices calling for tenders are inserted in the local papers and in foreign journals. Among the general conditions which tenderers must observe are the following:—

Tenders must be submitted on the form supplied.

The tender must be accompanied by a provisional deposit of two per cent. of the total value of the offer in money. Post Office Orders or cheques on local banks will be accepted, but not cheques on banks abroad. Cheques must bear the acceptance of the bank on which they are drawn. The provisional deposit may be replaced by a letter of guarantee from an approved bank in Egypt to the effect that the bank will hold at the disposal of the Government a sum equivalent to ten per cent. of the total value of the contract in the event of the tenderer obtaining the contract. Letters of guarantee from banks abroad may also be accepted, but in that case the Administration may require the endorsement of such letters of guarantee by an approved bank in Egypt.

Within ten days after the acceptance of a tender a sum equal to ten per cent. of the total value of the contract will be deposited by the successful tenderer as security for the due execution thereof.

There are other conditions, but it is essential that these mentioned above should be carried out.

THE STATE AS LANDOWNER.

Of the total area of Egypt about eight million acres may be regarded as cultivable land, and of this about one and a half million acres belong to the State. Well over four-fifths of this area have never been cultivated and await future development, when improved irrigation facilities can be provided. The remainder is either farmed for the purpose of propagating cotton seed or given out on lease. These extensive estates are managed by the State Domains Administration, acting as agents of the Minister of Finance, in whom the ownership of all State property is vested. The areas on the charge of the Administration on March 31, 1926, amounted to 1,476,937 acres of agricultural land, and 43,757,815 square metres of building land. Of agricultural land no less than 1,288,727 acres are returned as uncultivated and unproductive, only 188,210 acres are actually under cultivation—considerably less than one-fifth of the total area.

The estimated value of these properties to-day is over £E19,000,000; but it must be remembered that at least a million acres may in course of time be brought under cultivation and turned into good agricultural land, capable of growing cotton and worth upward of £E60 per acre, and that the book value at which they are estimated to-day is merely nominal. These estates, therefore, form a national asset of the first value.

The management of the estates of such vast extent and such great potential value obviously calls for a definite and far-seeing policy, based on carefully planned outlines. But the establishment of such a policy is not one in which the State Domains Administration alone is interested. The great bulk of the estates involved are, as has been pointed out, uncultivated. In England that would be a

matter of minor importance, but in Egypt, where cultivation is impossible without Nile water provided by the Irrigation Department, every extension of the cultivated area throws additional responsibility on that Department. It is well known that the present supply of irrigation water is barely adequate for the agricultural needs of the country, and so justly apprehensive is the Irrigation Department of the complications which might ensue on the unfettered disposal of uncultivated State properties, that until 1919 the State Domains Administration was bound by convention with the Irrigation Department to refrain from offering for sale uncultivated plots of more than thirty acres in extent. This restriction so hampered the Domains Administration in the disposal of its isolated properties scattered throughout the country that the Irrigation Department was finally induced, though with reluctance, to permit the sale of uncultivated plots up to a limit of one hundred acres per plot.

The Irrigation Department is not alone in being interested in the disposal of State properties. The Antiquities Department and the Department of Mines have contingent and undefined interests in them. Even the Fisheries Department must be consulted in some cases. The question of maintenance of the State Domains Farms, which reverted to the Government in 1913, and their possible extension or abolition, is one affecting the Ministry of Agriculture, which relies on these farms for the propagation on a commercial scale of selected cotton seed.

Future Development.

Reclamation of waste land has continued as circumstances permitted. Before economic conditions induced by the War had rendered the cost of land reclamation prohibitive some 10,500 acres situated in Belqas district in the north of the Delta were reclaimed. The levelling, earthwork, and installation of irrigation and drainage pumps were carried out, but the completion of the work had unfortunately to be postponed in part of the area owing to forced economy due to War conditions.

In 1920 this work was resumed and the remainder of the scheme abandoned in 1915 was taken in hand. In addition a further area over 3,000 acres was reclaimed between 1920 and 1923. The rise in the cost of labour which took place in 1920 rendered the achievement of this work more costly than had been anticipated. Yet even under these adverse conditions there is no doubt that the expenditure will prove highly remunerative. The total area reclaimed by the Domains Administration during these years amounts to about 15,000 acres. The land responded readily to treatment, and has since yielded excellent crops, though, when left continuously in the hands of tenants after reclamation, it has shown a tendency to fall back and become salty again. This difficulty is being met by special arrangements with the tenants, under which the land is periodically flooded during the summer and autumn, so as to wash it and keep down the salt content of the soil.

Curiously enough, though the fellah will emigrate from the country to the big towns, he is chary about moving from his village to another, and this reluctance has proved the main difficulty in getting reclaimed lands kept under such cultivation as would maintain their improvement. If the habit of migration to empty country districts can be induced, much will have been done to hold what has been gained.

L ET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paving proposition

Creation of Small Holdings.

The present Government has happily included in its programme the creation of small holdings. The idea is to provide fellahin with a small area of Government land on very easy terms, with a view to encouraging private enterprise and to giving fresh impetus to the industrious fellah. This is an agrarian reform of the widest importance and is also essential to the welfare of the country. The Government is creating these small holdings in the district of Fayum by selling on very easy terms some 2,000 feddans of State property. If this experiment proves a success, as is anticipated, the Government will extend the scheme to other districts, and will then introduce the necessary legislation.

The main conditions which will be followed in the distribution of State property in the Fayum are the following:—

(1) A man who possesses less than 10 feddans is entitled to buy up to 5 feddans.

(2) A man who possesses more than 10 feddans is, therefore, excluded from the distribution.

(3) A man who possesses less than 5 feddans or nothing is entitled to buy two and a half feddans.

(4) The buyer should be of Egyptian nationality, should be between 25 and 40 years of age, and should be married.

Priority is to be given to those who have not less than two male children.

(5) One-tenth of the price to be paid in cash. The balance to be paid in thirty years.

Direct Culture by Government.

The main object for retaining certain areas of Government lands for direct culture is the production of purified strains of the different farm crops, the most important of which is cotton. In most agricultural countries the selection of stock seed and the preservation of its purity are in the hands of individual growers or commercial firms. In Egypt, however, the number of farmers who endeavour to produce selected and purified seed, even for their own use, is small, and there are no individuals or firms who make a regular commercial business of such work. In the absence of such facilities for obtaining pure seed the Domains Farms have been called upon to take up the rôle. They have certainly already proved themselves of incalculable value to the country.

Until private individuals or syndicates have gone in for seed farming on business lines, and have shown that they are able to assure a permanent supply of sufficient seed adequate both in quality and quantity to the needs of the country, the maintenance of the direct culture will remain a matter of prime importance to Egypt.

COTTON SELECTION IN THE STATE DOMAINS.

The following is a short account of the method employed in the State Domains Farms for ensuring the quality and purity of cotton seed:—

As a nucleus for distribution the Domains Commissioners had purchased in 1912 a stock of the best and purest Sakellaridis seed available. The crop sown from this seed showed considerable irregularity in the growth of the plants and also in the type of cotton yielded. If this had been allowed to go unchecked, the increase of plants not true to type and their cross-fertilisation with true-type plants would soon have defeated the object in view, the production of pure seed. To counteract this danger a practical system of bulk selection was initiated, and since 1913 this system has formed part of the farm routine of the Domains. Its steady, patient application has been attended with remarkable success, and it is not too much to say that, but for its adoption, anything approaching pure Sakellaridis seed would long ago have ceased to exist.

1. A quantity of from 150 to 170 ardebs of carefully selected seed is sown on 400 to 450 feddans in specially chosen fields which are known for the regularity of their soil and their fertility.

2. During growth these areas are kept under careful and continuous observation. From the time plants are 50 centimetres in height, throughout the flowering period, until the bolls are formed, any plants which show signs of being untrue to type from the vegetative point of view are pulled up. This eliminates tall plants whose leaves are wrong in colour and shape. This operation is known as "rogueing."

3. Before the beginning of ordinary picking, as soon as one and a half kantars of cotton are ripe in the fields, trained children are sent through them to pick selected cotton. Their instructions are to pick only from typical plants which are of medium height and which have the largest number of fully opened sound bolls. (This selection tends towards early maturity—a valuable quality in these days when the late-maturing cotton is exposed to the ravages of the pink boll-worm). These trained pickers are also instructed to avoid picking cotton from plants which have not the true Sakel colour, thus eliminating plants which may have been accidentally introduced or may have resulted from cross-fertilisation.

4. Immediately after picking, the cotton is carried to the side of the field, where it is spread out on clean sack-ing and is picked over by hand. By this process any locks whose colour is not true, such as dead-white or brown locks, are removed. Further, locks in which seeds appear exposed are removed, as such seeds are known to produce inferior cotton.

5. The cotton thus selected and cleaned is ginned separately, and the most minute precautions are taken to prevent admixture of other seeds. The same precautions are taken with the apparatus for destroying the pink boll-worm, through which all seeds have by law to be passed. After the ginning the seed is placed in new sacks.

6. This seed is again subjected to a further selective process, which consists in picking it over by hand to remove naked seeds or seeds bearing only a small quantity of "fuzz," which, as investigation has proved, produce plants giving an inferior lint. Children are readily trained to this work, which, though tedious and somewhat expensive, amply repays the cultivator.

7. The seed which has survived this selection forms the nucleus stock for next year's propagation. On the Domains this seed is known for convenience as "X" seed. The following year this "X" seed is sown as above described on 400 to 500 feddans of chosen land, and from it is again selected the nucleus seed for the following year, the same process being repeated each year.

8. The remaining crop from the chosen fields where the "X" seed is sown is called for convenience "S" seed, and is used for sowing the Domains main crop.

9. Seeds resulting from fields sown with "S" seed, that is the seed taken from the second generation, is used for distribution amongst cultivators, being put at the disposal of the Ministry of Agriculture for the purpose of propagation.

The efficacy of the above system of bulk selection depends on the care with which each detail of the various operations is carried out, and on its being employed regularly every year without fail. At present the three main varieties grown on Domains Farms—Sakellaridis, No. 130, and Nahda—are being regularly subjected to the process of bulk selection.

In addition to bulk selection for pure seed, the Domains take elaborate measures to clean their cotton before ginning, with a view to obtaining better prices for the lint. All leaf and grass, all dead or damaged cotton and stained locks due to the pink boll-worm are removed by the pickers in the field. The cotton is then passed over sieves consisting of a wooden grid about four metres in length and one metre in width. The cotton is put on one end of the table. On either side of the table stand five children, who toss the cotton about, passing it from one to the other down the length of the table until it reaches the far end, where it is collected and put into sacks. Any dead or defective locks fall between the slats during the progress of the cotton along the table as above described,

and any bad cotton or foreign material which does not fall through the slats can be detected and picked out.

With a view to further improving the grade of the Domains cotton, and obtaining still better prices for the lint produced, an improved method of picking is now under trial, and if it continues to give better results than the existing method, its generalisation in the State Domains Farms will be considered.

CEREALS.

Wheat.

The Domains grow yearly an area of about 4,000 feddans of the best and most purified strains of wheat in the country; and give a year output of about 5,000 ardebs to the Ministry of Agriculture for distribution amongst cultivators.

During the growing period of the crop, any off-type plants are picked out and the best healthy fields are reserved for seed production. The seed after thrashing is sieved by Bobby's machine, and the indented cylinders take out any weak seeds or wild peas; and the resulting seed is greatly appreciated by the cultivators on account of its cleanliness, regularity, and production. Experiments are conducted on the State Domains lands each year, testing the different varieties and strains supplied by the Ministry of Agriculture as a result of their selection, and these strains, which give better results than the existing ones, are propagated on a bigger scale.

Maize.

The best strain of the maize crop, from the point of view of yield, is also propagated on the State Domains lands, and the resulting cobs are hand selected and the seed is also put at the disposal of the Ministry of Agriculture for distribution amongst cultivators for seed purposes.

Rice.

The best strains of rice selected by the Ministry of Agriculture are also propagated in the State Domains Administration and the resulting seed, after sieving, is put at the disposal of the Ministry of Agriculture for distribution.

M. Phillippe Berthelot, Permanent Under-Secretary at the French Foreign Office, has arranged to visit Athens.

A branch of the Banca Commerciale Italiana has been opened at Smyrna.

A Czechoslovak-Roumanian Chamber of Commerce is to be established.

The Government of India proposes to send annually five Indian Army officers holding the Viceroy's commission for training to Sandhurst, with a view to their qualifying for the granting of a permanent King's Commission in the Indian Cavalry or Indian Infantry. The expense of training is to be borne by the Government of India.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Dressings, Cotton and Mackintosh Cloth.—Tenders are invited for the supply of dressings, cotton and mackintosh cloth required by the Department of Public Health for the year 1929-30. February 10. (D.O.T.)

Drugs, Etc.—The Egyptian Department of Public Health invites tenders for the supply of drugs, etc. (i.e., proprietary articles, drugs and chemicals, galeicals and packed articles) required during the year commencing May 1, 1929. February 17. (D.O.T.)

Electric Lighting System.—The Ministry of the Interior, Section des Municipalités et Commissions Locales, Cairo, invites tenders for the supply and installation of an electric lighting system for the town of Fashn. March 27. (D.O.T.)

Cooling Tower, Etc.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of a cooling tower, elevated tank, supporting structure, piping connexions and centrifugal pump. February 16. (D.O.T.)

Clothing.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of clothing such as blankets, boots, tarbushes, jerseys, frocks, greatcoats, woollen cotton and linen cloth. March 21.

Swing Bridge.—The Ministry of Public Works invites tenders for the construction of a swing bridge at Abu Hommos on the Mahmoudieh Canal. February 1. (D.O.T.)

Clothing and Equipment.—The Egyptian Customs Administration invites tenders for the supply of clothing and general stores required for the year 1929-30. The schedule covers a miscellaneous range of goods, mostly in small quantities, including, among other items, khaki drill and blue serge uniforms, blue melton greatcoats, boots, etc. March 1. (D.O.T.)

Disinfectants.—The Egyptian Department of Public Health invites tenders for the supply of disinfectants for medical and general purposes required during the year ending April 30, 1929. February 10. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, January 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, February 5).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 6).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, January 26); s.s. Dumana for Bombay and Karachi (London, February 2).

Cunard Line.—S.s. Bantria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. (This steamer will also call at Volo if sufficient inducement.) (Liverpool February 16, Glasgow and Swansea February 15; s.s. Bosnia for Casablanca, Genoa, Leghorn; Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, February 16, Swansea February 19).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, January 26) (the first sailing of the season for the Danube ports of Galatz and Braila); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, February 1); s.s. Burdwan for Calcutta (London, February 2).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, February 9); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 2).

Ellerman and Papayanni Lines.—S.s. Polo for Algiers*, Patras, Smyrna, and Alexandria (Liverpool, January 26); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona, Venice, Trieste, and Fiume (Liverpool February 2, Swansea February 7); s.s. Destro for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 7); s.s. Mardinian for Algiers*, Patras, Syra*, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 9, Swansea February 9); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 11); A steamer for Calamata (Liverpool, March 2). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 22.

There has been a very much more subdued tone in the Stock Markets during the past week partly due to unfavourable conditions in New York in the early part of the week, but the investment sections on the whole maintained their strength. In the majority of other sections, however, there was some evidence of profit-taking. Towards the close of the week, however, the tone became a little better. Home rails, after their recent strength, were not supported, and a batch of disappointing traffic returns sent down the quotations of all the junior stocks. The rubber share market, which was strong at the beginning of the week on an advance in the price of the commodity, has since shown some fluctuations but on balance, prices are higher all round. We make further reference to the position of rubber shares in a later paragraph. The feature of the miscellaneous market was the heavy slump in Ner-Sag shares, which fell heavily on the announcement that the final dividend of 50 per cent. would not be paid. The quotations of the shares, which not long ago was £8, fell on Wednesday to 25s. The Swedish Match group came into prominence towards the end of the week and there was a further rise in Mond Nickels.

Rubber Prospects.

Some months ago reasons were given for the view that the general opinion of the rubber outlook was too pessimistic. For a long time the market continued under the depressing effects of the abandonment of the Stevenson Restriction Scheme, but dullness suddenly gave way to great activity early in the New Year, and prices of the commodity which had been at about 8½d. for months suddenly rose to 11½d., and have since been irregular at rather over 10d. This sudden activity is largely due to temporary and market influences, but the future prospects for the industry, if still uncertain, are not altogether black. American consumption is likely to increase, and the acre-

age of rubber coming into bearing in the next few years is relatively small, while the reduction in prices of crude rubber will discourage the use of reclaimed. Authorities differ as to whether consumption will overtake production this year, but it is certain that the industry cannot contemplate prices regaining the level of 1s. 6d. to 1s. 9d. per pound assumed in the restriction scheme. With prices at about a shilling, small differences in production costs will have a greater effect on producers' profits than in the past. The rubber share market is likely to be one in which careful judgment will be required, and costs will be a point needing the investors' most careful attention.

Liebig's Extract of Meat.

Last year the profits of Liebig's Extract of Meat, Ltd., whose general meeting has just been held, again showed a considerable increase, and reached the highest figure attained in the company's 64 years of business. Net profits in 1927-28 amounted to £344,863 as compared with £325,086 in the preceding year, an increase of 6 per cent. The Ordinary dividend is 16 per cent., free of tax, as it has been for the last five years, although profits have grown from £295,356 in that period. The latest profits represent an earning of 19.6 per cent. on the Ordinary capital, after allowing for the Preference dividend and payment of income tax. As a result of a policy of conservative finance reserves now stand at over 80 per cent. of the capital—which seems to indicate bonus possibilities sooner or later—and the excess of floating assets over liabilities amounted at the date of the balance sheet to nearly £2,000,000. The company's technical experts are still developing new preparations and the exploitation of these processes should add to the company's business. The 5 per cent. Cumulative Preference shares whose dividends are the first charge on earnings, give a yield of £5 5s. per cent. On the Ordinary shares, which contain good possibilities of appreciation, a return of £5 19s. per cent. can be obtained.

Industrial Profits.

The "Economist" quarterly analysis of industrial profits for the last quarter of 1928 shows a continuance of the upward tendency that had been visible in the earlier quarters of last year. The aggregate profits of 412 companies whose accounts have been examined amounted, after payment of debenture interest, to £36,120,801, an increase of £1,084,360, or 3.1 per cent. upon the net profits they earned in their previous financial year. In each quarter of 1928 an increase was recorded, the aggregate increase for the year being 7.2 per cent. In 1927 there was, in the aggregate, a decrease of 3.0 per cent., and in 1926, an increase of 6.3 per cent., so that the decline which resulted from the industrial disputes of 1926 seems to have been made good. Considering the figures published in the last quarter, the iron, coal, and steel group recorded a substantial improvement, a net loss of £278,394 being converted into a profit of £619,646. Brewery companies reported increases aggregating 8.8 per cent., and land and mortgage (19.3 per cent. higher), and trust companies (9.8 per cent. higher) also did well. An increase of 34.7 per cent. in the shops and stores group was mainly due to the prosperity of Harrods (B.A.) and its subsidiary, South American Stores. The decrease of 6.5 per cent. in the catering group, on the other hand, was largely caused by the poor results of the A.B.C. The biggest decline (61.3 per cent.) was experienced by the rubber companies but the tea, oil, and nitrate groups were all less prosperous than in 1927. A fall of 22.5 per cent. in the motor and motor-cycle group is no doubt a sign of competition in that industry.

Roumania's oil output in the first nine months of 1928 amounted to 3,096,267 tons, as against 2,704,268 tons in the corresponding period of 1927.

A Cairo message states that there is no truth in the Warsaw newspaper reports that the Egyptian State Railways have awarded Upper Silesian coal mines a contract for the supply of 130,000 tons of coal.

Motors and Motoring.

By G. B. B.

Standardisation.

Suggestions have been made from time to time that standardisation of motor vehicle parts should be carried further, and several motor lorry manufacturers have urged that the question of standardising the inclination of steering knuckle pivot pins should be taken in hand. The subject is receiving a good deal of preliminary discussion, and it would seem that opinions differ as to the advisability of this. It is pointed out that the angle of the pivot pin controls the camber and the castor of the front wheels and affects the toe-in, which in turn determines to a considerable extent the wear on the tread of the front wheel types. Considerable experimental work has been done by type and vehicle makers to ascertain the best degrees of castor, camber and toe-in of the wheels, and naturally the first move towards standardising these would be to collect all possible data relating to these parts and their behaviour on the road under varying conditions, after which it would be necessary to make a detailed analysis of such information as had been obtained.

Refuse Collectors.

Mr. H. Cook, who is the cleansing superintendent of the borough of Rochdale, recently gave an address, in the course of which he reviewed the systems adopted in various localities for the collection of household and shop refuse. He pointed out that the modern tendency is to collect heavier and still heavier loads and that the day of small vehicles was past. It was found, he said, that as a general thing the cost per ton mile decreased as the total bulk and weight of the loads dealt with increased. Whilst this was true to a certain extent, he felt that the system was apt to lead to abuses, and he gave a striking illustration of the way in which unintelligent persons, having learned a half truth, could act upon it in an unintelligent manner. He had found instances, he said, where men who had heard this actually stripped old stone from walls or soaked their loads with water in order to make them heavier, under the impression that by acting in such a way they were cutting down costs. It seems incredible that this should be so, but so great was this abuse that it had to be explained that weight was not the only measure by which the efficiency of the work of refuse collection should be judged, but that there were many other factors that have to be taken into account.

Efficiency in this connexion consists, not so much in removing so many thousand tons of refuse per month or year, but in removing the refuse from so many houses during the same period. The standard by which the work should be judged is not the weight of refuse but the number of houses or factories dealt with. He gave a rather startling light on the cost of refuse disposal by motor vehicle when he said that a saving of only one minute per week per house in his area would mean a total saving of £4,000 per year. The result of exhaustive tests carried out in his district had convinced both him and the Cleansing Committee that motor vehicles are cheaper in every way than horse-drawn vehicles for refuse collection.

Motor Canteens.

It is interesting to note that, according to the *Commercial Motor*, an experiment is to be made in and around Delhi with motor canteens for supplying troops when on the move. During operations over wide areas, when units are separated from a supply base, one of these motor canteens will carry supplies for 1,000 men for three days. A boiler and a supply of water will be carried for making tea, and when a halt is made a canvas awning pulls out from the side of the vehicle so as to provide a shelter for the men who are obtaining refreshments.

A Three-wheeled Tractor.

A useful tractor for contractors and others is of the three-wheeled type, with the single centrally-pivoted steering wheel at the forward end and the drivers at the rear. Over the drivers is a hopper for conveying concrete or ballast, so that when not used as a tractor it can be utilised as a carrier, or, if needs be, can fill both purposes simultaneously. The hopper has two curved feet, each of which has a series of studs engaging with holes or depressions in the upper web of the frame of the machine. These studs and holes form a toothed rolling path for the hopper, so as to permit of hand tipping. The tractor, it is stated, is sufficiently powerful to haul a ten-ton load on normal roads. When used as a tractor, the hopper can be filled with ballast to assist wheel grip, in which case heavier loads can be hauled.

From a description to hand it appears that the tractor is equipped with a dashboard and a cab mounted on four pillars, and for use in bad weather or in exposed situations a matchboard or tarpaulin shelter can be built or arranged round these pillars. When built with a tipping hopper, neither dashboard nor cab is provided, but the hopper itself forms a partial protection for the driver. The power unit is a 16 b.h.p. four-cylinder monobloc engine, the bore being $3\frac{1}{2}$ inches and the stroke $4\frac{1}{2}$ inches, and the engine speed is fixed by a governor at a maximum of 1,600 r.p.m. The magneto has an aerotype impulse starter to facilitate starting, and there is a three-speed gear-box with reverse. A universal joint is fitted between the gear-box and the back axle, and there are two independent brakes acting on drums on the transmission shaft, one being hand and the other foot operated. The wheels are on the disc form, of cast steel, with 28 inch by 7 inch solid tyres for the drivers and a 20 inch by 5 inch solid-tyred wheel in front. The springing on the front is by a coiled spring working in conjunction with a compressed air cylinder, and the rear springing is by quarter elliptic springs on either side. The steering is through a worm and cam gearing, and the machine is so simply and robustly constructed that it can be worked by a comparatively unskilled man.

The Egyptian State Railways have given a contract to Dorman, Long and Co., Middlesbrough, for the replacement of the superstructures of four fixed bridges on the Sherbinkalline line and the adaptation of the existing abutments to the new superstructures.

THE BULLION MARKET IN 1928.

The following extracts are taken from the annual report of Messrs. Samuel Montagu and Co.

The year 1928, although not without its disappointments, has, nevertheless, played its part in the establishment of a more hopeful outlook for the future. The position as regards industry should be brighter, if only for the promise of continued co-operation between capital and labour. Unhappily, the coal industry presents a problem of great magnitude, the solving of which will call for the utmost patience and fortitude. It can only be hoped that the endeavour to bring about the absorption into other spheres of industry, of at least some for whom the coalfields no longer offer employment, may do a little to alleviate distress, though any period of transition must of necessity be long and arduous.

Competition becomes keener as the countries stricken in the Great War strive, in their progress towards reconstruction, to find wider outlets for the products of their industry. It is, therefore, essential above all things that the directors of our great industries see to it that our factories are equipped and maintained with the most modern plant, so that we may compete on level terms in our efforts to regain for our manufacturers pre-eminence in the markets of the world.

From the point of view of international politics the year has been eventful mainly for the signing in Paris last August of the Kellogg Peace Pact to outlaw war. Although doubt may be expressed that any treaty could be framed that would render future wars impossible, the Pact, nevertheless, marks a great stride towards the establishment of the peace so vital to the commerce and industry of the world.

The all important question of reparations, now engaging the attention of the ex-belligerent nations, is of great concern, considering its bearing upon the economic situation of Europe. The problem obviously calls for the utmost skill and firmness in handling, and it is much to be desired that the forthcoming inquiry may find a path to an agreement, a result which would materially assist the recovery of the countries concerned. A definite solution of this question would be a relief to the whole of Europe.

Gold.

The year 1928 has seen much activity in the movement of gold. As far as the London Market is concerned, however, this activity has been more or less confined to the later part of the year. For the first seven months of the year the outflow of gold from the United States of America was exceptionally heavy, the total exports during that period approximating 500,000,000 dollars. Of this amount the greater portion was taken by France, viz., about 308,000,000 dollars. Of the remainder some 69,000,000 dollars was for Argentina, 27,000,000 dollars for Germany, 25,000,000 dollars for Brazil, 24,000,000 dollars for Italy and 32,000,000 for Great Britain. In addition to gold from Africa and the U.S.A. supplies of gold available in the London Market have been augmented by about £4,000,000 from the U.S.S.R.

Purchasers have continued to be made throughout the year on behalf of buyers whose identity has not been disclosed. Gold thus acquired has been doubtless on behalf of various Continental Central Institutions for the strengthening of their reserves. Presumably the gold indicated by the official statistics as exported, for instance to Belgium, Sweden, Switzerland and Poland, is not unconnected with these purchases.

Gold for Germany.

The outstanding feature of the year has been the steady outflow of gold from this country to Germany. The movements began in July and continued, with short intervals, to the middle of December. During this period gold to the value of about £20,000,000 was acquired in London by Germany. The price paid by the Reichsbank

was R.M.2,784 per kilo fine. The exchange with the U.S.A. during September and October was favourable to the export of gold, and shipments were made from London to New York, to some extent coincident with the movements to Germany. This outward movement of gold to the United States practically balanced the inward movement from that quarter which took place earlier in the year.

Bank of England Gold Reserve.

The Bank of England gold reserve against notes, which stood at £151,468,435 on December 28, 1927, increased steadily, culminating on September 12 in the record figure of £173,907,475, but was subsequently reduced, following the large withdrawals of gold for export to Germany and the United States. The amount of gold held on December 26 last was £153,783,646. The movements of gold as published by the Bank during the period covered by the foregoing show a net efflux of £863,766, which has, however, been more than counterbalanced by receipts through the Banking Department, the increase in the gold holding as shown by the figures quoted above being £2,315,211 during the same period. Considering the very large total movements during the year, it is very remarkable that the figures of the Bank of England's holding of gold at the beginning and the end of the year should be so close.

Silver.

The silver market during the year 1928 has been noteworthy for the way in which prices have been maintained. Supplies have been augmented to a large degree by the further demonetization of silver coin by the Indian Government, France and Belgium. In this maintenance of prices China has played the chief part and the political situation in that country was the dominant factor throughout the greater part of the year. Fluctuations in the prices fixed in the London Market have generally been narrow. The month showing the widest fluctuation was May, during which there was a range of 2½d., and upon this we shall comment later.

The year opened quietly, the prices on January 2—the first working day—were fixed at 26 7-16d. and 26¾d. for cash and two months' delivery respectively, these quotations being 1-16d. below those of the last day of 1927. There followed a quiet period with sagging prices, and it was during this first month that the lowest prices of the year were reached, viz., 26 1-16d. for cash and 25 15-16d. for two months' delivery—quoted on January 19.

In February it was announced that the Indian Government had decided not to proceed with the Bill for the establishment of an Indian Reserve Bank. The announcement caused little surprise, the Bill having been the subject of much controversy with no prospect of any agreement being reached as to the constitution of the proposed institution. Little of interest marked the passing of the next two months, and it was not until the month of May that the market showed signs of greater activity. The situation in China had assumed a more disquieting appearance and the intervention of Japan caused a great deal of activity in the silver market. Speculative anticipation that silver might be needed for the payment of Japanese troops, should the situation develop to such an extent as to lead to their employment in China, was the immediate factor responsible for the sharp upward movement of prices. The quotations rose steadily, and on May 21 the largest daily movement for more than a year was recorded—a rise of ¾d. in both quotations. The upward trend culminated on May 24 when the prices were fixed at 28¾d. and 28¾d. for the respective deliveries. These proved to be the highest quotations of the year.

Shipments of Indian Government silver have been received in London from time to time, and official figures show that the imports of silver into the United Kingdom from India amounted during the year to about 22,000,000 ounces. In addition about 4,500,000 ounces are known to

have been purchased in Bombay and shipped to China. In the Reports on the Administration of Mints at Calcutta and Bombay for the year 1927-28 reference is made to the establishment at the Bombay Mint of an electrolytic silver refinery, the estimates for which have received the sanction of the Government of India. Although it may be some time before the refinery is in operation, it is apparent that the great silver-using countries of the East may later have a source of supply from which silver will be obtainable in a form suited to their needs.

Happily the crisis in China was passed without the serious outcome which at one time looked imminent, and prices at once began to reflect the more tranquil conditions in that country. Towards the end of June prices had sunk to slightly above 27d., the average for the next two months remaining at about the same level.

Proposed French Silver Coinage.

The publication of the text of the French Stabilisation Bill revealed that provision had been made for a silver currency to take the place of the 5, 10, and 20 franc notes of the Bank of France, which were to be withdrawn from circulation before December 31, 1932, then ceasing to be legal tender. The proposed silver coins to be struck by the Currency Office are to consist of pieces of the nominal value of 10 and 20 francs, of a fineness of 680/1,000, and the issue is not to exceed a total value of 3,000,000,000 francs. No individual will be compelled to accept more than 250 francs in silver coins. The announcement of these proposals was productive of a bullish feeling in the Indian bazaars, where it was thought that the French Government might enter the silver market as a purchaser for coinage. It was apparent, however, that such a happening was extremely improbable for the reason that the French Government had actually realised a large amount of silver derived from demonetised coin—a step which would not have been taken had there been any likelihood of its being required for the new coinage. The returns of the Bank of France indicated that the silver then held was sufficient for their needs.

It was stated in July that the French Government were willing to acquire old five francs pieces at 10 francs (new) per piece. This price being equivalent only to about 24½d. per standard ounce, it was found more profitable to sell to refiners as, on the basis of London prices, even after allowing for cost of refining, etc., there still remained a substantial margin. Refineries on the Continent were unable to cope with all of the coin acquired, and a considerable proportion was treated in London. Thus refineries here enjoyed a period of more activity than for some time past. Meanwhile stocks of ready silver in London had grown. Silver had been turned out by the refineries ready to fulfil the contracts against which it had been sold. These contracts were, in the main, of a speculative nature, and at maturity were either covered by sale, or in the majority of cases extended for a further period. The fact that actual delivery of the silver was not taken naturally caused an accumulation of stocks, and the price for cash was quoted at a discount—as much as 3-16d. on August 27 and for several days following. Cash silver remained at a discount throughout the rest of the year, except for two days, November 2 and 3, when the prices were quoted level. For the cash quotation to remain at a discount for so prolonged a period is of rare occurrence, and the present instance probably constitutes a record.

The only outlet for silver being the Far East, and the demand from that quarter easing with the prospect of more settled conditions in China, the large quantity of spot supplies acted as a drag upon the market, and prices dipped below 27d. During September the downward tendency continued, and prices returned to much the same level as obtained at the opening of the year. There followed some revival in Eastern demand, particularly for India, and during October prices hardened, the quotations on the 9th of that month reaching 27d. for cash with two months' delivery at 27 1-16d. Hereafter a steady tone

prevailed, prices fluctuating only within narrow limits until the beginning of December. About this time it was made known that the Polish Government had completed arrangements for the purchase of about 6,500,000 ounces of silver, most of which was secured from Belgium in the form of demonetised coin.

Although Continental selling had become less free, the market was well supplied by sales made by bull operators in cover of near commitments. Prices sagged, and 26 3-16d. for cash and 26 5-16d. for two months' delivery were touched during this month. The lower level attracted support, particularly from the Indian bazaars, and some recovery in prices ensued, but the market had, on the whole, experienced a further quiet spell and closed on December 31 with cash delivery quoted at 26¾d., and two months' delivery at 26 7-16d. It is a strange coincidence that the year ends with quotations identical to those with which it opened, except that the cash and forward prices are reversed, the quotations on January 2, 1928, having been 26 7-16d. and 26¾d. for cash and two months' delivery, respectively.

Maria Theresia Dollars.

As was perhaps to be expected, in view of the large number of these coins minted during the three preceding years, there was a marked falling off in the number of Maria Theresia dollars produced last year. The demand, however, continues, and the amount of silver required in 1928 was still appreciable. During the past five years the output of the Vienna Mint has been as follows:—

	Dollars minted.	Quantity of fine silver used for coinage—Oz.
1924	4,065,000	3,049,000
1925	14,968,000	11,226,000
1926	9,382,000	7,038,000
1927	15,561,000	11,701,000
1928	5,660,000	4,256,000

World Production of Silver.

The United States Mint Report for 1928 gives the world production of silver for 1927 as 251,096,555 fine ounces, and, as far as can be ascertained at present, the output for 1928 is likely to approximate that figure. Supplies, however, have been augmented in a far larger degree than last year by demonetisation, though to what extent can only be estimated. In the case of France, the amount thus made available has been estimated as from 25,000,000 to 30,000,000 ounces, and in that of Belgium about 12,000,000 ounces, whilst sales of silver derived from British coin approximated 6,000,000 ounces. In addition, there must be taken into account the 26,500,000 ounces of Indian Government silver to which reference is made elsewhere.

To outline the possible course of silver presents a difficult problem, and any attempt to forecast would be ill-advised considering the particular factors which, as far as can be seen, are most likely to govern the situation. There still looms over the future the probability of further sales of silver by the Indian Government. On the other hand, we have seen how the market has been maintained, in the face of increased supplies, by the capacity of the Far East to consume silver, and it is the East, particularly China, that will continue to be the dominating influence in the trend of silver prices in the near future.

During 1928 131 bankruptcies were registered in Athens.

The City of Arad is raising a loan of 200,000,000 lei for railway construction and the provision of omnibuses.

A new agricultural bank with a capital of 650,000,000 drachmae is being established in Athens with the participation of the National Bank of Greece.

The Turkish Electricity Company, Ltd., is extending the central power station of Silighdar by the construction of a new boiler house with four high-pressure boilers, the installation of a turbine with a pressure of 2,700 k.w., and the re-adaption of a low-pressure turbine.

Company Meetings.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

Conditions in the Near East.

Mr. F. C. Goodenough's Address.

The third ordinary general meeting of the shareholders of Barclays Bank (Dominion, Colonial and Overseas) was held on January 17 at the Cannon Street Hotel, London, E.C.

Mr. Frederick Craufurd Goodenough (the Chairman) presided.

The Assistant General Manager (Mr. H. R. Bradfield) read the formal notice convening the meeting.

The Chairman said:—I desire to refer in the first place to changes which have taken place in the *personnel* of the bank during the past year. The Right Hon. Lord Lugard, G.C.M.G., C.B., D.S.O., has been elected to a seat on the board, and this meeting will be asked in due course to confirm his election in accordance with the articles of association. Lord Lugard has been for some years a member of the Colonial Bank local board, and his knowledge of Africa is unique and invaluable. I am also pleased to inform you that the Right Hon. Viscount Knollys, M.B.E., D.F.C., has been appointed to be a member of the Cape local board, and will shortly take up his residence at the Cape. I regret to inform you of the death during the year of Mr. Alexander McCalman Fraser, a member of the Rhodesian committee. Mr. Everard Osborne Holden, general manager's assistant of this bank, has been appointed a member of that committee. Mr. Walter Osborne Stevenson, foreign general manager of Barclays Bank Limited, has been appointed a member of the Anglo-Egyptian Bank board in London.

During the year visits have been paid to this country by Mr. James R. Leisk, C.M.G., chairman of our South African local board, Mr. Emrys Evans, C.M.G., vice-chairman, and Sir Drummond Percy Chaplin, G.B.E., K.C.M.G., M.L.A., and the board have thereby been enabled to keep in close touch with our South African business. Both Mr. H. L. M. Tritton and Lord Knollys have visited West Africa during the year.

Certain outstanding questions between the Inland Revenue authorities and the bank with regard to Dominion income-tax have at length been disposed of, with the result that the dividends which this meeting will be asked to approve will be subject to income-tax at reduced rates, the difference between such rates and the standard rate representing the refunded tax being passed on to the shareholders.

Balance-sheet.

Turning to the balance-sheet and profit and loss account for the year ended September 30, 1928, the board have much satisfaction in reporting a steady increase in the total figures, which now exceed £70,000,000. (Hear, hear.)

Current, deposit, and other accounts increased during the year by nearly £8,000,000, and reached a total of £59,675,656 on September 30 last. The bills rediscounted, amounting to £1,625,515, have now all been paid.

There has been a corresponding increase in assets, and cash in hand and at bankers and gold bullion amounted to £10,771,837, that is to say, 18 per cent. of the deposits. Bills discounted have increased to £17,415,119, representing more than 29 per cent. of the deposits, whilst investments at £9,249,647 represent 15½ per cent. Advances to customers have also increased.

The bank premises account is higher by about £175,000 than in the previous balance-sheet, and now stands at £1,956,246. This is accounted for chiefly by the completion of the purchase of the premises in Adderley Street, Cape Town, to the acquisition of which property I referred last year. A rebuilding scheme for these premises is now under consideration, and has been entrusted to Sir Herbert Baker, A.R.A., F.R.I.B.A., whose work in South Africa and in other parts of the Empire is widely known.

The reconstruction of the Gracechurch Street premises is now nearing completion, and will provide better and more economical accommodation for a large proportion of the London staff.

We have to report that the work of co-ordination of the various pension schemes of the bank has been completed, and a general pension scheme has now been established in addition to pension schemes for women and for messengers.

Profit and Loss Account.

The net profit for the year ended September 30, 1928, after making full provision for bad and doubtful debts, amounted to the sum of £404,822, which compares with £482,045 last year. An interim dividend on the "A" and "B" shares at the rate of 3½ per cent. per annum was paid in July last, and it is now proposed to pay a final dividend on the "A" and "B" shares at the rate of 3½ per cent. per making 4 per cent. for the year, against 3½ per cent. for the previous year. The reserve fund has again been increased by £150,000, bringing it up to £1,400,000, whilst the carry forward is increased from £122,478 to £130,709.

Barclays Bank, Canada.

The shareholders will probably have seen in the Press announcements to the effect that application is being made by Barclays Bank Limited for a charter for the conduct of business in Canada. It has

been felt for some time that in order to protect adequately our old-established interests in the West Indies it would be advisable to arrange for direct representation in Canada. This step has appeared to be specially necessary in view of the steadily increasing trade between Canada and the West Indies.

The capital of the new company will be 500,000 dollars, with a published reserve of a similar amount. The head office will be in Montreal, and the Right Hon. Sir Robert Borden, G.C.M.G., has accepted the chairmanship of the board of directors, which will also include the Hon. Louis Alexandre Tashchereau, LL.D., LL.L., M.P.P., Mr. Arthur Blaikie Purvis, Mr. Herman Poë Alton, our local director in New York, and Mr. Julian Stanley Crossley, who is a member of our South African London committee. There will also be a London committee in connexion with the affairs of the new company.

A brief report relating to matters of special interest in the various areas where our bank is represented will be circulated for the information of shareholders, together with a copy of the report of the proceedings at this meeting. There will also be circulated a copy of my address to the shareholders of Barclays Bank at the annual meeting which has already taken place to-day.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Herbert Hambling's Views.

Sir Herbert Hambling, Bt. (deputy-chairman), in seconding the resolution, said that he could affirm, as deputy-chairman, the fact that the directors were eminently satisfied with the position of the company. He could assure the shareholders that the association with Barclays Bank had been of the utmost assistance. Barclays Bank (Dominion, Colonial and Overseas) had been well and prudently managed; the chairman took the deepest possible interest in it, and went very closely indeed into every matter affecting the interests of the shareholders, and the executive were eminently capable, steady, and conservative men. He was convinced that the progress of the bank would be steady and sure. Reserves would be built up, and the shareholders could rest assured that so long as their affairs were in the hands of the present executive, presided over by the chairman, they need not have any anxiety as to their property. (Cheers.)

After some congratulatory remarks by Mr. E. T. Hargreaves, the resolution was carried unanimously.

The Chairman then proposed the re-election of the retiring directors, the Right Hon. Lord Lugard, G.C.M.G., C.B., D.S.O., Mr. Arthur Bevington Gillett, Mr. James Rankine Leisk, C.M.G., and Mr. John Edward Mounsey.

Sir Herbert Hambling seconded the resolution, which was carried unanimously.

Mr. R. H. Foa then proposed a hearty vote of thanks to the general manager, the assistant general managers, and the staff for the good services they had rendered to the bank during the year under review.

Mr. G. C. Cassels seconded the vote, and it was unanimously accorded.

Mr. John Caulcutt (general manager) having responded, a cordial vote of thanks, proposed by Mr. Addison Scott, to the chairman and board for their services during the year, terminated the proceedings.

Summary of Conditions.

The following is a summary of the chairman's references to the conditions in the Near Eastern countries:—

Egypt.

Trade gradually improved with the advent of the cotton season and remunerative prices for this staple product. The new cotton crop, which started at low prices but gradually improved, was on this occasion placed early on the market in order that producers might get the benefit of current prices.

The value of Egyptian cotton exports for the year—from September 1, 1927, to August 31, 1928—was £42,585,716, the official estimate of the crop being 6,100,000 kantars. It is expected that the crop now being harvested will reach 7,500,000 kantars.

Conditions have been further helped by a good maize crop, which left an exportable surplus.

Exports.—The total exports for eleven months to November 30, 1928, amounted to £50,136,320, the imports for the same period totalling £47,159,413.

The Sudan.

The general conditions of the country show a decided improvement. The cotton yield in the Gezira, though not so satisfactory as the

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

previous year, was disposed of at remunerative prices. Growers are improving their standard of living and better general trade conditions the expected.

The dura crop is expected to suffer in consequence of the absence of rain in September.

Palestine.

The outstanding event of the year has been the introduction of the Palestine currency in place of the Egyptian currency, which the country had used since the War. The change in the currency took place without any dislocation and is now completed. This work was largely carried through by this Bank as agents to the Palestine Currency Board.

Trade has revived and unemployment has diminished considerably. Weather has affected the orange groves, but as more land has been put under cultivation for orange trees, the total yield will, it is expected, not be diminished. Hot dry weather has also caused damage to olive and cereal crops, and has led to heavy importation of olive oil, wheat, and flour.

Banana cultivation has been successfully tried, and there are expectations that this industry will be developed considerably. The extension of Haifa Harbour is projected.

BENGAL AND NORTH WESTERN RAILWAY.

Small Decrease in Gross Earnings.

The ordinary general meeting of the Bengal and North Western Railway was held on January 22, at the offices of the company, Gresham House, Old Broad Street, E.C., Sir Henry P. Burt, K.C.I.E., C.B.E. (the Chairman), presiding.

The notice convening the meeting and the auditors' report having been read,

The Chairman said:—Gentlemen,—Our managing director, Lieut.-Col. W. R. Izat, is not present to-day, as he has been deputed by the board to visit India in connexion with the company's business.

I presume, in accordance with our usual procedure, that the report, which has been circulated to all the proprietors, may be taken as read.

Our gross earnings for the system for the complete year under review, which ended last September, show a small decrease of about Rs.3 lakhs. For the first half of the year, as compared with the previous corresponding half-year, there was an appreciable improvement in our gross earnings, which occurred under both coaching and goods traffic, but this was counterbalanced by a falling off under both those heads during the second half of the year.

The principal decreases were under third-class passengers and as regards goods traffic under oil seeds and cotton. This was due to the partial failure of the monsoon, and to the marriage season having been unpropitious for marriages. In an agricultural community such as we serve, any fall in the export of food grains not only affects our earnings from goods traffic, but also the movement of third-class passengers, which depends very largely on the success or failure of the crops. For the entire year, however, the falling off in gross earnings, compared with 1927, amounted to only 0.8 per cent., and as the comparison is made with a record year, of which we have recently been fortunate enough to have had a succession, I am sure you will agree that such a trifling decrease in our total gross earnings is of little importance. In the circumstances, to which I have referred, it is satisfactory that they have kept up so well as they have done, seeing that this is the first complete year during which the substantial reduction which we recently made in passenger fares has been in operation.

Working Expenses.

As regards working expenses, there has been a slight increase of 0.9 per cent., and our percentage of working expenses to gross earnings was 38.90 compared with 38.25. An exceptional credit to working expenses in connexion with the amount set aside for the restoration of the Bagaha bridge, which was not needed, as that bridge has been finally abandoned, contributed to this result. As a set off to this credit, the locomotive expenditure has increased by some 2 lakhs owing to the fact that the cost of some new locomotives which it was expected would have been paid for last year, has had to be met this year, the delay in delivery having been due to the strike in this country in 1926. There must, I am afraid, be a tendency for our working costs to rise during the next few years, due to the adoption in India of the Washington and Geneva Con-

ventions relating to the 8-hours period of duty and a complete day off duty once a week, which will necessitate the engagement of a larger staff, while the developments which are being undertaken in the interests both of the safety and convenience of the travelling public, such as faster trains, interlocking of stations, and many other improvements in working, must lead to increased expenditure. The special credit I have mentioned has reduced to some extent the effect of these tendencies during the year under review, but they will be felt in a larger measure as the Washington and Geneva Conventions are brought into full operation.

While I am on the subject of working expenditure, I should like to mention the success which has attended the policy which the board adopted during the War, of making provision to meet the cost of the renewals and replacements, which had then necessarily to be suspended, by establishing a separate reserve fund out of our earnings during that period. Since 1920 some 373 miles of track have been relaid with heavier rails and all deferred renewals for which the Engineering Department are responsible have been completed and charged off to this reserve fund. Similarly as regards the Locomotive Department and rolling-stock, all deferred renewals have been brought up to date, and in both departments normal renewals only will now be necessary. All this has been done without any undue call having been made upon our earnings since the termination of the War, and it is largely due to this fact that I have been able to present to you from time to time since then such a satisfactory record of our working results.

The company's net earnings for the year, calculated at 1s. 4d. to the rupee, amounted to £847,237, and, adding the gain by exchange £100,837, the total net earnings amounted to £948,074, compared with £954,316 last year. After making the necessary adjustments on account of income tax, the payment of interim and preference dividends, carrying £25,000 to reserve, providing, as usual, £35,000 for the sinking fund, and contributing £30,000 to the contingency fund, the amount to be dealt with to-day is £468,434. Out of this amount we recommend a dividend of 7 per cent., together with a bonus of 3 per cent., making a total dividend and bonus for the whole year of 10 per cent., or 1 per cent. higher than was paid last year. I am sure the proprietors will agree that this result is entirely satisfactory.

Contingency Fund.

In my speech to you last year I drew your attention to the establishment of a contingency fund to which an initial contribution of £40,000 had been allocated, and I explained to you briefly the purpose which the board had in view in starting this fund. I said then that the contingent expenditure which will have to be met in the event of the Secretary of State exercising his option to acquire our property in 1932, would have to be provided for and that it seemed better to recognise this forthwith and to make provision for it when our earnings were so eminently satisfactory, rather than to rely, when the time comes, on our reserve fund to meet the expenditure. As our earnings for the first half of the year were again so satisfactory, we made a further contribution of £30,000 to the fund when the interim dividend was declared. The fund now amounts to £70,000, and, allowing for the interest thereon which will accrue between now and 1932, it is possible that sufficient provision will then have been made for the purpose for which the fund was initiated, although that question is one for further consideration. The cost of liquidation, should our contract be terminated in 1932, will not be inconsiderable, and I am sure the proprietors will desire that very ample provision should be made for our London office staff to compensate them for the loss of their employment should the company cease to exist. All have served the company with exemplary zeal, none has really short service. Many may find difficulty in securing other employment, and some I fear will have to retire on such provision for their old age as you may be pleased to afford them, in the event of the company being purchased.

Funds for New Extensions.

To turn to more general subjects, you will notice from paragraph 13 of the report that a new contract has been concluded with the Secretary of State for the provision of funds for new extensions. When speaking to you in 1927, I explained that owing to the uncertainty which exists as to whether or not the Secretary of State will acquire our property in 1932, it was not possible for the company to consider the financing of any further extension, and I said then that, should further extensions be decided upon, it seemed probable that the required capital would be found by Government. That procedure has now been decided upon, and the contract in question

LLOYD'S AGENTS MASSOWAH & JEDDAH

makes the necessary provisions for giving effect to that arrangement. Briefly stated, all capital will be provided by Government; the branches will be constructed by the company on behalf of Government, and they will be worked by the company at the same working percentage as obtains on the system. All profits from the work of the branches will accrue to the Government, although the company will secure the net earnings from such new traffic as may be brought on to the company's lines by the construction of the branches. The Mashrakh Thawe extension is the first extension to come under this contract, its construction having now been started, and it is likely that sanction to the construction of the proposed Chakia Sidhwalla extension will be accorded before long. On this extension a new crossing of the Gundak is proposed to take the place of the Bagaha Bridge, which, as I have told you, has had to be abandoned.

The other contract referred to, which is still under preparation, provides, as explained in the report, for the adoption in our accounts and transactions of the 1s. 6d. rate of exchange. For the future the large gains by exchange which have appeared during recent years in our net revenue statements will disappear, and the small variations between the uniform rate of 1s. 6d. to the rupee and the actual rate at which the transactions have been carried out will alone appear; this is, of course, merely a change in book-keeping.

The latest report received from India as regards the prospects for the current year is not quite so satisfactory as usual, and, as I have explained, the working expenditure is likely to be somewhat higher.

In conclusion, I should like to say that our thanks are due to our staff of all ranks in India and to our London office staff for the zeal and efficiency with which they have discharged their duties.

On the motion of the Chairman, seconded by Mr. Leonard L. Cohen, the report of the directors dated January 12, 1929, together with the audited statement of accounts and balance-sheets for the year ended September 30, 1928, were approved and adopted.

The Chairman proposed, and Lt.-Col. T. Gracey, R.E., seconded, that a final dividend of £7 per cent. and a bonus of £3 per cent. for the six months ended September 30, 1928, on the ordinary stock of the company, less income tax, be, and the same are hereby declared, making with the ad-interim dividend of £4 and a bonus of £5 per cent. paid on July 30, 1928, a total dividend of £19 per cent. for the year ended September, 1928. The resolution was carried.

On the motion of the Chairman, seconded by Sir George Sutherland, Lt.-Col. T. Gracey, R.E., was re-elected a director of the company. The Chairman also proposed, and it was seconded by Lord Meston, K.C.S.I., that Sir George H. Sutherland be, and he is hereby re-elected a director of the company. The motion was carried.

Messrs. Cooper Bros. and Co. and Messrs. Gerard Van de Linde and Son were re-elected auditors of the company for the ensuing year.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 16:—

Egyptian Futures.

Sakel Contract.—Encouraged mainly by the recent upward movement in American values, rather more interest has been shown in this contract during the past week, and under the stimulus of a succession of small buying orders, mainly from Continental sources, some appreciation in the level has resulted. Fundamentally, however, the position remains unchanged; spinners, as far as this country is concerned, cannot afford to pay present prices, and conditions in the fine section have worked to such an unsatisfactory state that with the majority of concerns, organised short time would be welcomed. Unless a sharp change in the outlook occurs, concerted action on the part of those mills still using Sakels to cut down production and prevent further accumulation of stocks, appears inevitable.

Alexandria continues to furnish the sustaining power, but from now onwards those manipulating the market there would appear to be faced with increasing difficulties. So far, exports have kept up fairly well to last season's level; consequently, a certain amount of scepticism there regarding the falling off in consumption reported from spinning centres may have been warranted. We contend that we have now reached the time when the export figures will begin to show the effects of forcing Sakel premiums to their present extravagant differences with other cottons. The Sudan crops are undoubtedly going to exercise a considerable effect on the outlook when they begin to be marketed; the American seed varieties are now making their appearance and will be followed in the course of a few weeks' time by the first shipments of Gezira and Tokar. Both these crops promise well and will certainly attract business both from local and Continental users to the detriment of the Egyptian Sakel takings. We do not consider that values will be sustained, unless trade support develops; as there is no evidence of this, conservative sales on further appreciation should yield moderate profits.

Upper Contract.—Only a moderate business has taken place in this market during the past week, but values in sympathy with firmer American advices have hardened slightly. Spinners have again only bought sparingly, and complaints of the working qualities of this season's crop are beginning to be more prevalent. The improve-

ment in the offtake for the lower American counts may result in some concerns switching over again, as latterly competition in the coarser Egyptian numbers has severely cut into margins. For the near future we do not look for any radical alteration in the level; from a "Bull" point of view the poor spinning reports circulating are rather disturbing, as imports of moderate staple lots may have to be tendered later on.

Egyptian Spot.

Features of interest have again been lacking in this department, and sales have been approximately the same as the preceding week, that is to say just over 200 bales per diem. During most of the week the demand remained on a very moderate scale, but to-day inquiries poured in briskly in a manner which we have not witnessed for some time. It appears to us that the better tone recently seen in the American markets has drawn attention to the possibility of an unexpected rise taking place in Egyptian cotton, even in spite of the recognised bad time through which the Egyptian spinning trade is passing.

In Sakels there is nothing fresh to report. The bulk of the business has taken place in the "off" cotton, but there has been perhaps a little more interest taken this week in cotton at from pass to 75 on. There is a quantity of undesirable cotton here which appears very dear at the prices asked. Uppers have been in fairly good request at from 12d. to 12½d., but here again it would appear that a quantity of undesirable cotton is accumulating, and complaints have already been heard from spinners that this year's crop is not producing the strength expected of it.

Pilion has continued to be in improved request at from 13d. to 14½d. White cotton has met with an odd inquiry here and there, and spinners have been much interested in a new seed cotton which has recently appeared on the market in small quantities. This cotton is called "Farouki" and is grown in Upper Egypt. Spinning tests have given most satisfactory results, and there is every reason to believe that it will become very popular when it can be produced in larger quantities. Sudan Sakel has suffered from neglect.

There has been some slight improvement in c.i.f. business, and takings by spinners continue to be on a very satisfactory scale. Last week's figures were 9,097 bales Egyptian and 2,025 bales Sudan. Estimated spot sales, 1,400 bales Egyptian and 250 bales Sudan (the latter principally White Sudan). Quotations of Sakel show a net advance on the week of 30 points; those of Upper and Pilion are 22 points higher. F.G.F. Sakel to-day, 19.20d. F.G.F. Upper to-day, 12.37d. F.G.F. Pilion to-day, 13.00d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 10, state:—

Since our last report the futures market has been moderately active, with a somewhat undecided tone. The week's summary of

price movements is as follows:—Sakellaridis: January, 37.45 dollars, 0.10 dollars up; March, 37.93 dollars, 0.01 dollars up; May, 38.30 dollars, 0.05 dollars down; November, 38.38 dollars, 0.10 dollars up. Ashmouni: February, 22.89 dollars, 0.12 dollars up; April, 23.32 dollars, 0.15 dollars up; June, 23.86 dollars, 0.29 dollars up; October, 24.37 dollars, 0.37 dollars up.

Sakel.—There is nothing special to report on this market. The demand from the trade has again been very poor, and there is nothing in sight to indicate any change in the apathetic attitude of spinners which has already been in evidence for some time. The stock of Sakel in Alexandria on January 2 stood at about 1,375,000 kantars, and the stock held up-country on the same date should have amounted to about 800,000 kantars, making a total Sakel supply of about 2,175,000 kantars.

The Sudan Sakel crop continues to progress normally. The latest estimate of the Sudan Government puts the crop at 575,000 kantars, but private estimates place it at about 600,000 kantars. We are still of the opinion that present prices of Sakel are exaggerated, and look for a reaction of sufficient extent to re-awaken buyers' interest in the variety. The Sakel/Uppers straddle (March/April) this week stands at 1,461 points, against 1,475 points last week and 801 points at this time last year.

Uppers.—Trading in this market has been smaller than in Sakel, but in spite of the inactivity, the tone has not been at all weak. Trade demand has been very moderate, which is somewhat surprising in view of the relative cheapness of Uppers as compared with America. The Ashmouni/American straddle (February/March) this week stands at 285 points, against 299 points last week and 763 points at this time last year.

The week's receipts amount to 164,824 kantars, against exports 153,676 kantars; the stock in Alexandria stands at 3,605,218 kantars.

The official figures of arrivals and exports for the period September 1, 1928, to January 2, 1929, are as follows:—Arrivals: Sakellaridis, 1,716,604 kantars; Ashmouni and Zagora, 3,282,050 kantars; Pilon, 325,625 kantars; Various, 242,603 kantars; Scarto, 69,043 kantars; total, 5,635,925 kantars. Exports: Sakellaridis, 1,019,443 kantars; Ashmouni and Zagora, 1,938,237 kantars; Pilon, 146,519 kantars; Various, 91,511 kantars; total, 3,195,710 kantars.

Spot.—During the week under review Minet el Bassal has been fairly active and a very fair business has been done. Sales for the five business days amount to about 19,250 bales, of which we estimate 6,200 bales Sakellaridis, 10,800 bales Ashmouni and Zagora, 1,750 bales Pilon, 250 bales Nahda, and 250 bales other varieties.

Sakellaridis: All styles have been dealt in and a fair turnover has resulted. Spot differences are without much change, but are well maintained and decent staple cotton is not too easy to find.

Ashmouni and Zagora: A rather better demand has been in evidence and a very fair turnover has resulted, in which all grades have figured. Spot differences are unchanged but very firm.

Pilon: Has met with considerably more demand and a good business has been done. Spot differences are unchanged.

Up-country: The amount of business done in spot cotton has been done at last week's differences. A retail trade has transpired in Maarad and Fouadi.

Up-country: The amount of business done in spot cotton has been small. Holders of cotton are difficult, and the poor demand at Minet el Bassal naturally gives no encouragement to buyers to meet their ideas. Preparation of the land for the new crop is in progress everywhere, but the demand for sowing seed is as yet only beginning and does not yet permit any forecast, even approximate, of the proportions of the total acreage which will be planted in the different varieties this year.

Notes of the Week.

The Afghan Kaleidoscope.

From the welter of conflicting reports regarding the situation in Afghanistan the one point emerging about which there is any certainty is that the Amir Habibullah, like all his predecessors, is finding it easier to win the Afghan Throne than to keep it. His attempts to simulate settled government do not appear to have impressed the tribesmen outside Kabul, and it is reported that even in the capital the veneer of order and discipline is fading. It is too soon, however, to tell whether the qualities that brought Batcha-i-Saqao to the throne are not sufficient to enable him to render a good account of himself. He would not be the first ruler of Afghanistan who had to impose his authority upon unruly tribesmen; but he is handicapped by the fact that his humble origin deprives him of any large following loyally devoted to his cause. Allegiance to a brigand, with the constant prospect of loot, has greater attractions for the Afghan mind than allegiance to a Sovereign who has an empty exchequer and requires peace and order. It is, therefore, not improbable that Amir Habibullah is having a difficult time in Kabul. Even before he has to reckon with King Amanullah, his authority is being challenged by Jalalabad tribes, and there are reports that yet another claimant to the Throne is appearing in the person of Shah Mahmud Khan, brother of General Nadir Khan, who is said to be approaching Kabul from the north-west. In the meantime King Amanullah is making his own preparations at Kandahar, where he has been joined by his elder brother, the ex-King Inayatullah. The delay imposed by the weather on his military movements may prove to his advantage, as it is evident that action suits Amir Habibullah's cause better than inaction.

Afghanistan and India.

The theory that Great Britain must necessarily have had a finger in the Afghan cauldron dies hard; indeed at the moment it shows no sign of dying at all in spite of categorical denials on the part of the British Government. Yet those who make the most confident assertions on the subject offer no explanation of the advantage that Great

Britain or India might be expected to derive from an upheaval in Afghanistan. Before the recent troubles broke out King Amanullah appeared to have rendered Great Britain the greatest service in his power in securing and maintaining the pacification of his country. Any challenge to his authority must inevitably undo the good that he had done in this respect, and those who see the hand of Great Britain in anything that happens in any part of the world should at least try to show how she stands to gain by a long period of unrest in Afghanistan. The attempt to hold the British responsible for the Shinwari revolt or Batcha-i-Saqao's unexpected success is on a par with an incident in the Turkish conspiracy trial now in progress at Broussa. One of the accused had declared at the preliminary investigation that he had been told that the British Embassy was going to supply two cases of bombs, and it may yet be shown that the whole story of the "plot" was woven round this statement. At the actual trial this prisoner's evidence proved so unsatisfactory that he was finally asked what, in any case, he wanted bombs for. His answer was: "For killing fish." Perhaps those who are convinced of British participation in Afghanistan's troubles, when unable to discover any other advantage, will be content to explain that only by such means could the Royal Air Force in Peshawar obtain sufficient practice in flying troop-carrying aeroplanes.

The Yugoslav Dictatorship.

Thoroughness and consistency have been so far the dominant notes of the Yugoslav Dictatorship. All political parties have now been dissolved. Any attempt to differentiate between them on the ground that some were national and not regional would have been unfair and would have exposed the Government to the charge of partiality. It is better to adopt the attitude that the welfare of the country requires that all political activities should be in abeyance and to allow no party to keep its organization in being. When the time comes for parliamentary government to be restored, there will be the better chance for the formation of parties based on definite political principles without reference to territorial bound-

aries. King Alexander, who now claims sole responsibility for the *coup d'état*, while stressing the point that the idea suggested itself independently to many in different parts of the country, is aiming at a Yugoslavia which will have set behind it the unhappy divisions of the past and in which no Government will represent any territorial unit to the exclusion of others. This is a worthy goal, provided that it is not sought to reach it by forcing the different peoples into a common mould. The genius of the Serb and the genius of the Croat can always be distinct without prejudice to a united Kingdom, and both should be encouraged for the benefit of the country as a whole and not for that of Serbia or Croatia alone. The mistake made in the past has been that no scope has been allowed for the genius of the Croat owing to the selfish determination of the Serbs to keep all power and all offices of the State in their own hands. Only by enabling both peoples to work harmoniously together for the common good can the Dictatorship hope to justify itself. Already in Serbia a beginning had been made to appreciate the fact that the trouble lay not so much in antagonism between Serb and Croat as in the impossibility of reconciling the old order represented by the Radical Party with Western conceptions of government of which the Croats and an increasing number of Serbs had constituted themselves the champions. It is probably the fact that the evils from which the country suffered could be eradicated only by means of a Dictatorship; but, it is certain that the Dictatorship will have to provide more scope for the expression of public opinion before it can hope to build on any lasting foundation the edifice that it claims to have in view.

Yugoslav Foreign Relations.

The scope offering to the Yugoslav Dictatorship for improving existing conditions is almost as great in the sphere of foreign relations as in that of home affairs. The attitude of the Radical Party towards the rest of Yugoslavia was reflected equally in the policy of successive Belgrade Governments towards the country's neighbours. Albania, Greece and Bulgaria, all in turn had occasion to experience the heavy-handed diplomacy of Belgrade, and little vision was shown in the handling of Italo-Yugoslav relations. The Dictatorship has yet to indicate whether it intends to follow the foreign policy of the Serbian Radical Party or whether it is capable of evolving a happier policy of its own. So narrowly Serb has been the outlook of Belgrade in the past, that it could never shake off its fear of a superior Bulgaria of pre-War days, and it allowed its policy towards that country to vacillate between bullying and an exhibition of nerves. Something more heroic will be expected of the Dictatorship. From the elaborate nature of the plans that King Alexander must have thought out so carefully long before the *coup d'état* was carried through it would be expected that provision had been made for measures affecting foreign relations. The Bulgarian frontier, however, still remains closed, no public steps have yet been taken for any improvement in the administration of Macedonia, and the date of the expiry of the Treaty of Friendship with Italy has been allowed to pass without any further overtures for a renewal. The latter omission is not serious, as it would not have been possible to negotiate a new treaty within the time-limit required by the old one. An amelioration of conditions in Macedonia and better relations with Bulgaria, however, may be regarded abroad as the "acid test" of the intentions of the Dictatorship and may have an important bearing on the course of loan negotiations.

A Constantinople Fire and the Aftermath.

Yet again Constantinople has been visited with one of those devastating fires that are a familiar feature of its long history, and may be expected to recur so long as present conditions remain, wooden houses, narrow streets and an inadequate water supply. This time disaster has befallen the suburb of Tatavla, lying to the north of Pera, above Bulbuldere. It is a thickly populated district, occu-

pied for the most part by Greek artisans of Turkish nationality, and the distress caused by the fire among the large, now homeless population at a time of severe weather is considerable. Schemes for their relief were immediately set on foot by the Turkish authorities, and Lady Clerk, wife of the British Ambassador, has appealed in England for funds for the sufferers. A vicious and ill-mannered attack on the part of a Turkish newspaper against Sir George Clerk, who was accused of visiting the scene of the fire, because the inhabitants were Greeks, and of being guilty of sowing discord among the different races in Turkey, need not be taken too seriously. The Turkish Press is gradually emancipating itself from the craven subservience that followed the inauguration of the Republic, but it lacks the sense of responsibility and shows very clearly that, while the products of Western civilisation may be avidly adopted in Turkey, the manners and spirit of reciprocity that underlie that civilisation have not yet penetrated the country. The Turkish Press has recently fallen into disfavour with its own people for an irresponsible attack on the Turkish medical profession, because one man died under an operation. It would be well, if the President of the Republic were to take a leaf out of the book of the Yugoslav Dictatorship and enforce public courtesy on Press and officials. There would then be fewer venomous attacks on individuals and people in the former, and the latter, both abroad and at home, would be able to substantiate Turkey's claim to have entered the comity of nations.

Reforms at Al Azhar.

The decision having been taken that the great Muslim University of Al Azhar should be modernized, a Committee is now preparing the new educational programme. It is stated that there are to be three sections or Schools—Law, Literæ Humaniores and Theology. The first will include the study of Muslim Law, Jurisprudence, Forensic Medicine and Administrative Law; the second that of History, Philosophy, Philology, and Literature, both ancient and modern Arabic and modern European. The Theology School will specialise in the study of the Koran and theological subjects in general, including preaching, history and modern languages. An effort will be made to start on the new programme with the next academic year, and already the progressive head of the University, Sheikh Mustapha al Moraghi, is credited with having ordered copies of the Bible in Arabic with a view to introducing at an early date the study of the origins of beliefs. In the meantime the subject of improving the standard of Arabic writing is engaging attention. A Committee is to be formed to consider the introduction into the Arabic language of punctuation marks and capital letters. In connexion with the latter King Fuad has initiated a competition; suggestions for the writing of capital letters in Arabic are invited, and prizes of the value of £E100, £E50, and £E5 respectively are offered by the King for the best suggestions. The reforms contemplated are less drastic than Mustapha Kemal Pasha's improvement of Turkish, but the underlying motive is the same—to remove from both countries the reproach of illiteracy. It will be of interest to see whether the Turks reach their goal so far ahead of the Egyptians as to justify—perhaps in the minds even of many of the latter—the means employed—the adoption of Latin characters.

Egypt and the Fine Arts.

The transfer of the Egyptian Antiquities Service from the control of the Ministry of Public Works to that of the Ministry of Education is another sign of the times in an Egypt that is becoming more and more conscious of its responsibilities as well as of its resources. The Fine Arts have not been neglected in the past in Egypt, but the cult has progressed haphazardly. The decision has now been taken to co-ordinate the different branches and at the same time to give more definite encouragement to their study. Hitherto the Ministry of Public Works has been responsible for the Antiquities Service and for the

Opera House in Cairo; the Arab Museum and Arab monuments have been the charge of the Ministry of Works; the Greco-Roman Museum at Alexandria has belonged to the Alexandria Municipality, while under the care of the Ministry of Public Works, and the Coptic Museum in Old Cairo is the property of the Coptic Patriarchate. The post of a Director of Fine Arts has now been created under the Ministry of Education, to which a Frenchman has been appointed, and it has been arranged that not only all the museums and the supervision of antiquities and archæological excavations shall be entrusted to the Ministry, but also that the Department of Fine Arts shall include within its purview the provision of public instruction in the Fine Arts, music, the theatre and public libraries. Some misgivings have inevitably been roused by the removal from the Ministry of Public Works of the care of ancient temples and monuments, the preservation of which calls as much for technical experience as for knowledge of archæology; but no fault can be found with the motive that has prompted the grouping in one Department of all activities associated with the Fine Arts. Already the rich collections which Egypt possesses have outgrown their accommodation, and when new buildings to house them have to be erected it is better that the problem of the future of the cult of the Fine Arts in the country should be considered comprehensively and provision made on some definite principle.

The Sudan and General Gordon.

On the occasion of the forty-fourth anniversary of General Gordon's death at Khartoum the Governor-General, Sir John Maffey, has issued an appeal for funds to enable the work of the Church in the Sudan to be placed on a permanent basis. The proposal is that Khartoum Cathedral, which to-day stands in an unfinished condition, should be completed and suitably endowed, that Churches should be built at Port Sudan, Atbara and Wad Medani, and that provision should be made for a travelling railway chapel for the southern part of the country served by the railway. To start these schemes a sum of £60,000 is asked for. The appeal, as might be expected, is endorsed by the many prominent men whose names are associated with the history of the Sudan since Gordon's time, and it is fitting that the scheme should be associated with the memory of a man who is particularly identified with that aspect of Great Britain's world mission which is inseparable from the tenets of practical Christianity.

The Death of a Missionary.

The widespread regret which was manifested at Basrah over the most regrettable death of the Reverend Henry Bilkert, an American missionary well known in the Persian Gulf, will certainly be shared in London, which does not under-estimate the importance of the work done by missionaries in the region of the Gulf. The manner of Mr. Bilkert's death has attracted unusual attention. Travelling with Mr. Charles Crane, whose interest in the past and future of Arabia is generally known, he had the misfortune to come across, in the region between Basrah and Kuwait, the scouts of a body of Ajmanis, nominally Wahhabis, and under the ægis of King Ibn Saud, who had crossed the frontier on a raid. During this raid twenty Iraqis are reported to have been killed and 4,000 sheep to have been stolen. The question immediately arises, therefore: who is responsible for the raid, and who for the protection of the sufferers?

Anglo-Iraqi Relations.

These questions, although they have arisen fortuitously, and although the *ghazzu* happened on Kuwaiti territory, have a definite bearing upon the political crisis in Baghdad which has culminated in the resignation of the Cabinet of Sir Abdul Muhsin Beg, commonly and correctly regarded as one of the most pro-British of Iraq's leading men. With the inability to obtain accord upon the Financial Agreement subsidiary to the Anglo-Iraqi Treaty we are not so much concerned, because, as we said last week, no

question of fundamental principle is herein involved. These financial negotiations are in effect a matter of bargaining, and the failure of them would have little significance were it not accompanied by failure to find a way out of the difficulty which has arisen over the Military Agreement subsidiary to the Anglo-Iraqi Treaty. The essentials of the dispute which has thrown a shadow between Iraqi and British authorities do not appear difficult to discover. According to the wording of the Military Agreement Iraq was to accept full military and financial responsibility for her internal security and external defence not later than 1928. The date of her assumption of such responsibility has, therefore, passed. Why? Because the Mandatory Power objects to the way in which Iraqi Governments have proposed to assume such responsibility. That way is, of course, by Conscription. The only other way would seem to be by extension of the voluntary army to such limits as, in the opinion of Baghdad Cabinets, would intolerably strain the national exchequer. To some form of conscription, therefore, all Prime Ministers have pledged themselves; so far no one has been found among the Iraqis with some rival workable plan. It should be mentioned that there is among responsible-minded Iraqis no objection to the retention in Iraq of the Royal Air Force, provided that it does not do the work which Iraqis should properly do for themselves, that is, the defence of their country in accordance with the Treaty which their representatives signed.

The Cart before the Horse.

At this moment it may be convenient to compare the problem which has arisen in so vivid a form in Iraq with the Anglo-Egyptian problem. In Egypt the mistake was made in 1922 of granting independence to the Egyptians with certain vital questions left unsolved. The Egyptians, perhaps inevitably, took the independence and ignored the fact that it was conditional. In Iraq in 1924 much the same mistake was made. Nominal independence was accorded to the Iraqis with the vital question affecting the country postponed for future discussion. In all diplomacy there must be a certain amount of living from hand to mouth, admittedly; but such blunders as have been made in Egypt and in Iraq are, happily, rare in British diplomacy. That the cart should have been put before the horse is a blunder in vehicular disposition for which the British alone are responsible. In any case, the mischief has been done; and the problem is: how to repair it? To a certain type of mind the answer comes pat: revert to the conditions obtaining anterior to the granting of independence. But is such a reversion really desirable, even supposing it were practicable? No one can prophesy

upon the likely course of future events in Iraq, but that a return should be made at this stage in the history of the new Arab State to a more direct form of British administration would appear to be highly improbable. What, then, is the alternative? Is it not to "allow" a certain form of conscription to be introduced into Iraq while maintaining an attitude of neutrality? Surely it is not beyond the wit of British representatives to ensure that the interests of those sections of Iraq's population which have already professed abhorrence of conscription are adequately safeguarded? If some such policy be not followed, how can the British pledge concerning Iraq's responsibility for her defence by the end of 1928 be fulfilled?

Extra-Iraq Considerations.

But the problem is not so simple as that. Iraq and Great Britain are not, unfortunately, the only factors in this matter of the defence of the Arab Kingdom. For Great Britain has her obligations towards the League of Nations, to whom she is responsible for the good order of her ward. Whatever she does in Iraq, moreover, is bound to have repercussions in Syria, and the impression exists in Iraq that French susceptibilities are being more tenderly considered than Iraqi susceptibilities. But, again, this international difficulty should not prove insuperable. Even as things are, Iraq is far in advance of Syria; it is notorious, for example, that Great Britain flouted rather than considered the feelings of France when it was decided to make Iraq a monarchy and to support the candidature of the Amir Faisal for the Throne at Baghdad. If things are allowed to drift in Iraq, there would appear to be a very real danger of complications caused by the intrigues of Iraqis with States outside the orbit of the British Empire. To talk of armed resistance is, of course, extravagant: but to envisage a wave of pro-Turkish sentiment among Iraqis officials is certainly not extravagant. And Orientals, once they have begun to intrigue against the *status quo*, are notoriously unscrupulous in the matter of temporary allies. We are far from wishing to paint the picture in too lurid colours, but no one can study the position of Anglo-Iraqi relations without at least contemplating the effect of cordiality being extended by Iraqi Nationalists to agents of Bolshevik Russia. A strong and a generous measure seems, therefore, to be indicated as the desirable step for Great Britain. Generosity—if, indeed, it be generosity merely to respect the words of a Treaty—is not always a sign of weakness; and Great Britain's position in Iraq is strong in proportion to the number of her staunch friends in Iraq. If distrust grows between Englishman and Iraqi, who shall say how the mandatory system in the Middle East shall end?

The Alternative to Conscription.

The one possible alternative to the Mandatory Power's permitting the Iraqi Cabinet to impose a form of conscription is, it seems, to issue a bold declaration of the reasons why the course is undesirable. In a public statement of intention there is nothing derogatory, but a silent refusal to allow what all Iraqi Cabinets desire gives a handle to those who assert that the British Empire always has sinister motives in her dealings with the East. It is conceivable, therefore, that an official statement could be made on behalf of the British Government detailing the reasons why Iraqis are not yet in a position to be responsible for their own defence. Such a statement would explain how the Mandatory Power was prepared to accept provisional responsibility for the wellbeing of her ward and how it was proposed to train and establish Iraq's Army for the time when the Arab Kingdom was completely independent. That a publication of such a nature would cause serious heartburnings is obvious, but it would at least clear our national conscience before the world. What is wanted above all things in Iraq at the present time is clarity in expression of motive. If pledges, half-promises, or even encouragements, cannot, now that 1928 is past, be honourably fulfilled, let honourable explanation

be given of the non-fulfilment. Otherwise, what can prevent the rapid growth of distrust? The hand that grasps the nettle is always the most respected hand.

Russia and the Yaman.

The statement in *The Times* last week that a Commercial Treaty has been signed between the Imam Yahya of the Yaman and the Soviet Government of Russia will surprise no one who has followed, first, the course of Bolshevik policy in Arabian territories bordering the Red Sea, and secondly, the course of the policy adopted by the British authorities in regard to Sanaa. It certainly is not for the British to complain if the Bolsheviks appear to have stolen a march on them with the Imam, for their forceful methods have practically driven the Imam to make friends where he can. Whether the Imam Yahya has, even from his own point of view, chosen his new friends wisely is, of course, another matter. It is, however, to estimate too highly the powers of the Soviet representatives in the capital of the Yaman to suppose that it is they who have prevented the formation of good relations between the Zaidi Imam and the British Empire. For the present state of Anglo-Yamani relations the Aden authorities, or, perhaps one should say, the Royal Air Force, is primarily responsible. If it were otherwise, could not the Bolshevik representatives in the Hijaz have strained the notably good relations existing between King Ibn Saoud and Great Britain? There is at present, however, no need to take this last Commercial Treaty as a tragedy; certainly it is exaggerated fear to talk of the Yaman's being made a basis for Bolshevik propaganda in India. In all probability the Imam would even now give up all his newly-found friends for a satisfactory agreement with the British; and if this last Treaty with the Soviets awakens the responsible authorities to the shortcomings of their past and present policy it may have done little harm. It is practically certain that the Soviet representatives, whose ambition of revolutionising the East must appear peculiarly detestable in the eyes of so unchanged and reactionary a people as the Yamanis, would have been treated with contempt in Sanaa had they not been rivals, or enemies, of the now unfortunately hated British.

INDIAN NOTES.

The Public Safety Bill.

It is generally agreed that the Government of India have been well-advised in deciding, as foreshadowed in *THE NEAR EAST AND INDIA*, and announced in the Viceroy's inaugural address on Monday, to reintroduce the Public Safety Bill during the present Delhi session of the Central Legislature. The measure, it will be recalled, was only thrown out at the Simla session in September by the President's casting vote, after monopolising the attention of the Legislative Assembly for the greater part of the session, and while the result this time cannot in a way be regarded as a foregone conclusion, in view of subsequent developments, a Government victory by a substantial majority is not now improbable. For evidence in favour of the Bill, which empowers the executive to remove from British India Communists and other dangerous persons not being subjects of British India, the removal order being subject to revision by a special tribunal before which the Government will place all available information respecting the activities of the accused persons, continues steadily to accumulate, often from the most unexpected quarters. For instance, a delegate of one of the Bengal labour unions told the Simon Commission last week in Calcutta that this so-called Indian Trade Union Congress represented nobody but professional politicians who did not scruple to use money from Moscow for the purpose of financing disturbances for their own ends. In this connexion it is satisfactory to learn that the Bill, as reintroduced

THE REHABILITATION OF ROUMANIA.

Although M. Maniu's Government in Roumania has been in power for more than two months, it is only with the reopening of Parliament after the Christmas recess that the new Ministry has been able to attend to the details of its formidable programme. When Parliament met after the general election of December 12 the Government's main concern had perforce to be to secure the passage of the Budget within the stipulated period, before January 1. The position was delicate. The previous Budget had shown a serious deficit of five thousand million lei, or thirteen per cent. of the total. During the year there has been a general economic crisis, the harvest, in so far as the principal cereal, maize, was concerned, had been bad, and revenue had not come up to expectations. It was essential, however, to the Government's reputation and to the success of its programme that the deficit on the current year's working should be wiped off and that the new Budget should balance; this end could be reached only by further taxation. To the credit both of the Ministry and of Parliament the situation was faced, for all its unpleasantness, and the new taxes were voted. Only a Government that enjoyed the confidence of the country as a whole, and on whose word, that the proposed legislation was essential, while every effort would be made to reduce expenditure, reliance could be placed could have carried it through. Behind the Cabinet's assurances lay the general recognition of the urgency of a foreign loan, and Parliament responded to the demands made of it in the hope that thereby it would hasten, and possibly lighten the terms of, the loan on which so much depends. In spite, however, of the immediate resumption of the loan negotiations, the country has seen more than four weeks pass without a definite settlement. The previous Government, owing to the lack of confidence that it inspired abroad, had had to accept onerous conditions for the proposed loan. It was natural that its successors, who could point to a country very largely united behind it, as well as to a more enlightened fiscal policy, would expect to be accorded easier terms; but they found themselves handicapped by the urgency of their requirements. In the end it might have been better not to have resumed the negotiations that the Bratianu Government had initiated, but to have placed the matter of a loan in the hands of the League of Nations. In view of the sharp divergence of opinion between the two schools of fiscal policy in Roumania it would have been useful, apart from the question of the loan, to have had an independent and impartial inquiry into the country's financial position.

In the forefront of its programme M. Maniu's Government has placed the various economic reforms that are imposed upon it by the many short-sighted and arbitrary

measures of its predecessors in power. Following upon the stabilisation of the leu will come the revision of a number of laws passed by the Liberals which proved so prejudicial to Roumania's reputation abroad. Already modifications of the Law relating to Chambers of Commerce and Industry have been drafted, and the revision of the Mining Law, the Power Law, and the Law for commercialising the wealth of the country has been taken in hand. One of the principles to be followed in regard to revised Laws is that there shall be no differentiation between foreign and Roumanian capital; the attempt to secure a privileged position for Roumanian capital in the formation of companies broke down in practice, as the money was not available in the country, and the law had to be evaded in the case of mining companies by various devices, without advantage to Roumania, whilst effectually impairing Roumanian credit abroad. The question of import and export taxes will also be examined, with a view to promoting the export of agricultural products and to eliminating such protectionist duties as served no other purpose than to keep alive a number of parasitical industries.

Not less important than the economic problems awaiting settlement are the various political reforms to which the M. Maniu's Government is pledged. The whole system of administration has to be overhauled with a view to the introduction of a greater measure of local autonomy and to the purging of the Civil Service. It was noticeable that the Minority groups throughout the country welcomed the advent to power of the National-Peasant Party, and, with the exception of the Magyar group identified themselves at the recent elections with that Party's lists of candidates. At the earliest opportunity in Parliament the Minority spokesmen (including the Magyars) registered their satisfaction with the conduct of the elections and with the new atmosphere that the Government had already introduced in the different provinces. Expectation, accordingly, runs high in the country, and, if there is to be no reaction, achievement must follow on promise without undue delay. The mistake made by the late Government of allowing the pendulum to swing too much to one side must not, however, be repeated. Under the Liberals attention was concentrated on the Old Kingdom to the neglect of the new provinces, and the latter are not unnaturally anxious that with the accession to power of a Transylvanian Government their star should be in the ascendant. It will be not the least of Dr. Maniu's duties to eradicate the idea that there must necessarily be in Greater Roumania territorial camps more or less in opposition. The various provinces should be regarded as complementary to one another, and the aim should be to bring them, according to their several capacities, to the same standard of well-being and progress. For the moment the plight of Bessarabia calls for careful handling. In no other province did the régime inaugurated by the Liberal Government fail so signally in its task of Roumanian unification, and Dr. Maniu takes over a heritage of suspicion and discontent, to which has been added this winter the misery of famine. The change of Government came just in time to prevent the antagonism between the parties from finding its solution in civil war or a dictatorship. As the country was brought so near to this evil, the new Roumanian Government will do well to see that it gives no occasion for the embittering of party passions by one-sided legislation. It should also take care that its Press sets an example of conciliation and tolerance. At present the efforts of the official organs to meet abuse by abuse is as derogatory to the Government as it is to Roumanian journalism.

*The Near and Middle East

From Our Own Correspondents.

Constantinople, January 23.

Turkey and Afghanistan.

The startling events, both political and dynastic, which have lately been taking place in a country ruled by a Sovereign who, not so many months ago, was the honoured guest of the Turkish Government, have afforded sheaves of copy to the Turkish Press.

The general trend of developments in the disturbed area, as represented in the local vernacular papers, is reproduced from the daily wireless news received by the British Embassy and which, as a matter of courtesy, is passed on the local papers. These *communiqués*, however, do no represent more than about half of the total "output" of the Turkish dailies with respect to the situation in Afghanistan. The other half, which emanates from the "Tass" News-Agency, the Russian "Reuter," faithfully represents the views of Moscow, and the leader-writers of the Turkish papers would appear to have been consistently inspired rather by what Moscow has to say on the subject, than by the *communiqués* emanating from Peshawar and Delhi.

It is not so much that the statements of the Afghan Envoy to the Soviet Republic, on which the "Tass" *communiqués* are mainly based, have misrepresented the situation at Kabul, as the constant references to "the enemy across the border" which induce one to believe that the Turkish Press views are not entirely colourless or uninspired. Even in the mind of the ordinary Turkish peasant, there is only one construction that can be placed on the identity of this "enemy." The farmers of Konia and Sivas have never before heard of Shinwaris, Agha-Khels, and other warlike tribes who inhabit those distant regions, nor is the Turkish *Rendişper*, or farm-labourer, aware of the fact that these Afghan mountaineers are not so complacent as the Anatolian peasant in such matters as the adoption of Western dress, the bowler hat and the abolition of the *pardah*, but the more intelligent classes are not ignorant of the fact that the British "Raj" and King Amanullah are next-door neighbours somewhere in Central Asia.

The leaderwriters of the Turkish dailies represent the situation in Afghanistan as a mere temporary setback to the execution of a full programme of development on Western lines, a copy of which King Amanullah is said to have been furnished with, at his own request, during

his sojourn at Angora. According to the *Milliet* and the *Aksham*, the leading morning and evening papers in Constantinople, King Amanullah still has the situation well in hand, and will shortly be ruling the country once more from Kabul.

It is pleasant to record, on the other hand, that the same Turkish papers have paid a full meed of tribute to the enterprise of the British Air Force officers who transported, amongst others, a certain number of Turkish women and children from Kabul to Peshawar.

The report which appeared a few days ago in the Turkish papers to the effect that the Turkish Military Mission had reached Kabul would appear to be premature. In official circles, at all events, the Mission is understood to be awaiting developments at Kandahar.

Conflagration in Constantinople.

The night before last a fire broke out at Tatavla, the principal Greek quarter of Constantinople, which assumed alarming proportions and resulted in the destruction of over 500 buildings. A blizzard was raging at the time, blowing in from the Black Sea. The streets were ice-bound.

Although the Turkish papers lay the responsibility for the disaster on the shoulders of the "Compagnie des Eaux de Constantinople," a French concern, as a result of water shortage, the weather was so bad at the moment and the temperature so low, that an impartial observer cannot but think of frozen watermains, especially in some of the narrow back-streets, where the diameter of the conduits does not much exceed that of an ordinary zinc water-pipe.

Tatavla being a highly populous quarter, many shelterless families have been temporarily accommodated in church-annexes, school-buildings, and so on.

Broussa Plot.

The trial is proceeding at Broussa of about forty individuals accused of plotting to overthrow the established régime in Turkey. From the evidence which has so far been made public, it would appear that the conspirators contemplated the seizure of the central prison and the liberation of the prisoners as a preliminary to their plan of operations. Then, having donned the robes of *Hojas* or ecclesiastics, they hoped to work up the religious feelings of the *basse classe*, and thus bring about disturbances, incendiarism and the spread of revolution.

According to the version of the interrogatories published by the Constantinople papers and to the astonishment of the Examining Magistrates, a certain Laze Ali, one of the accused, declared that the arms and ammunition for the enterprise were to be procured from the British Embassy in Constantinople. All one can say for the moment is that no important personages are involved in the revolutionary movement, the ring-leaders and their followers all belonging to the lower classes.

ROUMANIA.

Bucharest, January 24.

The New Government.

The tension which has recently existed in Roumanian politics has gradually relaxed more and more since the opening of Parliament. The debates are animated and keen. Several orators on the Opposition side have shown considerable talent in their attacks against the Govern-

ment, whose adherents, however, have been able to refuse point by point, with carefully considered arguments, all the objections raised by their opponents.

One of the reproaches the Liberals brought against the National-Peasant Cabinet, not unjustly perhaps, was that they had not adhered to their much-vaunted programme in regard to the reduction of the number of State functionaries, many of whom are a useless charge on the Budget. It was not found possible all at once to eliminate all the superfluous elements, without interfering with the smooth running of the administrative machine, but the dismissal of all the temporary employees has already effected a marked economy.

Another graver reproach brought against the Government is the increase of certain taxes, which has caused a great outcry, especially as one of the main points on this Government's programme was the reduction of the existing taxation. But the Government was faced with the almost impossible task of compiling their Budget estimates between December 12 (the day of the elections) and December 31, as they had undertaken to place the Budget before the Parliament by the end of the year. Their difficulty was enhanced by the fact that they were faced with a serious deficit on the 1928 Estimates, and they were obliged to have recourse to temporary measures to increase the revenues, pending a full consideration of the question.

The Legislative Programme.

On the whole, however, the new Government is proceeding conscientiously to carry out its programme, and it has already submitted several Bills to Parliament—much more quickly than could have been expected—introducing improvements in various directions in keeping with the Party's principles. Among the Bills presented to the Chamber are one for Administrative decentralisation, and another for the reorganisation of the Gendarmerie.

In the economic field the Government has framed a Bill of great importance which the Minister of Industry supported with marked ability and understanding, namely, a new Commercialisation Law (Commercialisation of State Enterprises), in which the door is opened to foreign capital in a way calculated, it is hoped, to lead to the better development of industry and of the great natural resources of the country.

This Bill has already made an excellent impression, and it is stated that a British banking group is now treating for the purchase of certain important petroleum properties.

Other important measures submitted are (a) a Bill for the reorganisation of Chambers of Commerce and (b) a Bill for the draining of the Danubé Delta, with a view to recovering large areas of land.

It is hoped that Bills will shortly be ready relative to the stabilisation of the currency, the reorganisation of economic institutions and the revision of the Mining Law. As regards this last, a first step has already been taken by the dissolution of the petroleum "Cartel," which immediately resulted in a marked fall in the price of petrol.

Foreign Affairs.

As regards their foreign policy M. Maniu's Government is following the principles laid down in their programme, and repeated in the *communiqués* of the Ministry of Foreign Affairs. Events in Yugoslavia are followed in Roumania with great interest, as are also the conversations between Poland and the Soviets. On this question Roumania is perfectly at one with Poland, and her attitude towards the Soviets can only be a waiting one, until some official steps are taken by the latter in her regard.

The Conference of the Little Entente which was to have taken place in Yugoslavia in July seems to have been called earlier in order that the three Governments may come to an agreement on various questions before the March session of the League of Nations, at which, among others, the Minorities question is to be discussed, at the instigation of Germany.

The question has been raised of the modification of the European Commission of the Danube, as Germany desired to be admitted as a member. In view of the fact that the number of members is limited, it was necessary to convoke a meeting to introduce the modifications required, as each article has to be approved unanimously by the whole of the European Commission of the Danube. Up to the present Great Britain and Italy support the application of Germany for admission.

The Bucharest Season.

The death of King Ferdinand I. plunged Roumania into mourning and all social activities were completely stopped for a year. This autumn season, however, saw the re-opening of the social life of Bucharest. The Court led the way, when the Queen gave a charming "coming out" ball for Princess Ileana. Princess Hélène (mother of the boy King) also gave a largely attended reception. The foreign Legations have followed suit, and Bucharest is very gay this season.

Valona, January 20.

A Change in the Ministry.

On the twelfth of this month the Cabinet of M. Kotso Kotta suddenly and without reason fell. The Albanian newspapers, which often use foreign expressions, have called the affairs a crisis. Actually, there was no dispute with the Chamber of Deputies, and on the 16th inst. the

HAVE you been along the Nile to Luxor or Assuan? It is a wonderful voyage by one of the Anglo-American Nile Tourist steamers. The American Express are General Agents and can reserve cabins in advance for any of the weekly sailings from Cairo.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

AN advantage of American Express Independent Tours is that you travel with everything arranged but nothing to interfere with your liberty. We suggest itineraries and quote cost of tours combining Egypt and India, without obligation.

King again charged M. Kotso Kotta with the task of reforming the Government. All the old Ministers remain except two:—Ilias Bey Vrioni (Minister for Foreign Affairs) and Chafer Ypi Bey (Minister for Public Instruction). The latter has been succeeded by Abdurrahman Dibra, formerly Minister of the Interior. The portfolio for Foreign Affairs is provisionally held by Milto Tutulani, the Finance Minister. The newspapers have announced as head of the Albanian Foreign Office Raouf Fico, formerly Albanian Minister at Angora, and now Minister at Belgrade. It is also rumoured that, if Raouf Fico is not nominated, it is because of *démarches* made by Italy. In 1923 Raouf Fico was Prefect of Durazzo, and there was then an incident with Italy, who wished to establish postal offices in Albania.

It is not definitely known why Ilias Vrioni and Chafer Ypi have been dismissed. So far as is now known, it is due to a grave difference which has always existed between them and the President of the Council. But there is talk of a divergence of opinion in connexion with the Budget for 1929-1930 to be submitted to Parliament.

Agrarian Reforms.

The question is prominent at the moment of the application of agrarian reforms. Scarcely two months ago the words, "Agrarian Reforms," were considered as synonymous with Bolshevism and Communism, so that the Government drew up a conservative programme. The first time that the question of such reforms was raised was in the answer, made by the Chamber of Deputies last December 24, to the Speech from the Throne. Since then the official organ of the Government, the *Gazeta e Ré*, has used the phrase several times.

The fact is that the ground is very badly cultivated in Albania, especially in the plains, from Scutari to Valona. In this region, which is owned by great land-owners, the cultivators are practically serfs. The plight of these labourers is absolutely pitiable, and the owner himself draws only a meagre revenue from immense stretches of country. It is a sad example of the phenomenon of riches profiting no one. Owners, cultivators, and Government alike are justified in complaining.

National Finances.

The question of the national finances is seriously occupying the Government, for in spite of official optimism, the revenues of Albania cannot exceed 20 to 24 million gold francs.

Economically the country is in a very backward state. Without doubt it is the poorest country in the world, for the soil is both bad and incompletely cultivated, the natural riches are not exploited, and industry, like roads, ports, and public buildings, is lacking. The country, although living exclusively on the products of the earth, is not capable of producing even a sufficient quantity of cereals for the nourishment of its 830,000 inhabitants. Almost every year corn has to be imported, from Australia and Canada, not to mention the flour that often comes from Marseilles. So it happens that Albania is one of the dearest countries in the world. This dearness is

equally marked in labour as in food-stuffs, fruit, eggs, meat, milk, and so on.

To repair the anomalous state of things, there has often been talk of the creation of an office of National Economy, with competence to deal with financial and agricultural questions. Such an office would study laws capable of raising the state of the country. At the moment there is a possibility of the appointment of an Italian organiser as head of the office of National Economy.

CYPRUS.

Nicosia, January 9.

Health of the Governor.

There is some improvement in the health of Sir Ronald Storrs; but, on medical advice, he is to leave for England, and will probably be absent for some weeks, after which it is hoped that he will be able to resume his duties.

The Greek Archbishop's Memorial.

As a protest to the reply to the Secretary of State to the last Greek petition, His Eminence the Greek Archbishop, supported by the Holy Synod and Greek leaders, has drawn up a fresh memorial, as Archbishop and Ethnarch—a title jealously preserved—to be submitted to the Houses of Parliament in London. This, it is said, is to be followed by one to the League of Nations, in which the aspirations of the community, as stated by their leaders, will be set forth.

The New Penal Code.

Grumbling is continued over the application of the new Code. The opposition has proceeded not so much from the provisions of the Code itself as from the dissatisfaction which has been felt from the fact that it was introduced without having been referred to, and approved by, the Cyprus Council. The Chief Justice has stated that should experience show that the provisions of the new Code be found in any respect open to objection, he will not fail to take note, with a view to the adoption of amendments.

A "Cyprus Pavilion."

A new feature will meet the view of those who will henceforth land at Larnaca in the shape of a Cyprus Pavilion—an institution established by a happy thought near the Custom House. It is to be opened on February 1, and should be found very useful. It is intended for the exhibition of Cyprus products. All who desire to exhibit samples, can do so, free of charge, and have been invited to communicate with the Commissioner of Larnaca. Advertisements can be displayed on the walls. There are spaces outside the building for stalls for the sale of goods. A Superintendent will be on the spot to give all necessary information to visitors. It is believed that this will be found a place of considerable interest and value for tourists. If so, a similar institution might well be provided at Limassol, where so many visitors land during the summer season.

Football in Cyprus.

It is satisfactory to note that there is a marked development of a spirit in favour of football, as well as athletics and games in general. Football is now very popular, and a good many matches are arranged between the different towns and clubs. There was a large gathering of teams at Nicosia lately, and good contests have taken place at Larnaca, and at Kyrenia in a field belonging to Mr. G. L. Heustoun, who has been a resident for considerably over forty years.

Cyprus Sketches.

Paintings made in the island by Mr. Keith Henderson have been on view at Nicosia, and, it is said, will be exhibited later in London.

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on January 23 at the Grosvenor Hotel, London, Mr. Edward Hurtle (President) being in the Chair.

There were also present:—Messrs. T. C. Armitage, H. V. M. Clark, Arthur T. Cloud, C. W. Hough, Brig.-Gen. F. F. Lance, Lt.-Col. S. A. Medcalf, Mr. G. H. Ruxton, Capt. the Hon. George Savile, Col. F. S. Kennedy Shaw, Mr. R. S. Summerhays, Major C. B. Toms, Mr. R. E. L. Vaughan Williams, and the Secretary, the Rev. D. B. Montefiore.

The following new members were elected:—John Crawford, 26, Charing Cross Road, London, W.C.; J. H. Crawford, Fitzroy House, Newmarket, Suffolk; Mrs. M. C. Inge, Thorpe, Tamworth; and Count Joseph Potocki, 15, Faubourg de Cracovie, Warsaw, Poland.

Capt. the Hon. George Savile was elected as Vice-President in the place of the late Mr. C. W. Laird.

THE SCULPTURE OF MR. SAVA BOTZARIS.

Not long ago an exhibition in London of caricatures and sculpture by Mr. Sava Botzaris (usually known as "Sava") was noticed in *THE NEAR EAST AND INDIA*. His caricatures, however, were never anything more than a preparation for his sculpture, and in the exhibition which has just been opened at the French Gallery, 120, Pall Mall, S.W.1, this Serbo-Greek artist shows his fuller flowering.

There is no denying the supreme cleverness of "Sava's" modellings and carvings. The caricaturist, however, is never long absent from his sculptures, with the result that we get most vivid portrayals of such distinguished peoples as Bernard Shaw, Anna May Wong, Ernest Thesiger, and so on. All this is very amusing.

But when one turns to the more serious aspect of "Sava's" work one is, rather surprisingly, not disappointed. He has some beautiful bronze heads. That of Sir Denison Ross is of particular interest here. It is a massive affair, almost implying a large, tall body underneath; but as a head it is remarkably well done, suggesting a combination of learning, cleverness, *joie de vivre*, and *bonhomie*. Mr. Botzaris is to be congratulated. His skill is extraordinary, his perception very keen. It is over his judgment that opinions will vary.

The death was reported from Cairo on January 22 of Mahmoud Pasha Soliman, father of Mohamed Pasha Mahmoud, the Egyptian Prime Minister. He was, according to *The Times*, head of one of the wealthiest and most important families in Upper Egypt and had always taken a prominent part in politics and was much revered and esteemed. In early life he had entered Government service and became a Sub-Mudir before retiring to administer his own estates. He was a member of the second Egyptian Parliament under the Khedive Tewfik Pasha, brother of the present King. Later he became Vice-President of the Legislative Council and of the General Assembly. He founded the Party of the People, of which the Liberal Constitutional Party, in the formation of which the present Prime Minister took part, is the successor.

NEAR AND MIDDLE EAST ASSOCIATION.

At a meeting of the Near and Middle East Association held on January 25 at 125, Queen's Gate, S.W.7, by kind permission of Mrs. Charles Hancock, addresses on Yugoslavia were given by Miss Durham and Sir Edward Boyle. Captain E. N. Bennett was in the Chair, and among those present were:—M. and Mme. Vesmans, Vlora Bey and Mme. Vlora, M. Nelky, Count Stanislas Los, Lieutenant-Colonel Infante, Herr von Scherpenberg, Dr. and Mme. Weiser, Herr Karl Zelleissen, Dr. and Frau Feine, Mahmoud Bey, M. and Mme. Dimitri Stancioff, Mlle. Stancioff, the Dowager Lady Boyle, Sir William Clark, Sir Thomas Arnold, Brigadier-General J. Campbell, Mrs. L. Cobham, Major Arthur Bentinck, Captain Dixon-Johnson, Mr. Roden Buxton, Mrs. de Bunsen, Mrs. Gibson Smith, Mrs. Beauchamp Tufnell, Lady Sprigge, Lady Hewitt, Mrs. Macduff, Dr. Pellizzi, Mrs. Halford Hewitt, Mr. Alex Devine, and Mr. H. W. Nevinson.

Miss Durham dealt with Serbia rather than with Yugoslavia, confining her remarks for the most part to the history of Serbia during the twelve or fifteen years preceding the outbreak of the Great War. In particular she described the activities of the "Black Hand" group and the part that it played in stimulating the Yugoslav movement among students of Slav origin in Austria-Hungary.

Referring to the fully documented Paper which Miss Durham had read, Sir Edward Boyle stated that, in spite of the darkness of the picture painted, there was no part of it that he was qualified to challenge. The fact, however, remained that, whatever the policy that Serbia had carried out, the Serbians as a whole stood for a brave and active people among whom large numbers of Englishmen could reckon many friends. He analysed the present situation in Yugoslavia, setting out the different points of view of the Serbs and the Croats. Of the different solutions proposed he was inclined to favour that which would keep the unity of the country unimpaired, but give a measure of local autonomy, slightly less than what the Croats were demanding and a little more than the Serbs had shown any disposition to yield. Any solution that divided the country into territorial units, and placed Macedonia still more effectually under Serbia could not provide a satisfactory settlement. There was no prospect, in Sir Edward Boyle's opinion, of any agreement's being reached in the time of the present generation that would convert Bulgaria into a unit of a Southern Slav Federation. The Bulgarians were too zealous for independence and too devoted to their King to allow them to fall in with any scheme that would suit the Serbs to-day.

Among the speakers who took part in the brief discussion that followed were Mr. A. Devine and Mr. H. W. Nevinson.

The first draft of officers and men of the Royal Air Force who are to man the new Empire flying boat base are reported to have arrived at Basrah.

It is reported from Mardin, Turkey, that during a raid by an Arab band from Syria Habur Oglu Esvet, leader of the band and a notorious bandit, was killed by Turkish frontier guards.

According to the *Morning Post* correspondent at Athens the Greek Government has expressed a desire that the Refugees Settlement Commission, of which Sir John Hope Simpson is Vice-President, should prolong its work beyond the spring of 1930, when its term expires, to settle agriculturists on the drained marshes of the rivers Strymon and Vardar, the Commission being on a smaller scale.

Two new Acts were signed in Belgrade on January 27 by King Alexander of Yugoslavia and the responsible Ministers, and have passed into law. The first Act, codifying the penal laws of the country, has been prepared with remarkable rapidity, and for the first time in its history the criminal law of the country has been unified. The second Act establishes the competency of the Ministerial Council and greatly increases the powers of the Premier.

The death is announced from Cairo of Shaikh Abdul Aziz Shawish, one of the old Nationalist leaders in Egypt against the influence of the British. He was appointed Assistant Professor of Arabic at Oxford, but, returning from the English University in 1906, he at once began his notorious attacks on the British. As Editor of *Al Lewa*, he carried on a regular campaign against British rule in Egypt. During the War, however, his experiences at the hands of Great Britain's enemies seem to have modified his views. In his later years, having surprisingly secured during the régime of Zaghloul the Controllorship of Elementary Education, he abandoned politics and accomplished quietly much good work.

THE PERSIA SOCIETY.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 10.

The National Congress.

In the report of the proceedings of the last day of the National Congress there were two things said, and they are worth comparing. The first was said by Mr. Gandhi, as the mover of the resolution in which was laid down the programme of work for the year. "I would beseech you," he said, "not to accept the resolution, unless every one of you in your own heart mean seriously to carry out the programme, unless you are determined to take the message of the Congress from door to door ceaselessly for the next twelve months. If you can do that, I promise that you will see before you an atmosphere totally different from the atmosphere of distrust and despondency that I see in every one of us." The last words are those to call attention to. With them may be compared a saying of Pandit Motilal Nehru's, perhaps an hour later: "This Congress has surpassed the previous sessions both in grandeur and enthusiasm."

There have been many references to Lord Sinha in the speeches made during the last fortnight, but no one has thought of reminding his audience of the message that Lord Sinha sent to Sir John Simon, while Sir John and his colleagues were still at sea. I may recall it: "Allow me to welcome you and your colleagues. Economic evils, incapable of rapid remedy, combine with a natural sensitiveness and avoidable misunderstandings to provoke hostile demonstrations from certain classes, which, I feel certain, you will appraise at their proper value. Time and patience are necessary to dispel these passing clouds. In the meantime, rest assured of co-operation from all India in your inquiries which, God willing, will result in increased good will between our respective countries."

Just as much as it was certain that no one would recall those words, so is one certain that none of those who formed Mr. Gandhi's and the Pandit's audience, unless it was Mrs. Besant, went home and pondered the striking contradiction between their words.

Mrs. Besant's Lament.

In a lament by Mrs. Besant, too long to quote in full, the work of the Congress is reviewed, and these words occur: "The Nehru Report has been still further prejudiced by Mr. Gandhi's bringing to the All-Parties' Conference a message from the President of the Congress as Chairman of the Nehru Committee adjourning the All-Parties' Conference *sine die*. Of course, I opposed this, and equally, of course, was outvoted. I am directed as a Congressman and a Conventionist to cease my political work. I decline to obey the President, and I reject the policy of civil disobedience. I am, therefore, bound in honour to dissociate myself from Congress affairs. I deny the right of the Chairman to suspend the work of the All-Parties' Conference indefinitely, without the consent of the majority of the constituent bodies, on his own authority, and thus to paralyse political work."

It is easy for Mrs. Besant to deny another's right; but does not the fact remain that the All-Parties' Conference is dead, and that the Congress has lost an adherent? Might not they all with advantage to India return and rank themselves with whoever bears Lord Sinha's banner?

The Statutory Commission.

The Statutory Commission in the meantime has been looking into the affairs of remote Assam, listening to the views of officials and others on such diverse matters as the representation of this or that interest in the Legislative Council of the future, the Hill Tracts, the depressed classes, and the police. On the last subject they were told by the Inspector-General that the police force of the Province is divided into civil and armed, the armed force consisting of five battalions posted in the hill and frontier

tracts. Justice in the hill tracts is administered according to tribal customs and traditions. There are village councils to deal with ordinary crimes, but there are nothing like the *jirgas* of the North-West Frontier. All that may have been very interesting to the Commissioners, and a relief to them after the surfeit of constitutional questions; but one does not see how the Commission could possibly form an opinion of any value on the question of the constitution and use of the police in Assam, or, if they did form one, where they could find a place for it in their report to the British Parliament.

Afghanistan.

The cables have brought us some words by Sir Denison Ross, a familiar figure in Calcutta in the times of Lord Curzon and Lord Minto. "I am frightened at the westernisation of the East," said Sir Denison, adding, "What can be done in Turkey with comparative ease can only be done in Persia cautiously, and with still greater caution in Afghanistan." The last country and its affairs had again been brought prominently into our minds; for the Government of India had been constrained to publish a *communiqué* on the subject of certain sections of the Indian Press, and their efforts "to propagate credence in the dangerous falsehood that support or encouragement is being given by the British Government or the Government of India to the Afghan rebels." The Local Governments have been directed to consider forthwith the prosecution of the principal offenders.

Indian Economic Conference.

The annual Science Congress, to which I can only refer in passing, was being held in Madras, while the twelfth session of the Indian Economic Conference was being held in Mysore. H.H. the Yuvaraja welcomed the delegates. There is more need, as Lord Sinha knew, of economic conferences in Indian than of science congresses, useful as the latter may be, and the President of this session of the Indian Economic Conference, Mr. V. G. Kale, of Poona, was not mistaken in saying that "India's immediate national future is a big economic problem." The Conference has discussed federal finance, local finance, land tenure, and the marketing of raw produce and minerals among other topics.

Meteorites.

A word of meteorites in India might be not uninteresting. The news of a fall of four comes from Secunderabad, one of them—it measures 6 by 6 by 4 inches—having been sent to the Geological Survey Office here for examination. Three villagers out in the fields say they heard a roaring noise from the sky and saw a splashing of mud. It was raining heavily. As one of the meteorites penetrated the ground to the depth of eighteen inches, there may well have been a roar and a splash. The villagers were so frightened that they did not approach the place for two days.

Sir K. V. Reddi, who has succeeded Mr. Srinavasi Sastri as agent of the Government of India in South Africa, arrived in Durban on January 23, and was officially welcomed by the Mayor.

Sir Leslie Wilson, late Governor of Bombay, has joined the Council of the East India Association; and Sir Basil Blackett, Sir Alexander Murray, and the Hon. Gertrude Kinnaird have been elected members.

The Rev. A. F. G. Wardell, a senior chaplain on the Bengal Establishment and honorary canon of Nagpur Cathedral, has been appointed to the rectory of Cottered, Herts, and hopes to be inducted on February 27—patron, the Bishop of St. Albans.

Sir John G. Cumming, who was a member of the Indian Civil Service for 32 years and from 1917 to 1920 a member of the Executive Council of the Government of Bengal, has been elected chairman of the editorial sub-committee, British and Foreign Bible Society.

The death is announced in Karachi of Mr. C. F. Dabero, a prominent resident of that town, at the age of 67 years. Mr. Dabero had filled several posts in the Government service, among them that of Assistant Commissioner in Sind, and was shipping master at Karachi from 1897 to 1917. He was a councillor of the Karachi Municipality, becoming its Vice-President in 1926.

INDIA IN PARLIAMENT.

In reply to an inquiry by Lieut.-Commander Kenworthy on January 24 regarding the reported bombing of Indian troops by an aeroplane near the Afghan frontier, Lord Winterton said that the accident referred to had unfortunately taken place and that three Indian officers and 10 Indian troopers with 16 horses, had been reported killed and 12 troopers wounded. The whole affair would be investigated, he added, and he was not in a position to make any further statement at that juncture. In reply to a supplementary question the Under-Secretary said that he understood that the aeroplane was engaged in practice.

More recent information places the deathroll at fifteen and it is understood that an official inquiry is now proceeding. So far as can be ascertained it appears that a target of whitewashed stones and earth had been prepared for bombing practice near Jamoud. A squadron of the Poona Horse, wearing the white uniform, the regulation garb for parades when British officers are not present, decided to pass over the area although they had been warned of the risk and were mistaken for the target by the bombing machine.

The 17th Queen Victoria's Own Poona Horse is one of the most famous cavalry regiments in the Indian Army. Its present designation dates only from the reorganisation scheme of 1922, but the regiment is the lineal descendant of the late 33rd Queen Victoria's Own Light Cavalry which was raised in 1820, and the 34th Prince Albert Victoria's Own Poona Horse, raised under the Command of Colonel J. A. Muirhead, was transferred from Banna to Peshawar three years ago.

Replying to a question by Rear-Admiral Sueter, Lord Winterton said that he had very little information regarding the recent evacuation of the women and children of the Diplomatic Corps from Kabul beyond what had already appeared in the Press. So far as he was aware, the total number of foreign nationals removed by aircraft was 140, of whom 50 were of British nationality, 37 of Turkish, 23 of German, 10 of French, nine of Persian, and the remainder of miscellaneous nationalities. The Government of India had been asked, however, for a report on the whole subject and the question of disclosing the type of machines used, the name of the air officer in command and the names of the pilots who performed a remarkable feat would be considered on its receipt.

Later, in reply to another question by the same hon. member, Lord Winterton said that air eight squadrons were now kept in India, of which two had been sent out during the current financial year. This increase, he added, was finally decided upon in May 1927, and the decision announced in January 1928.

THE COUNTRY LEAGUE.

The *Times of India* understands that organised efforts are being made to establish the newly-formed Country League upon a firm and permanent basis. Branches of the League have now been formed in all the major provinces, the latest being one for Bihar and Orissa, with headquarters at Patna.

A central finance committee has been elected for the purpose of controlling the disposal of the funds and the present financial strength of the League is stated to compare favourably with that of political parties of censure importance in other countries.

The same paper further learns that Mr. C. T. Allen, one of the founders of the League, will lead evidence before the Simon Commission in Calcutta on the memorandum already submitted by the League to that body. The text of the memorandum was reproduced in THE NEAR EAST AND INDIA of December 6.

Miss Sophy Ethel Mary Smith, Bath, deaconess, of the Society of St. Hilda, Lahore, India, who died in October last, left £3,979, with net personalty £3,954.

THE C. P. COUNCIL AND THE COMMISSION.

The Central Provinces legislature now enjoys the unenviable distinction of being the only provincial Legislative Council which has refused to appoint a Committee to co-operate with the Simon Commission and the Committee of the Central Legislature. In his speech at the opening session of the Council at Nagpur on January 17, Sir Montague Butler, after reviewing the constructive work of the legislature, in co-operation with the executive, in other fields, a record, he said, of which both the Council and the Government might be proud, again voiced his disappointment at the Council's attitude towards the Commission and its task.

"I confess," he continued, "I could have wished that you would have let us use them (the achievements in question) as reasons for demanding for the Province a further instalment of reforms. But I see that this is not to be, and so I shall accept the position. I told you last August that I should do so. I do not propose to put before you a motion for the appointment of a Committee to work with the Statutory Commission. Thus the case of the Province for more reforms will go unrepresented. The decision is yours, not mine. I regret it, but I shall make the best of it. At least we can agree cheerfully to differ on the subject."

When the Council reassembled the following day the President announced that notice had been given of three motions of "no confidence" in the Ministers in charge of the Transferred Departments. The Ministers having resigned, the motions lapsed and the Governor, having accepted their resignations, has again taken over charge of the Departments. It is understood that the situation has arisen through the combination of the members of the Nationalist and Congress parties against the Democratic Party of which Raghavendra Rao, one of the Ministers, is the leader.

"THE KING'S INDIAN ALLIES."

Mr. L. F. Rushbrook Williams, who has returned to India to attend the session of the Chamber of Princes at Delhi next month, delivered an interesting lecture on the eve of his departure, before the Royal Empire Society, on "The King's Indian Allies."

The Ruling Princes of India, he said, were faithful allies who had rendered great service in time of Imperial strain and peril, and were ready to render similar service in any emergency that might arise in future. They only asked that when the report of the Simon Commission came before Parliament and the country they should not be forgotten, as they were forgotten in 1919, when the British Parliament, in its generosity, made valuable concessions to legislative bodies in British India without due consideration of their bearing on the rights and interests of the States.

Sir Michael O'Dwyer, who presided, said that there could be no doubt of the immense value of the services of the Princes in the past, and in particular of the rulers of Patiala and Jind in the Mutiny. We had shown ourselves ready again and again to make concessions to agitators; but what of such loyal and whole-hearted friends? He could not, he said, believe that the time would come when the Princes would be able to raise the reproach against the British people that in any hour of difficulty they were forgotten.

Mr. James David Sifton has been appointed Acting Governor of Bihar and Orissa during the absence on leave of Sir Hugh Lansdown Stephenson, the Governor.

The President of the Bombay Chamber of Commerce, Mr. G. L. Winterbotham, has been appointed President of the Associated Chambers of Commerce of India and Ceylon for the current year, and the Upper India and Burma Chambers will each appoint a Vice-President of the Association for the same period. In accordance with precedent the forthcoming annual meeting will accordingly be held in Bombay, for the first time since 1923.

AN INDIAN TRADE MISSION.

(From a Correspondent.)

The depression in the Indian cotton manufacturing industry has directed attention to the need for the development of India's export trade in cotton goods. As a preliminary move in this direction the Government of India appointed, about twelve months ago, a special Trade Mission to visit Persia, Egypt and East and South Africa, and to report on the potentialities of those countries as markets for Indian cotton manufactures. The mission consisted of Dr. D. B. Meek, the Director-General of Commercial Intelligence, and Mr. T. Maloney, Secretary to the Bombay Cotton Mills Association, with Mr. J. P. Datia as Commercial Adviser. About five months were occupied in the investigation; and a report summarising the information obtained, and putting forward recommendations, was subsequently published in India.

Two of the recommendations made in the report are of outstanding importance. The first of these is that India should appoint three Trade Commissioners. Alexandria would be the port at which one of these Commissioners would be stationed, and he would be required to investigate the conditions—as affecting trade with India—in Egypt, the Levant, Iraq, and Persia. The second Commissioner would be at Mombassa, his territories being Kenya, Uganda, Tanganyika, and Zanzibar. The other Commissioner would be at Durban for the Union of South Africa, Portuguese East Africa, and Rhodesia.

It appears from the Mission's report that in the Levant there is a chance of developing India's trade in cotton yarn and piece-goods. In Persia and Iraq, India holds a much larger share of the trade in cotton goods than she holds in most of the other countries surveyed by the Mission. But Dr. Meek and his colleagues think that active measures will be essential if this trade is to be retained and developed. The progress which India is making in East Africa is unsatisfactory, as other countries are doing much better in the import trade. In the Union of South Africa there are said to be considerable possibilities of expanding trade with India. And, as regards Portuguese East Africa, the Mission thinks that action is necessary to stimulate Indian trade which is declining.

The second of the two recommendations referred to above is that the Indian millowners should form a powerful export selling organisation to deal with the export trade in cotton piece-goods and yarn. In the past the attention of the Indian millowners has been chiefly centred on meeting the demand of the home market. They have never made any serious organised attempt to cater for the requirements of the export trade.

The result of this attitude is that practically the only countries where Indian cotton goods have found an export market are those where there is a considerable Indian mercantile community, or where the styles of piece-goods in demand are similar to those used in India. But nowadays the Indian cotton manufacturer is acutely feeling the need for large export markets; and the question of how they can be speedily developed is of pressing importance. The Mission takes the view that the best way is to establish a controlled organisation for export marketing to take the place of the existing methods. This organisation would be a selling agency of which all the millowners would be members. All cotton goods manufactured by members for the export trade would be sold through the agency, the head office of which would be at Bombay. In the more promising of the overseas markets there would be branch offices, and in the lesser markets there would be agencies. Baghdad, Alexandria, Mombassa and Durban are mentioned as likely centres for the branch offices.

It will be interesting to see how the Mission's recommendations are received in India. The task of organising the proposed selling agency is not likely to be an easy matter; and we do not anticipate that the agency will be quickly established. The appointment of Trade Commissioners should be less difficult if the Government and the Central Legislature are convinced of the need.

INDIAN NOTES.

(Continued from page 132)

duced, contains a new clause empowering the Government to seize money sent from abroad for such purposes. The same witness further declared that he was willing, if desired, to produce documentary evidence relating to the Lilloah and other recent strikes in support of his allegations. Giving evidence a few days previously, Sir Charles Tegart, the exceptionally able Commissioner of Police in Calcutta, was even more emphatic, when questioned by Lord Strathcona concerning the same subject. A large number of labour disputes, he said, had undoubtedly been engineered by Communists, and added that Communism in India was essentially of foreign origin. Referring specifically to the Public Safety Bill, Sir Charles Tegart explained that the police had no power to deal with even avowed Communists unless they committed offences punishable under the Indian Penal Code. If their activities continued, however, he stated the time would come when it would be not only desirable but imperative to invest the police with special powers.

The Bengal Jute Trade.

At the recent meeting of the Associated Chambers of Commerce in Calcutta the Viceroy stated that the Government of India had already made considerable progress with their examination of the report of the Royal Commission on Agriculture. On Monday in his inaugural address to the Legislative Assembly he announced their decision on one of the most important of the recommendations, namely, the proposed establishment of an Agricultural Research Council. Lord Irwin referred also to the importance attached by the Commission to the need for the adoption of improved methods of marketing Indian produce, and to the useful part which Chambers of Commerce might play in this connexion. And he specially welcomed the willingness which the Chambers had expressed to accept the Commission's scheme for the formation of a Jute Commission. In this all concerned with the welfare of the trade of India will, we are sure, agree with the Viceroy. The Bengal jute industry is in the front rank of Indian industries. It is extraordinarily prosperous; and one of the chief reasons for its prosperity is that jute is a monopoly of India. But, as the Commissioners rightly say in their report, there is no guarantee that it will always remain a monopoly. Indigo was at one time in a more or less similarly fortunate position; but nevertheless it disappeared before the synthetic article. In the same way regarding jute there is the ever-present danger of the discovery of an artificial product which will undersell and supplant it. Constant watchfulness must therefore be exercised. Every possible effort ought to be made by all interested to improve the quality of the fibre, to see that it maintains its relative cheapness as compared with other fibres, to enlarge the outturn, and to perfect the methods of manufacture. Research work devoted specially to jute is thus essential; and the best way to ensure that it is undertaken is to accept the advice of the Commission and to appoint a Jute Committee. This body, like the Indian Central Cotton Committee, would watch over the interests of every branch of the trade from the field to the factory. Growers, merchants and manufacturers would all be represented on it, as would also the Agricultural Departments of the three jute-growing provinces—Bengal, Bihar and Orissa, and Assam. As suggested by the Commission the Chairman of the Council of Agricultural Research should be appointed Chairman of the Committee in order that the jute research work should be linked up with the All-India research work. The scheme is unquestionably a good one, and the Chambers are wise to support it. The great point in its favour is that it is being undertaken at a time when jute is flourishing. With indigo the remedial measures were always too late. It would be absurd to make the same mistake with jute.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

ENGLAND IN EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your review of my book "Great Britain in Egypt," your reviewer writes: "Major Polson Newman's carefully compiled story of Great Britain in Egypt, for much of the contents of which he stands indebted to others as admittedly as he does for the title."

With reference to the underlined part of this extract, I will be glad if you will please correct this mis-statement of fact. Lord Milner's book bore the title of "England in Egypt," but I can see no trace of any book bearing the same title as mine.—I am, etc.

E. W. POLSON NEWMAN.

[Our Reviewer holds to his opinion that Lord Milner's "England in Egypt" should be regarded as sufficiently a Classic to be spared the obvious echo of the title "Great Britain in Egypt."—ED.]

ITALY AND YUGOSLAVIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—THE NEAR EAST AND INDIA in its comments upon Italo-Yugoslav tension (issue of January 10) said that "the Italian case against Yugoslavia, it may be supposed, rests on the anti-Italian attitude of the people, as shown by a proneness for demonstrations and anti-Italian rioting, and on the Yugoslav Government's obvious unwillingness to acquiesce in Italy's policy towards Albania." Allow me to say that "demonstrations and anti-Italian rioting in Yugoslavia" is a phrase which came into being like a soap bubble. The Italian Press and Italian news-agencies have blown so much into the bubble that no one any longer asks whether there is anything concrete in it. Could foreign editors see with own eyes those "demonstrations" and "rioting" they would be sorry for the space lost on such veritable soap bubbles.

As regards anti-Yugoslav demonstrations in Yugoslavia the simple truth is that here no demonstration ever took place except as an echo to anti-Yugoslav demonstrations in Italy. But Italian papers and news agencies never report the unprovoked anti-Yugoslav demonstrations in Italy. On the other hand, Yugoslav agencies have not the influence, the connexions, the ability nor the means, in which Italian propaganda excels, for dissemination of news. Yugoslavia being a much smaller State than Italy, torn with domestic strife, its Government is sincerely preventing everything which would give offence to its aggressive neighbour. In Italy the situation is quite the opposite. The anti-Yugoslav demonstrations in Italy are always organised by Fascists, having thus the semi-official stamp. And there is also this difference between the demonstrations in Italy and those in Yugoslavia. In Italy anti-Yugoslav demonstrations invariably end with the demolishing or burning of Yugoslav reading-rooms, newspaper offices, ships, cooperatives, etc., with assaults upon Yugoslav Consuls and Consulates, with beating and drastic punishments of Yugoslavs, both of Italian and Yugoslav citizenship; whereas anti-Italian demonstrations in Yugoslavia end with a few broken windows in Italian stores and the severe punishment of the demonstrators who, unlike the Government's Fascists in Italy, are mostly students and mere boys.

There is a saying in Dalmatia that the most privileged man in the world is an Italian in Dalmatia: he has no obligations towards the State, and Signor Mussolini is ever ready and capable of putting all Italy and half the world in motion on his account.

The Yugoslav case against Italy, on the other hand, is much more serious and real. Albania is not the only issue. In Italy there are at least ten organisations preaching and propagating the conquest of Dalmatia. *L'Adriatico Nostro* ("Our Adriatic"), *Volontà d'Italia* ("The Will of

Italy"), *Littorio Dalmato* ("Dalmatian Lictor") and several other publications deal with no other subjects than the conquest of the "other shore" of the Adriatic. Recently there appeared one more review, *La Terra Adriatica*, which sets as its only aim the "salvation of Dalmatia." Even in Genoa there is a paper styling itself *Popolo della Dalmazia* although 99.50 per cent. of the Dalmatian people is Yugoslav. The Association of Italian Volunteers arranges numerous "blessings" of the Dalmatian flag and organises "committees of Dalmatian action" throughout Italy. Of all this agitation in Italy for the conquest of Dalmatia, favoured and supported by official circles, the big Italian Press makes no mention, lest Europe should learn all and very good reasons for the anti-Italian attitude of Yugoslav people, and Croatian people in particular.

On the tenth anniversary of the "Italian victory" hundreds of thousands of leaflets were distributed throughout Italy containing the "battle song of Italian Volunteers for the conquest of Spalato." Only a few days ago the twelve remaining Yugoslav newspapers in Italy were ordered to cease publication. From now on 500,000 Yugoslavs in Italy have not one single publication in their language. All Yugoslav schools in Italy have long since been closed by Government decree, or demolished by Fascists. It is forbidden even to teach children religion in their mother tongue. All Yugoslavs of Italian citizenship daily receive "invitations" to change their family names. Tens of thousands have had to submit. These are not soap bubbles, but a very ugly reality. Yugoslav people cannot help feeling towards Italy in regard to their unfortunate brethren under her rule just as any other civilised people would feel in similar circumstances. Still Signor Mussolini is exacting from Yugoslavia "sincere friendship" and "heartly co-operation"; and Italian news-agencies continue to hide from the world anti-Yugoslav doings in Italy and accuse Yugoslav people of groundless anti-Italian feelings.

All these facts Europe should know at least for the sake of her own peace.—I am, etc.,

I. F. L. VUKITCH.

Split, Yugoslavia, January 22.

ARABIC SCHOLARSHIP.

Towards the end of the year, as a result of correspondence between Dr. J. L. Magnes, Chancellor of the Hebrew University of Jerusalem, and Sir Mathew Nathan, President of the Society in England known as the Friends of the Hebrew University, a Scholarship in Arabic, of which the annual value is £100, has been established by the Society at the School of Oriental Studies in Jerusalem. It is to be called the Plumer Scholarship, as a testimony of the esteem in which Lord Plumer was held as High Commissioner of Palestine.

The first recipient of the Scholarship is to be Dr. Walter Fischel, Doctor of Philosophy, who has been working at the School since the summer term 1926 on a concordance of early Arabic poetry, and on a critical edition of the work of Baldhuri, an historian of the third century of the Hijra.

CYPRUS.

Dr. A. Zemenides, the founder of the London Cyprus Brotherhood, was invited by the Selborne Society to lecture on his native country on January 21, at the Central Lectures, Civil Service Commission, Burlington Gardens. The speaker described briefly the history of the Island from earliest times to the present, and gave a sketch of the situation and importance of the Island. He then spoke of the inhabitants of Cyprus, their lives and character, their occupations, religions, costumes and interrelationship. He made special mention of the scenery and climate of Cyprus, and he explained the reason why so many people now visit the birthplace of Venus. At the end of his interesting lecture he mentioned the main industries of the Island and the prospects of their development, and in conclusion he said that the economic future of Cyprus depended upon the development of its industries, the increase in the amount of land under cultivation, the establishment of irrigation works, and, last but not least, reforestation.

Mr. Charles Crane, a former United States Minister to China, and his party, who were recently attacked by Ajmani raiders, left Basrah on January 26 for Muscat, where they are spending a week before proceeding to India.

THE WEEK AT HOME

London, Tuesday Morning.

The Political Campaign.

The political campaign for the General Election in the early summer has now started in earnest. Mr. Baldwin has been speaking in the North upon the virtues of De-Rating and of Safeguarding and upon the vices of Nationalisation; Mr. Ramsay MacDonald has reversed the attributes of these expedients; and Sir Herbert Samuel has been—doing whatever the Liberals think most fit at a time of despair.

Talking about the Liberals, I see that they have issued a memorandum to the Jewish community stating that all Jews ought to vote Liberal. This seems rather to have upset certain Israelite supporters of Disraeli and of the Balfour Declaration, and it looks as though Sir Herbert had blundered rather badly in sanctioning such a suggestion to his race.

Generally speaking, however, one can record but little excitement so far. Both Conservatives and Labour profess confidence, how sincerely it is impossible to fathom. Mr. MacDonald says that it is certain that the Conservatives will lose 100 seats, and they need lose only 50 more to be out of office. Conservatives, on the other hand, are by no means prepared to take it for granted that the industrial districts of the North of England will vote solidly anti-Government. As yet, it is true, they have not very much to show the electorate, but there is still the Budget to come, although the general impression is that Mr. Churchill will not be able to reduce income-tax.

For one who does not travel about the country it is impossible to have any fixed or even convinced opinion upon the probable result of the election. But, if my opinion is worth anything at all, I should say that the majority of the people in the country believe that Mr. Baldwin is improving, and that the best thing would be for the Conservatives to come back well chastened, that is, with a small majority, and for a good deal of unpopular material in the Cabinet to be thrown away by the Prime Minister.

Memorial to Mrs. Pankhurst.

Few things have changed within the last two decades as men's attitude towards women, that is, towards the social and political position of women, in this country. What ordinary man, for example, could be found to defend the antics of the Suffragettes in those incredible days

before the War? For the "wild women" seemed to put themselves beyond the pale altogether.

And now—the Prime Minister is to unveil a Memorial to Mrs. Pankhurst! Nor is this so illogical as it seems at first sight. For those very women who were prepared to go almost to any length to obtain what is in fact a practically worthless thing, viz., the vote, threw their whole energies, when the War came, to help that very Government which had been denying them their "rights." During the War they proved completely that, if a vote were worth anything, they were worthy of it. And this last extension of the franchise is but a logical sequence of the original granting.

There is nothing inconsistent in the point of view that the Suffragettes could justly be denied their demands, yet that the young women of to-day should enjoy the right to vote. For the whole position of women in our national life has changed. To-day they are everywhere. There are but few professions or trades in which a certain intelligence is needed where they are not to be found. For those who believe in the vote, therefore, no adequate argument against endowing them with political privileges exists. That is partly why the Prime Minister, a man of most liberal instincts, is going to unveil a statue in Westminster in memory of the woman who, granted the penetration of industrial society by women, made universal suffrage inevitable.

The Corinthians.

The Corinthians are now out of the Cup: which means that the Cup has now lost much of its interest. I do not know how many of the 42,000 people who watched the game against West Ham at Upton Park on Saturday were supporters of the winning team, but even they, I should imagine, would be the first to admit that their side had all the luck—the more honest of them, indeed, might say that they were lucky to win at all.

Corinth, after being three goals down (the third of which would never have been allowed in amateur football) played with magnificent heroism, despite the fact that one of their most dangerous forwards, C. T. Ashton, was lame and practically useless. It was during this half hour or so that the professionals did things which disgusted the non-partisan. It is not sporting, for instance, for the back when he is beaten by the outside man, to stop the centre with his hands, so that the defence may get back; it is not sporting to take an unconscionable time over the behind-kicks; it is not sporting to kick out unnecessarily.

How different things are at Cricket! There the professional plays in exactly the same way as the amateur at all times. As I watched the tactics of West Ham's right back, for instance, on Saturday, I could not help thinking of a certain cricket match before the War between Kent and Middlesex, when Middlesex, with many runs to spare, had only a few minutes to get the last Kent man out; yet Colin Blythe came running all the way to the wickets. That is sport; this other affair is a business. I came away depressed, for although by no means all the professional side indulged in dilatory or other questionable tactics, it was the skill of their side alone which one could unreservedly admire.

Hufton, for instance, the West Ham goalkeeper, proved himself a great saver of goals: but he did not play a great game. The man who really won the match was Ruffell, the winners' outside left.

Open-Air Folk Museums.

A most attractive suggestion was put forward a few days ago by Sir Henry A. Muir to the Royal Society of Arts in London. He was speaking of the activity to be seen in national museums, and compared it with the stagnation of local museums. What he advocated was museums to illustrate the life of the English people, museums, that is, of "contemporary by-gones."

It is an admirable idea. For it would stimulate interest in the whole story of England's life; and to historians, of course, such sources as these museums would provide would be invaluable. In a few districts some sort of effort has been made—at King's Lynn and Thetford, for

Pindi and Murree

instance, old houses have been secured and turned into the sort of "museum" which Sir Henry advocated.

But it will soon be too late to create these "folk museums," in which should be seen not only the usual objects illustrating the art, industry, and customs of the people, but also their actual houses, and, in open spaces, plays and folk-dances expressive of the region.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

January 31, 1929, (New Style).

January 18, 1929 (Old Style).

Shaaban 19, 1347 A.H., of the Muslim Calendar.

Shebat 20, 5689, of the Jewish Calendar.

Lady Demetriadi left London on January 24 for Egypt, joining the s.s. Razmak at Marseilles.

Field-Marshal Viscount Allenby has returned to 24, Wetherby Gardens from Egypt.

Lord and Lady Melchett left London on January 26 for the South of France for a short visit.

Lady (Arthur) Pearson will return to London at the end of March from Egypt.

Sir Arnold Lawson has returned from Egypt and is in residence at 12, Harley Street.

Princess Antoine Bibesco left London last week for the Continent.

The Rev. R. J. Hodges, Minister of Marshland, St. James' has been appointed to the Wardenship of the Bishop Cotton School, Bangalore.

Lady Humphrys, who arrived in London last week from Kabul, had the honour of being received by the Queen at Buckingham Palace on January 23.

On February 1 Professor J. L. Myres will give an address at the Royal Institution on "Geometrical Art in South-East Europe and Western Asia."

Sir Leslie Hudson, who is returning to Bombay, left London on January 24 for Marseilles to join the s.s. Razmak.

Field-Marshal Lord Plumer was, on January 25, elected President of the Society for Yorkshiremen in London and the Yorkshire Society.

Mr. John Pilkington, a nephew of Lord Lloyd, is joining the staff of the Residency, Cairo, as Hon. Attaché in the place of Lieut. Cecil Harcourt Smith, late R.N.

Sir Gilbert Clayton, High Commissioner designate for Iraq, and Lady Clayton, accompanied by Captain A. P. N. Thorowgood, left London on January 30 for Baghdad, via Constantinople, Syria, and Palestine.

Sir Denison Ross, after a few days' visit to Palestine, during which he inspected the Hebrew University at Jerusalem, left Tiberias on January 22 for Damascus on his way to Baghdad.

The "Lion" Ball, arranged by the British Empire Union will take place at the May Fair Hotel, on February 5. The Marchioness of Linlithgow will be hostess. A feature of the ball will be the "Flowers of the Empire" Pageant, in which a number of ladies will represent Great Britain and the Dominions. These will include Miss Diana York (England), Viscountess Dunedin (India), and the Marchioness of Queensberry (Egypt). Tickets and particulars can be obtained from the British Empire Union, 180, Piccadilly, W.

Lord and Lady Forteviot and the Hon. Irene Dewar left London on January 24 to join the P. and O. s.s. Razmak at Marseilles for Port Said. The Hon. Margaret Sinclair left to join the same vessel.

The Prince of Wales at St. James's Palace on January 24, received on behalf of the King, Brigadier-General Sir Gilbert Clayton, upon his appointment as High Commissioner, Iraq.

It is stated by the *Daily Telegraph* that the Egyptian Government intends to ask Sir Murdoch Macdonald, formerly Adviser and Under-Secretary for Public Works, to supervise the impending big irrigation projects.

The Faculty Board of Archaeology and Anthropology at Cambridge, has co-opted Mr. J. N. Wordie (St. John's) and Mr. R. N. Sayce members of the board in Class E until the end of this year.

Our Constantinople Correspondent writes, under date January 23: "Queen Marie of Roumania, accompanied by Princess Ileana, has arrived in Constantinople on a short visit. She is staying at Roumeli Hissar, one of the most picturesque sites on the Bosphorus."

At a meeting of the Senate of the London University on January 23, the title of "Reader in Arabic History and Literature in the University" was conferred on Mr. H. A. R. Gibb, M.A., in respect of the post held by him at the School of Oriental Studies.

Mr. F. Colin Burstall, of Liverpool, who was nominated by the British Government in 1925 for a term of service with the Egyptian Government, has recently been promoted to the position of Deputy Inspector-General of Egyptian State Telegraphs and Telephones.

Mr. Geoffrey Wallinger, of the Cairo Residency staff, has been appointed to Vienna as Third Secretary. He is being succeeded in Cairo by Mr. G. R. A. Herbert of the Foreign Office, who recently arrived in Egypt from London.

Following a week of most severe weather there was a heavy fall of snow in Jerusalem on January 23.

The British High Commissioner and Lady Lloyd left Cairo on January 23 for the Sudan, where they hope to ascend the Nile as far as Rejaf, the limit of navigability of the Nile from Khartoum upwards. Sir John Maffey, the Governor-General of the Sudan, met them at Wadi Halfa.

Book Reviews

MECCA AND MADINA.

"THE HOLY CITIES OF ARABIA." By Eldon Rutter. Two Vols. (London: G. P. Putnam's. One guinea each volume.)

Mr. Eldon Rutter is a young Englishman who, having trained himself thoroughly not only in the Arabic language but also in Islamic practices, resolved, in 1925, to set out for Egypt to accomplish the *Hajj*. This he most successfully achieved, and his resultant book is one both of immediate and of permanent interest. Its immediate interest lies in the fact that he saw and lived in the Holy Cities of Mecca and Madina in, so to speak, a transition stage—the Wahhabis having but recently dispossessed the Sharifians and come into that which they have since so strikingly made their own; its permanent interest lies in the fact that it is a contribution both to our knowledge of Arabia and to literature.

There is about this book of Mr. Rutter an artlessness, a simplicity, which grows upon one. This naïveté at first sight may make really interesting things appear to be padding or trivial; but actually the total impression produced by his account is such that without question he takes his place with other Englishmen who have written of the Holy Cities of the Hijaz, such as Burton or Wavell, with, also, other Europeans, such as Burckhardt and Snouck Hurgronje. On a few small points of fact he differs from previous European observers of Mecca, but in the main his description of the various features of the town of Mecca and of its life is rather an amplification than a modification of existing knowledge. Perhaps the chief difference between his experience and that of his distinguished predecessors concerns the morals of the Meccan. These, which have generally been thought to be notorious, he is convinced are not so bad; nor, in his opinion, was the decorum of the place wholly to be accounted for by the presence of the Wahhabis. This is by no means an unimportant point, and would appear to argue a welcome difference in Turkish and Arab overlordship of the Holy Places of Islam.

Mr. Rutter, who disguised himself as a Syrian ("Hajj Ahmed," he was called) travelled to the Hijaz by an original route. He went from Suez by sea to Massowa, where he picked up two *mutawwifs* (pilgrim guides) and thence, in the summer of 1925, across the stifling Red Sea to Al Gahm, in the Yaman, or, rather, in Asir. Thence to Birk, Qunfida, Lith, and Wadi Yalamlam; and thence, having assumed the *ihram*, without difficulty he rode into the Holy City itself, "the strangest of all the cities of the world," as he elsewhere calls Mecca.

Of Mecca itself, of its contents, rites and neighbouring places, such as Arafat (singular of Arafat, which signifies the whole region, plain and hill, where the pilgrims encamp) the description is excellent, for it is living, personal, human. Considerable learning sits lightly on Mr. Rutter, who nevertheless manifests in myriad ways his intimate acquaintance with the history, the traditions, the conversations, and the practices of Muslims. In a chapter on Mina, for example, he nicely displays his ear and his imagination:—

Suddenly all over the dark valley, faintly tinkling with the tiny sound of human activities and human voices, there rose the long-drawn chanting of the *adân*. It was the hour of *el 'eshâ*. Near to

where we sat a Bokhâran began to chant—making havoc of the Arabic words.

"Low ilawhow ilow low," he cried (for "Lâ ilâha ill Ollawh"—There is no god but The God).

"Listen, Hâjj Ahmad!" said Amm Shafig, with a pitying grin. "That one is of the people of Bokhâra."

I softly imitated the words of that stolid man, which seemed to flash into reality the scene, obscure till now, of Gutayba bin Muslim and his Arab hordes fighting their way into the city of Bokhâra in 88 A.H.

In Mecca, by the way, he was recognised by a native of Aleppo, who had known him in Egypt, as an Englishman. This fact, however, made no difference to King Ibn Saoud and his Wahhabis, who appeared unquestionably to have accepted him as a good Muslim. Not the fear of recognition, indeed, but the fanaticism of the Meccans it was which caused the author something more than anxiety. He was lying ill at the time in Mecca. Stricken with fever, he found none to befriend him; his *mutawwif*, rather, was waiting for his death, so that he might steal his belongings. But of a sudden the inspiration came to the Englishman (who realised that in the world of men he was alone) to repeat "The Throne Verse" from the Quran ("God! There is no god save He. The Living; the Self-existing. Slumber overcometh him not, nor sleep. Whatsoever existeth in the wide heavens and in the earth belongs to him. . . ."). The effect of the repetition was magical. He had unlocked the door of the Muslim's heart: he had found "the passport to the innermost confines of the world of Islam." This account of his fever in the closely-shuttered Meccan room is incomparably the most dramatic passage in the book.

His condensed impression of Mecca, which he saw both in and out of the Pilgrimage season, is worth setting down:—

Life in Mekka seemed to me, sometimes, attractive; and at other times horrible. The quietness and simplicity of life in the desert town, and the freedom of inquisition which characterises its inhabitants in their dealings with the stranger, were grateful. On the other hand, the absorption of all classes in matters of profit and loss, and their lack of precision in discussing any useful matter, not excepting their religion, created an atmosphere of discomfort and hopelessness. . . . Sometimes life in Mekka seemed to take on the strangeness of insanity. Mentally comparing the manners of many of my companions with those of the dwellers in more fortunate countries, I found them repulsive. Sometimes I have felt, when they joked together, that laughter like theirs belonged within the walls of a mad-house, and that the counterpart of their grimacing faces and starting eyes could only be seen through the aperture in the door of a padded cell. . . .

Will the Meccans, whose one crop is the pilgrims, ever change?

The author provides an admirable description of Taif, the dream city of the Hijaz, as it lay still under the spoiling hand of the Wahhabis. He is not concerned to point morals nor to adorn tales regarding politics, and frankly gives praise and blame alike to the present Guardians of the Holy Places. This utter lack of preconception or of prejudice makes his account of conditions in the Hijaz, of course, all the more valuable.

The return journey from Taif to Mecca was made by way of Jabal Kara, through most remarkable scenery. Mr. Rutter does not often indulge in geographical notes, but his account of this great mountain-wall we fain would quote—but must forbear. Neither in the Alps, he says, nor in the ranked volcanoes of Java; had he seen such grim and monstrous majesty as here met his view.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

His high level of writing does not fail Mr. Rutter when he comes to Madina, where he spent part of the pilgrimage month, Julhijja. A few days later, having been a little more than twelve months in the Hijaz, he journeyed to Yanbu, and thence to Egypt. A most notable experience was at an end, a most difficult ambition accomplished.

As we have said, Mr. Rutter's two volumes fall naturally into place beside their compeers on the Holy Places of Islam. We should not omit to say, however, that the author has been most worthily served by his publishers, Messrs. Putnam, who have seen to it that binding, printing, and paper alike do justice to the unusual text.

TWO INDIAN NOVELS.

"*THE SWORD AND THE SPIRIT.*" By Beatrice Sheepshanks. (London: Ernest Benn, Ltd. 7s. 6d. net.)

"*ON TRUST.*" By E. W. Savi. (London: Hurst and Blackett, Ltd. 7s. 6d. net.)

It is to be hoped that it is only a coincidence that two authors, writing novels with an Indian setting, should decide to make the local Commissioner one of the few unsatisfactory people in their books. Mr. Savi, who is at pains to leave his worst characters with a halo round them, and allows the villain of the piece to become a shining light in the Salvation Army, refuses to lift the stigma of mediocrity from the Commissioner McWart, or to mitigate the unutterableness of Mrs. McWart. In "On Trust," however, this does not matter. The reader is introduced to a hill station, and is concerned only with the doings of a small coterie. Their affairs are well depicted, and the *leit-motif* holds its interest to the end. Hilary Sinclair goes out to India to marry the man to whom she has been engaged for five years. He fails her on her arrival, and some one else steps into his shoes with a little "on trust" on both sides. The experiment turns out a success, surmounting even the obstacle of the return of a lunatic wife supposed to be dead.

"The Sword and the Spirit" stands on a very different plane. Here is a conscientious and well-informed attempt to interpret the India of to-day, without burking even the shooting at Amritsar (under another name), for which unfortunately the shortcomings of the Commissioner are mainly responsible. The incidents in the book, we are told, are founded on fact, and a perusal confirms the statement. Mrs. Stirling has been left a young widow; she has no desire to leave India, but is dissatisfied with the artificiality of Calcutta, and selects Andhari, where she can stay with a friend, as a suitable spot for seeing something of *mofussil* life at close quarters. All those who have to live there hate it, if only because nothing ever happens at Andhari. Mrs. Stirling, however, sees it with other eyes, and the town provides her with the very setting that she needs to gain an understanding of the Indian mind. The latter is knowledgeably portrayed, and there are many striking passages in the book that are accurate descriptions of the India which not all British residents in the country contrive to probe. Particularly admirable is the interview between the "Educational" member of the Andhari white community and the Bhond chief in his own stronghold, who at the eleventh hour is turned back from the warpath on which he had already set out. For anyone interested in India, this is eminently a book to read, for it is both absorbing and illuminating.

A ROUMANIAN ANNIVERSARY.

On January 24, 1859 (Old Style), Alexander Cuza, who had already been elected Prince of Moldavia on January 5 (January 17—New Style) was elected Prince of Wallachia, and the union of the two Roumanian principalities was accomplished. With the adoption of the new calendar in Roumania the tendency has been to observe the old style date as the anniversary for purposes of commemoration, and this year the seventieth anniversary of the foundation of modern Roumania would in ordinary circumstances have been celebrated on January 24. In view of the preoccupation of the new Government it was decided to postpone official celebrations until a later date, and these have now been fixed for May 10, Independence Day.

NOTES AND NEWS

170, Strand, London, W.C.2.
Tuesday Morning.

The Roumanian Loan.

Loan negotiations are always veiled in mystery, but there has perhaps been more than the usual amount of uncertainty about those in Paris for a Roumanian loan, owing to messages forthcoming from the Near East in the last few weeks. Thus a report from a Balkan country other than Roumania stated categorically that after all recourse would be had to the League of Nations, while a Bucharest message, dated last Saturday, denied the conclusion of a loan. As a matter of fact the inferential suggestion of a hitch in the negotiations conveyed in this last report was correct, but happily a way out of the difficulty was found, and I am able to state that the agreement is being signed this week. There are, of course, minor points to arrange, as is invariably the case with these loans. In the Bulgarian and Greek loans Great Britain has played a leading part, but it is understood that the section of the Roumanian loan which will be issued in this country by Lazard Bros. and Co. and Hambros Bank will be relatively small as the greater part of the issue is to be made in France. This development will occasion no surprise, for France's relations with Roumania are particularly intimate, and it is only natural that France should seize the opportunity of cementing a political by an economic entente. As I have already pointed out the loan is mainly required for the stabilisation of the leu and for a large programme of railway construction, and it is unfortunate from our point of view that this country will not be responsible for a larger part of the loan as it may be taken for granted that if most of the loan is to be raised in France our friends across the Channel are certain to obtain a very large part of the orders for railway material. When the prospectus makes its appearance here I shall hope to read that provision has been made for the allocation to this country of a reasonable share of the orders that will be going.

A Yugoslav Loan?

Besides the Roumanian loan, another Near Eastern issue is on the tapis. Following the establishment of the new régime in Yugoslavia it is reported that the negotiations for a Yugoslav loan, which were broken off in the spring, when they appeared to be on the verge of con-

clusion, on account of adverse political developments, have been resumed in Paris. If so it is rather a premature move, for the Dictatorship has been in existence for too short a time for it to be possible to form definite conclusions as to the prospects of more settled conditions, and I am sure it would be out of the question to look for any rapid development from the pourparlers. If the uncertainties of the political situation are resolved in the next few months and it becomes quite evident that the differences between Serbs and Croats are in process of being composed, then the position with regard to a loan will be very different from what it is at the moment. The conclusion of a loan now, it may be assumed, could only be on terms which would be an insurance against eventualities. In a few months' time, given stable conditions, Yugoslavia will be able to raise a loan at a rate which will reflect her real position and her potentialities.

Ionian Bank.

Even banks which, from the matter-of-fact way in which they face and overcome political and commercial vicissitudes, have come to be regarded as something apart from the common run of human institutions, have to bow the knee on occasions to plagues such as the 'flu, which from time to time afflict us. Last week's meeting of the Ionian Bank was a reminder of this unalterable fact, for it should have been held at the end of the year but had to be adjourned because of the effects of the serious outbreak of dengue fever in Greece in delaying the accounts from the branches. The recent decision of the bank to withdraw from Constantinople invested the meeting with special interest, as it was naturally concluded that Sir John Stavridi, the Chairman, would have something to say as to the reasons which had actuated the directors in deciding to take this step. He explained the position briefly and sufficiently. When the bank opened in 1922 by taking over the assets of the Guaranty Trust Company of New York there was a prosperous Greek community of nearly half a million, but most of the Greeks left the country for good after the Smyrna disaster. Subsequent developments can be summed up in the statement that foreign enterprises in Turkey have been subjected to restrictions and heavy taxation. Sir John Stavridi explained that the bank remained at Constantinople for several years in the hope that more auspicious circumstances would arise, but conditions did not improve and the directors came to the conclusion that they would not be justified in remaining in an overbanked and not too prosperous market.

Developments in Greece.

Sir John Stavridi dealt in detail with recent development in Greece, the bank's chief sphere of activity where

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. MITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928.

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitza, Gorna-Orehovitzza, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

the improvement in the outlook promises to provide ample compensation for the curtailment of the institution's activities in Turkey. As he justly pointed out, the past year has been a memorable one for the country. It has seen the stabilisation of the currency, for which purpose the Six Per Cent. Second Refugee Loan was issued a year ago at 91 and met with a warm reception on the part of the public, and in July the return to power of M. Venizelos. The measures taken under the new régime have been such as to give rise to considerable confidence in the country's future. It has been made abundantly clear that the Government's sole pre-occupation is reconstruction, and that every possible avenue will be explored with a view to the fullest utilisation of the country's undoubted resources. In one respect only has there been an injudicious step—the proposal to reduce the interest on the internal loan—and while that was quickly corrected, it had its effect, in my opinion, in the poor response to the Six Per Cent. Public Works Loan which was issued last month at 89. Sir John Stavridi expressed the view that when the nature of this loan is realised it will take its place on the same footing as other Greek loans. It may be mentioned *en passant* that the Greek Government has just made an agreement for a further loan for roads and drainage works with an American group, the amount being £10,800,000 at six per cent. It is reported that the first part of the loan will not be issued until eighteen months after the ratification of the agreement, an advance being made to the Government in the meantime. The delay in issuing the loan has the obvious advantage that, if developments in Greece in the meantime are favourable, it will be possible to carry out the transaction on better terms than would otherwise be the case.

Lancashire Cotton Corporation.

It is probably not too much to say that the most serious problem in regard to our depressed industries is in connexion with the cotton trade, not merely because of the enormous importance of the Lancashire industry in our export trade in normal times, but because it has now to contend with special circumstances in the overseas market. There has been a great development in the production of cotton goods by our competitors who are able, owing to local conditions, to undersell British products in markets which were formerly almost entirely our own. The depression which has existed since 1918 has inevitably had a most serious effect on the finances of the cotton mills, which are in very many cases overburdened with what may briefly be described as deadweight charges, and are unable to reduce prices to an extent which will enable them to compete overseas. The fundamental condition for recovery is obviously amalgamation. The recent registration of the Lancashire Cotton Corporation as a result of the efforts of the Cotton Yarn Association, which has long been advocating a policy of amalgamation, is an event which holds out great hopes at long last for the depressed industry. It is anticipated that by the end of the year the Corporation will acquire seven to eight million spindles and a large number of looms, and the scheme briefly is to free the mills spinning American cotton from the deadweight of fixed interest charges. The Corporation is to amalgamate companies by exchanging its own stocks and shares for the present creditors' balances and shareholders' certificates. Every effort will be made to avoid hardship to any of the interests concerned, and uncalled capital of the amalgamating companies will be called up over a long period. The effect on the mills concerned will be, it is hoped, that producing costs will be reduced, and that it will then be possible to compete on more equitable terms in the export markets.

The Bengal and North Western Railway Contract.

At the meeting of the Bengal and North Western Railway Company, a report of which was given in these columns last week, an important point was raised by Mr. Brannan with regard to the company's contract with the Secretary of State for India which was made forty-six

years ago. It is possible for the railway to be taken over by the Government of India in 1932, and the contract provides that when the company is taken over it shall receive twenty-five times the average net earnings for the five years immediately preceding December 31, 1912. At the meeting a year ago the chairman stated that this would mean about two hundred per cent. Mr. Brannan contended that this seemed rather inadequate, and expressed the view that taking into consideration the prospects of the company, its earning power, and the reserve fund which it has built up, the value of the dividend alone should be three hundred per cent. He went on to suggest that the contract was out of date, and asked if the directors could not approach the Secretary of State. "It is British capital," he pointed out, "that has gone into India, which has been for the benefit of India, and the risk has been to the British investor. Now he is going to pay away a valuable railway to the Secretary of State, but what is he going to give us for that precious railway?" The Chairman admitted that there was a considerable amount of truth in Mr. Brannan's statements, but pointed out that a contract was a contract and could not be departed from, and he gave an instance of the acquisition of another railway under a contract for a small sum. The question of this contract is obviously of wide application, and in view of the position it certainly seems desirable to see if it cannot be modified so as to bring the payment more into line with the facts.

Motors and Railways in India.

Another matter of special interest was brought forward at the meeting by Mr. Cunningham, who asked whether the railway had experienced any trouble from motor competition. This question, which is one of universal incidence is one to which I have referred from time to time in these columns. As we know, the motor has shown itself a very serious rival to the railways, not merely in countries where the iron tracks have not been extensively developed, but also in countries like Great Britain, which are covered by a network of lines. As the motor is only at the beginning of its utilisation as a means of communication, it is obviously impossible as yet to envisage the ultimate effects of its competition on railways generally. To return, however, to the particular case in question, it appears that while there is a tendency for motor 'bus competition, it has not affected the company so seriously as other railways in India. The Chairman pointed out that the roads in India are not so good, and are considerably cut up by rivers, which makes motor transport rather difficult to maintain throughout the year. He indicated that it is possible that the company may put on some special coaches or self-contained vehicles specially to compete with that kind of traffic.

The Qattara Power Scheme.

In last week's issue of THE NEAR EAST AND INDIA was published a short article on the proposal to utilise the Qattara Depression in the Libyan Desert as a means for generating hydro-electric power by admitting the sea into the Depression. In the course of a lecture delivered a few weeks ago to the Cairo Scientific Society, Dr. John Ball, who is responsible for the further examination of the scheme, gave some interesting details which amplify the information given in last week's issue. The following extracts are taken from a report in the *Egyptian Gazette*.

Triangulation surveys in the northern part of the Libyan Desert, that is to say, an area about one and a half times greater than that of the whole of the land under cultivation in the Delta, between Cairo and Siwa, have recently revealed the fact that a tract comprising some 18,000 square kilometres of the desert lies below sea-level. The perimeter of the Depression at its sea-level contour measures over 1,100 kilometres in length, and approaches to within 56 kilometres of the Mediterranean coast and 210 kilometres of Cairo. Half the area lies more than 50 metres below the sea; the lowest point yet found is 134 metres below the level of the Mediterranean. If we could stand the Great Pyramid on this deepest part of the Depression, its top would just reach to the sea-level. We do not

much of the floor of the depression might just as well be above sea-level as below it, for all you can see. It is only where accurate levelling observations are made, either by triangulation or otherwise, that the fact of the ground being below sea-level can be proved.

This dreary waste may, in consequence of its low level, ultimately prove to be a most valuable asset to Egypt. Let us imagine the great hollow filled with sea-water up to a level 50 metres below that of the Mediterranean. The surface of the lake so formed would have an area of at least 9,000 square kilometres, an area equal to more than two-thirds of that occupied by the cultivated lands of the Delta, and considerably larger than the area under cotton in the whole of Egypt, and the evaporation from this lake, at the rate of 4 millimetres a day, would amount to 36 million tons daily, that is to say, sea-water could be passed continuously into the lake at the rate of 36 million tons a day, with a total fall of 50 metres, without altering the level of the lake-surface. Here, then, is a possible great source of hydro-electric power. A very simple calculation shows that 36 million tons a day falling through a vertical height of 50 metres corresponds to the continuous development of 270,000 horse-power. Of course, some of this energy would have to be wasted in friction in the channels conveying the water and by various losses in the means employed for rendering the remaining energy utilisable in Lower Egypt. But it is estimated that by passing the water through turbines placed within the depression, employing these turbines to drive electric generators, transmitting the current to suitable central stations in Lower Egypt, a continuous effective output of some 160,000 horse-power would be rendered utilisable.

yet know the exact cubic content of the Depression, because we have not yet completely contoured its floor; but at the most modest estimate it exceeds 900 cubic kilometres. If we could toss a third of a million Great Pyramids into it, or if we could turn the whole Nile into it continuously for a dozen years, we should not fill it to sea-level.

The Qattara Depression.

The discovery of the Qattara Depression is a direct outcome of the special attention which has been given to levels in all our recent surveys, and I would emphasise that, in spite of its huge size, its existence could hardly have been ascertained in any other way. You may reach the edge of the Depression by car in six or seven hours from Cairo; but you will not know when you enter it, the downward slope is so gradual. You may drive right through the depression to Kara in another two days, and for part of the time your car will be running along a surface 80 metres below sea-level; but you will be quite unaware of that fact. Even if you take with you a good aneroid previously standardised at Cairo or Alexandria, and observe its indications on your journey, though you may suspect that you are below sea-level, you cannot be sure of it; for the barometer will indicate an air-pressure only a quarter of an inch higher than it did at your starting-point, and that, of course, might be due to a general change of air-pressure in the interval from your start. The aspect of the country itself gives you no clue to its level. The cliffs which bound the depression on the north will appear lowered almost to the horizon by the earth's curvature, while to the south all is monotonous openness. The treacherous salt-marsh which covers so

The Problem of Tunnels.

When it is borne in mind that this great source of power lies entirely within Egypt's own borders, that once the scheme was carried out, energy would be available for centuries at a small annual outlay for upkeep-expenses, independently of fluctuations in the price of imported fuel, that the bringing under cultivation of the waste lands of the northern part of the Delta would provide additional maintenance for an increasing population, and that the creation of a great lake in the desert might possibly have a beneficial effect on the climate of the lands of the Mediterranean Littoral, the scheme becomes a most alluring one. But it is not yet certain that it is economically practicable. There is the question of cost to be considered, particularly the cost of making the necessary channels for conducting sea-water to the depression. The distance to be traversed by the channels is about 60 kilometres; and for the greater part of their length they would have to be tunnelled, owing to the height (some 200 metres in places) of the land through which they must pass. The tunnels would have to be longer than any at present in existence. Great length does not, of course, of itself involve any insuperable engineering difficulty in the construction of the tunnels; it only means that a large number of working shafts would be required from which to carry on the work. Diameter is, however, another matter, especially if the rocks to be excavated are so soft as to require considerable support; and as a flow of 36 million tons a day is about equal to the average summer discharge of the Nile, several tunnels of very large diameter would be required for the full development of the scheme. As regards the number of tunnels, it is very important to note that since for many years to come only a portion of the available 160,000 horse-power could be usefully employed, it would not be necessary or advisable to proceed with the whole scheme at once. We might make in the first instance two tunnels, and increase the number in 30 or 40 years' time when the power-requirements of Lower Egypt had increased. Until more is known of the nature of the rocks through which the tunnels would have to be bored, it is not certain what would be the most

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

 proposition

economical diameter for them, nor what the cost of boring them would be. So far as we can gather from a surface geological examination of the ground, the rocks to be traversed appear to be mainly sandstones and other sedimentary rocks of a comparatively soft nature, and yet not so loose in texture as to necessitate very costly support during excavation. It does not appear likely that very great difficulties will be encountered by influx of water into the workings, because the dip of the strata is towards the sea, and there is next to no seepage from the face of the bounding cliffs into the Depression, even where the beds are exposed at depths of 50 metres or more below sea-level. In view of the softness of the rocks, however, and for the minimising of frictional losses, the tunnels would probably have to be lined with concrete throughout their length.

Trial Bore-holes.

The present position is that there appears to be at least a sufficient possibility of the scheme eventually proving to be practicable, to warrant the Egyptian Government incurring the expense of carrying out certain further investigations concerning it. These investigations will be commenced by drilling a number of deep vertical trial-holes along what seems to be the most suitable line for the proposed tunnels. This line, 66 kilometres long, extends in a south-westerly direction from a point on the coast about 8 kilometres beyond the railway station of Alamein, and reaches the edge of the Qattara Depression at a prominent point of the cliff called Mungar Budweis. The trial-holes will be about 3 inches in diameter, bored by diamond-shod tubular drills which will bring up cylindrical cores exhibiting clearly the nature of the entire series of rocks passed through. Other excavations will be made into the face of the bounding cliff to the Depression, near the proposed point of emergence of the tunnels, for a similar purpose. When once samples of the rocks showing their exact nature have been thus obtained, expert tunnelling engineers will be asked to express an opinion as to the practicable diameter and approximate cost of the proposed tunnels.

MINING CONCESSIONS IN ABYSSINIA.

(From Our Own Correspondent.)

Addis-Ababa, December 31.

The attention of financial groups is being repeatedly directed to the great mineral wealth of Abyssinia, and from time to time an engineer is sent out to investigate proposed concessions. Up to the present time developments have been hampered by the absence of any definite law governing the prospecting and exploiting of minerals. Mining engineers are scarce in Abyssinia, but there is no lack of prospectors, many of whom have spent many years in the country, and are well acquainted with its possibilities. Many of these prospectors have succeeded in getting concessions from the Abyssinian Government, the best known of them being an Italian, who sold his rights to a French Company, La Société Minière des Concessions Prasso en Abyssinie, which is working platinum on the River Birbir in the West.

Prospecting Licences.

The custom of the Government hitherto has been to grant prospecting licences for one or more provinces, with the right to fix seven points for exploitation within the area. The actual amount payable to the Government for such a licence is not great, but, owing to the absence of any organised machinery for dealing with such matters, a considerable amount of "greasing of the wheels" has to be done before the licence can be obtained. As prospectors for the most part have little cash available for this purpose, the "greasing" is done by contracts promising to pay sums, often of a considerable amount, on the formation of a company, Bribery, or "gubo" as it is locally

known, is a well recognised institution in the country, and every official from the highest to the lowest, who has anything to do with the matter, expects his share. Thus a company which contemplates doing business in Abyssinia is usually faced with the question of taking over onerous contracts made by the prospector in order to obtain the concession.

As already stated the prospecting licence gives the right to prospect, and to fix seven points for exploitation. The licence does not state on what terms exploitation will be allowed, but usually refers to a contract "to be fixed later by the Government." Hence when the prospector has fixed his seven points, fresh negotiations, and fresh "gubo," are necessary before he obtains the right to exploit. Several contracts for exploitation have been granted by the Government, and for the most part the terms vary greatly. As a rule it may be stated that the greater the "gubo" paid the better are the terms obtained. Prospectors are usually optimists, and often lack business experience, and it is not uncommon for concessions obtained at considerable expense, and with an infinite amount of trouble, to be quite unworkable, owing to the heavy charges which have been placed upon them.

Radius or Circumference.

The size of each point selected is fixed at a "zoria" of 25 kilometres. A dispute is now in progress between the Abyssinian Government and the company above mentioned, as to the meaning of the word "zoria." According to the contention of the company it means a radius of 25 kms. from the selected point. The Government contends, however, that it means a circumference of 25 kms. with the given point as centre. The Amharic language is by no means an exact language, and the term "zoria" really means a "round." Owing to the lack of education in the country, it is more than likely that when the concession was originally given it was not realised that there was any difference between a radius and a circumference of 25 kms. It is obvious, however, that it is essential that this point should be settled without delay, as the word "zoria" is used in most other concessions, apart from the case in dispute.

A Department of Mines has recently been organised, with a German engineer as technical adviser. This adviser has been engaged on the drafting of a mining law, Chapter I of which, dealing with prospecting, is now ready, but has not yet been published. It is understood that it is proposed to grant a prospecting licence to any applicant on the payment of about £3; this would, of course, greatly facilitate prospecting, but until Chapter II governing exploiting is available, it is not possible to say what rights exactly the prospector will have when he has made a discovery, and reported it to the Department of Mines.

An amount of £T720,000 is to be utilised for sewage works at Constantinople.

It is reported that the Romana Americana Oil Company has located rich oil wells near Bolvesti.

A narrow gauge railway has just been opened between Uvach and Priboj.

The traffic receipts of the South Indian Railway Company for the week ended December 29 amounted to Rs.11,80,836, making the total from April 1 Rs.4,60,39,335.

The import duty on wireless apparatus and articles imported into Roumania has been reduced to one-sixth of the existing rate, and it is believed that this duty will shortly be abolished altogether.

The gross receipts of the Bulgarian Railways for 1927-28 amounted to 1,132,000,000 leva, as against 1,058,000,000 leva for the preceding twelve months, while the working expenditure amounted to 819,500,000 leva, as against 810,000,000 leva.

The accounts of the East Indian Coal Company for the half-year to October 31, 1928, show a loss of £2,347, reducing the credit balance to £13,899. The dividend is 2½ per cent., leaving £10,899 to be carried forward.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Liquid Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of 700 metric tons of liquid asphalt (bitumen) for the Tanzim Department, Cairo. April 6. (D.O.T.)

Paper, Etc.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper, metals, printing and binding material, required for the Government Press for the year 1929-1930. February 21.

Wood Naphtha.—The Egyptian Customs Administration invites tenders for the supply of 135,000 kilos of wood naphtha (wood spirit). March 15. (D.O.T.)

Aerial Ropeway.—The Egyptian Ministry of Public Works invites tenders for the supply and erection of an aerial ropeway at Sollum. February 28. (D.O.T.)

Disinfectants, Etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of disinfectants for medical and general purposes, required for the period of one year commencing from May 1, 1929, February 10; bedsteads, iron, required for the year 1929-1930, February 10; pure alcohol, medical brandy and rum, sherry wine and malaga wine, required for the period of one year commencing from May 1, 1929, February 10; dressings, cotton and mackintosh, required for the period of one year commencing from May 1, 1929, February 10; drugs, required for the period of one year commencing from May 1, 1929. February 17.

Fuel Wood, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of fuel wood to the Egyptian Army at Salloum, March 25; and for the supply of cocoa nut oil to the Ministry of War. March 27.

Mail Bags, Etc.—The Egyptian Postal Administration invites tenders for the supply of approximately 46,300 mail, parcel, and letter bags and jute sacks as specified. March 11. (D.O.T.)

Clothing, Etc.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of: (a) Clothing and equipment; (b) tarbushes and tassels; (c) boots for guards required for the year 1929-1930. March 1.

INDIA.

Underframes and Goods Stock.—The Railway Department, New Delhi, invites tenders for the supply of underframes and goods stock. The underframes and goods stock are specified as having to be constructed in India, and alternatively, tenders accepted will be subjected to the condition that a substantial part of the manufacture is done in India. February 6. (D.O.T.)

TURKEY.

Cotton Machinery.—A company is being formed in order to develop the cotton industry in Turkey. It is the intention to erect a large factory in the neighbourhood of Constantinople, principally for the weaving of "Cabots," and the necessary machinery is to be purchased abroad. (D.O.T.)

Motor Patrol Boats.—A report has been received from the Commercial Secretary at Constantinople (Colonel H. Woods, O.B.E.) as to the possible requirements of the Turkish Customs Administration with regard to motor patrol vessels. Further particulars can be obtained by interested British firms upon application to the Department of Overseas Trade. Reference No. A.X. 7207 should be quoted.

YUGOSLAVIA.

Copper Plates, Etc.—A firm in Sarajevo is desirous of receiving quotations from British firms for the supply of copper plates and discs of various diameters and thicknesses. (D.O.T.)

The Greek Government is to issue an internal loan of 600,000,000 drachmæ for the indemnification of individuals for War losses.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, January 24.

Market Position.

The cereal market is firm, especially for maize. As regards timber, of which extensive stocks have accumulated, exporters are awaiting the decision of the Economic Committee as to a possible reduction of the export taxes. The prices of paper and coal tend to fall.

Shares Rising.

Owing to the intense cold which renders transport difficult, the production of petroleum has recently declined, especially at Moreni-Septura. Nevertheless petroleum shares are steady, or are rising a few points. Bank shares are rising and the feeling on the Stock Exchange is optimistic. It is confidently hoped that the loan negotiations will soon be concluded.

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board reports that the total direct shipments of Jaffa oranges to the United Kingdom up to January 19 amounted to 523,000 boxes as compared with 654,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 105,000 boxes as compared with 66,000 boxes last year. Transshipments have totalled approximately 58,000 boxes.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, February 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, February 5).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 6).

British India Line.—S.s. Dumana for Bombay and Karachi (London, February 2); s.s. Mandala for Colombo, Madras, and Calcutta (London, February 9).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool February 16, Glasgow and Swansea February 15); s.s. Bantria for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool February 16, Swansea February 19).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, February 1); s.s. Burdwan for Calcutta (London, February 2); s.s. Rajputana for Bombay (London, February 15); s.s. Nankin for Calcutta (London, February 16).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, February 8).

Ellerman and Papayanni Lines.—S.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Trieste, and Fiume (Liverpool February 2, Swansea February 7); s.s. Destro for Malta, Alexandria, Jaffa, and Haifa (Liverpool, February 7); s.s. Mardinian for Algiers, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 9, Swansea February 9); A steamer for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Glasgow, February 11); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool, February 14); s.s. Andalusian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, February 28); s.s. Oporto for Algiers, Calamata, Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 2, Swansea March 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool March 2, Swansea March 7). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

†TUSCANIA	...	Feb 12	*BRITANNIA	...	Mar. 15
*†CASTALIA	...	Mar. 1	*†ASSYRIA	...	Mar. 27

*First class passengers only. Specially low fares. †Calls Port Sudan.

‡First and third class passengers.

T.S.S. TUSCANIA, 17,000 Tons, from LIVERPOOL, Feb. 12, MARSEILLES, Feb. 18. Carrying FIRST and THIRD-CLASS Passengers.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Engineering Topics

By G. B. B.

Mass Production.

There are many who appear to regard quantity production as a universal panacea for poor business as though that in itself were all that was sufficient. They seem to ignore entirely the question of selling prices and the probable demand and extent and duration of markets. Mass production first requires a sound design, slightly ahead of the times, and the possibility of meeting an existing or creating a new demand. Everything turns on the saleable quantity, and without a basis of this kind to start on it is impossible to enter into estimates of the cost and output of special tools. The same point exactly, though in a somewhat different form, enters into every day shop work. How often are we confronted with the question whether some particular form of new tool or appliance is warranted in view of the number of pieces which have to be made. Quantity production, or mass production, as we understand it to-day, is the question of applying to a finished production the same amount of care and consideration, from every possible aspect, that we would give to the question of the making or purchasing of some special tool. Of course, there is a greater hazard, as in the one case we know exactly how many parts have to be made to meet requirements; in the other case we have to estimate how many engines, or anchors, or motor-cycles we shall be likely to sell if we lay down the plant necessary for producing them in quantities. Quantity production may, however, result in some curious anomalies by reason of its power to absorb the imagination. The extraordinary perspective in which standardisation is sometimes viewed was shown, some of us will remember, immediately after the War in the remarkable sales of motor transport vehicles. High prices were often paid for well-known British makes of machines in bad condition, whilst foreign makes in good condition only commanded extremely low prices simply because people thought spares would be readily obtainable for the one make and not for the others.

Electricity in Mining.

There seems a general consensus of opinion that coal mining is a dying, if not a dead, industry in this country, although the view has been expressed that the adoption of machinery in place of hand labour on a large scale for coal cutting would do much to restore it to its former state. Discussing the suitability of steam, water, or compressed air power for mining work, an experienced engineer was most emphatic in expressing the view that electricity was preferable where it could be obtained in ample quantities. Even where water power is plentiful, he said, it will be found by far the best plan to convert it into electrical energy by a turbo-generator and to use electricity throughout the mine for cutting, hauling, pumping, lighting, and, in short, every purpose for which power is required. He offered the following points for the consideration of those who are not yet so convinced as he is on the matter: Electrical energy requires no hauling nor handling to make it available for instant use, and if the power is generated by a sufficiently large water supply, as much energy as is required can be applied to any special purpose in any particular locality. It is admitted by all who have had practical experience of mining work that the electric motor is much easier to handle in the inaccessible places so often encountered, owing to the fact that it weighs only about one-half as much per horse-power output as other forms of prime movers. In regard to space, also, the electric motor offers a decided economy, a factor which bulks largely in importance where a good deal of tunnelling or timbering has to be carried out. Investigation shows that the electric motor requires approximately only about 40 per cent. of the space that is required for other forms of power producers.

First cost is a very important consideration and is often the feature which receives principal attention in mining work. Here, again, a rough estimate of average mining conditions shows a difference of about 25 per cent. in favour of the electric motor and the installation of electrically-driven devices, such as those mentioned above. Another point on which emphasis must be placed, is that the electric motor is extremely flexible; any desired variations of speed can be obtained and there is no consumption of energy, as in the case of steam, when the appliances are not in use. Further, the ease of starting and of stopping—operations which are performed by a mere pressure on a switch or a turn of a handle—is a great argument in favour of the installation of the electric, in place of other power drives, in mining work. In starting, in operating, and in stopping, electricity is the acme of simplicity, as a small controller or starter is all that is required, and its operation is so simple that the most inexperienced man can, with a little instruction, make the most powerful motor do its duty. It also enables an operator to control his power from a distance without regard to the location of the motor or of the other machinery employed in the mine.

Water Sterilisation.

Great progress has been made during recent years in the method of sterilisation by means of a small trace of liquid chlorine added to water or sewage, a process which has now become almost universally adopted for the treatment of public drinking supplies, swimming baths, and the like. On this subject the Paterson Engineering Company, Ltd., have recently published the fifth edition of their handbook "Water Sterilisation by Gaseous Chlorine," which gives a brief history of the development of chlorination and details of the various applications of this treatment to water and sewage. It also describes and illustrates the standard types of chlorinome for sterilisation of small and large supplies. These have a wide range

of from two or three thousand gallons to over 70,000,000 gallons per day.

A new development is the automatic type of chloronome designed for dealing with those cases where the flow of water varies from hour to hour, as, for example, where it is required to chlorinate the flow of water from a reservoir, such flow varying with the rate of consumption. The appliance has been devised for the purpose of controlling the chlorine flow by means of the varying differential head set up by a fluctuating flow of water through a venturi tube. This head is utilised to operate a special valve which combines the function of the pressure reducing and the flow regulating valves in such a way that an increase of water flow produces a proportionate increase of chlorine gas and *vice versa*, the rate of chlorine addition at any time being indicated on a scale. On the subject of chloramine treatment—the addition of liquid chlorine and ammonia to effect sterilisation—particular reference is made to a plant of 33,000,000 gallons daily capacity installed by the Paterson Engineering Company for the Paris Water Board.

New Lubricating Method.

A company owning a large number of chain-driven motor vehicles found that a change in the method of lubrication adopted greatly increased their life. Originally each driver, before leaving the garage in the morning, brushed over the chains with transmission oil. Various brands of oil were tried, and it was found that the best results were given with the lighter oils. Tests showed that this preliminary and somewhat perfunctory method was ineffective after the truck had run some fifteen or twenty miles. Inspection, after that length of running, showed that the chains were bright and dry. It was felt that most of the oil was being thrown off by centrifugal force, although a contributory cause was probably due to vibrations of the chain during the starting, acceleration, and stopping of the vehicle. The procedure was adopted of brushing the chains thoroughly each night, when the vehicle returned to the garage, with paraffin. Ample supplies of this were used, so that it could soak well into the joints. Next morning the surplus paraffin was wiped off and the chains were then treated with a dressing of light lubricating oil, the vehicles being dealt with *seriatim*. As soon as the chains of the last were treated, a coat of medium grease was given to the first set of chains, and so on until all were coated. The paraffin washed out the dirt and grit, the lubricating oil got well into the rollers and pins, and the grease coat over all provided sufficient lubrication for the teeth, and, at the same time, prevented the light lubricating oil in the rollers from escaping.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the administrative council of the Corporation was held in London on January 23. In the unavoidable absence of the President, Lord Derby, the Chair was taken by Mr. R. H. Jackson. The Chairman announced that the Director, Sir James Currie, was absent on a visit of inspection to the Corporation's Research Station, Trinidad.

The following extracts are taken from the quarterly report of the executive committee which was presented at the meeting:—

The Sudan.

During the summer and autumn advantage was taken of the presence in this country of the principal members of the London supervisory committee for the co-ordination of agricultural research in the Sudan, to hold two full meetings of the committee, while meetings also took place between the Sudan representatives and the three technical assessors appointed by the Sudan Government, Dr. Butler, Dr. Crowther, and Mr. Engledow. The committee considered and discussed in detail the research work that had been undertaken during the past year both at the Gezira Research Farm and in the chemical and entomological sections of the Wellcome Research Laboratories. The

reports showed that, extremely useful work was being done, and the results obtained should be valuable both in determining the cultural operations best suited to the Gezira conditions, and in mitigating or controlling diseases and pests. The volume containing the reports and the programmes of research work of the several sections will be published shortly by the Sudan Government.

Members will be gratified to learn that satisfactory progress can be recorded as a result of the concentrated efforts of the scientific staff in the Sudan in the investigation of the conditions governing the incidence of the disease known as blackarm. Close connexion has been shown to exist between the degree of virulence of the attack and the soil temperature at the time of planting. By utilising the information thus obtained and by choosing such a date for planting that the soil temperature is unfavourable to development of the disease, it is hoped that some degree of control may be obtained.

On the recommendation of the supervisory committee the Sudan Government recently appointed a plant physiologist, to work mainly on cotton, who has now taken up his duties, while a laboratory assistant has also been appointed to assist the Government Botanist mainly in connexion with plant pathology.

Mechanical Transport.

It will be remembered that the question of mechanical transport overseas was very fully discussed at the Colonial Office Conference in 1927, when the mechanical transport sub-committee of the Corporation submitted a note embodying the result of their investigations and recommending the establishment of a representative body to specialise in the requirements of mechanical transport in the Tropics. The Corporation endorsed this recommendation, and suggested that a council for mechanical transport in the Colonies should be set up. The whole question was accordingly referred to a sub-committee of the committee of civil research, and the outcome has been a proposal to establish an Oversea Mechanical Transport Committee, to be composed of representatives of the home Government, the Colonial Empire, and of the Governments of the Dominions, India, and the Sudan, should they desire to co-operate. Pending the establishment of this committee, Mr. Ormsby Gore has accepted responsibility for the initiation of the work, and a directing committee has been appointed to assist the main committee in preparing a programme of experimental work and in supervising the carrying out of this programme. Sir James Currie has been appointed chairman of this directing committee, the other members being Sir Henry Fowler, Brigadier-General F. D. Hammond, and Mr. H. Niblett. It is proposed that the expenditure in connexion with the experimental work shall be shared equally between the Empire Marketing Board and the Oversea Governments who co-operate. To enable an immediate start to be made, the board are finding the whole of the money required for the first year's work.

The committee will investigate every aspect of mechanical transport that is likely to be of importance, and hope that it may be possible to evolve a large transport unit, capable of operating on earth roads at a cost per ton mile somewhere between the present cost of motor and rail transport.

The Bulgarian Ministry of Agriculture has ordered the registration of all neglected or barren land, with a view to the requisitioning of a part of it for lucerne cultivation.

The Agricultural Bank of Cyprus announced particulars this week, for public information only, of an issue at 95 of £200,000 Sterling Five per Cent. bonds to bearer of £100 and £500 each, redeemable at par not later than January 31, 1980. The operation of a sinking fund will begin on December 31, 1930. The bank, which was incorporated in Cyprus on May 15, 1925, as a private limited liability company, has an authorised share capital (issued and fully paid) of £50,000 in shares of £1 each, of which 49,993 shares are held by the Ottoman Bank. The borrowing powers of the directors are limited to £300,000, and prior to the present issue have been exercised to the extent of £50,000. The proceeds of the issue now announced will be applied in repaying present bank advances which have been used for agricultural loans and in making further agricultural loans.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 29.

It has been an interesting week in the City. In the money market stringency developed to such an extent that fears were aroused in some quarters of monetary developments which might be disturbing both to investment and to trade. The best opinion, however, holds that the influences causing the stringency are transitory, and that no increase in the Bank Rate need be feared.

This monetary stringency reduced the volume of dealings in gilt-edged stocks without seriously affecting the firmness of tone. Leading shares in the industrial sections continue to show considerable strength, which was due in no small measure to the campaign of purchases from America which is growing in intensity and attracting a great deal of attention.

The other interesting points of the week were the Ner-Sag sensation, which has deprived gamblers in that share of all but the faintest hopes (and offers an object lesson in the dangers of heedless speculation), and the spectacular rise in Rhodesian copper shares. Here again international buying for the purpose of gaining control has been the principal cause of recent activity. Prices have now reached a level at which the English investor should be very cautious.

"Shares by Instalments."

It has constantly been pointed out that the genuine investor should restrict his holdings to the best class of security. Most of these securities are, however, in units of fairly large denominations—the lure of the shilling share is unknown in the gilt-edged market—and for many investors, whose savings accumulate month by month in fairly small amounts this is a considerable disadvantage. Their money must be left on deposit, either with banks or with the Post Office, until it reaches a sufficient sum to purchase stock. Even the investment shares of most building societies, which make a particular appeal to the small investor, are in denominations of from £50 or £25 upwards. But most building societies have also "subscription" shares which meet the need we have outlined. Subscriptions are taken by the society in very small amounts, and bear interest at a rate which is usually in the neighbourhood of 4 per cent. This interest is added to the amount subscribed, and when a sufficient total sum has been accumulated it is converted without further trouble into a paid-up share. An investment in a good building society is a first-class security, and so safety and convenience may be combined in this way. But some discrimination in the choice of a society is necessary.

Electrical Equipment Industry.

In spite of the general depression of trade in this country the British electrical industry found 1928 quite satisfactory, and the demand for generating plant was almost exactly the same as that in the previous record year, 1920. Various causes contributed to this state of affairs. Many firms which made large profits in 1927 spent large sums on bringing their plant up to date, and Imperial Chemicals gave very large orders in connexion with their extensions at Billingham. These factors cannot be expected to be of the same importance in 1929, though the "de-rating" scheme may bring increased business from the heavy industries in the following year. The development of the Central Electricity Board's schemes should, however, be an even more important source of demand this year, and

the next two years, than last. In 1928 orders arising from the scheme for transformers, overhead transmission lines, and switchgear alone amounted to £2,750,000. On the other hand, the export trade was not so satisfactory in 1928, and can be expected to improve this year, as the competitive position of the British industry is more favourable. The undoubtedly promising future of this industry is largely discounted in the current quotations of ordinary shares in electrical equipment concerns. Some of their prior charge stocks, however, deserve the careful attention of an investor in search of such securities. Siemens Brothers 4½ per cent. debentures give a return of £5 8s. per cent., the final redemption date being 1944. On the 8 per cent. cumulative preference shares of the Metropolitan Vickers Electrical Company a yield of £5 18s. is obtained, and the 6½ per cent. cumulative preference shares of the General Electric Company and Callenders' Cable and Construction Company both give an income of £5 9s. per cent.

Imperial Tobacco.

A bonus declaration by the directors of the Imperial Tobacco Company has been awaited for some time, but, nevertheless, the market was rather surprised when it accompanied the dividend announcement. The dividend itself is raised by 1 per cent. to 26 per cent., free of tax. As was the case a year ago £250,000 is allocated to pension funds and £500,000 to reserve funds while the carry-forward is raised from £959,000 to £1,169,000. It seems, therefore, that the trading profits amounted to some £9,591,000, or about £360,000 more than was earned in 1927. Although the company has always paid satisfactory dividends, its very prosperous record in recent years is to a large extent due to the conservative manner in which its finances have always been conducted, and the considerable proportions of profits which have been left in the business. For the new capital bonus of one share for every four held, no less than £4,000,000 is to be taken from an internal credit account, which has hitherto been undisclosed, and another £3,500,000 from general reserves. Even after this transfer, general reserves will stand at £4,000,000, apart from the carry-forward, and there is still an internal reserve of a very considerable size in the undervaluation of investments in other companies for balance sheet purposes. Although the prices of the shares were marked up upon the announcement, they can still be bought to give a yield equivalent to £6 2s. free of tax. In view of the strong position of the company this is a very satisfactory return.

AN ARIEL SUCCESS.

The Maudes Trophy, one of the most coveted honours in the motor-cycle world, has again been awarded by the Auto-Cycle Union to Ariel Works, Ltd., for what is considered to be the most meritorious performance in the year. This was an endurance test of 10,000 miles, to which two models of Ariel machines, a 500 c.c. and a 250 c.c., were subjected. Relays of drivers, constantly under the supervision of the A.C.U., drove the machines night and day over a circular course in the Cotswolds for 22 days till the 10,000 miles were completed. This is the second year in succession the Ariel has been awarded the Maudes Trophy. The last time it was awarded for a 5,000 miles non-stop engine test.

Company Meeting.

IONIAN BANK.

Improved Outlook in Greece.

The adjourned eighty-ninth annual general meeting of the Ionian Bank, Ltd., was held on January 23 at 25-31, Moorgate, E.C.

Sir John Stavridi (the chairman) said that the past year had witnessed the passing away of Mr. Falconer Larkworthy, their former chairman and colleague, to whom was due the commencement of the development of this institution as an international bank and the high reputation which it had earned and continued to hold.

The Chairman continued:—The first point I have to deal with is the delay in presenting our accounts to you. As a result of the very serious epidemic of dengue fever in Greece, which delayed the receipt of our accounts, we were compelled to call upon you to meet on December 28 in compliance with the Company Law and to ask you to adjourn the meeting to this date. In order that you may realise to what extent the epidemic affected business during its period of greatest virulence, I may tell you that, for a time, a proportion of 80 per cent. of the staff of our central office in Athens, as well as that of our Piræus branch, was incapacitated for work, and I take this opportunity of expressing our appreciation and gratitude to the management and staff for their loyal co-operation and devotion to duty at a time of such stress. The epidemic lasted several months and practically paralysed all business in Greece during that time and is partly responsible for the result shown in the balance-sheet.

The past year has been one of the most eventful for Greece, both financially and politically, and should, I think, be marked with a red letter. Since I last addressed you, the new Bank of Issue has been created and is functioning, and the whole of the note circulation has been concentrated in its hands. The gold value of the notes has been stabilised at 375 drachmæ to the £, the rate of exchange on the day when stabilisation was decreed, without any attempt being made at revaluation, which would have been fatal to the industrial development of the country. All existing restrictions upon dealing in foreign exchange have been withdrawn and the new Bank has made provisions for buying and selling gold exchange, which are amply sufficient to maintain the convertibility of its note issue. The official Bank rate was reduced in December from 10 to 9 per cent., and again on the 5th of this month to 8 per cent. A Clearing House has been formed, composed of the seven most important banks. Our institution is a member and this may materially facilitate business in the future.

As regards State finances, the administrative system is being reformed, and for this year the budgetary equilibrium has been maintained. The Public Debt accounts for nearly 27 per cent. of the expenditure, the Army and Navy for 20 per cent., Public Works for 4 per cent., and Education 5½ per cent. It is to be hoped that as the public realise the security which reliance on the League of Nations can bring to the country, the expenditure on armaments may be reduced, and the amount thus saved devoted to the development of education and the lightening of the heavy burdens so patiently borne during these past years. I feel confident that the new Government will inquire into and, where necessary, revise the methods of taxation which, as applied by the Treasury officials, appear at times to savour of the arbitrary, and injuriously to affect foreign as compared to local interests. It has already taken in hand the raising of the standard of justice from the level to which it had fallen during the years of political unrest, and this will doubtless bring about the repatriation of the capital of Greeks which had been stampeded to foreign countries by the unconsidered and confiscatory measures adopted during the period of political instability now happily ended, and of attracting foreign capital, of which the country is in such great need to develop its natural resources.

From the loan successfully floated in January last year the Government has been able to repay to the Bank of Greece a large portion of the State debt.

In 1928 two Greek loans have been issued on the London market: the one I have just mentioned, the 6 per cent. Second Refugee Loan for £6,500,000 at 9½, which was covered many times over, and the other a 6 per cent. Public Works Loan in December last for £4,000,000 at 8½, which did not appeal to the public and three-quarters of which was left with the underwriters. This latter is the first loan issued since 1898 which is not to come under the management of the International Financial Commission, and although it is secured many times over by the surplus of the revenues pledged to the International Financial Commission for the service of the other loans, it is based on the credit of the Government and is to be managed by the new Bank of Greece. I feel convinced that, as the investing public realises the favourable yield of this loan and how ample is the

margin of security, it will readily take its place with the other Greek loans and stand on the same footing as they do. I think that after the proof that has been given during all these years—years of terrible strain and difficulties through which the country has passed—of the determination and ability of Greece to meet in their entirety its international financial obligations, due recognition will be accorded her, and it will be realised that she can be trusted to discharge them without the intervention of a foreign body. I recognise, of course, the enormous services which the International Financial Commission has rendered to Greece since its establishment thirty years ago. It found the State practically bankrupt, the finances in absolute confusion, and all trust gone. With exemplary devotion, ability and tact it has managed to bring order out of chaos, to re-establish confidence, and to build up a financial system which has proved equal to the greatest strain.

From the political point of view, the improvement is no less great. The elections which took place in July last brought back to power, by an overwhelming majority, M. Venizelos, the great statesman to whom Greece owes its rejuvenation, thus putting an end to a period of continuous political unrest and eliminating the risk of the repetition of the dangerous experiment of militaristic rule. As I have said many times, what Greece requires above all is peace and a stable Government to enable her to carry out reforms and reconstruction. She now has both, and I am convinced that, under the able and enlightened guidance of its present Prime Minister, whose moral authority is recognised the world over, the country, with its vast and still hardly developed resources and its industrious and patriotic population, can look forward to important developments and a greatly improved economic future.

The report and accounts were unanimously adopted.

TURKISH MARKET FOR DENTAL EQUIPMENT.

Dental equipment valued at approximately £T75,000 is imported into the Constantinople consular district annually. Statistics showing Turkey's total dental imports are not available. It is stated that Germany supplies about 50 per cent. of the entire imports, while Great Britain and the United States also furnish important amounts. Germany's predominance in this field (says an American Consular report) is said to be accounted for by its nearness to the market, and the efficiency of the German local sales organisation. Occasionally, direct purchases of dental goods are made by hospitals and practitioners, but the bulk of the business is done by local representatives of foreign houses who carry supplies in stock. It is believed that the general introduction of American ideas and methods, which is now in progress, is tending towards a gradual increase in the demand for articles of foreign manufacture. The amount of this increase is, of course, contingent upon the economic revival of the country and the gain in its purchasing power.

As regards credit, certain European firms, especially those of Italy, Czechoslovakia, and Germany, have sometimes been granting terms of three to six months. Some firms demand payment of 50 per cent. of the cost of the goods at their local bank upon delivery and the remainder in three to six months. British firms, which were formerly more stringent in matters of credit, have recently altered their policies somewhat in order to meet the exigencies of the local market. Among European shippers to Turkey a conservative credit policy is generally regarded to be the payment of 50 per cent. cash against documents, the balance payable at the end of three months.

The directors of the Sudan Building and Agricultural Company have received an offer from Contomichalos Darke and Co. (1929), Ltd., to purchase the entire undertaking for £235,038 in 8 per Cent. Cumulative Preference shares of £1 each. In order that resources shall be available for the proper development of the Sudan Company's properties, the directors recommend the acceptance of the offer. It is proposed to wind up the Sudan Company, and that the Contomichalos shares should be distributed. Preference shareholders would receive 17 such shares for every 20 shares held, and ordinary shareholders would receive 15 such shares for every 40 shares held. A meeting will be held at Khartoum on March 1 to pass the necessary resolutions.

TO SUBSCRIBERS IN THE MIDDLE EAST.

Readers of "The Near East and India" in Iraq and Persia are reminded that for a subscription of £1 15s. per annum, the Paper is sent by Overland Mail. A subscription of £1 10s. covers postage by ordinary long-sea mail only.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British-Bulgarian Chamber of Commerce, of Sofia, dated January 15.]

General Situation.

Christmas and New Year business was considerably less active than was anticipated. Trade activity is generally slow, as usual in January and February.

The proceeds of the Stabilisation Loan, now available, are likely to enable the Government to liquidate pending liabilities to contractors and to proceed, next spring, with the completion of building and premises in suspense. Increased activity is, therefore, probable for the timber, building materials, and hardware trades.

Solvency does not seem to have much improved during recent weeks. Anyhow no new failures or suspensions of payments are reported. Monetary conditions continue easy.

The local textile industry is well supplied with orders for the spring season. The leather and chemicals industries are in a less favourable position as far as the sale of their products is concerned.

A relatively important cotton textile factory has been opened of late by an Italian group. The formation of a new factory for finer woollen cloths is pending, also with Italian participation. The cotton spinning and weaving factories at Varna, Yambol, and Mezdra are reported to contemplate the enlargement of their equipment for increased output. One raw silk spinning mill is about to be put in operation in the next few weeks. Generally speaking, industry is attracting increasing interest and resources.

The prices prevailing for good qualities of manipulated tobacco ready for export are approximately (in leva per kilo.): Djebel-Basma, 210-250; Gorna-Djoumaya, 140-170; Melnik, 140-170; Nevrokop, 130-150; Dupnitsa, 130-160; Kishu-Kavak, 120-150; Plovdiv-Yaka, 100-135; Haskovo-Yaka, 90-130.

Exports.

The export of the best quality of goat and kid skins in 1928 has exceeded by from 60,000 to 80,000 pieces the exports of 1927. Contracts for the export of large quantities have been signed with American firms, the price being from 13 to 13.50 dollars per dozen c.i.f. New York.

The exporters are now organising the campaign for furs, and it is hoped that, in consequence of the snowfall, the quality will be very good.

In 1928 there were 5,000 hectares of land under cotton and the production amounted to 1,000,000 kgs. The price of the local produce is expected to be higher. The area under cotton is likely to be increased.

According to official data 42,000 tons of sunflower seed were produced. Deducting 10,000 tons which have been exported there would remain 32,000 tons for local oil mills. In 1927 Bulgaria produced 10,000,000 kgs. of sunflower seed oil for which 43,000 tons of seed were required. In November, 1928, 4,100 tons of sunflower oil cake were exported, mostly to Hamburg. Prices are moving between 220-225 shillings per ton c.i.f. port on the North Sea.

Anglo-Bulgarian Corporation Concession.

In accordance with Article 12 of the Agreement between the Bulgarian Government and the Anglo-Bulgarian Corporation, Ltd., the Ministry of Commerce, Industry, and Labour has provided in its Departmental Budget for 1928-29 a sum of £8,000 being the first instalment towards the sum of £40,000 which the Government has to pay in cash in a period of five years. This forms part of £140,000, the Government's subscription of shares. For the remaining £100,000 the company will be supplied with 100,000 tons of good Pernik coal, valued at £1 per ton, also in a period of five years.

Miscellaneous.

On December 23, 1928, the banknotes in circulation

amounted to 4,057,647,551 leva, showing thus a continuous decrease.

The wholesale commodity prices index number (on the basis of 1914 equals 100) for December, 1928, was 3,210 as compared with 3,209 for November, 1928, and 2,934 for December, 1927. The general level of wholesale prices has thus risen by 0.1 per cent. as against November, 1928, and by 9.1 per cent. as compared with December, 1927. The average index numbers for 1927 was 2,819, as compared with 3,027 for 1928.

The movement of goods transported by the State Railways for the months of August, September, and October showed a considerable increase.

Amendment of Customs Duties Legislation.

Articles 109, 110, 111, and 214 of the Customs Duties Law are amended and supplemented as follows:—

Article 109.—Goods left at the Customs warehouses, dépôts, and other places, located under the supervision of the Customs authorities, pay a tax, called storage fee, of 0.10 leva per diem for each item, parcel, package, banderole, sealed bags, forwarded by post, and 0.50 leva per diem for every 100 kilos. gross weight or part thereof for merchandise otherwise transported.

Article 110.—Goods placed at the Customs warehouses, dépôts, and other places under Customs supervision, not cleared within thirty days from the day of their acceptance by the Customs, are liable, after the expiration of this period, to storage fees equal to double the amount of those determined by Article 109, for the whole period of their remaining under Customs supervision.

Article 111.—No storage fees are collected:

(a) On all goods, without any exception, for ten days from their acceptance by the Custom Houses;

(b) On mail parcels, shipped from abroad, destined for places where no Custom House exists, as also on those which, upon the request of the sender, should be returned within three months from the day of their acceptance by the Customs. If such shipments are returned after this time limit, they are subject to the corresponding storage fees for the whole time they have remained in the Customs warehouses;

(c) On goods destined for certain Customs Houses and stored in other Custom Houses, because of their erroneous entry on the manifests by steamship agencies or, as a consequence of their having been wrongly directed by railway stations, if within two months from their acceptance in the Custom House, such goods are taken out and forwarded to the proper Custom House. If such goods are taken out after the expiration of the above time limit or are cleared at the Custom House into which they have been discharged, the respective storage fees shall be paid for the entire time the goods have been under the supervision of the Custom House;

(d) On goods retained by the Customs for analysis in respect to sanitary, veterinary, or fiscal purposes, or for verification in accordance with the Laws for measures and weights, trade marks, control for gold and silver articles and trading with them, agricultural produce, etc., but only for the days during which the analysis or the verification took place. The time during which the analysis or the verification took place does not reduce the 10 days' limit provided for under heading "a" above. If, however, from the analysis or the verification it should appear that the importation of the goods is forbidden, only the concession provided by letter "a" is to be applied.

(e) On goods detained in the Customs Houses because of a disagreement between the importers and the Customs authorities in respect to their classification and determination of quality, or because of imposed penalties, when the contention has been decided upon wholly or in part in favour of the importer, but only for the days during which the point has been discussed.

(f) On goods, landed on the shore of the port, or Customs warehouses, dépôts, etc., coming under the jurisdiction of the Custom Houses, on account of the cases shown in Articles 101 and 108, if such goods are cleared or returned by the importer within three months from the date of their acceptance in the Custom House. Otherwise the respective storage fees are due for the entire time they have been under the supervision of the Custom House authority. Immediately upon the expiration of this time limit, such goods are sold by auction according to the procedure stated in Articles 114 to 120;

(g) On goods confiscated on the ground of this Law or other laws applied by the Custom Houses for the time under confiscation to the day of releasing from such confiscation, or to the time they have been turned over to the purchaser through sale, or to the day of their re-exportation, when sold on conditions for re-export, or to the date of their destruction;

(h) On homogeneous, heavy, and voluminous imported goods cleared without unloading from the trucks, or unloaded direct from the ships into the trucks or in private warehouses or in bonded warehouses.

(i) On homogeneous, heavy, and voluminous goods for export, cleared without unloading from trucks directly into the ships, or unloaded under the conditions provided in Article 301 of the Customs Regulations; on goods unloaded in private or rented places by the Customs authorities, when their examination and clearing takes place at such places; on live animals intended for export; on goods the clearance of which is conducted by the Frontier Customs Officers, as well as on goods mentioned in Article 99 of this Law;

(j) On goods which have remained at the Custom Houses in spite

of the desire of the owners, but only for the days these reasons have held good.

[NOTE.—Release of goods from the warehouses in the case mentioned under "b" and "c" is made by the Customs Management, and in cases falling under heading "j" by the Minister of Finance.]

Article 214.—Ready-made containers, bags, packing cloth, and small sacks imported for the purpose of being filled with local goods and consequently to be re-exported together with these goods, are free from import duty when imported and from export duty when exported as also from all other dues if the importers up to the moment of paying the import duty therefor and other dues have made a statement to that effect in their declaration. The same applies to ready-made containers, bags, packing cloth, and small sacks in which imported goods are packed, when the importers wish to re-export them either empty or filled with local goods, as also with those ready-made containers, bags, packing cloth, and small sacks which are exported temporarily abroad empty in order to be filled with foreign goods.

In all these cases the export or import duty and the octroi tax are guaranteed by a deposit made either in money or in writing vouched by guarantors, while the other customs dues are entered directly into the books as income. This deposit is refunded if the containers, bags, packing cloth, or small sacks are returned in a single shipment or in parts by the importers or the exporters in their own name within 12 months from the day they were imported or exported. The time limit for re-export of tobacco wrappers which have been temporarily imported is 18 months.

[NOTE.—The Minister of Finance is vested with powers, when national interests require it, to extend the above time limits by 6 months at the most.]

TANKER CHARTERING.

Messrs. John I. Jacobs and Co., in their report on tanker chartering for the second half of 1928, state:—

There are signs that the bottom of the depression has been reached, as charterers are willing to pay somewhat increased rates for forward fixing, and for consecutive voyages, yet it is difficult to forecast any material improvement in freight conditions for some little time to come.

It is more than fifteen years since tanker owners have had to face such a freight depression as the present. Owing to improved storage facilities throughout the world, it is the owner of the handier vessel, of say 4-6,000 tons, who has found the greatest difficulty in keeping his tonnage employed. It has been computed that at present some fifty tank vessels are laid up in European waters. Unless rates improve, this number will augment month by month. In spite of continued expansion, the petroleum trade has not been able to absorb the excess of tonnage built and contracted for during the last period of profitable freights. Competition amongst most of the large market-organisations is being to some extent eliminated, and there is talk of a scheme by which the main consuming areas shall draw their supplies from the nearest area of production and/or refining. Should this scheme materialise the outlook for owners will necessitate serious consideration, in spite of the undoubted vitality of the petroleum trade, and the certainty of further expansion.

The production of crude oil has increased the world over, except in Mexico, where the decline has been more than offset by Venezuela, now the second producing country. Fuel oil bunker prices generally have declined since the issue of our last report, but fuel stocks nevertheless are larger.

Considerable optimism is shown by some ship-owners in the future of steam engines and the improving methods of utilising coal, but the internal combustion engine continues to become increasingly popular, particularly for passenger ships and tank vessels. Over a million tons gross of motor vessels of some 800,000 horse power were completed during the year. Lloyd's figures for the quarter ending December show that there were building motor vessels of 1,396,000 tons gross or nearly 200,000 tons in excess of steamers under construction. Tankers under construction at end December amounted to 361,972 tons gross or under half the amount at December, 1927. The returns for the quarter ending September showed 416,787 tons gross, a reduction of 123,000 tons gross on the half-yearly returns. The great majority of these tankers are being fitted with oil engines. Orders for further tankers are being placed sparingly.

Time Charter.—Under depressed conditions this has been a much quieter market. Steam tankers, both clean and dirty, have latterly had to accept down to 4/6, as against 5/6 paid during the summer months. Moreover, to obtain such rates, owners have had to give charterers the option of extending the period of the charter. Diesel tankers have been, and still are, obtainable at 6s. on the d.w., although a vessel of 12,800 tons was fixed at 7s. for 12 months Pacific trade. A batch of steam tankers are again on the market for sale in conjunction with 10 years time charter at 5s. on d.w.

Black Sea.—Conditions have been rather quieter the second half of the year. Early in July clean tonnage according from Soviet ports to U.K. Continent 14s. to 15s., according to size, but later in the year rates fell away to 12s. 9d., and eventually as low as 8s. 6d. was accepted, but some recovery has taken place to 9s. 6d. Constantza has mostly taken tonnage not exceeding 6,000 tons, and rates during the same period varied from 14s. to 9s. 9d. to U.K. Continent. Fixtures from Constantza have been on the basis of charterers paying the Roumanian freight tax. There has been less movement of dark oil than of refined and/or spirit. A 4,400 tons lubricating oil boat was fixed in July at 20s., Batoum/Liverpool and Manchester, but an 8,000 tonner got only 12s. U.K. Continent in October. Port Said has taken several dark oil boats at about 9s. 6d., and a fixture to Dakar was reported at 13s. 6d.

Creosote.—The demand has been on about the same scale as for the first half of the year, and rates are little altered. The basis rate may be taken at 9s. 6d. for 8,000 tons from one loading to one discharging port.

FALL IN IVORY PRICES.

Messrs. Hale and Son report that the quarterly ivory sales, which were held on January 22 and 23, comprised 43½ tons (against 42½ tons same time last year and 38 tons in October last), viz., 22½ tons Zanzibar, Bombay, Mozambique, East African and Siam, 4½ tons Abyssinian, 5½ tons Egyptian (Alexandrian description), 9 tons West Coast African, Congo and Lisbon, and 2½ tons land carriage, also 2½ tons mammoth tusks, ½ ton rhinoceros horns, and ¼ ton sea horse tusks and boars' tusks; total, 47½ tons. During the progress of the sales 13½ tons were bought in or withdrawn, viz., 2½ tons Zanzibar, etc., 1½ tons Abyssinian, ¼ ton Egyptian, 6 tons West Coast African and Congo, 2½ tons land carriage, and ½ ton mammoth tusks.

Larger supplies of new import were offered at these sales. There was a good attendance of buyers, the home trade and the Continent and America being well represented. Throughout the sales a rather slow demand prevailed and some quantity had to be withdrawn, sellers being unwilling to accept the lower offers made. America and the Continent bought fairly freely, and the home trade took about the usual quantity. Soft tusks on the average were unchanged to £2 to £5 per cwt. lower, but hard was not so much in request and showed a decline of from £2 to £4 per cwt. Ball ivory was very irregular, the larger sizes being steady but the small were lower.

Abyssinian was partly sold. Egyptian was in small supply; soft large and medium tusks showed little alteration from previous rates, while hard was £2 to £4 per cwt. lower. Soft scrivelloes were steady to £2 easier, hard were unchanged, ball scrivelloes were rather lower, while bangle tusks were steady to a little easier.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended December 31 amounted to £E12,179, making the total from April 1 £E247,931.

For the first seven months of the budgetary year 1928-29 Bulgaria's expenditure amounted to 2,929 million leva, and in addition payments ordered but not yet made totalled 529 millions, making a total of 3,458 million leva. For the same period the receipts amounted to 4,098 million leva, leaving a surplus of 640 million leva, from which, however, should be deducted 486 million leva to cover budgetary engagements in suspense.

An International Committee has been constituted at Prague with the object of safeguarding the rights of bondholders of the old Bosnian loans and the bond issues of other Yugoslav autonomous corporations which have been in default since the War, and of ensuring, through negotiations with the Yugoslav Ministry of Finance, a speedy resumption of the loan service. The Committee will get in touch with the competent official quarters in the creditor countries and also with bondholders' organisations existing there. The headquarters of the Committee are at Prague, and there is a branch in Vienna (for Austria) and in Berlin (for Germany).

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 23:—

Egyptian Futures.

Sakel Contract.—The past week has been one of the quietest experienced since the commencement of the season; very little fresh business has come into the market, and fluctuations throughout have ranged within ten points of last Wednesday's closing rates. There are no signs of reviving interest on the part of spinners; in fact, if anything, business in the fine section has been even poorer than previously. Several mills have already curtailed production, and, as mentioned by us last week, a continuation of present conditions will certainly result in some scheme of organised short time. The Sudan Government estimate this season's yield at 575,000 and private sources 600,000 kantars, roughly 85,000 Egyptian weight bales; an equally important fact is that the crop is reported to be of good quality, both as regards grade and staple. Some little time ago we mentioned that serious attention was concentrating on the detrimental effects of our contract, running consistently at a heavy discount with Alexandria and its consequent loss of utility, both as a hedge for imports or adequate cover for trade purposes. Radical alterations have been suggested and will probably be carried through; the chief amendments are as follows:—

- (1) To confine the contract to Egyptian and Sudan Sakels.
- (2) To reduce the maximum allowance to 300 points on, or the value of Good Sakel, whichever is the wider.
- (3) Tender allowances for Sudan Sakel to be the same as for the equivalent grades of Egyptian Sakels.
- (4) To reduce the contract weight to 32 or 33 bales, i.e., the equivalent of 250 kantars.

It is hoped by these measures that our market will run more in line with Alexandria, that larger stocks will be attracted here and that it will prove a safer medium than the present contract for commercial purposes.

Upper Contract.—Only a nominal business has transpired in this contract during the past week, and fluctuations recorded have approximated closely to the movements witnessed in the American markets. The demand for either spot or forward cotton has fallen off materially recently, and the tendency for mills to revert to the use of American staple cottons continues in evidence. The large straddle interest accumulated in the March position during November and December has still to be liquidated, and unless present stocks begin to show material reductions we would not be surprised to witness our premium over American values close in somewhat.

Egyptian Spot.

Rather more business has been done this week, in spite of an inquiry that can only be described as moderate. Quotations have fluctuated mildly, and, on balance, are slightly lower on the week. The inquiry for Sakel has shown a further shrinkage, particularly for cotton above the contract price. Practically the only quality that has attracted buyers this week has been cotton at from 16d. to 17½d., with possibly some increase in the demand for the very low grades at between 5d. to 7d. On the other hand, a brisk inquiry has been witnessed for Uppers, chiefly for cotton at from 11½d. to 12½d. Competition is very keen, and buyers appear to be more concerned with grade than staple at this price. Cheap sellers abound and prices are very irregular. The better qualities (from 12½d. upwards) have received only moderate support. In this market staple is an essential, but, here again, we find sellers offering at very irregular rates. The improved offtake for Pilion, which has been quite a feature lately, has not been maintained this week, very few inquiries having been received.

A persistent inquiry for low Nahda at from 14½d. to 16½d. has been received from one quarter, but we doubt if the cotton has been found. The better qualities are suffering from neglect at the moment. Sudan Sakel has been neglected, but rather more interest has been shown this week in Tokar Sakel. White Egyptians have been in moderate request. Trade reports from up country show no improvement, in so far as the fine spinning section is concerned, but takings by spinners amounted last week to 9,641 bales Egyptian and 204 bales Sudan, a by no means insignificant total.

C.i.f. business has been very dull. Estimated spot sales, 1,400 bales Egyptian and 1,000 bales Sudan (chiefly White). Quotations of Sakel show a decline of 15 points, and those of Upper and Pilion 10 points. F.G.F. Sakel to-day, 19.15d. F.G.F. Upper to-day, 12.37d. F.G.F. Pilion to-day, 13.00d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 17, state:—

Since our last report the futures market has been rather inactive and fluctuations have been unimportant. The week's summary of price movements is as follows:—Sakellaridis: January, 37.85 dollars, 0.40 dollars up; March, 38.33 dollars, 0.40 dollars up; May, 38.72 dollars, 0.42 dollars up; November, 38.79 dollars, 0.41 dollars up. Ashmouni: February, 22.89 dollars, unchanged; April, 23.36 dollars,

0.04 dollars up; June, 23.76 dollars, 0.10 dollars down; August, 24.16 dollars; October, 24.40 dollars, 0.03 dollars up.

Sakel.—Although the market has shown some signs of heaviness, the level of prices has been fairly well maintained. The speculative long interest appears to be anxious to liquidate its holding, but is restrained from doing so by the realisation that the throwing of even a few contracts on the market would be sufficient to cause something in the nature of a collapse in values. The existing demand from the trade is very poor, and much lower levels must be reached before any revival can take place; such, at any rate, seems to be the view of the position on which the spinning world is at present basing its policy. Heavy rains up-country have greatly impeded ginning, and this partly explains the decrease in the quantity of arrivals this week; an additional reason is the congested state of the warehouses at Minet el Bassal.

The Sakel Uppers straddle (March/April) this week stands at 1,497 points, against 1,461 points last week and 818 points at this time last year. Against the second January tender, dockets for 13,750 kantars were issued, bringing the total tenders so far this month up to 41,500 kantars.

Uppers.—The demand from the trade has been slightly better than last week, but has, nevertheless, not attained proportions large enough to be characterised as active. America continues to hold aloof, England is buying very little, and only Continental spinners show any sustained interest.

The parity between American and Uppers has narrowed still further, and we can only express real surprise at the lack of interest in Uppers shown by spinners.

The Ashmouni/American straddle (February/March) this week stands at 254 points, against 285 points last week and 758 points at this time last year.

The week's receipts amount to 94,760 kantars, against exports 173,830 kantars; the stock in Alexandria stands at 3,526,148 kantars.

Spot.—The past week has witnessed a series of rather quiet markets at Minet el Bassal, and sales amount to about 16,100 bales, of which we estimate 5,600 bales Sakellaridis, 8,600 bales Ashmouni and Zagora, 1,200 bales Pilion, and 700 bales other varieties.

AMERICA.

New York: Brentano's, Fifth Avenue and 27th Street.

Boston (Mass): Smith and McCance, Ashburton Place.

Sakellaridis: Demand has been only moderate, and a very mediocre turnover has resulted, covering all grades up to Good to Fully Good. Good sound cotton in the grades below Fully Good Fair is very scarce and hard to buy. Spot differences, though quotably without much change, show a distinct tendency to stiffen.

Ashmouni and Zagora: Demand has been rather less than last week and only a moderate turnover has resulted, in which all grades have shared, with the medium qualities preponderating. Spot differences are generally unchanged except for Fully Good and better, which are somewhat dearer.

Pilion: Has been in considerably improved demand and a satisfactory turnover has resulted. Spot differences are unchanged for the medium qualities and rather dearer for the better grades. Really good staple cotton is not very easily found.

Other Varieties: Nahda continues to attract spinners' attention, and a good business has been done. Spot differences are rather dearer for the medium qualities and unchanged for the top grades. In White a fairly good business has been done. Spot differences are rather easier. Some small lots of Maarad have been done and a very fair business has transpired in Fouadi.

Up-country:—Business in spot cotton this week has been on very small lines, the firmness of the futures market having rendered holders of the remaining cotton more insistent in their demands. Heavy rains have caused a complete cessation of work in most of the ginning factories for some days. Preparations for sowing now seem more active, especially in Upper Egypt and in the South and Central Delta. A slight increase in the acreage planted is expected, especially in Upper Egypt.

The production of the Anglo-Egyptian Oilfields for the week ended January 25 was 4,830 tons.

NEWS FROM ALL SOURCES.

Liubliana is to spend £65,000 on the expansion of its municipal tramway system.

Yugoslavia's exports of bauxite in 1928 amounted to about 40,000 tons.

It is reported that negotiations are in progress for the amalgamation of the Banca Chrissoveloni with the Banque de Credit Roumain.

A Cairo message states that the Egyptian State Railways have awarded a contract for 70,000 tons of coal to Messrs. Beynon, and for 130,000 tons to Messrs. Watts Watts.

The Yugoslav-American Steamship Company, of Split, have given a contract to Messrs. William Doxford and Sons, Sunderland, for two cargo steamers, each of 10,500 tons and 12 knots speed. The machinery is to be supplied by Dickinson and Sons, Sunderland.

The General Accident Fire and Life Assurance Corporation announce that Mr. J. R. Yates, who for 20 years has been chairman of its London Board, retires from that office and joins the head office Board. Mr. E. J. Holland succeeds Mr. Yates as chairman of the London Board.

The value of Yugoslavia's exports in November was 652 million dinars, while that of the imports was 707 millions, there being an adverse trade balance of 55 millions. For the first eleven months of 1928 the exports totalled 5,875 million dinars, while the imports amounted to 7,287 millions, leaving an adverse balance of 1,412 millions, as against 777 millions for the corresponding period of 1927-

Notes of the Week.

The New Order in Yugoslavia.

The inwardness of the new régime in Yugoslavia continues to find interpretation mainly in keeping with the prejudices of the observer. Opinion in Italy, influenced, perhaps, by the signing of the Franco-Yugoslav Treaty of Commerce, seems to have decided that the *coup d'état*, even if not deliberately designed to that end, will have the effect of strengthening the ties between France and Yugoslavia, and ultimately of delivering the latter both politically and financially into the hands of the former. For the accuracy of this pessimistic outlook it is necessary to predicate for Yugoslavia the helplessness that proved the undoing of Albania, and at present there are no signs that the Yugoslavs themselves take such a tragic view of their position. The financial situation inevitably exercises the mind of the Belgrade Government, and it is no secret that all possible sources of a loan are being examined. On other subjects, however, King Alexander and his advisers contrive to keep in a large measure their own counsel, if only because they cannot commit themselves to any hard-and-fast policy, but must be guided by events. They have declared their wish or intention to restore parliamentary government at the proper moment, but it is to be on lines that will obviate the travesty of constitutionalism possible under the old order. History provides many instances of the unwisdom of too definite promises in regard to future action in the political sphere; Great Britain for a long time hoped to be able to evacuate Egypt unconditionally, until world conditions showed themselves too strong for her. Both King Alexander in Yugoslavia and Mahmoud Pasha in Egypt have pledged themselves to work for a return to constitutionalism, but have refused to fix any unalterable time-limit. Much depends on the capacity of each country to rid itself of the pernicious conditions that proved its undoing in the past. In both countries the suspension of parliamentary institutions has enabled the people to show themselves to better advantage. Belgrade is developing unsuspected capacity for administrative energy and efficiency, and arrears of official work that have been allowed to accumulate for years are being disposed of in a few weeks or days. For ten years the Cabinet has included a Minister for

the Unification of Laws, but hardly any unification has resulted. Under the Dictatorship an advisory Commission is being nominated for the purpose, and a start has already been made with the promulgation of a unified criminal law for the whole country. Within a few months, therefore, the anomaly of different codes and administrative systems in the Kingdom which has been allowed to exist for ten years will have been removed.

Yugoslavia's Foreign Relations.

The Yugoslav Dictatorship is probably finding it easier to introduce order and efficiency into the home administration than to lay down new lines for the country's foreign policy. So far there has been a noticeable tendency to mark time in regard to foreign affairs. The Treaty of Friendship with Italy has lapsed, and it may be that Signor Mussolini's pointed remarks about the necessity for the inculcation of friendly relations apart from any formal agreement on the subject have made the Yugoslav Government unwilling for the present to risk any further overtures which might not be reciprocated. As the ground for a treaty with Greece had already been prepared at the time of M. Venizelos's visit to Belgrade, the delay in drawing up a formal agreement suggests that the new régime in Yugoslavia is by no means satisfied with the position of Greco-Yugoslav relations as they were left by its predecessors in office. The Greek Prime Minister achieved a personal success in Belgrade; he had arrived with the Greco-Italian Treaty in his pocket, and clearly gave it to be understood that, if Yugoslavia desired friendly relations with Greece, it must be on Greece's terms. At the moment the Yugoslav Government, distracted, as it was, at home, was not in a position to challenge M. Venizelos's optimism, and it tacitly accepted his terms. They were, it may be supposed, far enough removed from the spirit in which Yugoslavia had denounced her treaty with Greece two years previously to make King Alexander and his advisers wonder whether it will be possible now to improve upon them. There has been some discussion of an economic entente between the three States of the Little Entente, and the initiative is understood to have been taken by Yugoslavia. Whether

this move is intended as a step in the consolidation of the latter's international position can be only a matter of surmise. The clash of interests between Yugoslavia and Czechoslovakia, which is concerned to build up a strong agricultural position at the expense of Yugoslav exports, has so far been proof against all official attempts to emphasize the ties of friendship between the two countries, and there would seem to be little hope of an economic understanding, unless Roumania and Yugoslavia, whose economic interests more or less coincide, can together bring pressure to bear on Czechoslovakia and extract concessions for the sake of keeping the Little Entente in being.

Greece and General Pangalos.

After all, General Pangalos is not yet out of the wood. He was kept in prison for nearly two years, without trial, and was liberated only when M. Venizelos returned to power. It seemed probable that on his showing signs of good behaviour and good Liberalism nothing more would be heard of his case. An unfortunate incident, however, at the last elections, when shots were fired from his electoral headquarters at a crowd which was inclined to jeer at his followers, stirred up feeling against him. The question of the prosecution of the ex-Dictator and his Ministers was submitted to the Chamber towards the end of January, on the strength of the report of the Commission appointed by the previous Chamber. It was agreed that the findings of that Commission were no longer valid, but its evidence was accepted as ground for a further inquiry. During the sitting M. Tantalides, Minister of Finance under the Dictatorship, was heard in his own defence, but he failed to convince the Chamber of his innocence. The motion to institute proceedings against the individual Ministers was carried, in the case of General Pangalos by 108 votes against 21, in that of M. Tantalides by 103 votes against 26, but in the case of General Nider by 72 votes only against 57. A new Commission of Investigation was appointed, to draw up the indictment within two months and to report whether the Ministers should be tried by the Senate as a High Court. From the course of the debate it is to be inferred that the main charges against the Ministers will be financial rather than political. They will be accused of having caused pecuniary loss to the State by dubious financial operations rather than of political indiscretions.

Government and Opposition in Egypt.

The Dictatorship in Yugoslavia and its mild counterpart in Egypt continue to offer an interesting contrast. King Alexander has decreed a complete ban on politics; all party organizations have been dissolved and there is no public indulgence in political controversy. Mahomed Pasha Mahmoud has suspended Parliament, but he has shown himself ready to tolerate a wide range of criticism from his political opponents. It remains to be seen whether the tendency of the Wafdists to abuse their liberty will force the Prime Minister to tighten the screw, now that he has an object lesson before him in Yugoslavia of a dictatorship conducted on lines of military thoroughness. So far Mahmoud Pasha has distinguished between provocatively false statements as indulged in by the Press and criticism, however captious or ill-informed, on the part of dissatisfied politicians. Certain newspapers have been suspended or suppressed; but the campaign against the Government continues, and the Prime Minister has now issued a warning to the Press which suggests that there will be limits to the Government's toleration. At the same time the leader of the Wafd is informed that the propaganda that he is carrying on is regarded as dangerous, and may call down upon his head strong measures. It may yet prove difficult to steer the middle course that the Egyptian Prime Minister has set himself. If he could have counted on a modicum of patriotism from the Wafd and its leader, this need for extreme action would not arise; but the attempt made by the Wafd to foul the Egyptian nest by propaganda abroad suggests

that its motives are wholly selfish and that it has no concern for the real interests of Egypt. Compared with the Egyptian fellahen the Yugoslavs are a hundredfold more politically-minded; yet they have had the sense and patriotism to recognize that the Dictatorship is capable of conferring practical benefits on the country, and they are prepared to give it a fair trial. In Egypt the most obvious benefits conferred on the people by the Government are challenged and decried; even the decision to put through the great irrigation projects for which the country has been waiting for years is attacked, on the ground of the Wafd's old bogey, that in so doing the Government is playing into the hands of the British.

Sir Henry Dobbs' Accomplishment.

It was an unfortunate climax to the career of Sir Henry Dobbs in Iraq that trouble should have arisen as between London and Baghdad on the subject of the Military and Financial Agreements subsidiary to the Anglo-Iraqi Treaty. Sir Henry, it is known, strove hard to bring the business to a successful conclusion before he retired from office in Iraq on February 3, but the crowning achievement was not to be. During the régime of Sir Henry Dobbs, however, the young Arab State has made remarkable progress towards her goal, whatever paper agreements have failed to materialise. He took over from Sir Percy Cox at a time when anything might have happened to Iraq, but by virtue of his qualities of firmness, tact, and patience he at last made the frontiers of Iraq secure. The consummation of Turko-Iraqi relations in the Treaty of Angora must be placed mainly to the credit of Sir Henry, whose finesse in bargaining and whose knowledge of Oriental diplomacy are unsurpassed—as had already been proved by the success which attended his patient efforts in Kabul in the years following the Anglo-Afghan War of 1919. That Turko-Iraqi relations are now excellent is at least as much due to British advice given in Iraq as to the desire of the Iraqis to live on good terms with their erstwhile masters. In regard to Iraq's eastern and southern neighbours, Persia and Najd, one can only say that, had an unchecked rein been given to the desires of the inhabitants of Baghdad, Iraq's relations with the two independent States would have had a far rougher course than they actually have had. Here, again, the restraining hand of the retiring High Commissioner has been most evident. It is, however, in the less ostentatious sphere of internal development that Sir Henry has proved his great worth. He has steadily encouraged the economic progress of Iraq, knowing well that financial stability is at the root of all progress. During his six years at the Residency Iraq has really made notable strides, as the League of Nations and all the world know. Nor, in this most satisfactory process, has Sir Henry failed to hold high in the Middle East that which elsewhere is sometimes lacking, namely, British prestige. There is now in Iraq more genuine friendship for Great Britain than in any other British commitment in the East. That friendship must be preserved.

The Immediate Problem in Iraq.

The new High Commissioner, Sir Gilbert Clayton, will, fortunately, have the opportunity of meeting Sir Henry Dobbs as he goes to, and Sir Henry comes from, Baghdad. It is to be presumed that Sir Gilbert, who has known in Egypt what differences between Nationalist politicians and Great Britain mean, will not be unduly depressed by the fact that the Cabinet in Baghdad has resigned; it is also to be presumed that whatever concessions, if any, the British Government intends to make in the military and financial spheres, the new High Commissioner will be able to announce at once. In Iraq itself, apparently, there are great hopes that the Mandatory Power will relax its opposition to the Iraqi proposal that the direction of military operations should be vested in the Iraq Army, the Royal Air Force to be regarded as auxiliary forces. Great Britain, of course, has maintained that where military operations demand, the

combined use of Iraqi and British forces, these forces should be controlled by a British Commander-in-Chief. Opposition has also been shown to the Iraqi proposal that the Military and Financial Agreements should end in 1932, instead of being made for the same period as the Treaties. Now without doubt these are knotty points, which it will need all the skill of Sir Gilbert Clayton to unravel, if, indeed, they are susceptible of solution in terms acceptable to both sides. Of such a solution, however, there is at present no need to despair. There is even talk of slight concessions being made which will enable Sir Abdul Muhsin's Cabinet to continue in office.

"The Ikhwan are Coming."

It is the fate, apparently, of the Wahhabis to be treated as the Bolsheviks of Arabia, with whose name non-Wahhabi mothers may frighten their children into obedience. Basrah, at any rate, never wearies of crying "The Ikhwan are coming"; but very much more often than not her sound of alarm turns out to be a lullaby. All last week, for instance, there were circumstantial statements concerning the invading intentions of sections of the Ajman and of the Mutair, which were alleged to have broken off from the main body of those tribes still under the control of King Ibn Saud. But in the end the raid failed to materialise, owing, it was carefully explained, to fear of dire punishment at the hands of the Royal Air Force. Our readers must be wearied with our continual warnings against all this exaggerated nonsense; so little faith, indeed, is now placed in reports from Basrah that, if anything serious were to occur, it would be the more serious in that at first it would surely be disbelieved! Nor, as we have often pointed out, is Basrah alone in these inaccurate reports about the dissensions among, or the activities of, the Wahhabis. A short time ago, for instance, the rumour was spread in Egypt and in Western Asia that at a great tribal conference at Riyadh King Ibn Saud had offered to abdicate. How any Arabic papers can publish these wild fancies passes our comprehension. The European or American newspaper correspondent, on the other hand, writing for readers who know no difference between Arabia and Afghanistan, smells good copy in these extravaganzas about desert warfare, and duly transmits the reiterated rubbish to the telegraph. His sense of responsibility consists only in sending a certain amount of sensational copy at stated or unstated intervals. Censorship has its disadvantages, but one is sometimes tempted to wish that it could be imposed at the more notorious centres of fabrication in the Near and Middle East.

INDIA.

The Nehru Report and After.

A year or more has elapsed since the Indian National Congress, the National Liberal Federation and a host of other political leagues, societies and associations both Hindu and Muhammadan agreed to form an All-Parties Conference, the business of which was to be the framing of a constitution for India. After months of discussion and consideration a Committee appointed by this Conference submitted a report—which has since become known as the Nehru report—setting forth the principles upon which a constitution might be framed. The report was based on the idea that Dominion Status would be accorded forthwith. India was to become a self-governing dominion of the British Empire with a federal system of government. At a meeting of the All-Parties Conference at Lucknow in August the report was adopted; and at first sight it appeared that some sort of unity was about to be attained. But almost immediately complete separation from Great Britain was demanded. And at the forty-third session of the Congress, which was held at Calcutta last Christmas, there was adopted a resolution which, if

it means anything, means that the Nehru report is rejected. For it is to the effect that, unless the British Parliament shall adopt the constitution as defined in the report on or before December 31, 1929, "the Congress will organise non-violent non-co-operation by advising the country to refuse taxation and in such other manner as may be decided upon." Obviously it will be impossible for Parliament to come to a decision by the end of the year, if it is to take into consideration—as of course it must—the report of the Simon Commission. The resolution is, therefore, nothing but a threat that revolutionary measures will be adopted if Parliament declines to be dictated to by the Congress. As the Viceroy told the Legislative Assembly in the speech summarised in another column, "such procedure savours rather of intolerance and impatience than of the methods of responsible statesmanship and would reduce Parliament to being a mere registrar of the decisions of other persons." The resolution was called a compromise as between those who would accept dominion status and those who demand independence. But far from being a compromise, it is, of course, in fact, a victory for the most extreme section. For it means that the Congress, having been captured by those who will be satisfied with nothing short of complete independence, has been turned into a revolutionary organisation. Even the veteran Pandit Madan Mohan Malaviya, and Mrs. Besant, who are certainly not moderates, recognise that the resolution would break the Congress into pieces. And Mrs. Besant expressed the view that in a civil disobedience campaign it would be the defenceless masses who would suffer, and not the leaders and organisers of the campaign.

It is reported that the American Minister at Addis Ababa, and Ras Tafari, Negus of Abyssinia, have signed a Treaty of Arbitration and Conciliation.

The Roumanian Chamber has unanimously ratified the Kellogg Pact. All parties except the Transylvanian Magyars and Saxons voted.

M. Venizelos has stated once more that Greece cannot forgo her quota of the reparations due from Bulgaria if she has to pay this year's instalment on her own War Debts to the Allies.

In celebration of the birthday of King Boris of Bulgaria on January 30, members of the Diplomatic Corps and many high officials of State attended the Cathedral in Sofia, where a "Te Deum" was sung.

A large swarm of locusts was attacked on January 28 north of the Allenby Bridge across the Jordan by the field forces of Palestine and Trans-Jordan. Three hundred volunteers, with 36 flame guns, helped in the work of destruction.

THE TRANSFORMATION OF ISLAM.

With the political changes that have come about during recent years in the world of Islam even the most superficial observer of affairs is familiar. The disintegration of former political entities, the rise of new rulers, the imitation of Western forms of governance—such phenomena as these have appeared so coincidentally as to cause the impression that these changes must derive from a common motive, and must be directed towards a common end. Yet is that really so? Now the material changes in lands like Turkey, Arabia, Persia, Afghanistan, it is not difficult to assess. National Budgets can be examined; roads and railways can be measured; exports and imports can be scrutinised. But are such things the real criterion of the so-called "Westernisation" of Islamic countries? Admittedly, it is the material side, the scientific side of the "successful" West which Islamic countries seem most anxious to copy; but ought not one rather to look for evidence of spiritual changes in these lands which fain would approach the West in "efficiency"? Spiritual changes in Islam are, indeed, to be found, but they are incomparably more difficult to find than are the material changes. The "progressive" countries in Islam do not appear, in fact, fully to be convinced that no country can be really great, can contribute to the civilisation of mankind, unless there be at the back of its activities, whether consciously or unconsciously, a spiritual impulse. If the transformation of Islam which is at present in process were to denote nothing more than material change, it might even now be written off as a matter, viewed from a world standpoint, of minor importance. No country can long and happily exist without a leavening of religious culture which contributes to the stock of universal civilisation, and if the Westernisation of the East were to imply an inevitable growth of scepticism or of atheism, accompanied by no increased and compensating spiritual activities, one would despair of it. Names of certain non-Islamic countries in which a successful policy of materialisation has been pursued, but in which there has come about an increasing soullessness, will at once present themselves to the reader: it is not such lands, but the older countries of Christian Europe which Islamic countries could more profitably take as models.

Although it is scarcely a point to be argued out in these columns, we believe that the West can be permanently proud of its accomplishments in the Muslim East only where Christian culture and civilisation have affected Islamic culture and civilisation. All the best Europeans in Muslim lands—at least all Europeans belonging to the more well-known nations—are in effect representatives of great cultures; inheritors of a civilisation; whether or not they belong to, or have detached themselves from, their national

faith, they are informed by their Christian past. Such men not unnaturally find abundant points of contact with representatives of the Islamic civilisation. The harmonisation of the interests of Christendom and of Islam is no idle dream, if Christians and Muslims be true to their best selves; it is an absolute and most desirable possibility. If, however, the Muslim East, in its pursuit of particular nationalisms, were to scrap its glorious common traditions; if it were to attempt to shape its destinies by the light of human reasoning alone; if, in a word, it were to imitate "Godless Russia" and make success, jealousy, and cupidity its watchwords, how quickly would its "points of contact" with the West diminish! In short, unless the transformation of Islam is to signify the preservation of Islam, it is difficult not to predict a more virulent form of the now unjustified "East versus West" complex which seems to afflict so many facile minds. There may, of course, be exceptions to this dictum. One Islamic country, for instance, might in this transformation return to its pre-Islamic religion, or of its own national genius form another; another section of Islam might conceivably exchange its religion for something even more familiar to Westerners. But the mass of evidence so far available seems to point to the fact that the main tendency in Islam in matters of faith and outward observance is towards the growth of indifference, if not of irreligion.

Now can the influence of the mollahs, which is often, although by no means always with justification, held to impede the progress of Islamic countries, be modified without changing the essentials of the religion of the Prophet Muhammad? To put the question in another way, can Islam be changed from a minute system of observances, a system of religion mingled with politics, to an ethical system? We ourselves are not competent to answer. But it would appear certain that, if the process of Westernisation is to continue, some such change must be made. In the opinion of many Muslim observers, of course, such a transformation is perfectly possible. The way has been shown by thinkers in Egypt, Turkey, and India. To prophesy success for this movement to rid Islam of the so-called "corruptions" that have attached themselves after the death of the Prophet Muhammad would be rash indeed, yet it is certain that the violent actions of the various ruling reformers will in the long run help, rather than hinder, the impetus more liberally to interpret the doctrines of Islam. Each particular Muslim country, moreover, must work out its own salvation: there is, we confess, considerable danger in generalising as we have been generalising upon a subject which has probably as many facets as Christianity itself. The separation of the political life in Islam from the religious life is not a thing on which Westerners can fitly dogmatise to the East. To suppose that Islam as a whole could, in order to meet the demands of the modern world, ever consent to a modification of its tenets is absurd. Unless the West is to collapse, however, mere obscurantism in the East can prosper only temporarily. The new thinker may be rejected, but he must be considered. That Islam, or Islamic countries have still something to contribute to the world of civilisation we fain would believe. It is not necessary to accept Spengler's view that our own civilisation is now approaching its end, still less to accept his by no means impossible estimate that it is from a changed Russia, which is now trying so hard to transform the Orient, that the next great civilisation will derive, in order to hope for a real revival of those immemorial countries which still constitute the main strength of Islam. The West has, perhaps, almost paid back to the Islamic East the debt which it owed it for services rendered during the Dark Ages. Soon the wheel will have come full circle, and then there may—who knows!—blossom in those ancient lands which produced the three great Semitic religions a new and resplendent civilisation, which will be none the less enduring for its blending of East and West.

*The Near and Middle East

From Our Own Correspondents.

Baghdad, January 26.

The Political Situation.

The Iraq Cabinet resigned on January 21, the Prime Minister having been unable to reach an agreement with the British Government over the Military and Financial Agreements subsidiary to the Anglo-Iraqi Treaty. King Faisal has accepted Sir Abdul Muhsin's resignation, but has instructed the Ministers to remain in office until a new Cabinet has been formed. It is generally understood that the chief difficulty is the question of defence, the British Government holding that Iraq is not yet in a position to undertake responsibility for her own frontiers. At a meeting of the Progressive (Government) party the British reply on this and other questions was read out. The leaders of the party were unanimous in stating that they would continue to seek a solution, but only on the lines of the demands made by the resigning Cabinet. At an informal conference to which the representatives of all parties were summoned by the Prime Minister, the leaders of the other political groups are reported to have taken the same line.

It is generally expected that no new Cabinet will be formed until after the arrival of the new High Commissioner, Sir Gilbert Clayton. Perfect order prevails throughout Iraq, though the vernacular Press abounds in articles which in their fiery repudiation of foreign interference consistently refuse to look cold facts in the face.

The High Commissioners.

Sir Henry Dobbs leaves Baghdad on February 3. He will go by air to Aleppo *via* Mosul, and thence to Constantinople, where he will meet Sir Gilbert Clayton, the incoming High Commissioner, who is expected in Baghdad on February 16. Mr. B. H. Bourdillon, the Counsellor, will act as High Commissioner during the interval. On his way through Syria Sir Gilbert Clayton will be the guest for three days of the French High Commissioner, and it is expected here that the possibility of a Commercial Treaty between Syria and Iraq will then be discussed.

Health Services.

This week has seen the passing of the Public Health Protection Law, which gives to the Health Services a wide measure of control over the sanitation of public institutions such as factories, baths, hotels, and so on. It also provides for the regulation of quarantine measures and for the control of the pilgrim traffic from the point of view of public health.

In this relation we may note the appointment by the Government of India of a Protector of Indian Pilgrims in

Iraq. The Indian Association in Baghdad, supported by the High Commissioner, has for some time past been endeavouring to bring this about. The Protector of Pilgrims will work in the High Commission, visiting the Holy Cities during the pilgrim season. He will supply the pilgrims with information on routes, passports, and so forth, and will be responsible for the repatriation of destitute pilgrims. The appointment to this post of Mr. Quraishi, a Shiah Punjabi already in Government service in Iraq, has given general satisfaction to the Indian community.

Child Welfare.

A meeting of Iraqi and British ladies was summoned last week by H.M. the Queen of Iraq for the purpose of supporting a Children's Welfare Society. If this movement survives its first enthusiasm, it may do much useful work and be symptomatic of real progress towards the development of a social conscience.

Desert Attack.

Mr. Charles Crane, an American millionaire and ex-Ambassador to China, has been visiting Iraq. He received a very enthusiastic welcome from the Baghdad Nationalists, one of the Party's newspapers even going so far as to bring out a special edition in which the visitor's known interest in Arab affairs was lauded. At a meeting of the *Hizb al Watani*, however, Mr. Crane made no bones about advising his admirers to put their energies into improving their country's economic and financial position instead of worrying about politics—excellent, and, as it happens, most timely advice.

Unfortunately Mr. Crane's visit ended in an alarming and tragic experience. He went to Basrah by air, and on January 21 set out to motor to Kuwait, accompanied by a member of the American Mission at Basrah, Mr. Bilkert. About forty miles south of Zubair a party of Wahhabi raiders pursued and fired at the car. Mr. Bilkert was shot dead; the rest of the party escaped unhurt, and returned to Basrah. Mr. Bilkert had worked for nine years as a teacher and missionary in Iraq, and was greatly liked and respected by Arabs and British as well as by his own countrymen. His early death is a real loss to Iraq.

General News.

The fifty annual meeting of the Permanent Frontiers Commission has ended at Mosul. The Iraqi and Turkish delegates maintained the most cordial relations throughout their discussions.

A new draft of the Baghdad penal code has been drawn up by the Ministry of Justice, and is shortly to be submitted to Parliament.

The Rev. F. A. Rogers has been appointed by the Archbishop of Canterbury to the Civil Chaplaincy of Baghdad, in place of the Rev. E. A. B. Royds, whose contract expires this month. Mr. Rogers worked for many years in South Africa, and for the last three years has been a Secretary of the Missionary Council of the Church Assembly.

Cairo, January 19.

The Singapore Dock.

On Thursday last the High Commissioner paid a visit to Ismailia. He lunched with the Marquis de Vogué, President of the Suez Canal Company and the Baron de Benoist, Chief Superintendent, and afterwards invested the members of the Company's staff with decorations which the British Government had conferred on them to mark the unprecedented event of the passage of the Singapore Dock through the Canal and its own recognition of the successful manner in which the passage was negotiated. M. Solente, Chief Engineer of the Company, received the honorary C.B.E.

Viscount Allenby.

Viscount Allenby has arrived, and is staying at the Semiramis Hotel. His lordship, who is a director of the Delta Light Railway Company, has come out to discuss, and, it is hoped, to settle certain important questions outstanding between his Company and the Egyptian Government. He was met at Port Said and Cairo by a large number of old friends and officials who had served under him.

British Chamber of Commerce.

On Monday last the British Chamber of Commerce in Egypt entertained the High Commissioner to dinner. This has been an annual institution since Lord Lloyd has been at the Residency, with the exception of last year, when, owing to the illness of the Chairman, Mr. Ralph Carver, the dinner had to be postponed. This year's function was an even greater success than its predecessor. At the high table where Lord Lloyd sat flanked on either side by the Chairman of the Chamber and Mr. Martin, the Chairman of the Cairo Committee, were the other guests of honour, including Lord Inchcape, General Sir Peter Strickland, Air Vice-Marshal Webb Bowen, Mr. Samuel Samuel, and Sir Archibald Boyd Carpenter. Altogether over one hundred and fifty, including a good contingent from Alexandria, sat down to dinner in the ball-room of Shepheard's Hotel.

Messrs. Carver and Martin, in proposing and seconding the toast of the health of the High Commissioner, testified from their own personal experience to the active interest which Lord Lloyd took in British trade, and to the courageous and never-failing support which they encountered at his hands whenever there was any question of British commercial interests to be taken up. They

declared that they and the commercial community, not merely the British but also the other foreign communities, had implicit confidence in his capacity to deal with the various very complex problems vitally affecting the foreign trade of Egypt and the position of foreigners within her gates, which are at present under, or will in the near future come up for, consideration.

The High Commissioner, who was received with prolonged applause, which had been preceded with "For he's a jolly good fellow," made what was one of the best speeches he has delivered during his tenure of office. Referring to the proposed reforms in the Mixed Courts he declared that the small concession which they were called upon to make should be readily acquiesced in by the British community as constituting a practical demonstration to the Egyptian Government of the sincerity of the British desire to do everything possible to help stamp out the terrible drug scourge. This attitude, he said, would stand when the time came to discuss other questions more vitally affecting foreign interests. Lord Inchcape and Sir Archibald Boyd Carpenter followed with short speeches, the latter conveying to the British community the assurance that their interests were being actively watched by the House of Commons, where they had a large number of keenly sympathetic supporters in the fight they were making for the improvement of British trade abroad. Finally Mr. Carver was induced to speak again, this time in reply to the toast of his health, and he fairly carried the assembly with him when, addressing Lord Inchcape, he expressed regret that his lordship had not replied to the question which was constantly in the mind of every Briton domiciled in Egypt, viz., "When are the fares to Europe going to be reduced?" Lord Inchcape merely replied with a "Never," but he missed an admirable opportunity of passing the joke, for he might well have replied that the matter might receive consideration if and when his friend on the right, Mr. Samuel, who controlled their fuel, reduced his price for petroleum. Altogether it was an eventful evening, revealing the good feeling existing between Alexandria and Cairo, the fullness of the support which the High Commissioner has from the British community, and, last but not least, the high opinion their own countrymen have of the efforts to develop British trade with Egypt, and protect British trade interests made by Messrs. Carver and Martin and Mr. Trimen, the Secretary, to whom the Chairman paid a warm and fully deserved tribute.

Sir Denison Ross.

Sir Denison Ross, who is making a short stay in Egypt on his tour of the Near and Middle East, was prevailed upon to give two lectures this week. The first took place under the auspices of the new International Club of Art and Literature "La Lanterne Sourde" and of the School of Oriental Studies of the American University, who lent their auditorium for the purpose. The subject was "Persian Literature" in which Sir Denison delighted his audience, who included the High Commissioner, by his charm of manner and by his recitation of selected poems with their English translation. The second, which was on "Arabic," was given at the Egyptian University, but

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or— from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express— before you leave England.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

AMERICAN EXPRESS

AN advantage of American Express Independent Tours is that you travel with everything arranged but nothing to interfere with your liberty. We suggest itineraries and quote cost of tours combining Egypt and India, without obligation.

so badly was it arranged that even the University authorities did not know until a few hours before that anything of the nature was to take place, and a great many who would have enjoyed hearing Sir Denison on the subject, particularly at the present juncture, were deprived of this pleasure.

A Popular Vice-Consul.

Those whose duty takes them regularly to the British Consulate-General in Alexandria will miss the cheery personality of the Vice-Consul, Mr. Somerhayes, who has now been transferred to Hamadan. Mr. Somerhayes has been over seven years in Alexandria, and during that period both he and his wife have won a place in the hearts of the British community—I might indeed add, in the respect and esteem of the other communities as well, which is quite unusual. Both as a sportsman and an official Mr. Somerhayes has proved himself most efficient, particularly in regard to the Court work falling to him as a result of the Consul-General's having for some time to act as Supreme Court Judge, and his departure is a great loss not only to his chief but also to the community in general. Recently leading members of the community met at the Consulate-General and made to Mr. and Mrs. Somerhayes, the latter in recognition of the work she had done as Commissioner of the Girl Guides, a presentation which was accompanied by a sincere expression of appreciation of their activities and regret at their departure. It is the devout hope of everyone that their stay at Hamadan may be happy but short, and that before long we may see them both back again amongst us in Egypt.

Cairo, January 26.

The Prime Minister.

The Prime Minister, who had a slight relapse after his return to office and was compelled to remain at home again, has now resumed work, but has been ordered by his doctors to avoid anything which would be a tax on him or expose him to a chill. For this reason it is not

expected that any speedy decision will be taken in regard to the reply to the question of guarantees raised by the Powers in their answers to the Mixed Tribunal circular, and it is quite possible that the settlement, which is believed to be very close, in the matter of the waters of the Nile will not be made until after the High Commissioner has had an opportunity of discussing the matter with Sir John Maffey in the Sudan, whither he went on January 23. Lord Lloyd, who was accompanied by Lady Lloyd, the latter's sister, Mrs. Maclagan, Mr. R. E. More, the Sudan Agent, and Mrs. More, Mr. P. Scrivener, Second Secretary at the Residency, and Sir Ian Malcolm, will be absent for about a month, during which he will pay a visit to the Upper Nile.

Death of Prominent Nonagenarian.

Much sympathy is felt with the Prime Minister on the death of his father, Mahmoud Pasha Soliman, which occurred on January 21. The sympathy is all the more keen as Mohamed Pasha Mahmoud had made up his mind to go to Assiut next week to see his father who had been ailing for some time, and his doctors absolutely forbade his going there now for the funeral, owing to the great fatigue which the ceremonies would cause him. As it is, the usual reception has been held at his house in Cairo, where several thousand people called to offer their condolences, but Mohamed Pasha could attend only for a short time each day, and then had to receive his visitors seated.

With Mahmoud Soliman Pasha disappears one of the old school—a figure who had played a great part in the affairs of his country. The Pasha, who was over ninety years of age at his death, entered the Government service after passing through Al Azhar University. He became eventually Sub-Mudir of Guirgneh and Assiut and then retired in order to attend to his properties. He was a member of the Chamber of Deputies under Tewfik Pasha, and it fell to him in 1881 to reply to the Speech from the Throne. When the new Organic Law was passed in 1882 and a Legislative Council and General Assembly were

formed he was a member of each and became Vice-President. Eventually when the Organic Law was again revised in 1913, he became a member of the Legislative Assembly then created. Coming of one of the oldest families in Upper Egypt and possessed of great wealth he played a great and influential part in the political and economic development of his country. It was in his house that the Wafd was formed, and when Zaghloul Pasha was deported to Malta he became President of the committee which acted for him in his absence. Recently he transferred all his property to his sons, as he preferred that they should enjoy life during his own lifetime. In justice to his children it should be stated that this made not the slightest difference, and that they continued to treat him with the respect and consideration which had before that characterised their relations with him. As a matter of fact Soliman Pasha, to his death, enjoyed in his family, which was very far spread, the position of a veritable patriarch, and it was really touching to watch the deference with which his sons behaved in his presence and the manner in which to his dying day they sought his advice on every question which concerned them. In their relations with one another and towards their head the Soliman family maintained all the old Oriental traditions, which are becoming alas! more and more scarce in Egypt.

Al Azhar.

An interesting reform has just been instituted by Royal Decree in the matter of the subsidies given to the teachers and students at Al Azhar University. These subsidies come partly from an annual State grant and partly from private Wakfs, and since time immemorial they have taken the form of loaves of bread. The bread ration per student or master is fixed, and the supply is farmed out to contractors who deliver every day at the University so many thousand loaves of bread, each of a stipulated weight. But if the weight is fixed it has not been so with quality, which latterly has been going from bad to worse, and it has now been decided that in lieu of the bread-ration there shall be a money payment, which will set a term to a scandalous state of affairs which has long existed, not merely because of the inferior quality of the bread supply, but also because masters and students openly traded with the outside public for the disposal of the bread ration which they could not consume.

Long Service.

At the end of 1928 the Pro-Consul and Registrar of H.B.M.'s Supreme Court, Mr. V. J. Hughes Laferla, retired, and this week a little meeting took place at the Consulate-General in Alexandria in his honour. It was presided over by the Consul-General, Mr. Heathcote Smith, who handed him an inscribed inkstand, while Mr. Lattey, on behalf of the British Bar, presented him with a cheque, both gifts as a mark of appreciation of the services he had rendered. Mr. Bianchi, as head of the Maltese community, said they were proud of the splendid example which one of their members had given, while Dr. Morrison, as the late Medical Adviser of the Consulate, added his tribute to the ready assistance he had always received from him. Mr. Laferla has served the British Government in one capacity or another for over forty-six years. He started in 1882 as a member of the staff of Sir Evelyn Wood and took part in the expedition for the relief of Gordon. Since 1890 he has been in the Consular service, being appointed to the post he now vacates in 1911. All the Consuls-General under whom he served—there have been four—as well as the five Supreme Court Judges, have spoken most highly of Mr. Laferla's work, and it is amazing, to say the least, to find that after such long and loyal service he should have to retire without receiving any pension from the British Government.

Financial Questions.

Mr. Leith Ross, of the Treasury, is now in Cairo discussing with the Ministry of Finance the settlement of

certain financial questions, which have been for some time outstanding between the British and Egyptian Governments. These questions include the 1855 Loan, the responsibility of the Egyptian Government for the colliers bringing coal to Egypt, which were sunk during the War, and the Egyptian Government's share in War reparations. The 1855 Loan was one of those repudiated by the Egyptian Parliament in 1924. It was not covered by the "Tribute Case," which the Mixed Courts decided in 1926 against the Egyptian Government, as the circumstances surrounding its flotation were quite different. It was guaranteed by France and Great Britain, the latter of whom has continued since the Egyptian repudiation to meet the interest charge of some £75,000. All efforts to persuade the Egyptian Government to meet its obligations in this matter have so far proved futile. The Egyptian authorities maintaining that the loan would long ago have been liquidated if Turkey had not suspended the sinking fund, which the terms of the loan imposed on the Sublime Porte.

Belgrade, January 25 (Delayed).

The Situation under the Dictatorship.

As is to be seen clearly from the various interviews that he has granted and the declarations issued, King Alexander has set himself sincerely and courageously to clean out the Augean stables of Yugoslav political life. The best elements of his people wish him well and are willing to give his Government a chance to make good and to judge it by results. The first effect of the sudden change on the population was a feeling of relief that the days of anxiety and apparently unending party squabbling were ended; later, while a certain uneasiness is felt by a liberty-loving people at the restrictions inseparable from a dictatorship, there is a genuine desire to see the administration thoroughly overhauled and the tangled skein of party politics straightened out, and there is the hope that after ten years of constant failure at least some measure of success may be achieved in the direction of the unification of the country. One result of these interviews and of the mass of details about the history of the *coup d'état* which are gradually becoming available is that it is now perfectly clear that the King, who commands the respect and trust of the masses of his people, accepts himself full responsibility for the change and is the guiding spirit of this great venture. This should relieve somewhat those who doubted the choice of some of the Ministers in the new Cabinet, for it is certain that, if any of them prove inefficient, they will immediately be replaced by more capable persons. It also removes the fear that the Government is a "military" one.

It is, perhaps, too early to judge the work of the new régime. It must certainly be said, however, the majority of the populace whole-heartedly endorses much of what it has begun to do. The complete re-organisation of the Civil Service was most essential. Orders have been given and are being enforced that State employees, unqualified either educationally or morally, who got positions through party political influences, are to be dismissed and replaced by qualified workers; the old Turkish habit of drinking coffee all day and receiving private visits of friends is to cease in Government offices, every Civil Servant who works efficiently is to be protected against all party or

personal spite, and in return Civil Servants must be both civil and servants of the public, every ready with friendly advice, refraining from shouting, cursing and swearing, conscious of the dignity of their positions. Later their number will be reduced and the economy thus effected will be used to increase the pay of those retained. The need for corruption being thus removed and a greater incentive to work being provided, it should become possible to eliminate most of the faults at present to be found in the Service. Most important of all the bad old system of "intervention" has been completely destroyed. When urgent business had to be done with a Government office before, it was essential to secure the intervention of a Member of Parliament or of a special lawyer. Many fortunes were made by securing the expedition of private business in the various Ministries by intervening with the Minister or some high official, and the ante-rooms of the Ministries were full continually with M.P.s and lawyers seeking precedence for some client's or friend's business. Now all petitions must be dealt with immediately and in rotation, and intervention by whomsoever it may be is forbidden. In diplomatic circles it is already said that, whereas one rarely received a reply to an inquiry before, now one invariably receives a reply and that promptly and courteously. All these changes are for the good.

The Suppression of Political Parties.

As reported in my last letter, the clauses of the new Defence of the Realm Act forbidding political parties bearing religious or tribal names, or whose objects are opposed to the new régime, are so worded as to allow of the suppression of any and every political party in the country. The process of their formal dissolution began with the voluntary liquidation of the Yugoslav Muslim Organisation in Sarajevo and was followed rapidly by the forcible dissolution by the police of the parties in Zagreb, Liubliana and other provincial centres. Their archives were confiscated, their offices sealed and their funds, usually almost nil, were taken over. Great interest was shown in the fate of the Belgrade parties, most of which did not offend against the new law, in so far as their names were concerned. Yesterday the police dissolved them too—even the Radical, Democrat and Peasant parties in Belgrade and the Independent Democrat Party in Belgrade and Zagreb. The only parties not yet definitely suppressed are the Minority parties. Dr. Kraft, leader of the German Minority party, visited the Prime Minister some days ago to inquire as to his party's fate, but no definite answer was given. While pointing out that the continued existence of their political party is guaranteed by the clauses of the Peace Treaties for the protection of Minorities, the German party has let it be understood that in case all other parties are dissolved they will not demand a specially privileged position. The dissolution of the Belgrade parties has had a good effect in the other provinces, where it is taken as an earnest of the Government's intention to treat all parties and provinces alike. The King's suggestion that he does not intend to try to crush out tribal differences, but to make Yugoslavs of the Serbs, Croats and Slovenes, as Great Britain has made Britons of the English, Scottish, and Welsh, has also created an excellent impression.

The Attitude of the Country.

It is difficult to say what opposition there is or how strong it is, since many people are reserving judgment. At present the only opposition views heard are those of passionate believers in the theory of democracy, who are naturally opposed to the new régime, even though they admit that the régime it replaces was neither parliamentary nor democratic in the real sense of those words, of ex-M.P.s and political leaders who have lost prestige, occupation and sport at one blow, and of those comparatively few who, like Dr. Matchek, the Croat Peasant leader, refuse to believe in the non-party character of the Government and fear that the Serbian parties will use it to continue the oppression of the Croatian people under the

guise of the suppression of their tribal political organisations. No active opposition has been offered to the dissolution of parties. Dr. Koroshetz, who resigned from his position as leader of the Slovene People's Party in accordance with a promise given on joining the new Government that he would cease all party work, wrote to his late followers advising them to accept the dissolution of their political organisation calmly, and promising to advise them as to the best future policy later. Of course the dissolution of his political party means little to him so long as the economic and religious organisation on which it was based, the Co-operative Societies and the Catholic Church, remain solid and continue their work. M. Krnyevitch, Secretary of the late Croat Peasant Party, declared that while the offices of the party might be sealed, their archives confiscated and their organisation formally dispersed, the spiritual union of the Croat peasants, resulting from the life work of their immortal leader, Stepan Raditch, and sealed with his blood, could never be destroyed.

Government and the Press.

It is natural that the difficulties of foreign correspondents here have increased. It is true that news is allowed to be sent freely from the country, but a number of special correspondents of various nationalities who sent messages considered by the Government to be untrue or unfairly expressed were sent for by the police and warned that they might not be allowed to stay, if they persisted in this course. A Roumanian correspondent, who certainly sent wildly exaggerated and sometimes quite unfounded news, was expelled at very short notice. More important, the home Press is strictly controlled and is allowed to publish little more than what appears in the *Official Gazette* on the political situation. Nevertheless it must be admitted that the censorship has been very tolerant and mild compared with that established during the critical first months of other European dictatorships. This policy is, undoubtedly, wise, for nothing breeds false rumours abroad more rapidly than the absence of authentic news from the accredited correspondents of foreign papers in this country. It is to be hoped that soon the Government will also feel confident enough to allow its own Press more freedom and a certain degree of right to make suggestions and to criticise.

Death Penalty for Political Crimes.

One of the most interesting of the reforms planned by the new Government is the unification of the Julian and Gregorian Calendars. At present owing to the fact that the Orthodox, Catholic, Muslim and Jewish Churches have different calendars hardly a day exists which is not a holiday for some section of the people, and this throws the business life of the whole country out of joint, since, for example, the banks of Zagreb are hindered, if those of Belgrade are not working and *vice versa*. Conferences have already been held between the Minister of Religion and the Professor of Astronomy of Belgrade University, and it is hoped that the new Calendar may be introduced by October 1.

One change introduced by the new Defence of the Realm Act has been seriously misinterpreted abroad. The old Constitution laid it down that political offences could not be punished by death. Thus, according to the opinion of many Belgrade lawyers, Punisha Ratchitch, who murdered the Croat members in the Skupshtina, could not be condemned to death, since the death penalty was reserved for murder for profit, murder with malice aforethought or for high treason, e.g., the murder of General Kovatchevitch in Shtip. This has now been changed, so that the death penalty may be applied to political crimes, but this does not mean at all that it will be applied to all who oppose the present régime or indulge in propaganda against it. This is shown by the fact that no single case of the death penalty being applied to political crimes has yet arisen, and very few cases even of imprisonment. The law gives the power, but does not insist on its being used.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 17.

The General Political Situation.

The general political situation in India has been as well expressed in a cable from Pretoria as it could be; one reporting Mr. Srinivasa Sastri, the retiring Agent-General, as having said that those who thought he was returning to India because he saw there an opportunity for greater service were much mistaken. India to-day, he said, was a scene of turmoil and tremendous political agitation, and he would rather keep out of it. He would not find in India an atmosphere more peaceful or more favourable for work, but he was somehow drawn back, and would soon be engulfed in the seat of trouble. He could not remain contented in South Africa while his associates were "undergoing torture of the soul." He looked forward to the day when India would arrive at a more wholesome stage, when her progress would be unimpeded and assured.

The "Pioneer's" View.

Writing on the Women's movement in India, the *Pioneer* had this word last Sunday on the general situation: "The minds of most Indians are occupied almost to the exclusion of everything else by the pure political problem: their energies are directed towards one end. They must necessarily leave undone much that should be done; and unless the women of the country come forward and take their part to implement the work for political freedom, whatever is gained in this direction will be of the nature of an empty victory. Side by side with India's advance towards Dominion Status must be her advance towards a status in the social and moral world beyond reproach, and fit to be compared with that of any other country. It is a noble work that stretches before Indian women. . . ." The *Pioneer* goes on to warn the women against their taking part in the political battle, which the *Pioneer* thinks they should leave to the men. They will not do that: it is not in the nature of things that they should. Women are always more ready to be worked on for a political cause than men; that is, those who are ready to be worked on at all. And they go to greater lengths of enlightened or deluded self-sacrifice. So, when a political movement is not sound at core, it is the women who are the most dangerous.

A Word from Rabindranath Tagore.

Rabindranath Tagore has not been speaking on the political situation, but he has spoken in the past upon the nature of his countrymen as revealed by their political work, and his word is worth remembrance. He puts this into the mouth of one of the strongest and most clear-sighted of the men in his novel, "The Home and the World": "What I really feel is this, that those who can find food for their enthusiasm in a knowledge of their country as it actually is . . . who needs must shout and defy their country in order to keep up their excitement—those love excitement more than their country." A line or two later on he has: "So long as we are impervious to truth, and have to be moved by some hypnotic stimulus, we must know that we lack the capacity for self-government."

Such words as the *Pioneer's*: "The minds of most Indians are occupied almost to the exclusion of everything else by the pure political problem. . . ." will mislead any one who does not know, as how can you in England know—that Tagore's analysis of his countrymen is unerringly true. He might now say himself that it is not true, but it is. It is a well-known fact that an Indian can hypnotise himself into hysteria; it is less well known that Indians in masses crave for the excitement of the emotional state born of a self-induced hypnotic stimulus. The real minds of most Indians are far less occupied with the pure political problem than is understood.

Mr. Gokhale and Mr. Gandhi.

The one Indian politician who, for all his idealism, does see his country as it actually is, if he may wish for it what cannot yet be, is Mr. Gandhi, which makes his word for the fact the interesting one. I quoted it last week. As for his power to foresee the future, and to lead men thither, there is a word given us now by Mrs. Besant, a word by the late Mr. Gokhale. "I remember how," she writes, "when I expressed to the late Mr. Gokhale, before Mr. Gandhi's arrival in India . . . my hope that he would be a great help in winning freedom for India, that wide and far-seeing statesman replied: 'No, you are mistaken. Mr. Gandhi will cause a great setback to our political movement.' His words have proved to be sadly true."

Afghanistan and the Frontier.

You will have received the most important Afghanistan news by the cables; so I need not repeat it. The Indian public, in such a matter, is not better served than London. Those who possess inside knowledge, as a few Government officials must do, naturally do not divulge it. But the fact of such an upheaval across the border has undoubtedly added to our interest in the Report on the administration of the North-West Frontier by the Chief Commissioner, which was published early in the week. It is evidence of the remarkable success of British policy. One short passage may be given: "Nothing is more symbolic of this change in the tribesmen's angle of vision than the increasing requests for the intervention of the Government in purely tribal matters." With the Border more peaceful, the Afghan danger is less serious.

Women's Education.

The reports of the proceedings of the Third All-India Women's Conference on educational reform do not properly belong to this week's news; for the proceedings were well over before the week began. A brief word may now be said. The Conference was held at Patna, and for a "gesture" on the part of the women of India that fifteen years ago no one would have dreamt of living to see, no less a person presided than a Dowager Rani, the Dowager Rani of Mandi State.

Ex-Soldiers' March on Lahore.

The most spectacular event of the week has been the march to Government House in Lahore of a large body of dissatisfied soldiers. They desired to lay their grievances before the Governor, but were stopped in Mela Ram Road, and had their leaders, Anup Singh and Sampuran Singh, arrested. There are not a few who think that the Governor would have done better to let the men see him. To their original grievances was added this other, that their leaders had been arrested; so the men, with those of their women who had accompanied them, sat down in the road, hungry, in the cold.

The King has been pleased to approve the extension of the term of appointment of Khan Bahadur Kutub-ud-din Ahmad as Member of the Executive Council of the Governor of Assam for a period of one month, with effect from March 1.

Mr. Said Fazl Ali, barrister-at-law, has been appointed a Judge of the High Court of Judicature at Patna, in the place of Sir Basanta Kumar Mullick, who has retired.

The King, as Colonel-in-Chief of the Royal Regiment of Artillery, has approved of the selection by the Master Gunner, St. James's Park (General Lord Horne), of Lieutenant-General Sir George MacMunn, K.C.B., K.C.S.I., D.S.O., to fill the position of Representative Colonel Commandant Royal Artillery for the year 1929.

By 53 votes to 34, the Legislative Assembly has voted the adjournment *sine die* of Mr. Sarda's Child Marriage (Prohibition) Bill, the Government siding with the postponement. The Bill, which has been the subject of acute controversy throughout the country for three years, applied to child marriage of all classes of the community, the object being not to declare child marriage invalid, but to restrain them by imposing punishments upon participants. The minimum age for boys was fixed at 18 and for girls 14. The punishments were one month's simple imprisonment or a fine of 1,000 rupees (£75) or both.

THE VICEROY'S SPEECH.

It is some time since the Viceroy's address at the opening of the Delhi session of the Legislative Assembly has contained so many interesting and important announcements as Lord Irwin delivered last week. It was impossible in the last issue of *THE NEAR EAST AND INDIA* to do more than make passing reference to a few points, a brief summary of the main features of the address is given below. Incidentally it may be recalled that as the Council of State, for reasons explained in our recent review of the principal business of the session, does not meet until next week, Lord Irwin addressed only the members of the Assembly instead of the usual joint sitting of both Houses. At the same time, as on the occasion of his eloquent appeal for religious toleration and a cessation of communal hostilities, Lord Irwin's words were in an exceptional degree meant less for the Assembly than for the country as a whole.

In the current state of general perplexity over the political situation, particularly the failure of the party leaders in their Christmastide conferences to agree upon any constitutional programme and the deepening and aggravation of the cleavage between Hindus and Muhammadans, the lofty tone and evident sincerity of Lord Irwin's remarks were never more timely. For while moderate opinion in every community seeks in vain for a formula that may reconcile the irreconcilable and afford at least the germ of a solution of the communal problem, the extreme Nationalist parties are attempting once more to cover up their internal dissensions and confusion of thought by adopting an attitude of uncompromising hostility towards any kind of constitutional government under British sovereignty. As a result, what was formerly vague and unsettled in their policy, if so the programme can be called, has now taken the form of a specific demand backed by a plain threat.

Having expressed the relief felt throughout India at the improvement in the King Emperor's condition and made appropriate reference to the loss India had suffered through the deaths of Mr. S. R. Das and Lala Lajpat Rai, the Viceroy confirmed the report that the Secretary of State had agreed to the scheme for the proposed Assembly Secretariat being introduced on a temporary basis, and that the President's desire that the Viceroy should be the administrative head of the new Department had been also met.

In the course of a brief reference to external affairs Lord Irwin said that the policy of the Government in regard to Afghanistan was, and had throughout been, one of scrupulous non-intervention, and he looked forward to the day when India might again have on her north-west frontier a peaceful, strong and united country for her neighbour. After paying a warm tribute to Mr. Sastri upon the conclusion of his term of office as Agent-General in South Africa, the Viceroy announced that his Majesty's Government had agreed that before any decision was taken upon the report of the East African Commission the fullest consideration should be given to the views of the India Government. Meanwhile, to facilitate such discussions, the Governor of Kenya, he stated, had offered temporarily to appoint to a seat on the Executive Council an officer of the Indian Civil Service nominated by the Viceroy himself.

Alluding next to the report of the Royal Commission on Agriculture in India, Lord Irwin stated that the Government had decided to establish a central organisation for research work upon somewhat different lines from the Commission's tentative proposals. There would be, first, a governing body presided over by a Minister with two members of the Assembly, one from the Council of State and nine nominated by the provincial governments; and, secondly, an advisory Council of 39 members. The Government, he added, proposed also to give a lump sum grant of Rs. 25 lakhs, supplemented by an annual recurring grant of Rs. 7½ lakhs, distribution of which was to be vested in the governing body.

As foreshadowed a few weeks ago in these columns,

the Viceroy stated that the Government of India would take steps to facilitate the progress of the Trade Disputes Bill, but added that the measure would not go to the root of the present unfortunate industrial situation. Accordingly, after earnest consideration of the whole question by the Government, his Majesty, Lord Irwin announced, had agreed to appoint a Royal Commission to explore all the various aspects of the labour problem in India. The personnel of the Commission and the terms of reference had not been settled but he was pleased to state that the services of Mr. Whitley, the former Speaker of the House of Commons, had been secured as Chairman. Meanwhile the disquieting spread of Communistic doctrines continued to cause grave anxiety, particularly in Bombay and Calcutta, and the Government had accordingly decided again to place before the Assembly proposals for dealing with Communist agents from abroad and to include in the measure power to forfeit or control remittances from Communist sources abroad.

But the main interest in the speech resides in Lord Irwin's restrained and reasoned statement of the Government's attitude towards the issues raised by the recent Congress resolution and the constitutional position generally. While the right and responsibility of Parliament in the matter of increasing the measure of self-government accorded by the existing constitution is not to be questioned, a scheme which would carry the willing assent of "political India" is most earnestly to be desired, and friendly collaboration, such as the procedure of the Simon Commission has made possible, is an indispensable condition of arriving at such a settlement. "But I see very clearly," Lord Irwin continued, "that nothing but harm can flow from the threat that unless a particular condition is fulfilled, which I believe to be mechanically impossible of fulfilment from the outset, an attempt will be made to plunge the country into all the possible chaos of civil disobedience."

"I recognised," he proceeded, "that, although many leaders and schools of political opinion in India will refuse to walk along the dangerous paths of non-co-operation, many of them openly profess distrust of the attitude of Great Britain towards this country. They say, and would have others to believe, that hitherto Great Britain has given no sufficient proof of her intention to fulfil the pledge Mr. Montagu gave on behalf of his Majesty's Government in 1917, and that Great Britain is seeking to forget or deny the high policy there enshrined."

"... but I tell this Assembly again, and through them India, that the declaration of 1917 stands, and will stand for all time, as the solemn pledge of the British people to do all that can be done by one people to assist another to attain full national political stature, and that pledge so given will never be dishonoured. And I will add that I should not be standing before you here to-day as Governor-General if I believed that the British people had withdrawn their hand from that solemn covenant."

"Those therefore who preach that a new generation has arisen in England which seeks to explain away the significance of the 1917 declaration are consciously or unconsciously, but not less really, misrepresenting the purpose of Great Britain and poisoning the wells by which the common life of India and Great Britain is supported and sustained. . . ."

"Gentlemen of the Assembly, though we may differ on all other issues, let us not readily or lightly impugn the good faith of one another, for that is to destroy the very foundation of all hope of better things."

"I would add," Lord Irwin concluded, "one or two observations of a more personal kind. Whoever holds the position of Viceroy and Governor-General of India is bound through his office and his conscience by a double duty. He is under the plain obligation of seeing that the King's Government in India is carried on with due respect for the law, and in this sphere he may at any time be confronted with issues that are more far-reaching than ordinary political controversy, and are, indeed, fundamental to all society. Respect for the law is an attribute

of civilisation painfully and hardly won, and the society which lacks it carries within itself the seeds of its own dissolution.

"Those, therefore, who can guide public opinion in this country are doing no service to India if they accustom her to think lightly of disobedience to constituted authority, whatever the title by which such disobedience may be described. But in another and not less important capacity the Viceroy and Governor-General stands as the intermediary between India and Great Britain, and as such will constantly endeavour to interpret as faithfully as he may the hopes, feelings and desires of the Indian people to those who may from time to time compose H.M. Government in Great Britain. . . That duty I have striven, and shall strive, to fulfil to the best of my ability. And it is, gentlemen, because the smooth adjustment of these different functions imposed on a single individual does not lie with me alone that I have tried to draw frankly the broad outlines of the present situation as I see them."

INDIA IN PARLIAMENT.

Once again events in Afghanistan have monopolised the attention given to Indian affairs in the House of Commons—an interest which, as Sir Frank Nelson explained last year, nowadays finds expression mainly through the medium of questions and answers.

Asked by Mr. J. H. Thomas for an indication of the attitude which his Majesty's Government proposed to adopt in relation to the present disturbances in Afghanistan, Sir Austen Chamberlain was more than usually explicit in his reply. His Majesty's Government, the Foreign Secretary again affirmed, have no intention of interfering in the internal affairs of Afghanistan by supporting or assisting any of the parties at present contending for power in that country. They earnestly desire the establishment of a strong central Government and they will be prepared, when this Government is established, to show their friendship for the Afghan people by giving it such assistance as they can in the reconstruction and development of the country. King Amanullah has formally announced his abdication to his Majesty's Government, and consequently, until it is clear that in spite of this abdication he is regarded as their King by the people of Afghanistan generally, his Majesty's Government are unable to regard his Government as the rightful Afghan Government.

Lord Irwin, it will be recalled, in his inaugural address to the Indian Legislative Assembly a few days previously, also explained the Government of India's attitude towards the same question in equally emphatic terms. In view of the disposition of some Continental publicists and not a few otherwise loyal Indians to accept Bolshevik versions of the British attitude, the statements were timely and will, it is to be hoped, receive as much publicity as has been given to the ridiculous *canards* which have sought to establish Colonel Lawrence's complicity in the upheaval.

Meanwhile, at the same time as Sir Austen Chamberlain was making his statement in the House of Commons

Sir Denys Bray, Foreign Secretary to the Government of India, was explaining to the Legislative Assembly the position on the North-West Frontier. In view of its obvious close bearing upon the larger issue, the relevant portions of Sir Denys Bray's statement may usefully be reproduced in full.

"The military situation has been normal throughout," he said. "Neither a soldier nor a gun has been removed to the frontier, and the daily life of the frontier garrisons has remained undisturbed. The only interruption of military routine has been the diversion of Royal Air Force machines from their ordinary duties to the humane task of bringing women and children in safety from Kabul."

"Every one of our tribes has so far remained steady, though individual tribesmen have been unable to resist the strong natural impulse to enter the turmoil on this side or that. But the interest of the tribesmen in the civil war is intense. Their support is being canvassed by adherents of the three Governments at Kandahar, Kabul, and Jalalabad, and the energies of our frontier officers are being taxed to keep the tribes from headstrong action and to hold them to the observance of that policy of scrupulous non-interference in Afghanistan which the Government have set before themselves from the outset."

Another prolific source of questions is the working of the stores purchase rules. Last week Lord Winterton informed Sir Robert Gower that the orders placed with foreign firms by the High Commissioner for India for Indian State Railways during the year ended March 31, 1928, amounted to £674,820, or about 28 per cent. of the total orders placed during that year. During the quarter ended December 31 last the orders placed with foreign firms amounted to about £39,000 only, out of a total amount of orders placed during the same period of over £1,000,000.

In accordance with the undertaking given by the Government of India to the Legislative Assembly, tenders, he added, are normally invited by advertisement in the case of orders placed outside India and the lowest satisfactory tender is accepted.

In reply to the same hon. member the Under-Secretary of State stated that the High Commissioner for India, in purchasing stores, acts under instructions given him by the Government of India, the effect of which is approximately that all orders of State requirements in India should be open to the lowest tender, irrespective of the firm's nationality. The Secretary of State was not prepared to approach the Government of India with a view to an agreement that a preference of at least 10 per cent. shall operate in favour of British firms.

Sir Hugh Lansdown Stephenson, Governor of Bihar and Orissa, has been granted leave of absence, for reasons of health and private affairs, for four months from April 24. Mr. James David Sifton will act as Governor during Sir Hugh Stephenson's absence.

The appeal of the editor and the printer of the newspaper *Forward* against their conviction and sentence of six and three months' imprisonment respectively on a charge of sedition has been dismissed by the High Court. Mr. Justice Suhrawady held that the article on which action was taken was plainly directed against the Government.

18, OLD BROAD ST., LONDON, E.C.2

PERSONAL AND GENERAL

TO-DAY

February 7, 1929 (New Style).

January 25, 1929 (Old Style).

Shaaban 26, 1347 A.H., of the Muslim Calendar.

Shebat 27, 5689, of the Muslim Calendar.

Lord and Lady Hamilton of Dalzell, who left last week for Egypt, will be away until the end of March.

The Hon. Sybil Borthwick travelled last week by the P. and O. s.s. Mongolia from Marseilles to Egypt.

Mr. and Mrs. Raoul Foa and Miss Marfydd Moon have left for Egypt.

Sir Ronald and Lady Storrs arrived last week from Cyprus.

Lt.Col. the Hon. George and Mrs. Keppet have arrived at the Ritz Hotel on their return from the East.

Lady Renshaw sailed from London on February 1 in the P. and O. liner Kaiser-i-Hind on her way to Karachi.

Lord and Lady Swaythling are expected to return to London from Egypt on February 23.

Colonel T. E. Lawrence (Aircraftman Shaw) arrived in London on February 2 from India.

Mrs. Eckstein and Miss Herminie Eckstein have left 18, Park Lane for Ceylon and Burma.

Captain Guy and Lady Violet Benson arrived at 32, Montagu Square on February 4 on their return from Egypt.

Major-General Sir Neill Malcolm left London on January 31 to join the P. and O. s.s. Malwa at Marseilles for Singapore.

Prince Fouad was among the passengers sailing from Marseilles on February 2 in the Bibby liner Yorkshire for the East.

The Earl and Countess of Lindsey sailed in the Orient liner Orford, which left Tilbury on February 2 for the Mediterranean ports.

The Hon. Mrs. Joicey joined the s.s. Mongolia at Marseilles on January 31 for Port Sudan and Khartoum. She does not expect to return to Northumberland before April.

Lieut.-General the Hon. Francis and Mrs. Gathorne-Hardy and Sir Amhurst Selby-Bigge arrived on January 31 at Marseilles in the P. and O. liner Mantua from Bombay.

Mr. F. Norie-Miller, Director and General Manager of the General Accident Fire and Life Assurance Corporation, Limited, is now making a stay of about three weeks in Egypt, and will return at the beginning of March via Italy.

Mr. H. G. G. Payne, Research Scholar of Christ Church, Oxford, has been appointed to succeed Mr. A. M. Woodward as Director of the British School at Athens, when the latter retires at the end of the present session.

The Faculty Board of Archaeology at Cambridge University have nominated A. M. H. Kitson Clark, M.A., of Girton College, as a student at the British School of Archaeology in Jerusalem.

Lt.-Col. W. G. Grey, Indian Army, has been appointed to the lectureship in Urdu at Cambridge University; and Lt.-Col. H. Harrison, Indian Army, has been appointed to a Government lectureship there in Hindu and Marathi, both for one year.

Mrs. and Mrs. Rudyard Kipling left Batemans, Burwash, Sussex, on February 1 on an extended tour to Egypt and Palestine, sailing from Tilbury in the Orient liner Orford.

Sir Percy Cox will be the guest of honour at a dinner to be given by the Royal Empire Society at the Hotel Victoria on February 12. Sir John Shuckburgh will preside, and among those who have accepted invitations to be present are: Jafar Pasha el-Askeri, Iraq Diplomatic Agent in London, Lady Cox, Lady Shuckburgh, Sir Edgar and Lady Bonham-Carter, and Sir Adam and Lady Ritchie.

On January 30, the thirty-fifth birthday of King Boris of Bulgaria, Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, called upon the Bulgarian Minister on behalf of King George and offered his Majesty's congratulations. The full text of the message was immediately telegraphed to King Boris. Cards were left at the Legation on behalf of the Lord Chamberlain, the State Chamberlain, and the Secretary of State for Foreign Affairs.

On January 29 King Boris was the guest at dinner of the Turkish Legation in Sofia.

Sir Stanley Jackson, Governor of Bengal, opened on February 2 the Bengal Flying Club, the second established in India. The club aerodrome is at Dum Dum.

By agreement between the Yugoslav and Bulgarian Governments a joint commission has been set up to inquire into the incidents which occurred on January 7 on the Serbian frontier, near Straphemirovtzi, when two Bulgarians who tried to cross the frontier were killed by Serbs.

According to *The Times*, Trans-Jordan has been provided with an emergency set of postage due stamps by the simple expedient of adding an Arabic inscription locally to the existing postage type until such time as a regular series can be obtained from London. Certain of the stamps have new values superimposed in Roman and Arabic numerals in addition to the overprint as follows:—1 on 3 millimes carmine, 2 mills. greenish blue, 4 on 15 mills. ultramarine, 10 mills. carmine, 20 on 100 mills. blue-green, 50 mills. lake. The provisional issue is limited to 5,000 complete sets of six values.

A new crew was due to arrive at Colombo on February 1 for H.M.S. Crocus, Commander B. O. Bell-Salter, one of the four sloops maintained in the Persian Gulf. Her present ship's company joined her at Bombay on March 10, 1927. Commander Bell-Salter, Lieutenant-Commander A. McD. Harvey, Lieutenant Kenneth Mackintosh, the navigator, and Lieutenant K. H. Fraser have been reappointed for the new commission.

THE WEEK AT HOME

London, Tuesday Morning.

The Liberals' Dilemma.

I am sorry for the Liberals. Sir Herbert Samuel, after consulting with Mr. Lloyd George, has made a statement which nobody understands. This cannot be a unique experience for a politician, still less for a politician of the opportunist army whose banner is carried by Mr. Lloyd George. But everybody with one accord has set about vilifying the Liberals, as if their intentions alone must be stated with the utmost clarity. If the chance arises, will the Liberals, to make a majority in the next Parliament, join the Conservatives or the Labour Party? That is the question to which the two major parties seem to think themselves entitled to an answer.

The *Daily Herald* says that every vote given to the Liberals is a vote given to the Conservatives. The *Morning Post* says that every vote so given is one given to the Labour Party. Why, therefore, since there is so much doubt upon what voting for the Liberals really means (it never means the return of a Liberal candidate, by the way) should the historic party of Mr. Gladstone compromise itself by publishing beforehand its plans for a contingency that may never arise?

It is interesting to observe the efforts made in certain influential quarters in the direction of a Liberal-Labour coalition, or, if that prove impracticable, in the direction of the formation of a "Middle Party," composed of men whose minds are supposed to be both "progressive" and reasonable. For myself, I do not think these efforts have much chance of success. That opinion may be partly due to the fact that I do not understand what "progressive" means in these days of universal progress. The word appears to belong to the stock-in-trade of those vague catch-words which mean nothing and which, in fact, are largely responsible for the decline in Liberals' fortunes (in the political, not the financial, sense!)

Our New Electorate.

Speculation is still wide, if not keen, upon the probable effect of the voting by the newly-enfranchised women upon the results of the General Election. Obviously the Conservatives must have calculated that the majority of women between 21 and 30 would vote Conservative, but general opinion seems to be veering round to the estimate that the Labour Party, which tends to develop feminine

influence more assiduously than the two older parties, may secure the majority.

The speculation is not merely of academic interest. For the increase in votes, or at least in the number of those entitled to vote, is very considerable. It seems quite certain that there will be a preponderance of woman voters in most constituencies. The example has been given of a North London constituency. Here at the last election there were about 33,000 voters—18,000 men and 15,000 women. At the next election there will be 45,000 voters—25,000 women and 19,000 men. What chance, therefore, has the misogynic candidate?

Dean Inge and Democracy.

Dean Inge let himself go last week at Oxford on the subject of "The Future of Democracy." He believes, of course, that democracy, as at present understood, has no future: in which opinion he belongs to an increasing band of both acute and stupid political observers.

He said, what is quite true, that the House of Commons has lost steadily in prestige during the last thirty years. It is not reported whether he also said that the decline dates, as Hilaire Belloc has often pointed out, from the beginning of the system of the Caucus and of Secret Party Funds. Given those two things, what could prevent our present system from becoming, as Dean Inge said, "mass bribery on a colossal scale"?

The Dean of St. Paul's approves of Single Chamber Government. But that Chamber is not to be the House of Commons. He would have a House of Lords something like the Roman Senate (at its best) to rule us. Nor does he think that there would be much opposition among the electorate to the change.

Of the last dictum I am not so sure. It would probably need a Dictator to force the change through. And then the Dictator would have to be persuaded that he must yield power to a Senate. Could such a man be found?

The Prime Minister and Nonconformity.

Wherever the heart of England, split though it is into many sections and communities, is to be found truly beating, there Mr. Baldwin also is to be found at his best. Perhaps that is why the Prime Minister is only second-rate in the House of Commons—the atmosphere of unreality, make-believe, opportunism, is too much for him in the "House of Pretence."

Anyhow, Mr. Baldwin made a magnificent speech on the Christian aspects of democracy last week before the Baptist Union. His thesis was that Christianity was still in the experimental stage.

A story was told at the Dinner about Mr. Baldwin which is too good, I think, not to pass on. Lord Shaw of Dunfermline explained that two caddies at St. Andrews were discussing Mr. Baldwin. "He is a fine mon that Mr. Baldwin, but he's an Englishman," said one. And the other replied: "I think he is sic a fine mon that if he'd been a Scotsman he would have come to something."

Cricket and Test Cricket.

The Test matches in Australia, which, from the English point of view, have so far had gratifying results, pursue their ineffably weary way, and the main interest taken in them now is either personal or patriotic or academic. For the whole game has so slowed down, without a time limit, that the very essence of Cricket has departed. Where is adventure in the game as now being played in Australia? Risks are never taken. The thing becomes mechanical, and the spectacle of run-getting at the rate of under fifty an hour must be a pain to mortal eyes.

In this country, however, an important decision has just been taken by the Club Conference (to which hundreds of Clubs are affiliated) to the effect that no changes should be made in the rules of the game. It had been suggested that the height of the stumps should be raised from 27 to 29 inches, that the ball should be made smaller, that the l.b.w. rule should be altered to help the

bowler, and so on. But none of these suggestions found support. The game as it is—provided it is played, as it is played in the Club matches, as a game—is good enough for the majority of English cricketers, whose main proposal in regard to county cricket seems to be that the pitches should not be so well prepared.

ALTER EGO.

Book Review

PALMER'S QURAN.

"THE KORAN (QUR'AN)." Translated by E. H. Palmer. With an Introduction by Reynold A. Nicholson. (Oxford University Press. 2s.)

The latest addition to that extraordinarily useful series known as the "World's Classics" has perhaps as great a claim to the title of "classic" as any book possibly can have, for the original Arabic of the Quran is, of course, classic Arabic *par excellence*, and the contents of the Quran are known all over the world.

There are three noted translations of the Quran into English: those of Sale, of Rodwell, and of Palmer—which last is here reprinted. Palmer first published his translation in 1900. This is not the place to discuss its merits relative to the other two translations, particularly as Dr. R. A. Nicholson in his most admirable Introduction gives no handle for such a discussion. Suffice it to say, therefore, that scholars are agreed that Palmer's is a very good translation, one which will certainly not mislead readers approaching the Quran for the first time.

Dr. Nicholson in his few masterly pages begins by stating that the case of Muhammad is "essentially inexplicable." The Prophet quite surely believed himself to be the Messenger of God, although Dr. Nicholson's estimate of the number of Mussulmans in the world differs considerably from the common estimate in the sentence which follows: "Any other view involves the paradox that a world-religion claiming at the present day over a hundred million adherents was founded by one who, not being peculiarly religious, was nevertheless capable of simulating religious enthusiasm so perfectly that his first essays in that style constitute for all Muslims and even for many who are not Muslims the clearest possible evidence of his prophetic genius." Are there not over a hundred million Muslims under the British aegis alone?

The Cambridge Professor of Arabic states with excellent conciseness a difference between the Bible and the Quran. The Quran, he says,

is not a literary work in the sense that the Bible is. It was addressed to the ear, not to the critical eye; it was uttered by a living voice that impressed those who heard it with the power and enthusiasm of the speaker; it made a *personal* appeal.

On controversial topics Dr. Nicholson touches lightly but with extreme deftness and skill. He rebukes those critics who have discovered flaws in the style of the Sacred Book:—

They sometimes forget that he (Muhammad) never wrote it and that the most effective speeches are seldom flawless in diction or taste, not to mention grammar. Though its abruptness and incoherence may offend, these qualities belong to the character of Arabian eloquence, which bursts out in flashes and refuses to burn with a steady flame.

It is to be noted that Dr. Nicholson comes down once more unqualifiedly upon the side of those who deny that Muhammad wrote any of the Quran.

A very warm welcome should await this reprinting, which is well printed, well indexed, and convenient to read.

CHANGES IN ISLAM.

Sirdar Ikbal Ali Shah lectured to the Central Asian Society on January 30 upon "The Changing Face of Islam," with Lord Allenby in the Chair. The lecturer, who spoke of a recent tour that he had undertaken through Turkey, Syria, Palestine, Trans-Jordan, Iraq, and Persia, concentrated rather on the changes in the everyday life of the people than on the political and religious changes in Islamic countries. Starting with Constantinople, he found many evidences of Westernisation, from costumes to modes of transport. In Angora there was a picturesque blending of East and West: one could believe that the typical industrial town of the West was being imitated. Of Syria the lecturer, as a Mussulman, had a sorry tale to tell, for there Muslims openly indulged in drinking, gambling and other things forbidden by their religion. Of Damascus he quoted the ex-Kaiser Wilhelm's description: "the kitchen of Arabia." If by this the German meant the place where the most delightful sweet-meats were prepared he was right—but only in that sense. In Palestine the lecturer found the Muslims very devout and interfered with in no way. This country was really a monument to British civilisation, for although Palestinian Muslims had their local grievances they had no grudge against the British Empire *vis-à-vis* Islam. Of Trans-Jordan Sirdar Ikbal Ali Shah said little, except to praise the Amir Abdullah's ingenuity in providing magnificent dinners for his guests! Crossing the desert, he found Baghdad—dead. For the last three hundred years, he thought, the City of the Caliphs must have been dead. To the increasing security in Persia he paid tribute, and stated that, under the impetus of the Shah, Reza Pahlavi, the Persians were now putting their backs into things. In concluding his lecture he briefly touched upon the unpopularity of ex-King Amanullah with the Shinwaris, in whose country the process of Westernisation might be said to have come to a full stop.

Sirdar Ikbal Ali Shah then showed some magnificent lantern slides, some of which were of places mentioned in his lecture. Particularly interesting were his slides of Petra, Mecca, and the Khyber Pass.

After the lecture Sir Arnold Wilson, in complimenting the lecturer upon his address and particularly upon his slides, contrasted it with one given by him on Islam to the Central Asian Society about a year ago. In the interval Sirdar Ikbal Ali Shah had made his journey to Western Asia, and, said Sir Arnold, the experience must have caused him sorrow. For what, as a Muslim, did he find in Turkey? Nothing. In Syria? Nothing. In Palestine? A little. In Trans-Jordan, Iraq, Persia? Not much. Only in Arabia itself was Islam still at its full strength. With some of the lecturer's dicta Sir Arnold did not agree. The Sirdar was unduly hard on Baghdad, for instance, which—perhaps in greater degree before the recent invasion of Syrians—had a genuine Arabic civilisation. Nor would Sir Arnold have it that the hard-working qualities of the Persians were a new phenomenon; it was at least 4,000 years old. Referring to the lecturer's remarks that cycles were an object of vituperation in Mecca, a favourite curse there being: "May you ride a bicycle!" he amusingly related an incident which he saw at Karbala. An unpopular Iraqi official was being removed thence, and as he left the town was greeted with cries of "Puncture!"

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
Further particulars may be obtained of
74, Grosvenor Street W.J.

E. H. Keeling.
Hon. Sec.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

BY AIR TO INDIA.

The Provisional Time-Table.

The provisional time-table of the new London-Alexandria-India air service of Imperial Airways, which will be opened on March 30 next, has now been issued. The outgoing service leaves on Saturday morning, and the incoming mail from India reaches Croydon on Sunday. There are three sections on the route, which crosses the frontiers of France, Switzerland, Italy, Greece, Egypt, Palestine, Trans-Jordan, Iraq, Persia, and India:—

(1) European Division.—London to Genoa, 635 miles.

(2) Mediterranean Division.—Genoa to Alexandria, 1,500 miles.

(3) Near East Division.—Alexandria to Karachi, 2,500 miles.

The whole journey is to occupy seven days, which will be divided as follows:—

First day.—London-Basel. Distance, 485 miles. Armstrong Siddeley Argosy aircraft with three engines. Night express through the Alps to Genoa. 150 miles.

Second day.—Genoa to Syracuse. Distance, 700 miles. Short Calcutta flying-boats with three Bristol Jupiter engines. Intermediate stop at Rome.

Third day.—Syracuse to Tobruk in Italian Libya. Distance, 750 miles. Intermediate stop at Navarino, Greece. Emergency airport for refuelling if strong head winds, Suda Bay, Crete.

Fourth day.—Tobruk to Alexandria. Distance, 350 miles. Half-day's flying. Then by air to Gaza. Three-engined de Havilland Hercules. Distance, 280 miles.

Fifth day.—Gaza to Basrah. Distance, 912 miles. Stops at Rutbah and Baghdad.

Sixth day.—Basrah to Jask. Distance, 800 miles. Intermediate stops Bushire and Lingeh.

Seventh day.—Jask to Karachi. Distance, 600 miles. Intermediate stop Gwadar.

As soon as sufficient experience has been gained and equipment for night flying is available, the time taken for the whole flight of some 4,600 miles can be still further shortened. As at present arranged, the air passenger will leave Croydon on Saturday at 6.45 a.m., reach Basel at 1 p.m., and leave by train for Genoa at 2.42 p.m., reaching the Italian port at 3.40 a.m. Leaving by the Calcutta flying-boat at 7 a.m., the passenger stops at Rome for an hour from 10 to 11 a.m., and finishes the flight on Sunday at Syracuse at 3.25 p.m. On Monday the machine leaves at 6.30 a.m., reaches Navarino at 11.45 a.m., where there is a stop for an hour, and then proceeds across the Mediterranean to Tobruk, which is reached at 4 p.m. Here the night is spent, and on Tuesday morning, starting at 6.30 a.m., the traveller arrives at the Harbour, Alexandria, at 11.45 a.m., where a connexion by car is made at Aboukir with the Cairo-India machine which had left Cairo at 11 a.m. Alexandria, Aboukir, is left at 1.15 a.m. and Gaza is reached at 4.40 p.m. The next morning, Wednesday, at 6.30 a.m., the machine departs for a long day's flight to Basrah, passing Rutbah at 11.45 a.m. (where there is a halt of 45 min.), Baghdad West at 3 p.m. (another halt of 45 min.), and reaching Basrah at 6.45 p.m. On Thursday morning the passenger leaves at 6 a.m., reaches Bushire at 9 a.m. (a halt of 45 min.), Lingeh 2.10 p.m. (halt of 45 min.), and Jask, the end of the day's flight, at 5.15 p.m. Once again the departure is at 6.30 on Friday morning, and after a stop of 45 min. at Gwadar, reached at 11.35 a.m., the passenger arrives at Karachi at 4 p.m. on the seventh day out from London. On the return flight the aeroplane leaves Karachi at 7.30 a.m. local time on Monday, stays the night at Jask, is at Basrah on Tuesday night, at Gaza on Wednesday, Tobruk on Thursday, Syracuse on Friday, Genoa on Saturday, and at Croydon at 3.45 p.m. on Sunday.

Italian Co-operation.

The service has been rendered possible as a result of the agreement between Imperial Airways and the Societa Anomina Navigazione Aerea, and the arrangement of this section of the route owes much to Signor Mussolini and the cordial interest and technical appreciation of the flying problems shown by General Balbo, the Under-Secretary of State for Air, who is himself a practical pilot. This has enabled a bi-weekly flying-boat service to be instituted over the Mediterranean section, and in addition to the departures for India on Saturdays by Imperial Airways aircraft, travellers can reach Egypt by a combination of Imperial Airways machines to Basel, night express through the Alps to Genoa, and the flying-boats of the Italian Company from Genoa to Alexandria. For this service the passenger leaves Croydon at 6.45 a.m. on the Wednesday, connects with the Italian machine at Genoa on Thursday morning, and reaches Alexandria on Saturday at 9.45 a.m. On the return he leaves Alexandria at 11.55 a.m. on Sunday and is back again in London at 4.30 p.m. on Wednesday. That is, Egypt is brought within three and a half days of London twice a week.

The actual time-table itself has been so planned that no airport will become suddenly congested by the arrival at the same time of an outgoing and returning boat. Persian wireless operators are now in this country undergoing the specialist training necessary for the wireless and weather reporting stations that the Persian Government is setting up at Bushire and Jask; Imperial Airways have engaged more pilots; a third Short Calcutta flying-boat is being constructed, and three more Armstrong Whitworth Argosy multi-engined land aircraft are also on order.

Air mail will be carried on a surcharge rate, probably 9d. an ounce, but both this and the passenger fare rates have not yet been finally settled. At present it is expected that they will range between £90 and £120 for the journey from Croydon to Karachi.

SAVE THE CHILDREN FUND: BULGARIA.

An appeal on behalf of the relief work undertaken by the Save the Children Fund in Bulgaria was made at a meeting held on January 30 at 63, Queen's Gate, Kensington, the residence of Sir Edward and Lady Boyle. The Chair was taken by Sir Edward Boyle, and the chief speakers were Lady Muir and Mrs. Henrietta Leslie. In his introductory remarks the Chairman referred to the sequence of misfortunes that had overtaken Bulgaria—the loss of territory as a result of the War, the influx of refugees from the north-east, the south and the south-west into an already impoverished country, and then a series of devastating earthquakes.

Lady Muir, who had visited the scene of the earthquakes last year, told graphically the story of the disaster that then overtook Bulgaria on April 14 and 18. Three flourishing towns and 146 villages were destroyed, a population of 265,400 was left homeless, the heads of 20,000 families of the working class were thrown out of employment, 107 people were killed and 1,085 were seriously injured. Material losses have been estimated to amount to over seven milliards of leva, about £10,000,000. The list of buildings now completely in ruins includes Government hospitals, railway stations, schools, factories, bridges, hotels and public buildings. At Philippopolis the Public Library, the second largest in the country, was destroyed. Over 17,000 private houses were demolished and 19,000 others were rendered uninhabitable. Part of the richest portion of Bulgaria was involved, the devastated area extending over 14,500 square kilometres. Lady Muir then referred to the steps taken by the representative in Bulgaria of the Save the Children Fund to help the people of the stricken districts, with the personal assistance of the British Consul at Bourgas and the wife of the British Consul at Varna, both of whom hurried to Philippopolis. According to the evidence of all the witnesses, the measures taken by the Bulgarian Government were both prompt and efficient: huts were erected at once and tents were collected from various sources. The Government had no resources in reserve, no rich citizens to appeal to; it could only fall back upon patriotism and common sense. King Boris, with Prince Cyril and Princess Eudoxia, arrived early on the scene of the disaster; he distributed large sums of money out of his own very inadequate Privy Purse, moved freely about the people, and did much to restore confidence and courage among them. On his return to Sofia he issued an appeal to the nation for material support for the sufferers, which met with a wonderful response, in view of the fact that the country is burdened with Reparation payments and suffers from general impoverishment. Government officials gave up a day's pay towards the King's fund; the inmates of the principal prisons went without their bread ration for two days in order to send the flour to ruined villages; the privates in the Army raised three million leva among themselves. Help came from practically every European country and from the United States. The Save the Children Fund started by feeding a thousand children; kitchens were established and huts to serve as schools were built. It was for this work, which it was so essential to continue through the winter, that funds are now needed. If the health of the children, whose normal life has been so ruthlessly destroyed, is to be safeguarded and the risk of mortality reduced to a minimum, the relief work which has been begun will have to be maintained for a considerable time. Bulgaria has recently obtained a loan of £5,000,000, but of this sum £4,500,000 are to be devoted to the general economic reconstruction of the country, and only £500,000 will be used for the relief of the stricken areas. In addition to the burdens of the Peace Treaty, to the loss of rich territories, and to the dangers created by constant Bolshevik propaganda, a further weight is laid on Bulgaria in the presence of destitute refugees. Thus the picture of Bulgaria, said Lady Muir, is full of sad shadows. A relentless fate seems to have condemned the country to obtrude itself periodically upon the world by some great misfortune.

Lady Muir continued: "There is one Bulgarian who fully deserves the admiration of Europe for having steered the country through the most troubled waters, preserved peace within the frontiers and made of the Bulgarian State a bulwark against Bolshevism. I refer to King Boris, whose great tact, wide knowledge of international affairs, fearlessness and charm combine to make this Sovereign's personality one of the most attractive in Europe. It is a happy coincidence that this meeting should be taking place to-day, the King's thirty-fifth birthday. King Boris always identifies himself so closely with his people. We have just heard that he has spent all the Christmas holidays with the sufferers, living in camp amongst them, motoring from place to place to superintend in person the work of reconstruction and to give away yet a little more of his own modest means. This visit is curiously similar to the present pilgrimage of the Prince of Wales to the mining districts, the only difference being that the British Prince has a rich Empire behind him, while King Boris reigns over the most impoverished nation of Europe."

Mrs. Leslie recounted her own experiences in the area visited by the earthquakes, and brought home very graphically to her audience the conditions under which the people in these parts were living. She showed a number of excellent slides of photographs that she had taken, and contrasted the difference between the plight of the great bulk of the victims of the disaster and the fortunate circumstances of those for whom provision had been made in the model village of Atolovo, built by the Save the Children Fund.

The thanks of the meeting to the speakers and to Sir Edward and Lady Boyle were conveyed in speeches by Mr. Percy Alden, Chairman of the Save the Children Fund, M. Dimitri Stancioff, Mr. Roden Buxton, Sir Kay Muir, and M. Hadji Misheff.

A collection for the Fund among those present realised over £81.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Roumanian Loan.

As I was able to indicate last week the actual signing of the Roumanian Loan agreement was only a matter of a few days. It at last took place on February 2, and there now remains only the ratification of the agreement by the Roumanian Parliament, which in the existing circumstances may be taken for granted. The loan is to be divided between a number of countries. The French quota of the loan is £4,500,000, while the London and New York issues will be each £2,000,000, and there will be in addition smaller issues in a number of other countries. In addition Kreuger and Toll are taking a substantial amount, the price at which they are taking it in return for a match monopoly in Roumania for a number of years being 96 or 97 as compared with the 88 at which the loan, which is a seven per cent. issue, will be floated here. *En passant* it may be noted that this is the first occasion that the Swedish Match Trust has been associated with the financial houses in respect of a loan. There is no doubt, it may be added, that if the Maniu Administration had decided to approach the League of Nations for a loan under its auspices it could have been obtained on much more favourable terms, but one objection to this course, as I have already pointed out in these columns, was that a League of Nations loan is a matter for prolonged negotiations and Roumania's need for a loan is urgent. The negotiations which have now had a successful issue have been in progress for many months, and if the Roumanian Government had finally decided to have recourse to Geneva it would have meant a total delay of perhaps half a year. A further objection, and one which carried great weight, was that the Government regarded it as incumbent to continue the negotiations initiated by the Bratianu Administration. The floating of the loan with its important results in the stabilisation of the leu and the improvement in the near future of Roumania's communications will be an important landmark in Balkan reconstruction. It was an extraordinary anomaly that the country most favoured by natural resources in the Balkans should lag behind its less fortunate neighbours in development since the War. The loan will enable the Maniu Administration swiftly to remove that reproach.

The Banks and Trade.

At the meeting of the Westminster Bank Mr. Hugh Tennant, the Chairman, dealt in detail with criticisms of the monetary policy of this country. He pointed out that there are three schools of thought, one being in

favour of revolutionising the fiscal policy, one in favour of the State control of private enterprise, and one in favour of the stimulation of industry by a more expansive credit policy. Mr. Tennant said that production can be stimulated by credit, but it is equally obvious that trade expansion is dependent on the development of demand, and he went on to explain that the function of banking is to be ready to cater for an increased demand but not to operate in advance of demand, for if that is done the well-known evils of inflation follow in proportion to the extent to which credit is increased. In this connexion Mr. Tennant recalled the history of the War and post-War periods, and pointed out that it was precisely the developments resulting from the inflation that then took place that it has been the object of the financial reforms of the nations to remove.

Trade Prospects.

Unsatisfactory as the past year has been in many respects, especially in view of the high hopes entertained at its beginning, it has at any rate marked to some extent and in certain directions a steady improvement in trade. While the depression in many of our leading industries continued, a number of others, and in particular new ones, enjoyed marked prosperity which has served in a measure to counteract and obscure the effects of the depression in the coal, iron and steel, and cotton trades. The all-important point as to how far we may look for an improvement in conditions is discussed in a forecast in the Economic Supplement of the F.B.I. in which it is pointed out (the period dealt with is the first quarter of the year) that "past experience provides no example of active and expanding trade under monetary conditions as at present persisting in Great Britain. It is not possible, therefore, even with the best will in the world, to look forward during 1929 to anything more than an acceleration of the more favourable developments of 1928, assisted by such orders as may be placed by the Central Electricity Board and any other similar public schemes which may be instituted during the year. If the monetary cloud could be lifted—either by some specially arranged shipments of gold or a modification of the fiduciary portion of the note issue—so as to permit of a reduction in the Bank Rate and an expansion of credit, there would be nothing in the other factors of the industrial situation to prevent trade going ahead." It is not a particularly hopeful forecast, but it is equally not pessimistic, and it does hold out the prospect of the continuance of the development of trade in an upward direction.

Ideal Holidays Exhibition.

This exhibition is not to be held this summer, as a *lapsus plumæ* led me to state in a recent note, but in 1930

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Dupnitza, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies.

—a year which, in the minds of most of us is already associated with the visit of the Australians. The Royal Agricultural Hall will be the scene of the exhibition, and its dates will be from June 20 to July 3. From literature I have received on the subject it is evident that the exhibition should be a very comprehensive survey of everything that has to do with a holiday. It is satisfactory to know that the trade aspect of travel is to receive adequate attention, and another interesting feature of the exhibition will be an international congress at which the value of holidays will be discussed. As I have already pointed out, the exhibition has a special interest for the Near East, and in view of the special attractions for the tourist held out by that part of the world it is only to be expected that there should be a distinctly Near Eastern tinge about it.

America and the Sudan.

That America is now beginning to pay increasing attention to the Sudan is evident from a long article in the latest issue of the official "Commerce Reports," the title of which refers to the improvement in the economic situation in that country. The article deals in detail with developments with regard to cotton and the other important crops, with the expansion of the transport system, and with the growth of the foreign trade of the country, in which connexion it is pointed out that the imports of the Sudan from the United States in 1927 valued at £E124,000, represented an increase of 105 per cent. on the figures for the previous year. A tribute is paid to the Sudan as a potential market for manufactures. "The purchasing power of the population at present is low," it is pointed out, "and their requirements few, but the gradual development of the country is expected to improve this condition. The closer relations of the various sections of the country through the use of the automobile should also reduce the marketing difficulties for wider introduction of many manufactured articles, the more general use of which is now restricted by inadequate transport facilities." I have devoted some attention to this article because it should have the effect of increasing the interest of British manufacturers in a market which will ultimately be very important.

Suez Canal Traffic in 1928.

The approximate figures now available of the Suez Canal Traffic in 1928 show that this year was easily the best on record for the Canal. The tonnage of the total traffic was 31,905,902, the tonnage in ballast being 2,956,481, which compares with 28,962,048 tons of which 2,409,621 represented tonnage in ballast, for 1927 which was the previous record year. It is of interest to point out that in 1928 there was little difference in the traffic for the first and second six months, the total from January to June being 15,991,938 tons and from July to December 15,913,964 tons. April was the best month in the first half of the year with 2,862,086 tons, but this record was beaten in the second half of the year by December with 2,932,016 tons. For each month of the year there was an increase as compared with the corresponding period of 1927. While it would be unwise to draw too favourable deductions from the steady increase in the traffic through the Canal, it serves to show at any rate that commercial developments are in the right direction.

NEWS FROM ALL SOURCES.

The Greek Chamber has ratified the Greco-Roumanian Pact of arbitration and non-aggression.

The production of the Attock Oil Company for January amounted to 65,996 barrels.

The net profits of the National Bank of Roumania for 1928 amounted to 201,000,000 lei, against 199,000,000 lei for 1927.

The Kostrena Company, Ltd., has been founded at Shushak to establish a spa at Kostrena.

Lord Reading has been elected a director of the Prudential Investors, Incorporated, a new United States investment concern.

The Turkish Government is to invite tenders for the construction of an aqueduct for Adana. The cost is estimated at about £140,000.

It is reported that the Banca Commerciale Italiana is to open a branch at Shushak.

A savings bank has been established by the Belgrade Municipality with a capital of 30,000,000 dinars, of which 3,000,000 dinars are paid up and the balance represents War Bonds.

The capital of the S.A.R. Pentru Industria de Bumbac is being increased from 40,000,000 lei to 60,000,000 lei by the issue of 40,000 new shares of 500 lei each.

The Pruga Croatian Company for the Construction of Light Railways, Ltd., of Zagreb, announces net profits for 1927-28 of 508,208 dinars.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for January was 60,670 tons.

A Cairo message states that the Egyptian Government has appointed a Committee to study a scheme for utilising the Assuan Dam for the generation of electricity.

A severe earthquake on February 2 is reported from Russian Turkestan. Among the places affected were Tashkent, Samarkand, and Kokand. The earthquake was registered at Kew and other places.

A Washington message states that the Senate Finance Committee has approved the Bill for a 62-year settlement of the 18,125,000 dollars (£3,625,000) Greek War debt. The settlement also provides for a further United States loan of 12,167,000 dollars (£2,433,400) under the agreement of 1918.

Mr. F. Norie-Miller, deputy chairman and general manager of the General Accident, Fire and Life Corporation, arrived at Port Said by the s.s. Ormonde on January 30. Mr. Norie-Miller, who is visiting Egypt for the first time, was to stay in Cairo until February 8, then going on to Luxor and Assuan.

The death occurred on January 27, at his residence at Woking, of Mr. Leslie Couper, C.M.G., a well-known figure in the banking world. Mr. Couper was born in Glasgow in 1871, was educated at Kelvinside Academy, and King William's College, in the Isle of Man. He joined the Bank of British West Africa on its foundation by the late Sir Alfred Jones some 35 years ago. For many years he was general manager of the bank, and was largely responsible for the development of the institution. He was a member of the West African Currency Board, being created C.M.G. for his services in 1919, and of the Palestine Currency Board.

Knitted sweaters, pull-overs, and waistcoats are in considerable demand in Syria (says an American Consular report). A large portion of this demand is met by native manufacturers, who since 1927 have used the hand-operated knitting machines. About 40,000 kilos (kilo equals 2.2046 lb.) of 18/2, 20/2, and 22/2 wool yarns and about 8,000 kilos of rayon yarn are consumed annually in Syria's production of knit goods. Most of this yarn comes from France. Men's knit wear comprises 75 per cent. of the entire output, the remainder being made up of women's and children's knit goods. Statistics showing the importation of this commodity in Syria are not available, but France and Belgium are the chief sources of supply.

The Cereal and Pulse Crops of Egypt.

The cereal and pulse crops cultivated in Egypt are various; the two main crops, however, are maize and wheat. The latter, from the earliest days the more important, on which to a great extent the wealth and prosperity of the country depended, has in recent years been superseded in value by the maize crop. Next to these two in value come beans, barley, and rice, followed by lentils, fenugreek, groundnuts, chick-peas, and lupins. Below is given a short account of the various crops; the average annual market price is not given, since the price is so variable throughout the year that this would be misleading.

MAIZE.

Approximate area cultivated in 1926=2,085,538 feddans (1 feddan =1.038 acres.)

Average yield per feddan in 1926=7.01 ardebs (1 ardeb maize =140 kgs. =315 lb.).

Maize is very largely grown throughout the Delta and Middle Egypt, and has replaced Great Millet (*Sorghum*) to a certain extent even in Upper Egypt. In the rotation it follows wheat, barley, or berseem (*Trifolium alexandrinum*). Under perennial irrigation, owing to maize requiring a liberal supply of water, the sowing date is controlled by law, planting not being allowed to take place until the edict forbidding it is removed, this being usually about the middle of July, when the Nile flood water will shortly be arriving.

Various local strains of maize may still be found under various names in small quantities in outlying districts; the great bulk of the crop, however, consist of two varieties, *Beladi* (native)—a twelve-rowed flint type—and *Nabel Gamal* (Camel's tooth)—a ten-rowed type similar to "Hickory King." A third, which has more recently been introduced—a special early strain of which is distributed by the Ministry of Agriculture—is likely to become increasingly popular, and should raise the average yield of the country. It is a fourteen-rowed "Boone County White" type. All three varieties are white, and coloured maize is not liked. Maize, providing as it does a large amount of cheap food, may be considered to be essentially the fellah's crop. Moreover, even where the land is owned by a wealthy cultivator, the maize crop is usually hired out to the fellaheen working on the estate.

The flour is used for making cakes and for mixing with wheat flour or barley. Sometimes it is picked before ripening, and the ears are roasted, or when quite young the ears are cooked as a vegetable. Pop corn and sugar maize are not grown, though *Beladi* maize is sometimes used for popping, and is sold as a sweetmeat in the bazaars of the larger towns.

Methods of Cultivation.

The maize crop occupies the land rather less than four months. The preparation of the land is simple. The ground, which has become hard and cracked after the wheat or berseem crop, is heavily watered, and in about a week it is firm and dry enough to be ploughed. The soaked seed is then dropped behind the plough in alternate furrows, and is covered by "zahaffing" (pulling a long heavy beam horizontally over the surface of the soil), and the land is ridged into watering compartments. The seed rate is about 60 lb.—unless the entire crop is to be cut and fed green to cattle, in which case it may be as high as 110 lb. and the growing crop is thinned and the thinnings given to the cattle. After sowing, water is given again at the end of three weeks, and subsequently at intervals of about ten days until the crop approaches maturity. The land is cultivated by hand-hoeing between the plants with a "fass" (a short-handled broad-bladed hoe) two or three times during the growing period. Being very responsive to nitrogenous manures, the crop, where possible, is manured with farmyard manure or with "koufri" (the remains of old village sites), or more often

nowadays a heavy dressing of sodium nitrate or other nitrogenous chemical manure is given. At harvest the crop is cut with a small jagged-edged billhook, and then the ears are pulled and husked by women, who are usually paid in kind. The ears are laid out to dry, and later the grain is shelled off with the aid of a wooden stake, though some small shelling machines are in use.

WHEAT.

Approximate area cultivated in 1926=1,475,456 feddans.

Average yield per feddan in 1926=4.57 ardebs (1 ardeb wheat =150 kgs.).

Approximate area under cultivation in 1927=1,594,188 feddans.

Throughout the ages wheat has been Egypt's main crop, and, during the Roman occupation the country became the "Granary of Rome," and the crop remained of supreme importance until comparatively modern times, when it declined following the advent of maize and cotton.

Types of Egyptian Wheat.

Egyptian wheats (*Triticum Pyramidale*) comprise most interesting types, the plants being quite unlike any other known forms. The stems are strong and comparatively short, and are usually, though not always, non-glaucous; the leaf blades are usually broad and long and of a bright rich, slightly yellowish-green colour. The plant habit is markedly upright, the quite young plants having an almost rushlike appearance. The ear itself is bearded, and may be either lax or dense, in many cases the ears being densely packed and the ears short and very broad. The type in all probability originated in *Triticum Dicoccum*, many forms of which are to be found in Abyssinia. The grain has a dorsal hump, and is concave ventrally. In texture the grain is very soft, and the flour is useless for making European bread; the nearly flat round loaves of native bread made from it are, however, very palatable, if rather tough. In recent years Indian types have been introduced, and are becoming more and popular, now forming the greater part of the crop in Lower Egypt. The flour made from these types is considerably better than that of the native varieties, and in fact some of the high-yielding Indian varieties and hybrid strains now being distributed by the Government are capable of replacing to a large extent the Australian wheat now imported for use in making European bread. A small amount of macaroni wheat (*Triticum Durum*) is grown in certain localities, this being probably introduced during comparatively recent times from Algeria.

Cultivation.

Wheat in Egypt is sown in the autumn and harvested in May. It is grown for the most part on good land, and in the rotation it usually follows cotton and is followed by maize. The seed is sown either by the "wet" or by the "dry" method. In the former the land is watered first, then prepared as soon as possible and the seed broadcast and lightly covered either by the plough or by the native cultivator. In the latter case, the land is ploughed, and cultivated and the seed broadcast and covered. The field is divided for irrigation and flooded. The sowing rate is 6—8 kelas (169-225 lb.) per feddan. In the basin lands the seed is sown broadcast on the mud after the water has receded; alternatively, it is sown when the land is moderately firm, and then covered in. As farmyard manure cannot usually be spared for the wheat crop, it generally receives instead a fairly large dressing of koufri manure or either one or two dressings of nitrate of soda, or less frequently, calcium nitrate or cyanamide. The crop is usually irrigated two or three times in all during its period of growth, the last time being at about full earing.

The chief parasitic enemies of growing wheat in Egypt are the Rust and Smut diseases, the former being by far

(Continued on page 183.)

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paving proposition

the most important and causing great losses annually in the value of the crop. Among insects, the wireworm and mole cricket probably damage it most in its early stages of growth, though the amount of destruction done is often a great deal less than that done by rats devouring the stems in the fields at about the time of full earing.

The wheat is harvested with sickles, and after standing two or three days it is carried to the threshing floor and threshed by the "Norag"—this being an implement which consists of a kind of chariot dragged round and round over the corn by oxen, with the driver and often other members of his family on it: Winnowing consists in throwing up the cut straw and the grain into the wind; the cut straw blows on one side and the accumulated grain is sieved by hand. The "Tibn" (chopped straw) is used for feeding to cattle and other stock. Among the more modern cultivators this slow and antiquated method is replaced by threshing machines with or without awners and straw chopping mechanism.

FIELD BEANS.

Approximate area cultivated in 1926=414,044 feddans.
Average yield per feddan in 1926=3.87 ardebs (1 ardeb beans =155 kgs.).
Area planted in 1927=447,493 feddans.

Although the acreage of the bean crop is not very large, the crop is of great value, especially in Upper Egypt. Beans grown in the South are generally referred to as "Saïdi" and those from Lower Egypt as "Behera," and these names are used in the market, although the type of bean grown is actually the same. Local names exist, but the nomenclature is quite haphazard. The Egyptian bean is a comparatively small seeded horse-bean, the seed being of variable size and varying in colour from white to red. The beans are used for human food, and are fed crushed to farm stock. The straw is used for feeding various stock, though not much for cattle; it is also used for stabling, and in brick making and as fuel for machinery.

Beans are sown in the autumn; in the rotation they follow various crops, and are usually followed by maize. Under perennial irrigation the land is ploughed and the seed dropped behind the plough in alternate furrows and covered in; alternatively, it is broadcast and ploughed in. The seed rate is about 6 kelas (175 lb.), or often even more on basin lands, where it is broadcasted in the mud following the withdrawal of the water. The fields are cultivated while it is possible, and are watered two or three times under perennial irrigation, though in the basins they receive no water after sowing. Manure is not usually given. The beans are cut with hooks when almost ripe in March or April, and are threshed by the Norag.

Beans are subject to the parasitic attack of Rust, which causes a great deal of damage, and often they are infested with broomrape (*Orobranche*), which causes a tremendous loss in yield. Occasionally fields are badly affected by Aphis; the crop is also subject to "Blight" and to a Mosaic disease.

BARLEY.

Approximate area cultivated in 1926=320,711 feddans.
Average yield=5.71 ardebs per feddan (1 ardeb barley=120 kgs.).
Area planted in 1927=361,943 feddans.

Barley is grown throughout Egypt from the sea coast in the north to the extreme south of the country; in fact, it is grown on most land which is not good enough for wheat. The native barleys consist of six-rowed types; these usually have fairly short straw, which may be glaucous or non-glaucous before maturity. The ears are bearded and may be either lax or dense. A type of hull-less barley is grown in small areas in some localities. The quality varies greatly. A specially good quality can be grown, notably along the coast to the west of Alexandria, though, contrary to general belief, good quality barleys can also be grown in other parts of the country. Unfortunately malting is not undertaken locally. Very little two-rowed barley is grown. Were it possible to obtain

good, well-cleaned barley for export, there seems no reason why trade with Europe should not develop. The barley is used for human consumption and for stock feed.

The sowing and cultivation is practically the same as that of wheat. Manure is not much applied, though some koufri or some sodium nitrate may be given. The crop, though sown rather later than wheat, is usually ready some days earlier for harvest; it is reaped and threshed in the same way as wheat. Pests are few. Smut disease does some damage and occasionally Aphis. Barley "Rust" attack is slight and this only on some varieties.

RICE.

Approximate area cultivated in 1926=228,636 feddans.
Average yield in daribas per feddan=1.383 daribas (1 dariba =934.5 kgs.).
Area planted in 1927=358,432 feddans.

The area under rice cultivation varies enormously from year to year, being dependent on the amount of water reported to be available. The crop is largely grown in the northern parts of the Delta, and is also cultivated in the Fayum and in Kharga and Dakhla Oases; except in the last-named places it is grown almost entirely for purposes of land reclamation.

Land Reclamation.

As rice is a crop which will stand a vast quantity of water and a considerable amount of salt, it is grown on the areas in the north which will not successfully grow other crops, through having become impregnated with salt, which is concentrated in the top layers of the soil. Rice is sown and the land thoroughly washed, the water being constantly run on to it from the canals and run off again by the drains, which consist of deep ditches. In this way the soluble injurious salts are removed.

The varieties of rice grown are many. They include beardless and bearded, white grained and red grained, tall and short, early- and late-maturing varieties. The most popular are beardless white-grained Japanese types; the red-grained types are not common. The names applied to the rices are various, often denoting their country of origin, sometimes the district in which they are grown, and sometimes they imply a certain quality. Japanese is of good quality, and specially high-yielding strains of this are being distributed by the Government, as are also exceptionally heavy yielding, though less good quality, strains of other varieties.

Possibilities of Export Trade.

Were it possible to obtain really clean seed after threshing, there is no doubt that the export trade would increase very rapidly. In a few years' time, with the spread of modern machinery for threshing and cleaning, and with much greater quantities of water available than hitherto, combined with the sowing of good quality strains for export and of the heaviest yielding types which fulfil the demand for native consumption, the rice crop should become of very great importance in the country, and the export trade very flourishing, especially as comparatively poor quality grain suitable to the native demand can often be cheaply imported. The area of land in Lower Egypt suitable for reclamation is considerable—probably more than 1,000,000 feddans.

Land used for rice cultivation must be quite level, and it is usually divided into $\frac{1}{2}$ feddan plots; if the area were too large, the ripples caused by the wind on the water might wash out the young seedlings. The land is ploughed and flooded and a levelling board (*lawata*) is dragged over it in the water. The seed is sown at about 5 kelas (47 lb.). It is first of all soaked for some days and then covered over in a warm place, so that germination sets in; it is then broadcast on the flooded land and the water is not run off until the seedlings are well established. Following this, the water is frequently run on and off. Some weeding is done whilst possible without much damaging the crop, chiefly to remove Dineba (*Crus. Galti*), a weed that is very prevalent.

(Continued on page 184.)

Transplanting is carried out after about six weeks to fill in badly germinated patches in the fields, but otherwise is not practised in Egypt. The rice is not usually manured, unless grown for its own sake, since most of the manure would be lost by being washed out of the soil. Rice in Egypt is not much subject to disease, its worst enemy in the field probably being a small stem borer.

At harvest the land is dried off and the crop cut by hand; it is either threshed by the Norag—in which case care is taken not to destroy the straw, the sheaves being turned with the grain inwards—or else it is threshed with the Nabout (flail), unless a threshing machine is available. Various, mostly rather unsuccessful, efforts are made to clean the seed from dirt and weed seeds. The grain is stored usually in heaped rows, which are split back from time to time, and it is eventually sold for finishing to the rice factories or to the exporters.

GREAT MILLET.

Approximate area cultivated in 1926=272,549 feddans.
Average yield per feddan=8.78 ardebs (1 ardeb millet=140 kgs.).

Great Millet is sown both as a spring (Sefi), or as a summer (Nili) crop; it is now confined almost entirely to Upper and Middle Egypt, and is being increasingly replaced by maize. Various strains having erect or drooping heads, and white, pink or yellow grain are grown. The grain is used for making flour, and the tall, strong stems chiefly for making palisades, wind and sand screens for protecting other crops, such as tomatoes, in exposed sandy places, for fuel, and for lime-burning. Sowing is similar to maize, the seed being dropped after the plough, or sometimes it is dibbled in holes about 30 cms. apart in lines, two or more plants being kept per hole. The land is cultivated several times, and, if available, a dressing of farmyard manure or more often Koufri or sodium nitrate is applied. Like maize, it is a very exhausting crop for the land. A small amount of Broomcorn is also grown; its cultivation is unfortunately, however, confined to the districts round a few villages. The panicles after the stripping of the seed are used for making flat household brooms; this is an industry which might profitably be developed, as vast numbers of similar brooms are imported annually from Europe.

GROUND NUTS.

Approximate area in 1926=14,238 feddans.
Average yield per feddan=10.15 ardebs (1 ardeb=60 okes).

The Ground Nuts crop thrives best and only yields well on quite light sandy soils. Its cultivation is likely to be greatly extended and developed. Not only is it a most useful crop for gradually reclaiming and improving desert land, but the crop itself is also a valuable one. The nuts, which contain a high percentage of oil, might be used—as in Europe—for many purposes, also a consider-

able export trade should be possible. In Egypt the nuts are used parched or roasted for human consumption.

OTHER CROPS.

The approximate area under lentils in 1926 was 63,422 feddans, the average yield per feddan being 3.75 ardebs (1 ardeb=155 kgs.). Lentils are sown chiefly in Upper Egypt, and the seed is almost entirely consumed locally. They are a winter sown crop, and though grown chiefly in basin lands, benefit greatly where a good tilth can be obtained.

The approximate area under fenugreek in 1926 was 73,699 feddans, the average yield per feddan being 3.16 ardebs (1 ardeb=155 kgs.). Fenugreek is sown chiefly in Upper Egypt, and is a winter crop. When used for fodder the plan is usually mixed with another leguminous crop. The seeds are used for human consumption, for flavouring, and as a spice.

Chick Peas are grown chiefly in Upper Egypt, and are a winter crop. The peas are used for human consumption, cooked or roasted.

The approximate area under lupins in 1926 was 14,888 feddans. Lupins are grown chiefly in Upper Egypt, especially on comparatively poor soil and in sandy places. The grain, after treatment to get rid of harmful alkaloids, is used for human consumption.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, February 19).

Bibby Line.—S.s. Staffordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 20).

British India Line.—S.s. Domala for Bombay and Karachi (London, February 23); s.s. Mantola for Colombo, Madras, and Calcutta (London, February 23).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool February 16, Glasgow and Swansea February 15); s.s. Bantria for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool February 16, Swansea February 19).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23).

P. and O. Line.—S.s. Rajputana for Bombay (London, February 15); s.s. Nankin for Calcutta (London, February 16).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, February 8).

Ellerman and Papayanni Lines.—S.s. Mardinian for Algiers*, Piræus, Syra*, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool February 9, Swansea February 9); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 11); s.s. Fabian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 14); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 28); s.s. Oporto for Algiers*, Calamata, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 2, Swansea* March 2). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The gross production of crude oil by the Phoenix Oil and Transport Company group during January totalled 34,484 tons.

Sir William B. Peat, Liquidator of the Alliance Bank of Simla, Ltd., announces the payment of a fourth interim dividend of 1s. 3d. in the £ on and after the 11th instant. The dividend will be payable at 11, Ironmonger Lane, E.C.2. Previous distributions have been made amounting to 12s. 6d. in the £, so that the present one brings the total up to 13s. 9d. in the £.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 5.

Two uncertainties served to keep the Stock markets quieter this week. Monetary uncertainties (which experts believe are likely to be only temporary) caused gilt-edged stocks to lose ground; while uncertainties as to American sentiment reflected themselves in the industrial sections. In an uninteresting market week the City has had leisure to pay full attention to an unusually interesting series of annual speeches by the Bank chairmen. From the considered pronouncements of these leaders of finance it is possible to deduce at least a modicum of confidence as to the outlook. They showed a consensus of opinion that, although 1928 was disappointing in many ways, yet it had been a year of very important spade work, especially in the direction of industrial re-organisation, from which good results will eventually accrue. Another main theme of the speeches was a defence of Bank of England policy, and more than one chairman expounded the canons of sound credit. On the whole the country has to be more than usually grateful to the Bankers for giving a confident lead, and a clear exposition of principles at a moment when such expert guidance is especially needed.

Introductions.

Considerable resort has been made recently to a method of flotation of new capital by "introductions." In accordance with the regulations of the Stock Exchange, a "public statement" is issued, which gives much less information than a prospectus would, and the shares are then "introduced" to the markets by their holders—those responsible for the flotation of the concern. The flotation involves certain expenses, so that there must always be a margin between the price at which the securities were originally issued and the price at which they are introduced. In some cases, however, the margin appears rather large, and the cash involved in introductions during 1929 to date amounted to £2,990,687, for a total amount of capital equal to but £1,185,750, the profits in one case being about 400 per cent. Profits of this order may perhaps be justified where the holders of the shares acquired their interests some time ago and took considerable risk, for example in financing a new process when its future was very uncertain, but this is by no means

always the case. From the investor's point of view, it is very desirable that more information should be available on which he can estimate the value of securities which are "introduced" to the Stock Exchange. It is not without significance that for the most part the shares which are brought before the public in this way are of a highly speculative nature.

The First Railway Dividend.

The first dividend announcement of the British railway companies, that of the Metropolitan, was published on Thursday, and although it disappointed the market, it must be regarded as satisfactory. The dividend on the Ordinary stock is raised $\frac{1}{2}$ per cent. to $3\frac{1}{2}$ per cent. for the whole year, 1928, and that on the Surplus Lands stock is raised from $3\frac{3}{8}$ per cent. to $3\frac{3}{4}$ per cent. The weekly traffic returns showed that, unlike the trunk companies, the London railway companies enjoyed an increased revenue in 1928 as compared with 1927. With the continued development of Greater London these companies which are predominantly passenger lines, should experience an expanding traffic, and the co-ordination of road and rail facilities in that area prevents the competition between these services which is a handicap in other districts. On the basis of the current dividend the yield on the Metropolitan Ordinary stock is £5 7s. per cent., while on the 5 per cent. Preference (a trustee stock) a return of £5 10s. per cent. is obtained. The traffic returns of the Underground have shown an even greater increase over last year's figures than have those of the Metropolitan.

SIR JOSIAH STAMP.

ON

ARMAMENTS AND PRODUCTION.

"The total production of divisible and usable wealth which make up the standard of life is reduced below what it might be by the potential but unborn production of all people engaged in making armaments, and keeping up armies and navies and various military forces and their equipment."

(Copyright: London General Press).

An increased dividend is therefore confidently expected, and somewhat discounted in the price of the Ordinary shares, which on the basis of last year's dividend yield only £3 16s. per cent. These shares, however, have very good prospects of appreciation.

Foreign Utility Stocks.

The issue of £2,000,000 6 per cent. bonds by the Voralberger Illwerke did not prove popular and underwriters had to take up a large proportion of their engagements. The stocks of foreign utility companies have, however, certain merits for those investors who, having a good holding of "safety first" investments, are justified in taking some risk for the sake of a fairly high yield. The merits of utility concerns in this country are well known, and their stocks are deservedly popular. Well-secured overseas utility issues generally give a very satisfactory yield, and, if they are situated in a growing district, are likely to obtain an expanding revenue. Many such stocks are dealt in on the London Stock Exchange, but it may be helpful if a few examples are given. On the Adelaide Electric Company's $5\frac{1}{2}$ per cent. debentures a yield of £5 11s. is obtained, while the Madras Electric Supply Corporation's $5\frac{1}{2}$ per cent. cumulative preference shares give a yield which is equivalent to £6 per cent. An income of £6 6s. per cent. is obtainable on the $6\frac{1}{2}$ per cent. Prior Lien stock of the Barcelona Traction Company. Some investors might prefer indirect investment in foreign utility concerns through an interest in such a concern as Whitehall Electric Investments, whose assets are various holdings in electrical and similar undertakings. On this company's $7\frac{1}{2}$ per cent. cumulative preference shares a yield of £6 6s. per cent. is obtained.

THE BALKANS IN 1928.

The current issue of the Monthly Review of the Anglo-International Bank, Ltd., contains an interesting article on developments in Central Europe in 1928, from which we take the following extracts :—

If the year 1928 has few outstanding successes to record in the economic sphere, there has been at least no retrogression, and, while the advance towards economic co-operation between the Succession States has not been as rapid as one had hoped, the process of internal consolidation has been steadily maintained and is reflected in a further series of banking amalgamations and rationalisation schemes for industry.

It would be too much to expect that, after the vast changes wrought by the Peace Treaty, Central Europe should have at once settled down into complete political tranquillity. It was inevitable from the first that a certain period of political instability must ensue before these new countries could complete their internal consolidation. The political changes which have taken place must be carefully noted. They need not be taken tragically. In the face of great difficulties the new Central Europe has come through the first ten years of its existence with a minimum of political upheaval. The second decade should present at least fewer difficulties than the first.

Economic progress in Yugoslavia during 1928 has been considerably hampered by political instability. The hopes, too, of a bumper harvest were destroyed by the long drought, and Yugoslav industry experienced the same difficulties as Hungarian industry, and for very much the same reasons. There was, however, a welcome improvement in the timber industry, while the process of financial and industrial re-organisation made further progress through a series of new banking amalgamations, in the largest of which, the new Union Bank of Yugoslavia, the Croatian Discount Bank of Zagreb were absorbed. It is too early as yet to speak of the effect of King Alexander's latest action on the economic life of the country. As, however, the Ministries of Commerce, Agriculture, and Finance are all in the hands of Croats, it would seem as if many of Croatia's economic grievances were about to be remedied. Provided there are no political changes, the new régime in Yugoslavia should be able to do satisfactory work for the economic consolidation of the country.

In Roumania, too, the economic life of the country has been affected by the political situation. The long reign of M. Bratianu was brought to an end, and with the advent to power of M. Maniu a new page has been opened in Roumanian history. As in Yugoslavia the hopes for a good harvest were not fulfilled, and, although the wheat crop was a bumper one, its value was discounted by the lower price of wheat on the world market and by the failure of the maize crop. . . . Nature has endowed Roumania with such wealth and such resources that all that is required for their successful development is a period of political tranquillity and efficient administration.

In summing up one may make the following conclusions :—(1) If 1928 has witnessed no great advance, there has been no retrogression. The best illustration of the progress that has been achieved since 1918 is furnished by the remarkable figures in Sir Henry Strakosch's Memorandum to the Financial Committee of the League of Nations. These figures show that since 1922 the foreign trade returns for the Succession States have risen by a steady progression from 1,870,000,000 dollars in 1922

of almost all the States has been characterised by a to 2,944,000,000 dollars in 1927. (2) The financial policy strengthening of the Central banks and the currency and by an increased willingness to co-operate with other Central banks. The process of stabilisation and currency reform has been nearly completed. (3) On the other hand, industrial enterprises, with a few exceptions, are having a hard struggle to exist. There is still a serious amount of over-industrialisation owing to the desire of every State to be self-supporting in industry. This desire is due more to political than to economic causes, and is characterised by an unwillingness on the part of the Succession States to recognise that the territories they inhabit form a natural economic entity. (4) The progress towards economic co-operation has been slow. Unless there is a change in policy in this connexion, there can be no radical improvement. Indeed, in spite of the League of Nations' valuable work in stabilising currencies, there is a danger of economic retrogression.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended January 31 :—

Currants.

It is customary to commence the year with a feeling of optimism, and this tendency manifests itself in the dried fruit trade as much as in other directions. Everybody hopes for more activity in business, though immediately after the festive season some reaction and slackness must naturally prevail. It was gratifying to find this influence less pronounced than usual in the early days of the month. More interest being shown engendered a hopeful outlook, which was encouraged by fairly numerous sales, even though the weight of fruit changing hands was not great in the aggregate. Unfortunately this bright time was not of long duration and the market relapsed into a very apathetic state, with no decided movement. Sellers began to evince anxiety to make progress, and were willing to make slight concessions to stimulate trade. It is to be regretted that buyers did not respond to the overture, and we close the period under review with a quiet and featureless state of affairs. Prices show no material alteration. Transactions are recorded in Pyrgos at 46s. to 46s. 6d., Amalias, Zante, and Patras at 47s. to 48s. 6d., Gulf at 49s. to 53s. Vostizza most pressed for sale at 50s. to 56s. S.s. Brescia, Bothnia, and Polo arrived with further supplies. Stocks in first hands, December 31 :—1928, 1,830 tons; 1927, 1,860 tons. Quotations :—Pyrgos, 46s.; Amalias and Patras, 47s. to 48s. 6d.; Zante, 47 to 48s.; Gulf, 49s. to 53s.; Vostizza, 50s. to 56s.

Sultanas.

Smyrna.—Have shown a dropping tendency throughout the month and notwithstanding the firmness of the Smyrna market, holders are anxious to make progress, and where business is done prices are lower than the parity at which goods could be replaced if imported on present values ruling abroad. Sales were :—Medium at 40s. to 41s., Good 47s. to 50s.

Greeks.—Were slow of sale at lower prices, Ordinary quality selling at 35s., Good at 45s., and Better Grades at 54s. to 55s.

Figs.

The small remaining stocks of skeleton cases were practically cleared at 65s. to 70s. Naturals were slow, Prima selling at 28s. and Genuine at 32s.

A branch of the International Rotarian Club was opened in Jerusalem on January 22.

Severe cold swept over Roumania last week, following a heavy snowfall.

Motors and Motoring.

By G. B. B.

Use of Tyres.

Talking to a leading tyre manufacturer, I was assured that if only tyres to-day were used more carefully by motorists generally, they would give much better service than they do. In his view the average motorist commits the following "crimes" against his tyres; he will not keep them inflated fully—his standard of inflation is "till they are as hard as a board," and he will not test the pressure once a week or oftener. Other omissions are that he will not attend to any minute cuts as soon as he finds them, a statement which seems to carry with it another omission which is, that the average motorist will not look for cuts, and that the attention that should be given is not merely looking at a gash and saying that it must be attended to, but having the fault properly filled and vulcanised. Another point that should be guarded against is overloading; no tyre can be expected to stand up properly against a far larger load than it is constructed to carry. It was, however, when on the subject of driving that my friend waxed most eloquent. "Nearly all the new motorists," he said, "drive with one foot on the brake and the other on the accelerator. They know no happy medium, but tear along a road as fast as they can and pull up by jamming on their brakes hard. They also have a habit of letting the clutch in full force, and any of these practices is bad for tyres. Another thing in which the average motorist is remiss is in checking, periodically, the wheel tracking. One has only to glance at the cars one sees to note that a very high percentage have a faulty wheel set. Particularly is that so in connection with front wheels. Bad alignment is common, and not only means more or less difficult steering, but also excessive tyre wear." I could add a few other things such as making sure there is an adequate but not excessive dose of French chalk between cover and tube; as seeing that the edges of the wheel rims are free from rust and have a good coat of blacklead, and last and by no means least, keeping the tyres out of the patch of oil which the average motorist always seems to have on the garage floor.

A Marine Morris.

I have been asked to mention the new venture of Morris Motors, Ltd., who are now producing an engine suitable for launch and motor boat work. I understand that although it will be rated at 12 h.p., it will give 24 h.p. on the brake and will be sold complete with all electrical equipment for £100. Many of the parts will be interchangeable with Morris Cowley engines.

Better Braking.

The subject of braking has been referred to on many occasions in these columns, and it is interesting to note the great improvements that have been made recently in this connexion. The layouts have been simplified, the number of cross-shafts reduced and the frictional area on which the shoes operate has been increased. In some instances larger drums have been fitted, whilst in others wider shoes are employed—in this I am referring to commercial vehicles—but one of the things which does not always seem to be remembered is that it is of no use fitting any such improvements if the power that can be applied is not increased. I agree with the *Commercial Motor* when it says that the driver of a fast and perhaps heavy vehicle should not be called upon to exercise much effort in applying the brakes. It is asking too much from him; steering and changing gear alone are quite sufficient to fatigue a driver. The addition of front wheel brakes, whilst promoting efficiency and greatly reducing the risk of skidding, does not in itself mean any increase in the braking power unless the initial effort has also been in-

creased, as by the addition of a servo device. Good as some of them are, however, I do not consider that the brake servo is the last word.

Let us go further. To arrest a vehicle progressing at a fair speed considerable energy has to be absorbed by the brake, rapidly. This represents wasted work, and why should it not be turned to some more useful purpose rather than to continue to utilise the present method, which is to do still more work in absorbing vehicle energy? In addition, any increase in the power of brake operation at or near the pedal throws extra stresses upon all the connections between the point of application of power and the brake shoes. The journal quoted above points out that many devices have been brought out with this object in view and that some of them have given fairly satisfactory results, but most have had certain disadvantages in that they did not give a self-energising action in both directions. Other forms produced are in some cases excessively complicated. The average brake shoes do not give really satisfactory contact with the drums and most of the wear is uneven and the area of contact small compared with the total drum area.

Car Cleaning.

Some useful hints on car cleaning have recently been given by Messrs. Brown Bros., who point out that dust can best be removed from cushions and seatbacks by a vacuum cleaner, failing which, by a brush after lightly heating the surface to loosen the dust from the crevices of the material. Grease or oil stains are best washed out with warm water and good toilet—not common—soap applied with a woollen cloth. Petrol is not to be recommended on account of the danger of its spreading the stain. Clean water, with a little ammonia, followed by a brisk rubbing with a clean woollen cloth or piece of flannel is best for cleaning leather upholstery. After repeated cleanings the leather should be treated with a leather reviver or special dressing. Hoods and side curtains are best cleaned with water and ammonia, followed by a suitable dressing, and whilst paints are much in vogue for treating used hoods, not every hood is the better for such treatment as some paints lack flexibility and tend to contract and shrivel the fibres of the hood.

Company Meeting.

WESTMINSTER BANK.

Large Increase in Deposits.

The Banks and a Trade Revival.

Mr. R. Hugh Tennant's Address.

The annual general meeting of the Westminster Bank was held on January 30 at the Head Office, Lothbury, E.C. Mr. R. Hugh Tennant (the chairman) presided.

The Chairman, commenting on the leading figures in the balance-sheet, said that they had had one or two movements of note—an increase of fully £13,000,000 in "money lodged," and an expansion of £14,000,000 in acceptances, endorsements, and other engagements. During the past year the figures of their money lodged had been on the up-grade—an experience common to many of the British banks. But as one of the "Big Five" enjoying the prestige of conducting the accounts of sundry and large financial institutions at home and abroad, the end of the year frequently occasioned money movements—upwards or downwards—which were of a transitory character, and while they welcomed the profitable "turn" which these balances brought, they naturally discriminated as to their suitability for lending purposes. Their advances stood at £149,100,000, an increase of some £12,000,000 compared with those of December, 1927. They welcomed the upward trend of their loan business. Some considerable part of the expansion, as with their deposits, might be of a more or less temporary character, and this feature had been well kept in mind. The profits for the year, at £2,148,408, showed a small but gratifying increase of £15,000. After allocation to the bank premises of £275,000, setting aside £200,000 to contingency account, and a similar amount necessary to the upbuilding of the officers' pension fund, there remained an amount adequate for a dividend similar to that paid in 1927, and a carry forward to the next account of £552,000, an increase of £17,000.

He then referred to the special resolutions giving effect to the Board's recommendations of a sub-division of the bank's £20 shares (£5 paid) into £4 shares (£1 paid), thus bringing about a broader distribution of the capital, which would be in the interests of the bank, and, therefore, of its members.

Current Year's Outlook.

Alluding to the economic position of the country and of the world at large, the Chairman said that the year had been disappointing in many respects, summed up in the fact that the ranks of the unemployed had increased by 14.4 per cent. on the year.

Alluding in detail to the conditions obtaining in the coal, iron and steel, engineering, shipbuilding, cotton and other of the country's basic industries, he went on to observe that in his review disappointment would seem to dominate, but that to write the year down as wholly unprogressive would be a mistake, for it possessed certain outstanding features of a satisfactory nature. As to the prospects for 1929, he did not propose to be drawn into the realm of prophesying. Much of the disappointment which each recent year had left behind had been due, in no small degree, to the extravagant hopes with which each year had been heralded, but it was reasonable to claim that, in spite of its disappointments, the year 1928 contributed substantially towards future prosperity, because of the real beginning made in the task of reorganising

industry, of cutting down the dead-wood and proceeding through sacrifice to efficiency. These considerations combined to give some degree of confidence in the future, but, lest disappointments recurred, it was necessary to throw off the mentality which looked to one particular year or another to work miracles and to solve the problems of a decade. It was not until they convinced themselves of the great variety of the problems, industrial, economic, and financial, which awaited solution, that they could attain a balanced perspective of the progress that any one year might reasonably be expected to produce.

If he had dwelt somewhat insistently upon these broad aspects of their many-sided economic difficulties, it was for a special reason. It was because they were so frequently invited, by one school of thought or another, to believe that, although their problems were by origin and nature numerous, there was one short cut to the coveted goal of renewed prosperity. There were three schools of thought. One would have them revolutionise the fiscal policy of this country; another would have them surrender private enterprise to the control of the state; yet another would have them experiment in the stimulation of industry by a more expansive credit policy. The theory of the last-named school, which he wished to discuss briefly, was that by making credit cheaper and more abundant the banks could promote a trade revival; and the protagonists of this idea usually prefaced their arguments by accusing the Joint Stock banks, and more particularly the Bank of England, of deliberately pursuing a policy which had hampered trade and retarded a revival which might otherwise have occurred.

In order to prevent any possible misconception, he would say at the outset that he was strongly opposed to any restriction of credit which could make it artificially difficult for trade and industry to develop as fast as economic circumstances permitted. He need hardly say that if he were persuaded that a more expansive credit policy than that which was now being followed could really help to lift burdens from the backs of struggling industries, or reduce the volume of unemployment, he would eagerly work for the immediate adoption of such a policy. If it could be shown that by their present policy the banks had been, or were, holding back a trade recovery, then let them mend their ways without delay. If there were even a possibility that by a change in their policy the Bank of England and the Joint Stock banks could really promote those better economic conditions which they all desired, then let them lose no time in getting together and concerting methods by which this all-important object might possibly be achieved.

Production could be stimulated by credit; but trade expansion was dependent on effective demand for the goods produced. Credit could help at the psychological moment; and those who controlled credit must always be ready and watching for the opportunity to help. But the initial impetus must come from the side of trade and industry. The function of banking was to be always ready to cater for an increased demand for commodities and an enhanced manufacturing activity by expanding the supply of credit *pari passu* with such developments. If the expansion of credit took place before the signs of an approaching increase in demand heralded the need for an increase in production, the well-known evils of inflation were let loose in proportion to the degree of credit expansion. In view of the history of the War and post-War periods, the nature of these evils should be fresh in the memory of the peoples of Europe; and it was the removal of precisely these evils that all the nations had in recent years made the object of their financial reforms.

The first visible result of an expansion of credit in excess of expanded production and trade was that more purchasing power was made available for the purchase of an unaltered volume of goods and services. The inevitable consequence was a rise in the level of commodity prices. For the time being producers might benefit; but the advantage was a fleeting one, for ultimately they had to pay more for their raw materials, and their wage bills rose eventually as a result of the rise in the cost of living. In foreign markets their competitive power was reduced—a vital matter for their basic industries—and though profits derived from the home trade might be greater on paper, the increase would be largely illusory, because the £ sterling would buy less than before. As prices rose, a fresh crop of wage disputes was apt to break out, and they became involved in a vicious economic circle of a type with which they were all familiar. Moreover, the national life was dislocated in various ways, the chief of which was, perhaps, that a rise in prices arbitrarily altered the respective shares of different sections of the community in the national income. These were just the troubles and dislocations from which Great Britain, after years of struggle and sacrifice, had recently emerged. "Are we now to retrace our steps, stultify years of sacrifice, and superimpose upon our present troubles some of the most serious of those which we have so recently and so painfully conquered?"

The Banker's Role.

It was the banker's duty to serve the national interest; but in doing so he must be guided by the principles of sound banking practice, and from a purely banking standpoint the results of premature credit expansion were as undesirable as they were from the national. Banks, it was sometimes forgotten, did not originate loans; they granted them in response to applications from their clients.

It was no part of a banker's function to provide the "fixed" or long-term capital for industry. This must come from the accumulated savings of the community. One of the essential points to

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations.
Alexandria.....	Piastre to £	97½	97½

Warsaw	Zloty to £	95.22½	43 3/16—7/16

remember in approaching the credit controversy was that it was only with the provision of floating capital that the banks were primarily concerned. A second point was that credit expansion which ran ahead of economic expansion created an atmosphere of unreal optimism. In economic terms, the banker's true goal was stability; and his primary duty was to secure that the flow of credit rose or fell in harmony with the volume of the nation's productive activity.

The Bank of England, however, was the target at which the arrows of the critics were mainly aimed. To their Central Bank was imputed the blame for the fact that the incipient trade improvement of the first quarter of 1928 failed to develop and continue. *Punch*, even, had gone so far as to publish a cartoon depicting the Old Lady of Threadneedle Street as standing still in the middle of the street and holding up the country's traffic. The gravamen of the charge, stated in the simplest terms, was that when the Bank of England in the early part of last year was accumulating gold, the opportunity should have been taken to reduce Bank Rate and broaden the basis of credit. It was suggested that if this had been done the trade recovery of the early months would not have faded away as it did. On the contrary, had such a course been followed, they might now be faced with a Bank Rate at 5 per cent. or higher.

Finally, he referred to the problem of unemployment, and proceeded to urge concentration upon large-scale production and the attainment of that cheapness combined with quality which ultimately would win the markets of the world. The brightest point about 1928, perhaps, was that the industrial leaders had given clear evidence that those lessons had been learned. The campaign for rationalisation was assuming important dimensions, and Great Britain was at last bringing herself up to concert pitch. He would conclude on a note of hope. Great Britain had live assets which had not changed in value, the inherent skill and vigour of the workers by hand and brain and the physical advantage of the geographical position. If they utilised those assets to the full in an efficient and determined endeavour they would carry them through. (Applause.)

The report and accounts were unanimously adopted and the special resolution embodying the sub-division of the shares agreed to.

CREDIT FONCIER EGYPTIEN.

Developments in Egypt.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 15:—

In conformity with Article 36 of our statutes we have the honour to present to you the account of the results of the past year, ended October 31, 1928.

The cotton crop of 1927, calculated on the arrivals at Alexandria, represented 6,096,822 kantars. That of 1928 is estimated as being likely to exceed seven million kantars. In the last fourteen months the price of Sakellaridis cotton has oscillated between 32 and 42 talaris, the average price being about 35 talaris. These are very satisfactory totals, especially when it is borne in mind that the prosperity of Egypt has followed an almost uninterrupted development since 1915.

The Budget of 1928-29 balances at £E41,532,000 by drawing on the general reserve as on a loan fund an amount of £E4,000,000 allocated for productive works, among which figures a credit of £E1,948,000 for the great irrigation projects. The Finance Committee and the Commission of Finances have insisted in this connexion on the need of carrying out without delay the promises in last year's speech from the Throne. The Government, which has energetically pushed forward the preliminary investigations, announces that it has decided to carry out as rapidly as possible the heightening and the construction of barrages necessary for the improvement of the conditions of irrigation and for the electrification which is required for the economic development of the country.

Mortgage Business.

We were able to inform you last year of a certain improvement in our mortgage business. The following totals will show you that the same progress has been in evidence during the past year:—

Date.	Current Loans.	Amount.	Realisations	Repayments.	Surplus.
		£E	of the Year.	£E	£E.
October 31, 1926 ...	16,860,359	2,075,676	1,845,824	229,852	
October 31, 1927 ...	17,090,211	2,177,931	1,974,333	203,598	
October 31, 1928 ...	17,293,809				

The realisations have been £E102,255 more than those of the previous year, but the repayments have been affected by an important award.

In certain official circles there has been anxiety at the increase, though slight, in our mortgage loans which was shown in our

previous balance-sheet. So we think that we ought to point out that the present increase and that of that year arise from urban and not from rural loans, and that far from being, as they have feared, an indication of a transitory agricultural crisis, they supply, on the contrary, evidence of newly created wealth. Our mortgage loans on urban property in the whole of Egypt have amounted actually in 1926-27 to £E455,743, and in 1927-28 to £E683,234. To give these totals their true significance we must tell you that the amount of our advances on property constructed or in course of construction in the City of Cairo in the last three years has not exceeded one-tenth of the total value of these properties.

To understand the lightening of the mortgage charge of Egypt it is not without interest to compare the amount of the current loans in 1913 and 1928. You will see from the following table that the total for urban loans has been scarcely maintained, while the rural loans and the mixed loans—these last made chiefly on rural securities—have decreased by nearly 40 per cent.

Amount of Current Loans.					
	October 31, 1913	October 31, 1928	Difference.		
	£E	£E	£E		
Rural Loans ...	22,289,068	13,870,382	—8,418,686		
Mixed Loans ...	2,391,149	998,397	—1,392,752		
Urban Loans ...	2,573,312	2,425,030	—148,282		
Total ...	27,253,529	17,293,809	—9,959,720		

We must point out that the rural mortgage business is constantly being reduced by reason of the increase in Wakf properties, removed from normal economic control, inasmuch as being Wakf they can be neither mortgaged nor sold. Thus it appears from recent statistics that the area of rural properties annually constituted as Wakf amounted in 1924 to 14,550 feddans, in 1925 to 19,550 feddans, in 1926 to 25,248 feddans, and in 1927 to 22,607 feddans. We would remark that the total area of the cultivable land of Egypt was estimated in 1927 at 5,544,361 feddans, and that, at October 31, 1928, the area of the lands mortgaged to the Credit Foncier Egyptien was 477,952 feddans.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

The balance of the account for annual and half-yearly payments and interest due at October 31, 1927, was £E1,346,088. Adding the maturities of the year £E2,058,289, we obtain a total sum of £E3,404,377. At October 31, 1928, we had collected £E2,031,839. The amount of our arrears stood at £E1,372,538, an increase of £E26,450 on the corresponding total at October 31, 1927.

The account of third party purchasers, which represents the amount of our claims on properties expropriated on our demand or on that of other creditors, has increased, rising from £E87,809 on October 31, 1927, to £E124,079 on October 31, 1928. But it is important to remark that our balance-sheet continues to show no immobilisation of funds in the shape of estates arising from properties expropriated which have not found a purchaser.

The particulars of our holdings of securities are given in the explanations of this report. Our English securities have decreased by the extent that we have increased our Egyptian securities, notably our redeemed bonds without prizes. We have been able during the year to add 27,947 shares to the 337,522 which we held already, so that, making deduction for shares paid off, we possessed on October 31, 1928, 362,613 bonds of our company.

Balance-sheet.

The balance-sheet which we submit to you does not present this time any special features. It shows an increase in the accounts for contingencies and reserves. The increase of £E117,184 in the statutory reserve is due to a satisfactory award which has to be added to the statutory percentage and to the development of the funds of the reserve. The reserve to provide for the reduction of the premium intended, as you know, to render possible the amortisation of the premium on our 3½ per cent. bonds, has increased by £E178,272, having received the proceeds of the purchase of 27,947 bonds without prizes and the premium on 19,754 prize bonds issued below par.

The net profits of the year stand at £E1,744,302. The corresponding expenditure was £E966,777. The amount of distributable profit stands at £E777,525, enabling the allocation of P.T. 155 to the ordinary shares and P.T. 4,100 to the founders' shares, subject to deduction of French taxes, or P.T. 39 for the shares which circulated in France, or on which the coupon No. 54 has been paid in France. The founders' shares presented in France will be subject to the retention of the tax affecting uncompounded shares.

If you agree to these proposals the position of the various reserve and provision accounts will stand as follows on November 1, 1928:—Statutory reserve, £E1,164,272.175, or 30,182,039.54 frs.; extraordinary reserve, £E970,773.067, or 25,165,860.45 frs.; provision for the reduction of the premium on bonds, £E396,742.232, or 10,284,957.41 frs.; provision and reserve for sundry contingencies, £E1,370,710.970, or 35,533,660.92 frs.; provision for dividend on shares, £E286,510.719, or 7,427,134.65 frs.; total at November 1, 1928, £E4,189,000.163, or 108,593,652.97 frs. For the account "Provision for the amortisation of bonds," £E1,965,568.433, or 50,954,463.59 frs. We ask you to join us in thanking our staff for their keen and devoted collaboration.

Resolutions of the Meeting.

The general meeting (1) approved the accounts for the year ended October 31, 1928; (2) adopted the division of profits proposed by the board of directors, and decided in consequence on (a) the distribution for the year on the 400,000 shares of a dividend of P.T. 155 per share, £E620,000, or 16,072,585.87 frs.; on the 2,000 founders' shares of P.T. 4,100 per share, £E82,000, or 2,125,729.10 frs.; (b) the allocation to the statutory reserve of £E54,607.560, or 1,415,620.49 frs.; to the board of directors, £E27,303.780, or 707,810.24 frs.; (c) to carry forward for the account of the ordinary shares, £E735.417, or 19,064.60 frs.; for the account of the founders' shares, £E221.022, of 5,729.66 frs.; total, £E784,867.779, or 20,346,530.96 frs., representing the amount of the profits of the year and the sums brought forward from the previous year; (3) decided that the dividend on the ordinary shares and on the founders' shares should be payable at the date fixed by the board. The dividend on the ordinary shares will be payable in Paris and in London in sterling at the rates of exchange fixed by the board, less French taxes, which correspond to 8s. per coupon; in Cairo in piastres tariff less the same French taxes or P.T. 39 per coupon. There will be exempted from this retention coupons on shares which have not circulated in France since November 1, 1927, and of which the previous coupon has been paid out of France. The dividend on the founders' shares will be payable under deduction, for the shares liable to French taxes, of the tax on the revenues from uncompounded securities. (4) Re-elected in accordance with Articles 15 and 36 of the statutes as directors for five years, M.M. M. Vincenot and J. Simon; (5) re-elected as auditors for one year M.M. H. Boinet and R. Harari. These resolutions were carried unanimously.

CHANGES AT THE BIRMINGHAM HEAVY INDUSTRIES FAIR.

Always under one continuous roof, the British Industries Fair in Birmingham is this year for the first time one single building, approximately 11 acres in extent. Not only have the five large exhibition halls occupied by the heavy section been thrown into one, with the removal of all passages and dividing walls, but lateral extensions, stage by stage, have been made all along, the area now taken up by the Birmingham section having grown to four times its size in as many years.

These costly improvements and extensions, systematically carried out at a capital charge of about £30,000 a year, have made it possible in 1929 to arrange the whole of the exhibits in symmetrical lines throughout the length and breadth of the Fair. There are no corridors or structural corners to turn, no complicated plans or directions to follow, when seeking the various stands a buyer wishes to visit. Parallel avenues a third of a mile long stretch from one end of the building to the other; they are intersected by similar avenues across the Fair. There are nearly four miles of gangways.

Lengthwise every row of stands is numbered, crosswise every row is lettered. Stand 6J or stand 14E, for example, can only be at the precise spots where the numerals and letters respectively meet. Moreover, illuminated signs above the aisles indicate from a distance exactly where any individual stand will be found.

"We believe that we have now secured the most perfect scheme of trade exhibition planning in the world," said Mr. G. N. Guest, Chairman of the Management Committee. "Simple as it all is now, the scheme presented more difficulties than would appear. Our advantage in having this great display on one floor only, and under one roof, was discounted to some extent by its rapid growth each successive year, making it urgently necessary to absorb more space. Some hundreds of stands, remaining in position year by year, have had to be moved a few yards this way or that, and many changed to new sites altogether, to bring about absolute alignment.

"Almost immediately from the close of the Fair last March a large body of workmen have been constantly engaged on these improvements. Arduous labour was involved in the demolition of walls made of good brick set in cement and heavily reinforced. Many hundred tons of bricks had to be prised apart with picks and crowbars; there were 300 tons of brick alone in the Boiler House which was razed and re-erected elsewhere. Tons upon tons of rubble came in usefully for our new roads. Quite appropriately does one of our technical journals, in suggesting a light railway system inside the Birmingham Fair ask 'Where will it end?'

While such a method of transport is not at present contemplated within the building, vast though it has become, it is interesting to note that an outside service of petrol-driven cars will be inaugurated at the Birmingham Fair this year. They will run the entire length of the building on the south side, serving three public entrances as well as the new Conference Hall and the Outside Section of some 50,000 sq. ft. This quick service is free to all visitors, who will be able to board the cars or alight at any point that best suits them, according to the section of the display to which their business takes them.

Recent alterations and extensions have afforded new facilities for meeting the comfort and convenience of visitors, the arrangements in this direction being on an unprecedented scale. An entirely new block in a central position, comprising a reception and luncheon hall to be known as the Bradford Room, a spacious public restaurant to seat 2,000, a buffet bar and a smoke room, occupies more than half an acre; the Royal Room, public dining-rooms, smoke room and refreshment buffets at various points account for another acre. In addition, the new Conference Hall, immediately outside the building, seats 250 for lunch and 350 for conference.

Private railway sidings are available for locomotives,

Salay Oil Lands, Ltd., has been registered as a private company with a capital of £150,000 in 10s. shares. The objects are:—To acquire property suitable for the finding or production of petroleum or other mineral oils, coal, asphalt, guano, and natural gas, and to adopt an agreement with the British Burmah Petroleum Company, etc.

and other exhibits in this section are identical with apparatus employed in preparing the ground for the particular purpose. In the new Outside Section will be found: steam navvies for levelling elevations and filling in depressions; light railway equipment; concrete mixers; steam rollers; electric cables; colliery appliances; signalling devices; agricultural implements; contractors' buildings; agricultural and horticultural buildings; transmission towers; drainage schemes; village industries—poultry houses, rustic seats, etc; fences of all kinds bull-proof, sheep-proof, vermin-proof; motor rollers; greenhouses and garden equipment; stone crushers; tractors; farm machinery; trench diggers; air compressors, oxygen cutting machines and many other products for open-air industries.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 30:—

Egyptian Futures.

Sakel Contract.—For some little time we have dwelt upon the unsound position of this contract, and whilst it has occasioned surprise that values have been successfully held for so long round the 10d. level, a material decline to a figure that will encourage trade support has appeared inevitable. The very heavy "long" account in Egypt seems to have been built up mainly on the statistical position, taking for granted that consumers would be forced sooner or later to pay the extravagant differences demanded for Sakels over other cottons. It is granted that supplies on the basis of exports to date would leave little cotton to protect the contracts at the end of the season; but are shipments going to be maintained on the present scale? We very much doubt it, as much of the cotton sent out of Egypt during the past two months has been against old contracts; during this period there has been very little fresh trade buying, and the resultant falling off in the consumption figures will not be apparent for a few weeks. In addition to the above it appears that the imminent marketing of the Sudan crops has been under-estimated as a price-controlling factor; probably it has been hoped by those working for higher prices than last year's somewhat disappointing yield from the Gezira would find a parallel this season, instead of which an appreciable improvement in both quantity and quality now appears assured. In a lesser degree, the present heavy tendency in the American markets has helped to unsettle sentiment, and a further falling away in these would accentuate further liquidation in our contract. A survey of the week's fluctuations shows that for the sessions immediately following our last report little alteration was recorded; later the market developed heaviness and, with Alexandria beginning to crack, prices stated to slip back rapidly; to-day Continental liquidation has been a feature, and with restricted buying power in evidence we close at practically the lowest of the week, near positions showing declines of 64 to 76 points, and new crop months 60 to 69 points. The premium of our contract over American values has been reduced about 60 points since we last wrote; we rather doubt if this closing in is sufficiently drastic to attract trade support. Certainly there are no signs of increasing mill activity as yet, and until this develops a further falling away in values appears probable.

Upper Contract.—This market has shown an easy undertone during the past week, and with small liquidation orders consistently bringing cotton on offer, prices have gradually declined. In addition, the action of the American markets has proved disappointing, and even those who, to date, have been quite optimistic regarding the relative cheapness of the Upper varieties are beginning to lose confidence. Trade support has again been very restricted, and the turnover, both for spot and forward cotton, continues on a reduced scale.

Egyptian Spot.

A distinct falling off in the inquiry has taken place this week, particularly during the last few days, and a substantial break in prices has occurred. This break, in our opinion, was overdue, and we shall not be surprised to see it carried still further. The only means left by which spinners in this country might be induced to increase their consumption of Sakel (instead of gradually curtailing it, as they are doing at present) is for Egypt to offer the cotton at considerably lower prices than those ruling to-day. Provided this season's Sudan crop is offered on a reasonable basis, we venture to predict that the offtake for Egyptian Sakel during the ensuing months will be very seriously affected.

The inquiry for very low cotton at from 6d. to 8½d. is again on the increase. The rest of the Sakel inquiry has differed in no way from that of previous weeks, except that tangible results have dwindled day by day. Uppers have continued in fair request at from 25 off to 15 on contracts and competition amongst sellers remains very keen. Few fresh tenders have been made, but the market is flooded with cheaply bought cotton and the Upper contract presents

a somewhat tired appearance. Pilon, Nahda, White, etc., have been neglected and little interest has been shown this week in old crop Sudan growths. Reports from up country have been less optimistic of late, and these are confirmed by the paucity of c.i.f. business which is going through at the present time.

Forwardings to spinners last week were returned as 8,073 bales Egyptian and 772 bales Sudan. Estimated spot sales, 1,300 bales Egyptian and 450 bales Sudan (chiefly American seed). Quotations of Sakel show a decline of 75 points and those of Upper and Pilon 50 points. F.G.F. Sakel to-day, 18.40d. F.G.F. Upper to-day, 11.87d. F.G.F. Pilon to-day, 12.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 24, state:—

Since our last report the futures market has continued dull and fluctuations have been negligible. The week's summary of price movements is as follows:—Sakellaris: March, 38.25 dollars, 0.08 dollars down; May, 38.58 dollars, 0.14 dollars down; November, 38.48 dollars, 0.31 dollars down. Ashmouni: February, 22.71 dollars, 0.18 dollars down; April, 23.25 dollars, 0.11 dollars down; June, 23.68 dollars, 0.08 dollars down; August, 24.00 dollars, 0.16 dollars down; October, 24.32 dollars, 0.08 dollars down.

Sakel.—The long interest does not seem to have given up the hope of assuming control of the Sakel market, and it is thanks only to their efforts that it has been possible to hold the March position at the level of 38 dollars. Against the third January tender, 23,500 kantars were delivered; this was larger than anticipated, but as the whole of this somewhat heavy tender was immediately taken up, the market quickly recovered from the bad impression it had caused.

On the 23rd instant the American Ginners' Report, showing cotton ginned to the 15th instant was published. The figure given was 13,892,000 bales, against 12,501,845 bales at the same date last year. The most recent estimate of the American crop gave a figure of 14,373,000 bales, against last year's final figure of 12,783,000 bales.

Regarding the demand from the trade, there is, unfortunately, nothing encouraging to report; it has been extremely poor; in fact,

almost non-existent. All reports from consuming centres agree in deploring the dearthness of Sakel in comparison with other growths of cotton, which has practically killed business and is causing grave apprehension to that section of the industry directly interested, as, if present conditions continue, it may quite possibly have to consider the advisability of short time.

The latest news from the Sudan indicates that the Sakel crop in the Gezira, as well as in Tokar and Kassala, is progressing satisfactorily. One of our private sources of information estimates the total Sakel production of the Sudan at about 735,000 kantars, a very respectable figure, and one which, if realised, cannot but have a depressing effect on Egyptian Sakel and undoubtedly react on present values.

The Sakel/Uppers straddle (March/April) this week stands at 1,500 points, against 1,497 points last week and 865 points at this time last year.

Uppers.—This market has shown signs of heaviness, which may be attributed to the only rather moderate demand from consuming centres and to the abundance of existing stocks. The relative cheapness of Uppers as compared with American does not appear for the moment to have attracted spinners' interest, but their heavy takings at the beginning of the season are reported as being rapidly used, and the time cannot be far distant when replenishing of their stocks will become necessary. The Ashmouni-American straddle (February/March) this week stands at 263 points, against 254 points last week and 683 points at this time last year.

The week's receipts amount to 161,553 kantars, against exports 158,547; the stock in Alexandria stands at 3,529,154 kantars.

Spot.—Demand has fallen away and the past week has given us a series of very quiet markets at Minet el Bassal. Sales amount to about 13,500 bales, of which we estimate 2,750 bales Sakellaridis,

9,400 bales Ashmouni and Zagora, 975 bales Pilion, and 375 bales other varieties.

Sakellaridis: Very little interest is being shown by buyers in this variety at present and a very poor business indeed has been done. However, with the exception of the best grades, all styles have been dealt in. Spot differences are generally a little stiffer in spite of the paucity of the demand.

Ashmouni and Zagora: Contrary to Sakel, there has been a very fair demand for these growths and quite a good business has resulted. All grades have been dealt in, with the medium qualities preponderating. Spot differences are without change.

Pilion: A very fair business has been done covering all grades. Spot differences are without change.

Other Varieties: In Nahda a fairly good business has been done. Spot differences are unchanged but very well maintained. In White a retail business has taken place at last week's rates. A few scattered lots of Maarad and Fouadi have changed hands.

Up-country.—Weather conditions are now better and this has allowed a resumption of work in the ginning factories, with a consequent slight increase in the daily arrivals in Alexandria. Preparations for sowing are progressing normally and, as mentioned in our last report, prospects are for a slight increase in the acreage planted.

The value of Yugoslavia's exports for the first eleven months of 1928 amounted to 5,875 million dinars, that of the imports being 7,287 millions, there being thus an adverse balance of 1,412 millions, as compared with one of 777 millions for the corresponding period of 1927.

Notes of the Week.

Rough Weather.

With a unanimity to which the Near East, unfortunately, is almost a stranger all the component countries are agreed that the weather for the last two weeks has surpassed all other topics in point of interest. An exceptionally cold spell has descended on a large part of Europe and the northern portion of Asia. There have been unusually heavy falls of snow, and at least three trains of the Orient Express service between Paris and Constantinople have been snowbound—one for more than a week—near the Turkish frontier. Relief by car has been provided in some cases for the passengers, among whom was Sir Gilbert Clayton, High Commissioner for Iraq, who was on his way with Lady Clayton to Baghdad *via* Constantinople. In Macedonia some villages are reported to be in danger of famine through being completely isolated by snow; at Koritza in Albania it is stated that a band of wolves, attacking the town, killed more than twenty people before they could be driven off. Conditions in Yugoslavia and Bulgaria are no less severe. The line between Zagreb and Split has been blocked with snow for a fortnight; in Bulgaria also railway communication has had to be suspended in certain parts, and the primary schools have been closed owing to the weather.

The Litvinoff Protocol.

The signing last week of the Litvinoff Protocol to the Kellogg Pact would constitute an important contribution to the world's peace, if Soviet Russia did not indulge in mental reservations distinguishing between public and private war. For war in the generally accepted sense of the term the Soviets have no use; the disintegration of Russia under Soviet rule is an effective obstacle to Russian participation in modern warfare on a large scale. The Moscow Government has, therefore, recourse to other means for venting its hostility on the established order of things in the world at large, and wages incessantly a warfare of its own against all and sundry, while loudly proclaiming its devotion to peace. Consequently, its ostentatious peace-gestures, such as its disarmament

proposal and now the Litvinoff Protocol, deceive no one but the Soviet itself, for the reason that the world can now keep the peace without Russia's adhesion, and all that it wants from Moscow is friendliness or, at least, absence of active and continuous hostility. Until one or other of these is accorded Soviet Russia must resign itself to being regarded as a pariah among nations. It may be that its peace-gestures are an indication of a knowledge of better things, while it follows the worse course; in this case there can be no harm in accepting them as a sign of grace.

Russia and Roumania.

When on December 29, 1928, M. Litvinoff proposed to Poland that Russia, Poland and Lithuania should sign a protocol rendering the Kellogg Pact effective between the three countries, without waiting for the ratifications of the Pact by all the countries adhering to it, the surprise of the Polish Government must have been great. Its reply on January 10 suggested that the problem of the security of Eastern Europe required to be dealt with conjointly by all the interested States. M. Litvinoff at once took the hint and announced the readiness of the Soviet Government to propose that Roumania should join the Protocol. The suggestion was accepted and now that document has been signed by Russia, Poland, Roumania, Latvia and Estonia, and will in due course be signed by Lithuania, which happens not to be on speaking terms with Poland—on account of Vilna—and, therefore, could not sign the Protocol at the same time on the same table. On its face value the Litvinoff Protocol means *inter alia* that Soviet Russia will never seek to detach Bessarabia from Roumania by means of war. If the Soviet Government is as wholly devoted to peace and good will, as it is anxious to impress upon the United States of America at the present moment, when it is trying to obtain the assistance of American capital, it will immediately follow up the Protocol by formally recognising the incorporation of Bessarabia in Roumania. If it does not do so, it will merely afford yet another example of the lip-service that it renders to peace, while doing all it can to foster unrest.

The Afghan Situation.

As far as there has been any change in the situation in Afghanistan it has been in the direction of a steady deterioration of the Amir Habibullah's position in Kabul and in the number of aspirants to the throne that he seems to hold so precariously. In addition to Ali Ahmad Jan, who is operating from Jalalabad—whether as a Pretender or as a loyal lieutenant of King Amanullah's is not quite clear—the Ghilzais under their tribal leader appear to be making a bid for power. In the meantime King Amanullah is doing his best to retrieve the ground that he lost by his incontinent surrender to Batcha-i-Saqao's challenge; and if he should find himself installed again as ruler of Afghanistan, it will be owing to the absence of any commanding personality among his rivals. Whatever figure he may cut in Afghanistan after his flight from his capital, he will not improve his prestige abroad by such an announcement as has been made by his Ambassador at Angora. Jelani Khan in a declaration to a Turkish newspaper complains that Great Britain is committing a breach of international law in sending aeroplanes over Afghan territory. He is pleased to allow that there may be justification on humanitarian grounds for the dispatch of machines to Kabul to fetch foreigners—incidentally King Inayatullah was also rescued in that way—but alleges that other aeroplanes are flying daily over Afghanistan. It is probable that Jelani Khan is referring to the machines sent to locate the missing aeroplane that had to make a forced landing in its journey between Peshawar and Kabul, as for ordinary flight purposes the Royal Air Force pilots have instructions to keep well on the Indian side of the frontier. In any case the method of complaint will strike any foreigner as petty and undignified; it is certainly derogatory to the Afghan Minister in London, who, it would be supposed, if cause for protest against the Royal Air Force in regard to Afghanistan existed, could make his representations to the British Foreign Office and not in a Press interview. If a breach of international law has been committed, it is a technical one, and if it were necessary for any official notice to be taken of Jelani Khan's lucubrations in the Turkish Press, he would probably have to explain first whether his complaint comes from a monarch who has abdicated or from the present Amir in Kabul, who seems to have approved of the flights of British aeroplanes between India and Afghanistan. Jelani Khan's further suggestion that countries friendly to Afghanistan will transfer their diplomatic missions to Kandahar, if he really made it, is even more naïve, as King Amanullah is showing good sense in withholding any further announcement about his position in Afghanistan until he is able to state what it is.

The Syrian Impasse.

The Olympian philosopher who regards Parliaments as a nuisance or make-believe may perhaps be relieved at the fact that M. Henri Ponsot, High Commissioner for Syria, has prorogued *sine die* the Syrian Constituent Assembly, but the Syrians themselves can hardly be expected to adopt so lofty an attitude. The *impasse* between Mandatory Power and mandated people is apparently complete. Readers of THE NEAR EAST AND INDIA are familiar with the points at issue between the Syrian Assembly and the High Commissioner: they concerned mainly the maintenance of public security, national defence, and foreign relations. M. Ponsot first suspended the Constituent Assembly for three months and then for another three; now it has been suspended indefinitely. If messages from Beyrout are to be believed, moreover, it would appear that the High Commissioner's recent visit to Paris has resulted in a stiffening, rather than in a modification, of the Mandatory's demand. For it is reported that the President of the Assembly had offered, in deference to the High Commissioner's original attitude, to suspend the application of those articles of the proposed Constitution to which the High Commissioner had taken exception last August, but that this did not satisfy M. Ponsot. His last proposal, obviously emanating from Paris, was that the Assembly

should accept conditions which would effectually override the Constitution which it had drawn up: France is, manifestly, now more strongly resolved to act up to her international responsibilities as Mandatory Power for Syria. But the attempt at getting the Syrians to agree to her new point of view has failed, and how, in these circumstances, optimism can be professed in French circles on the ultimate weakening of the Syrian attitude is something which it is impossible at this distance from the seat of affairs to understand. M. Henri Ponsot has done his best; there is no doubt that his personal intentions towards the peoples of Syria are benevolent. But there is little evidence so far available that he has brought the mandated territory and Mandatory Power nearer to real reconciliation. It is hoped, presumably, that economic improvements in Syria will soften the political asperities of the situation. But that must inevitably be a rather long process.

Bolshevist Geese.

How many of the Bolshevist geese in the Middle East turn out to be swans! Not content with attributing to Colonel T. E. Lawrence all the misfortunes of King Amanullah in Afghanistan, the Russian papers have avidly seized upon the visit of Sir Denison Ross to Persia as evidence of the meddling hand of British imperialism in Muslim lands struggling for independence. This picture of the vivacious head of the School of Oriental Studies in London as a sinister agent of the "policy of Colonial expansion" is quite the most mirth-provoking thing produced by the Bolshevist journals for some time. We had imagined that Sir Denison's visit to Persia was taken at the invitation of Taimour Tash, the Shah's Minister of Court. Now Taimour Tash, who has spent many years in Russia, who speaks Russian perfectly, and who may in fact be described as a Russophil, is hardly likely, one would have thought, to have inveigled the viper into the bosom of Teheran! Really the suspicion of the Soviets should be curbed, if they are not to become the laughing-stock of the nations. Those who know Sir Denison best are aware that politics are about his last interest, and that it is the cultural changes in the Middle East, to revisit which after so many years was an unfeigned delight to him, which he has gone to study.

Locust Invasions.

The responsibility which Great Britain has assumed in the Middle East and in Egypt and the Sudan for the preservation from external attack of certain territories under her influence is not always to the liking of the people concerned. In one respect, however, this protective guarantee is fully appreciated, namely, the measures taken to deal with the menace of locusts. Almost every Muslim farmer knows what unimpeded locusts mean to his crops, and the fight which the British authorities, with the help of the local authorities, carry on against the age-long enemy is watched or participated in with zest. In Palestine and Trans-Jordan, particularly, the inhabitants appear keen to employ the latest scientific devices against the locusts. Quite recently a serious campaign has been waged in the lower Jordan valley, and the battle was kept up successfully until reinforcements arrived in the form of a battalion of storks and of a south-westerly gale. Which were the more welcomed, the storks or the winds, we do not read, but it very often appears that luck comes in the nick of time to the countries aside the Jordan. The important thing is that the arrival of such luck should not dull farmers until the next plague arrives, but that active steps should be taken, and methods be perfected, in the lull which prevails before the next inevitable invasion.

The Soviets and the Yaman.

Scholars and scientists, at any rate, will not be disposed to belittle the cultural and scientific work accomplished by the Bolshevists within the borders of the U.S.S.R. To take but two instances, the Russians of the new régime have classified the languages of Central Asia in a way

never before attempted, and they have attacked the problem of dealing with invasions of locusts in a manner that has won general admiration. There is, therefore, nothing inherently improbable in their claim that the various expeditions into foreign countries of an institution called the "Pan-Union Institute of Applied Botany and New Botanical Culture" have accomplished work of great value. Whether the aim of these expeditions is wholly scientific is a matter which the authorities of those countries into whose interior they penetrate alone can decide. One wonders, for instance, what the Zaidi followers of the Imam of the Yaman will think of the botanical expedition which is said shortly to be starting out for Hudaida to study plant life in "Arabia Felix." We learn from a Russian source that since 1924 the Botanical Institute has sent expeditions into a number of countries, which include Afghanistan, the Oasis of Khiva, Altai, Asia Minor, Algiers, Tunis, Morocco, Greece, Cyprus, Palestine, Syria, Trans-Jordan, Abyssinia, Eritrea, and the coastal districts of China, India, Ceylon, and Java. These expeditions have, in fact, been sent all over the world. In certain countries where British influence exists, such as India and Egypt, complaint has been made that these botanical expeditions indulged in activities not purely scientific. That complaint, however, does not seem to have been general. But it will be distinctly interesting to observe how the Yamanis react to an expedition of Europeans whose motive is not one of exploiting the natural riches of the country. We have little doubt that the Aden authorities, who have seen both Italy and Soviet Russia obtain Treaties from the Imam, will also closely watch the reaction of the Yamanis to more intimate contact with the Russians.

INDIAN NOTES.

The Bombay Riots.

Once more after an interval of nearly eight years Bombay is the scene of unprecedented rioting and disorders. Those who were present in the City during the critical period which followed the Prince of Wales' arrival in India might have been disposed a few days ago to cavil at the adjective used. Unhappily it is now only too apparent that in point alike of the casualties actually reported—it is unlikely that the 125 dead is more than a conservative estimate—the violence and ferocity of the fighting on both sides, and the duration of the disturbances, the present trouble far exceeds, both in gavity and dimensions, the 1921 outbreak. For nearly a fortnight the second City of the Empire has been given over to the forces of anarchy and disorder, whose murderous activities even the extremely able and experienced Police Commissioner has been powerless to prevent. The necessity of having recourse to the military once recognised, the authorities appear to have acted with firmness and decision, but despite the fact that the troops have had to use their rifles to some effect the trouble, while temporarily checked, shows little sign of permanent removal. As usual the Government has been criticised for the tardiness of its decision to call in the troops, but those who are acquainted with actual regulations governing the enlistment of the military and of the civil power, the complicated procedure to be followed in determining the responsible authorities in such circumstances, and the natural and proper reluctance of the military commanders to inflict upon their officers and men the most thankless of all duties, will hesitate to condemn without inquiry those who were in the best position to judge the nature of the emergency with which they were confronted. At the same time, it is significant that the *Times of India*, in the issue of which our Calcutta Correspondent refers elsewhere, forecast only too plainly the dangers which would ensue, and have in fact developed, if the Government was not prepared to take prompt and decisive action at a much earlier stage. For to speak of the present disturbances as an effect of communal hostility is to give them a character which they

only assumed inevitably in the later stages. They seem to have originated in the resentment entertained by the Hindu workers at the oil installations against the Pathans who refused to take part in the recent strike. Later superstition was invoked to fan the flames of suspicion and excitement, with results that the daily reports of murder, lynching and reprisals on both sides, for the other Muslim communities were quick to take up the cause of their co-religionists, only too well reveal. On the other hand, while there can be no doubt that communal passions are now uppermost, Lord Winterton was correct when in the House of Commons on Wednesday he stated that the primary cause of the riots was Communist activities and incitement. The real offenders are not the ignorant and credulous workpeople, but political agitators and Bolshevik agents "whose stake is not increased wages or an improved economic régime, but the destruction of society." So far from attempting to dissuade the strikers from a campaign of lawlessness and murder they have taken advantage of the inaction of the authorities—whose hands, incidentally, have been tied by the very interests such as agitators are out to ruin—to foster and aggravate the discontent until the inevitable has happened.

Indian Banking.

In the Legislative Assembly last week the Finance Member of the Government of India, Sir George Schuster, announced that the Government had decided to assent to the demand for a general inquiry into Indian banking. The need for this investigation was pressed by the Assembly in August, 1927. But the idea did not originate with the Assembly, as the External Capital Committee of 1924-25 recommended that the whole field of banking in India should be subjected to a co-ordinated survey. The Assembly asked for the appointment of a Commission to inquire, first, into banking facilities with a view to their improvement and expansion, with particular reference to the development of industry and agriculture; and secondly into the question of what measures, if any, are necessary to regulate and to control banks and banking business. In December, 1927, the Associated Chambers of Commerce of India and Ceylon made a recommendation to more or less the same effect, but laying stress on the need for the regulation of banks and banking; and quite recently the Indian Chambers have moved in the matter. It is satisfactory to see that joint European and Indian action appears to be feasible. For within the last few weeks a Committee, consisting of representatives of the Bengal Chamber, of some of the Indian Chambers and of the Imperial Bank of India and the Exchange Banks,

INTER-STATE RELATIONS IN THE BALKANS.

One result of the recent political changes in the Balkans has been to stimulate a desire for the settlement of outstanding questions between the various States. At the present moment negotiations, or at least conversations, are taking place between Yugoslavia and Greece, between Yugoslavia and Bulgaria, and between Greece and Bulgaria, while a Commission appointed by the Roumanian Government is reported to be investigating conditions in the Dobruja with a view to removing legitimate grievances on the part of the local population. As, in one form or another, the problems of the Balkan Peninsula are linked up mainly with the question of minorities, which in turn is the outcome of a combination of nationalism and denationalisation run riot, the check administered to the latter both in Roumania and in Yugoslavia constitutes another healthy symptom of the times. The clash of nationalities, or branches of the same race, within these two countries is primarily a domestic concern; but it constitutes a disturbing element in the general condition of the Peninsula. Whatever developments the future has in store for the two countries, it is clear that the new régime in each aims at the introduction of harmony within its borders. Although it would be a mistake to read into the conversations now in progress any radical change of heart in the different Governments or peoples, dissatisfaction is sufficiently widespread to constitute a basis to work upon, if some outside influence could be brought to bear at this time on the various States for the purpose of pointing the way to co-operation, economic as well as political. The negotiations between Yugoslavia and Bulgaria on the one hand, and those between Greece and Bulgaria on the other may turn on widely different matters; but there is enough common ground in the problems confronting the three countries to make it advisable that the present discussions should be correlated, in order to see whether the interests of each State cannot be better furthered by a tripartite agreement. The question of a closer economic understanding between the countries of the Little Entente has been raised, and the ground is being tentatively explored by a commission of experts. It would be well, if advantage could be taken of the present negotiations in which Yugoslavia, Greece and Bulgaria are involved to appoint a joint commission of statesmen from the three countries to examine—without in any way committing their respective Governments—whether a basis of permanent friendship between them could not be evolved which did not impose unacceptable sacrifices on any one of them, regard being had to the material benefits that each country stands to gain from lasting peace and close co-operation between the Balkan States. Each delegation to the Commission should consist of representatives of the main political parties of the respective countries, as the surest means of preventing foreign policy from being made the sport of party politics.

The new régime in Yugoslavia has followed up the good impression that it has already created in its measures to clean out the Augean stables of Yugoslav politics by significant action in the domain of foreign affairs. The Bulgarian Government has been notified by the Yugoslav Minister in Sofia that the Serbo-Bulgarian frontier, which has been closed since October, 1927, has been reopened.

No measure was better calculated to set at rest any suspicions that may have been aroused regarding the military character of the Yugoslav Dictatorship, whether in Bulgaria or in any other country, than this reopening of the frontier. The closure, even if justified as a gesture of dissatisfaction with Bulgaria over the assassination of General Kovatchevitch, became, when persisted in without any attempt on the part of the Belgrade Government to reach a friendly agreement with Bulgaria, merely an expression of Yugoslavia's chronic ill-will towards her neighbours. King Alexander's Government has taken an important step towards the establishment of better relations with Bulgaria. If it can also give evidence that the petty and shortsighted policy hitherto adopted towards the inhabitants of Bulgarian origin in South Serbia is to be changed for one of broad-minded tolerance, it will be freed from one grave domestic problem. The day has passed when the immediate grant of autonomy to Macedonia is regarded as within the sphere of practical politics. A nine-tenths solution of the Macedonian question will have been evolved when Yugoslavia grants without quibble to her Bulgarian-speaking subjects liberty to be educated and to worship in their own language. A political and economic entente with Bulgaria will complete the solution, and it can be left to a distant day of evolution to decide whether in the interests of the Peninsula as a whole this arrangement can be improved upon by according local autonomy to the Macedonians.

How little a real change of heart has dictated negotiations in one direction is shown by the almost vicious reminder given by M. Venizelos, in the same breath with his expression of a desire for better Greco-Bulgarian relations, that Greece will not abate by one tittle her claim on the Bulgarian pound of flesh, which she shares with the other victors in the Great War. The original intention of the Greek Prime Minister in referring to the subject of Bulgaria's tentative inquiries whether her six months' moratorium in Reparation payments could be extended to a year was in all probability to defeat the proposal. Both Yugoslavia and Greece have shown themselves strongly opposed to any suggestion for the revision of Bulgaria's war penalties. It is the old Balkan Adam reasserting himself, with the doctrine of an eye (and as much else as can be extracted) for an eye, and with no thought for the all-important future. This policy, however, does not find much favour with more enlightened Western Powers. The Greek ground has, accordingly, been changed from one of mere obstruction to the Bulgarian proposal to the plea that, if Bulgaria is let off some of her reparations, Greece must be let off a similar amount of her war indebtedness. A competition in poverty between Greece and Bulgaria is not particularly edifying, and it would have been thought that Greece would have preferred to adopt the attitude that, whatever her indebtedness, she will pay it rather than plead for exemption. As far as is known, however, Bulgaria asks for nothing more than that the next reparation payment should, when it falls due, be postponed for another six months, as it will be hard pressed to find the money owing, in large measure, to the disorganisation of her public finances as a result of last year's earthquake. Postponement of payment would not free her from the obligation to pay; the total amount of her liability stands, and, if payment is deferred for one year, the burden spread over a number of years, as it is, remains with her one year longer. The Bulgarian plea, it may be presumed, will be granted only if the Allies' expert advisers agree that payment at this particular moment would prejudice the country's powers of recuperation; for it is in the interest of Europe, and especially of Bulgaria's neighbours, that her economic rehabilitation should not be delayed. If Greece is in an equally parlous plight, she can urge the same plea and undergo the same investigation. That at least would be a more dignified course to adopt than to insist upon retaining an indebtedness for one year longer than the country's capacity to pay necessitates.

*The Near and Middle East

From Our Own Correspondents.

Cairo, February 2.

The Premier and Nahas Pasha.

The Premier left this week for Upper Egypt, where, after paying a visit to his father's grave, he will make a stay of about ten days, returning in time for the Ramadhan fast. Before he went away, however, he replied to the latest vapourings of the Wafdist leader, Nahas Pasha, in regard to the irrigation programme of the Cabinet and the policy of the present régime, and issued a warning to the Press. This shows that, although he has been physically weakened by his long illness, he is still as determined as ever to maintain the authority of the Government and to carry out the schemes for economic reform which are an all-important part of the programme of his Cabinet.

The details of the interview with *Al Mokattam*, in which his reply to Nahas Pasha is embodied, and of the warning to the Press, have already been transmitted to London by cable. The first is regarded as an irrefutable answer to the Wafd criticisms of Gebel Aulia. The policy expressed by the old cry of the Wafd of "No independence unless through Saad," is reflected in its attitude towards the irrigation projects in general and Gebel Aulia in particular, where even those of which Parliament had approved when the Wafd was in office become against the country's interests as soon as it is in opposition.

Mohamed Mahmoud Pasha at the same time administered a well-deserved reprimand to Nahas Pasha in regard to his attacks against the King in a recent interview which he gave to a German paper. That Nahas Pasha should go to such extremes in his bitterness at being out in the wilderness shows even more conclusively than did his actions during his tenure of office how utterly incapable he is of appreciating the position of a man who has been Prime Minister. The Premier did well to warn him that he is exposing himself to severe action on the part of the Government. It is doubtful, however, whether anything, short of repressive action, will have any effect on this irresponsible politician, whose blunders must make Zaghloul Pasha turn in his grave.

The Irrigation Projects.

The Council of Ministers has approved the recommendations of the Minister of Public Works for the acceptance of the conclusions and advice, in regard to the heightening of the Aswan Dam and the question of the production of electric power there, contained in the report submitted by the International Technical Commission consisting of Messrs. Binnie (English), Cooper (American), and Grüner (Swiss). At the same time the Council authorised the Ministry of Public Works to proceed with the execution of the project for the heightening of the existing structure in such manner that this project

will not be incompatible with the possibility of generating electricity by means of the fall of water at the Dam.

The report of the Commission is interesting for two reasons. In the first place, it is a model in brevity and clarity. All that the Commission has to say on the subject is contained in a little over six sheets, and what it says is intelligible even to the layman. In view of the importance of the subject with which it deals, the shortness of the report must set up a record in such things. In the second place, it removes all doubt, if any such doubt existed, upon the stability of the existing structure. Indeed, it pays a most warm tribute to those who conceived the idea, those who executed both the original Dam in 1902 and the addition made to it ten years later, and those to whom has fallen the task of supervising its working during the intervening sixteen years. This is what it says in this respect:—

"The plans of Sir Benjamin Baker to create an absolute monolithic condition in the work between the original Dam and added portion have been proved successful after sixteen years of labour. . . . The existing Dam represents engineering of a high order and of monumental character. We are forced to wonder whether the designers and builders of this great Dam were not inspired to special effort by the fact that the Dam is built in a land famous the world over for great and enduring monuments. We are not only deeply impressed with all the engineering conceptions that produced the Aswan Dam, but we are especially impressed with the super-excellence of workmanship in executing those plans."

The report stresses the fact that the opinions therein recorded were arrived at individually and collectively and without any arguments for the conversion of any members of the Commission from views contrary to those expressed in the report. And it adds that:

"We have a very keen appreciation of the fact that the security, health, and happiness of more people now depend almost entirely on the safety of the Aswan Dam than ever before in its history, and we are conscious of the grave responsibility assumed by any engineer or by any Government of Egypt when they undertake to increase the load on the existing Dam where the existing masonry has worked so well for many years."

In the circumstances one can but feel that the decision to proceed with the heightening up of the Dam, to which there has been so much opposition, has been based on really thorough expert investigation accomplished with a true sense of the grave responsibility entailed by the execution of the project.

Shaikh Abdel Aziz Shawish.

A picturesque figure, one who at one time played a very prominent and active part on the Egyptian political stage, has passed away in the person of Shaikh Abdel Aziz Shawish, who died last week-end. Of Tunisian origin, but born in Alexandria, Shaikh Shawish was an exceedingly cultured and talented man with a very attractive personality. At one time he was instructor in Arabic at Cambridge University, and all the Englishmen chosen there for the Egyptian Civil Service passed through his hands. Disgruntled for some reason or other, he returned to Egypt and joined hands with Mustapha Kamel Pasha's successor, Mohamed Bey Farid, in the leadership of the Nationalist party. For some considerable time he edited the party organs, *Al Lewa*, *Al Shaab*, and *Al Alam*, and

in most virulent style conducted the campaign against Great Britain. On more than one occasion owing to the violence of his articles the paper he conducted was suspended, and in one instance he himself had to undergo a term of imprisonment.

Prevented from continuing his activities in Egypt, he went to Constantinople, where on behalf of the "Young Turks" he continued his anti-British campaign. During the War he was active on the side of the Central Powers, and when war was concluded he was refused permission to return to Egypt. But he contrived to leave Berlin, where he had established his headquarters, without the knowledge of the British authorities, and succeeded in eluding the vigilance of the Egyptian passport officers. He appeared one day in Cairo, where in the end he was allowed to remain. Shortly afterwards he was given a post in the Ministry of Education, and as Director of Primary Education he did most useful work.

The experiences which he had had during the War and the triumph of the Allies had a considerable effect on him. He returned to Cairo in a chastened mood, and from the day of his entry into the Ministry of Education he completely renounced politics. Those who had to transact business with him could scarcely believe that the venerable, quiet-mannered old gentleman, who so earnestly and temperately discussed the future of education in Egypt with them, had at one time been a veritable fire-brand in the Egyptian political arena, and I am but interpreting the feeling of all who knew him when I say that they sincerely regret his passing.

Sofia, February 5.

Negotiations with Turkey.

The negotiations between Bulgaria and Turkey are almost concluded, and the Treaty of Arbitration and Neutrality which has been arrived at ought soon to be published. The Bulgarian Government has just sent instructions to the Bulgarian representative at Angora upon the last Turkish suggestions on the exact meaning and methods of Arbitration. The pact which will shortly be signed will be an instrument of complete friendship between the two countries, who pledge themselves to benevolent neutrality for all eventualities.

Negotiations with Greece.

There exist between Bulgaria and Greece certain disputes of considerable magnitude which, arising from the sad past of the War, have injured Greco-Bulgarian relations and prevented the establishment of friendship between Greeks and Bulgarians, despite the feelings induced by their common trading. The Greek and Bulgarian Governments have for a long time wished to liquidate these disputes. Pourparlers were begun twelve days ago in Sofia by the Greek Minister, M. Vassili Dendramis, and the Bulgarian delegate, M. Constantin Minkoff, Secretary-General of the Ministry of Foreign Affairs. M. Minkoff and M. Dendramis have had several meetings, on the subject of which M. Bouroff, Foreign Minister, has expressed, in declarations to the Press, his high satisfaction at the prospect of accord which they hold out.

Greco-Bulgarian negotiations will be conducted simultaneously at Sofia and at Athens, the Greek claims being discussed at Sofia and the Bulgarian claims at Athens, to which the Bulgarian Government has just nominated M. Kiosseivanoff, Political Director of the Ministry of Foreign Affairs, as Bulgarian Minister. It should be noted, however, that progress may be delayed on account of the hostile attitude which Greece has adopted in the question of the adjournment of the next two payments of the Bulgarian Reparations debt. This attitude has had an unfortunate effect on Bulgarian opinion.

Italy and Bulgaria.

As is known, Italy keeps a very close eye on all the negotiations, playing the rôle of benevolent intermediary, so as to facilitate an entente between Bulgaria and her neighbours, or at least the majority of them. From this fact with which the sending of General Volkoff to Rome is connected, there has been a tendency to infer, if not an Italo-Bulgarian agreement, at least an orientation of Bulgarian policy towards Italy. Informed circles categorically deny this assumption, which is beginning to be taken up in the foreign Press, asserting in the most formal and precise way that Bulgarian policy remains what it has been ever since the War, that is a policy of peace and sincere collaboration with Bulgaria's neighbours as well as with the Great Powers towards the consolidation of peace within the framework of the treaties, and that Bulgaria values more than ever the friendship of all the Great Powers, without even thinking of exploiting their antagonisms and without seeking to approach one to the detriment of the other, welcoming with sincere gratitude all the help which can be lent to her in her efforts to liquidate the past and to prepare for the future in this corner of Europe.

The Macedonian Congress.

This year the traditional Congress of the Union of Macedonian Brotherhoods in Bulgaria, which now number 180, was held in a tense atmosphere, in which one could feel, on the one hand, the remembrance of the dissensions which had sullied with blood, since the tragic death of Protoguéroff, the ranks of the Revolutionary Organisation and which made some desire to transfer the struggle to the legal organisation of emigrants, and on the other hand, the nightmare of the Dictatorship proclaimed at Belgrade, which in the view of the Bulgarians cannot fail to bring about events of quite exceptional gravity in Yugoslavia and which, therefore, should induce union and cohesion among the Macedonians, so that they may be prepared for all eventualities. The Congress had to choose between Macedonian patriotism and the quarrels of two rival factions, of which one was clearly inferior to the other.

The Congress chose the policy of Macedonian unity — which explains how it was able to avoid the incidents which one had expected and how sentiments of rare generosity were engendered. The Congress appeared to be convinced that the turn which affairs have taken in the

The Company transacts, either direct

CHIEF ADMINISTRATION

17, CHANCERY LANE, LONDON, ENG.

Balkans would shortly force the Macedonians to a decisive struggle, in which the Macedonians would no longer be alone against the Serbs, but would have with them all the oppressed nationalities of Yugoslavia, notably the Croats, to whom they are already appealing for a co-ordination of effort. It explains also the calm, but firm and assured tone of the resolutions with which the Congress ended its labours. Here are the principal resolutions:—

1. The Congress recalls with gratitude the noble help of foreigners who, moved solely by sentiments of justice and of humanity, intervene generously to ensure for the Macedonian population respect of its cultural and most elementary rights as provided for in the Peace Treaties, and which are persistently refused in Macedonian territories under the Serbian and Greek Governments. The representatives of the Macedonian emigrants in Bulgaria cherish the firm hope, that, in view of the sentiments of humanity and of conciliation, the help which they have hitherto lent to the Macedonian cause will not be refused by their country in future, so that the indisputable conditions for a Balkan entente to safeguard the peace of Europe may be safeguarded.

2. The Congress asserts with bitterness that the Bulgarian Government, in its desire to give superfluous and absolutely useless proofs that its policy was being conducted according to the Peace Treaties, has been reduced to the absurdity of proclaiming a state of seige in the Departments of Petritch and of Kustendil, which offer a striking example of discipline and obedience to law. Representatives of Macedonian emigrants in Bulgaria address an urgent appeal to the Bulgarian Government, asking for the immediate raising of the state of siege in the afore-mentioned Departments—a measure harmful to the public and threatening its vital interests in the economic sphere.

3. Profoundly mindful of the common interests of the Balkan peoples, the Congress is of the unanimous opinion that the establishment of a just and lasting peace in South-Eastern Europe can be obtained only if the formula of William Gladstone be acted upon, namely: "Macedonia for the Macedonians." The Congress appeals to the Governments of the Great Powers and requests their intervention with a view to guaranteeing the self-government of Macedonia, assuring them that by doing so they will act in a manner conforming to the legitimate aspirations of millions of oppressed human beings, as well as laying the foundations of peace so ardently longed for by the Balkan peoples.

4. The Macedonian hell is always claiming new victims, seeing that the State is bound to wage ceaseless war against its own population in the eyes of the civilised world. Moreover, this population is deprived of the possibility of making known its aspirations for liberty and justice, being cut off from the rest of the world by barriers. Although it longs for peace, it sees that a revolutionary struggle is inevitable and that in taking it up it will be justified. The champions of this struggle have sown the soil of Macedonia with crossless tombs.

We, who are the most ready of these champions, who have endured the most, and who are best informed on the intolerable situation in which our brothers in the subject country exist, we address ourselves again to the League of Nations, of whom we request the following:—

(a) To take efficacious measures to ensure, in Macedonian territory, the observance of the clauses relating to the protection of minorities, guaranteeing the re-opening of the schools and churches which the indigenous Bulgarian population formerly possessed.

(b) To create conditions which allow the return to their homes of numerous exiles, guaranteeing the security of person and enjoyment of civil and national rights.

Our hope of being heard is this time larger on account of the fact that it conforms on all points to the noble declarations made in clear and unmistakable terms, at the last session of the Council of the League of Nations, in the sense that it will not refuse its protection for ethnic minorities.

CYPRUS.

Nicosia, January 30.

The Greek Archbishop's Appeal.

It is understood that printed copies of the new memorial of the Archbishop and "Ethnarch" on the "ethnic question" are to be sent to all members of both Houses of Parliament, to the Archbishop of Canterbury, to all Bishops of the United Kingdom, and to Editors of the principal organs of the Press not only in England, but also to those of other countries.

The reply of Mr. Amery to the memorial of the Bishop of Kitium and the Greek elected members of the Legislative Council protesting against the application of the new Penal Code has been communicated to them. The Secretary of State replies that the matter cannot be reconsidered.

Proposed Settlement of Maltese.

The question of bringing to Cyprus 320 Maltese families, with a priest and a doctor, which is before the Maltese Assembly, has caused amusement rather than surprise, having regard to a somewhat similar proposal in 1878 and to the unfortunate experiences which attended an attempt to plant a colony of Jews in Cyprus some years ago. It is considered that the Maltese project, if carried out, would not succeed. The general comment is: "Let them all come; we can only pity them." At any rate, it is said, let the mission of inquiry study very carefully all the inland conditions, not only those of climate and public health, but also and especially the matter of taxation.

More Excavations.

It is probable that permits will be given to the Swedish Mission for a continuation of their hitherto successful work of excavation in the island. In that case, exploration will be made at sites in Nicosia, Larnaca, and Papho districts. That at Kitium in the Larnaca District will be

one. The Cyprus Museum Committee will probably participate in the proposed exhibition to be held in London in 1930 by lending objects of antiquity.

Weather and Agriculture.

There have been some heavy snowfalls in the hills. On January 24 snow fell in the plains, which occurs only at very rare intervals. Such an occurrence is regarded as a harbinger of good crops and of other benefits to agriculture, including destruction, or diminution of various destructive pests.

There have been heavy seas along the coasts. A steamer from the Syrian coast last week was unable to enter the Famagusta harbour, and was obliged to remain at sea for a day before doing so.

General News.

With the object of restricting the number of ownerless dogs, the Government is introducing a Dog Law, providing that all owners must take out a yearly licence, 2s and 10s., a badge being issued.

January 31 is the last day for the issue of public stamps. All remaining stocks will be destroyed on February 1.

The population on December 31, 1927 was 339,500 as against 310,709 in 1921.

Many additions have been made to the Public Library, but gifts will be welcome. In the reading room *The Times* is taken and filed.

In regard to the spread of games and athleticism among all classes, it may be mentioned that, besides football, hockey is now played by girls as well as by boys. Girls' hockey clubs are being formed.

The Office of *Mufti* has been abolished from January 1. It is certainly no longer needed.

Sir Ronald Storrs, if restored to health, on the expiration of two months' sick leave, should return by March 18.

THE SLAVONIC REVIEW.

The January issue of the *Slavonic (and East European) Review* is a number of even more than ordinary interest, if gradations of this kind are possible in this most admirable publication. In so saying we may plead guilty at once to appreciation of the unusual proportion allotted in the contents to articles dealing with South-Eastern Europe. The first decade since the War has passed, and it is an occasion for stocktaking. The Editors of the *Review* have enlisted the collaboration of several notable people. President Masaryk contributes a message in which he discusses the rôle of the *Review* in the promotion of all-necessary understanding between nations. Dr. Benesh writes on "Central Europe after Ten Years"—a geographical term that he is inclined to use as a synonym for Czechoslovakia, although later on he seeks to include in it Yugoslavia, Roumania, and Poland as well as Austria and Hungary. Unlike the Foreign Minister of Czechoslovakia, the writers of the articles on Ten Years of Greater Roumania and on the Yugoslav Crisis do not approach their subjects from the point of view of the Government in power at the time. Dr. Vaida-Voevod is critical of the conditions during the greater part of the decade, but ends up on a more optimistic note:—

"The whole country breathed more freely, as after a horrible nightmare, when at last the Regency accepted the resignation of Mr. Vintila Bratianu and entrusted Mr. Julius Maniu with the formation of the new Government. . . . As complete harmony reigns between the constitutional factor, the Regency, and the expressed will of the nation, there are just grounds for hoping that through the activities of the new Government the reputation of our country, impaired in the eyes of Western public opinion, will be speedily rehabilitated, and that the Roumanian nation will be able to enjoy the confidence and esteem of all friendly nations, which the usurpers of Roumania's destinies had till very recently not known how to deserve."

The past régime in Yugoslavia is also subjected to a critical review by an anonymous Croat politician, who writes before the recent *coup d'état*. He tells the story of the Vidovdan Constitution, and shows how, while in one direction a Pan-Serb centralist policy was "recklessly pursued," many of the most urgent steps towards national unification, notably in respect of the divergent systems of law in the various sections of the country, were neglected. The "Political and Social Aspects of Modern Bulgaria" are examined with knowledge by M. Tchitchovsky. Other articles deal with Russian affairs—"Russian History and the Revolution," "Labour Conditions in Soviet Russia"—and no less than five writers contribute to the Tolstoy Centenary Supplement. The *Slavonic Review* is published by Jonathan Cape, price 6s. net.

THE SIXTEENTH ZIONIST CONGRESS.

The Central Office of the Zionist Organisation announces that the Executive of the Organisation, in accordance with the decision of the General Council and in agreement with the Chairman of the General Council, has decided to open the Sixteenth Zionist Congress on July 28 next at Zurich.

Dr. Hugo Herrmann, of Brünn, has been appointed as Director of the Congress Bureau, which will be opened in Zurich in the course of the summer.

NEWS IN BRIEF.

A decree has been issued by the Yugoslav Prime Minister reducing the number of public holidays to eight a year.

A fire at Mehalia, in the province of Gharbia (Egypt), last week destroyed 240 native dwellings, with the loss of three lives.

The death was announced from Teheran on February 2 of Seyyid Abolghassem Khan Amid, former Persian Minister in Rome, who was recently appointed acting Foreign Minister.

The death occurred on January 24, from typhoid, of Dr. Cesare, Italian Consul at Jidda. The body of the deceased was sent from Jidda to Italy for burial.

The King of Egypt has given £E5,000 to the fund for the restoration of the Dome of the Rock in the Haram ash Sharif of Jerusalem.

A man named Radu Merarul, of Caracal, in Roumania, died recently at the reputed age of 120. Up to a year ago he earned his own living unassisted, selling flowers, vegetables, and fruit.

On the occasion of the centenary of Josef Dobrovsky, an international Congress of Slavonic Philologists will be held in Prague from October 6 to 13, 1929. The programme will comprise Slavonic linguistics, the history of Slavonic literature, and popular traditions.

It was last week announced by the Registry of the Permanent Court of International Justice at The Hague that the case between France and Yugoslavia, relating to the payment in gold of certain Yugoslav loans issued in France, would in all probability be resumed at an extraordinary session of the Court towards the middle of May.

The Rev. E. W. G. Hudgell, who has been associated with the British and Foreign Bible Society since 1914, has left England to take charge of the work of the Society's Egyptian Agency, which extends from Khartoum in the South to Aleppo in Northern Syria. His headquarters will be at Port Said.

The Greek Chamber on February 5 gave a first reading to the Bill for the ratification of the Italo-Greek Treaty, and the Greek Minister of Finance introduced a Bill for withdrawing all gold and silver coins from circulation, as this form of currency is superfluous in consequence of the stabilisation of the drachma.

M. Nechitch, Yugoslav Minister to Bulgaria, who returned to Sofia from Belgrade on February 6, notified M. Bouroff, Bulgarian Minister for Foreign Affairs, on behalf of his Government, of the complete reopening of the Serbo-Bulgarian frontier, which had remained closed since the assassination of General Kovatchevitch at Sktip in October, 1927.

A flight of six all-metal flying-boats, which has been stationed at Cattewater, Plymouth, is leaving for Basrah about the middle of this month, where they are to form the nucleus of a new Empire air base. Group-Captain H. R. Bussted will be in charge of the flight. Coastal reconnaissance duties will be carried out from Basrah.

King Alexander of Yugoslavia on February 4 signed a decree appointing Professor Pitametz to the post of Yugoslav Minister in Washington. Professor Pitametz, who is Professor of Constitutional Law at Liubliana University, has several times represented Yugoslavia at meetings of the League Assembly.

The Roumanian Bishop of Oradea Mare (Nagy Varad or Grosswardein) has sent a circular to the priests of his diocese forbidding them to take part in politics and instructing those who are members of a political party to resign within a week. Discontent, says the Bishop, has been caused among the laity through priests neglecting their duties for politics and showing partisanship.

M. Davila, Roumanian Minister to Poland, left Warsaw on February 6 for Moscow, accompanied by M. Kobynanski, Councillor of the Polish Legation in Bucharest, with a view to signing, on behalf of the Roumanian Government, the Litvinoff protocol for putting the Kellogg pact into immediate operation.

The Central Office of the Zionist Organisation states that approval has been given for a grant by the Government of Palestine of approximately £2,500 to the Ezrath Nashim Society of Jerusalem, for the purpose of enabling it to provide additional accommodation for mental patients requiring institutional treatment.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 24.

The Statutory Commission.

The European case, it was said at Poona, should be heard in Calcutta. It has now been presented by a deputation of the Associated Chambers of Commerce, composed of Sir George Godfrey, Mr. Cocke, Sir James Simpson, Mr. Cunnison, Mr. Molson, and others. Those who have been at all behind the scenes, as I have been a little, know how very carefully the case has been prepared. It is safe to predict that what the Statutory Commission recommends to Parliament will not be found to depart materially from what the Chambers have recommended; that, if anything, the Commission will not be prepared to go quite so far.

What the Chambers do recommend, Sir George Godfrey explained, is the grant of responsible government to the Provinces, in varying degrees up to full autonomy, provided :—

- (a) The position of the Government of India *vis-à-vis* the Legislative Assembly is strengthened;
- (b) The Central Government is given the power of intervention in case of a breakdown of the administration in a Province;
- (c) That Second Chambers are set up in the Provinces;
- (d) That adequate safeguards are provided for the administration of the police of the Provinces; and
- (e) That discriminatory legislation against any commercial, industrial, or agricultural interests is forbidden.

The most interesting proposal of the Chambers, as emerged in the course of the cross-examination, was that the Governors of the Provinces should nominate the Ministers from among the party leaders in the Councils, and not select Ministers from one party only, and try to run the Government on the party system. It was explained that the view of the Chambers is that we can only look forward to the party system evolving in the legislatures.

The Permanent Settlement.

No part of the Statutory Commission's report to Parliament will be awaited with more interest than what the Commission may have to recommend regarding the Permanent Settlement in Bengal. It dates from 1793 and the times of Lord Cornwallis. The effect of it was aggravated by the decision at a later date not to make incomes derived from agriculture subject to income tax. What Lord Cornwallis aimed at was rather political security than revenue. If more political security was gained by the measure than could otherwise have been gained, it is certain that there has been an enormous loss of revenue. It has not yet been found possible to make good this loss of revenue by taxation in other directions, with the result that Bengal is unable to spend as much per head of the population on education and sanitation as is spent in the other Provinces.

The Indian States.

The Nawab of Bhopal has taken the opportunity of a jubilee banquet to the Maharaja of Alwar to make an important pronouncement on the subject of the attitude of the Indian States to the pending constitutional changes in British India. "If any of us," said the Nawab, referring to the Princes and Chiefs, "has raised his voice against the form of government that is now being asked for in British India, it is not because we are opposed to constitutional government, based on the principles of the largest good of the people, but for the simple reason that we cannot ignore the existing conditions of India. Very few people in India understand the basic principles of democracy in the form in which it is to be found in the western countries, and until and unless they are thoroughly educated and understand those basic prin-

ciples, and are able to express freely their own opinions, it might be dangerous to impose western methods of administration upon the country."

The Central Provinces.

The affairs of the Central Provinces, there being no large city in that part of India, are ordinarily ignored by the rest of the sub-continent. They have been a little in the public mind this week, owing to the resignation of the Ministers; but why the Ministers should have resigned we hardly know here, and are content not to know. The Council of the Central Provinces is the only legislative body in the Provinces which has not appointed a Committee to work with the Statutory Commission. "I confess," said the Governor to the Council recently, "I could have wished that you would have let me use the work which we may well be proud of as reasons for demanding for the Province a further instalment of Reforms; but I see this is not to be and so shall accept the position. . . . The case for the Province will go unpresented. The decision is yours, not mine. I regret it, but shall make the best of it." It is a fair conclusion from the rest of Sir Montagu Butler's speech that there has been work done in the Province of which the people may be proud.

The Age of Consent.

A great deal is being heard in India these days about the age of consent, the fact that that was not long ago settled to the satisfaction of everyone being significant, as is also the fact that, if any change is now made, it will probably not meet with general approval. A Committee has been touring up and down India, collecting opinions, and if I have passed over all the rest, I should like to call attention to the views of Sir Tej Bahadur Sapru, delivered the other day at Allahabad. Sir Tej is reported in the *Pioneer* to have "expressed himself very strongly against the present state of affairs, and urged very severe penal legislation to secure the object in view." He would have "legislation of a very drastic character in the matter of social reform." There is never any smoke without a fire. If a man of Sir Tej Bahadur Sapru's standing and responsibility calls for drastic social reform, it may fairly be argued that reform is badly needed. But if Sir Tej is right, reform will be difficult to secure; for he says that it is impossible to reconcile commonsense with the Shastras and the orthodox view. Nothing in the wide world is stronger than the hold of the Shastras on India.

The Labour Position.

I had intended to devote a paragraph to the labour position, but space is lacking. The *Statesman* published a paragraph on Sunday, beginning: "The Bombay papers present a picture of the western capital as a prey to conditions almost resembling civil war. The mill area continues to be guarded by armed police, and emergency motor lorries are kept ready for any emergency." The situation is not as grave in other parts of India, but it is doubtful if it is anywhere really satisfactory. It may appear so on the surface here and there, but there are dangerous forces at work underground everywhere.

INDIA AND SANDHURST.

With a view to attracting the best qualified Indian youths to a military career and affording wider opportunities for a suitable military education, the Indian Sandhurst Committee recommended that the number of direct vacancies at Sandhurst annually open to Indians should be increased from 10 to 20, and that five to ten vacancies in addition should be reserved for officers holding the Viceroy's Commission. In the Legislative Assembly in March, 1928, the Commander-in-Chief in India, Field-Marshal Sir William Birdwood, announced that the proposal had been accepted by the Government of India, with the approval of the Imperial Government, and that early effect would be given to the recommendation.

The promise has now been implemented and at the same time Woolwich and Cranwell are also being opened to Indians with a view to the formation of Indian Artillery, Engineer, and Air units in due course. The aggregate number of vacancies open to Indians will then be 37, as compared with ten at present.

THE HISTORY OF THE ROYAL INDIAN MARINE.

An interesting paper on The History of The Royal Indian Marine was read by Sir Edward Headlam, who retired recently from the command of the service, before the Indian Section of the Royal Society of Arts on February 8. Vice-Admiral Sir Herbert Richmond, Commandant Imperial Defence College, and late Commander-in-Chief, East Indies Squadron, presided.

For the purposes of the paper the lecturer explained that by the Indian Marine he meant the sea service under whatever form of British government obtained in India from 1612 to the present time. The full title of the service, which had been variously designated since its formation in 1617—from 1830 to 1863 it was known as the Indian Navy—was His Majesty's Royal Indian Marine Service, but it was generally called by the shorter term of the Royal Indian Marine.

After outlining the early history of the Service, which was reviewed in an article in THE NEAR EAST AND INDIA'S issue of April 26, 1928, the lecturer passed to the War period, during which officers of the R.I.M. served in the Grand Fleet, the North Sea, Atlantic, France, Mediterranean, Egypt, the Red Sea, Mesopotamia and East Africa, gaining no less than 65 British and 6 foreign honours, while many of the other ranks received the Indian Distinguished Service and Meritorious Service Medals.

"After the War," Sir Edward Headlam proceeded, "the Government of India asked Admiral of the Fleet Lord Jellicoe, who was visiting India, to draw up a scheme for the re-organisation of the service. His valuable suggestions were, unfortunately, too ambitious for Indian finances and could not be accepted. Shortly afterwards the Esher Committee arrived in India to report on the Indian Army, and although the R.I.M. was not included in their terms of reference, they strongly recommended that the R.I.M. should be re-organised as a combatant service. The Government of India in 1920 obtained from the Admiralty the services of Rear-Admiral Mawby as Director R.I.M., to draw up a scheme of re-organisation within limited lines. His scheme, however, was not adopted, and Admiral Mawby resigned his appointment.

"The R.I.M. then fell upon hard times; money was scarce, the report of the Inchcape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R.I.M. ships on their various stations, on lighthouse duties, transport work, carrying of officials, etc. The Local Governments were naturally inclined to think that, if they had to pay, they would like to have a say in the management, and that if the work could be done cheaper locally, they should arrange to carry out the duties themselves. Further, the Inchcape Committee recommended that the three large troopships should be scrapped and all troopship carried out under contract, which would have left the Marine with only the Survey Department and the Bombay Dockyard.

"Happily for the Service, however, the Government of India in 1925 appointed a Departmental Committee under the Chairmanship of General Lord Rawlinson, in his capacity of Minister of Defence and Member of Council in charge of the Marine Portfolio, to submit a scheme for the re-organisation of the Service as a combatant force. This Committee recommended that the Service should be re-organised as a purely combatant Naval Service with the title of Royal Indian Navy, with a strength in the first instance of 4 armed sloops, 2 patrol vessels, 4 mine-sweeping trawlers, 2 surveying ships and a depot ship, the Service in the first instance to be commanded by a Rear-Admiral on the active list in the Royal Navy. The scheme was accepted by the Indian and Home Governments, and the necessary Act to permit India to maintain a Navy was passed through both Houses of Parliament.

"To effect the change in the title it was necessary to draw up a new Indian Naval Discipline Act, and this had

to be passed in the Legislative Assembly and Council of State in India. The Bill was introduced in February, 1928, when the Government were defeated by one vote, the defeat being caused, not by the fact that the people of India did not want an Indian Navy, but because in some cases members did not consider that the Legislature had been properly and fully consulted beforehand. Other members voted against the Bill on principle, as they considered that both Army and Navy should be directly controlled by the Legislature, while the extremists voted against it because they were prepared to vote against any Government Bill which might be introduced.

"The blow to the Service was a heavy one, as it was feared that the defeat might put an end to the re-organisation. The Government, however, decided that the re-organisation should continue on the original lines, except that the title could not be altered, and that the service would have to use the old Discipline Act, a perfectly correct 'Articles of War' based on the Naval Discipline Acts. To this organisation," Sir Headlam remarked, "I have never heard any Indian, politician or otherwise, advance any objection, and all of my Indian friends are pleased and proud of the change, which among other things includes the admission of Indians to commissioned rank in the proportion of one to three."

In the present year, on the recommendation of the Admiralty, His Majesty the King has been pleased to approve of the change in uniform of officers to that of the Royal Navy, with the exception of the buttons of the R.I.M., which bear the Star of India as a distinctive mark, and also of the flying in R.I.M. ships of the White Pennant and the White Ensign of the Royal Navy, the greatest honour which can be conferred upon any sea service. The White Ensign was hoisted for the first time on Armistice Day, November 11, 1928.

The Indian Marine is now re-organised as one of the fighting forces of the Empire under the command of a Rear-Admiral on the active list of the Royal Navy. Its duties are purely naval and its personnel are trained for war. It is probable that in the future the R.I.M. will be chiefly employed for the defence of the Indian seas, coasts and harbours, and "I think," Sir Edward Headlam concluded "that we may rest assured that the Service will worthily uphold the great traditions of its past history and maintain an honourable position among the Navies of this great Empire."

TRADE ORGANISATION IN INDIA.

(From a Correspondent.)

In his recent speech to the Federation of Indian Chambers of Commerce the Viceroy made an interesting reference to the question of trade organisation. He had in mind the work of the Indian Central Cotton Committee for the improvement of Indian cotton. To finance this organisation the Government of India imposed by legislation a cess of two annas per bale on all cotton used in the mills in India or exported. The proceeds of the cess are made over by the Excise and Customs Departments to the Committee and are by it expended in the interests of the industry. Lord Irwin said that the Government are willing to undertake similar legislation for other trades; and he mentioned particularly hides and coal. This offer on the part of the Viceroy is striking evidence of how greatly the attitude of the Government to commerce, and of commerce to the Government, has been modified since the days when such cesses were first suggested. The idea of a trade taxing itself for its own advantage did not originate with the Indian cotton cess. In fact it did not originate in India at all: it was borrowed from Ceylon. In 1892 the Ceylon planters wanted to push their teas in the United States; and with this end in view they contemplated a display at the Chicago Exhibition in 1893. But their difficulty was to provide the necessary money; and they asked the Government of the island to come to their

help by collecting for them through the Customs a small cess—10 cents per 100 lb.—on all tea exported. The Government agreed, and with the money so obtained the planters advertised Ceylon tea not only at the Chicago Exhibition, but in other parts of the United States as well; and they continued this work for a number of years. Indian tea-growers joined with them. But India had no cess: the required funds were collected on a voluntary basis, which was not of course satisfactory, because a minority of the estates failed to contribute. In 1896 the Indian tea growers mooted the question of proposing to the Government of India that it should follow the good example of the Government of Ceylon. But even in commercial circles in Calcutta—the headquarters of the tea industry in India—the idea was received very coldly. It was pointed out that India is a very large country with many ports, while Ceylon is a small island with only one port. And it was feared that for this reason difficulties which could not arise in Ceylon would be formidable in India. Moreover it was thought that the Government would want to share in the proceeds of the tax: they might seek to regard it as an ordinary export duty. Such was the commercial view, and the Government were also of the opinion that the levy of a cess was not a matter for them. No such help to trade had ever been given before; and the machinery of the State could not well be utilised for such a purpose. But in 1900—when the tea industry brought the proposal forward again—Lord Curzon was Viceroy of India. He said that the scheme was “novel and unusual”; but he did not reject it on that account. If those engaged in the industry were practically unanimous in their demand for a cess the Government of India would, he said, undertake the legislation. And in 1903—seven years after the scheme had been originally mooted—the Indian Tea Cess Act was passed.

The movement was and still is an unqualified success, as it enables large sums to be spent yearly to great advantage in promoting the sale of Indian tea in various parts of the world including India itself. Many years passed before any other Indian industry followed the example of the tea industry. But eventually indigo, cotton and lac moved in the same direction. The cess on indigo was too late to be of service, and it was taken off. The position in regard to cotton has been already explained. The Indian Lac Association for Research is the organisation of the lac industry, and it maintains a scientific research institute with the funds provided by the cess. Times have indeed changed. A method of raising money which only some twenty-five years ago even so strong and courageous a Viceroy as Lord Curzon declared to be “novel and unusual” has now become the ordinary procedure. The Royal Commission on Agriculture expressed the opinion in its report that any trade willing to submit to a cess for the purpose of promoting additional research on the product in which it is interested, and generally advancing the solution of all problems connected with the cultivation, marketing and manufacture of that product should be encouraged to do so. And now the Viceroy has pointedly invited attention to the procedure, and has shown that it need not be restricted to trades

dealing in agricultural produce only. India does not often follow the lead of Ceylon; but in this instance the copying of the go-a-head methods of the island planters has proved to be of signal advantage to Indian industries.

SIR MUHAMMAD RAFIQUE.

The death of Sir Muhammad Rafique, Member of the Council of India, which occurred suddenly last week, comes not only as a great personal blow to his many friends, but above all as an irreparable loss to the country he has always served with an untiring and unfailing devotion.

Graduating at Cambridge, and afterwards called to the Bar at the Middle Temple in 1885, he returned to India, where, after a few years' practice as a barrister, he joined the judicial service in 1892 as a Judge of the Small Causes Court for Oudh, afterwards being promoted in turn to the Bench of Judicial Commissioners in Oudh and, in 1912, to the Allahabad High Court. In 1924 he was appointed a member of the Indian Delegation to the League of Nations Assembly, and in March, 1925, he joined the India Council on the selection of Lord Birkenhead.

He was entirely free from all racial antipathies, and never during the whole of his career did he once refuse the alliance of reason with sentiment. Love for his country was the key to his outlook on all matters pertaining to India, and he tried with a deliberate will and a ready mind to translate a feeling of cordiality and sympathy when expressing his ideas of Western Europe to his people in India.

It was his absolute knowledge of both countries that made it possible for him to realise that he was dealing, in the East, with a quality utterly at variance with the rationalism of the West, and he united his mind and will in an endeavour to create a more complete understanding between the countries. With him it was a cardinal act of faith that such co-operation could only spring from the frank and clear recognition of facts on both sides.

Sir Muhammad Rafique had been in indifferent health for many months, and yet his enthusiasm in his work never abated. Nor during his illness was there ever any bitterness or resentment—only pluck and a smile! His attitude in this was a good illustration of how, during his life, he had made it possible for sheer persistence to remove seemingly unsurmountable difficulties.

Of his charm as a companion and host, of the infinite pains he would devote to the most trivial affairs of his friends, those who knew him intimately need no reminder. There were no limits to his kindness and good nature. He possessed a mind always responsive even to the suggestion of emotion. He had a vast capability of seeing through things, and so saw them as they were. He will leave behind, both in India and in England that he loved so well, the memory and example of a life dominated from first to last by selfless devotion to public and private duty and his place will be a hard one to fill.

INDIAN NOTES.

(Continued from page 195.)

has been formed in Calcutta for the discussion of the question. Indian opinion is, as was clear from the Assembly debate, that the time has come for the Government to take measures for the creation of suitable and adequate facilities for the development and growth of Indian banking autonomy. And it is understood that the Federation of Indian Chambers has lately made special reference to the need for the encouragement of the indigenous *shroft* system. The European Chambers and Banks have so far emphasised another aspect of the question, namely, that the Government ought to devise such safeguards as will ensure that banking development in India is founded on scientific principles and is regulated on sound lines. As was pointed out in these columns no more than twelve months ago, there is apparently nothing antagonistic as between the European and the Indian view. And it may be presumed that the recognition of this fact has led to the constitution of the joint Committee to which we have referred. Indian banking is anything but a simple subject, and it may be anticipated that the investigation will be laborious and difficult, and that it will take a considerable time. The Finance Member has arranged for an early discussion of the preliminaries with the leaders of the various political parties, and with the Presidents of the Associated Chambers of Commerce and the Federated Chambers.

The Position of the Liberals.

The National Liberal Federation which met at Allahabad at the beginning of January certainly took a saner view than that taken by the Congress. For it recognised that those who clamour for complete independence cannot possibly have anything in common with those who want dominion status within the British Empire. Independence is in no sense the complement of dominion status; and it is absurd for those who will accept nothing but the former to join in drafting a constitution based on the latter. The Federation stands for dominion status which the President, Sir Chimanlal Setalvad, said should be accepted by every reasonable mind, seeing that it "meets all national aspirations and carries with it advantages of partnership in the most powerful Empire in the world." It is very difficult to understand how any Indian who is acquainted with the circumstances and conditions of India can advocate independence. In fact it is difficult to believe that he can favour an immediate advance to dominion status. For he must recognise that at one stroke to convert British India as it exists to-day into a democracy will be a stupendous task, the success of which must be, to say the least of it, doubtful. The experience of the working of the first instalment of democratic institutions which the past ten years have afforded must surely suggest to everybody that the road to the establishment of complete self-government even within the Empire will be hard and stony. The communal problem is of itself sufficiently formidable, and it remains unsolved. None of the political organisations seems to be able to do anything in the way of solving it. For example, all that the Liberal Federation appears to have done in that direction is to appoint a Committee "to co-operate with representatives of other organisations for a settlement of communal questions." There are also other thorny problems to be dealt with, for example, the position of the Indian States, to name only one, before dominion status can be achieved. But all these difficulties are relatively slight as compared with the difficulties which would beset those who seek complete independence. For they would have rooted out the one strongly unifying influence which exists in India, namely, the British connexion. Their task would be indeed hopeless. Lord Irwin was right when he said recently in Calcutta that those false friends of India who were heading for "the morass of independence" would do the country's cause far more harm than even the most bitter reactionaries could ever inflict upon it. The Indian

Nationalists have made many blunders in the past. They seem fated to take the wrong course. But to set up a senseless cry for independence at the moment when the question of India attaining dominion status is coming to the front is surely of all their mistakes the worst.

FLYING CLUBS IN INDIA.

A well-merited tribute to the foresight, initiative and enthusiasm of Sir Victor Sassoon was paid by the Viceroy at the opening of the Delhi Flying Club on January 28. To many, Lord Irwin said, the opening ceremony of the first light aeroplane club in India might become historic. The movement was a fast growing child in all quarters of the world and the debt which India owed to Sir Victor Sassoon in enabling it to keep so abreast of the times could scarcely be overrated.

The second club to be established was opened by Sir Stanley Jackson, the Governor of Bengal, a few days later and will be known as the Bengal Flying Club. The club aerodrome is at Dumdum, just outside Calcutta, where a fine bungalow has been equipped as a country club. In addition to presenting two Moths the Government of India, in accordance with the scheme for the assistance of the movement from State funds recently announced, has constructed a hangar and given a subsidy of 20,000 rupees for two years.

ANGLO-INDIAN ASSOCIATION.

The third annual luncheon of the Anglo-Indian Association, London, will be held in London in July next. Members of the European and Anglo-Indian communities who would like to be present are asked to send, as soon as convenient, their names and addresses, and the names of any friends they may wish to invite as guests, to Mr. W. G. Bason, Hon. Treasurer, 7, Homefield Road, Chiswick, W.4. The subscription is ten shillings per head.

The primary object of the luncheon is to effect a reunion of past and present members of the various Indian Services, Covenanted and Uncovenanted, as well as of non-officials from India; and, by enabling them to meet on common ground, in the very heart of the Empire, and in an informal atmosphere, to promote and maintain the Anglo-Indian *esprit-de-corps*.

Lord Winterton and Lord Meston and many of the Association's distinguished Honorary Members were present at last year's luncheon, which proved a great success, and it is hoped that this year's gathering will be equally representative.

The Indian and Eastern Association for Promotion and Protection of Trade, Ltd., has been registered as a company limited by guarantee and not having a share capital. The number of members is unlimited. The objects are to promote, maintain, and assist home, Indian and foreign trade, shipping business and commerce, and the interests of all members engaged therein, to collect and diffuse information as to sound principles of trading and statistical and other information, to promote, support, or oppose legislation, to deal with railway and shipping companies in respect of transit of goods and charges and facilities generally, to improve and extend technical and general knowledge, to establish, maintain, and conduct a court of arbitration, and to procure status information for members. A committee of management is to be appointed. The registered office is at 16-17, Dashwood House, 69, Old Broad Street, E.C.2.

At a meeting last month of the Committee which is inquiring into the Bombay cotton mill dispute, the representative of the Bombay Millowners' Association applied for a week's adjournment. He made the suggestion, he said, because the Association and the labour organisations felt that the inquiry had reached a point at which, after mutual consultation and negotiation in private, the two parties felt that an understanding might now be reached on the standardisation scheme, which is the principal question at issue. On receiving a definite assurance that there was every chance of an amicable settlement at last being reached and that in any case the progress of the negotiations would be reported to him after three days, Sir Charles Fawcett, the Chairman of the Committee, agreed to the proposal. It is understood that as a result of the negotiations almost all the draft mediation rules have been accepted by the men's representatives, the only difference outstanding being the desirability of appointing a joint standing committee to meet regularly and consider grievances. It is hoped that an early settlement of the dispute may now be expected.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE COLONEL LAWRENCE BOGY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is difficult for the average Englishman to take seriously the Bolshevik legend about Colonel T. E. Lawrence's responsibility for the rising in Afghanistan. The allegation was denied by the British Government, and Colonel Lawrence was immediately produced, in the person of Aircraftman Shaw, at the place where he was officially stationed, whereas for the mere plausibility of the legend he ought to have been "missing," somewhere in Afghanistan. Moreover, "Lawrence of Arabia" is presumably fluent in Arabic and in dialects of the Arabian Peninsula, but that is no reason why he should have the requisite knowledge of Afghan dialects for carrying out the work attributed to him among Shinwaris or others in Afghanistan.

In the East, on the other hand, the legend has taken sufficient hold, among people who are not capable of judging the matter on its merits, to be annoying, but for the fact that the Turkish Press has come to Great Britain's rescue by the introduction of the comic relief.

Younus Nady Bey is a Deputy of the Grand National Assembly of Turkey and a close friend of the President; he is also chief Editor and proprietor of the *Djunhouriet* and its counterpart in French, *La République*. What Younus Nady Bey writes to-day (over his own name), Turkey thinks to-morrow and Angora generally thought yesterday. There may be little foundation for what is written; as when one day a Sugar Trust and its founder are violently denounced and a few days later it is established that no such trust exists and the "villain" in question is hailed as a "compatriot always conspicuous for his exemplary uprightness and honesty," or when still more libellous remarks are published about a foreign company. In any case, for its understanding of foreign affairs the Turkish public is led to believe that in Younus Nady Bey it has an unerring guide.

On the subject of the Lawrence legend *La République* was for once a model of discretion. The allegation was reproduced, the presence of Aircraftman Shaw on the Afghan frontier was noted; nothing was said about the British denial, but judgment on the accuracy of the allegation was withheld on the ground that Turkey was not called upon to deal further with the matter. The reflected self-abnegation of Angora, however, must have proved too much for Younus Nady Bey, who returned to the charge a few days later on the strength of a communication from an "English friend," who had taken him to task for his treatment of the subject. Younus Nady Bey is now on his mettle. The "English friend" has shown what a little he knows of British administrative and political matters, and Younus Nady Bey proceeds to enlighten him in numbered paragraphs on the British Intelligence Service, "*l'esprit infernal de l'Empire Britannique*":—

1. On his way to the London Conference in 1921 Younus Nady Bey broke his journey at Rome and found the Italian Government obsessed with the "excessively active rôle" of this Intelligence Service. "Une organisation qui arrive à harceler ainsi un gouvernement dans son home même doit être singulièrement forte et redoutable."

2. Arrived in London Younus Nady Bey had his "eyes opened" when a Captain attached to the Intelligence Service told him, at a moment when Lloyd George had the whole of England in the hollow of his hand, that within eighteen months he would be out of office. "Je le répète, ces paroles là je les tiens d'un capitaine dont les dires se sont réalisés presque textuellement."

3. Colonel Lawrence of the Intelligence Service was certainly on the Afghan frontier and has quite recently been recalled by the British Government.

4. This Colonel Lawrence "worked" in Arabia during the War and succeeded in raising the Arabs against the Turks. "La première chose que nous avons cru devoir faire à notre tour lors de l'insurrection Kurde a été donc de le chasser du Kurdistan."

5. This same Colonel Lawrence, dissatisfied that his views about Arabia were not shared by the British Government, returned his decorations to the King.

6. On the morrow of the War Colonel Lawrence published "The Revolt in the Desert," a book which much pleased the English middle classes, but irritated excessively the military, who would have soon made an end of Lawrence ("l'envoyer ad patres") if they could have done so. It was on these facts that the celebrated Bernard Shaw energetically took up the defence of Lawrence, and the Colonel in his "excessive gratitude" took on the name of Shaw when he went to the Afghan frontier to "work" again.

If this is an example of the intellectual fare on which Modern Turkey is being reared, it is to be feared that the Ghazi's lifetime will not be long enough to enable him to bring the country into line with the West.—I am, etc.,
London, February 7.

TURKOPHIL.

"THE MOSLEM WORLD."

The first number of the nineteenth volume of the *Moslem World*, the well-known quarterly review, contains some articles of outstanding interest. Professor D. S. Margoliouth, for instance, writes on "South Arabia and Islam," suggesting the thesis that the source of the Prophet Muhammad's campaign against the fetishism of the Hijaz may well have been derived from Southern Arabia. Mr. L. E. Browne, writing on "Religion in Turkey To-day and To-morrow," states that the efforts of missionary societies in Turkey (which is "looking increasingly to England and America as the source of her culture and is likely before long to adopt English as the chief foreign language") should not be restricted to building up new Christian communities, but should be directed towards promoting such friendly intercourse with the ancient indigenous Churches as may result in their reformation from within. Other articles concern "The Mind of Moslem in India," "An English Shiah Koran Commentary," and "Islam and the Modern World." In this last article, Mr. S. Khuda Buksh, of Calcutta, claims that in the past the fundamentals of Christian and Muhammadan culture were identical, and that to-day "true Islam is true Christianity, their missions being identical."

This review deserves great praise for the way in which, despite what must be very considerable difficulties in publication, it contrives to keep up a high standard, both in variety and in authority.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost.

A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

AMERICAN EXPRESS

6. Haymarket London, S.W.1
Continental Savoy Buildings Cairo
Winter Palace Hotel Luxor
Jaffa Road Jerusalem

14. Government Place East Calcutta
240. Hornby Road Bombay
Church Street Colombo
Union Building, Collyer Quay, Singapore

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

AN advantage of American Express Independent Tours is that you travel with everything arranged but nothing to interfere with your liberty. We suggest itineraries and quote cost of tours combining Egypt and India, without obligation.

THE WEEK AT HOME

London, Tuesday Morning.

The King at the Seaside.

The King's doctors have warned us that the period of convalescence has not yet been reached, but the public has made up its mind, from the fact that the King was moved to Bognor last Saturday, that all is now well. Nor could it refrain from showing its relief at the longed-for turn in the King's health as the ambulance car made its way from Buckingham Palace to the sea.

The hold which the Royal Family have in Great Britain is not to be wondered at, but it is very impressive.

The Political Needle.

Despite the space given in the newspapers to political matters, the country steadily refuses to interest itself in the doings and sayings of those whom it appears to have classified as do-nothings or quacks. This is no more than the bare truth. Electorates are in increasing numbers simply not troubling to vote, as has just been proved by by-elections at Battersea and Bishop Auckland, both of which returned Socialist members.

It is presumed that all those who refrain from voting would vote Conservative if they troubled to go to the poll; but this must be cold comfort for the defeated Conservative candidates. If the Conservatives have nothing to attract the people, why should they be voted for? As for the grouse against the Liberals, that their candidature only ensures the getting in of the Socialist candidate, that again rings rather thin. If they are to command popular enthusiasm the Conservatives will have to produce something better than the old bog of anti-Socialism. Negative appeals mean little to a disappointed electorate, which one of these days will vote for the party out of power merely to let them "have a chance."

The Home Secretary, however, is by no means daunted. He has just forecast the result of the General Election: it is that the Conservatives will have a clear majority of between sixty and seventy members. Sir William Joynson Hicks is, of course, a keen student of the future life, and if he can impose his optimistic views upon his party, all may be well for them. But the Labour Party have been considerably heartened by their two most recent victories, and are very far from accepting the Home Secretary's forecast as even approximately correct.

Now the guessing competition has begun, however, it will be all the rage, and one can well imagine that popular

interest will be greater in the mathematical results of the General Election than in voting during the Election.

Trade with Russia.

Facts are triumphing over fancies, for the movement to trade with Russia is being advocated with significant publicity. A delegation from some very large British firms is shortly to go to Moscow to explore the ground, and although it goes with no Government sanction, it is almost certain that Government does not oppose the move.

This means that the Home Secretary's gesture in turning out Arcos from this country—a gesture designed almost wholly to impress voters at home—may be nullified. I have already mentioned the attitude of certain Conservative M.P.s in this matter, who in their desire to resume relations with Soviet Russia are commonly supposed to have the blessings of Mr. Winston Churchill.

The Influenza Epidemic.

How the influenza germ which has invaded England this year compares in numbers and in victims with previous years I do not know, but it seems to have greater success than in any year since the War. One knows cases oneself, and the thing is getting into the newspapers.

Every year has its own variety, from nose-bleeding to earaches. This year there appear to be two main varieties: a gastric influenza, which is often followed by jaundice, and a headache influenza, which involves delirious pains. Between them these two varieties have affected the staffs of every considerable establishment in England.

Curiously enough, the epidemic does not seem to follow a logical course. The North and the South of England, for instance, are suffering very much more severely than the Midlands; Liverpool and Manchester have been badly hit compared with Sheffield and Leeds; and the South of London compares ill with the North, which, however, gained notoriety through having it first!

Cruft's.

There is no dog show like Cruft's, which was held in the Agricultural Hall last week. About 10,000 dogs were being exhibited, and the crowds of exhibitors, both men and women, made the whole place a restless hum.

It is always interesting to observe the changing fashion in dogs. Personally I was pleased at the evidence that the Alsatian wolf-dog is slightly declining in favour, whereas there is a revival in native dogs, especially gun-dogs. The popularity of new foreign dogs one can never foresee, but considerable interest seemed to be shown in the Ivicenes from the Balearis Isles.

The Legend of Twickenham.

The legend of Twickenham had to go some time or other, and I do not think that England would have wished it otherwise than that Ireland should have the honour of being the first to expose the alleged invulnerability of England at home. On Saturday last Ireland were clearly the better fifteen: the luck which in the past has kept the English record intact simply had to give way before the relentless attacks of the whole Irish side.

It was not an unexpected win. For Wales but a week or two before had come very near to beating England at Twickenham, and the Irish team this year is without question a very fine side.

Irish Rugger is always popular with Englishmen, the most partial of whom could not grudge the green jerseys their victory on Saturday. And so into the mists that surround the river has gone the great "legend of Twickenham." The next legend may—who knows?—grow up round Paris.

Preserving Cambridge.

I mentioned recently the excellent work done by the Oxford Preservation Society. Now it is the turn of Cambridge, whose corresponding Society a few days ago published the fact that it has purchased (with borrowed

money, which has to be repaid) the south side of Madingley Hill and the fields that lie below it. The north side is secure.

Now, as every Cambridge man knows, the best view of the town is obtained from Madingley Hill. The walk to Madingley and Coton is, I suppose, the favourite short walk when one is up at the University, and to think that its amenities have thus been perpetuated is very comforting. Had the approach to Coton village by the well-known footpath ever been built over, something real would have gone out of the lives of undergraduates. And as for the Dons, where else could they have taken their gentle exercise?

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

February 14, 1929 (New Style).

February 1, 1929 (Old Style).

Ramadhan 4, 1347 A.H., of the Muslim Calendar.

Adar 1. 4, 5689, of the Muslim Calendar.

Field-Marshal Viscount Allenby and Viscountess Allenby left London on February 8 for Scotland.

Lord and Lady Castlemaine arrived last week at the Semiramis Hotel, Cairo.

Sir Ian Malcolm, who is at present in Egypt, will arrive in London on March 15.

Sir John Cadman, Chairman of the Anglo-Persian Oil Company, arrived last week at Abadan (Persian Gulf).

M. and Mme. Alfonso Sanges have left the Semiramis Hotel, Cairo, for the Cataract Hotel, Assouan.

General Lord Horne and Lady Horne left for Egypt on February 8. They hope to return to England by the end of March.

Princess Aspasia, of Greece, sailed from Southampton on February 6 in the Cunard liner Mauretania for New York on her way to Palm Beach.

Sir Henry and Lady Bax-Ironside left 23, Grosvenor Place last week for Biarritz. They will be away until March 11.

Dr. J. G. Andersson (of Stockholm) will deliver a lecture, which has been arranged jointly by the Royal Asiatic Society and the Central Asian Society, on "The Highway of Europe and Asia," at the Royal Society of Arts Hall, John Street, Adelphi, W.C., on February 20, at 5 p.m. The lecture will be illustrated.

The Prince of Wales received at St. James's Palace on February 5, on behalf of the King, Lieut.-Colonel the Right Honourable Sir Leslie Wilson (upon relinquishing his appointment as Governor of Bombay), and Sir Basil Blackett (upon relinquishing his appointment as a Member of the Council of the Governor-General of India).

Mr. Paul Mak, Court Artist to the Shah of Persia, whose recent exhibition at the Leicester Galleries was noticed in THE NEAR EAST AND INDIA, has painted a portrait-sketch of the President of the Central Asian Society, Field-Marshal Viscount Allenby. Through the medium of Prince Inverico Mickeladze, who lives in Cairo, this portrait has been presented to the Society, and Members will have an opportunity of seeing it before the lecture at the Royal Society's Rooms on February 27, which begins at 5.0. That lecture is to be by Mr. Eldon Rutter on "The Holy Cities of Arabia." Mr. Rutter, whose recent book on Mecca and Madina has created much interest, will illustrate his lecture with lantern slides.

Captain and the Hon. Mrs. Melville Portal have left London for Government House, Madras.

Sir Gilbert Clayton (who left London on January 30 to assume the office of High Commissioner for Iraq) was snowed up, together with Lady Clayton, in Thrace for over a week, but was taken by car to Rodosto, and arrived at Constantinople on February 10 by ship.

Field-Marshal Lord Plumer and Lady Plumer are expected to return to town from Italy in March. Lord Plumer will be the principal guest at the annual dinner of the 49th (West Riding) Division at the Queen's Hotel, Leeds on March 15.

Sir Henry Dobbs, the retiring High Commissioner for Iraq, who is one his way home, has been the guest of the French High Commissioner at Beyrout owing to the blocking by snow of the Constantinople route. He left by steamer on February 9, and was expected to arrive in Constantinople to-day (February 14).

At a Communist meeting at Bucharest on February 3 there were violent demonstrations against the Royal family, and pictures of the late King and Queen Marie and King Michael were trodden underfoot. Two hundred Communists were arrested.

Lady Himbury, wife of Sir William Himbury, Managing Director of the British Cotton Growing Association, died on February 5 in a London nursing home from pneumonia following influenza. Sir William is on a business tour in the Middle East.

Mr. Leith-Ross, Deputy-Controller of Finance in the British Treasury, left Cairo on February 6, on the conclusion of his mission in connexion with the various financial questions outstanding between the British and Egyptian Governments.

Deputy Inspector-General Isaac Henry Anderson, M.D., R.N., died on February 2, at the age of 80. He became a surgeon in the Navy in September, 1871, and in the War in Egypt, 1882, was the surgeon of the dispatch vessel Salamis. For his services he received the Egyptian medal and the Khedive's bronze star. He also took part in the naval and military operations near Suakin, Eastern Sudan, in 1884, for which he was awarded the Suakin clasp.

The State Department at Washington announced on February 2 that negotiations for a Treaty between the United States, Great Britain, and Iraq were nearing a conclusion, and that the signing of the new Treaty would constitute recognition of the last-named kingdom. It was further indicated that the Treaty would follow the lines of a convention signed with Great Britain in 1924 concerning American rights in Palestine. The rights of American nationals in Iraq are provided for in the new Treaty.

REFORMS IN PERSIA.—I.

BY MIRZA FIROOZ KHAN.

Tabriz.

Reforms in Persia are proceeding on a grand scale. Reforms in hats, abolishing the old-fashioned, dirty, lamb-skin caps; reforms in the dress of both sexes; reforms of the narrow and crooked streets; and reforms in the method of registration of the population. In ancient times the census was taken by simply inquiring of the head-man of the family how many children he had in his household; but the present census must register the names, the ages and the occupation as well.

Let me mention two typical incidents in the *Sijil* room: I.

The Officer: "How old are you?"

The man to be registered: "I am thirty-two years old, sir."

Officer: "You cannot be thirty-two years old. If I put you down twenty-four stones will crack. But I think I will register you twenty-four, anyway, taking all the responsibility upon myself if in case you prove to be less than that. My *agida* (idea, opinion) cannot be very far from the right number. . . ."

And he registers the man as twenty-four years old (the age at which young men are recruited as soldiers—called *Ijbari*, or compulsory recruiting). There is a reason for everything, and there is a reason for this false registration.

Officer (to the same young man): "Is your father living?" "Yes sir."

"What is his name?" "Hashim."

"How old is your father?" "Twenty-four years old."

"What is his occupation?" "He is a *bakkal* (grocer)."

"Is your mother living?" "Yes, sir."

"What is her name?" "Najimah."

"What is her occupation?" "She has no occupation, she keeps our house."

"How old is your mother?" "Twenty-four years old."

"You have a brother?" "Yes, Sir."

"His name?" "Hasan."

"His occupation?" "Goes to school."

"How old is he?" "Twenty-four."

"You have a sister?" "Yes, Sir."

"Her name?" "Ayisha."

"Her occupation?" "No occupation."

"How old is she?" "Twenty-four."

The young registrar, who was busy, as a matter of habit, in asking his prescribed questions and jotting down the answers mechanically, suddenly came to himself, and raising his head, inquired rather roughly:—

"Say, young man, are you joking? I am not a man to joke with—not in this room." "I am not joking."

"What do you mean, then, by registering every member of your family as twenty-four years old? Can this be so?" "Why can it not?"

"How can your father be of the same age as yourself or your younger brother, who goes to school?" "I have simply registered them according to your *agida*, and your *agida*, as you stated, cannot be very far from the right number."

"What do you mean, Sir?" "I mean just what I say; if in your opinion a young man thirty-two years of age can be registered twenty-four, why can not a man fifty-five years old be registered as twenty-four?"

The officer then registered the father fifty-five, the mother forty-five (again using his own opinion) the younger brother as twenty-one (recruiting age is 21-25)

and the sister as fifteen, leaving the young man at twenty-four, and asked the young man to seal it (sign it).

"I will not seal it," said the young man positively.

"Why not?" "I cannot seal those that are not my answers."

"But in my *agida* these ought to be so!" "I cannot sign under your *agida*. I can sign only my own answers!"

A "knowing" look by the registrar straight to the young man's eyes accompanied by a soft smile settled the whole affair! A few minutes' whispering and, a five toman English bank-note slipped by the young man into the registrar's left hand raised his age from twenty-four to thirty-two, his father's to fifty-five and brother's lowered down to sixteen. The whole thing was settled most amicably, as if nothing had happened!

II.

Incident the second, in the *Sijil*-room:—

Officer: "What is your name?"

Subject: "Mullah Hasan."

"Your occupation?" "I just said I am a Mullah."

"How old are you?" "Forty years."

"You have a wife?" "Yes."

"Her name?" "Rooghia" (always a fictitious name is given so far as the female sex is concerned).

"How old is the khanum?" (lady). "Thirty years old."

"You have a son?" "Yes."

"His occupation?" "School-teacher" (teachers are exempt from military service—they were at one time, but not now, on account of many pseudo-teachers).

"His age?" "Twenty-eight."

"You have a daughter?" "None."

The registering officer (with an oval yellow badge attached to the front of his Pahlavi hat) woke up from his coma, and inquired:—

"Agha (my Lord), you said your Khanum is thirty years old?" "Yes."

"And your son is twenty-eight?" "Yes."

"Look here, my lord, here we have a small mathematical problem to solve. Your wife is thirty years of age and your son is twenty-eight. It follows, then, that when you married your wife she was one year old—is this so? Can it be so?"

Perfect silence all round!

The solution of this mathematical problem is this:—In the first incident the *Sijil* officer was exaggerating or lowering the age of the applicant to that of the recruiting or *ijbari* age in order to extort money, while in this, the second incident, the applicant gives the wrong date of his son in order to save him from military service. Although in this case the age difference between the mother and the son is so transparent that a schoolboy ten years old can see it, still, the ignorant mullah, confident upon his being a clergyman with a large-sized turban, asserts the lie without feeling the degrading shame of it. Although mullahs in Persia are not in the habit of giving, the registering officer finally was victorious and the affair was settled in the usual financial manner.

A decree was signed in Athens on January 24 fixing the elections for the Senate for March 3. By-elections for four vacancies in the Chamber will be held on the same date.

The German cruiser Emden is to visit Aden from February 25 to March 1.

In Convocation at Oxford on February 5 a Decree was passed authorising the trustees of Dean Ireland's Scholarships to make a grant of £50 to the British School at Athens.

Students of Al Azhar University, Cairo, and of various religious establishments in Egypt, have been ordered to adopt a uniform dress of turban and *kakula* or *jebba*, with a collar.

It is announced in Moscow that the Turkish Government has decided to recall Wasif Bey, Turkish Ambassador in Moscow, and to appoint him Minister of Education in Angora. Hussein Raghib Bey, at present Turkish Minister to Roumania, is to succeed him in Moscow.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Book Review

A HAJJI'S ADVENTURES.

"WESTWARD TO MECCA." *A Journey of Adventure through Afghanistan, Bolshevik Asia, Persia, Iraq and Hijaz to the Cradle of Islam.* By Sirdar Ikbāl Ali Shah. With photographs. (London: H. F. and G. Witherby. 12s. 6d. net.)

No diligent reader of the British Press, certainly no student of writings upon Islamic subjects, can fail to be familiar with the work of Sirdar Ikbāl Ali Shah, the gifted Afghan publicist. The Sirdar has a most facile pen, an excellent command of English, and, as exemplified in this book, "Westward to Mecca," no ordinary degree of imagination. In his style of travel literature no complaint of dullness, at any rate, can ever be made, for he always has an eye for, and a ready pen in the description of, the picturesque, the unusual, even the miraculous.

In this work he states that he started at Lahore for Mecca, and what he saw and experienced on the journey to the Holy City in the Hijaz makes up a considerable portion of the book, although not all of it. Beginning with the assertion that the longer the route to Mecca the richer the spiritual reward for the *hajji*, and the explanation that circumstances forbade his going direct from India to the Red Sea, he relates some marvellous adventures in the Himalayas. Part of this chapter, particularly that section dealing with an out-of-the-way alchemist, we seem to have read before in newspaper articles (indeed the book appears to be but an expanding of newspaper articles); but it reads amazingly well, so fresh, strong, and clear is the writing. Next comes a useful description of the Frontier district, a district which the Sirdar ought perhaps to know better than any other, in consideration of his Afghan and Indian affiliations. Then to Afghanistan, of which the Sirdar remarks: "No one seems to notice that the future political and moral evolution of Central Asia is going to begin and end in Afghanistan." There follows a short chapter of "Afghan Women," and then we come to the most vivid description in the whole book.

"In a little house in a remote spot" in northern Afghanistan (it is to be regretted that the Sirdar is so vague generally in his geographical and chronological details) he sat down, one raw September, to write a portion of his book. He had a colleague with him, one Rask, a Norwegian. Suddenly he remarked that the room in which they sat was getting intolerably stuffy. Rask, a Sanskrit scholar, noticed an inscription above the door. Reading it, and realising that a doom was upon the house, he persuaded the Sirdar to leave for Kabul. Returning after a short time, the Sirdar found the house as if in a great conflagration, a mass of roaring flames. As he broke his way in to rescue Rask, the roar suddenly ceased. He got Rask to bed and then (as in forgetfulness of his medical training at Edinburgh University) "ran for a local, Eastern 'medicine man' half a mile away, who returned with me and gave it as his opinion that Rask's injuries were serious, and his chances of recovery but slender." The explanation of this miraculous and extremely well-told story is that the house was dedicated to the goddess Durga, a form of the terrible Kali, a deity worshipped among the Hindus. By magical means a fire was lighted in the house in her honour once a year, consuming any who dared defile the sanctity of her shrine.

This is exciting fare, but the Sirdar feeds the taste of the reader by regaling him further with thrilling experiences befalling him in Red Turkestan. He went, according to this book, to Kushk, Merv, Khan Kui, and Khiva. Here again he was in peril of his life. So devoted a Muslim could not, however, be daunted by danger, and he resolved to brave the suspicion of the Bolshevik authorities and visit the shrines of Bokhara and Samarkand. But if he had one eye on religious objects, the other was kept wide open for more mundane attractions. At Bokhara, for instance, he visited the "Oriental Institute" of the Bolsheviks—a thing quite outside his duties as a pious

Muslim, and he cannot have been surprised that suspicion concerning his motives in this strange part of the world grew and grew. Incidentally, this description of Bokhara provides one of the very few clues in the book to its chronology, but the reader is hardly assisted by it in his search for consecutive dates and logical movement. The Sirdar says of the Bokhara Institute:—

I quickly found that the bureau was one of the most efficient falsehood factories in any of the five continents. The wildest yarns arrived regarding the condition of affairs in Great Britain. The coal strike, we were told, had precipitated a widespread revolution. The trade unions had formed a government, and Mr. H. G. Wells had been nominated as first president of the British Soviet. . . .

Now that date cannot be earlier than May 1926. But the Sirdar was, he says, an Afghan delegate for the Grand Muslim Conference at Mecca which was to begin on June 6, 1926. Then how could the Sirdar have "remained at the Labour Bureau" in Bokhara "for some weeks"? Was this all a part of the miraculous existence which he seems to have lived during this period?

Escaping from Central Asia by means of a gallant swim at midnight in the Caspian, he wandered for some weeks by Astarabad, Meshed, and other places. He even went, he says, to Nishapur—which gave him the opportunity to include in his book a chapter on "Omar and Shakespeare" that otherwise might look suspiciously like padding.

The work ends with Chapters on "The Inflexible Persia" (which concerns mainly the ceremonies attending the birth of a child in Persia), "The Human Oil Cure" (which is a miraculous story of his death at the hands of Kurds in northern Mesopotamia, a death prevented only by the fact that he had moles on his arms), "The Kingdom of Baghdad" (which contains a good deal about a snake farm in Bombay), and "Mecca at Last," (which describes exultantly the emotions of the crowded pilgrims on board the ship from Bombay to Jidda).

One cannot help wishing that the Sirdar had been more explicit in his details and in the description of his motives. Why, for example, should he have gone to Northern Mesopotamia from Persia when he wanted to reach the Persian Gulf? Why, after leaving Mosul, go to Khaniqin to get to Baghdad? Such questionings constantly assail the reader. Other things to which the informed student may object, apart from misprints, such as "the ancient Greeks wrote ballads," "escaped to the Arab (Aral) Sea," are such sentences as "annually millions, representing every colour and clime, undertake the pilgrimage under the grilling heat to the Holy City," or "there in Teheran to-day as it was a thousand years ago." For the pilgrimage month does not always fall in the summer; and did Teheran exist a thousand years ago?

"Westward to Mecca" is, therefore, a book for the popular reader, who wishes above all to be fascinated, intrigued, taken to a world hitherto unknown to him. For the satisfaction of such a desire there are few better writers at hand than Sirdar Ikbāl Ali Shah. That his book belongs rather to the realm of journalism than of literature is a fact which will in no wise stand in the way of its merited popularity.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The B.I.F. and the Outlook.

The British Industries Fair opens next week in conditions which have become for the moment at least somewhat unfavourable for the development of trade owing to the raising of the Bank Rate to $5\frac{1}{2}$ per cent. This unfortunate occurrence, which is discussed in "The Week's Finance," was in no sense unexpected in view of the prolonged drain of gold which had reduced the Bank's supplies of the metal by over £26,000,000 since last September. It was none the less regrettable, for the higher Bank Rate means the imposition of a check on trade, and that is the last thing to be desired at this juncture, while it carries with it various other unpleasant contingencies. It can only be trusted that the view held in banking circles generally that the increase will not be of long duration will prove correct, but sight must not be lost of the possibility that a further increase may be necessary before the object aimed at is attained. Happily there is no reason for thinking that the temporary change in the economic outlook will have any pronounced effect on the coming Fair, though the psychological factor has, of course, to be taken into consideration. It must be remembered that buyers at the Fair are not preparing for immediate trade but for business some months ahead, so that they are not likely to be greatly concerned about what is purely a temporary and passing phase. Still, one would have liked the Fair to be held in conditions which left nothing lacking as regards the promise of trade improvement.

The Roumanian Loan.

This week is to see the issue of the long awaited Roumanian Loan. The London portion, which is £2,000,000, represents just under one-tenth of the total amount of the loan which is £20,750,000, and it is to be regretted that the leading financial market of the world is not taking a more prominent part in such an important event. The chief reasons for the comparative insignificance of the British portion of the loan are, of course, obvious. The loan has been engineered through French auspices—the Bank of France has taken the lead throughout in the negotiations—and the number of countries who wished to participate in the issue was so considerable that the individual issues were bound to be rather small. Still, in view of Great Britain's support of other Near Eastern issues, and of our important relations with Roumania, principally through the oil industry, it is impossible not to regret the fact that this country will not have a more substantial opportunity of showing her sympathy with Roumanian reconstruction. This will not be the only loan that Roumania will be raising in the next few years, and in the next issue it may be hoped that London will loom more prominently. The present loan, which is a seven per cent. issue, is to be issued in London at 88, at which price the issues in the United States and on the Continent will be made, with the exception of the French instalment, which will be made at 92. In the United States, Austria, Belgium, Czechoslovakia, Germany, Holland, Italy, Roumania, and Switzerland the loan is being offered in dollar bonds, the total amount of which will be 60,000,000 dollars, while in France the issue will be made in francs, the amount being 561,638,000 francs. In addition, as I have already pointed out, the Swedish Match Company has taken 30,000,000 dollars firm in return for a match

monopoly which will be operated through a Roumanian subsidiary, and has agreed that these bonds shall not be placed on the market for three years except with the consent of the banking houses interested. The Swedish Match Company guarantees a minimum royalty to the Roumanian Government of 3,000,000 dollars, a sum which is sufficient to cover nearly forty per cent. of the service of the whole international loan.

Objects of the Loan.

The loan is required for the stabilisation of the currency and for the economic development of the country which has been gravely retarded since the Armistice through lack of means for such vital things as the improvement of the railways. It will not be gainsaid that Roumania's natural resources are easily the most important of the Balkan countries, but as her exchange rate has shown, despite the steady increase in the output of petroleum and the measures taken to further agriculture, she has not been able to take advantage of them. For the failure to do so there have been other reasons beside the lack of capital, notably the unsatisfactory policy pursued by the late Administration, and the failure to conclude a loan until the present time was a reflexion of the working of this policy. The Maniu Government, as is well known, stands for a policy which will permit the fullest utilisation of the country's resources, and will encourage the co-operation of foreign assistance and finance, and with the aid of the funds which the loan will place at its disposal the way will be clear for a great improvement in Roumania's position in the near future. As regards the allocation of the proceeds of the loan it is understood that about £7,500,000 will be required for stabilisation and Budgetary purposes, that £1,800,000 will be earmarked for working capital for the State Railways, that £2,000,000 will be devoted to public works, and that the balance will be utilised for the reconditioning of the railway system. One result of the loan will be that very large orders will shortly be placed abroad for railway material, and these orders, it is gathered, assuming equal conditions as regards price and quality, will be placed with the countries issuing the loan in proportion to the amounts issued in each country. It remains to be added that the loan is unconditionally guaranteed as to principal, interest, and sinking fund by the

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathén."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

Government of Roumania, and will be a direct and unconditional obligation of the Institute of Monopolies which has been established by the Roumanian Government to control the following monopolies which have been transferred to it: tobacco, matches, salt, playing cards, explosives of all kinds for commercial use, and cigarette papers.

France and Yugoslavia.

The next Near Eastern loan on the tapis is, of course, that for Yugoslavia, and in view of France's increasing interest in the Near East generally and the fact that she has recently concluded a trade treaty with Yugoslavia it will not be at all surprising to find her playing as prominent a part in the Yugoslav loan negotiations as she has in regard to the Roumanian loan. It is thought probable in some quarters that the Yugoslav loan must be a matter of the very distant future, but in view of news which has reached me during the past week regarding the situation in Yugoslavia I am inclined to modify the opinion I expressed on the subject. It appears that business men in all parts of the country are welcoming the new régime with open arms, and that they anticipate a rapid improvement in conditions now that there seems to be a reasonable certainty that political vicissitudes will not interfere with the country's progress. If their estimate of the situation proves to be correct then a loan may be forthcoming much sooner than was expected. It must not be overlooked that, despite the effect of political disturbances, a good deal of quiet progress was made during 1928. The numerous banking amalgamations are an instance of this, and the new and stronger institutions will stand Yugoslavia in good stead in the task of recovering her economic position.

Modernising Abyssinia.

The news that a wireless station is to be established at Addis Ababa is the latest surprise for us from the East. There is no doubt about the development, for tenders have been actually called for, and, as showing the ambitious nature of the project, for which the Negus Tafari is responsible, the specification stipulates that the installation must include a transmitting station capable of working permanently with Europe and a receiving station capable of receiving from the European stations and also from America. The attraction of a wireless station in the eyes of the ruler of Abyssinia, who, like his colleague of Afghanistan, has had the advantage of an extensive tour in Europe, can well be realised, but whether the Abyssinians in their present state of civilisation are likely to approve of the latest development of Western science any more than the Afghans did of Western dress and habits of life must remain to be seen. It seems a rather premature development, seeing that there are so many other things of more immediate importance which Abyssinia still lacks, such as a series of good roads, but perhaps the Negus Tafari holds the opinion that there are distinct advantages in trying to make a child run before it can walk. After all, the Abyssinians are accustomed to motor cars, and in the capital they have electric lighting, and if they take to these things wireless is only a stage further on, and it may yet

be the lot of Abyssinia to demonstrate to the world that with nations, as with schoolboys, a system of cramming is occasionally very successful.

Markets for Cyprus Products.

Some weeks ago I referred to the efforts now being made to develop overseas markets for Cyprus products. A recent supplement to the *Cyprus Gazette* deals with the position with regard to Greece which ranks fourth among the countries importing goods from Cyprus. In 1927 the United Kingdom took 18.04 per cent. of the Island's exports, Egypt 17.74 per cent., Italy 12.64 per cent., and Greece 10.18 per cent. In the Island's import trade in that year Greece came next after the United Kingdom and other parts of the Empire (whose percentage was 44.65) with 7.72 per cent. It is believed that the Greek market for Cyprus products is capable of much further expansion, and this view is borne out by the report of Mr. Papa Jiacovou, District Agricultural Superintendent of Larnaca, who investigated the Greek market last autumn, and whose conclusions are summarised in the supplement. Greece's principal imports from Cyprus in 1927 were cotton lint, £49,398; potatoes, £40,713; oranges, £17,290; mules, £5,765; barley, £5,743; and cottonseed, £5,569. The Cyprus orange, it is pointed out, is regarded favourably in Greece, but it is suggested that better results would be obtained if the fruit were properly graded and packed in boxes. It is significant that the trade has increased from 367,640 (which includes lemons) in 1923 to 7,006,199 (oranges only) in 1927. The trade in potatoes is a recent development, for the exports to Greece in 1924 only totalled six cwt. as compared with 101,769 cwt. in 1927. As Greece's imports of potatoes from France and Italy have sharply decreased over this period it would seem the Cyprus has gained ground at the expense of these countries. Greece's trade with Cyprus is almost entirely in the hands of Greek merchants, and Mr. Jiacovou says that the distribution of Cyprus goods leaves much to be desired, and that organisation in the distribution and marketing of the Island's products would result in increased trade.

Manchester Ship Canal.

Disappointment will be felt at the dividend of the Manchester Ship Canal Company. For five years the ordinary shareholders have received 5 per cent., but the proposed dividend for the past year is only 3½ per cent. which will leave a carry forward of £16,498 as compared with one of £29,043. The brief announcement gives no reason for the reduced dividend, but it may be assumed that the less satisfactory results are a reflexion of the depression through which the cotton county is passing. For details we shall have to await the coming meeting when no doubt something will be said as to the outlook for the present year.

COMMENTATOR.

The Zagreb Spring Fair will be held from April 20 to 28. It will be devoted to the exhibition of motor cars and motor cycles, agricultural machinery, and wireless apparatus. The Autumn Fair will be held from September 7 to 16 and will cover all classes of goods.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Doupnitz, Gorna-Orehovitz, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies

The Soils of Egypt

By R. ALADJEM.

In most countries the origin and nature of the soil are related to the underlying geological strata, but in the case of Egypt one has to look thousands of miles southwards to the high plateaux of Central Africa to discover the origin of its soils. The arable land of the Nile Valley is a gift from the Nile, as the soils of Egypt are practically all alluvial soils and the particles of which they are composed have been carried by water to their present position. In the upper reaches of the Nile Valley, the rain and other weathering factors are continually breaking off particles from the hard rocks. The finest of these particles are washed by rain into the river, and, coming down the Nile in a state of suspension, are ultimately deposited, thus forming the soil.

It is mainly the mud carried by the Blue Nile and the Atbara that contributes to the formation of Egyptian soils; to a smaller extent, other tributaries, desert sand blown by the wind, the product of weathering of the cataracts' bars, Nubian sandstone and various other mineral and organic materials resulting from erosions along the Nile banks, add their quota.

Blue Nile and Atbara silts are derived from the weathering of rocks forming the Abyssinian Plateau, which consists of a mass of granite, gneiss and shales coated by sandstone overlaid here and there by Jurassic formations. Above these various massifs there are very wide-spreading stretches of rocks of volcanic origin, such as basalts, etc., which crown the summits of that country and which gave rise to strata 600 to 900 ms. thick of the so-called "black soils. The torrents and torrential rivers sprung from these massifs dug their way through these and the underlying sandstone and limestone, forming deep gorges and flowing on beds resting on crystalline rocks (gneiss), which form the framework of the plateau. The streaming down of water and other weathering factors affect mainly the "black soils" and the quartzite sandstone. The silt carried down by the Atbara River has mainly a gneissic origin, while that of the Blue Nile originates from various felspars and "black soils."

The While Nile which is the main supplier during the low stage contributes but to a small extent to the formation of Egyptian soils owing to its small content of suspended matter.

The rich alluvial soils found on either side of the Nile and throughout the Delta derive, therefore, from the weathering of rocks of the Highlands of Abyssinia, and their mineralogical composition is, consequently, identical. While the chemical composition of the cultivated Egyptian soils is remarkably uniform, their mechanical structure differs very widely. As a rule, the soils of Upper Egypt contain a greater proportion of coarse particles and calcium carbonate than those of Lower Egypt. Nile mud is, of course, composed of particles differing in size and density. The coarser and denser particles are first deposited, while the fine clay is carried to greater distances. Hence, the soils formed by the first Nile deposits, the coarse portion of the mud, will have a much coarser structure than those formed by the finest particles of clay. The proportion of clay in the soil goes on increasing from south to north and from the river banks to the distant parts.

Three Classes of Soils.

The soils of Egypt may be divided into three classes according to their mineralogical composition:—

1. Purely alluvial soils, entirely composed of Nile deposits. These are the normal soils of the country and cover far the greatest part of the arable area.
2. Non-alluvial soils, such as the desert soils, torrential deposits, etc.
3. Mixed soils, such as those composed of a mixture, in

varying proportions, of Nile silt with either desert sand, such as those which are to be found in the desert borders of the Nile Valley, or with siliceous or calcareous debris carried down by wind or by torrents; or else such as the sandy soils of the desert border, irrigated with muddy Nile water or other Nile deposits, mixed up with shell-sand such as those found in the extreme north of the Delta.

As regards the alluvial soils with which this article is more especially concerned, the deposition of Nile silt by order of density gave rise to a series of types of soil, the most important of which are the "Safrā" or light soil and the "Soda" or heavy clayey soil. Between these two extreme types several intermediate soils find place which differ by their clay content.

	Per cent.	Per cent.
Very light soils containing at least 20 of clay.		
Light soils	from 20 to 30	„ „
Medium soils	30 „ 40	„ „
Heavy soils	40 „ 50	„ „
Very heavy soils	50 „ 70	„ „

The extremely high percentage of clay is noteworthy in the last two types of soil. These proportions are very seldom found in soils of other countries. The light and medium soils are very easy to work; the heavy soils, however, would have been unworkable but for certain special conditions prevalent in Egypt. It is well known that the presence of some calcium and sodium chlorides in the soil prevents the formation of "black alkali" (sodium carbonate) which, like many alkaline salts, has the peculiar property of deflocculating the clay, making the soil impermeable to air and water. Such impermeability causes an asphyxiating medium highly detrimental to plant life. Indeed, a great part of the irrigated alluvial soils of Egypt suffers from excessive tenacity and impermeability, and poor crops are due more to these defects than to deficiency of plant food. But these salts keep the clay in a flocculated (coagulated) condition, and it may be said that it is to the presence of minute quantities of the said soluble salts that Egypt is indebted for the possibility of obtaining abundant crops in spite of a high clay content which would even preclude cultivation.

All the soluble salts which are met with in normal quantities in soils and irrigation water have generally a stimulating effect on plant life and keep the soil permeable and well ventilated.

Need for Fertilisers.

The legendary fertility of Egyptian soils is due also to their very high content of fine particles (clay) which are rich in plant-food material. The respective amounts of potash (supplied by felspar and micas), phosphoric acid (supplied by the apatite present) and lime are as a rule quite sufficient to meet the requirements of crops but nitrogen and organic matter are usually low. Owing to favourable temperature and moisture conditions prevailing almost throughout the year, bacterial life in soils is very active, decomposition of organic matter goes on rapidly, and the stock of nitrogen is used up quickly. Hence the necessity of supplying to the soil organic manures and nitrogenous fertilisers for the maintenance of a sufficient percentage of humus and nitrogen and, therefore, fertility.

With reference to the chemical characteristics of soils in Egypt it should be pointed out that, though the soils forming alluvia are originally extremely rich in plant food material, yet this material, to become gradually available to plants, has to undergo the action of various factors, the most important of which are air, sun heat, and water.

Air and sun heat exert their influence chiefly during the summer months, during which the soil lies fallow. Owing to the great proportion of clay present, the soils which

LET THE "NEAR EAST & INDIA" carry your message to the markets of the Near and Middle East. You will find it a paying proposition

lay fallow during summer months are deeply fissured. The importance of this shrinkage is enormous, as by its means the soil is aerated and dried to a considerable depth, partially sterilised (as the temperature at the soil surface reaches 65 per cent. and more) and at the same time, the excess of harmful salts crystallising out on the surface of the crevices is washed away by the first summer watering applied about flood time.

During summer fallow, therefore, the land is, as it were, regenerated through the drying and alteration of the colloidal substances of the soil, the destruction of detrimental micro-organisms, the availability of more mineral plant food by weathering and the washing away of excess of salt. Summer fallow can be considered as an equally, if not more important, factor of fertility as the annual tribute of mud brought down by the Nile. But under the modern system of perennial irrigation, the beneficial influence of both these factors is gradually decreasing. The summer fallow has been considerably curtailed and the greatest portion of the silt, which when basin irrigation prevailed used to deposit on the land, is deposited in the canals. Thus it has been found that out of about 1300 grams of silt carried in suspension by a cubic meter of Nile water only 600 grams reached the fields. This, and the shortage of the farmyard manure, may explain the fact that the need for chemical fertilizers is being felt more acutely every year.

Land Reclamation.

A large part of the Delta land, especially in the north, contains a considerable amount of salts. About 1,000,000 feddans are at present lying barren and waiting reclamation. Land reclamation is possible when rice can be grown. The reclamation of all the salty area will be possible when ample water supply will be available. At present, the area that can be put under rice rarely exceeds 200,000 feddans. Water for land washing is available only during flood time.

The work of reclamation consists in levelling the land, flooding it to wash away the greatest portion of salt present and growing dineba (small millet) or rice once or twice. Dineba and rice are salt-resistant plants. When the soil is nearly sweetened, berseem (clover) is grown, and after berseem cotton and other crops follow. Drainage water has, especially in northern and Delta districts, to be raised by pumps into the main drain. Unless good drainage is secured, salt is brought up again by capillarity to the surface. Rice has, therefore, to be cultivated according to districts, every other year or every two, three or four years, in order to keep the salts down beyond the reach of the roots of crops.

It was not found advisable to wash out the salts completely. The presence of a slight amount of chlorides (from 0.05 to 0.15 per cent.) is helpful in keeping the soil permeable and preventing the formation of sodium carbonate.

The presence of sodium carbonate in the soil solution is one of the most frequent causes of infertility in Egyptian soils, although the areas so affected are not usually extensive, varying from a matter of a few square metres to 2 or 3 feddans or more. Such patches are to be met with in all districts, from Aswan to the extreme north of the Delta, but more especially in the Behera Province. Sodium carbonate, besides being toxic to plants has, as it has been already pointed out, the property of deflocculating the clay, thus causing infertility. No crop can possibly thrive on land containing more than 0.10 per cent. sodium carbonate. In such soils, an application of gypsum of about one ton per feddan prior to the flooding of the land will at once coagulate the clay and make possible the washing out of the salts. Subsequent applications of gypsum are made, if necessary, until the soil is freed from the noxious salts. One of the most serious problems with which the Egyptian agriculturist is faced, is the salt problem. Accumulation of salts on the soil should be avoided in districts irrigated during the summer season, by well water, which, in some cases, contain a high

amount of dissolved salts. Salt has to be kept down by drainage where the subsoil is salty, as is the case in most of the northern districts.

As a rule the plant roots should have at their disposal a depth of sweet, sound soil of at least 1.25 metres in the northern Delta and 2 metres in the central Delta. Upper Egypt has on the whole a good natural drainage. Nowadays, the present intensive farming system and the natural abundance of plant food could be maintained—to the great benefit of the Fellah—provided that a rational crop rotation, good drainage and irrigation, and a judicious use of manures were practised.

NEWS FROM ALL SOURCES.

A new shipping company has been established at Shushak under the title of Slobodna Plovdba with a capital of 500,000 dinars.

A Basrah message states that Sir John Cadman, chairman of the Anglo-Persian Oil Company, arrived at Abadan on February 7.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 20 amounted to £Eg.772, making the total from April 1 £E268,206.

Yugoslavia's sugar production for 1928-29 is estimated at 127,000 tons, and some 270,000 tons will be available for export.

An Athens message states that Bills have been introduced by the Greek Government in Parliament, in accordance with the provisions of which imports not accompanied by clearance certificates will be subjected to the highest duties.

An Amsterdam message states that a syndicate has been formed by a Dutch group of bankers under the Netherlands Trading Company and by a German group of bankers under the Deutsche Bank and the Disconto Gesellschaft in order to investigate the possibility of offering a loan to the Turkish Government. The amount mentioned is £5,200,000.

The Albanian Government is reported to be endeavouring to attract to Albania expert carpet weavers who are Greek and Armenian refugees from Turkey (says an American Consular report). The Government in Greece is expected to take steps to check this movement, which may have a detrimental effect on the development of the Greek carpet weaving industry.

The Fourth Palestine and Near East Exhibition and Fair is to be held in April at Tel Aviv. German, Italian, and Roumanian firms are understood to be taking considerable interest in the coming Fair. The period of the Exhibition will coincide with the twentieth anniversary of the founding of Tel Aviv. The Exhibition will contain sections for imported industrial and agricultural machinery, builders' plant, electrical goods, wireless apparatus, a motor and motor cycle show, and raw materials for local industries.

Starched white collars are imported into Turkey chiefly from Europe, but are gradually losing ground to semi-soft collars for all uses except formal dress (says an American Consular report). Total annual imports of semi-soft collars into Constantinople are estimated at approximately 7,000 dozen per year, of which about 75 per cent. are said to come from Czechoslovakia. The semi-soft collars imported from Czechoslovakia are packed usually in individual glazed paper envelopes bearing the trade mark of the manufacturer. There is also a considerable sale of detachable soft collars of the same material as the shirts with which they are worn.

Messrs. J. Henry Schroder and Co. announce that they are authorised to receive bonds of the Roumanian Government 4 per Cent. Loans of 1889, 1890, 1891, 1894, 1896, 1898, 1905, 1908, 1910, and 5 per Cent. Loan of 1903, stamped for payment in any currency other than lei for transmission to the Roumanian Ministry of Finance, for exchange for new bonds which are to be issued in conformity with the agreement signed in Paris on May 31, 1928, between the Roumanian State and the representatives of the bondholders. Full particulars of the arrangements as well as copies of the agreement may be obtained at the counting-house of Messrs. J. Henry Schroder and Co.

Under a recent Roumanian Decision certain modifications have been made in the valuations fixed for goods subject to turnover and luxury turnover tax. The valuations have been increased for a number of goods, including furs, leather belting, boots and shoes (except those made of mineral tanned leather) and other leather goods, wooden furniture and other wooden goods, china and glassware, certain machines and machine tools, electrical goods, motor cars and toys, syrups, jams, marmalades, spirits, wines, and sweets. A few decreases in the valuations have also been made, affecting, *inter alia*, boots and shoes made of mineral tanned leather, canvas shoes, belting leather, beer, and soap. The rates of the tax on automobiles and their parts have also been increased from 2 per cent. or 10 per cent. to 10 per cent. or 15 per cent. respectively.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Dressings, Cotton and Mackintosh Cloth.—The date for the receipt of tenders for the supply of dressings, cotton and mackintosh cloth to the Egyptian Department of Public Health has been postponed from February 10 to March 28. Copies of the new specifications which have been issued by the Egyptian authorities are available for inspection at the offices of the Department of Overseas Trade.

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of linen for schools comprising tulle for mosquito-nets, bedsheets, towels, napkins, blankets, table materials comprising metal spoons, forks and knives, china plates, salt cellars, glass and aluminium tumblers, copper dishes and articles for cleaning comprising brooms, canvas cloth, liquid metal polish, carbolic soap, bag blue, etc., required for the schools during the school year 1929-1930. March 18.

Machinery, Etc.—The Controller of Technical Education, Ministry of Education, Sharia El Turka el Gharbi, Cairo, invites tenders for the supply of machinery and machine tools for the Abu Tig Trades School of the Assiut Provincial Council (March 2); and for raw wool required for the spinning shed at Assiut Model Workshops. March 14.

Medicinal Oils.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of medicinal oils required for a period of one year commencing from May 1, 1929. March 16.

Pilgrims Jetty.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the construction of pilgrims jetty at Tor as per conditions specified in the cahier des charges obtainable from Secretariat Department (Arsenal), against payment of five Egyptian pounds per set. March 2.

Pharmaceutical Sundries.—The Egyptian Department of Public Health invites tenders for the supply of bottles, demijohns, pots, india-rubber tubing, oxygen cylinders, ampoules, tin ointment boxes, tooth brushes, corks, paper powder bags, filtering paper, powder envelopes required during the year commencing May 1. March 16. (D.O.T.)

Electric Lighting System.—The Ministry of the Interior, Section des Municipalités et Commissions Locales, Cairo, invites tenders for the supply and installation of an electric lighting system for the town of Fashn. March 27. (D.O.T.)

Clothing.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of clothing such as blankets, boots, tarbushes, jerseys, frocks, greatcoats, woollen cotton and linen cloth. March 21.

Clothing and Equipment.—The Egyptian Customs Administration invites tenders for the supply of clothing and general stores required for the year 1929-30. The schedule covers a miscellaneous range of goods, mostly in small quantities, including, among other items, khaki drill and blue serge uniforms, blue melton greatcoats, boots, etc. March 1. (D.O.T.)

The ordinary general meeting of the National Bank of Egypt will be held on March 21 at the head office of the bank, in Cairo.

By a recent Syrian decree certified invoices will be required, on importation into Syria, in the case of goods mentioned in the quarterly Customs Valuation Tariffs.

In future Greek joint stock companies and foreign companies operating in Greece must obtain the sanction of the Greek Ministry of Foreign Affairs for an increase in their capital.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, February 19); s.s. Manipur for Calcutta (Birkenhead, February 28).

Bibby Line.—S.s. Staffordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 20); s.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 8).

British India Line.—S.s. Domala for Bombay and Karachi (London, February 23); s.s. Mantola for Colombo, Madras, and Calcutta (London, February 23).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will also call at Volo if sufficient inducement) (Liverpool February 16, Glasgow and Swansea February 15); s.s. Bantria for Casablanca, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool February 16, Swansea February 19).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23).

P. and O. Line.—S.s. Rajputana for Bombay (London, February 15); s.s. Nankin for Calcutta (London, February 16); s.s. Ranchi for Bombay (London, March 1); s.s. Whitegate for Calcutta (London, March 2).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 20); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 2).

Ellerman and Papayanni Lines.—S.s. Grodno for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, February 28); s.s. Algerian for Algiers*, Calamata, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 2, Swansea March 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool March 2, Swansea March 7); s.s. Oporto for Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool March 2, Swansea March 7); s.s. Lesbian for Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 16, Swansea March 16). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The recent Commercial Treaty between Greece and Albania involved a reduction of the Albanian Customs duties on certain goods of Greek origin. The goods affected include cognac and rum; cigarettes; kid leather; glacé, moroccoed or shagreened leather; twine, etc., less than 9 mm. thick; wax candles; and common soap in pieces or powder. The Treaty also involved a reduction of the Greek Customs import duties on certain goods of Albanian origin. The goods affected include certain cheeses, beeswax, rock asphalt, asphalt in powder and mastic, bitumen, unwashed wool and washed combed wool. The reduced rates in both cases are also applicable to similar goods of United Kingdom origin.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 12.

The rise in Bank Rate to $5\frac{1}{2}$ per cent. after it had been at $4\frac{1}{2}$ per cent. since April, 1927, was not altogether unanticipated, especially on the Stock Exchange, although it had been hoped in many well-informed quarters that the necessity for an increase might be avoided. During the past five months we have lost more than £26 millions in gold, and these withdrawals have had practically no effect upon the foreign exchanges. At the same time there is no doubt that Stock Exchange activity, both here and in New York, has been responsible for a higher level of money rates than would otherwise have been the case. The Bank of England's rate, hitherto $\frac{1}{2}$ per cent. below New York Bank rate, is now $\frac{1}{2}$ per cent. above it, and this week's increase in the Bank of England rate is likely to make itself felt in Wall Street as much as in London. Higher money rates here may perhaps involve some forced liquidation, in so far as speculation has been financed on borrowed money. There is nothing in the present situation, however, which need cause holders of high-class investment stocks a moment's worry. The immediate effect of the rise in Bank Rate was a fall in gilt-edged securities, and although there may be a certain amount of scattered selling, it is unlikely that anything in the way of general weakness will set in.

Underground Dividends.

As expected from the satisfactory increases in traffic receipts, the dividends of the Underground group, like the Metropolitan to which we referred last week, have been generally advanced. At the same time in many cases appropriations to reserves have been increased. The ordinary dividend of the holding company, the Underground Electric, is raised from 5 per cent. to 7 per cent., while a considerable addition is made to the carry forward. This increase is very satisfactory when it is recalled that the maiden dividend on the ordinary shares of $1\frac{1}{2}$ per cent. was paid in 1926. The deferred stockholders of the Central London Railway receive 6 per cent. for 1928, while the L.G.O.C. increases its reserve allocation from £345,000 to £390,000, and its dividend from 7 to 8 per cent. This group, to an even greater extent than the Metropolitan, is a purely London traffic organisation, and is

therefore likely to benefit the more from the development of Greater London. The yield on the ordinary shares of Underground Electric, on the basis of the dividend just declared, is about £4 12s. per cent., but an appreciation in capital value, with larger future dividends, is almost assured. The ordinary stock of the City and South London and the deferred stock of the Central London both yield about £5 15s. per cent. The prior charge stocks of these companies also constitute satisfactory "safety first" investments. As examples we may give the 4 per cent. debentures of the Central London line, a trustee security, yielding £5 per cent., and the 5 per cent. preference stock, 1891 or 1896, of the City and South London which gives a return of £5 8s. per cent.

A Promising Industrial.

It is reported from Australia that the Distillers Company has two important developments in hand. A subsidiary concern is to be formed to distil whisky at Geelong at a distillery which is already under construction, and another subsidiary, Australian National Power Alcohol Company, is to produce alcohol from molasses by a new process. An agreement has already been concluded with the Shell company for the marketing of this spirit. The latter announcement is particularly interesting as reflecting the attention this concern is giving to the industrial spirit side of its activities. The wide field for this commodity and the big expansion in the company's trade should prove profitable to its shareholders in the future. At the same time its whiskies, which include such brands as Johnny Walker, Dewars, and John Begg, are likely to enjoy a steady demand. There is, of course, the possibility of political interference with the industry at some future time, but the world-wide interests of this particular concern would minimise its effects. Distillers Company, Ltd., has been soundly managed on the financial as well as the commercial side, and its assets are written down to a low level. In spite of a steady growth in profits, the dividend on the ordinary shares has been maintained at 20 per cent. On the basis of this dividend, the ordinary shares can be bought to yield £5 3s. per cent., while the $4\frac{1}{2}$ per cent. mortgage debentures, redeemable at the company's option, which are unusually well secured, give a return of £5 7s. per cent.

Another Reconstruction Loan.

Arrangements have at last definitely been made with regard to the new Roumanian Loan, projected for some time past, which is raised to facilitate the stabilisation of the leu. It will bear interest at the rate of 7 per cent., and will be issued at 88, the British portion amounting to £2,000,000 out of a total of £20,000,000. We have from time to time commented on the attractiveness of similar reconstruction or stabilisation loans which have been floated in recent years. While it is impossible entirely to eliminate the element of risk from foreign investments, it is reduced to a minimum in these securities, and is, of course, balanced by the very satisfactory yields. Definite revenues are generally set aside for the service of the loan, and in many cases they were issued under the auspices of the League of Nations, every effort being made to achieve the greatest security. At present prices the German 7 per cent. sterling bonds, finally redeemable 1949, yield £6 9s. per cent., while on the Austrian 6 per cent. bonds, which are finally redeemable in 1943, a return of £5 16s. per cent. is obtained. The Belgium 7 per cent. Stabilisation Loan, which is perhaps particularly attractive in view of the economic position of that country, gives a yield of £6 7s. per cent. This loan is finally redeemable in 1956.

A company has been registered at Bourgas under the name of Petrolé Européen, with its head office in Brussels, and having a capital of 30,000,000 Belgian francs, for the exploration of Bulgarian oilfields. The company has obtained a concession covering an area of 145,000 hectares around Bourgas, Varna, Rasgrad, Svishtow, and Sofia.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British-Bulgarian Chamber of Commerce of Sofia, dated January 31.]

Heavy snowfalls in the last few days caused an almost complete interruption to communications, a circumstance which is adding to the usual slackness of trade at this season. Important quantities of grain have been concentrated on railway stations and other centres of communications, where they remain unsold owing to the unsatisfactory trend of prices abroad. Tobacco sales are much less active than in December, and the export of eggs is at a standstill.

This state of things is having an unfavourable effect on sales of retail traders and there is much probability of a temporary delay in their payments to the wholesale dealers. Demands for prolongations of bills falling due in February are very likely to increase, but this circumstance is not necessarily indicative of a change for the worse in the general economic situation.

As a consequence of satisfactory business done last season by the local textile and iron industries, their orders for raw materials abroad continue to be active. Owing to easier credits and to better money conditions which are likely to go on increasing, it is to be expected that obligations entered into will be met punctually.

Treasury receipts continue to make a better showing than last year.

Weather conditions are reported to be favourable to the winter sowings all over the country.

Imports and Exports.

The trade balance during the month of December is closed with a deficiency of 57,318,146 leva, while during November the deficiency amounted to 102,000,000 leva. The exports during December amounted to 30,988 tons for 534,924,000 leva, and there were imported 28,642 tons for 529,424,000 leva, while during November there were exported 37,246 tons for 597,244,981 leva, and merchandise imported amounted to 38,310 tons for 699,409,758 leva.

The trade balance during 1928 is closed with a deficiency of 812,958,925 leva, while in 1927 it was closed with a surplus of 510,000,000 leva. The exports amounted to 6,376,413,000 leva, and the imports aggregated 7,192,371,000 leva, while in 1927 the exports amounted to 5,684,201,000 leva and the imports to 6,173,660,000 leva. The large deficiency is accounted for by the decreased exports by 97,871 tons amounting to 304,789,000 leva and by the increased imports by 46,697 tons aggregating 1,018,711 leva. The increase in the imports is due mostly to the increased imports of agricultural and industrial machinery.

Of the goods exported during 1928 the largest decrease as compared with 1927 is to be noticed in: Wheat, 19,090 tons for 154,000,000 leva; barley, 40,290 tons for 265,000,000 leva; maize, 81,310 tons for 279,000,000 leva; flour, 6,361 tons for 81,000,000 leva; eggs, 1,846 tons for 92,000,000 leva; while the increase is in the exports of cocoons by 313 tons for 107,000,000 leva, sunflower seed by 8,480 tons for 66,172,000 leva, oil cake by 1,316 tons for 46,000,000 leva, etc.

Mineral Concessions Reservations.

In 1928 there were 852 reserved perimetres, 77 of which were the Government's. The largest number are perimetres reserved for petroleum (196), followed by the reservations for coal, copper, etc. Much interest is shown in establishing the percentage of petroleum contained in various tracts of land near Varna and Bania Kostenetz. It is also reported that a few days ago there were discovered in the mountains near Stanimaka chrome ores covering an area of 20 square kilometres. Work on silver, lead, and coal mines exploited by private individuals or societies is progressing with apparently satisfactory results.

Tenders Invited.

The Administration of State Railways, Construction Section, is inviting tenders for the supply of 100 tons of bar-iron for concrete work. The adjudication is to be held on March 5. The estimated value is 650,000 leva. Tenders are also invited for the supply of complete 600 mm. narrow gauge railway and the necessary accessories, such as rails, fish plates, sleepers, screws and bolts, etc. The estimated value is 1,400,000 leva.

Miscellaneous.

A joint stock company has been recently formed in Bulgaria for the manufacture of threshing machines. The company, however, having no model of their own for such machines, is trying to obtain one from a German manufacturer, who in exchange will supply the Bulgarian company with all iron parts which cannot be manufactured locally. It is also stated that the company will manufacture tractors to go with the threshing machines instead of locomobiles or other engines.

The receipts of the Bulgarian State Railways in December show a decrease as compared with November, but still show an increase as compared with December, 1927. Receipts of December amounted to 93.7 million leva, against 110.2 million leva for November and 80.5 million leva for December, 1927.

The production of coal of the Pernik Mines in 1928 amounted to 1,183,569 metric tons, of which 1,104,778 metric tons were sold. Comparing the 1928 output of coal by these mines with 1927, the increase amounted to 166,955 tons and the placing to 144,644 tons over that of 1927.

On December 31, 1928, the notes in circulation amounted to 4,173,017,000 leva, showing a slight increase over the notes in circulation for the period from December 15 to December 23, 1928.

Receipts of the State Treasury for December show a decrease as compared with November. In December the regular receipts amounted to 621,969,000 leva, while in November they were 677,515,000 leva. Receipts of the State Treasury from April to the end of December aggregate 5,397,060,000 leva, while during the corresponding period of the last Budgetary year they amounted to 5,050,120,000 leva. There is consequently an increase in the present Budgetary year of 34,940,000 leva. This increase is due to receipts from direct and indirect taxation, communications, etc.

The deposits with the Postal Savings Office during the month of December aggregated 31.2 millions of leva, against withdrawals of 26.7 millions of leva. In December, 1927, deposits amounted to 23,600,000 leva, while in November deposits amounted to 40,700,000 leva, and the withdrawals aggregated 28,100,000 leva.

THE DEVELOPMENT OF SALONIKA.

Among the projects which the Greek Government has in view is the development of the port of Salonika. The Commission of the Free Zone has drawn up a scheme providing for the extension of the port to the west and for the construction of three new docks with two jettys, bringing the total extent of new quays to almost 2,700 metres. These works will enable the installation of silos along the quay and will facilitate unloading into the warehouses. The total cost of this first series of works is estimated at 300 million drachmæ, which the Commission proposes to raise by means of a loan. It is anticipated that the construction will be begun this summer.

The extraordinary meeting of the shareholders of the Banque Franco-Serbe has approved the reconstruction scheme submitted by the board. The share capital will be reduced from 20,000,000 francs to 2,000,000 francs and will then be raised again to 20,000,000 francs by the issue of 36,000 new shares ranking *pari passu* with the old ones. Under reserve of the preference rights according to the existing shareholders by the Statutes, the new shares will be taken up by the Ottoman Bank for the most part, the Banque de Paris et des Pays-Bas, and the Société Financière d'Orient.

Engineering Topics

By **G. B. B.**

Machine Tools.

There is a growing opinion among users of machine tools that they are more elaborate than is necessary. Machines tools, and machine tools designed for special duty at that, are absolutely necessary, and there is no comparison between the efficiency of a modern drilling, slotting, or milling machine and that of the machines used twenty years ago. The necessity for development was welcomed. Now the question arises whether it has not gone far enough in at least one direction—that of elaboration. Engineers are, and for some time have been, quite ready to encourage machine tool makers to turn out lighter, stronger, and more rapidly running machines. If the present day slotter will cut a certain key-gate in, say five minutes, engineers will welcome one that will do the work in half the time; if a miller for cutting out certain parts required four square feet of floor space, and stands four feet in height, engineers will welcome one of the same height that requires only three feet of floor space. Countless instances of what is meant could be given, but there is no need to labour the point.

Development in the laudable direction of improved efficiency and of reduced size and weight for a given output will always be encouraged by engineers, but it appears hardly to be in those directions that machine tool workers, with certain notable exceptions, are travelling at present. There seems a tendency to add special attachments and mechanical means for obtaining almost mathematical accuracy, all of which means a vastly increased first cost, regardless of the fact that in many cases these extras will seldom be used in practice. This increased cost naturally adds to the overhead expenses, and so renders ordinary operations far more costly than they would be were the work carried out with simple tools.

Some little time ago an authority on railway shop practice said much the same thing concerning American machine tools, from which one may gather that the tendency mentioned is not confined to British makers. It is certainly possible, when selecting ordinary shop tools, to go too far in the direction of purchasing over-refined units, whether they are intended for railway, motor or general engineering shops. Just as in office practice, where it is possible to install special indexing and correspondence filing systems that cost more than they are worth in regard to the work they have to do, so in the world of engineering it is possible to purchase specially fitted tools, when ordinary lathes, planers, or shaping machines would do the work.

Many machines are only used, perhaps, two or three times a day, and an expert view is that in such cases the better policy would be to transfer an ordinary and, perhaps

even old-fashioned machine from a larger shop. If, however, it is decided that a new machine should be bought, a low-priced one of simple construction or a second-hand machine even, if in reasonable condition, will help in such work being carried out at a low price.

In general works, as well as in railway shops, it is unnecessary to work with micrometers or even within close limits, and so, even, for the most important shops a tool of moderate price will meet most, if not all, requirements. The situation, as will be seen, is in such cases, very different from that obtaining in mass production shops, where thousands of precisely similar parts, machined to exact sizes, are turned out every day from the machine shops.

In connexion with these latter establishments the specialist tool is essential, as it actually reduces the cost of production by its extreme exactness. It is in connection with the general shops that the argument against over-elaboration holds good, and for use in these, simple tools, provided they are rigidly and strongly built, have adequate bearing surfaces, steel gears where necessary, and all the essentials of a first-class tool without refinement of detail, will be found to answer every ordinary purpose.

Cost of Building.

A gradual reduction in the cost of house building in this country has been noticeable during the past two years, and whilst the average cost of a parlour house with three bedrooms was £492, by last September it had dropped to £429. It is to be hoped that the cost will continue to fall, but in connexion with this a writer, in discussing reduced prices, states that to claim or suggest that building prices are regulated by the amount of Government subsidy for cottages is almost ridiculous. By the violent fluctuations which its administration is permitted to cause in the building trade, the Government subsidy does affect and tend to disorganise the industry and in that way to affect the cost; but the claim that it is itself a factor of importance in influencing the cost of building is entirely without foundation. It is only natural that when writing on this matter the subject of subsidy should receive attention, and undoubtedly the opinion amongst the best informed in the trade is that it is a bad thing and always has been a bad thing. It is to be hoped that before long the building industry may be relieved from the causes of violent fluctuation, and under normal conditions may be free to secure the utmost efficiency and economy in its service to the public.

A 380 Ton Excavator.

I am informed that Ruston and Hornsby, Ltd., of Lincoln, recently received an order from the London Brick

THE P.G. MACRIS TRADING & INDUSTRIAL CO. Ltd.

18, LYCOURGOU STREET, ATHENS, GREECE.

Telegraphic Address: "Pimacricia," Athens.

Branch at Piræus: 48, Notara Street

GENERAL MERCHANTS & COMMISSION AGENTS

General Agents for the Shell Company (Hellas) Ltd.

Over 100 Agencies throughout Greece.

Special Branch for Commission Business.

Contractors to the Greek Government for the construction of a Complete System of Roads throughout the Country.

Co., and Forders, Ltd., for a giant electrically operated shovel which, it is said, will be the largest excavator employed in any brickyard in the world. The machine will weigh approximately 380 tons and will carry a $7\frac{1}{2}$ cubic yard bucket and a jib 90 ft. long. It will be capable of lifting 200 tons of clay per hour, and this with their other resources should enable the brickworks to turn out about 200,000,000 bricks per annum. Nothing approaching this output has yet been made anywhere in the world.

Turkey's Railway Programme.

One of the outstanding problems with which the present régime in Turkey has been confronted has been that of the development of railway communications. The work of reconstruction after 1922 was considerably simplified by the fact that a large part of the railways in Turkey was in the hands of private companies, but with every allowance for that fact it is impossible not to admire the efforts of the Government which, between 1924 and 1927, managed to construct 550 kilometres of new lines at a cost of £T30,000,000. In the same period the private companies constructed 66 kilometres of new lines, their extensions being Samsoun—Bafra and Iiidja—Palamoutlouk. At the present time Turkey has 4,837 kilometres of railway lines, of which 2,250 kilometres are operated by the State, while 2,050 kilometres of lines are under construction, all but fifty of which are being built by the State. The lines being constructed by the Government are (the figures representing kilometres):—Amassia to Sivas (270), Fevzi-Pasha to Diarbekir (500), Irmak to Eregli and branches (380), Kaiseria to Sivas (200), Kutakia to Balikessar (250), and Ulu-Kishla to Kaiseria (200). The total of 2,050 kilometres is made up by the Derbessi-Nissibin branch (50 kilometres) which is being constructed by the Compagnie des Chemins de Fer Cilicie-Nord-Syrie. The completion of this programme will give Turkey a kilometre of railways for every 100 square kilometres instead of 0.52, or to put it in another way for every 1,000 Turks there will be .5 kilometres as against .315.

A Facsimile Telegraph System.

The day when the transmission and reception of telegraph messages in facsimile, instead of by the Morse system, will become the normal procedure is brought appreciably nearer by the success that has attended the experiments now being carried out by the research department of the Marconi Company at the Somerton Beam Receiving station. During a recent week-end a number of pictures and handwritten messages were flashed across the Atlantic at high speeds on the short wave Beam circuit in operation between New York and Somerton, Somerset, and an important step is thus taken towards the solution of the problem of rapid facsimile transmission.

Practically ever since the inception of the telegraph, the problem of picture transmission has fascinated electrical engineers. As early as 1842 Alexander Bain invented a highly ingenious system, and many others have followed more or less in his footsteps, with widely varying results. The first telegraphic picture service opened to the public, however, was that which has been in commercial operation between Radio House, the Marconi main telegraph office in London, and New York since May, 1926. Some hundreds of news pictures, cartoons, fashion plates, signatures, cheques, and plans have been transmitted commercially across the Atlantic by this system.

The unequalled working speed of the Marconi short-wave Beam telegraph services has now opened the way to further revolutionary achievements in facsimile transmission, and the Marconi Company has during the last three years been developing its system, adapted specially to short wave circuits, to give far higher speeds and clearer reproduction than can be obtained by any other method. This system is, in fact, designed to replace Morse working on busy circuits and to make it possible for Marconigrams to be received in the actual handwriting of the sender. When such a system is universally adopted it is expected that it will reduce the telegraph operating costs with the result that facsimile telegrams instead of

costing more than ordinary telegrams should actually cost less.

Description of the System.

In order to produce a system commercially applicable to everyday telegrams, the Marconi engineers deliberately scrapped practically all that had previously been done in the field of picture transmission, and started afresh. The result is that their system differs greatly both mechanically and electrically from any other, and while there are certain difficulties still to be overcome before practical perfection is attained, they are now able to transmit two images each 8 in. by 10 in. in less than twenty minutes. These messages have the advantage of unimpeachable accuracy and the possibility of including facsimile matter of all kinds in the telegrams transmitted—a particularly valuable feature when complicated columns of figures and diagrams are required to be sent.

The method of operation of the Marconi system is, shortly, that the image to be transmitted is placed on a cylinder and is scanned in a helical line by a fine spot of light. According to the light and shades of the image a certain amount of light is reflected from the image on to the photo-electric cell. The internal electrical resistance of the cell is varied with the varying intensity of the light, and these electrical variations are made to modulate the wireless transmitter. At the receiving end the wireless signals are detected in the usual manner and are made to work an electrically controlled light cell which shuts off or passes light in synchronism with the received wireless signals. This varying source of light is focussed in a spot which moves along a helical line over a sheet of commercial bromide photographic paper upon which a faithful copy of the transmitted image is recorded.

From the operating point of view, the most important novelty about the Marconi facsimile gear is that it runs continuously. It is not necessary to stop the machinery every time a new picture is put on the transmitter or taken off the receiver. As soon as one message is finished another can be placed on the cylinder and transmission begins at once. This point alone effects a great economy in obviating the running up of the machinery and synchronising the two ends of the circuit separately for every picture. In addition, no preparation is needed of the message to be transmitted, and the reception is perfectly direct and can be checked as it is taking place, enabling faults to be instantly detected and corrected.

As the apparatus is ingeniously arranged to transmit two pictures at once, in commercial working one channel could be kept busy on "ordinary" telegrams and the other reserved for "urgent" messages, thus providing a valuable commercial advantage. This new Marconi facsimile system is in every way suitable for the transmission of pictures over landlines as well as by wireless, the speed of transmission with which pictures can be transmitted depending on the quality of the landlines.

MARKET FOR FOUNTAIN PENS IN IRAQ.

Fountain pens have been known in Baghdad for 25 years, but until 10 years ago the trade was very limited. The trade in refillable pencils is likewise a development of the last 10 years (says the American Consul at Baghdad, Mr. John Randolph, in a recent report). Iraq's Customs publications do not show as separate items the quantities or values of fountain pens and pencils imported into the country, but one of the leading Baghdad merchants estimates that the value of these products sold in the Iraq market totals £1,300 annually, £800 worth being imported each year from the United States and the remainder from Europe. The better quality fountain pens sold in Iraq are of ordinary black rubber composition, with one or two gold or silver bands. The better quality refillable pencils are either gold or silver or gold or silver plated.

Fountain pens retail at 10 rupees each, including Customs duty of 15 per cent. *ad valorem*. Cheaper fountain pens are also sold in Baghdad and retail at 2 rupees to 5 rupees. Gold or gold-plated refillable pencils or silver or silver-plated pencils retail at varying prices, being generally between 8 rupees and 20 rupees each, including Customs duty of 20 per cent. *ad valorem*. Cheaper automatic pencils are also sold in Baghdad and retail at 1 rupee to 3 rupees.

Near East Markets

SUDAN GUM EXPORTS IN 1928.

Messrs. Boxall and Co., of Khartoum, report as follows under date January 26 :—

Arrivals of new crop gum in Kordofan Stations (including Tendelti) amounted during the last ten days of December to 580 tons, as against 791 tons for the same period last year, i.e., a decrease of about 26 per cent., whilst the total new crop gum which came in during November and December taken together amounted to practically the same thing during both years.

During January arrivals totalled 1,612 tons, as against 2,300 tons in 1928, or a shortage of 30 per cent. The total shortage in new crop gum up to this date is, therefore, about 690 tons compared with last season.

Taking El Obeid as the standard, the market opened at 3d. less than the closing price on December 20, fluctuated within the limits of 5d. up to the 27th, when prices fell to that extent. They then remained steady up to January 5, whilst between that date and the 12th a further fall of 1s. 6d. per cwt. occurred. Prices remained practically stationary at that level up to the 26th, on which date a slightly firmer tone prevailed, prices closing at 2d. more. The total fall between December 20 and January 26 amounted to 2s. per cwt. Demand was very good from practically all quarters—the exception being the United Kingdom.

As will be seen from the following export figures 1928 was a record year, 22,778 tons having been exported, or 1,518 tons more than during the previous year. It is noteworthy that France imported as much as 1,500 tons, or 66 per cent. more than in 1927. The U.S.A., Japan, Norway and Sweden, and British India are amongst the countries which took more gum—the total exports to those markets being about 1,000 tons more in 1928, whilst, on the other hand, Great Britain, Germany, Spain, Holland, and Australia took together about 1,000 tons less than in 1927.

	1927.	1928.
Great Britain	4,402	3,986
America	4,358	4,781

have greatly increased since the War, the use of motor cars and petrol engines has not yet been generally extended to the rural districts, with the consequence that the peasants have not become accustomed to the use or repair of motors or general machinery.

Official registration figures of tractors in use in Roumania are not available, but local dealers estimate that about 5,000 are in use at present. About 80 per cent. of them are of American origin, with the remainder of German, Czechoslovakian, Austrian, and Italian make.

Wheel tractors are most used for the conventional ploughing, mowing, harvesting, and threshing. Their use for belt work or hauling purposes on the farm is as yet little known. The most popular ploughs and harrows for use with tractors are of two or three-mould boards with 12 disks at 16 inches. Motor ploughs are rarely seen. It is considered more economical to employ draft animals for the less urgent tasks of the farm. Timber production, transportation, and road building comprise tasks which are not so urgent as the usual ploughing, mowing, and harvesting, and which may be done at leisure by making use of the great supply of cheap labour.

Recently a number of tracklaying tractors have been introduced for hauling purposes by several of the more important oil companies. It is believed that with the revival of industry, as a result of the stabilisation of the currency, an active market may be developed for this type of tractor in the lumber and oil industries, which are the most important in Roumania after agriculture.

Kerosene and gas oil are the principal fuels used. Fuel substitutes are almost unknown, and steam tractors, which had some sale before the War, are gradually disappearing. The cause of the extended use of oil products is quite patent, for Roumania is one of the most important oil-producing countries of the world. Kerosene and gas oil may be obtained from Roumanian refineries at very reasonable prices and in amply sufficient quantities.

Roumania possesses practically no tractor industry and, therefore, all that are used are imported. No statistics are available showing the number of sources of origin of the tractors imported prior to the War. Soon thereafter, German and Austrian tractors predominated, perhaps because the country was under an intensive agricultural exploitation by the Central Powers during the War, and they brought in a considerable number of German and Austrian tractors, which were left behind upon their retirement from the country.

At present a preference for medium-sized tractors is shown. Most of the tractors in use are of 20 to 30 horsepower. Local agricultural experts, however favour the introduction of heavier machines, having 40, 50 and even 80 horsepower. The experts base their claims on the fact that the hard, weedy soil requires a heavier machine than is now used. Tractors for use on small farms must necessarily be purchased by co-operative societies, because the poor economic condition of the peasant will not allow the purchase of one for exclusive use. Therefore, a tractor to be used by a co-operative society must of necessity be of sufficient power to do the work in the most expeditious manner possible.

The Roumanian Government has shown a disposition to encourage the use of tractors, as there is a realisation of

MARKET FOR TRACTORS IN ROUMANIA.

Roumania offers a promising market for the sale of tractors and tractor attachments and implements, and the country is well adapted for the use of them, from the points of view of topography, climate, altitude, and the nature of the crops, although certain factors militate against the use of tractors (says the American Consul at Bucharest, Mr. J. Rives Childs, in a recent report).

Outside the principal urban centres of the country, trained mechanics are few, and of even greater scarcity are service stations for the repair and overhauling of mechanical equipment. Although the sales of automobiles

the possibilities of the increase of production by the use of motor power in agriculture. So far, the Government has been able to accomplish little of practical value because it has lacked appropriations to carry on the work in a satisfactory manner. The Ministry of Agriculture, however, has published literature advocating the use of tractors.

The purchase of tractors is actually encouraged by the agriculture associations in Roumania, of which the most important are the agricultural syndicates and the peasant co-operatives. The former comprise associations of large landowners, and the latter, the small farmers. These organisations are keenly interested in the development of production and, consequently, in the encouragement of the use of motor power in farming.

The first tractor demonstration and competition in Roumania was organized by the *Sindicatul Agricol Ialomita* in 1913, at Ciulnita. The War interrupted further demonstrations, but a competition was organised in 1920 under the auspices of the Ministry of Agriculture. At present demonstrations are held at irregular intervals under the auspices of the agricultural syndicates and take place usually at the time of the agricultural congresses.

In the years following the War, when the agrarian reform was being applied, the market for tractors was demoralised. Now that the reform has been completed, a slow but inevitable adjustment is taking place. Peasant co-operatives are undertaking to purchase tractors for the use of the small farmers thus associated together. At the same time, former large landed proprietors are finding the use of tractors indispensable now that peasant labour is not so readily available as before the reform.

These factors have not been given free play, however, owing to the abnormal conditions brought about by the War, which upset the economic balance of the country. The acute money and credit stringency, which finds illustration in the fact that banks are charging from 18 to 24 per cent. on well secured loans, has made it difficult for peasants to purchase tractors on credit.

Approximately 1,000 tractors were imported into the country in the first 10 months of 1928, as compared with approximately the same number in 1927. This relative limitation of the market has been due to a poor crop and to the adverse economic conditions in general. However, with the normalisation of the economic situation there should be a rapid increase in sales.

NEAR EAST MARKET REPORTS.

The current issue of the *Monthly Review* of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

The cotton season has followed its normal course. Arrivals in Alexandria have been heavy, and although exports have been above the average, available storage space has been fully utilised. Apart from one serious break during the quarter, in sympathy with American cotton, the market has been steady. Sakellaridis has shown considerable strength, in spite of a slackening in demand. The price to the grower has, on the whole, been a fair one, and at least 90 per cent. of the crop has been already marketed in the interior. Ashmouni has been in steady demand, and the record crop of this variety is rapidly moving into consumption, a fact which is not surprising in view of the quality and staple of the cotton and its comparatively small premium over Americans. Other sorts have been fairly abundant, and among them "Nahda," which is a very attractive brown cotton, has been eagerly sought after at remunerative prices. Pilion has also been in demand and good stapled lots have found keen buyers, but Moorad cotton has been difficult to place, as, at the prices asked, it does not seem to be sufficiently attractive to spinners. The undertone of the market continues strong and, with very little encouragement from outside, higher prices might materialise. The advent of the Sudan Sakel crop, which promises well, has had a steadying influence, as much hedging has been done; but as all sales have found purchasers without any great effect on prices, it is thought in some quarters that the world will be able to take the present crop of Sakels, both Egyptian and Sudan, around present prices.

The cotton seed market has been strong and outside buyers have shown interest in the raw product, oils, and cakes. In spite of the record crop of cotton, the available supplies of seed will not show a very great increase, as the extension of planting in Upper Egypt

will absorb a large quantity of the excess production. Local mills have been working full time and contracts for oil have been booked for some distance ahead. The position in this commodity is recovering and the movement has been normal. During the quarter, little of outstanding interest has occurred in the cotton goods market and business was evenly spread. The market has been active, with prices steady. The demand for Manchester goods has been satisfactory, a great part of the stocks having been absorbed. Arrivals have been regular, but quantities afloat are moderate and quotations for forward deliveries have been uneven, although the market shows a tendency towards further improvement. Little business has been transacted in any of the varieties of imported rice, while the demand for Egyptian rice was limited. Spot supplies are ample, but holders are not pressed to sell.

Owing to a lack of demand for export, the market for cabots has been quiet. Stocks are down and holders are firmly of the opinion that, as soon as the demand revives, spot prices will advance sharply. The gunnies market has been quiet throughout the quarter, with prices irregular and the spot demand poor.

The Sudan.

The anticipated improvement in trade in the Sudan has not yet attained the expected level, and conditions generally during the quarter have been dull. Purchasing power is somewhat low, and in this direction there are few signs of improvement. The final results of the dura crop are said to be disappointing and, although the importation of this commodity will not be necessary, the purchasing power of the natives is likely to be adversely affected by the unsatisfactory results. The export market has been dull. Sesame has been in good demand, but, owing to large supplies, prices have been low. The quality is satisfactory and quotations, which are said to have reached "rock bottom," are at present £E18 per ton for white, f.o.b. Port Sudan, and £E17½ for red. Little is being exported at the moment, as shippers are holding back until the demand from Egypt begins. Gum is expected to yield an average crop of about 20,000 tons, and, although arrivals are fairly good, prices are falling. Present quotations are 38s. 6d. per cwt. for natural and 40s. per cwt. for cleaned c.i.f. United Kingdom.

Latest reports concerning the cotton crop are satisfactory. Picking has commenced and the estimated yield of Sakel has been put at 450,700 kantars for the Gezira crop, over an area of 131,351 feddans; 63,500 kantars from Tokar, over an area of 55,000 feddans; 54,000 kantars from Kassala, over an area of 27,700 feddans, whilst other varieties are expected to yield 7,350 kantars over an area of 2,817 feddans.

The import market has not shown much activity except, perhaps, in the case of coffee, the stocks of which are being readily sold. Stocks of tea are high for ordinary requirements, and the demand for commodities generally is poor, owing to the low purchasing power.

Palestine.

At the beginning of the period under review, retail trading in Palestine was quiet, but a gradual improvement became manifest as the winter approached. This movement, together with the advent of the tourist season, has engendered a feeling of optimism in regard to the coming months. Distress has occurred among certain sections of the farming community, owing to the unsatisfactory outturn of the 1928 crops, but signs of relief are visible, as there have been excellent rains in all districts. In the Colonial goods market, sugar has shown the most activity, although prices have exhibited a downward tendency, due to heavy stocks. The demand for coffee and rice was small. Owing to the failure of the local crop, wheat has been imported from America and North Africa for milling and it is anticipated that importation will continue until the local harvest is reaped in the coming August. Local millers have suffered somewhat from competition with a cheap brand of flour, which has proved to be of inferior quality and the local product is again coming into favour. Australian flour has also been imported.

In the textiles market, business in cotton goods has been normal and trade in woollens satisfactory. Dealings in silk materials, however, have been quiet, although prices remain unchanged.

The shipment of oranges began at the end of October, and up to January 9 624,426 cases had been exported. It is anticipated that the season's crop will exceed 2,000,000 cases. Prices f.o.b. Jaffa have ranged from 10s. to 12s. per case since the opening of the season, while prices realised in the United Kingdom for the first shipments there only amounted to 10s. to 14s. per case, and during a period of three weeks in November they fell to 7s. and 11s. 6d. per case, which caused serious losses to exporters. It was decided, however, to suspend shipments for a fortnight, and the price thus rose to 10s. to 21s. per case, but it has since declined gradually to 14s. and 17s. per case.

A Commercial Agreement has been concluded between the Egyptian Government and the Government of Palestine, by which the Egyptian Government agrees, on conditions of complete reciprocity, to grant most-favoured-nation treatment to agricultural and industrial produce of Palestinian origin imported into Egyptian territory, whether intended for consumption in Egypt, for re-exportation, or for transit.

The Banca Commerciale Italiana and Greca, which was recently formed by the Banca Commerciale Italiana of Milan, announces the opening of offices at Athens and Piræus. Other branches are shortly to be established at Salonika and Kavalla.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 6:—

Egyptian Futures.

Sakel Contract.—The general conditions governing the outlook in this market show no radical change on the week. A further decline in values has to be recorded, and this has had the effect of causing increasing uneasiness amongst the "Bull" clique. So far, however, we have had no signs of a general unloading movement in Alexandria, although locally a fair amount of stale long cotton has been liquidated, especially during the past two sessions. At a meeting of the Bolton Master Cotton Spinners' Association yesterday it was decided by an overwhelming majority to ballot the members on the question of short time working, and to recommend them to vote in favour of restricting production by $33\frac{1}{3}$ per cent. for two months. The result of this will be known in a week, and it is generally anticipated that it will be carried and come immediately into operation. This action has been forced by recent trade conditions, and is directly attributable to the uneconomic basis to which fine cottons have been manipulated and held since the commencement of the season. As a result of the week's fluctuations we have again closed somewhat in comparison to the ruling values of other varieties; even so, with trade conditions as at present, Sakel premiums are quite prohibitive to the majority of consumers, and we cannot anticipate consumption reverting to a normal figure without a further material readjustment. The main portion of the liquidation that has taken place has fallen on the old crop positions; Novembers have been consistently supported by straddlers buying here against sales in Alexandria; the current differences have been running between 40 and 50 points. We have previously pointed out the attractiveness of this operation, and would advise those interested leaving limits in hand round the above figure. Values on the week show the following alterations:—21 to 5 down for old crop, unchanged to 10 up for new crop positions.

Upper Contract.—Although little outside interest has been shown in this contract during the past week, the undertone has been quite steady and very little change in the level has to be recorded. Trade support continues to be disappointing and business in actual, either spot or for shipment, has been very slow. With American values still inclining to the easy side, we are not very optimistic regarding the outlook, and consider that sales on any appreciation from the ruling level are to be recommended.

Egyptian Spot.

A further falling off in the inquiry has taken place during the past week. During the first few days there appeared to be a disposition for prices to harden somewhat after the sharp drop which had occurred. Renewed weakness in Sakel futures during the past few days caused a further relapse, however. Uppers and Pillion, helped by the comparative steadiness of American cotton, have shown a slightly firmer front. The offtake for Sakel has shown no improvement, in spite of the drop in values. Organised short time in the Egyptian section of the Lancashire spinning trade is not likely to help matters, and this is now regarded as a certainty.

The local inquiry has produced little of interest. Sakel, at from pass March down to 12d., has been in scattered request, and apart from this only an odd inquiry here and there for cotton at from 100 to 150 on has been met with. Uppers have been distinctly quieter and the range of inquiry tends to narrow on account of the very keen competition experienced. This week 10 off to 10 on has been the most popular market. All the higher-priced cottons have been studiously neglected. Pillion has met with less interest in spite of the fact that this cotton looks remarkably reasonable as compared with other growths. When trade shows any signs of a revival we feel sure that Pillion will find many friends.

Sudan Sakel has moved off very slowly, buyers preferring to wait for the new crop. Three thousand five hundred bales were tendered on January 31. White, Nahda, etc., have been neglected. C.i.f. business has been stagnant, but forwardings to the trade last week again reached a presentable figure, at 7,848 bales Egyptian and 1,255 bales Sudan.

Estimated spot sales, 1,200 bales Egyptian and 210 bales Sudan. Quotations of Sakel show a net decline of 25 points on the week; that of Upper and Pillion are 5 points dearer. F.G.F. Sakel to-day, 18.15d. F.G.F. Upper to-day, 11.92d. F.G.F. Pillion to-day, 12.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 31, state:—

Since our last report the futures market has been very active but with a tendency very much weaker. The week's summary of price movements is as follows:—Sakellaridis: March, 36.89 dollars, 1.36 dollars down; May, 37.32 dollars, 1.26 dollars down; November, 37.45 dollars, 1.03 dollars down. Ashmouni: February, 21.83 dollars, 0.88 dollars down; April, 22.45 dollars, 0.80 dollars down; June, 22.95 dollars, 0.73 dollars down; August, 23.25 dollars, 0.75 dollars down; October, 23.48 dollars, 0.84 dollars down.

Sakel.—We have had a series of weak markets, due to some liquidation by the long interest, this being induced as much by the reaction in New York as by the almost entire absence of demand from consuming centres.

Although we are now well on in the season, stocks continue to accumulate, and the demand, instead of developing, grows less and less. The situation can hardly be described as promising, and the only thing which can relieve it is a demand on the part of the trade, which the latter, we understand, are in no position to provide unless Sakel prices fall to levels much more in line with the prices of other varieties of cotton.

The Sakel/Uppers straddle (March/April) this week stands at 1,444 points, against 1,500 points last week and 877 points at this time last year.

Uppers.—This market also has been depressed, due principally to sales by the speculative interests as hedges against their long positions in the Sakel market. The trade demand for Uppers, although more active than for Sakel, has not been sufficiently large to absorb the quantity of speculative sales. At one time February Ashmouni actually stood at only about 2 dollars over March New York, the lowest parity this season.

The Ashmouni/American straddle (February/March) this week stands at 214 points, against 263 point slast week and 600 points at this time last year.

The week's receipts amount to 130,000 kantars, against exports 201,162 kantars; the stock in Alexandria stands at 3,457,992 kantars.

Spot.—We have had another rather quiet week at Minet el Bassal and only a moderate business has been done in spot cotton. Sales amount to about 15,400 bales, of which we estimate 1,950 bales

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

Sakellaridis, 11,950 bales Ashmouni and Zagora, 1,000 bales Pilion, and 500 bales other varieties.

Sakellaridis: Is neglected and demand almost nil. A retail business has taken place covering the grades up to Good. Above Good, no business has been done. Spot differences are without much change.

Ashmouni and Zagora: Have been in better demand and a good business has been done in all grades. Spot differences are generally rather dearer.

Pilion: Has been in good demand and a good business has been done in all grades. Spot differences are steady and well maintained and the selection of cotton offering is not very good, decent staple cotton being rather hard to find.

Other Varieties: In Nahda a good business has been done at last week's business. A small business has been done in White. Spot differences are unchanged. A few bales of Maarad have changed hands.

Up-country.—The decline has had the effect of causing slightly more activity in the villages, due to the fact that in many cases margins on cotton financed by the banks have been reduced to vanishing point, and the latter have been pressing their clients to sell. The improvement in the weather has given a new impetus to the preparation of the land for sowing and in the South and Central Delta district work is well advanced.

According to an official statement the Revenue of Yugoslavia for the Budget Year 1927-28 amounted to 11,093,456,177 dinars, and the Expenditure to 11,521,213,101 dinars, showing a deficit of 427,756,924 dinars.

CYPRUS CROP REPORT.

The report on Cyprus crops for January states:—
The sowing of wheat is practically completed. Very useful rains have fallen, and the prospects for the new year's crop are excellent. The old stock is now heavily depleted and the demand for local consumption is satisfied by imported flour. Prices are 8s. to 10s. per bushel.

The area under new crop barley is a good average. The growth is very satisfactory, and a very good harvest is anticipated. Green barley grass is already in use as fodder, and the demand for dry barley is somewhat low. The price is 3s. 4d. per bushel, falling.

Most of the area assigned to oats is sown. There is sufficient rainfall to give hope of a successful crop. The old stock is practically exhausted.

The new crop of potatoes, now stored, is excellent both in quality and quantity. The demand from overseas markets is rather poor. Prices are falling and unsettled, £6 10s. per ton.

The ginned cotton crop is now baled. The price is 3s. 10d. per stone for seed cotton.

The export of carobs is steady at about £6 per ton.

The demand for Jaffa type oranges is poor at £2 per 1,000. Round oranges are £1 5s. per 1,000.

Nearly all the surplus crop of sour lemons has now been utilised. There is still a good demand at 20s. to 25s. per 1,000.

Seed beds for the new crop of tobacco are already prepared and sown. Seeds were imported from Greece for this season's requirements, and much improvement is expected in the quality of cigarette tobacco of next harvest. The previous crop is now sorted and baled. Prices are 4½d. to 7d. per lb.

Notes of the Week.

A Question of Legal Fees.

The Disciplinary Council of the Egyptian Native Bar has acquitted Mustapha Nahas Pasha and his colleagues of the charges of unprofessional conduct. Satisfactory as the verdict may be from one point of view, it would, perhaps, have been better if the Council had been less laconic in its judgment, and explained the reasons that led to the finding. Nahas Pasha, Wissa Wassif Bey, ex-President of the Chamber of Deputies, and Gaafar Fakhry Bey, a Deputy, had covenanted with the family of Prince Seif-ed Din, who had been detained in an English mental home for more than twenty years and had escaped to Constantinople in 1925, for the payment of a fee considerably over £E100,000 in the event of the three lawyers' winning the case for the return of the Prince's very large estate to his own personal management. An indiscreet letter attributed to Gaafar Fakhri Bey invested the agreement with a political aspect, and lent colour to the suspicion that the Wafdist leaders had hoped that certain legislation for which the party was to be responsible would ensure the success of the Prince's case. When the information was made public the position of Nahas Pasha's Cabinet had already become precarious as a result of the resignation of three Ministers, and on the following day King Fuad, exercising his prerogative under the Constitution, dismissed the Government on the ground that it represented no longer the coalition on the basis of which it had been formed. In the circumstances, however, it was difficult for the Egyptian public and the Prime Minister to dissociate the "revelations" and the dismissal. The explanations given by Nahas Pasha of his action in the Seif-ed-Din affair at once cleared his reputation of any suspicion of his having abused his high office, but the amount of the fee which the Seif-ed-Din estate was required to pay was so formidable that an investigation of the matter by the Council of the Native Bar was considered necessary. Its verdict, which appears to have been restricted to the words: "The Council acquits all three lawyers of the charges brought against them," will be

welcomed by Egyptian lawyers, in the absence of any reasons for the judgment, as high sanction for the practice of making fees proportionate to the paying capacities of their clients, without limits and without regard to the amount of work entailed.

An Unedifying Incident.

Whatever a layman's views about lawyers' fees—and high fees are not restricted to Egypt—those who wish Egypt well will be content that one who has held the high office of Prime Minister should be exonerated even of having set too high a value on his own services. There was, not unnaturally, a display of *Schadenfreude* among the political opponents of the Wafd at the prospect of finding the Wafdist leader at fault, and this circumstance, coupled with his abrupt dismissal from office, has, no doubt, been responsible for much of the personal spite and vindictiveness with which Nahas Pasha appears to have pursued the present Government. The letter addressed to Prince Seif-ed-Din's family in which Gaafar Fakhri Bey commented upon the election of Nahas Pasha as President of the Wafd and President of the Chamber in succession to Zaghoul Pasha, in its implied bearing upon the issue of the trial was, however innocent in intention, an unfortunate act on the part of one who combined the office of Deputy and the rôle of counsel in the case. On reflexion, therefore, Nahas Pasha will be obliged to admit that, if the parts had been changed, the Wafdist Press could have been relied upon to make just as much capital out of an apparent mistake on their opponents' part. His complete exoneration at the hands of the Disciplinary Council of the Native Bar should, therefore, close an incident which has been unedifying from whatever point of view it is approached. Egypt is handicapped by a Press which, in spite of individual exceptions, has as a whole indulged far too much in personal abuse, and has materially helped to lower the standard of political controversy. An opportunity offers to Nahas Pasha, as head of the Wafd, to associate himself with the present Prime Minister in the attempt to raise that standard.

The Political Game in Egypt.

Egypt has enough problems before it to call for honest differences in regard to them among politicians, and there is no reason why the latter should not base their claims for the support of the people solely on the merits of the particular solutions of those problems that they have to advance. Hitherto, during the brief lifetime of the Constitution the Wafd has stultified itself by clinging to the belief that the alleged unanimity of the country behind it in regard to the Anglo-Egyptian question absolved it from giving serious attention to other matters which would inevitably have transferred a large, if not the larger, part, of its big battalions into other camps. To-day the arena selected by the Wafd for its exhibitions of strength is closed, with no prospect of an immediate re-opening. Smarting, perhaps, under a sense of injustice in having been penalised according to rules which he did not accept, Nahas Pasha has hitherto refused to play the new political game introduced by Mahomed Mahmoud Pasha. The better nature of the Leader of the Wafd must have convinced him that the new game is the only one that furthers the real interests of Egypt, and now that he has been acquitted of the personal charge brought against him, it is to be hoped that his attitude in public affairs will show less of personal malice and more of the statesmanship that becomes the acknowledged head of a political party.

Developments in Yugoslavia.

In spite of the exacting demands on their attention of the weather, with all its resultant inconveniences of disorganised communications and shortage of food and fuel, the people of Croatia are finding time to note that there is some method in the measures of the Dictatorship. The recent appointments of mayors to the cities of Belgrade, Zagreb, and Liubliana, as well as to some smaller towns, have all been given to tried men of mark. The new Mayor of Belgrade is M. Savchitch, who worked hard before the establishment of the Dictatorship to bring about reconciliation between Serbs and Croats. He is a banker by profession, and brings a reputation for business efficiency, in addition to his work for internal peace, to bear upon his new office. In Zagreb the new Government has not only taken a tactful step in appointing a civilian in the place of the previous Military Governor, but has also chosen a Croat who, if the Press is to be believed, is really popular among his own people. Another excellent move is the appointment of a Slovene and a Croat to important posts in the Diplomatic Service. Any seeming inconsistency between these appointments and a tightening of the censorship is, perhaps, to be explained in the desire of the Dictatorship to put the finishing touches on its elimination of politics from the public life. Efficiency, however, has its place as a useful ingredient in the Press of a country as well as in the Administration, and there can be little room left for it, if the whole of the contents of a newspaper has to be submitted first in manuscript to the censor. A better way, it would be thought, would be to lay down within clearly defined limits the responsibility of editors in regard to political news and comment, and, if the free expression of views is to be held in check, to impose the necessary penalties *pour encourager les autres*. The new system which the Yugoslav authorities are said to be introducing frees every paper from any sense of responsibility and encourages them to sail as near the mark as possible in the hope of being able to get something past the eagle eye of the censor.

Great Britain and the Yaman.

Those assiduous Members of Parliament who have the temerity from time to time to ask how affairs are progressing in the Yaman must despair, unless they are made of very stern stuff, of ever extracting anything in the nature of real information from the responsible officials. Recent questions that have been asked in the House have received answers that, despite their many words and the pomp that accompanies them contain—absolutely nothing! First, it seems, this country is waiting for a favourable

situation to arise, which would imply, at any rate, some action on the part of the authorities at Aden; and then, it appears, no conversations are proceeding with the object of concluding a Treaty with the Imam! The position, as officially described last week in the House of Commons, is that Aden is still waiting the dispatch of a representative of the Imam. Aden is ready, it was said, to recognise the Yaman's independence provided that the frontiers of the Aden Protectorate were agreed upon. Since last September, however, nothing at all has been done. This can hardly be as it should be. Italy has recognised the independence of the Yaman; Russia likewise. There is talk among the Muslim States of the Middle East, particularly in Persia, of the desirability of recognising the Imam's sovereignty. It would appear, therefore, that if this process of recognition continues, the Imam Yahya may imagine that he enjoys independence whatever the British at Aden may say. And doubtless he will be right. Really this problem of Anglo-Yamani relations presents a most unfortunate face. Surely the time has come when this talk of British prestige should be more closely examined. In certain circumstances that prestige must be upheld without qualification; but in other circumstances "prestige" is apt to mean "illusion." Are the real interests of the British Empire bound up with the retention of the hinterland of Aden which the Imam claims as his own?

Relations with the Wahhabis.

Another fact which was mentioned in the House of Commons last week was that negotiations "for the settlement of outstanding differences" were still proceeding with King Saoud of the Hijaz and Najd. The main difference concerns, of course, the so-called frontier-posts erected by the Iraq Government. Are they, or are they not, to remain? Reports have recently come to hand of the great tribal conference last December at Riyadh, when very bitter opposition was manifested to the posts, which, it was alleged, had been erected on the pasturage of Najdi tribes. But King Ibn Saoud, whose hold upon his outlying tribes is often referred to as non-existent, has so far managed to restrain them from taking measures against the hated posts; there has been so far no serious incident this winter between Iraqis and Najdis in the Busaiyah and As Salman region. The ruler of the Wahhabis surely deserves great credit for that. What view Sir Gilbert Clayton, the new High Commissioner for Iraq, will take of the desirability of these posts when he has assumed charge remains to be seen; but it is certain that the difference between Wahhabis and Iraqis is one that can be most fitly resolved by Englishmen. It is from London, rather than from Baghdad, that the word can go out which will solve the difference with the Wahhabis. Again, as with the Yaman, one must plead for a re-examination of what British prestige means in the desert region, and what the real interests of Iraq and of the British Empire are in this connexion.

Reforms in Persia.

Reforms in Persia appear to be proceeding with that unexciting speed which, although making poor "copy" for the newspapers, in the more significant on that account, and certainly implies that they will be the less easily upset. Curiously enough it is the less important, such as the introduction of national costume, which seems to have aroused most interest. But the imposition of the Pahlavi hat really means very little; like the rule that all Government officials must, when on duty, wear home-spun cloth, it is a means to an end. Uniformity can possibly help towards unity, although the distinction must be perfectly well realised by the Teheran authorities. However, the law of conscription, which, despite reported numerous desertions and evasions, does appear to be operating with a certain success, must help the unity and self-respect of the nation at which the Shah is so strenuously striving; nor can one fail to discern a growing recognition of the need for centralisation in the reported discontinuance of the system of provisional governorates.

It can never be too often repeated, however, that the backbone of Persia is in her tribes, and it will need the utmost discretion to mould the tribes into the national path to ensure simultaneously their own development and that of the patriotic Persian nation as a whole. Persia has centuries-old virtues and centuries-old vices, and if the former are injured in a general assault upon the latter, the results may not be happy. As for the latter, the Shah is stated to have said after his return to Teheran from his tour in Khuzistan that the two things which had blocked Persia's progress in the past were: the relegation of to-day's duties until to-morrow, and the total lack of interest in public affairs. He was speaking to the classes which needed straight speaking most: officials, Members of Parliament, and newspaper editors, upon whom he impressed the fact that they should not be influenced by considerations of personal advantage—particularly that Members of the Majlis should not misuse their influence for private gain. This particular lead is one which every well-wisher of Persia will hope to see followed.

A British School in Archaeology in Iraq.

The proposal which, as we report on another page, Sir Edgar Bonham-Carter made at a meeting on Iraq before the Royal Empire Society, of founding a British School of Archaeology in Iraq, is a most interesting one, and one that deserves the fullest investigation. Sir Edgar's own distinguished connexion with Iraq is well known to our readers: his work in Baghdad was equally and without exception admired by British and Iraqi. It is, therefore, with the certainty that the scheme which he publicly advocated would benefit, and redound to the credit of, both Great Britain and Iraq, that we commend his remarks to our readers. He mentioned, what is not generally known, that Miss Gertrude Bell, the founder of the Department of Antiquities in Baghdad, foreshadowed in her will the creation of a British School of Archaeology in Iraq. The heritage of Layard and Rawlinson fell, indeed, not unworthily upon Miss Bell's shoulders. So vast a responsibility, however, is certainly too great for the shoulders of any one person, however distinguished an archaeologist: it can fitly be assumed, as Sir Edgar Bonham-Carter indicated, only by the establishment of a School in Iraq. We hope to have the opportunity of returning to this scheme, when fuller details and prospects are known. In the meantime we would beg of our readers to docket the suggestion in one of their most frequently dusted pigeon holes.

INDIAN NOTES.

The Aftermath of Bombay.

The disturbances in Bombay appear at long last to have been brought under control. They will, however, leave an aftermath of uneasiness, not merely in commercial circles in the City itself, but among observers elsewhere. The violence of the intercommunal murder outbreak will not, perhaps, astonish the latter so much as the supine and dilatory manner in which lawlessness in Bombay, of which the recent riots were merely the culmination, has been treated by the Government of Bombay. It is not necessary to look far for the immediate causes of the recent outbreak. The Pathans have long been the main object of antipathy to all classes of Hindus, from the writers in the Press to the labourers with whom they effectively compete at the docks and in the mills. Their unpopularity has recently been increased by their employment as strike breakers, both by the millowners, and by the Government of Bombay in Bardoli. It only needed a few absurd stories of child-kidnapping to excite the smouldering ill-feeling into a murderous flame, and, once the Pathans were attacked, the rest of the Muhammadan lower classes, at whose mosques the Pathans have the most regular attendants, were inevitably involved. For any parallel to the savagery of the intercommunal warfare we

must go back to 1893: and, as always happens in the intercommunal riots in Bombay, the Muhammadans, then as now, got the better of the actual fighting. There can, however, be no doubt that the Bolshevik agitators contributed an element of disturbance lacking in former years. When we read how, before the riots began, the workers in a mill struck work merely because a red motor car with a red flag passed their mill, which they assumed to be some signal from their union, we can estimate how easily the workers are affected by communist agitation: and we must remember that, while the Hindu labourers have eagerly joined such unions, the Pathans, whose main object is to earn money as quickly as possible and to return to their native land, have fought shy of them. Lamentable, however, as the actual fighting has been, perhaps the feebleness of the action taken to check the disturbance in the earlier stages has been even more alarming. It has not been for want of warning. Before the outbreak of the riots, as we observed last week, the *Times of India* pointed out that Bombay was becoming a second Chicago and called for decisive action. It is sometimes said that the Government is tied up by regulations. Such regulations have not, however, proved a deterrent in the past; and every officer who has served in Bombay will remember occasions when prompt action has checked incipient riot: and the Police Commissioner would be equally ready to take such action now. The sad truth is that the Government of Bombay has been painfully weak of recent years. Doubtless the system of dyarchy has been worked there more fully and harmoniously, and to that extent more successfully, than elsewhere. It is a sad reflection for the future of India if the weakness that has marked the Government of Bombay's action is a necessary concomitant of such working. It is not merely in Bombay City that the policy of the Government has conduced to agitation. We read that Mr. Vallabhbhai Patel, the protagonist of the Bardoli campaign, is now conducting a liquor shop picketing agitation in the Surat District: and such a movement, though it may be nominally in the cause of temperance, is obviously intended to embarrass the Government in its tenderest points. We doubt the wisdom of Mr. Patel's choice: such campaigns have been tried before in the Surat District, and, though sometimes temporarily successful, have always broken down before the love of the Surati for his toddy and his country liquor which he regards as a necessity in his moist and enervating climate. But the form of the agitation is not of great importance: what does matter is the fact that the alleged victory over the Government in Bardoli must lead to further lawlessness.

EUROPEAN EVIDENCE BEFORE THE SIMON COMMISSION.

It is clear, from the reports in the Indian newspapers, that our Calcutta Correspondent was right in attaching considerable importance to the evidence tendered to the Simon Commission towards the end of January by non-official Europeans. The general view taken by the non-official community on the main questions before the Commission was explained in two memoranda which were submitted last autumn by the Associated Chambers of Commerce and the European Association respectively, and which were summarised in these columns. It was upon these memoranda that the oral evidence which our Correspondent had in mind was based. The Associated Chambers were represented by a deputation headed by their President, Sir George Godfrey, while Mr. C. B. Chartres, President of the European Association, headed the deputation from that body. It appears from the published reports of the evidence—and it was clear also from the memoranda—that, although the two organisations are in complete accord regarding most points, there are some concerning which they differ. But the outstanding feature of their evidence is that they have declared themselves to be in favour, subject to certain provisos, of provincial autonomy. We do not propose to stop to consider what exactly is the meaning of the phrase provincial autonomy. But what the Associations propose is, we gather, that the existing system of dyarchy—whereby the functions of the Provincial Governments are classified as "Reserved" and "Transferred"—should be replaced by a system under which, with one exception, all the functions of the provincial Governments should be "Transferred," that is to say, should be entrusted to Ministers. The Governor of the Province would have no Executive Council. He would have a Cabinet of Ministers, who would be selected by him from among the leaders of the various parties in the Provincial Legislative Council. Of this Cabinet the Governor would be the President, but he would not be able to over-ride its decisions.

The exception to which reference has been made is the very important subject of Police control and the maintenance of law and order. A majority of the European Chambers of Commerce in India are in favour of the transfer to Ministers of this subject. In other words, they would make the Provincial Governments completely autonomous. They take the view, as we pointed out last August, that the surest way to make the Indians realise the need for an efficient Police force is to make them responsible for law and order. On the other hand, the European Association and some of the Chambers are against this proposal. They would still retain a vestige of dyarchy by entrusting the subject to a special member of the Government, who would not be a member of the Cabinet, nor a Minister, but who would work directly under the Governor. It is the opinion of the Association that to transfer to a Ministry the responsibility for law and order would be unsafe, in view of the acute communal tension which now prevails in India. In the course of his evidence Mr. Chartres admitted that his proposal means the retention of dyarchy in a modified

form; but he maintained that in the exceptional circumstances this was unavoidable. We are certainly not disposed to blame the Association for being cautious in a matter of such supreme importance. At the same time, however, the maintenance of law and order is the primary duty of every Government; and it will not be easy to make provincial autonomy a reality, if this primary duty is not entrusted to the Cabinet. The recommendation that provincial autonomy should be established is contingent upon certain provisos or safeguards. Of these the most important are: (1) that bicameral legislatures should be set up in the provinces; (2) that discriminatory legislation or taxation against communities, trades, etc., should be prohibited; and (3) that the Governor-General in Council should be empowered to intervene in the case of the breakdown of any provincial administration. As was, doubtless, anticipated the second of these proposals gave rise to some discussion at the examination. Sir John Simon apparently took the view that it would not be easy to give effect to the idea. In the first place he feared that there would be difficulty in framing a suitable provision for insertion in the Government of India Act. He also thought that, if the power of challenging legislation were conferred, there might be in consequence even more litigation than there is now. Ultimately it was agreed, on his suggestion, that the deputations should consult their legal advisers with the idea of getting the proposal put into the form of a draft clause for insertion in the Act. As regards provincial Second Chambers, the deputations recommended that two-thirds of the members of such should be elected and one-third nominated. The franchise should, they thought, extend only to those who now exercise it for the Council of State. They also suggested that the power of veto over legislation, which is vested in the Governors, should remain. On the other hand they favoured the restriction to the greatest extent possible of the power of certification, which should not be, they thought, exercised except in the case of emergency. This withdrawal of power might be balanced by vesting powers of intervention in the Governor-General in Council, who in the event of the breakdown of a Provincial Government, might order the Governor to carry on the administration for the time being with the help of his executive officers.

The European Association is not in favour of the introduction in the Central Government of the principle of responsibility to the Indian Legislature. This view is shared by the Associated Chambers and the two deputations pressed it at their examination. They hold that experience of the working of the autonomous Provincial Governments ought to be obtained before a radical change is made in the Central Administration. Far from doing anything to weaken, they would strengthen, the Central Executive, as they hold that a strong central authority will be more than ever necessary when provincial autonomy is in operation. Furthermore, they favour a modification of the elective system in respect of the Legislative Assembly. They would replace the existing direct franchise by a system of indirect election by the provincial Legislatures and approved public bodies representing landed, commercial, labour and minority interests. For they believe that thereby a more truly representative House than has so far been obtained would be elected. One point that the evidence before the Simon Commission has brought out most clearly is that the non-official European community, far from being the inert and lifeless body it is often said to be, has made a valuable, well thought-out contribution to the solution of India's political problems. In addition to this the evidence is also conclusive proof that it is a complete mistake to describe the Europeans as political reactionaries. The difference of opinion on the question of the maintenance of law and order is, of course, regrettable, but we do not think that any very special importance need be attached to it. The question is one of supreme difficulty, and there is, therefore, nothing remarkable or surprising in the fact that some members of the community may be disposed towards a more cautious attitude than others are prepared to adopt.

*The Near and Middle East

From Our Own Correspondents.

Cairo, February 9.

The Seifeddine Revelations.

The Bar Council of Discipline have delivered their long-awaited decision in the case of the complaint brought by the Parquet against Nahas Pasha, Wissa Wassef Effendi, and Gaafar Fakhry Bey, whom they acquitted of actions inconsistent with the dignity of the Bar and of intentions to misuse their former position in the Chamber to further the interests of their clients. There is good reason to believe that, as a result of the inquiry and of the abortive prosecutions, the legislation in regard to members of the Bar will undergo amendment, as it has been found very defective on this point.

It is perhaps worth noting that the Wafd, in making arrangements for the defence, carefully separated the case against Nahas Pasha and Wassef Effendi from that of Fakhry Bey.

Air-Display.

The Middle East Section of the Royal Air Force gave its annual aerial display at Heliopolis aerodrome this week. Last year the exhibition had to be given in the teeth of a fierce "khamsin," but this time the day was perfect, and the crowd of spectators were able to watch in comfort and with no immediate fears of mishap the many thrilling events which the intrepid pilots performed for their edification in the air. "Middle East" very thoughtfully admitted the Press to the Dress Rehearsal on the previous day, and at the same time offered a free passenger-flight to one representative of each paper. The whole arrangements, as well as the display itself, were a conspicuous success, and both the organisers and those who actively took part in the display, are heartily to be congratulated.

The Mixed Courts.

The various Chambers of Commerce have presented a joint memorandum on the subject of the delays in the Mixed Courts. They are by no means satisfied with the decision of the Government to create three new Judgeships in the Lower Courts in addition to the three counsellor chamber in the Court of Appeal, which is part of the reforms at present under discussion with the Powers. That there is every justification on the side of the commercial communities to be disappointed with what the Government proposes is clear from statistics quoted in the memorandum. Whereas in 1901, 15,000 cases were set down for hearing, in 1926, the last year for which there are complete figures, the number was 44,000, while the arrears at the end of the first-named year were 3,672 compared with 9,702 twenty-five years later. In regard to magistrates, in 1901 there were 26 foreigners and 15 Egyptians, whereas in 1926 the numbers were respectively 34 and 16, while the number of counsellors in the appeal Court remained unchanged.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

That with only nine more Judges the lower Courts were able to dispose of three times the number of cases, and that with the same personnel the higher Courts dealt with about double, speaks volumes for their industry. But, as the memorandum points out, to place on these magistrates the obligation to dispose with more cases annually is merely to ask them to give less attention to the work they have to do. The Chambers press for three new lower chambers and a full chamber in the higher Court, and they add that the receipts of Mixed Tribunals are such that there can be no valid objection to the extra expense of additional magistrates. They also ask for amendments in the procedure, which would lead to a saving in time in getting judgments out and to setting a term to the dilatory and vexatious tactics, which are to-day a feature of Mixed Court litigation, owing to the loop-holes and weakness in the existing procedure.

Public Security in 1928.

The report for the year of the Director-General of Public Security makes very satisfactory reading. During 1928 real crime underwent a marked reduction. Whereas compared with the preceding year 1927 had shown an alarming increase, last year there was a falling off of just under 5 per cent., and practically all categories of serious crime shared in this reduction. At the same time it is interesting to note that, while crime has diminished in the provinces, it has increased in Cairo and Alexandria and the Canal Zone. The explanation is, not that public control is more lax in the cities than in the districts, but that there has been a steady influx into the urban areas from the rural districts, with the consequence that the town population has increased out of all proportion to the rest of the country with greater demand for employment and greater opportunities and incentive to crime of every description.

The general improvement is undoubtedly due, as Kaissy Pasha points out, on the one hand to drastic re-organisation and increase of the forces at the disposal of the Public Security Administration and to the sterner enforcement of discipline, and, on the other hand, to the greater authority which the provincial representatives of the Central Government have acquired since the Mohamed Mahmoud Cabinet came into office the middle of last year. At the same time Kaissy Pasha emphasizes that, while the additions and re-organisation have militated in favour of this improvement in the general condition of public security, no permanent amelioration can be expected unless and until the forces at his command are brought up to a strength in proportion to the development in numbers and condition of the population.

There are one or two exceedingly interesting features in the report. One of these is the section dealing with drug traffic, which has extended to the remotest parts of the country and in regard to which Kaissy Pasha says that, while energetic efforts are being made to stamp it out in the country, these require to be supported by some international agreement with regard to the production something like that made at Geneva in regard to the production of arms and ammunition. The other deals with

dragomans, who are henceforward to be subjected to much more drastic discipline than formerly, and for whom special night classes are to be arranged so that they may in future be able to speak more or less intelligibly either French or English, and to know something about the monuments which they have to show visitors. Altogether the report reveals a state of things and a keen control over all the social activities of the country which do credit to the Department of Public Security in general and to its head, Kaissy Pasha, in particular.

ROUMANIA.

Bucharest, February 12.

One of the most prominent members of the National-Peasant Party has been good enough to discuss with me the more important topics of the day and it may be of interest to summarise his remarks in my letter this week:

Financial Policy and the "Caisse Autonome."

The most important event of recent occurrence is the successful conclusion of the negotiations for Roumania's foreign loan—the first since the War, except a very small one from Italy. The fact that the loan has actually been obtained is a matter of the greatest gratification to the whole country, although in amount it is a little disappointing. So far as can at present be calculated the total amount of the loan obtained from the Franco-American group in Paris is rather over seventy million dollars, besides which a loan of thirty million dollars has been obtained from the Krüger group of Sweden in exchange for a concession of the Matches Monopoly. The rest of the Monopolies (salt, tobacco, etc.) are to serve as guarantee for the loan of seventy or more million dollars.

In the arrangement made with the group of foreign bankers the Roumanian State has transferred its monopoly rights to an institution created for this purpose,

namely "La Caisse Autonome." It is in fact this institution which has negotiated the loan and which guarantees it. Thus formalities for the signature of the loan had to be arranged in two sections; first the signature of the contracts between the Roumanian State and the lending group of bankers, after which the legislative bodies passed the necessary laws—new Statutes for the National Bank, the creation of the "Caisse Autonome," and the transfer of the powers of the State to the "Caisse Autonome"; secondly the signature of the contracts between the leading bankers and the "Caisse Autonome," which represents the State for the encashment of the revenues of the Monopolies and for guaranteeing the loan.

The greatest optimism prevails as to the effect the loan will have on the economic situation of the country, especially as, immediately after the issue of the loan prospectus, the amount of the issue on various foreign markets was at once fully subscribed, while the Bucharest issue was fully subscribed in advance, as soon as the contract had been signed.

The Date of Easter.

In the sphere of internal politics, my informant declared, there can as yet be no question of political party struggles. The results of the elections are too recent and too irrefutable to allow of the Government's meeting with any serious difficulties from the Opposition in the meantime. The only questions causing anxiety are, on the one hand, unemployment, especially in the mining districts, due to the economic crisis, and on the other hand, in the province of Bessarabia, the question of the date for the celebration of Easter. The population of that province has always been refractory towards the adoption of the new Calendar (the Gregorian), as for them this question is closely linked with the celebration of the religious holidays prescribed by the Greek Orthodox ritual. A decision of the Holy Synod published last autumn that the Easter holiday

should be celebrated according to the new Calendar sufficed to provoke a strong movement in opposition. Although the Roumanian Church is independent, under the Roumanian Patriarch, the Œcumenical Patriarch of Constantinople drew the attention of all Greek Orthodox Churches to the necessity of celebrating Easter this year according to the decision of the Council of Nicaea, whether or not the Greek Orthodox countries had accepted the new Calendar. This raised a strong protest from the clergy on the one hand and from the public also against the decision of the Holy Synod. The latter, however, confirmed its instructions, but made a concession to public opinion by admitting that Easter might be celebrated by the Faithful either on March 31 or May 5. As a result the Old Kingdom of Roumania, Transylvania and the Bukovina will celebrate Easter according to the decision of the Holy Synod on March 31, but Bessarabia on May 5. This vacillation on the part of the Holy Synod has been interpreted as a sign of weakness, and it may lead to further agitations in Bessarabia subversive to the interests of the State.

Unemployment.

For the first time in her history unemployment has to-day become a real problem in Roumania, but only the mining population in the Valley of the Jiu is seriously affected. It is not correct to state that only foreign workmen and those belonging to the minorities have been paid off, and that Roumanian workmen are favoured. An impartial inquiry has shown that this is not the case, and that there are as many Roumanian as other workmen out of employment. Moreover, if the condition of the non-Roumanian workmen is more lamentable than that of their Roumanian brethren, it is because they refuse to accept other work of a casual kind, on the roads, etc., which the Government started on purpose to provide a means of livelihood for the miners out of work, and which the Roumanian miners accepted *faute de mieux*.

Communism cannot be said to exist in Roumania. It is true that a Communist (of Russian origin), Dobrogeanu-Gherea, has just been condemned to eight years' imprisonment, but his is an isolated case. He himself admitted that he was a Communist propagandist, distributed Communistic literature, and was connected with the Third International.

The Optants Question.

In the question still pending with Hungary on the subject of the Transylvanian Optants the discussions have been very lively, and the attitude of Roumania has been broad and conciliatory. As the details are not known, it is difficult to say much; but my National-Peasant informant declared that it is certain that Roumania will make all possible concessions, in order to settle this matter once for all—always safeguarding her own vital interests.

The Litvinoff Protocol.

The signature of the Litvinoff Protocol by the Roumanian delegate and by the delegates of Poland and the Baltic States is, the speaker continued, an event of the highest importance to Roumania and has caused the greatest satisfaction in the country, for it is the chief desire of Roumania to remain on good terms with all her neighbours. The Soviets appear to be of the same mind, for they gave the warmest reception to M. Charles Davila, Roumanian Minister at Warsaw, the signatory of the Protocol on behalf of Roumania. This Treaty of non-aggression will, it is thought, go a long way to insure peace in the Near East and, consequently, in the whole of Europe.

The Teheran Majliss on February 7 passed an Act prohibiting slave-trading in Persia. Slaves entering the country will be considered as free men.

Before adjourning on February 14 the Greek Chamber ratified the adherence to the Peace Pact. The Chamber will not reassemble until after the Senatorial elections on March 3.

PERSIAN NOTES.

Khuzistan.

Since the recent visit of the Shah to Khuzistan, great interest has been taken in that Province by the Persian Government and the Press, and as a result there has been a considerable improvement effected in the machinery of government there. Municipal budgets have been increased, and all officials sent to the south are carefully selected, whereas the Province was sadly neglected in this respect.

Railway Construction.

Railway construction work is active in both northern and southern sections. Two ships of material have been discharged at Khor Musa and one at Bandar-i-Gaz. Rail laying was formally inaugurated on January 26 in the North by the Governor-General of Gilan. Bad weather has delayed work considerably in both sections, but real progress is being made notwithstanding this and other difficulties. Colonel Morris, recently Director of Roads in Persia, has joined the staff of Ulen Company in Teheran. His knowledge and experience of the past two years should be of great assistance to the railway contractors.

The Budget.

The new Budget has been submitted to the Majliss with commendable promptness and has aroused unusual interest. In his speech presenting the Budget, the Minister of Finance (Prince Ferooz) announced a deficit which he proposed to cover by new taxation on tobacco and slaughter houses. It is known that an income tax project is under active consideration, but no allusion was made to it in his speech.

In view of the success of the new National Bank Government is considering the advisability of starting new industries with Government funds and transferring them later to private persons or companies, with the idea of inducing the employment of private capital in industry. In view of this policy the income tax is unlikely to be seriously introduced for the present as being likely to deter capital when its introduction is so badly needed.

Increased expenditure is proposed for the Army and Air Services, while allowance is also made for the purchase of coastal vessels for preventive service in the Persian Gulf. Two Italian officers have been recently engaged by Government to advise on the craft most suitable for Gulf work, and a determined effort is to be made to put down smuggling by means of preventive vessels and the opening up of new coastal roads.

Bills for the Majliss.

The new Majliss has a big programme of new legislation before it, the most interesting Bills being those for a "Law of Patents" and amendments to the Tax on Property. A Bill has been passed providing for a special court to deal with persons accused of embezzlement or misappropriation of Government funds, and the court has already been constituted.

The Financial Adviser.

The new Financial Adviser, Dr. Schniewind, recently arrived in the country, and his services are being used in the consideration of new financial projections. His services have been engaged for two years, and he will presumably carry out the advisory work of Dr. Mills-paugh, but without the executive authority which Dr. Mills-paugh enjoyed.

Tagizadeh's Appointment.

Tagizadeh, the noted writer and Nationalist, has been appointed Governor-General of Khorasan, this being the first occasion a Governor-General has been selected from other than nobility or military or civil officials. Tagizadeh was a refugee in Germany for some years, and since his return has been a member of the Majliss up to last election. Amongst his many literary works is a recent publication on the subject of the proposed Latin alphabet for Persia, in which he strongly advocates the change, and

gives a form of alphabet which is likely to be adopted eventually if the movement progresses. Public opinion at present is lukewarm on the necessity of any change, but interest is being stimulated by the writings of Tagidazeh and others.

Compulsory Dress.

An Act was recently passed for the compulsory wearing of a uniform style of dress after March next, but the change is already in practice generally, and it is even now rare to see the old costumes and types in Teheran. Members of Parliament and Government officials are obliged to wear clothing of national weave under penalty of fine, and a proposal is under consideration to make the use of national cloth compulsory for school children.

Rails at the Caspian.

The first rail of the northern section of the railway was laid on January 10 at Bandar-i-Shah on the Caspian, and it is expected that rails will be complete to Bandar-i-Gaz in two months' time, and to Teheran by March 1930. The advantages of the railway in giving winter employment to the working classes during the slack agricultural season are great, and over 6,000 labourers have been employed latterly on construction work. The public is kept well informed of progress by means of regular Press bulletins.

General News.

That great attention is being paid to industrial development is shown by the recent conclusion of an agreement with a Czechoslovakian Company for experimental work to be carried out near Teheran with a view to the eventual construction of a sugar factory.

In view of the need of cement in large quantities for railway work, a committee is seriously studying the possibility of constructing a cement factory near the coal mines in the Teheran district. Dr. Schniewind, Dr. Millspaugh's successor as Financial Adviser, and Herr Scheer, Economic Adviser to the Government, are members of this committee, and much interest is taken in the project by the public and Press. The present Minister of Public Works carried out notable improvements during his term of office in Khorasan, and is showing active interest in work of industrial improvement which is one of the most pressing needs of the country.

New roads are being constructed in various parts of the country, especially in Baluchistan and the northern provinces, and several new telegraph lines are under construction.

Professor Herzfeld, the noted archæologist, is expected to proceed to Sistan very shortly for excavation work near Nasirabad at Khavil. French archæologists are resuming their work at Shush during the current season.

In accordance with an agreement recently concluded an officer from Scotland Yard will shortly arrive in Athens to organise a Criminal Investigation Department.

Junkers, the German aircraft manufacturing company, are about to open negotiations with the Iraq Government for the extension of their air service from Teheran to Baghdad instead of merely to the frontier, the present terminus.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 31.

The Viceroy and the Assembly.

It is greatly to be feared that the generosity of spirit of the Viceroy has betrayed him into an unwise gesture. Addressing the Assembly, and speaking of the distrust of Great Britain felt in so many political circles in India, Lord Irwin said: "In conditions more favourable to cool judgment I suppose that most persons would admit that British India . . . is a British creation, and that it is the British power which has held together its constituent parts. If this centripetal influence is immediately or too suddenly withdrawn, it is not wholly unreasonable to fear that some at any rate of the parts might fly asunder, and the dream of a strong, united India, a nation among the nations of the world, as we may speak of the British or American nation, would vanish and be destroyed. Anxious as I am to see the realisation of this dream . . ."

The Dream.

The rub is that it is a dream, if what is meant, by the reference to an Indian "nation among the nations," is an India not largely ruled by Englishmen. What the "Nationalist" politicians say they want is an India ruled by Indians, and that cannot come within the lifetime of this generation. It is to be feared that they will remember these words of the Viceroy: "... the Viceroy and Governor-General stands as an intermediary between the hopes, the feelings, the desires of the Indian people to those who may from time to time compose His Majesty's Government in Great Britain, and . . . beg His Majesty's Government ever to place the most favourable construction upon all their proceedings." It is to be feared that they will remember those words, and forget that the Viceroy spoke in the same speech of a dream; that in Calcutta he spoke of the "morass of independence." Now Dominion status, unless in accepting it India voluntarily undertakes to employ Englishmen very largely to govern India, would be equally a morass; and, in his representations to the British Government, that is what necessity will compel Viceroy after Viceroy to say. There will then appear to the Indian politicians to have been duplicity in the Viceroy's words; for he will have said to the Assembly in effect that he would say one thing to the British Cabinet, and as an honest man, remembering the greater interests of the toiling masses in India, he dared not say that thing.

Agriculture.

The Viceroy was on much safer ground in that part of his speech in which he dealt with the recommendations of the Royal Commission on Agriculture, and in particular with the recommendation that there be set up a Council of Agricultural Research. The Government of India propose to establish a Council, with a governing body of a president, the Member of the Governor-General's Council in charge of Agriculture, and seventeen others, with an advisory council of thirty-nine members, and it is hoped

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

that the major provinces will establish committees to work in close co-operation with the Council of Agricultural Research. The Government of India are to give the Council a lump grant of twenty-five lakhs of rupees (the Royal Commission suggested one of double that amount), but supplemented by annual grants of Rs. 7,25,000. One's only fear is lest the research should not really be research. "India," said a man to the writer once, "is still being run as a *Company*. India will borrow a word, such as *research*, but not its meaning; will set up a library, and call it the Imperial Library, but not make it of *imperial* size and value." What that man said is very true.

Law and Order.

It is considered very unfortunate that, in the presentation of the European case before the Statutory Commission, there should have been, not so much a difference of opinion, as between the European Association and the Associated Chambers of Commerce, on the vital question of Law and Order, as a failure to make clear what the difference really amounted to. The European Association was emphatic in saying that, in the opinion of their body, the transfer of Law and Order to a popular Minister involved much too great a risk. The President of the Associated Chambers, while stating that the Chambers made no recommendations on the subject, let out the fact that the majority of them were in favour of the transfer of Law and Order. What the public want to know is what Chambers made up that majority; how big a majority it was, and whether the Chambers that were in favour of transfer still are in favour of it. There is understood to have been some change of opinion, and, moreover, that the Chambers that represent the bulk of the European capital invested in India always have been of the opinion of the European Association.

The New Boycott.

Always a boycott. Not to speak of earlier ones, there was, first, the boycott of the Statutory Commission, then the boycott of those who mingled socially with Sir John Simon and his English and Indian colleagues. How little success the second achieved was shown by the garden-party at Belvedere given by the Hindu, the Muhammadan, the Marwari, the European, and the Anglo-Indian Associations of Calcutta. Now there is yet another boycott—Gandhi's boycott of foreign cloth. All Congress organisations are to call for volunteers to go from door to door in town and village, collecting foreign cloth, and delivering or receiving orders for *khadi*. "Foreign cloth," Mr. Gandhi's programme goes on, "should be burnt *wherever possible*." It is always possible to burn cloth; all you need is a lucifer match. So "wherever possible" is a euphemistic way of saying, whenever the owners wish it burnt, or can be cajoled or frightened into thinking that they do. That is where the ugliness begins. Where it ends can be read in a novel of Rabindranath Tagore, "The Home and the World," a novel written years ago, but about a people that does not change. At the end of the story two of the characters are being brought home, one wounded, the other with a bullet through his heart.

Communism and Labour.

The Viceroy's announcement that the Public Safety Bill, with an additional clause touching foreign remittances to Communists in India, is to be brought again before the Legislative Assembly, has been welcomed by a public greatly perturbed by recent happenings in the world of factory and other labour, as also the Viceroy's announcement of the appointment of a Royal Commission on labour conditions, with the late Speaker of the House of Commons as Chairman. It is understood that the work of the Commission will not begin until the autumn. Its task will be to make a comprehensive survey of the whole field of industrial relationship in India. Among the particular aspects which the Commission will be asked to examine are the relationships between employers and employed; the legislation already in existence to maintain that relationship on a good footing; the present laws for the protection of workers and the need, if any, for extension; and the causes of ill-feeling, if any is found to exist.

THE CHAMBER OF PRINCES.

A variety of circumstances combined to make the present session of the Chamber of Princes, which opened last week at Delhi, among the most interesting since its inauguration by H.R.H. the Duke of Connaught in 1921. The return of the members of the Standing Committee from giving evidence on behalf of their Order before the Butler Committee would in any case have made the occasion a memorable one. Expectations that the Princes would take the opportunity of defining their attitude as a body not only towards the subject of the inquiry but also towards the famous Congress Independence resolution, lent additional interest to a gathering which, owing to the fact that the proceedings until the present session were not open to the Press, ordinarily attracts little attention.

After the decision to admit the Press had been taken, the remainder of the first day's proceedings was devoted to the presentation and adoption of a report on the September meeting of the League of Nations by the Nawab of Palanpur, one of the delegates, and a review of the Chamber's work during the past year by the Chancellor. While the Chamber's ordinary activities, the Maharaja of Patiala pointed out, had been almost entirely overshadowed by the proceedings in connexion with the Indian States inquiry, many interesting and important matters had been considered by the Standing Committee. Among these his Highness mentioned particularly civil aviation, wireless and broadcasting, the censorship of telegraphs and the employment of Europeans in Indian States.

That the Princes have been for some time past considering their position *vis-à-vis* the recent political developments in British India, culminating in the resolution adopted at the Calcutta Congress, is well known to readers of THE NEAR EAST AND INDIA. The decision which they have reached was dramatically disclosed at the opening of the second day's proceedings on February 13, when the

18, OLD BROAD ST., LONDON, E.C.2

following resolution, moved by the Maharaja of Patiala as Chancellor, was unanimously adopted:—

"While adhering to their policy of non-intervention in the affairs of British India, and repeating their assurances of sympathy with its continued political progress, the Princes and chiefs comprising this Chamber, in view of recent announcements of a section of British Indian politicians, indicative of a drift towards complete independence, desire to place on record that in the light of mutual obligations arising from their treaties and engagements with the British Crown, they cannot assent to any proposals for the adjustment of equitable relations between the Indian States and British India unless such proposals proceed on the initial basis of the British connexion."

The proceedings, over which the Viceroy presided, according to *The Times'* Delhi Correspondent, were marked with great dignity, the words of the speakers, all of whom, with one exception, read from typescript, being carefully and deliberately chosen, without any attempt at rhetoric. Accordingly the speeches were more of the character of authoritative declarations of policy than contributions to a debate, a fact the significance of which was doubtless not lost upon the leaders of the various political parties in the Legislative Assembly who were present in the public gallery.

The advocacy of independence by a section of British Indian politicians, said the Maharaja of Patiala, in moving the resolution, would be a matter of indifference to the Princes if they had no desire for ultimate federal relations with British India or no treaty obligations to the British Crown. But circumstances made them deeply concerned that developments in Indian politics should not be such as would create an insurmountable obstacle in the way of closer relations between British India and the Indian States or inconsistent with their treaty obligations. Quite apart from their conviction that the inclusion of India within the British Commonwealth was vitally necessary to the well-being of the country, they felt, he said, that the suggestion of independence conveyed a menace to the due discharge of those reciprocal rights and obligations which were the foundation of their relationship with the British Crown.

The Maharaja of Kashmir, seconding the resolution, also emphasised the aim of federation rather than isolation as the ideal future for the States and British India under the ægis of the British Crown. The Maharaja of Bikanir, supporting, repeated the warning given in his speech last September, and explained that the resolution implied no hostility to British Indian aspirations. Dismissing as fantastic the idea of independence which was so contrary to India's interests, "we stand," he declared, "unflinchingly, steadfastly, irremovably and regardless of all sacrifices for the maintenance of the British connexion."

While wishing British India every prosperity in its endeavour to attain Dominion status, the Maharaja of Alwar made it plain that the Princes could have no part nor lot in "any wild theories" aiming at complete independence, a view which the Maharaja affirmed reflected the spirit of the Order throughout India.

Before putting the resolution, which was also supported by the Chief of Sangli and the rulers of Mandi, Dewas (senior branch), and Nandgaon, to the meeting, Lord Irwin observed that it was one of the most important, if not the most important, the Chamber had ever discussed, and added that he had no doubt that it expressed the feeling of the whole Princely Order.

A Johannesburg newspaper, in an article on the meeting of the British Association, to be held in South Africa this year, urges that an invitation be sent to Sir Jagadis Bose, the Indian Botanist.

A further saving of time on the Imperial Airways service between London and India, which is to be opened on March 30, has been effected by a revision of the schedule on the European section. The time of departure from London each Saturday has been altered from 5.45 a.m. to 10.30 a.m., and passengers and mails will arrive at Karachi at 10.30 a.m. G.M.T. on the following Friday. Thus the time for the journey will be exactly six days, the actual flying time being 52 hours.

THE COUNTRY LEAGUE.

Oral evidence on behalf of the Country League was heard by Sir John Simon and the members of the Statutory Commission and the Committee of the Central Legislature, at Calcutta on January 15. The deputation consisted of Raja Bahadur of Amawan, O.B.E., M.L.C., C. T. Allen, Esq., C.I.E.; Maharaja Kumar Kameshwar Singh; Sirdar Nihal Singh, M.L.C.; Raja Raghunandan Prashad Singh, M.L.A.; M. Yunus, Esq., and A. H. Ghuznavi, Esq., M.L.A.

Raja Ejaz Rasool Khan, C.S.I., of Jehangirabad, Sir Shapoorjee Billimoria, Kt., J. P. Srivastava, Esq., M.L.C., Raja Sir Krishna Chandra Gajapati Narayana Deo, of Parlakimedi were unavoidably prevented from accompanying the deputation of which they were also members. The Deputation was introduced by the Raja Bahadur of Amawan, who made the following introductory remarks:—

"Sir,—It has been our endeavour to bring together in this Deputation representatives of different creeds and varying interests, in that the Country League is non-communal, but in that its members have the tangible and very real bond of 'ownership,' either of investments, lands, business or property. And these they are unitedly out to protect.

"Membership is small but steadily increases; our set intention being to enrol those only who can sincerely and definitely accept the tenets of the League as set out in our Manifesto. It is computed that we already represent not less than: in land 92,000 square miles; in investments and in business Rs. forty-four crores, eighty-two lakhs, fifty thousand; and in properties, Rs. four hundred and sixty crores, nine lakhs, and fifty thousand; while the number of those dependent on us and on the institutions we own or control is very large.

"What we specially desire to emphasize to-day is our claim for greater representation in those Institutions which are to control the destinies of our tangible assets and those similar to it. We believe that a form of provincial autonomy, but only if accompanied by the safeguard of second Chambers in most of the provinces, is desirable. With reference to that part of our Memorandum on the subject of law and order, we do not insist that the vital portion of law and order should be placed under the Central Government, if any other proper safeguard is found or provided, and to that extent our Memorandum is modified. We stand definitely and absolutely for the retention of a close maintenance of the British connexion."

The Joint Free Conference cross-examined the Deputation for one hour and a quarter, in the course of which Mr. C. T. Allen, who acted as spokesman for the deputation, said: "The League was started with the idea of getting together people who would really be anxious to maintain peace and stability in India. The membership of the Association was extended to those who had large stakes in India. It was non-sectarian and non-racial. It was an All-India Association.

"Its formation was publicly announced in June, 1928, although it was formed 18 months before that. The League had started working in one province and had gradually pushed into other provinces. The League was focussing its views with a view to safeguarding landed, industrial, commercial, and agricultural interests, and was trying to bring all these interests within the fold of the League.

"It would be more correct to say the League is in a stage of evolution, than to say, it is in a stage of formation. The Memorandum submitted by the League had been circularised to all the Members. They were generally agreed on main principles.

"With regard to the statement in the Memorandum that the Legislative Assembly had been wrongly constituted, the elected Members of the Central Legislature were insufficiently in touch with the electors. The Members of the Viceroy's Executive Council should be re-

cruited from the best material available irrespective of race or creed. Such men need not necessarily be aristocrats."

With regard to the statement in the Memorandum: "Whatever changes are made in the Indian Constitution, it is essential to provide for the continuity of tradition and authority," Mr. Allen stated that the League had always looked on tradition as a thing of great value which enabled those who follow after to set their minds up to a certain level.

Asked by Sir H. S. Gour whether the League wanted to reconcile bureaucracy with democracy, or a restoration of autocracy, Mr. Allen said: "We want a blending of the old order of ruling authority and tradition with the new order." Asked further "How is autocracy to be blended with democracy?" Mr. Allen replied: "We believe that is one of the problems which the Statutory Commission has come out to India to solve."

Sir H. S. Gour asked whether the League would be prepared to subscribe to a levy of a special educational tax for financing the scheme of mass education suggested in their memorandum. Mr. Allen replied that charges for mass education should be met from existing taxation, adding that, of course, as the country progressed taxation would increase.

Replying to Sir Arthur Froom, Mr. Allen confirmed that the League does not insist that the vital portion of law and order should be placed under the Central Government, if any other proper safeguard is found or provided, and that to that extent the League's Memorandum was modified.

Replying further to Sir Arthur Froom, Mr. Allen said that the League considered that the instructions to Governors in the Instrument of instructions were not effective in preventing discriminatory legislation and the League left it to the Conference to ascertain what safeguards were necessary and how they could be provided.

Sir John Simon brought out the fact that the League proposed three methods of preventing discriminatory legislation against minorities. First, the establishment of a Second Chamber, and secondly, the assent of the Governor-General in Council to provincial bills. These two were, however, not considered sufficient and required to be supplemented by constitutional safeguards. These two could only prevent legislation, but there was a general fear, rightly or wrongly, that a good deal of harm could be done to the interests of minorities through executive action, and it was against this that the League wanted safeguards.

With regard to the League's claim for the creation of more special constituencies for Landed Interests, Commerce and Industry, Sir John Simon pointed out that although only a few seats were reserved for that class, in actual practice hitherto they had succeeded in sending in a much larger number of representatives through the general constituencies.

Raja Bahadur of Amawan said that those people were not returned as landlords. Raja Raghunadan Prashad Singh added that those people had obtained election by recanting their creed as landowners and accepting the creed of the Swarajists and Extremists. Mr. Allen stated that the League felt that at present there was too much generalisation about the allotment of representation.

Examined by Lord Burnham Mr. Allen said that the League had for one of its objects, the promotion of the welfare of the people, and replacement of mistrust by mutual confidence and goodwill. The League had recently intervened in the case of ex-military men at Lahore, and it had succeeded to a large extent. It was the League's ambition to act as a conciliatory body in case of disputes between labour and capital, or landowners and tillers, but they had not yet reached that stage.

Mr. Allen stated that the League supported the separate representation made by Goalpara Zemindars' Association of Assam. This representation clearly shows that the Landlords' interests in the Assam Legislative Council are unprotected. The League was in favour of the transfer

of the Goalpara District to Bengal. This closed the oral evidence, and the Deputation received the thanks of Sir John Simon, and withdrew from the Conference.

INDIAN NOTES.

(Continued from page 227.)

The Declaration of August 20, 1917.

"I tell this Assembly again, and through them India, that the declaration of 1917 stands, and will stand for all time, as the solemn pledge of the British people to do all that can be done by one people to assist another to attain full national political stature, and that that pledge, so given, will never be dishonoured." In these words the Viceroy, in addressing the Legislative Assembly at the end of January, reaffirmed and emphasised the declaration of August 20, 1917. It will be recalled that by the declaration the British Government definitely pledged itself to (1) "the increasing association of Indians in every branch of the administration"; and (2) "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire." It was also clearly stated in the declaration that progress in this policy could only be achieved by successive stages; and that the British Government and the Government of India would be the judges of the time and measure of each advance. There is at present, as Lord Irwin truly said, "a black cloud of mistrust enshrouding much of Indian political thought." And it is well, therefore, that he should have so definitely stated that the British Government stands by its declaration. The honesty of the Government is now, and has been for a long time, suspected by the political classes or, at any rate, by some of them. The speech in which, in 1921, Mr. Lloyd George referred to the Indian Civil Service as the steel framework of the structure of the British administration no doubt had something to do with the growth of this feeling, although it was not, of course, the only factor. It is the natural Indian attitude to be suspicious of the Government. And being slow to believe that any radical change was really intended, the Indian mind took the view that the declaration had been made merely for the purpose of pacifying India at a time when the Great War was engaging the undivided attention of the Empire; and that the policy defined in it would be quickly abandoned and the old system of administration restored. It was in this atmosphere of suspicion and mistrust that the reforms scheme was launched and its continuance has been, of course, one of the factors working against the scheme. The extreme sections of the politicians have in the meantime become more and more extravagant in their demands, and they have now set up a wild cry for complete independence of Great Britain. In such an unsatisfactory state of affairs it is obviously for the Government to stand firm and to pursue the policy to which they are pledged; and the Viceroy's clear statement that this is what they intend to do ought to help to calm the situation. The clear and unambiguous declaration by the Chamber of Princes, reported fully in another page, is equally to be welcomed. The effect of the Princes' pronouncement, following closely upon the Viceroy's plain speaking, must be to steady and hearten the great mass of the people, whose minds have been perplexed by recent political developments.

IRAQ.

A Dinner was held at the Hotel Victoria on February 12 under the auspices of the Royal Empire Society, followed by an illustrated lantern lecture by Sir Percy Cox on "Iraq." At the Dinner, over which Colonel A. Weston Jarvis presided, among those present were:—H.E. Jaafar Pasha, Lord Stanley of Alderley, Sir Percy and Lady Cox, Sir John and Lady Shuckburgh, Air Vice-Marshal Sir John and Lady Higgins, Sir Hugh Bell, Sir Arnold Wilson, Colonel Sir William and Lady Willcox, Sir Adam and Lady Ritchie, Sir Edgar and Lady Bonham-Carter, Air Vice-Marshal Sir Sefton Branker, Sir Albert and Lady Stern, General H. O. Mance and Mrs. Mance, Lady Storrs, Lady Goold-Adam, Sir George Boughey, Mr. A. Yusuf Ali, and Mr. J. M. Wilson.

Sir John Shuckburgh, who presided at the lecture on Iraq, referred to the long service to the British Empire of Sir Percy Cox, who was, so to speak, the parent of the young Arab State of Iraq. Sir Percy then delivered his lecture, the text of which we are privileged to print herewith:—

History of Iraq.

"The subject of the Paper which I have been invited to give you to-night—Iraq—(simply) is a somewhat comprehensive one to embark upon; it presents so many interesting aspects and problems, upon any one of which, if one had the up-to-date knowledge, it would be easy to discourse for the time at our disposal. But the lapse of nearly six years since I gave up the High Commissionership makes me feel very much of a 'back-number,' so great have been the changes since I left. I am the more glad, therefore, to see here to-night several distinguished friends who have special knowledge in various directions, and will, I hope, have time to give us the most recent information regarding their particular spheres of work or interest. The Paper which I am now going to read has been framed rather for those who, without any first-hand acquaintance with Iraq take a general interest in the life-history of King Faisal's infant kingdom. To them I shall try to give a connected though necessarily condensed review of the circumstances of its creation and development, in the hope that they will derive from it a clear understanding of the problems which present themselves for solution from time to time and receive passing mention in the daily Press. After doing so, I shall show you a few slides on the screen, illustrating references in my text or representative scenes in the country, and these will perhaps prove more interesting than the body of my address itself.

"Before going further, I venture to say a word, by way of appeal, in regard to the name of the country we are discussing. It will be remembered that during the War it was always referred to by the War Office and the public as 'Mesopotamia,' or, more affectionately, as 'Mesopot.' That was near enough for our purpose at the time, but, as you know, Mesopotamia is a word of Greek derivation meaning 'Between the rivers,' and it is quite unfamiliar to the natives of the country. Consequently when it came to setting up a national Government, of which the official language was to be Arabic, 'Iraq,' the name by which their country was known to them, had to be brought into use.

"As to the meaning of the name, scholars both ancient and modern are at variance. To my mind the most plausible of the derivations suggested is the Arabic trilateral A-R-Q—Araqa, a verbal root giving the idea of 'perspiring' or 'exuding moisture.' It is the same root which those who have lived in India will recognise in the Hindustani word 'Arraq' the fermented juice of the toddy-palm or other source of firewater. This sense of 'exuding moisture' is certainly most appropriate to the region in question, embracing as it does the low lands of the Euphrates and Tigris deltas, which at one season or other during the year have been in the habit of exuding moisture ever since the Deluge.

"But doubt though there be as to the meaning of the word, there is none as to its proper pronunciation. Taking it as we transliterate it in English, 'I-R-A-Q,' the 'I' is short and the 'a' long, that is, Iraq, and not 'Eyerack,' as I so often hear it called, and I beg you, ladies and gentlemen, to take your courage in both hands and challenge Eyerack whenever you hear it.

"Previously to the Great War the region in question was included in what was called 'Turkish Arabia,' but its Arabian aspect was of no ancient origin. It may be said to date from the death of the Prophet Muhammad in A.D. 632. In his lifetime he had come to realise that by reason of the abundant opportunities of gain and booty, which it provided for his faithful followers, the expedient of the *Jihad* or Holy War was by far the most effective means of pushing and popularising the new religion of Islam, and after his death the same policy was pursued by his immediate successors. They were not long in overrunning the Eastern Empire of Rome and also, almost simultaneously, the Sassanian Empire of Persia, which at that period included Iraq. In 63 A.D. the Sassanian Fire Worshipers were finally defeated at the Battle of Qadisiyeh, their capital at Ctesiphon occupied, and the surrounding country brought into Arabian subjection; and it was not long before the militant forces of Islam had successfully wrested from their Aryan intruders Palestine, Assyria, Babylonia, and Iraq, and had thus brought all the territories bordering on the Arabian desert into their orbit. Iraq itself became the patrimony of the Arab Caliphs, with their seat of government first at Damascus and then at Baghdad; and there under the famous Haroun al Rashid, the Abbasid Caliph of the Arabian Nights, the Arab Empire reached its zenith of prosperity. After Haroun's death it began to decline and continued on the downward path until the Mongol invasion of 1258, when Halagu Khan descended on the province, wiped out the dynasty of the Abbasid

Caliphs and destroyed the vast irrigation systems which had been spread like a network over the face of the country. For three centuries after this Iraq remained the playground of warring tribes and transient rival dynasties and contributed little or nothing to history, and it was not until 1534 that the great Ottoman Sultan, Sulaiman the Magnificent, ousted the régime of the Persian Safavi dynasty from Baghdad and constituted Iraq a province of the Turkish Empire.

"But communications with the capital were still slow and precarious and for nearly three centuries but a shadowy authority could be exercised. It was not until after the Crimean War that the Turks, now rejoicing in a strong Army and a fuller Treasury, felt they ought to exercise closer control over their distant provinces, and some improvement in general conditions did result; more particularly during the régime of Midhat Pasha, who during the period of his governorship of Baghdad (1869-72) laboured single-mindedly in the cause of progress and reform. But his activities proved to be but a transient phase, and conditions soon relapsed into their former state of stagnation; and it was not until the period of the Revolution of 1908 that any marked change became apparent. Then, even in distant Iraq, the influence of the Committee of Union and Progress began to make itself felt. Attempts were made to encourage education, and serious attention was paid to the possibility of agricultural development, the distinguished English engineer, Sir William Willcocks, being employed to draw up a comprehensive irrigation scheme. From this, later on, was evolved the great Hindiyyah Barrage system, built by a British firm and designed to restore to prosperity a large area of fertile land, which for generations had remained derelict. Unfortunately the incidence of the Italian and Balkan wars at this stage tended once more to weaken the authority of the Central Government, and in the Arab Provinces, in particular, the disappointment of the hope of better things, which had been born of the Constitution of 1908, generated a recrudescence of racial aspirations and a general atmosphere of unrest. In Iraq, nearly every summer at the time of harvest or revenue collection, rebellious outbreaks occurred at one place or another, travel became unsafe, and river piracies frequent.

Turkey and Great Britain.

"And a disagreeable sign of the times was the fact that the tendencies of the Governing Authorities in Mesopotamia were now distinctly anti-British. The Young Turks, partly prompted by an understandable desire to be rid of foreign control and influence, and partly from some disposition to swelled head, regarded the foreigner in his country with no friendly eye, and in Mesopotamia there were few other foreigners to share these amenities with the British, whose long traditional position of predominance in the Persian Gulf and strong interest in the pilgrim traffic to the Holy Places of Islam had combined to give her a privileged position in the country. For example, the British Resident and Consul-General in Baghdad enjoyed the right to have an Indian Sepoy guard at his residence and an armed Indian Marine vessel at his disposal on the river, while the British firm of Lynch Bros. had a concession for running a service of boats on the Tigris under the British flag. And at this time, too, our own interests in the region were of increasing importance, and it was a cardinal feature of our policy that no European Power should be allowed to establish itself at or near the head of the Persian Gulf. There was no doubt that the hostile attitude of the Turkish authorities at this period was not a little due to German influence, and negotiations were, in fact, in progress during the early part of 1914 by which it was hoped that an amicable adjustment of interest and difference would have been reached; but the outbreak of the World War put an end to all this. I was at the time, that is the summer of 1914, acting as Foreign Secretary to the Government of India, and so was in close touch with current developments, and it soon became evident that the attitude of Turkey towards the Allies would at best be one of malevolent neutrality. Thus, before the end of August the Basrah authorities were reported to be making ill-disguised preparations for blocking the Shatt-el-Arab, with the result that only two British vessels ventured up the river during the next two months, and those at the masters' own risk and peril. This hostile attitude on the part of the local Turkish authorities, their repeated threats to our Arab friends at the head of the Gulf, and the obvious menace to the great oil industry in the Persian territory, just across the river, compelled the British Government to take timely precautionary measures. On October 16 an enormous fleet of 47 transports, probably the largest number that ever sailed together, left Bombay under sealed orders, partly destined for East Africa and partly for a point in the Persian Gulf, which proved to be the harbour of Bahrain. After lying at anchor there for a week we received news of the entry of Turkey into the War by the attack on Odessa, and the transports then proceeded to the mouth of Shatt-el-Arab and on November 6 the Mesopotamia Campaign began by our attack on Fao.

"A good deal of criticism on the dispatch of this expedition was passed at the time and afterwards. The vital importance was emphasised of concentrating the whole of our strength in the main theatre and the folly of dissipating our resources in side shows, but these critics overlooked the actual situation with which we were confronted. As the result of the prominent rôle we had played in the Persian Gulf for centuries past, we were in relations of treaty obligation or close friendship with all the Arab potentates on its Arab shore, especially with those at the head of the Gulf, the Shaikhs of Kuwait and Mohammarah. If we left them without support they would have no alternative but to throw in their lot with the Turks; the whole of Arabia would then go with them and *Jihad* would undoubtedly follow. The oil refinery on the Persian shore would

go by the board and Persia and Afghanistan would surely be drawn into the net of the Central Powers. On the other hand, it seemed certain that if we made it clear, immediately, that we were ready and able to support our Arab friends, we should carry them with us and any operations we had to undertake in Lower Mesopotamia would open under entirely different auspices. But it was everything to act promptly. We know from documents captured from Germany during the War and from others which have seen the light since that the instructions issued to Field-Marshal Von De Goltz, who was in command of the Turkish VI. Army, were that he was to expel the British and Russians from Persia, to raise a Persian Army, and organise a confederacy of Turkey, Persia, and Afghanistan for the invasion of India. It was only the prompt dispatch of Expeditionary Force D that frustrated all these schemes and subsequently, by establishing connexions with the Russian forces in Persia, cut the enemies' east and west communications.

Great Britain and the Arabs.

"It has seemed to me necessary, for the purpose of my sketch, to restate the circumstances in which we embarked on the campaign in Iraq, but I have no intention of pursuing its further military history. But what I want at this point to emphasise is a factor on which turns much that follows, namely, that when we entered Mesopotamia it was not to fight with the people of the country, but with their alien over-lords, the Turks. As regards the Arab population, we had no reason to suppose that it was hostile as a whole to the Turks; indeed, in the case of the couple of million settled on the land, it was hardly possible that they could be, but we hoped that if we could persuade them at the outset that our intentions towards them and their religion were *prima facie* benevolent, we might at any rate count on their remaining neutral and leaving us to settle our differences with the Turks unmolested. Reassuring proclamations were at once issued when the campaign started, and the history of the War shows that the inhabitants proved on the whole friendly. It is unfortunately true that the tribesmen whose habitats lay along the fluctuating tide mark of warfare and who were thus with the Turks to-day and with us to-morrow, regarded us both as fair game for their predatory and often savage proclivities, but we had no trouble from the inhabitants of the important centres which we occupied in succession; on the contrary, we had reason to be grateful for the co-operation we received from them; at any rate, there were no organised risings against us, while the Turks got little or no help from them.

"But the fact of our having undertaken by proclamation to treat them as a friendly population placed upon us the obligation to provide them with the amenities of a normal civil administration, and this we set out to do, but the question was a curiously anomalous one. Though we called them friends they were still technically 'enemy subjects,' and their relations and belongings in Allied countries outside Iraq were treated on the enemy basis. Again, it was all very well for us to say, 'if you behave nicely we shall treat you as a friendly population,' but when all was said and done, there was a war going on and martial law in operation, and we were always liable to be brought up sharp on some point of military exigency which conflicted with our proclamation; but somehow we muddled along successfully. The initial difficulties were, however, of setting up the machinery of a civil administration. The task that fell to me as Chief Political Officer was greatly enhanced by the fact that under the Turkish régime all the chief officials had been European Turks and as each administrative centre was evacuated in the face of our advance, these officials all fled with the retreating troops, having first removed or destroyed all local records, and we found no local material whatever wherewith to replace them. Consequently during the whole duration of the War the personnel for the civil administration had to be recruited from the British and Indian ranks serving with the Army, or to be borrowed from India. Fortunately, at first, when we were dealing only with Basrah, then the Basrah Vilayet, it was not difficult to find British officers serving with the Force with the right experience of various branches of civil and judicial administration, mostly Indian civilians and 'Military Politicians.' Prominent among these was Sir Henry Dobbs, who has just retired from the High Commissionership, and within my Secretariat at Basrah I was joined by Captain, now Colonel Sir Arnold Wilson, whom I am glad to see here to-night, and a little later by Miss Gertrude Bell, who was transferred to me from the Intelligence Branch, both of whom served me devotedly and with much distinction to the end of the chapter."

[At this point Sir Percy told an amusing anecdote concerning his political activities at this time. It was his habit, he said, to divide his time between backward and forward areas. Once when he was up with the troops, somebody in Basrah had thought of the idea of creating officials with high-sounding titles, such as Revenue Officer (who had no revenue to collect), Judicial Officer (who had no subordinates), and so on. These ranks duly appeared in Army Orders. But the Government of India was puzzled by the new creations, and asked the reason why. For a time Sir Percy, who was not responsible for them, was puzzled to know what to reply, until at last, with his Secretary, he thought of sending a telegram to the Government of India: "See Book of Genesis, Chapter II., Verse 19." That verse runs: "And out of the ground the Lord God formed every beast of the field, and every fowl of the air; and brought them unto Adam to see what he would call them; and whatever Adam called every living creature, that was the name thereof."]

"But with each successive advance the task became more exacting, not only from the primary difficulty of finding sufficient officials with civil administrative experience and knowledge of the language, to take over areas being constantly added to our responsibilities, but

also because, as the War went on, the country in the hands of the Turks fell into ever-increasing destitution. For instance, in one case thousands of people were found to have died of starvation, and in another, the men having all fled to avoid conscription, starving women and children were subsisting on grass, the only food being found in the bazaar being a handful of dates. For the last eighteen months of the War, that is, practically from the time we reached Baghdad, the first task of the newly-appointed Political Officer was to get food sent out from the nearest centre in our occupation for his civil population. But the country showed great resiliency, and in a few weeks a bazaar would be as replete and busy as before!

"All this time the civil administration was splendidly served by the personnel thus recruited from all sections of the fighting forces. It was nothing short of wonderful how aptly and devotedly they took to their novel duties. But from the point of view of policy and the possibility of the future we were working entirely in the dark, just from hand to mouth as necessities arose. We knew not how the War was going to end, nor what the fate of Mesopotamia would be in the event of the Allies' success. For the same reason it was, of course, difficult for the powers that be to give us much guidance; but at this distance of time I think there may perhaps be no harm in my mentioning that in 1917, soon after our occupation of the Baghdad Vilayet and the southern portion of the Mosul Vilayet, a suggestion for comment did come from home, which if it had been adopted might have altered the whole course of future development. Referring to the three provinces, Basrah, Baghdad, and Mosul, it was asked that as the circumstances and needs of each seemed to be distinct or distinguishable, might it not be advisable to administer them independently of each other on such different bases as might seem appropriate in each case? It seemed to us on the spot that whatever territory might be found in our hands at the end of the War it would be subject to the various announcements which we had made to the inhabitants and should be without doubt administered as one whole. The idea had only been put forward as a suggestion and was not pursued, as in face of the views received from Baghdad, both before the Armistice, and afterwards, as High Commissioner, I failed not to oppose unequivocally any separatist tendency which seemed to be in evidence, and, judging by results, I think there can be no doubt that our instincts were right.

Towards an Arab Kingdom.

"Well, after our arrival at Baghdad, the gradually expending civil administration pursued the now even tenor of its way, my designation as head of it being altered from Chief Political Officer to Civil Commissioner. At the same time my headquarters were moved up from Basrah to Baghdad. In the spring of 1918 I was called to London for consultation, leaving Colonel Wilson in charge of my duties, with Miss Gertrude Bell still working indefatigably as Oriental Secretary. On my way back from home I received an urgent message to proceed to Teheran to relieve His Majesty's Minister, who had been ordered home on sick leave. I reached the Persian capital a few weeks before the Armistice and remained away nearly two years, during which Colonel Wilson continued to carry on the duties as Civil Commissioner, developing the administration as needs arose on the same lines as heretofore. With the Armistice a great change came over the face of the scene. A few days after its signature, on November 7, the British and French Governments issued a declaration of vital importance to the inhabitants of the occupied territories, stating their aims in the territory to be:

"The complete and final enfranchisement of the people so long oppressed by the Turks and the establishment of national Governments drawing their authority from the initiative from free choice of native populations."

"The proclamation went on to promise help in the establishment of national Governments and Administrations, alike in Syria and Mesopotamia. In the case of Sir Stanley Maude's earlier pronouncement, when the issue of the War was still doubtful, the sentiments therein expressed had been to a great extent discounted by the public as a natural form of propaganda, but the Anglo-French proclamation above quoted was taken in all seriousness. Had an early peace made it possible to give prompt effect to the policy therein enunciated, all would have gone well; unfortunately the delay which ensued over the peace negotiations and the wide publicity given to President Wilson's '14 points,' with their potent element of self-determination, gave free play to political speculation and stimulus to nationalist feeling. This was further encouraged by the inquiries which the Civil Commissioner was requested to set on foot, as to whether the people of Iraq were in favour of a united Arab State from Mosul to Basrah, and, if so, under what auspices. On the first point the replies were unanimously in the affirmative, but on the others they were so conflicting that they served no useful purpose and for the time being the solution of the problem remained in abeyance, as far as His Majesty's Government was concerned; locally, however, considerable progress was made with the introduction of natives of the country into the administration.

"But affairs in Iraq were naturally affected a good deal by events passing in Syria, and when in March, 1920, the Amir Faisal was proclaimed King of Syria, the Iraqis responded by proclaiming his brother, the Amir Abdullah, King of Iraq. Hardly had this somewhat meaningless incident occurred when the assignment of the Iraq mandate to Great Britain was publicly announced and, of course, set all tongues wagging. Two days later I was summoned home from Teheran for consultation. Meanwhile the announcement of the mandate had been received very unfavourably in Baghdad, and in reply to objections immediately raised by a self-chosen Committee, it was announced by the Civil Commissioner that in the autumn an Arab Government would be established and an Assembly called, freely

elected by the people, in consultation with which an Organic Law would be prepared. But by now the hot-heads had got control and a few days later, on June 2, the Shiah tribes of the Baghdad Vilayet, encouraged by their religious leaders, broke into open revolt. A variety of causes have been sought to account for this outbreak which there is not time to discuss here, but obviously the first step necessary was to restore peace and order, and energetic measures were taken for that purpose. But by the time I had reached London the public at home were considerably disturbed at the turn things were taking in Iraq and a strong agitation was at work in certain sections of the Press, demanding that we should cut our losses and evacuate the country. The problem was earnestly debated in the Coalition Cabinet, and it was finally decided that in view of the undertakings which we had given to the inhabitants and the indubitable results which would ensue from evacuation there could be no question of our relinquishing our responsibilities, and in the alternative I was instructed to return as High Commissioner and get to work at once with the establishment of a National Government. I returned forthwith to find the fires of revolt practically extinguished, and with the self-denying co-operation of the aged Naqib of Baghdad I proceeded to organise a Government in the form of a Council of State under his presidency. This body represented all classes and sects of the community, and gave immediate attention to the repatriation of Iraqi officers from Syria and Hijaz; to the reorganisation of civil government under Iraqi officials; the preparation of an electoral law and the formation of an Army. All this time the question of the ultimate rulership of Iraq was the subject of universal interest and discussion. It appeared certain in the views of all sections of the community that no individual inhabitant of Iraq could command the suffrage of the whole people, and that it would be necessary to bring in an outsider. Among outsiders the family of the Sharif of Mecca, owing to the prominent part they had played in the Arab Movement, were the favourite candidates. At this stage, in March, 1921, Mr. Winston Churchill, who had now become Secretary of State for the Colonies, convened a Conference of Middle-Eastern Governors at Cairo, at which the questions to be debated with reference to Iraq were mainly the possibility of reduction of expenditure; the treatment of the Kurdish provinces; the nature of the force to be created for the defence of the new State; and lastly, the claims of the various possible candidates for the throne of Iraq. In regard to this latter question it was easier to arrive at the result by process of elimination. Indications of public feeling in Iraq convinced me there was no living Iraqi who would be acceptable to all shades of opinion, and that one of the family of the Sharif would command the most general support. I myself knew none of them personally, and went to Cairo prepared to recommend that whichever of the four brothers appeared most likely to suit the part should be allowed to offer himself to the people of Iraq. It is common knowledge that Amir Faisal won the ballot.

"In the matter of the reduction of expenditure, which at the time, if I remember aright, amounted to 37 millions, I came prepared with a Budget which provided for a large immediate reduction and then an annual decrease to the point of the irreducible minimum. The secret of this reduction was the transfer of the command of the forces in Iraq from the Army to the Air Arm. There was a certain amount of controversy on the subject at the time. As you all know, the career of the Air Force in Iraq has proved a triumphant success.

Anglo-Iraqi Treaties.

"In due course Amir Faisal arrived in Iraq, assured that in the event of his proving acceptable to the people he would have the support of H.M. Government. Once in the country he was his own best advocate, and after a resolution by the Cabinet of the Naqib, declaring him King, a referendum to ascertain the views of the countryside resulted in his acceptance by an overwhelming majority. He was crowned King of Iraq on August 23, 1921. In the course of his address on that occasion he expressed his gratitude to the British nation for its aid to the cause of Arab liberation and independence, and declared that it was from Great Britain alone that they would seek help to reach their goal. Meanwhile it was decided by H.M. Government that in order to dispel the dislike displayed in Iraq for the mandatory idea (mainly, I am convinced, because when it was first referred to in the Press, it was accepted in its sinister sense of 'one who makes an arbitrary demand,' instead of the benevolent sense contemplated by the inventors, of 'one who undertakes a voluntary trust') they would agree to their relations to Iraq being expressed in terms of a Treaty of Alliance. The first Treaty of Alliance was in due course framed and signed on October 13, 1921, but unfortunately the British Government, under whose auspices it took place, resigned ten days later, and the question of our responsibilities in Iraq became a prominent plank in the election campaign which ensued. A fierce newspaper propaganda was launched to protest against the continued expenditure of British money in Iraq, and several Ministers of the new House of Commons gained their seats pledged to work for its evacuation at the earliest possible moment. On the formation of the new Government the question of the policy to be pursued in Iraq came under active consideration, and I was called home for consultation. I returned to Iraq on March 31, taking with me the decision of this Conference. It was in the shape of a draft protocol to the unratified Treaty of Alliance of the preceding October, by which the twenty years period of the Treaty was reduced to four, to date from the date of the ratification of the peace with Turkey, and it further provided that, if before the lapse of that minimum period Iraq should be admitted to membership of the League of Nations, the Treaty should terminate immediately. The Treaty was signed on April 23, 1923, but it still remained to be ratified, together with certain subsidiary agreements

attached to it for the detailed regulations of Military, Financial, and Judicial arrangements. The negotiations to this end dragged on tediously for more than a year, but at last both Treaty and Agreement were thereupon accepted by the Constituent Assembly, a rider being added to their Resolution, to the effect that they accepted it on the assurance that after ratification the British Government would amend with all possible speed the financial agreement in the spirit of generosity and sympathy for which the people of Great Britain were famous. The instruments were in due course ratified, and were accepted by the Council of the League as satisfying Article 22 of the Covenant for the regulations of relations between Great Britain and Iraq.

"The question which now remained and overshadowed all others was that of the settlement of the northern frontier with Turkey, but this was soon to be brought to a successful issue. In the spring of 1925 a mixed Frontier Commission, dispatched under the auspices of the League, carried out its duties, and on receipt of its report the Council of the League unanimously decided that what was known as 'the Brussels Line' should be accepted as the Turko-Iraqi Frontier, but on the condition that Great Britain should undertake by a new Treaty with Iraq to continue her present relations for a period of twenty-five years unless before the expiry of that period Iraq were to be admitted to membership of the League. This satisfactory solution of the frontier problem was received in Iraq with great relief and much appreciation of the part taken by the British Government in the matter. Negotiations were promptly inaugurated for the framing of the new Treaty and, having been accepted by both Parliaments, it was recognised by the Turkish Government in the preamble to a tripartite Treaty concluded at Angora on June 5, 1926, between the representatives of Great Britain, Turkey, and Iraq. This latter Treaty records the acceptance by the High Contracting Parties of the boundary line adopted by the League, provides for the dispatch of a delimitation Commission to trace it on the ground; lays down procedure for settlement of boundary dispute and for maintenance of tranquillity on the frontier; and finally provides for the payment by the Iraqi Government to Turkey of a proportion of the royalties to be received prospectively by the former from the Turkish Petroleum Company and its subsidiaries.

The said Delimitation Commission having successfully completed its labours by the autumn of 1927, His Majesty King Faisal, accompanied by His Excellency Jaafar Pasha al Askari, journeyed to London in November, 1927, for the purpose of sounding His Majesty's Government as to the possibility of supporting an application from the State of Iraq for admission to membership of the League at the meeting in September, 1928. The problems raised by this proposition were fraught with no little difficulty, especially in regard to the problem of a national defence and the ability of Iraq to take responsibility for it. King Faisal's Government urged that full military responsibility could be taken if some form of conscription were adopted, a measure to which H.M. Government believed that a good deal of opposition might be expected, and found it difficult to promise their support. On the whole they did not consider that it would be possible for them to support Iraq's application at this early stage with the least chance of successful result. Short of that, however, they decided that some adjustment of the relationship between Iraq and her Mandatary were feasible, having regard to the undoubted progress made by the Iraq Administration during the past few years. This adjustment was interpreted in yet another Treaty to replace that of January, 1926. While the main principles of the former document underwent little change, a further step was taken towards a satisfaction of the Iraqi aspiration by the formal recognition of Iraq as an independent State, and Great Britain agreed, provided the present amount of progress should be maintained and all went well in the interval, to support Iraq's candidature for admission to the League in 1932. At the same time it was recognised that the Military and Financial Agreement as at present framed admitted of revision in view of the progress made, and it was accordingly agreed that negotiations should proceed for the framing of fresh instruments.

"Well, ladies and gentlemen, I have now brought you with me to the stage of current happenings. We have seen in the newspaper reports that these negotiations to the framing of this fresh agreement have not yet met with success, and in consequence the Cabinet of Sir Abdul Muhsin has felt it necessary to resign, on the ground that he has failed to arrive at a draft which he could present to the Assembly with any chance of acceptance.

"Having reached this point, I feel that I am getting on to delicate ground, with the head of the Middle East Department in the Chair and the Minister for the State of Iraq sitting before me. Doubtless they are in a better position than I am to tell you about the actual position at the present moment; but I can well understand their hesitating to do so, on the ground that anything in the nature of a public discussion at the present moment might do more harm than good, and, indeed, be improper so long as conversations are still proceeding between the two Governments. That was the line, I note, that the Secretary of State for the Colonies took in replying to a recent question in the House of Commons.

"This, however, I may certainly say without offence: that I am convinced that neither the people nor the Government of Iraq have the least wish to get rid of the British connexion, as is, unfortunately, suggested from time to time in the Press. A section of the advanced politicians no doubt think that they are not left sufficiently to their own devices in certain directions, but I am sure that they all fully realise that it is only by the continuance of our sympathetic friendship and support that they can hope to make finally good. This being my conviction, I ask you not to take too seriously such episodes as the resignation of a Cabinet or the occurrence of a momentary *impasse*. The political atmosphere may, at the moment, be some-

what clouded, but the cloud will pass. The present difference is essentially one as between friends; and as such, given good will on both sides, about which there is no question, there is every reason to hope that it will be settled in the not too distant future. Patience will, I am sure, carry the day. Of the actual points in dispute, if they have been correctly reported in the Press, they are surely not such as could seriously impair the mutual friendship and trust which happily marks the relations between the two countries."

At this point Dr. H. R. Hall, of the British Museum, who was the first excavator to work at Ur after the War, explained the importance of Mr. Woolley's recent finds at Ur, and also spoke of the other archaeological expeditions at Kish, Kirkuk, Nineveh, and other places. He mentioned with great satisfaction the recent appointment of Mr. Sidney Smith, of the British Museum, to the Department of Antiquities in Baghdad.

Sir Percy then concluded his lecture by referring to the improvements which, largely as a result of the War, had been made in Iraq, such as the port of Basrah, the deepening of the channel of the Shatt-al-Arab, the railways, the trans-desert motor service, and Imperial Airways. The slides which he showed were mainly of Basrah, Baghdad, and Mosul.

In the subsequent discussion, Jaafar Pasha al Askari, Iraqi Minister in London, congratulated Sir Percy Cox upon the comprehensiveness of his lecture, from which he, Jaafar Pasha, had learned much more than he expected to learn. Turning to a few points mentioned in the lecture, he remarked that the word "Iraq" meant to the Arabs a "shore" or "side," and the country of Iraq meant, therefore, the land lying on the shores of the two rivers, Tigris and Euphrates. He added a further note to the history of the Arabs in Iraq. Their existence in Iraq, he said, considerably antedated the birth of the Prophet Muhammad, as was proved by the existence of the renowned Kings of Hira (which was near Kufa), who were Christian Arab Kings, and also by the non-Christian Lakhmide dynasty at Hira. And he mentioned the Beni Kanda and the poetry of Imru'ul Qays in support of his contention. His Excellency then asserted, on behalf of the people of his country, that the Iraqis were grateful for the immense services rendered by Great Britain in the building up of this young State. In this fostering of good will towards the British Empire no one was playing a greater part than His Majesty King Faisal. As for the present difficulties in Anglo-Iraqi relations, it was inconceivable that the British Empire, an institution with so long and distinguished a record in political dealings, would not find a solution of the differences satisfactory to all parties.

In conclusion, Jaafar Pasha much amused his audience by saying that he was sorry that he had no photographs of Iraq, he himself being the only picture which he had of his country!

Sir Arnold Wilson said that for twelve years it had been his privilege to be cypher and record clerk, typist, secretary, and finally deputy to Sir Percy Cox; he had received at his hands and at those of Lady Cox so much kindness and had learned so much that he would be very loath to disagree with him in public, even did he desire to do so, which was far from his mind. Nor would he venture to criticise H.M.'s Government; the experience he had gained while under the direct orders of Sir John Shuckburgh and Sir Arthur Hirtzel had cured him of any tendencies which he might once have evinced in this direction!

The lecturer had urged his hearers to forget the word Mesopotamia and to pronounce Iraq correctly. Sir Arnold Wilson suggested that a similar warning to certain sections of the public and the Press was needed in relation to the words "Imperialism" and "Machiavellism." With what disapproval would the Mandatory system have been regarded by the Imperialists of old, from Alexander and Akbar to Napoleon and Palmerston! As for Machiavelli, supposing he were a civil servant in these days, and had written a Home Office or Foreign office hand-book on the lines of "The Prince," what would happen? He would be called upon to resign, and we should probably hear, soon after, that Sir Nicholas Machiavelli had joined the staff of *Giovanni Toro*.

He felt that much of the misunderstanding and prejudice that existed in the public mind in regard to Arabian affairs was due to an unsatisfactory news service, the deficiencies of which he emphasised.

Turning to more serious subjects, Sir Arnold said he had never yet heard a lecture on Iraq in which the War was mentioned except incidentally. Yet the awful sacrifice of life and health which it entailed on British and Indian troops was the very foundation both of the Mandate and of the subsequent Treaty and the liberties of the new State. He understood and respected such reticence. "We would not," he said, "have later generations know the whole agony of that unhappy time: we hope to save posterity from the terrible knowledge of what such sufferings are. But we, who saw and heard and knew, do not forget the gallantry and faithfulness of those who fought and endured, though few or none could understand the issue, or know the event. Of the disabled soldiers from Iraq who eke out a miserable existence in this country and India there is no need to speak: they are with us. In Iraq the graves of 50,000 soldiers, British and Indian (not to mention the 10,000 or so who died in Turkey of starvation and neglect) stand in mute testimony to the price we have paid for Iraq's liberties.

"Iraqi statesmen, some of whom, such as Jaafar Pasha al Askari, also fought and sacrificed much, and statesmen of other countries, should remember these things when they speak to our nation of our duties and our status in Iraq."

Sir Arnold Wilson paid a tribute to the personality and achievements of the Iraqi Minister in London, and expressed the greatest confidence in the future of Iraq under the guidance of King Faisal, in accord with the High Commissioner. He concluded by express-

ing his conviction, that the people of Iraq still looked confidently to Great Britain for friendly guidance and support, and begged his hearers to remember Milton's exhortation—"Let not England forget her precedence of teaching nations how to live."

Sir Edgar Bonham-Carter said that he would have liked to discuss, had there been time, the questions whether Iraq was attaining stability, and whether the form of constitutional monarchy and parliamentary government to which Great Britain introduced Iraq, was working satisfactorily. He believed that in both cases the answer was in the affirmative. He then spoke on the possibility of founding a British School of Archaeology in Iraq. Great Britain, with her early connexion with Iraq through Rawlinson and Layard, had obviously a duty in this respect. The late Miss Gertrude Bell realised the national obligation, and, founding the Department of Antiquities in Baghdad, did her best to fulfil it. It was not generally known, however, that by her will she had left £6,000 to the British Museum, the income to be paid to a British School of Archaeology in Iraq, should one be founded within twenty-one years of her death. Her wish, evidenced in this signal manner that such a school should be established, would be to many of her friends a sufficient reason in itself for their supporting a project for that purpose. But it would be a mistake to establish the School unless it could be carried on on a scale worthy of British archaeological traditions in the country and our position as Mandatory Power. Sir Edgar's own estimate of what was immediately needed for such a purpose was £10,000 to £15,000—which at any rate would keep a School going for five or six years. He hoped that one or more generous donors would be willing to start the scheme with donations of a substantial character. It would then be possible to issue a general appeal with every prospect of success.

Sir John Shuckburgh pointed out the error of magnifying the significance of certain happenings in Iraq. We should not take such things as "resignation of Cabinet," and "political crisis" too tragically. Not until 1926 had Iraq attained definite frontiers. The parliamentary system had been working in Iraq for only two or three years: was it any wonder, then, that "crises" were apt to occur? Did the parliamentary system work so perfectly in countries which had had experience of it for more years than Iraq had had it weeks? Sir John paid a great tribute to the British officers who from the time of the War had carried on in Iraq, despite the very uncertain future of the country. It was upon the basis of the work done by Political Officers during and after the War, in fact, that the present State of Iraq was being erected.

ADEN AND THE YAMAN.

Lord Lamington will address the Near and Middle East Association on the subject of "Aden and the Yaman," on February 28, at 8.45 p.m. The meeting, which will take place by kind permission of Miss Spalding and Madame Griboval at 133, Queen's Gate, S.W., will be presided over by Sir Thomas Arnold.

NEWS IN BRIEF.

Earthquake shocks damaged houses in the Vladikavkaz region of the Caucasus on February 10 and caused landslips.

An agreement has been drawn up between proprietors of Greek coastal steamers providing for the transfer of their ships to a new "pool" company.

On February 13 Dr. Benesh, Czechoslovak Minister for Foreign Affairs, and the Yugoslav Minister in Prague exchanged the documents ratifying an extension of the Treaty of Alliance between the two countries.

Sir Gilbert Clayton, who is succeeding Sir Henry Dobbs as High Commissioner for Iraq, during his visit to Angora attended a luncheon given in his honour by Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs.

Three Decrees published in Belgrade on February 14 provide the cities of Belgrade, Zagreb, and Liubliana with new mayors and municipal councillors appointed by the King. The new Mayor of Belgrade is M. Savchitch, the banker, who attempted for some time last autumn to mediate between the Serb and Croat political parties.

General Maximovitch, who since December has been Acting Governor of Zagreb, returned to his former military duties at the Yugoslav Staff College and was last week decorated for his services. A Croatian civilian official, Dr. Zorichitch, has been appointed Governor in his stead.

The death occurred on February 14 of Mr. Sydney William Carline, Ruskin Master of Drawing at Oxford, whose paintings of the East have frequently been mentioned with warm approval in our columns. He served in the R.A.F. during the War, in Iraq and elsewhere in the East. With his brother, Mr. Richard Carline, he was sent to the Middle East by the Imperial War Museum on a painting tour. He made some excellent pictures of Arabia, Palestine, and so on. Incidentally, his work has been reproduced in Lawrence's "Revolt in the Desert." Technically Carline was excellently equipped, and he had considerable perception, imagination, and originality.

THE WEEK AT HOME

London, Tuesday Morning.

The Great Frost.

For the past week one topic has dominated all others: the great frost. For the inconveniences which it has caused have concerned almost everybody. The cold in itself is the least of these. What has bothered people most is the lack of water—unprecedented in our generation.

Nine out of ten householders have had their water pipes frozen, and although in some cases a cold water main has kept running, thousands of men and women (children hardly count, for all they want is to be on the ice) have had to depend on stand-pipes, erected by the water companies, in the streets, for all their water.

For this emergency no one was prepared. London, in particular, was ill-equipped for such a shortage of water. One heard of men leaving home early to get a bath and wash at their Club; and with those who habitually shave themselves the barbers' hands were very full. For a week, indeed, London's population spoke of itself as "the great unwashed," and last Saturday the Medical Officer of Health of one of the larger suburbs told me that "there was not a clean person in the district!"

This sudden spell, which, as I say, was eagerly welcomed by the young, has meant a considerable increase in the number of deaths, particularly as the influenza epidemic still continues. Of course, there have been worse times, in the opinion of people with long memories; they (after they have read about it in the newspapers) all remember how infinitely worse things were in 1895. But 1929 is quite bad enough for most of us.

Political Apathy.

The most remarkable feature of the by-elections which have gone against the Government in the last week or two is the low proportion of the total electorate which voted. Quite obviously the country is not excited over the rival claims of politicians; it seems to take alleged accomplishment and promised accomplishments with quite philosophic calm. The most telling and timely cartoon last week was one by "Low" in the *Evening Standard* which depicted "Winnie" and "Jix" at work in a loft, trying with all sorts of hot air gadgets to thaw the unmoved cistern labelled "national political apathy," with Baldwin mounting the stairs to the loft and remarking dolefully, "t'aint running yet."

But although the votes of all candidates have shrunk

at these by-elections, the Conservatives, at any rate, cannot get much satisfaction from them. For in the last four contests the party aggregates have been: Labour, 54,901; Conservatives 31,147; Liberal 18,986. Labour, it will be noted, beats the other two put together. How then, can the Conservatives cure the political apathy which allows such an unexpected state of things? The question haunts them every night.

One would have thought that by now the Conservatives would have issued a definite programme, on which their candidates might go to the electors. But no; they allow themselves to be defeated, here by the bookmakers' vote (an unholy alliance, one would have imagined, with the "non-capitalistic" Labour man), here by insufficient precision on the policy of Safeguarding. In short, the Conservatives' present voice is vague, halting, entirely unsatisfactory. I notice that a great Sunday journal, in evident alarm at the lack of definiteness in Conservative policy, pleads in the following way for the Unionists: "Let them tell the electorate about widows' pensions, about the practical relief to industry through de-rating; let them publish their programme for the next Parliament, designed to deal progressively with the problems of employment and trade revival coupled with a reasonable but vigorous policy of peace and disarmament; let them preach departmental economy and death to bureaucratic encroachment."

But that would not help much. Anybody can say what they are going to do when in office; the point is, what do they do when they are in office? A feeble answer comes . . . widows' pensions, extension of the franchise, safeguarding. Really it is beyond question that the Conservatives ought to have had a better record, and if at the next election their majority is reduced to the smallest possible number, it will probably be the finest thing that could happen.

Mr. Churchill's "Alarm Bell."

There are few points in which Mr. Winston Churchill does not stand head and shoulders above his colleagues in the Cabinet, but it is a fact that he still is not trusted by the country at large. When one says "not trusted" one refers, of course, to his judgment, for he is one of the most patriotic men in the land.

An adequate instance of the unreliability of his judgment was given last week, when he made his famous "alarm bell" speech. In vivid colours he painted the awful picture of a return to office at the next election of a non-Conservative Government. To talk of the moderation of the Socialist leaders was, he implied, the veriest rubbish, for such men as Messrs. MacDonald, Clynes, Snowden, Thomas would be but a "façade" of "marionettes" moved hither and thither "in accordance with the decisions of a small secret international junta."

To this lurid rubbish Mr. Churchill unfortunately often descends. Opposition to the Labour Party must be built on something better than "the Bolshevik in our midst" theory. For the word "Bolshevist" has come in our uneducated time to have as much meaning as the word "Socialist" had, say, thirty years ago. The voters of England are not to be frightened again (supposing that they can be moved to vote at all—which is true of not much more than half of them) by stories of the "Red menace."

Mr. Churchill is, of course, declaiming valiantly for his party, and there is something so perennially boyish about his demeanour that one listens readily to the babble from such fresh cheeks. But it is a pity that boyishness should show in his judgment and analysis: if the Conservatives could put up no better case than the melodrama which the Chancellor produced last week, their cause would indeed be hopeless. As a matter of fact, their chances are still quite rosy. But pro-Conservatism, not anti-Socialism, must be their ceaseless cry.

The Liberals' Explanation.

Certain Conservatives appear to be extremely angry at the policy of the Liberals in putting up candidates at

by-elections who have not the remotest chance of getting in. "Playing into the hands of the Socialists," the disgruntled Tories call it. And the ordinary unofficial Liberal will regret the results of the policy, although professing that the actual result is not the intention of his party.

In official Liberal circles, however, there appears to be another explanation. The tendency being for Labour to win in industrial districts and for the Conservatives to win in country districts, it is, according to this argument, the duty of the Liberals to attempt to upset it. The Labour Party in the view of the Liberals can in no circumstances have more than 280 seats in the next House: it will never win the country seats. But the Liberals' intervention will, in addition to completing the rout of the Conservatives in the towns, make it impossible for the Conservatives to make up on the agricultural swings what they lose on the industrial roundabouts. By this means the Tories will be taught by the Liberals the folly of trying to get back to power by forcing electors to vote for one of two creeds.

This line of argument may convince some minds, but one is tempted to ask whether the national and urgent importance of the policy which it adumbrates would be recognised even by the Liberals themselves if there were not money in a certain quarter just burning to be spent.

"The Salvation Army."

There is little enough of the sentiment nowadays which prompted Huxley to describe the Salvation Army as "cory-bantic Christianity": the movement started by William Booth and his wife, and carried on by thousands of voluntary workers is, indeed, generally recognised as a most worthy work. No one denies that the "Army" has reached the slums and other places that no other Christian organisation had previously touched; and from its success have sprung similar movements in different religious communities.

It has been, therefore, with very real regret that the public has read of the recent internal quarrels in the "Army" over the question of leadership. Last week the High Council chose Commander Higgins to succeed "General" Bramwell Booth, who on account of his old age, and alleged inability to cope with the work, had been "deposed." Whether these steps are definitive remains to be seen. But the spectacle of such a quarrel has been a sorry one. That a movement in the direction of practical Christianity, a movement that spread like wildfire almost all over the world, should have become rich is by no means to be wondered at, but that it should, now that prosperity has come to it, encounter crisis after crisis is also not to be wondered at. It is the hope of many good men, however, both Christian and non-Christian, that the present ugly situation will be overcome, and that no feuds will be left to hinder the certainly good work of the Salvation Army all over the world.

ALTER EGO.

Book Review

TALES OF THE EAST.

"THE BOOK OF THE MARVELS OF INDIA." *Arabian Travellers' Tales of the Tenth Century.* By Buzurg Ibn Shahriyar. Translated by Peter Quennell.

"THE WILES OF WOMAN." *Turkish Stories.* Translated by J. and S. F. Mills Whitham.

"THE PORCELAIN JUNK." *A Romance of the Southern Ocean.* By J. Delteil. Translated by Paul Courtney.

"THE SHOJI, OR SLIDING SCREEN." By Kirkou Yamata. Translated by J. and S. F. Mills Whitham.

The fashion has set in perhaps over-heavily of publishing English editions of Eastern stories, of which we appear to be in danger of a somewhat indiscriminating spate. Whether this "Golden Dragon Library," of which the four books mentioned above are the first, and which is published by Messrs. George Routledge at 6s. per volume is to gain real distinction, it is perhaps too early to say. But if one is to judge by these four books, it is necessary to remark that the distinction between the Oriental and

the pseudo-Oriental has not been sufficiently realised by the Editor of the series, Mr. C. Egerton. "The Porcelain Junk," for instance, is of the East, but emphatically not from the East: it is, indeed, a modern work by a Frenchman. "The Travellers' Tales," on the other hand, although it has suffered a double translation, having been done first into French from the Arabic by M. L. Marcel Devic and then into French by Mr. Peter Quennell, is most entertaining reading and certainly the genuine thing.

Sailors are sailors all the world over, and those in the Persian Gulf a thousand years ago, as Buzurg Ibn Shahriyar of Hormuz here shows, knew very well the art of exaggeration. Arab mariners did sail strange seas, and no doubt saw incredible things; but equally there is no doubt that the people of the Gulf in those times were an impressionable folk. Who were they to question the tales of the mariners concerning such outlandish places as the Yaman or India or Abyssinia? Their unquestioning acceptance of the stories doubtless added to the *élan* with which they were told. This volume is the best of the series, and sets a worthy standard for the rest to follow.

"The Wiles of Woman," on the other hand, although possessing the real flavour, is a little unequal and also a little monotonous. It was first translated into French from the Turkish by J. A. Decourdemanche, from a manuscript version which is said to belong to the eighteenth century. But in addition to "The Wiles of Woman," tales have been taken from another collection, called "Pleasure after Pain." As all readers of the "hoja" stories know, there is about Turkish popular tales a simple naïveté which is in moderation very attractive. Whether the repetition involved in the composition of the quintessential Turkish story—the success of female wiles, the dig at the *hajib* (or Police)), the amused toleration of life's little affairs by the Caliph, Master of the Word; and so on—can easily accommodate itself to the Western taste is, perhaps, a matter of opinion. But one reader, at any rate, can follow the experiences of the notorious Dellé with interest and delight.

A word should be said on the way in which these volumes of the "Golden Dragon Library" have been produced. It is admirable. But that is only another reason why the false article should not be included in it. If the aim of the Editor is to reprint some of the lesser masterpieces of the East he has a vast field before him without drawing on work by modern Western authors which, however clever (and it is often undeniably clever, though technique is always an imitable thing) is spurious. Genuine Orientalists or students of Orientalism are likely to find nothing more aggravating than such Occidental extravaganzas as "The Porcelain Junk."

PERSONAL AND GENERAL

TO-DAY

February 21, 1929 (New Style).
February 8, 1929 (Old Style).
Ramadhan 11, 1347 A.H., of the Muslim Calendar.
Adar I. 11, 5689, of the Muslim Calendar.

Lord and Lady Swaythling, who have been travelling in Egypt, are expected back in London to-morrow.

The Hon. Mrs. Levy will arrive in London from Egypt on February 23.

Viscount and Viscountess Inchcape left Cairo on February 17 on their return to England.

Sir St. Clair Thomson is returning to 64, Wimpole Street towards the end of this week from Egypt.

Lord and Lady Belper left Tilbury on February 16 in the s.s. Oronsay, en route for the Mediterranean and Egypt. The Dowager Lady Petre is also a passenger.

Sir Gilbert Clayton, the newly-appointed High Commissioner in Iraq, leaves Constantinople to-day (Thursday) on his way to Baghdad.

Sir John Maffey, Governor-General of the Sudan, opened the new railway extension from Kassala to Gedaref and Makwar on February 15, a section 140 miles long.

Lord and Lady Hamilton of Dalzell, who have been staying at the Semiramis Hotel, Cairo, left last week for a trip up the Nile.

Sir Amos and Lady Nelson and Miss Nelson left London on February 15 for Egypt. They sailed from Tilbury for Port Said in the s.s. Rajputana, in which Sir Charles McLeod was a passenger for Marseilles.

Princess Mary Viscountess Lascelles has promised to attend an Ice Carnival at the Ice Club, Grosvenor Road, on March 7, in aid of Lady Minto's Indian Nursing Association Endowment Fund and the Bird-in-Bush Infant Welfare Centre, Camberwell.

Sir Ronald Storrs, Governor of Cyprus, who has been in England on sick leave, left for South Africa on February 15, for the benefit of his health. He is accompanied by Lady Storrs and they will be away for about two months.

Sir Henry Dobbs, who has just retired from the High Commissionership of Iraq, arrived in Constantinople on February 14, and left two days later for London. While there he had a long conversation with Sir Gilbert Clayton, his successor in Iraq.

The Anglo-Hellenic League is arranging a Dinner to celebrate Greek Independence Day on March 21 at the Carlton Hotel. Earl Beauchamp, Chairman of the League, will preside; and the Dean of St. Paul's will propose "The Welfare of Greece."

Mr. A. F. Suter will lecture to the Royal Society of Arts on February 27, at 8 p.m., on "East Indian Copals and Damars." The meeting will take place at John Street, Adelphi, and Mr. J. G. Watson (Forest Economist of the Forestry Department at Kuala Lumpur, F.M.S.) will preside.

We learn with much regret of the death in London, on February 17, of Captain G. J. Eccles, I.A., Assistant Military Attaché to the British Legation at Teheran. Captain Eccles, who was but 35 years of age, had served with much distinction in the East, having performed particularly notable work in connexion with the Levies at Muscat. He lectured to the Central Asian Society upon Oman a year or two ago.

NEWS IN BRIEF.

It is officially announced from Angora that it has been decided to teach Latin and ancient Greek in Turkish Universities.

The Orient Express arrived in Constantinople on February 12 after being snowed up for twelve days.

H.E. Nashat Pasha, the newly-appointed Egyptian Minister to Berlin, left Cairo on February 3 to take up his new post.

The German cruiser Emden arrived at Constantinople last week. She is the first German warship to visit Turkey since the War.

Roumania has suggested that the negotiations now being conducted at San Remo concerning the Hungarian-Roumanian agrarian dispute should be suspended for several weeks.

Sir Murdoch Macdonald, K.C.M.G., M.P., has accepted the post offered him by the Egyptian Government of technical adviser in connexion with the scheme for the raising of the level of the Assouan Dam.

The Court in Broussa has condemned five men to death for their share in the plot for the overthrow of the Turkish Government discovered there in December. The other conspirators received lighter sentences.

Dr. Shverlyuga, Yugoslav Minister of Finance, who is engaged on reforming the Yugoslav fiscal system, has invited Dr. English, former Czechoslovak Minister of Finance, to come to Belgrade to advise him on these matters.

It has been decided by the Holy Synod of the Orthodox Church of Roumania that Easter shall be celebrated on March 31, but that there shall be no interference, either by the clergy or the authorities, in cases where people prefer to celebrate the festival on May 5.

Mr. Rudyard Kipling inspected the military cemetery at Port Said on February 13. The Australian High Commissioner, Major-General Sir Granville Ryrie, who had been accompanying Mr. Kipling in his inspection of War graves, was ordered to return to London owing to indisposition.

Sir Herbert Samuel, lecturing on February 13 at Westbourne Park Baptist Church, W., on "Palestine of To-day," said that the mineral wealth of the Dead Sea, with its potash content, if it could be extracted, was estimated to be worth £800,000,000—enough to pay the whole cost of the War.

Municipal elections took place on February 10 in nearly all towns of Bulgaria, except Sofia. The results announced show that the Government has maintained its position in consequence of disunity among the Opposition. The latter, however, as a whole, received a noticeably larger number of votes than the Government.

An Egyptian Royal Rescript has been issued appointing Aly Ismail Bey, Chief of the Cabinet of the Prime Minister, to be First Secretary to the Egyptian Legation at Washington. Aly Ismail Bey was educated in Cairo, at Malvern, and in France, where he took the degree of Doctor of Law. He was the first Egyptian to be elected a member of the International Law Association of London.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

New Sudan Railway.

The opening on February 15 by Sir John Maffey, the Governor-General of the Sudan, of the new railway extension from Gedaref to Makwar, marks a further and important stage in the improvement of the country's communications. The length of the new section is 140 miles, and its importance lies in the fact that it not only provides an alternative route for the export of cotton from the Gezira region, but also opens up a most promising district. The railway extension scheme, of which the completion of the Gedaref-Makwar section marks the conclusion, was begun in 1923, and the first section from Haiya to Kassala was opened in 1924, and that from Kassala to Gedaref in 1928. Altogether the extension is 491 miles in length. At the opening ceremony Sir John Maffey said that the final section would help to populate a hitherto uninhabited an inaccessible but fertile area, and he stated that the Government proposed to arrange for expenditure on the provision of reservoirs.

The Fair.

A review of the Fair, both at Birmingham and at the White City, will be found elsewhere in these columns. It is sufficient to say here that the two sections between them furnish a fairly complete index of British industrial potentialities. While it is too early to estimate the results of the Fair, it is at any rate satisfactory to know that a promising amount of business was done on the opening day. Once again it must be emphasised that representation at the Fair must not be regarded by our firms as the be all and end all of trade endeavour. It has proved itself to be an important factor, but even more vital is the need to follow up representation at the Fair by cultivating assiduously the most promising markets. On this subject the Prince of Wales delivered a notable address at the Government dinner at the Mansion House to mark the opening of the Fair. He emphasised the need for up-to-date salesmanship, and pointed out that without it our firms will not find the markets nor create the demand. It is necessary to send exactly the goods that are required by the various markets, and it is equally essential to let the buyers know what we produce by an adequate system of publicity.

The Roumanian Loan.

In view of the various factors adverse to the issue the fact that it was possible to close the lists of the Roumanian Loan at 10 a.m. on the opening day must be regarded as distinctly satisfactory. The loan was not issued under the auspices of the League of Nations, the Press was not unanimous in supporting it, while on the eve of the issue came the raising of the Bank Rate which made conditions in the market anything but favourable for such an operation. On the other hand the terms were very inviting—too favourable some people might think—

and it is evident that in the view of investors they more than counterbalanced such risks as may exist in connexion with a loan for Roumania. The attitude that will be taken up by the investing public in a given instance is to-day, it may be pointed out, a distinctly uncertain factor, as was evidenced in the case of the Greek Loan a few months ago, and the fact that the present loan has proved acceptable is at once a tribute to the confidence enjoyed by the Maniu Administration and to the potentialities of Roumania. Naturally the loan could have been raised on more favourable terms if the Maniu Administration had felt it possible to delay the matter for a few months so as to enlist the support of the League of Nations, but too much could easily be made of this aspect. It is by no means the only loan issued in the last few years on terms which have favoured the lender, and if the results of the loan in the general improvement of the economic position of the country prove to be in accordance with anticipations there is unlikely to be criticism from Roumania later on in regard to the expenditure entailed by the issue.

Roumania's Stabilisation Scheme.

The plan for the stabilisation of Roumania's currency provides for the establishment of a new parity of 813.6 lei to the pound. While this is an exceptionally low level at which to stabilise the leu, it was a case of Hobson's Choice in view of the wide fluctuations of the currency since the War. Thus in May, 1926, the leu fell as low as 1,280 to the pound, but subsequently there was a recovery, and last year the limits of the fluctuations were only between 765 and 855 to the pound. If a higher rate than that chosen had been fixed it would have meant a fresh period of unsettled economic conditions while prices, which have more or less settled down, were adjusting themselves to a new level of values. It is provided that the notes of the National Bank of Roumania shall be convertible either into gold or foreign exchanges, at the option of the bank. The note circulation and sight liabilities must be covered to the extent of 35 per cent., of which 25 per cent. must represent gold cover. The capital of the bank is to be raised to 600,000,000 lei, and the debt of the Government to the bank will be reduced to 4,000,000 lei by the revalorisation of the gold reserve, and

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

provision is made for the gradual redemption of this amount. It is further laid down that the State shall not hold more than ten per cent. of the capital of the bank, and a foreign adviser is to be appointed to collaborate with the bank in carrying out the stabilisation scheme.

The Greek Reclamation Contract.

The important contract for land reclamation and irrigation in Greece, which, as I recorded in these columns some months ago, had been awarded to Messrs. Henry Boot and Sons, Ltd., public works contractors, of Sheffield, has now been ratified by the Greek Parliament. It is announced that the survey will be begun in the course of two or three months, and that the actual work will be begun in 1930. It is anticipated that the work, which will mean very important orders for plant and machinery for British firms, will not be completed until 1940.

Sudan Trade Expansion.

The figures of the trade of the Sudan for the first eleven months of 1928 make a very satisfactory showing. The value of the volume of trade was £E11,572,949 which represents an increase of £E1,150,618 on the figures for the corresponding period of 1927. With the exception of Government imports, which at £E1,799,420 show a decline of £E190,014, there is an increase under every heading, specially noteworthy being the increase of £E517,111 in public imports. This development of the import trade is the more significant as the increase is spread over a wide range of commodities, some of the chief increases being in cotton piece-goods, metals and metalware, machinery, motor cars, cycles and accessories, sacks and timber. Dura is responsible for the principal decrease in the imports. Its figures for this period for only 16 tons of the value of £E26,102 as compared with 119 tons of the value of £E227,440 for the first eleven months of 1927. The value of the exports shows the fairly substantial increase of £E650,002, due to a large extent to the much better level of prices obtained for cotton. Thus the approximate unit value of Sakellarides per kantar in 1928 was £E7.3 as compared with £E5.2 for 1927. But there were increases, more or less notable, in respect of a number of the products of the Sudan, for instance gum, hides, the value of which was £E200,791 as against £E52,823, sesame, and senna. The decreases in exports, spread in the main over seven items, were, on the other hand in no case very pronounced. As I have pointed out before, nothing is gained by the undue exaggeration of the trade development of the Sudan, but the returns, it must be emphasised, do show that the country has come well through the recent depression, and that the purchasing power of the country is on the up grade. It is unfortunate that the situation with regard to dura is not yet satisfactory enough for it to be possible to permit the resumption of the export of this important crop, and it can only be hoped that the next harvest will put things right in this direction. Meanwhile there is the fact that

the Sudan has a particularly good cotton crop this season, the disposal of which should help further to improve the country's purchasing power.

Rubber Rising Again.

Developments in regard to rubber have now taken on a distinctly interesting aspect. I doubted very much whether the large totals suggested for the stocks of rubber which would be exported on the lapsing of restriction had any very solid foundation, and events point to the fact that the surplus was not so very terrible after all. At any rate not three months after the end of the restriction scheme the London stocks have only risen to a little over 26,000 tons while this week there was actually a decrease in the total of over 600 tons. Admittedly it might be as well not to rely too much on the latter fact as arrivals may have been affected by the unprecedented climatic conditions. It is sufficient, however, to note the movements in the price of the commodity to realise the feeling in the trade as to the outlook. In the second half of last week the price began to go up rather rapidly, and on Saturday 1s. rubber was a *fait accompli*. The rise has been too rapid to have been caused entirely by trade buying, and has no doubt been helped by speculation (in which it appears that the Americans are now taking a hand) but it is sufficiently justified as to afford a plain indication as to the situation, and it is probable in the circumstances that before this year has run its course the commodity will rule at a much higher rate.

COMMENTATOR.

The Greek Chamber has passed the Budget estimates and adjourned until the end of March.

The Banque Belge pour le Commerce Extérieur is to open a branch in Athens.

The traffic receipts of the Suez Canal from February 2 to 8 amounted to 18,030,000 francs.

Egyptian cotton ginned from the beginning of the season up to the end of January totals 6,591,681 kantars, of which 1,991,480 were Sakellaridis.

During the Zagreb Autumn Fair—from September 7 to 16—there will be a medical and pharmaceutical congress in Zagreb, in connexion with which there will be special exhibits of hygiene and medicine.

The Franco-Greek provisional commercial agreement which expired on February 12 has been prolonged for a month. A number of points regarding the entry of Greek wines into France have yet to be settled before a new agreement can be concluded.

Greece's imports of motors last year totalled 2,003, of the value of 3,610,000 drachmæ. Of the supplying countries America was first with 1,649 motors, France second with 172, Italy third with 74, and Great Britain fourth with 44.

The Bulgarian Government proposes to erect a number of power stations to supply electricity to every part of the country, and a Special Commission has been appointed to inquire into the possibilities of the electrification of various districts of Bulgaria and to submit a detailed scheme for carrying out the work.

NATIONAL BANK OF BULGARIA

Established 1879

Head Office: SOFIA.

CAPITAL - Leva 500,000,000 RESERVE FUNDS - Leva 1149,755,960

Governor: As. IVANOFF.

Deputy Governors: J. Th. BOURILKOFF, D. BOJILOFF.

Directors: Dr. P. KOSSEFF, Iv. ROUSSEFF, K. KOLEFF, K. GOUNEFF, M. NITCHEFF.

Transformed into a Central Bank of Issue in conformity with the National Bank of Bulgaria Act, 1926, and the recommendations of the Finance Committee of the League of Nations of March, 1928

The National Bank of Bulgaria has Branches in the following towns:

Sofia, Varna, Bourgas, Roustchouk, Plovdiv, Tirnovo, Gabrovo, Pleven, Vidin, Sliven, Stara-Zagora, Lom, Sistov, Shoumen, Dupnitsa, Gorna-Orehovitsa, Haskovo, Yambol, Kirdjali, Kustendil, Tatar-Pazardjik and Vratza. It has also 86 agencies

British Industries Fair.

WHITE CITY EXHIBITS.

A Wonderful Display.

Since the British Industries Fair at the White City began to increase in size a journey round the stands has been a rather arduous process. This year there has been a further extensive development, and the stands are now something like eight miles in length, so that it can well be imagined that their inspection takes on the aspect of a veritable Odyssey. When one adds the length of the stairs and passages, it is clear that to go round the whole Fair in one day is something of an athletic achievement. Fortunately the Fair lends itself readily to a division into two parts, if one starts at the Shepherd's Bush end and terminates the first day's exploration at Wood Lane, including the section a little further on devoted to Empire products, and leaving to the second day the rest of the exhibition.

It is difficult in plain English to convey the impression made by the White City Fair. The heavy industries of England are at Birmingham, yet here we have serried rows of stands, covering a bewildering multitude of objects and giving an absolute revelation of the industrial potentialities of this country. We have been, and are, suffering from a trade depression as profound as has been the unfortunate lot of any country, and it is obvious that it is the wealth of our small industries—many of them old-established but not a few dating from the War period—which has prevented the depression from becoming insupportable. At the White City are to be seen a characteristic range of them, one not absolutely comprehensive but sufficiently so to show that there is no avenue of arts and crafts which this country is not exploiting, and, be it added in a most proficient manner. They are by no means all small industries at the White City, of course, and one uses the adjective more as a means of signifying the fundamental difference between the White City and Birmingham, where the heavy goods are staged, than as a classification. Indeed, not a few of the exhibits, in view of their importance in this country's trade, may justly claim to be ranked among the chief staple trades. To deny the claim to chemicals and pottery, to mention only two, would seem absurd. The former, in its great expansion, is a product of War developments, and in its importance for the future stands second to no industry. The latter is one of the most famous industries of the country, and one in which the utmost skill and craft of which British intelligence is capable seems to have attained the highest point. And there are a number of other industries of outstanding importance. It is necessary to mention this, because, owing to the fact that the Birmingham Fair is described as the section devoted to heavy industries, the impression may perhaps arise that the White City Fair is devoted to industries which are really small.

Range of Exhibits.

One gets a perfectly bewildering impression wandering past the rows of stands at the White City. It seems as if there is literally no end to the range of British industries, and the exhibits make it evident that they cover every side of human activity. At the Shepherd's Bush end are to be found motor boats and sports goods, the latter occupying two halls. Then practically three halls are devoted to toys and games, and pottery and glassware exhibits are spread over a similar space. Then comes the dignified exhibit of the Empire Marketing Board with the statue of St. George dividing it into two parts, and beyond it are sixteen more halls in which the most important exhibits are foodstuffs, etc., chemicals, musical instruments, wireless, scientific and optical instruments, stationery, textiles and clothing, and leather and leather goods. Altogether a wonderful exhibition and an absolute revelation of British potentialities, more particularly in those

branches of industry in which before the War foreign countries were supreme. It is not surprising if the long-drawn-out trade depression should have given rise to pessimism, but it is impossible to visit the White City and retain a vestige of any such feeling. The exhibits make it clear that British craftsmanship is as good as ever, it was—which is another way of saying that it is still the best in the world—and that being the case it is clear that we are in a position to reap the fullest benefit from the trade revival when it comes.

The sports goods section is quite the most comprehensive display of one of the most characteristic of British industries which has ever been staged at the Fair. The section commences in the hall at the Shepherd's Bush end, which was known during the War as one of the chief medical examination centres for recruits, and extends far along the corridors. It is impossible to think of the wherewithal to play any game, and not find it at one or other and probably several of the stands. From badminton racquets to toboggans, from boats to quoits, from billiard tables to hockey sticks they are all there, and all well-known firms are represented, such as F. H. Ayres, Ltd., John Jaques and Son., Ltd., and the Dunlop Sports Co., Ltd., who show an excellent range of the products of the Dunlop Rubber Company such as golf balls, hockey sticks, etc. It has always been a matter of great surprise to me that in view of the great development of this industry, there should not have been a more determined attempt to take advantage of the undoubted markets for sporting equipment in the overseas markets. As we were reminded by an authority only the other day, people on the Continent are taking up games with ever greater enthusiasm, and that means an increased market in the future. It is to be hoped that the greatly improved representation of the industry at the Fair is an indication that the task of competing for the overseas trade is now to be entered upon in earnest, and it may be hoped that if that proves to be the case the important markets of the Near and Middle East will come in for due consideration. Another stand in this section of special interest from the point of view of the regions covered by THE NEAR EAST AND INDIA is that of F. Goddard and Co., Ltd., who show a number of their hammock beds which are particularly suitable for use overseas. This firm, it may be noted, have done an extensive business with Egypt.

Pottery and Glassware.

The Pottery and Glassware section has always been

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

prominently represented at the Fair, but, as is the case with other sections, it shows this year a very considerable growth. From many points of view it is one of the most attractive features of the Fair. The rich and varied colours, relieved here and there by the beautiful glassware, provide a veritable feast for the eye, and the connoisseur can scarcely help lingering before some of the exhibits for a long time. Actually 100 firms are exhibiting this time as against 76 last year which both illustrates the development of the section and its also a tribute to the utility of the Fair as a medium for trade expansion. The level of excellence throughout the section is very marked, but special mention may be made of the exhibits of Stuart and Sons, Ltd., who show some admirable glassware, of Stevens and Williams, Ltd., who also show cut glass and crystal ware, and of W. Moorcroft, Ltd., whose stand contains some exquisite examples of pottery in blues and reds.

This section is followed by the exhibit of the Empire Marketing Board, a feature of which is the display of Cyprus where is shown for the first time samples of marmalade made from Cyprus oranges. This marmalade is shortly to be placed on the market, and if one may judge by its appearance it should meet with a ready demand.

(To be continued.)

BIRMINGHAM SECTION.

Comprehensive Exhibits.

The Birmingham portion of the British Industries Fair for the tenth year in succession is devoted to the "heavy" section of British manufactures. Last year this section was visited by more than 115,000 people from home and abroad, an increase of almost fifty per cent. on the figures for 1927. From the fact that so large a proportion of the exhibitors at the 1928 Fair are represented again this year it can safely be inferred that the amount of business actually transacted a year ago justified expectations. The number of exhibitors this year is 975, as compared with 850 in 1928, 600 in 1927, and 400 in 1926. The Exhibition building, now under one continuous roof, comprises a floor area of 400,000 square feet; it is 1,620 feet long, and the length of the gangways is $3\frac{1}{2}$ miles. Brick walls and a boiler-house have been removed this year, and stands are arranged in perfect alinement from one end of the building to the other.

The following groups of industries are represented at the Birmingham Section, the number of exhibitors in each being given in brackets: Hardware, Ironmongery, and Brassfoundry (283); General Heating and Cooking (41); Gas (70); Building and Decoration, Public Works and Roads (129); Metals (ore and semi-manufactured, excluding precious metals) (79); Transport, Mining, Engineering (204); Electricity (119); Services (50).

The Birmingham Chamber of Commerce is responsible for the Fair, and is ably supported in many practical ways by the Birmingham Corporation. Unfortunately this year the well-laid plans of the former did not receive adequate backing from exhibitors in one respect. On the day selected for the "Press view" the number of stands that were ready for view was so insignificant that the value of inviting inspection two or three days before the opening

ceremony becomes problematical. It may be that the weather has helped to delay the arrival of exhibits; but, whatever the cause, the fact remains that the numerous Press representatives who assembled as the guests of the Chamber of Commerce last Friday were more impressed by its efficiency and hospitality than by the preparedness of the Fair. It is not possible, therefore, to give any detailed account of individual stands, and remarks on this occasion must be restricted to a general description of the different classes of exhibits.

General Hardware.

The Hardware, Ironmongery, and Brass-foundry Group is again a leading feature of the Fair. It is by far the largest ever seen in this country. Brass-foundry is a most comprehensive department. The range of products is so wide that it can only be indicated under the sub-divisions of cabinet brass-foundry, plumbers' and engineers' brass-foundry, gas and electrical fittings, and shop and licensed house fittings. There are more stamped goods on the market than formerly, but whether the brass products are cast or stamped, the high traditions of the industry are maintained. The British brass trade relies largely upon the overseas demand, and by improved and more economical methods of production, makers are gradually regaining a foothold in markets in which Continental competitors were able, owing to the abnormal economic conditions prevailing after the War, to make headway.

Hollow-ware.

The British hollow-ware manufacturers are again responsible for a remarkably fine display. This trade may be classified in general terms as follows: Cast, un-enamelled and enamelled; cast, tinned; wrought, un-enamelled and enamelled; galvanised; brass and copper; tinned plate; japanned; burnished, and aluminium. The reputation of British made hollow-ware for durability and finish never stood higher in the world's markets, and every conceivable class of requirement in size, shape, and price is being produced in our factories. Productive capacity is immeasurably greater than before the War, effective use being made of munition machinery. Overseas and native requirements are carefully catered for.

It is impossible to enumerate the wide range of domestic and other goods that are to be seen in the Fair. Builders' requirements are well represented—particularly screws, nuts, and bolts; in regard to domestic needs manufacturers appear to be paying increasing attention to all kinds of labour-saving equipment. This is to be noted, in particular, in vacuum cleaners and washing and laundry machines.

The Wire Industry.

The ramifications of the wire trade are very wide. Wire is shown made in all gauges and in many metals and alloys, and in ferrous material. Woven wire is shown in a variety of metals and meshes. The vast array of wire products for domestic use, some of ingenious construction, is a matter of surprise even to many engaged in the industry. Then there are wire guards for machinery, so designed as to give full protection with least hindrance to workers, and guards for windows, which are made to afford safety with the minimum interruption of light.

Metal windows are again an important feature of the Fair, and so are locks and keys, safes and strong rooms,

LIVERPOOL

MANCHESTER

GLASGOW

edge tools, guns and ammunition, as well as a variety of metal goods, modern antiques, and coffin furniture. In decorative metal work the highest form of artistic craftsmanship is revealed. Other equipment includes garden rollers, lawn mowers, wire netting, dairy utensils, spraying machines and syringes.

Edge tools for rubber and coffee plantations, and matchets for sugar-cane districts are shown in great variety. Birmingham and Sheffield firms are well represented. Among other exhibits of interest are refrigerators; oil lamps and stoves with patent burners; scales and weighers for special purposes; and metal frame chairs and stools for all climates. The popularity of motoring has stimulated the demand for picnic outfits, and many examples are shown.

Varnishes, lacquers, paints and enamels form again a most attractive and comprehensive department. Some of the decorative effects are extremely beautiful.

Hearth Furniture and Fireplaces.

In the production of hearth furniture British manufacturers have made great advances in the utilisation of stainless steel and other rustless materials. The former is largely in evidence, and, from a labour-saving point of view particularly, it is making a strong appeal. Kerbs and companion sets in "period" styles continue popular. Among the finishes which predominate (in addition to stainless steel) are oxidised silver, antique bronze, oxidised and hammered copper, and Greek bronze. Enamel ornamentation is used on some models. Various colours are employed to harmonise with the different finishes, and the result is effective.

Gas Industries.

Last year saw the birth of the Gas Section as a separate entity of the Fair, and it speaks well for the spirit of progress and co-operation that exists within the Gas Industry that this year should see the section extended, and with a common motif of design and colouring adopted by all the exhibiting firms. The makers of heavy gas works plant are well represented and many appliances are shown. Manufacturers are faced with difficulty in the display of the huge products needed on a gas works, and this has been overcome by the use of models and photographs. The display of automatically controlled street gas lamps is of peculiar interest, as the persistent fogs this country has experienced this winter have led to a wider realisation of the fog-penetrating powers of gas light.

The British Road Tar Association has an interesting exhibit which draws attention to the non-skidding surface to be obtained by employing British tar on modern roads. By the use of this by-product of gas manufacture it is claimed that "the life" of thousands of miles of roads in Great Britain has been lengthened.

Electrical Section.

A considerable growth is to be noted in the Electrical Section. Whereas at the 1928 Exhibition 80 electrical manufacturers displayed apparatus, this year there are 119 exhibitors. The Birmingham Corporation Electric Supply Department's stand shows a range of electric furnaces and welding machines with many improvements over the apparatus previously shown. Amongst the other general exhibits are electric lighting plants and electric lift and crane motors as used in factories, public buildings, and for transport purposes. The display of power plant generally is, in fact, on a more comprehensive scale, and shows the dominating influence which electricity exercises in industry nowadays. An attractive part of the Electrical Section is devoted to cooking, heating, and domestic appliances, including refrigerators, vacuum cleaners, washing machines, water heaters, etc. There are also a number of interesting exhibits of electrical appliances used for medical and surgical purposes.

On the generation and transmission side of the industry, generators, motors, transformers, accumulators, and switchgear are prominently displayed. Industrial and

domestic appliances for heating, cooking, lighting, and power are well represented.

General Engineering.

The general engineering group is much larger than last year. Cold-starting heavy oil engines are again a special feature, and a number of new models are shown in public for the first time. There are some most interesting examples of modern gas engines, crude oil engines and petrol engines. The British drop-forgers are again represented in a composite exhibit. The forgings are in many sizes, and all interchangeable parts are made with absolute accuracy. Alloy-steels and non-ferrous alloys are prominent among the forgings. New mechanical exhibits include water turbines, steam boilers, oil engines, marine engines, rotary and hydraulic pumps; hydraulic type and hot plate presses; and presses for baling straw or waste material. For the production of seamless metal hollow-ware heavy presses have been installed. There are nibbling machines which will cut slices off heavy steel plate; testing, weighing, and measuring machines of huge capacity; conveying machinery; magnetic separators; mammoth springs for industrial purposes; weighbridges; wood-working machinery; electric welders; chemical plant of all descriptions, and modern equipment for use in foundries. Conveyors and trucks and safety appliances in factories, plantation machinery, house-lighting plants, and aerial wire ropeways add to the general interest. New types of fuel economisers are shown.

Some firms have made noteworthy advances in machinery or apparatus; several show as many as six or eight features new to industry. Below are typical examples of new products displayed:—

Six-spindle drilling machine, which permits six holes to be drilled at once; dividing apparatus for milling machines with new feature for quicker holding and releasing; electric resistance furnaces of new type; adjustable spindles which drill holes either close together or wide apart; rubber lining capable of resisting corrosive and erosive liquids up to 110 deg. C.; tensile testing machine for rods, capacity 5,000 lb.; motor-car steering-wheel rim made from a single strip of material; galvanising by electro-deposition; deep drawing device that converts any single-acting press into more than a double-acting press at will; combustor for the heat expansion of tram and wagon tyres; silent portable petrol-driven and electrically-driven air compressors; hack-saw blades of increased durability; gas-tight and water-tight iron-clad distribution boards, with fuse equipment, etc., giving absolute safety; large size "drum" type separator, for dealing with foundry sand, shipyard refuse, borings, etc.; water-fall separator for extracting iron from pulverised fuel, foodstuffs, etc.; magnetic rake; high-speed crude oil engines saving 75 per cent. of running costs by the use of residual oils.

In the group devoted to Civil Engineering Equipment (much of which is shown on a large area outside the Exhibition Hall) are locomotives; steam-rollers; tractors; equipment; concrete-mixing machines (shown in operation); railway and kindred apparatus; temporary structures on contract jobs; and a one-man-worked concrete block-making machine.

Barclays Bank (Dominion, Colonial, and Overseas) will have a representative in attendance at Barclays Bank, Stand 2, Block 19K, Castle Bromwich, Birmingham, during the British Industries Fair. Copies of the bank's trade summary and review, and information regarding the trade conditions, etc., in the undermentioned territories can be obtained from him on application:—South, West, East, and Central Africa, Egypt, Palestine and the Sudan, Malta, Gibraltar, the West Indies and Mauritius.

Establishments manufacturing knit goods in Roumania, according to the latest official census, numbered 85 (says an American Consular report). These factories contained 3,844 knitting machines and employed 5,443 workers. Of the total number of knit-goods factories, 16 produce hosiery exclusively, and 6 or 7 are known to supply a large part of the domestic demand for cotton bathing suits of medium quality. Bathing suits of the better quality are imported from Austria, Germany, France, and the United States, as the local industry is unable to produce satisfactory woollen bathing suits.

Motors and Motoring.

By G. B. B.

Oil Reclamation.

A good deal has been said of late regarding oil reclamation, and many proposals to that end have been made, and many schemes, some practical and some largely theoretical, have been set forth. As a result there have been many inquiries amongst private car owners as to whether anything is really gained by reclaiming lubricating oil, whether reclaimed oil is as good as oil that has once been used, and whether it is an operation that can be carried out in an ordinary garage. To these, the following answers may be given: reclaimed oil is not a great deal different from fresh oil, although it may be, and frequently is, somewhat thinner. The operations of reclaiming can be carried out in an ordinary garage—and there is no advantage to the average motorist in reclaiming oil at all. The case is different in big garages where fleets of motor coaches and omnibuses have to be dealt with, or in places where a number of commercial vehicles are in service, but the man who owns one or perhaps two cars will be ill-advised if he troubles about any method of oil recovery. It can be done; filters for the purpose can be bought, but even in that case it is doubtful whether sufficient oil can be handled to make it worth while buying a filter. But although that may be a doubtful point, and one that can be decided only by the individual, it is certain that any of the messy schemes proposed by people who have some small smattering of engineering knowledge can only result in failure. I would particularly warn readers against trying to make an oil filter out of containers filled with sand, as with such it is practically impossible to get the fine particles of sand out of the oil after it has passed through the home-made contrivance, and the presence of sand in lubricating oil is not exactly desirable! Purchase a filter by all means, if you think your oil consumption and the resulting economy will warrant the outlay, but beware of attempting to rig up any kind of filter according to directions given by well-meaning writers.

A Newcomer.

The old-established firm of A. J. Stevens and Co., (1914) Ltd., motor cycle manufacturers, have taken the bold step of entering the ranks of motor omnibus makers, and are producing a passenger chassis, for 26 passengers, with a six-cylinder engine giving 25 h.p. at R.A.C. rating. The bore and stroke are 82 and 120 m.m. respectively with a cubic capacity of 3,800 c.c. Water circulation is by centrifugal pump, a Solex carburettor is fitted and the lubrication is forced. A single plate dry clutch transmits the power to a four speed gearbox, and there is a worm final drive. Hand brakes of the expanding type work on the back wheels, with expanding foot brakes, Dewandre Servo, on all wheels. Steel detachable disc wheels, with single pneumatics on the front and double pneumatics on the back are provided, and the suspension is four-point, half-elliptic. The specification seems to be all that is to be desired for this type of omnibus and I gather that the chassis is of particularly robust construction. The frame is dropped, in accordance with the prevailing practice, giving a loaded height of about two feet. The longitudinal chassis members are of deep channel sections and five strongly braced cross members complete a frame that should easily withstand any road shocks to which it may be subjected. The bus should be well lighted, as a C.A.V. compensated voltage dynamo of ample output is provided, and provided the body fitted is of good design, the vehicle should prove an immediate success. The firm are well known for the excellence of their engineering work and for the care and attention they give to details, and the result of this, their latest venture, will be awaited with interest.

The Driver.

I am quite in agreement with Mr. Brackenbury when he said recently, that a driver who can be induced to regard his vehicle as a sensitive creature that responds to decent treatment, and which repays him for keeping it clean and in good condition, will in all probability very soon become familiar with and appreciate the technical reasons for what he does, and will never grudge the necessary time and care which such attention demands, and in addition will set an excellent example to others. It is also true that in the chain of responsibility for the maintenance of a vehicle the driver comes first. Broadly speaking, it is he who sets the rate of wear throughout the chassis, according to whether he is heavy or light handed, sympathetic or the reverse, and whether he drives considerably or otherwise. But it is sad how few realise this and appreciate the fact that the way a vehicle is cared for contributes very largely to the success or failure of motor transport as a commercial proposition.

The Indian Market.

Orders for eighty trailers for India have been received by the Eagle Engineering Export Co., as well as for twenty-six for Portugal and seventeen for South Africa. The importance of India as a market for motor vehicles generally, tractors and trailers has long been emphasised in these columns, and it should be remembered, in this connexion, that the British made vehicle has everything in its favour in the Near, Middle and Far East. The high engineering standards set up by our manufacturers and the excellence of their productions have long been recognised, and the only thing that prevents large and increas-

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

*A copy will be gladly sent
on application to
the Secretary*

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

ing sales in India of British vehicles is that few prospective buyers know where they can be obtained. American makers simply flood the country with advertisements of their products and it is not to be wondered at that sales are made, when the buyer does not know either what British made vehicle would answer his purpose or where it can be bought.

Some Recent Changes.

It is announced that the business of the Mann Patent Steam Cart and Wagon Co., Ltd., has been acquired by Atkinson, Walker Wagons, Ltd., who took over, about a couple of years ago, the steam wagon side of the business of Leyland Motors, Ltd. The buses belonging to the District Motor Co., Ltd., of Horsley, have been purchased by the Trent Motor Co., Ltd., who own a big fleet of motor coaches and omnibuses in the Midlands. The Great Northern Railway of Ireland are about to abandon a part of their steam railway system and to run motor coaches instead of trains, and an agreement has been reached between the L.M.S. and L.N.E. railways and the Halifax Corporation whereby a joint committee shall be set up to deal with a joint service of motor omnibuses. The committee will consist of four members appointed by the Corporation and four representatives of the railway companies.

COAL MARKETS OF THE MEDITERRANEAN.

Consumption of imported coal, coke, and briquets in markets accessible by way of the Mediterranean Sea amounts to about 20,000,000 tons annually (says an article in the United States "Commerce Reports"). The relative positions of coal-producing countries, as compared with pre-War days, have changed, and these changes, with deliveries of coal on reparations account by Germany, have altered the old channels of trade. As the bottleneck of an important stream of ocean traffic, the Suez Canal has records of cargo which indicate the changes since the War. In 1913 southbound cargoes through the Canal totalled 1,193,000 tons of coal; there was a sharp drop in 1915 to 497,000 tons, followed by a steady decline for a few years and a decrease to 275,000 tons in 1918. Continued declines brought the total to 118,000 tons in 1920, but in recent years it advanced again to 604,000 tons in 1925 and 667,000 in 1927.

Recent estimates indicate that the entire region has an annual consumption of gas coals amounting to about 1,500,000 tons, of which Italy requires 1,300,000 tons, Greece, 40,000 Egypt 53,000, Algiers 40,000, Tunisia 8,000, and Portugal 40,000. None is consumed in Palestine, Morocco, British or French West Africa, or the Belgian Congo. National coal is required in Turkey.

As of other classes of coal, Great Britain supplies by far the greater part of the coal used in this area as bunker, largely because of British control of coaling depots and because of the considerable tonnage of shipping owned in Great Britain. Furthermore, British shipowners operate not only their own vessels but also a comparatively large number flying foreign flags. The tonnage of coal dumped into bunkers in the Mediterranean region must be in excess of 5,000,000 tons annually, including the following estimated tonnages: 1,000,000 in Egypt (largely at Port Said) 300,000 in Turkey, 235,000 at Malta. No recent data are available with respect to Greece, Syria, Tunisia, or Morocco.

PALESTINE ORANGE EXPORTS.

For the week ended February 13, the Empire Marketing Board reports that the arrivals of oranges from Palestine amounted to about 72,000 boxes, including 18,000 in London, 28,000 at Liverpool and 26,000 at Manchester. The total direct shipments to the United Kingdom up to February 8 amounted to 688,000 boxes as compared with 934,000 boxes at the corresponding date last year. Total shipments to the Continent amount to about 208,000 boxes as compared with 78,000 boxes last year. Transshipments (via rail to Kantara) have totalled approximately 78,800 boxes.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, February 26); s.s. Britannia (Birkenhead, March 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, February 28); s.s. Maidan for Calcutta (Birkenhead, March 7).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 8).

British India Line.—S.s. Domala for Bombay and Karachi (London, February 23); s.s. Mantola for Colombo, Madras, and Calcutta (London, February 23); s.s. Manela for Colombo, Madras, and Calcutta (London, March 9); s.s. Mundra for Bombay and Karachi (London, March 16).

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume; also at Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, March 16, Swansea March 19); s.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (this steamer will call at Volo if sufficient inducement) (Liverpool, Glasgow, and Swansea March 23).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 23); s.s. Avimore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 23).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 1); s.s. Whitgate for Calcutta (London, March 2); s.s. Ranpura for Bombay (London, March 15); s.s. Nellore for Calcutta (London, March 16).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 2); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, March 2).

Ellerman and Papayanni Lines.—S.s. Grodno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 28); s.s. Algerian for Algiers*, Calamata, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 2, Swansea March 2); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool March 2, Swansea March 7); s.s. Oporto for Bari, Gruz*, Ancona*, Venice, Trieste, and Fiume (Liverpool March 2, Swansea March 7); s.s. Flaminian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 7); s.s. Lesbian for Algiers, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 16, Swansea* March 16). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 19.

The Stock Markets have again been under the influence of monetary conditions this week. The acute stringency in the short loan market, due to pressure of tax payments, which has resulted in up to 6 per cent. being paid for fresh loans, has made for a heavy tone in the gilt-edged market with some falls in prices. Fears of an approaching rise in the New York re-discount rate, together with the approach of the Settlement, led to dullness and some irregularity in industrials and other speculative securities. The home railway dividends, to which we refer below, did not have a great effect on share prices, in which a quick rise was offset by a reaction following further disappointing traffics. Among industrials the chief feature is the fall in Courtaulds, started by the Chairman's letter on artificial silk stock and accentuated by the dividend announcement, which, as we explain in another note, did not come up to expectations. Towards the end of the week a rise in the commodity price brought some inquiry for rubber shares, which, in the absence of plentiful supplies, responded fairly generally.

Home Rail Dividends.

The dividend announcements of three of the four British trunk railway companies, which appeared on Wednesday, were more favourable than shareholders could expect. This is not to say that they were altogether satisfactory, since in two cases out of the three there is a substantial reduction in the payments in respect of 1928, but it is clear that the companies have affected rather greater economies than had been thought probable. The Southern Railway, in spite of a decline in gross traffic revenue of £695,000, and a larger volume of prior charge capital than a year ago, is maintaining a dividend of 2 per cent. on its deferred stock in addition to increasing its carry forward considerably. It seems, therefore, that the economies have more than compensated for the loss in revenue. The L.M.S. results have, however, been regarded as even more satisfactory. This company had to face by far the largest decrease in revenue, which amounted to £4,300,000, or 5.6 per cent. of the gross revenue in 1927. The reduction of the dividend from 4½ per cent. to

3½ per cent. effects a saving of £1,190,000 but £100,000 more is carried forward than a year ago. The economies must, therefore, have amounted to some £3,000,000. The gross receipts of the Great Western in 1928 were £1,387,000 less than in 1927. Of this the reduction in the dividend from 7 per cent. to 5 per cent. reduces the amount to be distributed by £850,000, but as in the case of the two other companies, the balance carried forward is increased (by £46,781). A saving of some £580,000 in expenses is indicated by these figures.

Courtauld's.

Although the ordinary dividend of Courtauld's, Ltd., for 1928 is well below the more optimistic expectations, the results disclosed by the accounts for last year are very satisfactory. Net profits reached £5,171,987, the highest in the history of the company, and an increase of £586,076 over those for 1927. A year ago, however, the balance was struck after an allocation of £250,000 for special depreciation, but no mention is made of a similar allocation this year. The profits for 1928 are nearly ten times the profits made in the company's first year, 1913, when they amounted to £520,349. Last year a dividend of 25 per cent., free of tax, was paid on the ordinary shares, and a share bonus of 100 per cent. distributed. The dividend on the doubled capital this year is 15 per cent., free of tax, which is equivalent to 30 per cent. on the old

MR. HARTLEY WITHERS

SAYS PROGRESSIVE INSTINCT BENEFITS INVESTORS.

Individually and collectively, the great majority of us are always trying, with varying rates of success, to earn more and spend more, and this general progressive instinct is on the side of the investor, especially of the investor who can spread his interests and his risks as widely as the Trust companies.

(Copyright: London General Press.)

capital. At the same time the allocation to general reserves is maintained at £1,000,000, while the carry forward is increased by £172,000. Dividend anticipations had ranged up to 25 per cent. on the doubled capital, in spite of the Chairman's warning at last year's meeting that the mere capitalisation of reserves did not in the least affect earning power. When these anticipations were shown to be too hopeful the shares receded somewhat, and can now be obtained at prices which are comparatively favourable to those who would buy as a permanent investment.

Dry Goods.

The accounts of several large wholesale clothing concerns which have appeared recently all show a pronounced decline in profits. Thus, for example, the net earnings of Bradbury, Greatorex and Co. fell from £92,523 in 1927 to £84,258 in 1928, while those of Cook, Son and Co. (St. Paul's) declined from £216,028 to £195,663. The earnings of Copestake, Crampton and Co. are also lower at £21,609, against £33,746. The explanation of this unsatisfactory position is the continued trade depression, which has inevitably reduced the purchasing power of the industrial population who form the ultimate market for the goods of these concerns. It is, in fact, the "bread-and-butter" class of goods which they have had most difficulty in selling. While the traditional stability of the demand for clothing has been severely tested in recent years, there is every reason to suppose that, when a trade revival does get under way, these concerns will once again benefit from a steady and expanding demand for their goods. As a permanent lock-up their shares, which have been badly affected by the results of the last few years, therefore merit attention. The ordinary or "B" shares of Bradbury, Greatorex and Co. can be bought to yield £6 12s. per cent., while on the ordinary shares of Cook, Son and Co. a return of £6 5s. per cent. is obtained.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Water Tank, Etc.—The Ministry of the Interior invites tenders for the supply and erection of a water tank in reinforced concrete on a reinforced concrete tower, or, alternatively, in steel on a steel framework, with necessary piping and fittings, as well as an electric water level indicator. March 2. (D.O.T.)

Dressings, Cotton and Mackintosh Cloth.—The date for the receipt of tenders for the supply of dressings, cotton and mackintosh cloth to the Egyptian Department of Public Health has been postponed from February 10 to March 28. Copies of the new specifications which have been issued by the Egyptian authorities are available for inspection at the offices of the Department of Overseas Trade.

Linen, Etc.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of linen for schools comprising tulle for mosquito-nets, bedsheets, towels, napkins, blankets, table materials comprising metal spoons, forks and knives, china plates, salt cellars, glass and aluminium tumblers, copper dishes and articles for cleaning comprising brooms, canvas cloth, liquid metal polish, carbolie soap, bag blue, etc., required for the schools during the school year 1929-1930. March 18.

Clothing.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of clothing such as blankets, boots, tarbushes, jerseys, frocks, greatcoats, woollen cotton and linen cloth. March 21.

YUGOSLAVIA.

Railway and Shipping Material.—A list of materials urgently required by the Yugoslav Ministry of Communications has been received in the Department of Overseas Trade from the Commercial Secretary at Belgrade. The list includes the following:—Schedule I. For River Shipping Board.—Sheet metal, tool steel, screws, kieselguhr, asbestos cotton and cord, materials for making paint, gangways, passenger steamer 70 to 75 metres long, boiler tubes, printing press, paper, river ice breaker, motor barges, eighteen river vessels of 350 and 800 tons d.w., 50 oil fuel injectors for boilers, 464 wire hawsers, floating crane, tank barges, steam steering gear and windlasses for river steamers, fire bars, mobile air compressor, electric welding apparatus, universal planing machine, saws, various other machine tools for metal and wood-working, 100 h.p. Diesel engine with electric generator and switchboard, 2 electric motors 25 and 20 h.p., cotton material, plush, linoleum, hosepipe, antiscald apparatus for boilers, metric weighing machines, differential pulley blocks, wheelbarrows, 2 boilers of 150 square metres heating surface, 2 ditto of 100 square metres, 1 ditto 162 square metres, 95 anchors, various electrical generators, and other electric materials. Schedule II. For Construction Department.—Rails and accessories, truck weighing machine, turntables, telephone and telegraph materials, tools, bridges, harbour cranes. Schedule III. For Machinery Department.—Locomotive spare parts and materials for repair, electric lighting sets for passenger coaches, coal loading appliances, 25 goods locomotives, 20 express locomotives, 85 passenger coaches, 15 rail motor coaches, 2,000 goods trucks, 300 closed good waggons, refrigerator waggons and special waggons for conveyance of molasses, etc., snow ploughs, crane trucks, cranes, luggage waggons, rail trucks. Schedule IV.—Optical apparatus for lighthouses, acetylene lamps for lighthouses, harbour lamps, mooring buoys, chains, anchors. Schedule V.—Dredger, tugs, 8 motor boats, sounding apparatus, etc. Schedule VI. For the Shipping Department.—14 iron bridges, iron railings, harbour cranes, iron pontoons. The total requirements are estimated to be about £5,500,000. Tenders are to be submitted in Belgrade by March 10, and may be for all the materials or for each separate group of materials. Tenders are to be binding until April 25, and tenderers are required to deposit a sum of 5 per cent. of the value of the material if not greater than 50 million dinars, and at the rate of 100,000 dinars for each further 50 million dinars. This deposit may be made in various forms. Payment is to be made in 7 per cent. bonds, bearing simple interest, to be redeemed in ten equal yearly instalments. Alternatively tenders may be submitted on the basis of payment by bonds over a period of 20 years. (D.O.T.)

TURKEY.

Firetube Boilers.—The "Administration Generale de Chemins de fer et des Ports d'Etat" invites tenders for the supply of seven firetube boilers. March 11. (D.O.T.)

NEWS FROM ALL SOURCES.

The Commercial Bank of Greece made a net profit of 21,539,000 drachmæ for the second half of 1928.

The Banque Agricole de Turquie made a net profit of £1,500,000 for 1927, as against one of £11,800,000 for 1926.

The net profit for 1927 of the Banque de Turquie pour l'Industrie et les Mines was £T610,550, as compared with £T933,000 for 1926.

King Alexander of Yugoslavia has signed a law putting into force, from January 1, 1930, a new penal code for the whole country.

A delegate from Bulgaria was among those present at the opening session of the International Union of Barristers at Brussels on February 16.

King Alexander has signed a decree appointing Professor Milorad Strajnski to be Yugoslav Minister in Buenos Aires. The Minister was born in Zagreb in 1883, is a Professor of Law at Zagreb University, and the author of a number of legal works.

To commemorate his visit to Madras, the Nizam of Hyderabad has placed at the disposal of the Governor of the Presidency Rs.25,000 (£1,875) for distribution among charities without distinction of caste or creed.

Negotiations are reported to be proceeding between Persia and friendly Governments for the conclusion of permanent treaties in place of those abrogated last May, when provisional treaties were exchanged for a period of one year.

Dr. Maniu the Roumanian Prime Minister, has received a deputation of Roumanians from the United States, who had emigrated from Transylvania when the province was under Austro-Hungarian rule. They represented some 300,000 emigrants, and most of them are said to desire to return to their native land.

Mr. A. d'A. Willis, a partner in the firm of Messrs. Ogilvy, Gillanders and Co., has joined the board of Sika (India), Ltd. Messrs. Ogilvy, Gillanders and Co. have arranged with their Indian house, Messrs. Gillanders, Arbuthnot and Co., to act as managers of the Indian Sika business.

According to Barclays Bank (Dominion, Colonial, and Overseas) the total imports for Egypt during January were valued at £E4,784,406 (against £E4,285,186 for the corresponding month last year), and exports at £E5,482,749 (against £E4,849,575). Cotton exports were £E4,451,349 (against £E3,955,103).

The directors of Westminster Bank announce the appointment of Mr. J. Greenhill as manager of the Lothbury office and Mr. W. W. Woodhams as treasurer and deputy-manager. Mr. Greenhill will be succeeded in the management of Lombard Street office by Mr. W. T. Ford, the present deputy-manager.

An extraordinary general meeting of Westminster Bank, Ltd., was held on February 14 confirming the special resolution passed at the annual general meeting for the purpose of subdividing the £20 shares of the bank. A notice will be sent to each shareholder as soon as the new certificates are ready for exchange.

At the meeting of the board of the Bank of British West Africa on February 14, Mr. R. Roy Wilson, M.P., was elected to a seat on the board. The directors appointed Mr. D. W. Paterson, who has held the position of assistant general manager for nine years, to be the general manager of the bank in succession to the late Mr. Leslie Couper.

It is reported that contracts have been awarded for eight "Garratt" metre-gauge locomotives for the Burma Railways to Fried Krupp A.G., of Essen, Germany, at a total cost of £35,600, and for 57 boilers, required for locomotives of the Indian State Railways, to Messrs. Henschel and Sohn, of Kassel, Germany.

The report of the Constantinople Land and Building Company states that the profit and loss account for 1928 shows a credit balance of £3,472, to which has to be added £1,770 brought forward from 1927, making £5,242. The directors recommend a dividend of 4½ per cent., less income tax at 4s. in the £; that £1,000 be carried to reserve, which will bring the amount of reserve account up to £9,000, carrying forward £1,243.

At a meeting of the Consultative Committee on refugee problems, which concluded at Geneva on February 16, it was reported, according to *The Times*, that of the 2,800 Russians who had recently been residing in Constantinople about 1,000 had been deported, that 1,000 had sought naturalisation, and that most of the rest would be found occupations in Palestine, France, and Brazil. On the other hand, although 8,000 Armenians have been established in Syria, provision has yet to be made for 32,000 others. An urgent problem of providing food for many already established, during the period of putting the soil of their farms into productive conditions, has been solved by a gift of about £5,000 from the International Red Cross.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 86, Cross Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool.

THE INDIAN COASTAL TRADE.

The object and implications of the Indian Coastal Reservation Bill, the report of the Select Committee on which will be presented during the present session of the Indian Legislature, were subjected to a reasoned and critical analysis in a paper read by Mr. Frank Birdwood (of "Fairplay") before the East India Association on February 11. Sir Stephen Demetriadi, Chairman of the Council of the London Chamber of Commerce, presided.

The measure as drafted, Mr. Birdwood pointed out, was indefensible on many grounds, which he enumerated. Above all, it was inconsistent with the principle of equal opportunity for all classes and races of his Majesty's subjects enunciated by the Viceroy at the recent session of the Federation of Indian Chambers of Commerce in Calcutta. At the same time, the intention of the promoters and supporters of the measure was plain.

"What is sought," he continued, "is tantamount to the expropriation, without any compensation, of the British shipping companies now carrying on the coastal service. The stake is a considerable one, for the total value of merchandise and treasure (exclusive of Government stores and treasure) imported and exported coastwise in 1926-27 was over Rs.200 crores (£150,000,000). The steam tonnage entered and cleared over the same period comprised 9,000 British vessels, representing 22 million tons; 6,000 British Indian vessels, representing 4 million tons; and 1,200 foreign vessels, representing $4\frac{1}{2}$ million tons."

The real issue was therefore whether those shipping companies which had won for themselves by lavish expenditure of capital and energy their present position in the coastal trade of India provided, on equitable terms, a service adequate to its growing requirements. To such a question the lecturer said there could only be one answer. Far more, however, was at stake than the simple question whether or not the coastal trade could be efficiently operated by an Indian-owned and Indian-managed fleet. The principle of the nationalisation of industry was involved.

"It is earnestly to be hoped," Mr. Birdwood concluded, "that after the present session of the Indian Legislature closes at the end of March no more will be heard of a measure which, even if it contains the germ of problematical benefit, cannot but perpetuate those ills from which India is so sorely suffering, and with which her statesmen are so whole-heartedly endeavouring to grapple."

It was true, Sir Stephen Demetriadi observed, that there are countries which found it to their advantage to reserve their coastal traffic to their own vessels. The action, however, of these foreign countries had been dictated by political rather than by economic considerations—mostly to ensure that in the event of war they should not be dependent for sea transport upon other, possibly hostile, peoples. To countries dependent upon imports of food and raw materials, or upon a large export trade shipping was a key industry, to maintain which they were prepared to make economic sacrifices.

Those were political considerations which were clearly not applicable as between the various units of his Majesty's Dominions. There was certainly no precedent in any other State of the Empire for a measure of the nature under review, because Indians realised that, far from their national safety necessitating the building up, at an economic sacrifice, of a mercantile marine of their own, the safety of the whole Empire lay in the continued supremacy of Great Britain's sea power.

The oft-reiterated suggestion that the Indian mercantile marine of pre-steam days was destroyed through the machinations of this country was also effectively countered by Sir Stephen. America at that time also, he pointed out, had a profitable and flourishing mercantile marine. Could it be suggested that the falling behind of the United States as a maritime nation during the latter half of the last century was also due to nefarious practices on our part? The explanation in both cases, he submitted, was

that it was due to the action of economic laws. The United States could more profitably employ her capital and her men on land, and India had neither the plant nor the technical skill with which to build and to man the ships which took the place of wooden sailing vessels.

Shipping services, the Chairman proceeded, represented one of Great Britain's largest exports, and there was nothing derogatory to India in being dependent on Great Britain for these services, any more than there was in Great Britain's being dependent on India for such things as tea and jute. It was as illogical for politicians in India to talk about the annual loss to India of the sums of money paid to British steamship companies for these services as it would be for Great Britain to refer in similar terms to the vast sums of money which she paid annually for imports from India.

"Great Britain," said Sir Stephen in conclusion, "still possesses one-third of the mercantile tonnage of the world. She carries the goods of all nations, not merely the goods of India. She has attained to that position in fair competition with the rest of the world, because it is a business in which she excels. If it were not sound economically to buy British shipping services, India may rest assured that the other nations would not do so."

"Such reservation in the case of foreign nations is justified, if at all, by political considerations; no other portion of his Majesty's Dominions has felt that its national dignity or safety demanded independence of British shipping, and where they have led India might well be content to follow."

The Southern Punjab Railway Company recommends a final dividend of £6 per cent. and a bonus of £4 per cent. on the ordinary stock (subject to English tax at 2s. in the £—that is, 4s., less Dominion relief at 2s.), making £16 per cent. for the year ended September 30, 1928.

The First International Exhibition of Radio Apparatus in Roumania will be held from April 15 to June 1 in the pavilions of the Park Carol, Bucharest. Models and samples sent for the Exhibition will be admitted into Roumania duty free.

A Brussels message states that the Financial and Economic Commission of the International Union of League of Nations Societies passed a resolution on February 12 deciding to present the League with a report from the Bulgarian Association to the effect that reparations payable by Bulgaria under the Treaty of Neuilly should be reduced and the period of payment extended. The reason for the presentation of this report is the financial and economic crisis in Bulgaria, due to the influx of refugees.

The question of establishing sugar factories in Persia has long been under consideration, and a Teheran message states that discussions with a Czechoslovakian company have resulted in an agreement whereby the latter will send shortly an expert adviser on the cultivation of beet and the manufacture of sugar, after which factories will be established, if it is found that the cost of production compares favourably with imported sugar. Tenders will be invited for machinery from sugar manufacturing companies, precedence being given to the Czechoslovak company mentioned. Approximately £2,000,000 worth of sugar is at present imported into Persia annually.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 13:—

Egyptian Futures.

Sakel Contract.—The undertone in this market has inclined to the easy side throughout the week, the apathy shown by both trade and speculative interests rather more than outweighing a certain amount of resistance manifested by Alexandria round the 36 dollars level. The heavy tenders at the end of last month are beginning to exercise a decided influence on near position differences; the spot demand is so restricted that holders are beginning to show signs of uneasiness, thus March has gone to 33 under May, and to a discount, leaving shipping charges out of the question, of 50 points below the corresponding month in the overseas market. This backing away from actual cotton can only imply one thing, the underlying weakness of the whole position, and as long as trade conditions continue as at present there appears little doubt that Sakel values will have to work down to a closer difference with other cottons before the necessary stabilising support can be encountered.

On one or two occasions during the week adverse reports regarding the Sudan crop have been circulated; we believe, in certain areas some damage has occurred, but, on the whole, the outturn is satisfactory both as regards quantity and quality. The marketing of the crop, which is imminent, will be welcomed by consumers not only in this country but in all fine spinning centres; there is no doubt that the extra supplies from this source are mainly responsible for these severe check recently experienced by those manipulating prices in Alexandria.

Ginning figures received to-day show 1,991,480 kantars ginned to the end of January; this compares with 1,749,271 kantars for the same period last year. Whilst probably prices will decline further, recent liquidation has left the market in a healthier position. We also have noted latterly the working up of a somewhat weak "short" interest, which may readily be scared to cover, should any factors crop up to cause a change in the prevailing "bearish" sentiment.

Upper Contract.—Whilst only a moderate business has been transacted in this contract during the past week, a very steady tone has been in evidence, and under the encouragement of advancing American values prices have hardened 13 points to 28 points on the week. Trade support continues to be restricted and we have again to report a very moderate offtake for either spot or c.i.f. cottons. There are no signs as yet of the large straddle long interest in the March position being liquidated. Whether this cotton is sold outright or transferred to more distant positions, it will be bound to have a decided effect on the market and probably cause a narrowing-in with American values. We still remain conservatively "bearish" on the situation and think sales effected at round the present level will later show moderate profits.

Egyptian Spot.

There has been no change in the general conditions prevailing, which are just about as bad as they could be. The recent strength of American futures has had the result of stiffening up quotations of Uppers and Pilon, but very little fresh business has been attracted by it. The decline in Sakels has continued, but price movements have not all been in one direction. It is astonishing how the price of Sakel has been kept up in Egypt considering the adverse influences working against it, and in so far as this growth is concerned buyers and sellers are as far apart as ever. The offtake in our market has this week been painfully meagre, and cotton based on Alexandria has been almost impossible to move. A small but steady trade has taken place in the lower qualities at from 11½d. to 16d., and "pass to 50 contracts" has formed the basis of another very limited inquiry. We might remark here that spinners expect a good deal more at this latter figure than Alexandria seems prepared to supply. In other words, it is almost always the "merchant" cotton, which has been hedged in Liverpool, which fills the small demand.

Uppers at from 10 off to 10 on have continued in quiet request. Pilon, although appearing reasonable compared with competitive growths, has attracted little attention this week. White Egyptians, at about 100 on, have been in limited request, but Nahda has remained neglected. Very little business has taken place in Sudan Sakel, but interest in the coming new crop continues to spread.

C.i.f. business has been very dull indeed, and there seems to be nothing in the situation at the moment to encourage spinners to buy forward. Reports from up-country make depressing reading and the forwardings last week were not so good as in recent weeks at 7,242 bales Egyptian and 767 bales Sudan. Estimated spot sales, 1,000 bales Egyptian and 400 bales Sudan. Quotations of Sakel show a net reduction of 25 points, but Upper and Pilon have advanced 33 points. F.G.F. Sakel to-day, 17.95d. F.G.F. Upper to-day, 12.25d. F.G.F. Pilon to-day, 12.88d.

Mr. H. W. Lee, chairman of the Fine Cotton Spinners and Doublers Association, has been appointed president of the Manchester Chamber of Commerce in succession to Mr. W. E. Thompson. Sir Kenneth Stewart has been elected vice-president and Sir Benjamin Longbottom treasurer.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 7, state:—

Since our last report the futures market, while still maintaining its activity, has continued to show a weakish tendency for Sakel, but has been relatively firm for Uppers. The week's summary of price movements is as follows:—Sakellaridis: March, 26.65 dollars, 0.24 dollars down; May, 37.03 dollars, 0.29 dollars down; July, 37.30 dollars; November, 37.53 dollars, 0.08 dollars up. Ashmouni: February, 22.08 dollars, 0.25 dollars up; April, 22.56 dollars, 0.11 dollars up; June, 22.98 dollars, 0.03 dollars up; August, 23.32 dollars, 0.07 dollars up; October, 23.75 dollars, 0.27 dollars up.

Sakel.—Fluctuations in Sakel have been irregular, with a generally downward tendency. The feeling has completely changed, and not a few operators who were working for the bull side have lost patience and commenced to liquidate their positions. This, of course, was to be expected; what really surprises us is that the reaction did not materialise sooner, as both the technical and statistical positions of the market have for some time been really too weak to justify the prices ruling. The market was overloaded with speculative bull positions, and stocks have steadily accumulated on account of the continually declining demand from spinners, especially since the situation has reached a point at which spinners are seriously considering the question of short time. Up to now, no definite decision on the matter has been taken, but there is little or no doubt that the proposal will be adopted very soon. In addition to bull liquidations, there has also been a good deal of reversing of straddles by sales of Sakel against purchases of Uppers. At the level of 36 dollars for March, some trade purchases were noticed which caused prices to harden and the market regained some of the ground lost, but we are of the opinion that the reaction is only temporary. To check the decline, trade purchases on a substantial scale are necessary, but we do not think they are to be expected until prices have reached a level at which they will more reasonably compare with those of other varieties of cotton.

The Sakel/Uppers straddle (March/April) this week stands at 1,400 points, against 1,444 points last week and 896 points at this time last year.

Uppers.—This market has also been very active, but continues

firm as a result of trade purchases and, more especially, as a result of operations forming part of the reversal of straddles alluded to above. We consider prices of Uppers very cheap in relation to American and persist in our expectation of a marked appreciation as the season advances and exports relieve the market of the weight of the crop. Against the first February tender, 10,250 kantars were delivered.

The Ashmouni/American straddle (February/March) this week stands at 236 points, against 214 points last week and 653 points at this time last year.

The week's receipts amount to 124,316 kantars, against exports 191,146 kantars; the stock in Alexandria stands at 3,391,162 kantars.

Spot.—Business continues quiet at Minet el Bassal, and during the past week we have had a very moderate demand from abroad and only a mediocre turnover has resulted. Sales amount to about 14,000 bales, of which we estimate 5,000 bales Sakellaridis, 7,450 bales Ashmouni and Zagora, 1,150 bales Pilon, and 400 bales other varieties.

Sakellaridis: Rather more interest has been shown in this variety, and the turnover, although very moderate, is a distinct improvement on last week. All grades up to Good to Fully Good have been dealt in, but the medium grades have absorbed the great majority of the demand. Spot differences are a little dearer for Fully Fair and below, slightly cheaper for Fully Good (for which there is practically no demand), and unchanged for all other grades.

Ashmouni and Zagora: Have not attracted so much attention as last week and only a fair business has been done, covering all grades, but with the medium qualities in most favour. Spot differences are generally slightly stiffer.

Pilon: Continues in good demand and a good business has been done, in which all grades have shared. Spot differences are generally

unchanged with the exception of Good, which is rather dearer.

Other varieties: A good business has been done in Nahda and spot differences are somewhat dearer. In White a retail business has taken place at last week's differences. A small trade has also been done in Maarad and Fouadi.

Up-country: Transactions in spot cotton have been negligible this week; on the other hand, business in new crop has been more active, especially in Upper Egypt. Cold and rainy weather has prevailed during the week all over the Delta, and this has again caused a cessation in preparation of the land; it is yet too early, however, for this to be of any consequence. It is expected that the first sowings will be effected during the second half of this month, which is about the normal time.

The traffic receipts of the South Indian Railway for the week ended January 19 amounted to Rs.10,66,199, making the total from April 1 Rs.4,93,67,347.

Mr. Harry Farnall, British delegate on the Egyptian Public Debt Commission since April, 1904, died in Cairo on February 11 following a motor accident the previous week. Born in 1852, Mr. Farnall entered the Foreign Office in November, 1873, and was temporarily employed in the Colonial Office in 1881, and was subsequently engaged in connexion with a number of international conferences. In 1891 he was appointed secretary to the British Plenipotentiaries at the Venice Conference on the Sanitary, Maritime, and Quarantine Board of Egypt, and was commissioned as an acting second secretary in the Diplomatic Service. In 1904 he became British Commissioner on the Egyptian Public Debt. Mr. Farnall had received the first class of the Medjidieh and the grand cordon of the Order of the Nile.

Notes of the Week.

The Afghan Kaleidoscope.

In spite of the confidence of Jelani Khan, Afghanistan's diplomatic anomaly in Angora, no European Government seems disposed to risk much on any opinion it may hold as to the ultimate winner in the Afghan struggle for supreme power. The last fortnight has seen the eclipse—temporary or otherwise—of Ali Ahmad Jan, who has lost his prestige by defeat in battle, and most of Jalalabad, his capital, by explosion. Amir Habibullah in Kabul is endeavouring to make the soundness of his Islamic principles do duty for the ordinary Afghan currency in which his exchequer is notably deficient, and appears in consequence to have widened the basis of the support that is being accorded to him. In Kandahar King Amanullah bides his time and is now, wisely, saying little, but may be supposed to be making his preparations with what thoroughness he can, having regard to the imperfect material at his disposal. The most satisfactory feature in the situation is the return to Afghanistan of General Nadir Khan, ex-Commander-in-Chief and formerly Afghan Minister in Paris; he is returning, not as yet another pretender to the Throne, but to endeavour to restore peace to the country. His aim, it may be imagined, will be to examine carefully the relative positions of Amir Habibullah and King Amanullah, to decide whether the origin of the one and the abdication of the other have rendered both impossible as rulers of Afghanistan, and, if one or other difficulty can be overcome, to smooth the way for the elimination of the unsuccessful aspirant. General Nadir Khan will hardly have omitted from his calculations the possibility of both the rulers of Kabul and Kandahar proving unacceptable to the majority of the Afghans, and his own outstanding qualifications securing for him a strong call to the Throne, however little he may desire it.

The Evacuation of Kabul.

For the present there is no indication that, even with the partial elimination of Ali Ahmad Jan, the issue in Afghanistan is clear-cut as between Amir Habibullah and King Amanullah. General Nadir Khan's intervention may reduce the situation to these comparatively simple pro-

portions, if he should fail to secure the withdrawal on terms of the less popular aspirant to the throne of a united Afghanistan. There can, however, be no question that the various European Governments are well advised not to risk the possibility of unfortunate complications by retaining the staffs of their Legations at Kabul in view of the prospect of further fighting when spring approaches. It was decided that the personnel of the British, French, Italian, and German Diplomatic Missions should be evacuated by the Royal Air Force, and the work of removal was carried out on Sunday and Monday, thus completing the great task that has been in progress for the last two months of transferring by air to India nearly six hundred foreigners residing in Kabul. The persuasive powers of General Nadir Khan may avert civil war in Afghanistan; but at the moment there is the likelihood that, directly the weather renders military operations on any large scale possible, a trial of strength will be engaged between Amir Habibullah and King Amanullah, while other claimants may be tempted to test their fortunes, in view of the fact that in the primitive conditions of the country no one who can secure a following starts at any very great disadvantage in his bid for the Throne as compared with his rivals.

The New Order in Yugoslavia.

Although only seven weeks have passed since the establishment of the new order in Yugoslavia the Government of General Zivkovitch has already a considerable programme of achievement to its credit. The earlier weeks were inevitably devoted to the consolidation of the position of the Dictatorship, so as to disarm any misguided attempts to challenge its stability, and to such measures as were required to bring the machinery of government into line with the objects that King Alexander had in view in taking the drastic step that he did on January 6. The further stage of a constructive policy designed to undo the "moral disorganisation and national disunion" which had previously prevailed, and to develop Yugoslavia's prestige and credit abroad, has now been reached. On the one hand, negotiations have been opened with Bul-

garia, in what there is some reason to suppose is a conscientious endeavour to place the relations between the two countries on a footing of permanent friendliness and mutual understanding; on the other hand, the steps taken to bring about a better feeling between Croats and Serbs have received a notable reinforcement in the announcement that Zagreb is to be recognized as a second capital and to become the residence of King Alexander for a certain period each year. It is unfortunate that the Croats should have had to wait ten years for an arrangement which ought to have been made in the early days of the new Kingdom; but, coupled with the appointments of Croats to various State and diplomatic offices, the King's decision leaves no room for doubt as to the intention of the new order to hold, as far as possible, the balance even between the component parts of Yugoslavia.

Yugoslavia and Bulgaria.

An almost essential condition for the success of the negotiations now in progress between Yugoslavia and Bulgaria is that the Press in both countries should be muzzled, or at least that there should be no discussion for the time being of matters bearing on the relations between the two countries. There was no justification for the captious and critical spirit in which the Bulgarian Press was ill-advised enough to receive the initial overtures of the new Yugoslav Government. A complete break had been made with the past in Yugoslavia by the establishment of the Dictatorship, and it was the duty of Bulgaria to welcome, without reservations, the reopening of the frontier ordered from Belgrade. The ungenerous spirit in which the gesture was received in the Bulgarian Press evoked the inevitable recriminations in Yugoslavia, and once again representatives of the two countries will meet with all their bristles up instead of under the conviction that now at last a new chapter is to be reached in their joint history. The object of the conference at Pirot is to draw up a satisfactory *modus vivendi* which will facilitate trade and personal movement across the common frontier, while maintaining reasonable precautions against the abuse of these facilities for illegal and, particularly, aggressive purposes. The frontier as revised by the Treaty of Neuilly is a thoroughly bad one, which leaves the border population on each side with interests on the other, calling for frequent crossings. Hitherto every possible obstacle has been placed by both countries on movement across the frontier, and for the last fifteen months the frontier has been practically closed from the Yugoslav side. With the new spirit now actuating Belgrade a satisfactory settlement should be possible, provided that Yugoslav overtures are received with good will by Bulgaria and without any harking back to what has happened in the past.

Waiting in Iraq.

The anxiety with which Iraq—perhaps it would be better to say Baghdad—is waiting the arrival of the new High Commissioner, Sir Gilbert Clayton, who has suffered unfortunate, although by no means fruitless, delays on his outward journey, would not appear to be fraught with any untoward events. The political "crisis" is a matter the vitality of which is not likely to manifest itself in visible action. Sir Abdul Muhsin, it is true, has resigned, and his resignation has been accepted by King Faisal, but the lack of political leaders to take up the reins which Sir Abdul Muhsin is laying down is perhaps due more to the chances of the situation than to its intrinsic difficulties. It remains to be seen how Sir Gilbert Clayton, whose leisurely progress to Baghdad really is in itself a hopeful symptom that the so-called *impasse* is not of such grave dimensions as has sometimes been painted, will judge the position. It is difficult not to think that a *modus vivendi* will soon be found between the British estimate of the essentials of the situation and Iraq's aspirations. In particular, Sir Gilbert should be able to disabuse the Iraqis of the idea, current in certain Baghdad quarters, that what Great Britain is really aiming at is to make of Iraq a second Egypt. That that conception may commend

itself to certain British politicians, politicians, incidentally, by no means confined to the Party at present in power, as it may commend itself to certain non-politically minded Iraqis, is granted; but it is not the policy of the British Government. It is profoundly to be hoped that a new broom in Iraq will succeed in removing some of the cobwebs with which some of the Iraqis themselves have been wont to obscure the situation. There is a bad kind of Imperialism and there is a bad kind of Nationalism, but there is little reason why Iraq should not find between the good kinds of these conceptions not only compatibility but also co-operation.

The Judicial System of Iraq.

Whatever difficulties may attend the Military and Financial Agreements between Great Britain and Iraq, the changes which are proposed in the Judicial Agreement and which are shortly to be considered by the League of Nations, should command universal assent. The judicial administration in Iraq has suffered from the serious anomaly that the nationals of certain foreign States have received more favourable treatment than that given to others; nor are the Iraqis themselves in support of any system which even savours of extra-territorial privileges. It is proposed, therefore, to abolish the Anglo-Iraqi Judicial Agreement of March, 1924, and to substitute a uniform system of justice. Once the approval of such a change has been given by the League—and one cannot well imagine opposition to it coming from members of the League—the details can quickly be worked out as between London and Baghdad. That the change will involve additional expense is to be expected, but the benefits accruing from it should easily outweigh any sacrifices in this direction made by the Iraqi Government. In particular, an improvement in Iraqi-Persian relations is to be looked for with the establishment of a uniform system of justice; for the Persians, who have themselves abolished the capitulatory régime, have hitherto demanded what amounts to capitulatory privileges for their nationals in Iraq.

Persia and Bahrain.

It had been hoped that all the questions outstanding between Persia and Great Britain had been discussed by the Persian Court Minister, Taimur Tash, when he paid his recent visit to London. Anglo-Persian relations had, in fact, to all outward appearances so notably improved that the re-emergence of a problem which, we understand, was not among those discussed in London by the emissary of the Shah, is a little puzzling. We refer, of course, to the Bahrain question. It will be remembered that in November, 1927, the Persian Government formally protested to the League of Nations against the assumption, in the Anglo-Hijaz Treaty, of the independence of the Bahrain Islands, which were, it was alleged by the Teheran Government, an integral part of the Persian Empire. The British Government replied in the following February, denying Persia's claims to suzerainty over Bahrain, and re-asserting the independence of the Arab ruler of the islands. Persia, however, persisted in her claim, which, incidentally, she has raised several times within the last century. But in face of this reiterated claim, and especially in view of the manner of its being raised, the Shaikh of Bahrain has signalled his independence by obliging Persians who wish to travel to the islands to obtain passports. It is this last action which has produced the last Persian protest. We cannot help feeling that in the circumstances it will be unfortunate if the League, which may or may not feel itself competent to deal with the matter, is called upon for a decision; and it is to be hoped, therefore, that the Persian Government will arrive at a private understanding with the British Government over this problem. The desirability of smooth Anglo-Persian relations is so great at the present moment that it would be deeply regrettable if a matter of no vital importance should be allowed to wedge itself in between the Persian and British nations.

INDIAN NOTES.

Commerce and Politics.

While the Select Committee on the Coastal Reservation Bill has not yet made its report, although it has had ample time in which to do so, the same member's Bill to abolish the deferred rebate system in the Indian coastal trade has passed the second reading and also been referred to a Select Committee. As is indicated by the smallness of the majority in favour of the motion, 52 votes in favour of the reference and 42 votes against, the Government members united with the European party in opposing the measure, which Mr. S. N. Haji made clear was directed mainly, if not entirely, at the British India and Asiatic companies. With a candour worthy of a better cause Mr. Haji explained that the Bill was, and intended to be, complementary to the Coastal Reservation Bill. While the earlier Bill, the prospects of which, incidentally are seriously jeopardised by the delay in the presentation of the report, was designed to keep shipping earnings in the country, the present measure, he pointed out, would ensure a fair distribution of shipping business among the existing indigenous interests, in other words a division of the spoils. An interesting and significant feature of the debate, according to the cabled reports, was the absence of the non-official party leaders and the general lack of interest displayed by Swarajist and Nationalist members. The attendance, it is stated, dropped to 47 during Mr. Saraghai's speech in introducing the Bill and to 27 while he was replying on the debate. A desire not to exacerbate public opinion in this country before the Statutory Commission has submitted its report is suggested as a popular explanation of the lack of support which Mr. Sarabhai received from the extremist members. Another and more reasonable interpretation of the latter's attitude is the revival of the underlying suspicion of members representing agrarian constituencies of proposals emanating from the industrial and business centres, and from Bombay in particular.

The Bombay Budget.

The details of the Bombay Budget have not yet come to hand, but the cables indicate that it shows a small surplus, without, however, any allowance for the losses to the land revenue receipts, which must have been caused by the recent unprecedented cold. The damage done by frost from Sind to the Deccan has been widespread, and must lead to a considerable remission of the Land Revenue, more than enough to turn the small surplus into a considerable deficit. There is nothing to indicate that any steps are being taken to raise the revenues of the Presidency from their present precarious condition. It is an unfortunate result of the Meston Settlement that a Province like Bombay, which has the most reason to complain of its inequitable assessment, is inclined to cry out for redress, which, if ever granted, must take time, instead of seeking for other means of supplementing its finances. We are further informed that the loss on the Back Bay reclamation may exceed three crores. This is a sufficient contrast from the hopes of enormous profits held out by previous Members of Council: but the loss now estimated is generally believed to be a very conservative prediction. The cause now stated for the further delay and loss, namely, the shrinkage in the reclaimed land, necessitating very costly dry filling, was anticipated by many of those who saw the nature of the material supplied from the bed of the harbour on which such vain hopes were based. It is no use lamenting over past mistakes. A further unfortunate effect of the Back Bay failure, however, has been its reaction on the development schemes undertaken by the Bombay Municipality. Some of these were framed during the boom period, with financial forecasts which have proved unfortunate. They were, however, all necessary for the improvement and development of the City, and the difficulties which have arisen in their execution do not justify the attacks made by the present Corporation on the executive officers responsible for them.

Bishop Palmer of Bombay.

Bishop Palmer has now left the diocese of Bombay, over which he presided for nearly twenty years. It is no exaggeration to say that his administration will be remembered as the most memorable in the annals of the diocese. He found it in comparative disorder, after a succession of Bishops whose rule had been for various reasons short-lived. He left it in good condition, with its finances, if not flourishing, at least on a sound basis, and by the successful creation of a new diocese at Nasik he reduced the burden of routine and travelling imposed on the holder of the old Bombay diocese. But, above all, he was more responsible than any other man for the passing of the Indian Church Measure, which has placed Indian Christianity on a new footing. That measure has not yet been fully tested, and is bound to be unpopular in its early years. It at least marked, however, a definite policy, and probably the only policy by which the Indian Church could be transformed from a precarious exotic to a sturdy, if modest, indigenous growth. Dr. Palmer deserves the more credit in that many of the inevitable concessions of the Act must have run counter to his earlier prejudices. If Bishop Palmer never attained great personal popularity in Bombay itself, it was largely because the diocese claimed his attention rather than the City, and he had not the time to cultivate both. But he will long be remembered as the last, and, we think, the most distinguished, holder of the undivided see of which St. Thomas' Cathedral is the centre.

The Greek Chamber has passed the Bill ratifying the Greco-Roumanian Pact.

The Greek Government proposes to undertake considerable harbour extensions at Kavalla.

M. Venizelos has promised a women's deputation that he will support the immediate granting of the municipal vote to women, but he stated his opinion that the time was not yet ripe for female suffrage in Parliamentary elections.

At two selected villages in Galiubia Province, the Egyptian Government is carrying out a minute investigation with regard to the extent in which the inhabitants are affected by bilharzia, ankylostomiasis, and malaria, in view of the intention of the Rockefeller Foundation to come to the assistance of the Egyptian Government in combating these diseases.

Mr. Bruce has assured Sir Eric Geddes that Australia is prepared to co-operate in the extension of the London-Karachi air services if the question of finances and other relevant subjects can be satisfactorily adjusted.

BRITAIN AND ABYSSINIA.

The determination of the Egyptian Government to proceed without further delay with the big irrigation works that are required for the adequate supply of Nile water to Egypt inevitably fixes attention afresh on the question of the Lake Tana Dam, the construction of which is linked up with any comprehensive and final settlement of the water problem in Egypt and the Sudan. Nearly twenty-seven years have passed since the Emperor Menelik recognised in a formal treaty the special interest of Great Britain in the waters of the Blue Nile, and undertook on behalf of Abyssinia not to interfere with the river nor to allow any other Power than Great Britain to construct a dam at Lake Tana. In spite of frequent attempts on the part of the British Government to obtain Abyssinia's consent for the construction of that dam, no progress has been made in the matter, and there would seem to be a danger of the present state of stalemate to which the question has been reduced being accepted as a permanent and irrevocable feature in Anglo-Abyssinian relations. Yet the need for a practical policy in regard to Abyssinia is paramount in the interests both of Egypt and of the Sudan. The fierceness with which the Opposition in Egypt is attacking the present Government's programme of irrigation works is a sign that it hopes to take advantage of popular ignorance of technical matters by using any prejudice against or suspicion of Great Britain to undermine the position of Mahmoud Pasha's Cabinet. The heightening of the Aswan Dam and, more especially, the construction of the Gebel Aulia Reservoir are being cited as clear evidence that there is a conspiracy between the Government and Great Britain to deliver Egypt into the hands of the latter. The ridiculous allegation that the flow of the Nile can be stopped by, as it were, the turning of a tap is being disseminated anew among the ignorant fellahen; where any symptom of intelligence is encountered to raise the question as to what is to happen to the waters thus blocked up, the reply is given that they are all to be used for the Sudan alone, and in support of the contention the failure of the British Government to proceed with the Lake Tana project, which is intended to be for the special benefit of the Sudan, is quoted. Honesty of purpose and common sense may ultimately prevail against the mischievous intrigue in which Wafd extremists are now indulging; but it would undoubtedly strengthen the hands of the present Egyptian Government, if the deadlock between Great Britain and Abyssinia could be overcome, and a start be made with the Lake Tana Dam.

The first obstacle to be removed, if there is to be any improvement in Anglo-Abyssinian relations, is the agreement made between Great Britain and Italy by an exchange of Notes in December, 1925. In this agreement Great Britain undertook to recognise an exclusive Italian

economic influence in the west of Abyssinia, to support Italy in seeking from Abyssinia the concession for a railway across the country from Eritrea to Italian Somaliland and to support with the Abyssinian Government all Italian requests for economic concessions connected with the Italian zone. Italy on her part undertook to give her support in connexion with the British application for the construction of a dam at Lake Tana. It is true that the British undertaking was contingent upon Great Britain's having first obtained with Italian support the Lake Tana concession from the Abyssinian Government; but in its bearing on the agreement and its results this detail had no significance. The immediate effect of the agreement was to antagonise the Abyssinian Government still more against Great Britain. Until then Italy had been its chief *bête noire*; it now decided that there was no longer anything to choose between the two countries in the matter of their potential menace to Abyssinia. A protest was made to the League of Nations, and both Great Britain and Italy took steps to reassure Abyssinia and the League of the innocuousness of their intentions. With this explanation the British Government, conscious of its own honesty, appears to have remained content. Not so the Italian Government. The reason for the agreement, as far as Great Britain was concerned, was well known: all her efforts to obtain the Lake Tana concession were ultimately thwarted in Addis Ababa by the intrigues of the Italian or French Legations, or both—for no special reason, as neither Italy nor France had the least interest in the Lake Tana Dam. The agreement of December, 1925, was made with Italy in the hope that the anti-British intrigues of one of the Legations at Addis Ababa would cease. There could be no disguising of this fact. By recognising Western Abyssinia as an Italian zone, Great Britain was penalising British interests in view of the proximity of the Sudan; but the need for the Lake Tana Dam was paramount, and hence the understanding with the Italian Government. The latter, however, was not picking any chestnuts out of the fire for Great Britain. Confronted with Abyssinian hostility to the Anglo-Italian agreement, it was quick to follow up the explanation issued in common with Great Britain by private assurances to the Abyssinian Government. As far as the latter was concerned, the agreement could be regarded as non-existent; and so well did Italy play her cards at Addis Ababa that Abyssinian hostility gave place to a treaty of friendship and conciliation signed on August 2, 1928.

All that is left of the Anglo-Italian agreement of December, 1925, is the sense of bitterness which it engendered in the Abyssinian Government against Great Britain. It might be thought that Italian assurances which satisfy the Abyssinians of the harmless character of the agreement would have served to reinstate Great Britain in their estimation; but, to counteract this development, they are able to watch the scrupulousness with which the British Government adheres to the spirit and letter of its undertaking by refusing to countenance any British enterprise in Western Abyssinia. The time would thus seem to have come for a more direct British policy in Abyssinia, and the first step might well be the denunciation of the agreement of December, 1925, which Italy has already made a dead letter. So long as Great Britain shows herself to be bound by her undertaking to Italy the Abyssinian Government will retain its suspicion of British diplomacy. It is unfortunate that the new British Minister to Abyssinia should have had to leave the country owing to illness almost immediately on his arrival at his post; but if it be established that his health cannot stand the high altitude of Addis Ababa, no time should be lost in making a fresh appointment, in order that a new policy may be inaugurated with some chance of success. The importance of Lake Tana invests the Legation at Addis Ababa with a significance that Abyssinia may not usually have among the Foreign Office appointments, and for once in a way a departure might be made from the normal rotation of diplomatic shufflings; if by so doing there will be the certainty that the right man will be in the right place.

Baghdad, February 6.

Politics.

The Saadun Cabinet is still carrying on the duties of government, and will go on doing so until after the arrival of the new High Commissioner. It may even continue in office, if some small concessions on the part of the British Government make possible a compromise over the Treaty question. At the moment there is a general feeling of hiatus; Sir Henry Dobbs has gone, Sir Gilbert Clayton is yet on his way, and no new political developments are to be expected for the moment.

The end of Sir Henry Dobbs' six-year term of office finds the Iraq nation fundamentally friendly to Great Britain, more so perhaps than at any time since the War. The Cabinet's resignation over the Treaty negotiations was in the main a political manoeuvre, and need by no means be taken as disproof of this. The chief point over which difficulty has arisen is that of the supreme command in military operations, either defensive or for the maintenance of law and order; Great Britain insists on a British commander-in-chief if British forces are to be employed; Iraq would have the Royal Air Force regarded as auxiliary forces, and would make the Iraq Army (with King Faisal as its titular head) ultimately responsible. Another difficulty is the question of martial law. Great Britain, as the power entrusted by the terms of the Mandate with responsibility for law and order, would wish to administer martial law in the event of its ever becoming necessary; but on this point Iraqi opinion in general is suspicious. The third point at issue is the duration of the Military and Financial Agreements, which Iraq wishes to terminate in 1932, whereas Great Britain, to simplify discussion and revision, would make them for the same period as the Treaty. Other minor matters, such as the payment by Iraq of half the cost of the High Commission, and the handing over to Iraq of the Port and the Railways, are under discussion; but the real point at issue is Britain's determination to retain a reasonable measure of control so long as it is necessary in the interests of Iraq's safety to retain British forces in the country.

Departure of Sir Henry Dobbs.

Sir Henry Dobbs' departure from Iraq was signalled by many public tributes to the respect and affection in which he has been held both by British and by Iraqis. On Friday night he was the King's guest at a banquet at the Palace, when he was invested by His Majesty with the Order of the Two Rivers, First Class. The King spoke in the warmest terms of Sir Henry as a sincere friend to himself and to Iraq, and said that the Iraq nation acknowledged with gratitude his services in defending its rights and interests. On the previous day Sir Henry had been presented, at a gathering representative of the whole

British community in Iraq, with a cheque for 420 guineas, to be expended in accordance with his own wish on a portrait of Lady Dobbs.

Many deputations from the provinces came in to Baghdad to bid the High Commissioner farewell, and he had a royal send-off when he left by air for Mosul on Sunday morning. Guards of honour of the Royal Air Force, Iraq Army, Levies and Police were drawn up at the aerodrome. King Faisal was represented by the Crown Prince, who is now serving as a cadet in the Royal Iraq Military College. After inspecting the troops, Sir Henry went round the large assembly of British and Iraqi officials, shaking hands and saying goodbye. A battery of guns of the Iraq Army fired a salute as the Victoria took off with its escorting flight of aeroplanes.

It was unfortunate that the continuation of Sir Henry's journey from Mosul next day was delayed by fog. The two aeroplanes left for Aleppo, but were forced by the bad visibility to return to Mosul, thus dislocating the arrangements made for Sir Henry's reception and entertainment at Aleppo and Constantinople.

A number of tributes in the local Press refer to the statesmanlike qualities of Sir Henry Dobbs, and speak particularly with gratitude of the important part played by him in bringing the Mosul question to its peaceful and satisfactory conclusion. Iraq was indeed fortunate in having so wise and temperate a guide during these six most eventful years of its history. During that time Sir Henry concluded three Treaties with Great Britain, one with Turkey, and one with Najd; he pacified Kurdistan, and by unceasing efforts brought Iraq into a more friendly relationship with her neighbours Syria and Persia. In internal affairs, the firm support which he consistently gave to the tribal majority in its resistance to the pressure of the more articulate townsman minority goes far to account for the present high standard of law, order and general contentment throughout the country. Above all, Iraq owes to Sir Henry Dobbs its present firm foundation of political stability—a foundation upon which it can now, as never before, hope to rear an edifice of national prosperity and self-respect.

The Wahhabis.

The fresh Wahhabi raid last week, in which twenty men were killed and over four thousand sheep driven off, led to a heated debate in the Chamber of Deputies on the subject of the defence of the southern frontier. Nouri Pasha pointed out that the raid had taken place in Kuwait territory, and could not, therefore, have been prevented by the Iraq Government. The Chamber then passed a bill allotting to the Ministry of Defence Rs.446,000 for "the defence of the frontiers," and to the Ministry of Interior Rs.300,000 for "the maintenance of security on the southern frontier."

The raid was made by men of the Ajman tribe, of Ibn Hadhlan's section; they are said to have been two hundred strong, and to have been well mounted on horses and camels.

General News.

The rule of the road in Iraq is now "Keep to the Right," the change having come into force on February 1, with an absence of accident and confusion most creditable to the police arrangements. The change became advisable owing to the great increase of road traffic between Iraq and Persia on the one hand, and Syria on the other—the Continental rule of the road being in force in both these countries, and in Palestine. The difficulty of knowing in the desert just when to apply the opposite rule has been a considerable one for some time, and has led to several accidents. Moreover, the majority of cars used in this country are American, and therefore built with a right-hand drive. The absence of any real effort on the part of British manufacturers to cater for the growing motor trade in Iraq is regrettable, but undeniable; those few motorists who are public-spirited enough to insist on bringing out a British car do so at a heavy disadvantage, knowing that they will have the greatest difficulty in obtaining spares. Makers of British cars have only themselves to blame if the market has been captured by America and France.

An unusual social event of this week was the entertainment by No. 70 Bombing Squadron, R.A.F., of the Baghdad Medical Society on the aerodrome at Hinaidi. Dr. Saib Shaukat (President of the B.M.S., and brother of the Minister of Interior) and forty members of the Society were received by the officer commanding the Squadron and by a number of the R.A.F. medical service, and an exhibition was given of transport of wounded by a Vickers' Victoria bombing machine, which is adaptable for use as an ambulance. The Baghdad doctors were then given flights in the plane, twelve at a time, and afterwards entertained to tea. An interesting *rapprochement*.

Sir Denison Ross, Director of the School of Oriental Studies, and Lady Ross have been visiting Baghdad, and have now gone on to Persia. They were entertained at a reception by Muzahim Beg Pachachi, lately Iraq's Diplomatic Agent in London.

THE HIJAZ.

Jidda, February 7.

Death of the Italian Consul.

Jidda society has suffered a grievous loss by the untimely death of Dr. G. Cesana, who has been Italian Consul here since August, 1927, and had only returned from leave on December 20, accompanied by his daughter. Himself a doctor of great ability, who had placed the whole European community here under a great debt of gratitude by devoted service, for which he ever refused to accept any remuneration except thanks, he appears to have made light of his own trouble, and succumbed with dramatic suddenness to typhoid, apparently contracted during the latter part of his holiday. He died on January 23 at the age of 53, and his body was embarked two days later on a Holt Line steamer for Suez *en route* for Italy. Mr. Stonehewer Bird, British Agent and Consul, conducted a service on board the vessel after the embarkation of the

body, and the following day Mlle. Cesana, accompanied by Mrs. Andresen, of the Dutch community, left for Italy with all the sympathy of the many friends that she had made during her all too short sojourn at Jidda. Incidentally it may be mentioned in this connexion that Mrs. Andresen performed the double journey to Suez and back in the record time of only 115 hours, going up by a Dutch pilgrim steamer and returning by the first boat of a recently instituted monthly service of cargo steamers coming to Jidda direct from Europe—a notable event in the history of the progress of the Hijaz, which has thus for the first time been adjudged worthy of regular commercial communication with Europe.

Apart from the great value of his medical services both to Europeans and to many Arab friends, Dr. Cesana will long be remembered at Jidda for the peculiar charm of his personality, his easy accessibility to all, his kindly though somewhat cynical outlook, and his intelligent appreciation of the practical side of affairs. It is an open secret that, while, loyally accepting, he genuinely regretted the failure of his Government to accord its formal recognition to the Dual Monarchy of the Hijaz and Najd, and that to the best of his ability he had for some time been working for the establishment of more cordial relations between the two countries. His much-lamented death provides his Government with a suitable opportunity of perpetuating his memory by according that formal recognition of the Wahhabi State which he himself always hoped to achieve before the time came for his retirement from service.

Dr. Cesana is to be succeeded by Commendatore Teodorani, who is due to arrive here from Massawa about the middle of this month in the capacity of acting Consul.

The Egyptian Consulate.

Bairam Bey, originally nominated to the charge of the Egyptian Consulate at Jidda, was prevented by illness from proceeding to his post; it has now, however, been filled by Ashmuni Bey, who arrived on January 25 to assume charge from Matar Bey, who has been acting as Consul since the departure of Said Bey some months ago. From all preliminary accounts it would seem that the Egyptian contingent to join in the Pilgrimage this year will be larger than usual; and it is perhaps not too much to hope that the two countries will celebrate the occasion by sinking such differences as may still survive from the *Mahmal* epoch and by exchanging those tokens of mutual recognition and respect which are needed to cement the friendship of two peoples proud of the Arab culture they share. In such a case there can be no question of conditions, and nothing is needed but the declared determination of the two countries to live in mutual neighbourly amity.

The Approach of Ramadhan.

In a few days (Monday, February 11, in all probability) the annual fast of Ramadhan will again be upon us, during which, as usual, work will for the most part be relegated to the night hours, while the daytime will be devoted to repose under the strain of the Fast and to such other activities as cannot be undertaken at night, e.g., the work

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

of the Customs House, and so on. The number of pilgrims already arrived in the country (mostly from the Dutch East Indies) up to date is 27,066, which shows a reduction of about 5,000 on the numbers which had reached the Hijaz by the corresponding date of last year (32,369). It is, however, impossible to estimate the probable total visitation by the time of the Pilgrimage, though it may be supposed that the absence of the alarms of last year (arising out of certain misrepresentations of the Najd-Iraq frontier incidents) will encourage a substantial incursion of pilgrims from both British India and Egypt to make up for any falling off in the number of Javanese visitors, whose excursions depend largely on the fortunes of the rice and rubber crops, which this year appear to have been unkind.

Visitors to Jidda.

During the last ten days of January the Amir Faisal paid Jidda a State visit, and the Foreign Office celebrated the occasion of a tea-party, at which the European community and the notables of Jidda had an opportunity of meeting His Highness. Madame Gaulis, a French lady who has written books about various Near Eastern countries, had shortly before arrived at Jidda on a brief visit, and thus had many opportunities of discussing Arabian affairs with the Amir and his high officials. It is much to be hoped that she carried away with her not only a good impression of the state of affairs obtaining in the Hijaz to-day after three years of the beneficent rule of the Wahhabi monarch, but also a clue to a possible solution to the Syrian problem itself, which is of more pressing importance to her Government.

Another interesting and quite unpolitical visitor to Jidda during the last few weeks was Mr. Fred Richards, who is understood to have collected much material for inclusion in his next book of etchings, which is to embrace several countries of the Near East. He was much impressed with the beauty of this still little spoiled town, better known to the world for its vile climate. As a matter of fact there is little to complain of in the latter respect at the moment, as the rain of November has been followed by a cold spell already nearly three months old. The average maximum temperature is well below the 80 degree mark and the minima range down to 59, which means cold nights—relatively speaking.

The British Agency.

It is understood that a supernumerary British Vice-Consul is very shortly to join the staff of the Agency to cope with the greater volume of work that now falls on it. This is undoubtedly a move in the right direction, but there seems to be a disinclination on the part of the Foreign Office to face the problem of its representation in this country seriously. There can be no question of serious financial obstacles to the raising of the status of the Agency at Jidda, and Arabia is at least as worthy of a British Legation as, for instance, Albania. At present Jidda is regarded almost in the light of a penal station by the officers of the Consular Service who take (if they cannot avoid taking) their turn here in the ordinary routine

of the service. They can scarcely be expected to be enamoured of the place when, if any matter of special importance arises for discussion between the two Governments, they are temporarily side-tracked by the despatch of a special envoy or mission. Furthermore, the emoluments of the post are not such as to override the obvious disadvantages. At the same time it is important that Great Britain should be represented here in a worthy manner, as at least three-quarters of the diplomatic work of the Hijaz-Najd Foreign Office is conducted with her and the friendliness of Arabia is a vital consideration in the general interests of the British Empire.

Not less important is the fact that, when differences arise between the Wahhabi State and the British mandated territories, the British Government is inevitably inclined to be swayed by the authoritative voice of its High Commissioners rather than by the representations, however cogent, of a Consul-Agent. There is really no valid argument against the establishment of a British Legation in Arabia, and such a post would provide ample opportunities of distinction for a young and ambitious member of the Diplomatic or the Consular Service with a special interest in Arabian affairs. A five years' tenure of such a post should be made obligatory, as it is high time the British Government should breed a new generation of Arabian experts. The approaching end of Mr. Bird's tenure of the post provides a fitting occasion for reviewing the situation.

Locusts in the Hijaz.

The swarm of locusts which passed over these territories during the autumn has unfortunately neutralised the hopes which arose out of the heavy rain of November. Vast areas of the desert were sown with millet and melons—and also with locust-eggs. The simultaneous appearance of the young locusts and the young crops proved disastrous to the latter, and only about a quarter of the sown area remains unaffected. Unfortunately the Hijaz has not yet made the acquaintance of the measures for combating locusts which have been so successful further north.

News from Riyadh.

A camel post which left Riyadh about January 20 arrived at Mecca on February 2. It brought no definite news of the King's probable movements, but it is probable that, as last year, he will leave his Najdian capital a few days after the end of Ramadhan to return to the Hijaz. His eldest son and heir has recently distinguished himself by discovering a practicable motor-route from the Hasa to Riyadh across the terrible Dahna. The "million" is a blank for the route traversed except for its beginning and its end, so Saud has made a definite contribution to geographical knowledge. The cars started from Hufuf via Ghar al Shuyukh, whence they appear to have gone slightly north of west across the Summan and Dahna to the watering of Rumaihiya, from which the going is straightforward to Riyadh almost due south. So far as can be gathered there is no reason whatever to connect the recent attack on a motor convoy proceeding from

Basra to Kuwait with the Wahhabis, to whom some papers have hastily attributed it. Nor is there the slightest ground for supposing that the present calm of inner Arabia is the presage of a storm on its frontiers, as some people, who ought to know better, seem to think. The Riyadh Conference has had a great effect throughout the desert, and the influence and prestige of Ibn Saoud probably stand higher than ever before. He has held his own in conference with Great Britain and he has held his own in conference with the Wahhabi leaders. Arabia and Afghanistan provide an interesting parallel and a striking contrast, from which there is much to be learned. And perhaps history will judge that King Amanullah doomed himself and his reforms at the outset of his famous world-tour by not beginning it with a pilgrimage to Mecca. I understand that he received a cordial invitation to do so, but he passed by on the other side—to court Nemesis.

Later (February 10).

The new moon was not seen last night here, but at 10 p.m., the firing of guns announced that the Fast would begin to-day. I have not been able to ascertain whence the news of the sighting of the moon came, but it was probably from some station on the Hijaz Railway.

Cairo, February 16.

The Premier's Return.

The Prime Minister, Mohamed Pasha Mahmoud, returned this week to Cairo, apparently completely restored in health by his stay at Aswan. His return is very welcome, as during his illness there had been distinct signs of a slackening in the administrative control which he had introduced on taking office.

Egypt's Finances.

The final accounts for the financial year of 1927-1928 repeat the experiences of the preceding years. Receipts are one million and a quarter higher than the estimates, while expenditure has been kept down to four millions below the total credits allotted during the year. The result is that a further three millions have been transferred to the general reserve, bringing it to the unprecedented figure of 40 millions, which is more than one year's revenue.

The main increases in receipts over estimates were Customs £E1,000,000, Judicial fees £E370,000, Railways £E500,000, Interest on funds £E115,000; while under expenditure the principal reductions on credits were Irrigation Department £E800,000, Education £E350,000, Railways £E700,000. This is an eminently satisfactory result. But while the increase in revenue reflects the improved economic condition of the country, it must be admitted that the substantial addition to the Reserve Fund is mainly due to the fact that, owing to delays and other reasons, work was not carried out, and the money allotted could not be expended, a condition of

things which has been a marked feature of successive budgets and has contributed to the present high level of the reserve. The latter will be entirely absorbed by the Irrigation projects and the schemes for social and economic development which are being undertaken, and it is for this reason that the Government is so keenly looking for new sources of revenue, and is studying a reform in the Customs tariff, and the imposition of new forms of taxation.

The Customs Regime.

The Egyptian Government has issued an official intimation that it intends to introduce, as from February 16, 1930, a new Customs tariff by legislative means. The introduction of a new Customs tariff connotes the denunciation of all the commercial conventions with foreign countries, and the Egyptian Government has officially notified the Powers of its intention to terminate its commercial agreements with them as from that date, and to apply a new Customs tariff. The reason that February 16, 1930, has been chosen is that on it ends the commercial convention between Egypt and Italy—which is the longest dated of all the conventions with other Powers. In foreign commercial circles it is much doubted, however, whether all the preliminaries will have been completed by this day next year. Before the new tariff can be embodied in the decree the Chambers of Commerce will have to be consulted thereon, and the decree itself will have to be promulgated so that the commercial community may have the customary six months' notice to enable it to base its quotations on the new tariff. This means that to be applied in February, 1930, the decree must not be promulgated later than August next. The international experts engaged to advise the Government in the matter and elaborate a new tariff have by no means completed the final draft, and, as the leave-season will intervene between August and now, there will be by no means sufficient time for consultation with the Chambers of Commerce. There is, indeed, a strong impression that in view of the non-completion of these discussions, the Egyptian Government will find itself compelled to announce an increase in the *ad valorem* tariff next February, preliminary to the application of the new specific tariff. But long before that a very serious question may be raised affecting the introduction of a new tariff, *viz.* whether, so long as the Capitulatory régime exists, the Egyptian Government has the right to change its Customs régime without the unanimous consent of the Capitulatory Powers.

Cairo Motor Show.

Cairo has just concluded its second motor show which was held under the auspices of the Royal Automobile Club of Egypt in the exhibition grounds of the Royal Agricultural Society at Gezira. The show was a distinct advance on last year both as regards the number of exhibits and the more comfortable and convenient manner in which they were housed and shown. But alas! Great Britain did not shine by the area she occupied, although the few British manufacturers who exhibited had a very fine exhibit. As a matter of fact it was rather an American, than an International, show, with the United States easily first, Great Britain an also ran, and the rest nowhere.

Mr. Harry Farnall.

The death of Mr. Harry Farnall, for nearly twenty-five years British Commissioner on the Caisse de la Dette, has created a blank, which it will be difficult, if not impossible, to fill. A man of infinite simplicity and modesty in spite of his high intellectual attainments, he had acquired a unique position among all communities. Wherever he went his personal charm made him welcome. In no matter what company he found himself he brightened the atmosphere and raised the tone of conversation. His courtliness of manner and the milk of human kindness which radiated from him had a pacifying effect on all who came into contact with him and often his influence acted as oil on troubled waters. No one will ever forget the

mass meeting of the British community of Egypt, for instance, after the murder of Dr. Robson at the end of December, 1922, when an angry gathering, bent on obtaining the heads on a charge of the British officials whom it held responsible for the continuation of the epidemic of assassinations, was induced by his tactful handling to formulate all that it felt in a manner to which no one could take exception. The result of that meeting was a tribute to Mr. Farnall's personality, which undoubtedly saved the situation.

But while the British community deeply mourn the passing of one who was an asset and a credit to it, he is mourned to almost an equal degree by the foreign and the Egyptian communities. It is with justifiable pride that on all sides one has heard from foreigners and Egyptians references to Mr. Farnall which plainly show the profound respect, nay deep affection, which he had inspired. Particularly striking have been the tributes to his charitable acts of which few, if any, of us knew anything. Many indeed are those to whom his passing means a disappearance not only of a kindly heart but also of one of their means of subsistence. There were, it appears, numerous needy folk whom in the early days of each month Mr. Farnall met surreptitiously at fixed points and to whom, as he passed, he handed, in a packet, the "allowance" which for years he had been accustomed to make them. His was indeed a case of the right hand not knowing what the left did. We shall one and all miss that quaint old-world figure in early Victorian dress who moved about so quietly and with such dignity amongst us and made us the better for his presence. He leaves behind him a memory which will remain for all time with those who were privileged to know him.

Mr. Rudyard Kipling.

Mr. and Mrs. Rudyard Kipling have arrived in Egypt and are staying at the Semiramis Hotel. Mr. Kipling, who is a Commissioner of the Imperial War Graves Commission, has come out with the Australian High Commissioner in London, Major-General Sir Granville Ryrie, to make a tour of inspection of the War cemeteries in Egypt.

British Education.

An interesting ceremony took place in Alexandria this week, when the ranks of the British Boy Scouts of Alexandria were increased by a number of pupils from the recently created Boys' School. The enrolment was effected by the District Commissioner of Alexandria, Mr. Douglas Allen, in the presence of the Consul-General, Mr. C. E. Heathcote-Smith, the Headmaster of the new school, Mr. H. R. Thompson, Mrs. S. R. P. Carver, the County Commissioner for Girl Guides, Mrs. Roy Bruce, the District Commissioner of Alexandria, Mrs. Douglas Allen, the County Secretary, a detachment of Boy Scouts from Victoria College and a contingent of the Girl Guides Company in Alexandria. Mr. T. L. W. Hubbard, Assistant Master at the boys' school, was enrolled as Scout Master, and Messrs. Wikeley and Diacono as his assistants.

The formation of this new troop is evidence of the success which is attending the movement for New British Schools in Alexandria. The Boys School, which was started only last October in hired premises, already has a hundred pupils, and that number will be considerably increased as soon as the extra accommodation is provided by its own permanent premises. The land has been ceded by the Alexandria Municipality at very much below the market price. Over £60,000 has been subscribed by the British community in Alexandria alone, and but £6,000 is still required for the completion of the amount estimated as being necessary before building can be started and the school endowed so that in the near future there will be no further need to call on the public for funds to carry on. (It may be mentioned that subscriptions can be sent to the Barclays Bank (D.C. and O.) in London or in Alexandria.) An indication of the demand for British education in Alexandria is afforded by the fact that Victoria College has just enrolled its three hundredth pupil.

Belgrade, February 14.

The New Government at Work.

The intense cold and the muzzling of the Press have distracted public attention from the once all-important theme of politics, and the new Government carries on steadily and quietly with its work, of which it has already accomplished an amazing amount, especially when compared with previous Governments that were hampered by the interventions of friends, the bickering of party groups and the strained relations between Belgrade and Zagreb.

When it is considered how delicate the situation had become by the end of last December and how near to civil strife we appeared to be, the change brought about so quickly by the King's declaration of January 6 seems little short of miraculous. There is still some dissatisfaction in Zagreb, as in Belgrade; this is mostly confined to ex-party politicians who have lost their jobs, their prestige and their graft, and are naturally unhappy, but the tension between the peoples of Belgrade and Zagreb has almost entirely disappeared. The annulling of the Vidovdan Constitution, the dissolution of the "bloody" Parliament, and the establishment of a non-party Government did a great deal to create a new situation, but this process was continued by the policy adopted by the new Government of complete equality of treatment of all districts, as was shown by the dissolution of all political parties, irrespective of name or place, and by the appointment of Croats and Slovenes to important State positions which they were never allowed to hold before. Thus the appointment of Professor Pitomitz, a Slovene, as Minister in Washington, and of M. Anjelkovitch, ex-Minister of Public Works, in Prague, has been interpreted as showing that the highest diplomatic posts are now open to Croats and Slovenes, and this has had a very good effect in the *prechanski* provinces. If the new Government can persuade the Croats that they have now real and complete equality of citizenship, the so-called Croatian question will soon cease to exist.
